

Dave Navecky

Please thoroughly research the impact of the natural water flow and drainage on our fields and streams.

Enclosed are maps of sections 30 & 19 in Johnstown township. The maps were provided by Mary Howard at FSA Janesville or websites noted on maps.

The photos are usually taken in the summertime so springtime maps would be wetter.

The water is flowing eastward to Blackhawk Creek, the Green belt, and Rock River in Janesville Wisconsin.

The proposed railroad would stop this natural drainage and flow of water. The railroad would be like building a dam and making a lake of our field.

The field in section 19 is the actual headwaters of Blackhawk Creek as stated by Norm Tadt NIBRS Rock County.

There will be side tracks and a bridge crossing County A stopping all drainage and our natural flow of water through our farm. About 10,000 acres drains through here. What will happen if the railroad is allowed to build across our farm?

Our alternatives

- move railroad east or west of this natural flow of water
- use existing railroad tracks
- smaller bypass around Chicago - don't start in Milton Wisconsin
- use CREATE project in Chicago

Thank you
