Route Narrative,
 After speaking with several hundred people along the route about this subject. I find the narrative misleading. Many people describe terrain, wetlands and other environmental issues not in the narrative.

After reading through the narrative and seeing a few instances where these issues were mentioned. I have to believe the investigation and information collected lacking in substance.

On page 20 GLBR Rockford Subdivision. There is no mention of the creek, floodplain or wetlands that exist there after mile marker 11. While they do mention mile marker 12, they do not mention the possible Indian Mound there. I use this example since I am most familiar to is as illustrated in EI-22981.

There are most likely many more areas where this narrative is false. I have read many Incoming statements from all along the route that show this

.
 I hope that the STB will take the "No Action Alternative".
