5. Description of Combined Network – Growth Plan

5.1. Growth Plan – Principal Routes

236. Combining UP and NS into a unified network provides tremendous opportunities to offer existing and new customers single-line service products that deliver faster, more reliable, more efficient service than currently exists in the marketplace. As described in the Joint Verified Statement of Kenny Rocker and Ed Elkins and the Joint Verified Statement of David T. Hunt and Matthew Schabas, by offering improved service products, UP/NS is projected to attract substantial volumes of traffic currently moved by other railroads or in trucks.

237. In developing the Growth Plan, we began with the Optimized Plan and then considered additional operational changes that could drive and accommodate growth. In other words, marketing analyses identified opportunities that exist if we can provide the service, and we designed train services to realize those opportunities. In many cases, that meant adding volume to trains already in the Optimized Plan or adding train starts on existing routes. In other cases, additional growth allowed us to develop new trains that will further improve service, as we discuss below.

238. Accommodating projected growth will not fundamentally alter the principal routes currently operated by UP or NS. UP and NS will continue using their principal routes to serve customers shipping traffic within the east and the west and between eastern points and western points. However, the merged UP/NS will significantly improve the service offered over their east-west routes, which will attract traffic and thus build densities to support both new and improved services.

239. In developing the Growth Plan, we carefully considered whether UP and NS main lines, yards, and terminals have sufficient capacity to accommodate projected growth without negatively affecting service to existing customers, passenger railroads, or connections to other freight railroads. Where we determined additional capacity might be needed, we developed capital investment plans, as discussed in Part IV of the accompanying Service Assurance Plan. We reviewed these investment plans with Mr. Rocker and Mr. Elkins to ensure alignment between projected traffic growth and the ability to accommodate the growth and provide the level of service we offer the customer.

5.2. Growth Plan – Proposed Operations – Through Train Service

240. Applicants provide a full list of all trains added and removed between the Optimized Plan and the Growth Plan in Electronic Appendix L and the workpapers accompanying this Operating Plan.[69] Many of the additional trains in the Growth Plan accommodate incremental traffic volumes Applicants anticipate attracting by improving service on existing routes. Other Growth Plan trains respond to opportunities the merger creates to grow rail traffic by offering services on new routes. We briefly describe the new routes below in Sections 5.2.1 (intermodal trains) and 5.2.2 (manifest trains) and provide additional details in Appendix B.[70] Applicants anticipate implementation of additional interdivisional services in future years and

[69] *See* Workpaper "T1_T2_T3_Train_Comparison.xlsx," Tab "T2 to T3 Train Changes."

[70] *See* Workpaper "T2 T3 New Train Plans Final.xlsx."

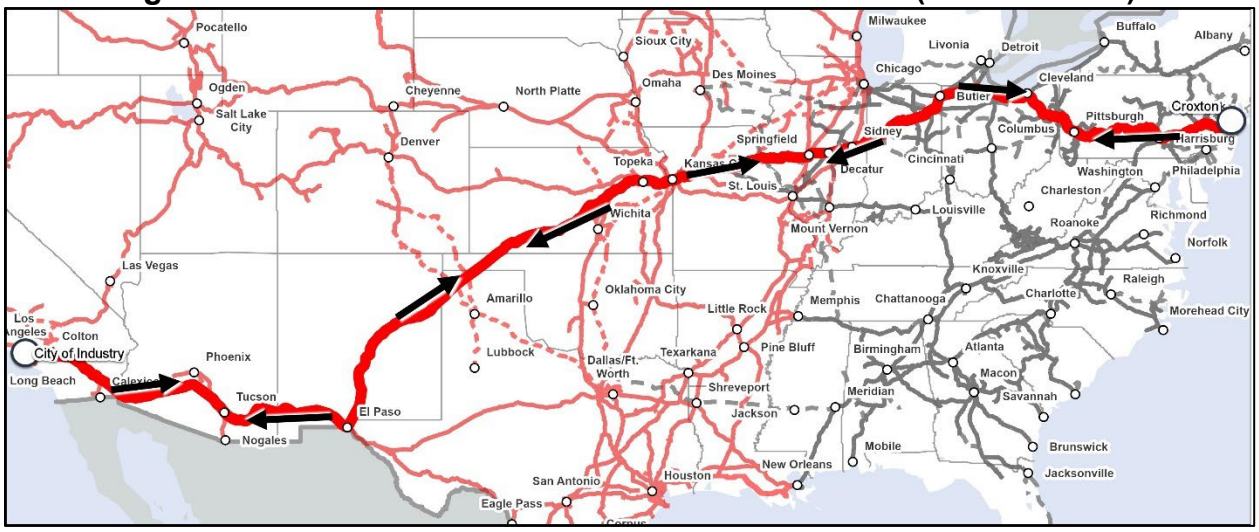
will obtain agreements to implement those services through established collective bargaining processes.

5.2.1. New Intermodal Trains

241. The combined railroad's improved service offerings are expected to induce significant new demand for long-haul intermodal service across the integrated network. Based on projected traffic flows, Applicants have designed six new intermodal train pairs to attract and accommodate this demand. These train pairs will run seven days a week carrying domestic intermodal freight across the country.

242. *Northern California-Northeast* (ZLTCX/ZCXLT). Applicants plan to route a new intermodal train pair between Lathrop, California, and Croxton, New Jersey, via Chicago. This new train responds to projected demand for a direct route between Northern California and the Northeast.

Figure 29: Northern California-Northeast Intermodal (ZLTCX/ZCXLT)



243. Eastbound, ZLTCX will depart from Lathrop and move via North Platte and Chicago to Croxton. ZLTCX has no planned work event in Chicago, only a crew change, which will help minimize congestion in the busiest freight rail hub in North America. From Chicago, the train will continue east towards Croxton, setting out

blocks at Toledo and Harrisburg. Westbound, ZCXLT will follow the same route in reverse, picking up blocks in Harrisburg, Toledo, and Colehour, and setting out blocks at Colehour and Sparks, Nevada before arriving at Lathrop.

244. *Southern California-Northeast* (ZCICX/ZCXCI). Applicants plan to route a new train pair between City of Industry (Los Angeles) and Croxton, via Kansas City, Springfield, and Sidney. This new train responds to projected increased demand for an additional efficient, direct route for traffic moving between Southern California and the Northeast.[71] This train pair replaces the ZLCCX/ZHBLC train pair introduced in the Optimized Plan as new growth opportunities from Southern California to the Northeast enable segregation of traffic moving to the Ohio Valley traffic, producing improved service levels for both groups of traffic. (See the discussion below of ZLCDT/ZDTLC.)

Figure 30: Southern California-Northeast Intermodal (ZCICX/ZCXCI)

[71] Applicants' Optimized Plan includes a train between LATC and the Northeast that also takes advantage of the same new route via Kansas City, Springfield, and Sidney.

245. Eastbound, ZCICX will depart from City of Industry and move via El Paso and Kansas City and then route via the legacy NS through Moberly, Decatur, Peru, Sandusky, and Conway. The train's first work event will be at Harrisburg, where it will set out Harrisburg, Bethlehem, and Morrisville traffic. After departing Harrisburg, the train will continue on to make a set-out at E-Rail before terminating at Croxton. Westbound, ZCXCI will follow the same route in reverse, departing Croxton and picking up blocks at E-Rail, Harrisburg, and Sandusky for Southern California destination terminals.

246. *Southern California-Ohio Valley/Detroit* (ZLCDT/ZDTLC). Applicants plan to route a new train pair between LATC and Livernois (Detroit) via Kansas City, Springfield, and Sidney. This new train will provide an efficient, direct route for traffic moving between Southern California and the Ohio Valley/Detroit markets.

Figure 31: Southern California-Ohio Valley/Detroit Intermodal (ZLCDT/ZDTLC)

247. Eastbound, ZLCDT will depart from LATC and move via El Paso (Santa Teresa) to Kansas City. At Santa Teresa, ZLCDT will pick up Detroit and Ohio Valley blocks and while at Voltz, ZLCDT will set out blocks for Kansas City, Norfolk, and destinations in the lower Ohio Valley, including Louisville, Cincinnati, and Columbus. ZLCDT will then continue to Detroit with blocks for Detroit and Cleveland. Westbound, ZDTLC will follow the same route in reverse, picking up LATC and Nogales blocks at Voltz then setting out the Nogales block in Tucson before terminating at LATC in Southern California.

248. *Southern California-Southeast* (ZIEJX/ZCTLB). Applicants plan to run a new train pair between Southern California and the Southeast via the Meridian Speedway. This new train pair responds to projected demand for an efficient route for traffic moving between California and Southeast markets.

Figure 32: Southern California-Southeast (ZIEJX)

Figure 33: Southeast-Southern California (ZCTLB)

249. Eastbound, ZIEJX will depart from Inland Empire and move via El Paso and Forth Worth to Shreveport. In Shreveport, the ZIEJX might be split into a second train (ZSHAT) as a result of a CPKC-imposed train-length restriction on the Meridian Speedway. The Growth Pan's ZIEJX replaces the ZLBAT introduced in the Optimized Plan. Both trains will follow identical routes via the Meridian Speedway to Birmingham and then Atlanta. At Atlanta, the trains will set out traffic bound for Greencastle, Greensboro, and Charlotte before continuing to Jacksonville. Westbound, ZCTLB will depart from Charlotte and move to Atlanta, where it will set out a block and may be split into a second train (ZATSH) also as a result of the Meridian Speedway length restriction. At Shreveport, the two trains would be recombined and continue to Southern California.

250. *Texas/Mexico-Northeast* (ZMXCX/ZCXMX). Applicants plan to route a new train pair between Port Laredo and Croxton via New Orleans. This new train responds to projected demand for an efficient route for traffic moving between Mexico and Texas and the Ohio Valley, Southeast, and Northeast.

Figure 34:Texas/Mexico-Northeast (ZMXCX/ZCXMX)

251. Eastbound, ZMXCX will depart from Port Laredo with blocks for Croxton, Atlanta, Charlotte, Columbus (Rickenbacker), and Cincinnati (Sharonville), enabling service from Mexico and Texas to the watershed markets of the Ohio Valley, the Southeast, and the Northeast. At San Antonio, the train will pick up blocks for Croxton, Atlanta, and Greencastle. At Houston, the train will pick up blocks for Greencastle, Morrisville, and Charlotte before continuing to Atlanta, where it will set out blocks destined to the Southeast and Ohio Valley and pick up blocks destined to the Northeast. From Atlanta, ZMXCX will continue north, setting out and picking up traffic at Greencastle and Rutherford before terminating at Croxton. Westbound, the

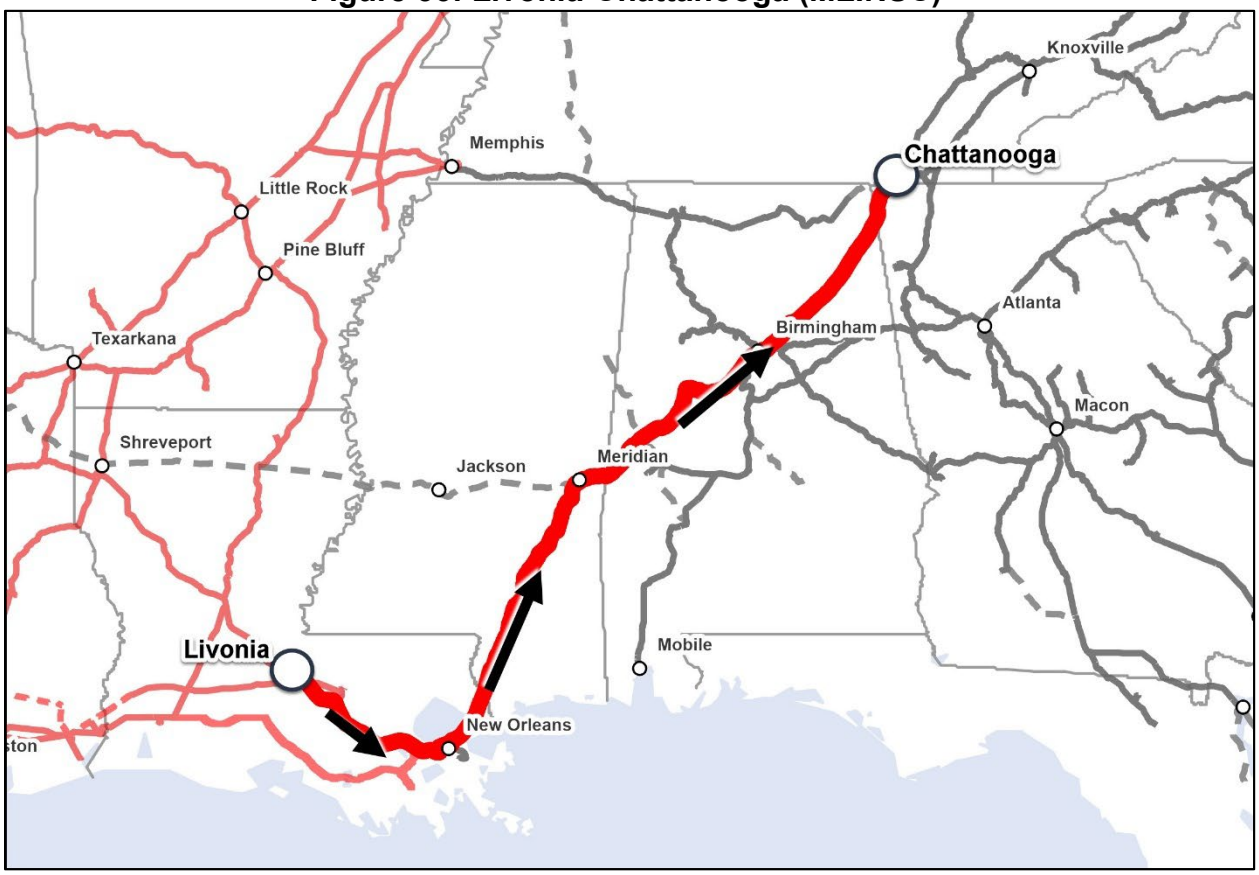
ZCXMX will follow the same route in reverse, picking up and setting out traffic along the way.

252. *Houston-Atlanta* (ZHOAT/ZATHO). Applicants plan to run a new train pair between Houston and Atlanta via New Orleans. This new train responds to projected demand for an efficient route between Houston, on the one hand, and the Southern Ohio Valley, the Southeast, and the Northeast, on the other hand. The ZHOAT/ZATHO train pair will also help to offset projected demand that would have operated on the ZCXMX/ZMXCX train pair.

Figure 35: Houston-Atlanta (ZHOAT/ZATHO)

253. Eastbound, ZHOAT will depart from Houston for Atlanta with blocks for destinations in the Southern Ohio Valley, Southeast, and Northeast. In Atlanta, the Northeast blocks will picked up by ZMXCX, while blocks to serve the watershed markets of the Southern Ohio Valley will leverage current Atlanta originating train capacity. Westbound, ZATHO will carry traffic from the Northeast to Houston that

arrives in Atlanta on the ZCXMX, as well as traffic from the Southern Ohio Valley and Southeast to Houston that arrives in Atlanta on other trains.



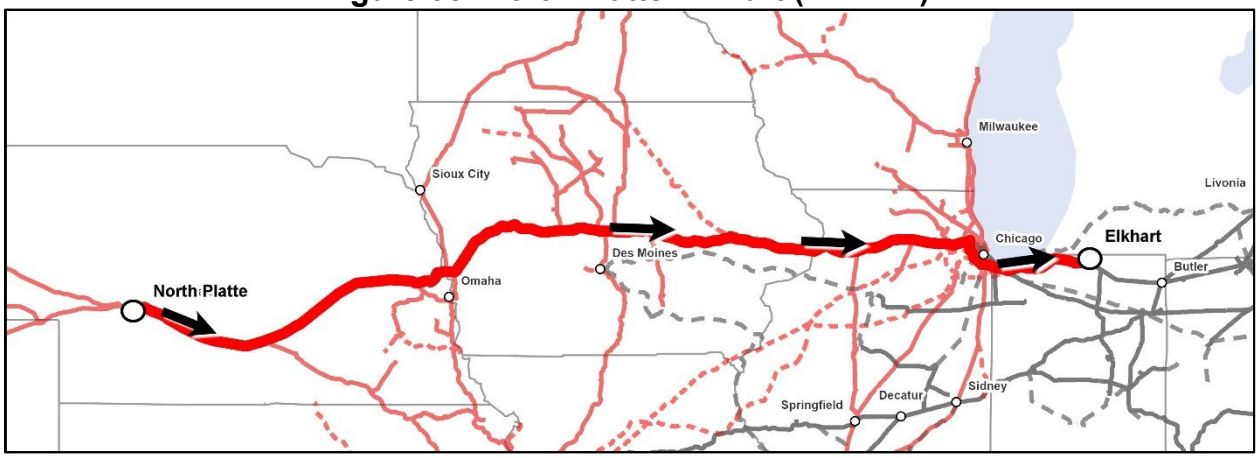
5.2.2. New Manifest Trains

254. Applicants project their service offerings will produce manifest traffic growth throughout their combined network. To adequately serve this growth while delivering high-quality service for existing customers, Applicants plan to add six new trains, including two train pairs, that will move traffic between locations on legacy UP and legacy NS, and twelve new trains that will operate within the current footprint of either UP or NS.[72] Below, we briefly describe the six new trains that combining UP and NS will directly enable.

255. *Livonia-Chattanooga* (MLINSC). To accommodate projected growth in manifest traffic moving from the Gulf Coast to the Ohio Valley and Northeast, Applicants plan to add an incremental train from Livonia to Chattanooga seven days a week. The train will pick up and set out traffic at New Orleans, set out traffic at Meridian, and terminate at Chattanooga, where the remaining traffic will be classified and dispersed on trains heading to the Ohio Valley, Northeast, and other locations on the NS network.

[72] Two of the 12 new trains operating inside the legacy UP or legacy NS system will replace existing trains, producing a net increase of 16 new manifest trains.

Figure 36: Livonia-Chattanooga (MLINSC)



256. *Elkhart-Boone* (MEKBO/MNPEK). In the Growth Plan, the current train running from Elkhart to North Platte will be oversubscribed. To improve the routing of traffic from the NS network destined for Iowa and traffic from Iowa heading east, and to reduce handlings in Chicago, Applicants plan to add a westbound train launching from Elkhart to Boone that will be paired with an incremental train running from North Platte to Elkhart. Traffic destined to points further east will continue to operate on a train from North Platte to Conway (MNPCW), while traffic destined to further points west will continue to be carried on the Elkhart to North Platte train.

Figure 37: Elkhart-Boone (MEKBO)

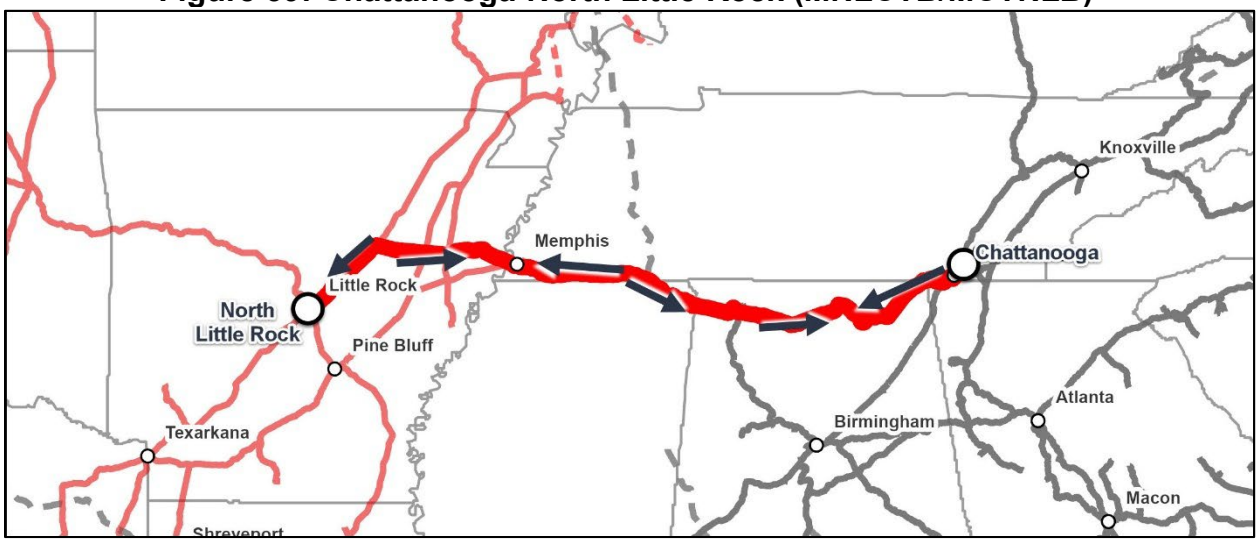


Figure 38: North Platte-Elkhart (MNPEK)

257. *Chattanooga-North Little Rock* (MNLCTB/MCTNLB). To accommodate growth in traffic traveling across the southeast, Applicants plan to add a new manifest train pair running between Chattanooga and North Little Rock.

Figure 39: Chattanooga-North Little Rock (MNLCTB/MCTNLB)

258. *Birmingham-Englewood* (MBHEW). To accommodate increased demand for traffic originating in the East and destined to the Texas Gulf Coast via Houston, Applicants plan to add a train running between Birmingham and Englewood yard via the New Orleans gateway. All traffic on the train will be destined for points in Texas and the Gulf Coast.

Figure 40: Birmingham-Englewood (MBHEW)

5.3. Growth Plan – Proposed Operations – Local Train Service

259. Applicants have no specific plans to change local train services as part of their Growth Plan. However, Applicants will look for opportunities to adjust local assignments to achieve further improvements in service to customers and additional efficiencies in operations as the two railroads integrate and refine their plans in light of customer demand. The proposed transaction will remove barriers that currently limit local capacity and efficiency. This in turn will allow the combined UP/NS to capitalize on opportunities to capture watershed traffic by maintaining or improving existing service levels while handling expanded traffic volumes.

5.4. Growth Plan – Yard and Terminal Activity Changes

260. Applicants have no specific plans to fundamentally alter yard and terminal operations as part of their Growth Plan. However, Applicants will look for opportunities to rationalize yard functions to achieve further improvements in service to customers and additional efficiencies in operations as the two railroads integrate and refine their plans in light of customer demand.

261. In addition, as discussed in Section IV.B.2.a of the Service Assurance Plan, Applicants plan to expand the capacity of certain intermodal terminals to accommodate projected increases in demand. Tables 7 and 8 below show yards and terminals with more than 300 handlings per day that have an increase in activity greater than 20 percent between the Base Plan and the Growth Plan. All yards and terminals experiencing a projected increase in activity over 20 percent are reported in Electronic Appendices Q and R and in the workpapers accompanying this Operating Plan.[73]

[73] *See* Workpaper "Consolidated Terminal Data.xlsx," Tabs "Manifest Growth ALL" and "Intermodal Growth ALL."

5.4.1. Impact on Other Railroads and Ports

262. Applicants' Growth Plan will not affect interchanges with other carriers beyond the changes described in connection with the Optimized Plan. As discussed in connection with the Optimized Plan, the combination of UP and NS will make

[75] *See* Workpaper "Consolidated Terminal Data.xlsx," Tabs "C.1.e Intm Growth."

interchanges with other carriers, including both Class I railroads and short lines, more efficient overall by optimizing operations at existing gateways, particularly Chicago, St. Louis, and New Orleans.

263. Applicants' plans do not include any operational changes to connections with UP's and NS's many current short line partners, other than the connections in Chicago and St. Louis discussed above in Section 4.3. UP and NS highly value their relationships with short line partners. A substantial share of UP and NS manifest traffic originates and terminates on short lines. The merged UP/NS will look for opportunities to develop even more efficient connections with short lines to take advantage of the many opportunities created by the merger to attract new business to rail.

264. Applicants' plans do not include any operational changes to connections with the many ports served by UP and NS. Applicants project that their combination will increase traffic moving to ports as businesses take advantage of single-line service improvements and efficiencies to become more competitive in international markets.

6. Impacts on Traffic Density and Mix

6.1. Impacts on Traffic Density

265. As discussed in connection with the Optimized Plan, the merger will allow UP/NS to handle the same traffic levels as the two railroads handled before using fewer, more efficient trains than UP and NS use today. As the combined carrier attracts new business, it will add new train services to support growth. The pro forma density charts contained in Electronic Appendices S and T and the workpapers

accompanying this Operating Plan show the projected change in traffic density on the network between the Base Plan, the Optimized Plan, and the Growth Plan.[76] In addition, Electronic Appendices U and V show the projected changes in train counts between Base Plan, Optimized Plan, and Growth Plan.[77]

6.2. Impact on Traffic Mix

266. The merger is not projected to significantly change the traffic mix carried by UP and NS when comparing the Base Plan to the Growth Plan.

6.2.1. Manifest

267. Manifest traffic is projected to comprise approximately 41 percent of carloads handled by the combined UP/NS, compared with 42 percent of total carloads for the pre-merger UP and NS.[78]

6.2.2. Intermodal

268. Intermodal traffic is projected to comprise approximately 37 percent of carloads handled by the combined UP/NS, compared with 34 percent of total carloads for the pre-merger UP and NS.[79]

---

[76] *See* Workpaper "Line Segment Tables from Model vF.xlsx," Tabs "UP Tonnage Change" and "NS Tonnage Change."

[77] *See* Workpaper "Line Segment Tables from Model vF.xlsx," Tabs "UP Train Change" and "NS Train Change."

[78] *See* Workpaper "20251124_Market share calculations.xlsx," Tab "Summary of UPNS Traffic," Cells B50:E50.

[79] *See id.*, Cells B48:E48.

6.2.3. Bulk

269. Bulk traffic is projected to comprise approximately 22 percent of carloads handled by the combined UP/NS, compared with 24 percent of total carloads for the pre-merger UP and NS.[80]

7. Capacity Needs of the UP/NS System

270. Applicants anticipate that the combined railroad will invest in main line, yard, and terminal capacity to accommodate the substantial traffic growth projected to result from the merger and to deliver on the improved service levels described in this Operating Plan. Applicants evaluated existing capacity on the main lines and in the yards and terminals expected to experience significant merger-related increases in activity to (1) ensure sufficient capacity presently exists to implement operating changes that will optimize current traffic flows, and (2) develop a capital improvement plan for timely funding of capacity improvements to accommodate projected growth. Applicants provide a more detailed description of their identification of potential infrastructure impediments and the solutions they have formulated in the Service Assurance Plan.

271. Applicants provide an overview of the capacity planning process below because operating plan design and capacity planning go hand-in-hand: operating plans must account for capacity constraints and plans to increase capacity. In total, Applicants' plan includes investment of approximately $1,023 million to increase

[80] *See id.*, Cells B49:E49.

capacity and make other improvements on main lines and in yards and terminals to integrate UP and NS operations.[81]

272. Applicants have engaged in a careful, thorough, analytical process in developing the Operating Plan and the capital improvement plan within the Service Assurance Plan. They recognize, however, that the plans provided in this Application reflect results of modeling activities intended in substantial part to satisfy regulatory standards that require projecting future operations using data from the past. Applicants are fully aware that traffic patterns fluctuate and change over time, driven by changes in market supply and demand conditions that can be unpredictable. Traffic growth will not necessarily occur in the amounts or locations where it is now expected. Applicants recognize the combined railroad's actual investment needs may prove to be greater or less or otherwise different than the results of their modeling show. In everyday operations, Applicants face similar challenges in planning for an uncertain future. They must engage in long-term planning, so they do not set their capacity investment plans in stone, but rather

[81] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cells H80 and H81. Applicants' capital investment plans discussed here and in the "Infrastructure Improvements" section of their Service Assurance Plan reflect Applicants' current plans based on traffic levels and flows projected in their Application. The combined railroad's plans may change as circumstances change. UP/NS actual investments may be lower than planned if market conditions shift and overall traffic volumes decline, or if shifts in supply and demand patterns allow the combined railroad to route traffic using main lines, yards, and terminals that have excess capacity, or if productivity improvements or changes in technology allow UP/NS to accommodate more traffic with a lower level of investment or different investments. The combined railroad's actual investments may be higher than planned if market conditions or supply and demand conditions shift in the opposite direction.

develop plans that can be calibrated and adapted to meet demand. For example, UP engages in a robust, cross-functional business planning process at least twice each year to review and revise its forecasts and thus its plans for hiring, locomotive and freight car purchases, investment in terminal and line of road capacity, and more. Applicants' plans in this proceeding show how they would address the traffic they modeled, but Applicants expect that the combined railroad will invest the capital required to meet the demand created by the new single-line services created following the merger.

7.1. Main Line Capacity

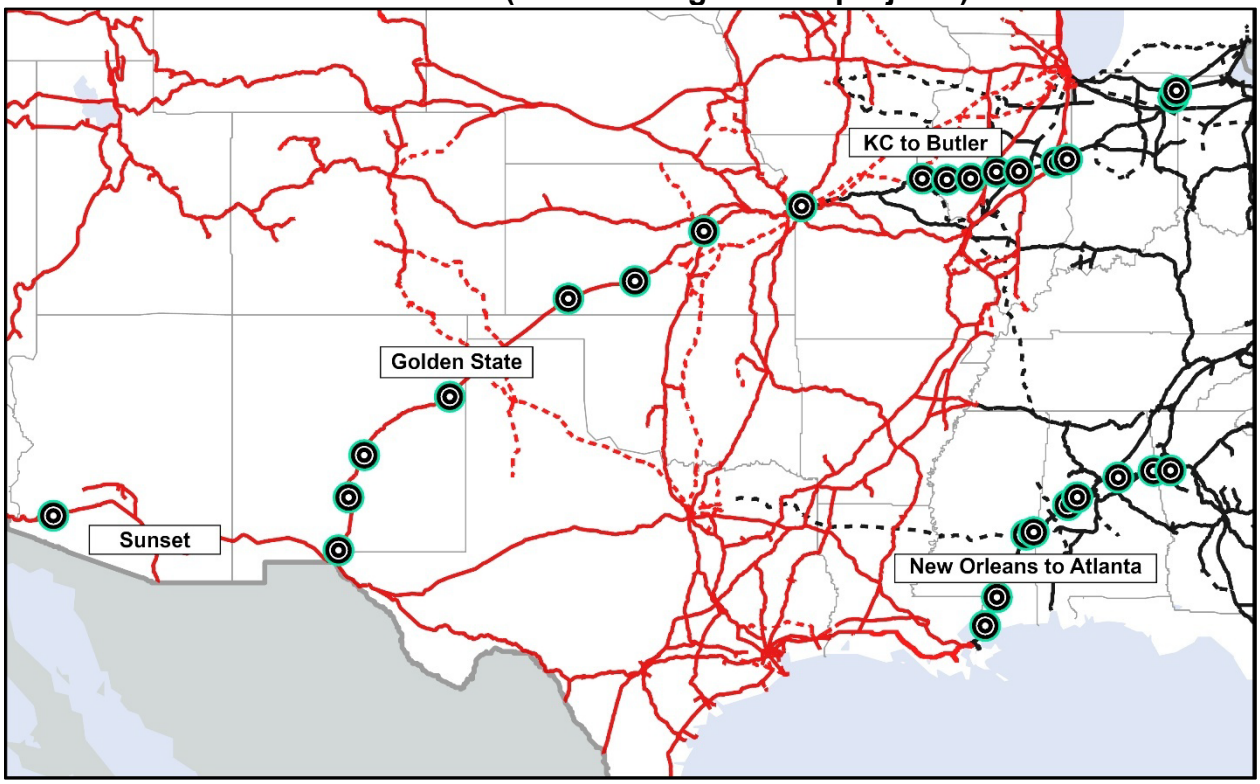
273. Applicants systematically evaluated whether UP and NS main lines currently have sufficient capacity to accommodate projected traffic levels. They then developed plans as necessary to address capacity shortfalls.

274. Applicants' analyses show the Optimized Plan will not significantly change train counts on UP or NS main lines, and the main lines on which train counts would increase could readily accommodate the increase.[82]

275. To accommodate projected merger-related traffic growth reflected in the Growth Plan, Applicants anticipate that the combined railroad will invest approximately $507 million on main lines where train counts are projected to increase.[83]

---

[82] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx"; Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx."



[83] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H83.

276. Where Applicants project merger-related traffic growth will produce train counts in excess of a line's current capacity, Applicants have plans in place for the combined railroad to increase capacity ahead of projected traffic growth. In some instances, Applicants recognized UP or NS had made pre-merger commitments to projects that would close or begin closing the capacity gap. Those investments are not included in the capital investment figure submitted in this Application. Where Applicants' operating plan anticipates increasing train lengths to make operations more efficient, Applicants developed investment plans for lines requiring additional capacity to accommodate the longer trains. These investments are included in the capital investment figure submitted with the Application. In all instances, Applicants identified the additional infrastructure required to ensure the lines will continue to operate fluidly.[84]

277. The locations of anticipated merger-related investments in main line capacity are shown below in Figure 41.

[84] *See* Workpaper "UP Capacity Investment Summary.xlsx"; Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Line Capacity Projects."

Figure 41: Locations of Planned Investments on Main Lines (excludes signal/PTC projects)

278. Additional information regarding anticipated investments to increase main line capacity are provided below in Table 9.

Table 9[85]
Planned Investments on Main Lines (2023 dollars)

New Orleans to Atlanta: Taylor	Siding extension	11,414
Cleveland to Conway	Signal	34,283
Conway to Harrisburg	Signal	37,308
	Total	**$507,385**

279. Applicants discuss their specific plans for investing in main line capacity in more detail in the Infrastructure Improvements section of the Service Assurance Plan (Section IV.B.1).

7.2. Yard and Terminal Capacity

280. Applicants also systematically evaluated whether projected yard and terminal activity levels would increase beyond the current capacity of their yards and

terminals.[86] They then developed plans as necessary to address capacity shortfalls either by investment to increase capacity or modification of transportation plans as new traffic materializes.

281. The Optimized Plan will result in additional activity at 46 manifest yards, six of which will see activity increase by more than 25 cars per day: Chattanooga, 18th Street (Kansas City), Toledo Airline, Livonia, and Sevier (Knoxville).[87] Five intermodal terminals will see activity increases of more than 25 lifts per day: Marion, Global 2, 47th Street (Chicago), Toledo Airline, and Rutherford (Pennsylvania).[88] And there will be additional activity at three automotive terminals: Hegewisch (Chicago), Centreville (St. Louis), and Voltz (Kanas City).[89] No merger-related investments will be needed to accommodate the additional yard and terminal activity reflected in the Optimized Plan. NS's Shelbyville, Kentucky, automotive

[86] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx"; Workpaper "NS Manifest Yard Capacity Calculations.xlsx"; Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx."

[87] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Manifest"; Workpaper "NS Terminal Volume Review.xlsx," Tab "Manifest."

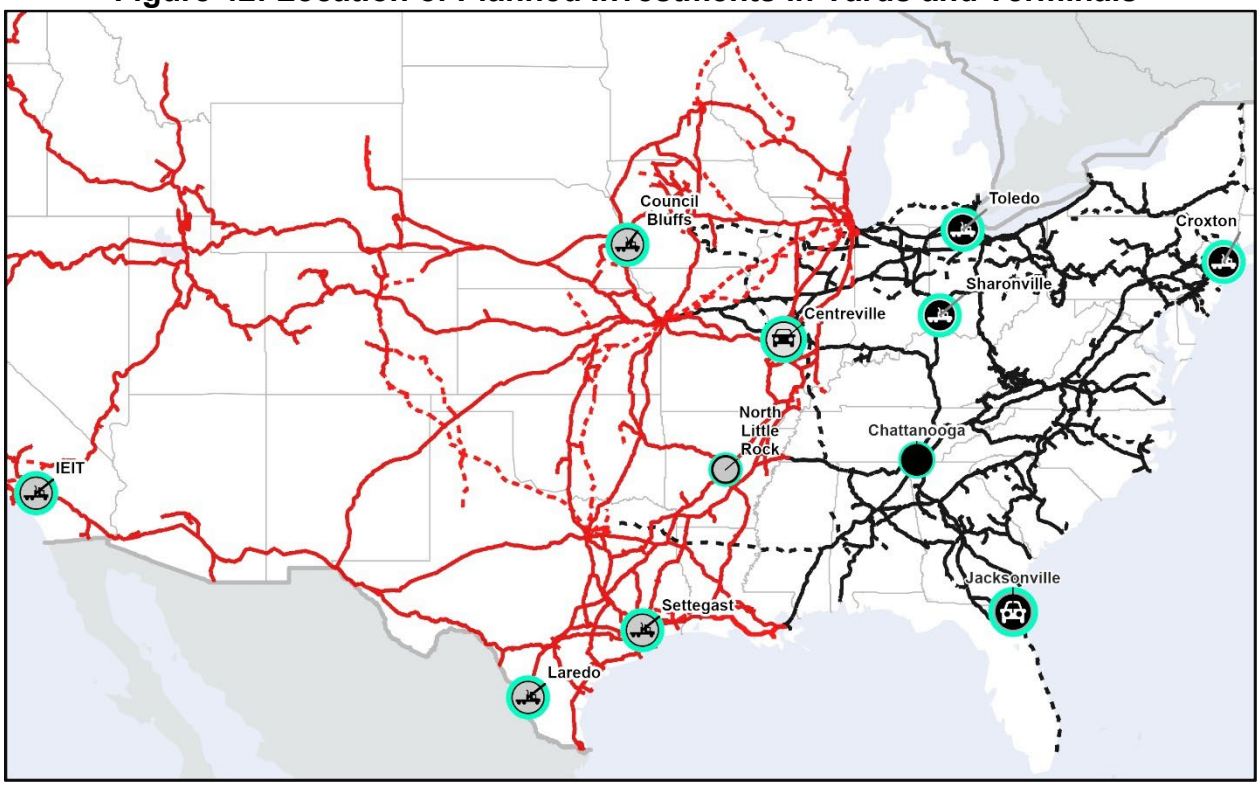
[88] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Intermodal"; Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal."

[89] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Auto"; Workpaper "NS Terminal Volume Review.xlsx," Tab "Auto."

facility is projected to experience activity levels above its current capacity, but NS has a pre-merger plan in place to expand capacity at Shelbyville.[90]

282. To accommodate projected merger-related growth reflected in the Growth Plan, Applicants anticipate that the combined railroad will invest approximately $516 million to expand yard and terminal capacity where the projected activity levels exceed existing capacity.[91]

283. Where Applicants project merger-related growth will create capacity demands in a yard or terminal that exceeds the facility's current capacity, Applicants have a plan in place for the combined railroad to address the issue ahead of projected traffic growth. In some instances, Applicants recognized UP or NS had made pre-merger commitments to investments that would close or narrow the capacity gap. Those investments are not included in the capital investment figure submitted in this Application. In other instances, Applicants recognized that projected capacity shortfalls could be addressed through changes to operating plans. In all instances, Applicants identified the additional infrastructure or plan changes required to ensure that yard and terminal facilities will continue operating fluidly.



284. Locations of anticipated merger-related investments in yard and terminal capacity are shown below in Figure 42.

---

[90] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 24.

[91] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cells H87:H88.

Figure 42: Location of Planned Investments in Yards and Terminals

285. Additional details regarding anticipated merger-related investments in yard and terminal capacity are provided below in Table 10.

Table 10[92]
Planned Investment in Yards and Terminals (2023 dollars)

Project	Facility Type	Location	Investment ($000's)
North Little Rock Yard Expansion	Manifest	Little Rock, AR	30,441
Settegast Yard Expansion	Intermodal	Houston, TX	102,467
Council Bluffs Yard (Greenfield)	Intermodal	Council Bluffs, IA	75,419
Port Laredo Yard	Intermodal	Laredo, TX	63,691
Inland Empire Intermodal Terminal ("IEIT") Yard Expansion	Intermodal	Colton, CA	58,059
Lift Equipment (UP and NS yards)	Intermodal	Various	70,027
Ramp Equipment (UP and NS yards)	Autos	Various	2,521
Centreville Yard Expansion	Autos	Centreville, IL	2,116
Croxton Yard Expansion	Intermodal	Croxton, NJ	7,361
Sharonville Yard Expansion	Intermodal	Sharonville, PA	26,216
Toledo Parking Expansion	Intermodal	Toledo, OH	36,299
Jacksonville Yard Expansion	Auto	Jacksonville, FL	24,300
Chattanooga Yard Expansion	Manifest	Chattanooga, TN	17,141
		Total	**516,059**

286. Applicants discuss their specific plans for investing in yard and terminal capacity in more detail in the Infrastructure Improvements section of the Service Assurance Plan (Section D.1.d.).

287. Below, Applicants discuss the yards and terminals for which they anticipate that the projected demand for capacity reflected in the Growth Plan would be resolved through means other than additional investment in capacity.

7.2.1. Intermodal and automotive terminal capacity

288. In a handful of locations, Applicants' Growth Plan projects activity levels at intermodal and automotive terminals that are slightly above the calculated

[92] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cells H24:H31 and H56:H62.

capacities of those facilities. In those instances, Applicants have identified solutions that do not require additional infrastructure, though these plans could change as conditions change.

289. *Brooklyn (Portland, Oregon).* UP/NS would likely address the projected capacity shortfall (approximately 13 lifts per day) by reducing block swaps at Brooklyn. UP/NS could accomplish this by creating an overhead train with blocks of traffic destined to Chicago, Kansas City, and the Midwest.

290. *TCIT (Minneapolis, Minnesota).* UP/NS would likely address the projected capacity shortfall (approximately 20 lifts per day) by engaging with customers to minimize container dwell. UP/NS could also explore off-site parking solutions.

291. *Tacsim (Tacoma, Washington).* UP/NS would likely address the projected capacity shortfall (approximately 5 lifts per day) by engaging with the facility owner to increase terminal operating hours.

292. In addition, NS has several idled intermodal terminals that UP/NS will begin using for intermodal service, as follows.

293. *McCalla (Birmingham, Alabama).* McCalla currently supports only automotive distribution, having idled intermodal operations several years ago. To accommodate merger-related intermodal growth, Applicants anticipate that UP/NS will reintroduce intermodal service at McCalla. Applicants expect that UP/NS will collocate intermodal and automotive operations at the ramp without requiring

additional capital investment. Reintroducing intermodal operations at McCalla will provide 78,000 annual lifts of capacity, exceeding projected post-merger demand.

294. *E-Rail (Elizabeth, New Jersey).* E-Rail is a currently idle intermodal terminal. To support merger-related growth in the New York/New Jersey market, Applicants anticipate that the combined railroad will reintroduce intermodal service at E-Rail in the Growth Plan. While UP/NS will undertake necessary terminal maintenance and crane procurement to restart operations,[93] Applicants do not anticipate that the combined railroad will make additional capital investments in E-Rail. The terminal's existing infrastructure provides an annual capacity of 174,000 lifts, which is more than sufficient to meet projected post-merger demand.

295. *Greencastle (Pennsylvania).* The NS intermodal terminal in Greencastle, Pennsylvania, is currently idle. To support merger-related growth in the Eastern Pennsylvania market, Applicants anticipate that the combined railroad will reintroduce intermodal service at Greencastle in the Growth Plan. While UP/NS will undertake necessary terminal maintenance and crane procurement to restart operations, Applicants do not anticipate that the combined railroad will make additional capital investments in Greencastle.[94] The terminal's existing infrastructure provides an annual capacity of 133,000 lifts, which is more than sufficient to meet projected post-merger demand.

---

[93] *See* Workpaper "NS Crane Capacity Calculations.xlsx," Tab" Intermodal Crane Inputs," Row 21.

[94] *See id.*, Row 19.

7.2.2. Manifest Yard Capacity

296. In a number of cases across the expansive networks of UP and NS, Applicants' Growth Plan projects activity levels at manifest terminals that are above the calculated capacities of those facilities, but where a solution would not involve additional infrastructure, though these plans could change as conditions change.

297. *Alfalfa (El Paso, Texas).* UP/NS would likely address the projected capacity shortfall (28 cars/day) by using excess capacity at Dallas Yard, where activity is projected to decrease below pre-merger levels. UP/NS could also use Davidson Yard to build blocks that overhead Alfalfa.

298. *Coady (Baytown, Texas).* UP/NS would likely have sufficient capacity to absorb the projected capacity shortfall (3 cars/day) without altering its operations, but it could also address the shortfall by using excess capacity created by a UP pre-merger project at Robinson Yard in Dayton, which is described in Section IV.B.2 of the Service Assurance Plan.

299. *Boone (Iowa).* UP/NS would likely have sufficient capacity to absorb the projected capacity shortfall (8 cars/day) without altering its operations, but it could also address the shortfall by running an intermodal train directly from Chicago to East Minneapolis to avoid a block swap that consumes capacity in Boone.

300. *Elkhart (Indiana).* UP/NS would likely address the projected capacity shortfall that remains after completion of a pre-merger investment project described in Section IV.B.2 of the Service Assurance Plan (127 cars/day) by developing Yard Center blocks at Bellevue and Conway Yards and operating a train from Bellevue directly to Yard Center.

301. *Gateway Yard (A&S) (E. St. Louis, Illinois).* UP/NS would likely address the projected capacity shortfall that remains after completion of a pre-merger investment project described in Section IV.B.2 of the Service Assurance Plan (20 cars/day) by setting out Chicago-bound and CSX interchange blocks at Dupo Yard before they reach Gateway Yard so they can overhead Gateway Yard.

302. *Lake Charles (Louisiana).* UP/NS would likely address the projected capacity shortfall (24 cars/day) by using excess capacity created by a UP pre-merger project at Frances Yard in Orange, Texas, as described in Section IV.B.2 of the Service Assurance Plan.

303. *Livonia (Louisiana).* UP/NS would likely address the projected capacity shortfall that remains after completion of a pre-merger investment project described in Section IV.B.2 of the Service Assurance Plan (271 cars/day) by using excess capacity at nearby yards in Alexandria and Addis. UP/NS could use Alexandria and Addis to build northbound blocks for North Little Rock, Conway, Bellevue, and other traffic so they can overhead Livonia.

304. *North Little Rock (Arkansas).* UP/NS would likely address the projected capacity shortfall that remains after completion of a merger-related investment project described in Section IV.B.2 of the Service Assurance Plan (322 cars/day) by using excess capacity at Pine Bluff Yard. Specifically, UP/NS would reintroduce southbound blocking operations at Pine Bluff for traffic heading to Texas, Mexico, and the Gulf Coast to alleviate pressure on North Little Rock. Pine Bluff and NS's yard in Sheffield, Alabama, would have sufficient capacity combined to absorb the

North Little Rock traffic without compromising existing capacity thresholds at either terminal.

305. *South St. Paul (Minnesota).* UP/NS would likely address the projected capacity shortfall (12 cars/day) by running a train directly from Chicago to East Minneapolis intermodal terminal to avoid a block swap that consumes capacity in South St. Paul.

306. *18th St. Yard (Kansas City, Kansas).* UP/NS would likely address the projected capacity shortfall (59 cars/day) by using idled capacity at the nearby Neff or North Kansas City facilities, each of which could independently absorb the additional traffic.

8. Impacts on Passenger Operations

307. The UP/NS merger will not result in any adverse impact to passenger operations. Where Applicants host passenger operations on lines expected to experience merger-related traffic growth, Applicants have ensured the lines will have sufficient capacity to abide by their contractual commitments and legal obligations to passenger carriers.

308. In the sections below, Applicants systematically review passenger operations they host and explain why the merger will not harm those operations. In the Service Assurance Plan, Applicants explain how they will continue to facilitate those operations so as to fulfill their existing performance agreements, and how their established operating protocols will ensure effective communications to minimize any potential transaction-related negative impacts.

8.1. Amtrak Operations

309. UP and NS host Amtrak trains under agreements entered pursuant to 49 U.S.C. § 24308(a) and statutes providing Amtrak preference over freight transportation in using a rail line, junction or crossing, *see* 49 U.S.C. § 24308(c).

8.1.1. Amtrak Operations on UP lines

8.1.1.1. California Zephyr

310. Amtrak's California Zephyr service operates a daily train in each direction between Chicago, and San Francisco. UP hosts these trains for 1,377 miles between Denver and Emeryville, California.

311. Merger Impact: UP/NS plan to add one train pair to the Zephyr's route between Sacramento, and Alazon, Nevada, as part of a new intermodal service between Northern California and the Northeast. UP's line between Sacramento and Alazon has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[95]

8.1.1.2. Capitol Corridor

312. Amtrak's Capitol Corridor service is a state-supported service sponsored by the California Department of Transportation ("CalTrans") and overseen by the Capitol Corridor Joint Powers Authority ("CCJPA") that operates 28 daily trains in each direction between San Jose, and Auburn, California. UP hosts these trains for 161 miles between Santa Clara and Auburn.

---

[95] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 785-02.

313. Merger Impact: Applicants' plan to institute a new intermodal service between Northern California and the Northeast would add one train pair to the Capitol Corridor route between Sacramento and Auburn. UP's line between Sacramento and Auburn has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[96]

8.1.1.3. Cascade

314. Amtrak's Cascade service is a state-supported service sponsored by the Washington and Oregon Departments of Transportation that operates twice daily in each direction between Seattle and Eugene. UP hosts these trains for 123 miles between Portland and Eugene.

315. Merger Impact: Applicants do not expect that the merger will add trains to the Cascade route.

8.1.1.4. Coast Starlight

316. Amtrak's Coast Starlight service operates a daily train in each direction between Los Angeles and Seattle. UP hosts these trains for 1,147 miles between Moorpark, California, and Portland.

317. Merger Impact: Applicants do not expect that the merger will add trains to the Coast Starlight route.

---

[96] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 845-02.

8.1.1.5. Gold Runner

318. Amtrak's Gold Runner[97] service is a CalTrans-funded service that operates seven times daily in each direction between Bakersfield and Stockton, California, with five trains connecting to Oakland and two to Sacramento. UP hosts the Oakland trains for 41 miles between Port Chicago, California, and Oakland, and the Sacramento trains for 50 miles between Stockton and Sacramento.

319. Merger Impact: Applicants plan to institute a new intermodal service between Northern California and the Northeast that would add one train pair to the Gold Runner route between Stockton and Sacramento. UP's line between Stockton and Sacramento has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[98]

8.1.1.6. Lincoln (Illinois)

320. Amtrak's Lincoln (Illinois) service operates three trains per day in each direction between Chicago and St. Louis. UP hosts these trains for 241.5 miles between Wann, Illinois, and Joliet.

321. Merger Impact: Applicants' plan to route a westbound train via Butler to Kansas City would remove one freight train per day from the Lincoln (Illinois) route.

---

[97] The Gold Runner is a recently rebranded service previously known as San Joaquins.

[98] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 938-01.

8.1.1.7. Missouri River Runner and Lincoln/Missouri River Runner

322. Amtrak's Missouri River Runner operates one train daily in each direction between St. Louis and Rock Creek, Missouri. UP hosts these trains for 271 miles (out of the service's 283 total miles) between St. Louis and Rock Creek.

323. The full Lincoln/Missouri River Runner service runs the combined route of the Lincoln (Illinois) and Missouri River Runner (see below) services between Chicago and Kansas City once daily in each direction. It operates on Union Pacific lines for 512.5 out of 567 total miles.

324. Merger Impact: Applicants' plan to route a westbound train via Butler to Kansas City would remove one freight train per day from the Missouri River Runner and Lincoln/Missouri routes.

8.1.1.8. Pacific Surfliner

325. Amtrak's Pacific Surfliner service is a CalTrans-funded service, operated by the Los Angeles-San Diego-San Luis Obispo Rail Corridor Agency ("LOSSAN"), that operates ten times daily in each direction between San Luis Obispo and San Diego. UP hosts these trains for 174.4 miles between San Luis Obispo and Las Posas, California (out of the service's 350 total miles).

326. Merger Impact: Applicants do not expect that the merger will add trains to the Pacific Surfliner route.

8.1.1.9. Sunset Limited

327. Amtrak's Sunset Limited service operates three trains per week each way between Los Angeles and New Orleans. UP hosts these trains for 1,774.4 miles

between Iowa Junction, Louisiana, and El Monte, California (out of the service's 1,995 total miles).

328. Merger Impact: Applicants' plan to grow intermodal service to and from Southern California would add two trains per day between El Monte and City of Industry, California, four trains per day between City of Industry, California and West Colton, California, six trains per day between West Colton and El Paso, two trains per day between El Paso, and Sierra Blanca, Texas, two trains per day between San Antonio and Houston, two trains per day between Houston and Beaumont, Texas directionally traveling east on the Beaumont Subdivision and four trains per day between Houston and Beaumont directionally traveling west on the Houston Subdivision.[99] As discussed in Section 7.1 above and in Section IV.B.1 of the accompanying Service Assurance Plan, Applicants plan to invest approximately $34 million to increase capacity along the Sunset route to accommodate merger-related growth.[100] In addition, UP is currently investing to double-track portions of the route, which will expand capacity ahead of expected merger-related growth.[101] UP's lines between El Paso and Sierra Blanca and between San Antonio and Houston have sufficient capacity to accommodate the two additional trains per day projected to move across those segments.[102] In addition, as discussed in Section 4.3.5, Applicants'

---

[99] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 675-02.

[100] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H16.

[101] *See* Workpaper "UP Sunset Corridor Capacity Projects.pdf."

[102] *See* Workpaper "Line capacity.xlsx."

rationalization of operations in New Orleans will reduce congestion associated with current interchanges between UP and BNSF and NS.

8.1.1.10. Texas Eagle

329. Amtrak's Texas Eagle service operates a daily train in each direction between Chicago and San Antonio. UP hosts these trains for 1,086 miles between Joliet and San Antonio, although the Union Pacific trackage is not contiguous.

330. Merger Impact: Applicants' plans would reduce one train per day between Joliet and Gorham, Illinois, and would add three trains per day between Bald Knob, Arkansas, and North Little Rock, Arkansas, add on average one to two trains per day between Marshall, Texas and Dallas, and add one train per day between Ajax, Texas and San Antonio. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[103]

8.1.1.11. Winter Park (Ski Train)

331. Amtrak's Winter Park (Ski Train) service is a seasonal service that operates between three and five round trips per week between Denver and Fraser, Colorado. UP hosts these trains for almost their entire 62.2-mile route.

332. Merger impact. Applicants do not expect that the merger will add trains to the Ski Train route.

---

[103] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 400-01.

8.1.2. Amtrak Operations on NS lines.

8.1.2.1. Blue Water

333. Amtrak's Blue Water service operates between Chicago and Port Huron, Michigan, a distance of 319 miles. The service is sponsored by the Michigan Department of Transportation ("MDOT") and runs daily in both directions. The service runs over NS lines, consisting of a combination of double and triple track mainline between Chicago (21st Street) and Porter, Indiana, covering a distance of 38.9 miles.

334. Merger Impact: Applicants' plan would increase the number of freight trains on the Blue Water route. Applicants expect the merger would add one to two trains per day between Chicago and Porter. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[104]

8.1.2.2. Cardinal

335. The Cardinal is an Amtrak long distance route from Chicago to New York's Penn Station, via Washington, DC, a distance of 1,145 miles.[105] The service runs three times a week in each direction. On NS, the service runs on several separate segments. First, between Chicago (21st Street) and Chicago (CP 518), consisting of a combination of a double and triple track mainline, a distance of 2.6 miles. The Cardinal also operates on NS between Manassas, Virginia, and Orange, Virginia,

---

[104] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 55 and 56.

[105] The Cardinal also operates on UP lines for a short distance, 6.7 miles, in Chicago.

consisting of a combination of single and double track mainline (depending on the segment), a distance of 52.1 miles. NS dispatches the Virginia Passenger Rail Authority ("VPRA") owned lines between Alexandria and Manassas, a distance of 23.5 miles, consisting of a double track mainline. NS partnered with the VPRA in 2022 to implement future infrastructure improvements, including the Nokesville to Calverton double track project, related to the Roanoke Passenger Service, which operates on the same corridor between Manassas and Orange.

336. Merger Impact: Applicants' plan would increase the number of freight trains on the Cardinal route. Applicants expect the merger would add two to three trains per day between Orange and Manassas. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels. Cardinal trains will also benefit from the planned infrastructure improvements being undertaken to advance VPRA's passenger service objectives.[106]

8.1.2.3. Carolinian

337. The Carolinian is a daily roundtrip Amtrak operated and North Carolina Department of Transportation ("NCDOT") sponsored service between Charlotte and New York's Penn Station, a 497 mile distance. The NS portion of the route is 203.77 miles between Charlotte and Selma, North Carolina, consisting of a combination of a double track mainline and a single track mainline with passing sidings. NS partnered with the North Carolina Railroad ("NCRR") and NCDOT in

[106] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segment 147.

2024 to implement future infrastructure improvements between Greensboro and Raleigh, including the Clegg to Cary siding extension, Hillsborough Curve realignment, Cornwallis Drive grade separation and curve realignment, Elon siding, and Hillsborough siding projects, each related to the Carolinian and Piedmont passenger services.

338. Merger Impact: Applicants' plan would, on balance, increase the number of freight trains on a portion of the Carolinian route. Applicants expect the merger will add two to three trains per day between Charlotte and Greensboro, and will not add trains between Greensboro and Selma. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[107]

8.1.2.4. Crescent

339. The long distance Amtrak Crescent train runs between New York's Penn Station and New Orleans on a daily basis, covering 1,367 miles. On NS, the Crescent runs for 1,116.2 miles between Manassas and East City Junction, Louisiana, consisting of a combination of single and double track mainline and a single track mainline with passing sidings. NS dispatches the entire route, although CPKC controls a key interlocking at Meridian, Mississippi and CSXT controls the interlocking at Howell in Atlanta. As noted in the discussion on the Cardinal Service, NS dispatches the VPRA owned line between Manassas and Alexandria, and

[107] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab NS 251119-01, Segments 49, 142 and 191.

partnered with the VPRA in 2022 to implement future infrastructure improvements, including the Nokesville to Calverton double track project, related to the Roanoke Passenger Service, which operates on the same corridor between Manassas and Lynchburg, Virginia. In addition, NS is coordinating with Amtrak to implement future infrastructure improvements related to the Mardi Gras Service, which operates on the same corridor near New Orleans. Specifically, new crossovers on the Back Belt in the New Orleans terminal will allow Amtrak trains to enter and exit the terminal more efficiently and improve the overall fluidity of the Back Belt.[108]

340. Merger Impact: Applicants' plan would increase the number of freight trains on the Crescent route. Applicants expect the merger would add three to four trains per day on the Crescent's route between New Orleans and Meridian, as well as nine to ten trains per day between Meridian and Atlanta, and two to three trains per day between Atlanta and Manassas. To support the projected freight volumes, UP/NS will implement targeted infrastructure enhancements at key locations on the Crescent's route, primarily focused on the corridor between New Orleans and Atlanta, ensuring continued compliance with existing passenger service obligations. An anticipated infrastructure improvement investment planned near Meridian could also provide operational benefits for the Crescent route. Similarly, infrastructure improvements between Lumberton, Mississippi, and Taylor, Georgia, may also

[108] These investments, which NS will partially fund, are described in the FRA Consolidated Rail Infrastructure and Safety Improvements ("CRISI") grant application submitted by Amtrak. *See* Application for Federal Assistance, https://www.amtrak.com/content/dam/projects/dotcom/english/public/documents/corporate/foia/Submitted-Core-Application-Gulf-Coast.pdf.

provide operational benefits to the Crescent on that segment.[109] Additionally, all trains on the Crescent route will benefit from the above-mentioned Nokesville-Calverton double tracking project, as well as the Back Belt crossover projects, all of which will improve fluidity on this key passenger route. With the addition of the planned merger-related infrastructure improvements between New Orleans and Atlanta, the route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.

8.1.2.5. Floridian (Combination of Capitol Limited and Silver Star Services)

341. The Floridian is a temporary Amtrak long distance train that runs daily round trip from Chicago to Miami via Washington, DC while planned rehabilitation work of New York's East River Tunnels takes place. The Floridian is operating over the routes of two currently suspended Amtrak services: The Capitol Limited (Chicago to Washington, DC) and Silver Star (New York's Penn Station to Miami). The NS portion of the 2,065 mile Floridian route is in two segments: Chicago (21st Street) to Pittsburgh (489.9 miles), consisting of a combination of double and triple track mainline and Selma, North Carolina to Cary, North Carolina (37.6 miles), consisting of single track mainline with passing sidings.

342. Merger Impact: Applicants expect to add one to two trains per day on the Lake Shore Limited's route between Chicago and Toledo, Ohio, and two to three

[109] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 6, 14, 19, 23, 30–31, 36, 46, 49, 120–121, 141–142, 147, 162–164, 191, and 200.

trains per day between Toledo and Cleveland. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[110]

8.1.2.6. Lake Shore Limited

343. The Lake Shore Limited is an Amtrak long distance train from Chicagoto Boston and New York, a 1,018 and 959 mile route, respectively, traveled round trip daily. The NS portion of the route is from Chicago (21st Street) to Cleveland, 339.6 miles, consisting of a combination of double and triple track mainline.

344. Merger Impact: Applicants' plan would increase the number of freight trains on the Lake Shore Limited Route. Applicants expect to add one to two trains per day on the Lake Shore Limited's route between Chicago and Toledo and two to three trains per day between Toledo and Cleveland. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[111]

8.1.2.7. Mardi Gras

345. The Mardi Gras is a new—as of August 2025—state supported service funded by the Southern Rail Commission running two round-trip daily trains between Mobile, Alabama, and New Orleans. The NS portion of the 144-mile route is

---

[110] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 8, 55–57, 80–82, 95, and 212.

[111] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 55–57, 95, and 212.

just 3.7 miles between East City Junction, Louisiana, and Elysian Fields, Louisiana, in New Orleans, consisting of double track mainline. NS is coordinating with Amtrak to implement future infrastructure improvements related to the Mardi Gras Service. As referenced in the discussion of the Crescent, anticipated improvements include three new crossovers that will improve the efficiency of Amtrak train movements.

346. Merger Impact: Applicants' plan would increase the number of freight trains on the Mardi Gras Route. Applicants expect the merger will add three to four trains per day on the Mardi Gras route between East City Junction and Elysian Fields, Louisiana, in New Orleans. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[112]

8.1.2.8. Pennsylvanian

347. The Pennsylvanian is a state sponsored service funded by the Pennsylvania Department of Transportation ("PennDOT"). It runs a daily round trip for 444 miles between Pittsburgh and New York's Penn Station. The NS segment is 248.5 miles between Pittsburgh and Harrisburg, Pennsylvania, consisting of a combination of double and triple track mainline. NS partnered with the PennDOT in 2023 to implement future infrastructure improvements, including the Harrisburg third mainline, Enola 3rd mainline, Lemoyne connection, Camp Hill connection, Mifflin crossovers, Hawstone crossovers, Altoona 3rd main, control point 'C' reconfiguration, Johnstown crossovers, control point 'Home' connection, and the

[112] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segment 163.

Pittsburgh station additional main projects. Following completion of certain infrastructure projects, PennDOT will add an additional round trip for this service.

348. Merger Impact: Applicants' plan would increase the number of freight trains on the Pennsylvanian route. Applicants expect the merger will add four to five trains per day between Pittsburgh and Harrisburg. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels (which can be increased once certain passenger-specific infrastructure projects are complete).[113]

8.1.2.9. Pere Marquette

349. Amtrak's Pere Marquette service operates between Chicago and Grand Rapids, Michigan, a distance of 174 miles. The service is sponsored by the Michigan Department of Transportation and runs daily in both directions. The service runs over NS lines, consisting of a combination of double and triple track mainline between Chicago, IL (21st Street) and Porter, Indiana, covering a distance of 38.9 miles.

350. Merger Impact: Applicants' plan would increase the number of freight trains on the Pere Marquette route. Applicants expect the merger would add one to two trains per day between Chicago and Porter. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[114]

---

[113] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 80 and 101.

[114] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 55–56.

8.1.2.10. Piedmont

351. The Piedmont is a state supported service sponsored by NCDOT and operated by Amtrak between Charlotte, NC, and Raleigh, NC for 173 miles. The four daily round trips operate entirely on NS's tracks, consisting of a combination of a double track mainline and a single track mainline with passing sidings. As noted in the discussion on the Carolinian, NS partnered with NCRR and NCDOT in 2024 to implement future infrastructure improvements, including the Clegg to Cary siding extension, Hillsborough Curve realignment, Cornwallis Drive grade separation and curve realignment, Elon siding, and Hillsborough siding projects, related to the Carolinian and Piedmont passenger services.

352. Merger Impact: Applicants' plan would, on balance, increase the number of trains on the Piedmont route. Applicants expect the merger will add two to three trains per day between Charlotte and Greensboro, North Carolina, and will not add trains between Greensboro and Raleigh. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[115]

8.1.2.11. Richmond/Newport News/Norfolk

353. The Richmond/Newport News/Norfolk service is supported by the Commonwealth of Virginia through VPRA and operated by Amtrak. It operates a minimum of three daily round trips between Boston and Norfolk. NS hosts 81.2 of the

[115] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 49, 142 and 191.

689 total miles between Norfolk and the North Collier Yard near Petersburg, Virginia, consisting of a double track mainline.

354. Merger Impact: Applicants' plan would increase the number of trains on the Norfolk route. The Applicants expect the merger will add one train per day between Petersburg and Norfolk. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[116]

8.1.2.12. Roanoke Service

355. The Roanoke service, another Virginia-supported service that is operated by Amtrak, runs twice daily between Roanoke, Virginia, and Boston, a distance of 735 miles. The NS portion of the route is 237.6 miles between Roanoke, and Manassas, consisting of a combination of single and double track mainline. As noted elsewhere, NS dispatches the VPRA-owned line between Manassas and Alexandria. NS also partnered with the VPRA in 2022 to implement future infrastructure improvements, including the Nokesville to Calverton double track project, related to the Roanoke Passenger Service. Further, NS and VPRA have agreed to a series of improvements that will allow VPRA to expand the service to Christiansburg, Virginia in the New River Valley in 2027.

356. Merger Impact: Applicants' plan would increase the number of freight trains on the Roanoke service's route. Applicants expect the merger will add one train per day between Roanoke and Lynchburg, Virginia, and two to three trains per day

[116] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 130, 176 and 207.

between Lynchburg and Manassas. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels, which can increase with the future, passenger-specific infrastructure projects.[117]

8.1.2.13. Wolverine

357. Amtrak's Wolverine service operates between Chicago and Pontiac, Michigan, a distance of 299 miles. The service is sponsored by Michigan Department of Transportation and runs three daily round trips. The service runs over NS lines, consisting of a combination of double and triple track mainline between Chicago (21st Street) to Porter, Indiana, covering a distance of 38.9 miles.

358. Merger Impact: Applicants' plan would increase the number of freight trains on the Wolverine route. Applicants expect the merger would add one to two trains per day between Chicago and Porter. The route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[118]

8.1.3. Other Existing Passenger Operations on UP Lines

8.1.3.1. ACE

359. Altamont Corridor Express ("ACE") commuter service operates eight daily trains in each direction on weekdays over its 87-mile route between El Pinal

---

[117] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 6, 144, 174, 187, and 189.

[118] *See* Workpaper "NS Line-Of-Road Volume-Capacity Summary.xlsx," Tab "NS 251119-01," Segments 55–56.

ACE, in Stockton, California, and CP Coast in Santa Clara. These trains operate on UP from origin to destination.

360. Merger Impact: Applicants' plan to institute a new intermodal service between Northern California and the Northeast would add one daily train pair to the Altamont Corridor express route for the short distance between Lathrop Intermodal Ramp and Stockton. The corridor's existing configuration supports the projected freight increase while maintaining the current passenger service levels.[119]

8.1.3.2. CalTrain

361. CalTrain commuter service in California is hosted by UP between CP Lick and Gilroy. CalTrain runs 22 trains on weekdays over the UP segment.

362. Merger Impact: Applicants do not expect the merger will increase the number of trains operating over the lines used by CalTrain.

8.1.3.3. Metra

363. Metra commuter service operates over three UP-owned lines in and around Chicago. Metra currently operates 35 daily weekday trains and 15 daily weekend trains in each direction on the UP-North line over approximately 50 miles of UP line between Chicago to Kenosha, Wisconsin; 39 daily weekday trains, 17 Saturday trains, and 11 Sunday trains in each direction on the UP-Northwest line over approximately 63 miles of UP line between Chicago and Harvard, Illinois; and 39 daily trains, ten Saturday trains, and nine Sunday trains in each direction on the

[119] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 900-01.

UP-West line over approximately 44 miles of UP line between Chicago and Elburn, Illinois.

364. Merger Impact: Applicants expect the merger will add 12 trains per day to UP's line between Proviso and Kedzie on the UP-West line and 4 trains per day between Proviso and Elburn. UP's route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[120]

8.1.3.4. Metrolink

365. Metrolink's commuter service in California provides service to multiple different origin-destination combinations. Metrolink is operated by the Southern California Regional Rail Authority ("SCRRA")—a joint powers authority representing various county transportation commissions—serving several counties in California and runs three round trips each weekday and two round trips per weekend on UP's line between Moorpark, California, and North Montalvo, California, a distance of 23.51 miles. Metrolink also has rights to run special trains an additional 5.6 miles from North Montalvo to the Ventura Fairgrounds. Metrolink also operates five round trips each weekday on UP's line between West Riverside, California, and Soto Street Junction, California, a distance of 54.77 miles.

366. Merger impact: Applicants expect the merger will add on average two trains per day only between City of Industry, California, and Soto St. Jct, California.

[120] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 001-03.

UP's route has sufficient capacity to support the projected freight increase while maintaining the current passenger service levels.[121]

8.1.3.5. Trinity Railway Express

367. Trinity Railway Express ("TRE") operates commuter rail service between Dallas and Fort Worth. TRE operates approximately 384 trains each week (Monday through Saturday)—not including special event trains—on an hourly or half-hourly schedule. The Dallas Area Rapid Transit Authority and Trinity Metro are the owners of the rail corridor, over which UP also operates via a trackage rights agreement. TRE also operates through CP T-217 (JFK Junction) on UP's Dallas Subdivision to reach EBJ Union Station.

368. Merger Impact: Applicants do not expect the merger will increase the number of trains operating over the lines used by TRE.

8.1.3.6. Rocky Mountaineer

369. The Rocky Mountaineer is a privately-owned seasonal train owned and operated by American Rocky Mountaineer that runs on UP lines. It operates approximately April through November from Denver, to Moab, Utah, as a leisure train for tourists. During its active season, the service makes 1-2 round trips per week (with each round trip taking place over three days). The entire route trip is 840 miles (Days 1 and 3 are 225 miles, Day 2 is 390 miles).

---

[121] *See* Workpaper "UP Line-Of-Road Volume-Capacity Summary.xlsx," Tab "Summary," Segment 965-07.

370. Merger Impact: Applicants do not expect the merger will increase the number of trains operating over the lines used by the Rocky Mountaineer.

8.1.4. Other Existing Passenger Operations on NS lines

371. NS is host to two commuter rail operations subject to contractual agreements, discussed further below.

8.1.4.1. Metra

372. In the Chicago area, NS hosts Metra for a small segment of its SouthWest (SWS) service, consisting of a combination of double and triple track mainline, with 15 daily trips in both directions between Chicago (21st Street) and Chicago (CP 518). Metra's SWS service also runs on tracks leased from NS between Landers and Manhattan, Illinois (32.9 miles). NS maintains dispatching authority for the line. Fifteen trains run in each direction on weekdays and there is no weekend service.

373. Merger Impact: Applicants' plan does not anticipate addition of trains to the Metra route.[122]

8.1.4.2. Virginia Railway Express (VRE)

374. Virginia Railway Express' ("VRE") Manassas service operates between Washington, DC, and Broad Run, Virginia, a distance of 35 miles. The service runs eight round trips, Monday through Friday. The service runs over NS lines, consisting

[122] NS also has freight easement rights to operate on the Metra SouthWest Service line between 75th Street and 47th Street in Chicago, a distance of 3.7 miles. The easement includes operating restrictions to avoid conflicts with peak commuter service. An intermodal train pair (ZEGYC and ZYCEG) will be extended to reach NS's 47th Street intermodal terminal and will operate over the easement to do so.

of a double track mainline between Broad Run and Manassas, covering a distance of 3.48 miles. NS has worked cooperatively with VPRA to support additional VRE weekend services in future years as part of selling to VPRA a portion of the NS Manassas Line between Alexandria and Manassas, which NS continues to dispatch.

375. Merger Impact: Applicants' plans do not anticipate addition of trains to the VRE route.

9. Equipment Requirements and Utilization

9.1. Locomotives

9.1.1. Current Locomotive Fleets and Post-Merger Utilization

376. As shown below in Table 11, UP currently—as of October 9, 2025—owns or leases 6,985 locomotives, including 5,537 for road freight service and 1,448 for yard and local switching service. UP has significant excess locomotive capacity, with 1,524 of its locomotives in storage as of October 9, 2025.

377. Also as shown in Table 11, NS owns 3,255 locomotives, including 2,108 for road freight service and 1,147 for yard and local switching service. NS also has significant excess locomotive capacity with 867 of its locomotives in storage as of October 9, 2025.

Table 11[123]
UP and NS Locomotive Inventory

UP	Owned	Leased	Total
Freight	4,342	1,195	5,537
Switching	1,448	-	1,448
Total	5,790	1,195	6,985

NS	Owned	Leased	Total
Freight	2,108	-	2,108
Switching	1,147	-	1,147
Total	3,255	-	3,255

Combined UP & NS	Owned	Leased	Total
Freight	6,450	1,195	7,645
Switching	2,595	-	2,595
Total	9,045	1,195	10,240

378. The UP and NS fleets are largely compatible across model types and horsepower ratings, which will allow the combined railroad to seamlessly integrate its locomotive stock.

379. The combination of the UP and NS networks will enable improved locomotive utilization, creating excess locomotive capacity from the legacy fleets. The operating plan for the combined network optimizes train routing and reduces interchanges and yard touches. In addition, Applicants anticipate reduced locomotive dwell across the legacy UP and NS yards as homogenous treatment of the combined fleet eliminates inefficient return trip scheduling. From a switching perspective, bringing the legacy NS yard and local network to the higher UP efficiency levels

[123] *See* Workpaper "UP and NS Locomotive Rosters 10-9-25.xlsx," Tab "Locomotive Summary."

would reduce the switching locomotive demand in the Optimized Plan. Applicants identified the switching efficiency based on the ratio of daily people starts to car volume for production and industry jobs respectively. The change in daily people starts was translated to locomotives by adjusting for the historical NS people per job, planned locomotives per job, and planned power shares between one, two, or three jobs. Applicants expect that these synergies will reduce the locomotive needs of the combined railroad in the Optimized Plan by 58 freight locomotives and 159 switching locomotives.[124]

380. The combined railroad's ability to optimize locomotive assignments across a combined fleet will also create a sufficient buffer such that it will have an opportunity to remanufacture older locomotives to meet future demands. UP/NS will store the majority of excess locomotives, which will provide a low-cost solution to support future growth as well as defer future asset replacements. UP/NS may sell some older locomotive models based on market conditions.

9.1.2. Post-Merger Locomotive Needs

381. Applicants expect the existing locomotive stock of the two railroads will be sufficient to effectively handle the anticipated volume of traffic for the combined UP/NS network. They also expect that the merger of the two railroads and their fleets will improve efficiencies in equipment use.

[124] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Loco Fleet Impact," Cells F12 and F18.

382. The combined UP/NS network will drive additional service growth as explained in the Growth Plan, increasing locomotive needs in the years following the merger. Applicants calculated Growth Plan locomotive needs based on the increased gross ton mile demand for freight and increased daily yard volume for switching locomotives, relative to the Optimized active fleet size. Under the Growth Plan, the combined railroad is expected to need 1,096 more locomotives in active service by Year 3.[125]

383. Specifically, Applicants expect that the merged railroad will need 890 more active freight locomotives and 206 more active switching locomotives in Year 3.[126] As shown in Table 12 below, Applicants expect that their combined current locomotive inventory is sufficient to address those needs.

Table 12[127]
UP/NS Locomotive Needs

Service Type	Current Active	Optimized Active	Growth Active	Total Fleet
Road Freight	5,121	5,063	5,953	7,645
Switching	1,858	1,699	1,905	2,595
Total Fleet	6,979	6,762	7,858	10,240

384. To satisfy projected demand, Applicants anticipate that the combined railroad will utilize the excess locomotive capacity created by the locomotive optimization discussed above, including repair of stored serviceable and stored

[125] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "ThruFreight Fleet Plan," Cell E35.

[126] *See id.*, Cell E8; *id.*, Tab "Switching Fleet Plan," Cell E7.

[127] *See id.*, Tab "ThruFreight Fleet Plan," Cells C16:E16 and C20; *id.*, Tab "Switching Fleet Plan," Cells C32:E32 and C35.

unserviceable units.[128] Even factoring in the expected merger-related and other growth reflected in the Growth Plan, Applicants expect that no locomotive acquisitions will be necessary for UP/NS to handle the volumes projected by the end of Year 3.

385. Applicants do not plan that the combined railroad will retire any locomotives.

9.1.3. Locomotive Maintenance

386. UP's Mechanical Department performs locomotive maintenance at shops and yards throughout its network. Thousands of UP employees focus on locomotive inspection, maintenance, and repair. The following Table 13 lists UP inspection, maintenance, and repair locations with more than 20 employees. For each location, the table lists total employees and specifies how many employees are locomotive craftsmen and rail car craftsmen performing the inspection, maintenance, and repair work, and the non-agreement employees who oversee that work.

[128] For an accounting of expected locomotive repair costs, *see* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Implementation Expense," Cells D4:G4.

Table 13[129]
UP Mechanical Locations With More Than 20 Employees

Location	Employees

[129] *See* Workpaper "Mechanical Locations Over 20 Employees.xlsx," Tab "UP Locations."

387. NS's Mechanical Department performs locomotive maintenance and equipment repair at shops and yards across its network. NS has over 1,300 craft employees focused on locomotive inspection, maintenance, and repair. Table 14 below summarizes NS's mechanical shops with more than 20 employees. For each location, the table lists total employees and specifies how many employees are locomotive craftsmen and rail car craftsmen performing the inspection, maintenance, and repair work, and the non-agreement employees who oversee that work.

Table 14[130]
NS Mechanical Locations With More Than 20 Employees

Location	Employees			
	Locomotive	Rail Car	Non-Agreement	Total
Bellevue, OH	55	59	15	129

Total	**1,281**	**722**	**209**	**2,212**

[130] *See* Workpaper "Mechanical Locations Over 20 Employees.xlsx," Tab "NS Locations."

388. In addition to the mechanical work undertaken at NS's locomotive shops, NS has mechanical personnel at over 15 other locations available for servicing or running repairs to minimize locomotive down time.

389. Following the merger, UP/NS will evaluate the mechanical needs of the combined network, during which time the combined railroad will continue maintenance operations at most existing locations. The combined railroad's evaluation of mechanical needs will be based on operational flow, and could result in additional consolidation or rationalization of existing mechanical facilities to best support the combined railroad's traffic service.

390. The increased traffic flow on the combined network may result in the need for additional locomotive maintenance. If this occurs, existing facilities on the UP and NS networks are expected to have sufficient capacity to address these needs.

391. UP and NS also intend to reduce potential redundancies at existing interchange locations where UP and NS currently operate independent facilities, including in areas around Chicago, Kansas City, New Orleans, and St. Louis. By consolidating maintenance operations and eliminating redundancies, UP and NS anticipate they will improve fluidity and run-through at current interchange locations. This is expected to result in fewer locomotive stops for repair and inspection at interchange gateways.

392. UP and NS also anticipate that the redesign of the network will allow for other mechanical synergies. These and other anticipated mechanical synergies are discussed in greater detail in Section 10.3.2, below.

9.2. Rolling Stock

9.2.1. Current Rolling Stock Inventory

393. As provided in Table 15 below, as of September 3, 2025, UP had 144,830 total railcars of varying types and NS had 95,897 total railcars of varying types. This includes owned, leased, and allocated TTX railcars. Like other railroads, UP and NS also move significant private railcar traffic across their networks.

Table 15[131]
UP and NS Railcar Inventory

Car Type	UP	NS	Total Fleet
Automotive Racks	14,660	10,380	25,040
Boxcars	17,267	9,036	26,303
Refrigerated Boxcars	2,902	-	2,902
Covered Hoppers	23,498	5,312	28,810
Flatcars	9,565	3,359	12,924
Gondolas	11,251	12,427	23,678
Intermodal Double Stacks	57,383	36,397	93,780
Intermodal Conventional	3,489	3,289	6,778
Open Top Hoppers	4,815	15,697	20,512
Total	**144,830**	**95,897**	**240,727**

9.2.2. Post-Merger Rolling Stock Needs

394. The Optimized operating plan improves railcar utilization through more single-line service, decreased handlings and yard work, reduced dwell time, and optimized movements including increased train speeds.

395. The merger will improve the efficiency of freight car distribution and create new opportunities to triangulate railcar usage. For example, the merger should

[131] *See* Workpaper "Railcar Fleet Exhibits.xlsx," Tab "Railcar Fleet Plan," Columns E, H, and K.

result in reduced empty car miles as fewer cars will be reverse-routed to the origin carrier. The benefit of reduced empty car miles was calculated for gondola, covered hopper, flatcar, and open top hopper fleets. Applicants did not calculate incremental empty mileage savings for railcars that currently operate in national pools, such as intermodal wells, autoracks, and boxcars. Applicants also anticipate that the combined railroad will have improved ability to provide shippers with the empty railcars they require for loading.

396. These efficiencies will result in improved cycle times, allowing the combined system to handle the same volume of freight traffic (and provide improved service levels) with fewer railcars. The combined UP/NS system is estimated to need 198,722 railcars, a reduction of 468 from current stock levels.[132] Table 16 below shows the expected needs by car type and current stock.

Table 16[133]
Optimized Plan Rolling Stock

Car Type	Current Active	Optimized Active	Difference	Total Fleet
Automotive Racks	22,505	22,505	-	25,040
Boxcars	19,941	19,941	-	26,303
Refrigerated Boxcars	1,737	1,737	-	2,902
Covered Hoppers	20,394	20,294	(100)	28,810
Flatcars	9,186	9,146	(40)	12,924
Gondolas	17,289	17,069	(220)	23,678
Intermodal Double Stacks	89,375	89,278	(98)	93,780
Intermodal Conventional	4,230	4,230	-	6,778
Open Top Hoppers	14,533	14,523	(10)	20,512
Total Fleet	**199,190**	**198,722**	**(468)**	**240,727**

[132] *See* Workpaper "Railcar Fleet Exhibits.xlsx," Tab "Railcar Fleet Plan," Cells V13:W13.

[133] *See id.*, Columns I, K, and V:W.

397. The combined railroad will reduce the size of the UP/NS fleet following the merger. Applicants anticipate that UP/NS will retire the older, less efficient cars, which should improve the average quality of the fleet's cars across the network.

398. The anticipated traffic growth resulting from the merger will require an increased active fleet in certain types of railcars by Year 3. For example, intermodal traffic growth will increase the demand for intermodal stack cars across the combined network. As another example, finished vehicle traffic growth will increase the demand for autoracks.

399. Table 17 below shows the forecasted active fleet size by car type, along with the remaining stored counts, in the Growth Plan.

Table 17[134]
Growth Plan Rolling Stock

Car Type	Current Active	Growth Active	Difference	Total Fleet
Automotive Racks	22,505	23,855	1,350	25,040
Boxcars	19,941	20,102	161	26,303
Refrigerated Boxcars	1,737	2,727	990	2,902
Covered Hoppers	20,394	21,512	1,118	28,810
Flatcars	9,186	9,748	562	12,924
Gondolas	17,289	17,091	(198)	23,678
Intermodal Double Stacks	89,375	90,538	1,163	93,780
Intermodal Conventional	4,230	4,230	-	6,778
Open Top Hoppers	14,533	15,182	649	20,512
Total Fleet	**199,190**	**204,985**	**5,795**	**240,727**

[134] *See* Workpaper "Railcar Fleet Exhibits.xlsx," Tab "Railcar Fleet Plan," Columns I, K, and Z.

400. Based on the UP/NS growth plan and current rolling stock fleet of the two railroads, Applicants do not anticipate future acquisitions of rolling stock. Instead, the increased demand will be served by bringing inactive cars in the fleet into service. For example, the combined railroad will fill increased demand for refrigerated boxcars by investing $35 million in refrigerated unit replacements to return stored refrigerated boxcars back into the active fleet.[135]

9.2.3. Railcar Maintenance

401. UP's Mechanical Department has over 1,000 employees focused on railcar inspection and repair. UP conducts railcar maintenance at shops throughout its network, including its backshop in De Soto, Missouri, as shown above in Table 13. De Soto focuses on autorack rebuilds and heavy damage repair. In addition to the internal network of 23 car facilities, UP participates in eleven TTX-operated repair locations. UP also has mechanical personnel available at locations throughout its network for spot repairs to avoid time off the line.

402. NS's mechanical department has over 900 employees devoted to freight car inspection and repair. NS operates two system program shops in Norfolk, Virginia, and Portsmouth, Ohio. Norfolk handles cross brace repairs on coal cars while Portsmouth handles all other work. NS also has 10 car shops at major terminals. NS further participates in 15 TTX-operated intermodal repair shops and

[135] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H10.

has mechanical personnel available around the network for spot repairs to avoid time off the line.

403. Following the merger, the combined railroad will insource autorack rebuilds at its De Soto, Missouri, facility. This will require the addition of 19 craft employees by the end of Year 3.[136] Additionally, Applicants anticipate that UP/NS will rationalize the legacy NS car backshop at Portsmouth, Ohio, by leveraging capacity at other facilities across the combined network. By leveraging existing capacity, the combined railroad should be able to eliminate overhead and realize cost efficiencies. *See* Section 10.3.2.4 below for additional detail.[137]

404. UP and NS expect that integration of the two railroads will create additional synergies and unlock efficiencies related to certain equipment and policies. These and other anticipated mechanical synergies are discussed in greater detail in Section 10.3.2, below.

9.3. Maintenance of Way (MOW) Equipment and Practices

9.3.1. Current Inventory of MOW Equipment

405. Both NS and UP use a variety of owned and leased MOW equipment, each piece critical to ensuring safe and efficient rail operations. Applicants' MOW equipment inventories include:

---

[136] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Autoracks Capital," Cell H37.

[137] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Car Backshop," Cell E21.

406. *Track Geometry Vehicles*. Applicants use track geometry vehicles to collect detailed information about track infrastructure and analyze track conditions to maintain overall infrastructure reliability. NS uses locomotive-based automated systems, track geometry trucks and railcars, along with an in-house, proprietary process for collecting, reporting, and maintaining track data. Over the last five years, UP increased its fleet of manual and autonomous geometry testing equipment. The increase resulted in a nearly 10x increase in miles tested. In that time, UP has recorded an 85 percent drop in geometry-related defects—evidence the railroad's data-driven approach promotes lasting, quality repairs. UP continues to expand its geometry testing fleet each year, and is now operating 15 autonomous systems across its network.

407. *Rail Flaw Detection*. Applicants use the latest technology to identify internal rail flaws. This technology—referred to as non-stop rail flaw detection—allows UP and NS to operate at a higher speed while leveraging AI and analytics to detect defects. Today, UP's fleet of 13 trucks minimizes Engineering's on-track footprint while increasing safety and reducing overall variability. UP employees operate these trucks, while NS uses contractor-operated units.

408. *Automated Tie Unloaders*. UP uses these machines to autonomously distribute crossties throughout its network, reducing unloading time by 75 percent per tie car while nearly eliminating internal and external safety risks. NS does not currently have this technology.

409. *Automated Rail Unloader*. UP uses this machine to autonomously unload rail within existing traffic windows. The automated rail unloader, which debuted in May 2025, unloads rail 50 percent faster than traditional technologies. It offers 24/7 unloading capabilities and drastically reduces internal and external safety risks. The construction of three additional automated rail unloading units is underway. Two of the additional units are expected to be in operation in 2026, and the third additional unit in 2027.

410. *GPS Automated Ballast Unloading Train*. UP uses six Global Positioning System ("GPS") belly dump ballast-unloading trains, each equipped with 75 to 100 cars, to unload ballast at precisely identified locations via GPS, while moving at speeds of up to 15 miles per hour. This technology has the ability to operate 24/7 and entirely eliminates the need for Track Laborers to physically supervise the process, drastically reducing personal injury risk. NS utilizes three GPS belly dump trains.

411. *Tampers*. Applicants use surfacing equipment, including tampers, which are machines featuring hydraulic jacks to "tamp" the ballast. This levels the stone around and underneath the ties for proper support.

412. *Regulators*. Applicants use regulators, another type of surfacing equipment, to ensure ballast is evenly arranged across the right of way. These machines clear the stone from the ties and angle the ballast to restore proper drainage.

413. *Spike Driver*. Applicants use spike drivers, which are machines that utilize hydraulics to quickly drive spikes down, holding the tie plate and rail to the tie.

414. *Spike Puller*. Applicants use spike pullers, which are machines that utilize hydraulics to pull spikes from each side of the rail simultaneously.

415. *Rail Grinders*. Applicants use large production high speed rail grinders, which are machines that grind the rail surface to reduce friction and wear, prolonging track life and protecting rolling stock.

416. *Anchor Spreader and Squeezer*. Applicants use an anchor spreader and squeezer, which is a machine that seamlessly spreads anchors once a tie has been removed, allowing for installation of a new tie. Following tie installation, the squeezer effectively reinstalls the anchors to prevent longitudinal movement of the rail.

417. *Undercutter*. Applicants use undercutting equipment, which removes mud and fouled ballast from the right-of-way, renewing roadbed conditions.

418. *Automatic Conveyor Train*. UP leases automatic belt-fed conveyor trains, which allow UP to expeditiously unload bulk aggregate material, reducing track time and overall resource requirements. The four consists, each with 30 cars, are essential for quickly restoring infrastructure during weather-related outages (*i.e.*, washouts). NS also uses this technology.

419. *Water Car Fleet*. UP uses a fleet of 50 strategically staged water tank cars across its network ready to be deployed day or night. Each car is capable of holding between 7,000 and 23,000 gallons of water and is equipped with nozzles that

can spray up to 75 feet. UP deploys this fleet to protect railroad infrastructure and communities from the devastating effects of wildfires across primarily the western United States. During Northern California's Lava and Dixie Fires in 2021, for example, UP was able to douse spot fires and protect the infrastructure with water cannons. UP also assisted federal, state and local first responders on the ground by hauling water into remote sections of the National Forest to fill water tank trucks, saving firefighters valuable time.

9.3.2. Acquisition and Retirement of MOW Equipment

420. Both UP and NS base their acquisitions and retirements on the useful life of the MOW equipment and capital program requirements. NS categorizes over 3,800 pieces of MOW equipment across 145 categories, while UP's inventory exceeds 5,000.[138] Both railroads track manufacturer year and build date to ensure the fleet's optimal performance.

421. Applicants anticipate that the combined railroad's MOW inventory will be sufficient to satisfy the maintenance and renewal needs of the combined network in the immediate future.

422. UP/NS will operate a combined legacy fleet in the short-term, ensuring qualified operators and maintenance practices remain intact. Looking ahead, Applicants anticipate that the combined railroad will right-size the combined MOW equipment inventory through a combination of purchased, leased and rented equipment sized according to operational demand.

---

[138] *See* Workpaper "UP_NS MOW Equipment Inventory.xslx."

9.3.3. Equipment Inventory Management

423. UP and NS meticulously track work equipment, minimizing downtime and maximizing production. UP's tracks equipment via GPS and measures productivity via gang production reporting. UP tracks downtime and spend through work orders submitted through SAP, which account for every maintenance event exceeding five minutes.

424. NS uses a centralized system for inventory management, in which decisions are made by the Director of Engineering Equipment, who reports up to the Chief Engineer Program Maintenance, who oversees the age, condition, and needs for the MOW fleet. NS tracks downtime and spend for each piece of NS MOW equipment through work orders submitted through SAP. The Engineering Department has a budget, and the Vice President-Engineering grants final approval.

425. Both UP and NS maintain centralized work equipment shops that leverage data to plan equipment maintenance, repair, and replacement: UP's shop in Adams City, Colorado, and NS's shop in Charlotte, North Carolina. While both railroads' MOW equipment is similar, some key components—such as operating systems—differ. Eventually, the combined railroad will transition to comparable equipment, with established training programs to support personnel systemwide.

426. Following the merger, the combined railroad will right-size MOW equipment counts according to operational need and equipment condition while optimizing each shop's capacity, geographic location, access to suppliers, technology, and manpower. Applicants continue to evaluate opportunities to consolidate operations among the existing shops at Adams City and Charlotte.

9.3.4. Track Evaluation

427. Both UP and NS collect track geometry and overall infrastructure assessment data via physical observation and autonomous technology to analyze potential track defects, prioritize repairs, plan maintenance activities, and build long-term capital investment strategies. As discussed above, both railroads harness technologically-advanced equipment that allows them to monitor track geometry, while adhering to Federal Railroad Administration rules regarding visual track inspection.

428. NS's autonomous fleet includes a combination of geometry trucks, ATGMS (Automated Track Geometry Measurement System)-equipped locomotives, and survey trucks, some of which are supported via contracted field services.

429. UP maintains its own geometry testing fleet, including ATGMS-equipped locomotives and boxcars, in addition to manned inspection cars.

430. UP/NS will adopt NS's industry leading in-house testing capabilities across the combined UP/NS network. This will enable more frequent and consistent infrastructure assessments, supporting improved safety, reliability, and strategic investment planning.

9.4. Deferred Maintenance or Delayed Capital Improvements

431. The full integration of the legacy UP and NS networks will not result in any routes being downgraded or made redundant. Applicants anticipate that the combined railroad will keep MOW activity consistent across the system, with no deferral of maintenance tasks or postponement of capital improvement projects due to the consolidation.

432. Bringing together the operational strengths of UP and NS presents a unique opportunity to unify and enhance maintenance practices. For example, Applicants anticipate they will be able to improve the execution of infrastructure work by leveraging the combined railroad's extensive fleet of company-owned MOW equipment, enabling Applicants to deploy maintenance equipment and complete maintenance tasks more quickly and more efficiently.

10. Consolidation of Other Facilities/Functions

10.1. Transportation

10.1.1. Transportation Operations

433. UP and NS each operate complex transportation systems. Every day UP and NS make countless decisions designed to maximize output from people and equipment while maintaining safe and effective performance. Following the merger, the combined UP/NS will leverage the diverse strengths of both systems to optimize transportation operations even further.

10.1.2. Post-Merger Coordination and Synergies

10.1.2.1. Thru Freight/Road Expense Reduction

434. Applicants plan that UP/NS will increase train lengths of legacy NS trains, which will reduce crew costs by reducing the number of first starts. A first start refers to the first train crew to begin work for a specific train's journey, as defined by its origin and destination.

435. Applicants project that the use of UP processes, technology, and asset utilization philosophy will result in the same percentage improvement in train length on the legacy NS network as when these processes, technology, and philosophy were

applied on the UP network. Applicants translated the resulting reduction in first starts into crew savings based on the ratio of aggregate train Car Miles to Thru Freight First Starts.[139] Using 2024 data, Applicants determined that closing the train length gap on the NS network would reduce annual first starts by approximately 7.6 percent, beyond the crew start savings associated with the Optimized Plan.[140]

436. Applicants plan that following integration the combined railroad will implement the UP deadhead/heldaway optimization program across the legacy NS network. Deadhead/heldaway expenses occur when crews must be compensated for time spent away from their home base, and when they are transported on trains they do not crew. UP currently manages these situations more efficiently, and the combined railroad will apply best practices to the legacy NS network.[141]

437. Applicants project total annual synergies from these steps of $41.6 million.[142]

10.1.2.2. Yard and Local Efficiency Gains

438. Applicants plan that the combined railroad will apply UP's Yard and Local Mapping processes to NS's legacy operations, which will optimize work assignments and scheduling. As a result of projected improved efficiencies, the

---

[139] Applicants assessed several other metrics, but the one they have chosen showed the smallest change relative to the status quo. *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Train Length," Cells J40, J46, and J48.

[140] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Train Length Synergy," Cell M33.

[141] *See id.*, Cells G35:I35 and G38:I38.

[142] *See id.*, Cell K50.

combined railroad will have a reduced number of yard and local people starts within the legacy NS network, and bring productivity of these starts in line with UP's productivity levels. To quantify this expected improvement, UP compared its productivity to that of NS. Specifically, for each company UP compared workloads (*i.e.*, cars handled) to TE&Y people starts for production and local jobs. A "production" job was defined as a yard or terminal assignment that did not perform any transfer or local work. A "local" job was an assignment performing industry work and issuing a work order over 50 percent of the time. Workload for a production job was defined as cars switched, excluding block swaps. Workload for local jobs was defined as cars spotted or pulled from a customer facility.[143] Production workloads were based on the Base Plan MultiRail modeling. Local workloads were based on car counts from each respective roads local service measurement system.

439. Once these variables were defined, Applicants estimated savings of $35.4 million annually by multiplying the anticipated reduction in NS people starts by the NS cost per people start, reduced by a factor of 50 percent to create an appropriate estimate.[144] Savings to these metrics from institution of Remote Control Operations and SwitchPro eNtry eXit technology were excluded, and are discussed in the next section.

---

[143] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tabs "Yard and Local," "Yard and Local Volumes," "Oliver Wyman T1 Detail," "UP and NS Job Support," and "UP Job Support."

[144] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Yard and Local," Cells B48 and B42.

10.1.2.3. Remote Control Locomotive Operations (RCO) and the SwitchPro eNtry eXit (NX) System

440. The combined railroad will expand the use of two technologies, Remote Control Operations ("RCO") and SwitchPro eNtry eXit ("NX") at select legacy NS terminals. Introduction of each technology will enhance safety and efficiency. RCO allows employees to operate a locomotive with a wireless remote control device. NX automates remote switching operations and car inventory updates and integrates field equipment, back-office systems, handheld devices, and digital displays. It eliminates the need for yard conductors to walk the line and manually operate switches, and allows a single operator to efficiently classify cars. Applicants estimate annual savings of $20.4 million from applying these two technologies to selected legacy NS terminals.[145]

10.1.2.4. Crew Transportation

441. Applicants expect that the combined railroad will generate $6.0 million in annual savings by implementing UP's crew transportation strategy on the NS legacy network.[146] UP and NS both currently use Uber as a supplemental supplier for crew transportation needs. In 2024, UP implemented an improved Uber transportation strategy in key service units. By working with Uber to expand pickup and dropoff opportunities at GPS-pinned UP locations outside of traditionally-

[145] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "RCO NX," Cell P47.

[146] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Crew Transportation Uber," Cell D25.

available addresses, UP saved 19 percent (inflation-adjusted) on crew transportation costs across its Houston and Chicago service units.[147] NS's existing Uber usage does not have UP's expanded functionality. Applicants estimate that the combined railroad will capture 50 percent of the annual crew transportation savings UP has realized since deployment of its Uber strategy.[148]

10.1.2.5. Crew Lodging

442. UP/NS will reduce crew lodging costs by implementing UP's primary lodging vendor and more efficient lodging processes across the legacy NS system. UP's processes identify opportunities to shift lodging locations to minimize base payments, tax spend, and guaranteed expenditures. In total, UP saved 6.4 percent on lodging following implementation of these strategies.[149] Applicants project a reduction of 2.5 percent on legacy NS lodging costs in the first year and 6.4 percent in normal year savings by leveraging these strategies.[150] Following full implementation, Applicants project ongoing annual savings of $2.2 million.[151]

10.1.2.6. Terminal Command Center

443. UP/NS will implement Terminal Command Center at all legacy NS manifest terminals as part of the broader suite of operating technology

---

[147] *See id.*, Cell E53.

[148] *See id.*, Cells A12 and D22:D25.

[149] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Lodging Wave," Cell F17.

[150] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Lodging WAVE," Cells F26:F27.

[151] *See id.*, Cell E27.

improvements. Terminal Command Center is a digital platform that gives real-time visibility into terminal operations, including crew productivity and car movement information. Terminal Command Center will enable more efficient operations and create personnel efficiencies.

444. UP was able to reduce the number of yard controllers it utilized after implementing Terminal Command Center,[152] and the combined railroad should realize the same percentage reduction on the legacy NS network. Applicants estimate that additional use of Terminal Command Center will generate labor savings of $5.2 million annually.[153]

10.1.2.7. Train Dispatchers

445. As discussed in more detail in the IT section of the Service Assurance Plan, UP/NS will implement NetControl, its transportation management system, and CADx, its dispatching software, on the legacy NS network. Efficiencies from these technologies will reduce the number of positions needed to collectively cover a 24 hour a day, 7 day a week role—referred to as an employee "wheel"—and expand the territory that some dispatching groups can oversee. Overall, Applicants believe NS wheel and territory sizes can be brought in line with those of UP, in accordance with the applicable collective bargaining agreement. The combined railroad will realize

[152] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "NS YC Planning," Cell C8.

[153] *See id.*, Cell L8.

these reductions through attrition. Applicants estimate that the combined railroad will realize normal year savings totaling $5.8 million from the reductions.[154]

446. To maintain continuity in train dispatching, Applicants plan that the combined railroad will maintain separate dispatching centers for legacy UP and NS operations following approval of the proposed transition, until such time as UP/NS can transition dispatching safely and seamlessly to a unified dispatching system. When UP/NS decides to combine dispatching functions, it will serve the appropriate notice under Section 4 of the *New York Dock* conditions and obtain any necessary implementing agreements.

10.1.2.8. Crew Dispatchers

447. UP/NS will implement UP's crew calling system on the legacy NS network. This system offers efficiencies that are not available with NS's current process, reducing personnel needs. The combined railroad will realize the reductions through attrition. Applicants estimate annual savings of $1.6 million from these reductions.[155]

10.1.2.9. Precision Gate Technology

448. The combined railroad will also install Precision Gating Technology ("PGT") at 14 of 29 total legacy NS-operated yards and centralize the corresponding

[154] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "HDC Personnel," Cell S12.

[155] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "HDC Personnel," Cell S6.

legacy NS gate problem resolution function.[156] PGT uses high resolution cameras and an associated online application to improve truck fluidity and automatically track asset damage at UP gate locations. This will reduce maintenance and contractor costs associated with operating manual and automated gates. Centralized problem resolution operations are more efficient, also reducing costs. Applicants expect $6.6 million in annual savings, informed by UP's own savings after it began to implement PGT across its network in 2021.[157]

10.1.2.10. Leveraging UP Personal Safety Processes

449. UP's industry-leading safety processes have enabled it to substantially reduce its injury rate relative to its peers, including NS. UP/NS will adopt UP's processes across the legacy NS network. Applicants expect that in doing so UP/NS will reduce the gap between NS's and UP's injury rates. Applicants project that once the combined railroad completes systemwide adoption of UP's processes in Year 3, it will realize annual savings of $5.6 million.[158]

10.1.2.11. Leveraging NS Derailment Safety Processes

450. NS has invested heavily in developing an industry-leading derailment safety process. Post-merger, UP/NS will implement the NS derailment safety process across the legacy UP network. Applicants project that implementation of the NS

---

[156] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "PGT," Cells C11, C20, and C28.

[157] *See id.*, Cell I37.

[158] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Personal Injury Derailment," Cell H16.

process will reduce the derailment rate gap between UP and NS. Applicants project annual savings of $10.0 million from this reduction in the derailment rate.[159]

10.1.2.12. Procurement Savings

451. UP/NS will implement UP's proprietary set of procurement principles and practices across NS's legacy procurement portfolio, resulting in reduced operating costs stemming from third party contracts. Applicants analyzed category spend based on the R1 Schedule 410 (operating expenses) and Schedule 330 (capital improvements) to identify the categories to exclude where they do not expect that the combined railroad will realize any synergies in that category or any potential synergy was quantified in a separate analysis. Applicants anticipate significant savings opportunities involving material contracts with locomotive parts suppliers, brush cutting contract management, and first call contracts. Applicants estimate the annual savings opportunity from extending the UP procurement practices to the legacy NS portfolio is $104.8 million.[160] Applicants expect to realize 85 percent of that opportunity, resulting in normal year savings of $89.8 million.[161]

10.1.2.13. Rubber Tire Interchange

452. The merger will result in more efficient routing, reducing the need to use trucks to transfer intermodal containers from legacy UP facilities to legacy NS facilities, a practice known as "rubber tire interchanges." Applicants estimated the

---

[159] *See id.*, Cell Q15.

[160] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "WAVE Capital Summary," Cell G9.

[161] *See id.*, Cells G10:G11.

incremental cost of trucking containers from one ramp to another by applying the cost per move, by origin / destination pair, multiplied by the number of moves eliminated in each lane.[162] Applicants estimate annual savings from eliminating such interchanges to be $26.4 million annually.[163]

10.1.2.14. Terminal Switch Fee Reductions

453. Improved routing as a result of the merger will also reduce fees primarily paid by NS related to terminal activity, specifically terminal switch fees paid to intermediate carriers such as BRC and TRRA. To estimate savings, Applicants applied the 2023 actual NS unit costs to the change in activity, by terminal and type of handling. Applicants estimate annual savings of $6.7 million from reduction of these fees.[164]

10.1.2.15. Fuel

454. The merger will create fuel savings on the legacy NS network for several reasons. The combined UP/NS network will need fewer high horsepower locomotives to haul the same amount of freight, leading to a corresponding reduction in fuel usage. As a result of the more efficient yard and local operations discussed in 10.1.2.2, Applicants anticipate reduced usage of switch locomotives, which will likewise reduce

---

[162] In their Verified Statement, Boyles and Mathur use URCS to quantify other savings from reduced rubber tire interchanges—for example, those stemming from related yard operations—not the cost of trucking to transport the intermodal boxes themselves. *See* Boyles/Mathur VS, ¶¶ 38, 39.

[163] *See* Workpaper "Synergies Transportation - Operating.xlsx," Tab "Rubber Tire Savings," Cell AB70.

[164] *See* Janke VS Workpaper, "Synergies Transportation - Operating.xlsx," Tab "Third Party Fees," Cell L38

fuel usage. UP/NS will also increase train length of legacy NS trains without increasing the number of locomotives per train, resulting in more efficient trips overall. Finally, UP/NS will implement processes at legacy NS facilities to reduce the duration of engine component load tests. Collectively, Applicants estimate these changes will result in $46.5 million of annual savings.[165]

10.2. Engineering

10.2.1. Engineering Operations

455. Both UP and NS employ safe, efficient, and effective practices for maintaining and replacing capital assets in a wide range of operating environments. As explained above, both have extensive maintenance-of-way departments and sizable fleets of equipment for testing, inspecting, and maintaining their tracks. Both have invested in refining their MOW procedures and developing innovative technologies to improve their practices.

456. As noted above, the UP Engineering Department employs more than 10,000 managers and craft professionals who design, maintain, inspect and replace critical infrastructure across the railroad's nearly 33,000-mile mainline network. Operating more than 5,000 pieces of MOW equipment, the team oversees 42,000 miles of track, over 113 million ties, over 15,000 rail bridges, 34,000 miles of fiber optic cable, and over 7,000 wayside detectors generating more than 72 million daily

[165] *See* Janke VS Workpaper, "Synergies Transportation - Operating.xlsx," Tab "Fuel Use Merger Initiatives," Cell C67.

"reads" that communicate overall network health.[166] Likewise, the NS Engineering Department's more than 5,000 managers and craft professionals design, maintain, inspect and replace critical infrastructure across the company's 19,200-mile mainline network. The workforce currently operates over 3,800 pieces of MOW equipment critical to overall infrastructure reliability and safety. The team oversees 28,000 miles of track, over 9,500 bridges, and over 2,700 wayside detectors generating over 10 million data points daily that communicate overall network health.[167] A combined UP/NS Engineering Department will assume the same number of track miles, bridges, signals and crossings, thus Applicants expect that the combined current MOW equipment inventory of UP and NS is sufficient to appropriately maintain and repair the combined network.

457. The merger provides significant opportunities to make more efficient use of each company's existing resources, and to more broadly deploy each company's best practices and most advanced technologies to make UP/NS the industry leader in safe, efficient, effective maintenance-of-way practices. These maintenance synergies will result in better and more reliable service and cost savings.

458. UP and NS continuously innovate their engineering procedures, practices, and technologies to increase the safety of the railroad and its workers. Applicants intend that the combined railroad will take the best of both legacy networks to further increase engineering safety on the integrated network. For

---

[166] *See* Workpaper "Engineering Network Stats.xlsx," Tabs "Summary" and "Wayside Detectors."

[167] *See* Workpaper "Engineering Network Stats.xlsx," Tab "Summary."

example, Applicants continue to explore leveraging the following UP- or NS-specific programs across the integrated network: (1) UP's advanced welding strategy that minimizes the total number of mainline joints on the network; (2) NS's leading process for broken rail prevention; and (3) NS's in-house vision-based track assessment solution.

459. In addition to the quantified synergies described below, Applicants expect to identify further operational efficiencies during the integration of the UP and NS engineering departments. For example, Applicants continue to explore the following efficiency opportunities: (1) deploying UP's next-generation automated wood tie unloading process on the legacy NS network to reduce contractor spend for that network; (2) applying UP's concrete tie strategy to the legacy NS network to improve tie durability and reduce total cost of ownership; (3) leveraging UP's industry-standard bridge maintenance and replacement system on the legacy NS network; (4) consolidating preplated-panel turnout manufacturing facilities at Little Rock (UP) and Roanoke (NS); and (5) reorganizing or consolidating signal operations centers in Omaha (UP) and Atlanta (NS).

10.2.2. MOW Equipment Maintenance and Operation

460. As described in Section 9.3.3. above, both UP and NS follow a centralized approach for MOW equipment inventory management and leverage centralized work equipment shops or "hubs."

10.2.3. Post-Merger Coordination and Synergies

10.2.3.1. Yard Curtailment

461. In a merged environment, certain network switching yards at key interchange locations will become redundant. Applicants plan that the combined railroad will relocate non-local work from the following six yards into other yards with sufficient capacity to handle both operations: (1) New Orleans Oliver; (2) St. Louis Luther; (3) Chicago 63rd; (4) Des Moines; (5) North Kansas City; and (6) Wentzville. Based on costing data provided by NS, Applicants project total annual savings of $1.8 million per year as a result of these yard rationalizations.[168] Applicants project that the rationalizations will yield only 50 percent of the non-labor savings because these yards will continue to perform local work.[169] Of the total savings, $1.4 million comes from a reduction in labor and $373,000 comes from reduced material and overhead costs at idled facilities.[170]

10.2.3.2. Vegetation Management

462. UP has developed highly efficient proprietary on-track vegetation spray equipment which can spray a broad area with a small footprint. The equipment can be used 24 hours a day with back-to-back scheduling, but currently runs only one shift daily to cover UP territory. NS currently contracts for vegetation management equipment, paying contract fees that exceed the costs UP incurs for its internal

---

[168] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Yard Curtailment," Cell H34.

[169] *See id.*, Cell H30.

[170] *See id.*, Cells H32:H33.

vegetation management program. The combined railroad will add a seasonal shift to allow UP's vegetation management equipment to cover a portion of the legacy NS's seasonal vegetation needs, reducing associated contract spend. The operation will target core routes where timing and reduced track occupancy are critical to the service product. The combined railroad will add six more craft employees to enable the additional shifts needed to cover the legacy NS territory.[171] Applying UP's historical savings rate to the NS workload, Applicants project that deployment of UP spray equipment to the NS network will generate $833,000 in net annual operating savings.[172]

10.2.3.3. Wood Tie Pick Up

463. UP utilizes a scrap material recovery team (SMRT) consist to perform wood tie pickup. The SMRT consists have reduced UP's average tie pickup cost over the past three years and increased the speed of tie pickup. UP currently picks up approximately 2.5 million wood ties per year.[173] NS uses contractors to remove old ties from its right of way, which is more costly and less efficient. Post-merger, UP/NS plan to invest $66.8 million to construct additional SMRT consists for deployment across the legacy NS network.[174] This will allow the combined railroad to reduce reliance on contractors and insource up to 30 craft positions.[175] Applicants expect

[171] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Spray," Cell E32.

[172] *See id.*, Cell E29.

[173] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "SMRT," Cell C25.

[174] *See id.,* Cell C46.

[175] *See id.*, Cell E61.

deployment of the SMRT system across the legacy NS network to generate annual operating savings of $12.9 million.[176]

10.2.3.4. Vehicle Rationalization

464. UP and NS each maintain a robust vehicle fleet to support Engineering operations. Applicants compared a ratio of Engineering employees to Engineering vehicles for UP and NS as a measure of overall fleet efficiency. UP's recent efforts to reduce its overall fleet size based on usage while maintaining steady operations resulted in a more efficient operation as compared to NS. UP/NS will implement the same type of fleet reduction initiative to the legacy NS vehicle fleet. Applicants expect that the combined railroad will save $40.3 million annually due to these vehicle reduction efforts.[177] That figure includes both recurring operating savings of $24.8 million and annual depreciation savings of $15.5 million associated with the vehicle fleet reductions.[178]

10.2.3.5. Track Geometry

465. UP and NS each maintain and operate separate systems to house track geometry and projected usage data. UP relies heavily on outside vendors to measure and process track geometry data. NS utilizes an in-house, proprietary process for collecting, reporting, and maintaining track data. Following integration, UP/NS will fully implement NS's in-house track geometry system on the UP network by Year 3.

---

[176] *See id.*, Cell E51.

[177] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Eng Vehicles," Cell I47.

[178] *See id.*, Cells I45:I46.

Applicants expect that using the NS system to collect, process, and store track data will allow the combined railroad to save $1.2 million per year on operating expenses by eliminating the need for contract services.[179]

10.3. Mechanical

10.3.1. Mechanical Operations

466. UP and NS both employ safe, efficient, and effective practices in maintaining, refurbishing, and repairing locomotives and rail cars. As Sections 9.1.3. and 9.2.3. above describe, both railroads have extensive mechanical departments with a broad network of shops to inspect and repair locomotives and rolling stock. Both have invested in refining their mechanical operations and developing innovative technologies to improve the reliability and performance of locomotives and rolling stock, thereby ensuring safe and efficient railroads.

467. Applicants expect the UP/NS merger to provide significant opportunities to make more efficient use of each company's existing resources, and to deploy each company's best practices and most advanced technologies across the combined network. Applicants expect that as a result the combined UP/NS will be the industry leader in safe, efficient, effective locomotive and rolling stock inspection and repair practices. These synergies will result in better and more reliable service and cost savings.

468. Beyond the quantified synergies below, the combined railroad will seek to identify additional efficiencies during the integration process.

---

[179] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Track Data," Cell I27.

10.3.2. Post-Merger Coordination and Synergies

10.3.2.1. Curtailment of Locomotive Facilities

469. Applicants anticipate that the redesign of the network will create mechanical operations efficiencies as work is relocated. In total, UP/NS will relocate positions from four locomotive shops where operations will be idled, consolidated, or reduced: (1) Decatur, Illinois; (2) Ft. Wayne, Indiana; (3) Inman (Atlanta, Georgia); and (4) Louisville, Kentucky. By curtailing these four facilities, the combined railroad can eliminate the associated overhead, partially offset by an increase in overhead at the facilities to which the employees are relocated. Applicants project that the operations reductions at the four locomotive shops will generate $4.6 million in annual operating savings.[180]

10.3.2.2. Shop Consolidation & Rationalization

470. As explained above, UP and NS each independently operate mechanical shops at key points throughout their networks, with UP operating 28 mechanical shops, and NS operating 24 mechanical shops. Nine of these shops are located at interchange points between the UP and NS networks. These nine shops currently employ 534 mechanical employees.

471. The combined network will improve fluidity and provide additional run-through traffic, which will yield benefits associated with fewer locomotives stopping and requiring repairs and inspections at interchange gateways. Savings associated

[180] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Shop Curtailment," Cell N37.

with interchange areas around Chicago, Kansas City, St. Louis, and New Orleans include reduction in shop facility overhead.

472. Specifically, Applicants expect that following the merger, the combined railroad will consolidate mechanical facilities and operations in Chicago, Kansas City, New Orleans, and St. Louis, resulting in the need for fewer positions in these areas. As a result of this consolidation, Applicants expect that the combined railroad will save $27.2 million annually.[181] That figure includes annual savings of $6.2 million in reduced overhead expenses and $21.0 million from position reductions at interchange locations.[182]

10.3.2.3. Locomotive Fleet Impact

473. Applicants expect that the integration of UP and NS's networks will unlock new scale and routing efficiencies. In addition, there will be opportunities to reduce the size of the fleet for the legacy NS yard and local network to align with the yard and local crew start reductions described in Section 10.1.2.2. These efficiencies will enable UP/NS to maximize locomotive utilization and operate with fewer active locomotives. In addition to locomotive reductions addressed in the Boyles/Mathur Verified Statement, Applicants calculate that the locomotive synergies will result in an incremental fleet reduction of 152 locomotives.[183] Applicants project that this fleet

[182] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Mech Intchg," Cells P52 and R52.

[183] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Loco Fleet Impact," Cell F22.

reduction will result in ongoing non-labor repair and material cost savings of $5.3 million annually.[184]

10.3.2.4. Rationalization of Portsmouth Car Backshop Operations

474. NS's car backshop in Portsmouth, Ohio, performs certain "heavy" repair work, employing 16 mechanical workers.[185] There will be sufficient capacity at other facilities on the combined network to absorb the work currently performed at Portsmouth. Post-merger, UP/NS plan to idle Portsmouth's car backshop operations and rationalize the backshop's work across the combined network. Following the consolidation, UP/NS will transfer the 16 positions at Portsmouth to realign the workforce to better fit the combined rail network. Idling operations at Portsmouth will eliminate the associated overhead, generating annual operating savings of $1.0 million.[186]

10.3.2.5. Vehicle Reduction

475. UP and NS each maintain a fleet of SUVs and wheel trucks to support maintenance management operations. UP's recent efforts to reduce its overall fleet size based on usage while maintaining steady operations resulted in a more efficient ratio of mechanical workers to vehicles as compared to NS. The combined railroad will apply these same efforts to the legacy NS vehicles. Applicants examined existing

---

[184] *See id.*, Cell F28.

[185] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Car Backshop," Cell E11.

[186] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Car Backshop," Cell E26.

NS mechanical vehicle counts and identified opportunities for the combined railroad to right-size the fleet following the merger. Applicants expect that UP/NS will save $1.9 million annually due to these vehicle rationalizations.[187] That figure includes both recurring operating expenses and a reduction in annual depreciation resulting from the reduction in number of vehicles.

10.3.2.6. Optimizing Utilization of End of Train Devices

476. Both UP and NS rely on End of Train ("EOT") devices to perform essential monitoring functions. An EOT device is an electronic device mounted on the end of a freight train that flashes to mark the end of the train and collects and transmits data on the train's status. Railroads either utilize their own stock of EOT devices, or pay rent to use other railroads' units that are placed on interchange trains. EOT devices often go missing or get damaged with frequent handlings. Applicants anticipate that following the merger the optimized network will result in fewer interchanges, thereby reducing EOT handlings across the network. With fewer handlings, EOTs will have a longer useful life and the combined railroad will be able to reduce annual purchasing needs for replacement stock. Based on UP purchasing history from 2021 to 2024, Applicants anticipate that the combined railroad will reduce annual spend on EOT devices by approximately 25 percent.[188] The anticipated reduction in EOT device spend is expected to generate annual cost savings of

[187] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Mech Veh," Cell F21.
[188] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "EOTs," Cell E19.

$339,000.[189] This is a estimate and does not account for anticipated annual savings from reduction of NS's EOT rental costs.

10.3.2.7. Reduction of Freight Car Lease Expense

477. UP currently leases certain cars to fulfill its network needs. NS currently has stored cars of the same type that UP leases. Following integration, UP/NS will leverage stored legacy NS freight car fleets to enable return of the legacy UP's leased cars upon lease termination. Applicants expect that UP/NS can meet 75 percent of the total lease reduction opportunity from utilizing stored legacy NS cars.[190] Applicants project annual savings of $5.5 million from reduction of freight car lease expense after full integration.[191]

10.3.2.8. Insource Wheel Set Assembly Expense

478. Both UP and NS currently contract with third parties for wheelset assembly services. UP, however, has premerger capital plans to increase capacity at its Jenks facility, which will enable insourcing of UP's contracted wheel set volume. With an additional $17.2 million capital investment,[192] UP/NS can create enough capacity at Jenks to also insource a portion of the legacy NS wheel set volume. The combined railroad will require additional positions to enable this synergy. After

[190] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Car Leases," Cells M28:P28.

[191] *See id.*, Cell P29.

[192] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Row 8; Workpaper "Mech_Eng Synergies.xlsx," Tab "Wheelset," Cell F32.

accounting for incremental labor and overhead costs, Applicants project net annual operating savings of $7.7 million due to insourcing legacy NS wheelset assembly at Jenks versus continuing to use a contractor.[193]

11. Projected Territory Changes Required for the Operating Plan

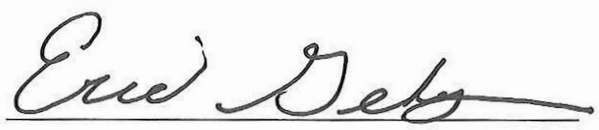
479. The Operating Plan shows how a combined UP/NS system will take advantage of the end-to-end connection of UP and NS to provide new and improved rail services and to make more efficient use of rail capacity and investments. In addition to the planned changes to the workforce as indicated in the Operating Plan and Employee Impact Exhibit, consolidation will also require changes to train crew districts and terminal limits to align the work performed with new and more efficient operating patterns. These changes will be necessary to integrate operations, maximize capacity, and realize both improved service and other intended benefits from this Operating Plan and the underlying transaction.

480. For example, it will be necessary to create a new 246-mile district between UP-Salem, Illinois and NS-Peru, Indiana for trains using the Sidney, Illinois, connection to support the additional train pairs between Southern California and the Northeast described in Section 4.2 of the Operating Plan. Applicants expect that during network integration UP/NS will develop additional district optimizations that further improve service and achieve other intended benefits from the operating plan and transaction. Further, the combined railroad will seek implementing

[193] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "Wheelset," Cell H29.

agreements, as necessary, to permit the establishment of additional districts as the need arises during the network integration process.

481. The strategy reflected in the Operating Plan will also require certain changes in terminal switching to integrate legacy UP and NS operations, maximize terminal and yard capacity, and realize both improved service and other intended benefits from this Operating Plan and the underlying transaction. In particular, it will be necessary to change or expand certain terminal switching limits in Kansas City to include the legacy NS's Voltz facility and in Chicago to include the legacy UP's Global 4 facility. Applicants expect that during network integration, UP/NS could seek additional changes to terminal switching limits that further improve service and achieve other intended benefits from the Operating Plan and transaction. UP/NS will seek implementing agreements, as necessary, for additional changes that will be needed as network integration proceeds.



12. Conclusion

482. The Operating Plan set forth above describes how a unified UP/NS system will operate to serve its customers and grow the amount of freight moving by rail. It shows how UP and NS will integrate activities, personnel, and facilities following consummation of the proposed transaction; the operational changes expected to result; and the gains in safety, service, operating efficiencies, and other benefits anticipated from the merger. The combination of UP and NS will deliver faster, more reliable, more efficient service to customers and attract new business, providing increased competition to trucks and other rail carriers and benefiting American manufacturers and consumers.

SERVICE ASSURANCE PLAN

VERIFIED STATEMENT

OF

JOHN W. TURNER

I. Introduction

A. Witness Qualifications

1. My name is John Turner. I am Senior Vice President Operations – Northern Region at Union Pacific Railroad Company ("UP"). In my current role, I am responsible within UP's Northern Region for providing leadership and optimizing network performance while ensuring the railroad's safety, service, and operational excellence objectives are met. I joined UP in 1998 and have held my current position since April 2024. I began my railroad career as a conductor and worked my way up through the transportation ranks. I previously served as Senior Vice President – Network Planning and Harriman Dispatch Center ("HDC"), Vice President – Network Planning, and Assistant Vice President – Network Integration and Scheduling. I also led the Portland and Utah service units as General Manager. I earned a Bachelor of Science degree in Transportation and Logistics from Iowa State University and an MBA from Mendoza College of Business at the University of Notre Dame.

2. I am sponsoring and verifying this Service Assurance Plan, which Applicants are required to file under 49 C.F.R. § 1180.10. The Service Assurance Plan, in concert with the Operating Plan, describes the precise steps to be taken by

Applicants to ensure that projected service levels would be attainable and that key elements of the Operating Plan would improve service when UP merges with Norfolk Southern Railway Company ("NS").

3. I have overall responsibility for developing the Service Assurance Plan. In accordance with the Board's rules, the Service Assurance Plan addresses Applicants' planning efforts covering a wide range of subject matters. The Service Assurance Plan was developed over the past four months with the assistance of numerous professionals from a variety of disciplines at both UP and NS, each of whom contributed to the planning process. I have relied on their work in sponsoring and verifying this Service Assurance Plan.

4. In particular, the Information Technology Systems portion of the Service Assurance Plan was prepared by and under the supervision of Rahul Jalali, UP's Executive Vice President and Chief Information Officer. Mr. Jalali was appointed Senior Vice President and Chief Information Officer in November 2020 and promoted to Executive Vice President in June 2023. Mr. Jalali serves as the organization's technology thought leader, ensuring UP has a complete, integrated process and systems strategy. Prior to joining UP, Mr. Jalali spent 23 years with Walmart Inc., most recently as corporate vice president in the technology division serving Walmart International. In that role, he specialized in developing world-class global technology solutions and organizations that could scale technology platforms and leverage data, automation, and machine learning to build quality products to grow/optimize businesses.

B. Purpose and Scope

5. This Service Assurance Plan describes how the integration of UP and NS activities following consummation of the proposed transaction, the operational changes expected to result, and the operating efficiencies and other benefits anticipated from the merger, will translate into present and future benefits for the shipping public. The Service Assurance Plan also describes potential areas where service may be impacted due to operational changes and how instances of impacted service might be mitigated.

6. To address these issues, Part II of the Service Assurance Plan describes how the changes described in the Operating Plan will result in improved service levels at a route level, and how the changes will affect shippers, connecting railroads, and ports. Part III describes how the changes will affect the operational fluidity of Applicants' principal classification yards and major terminals. Part IV identifies the infrastructure improvements Applicants currently anticipate they will need to produce the projected service improvements and accommodate the projected merger-related traffic growth, and their plan for timely completion of those improvements.

7. The Service Assurance Plan also describes how Applicants will guard against service degradation through their planning efforts. Part V describes Applicants' planning for integration of their information technology ("IT") systems and the interim systems they will use prior to full integration. Part VI describes Applicants' plans for consolidating their customer service functions and familiarizing customers with new processes and procedures they may encounter. Part VII describes Applicants' plans for reaching necessary labor implementing agreements and shows

Applicants will have sufficient qualified employees available at the proper locations to implement the proposed transaction. Part VIII describes Applicants' plans for providing the necessary training to employees in functions that will be affected by the transaction. Part IX of the Service Assurance Plan describes Applicants' contingency plan for merger-related service disruptions, as well as Applicants' protocol for handling service failure claims.

8. Part X describes how Applicants will continue facilitating the operations of Amtrak and commuter carriers to fulfill existing performance agreements and ensure effective communications to minimize any potential transaction-related negative impacts.

9. The Service Assurance Plan provides a timetable for all major functional and system changes that will occur in Part XI.

10. Finally, the Service Assurance Plan provides benchmarks for measuring corridor performance, yard and terminal performance, and system performance in Part XII.

C. Overview

11. This Service Assurance Plan presents Applicants' current plans and projections regarding the integration process. Applicants have been engaged in the planning process for the past four months, and they have made substantial progress, but their plans will continue to develop and evolve between now and the time the merger is fully implemented, which is not expected to occur until three years after the merger is authorized.

12. Applicants operate in a highly dynamic industry, characterized by a constantly changing market environment. To provide the highest level of service to their customers, Applicants must be flexible and adaptable. Service offerings designed to meet expected customer demands today may no longer meet actual customer demands a year from now. Projected traffic flows that would necessitate investment in new capacity may shift locations or fail to materialize. UP and NS have been leaders in developing and implementing technologies that make rail operations safer and more efficient. Combining the two companies should accelerate the pace of change, so the way work is performed today will not necessarily be the way work is performed tomorrow. The merged company will also continue to improve information technologies that support operations and customer service functions. Systems that are best-in-class today may be replaced by better systems within a few years. The merger will allow the combined companies to respond to changing market dynamics and generate greater positive change than either company could do on its own.

13. The Service Assurance Plan clearly demonstrates that Applicants are engaged in a careful planning process designed to ensure the merger delivers benefits to the shipping public without causing service degradation during the implementation process. However, Applicants' plans are not set in stone; they must remain flexible for the full promise of the transaction to be realized.

II. Service Improvements from Integration of Operations

14. The Operating Plan describes in detail Applicants' plans to integrate UP and NS operations to provide customers faster, more efficient, more reliable single-line service. As described in the Operating Plan, Applicants plan to improve service

in two ways. First, Applicants will optimize existing UP-NS traffic flows by changing train and blocking plans and eliminating interchanges between the two railroads. Second, Applicants will introduce new train services to accommodate projected merger-related traffic growth. Customers with traffic currently interchanged between UP and NS will benefit most directly from the changes described in the Operating Plan, but many other customers of UP, NS, and other railroads will also benefit from optimized traffic patterns that reduce congestion at key gateways, as well as the other safety, service, and technological improvements the merger will make possible.

15. Applicants' plans to integrate UP and NS operations should not result in harm to existing service. As discussed in the Operating Plan, most of Applicants' main lines, yards, and terminals will not experience any significant merger-related increase in activity levels. With regard to main lines, yards, and terminals projected to experience a merger-related increase in traffic levels, Applicants have evaluated their current and future projected capacity and determined they either have sufficient capacity to absorb the increased activity levels or will have sufficient capacity as a result of currently planned or merger-related infrastructure improvements or operating changes.

16. Applicants recognize that any change to train and blocking plans and any yard or terminal rationalization creates a risk of service degradation to the extent plans are flawed in design or execution. UP and NS use similar standardized transportation plan change management workflows to guard against design and

execution flaws. Applicants will follow these change management procedures in implementing the changes to train and blocking plans described in the Operating Plan. Applicants will similarly engage in extensive planning before undertaking the yard and terminal consolidations described in the Operating Plan.

17. Applicants describe the change management procedures they will follow in implementing any changes to train and blocking plans and any yard and terminal consolidations in Section II.A. Applicants then describe their planned changes to manifest and intermodal train operations and the projected impacts on customer service levels in Sections II.B.1 (manifest) and II.B.2 (intermodal). Applicants discuss potential areas of service degradation resulting from their planned changes in Section II.C. Finally, Applicants discuss the impact of their planned changes on connecting carriers and ports in Section II.D.

A. Applicants' Change Management Process

18. UP and NS use similar change management procedures to guard against the risk of service degradation when implementing changes to their train and blocking plans and when planning to add new trains or rationalize yards and terminals. The procedures are designed to establish clear expectations, careful oversight, and accountability. They ensure stakeholders from across the organization analyze potential service impacts, develop criteria for success before changes are implemented, and monitor the implementation process so plans can be adjusted if necessary.

19. Applicants will use these established change management procedures when implementing the changes described in the Operating Plan. Applicants'

procedures require careful consideration of existing conditions and constraints at the time changes are implemented. For this reason, among others, Applicants' Operating Plan and the service improvements identified in this Service Assurance Plan necessarily represent projections rather than finalized plans. However, Applicants will use their established change management procedures in actually implementing any merger-related operational changes.

20. In the first step of the transportation plan change management process, Applicants' network planners prepare a proposal for recommended changes that considers the impact of the proposed changes on critical network assets—*i.e.*, main lines, yards and terminals, crews, locomotives, and rail cars—and on customers. When a proposed change involves a line on which passenger trains operate, the planners also consider the impact of the change on passenger operations. The proposal includes an updated transportation plan that identifies service changes at each intermediate point from origin to destination on the affected service—that is, crew changes, inspections, pick-ups, and set-outs. Applicants' Operating Plan in some ways replicates this first step, though it analyzes the consolidated impact of all the proposed changes rather than the incremental impact of each proposed change.

21. In the second step of the change management process, the updated transportation plan is circulated to a set of internal stakeholders for review. At UP, stakeholders include representatives from potentially affected groups—*e.g.*, operating, marketing, locomotive and crew resources—as well as regional and local operating personnel and personnel responsible for passenger operations. Each

stakeholder department reviews the proposal to determine whether it can be executed as planned. A proposal cannot proceed until it receives approval from each stakeholder. The process is designed to be iterative—each stakeholder can provide feedback, identify additional considerations, and grant contingent approval.

22. Once all stakeholders provide approval, the implementation process begins. The implementation process varies based on the relative complexity and nature of the transportation plan change. Simple changes in blocking patterns may require only providing detailed instructions to personnel in affected yards and periodic remote monitoring by regional and network operations managers. Work crews and facilities are already well-equipped to implement minor alterations to blocking patterns.

23. More complex operational changes such as starting new train pairs and rationalizing terminals typically involve additional considerations and closer supervision. For example, operational changes impacting crew assignments may require negotiations with labor organizations. Main line route changes may require crews to undergo additional familiarization, training, or certification processes. Terminal rationalizations will likely require multiple on-site visits by network planners to walk through specific changes with local operating personnel, as well as close coordination between railroad customer service personnel and customers whose shipments are processed in affected yards.

24. For these more complex changes, Applicants typically develop scorecards to closely track each consideration and ensure implementation metrics

align with projected service improvements. In some cases, scorecards are distributed daily to the teams charged with implementing changes to provide immediate feedback on their progress. In all cases, supervisors and their teams meet on a regular basis to address progress and any deviations from the implementation plan and to adjust plans in response to unanticipated challenges.

25. As discussed above, Applicants will apply their change management processes to the changes described in the Operating Plan. As Applicants get closer to implementing the merger, they will establish an implementation sequence that considers how related changes can be grouped to accelerate delivery of merger benefits while also accounting for regional and local resource availability to ensure no one area is overwhelmed by changes.

26. All changes will be made within a structure that includes clear expectations, careful oversight, and accountability. As Applicants begin implementing changes to train and blocking plans, they will establish a regular cadence of weekly meetings between local and regional operating personnel and network planners to evaluate impacts of recent changes, discuss ongoing implementation efforts, and plan for additional future changes. These meetings will provide opportunities to give and receive feedback and adjust plans as necessary.

27. Applicants also will not make any merger-related changes that cannot be reversed if necessary. They will be able to revert to pre-merger train and blocking patterns if unexpected issues arise with new patterns. They also will be able to restore pre-merger terminal operations if unanticipated issues arise after consolidations.

Applicants have also developed specific contingency plans for merger-related service disruptions, as described in Part IX of this Service Assurance Plan.

28. Applicants' planning process is designed to protect against events that might cause merger-related service disruptions. Applicants will proceed with implementation only when the network and all internal stakeholders are properly oriented for success, and Applicants will ensure customers and affected connecting carriers are informed about the timing of any changes affecting their operations, though, as discussed below, Applicants expect those affects to be minimal.

B. Service Changes from Optimizing Operations

29. As discussed in the Operating Plan, Applicants' consolidation and optimization of UP and NS operations will provide faster, more efficient service for traffic currently interchanged between UP and NS. In aggregate, Applicants' Optimized Plan is projected to eliminate approximately 2,400 daily handlings and save approximately 60,000 daily car miles.[1] Applicants' Growth Plan anticipates the merged railroad will attract a significant amount of new traffic, and thus handlings and car hours increase, but the growth traffic will be created by and benefit from the same types of service improvements and efficiencies achieved in the Optimized Plan. In the sections below, Applicants describe those service improvements and efficiencies on a route level so individual shippers can evaluate the projected improvements and changes.

[1] *See* Op. Plan Workpaper "C-251124 Operating Plan Metrics vF.xlsx," Tab "Growth Plan," Cells D17 and D25.

1. Manifest Traffic

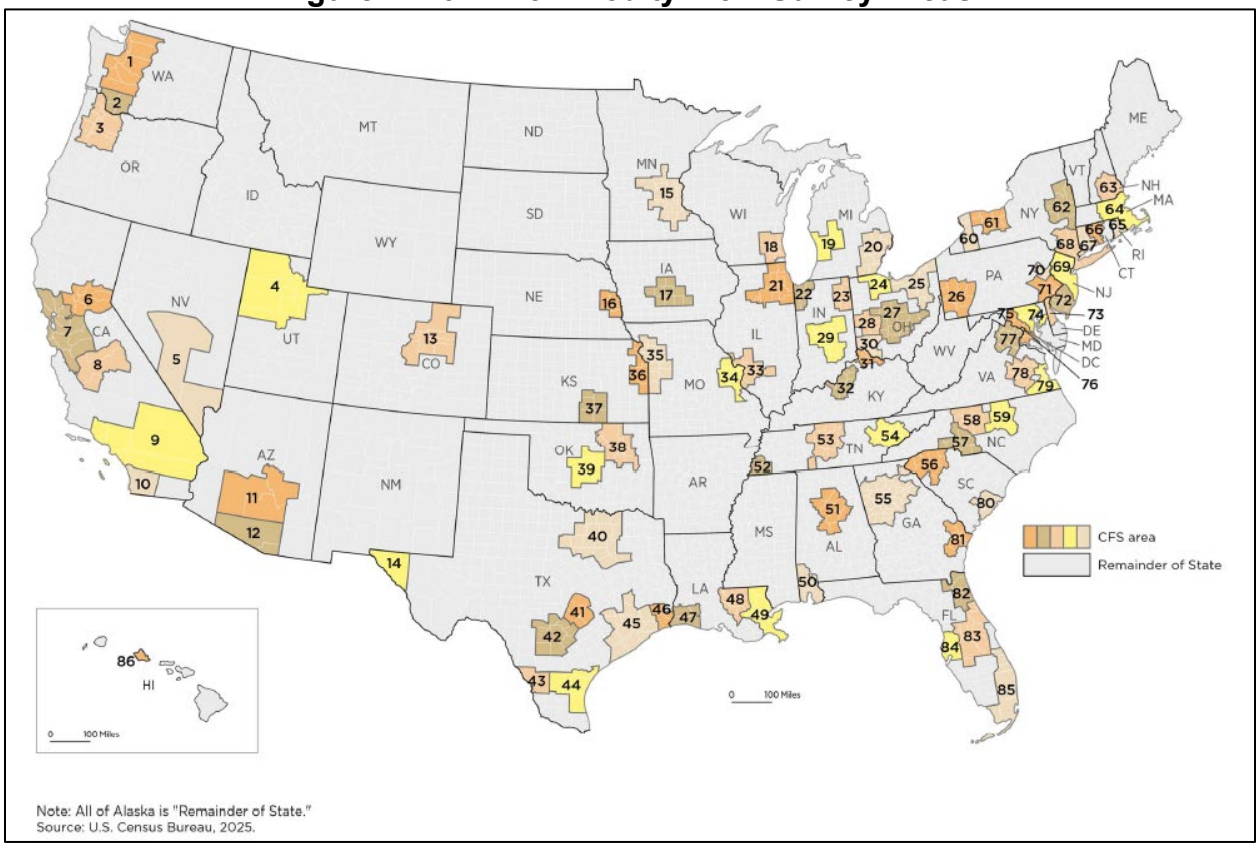
30. As described in the Operating Plan, Applicants are planning significant changes to train and blocking plans to optimize current flows of manifest traffic and provide significant transit time improvements. Transit time savings from eliminating car handlings depend on the nature of the handling and the capabilities of the facilities in which the handling occurs, as well as the timing of connecting services. Applicants' experience is that, on average, eliminating handlings reduces transit times by approximately 20 to 24 hours. Applicants' Optimized Plan includes plans to operate several new manifest trains that will allow traffic to move from origin to destination with fewer intermediate handlings. These trains, which are described in more detail in the Operating Plan,[2] include:

- A new train (MNPCW) that will eliminate 220 daily car handlings for traffic moving from west of North Platte to the Ohio Valley and Northeast;
- A new train (MALEK) that will eliminate 151 daily car handlings on traffic moving between Minnesota and Wisconsin, on the one hand, and Ohio, Pennsylvania, and New York, on the other hand;
- A new train (MCWAL) that will eliminate car classifications for approximately 110 cars daily processing through the BRC on traffic moving from New York, Pennsylvania, Ohio, and Virginia to Illinois, Wisconsin, and Minnesota;
- A new train (MNLCW) that will save between one to two handlings for approximately 80 cars daily (144 total daily car handlings) on traffic moving from Texas, Louisiana, and Arkansas to Detroit, the Ohio Valley, and the Northeast; and
- A new train pair (MNLCT/MCTNL) that will eliminate 124 daily car handlings on traffic moving between Texas, Louisiana, Arkansas, and western points on UP, on the one hand, and Kentucky, Alabama,

[2] *See* Op. Plan Workpaper "Manifest T1 vs T2 111825.xlsx."

Tennessee, and northeastern and southeastern points on NS, on the other hand.

31. Applicants' Optimized Plan also incorporates a substantial number of changes to existing plans that do not involve operating new trains but will reduce handlings for manifest traffic that rides existing trains. These changes include:



- Building blocks for eastbound traffic to destinations currently served by NS using Alton & Southern Railway ("A&S"), rather than have A&S transfer eastbound traffic to the Terminal Railroad Association of St. Louis ("TRRA") for blocking;
- Building blocks in North Platte to destinations in Ohio and Pennsylvania served by NS, rather than building blocks for Indiana and blocking the cars again in Indiana;
- Building blocks at Bellevue and Conway for UP's 18th Street and North Little Rock yards to reduce handlings in the St. Louis gateway;
- Building blocks at Birmingham for Texas Gulf traffic to reduce handlings;
- Building blocks in eastern Iowa and Elkhart to reduce terminal handlings in the Chicago gateway;
- Shifting work from NS's North Kansas City Yard to UP's 18th Street Yard to reduce transfers between NS and UP; and
- Shifting work from NS's Oliver Yard to UP's Avondale Yard to reduce transfers between UP and BNSF and NS.

32. Applicants' combined network, as represented in the Optimized Plan, includes approximately 9 million loaded and empty cars of manifest traffic moving between 177,993 origin-destination pairs, including 173,433 origin-destination station pairs with traffic levels of less than one car per day.[3]

[3] *See* Workpaper "OD Pair Summary Documentation 112025.xlsx," Tab "Total Manifest Car Count," Cell B6; *id.*, Tab "Documentation."

33. To allow shippers to evaluate projected service improvements and changes on a more manageable level, Applicants identified origin-destination station pairs that had movements in the Base Plan and the Optimized Plan—to allow an apples-to-apples comparison—and assigned the station pairs to origin-destination routes based on Commodity Flow Survey ("CFS") areas used by the U.S. Census Bureau. CFS areas are shown below in Figure 1.

Figure 1: 2022 Commodity Flow Survey Areas

34. Applicants' process identified 1,602 manifest CFS-based routes that Applicants project will experience an improvement of at least one handling per day. Applicants are providing the full list of manifest CFS-based routes in Electronic

Appendix W and the accompanying workpapers.[4] Applicants anticipate the manifest trains they project adding as part of their Growth Plan would perform similarly to trains moving over comparable routes in the Optimized Plan.

35. The results presented in Applicants' Appendices reflect modeling performed far in advance of any actual post-merger operating changes. The results therefore do not necessarily represent changes UP/NS will adopt after applying their change management process. Network planners rely on the best information available at the time changes are made. As discussed above, Applicants will not change any train or blocking plan without completing their change management process. Use of the change management process is important to ensure Applicants can successfully execute their plans under the operating conditions that exist when the plans change.

2. Projected Service Improvements for Intermodal Operations

36. As described in the Operating Plan, Applicants are planning significant changes to optimize current flows of intermodal traffic and provide substantial improvements in transit times. Applicants' Optimized Plan includes plans to operate two new intermodal trains that will allow traffic to move from origin to destination using faster routes with fewer intermediate handling. The new trains, which are described in more detail in the Operating Plan, are:

- A new train pair (ZLCCX/ZHBLC) that will save approximately 17 hours of transit time on traffic moving from Southern California to the

[4] *See* Workpaper "20251128 2210 CFS lane analysis_WorkPaper.xlsx," Tab "tab_1A_Manifest_summary."

Northeast and approximately 19 hours on traffic moving in the opposite direction by using NS's line between Kansas City, Missouri, and Butler, Indiana;[5] and

- A new train pair (ZLBAT/ZCTLB) that will save approximately 70 hours of transit time on traffic moving from Southern California to the Southeast and approximately 95 hours on traffic moving in the opposite direction by operating via Shreveport and Meridian.[6]

37. Applicants anticipate ZLCCX will operate between LATC and Croxton in 95 hours; ZHBLC will operate between Harrisburg and LATC in 93 hours.[7]

38. Applicants anticipate ZLBAT will operate between Long Beach and Atlanta in 74 hours; ZCTLB will operate between Charlotte and Long Beach in 83 hours.[8]

39. Applicants are also planning to institute several new intermodal services as part of their Growth Plan. The new services are described in detail in the Operating Plan. The projected origin-to-destination train transit times, from departure to arrival, for the new services are set out below in Table 1.

[5] Workpaper "Transcon Lane Level Transit Time & Comps.xlsx," Tab "Transit Times," Cells N4 and N14.

[6] *See* Workpaper "Transcon Lane Level Transit Time & Comps.xlsx," Tab "Transit Times," Cells N5 and N15.

[7] *See id.*, Cells M4 and M14.

[8] *See id.*, Cells M5 and M15.

Table 1[9]
New Intermodal Services

Train Symbol	Direction	Origination	Destination	Planned Transit Time (hrs)
ZLTCX	Eastbound	Lathrop, CA	Croxton, NJ	83

40. Applicants can provide more specific estimates of planned transit times for intermodal trains than for manifest trains because intermodal service generally involves fewer elements than manifest service—for example, fewer pick-up and set-out events and fewer connections to coordinate. However, the planned transit times set forth above also reflect only preliminary expectations. Applicants will not institute any new schedules without completing their change management process to ensure the schedules respond to market conditions and can be executed under the operating conditions that exist at the time.

[9] *See* Workpaper "Transcon Lane Level Transit Time & Comps.xlsx," Tab "Transit Times."

C. Potential Areas of Service Degradation

41. As discussed throughout the Application, the UP/NS merger will provide tremendous benefits to customers shipping on UP and NS, especially customers shipping traffic between locations on the legacy UP and the legacy NS. Further, as discussed throughout this Service Assurance Plan, Applicants are carefully planning the integration of the two companies to avoid any merger-related service issues.

42. In developing an Operating Plan for the combined company, UP and NS service designers found significant opportunities to improve the speed and efficiency of service for large numbers of customers. As noted above, the combination is projected to eliminate approximately 2,400 daily handlings and save 60,000 daily car miles, which benefits our customers and the public at large.[10] Making these improvements sometimes requires making trade-offs. Sometimes improving transit times for a heavily used route requires changes that have the opposite impact on a route with less traffic. For example, UP currently moves some intermodal traffic directly from Southern California to Marion, Arkansas. Under the Optimized Plan, the Marion traffic will initially ride ZLBAT, a new train UP/NS plans to operate to Atlanta via the Meridian Speedway. UP will split out Marion and Dupo (St. Louis) traffic at Greggton, Texas, where it will continue to Marion on the IGRMN (Greggton to Marion). The new ZLBAT will reduce transit times by 70 hours for 57 containers of traffic per day moving to the Southeast—a number expected to grow as the

[10] *See* Workpaper "C-251124 Operating Plan Metrics vF.xlsx," Tab "Growth Plan," Cells D25 and D17.

improved service attracts even more business.[11] However, the extra handling at Greggton will add approximately 4 hours of transit time to the 191 daily containers in the Marion and Dupo blocks.[12] Applicants would look carefully for ways to mitigate the impacts on Marion and Dupo traffic before implementing any new service as part of their change management process; however, transit times could increase on some routes in creating transit time savings on other routes.

43. To help shippers understand the potential magnitude of the transit time savings in relation to potential transit time increases, Applicants used the manifest CFS-based routes discussed above to identify routes on which traffic was projected to experience any change in average handlings per car from the Base Plan to the Optimized Plan. Of the 9,228 manifest routes identified, 40 percent of routes are projected to have an improvement, 46 percent are anticipated to have no change, for a total of 86 percent projected to have no change or an improvement.[13]

44. To focus on routes on which customers would be likely to experience more noticeable changes, Applicants identified manifest CFS-based routes on which traffic was projected to experience an average change of more than one handling per car. Of the 1,748 routes projected to see an increase or decrease of one or more

---

[11] *See* Workpaper "Transcon Lane Level Transit Time & Comps.xlsx," Tab "Transit Times," Cell N5; Workpaper "Intermodal T1 vs T2 111925.xlsx," Tab "ZCTLB ZLBAT Detail," Cells G10:G13.

[12] *See* Workpaper "Intermodal T1 vs T2 111925.xlsx," Tab "ZLBAT Greggton Detail," Cell G7.

[13] *See* Workpaper "20251128 2210 CFS lane analysis_WorkPaper.xlsx," Tab "tab_1A_Manifest_summary," Cells M7, M8, and N8.

handlings, Applicants expect that 1,602, or 92 percent, will see a decrease (improvement) in handlings.[14]

45. On the intermodal side, Applicants used the CFS areas to identify intermodal routes projected to see any change in average handlings per car from the Base Plan to the Optimized Plan. Of the 1,569 intermodal routes identified, 88 percent are projected to have no change or an improvement.[15] Applicants also identified 82 additional routes on which they would improve handling by eliminating rubber tire interchanges, for a total of 351 routes with improved handlings.[16] The rubber tire routes were not included among the "changed" routes with improved handlings because the improved origin-destination route was "new" in the Optimized Plan.

46. To focus on routes on which customers would be likely to experience more noticeable changes, Applicants identified intermodal CFS-based routes on which traffic was projected to experience an average change of more than one handling per trip or routes representing converted rubber tire traffic. Of the 247 routes projected to see an increase or decrease of one or more handlings, Applicants expect that 185 routes, representing 301,549 containers, or 94 percent of containers, will see a decrease (improvement) in handlings.[17]

[17] *See id.*, Cells K43, L43, and L46.

47. Again, Applicants emphasize UP/NS will not change current train and blocking plans, institute new trains, or rationalize yard operations without applying the change management process described above in Section II.A. UP/NS will closely monitor the impact of any changes through their normal change management process and provide stakeholders with periodic updates on their merger implementation progress and plans. Applicants will remain committed to transparency throughout the implementation process.

D. Potential Impacts on Connecting Rail Carriers and Ports

48. Applicants' implementation of operational changes will have some impact on the operation of Class II and III railroads, other connecting railroads, and ports, but the impacts should be positive. The sections below first address the effects of Applicants' implementation of operational changes on operations at major gateways. Next, they address the non-gateway effects on operations of Class II and III railroads and the operations of ports.

1. Chicago Gateway

49. Applicants' implementation of operational changes in the Chicago area should help alleviate congestion and thus improve operations for other rail carriers in Chicago. As described in the Operating Plan, Applicants plan to route certain trains around Chicago, thus reducing congestion in the Chicago area. They will also reduce car handlings and crew changes on trains that continue operating through Chicago through train plan and blocking changes and by consolidating certain UP and NS yards and terminals in Chicago.

50. Applicants have no plans to alter their existing interchange with other rail carriers in Chicago, except they will reduce interchange traffic between UP and NS using BRC, as described in the Operating Plan. BRC and IHB will continue to play important roles in the Chicago area, performing local operations and handling traffic interchanged in Chicago between UP/NS and other Class I railroads. By rationalizing handling of UP/NS traffic in Chicago, the UP/NS merger will increase BRC and IHB capacity available to serve other railroads.

2. St. Louis Gateway

51. Applicants' implementation of operational changes in St. Louis will reduce operational complexity and help create interchange and switching capacity in St. Louis. UP/NS will overall reduce yard activity by building blocks for eastbound traffic using A&S, which has capacity to accommodate the additional activity, rather than have A&S transfer eastbound traffic to TRRA for blocking. Applicants will also offset some of the additional work being performed by A&S by building blocks in North Little Rock, Bellevue, and Conway that travel deeper into the combined network, thus reducing classification demand at A&S's Gateway Yard.

52. Applicants have no plans to alter their interchanges with other carriers in St. Louis. UP/NS expect to continue to interchange with other carriers in St. Louis just as UP and NS interchange with those carriers today.

3. Kansas City Gateway

53. Applicants' integration of UP and NS will streamline yard activity in Kansas City. For intermodal traffic, Applicants will use UP's Kansas City Intermodal Terminal and NS's Voltz Yard primarily for separating domestic and international

shipments. For manifest traffic, Applicants will consolidate NS's North Kansas City Yard into UP's 18th Street Yard.

54. Applicants have no plans to significantly alter their interchanges with other carriers in Kansas City. UP/NS expect to adjust their current interchanges with Canadian Pacific Kansas City ("CPKC"), BNSF Railway ("BNSF"), Kansas City Terminal Railway, and Missouri and Northern Arkansas Railway in accordance with the terminal consolidations described above, which will help reduce interchange moves and congestion in the Kansas City gateway.

4. Memphis Gateway

55. Applicants' integration of UP and NS and intermodal terminal rebalancing will not significantly affect other rail traffic moving in and through Memphis.

56. Applicants have no plans to alter their interchanges with other carriers in Memphis. UP/NS expect to continue to interchange with other carriers in Memphis just as UP and NS interchange with those carriers today.

5. New Orleans Gateway

57. Applicants' integration of UP and NS will streamline activity in New Orleans by consolidating operations from NS's Oliver Yard into UP's Avondale Yard. Applicants will also shift BNSF's interchange with NS from Oliver Yard to a UP/NS-BNSF interchange at UP's Avondale Yard. The consolidation of activities in UP's Avondale Yard will free capacity currently consumed when UP and BNSF interchange trains with NS. Specifically, this change will streamline interchange

between UP/NS and BNSF, while other through freight movements will reduce crew change events on the Back Belt, thus further improving fluidity in New Orleans.

58. The changes to Applicants' New Orleans-area operations will not affect interchanges with other carriers in New Orleans. Applicants plan to continue using Oliver Yard to support interchange operations with Canadian National Railway Company ("CN"), CPKC, and New Orleans Public Belt Railroad, but there will be additional opportunities to streamline New Orleans-area operations by shifting NS's current interchanges with CN and CPKC to UP's facilities via Baton Rouge, which will further reduce congestion in New Orleans.

6. Other Class II and Class III Railroads

59. As discussed in the Operating Plan, Applicants' plans do not include any operational changes to connections with UP's and NS's many current short line partners, other than the connections in Chicago and St. Louis discussed above. Applicants' change management process will consider potential impacts on short line connections before UP/NS adopts any new train or blocking plans that would affect short lines. UP and NS highly value their relationships with their short line partners and will look for opportunities to develop even more efficient connections with short lines to take advantage of the many opportunities created by the merger to attract new business to rail.

7. Ports

60. As discussed in the Operating Plan, Applicants' plans do not include any operational changes to connections with the many ports served by UP and NS, though Applicants anticipate traffic moving to ports will increase as businesses take

advantage of single-line service improvements and efficiencies to become more competitive in international markets. Applicants' change management process will consider potential impacts on ports before UP/NS adopts any new train or blocking plans that would affect ports.

III. Yard and Terminal Operations

A. Overview

61. Applicants recognize the operational fluidity of yards and terminals is critical to the successful implementation of a transaction and effective service to shippers. Below, Applicants describe how the operations at principal classification yards and major terminals will be changed and how those changes will affect service to customers. As part of their analysis, Applicants furnish dwell time benchmarks for each facility described and estimate what the expected dwell times will be after operational changes are implemented. Applicants also furnish on-time origination performance benchmarks for each facility described and estimate what the expected on-time origination performance will be after operational changes are implemented.

B. Principal Classification Yards and Major Terminals

62. The Board's rules require reporting on changes to operations of Applicants' "principal classification yards" and "major terminals." However, the Board's rules do not define the terms "principal classification yards" or "major terminals."

1. Principal Classification Yards

63. To respond to the Board's requirements regarding principal classification yards, Applicants identified manifest yards with more than 800 cars

processed per day, as shown in the Operating Plan's Base Plan, and then added several yards to ensure all UP-to-NS gateways had a nearby yard subject to reporting. Applicants use the same yards for the benchmarking required by 49 C.F.R. § 1180.10(k)(2). Applicants list their principal classification yards for reporting purposes below in Table 2 and show the locations of those yards below in Figure 2.

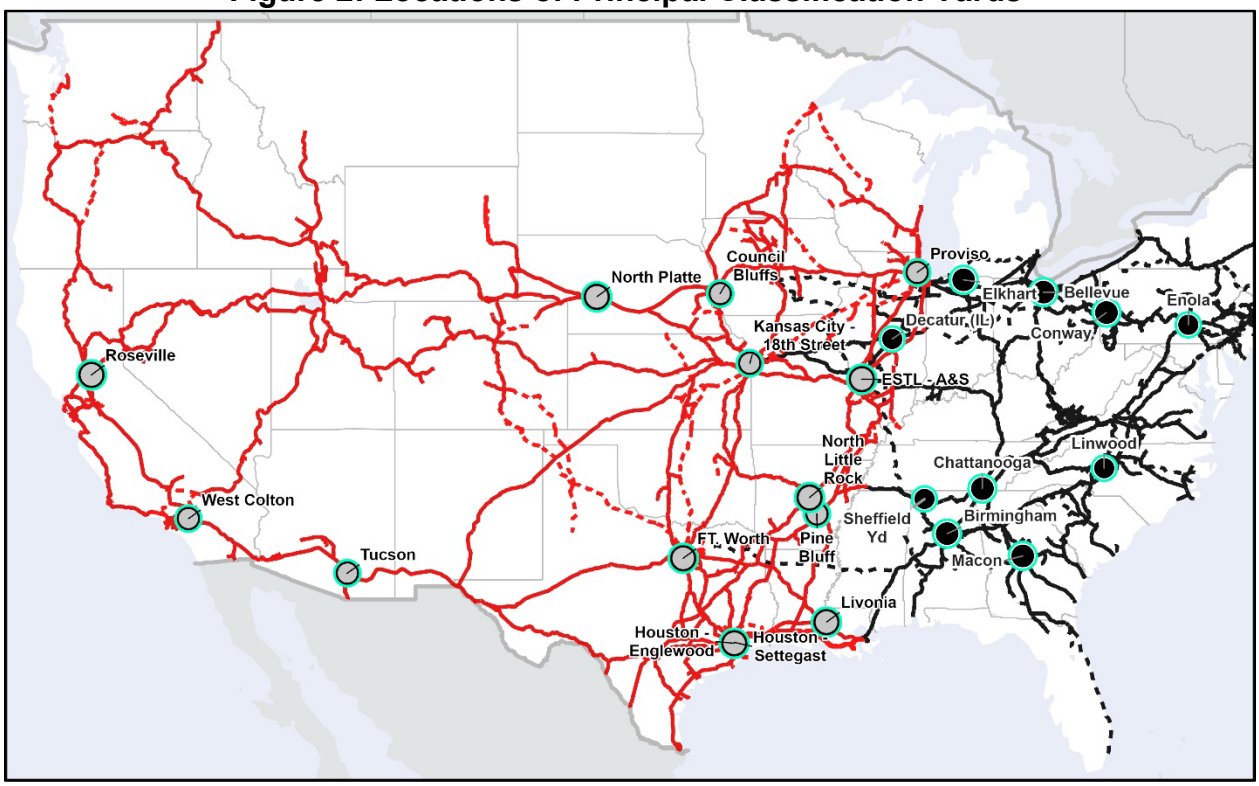

Table 2[18]
Principal Classification Yards

UP Yards	Base Plan Cars/Day
North Little Rock, AR	2,264

Figure 2: Locations of Principal Classification Yards

2. Major Intermodal Terminals

64. To respond to the Board's requirements regarding major intermodal terminals, Applicants identified intermodal terminals with more than 800 lifts per day, as shown in the Operating Plan's Base Plan, and then added several terminals projected to experience meaningful growth as a result of the transaction and to ensure coverage of all major UP-to-NS gateways. Applicants use the same terminals for the benchmarking required by 49 C.F.R. § 1180.10(k)(2). Applicants list their major intermodal terminals for reporting purposes below in Table 3 and show the locations of those terminals below in Figure 3.

Figure 3: Location of Major Intermodal Terminals

C. Changes to Operations of Principal Classification Yards and Major Intermodal Terminals

65. As discussed in the Operating Plan, Applicants' principal classification yard and intermodal terminal operations will change as a result of a combination of merger-related growth, changes to train and blocking plans, and yard and terminal consolidations. As described in the first part of the Service Assurance Plan, UP/NS will engage in a thorough change management process before implementing any of these changes to ensure they will not cause any degradation of service to customers.

1. Principal Classification Yards

66. Below in Tables 4 and 5, Applicants show the change in the projected number of cars per day between the Base Plan and the Growth Plan for the classification yards listed in Table 2.

Table 4[20]
Changes to Operations
Principal Classification Yards – UP

Yard	Base Plan Cars/day	Growth Plan Cars/day	Variance
North Little Rock, AR	2,264	2,672	407
Englewood (Houston), TX	2,040	2,286	245
Gateway Yard (St Louis), IL	1,866	2,180	314
Livonia, LA	1,813	2,311	499

Table 5[21]
Changes to Operations
Principal Classification Yards – NS

Yard	Base Plan Cars/Day	Growth Plan Cars/Day	Variance
Elkhart, IN	2,349	2,747	398
Moorman (Bellevue), OH	1,811	2,015	204
DeButts (Chattanooga), TN	1,671	2,244	573
Birmingham, AL	1,651	2,030	378
Conway, PA	1,500	1,644	144
Brosnan (Macon), GA	1,172	1,405	234
Decatur (Incl. East Decatur), IL	1,164	1,493	329
Enola (Harrisburg), PA	880	1,009	129
Sheffield, AL	671	676	4
Linwood, NC	453	486	33

67. The projected traffic growth in these yards is the result of improved train and blocking patterns in the Optimized Plan and added traffic in the Growth Plan. For example, Livonia, North Little Rock, Chattanooga, and Birmingham are heavily used in the Optimized Plan to improve blocking for deeper network benefit. These changes, coupled with projected manifest traffic growth between Texas and the Gulf Coast to the Ohio Valley and the Northeast, results in significant increases in volumes at these locations. Similarly, Elkhart is projected to experience increased traffic as a result of traffic growth between the Northeast and the Ohio Valley, on the one hand, and the Midwest and the West, on the other hand.

[21] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Changes Class."

68. As volume increases at these yards, and as traffic patterns evolve over time, UP/NS will continue to optimize its transportation plan with the goal of reducing handlings below the levels currently projected. UP/NS will also continue to evaluate the need for additional capital investment to accommodate traffic growth. However, Applicants' Operating Plan, including their capital improvement plan, which is described in detail in Part IV of this Service Assurance Plan, is designed to ensure their classification yards will have sufficient capacity to accommodate projected activity levels.

69. Applicants show the projected number of cars per day handled by their principal yards in the Growth Plan and the projected capacity of those yards after planned merger-related and non-merger-related investments below in Tables 6 and 7.

Table 6[22]
Growth Plan Cars per Day v. Capacity
Principal Classification Yards – UP

Yard	Growth Plan Cars/Day	Capacity Cars/Day	Variance
North Little Rock, AR	2,672	2,350	(322)
Englewood (Houston), TX	2,286	2,520	234
Gateway Yard (St Louis), IL	2,180	2,160	(20)
Livonia, LA	2,311	2,040	(271)

Jacksonville, FL	640	622	(19)

[24] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Changes Intm."

[25] *See id.*

71. The projected traffic growth in these terminals primarily results from added traffic in the Growth Plan. For example, volume increases at Croxton and Lathrop are driven by new traffic to the Northeast from the West Coast. Volume increases at Settegast and Austell are driven by new traffic between Texas and the Southeast. Optimized train plans that eliminate UP-NS interchanges in the Chicago gateway will offset some demand at Global 4. In addition, terminal consolidations in the Optimized Plan contribute to traffic increases at 47th Street, Global 2, and Marion.

72. As volume increases at these terminals, and as traffic patterns evolve over time, UP/NS will continue to optimize its transportation plan to make efficient use of its intermodal facilities. UP/NS will also continue to evaluate the need for additional capital investment to accommodate traffic growth. However, Applicants' Operating Plan, including their capital improvements plan, which is described in detail in Part IV of this Service Assurance Plan, is designed to ensure their intermodal terminals will have sufficient capacity to accommodate projected activity levels.

73. Applicants show the projected number of lifts per day in their major intermodal terminals in the Growth Plan and the projected capacity of those terminals after merger-related and non-merger-related investments below in Tables 10 and 11.

Table 10[26]

D. Dwell Time and On-Time Origination Performance Benchmarks

74. In accordance with the benchmarking requirements in 49 C.F.R. § 1180.10(k), Applicants developed dwell time and on-time origination performance benchmarks for their principal classification yards and major intermodal terminals. Specifically, Applicants used the 36 monthly periods immediately preceding the filing date of the notice of intent to file the application as the benchmarking period.

1. Principal Classification Yards

75. Applicants provide dwell time and on-time origination performance benchmarks for their principal classification yards in Electronic Appendix X.[28] Applicants show the expected post-merger ranges of those benchmarks below in Table 12.

[28] *See* Workpaper "System, Yard, and Terminal Benchmarking Matrix.xlsx," Tab "Yard and Terminal Matrix."

Table 12[29]
Dwell Time and On-Time Origination Performance Ranges
Principal Classification Yards

Yard	Benchmark Dwell Range	Benchmark On-Time Origination Performance Range

Conway, PA	26hrs-32hrs	25%-75%
Brosnan (Macon), GA	26hrs-32hrs	25%-75%
Decatur (Incl. East Decatur), IL	26hrs-32hrs	25%-75%
Enola (Harrisburg), PA	26hrs-32hrs	25%-75%
Sheffield, AL	26hrs-32hrs	25%-75%
Linwood, NC	26hrs-32hrs	25%-75%

[29] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Class Ranges."

76. Applicants do not expect dwell times in their principal classification yards to change substantially as a result of the revised operations reflected in the Growth Plan. Applicants will ensure their classification yards have sufficient capacity such that dwell times should not deteriorate as a result of merger-related traffic growth. Applicants expect that dwell times in legacy UP classification yards will range between 20 and 26 hours under typical operating conditions, and dwell times in legacy NS classification yards will range between 26 and 32 hours under typical operating conditions. As discussed in the contingency planning portion of the Service Assurance Plan, Applicants will activate their contingency plans for the yards addressed in those plans if dwell times rise above 29 hours for legacy UP yards and 36 hours for legacy NS yards after the revised operating plans reflected in the Growth Plan are implemented. Applicants discuss the reasons for selecting those thresholds in the contingency planning portion of the Service Assurance Plan. *See* Section IX.E.

77. Applicants do not expect on-time origination performance in their principal classification yards to change substantially as a result of the revised operations reflected in the Growth Plan. Applicants will ensure their principal classification yards have sufficient capacity such that on-time performance should not deteriorate as a result of merger-related traffic growth. Applicants expect that on-time performance in legacy UP classification yards will remain between 40 and 90 percent, and on-time performance in legacy NS classification yards will remain between 25 and 75 percent, after the revised operations reflected in the Growth Plan are implemented.

2. Major Intermodal Terminals

78. Applicants provide dwell time benchmarks an on-time origination performance benchmarks for their major intermodal terminals in Electronic Appendix X.[30] Applicants show the expected post-merger ranges of those benchmarks below in Table 13.

[30] *See* Workpaper "System, Yard, and Terminal Benchmarking Matrix.xlsx," Tab "Yard and Terminal Matrix."

Table 13[31]
Dwell Time and On-Time Origination Performance Ranges
Major Intermodal Terminals (bold indicates international or mixed ramp)

Yard	Benchmark Terminal Arrival to Van Ground ("TA-VG") Range	Benchmark On-Time Origination Performance Range
Global 4 (Chicago), IL	6hrs to 18hrs	70%-95%
Global 2 (Chicago), IL	5hrs to 9hrs	70%-95%
East Los Angeles, CA	5hrs to 9hrs	70%-95%
Mesquite (Dallas), TX	5hrs to 9hrs	70%-95%
ICTF (Los Angeles), CA	6hrs to 18hrs	70%-95%
Lathrop, CA	5hrs to 9hrs	70%-95%
Marion (Memphis), AR	5hrs to 9hrs	70%-95%
Port Laredo, TX	5hrs to 9hrs	70%-95%
Settegast (Houston), TX	5hrs to 9hrs	70%-95%
47th St (Chicago), IL	5hrs to 9hrs	70%-95%
Austell (Atlanta), GA	6hrs to 18hrs	70%-95%
Harrisburg, PA	5hrs to 9hrs	70%-95%
Calumet (Chicago), IL	6hrs to 18hrs	70%-95%
Landers (Chicago), IL	5hrs to 9hrs	70%-95%
Croxton (New York City), NJ	6hrs to 18hrs	70%-95%
Rutherford (Harrisburg), PA	5hrs to 9hrs	70%-95%
Rickenbacker (Columbus), OH	6hrs to 18hrs	70%-95%
Voltz (Kansas City), MO	6hrs to 18hrs	70%-95%
Jacksonville, FL	6hrs to 18hrs	70%-95%

79. Applicants do not expect dwell times in their major intermodal terminals to change substantially as a result of the revised operations reflected in the Growth Plan. Applicants will ensure their intermodal terminals have sufficient capacity such that dwell times should not deteriorate as a result of merger-related

[31] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Intm Ranges."

traffic growth. Applicants expect that dwell times at terminals primarily or exclusively handling domestic intermodal traffic will remain between 5 and 9 hours, and dwell times at terminals primarily or exclusively handling international intermodal traffic will remain between 6 and 18 hours, after the revised operations reflected in the Growth Plan are implemented. However, as discussed in more detail in Section XII.B.2 of this Service Assurance Plan, intermodal terminal dwell times depend significantly on the timely performance by third parties to retrieve and remove containers and trailers from yards, and therefore they provide a poor measure of railroad service performance.

80. Applicants do not expect on-time origination performance in their major intermodal terminals to change substantially as a result of the revised operations reflected in the Growth Plan. Applicants will ensure their intermodal terminals have sufficient capacity such that on-time performance should not deteriorate as a result of merger-related traffic growth. Applicants expect that on-time performance in legacy UP and NS intermodal terminals will remain between 70 and 95 percent after the revised operations reflected in the Growth Plan are implemented.

IV. Infrastructure Improvements – Capital Improvement Plan

A. Capital Improvements Critical to Integrating UP and NS

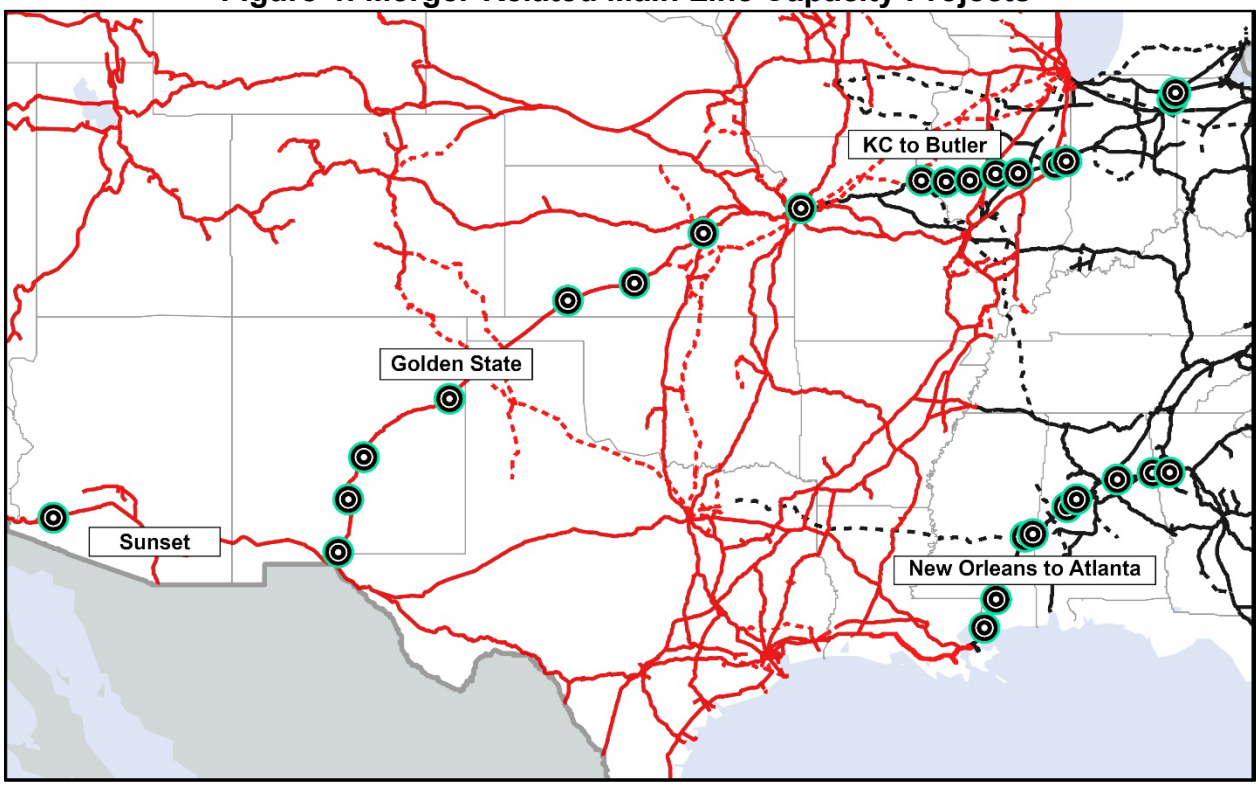
81. As discussed in the Operating Plan, Applicants' combined network has sufficient capacity to accommodate the traffic flows projected in the Optimized Plan. Applicants have not identified any potential infrastructure impediments to the timely integration of UP and NS.

B. Capital Improvements to Handle Projected Growth

82. As also discussed in the Operating Plan, Applicants have planned extensive capital improvements to main lines and yard and terminal facilities on the combined UP/NS network that are projected to experience merger-related traffic growth. These investments will allow the combined railroad to accommodate anticipated traffic growth while also improving safety and service quality.

83. In the sections below, Applicants describe their plans to invest on main lines and in yard and terminal facilities to accommodate the traffic flows projected in the Growth Plan. The investments described below include two types of projects: (1) merger-related investments—projects Applicants planned specifically to address anticipated merger-related growth, and (2) pre-merger investments—projects UP or NS was advancing prior to their agreement to merge. Applicants are not including the second category of projects in their calculations of merger-related capital investment.[32]

1. Main Line Capacity Improvements



84. Applicants plan to invest approximately $507 million (in 2023 dollars) in projects to increase main line capacity on the combined network.[33] The locations of the planned projects are shown below in Figure 4.

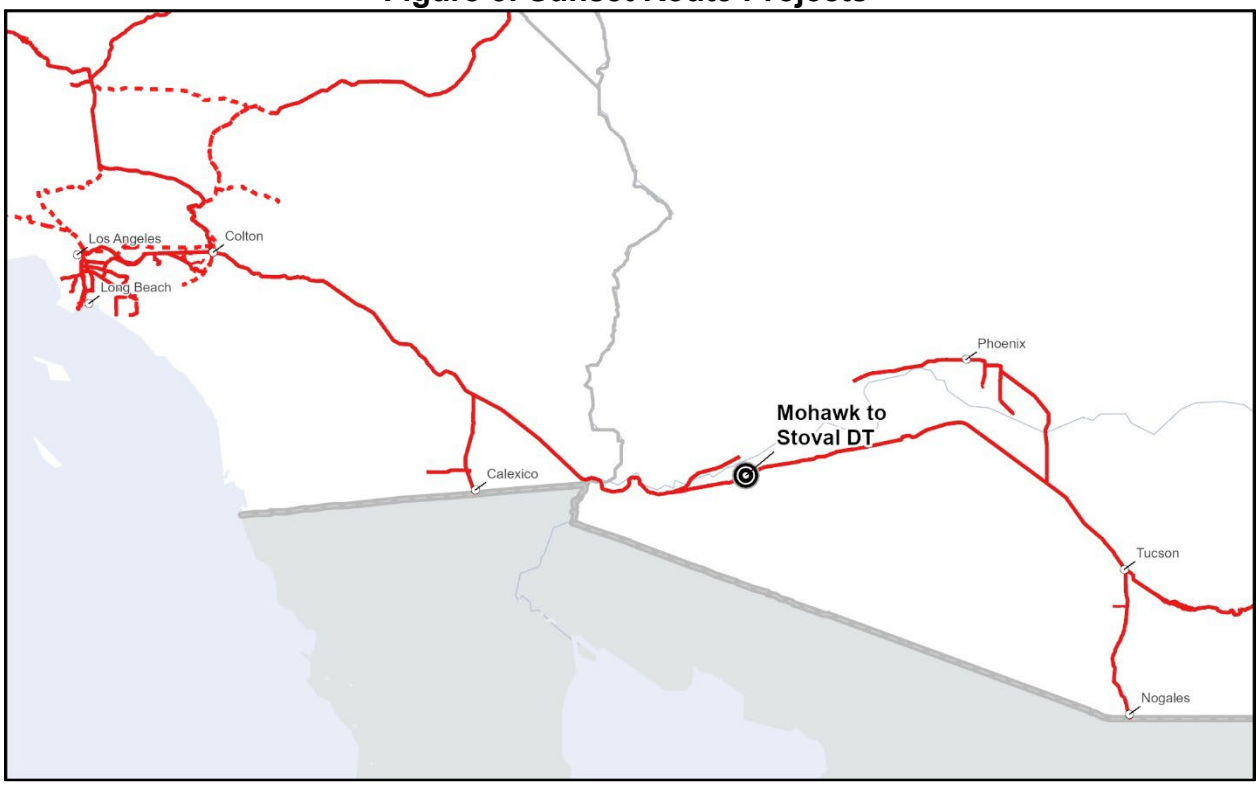
---

[32] In describing expected project completion dates, Applicants refer to the actual year in which UP or NS plans to complete the projects when discussing pre-merger projects, and the number of years following merger approval for post-merger projects (*i.e.*, "Year 1," "Year 2," "Year 3").

[33] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H83. Planned investments are stated in 2023 dollars because 2023 is the year used for the impact analysis in this transaction. Applicants'

Figure 4: Merger-Related Main Line Capacity Projects

a. Main Line Projects on the UP Network



85. Applicants are planning merger-related investments to increase main line capacity on two routes on the legacy UP network: (1) the Sunset route between Los Angeles and El Paso, and (2) the Golden State route between El Paso and Kansas City. UP also has plans underway to increase capacity on its DeQuincy Subdivision that will help accommodate traffic flows projected in the Growth Plan. These investments are described in the next paragraphs.

86. *Sunset Route Projects*. UP's Sunset route runs between Los Angeles and New Orleans. In the Growth Plan, Applicants project that the number of trains on

workpapers show investments in 2025 dollars to avoid the need for numerous separate conversions to 2023 dollars.

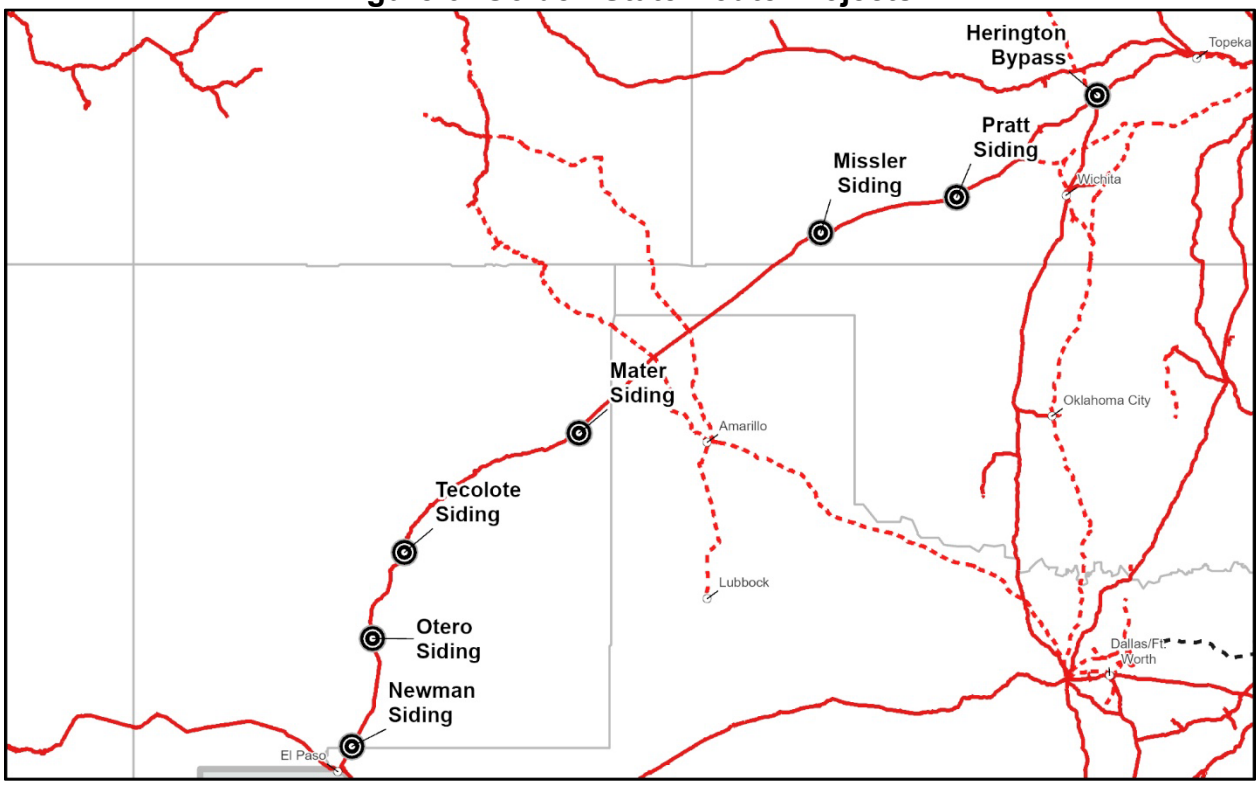
the Sunset route between West Colton, California, and El Paso, Texas, will increase from 30 per day to 36 per day, which would exceed the route's current fluid capacity. However, UP had a pre-merger plan to construct two new double-track segments on the route and had developed plans to further increase capacity as warranted. To accommodate merger-related growth, Applicants plan to make the next investment on UP's list: 3.9 miles of new double-track to connect the Mohawk and Stoval sidings. The location of the post-merger project is shown in Figure 5, and the projects are summarized below. Together, these projects will increase the Sunset route's fluid capacity between West Colton and El Paso well above 36 trains per day.[34]

Figure 5: Sunset Route Projects

[34] *See* Workpaper "UP Sunset Corridor Capacity Projects.pdf" at 3–4.

- Pre-Merger Investment:
    - Yuma to Fortuna Double Track (Gila Subdivision MP 737.4 to 742.9). Applicants plan to construct 5.4 miles of new double track between East Yard near Yuma and Fortuna on the Gila Subdivision. Applicants expect to complete this project in 2027.[35]
    - Bosque to Shawmut Double Track (Gila Subdivision MP 862.1 to 870.8). Applicants plan to construct 8.7 miles of new double track between Bosque and Shawmut on the Gila Subdivision. Applicants expect to complete this project in 2027.[36]
- Merger-Related Investment:
    - Mohawk to Stoval Double Track (Gila Subdivision MP 795.9 to 801.9). Applicants plan to construct 3.9 miles of new double track between Mohawk and Stoval on the Gila Subdivision. Applicants estimate this project will cost $34.1 million and be completed by the end of Year 2.[37]

87. *Golden State Route Projects*. UP's Golden State route runs between El Paso, Texas, and Kansas City, Missouri. In the Growth Plan, Applicants project that the number of 14,000-foot trains moving over the Golden State route will increase from 9 per day to 14 per day, which would exceed the route's current fluid capacity. However, UP had a pre-merger plan to construct a new lead track in its Herington Yard to increase capacity on the route. To accommodate merger-related growth, Applicants plan to make a series of additional investments, primarily involving extensions to existing sidings. The locations of the post-merger projects are shown in Figure 6, and the pre- and post-merger projects are summarized below. Together,



[35] *See id.* at 13.

[36] *See id.* at 14.

[37] *See id.* at 8; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H16.

these projects will allow the Golden State route to accommodate the projected increase in 14,000-foot trains.[38]

Figure 6: Golden State Route Projects

- Pre-Merger Investment: In 2026, UP plans to begin construction on a preexisting capacity improvement project.
    - Herington South Lead (Herington Subdivision MP 174.4 to 171.9). Applicants plan to construct 2.5 miles of new lead track into Herington Yard. This project will reduce congestion in and out of Herington Yard and help traffic flow through the Herington Subdivision. Applicants expect to complete this project by the end of 2026.[39]
- Merger Related Investment:
    - Otero Siding Extension (Carrizozo Subdivision MP 864.1 to 862.9). Applicants plan to extend the existing Otero siding on the

[38] *See* Workpaper "UP Golden State Corridor Capacity Projects.pdf" at 2–3 (total trains) and 4–5 (14,000-foot trains).

[39] *See id.* at 32.

Carrizozo Subdivision from 8,976 feet to over 15,000 feet. Applicants expect that this project will cost $11.2 million and be completed by the end of Year 1.[40]

- Missler Siding Extension (Pratt Subdivision MP 395.9 to 393.7). Applicants plan to extend the existing Missler siding on the Pratt Subdivision from 8,875 feet to over 15,000 feet. Applicants estimate this project will cost $18.9 million and be completed by the end of Year 1.[41]

- Herington Yard Bypass (Herington Subdivision MP 171.9 to 170.2). Applicants plan to construct an additional bypass lane through Herington Yard. The new lane will provide an additional route through the potential bottleneck at Herington and improve fluidity along the Golden State mainline. The combined railroad could also utilize the fast track as needed for additional yard capacity. Applicants estimate this project will cost $19.7 million and be completed by the end of Year 2.[42]

- Pratt Siding Extension (Herington Subdivision MP 296.1 to 294.5). Applicants plan to extend the existing Pratt siding on the Herington Subdivision from 9,219 feet to over 15,000 feet. Applicants estimate this project will cost $13.3 million and be completed by the end of Year 3.[43]

- Mater Siding Extension (Tucumcari Subdivision MP 624.2 to 623.0). Applicants plan to extend the existing Mater siding on the Herington Subdivision from 9,120 feet to over 15,000 feet.

---

[40] *See id.* at 8; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H17.

[41] *See* Workpaper "UP Golden State Corridor Capacity Projects.pdf" at 9; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H18.

[42] *See* Workpaper "UP Golden State Corridor Capacity Projects.pdf" at 10; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H19.

[43] *See* Workpaper "UP Golden State Corridor Capacity Projects.pdf" at 11; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H20.

Applicants estimate this project will cost $10.1 million and be completed by the end of Year 3.[44]

- Newman Siding Extension (Carrizozo Subdivision MP 948.4 to 947.2). Applicants plan to extend the existing Newman siding on the Carrizozo Subdivision from 8,996 feet to over 15,000 feet. Applicants estimate this project will cost $8.3 million and be completed by the end of Year 3.[45]

- Tecolote Siding Extension (Carrizozo Subdivision MP 791.1 to 789.8). Applicants plan to extend the existing Tecolote siding on the Carrizozo Subdivision from 10,414 feet to over 15,000 feet. Applicants estimate this project will cost $11.2 million and be completed by the end of Year 3.[46]

88. *DeQuincy Subdivision Projects*. UP's DeQuincy Subdivision runs between DeQuincy, Louisiana, and Livonia, Louisiana. In the Growth Plan, Applicants project the number of trains operating, including 10,000-foot trains, would exceed the subdivision's current fluid capacity. However, UP had a pre-merger plan to extend the Lawtell Siding, an existing siding on the subdivision, which will create sufficient capacity to accommodate traffic levels projected in the Growth Plan.[47] Applicants expect to complete the new siding in 2027.[48]

---

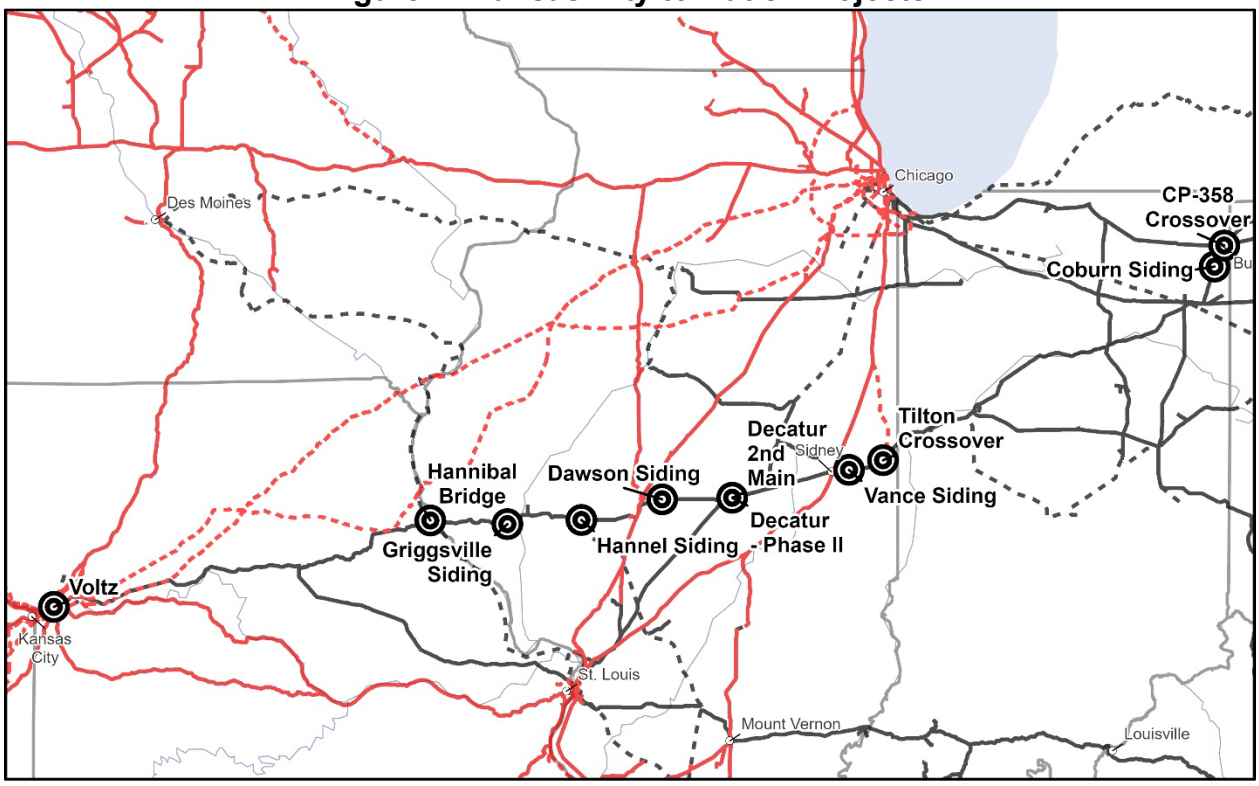
[47] *See* Workpaper "UP DeQuincy Subdivision Capacity Projects.pdf" at 3–4 (total trains), 5–6 (10,000-foot trains), and 9 (Lawtell Siding plan).

[48] *See id.* at 9.



b. Main Line Projects on the NS Network

89. Applicants are planning merger-related investments to increase main line capacity on two portions of the legacy NS network: (1) the corridor between Kansas City, Missouri, and Butler, Indiana, and (2) the corridor between New Orleans, Louisiana, and Atlanta, Georgia. NS also has plans underway to increase capacity on its 3B Subdivision between Burstall, Alabama, and Mobile, Alabama, which will help accommodate traffic flows projected in the Growth Plan. Finally, Applicants are planning merger-related investments to improve operational fluidity by transitioning signaling technology on the legacy NS corridor between Cleveland, Ohio, and Harrisburg, Pennsylvania. These investments are described in the next sections.

90. *Kansas City to Butler Corridor Projects.* NS's Kansas City to Butler corridor is an important link on the combined network's route between Southern California and the Ohio Valley and the Northeast. Applicants project that the number of trains moving over the corridor will increase by 1 to 3 per day under the Optimized Plan and 3 to 8 per day under the Growth Plan. (The variance in train counts is driven by the fact that the corridor has many entry and exit points.) The corridor currently has sufficient fluid capacity to accommodate the projected growth in volume, but Applicants are planning a series of upgrades to reduce transit times and allow operations consistent with the combined company's train-length strategy. The locations of the post-merger projects are shown in Figure 7, and the pre- and post-

merger projects are summarized below. Together, these projects will allow the combined railroad to provide the service described in the Growth Plan.[49]

Figure 7: Kansas City to Butler Projects

- Pre-Merger Investment:
  - CP Brush Phase I (Lafayette Subdivision MP D373). NS has begun constructing a new connecting track between the yard leads and Main 2 at Brush Interlocking. This project will provide important connectivity for originating and terminating trains, trains that are working the yard, and yard movements. The project also includes signaling needed to interface the new track to the Centralized Traffic Control ("CTC") system. Applicants expect this project to be completed by the end of 2026.[50]

[49] *See* Workpaper "NS - Corridor Infrastructure.pdf" at 8 and 10.

[50] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Line Capacity Projects," Row 31.

- Merger-Related Investment:

    - UP connection at West MC (Voltz) (Kansas City Subdivision MP S266.0). Applicants plan to upgrade the existing NS-UP connection at West MC. This project will support increased speeds of 30 mph (from 10 mph) and will include a crossover between NS main lines to allow a progressive move to/from either NS main line track to the UP main line track at the connection point. Applicants estimate this project will cost $6.8 million and be completed by the end of Year 2.[51]

    - Positive Train Control ("PTC") Upgrade (Kansas City District MP S212.9 to S148.5; Hannibal District MP H0.0 to H69.9; Springfield District MP DH466.0 to DH515.5). Applicants plan to install PTC on the district between Wabash Junction and Bluffs, a distance of 182 miles. Applicants estimate this project will cost $19.5 million and be completed by the end of Year 3.[52]

    - Hannibal Bridge Speed Upgrade (Springfield-Hannibal District MP DH513.9 to DH515.1). Applicants plan to increase superelevation to approximately two inches for approximately 1.2 miles to support an increased speed over the bridge to 20 mph (from 10 mph). Applicants estimate this project will cost $2.4 million and be completed by the end of Year 2.[53]

    - Griggsville Siding Extension (Springfield-Hannibal District MP DH479.0 to DH482.0). Applicants plan to upgrade and extend the existing siding at Griggsville to a clear length of 15,000 feet. The project will include constructing 1.45 miles of new siding track, upgrading existing siding track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants

---

[51] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 4; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 4; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H32.

[52] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 5; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H33.

[53] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 6; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 7; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H36.

estimate this project will cost $11.6 million and be completed by the end of Year 3.[54]

- Hannel Siding Extension (Springfield-Hannibal District MP DH440.4 to DH443.5). Applicants plan to upgrade and extend the existing siding at Hannel to a clear length of 15,000 feet. The project will include constructing one mile of new siding track, upgrading existing siding track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants estimate this project will cost $10.6 million and be completed by the end of Year 3.[55]

- Dawson Siding Extension (Springfield-Hannibal District MP DH402.5 to DH405.6). Applicants plan to upgrade and extend the siding at Dawson to a clear length of 15,000 feet. The project will include constructing one mile of new siding track, upgrading existing siding track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants estimate this project will cost $10.1 million and be completed by the end of Year 3.[56]

- Decatur Second Main Line (Lafayette District MP D374.3 to D375.4). Applicants plan to construct one mile of new double track between Wabic (D375.3) and 22nd Street (D374.3) at Decatur. The project will include road access for possible fueling and inspection events. This project, in conjunction with the CP-Brush Phase II project discussed below, replaces two single track sections with 23 miles of continuous double track.

---

[54] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 7; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 9; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investments," Cell H37.

[55] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 8; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 12; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H38.

[56] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 9; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 17; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H39.

Applicants estimate this project will cost $11.9 million and be completed by the end of Year 3.[57]

- CP Brush Phase II (Lafayette Subdivision MP D372.0 to D373.0). This project is additive to the pre-existing (non-merger related) East Decatur CP-Brush Phase I project. This CP-Brush Phase II project, in conjunction with the Decatur Double Track project described above, will replace two single track sections with 23 miles of continuous double track. Applicants estimate this project will cost $16.9 million and be completed by the end of Year 3.[58]

- Vance Siding Extension (Lafayette Subdivision MP D318.0 to D321.1). Applicants plan to upgrade and extend the siding at Vance, Illinois, to a clear length of 15,000 feet. This project will include constructing 1.7 miles of new siding track, upgrading existing track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants estimate this project will cost $15.8 million and be completed by the end of Year 3.[59]

- CTC Upgrade: Eldon to Ross Lane Plus Tilton Universal Crossover (Lafayette Subdivision MP D296.4 to D305.7). Applicants plan to convert 9.3 miles of Rule 93/directional double track to CTC at Tilton Yard. The project will include #20 universal crossovers just east of Tilton Yard at MP D302.4. Applicants estimate this project will cost $10.2 million and be completed by the end of Year 2.[60]

---

[57] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 10; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 14; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H40.

[58] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 11; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 20; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H41.

[59] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 12; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 22; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H42.

[60] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Rows 13, 14; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf"

- Coburn Siding Extension (Detroit-Huntington Subdivision MP D123.2 to D126.4). Applicants plan to upgrade and extend the existing siding at Coburn to a clear length of 15,000 feet. The project will include constructing 1.7 new miles of siding track, upgrading existing track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants estimate this project will cost $16.3 million and be completed by the end of Year 3.[61]

- CP-358 Crossover (Toledo West Subdivision MP CD358.3). Applicants plan to construct a #20 LH powered crossover within CP-358 on the Chicago Line, which is on the NS Premier Corridor section between Elkhart, Indiana, and Toledo, Ohio. Applicants estimate this project will cost $4.6 million and be completed by the end of Year 2.[62]

91. *New Orleans to Atlanta Corridor Projects*. NS's New Orleans to Atlanta corridor is an important link on NS's network connecting the Southeast to UP's routes to and from South Texas. Under the Optimized Plan, train volumes on this corridor are flat on the Back Belt, reduced by 3 train starts per day between New Orleans and Meridian, Mississippi, and increased by as many as 2 train starts per day between Meridian and Austell, Georgia. Under the Growth Plan, train starts increase by 4 per day on the Back Belt, 3 per day between New Orleans and Meridian, and 9 to 11 per day between Meridian and Austell. Applicants are planning a series of investments

to accommodate the projected volume growth. The locations of the projects are shown in Figure 8, and the projects are summarized below. Together, these projects will allow the combined railroad to provide the service described in the Growth Plan.[63]

Figure 8: New Orleans to Atlanta Projects

- Merger-Related Investment:
  - Pearl River Siding Extension (NONE Subdivision MP NO159.52 to NO162.35). Applicants plan to upgrade and extend the existing siding at Pearl River to a clear length of 15,000 feet. The project will include constructing 1.70 miles of new siding track, upgrading existing siding track to accommodate speeds of 40 mph

[63] *See* Workpaper "NS - Corridor Infrastructure.pdf" at 20 and 22.

(from 25 mph), and upgrading turnouts to #20s. This segment of track will also be upgraded to CTC. Applicants estimate this project will cost $19.4 million and be completed by the end of Year 3.[64]

- Lumberton Siding Extension (NONE Subdivision MP NO112.1 to NO115.3). Applicants plan to upgrade and extend the siding at Lumberton to a clear length of 15,000 feet. The project will include constructing 1.7 miles of new siding track, upgrading the passing siding to accommodate speeds of 40 mph (from 15 mph), and replacing the existing spring switches with #20-power/dispatcher-controlled switches at each end of the siding. This segment of track will also be upgraded to CTC. Applicants estimate this project will cost $22.0 million and be completed by the end of Year 3.[65]

- North End Meridian Double Track (Birmingham Subdivision MP AG289.7 to AG292.7). Applicants plan to extend the Meridian double track north from CP Breyer by constructing three miles of new track. Applicants estimate this project will cost $28.6 million and be completed by the end of Year 3.[66]

- Toomsuba Siding Extension (Birmingham Subdivision MP AG279.1 to AG282.2). Applicants plan to upgrade and extend the siding at Toomsuba to a clear length of 15,000 feet. The project will include constructing 1.5 miles of new siding track and upgrading the existing track to accommodate speeds of 40 mph

---

[65] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 18; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 35; *see also Janke* VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H48.

[66] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 19; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 38; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H49.

(from 15 mph). Applicants estimate this project will cost $23.3 million and be completed by the end of Year 3.[67]

- Moundville Siding Extension (Birmingham Subdivision MP AG213.2 to AG216.4). Applicants plan to upgrade and extend the siding at Moundville to a clear length of 15,000 feet. The project will include constructing 1.7 miles of new siding track, upgrading the existing siding to accommodate speeds of 40 mph (from 20 mph), and upgrading turnouts to #20s at each end of the siding. Applicants estimate this project will cost $20.7 million and be completed by the end of Year 3.[68]

- Fleming Siding Extension (Birmingham Subdivision MP AG184.4 to 187.9). Applicants plan to upgrade and extend the siding at Fleming to a clear length of 15,000 feet. The project will include constructing 1.1 miles of new siding track, upgrading the existing siding to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s at each end of the siding. Applicants estimate this project will cost $16.0 million and be completed by the end of Year 3.[69]

- Holt Siding Extension (Birmingham Subdivision MP 770.10 to 767.23). Applicants plan to upgrade and extend the existing siding at Roberts-Holt to a clear length of 15,000 feet. The project will include constructing 1.16 miles of new siding track, upgrading existing siding track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants

estimate this project will cost $17.7 million and be completed by the end of Year 3.[70]

- Foster Siding Extension (Birmingham Subdivision MP 707.3 to 708.5). Applicants plan to upgrade and extend the siding at Foster to a clear length of 15,000 feet. The project will include constructing one mile of new siding track, upgrading the existing siding to accommodate speeds of 40 mph (from 30 mph), and upgrading turnouts to #20s at each end of the siding. Applicants estimate this project will cost $13.1 million and be completed by the end of Year 3.[71]

- Taylor Siding Extension (Birmingham Subdivision MP 674.52 to 677.44). Applicants plan to upgrade and extend the existing siding at Temple-Taylor to a clear length of 15,000 feet. The project will include constructing 1.04 miles of new siding track, upgrading existing siding track to accommodate speeds of 40 mph (from 25 mph), and upgrading turnouts to #20s. Applicants estimate this project will cost $11.4 million and be completed by the end of Year 3.[72]

92. *Birmingham to Mobile Corridor (3B Subdivision) Projects*. NS's 3B Subdivision runs between Burstall and Mobile, Alabama. Under the Growth Plan, projected train counts are expected to exceed fluid capacity on the 3B North District, specifically on the segment between Wilton and Selma. NS previously identified and is currently constructing multiple projects across the entire 3B District. These

---

[70] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 23; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 50; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H53.

[71] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 24; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 53; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H54.

[72] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab Line Capacity Projects," Row 25; Workpaper "NS_Corridor_Infrastructure_Project_Report.pdf" at 56; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H55.

projects will be sufficient to allow the segment to accommodate the traffic projected under the Growth Plan.[73]

93. *Cleveland to Harrisburg Corridor Projects*. The NS network still utilizes cab signals on the Premier Corridor between Cleveland, Ohio, and Harrisburg, Pennsylvania, and from Harrisburg, Pennsylvania, to Perryville, Maryland. Cab signal technology emerged in the early 20th century. With the ongoing expansion of PTC and thanks to a federal waiver that allows trains to operate with PTC in lieu of cab signals, UP phased out its use of cab signal systems on its network, a step approved by the Federal Railroad Administration ("FRA") in 2022. Applicants plan to discontinue legacy cab-signal systems across NS's mainline network between Cleveland and Harrisburg, transitioning to a PTC-only architecture with underlying signal system. Removing out-of-date cab signal technology will improve operational fluidity for trains on the combined UP/NS network. While the NS locomotive fleet is 98 percent equipped with cab signals, UP locomotives are not so equipped. The elimination of cab signals in the legacy NS fleet will provide the combined railroad with more flexibility in the assignment of locomotives to trains. This transition will also enhance safety, reduce maintenance costs, and improve operational efficiency while maintaining regulatory compliance. Additional detail on this initiative appears below.

- Phase I is a $34.3 million investment in PTC-only architecture that replaces the need for cab signal locomotives at Cleveland Terminal. Phase I will allow foreign units to serve as a lead locomotive until arrival at Conway terminal (outside of Pittsburgh). Conway terminal is a

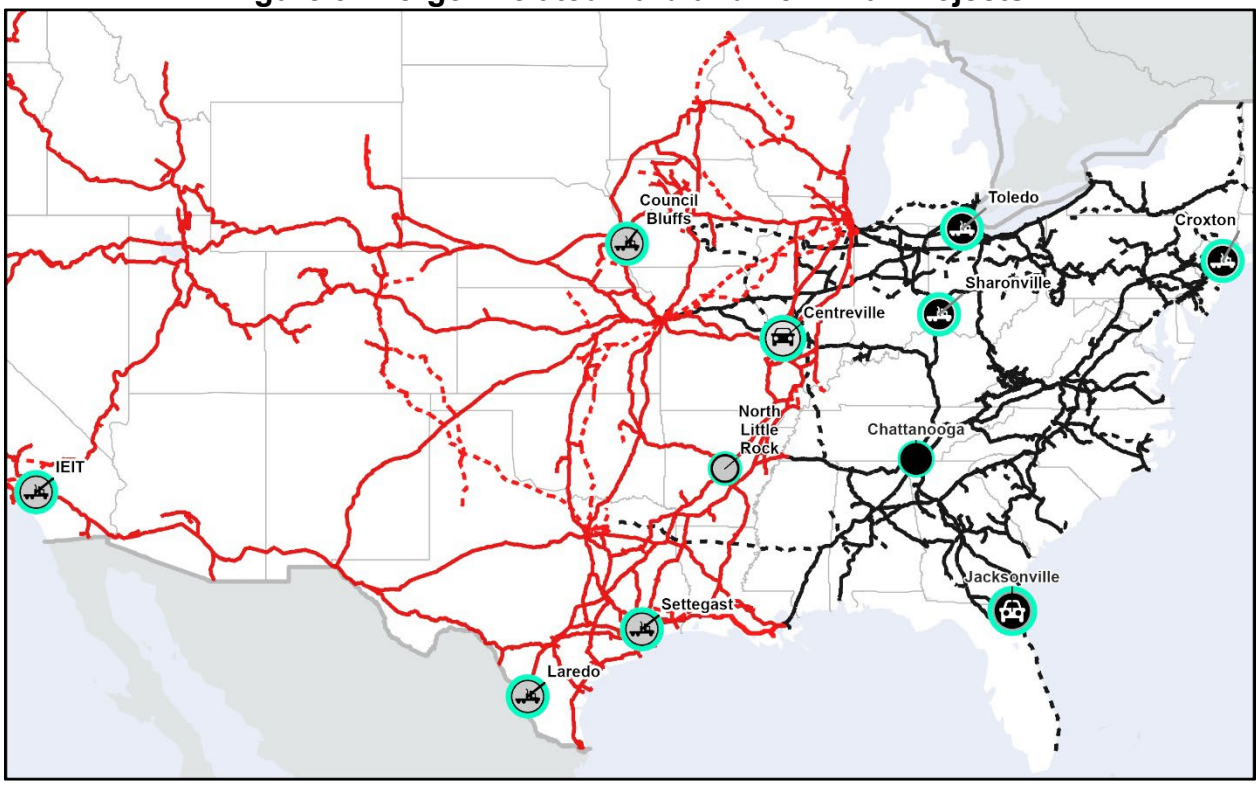
[73] *See* Workpaper "NS - Corridor Infrastructure.pdf" at 36.

natural stopping point because it has the capacity to handle inbound and outbound unit train staging, engine swaps, and brake testing. Stopping trains at Conway terminal will be less disruptive to operations than stopping trains at Cleveland. Applicants estimate that the 139-mile project between RD 122.2 at Cleveland on the Cleveland Line and PC 0.0 at Pittsburgh on the Fort Wayne Line will be completed by the end of Year 3.[74]

- Phase II is a $37.3 million project involving investment in PTC-only architecture that, when complete, will allow for a streamlined network from Chicago to Harrisburg (and consequently to New York) with minimal interruptions or delays for cab signal locomotive additions. Applicants estimate that work on this additional 326-mile footprint (including the primary and Conemaugh Line routes) between PT 353.2 at Pittsburgh on the Pittsburgh Line and PT 105.1 at Harrisburg on the same line will also be completed by the end of Year 3.[75]

94. When both phases are complete, a small pool of cab-signal-equipped locomotives will remain in service east of Conway to ensure compliance with cab signal requirements in Pennsylvania and New Jersey on Shared Assets along with Amtrak and Southeastern Pennsylvania Transportation Authority ("SEPTA") corridors.

2. Yard and Terminal Capacity Improvements



95. Applicants plan to invest approximately $443.5 million (in 2023 dollars) in merger-related projects to increase capacity in UP/NS intermodal, manifest, and automotive yards and terminals to accommodate volumes projected in the Growth

[74] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Cab Signal Projects," Row 4; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H63.

[75] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Cab Signal Projects," Row 5; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H64.

Plan.[76] The locations of these projects are shown below in Figure 9. In the sections below, Applicants describe the pre-merger and merger-related investments in yards and terminals that will help the combined railroad accommodate the volumes projected in the Growth Plan.

Figure 9: Merger-Related Yard and Terminal Projects

a. Intermodal Terminal Projects

96. *Inland Empire (West Colton, California).* UP's Inland Empire intermodal facility in West Colton currently has a fluid capacity of 195,000 lifts per year. Applicants project that Inland Empire will require post-merger capacity of

[76] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cells H25:H28 and H56:H58 (Intermodal); *id.* at Cells H24 and H61 (Manifest); *id.* at Cells H31 and H60 (Autos).

approximately 380,000 lifts per year.[77] Applicants expect to accommodate projected growth through a combination of pre-merger and post-merger investment.[78]

- Pre-Merger Investment: UP has invested heavily at Inland Empire to reconfigure the west end receiving yard to handle intermodal traffic. UP is also adding new working track, parking slots, and parking stalls. UP expects to complete these projects in the first half of 2027. Applicants expect these projects to increase Inland Empire's capacity to 345,000 lifts per year.[79]

- Merger-Related Investment: Applicants plan to add two new working tracks (5,910 ft.), 524 stack slots, and additional crossovers at the Inland Empire intermodal facility. Applicants expect these projects to increase Inland Empire's capacity to 500,000 lifts per year.[80] Applicants estimate these projects will cost $58.1 million and be completed by the end of Year 3.[81]

97. *Settegast (Houston, Texas).* UP's Settegast facility in Houston currently has a fluid capacity of 140,000 lifts per year. Applicants project that Settegast will require post-merger capacity of approximately 320,000 lifts per year.[82] Applicants expect to accommodate projected growth through a combination of pre-merger and post-merger investment.[83]

---

[77] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Intermodal," Row 27.

[78] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Intermodal Terminal Inputs," Rows 38 and 44.

[79] *See* Workpaper "UP Intermodal Terminal Expansion Projects.pdf" at 24.

[80] *See id.* at 5.

[81] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H28.

[82] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Intermodal," Row 4.

[83] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Intermodal Terminal Inputs," Rows 37 and 43.

- Pre-Merger Investment: UP has been planning to construct additional parking stalls at Settegast to accommodate traffic from its Barber's Cut facility. UP has also invested in using the nearby Pierce Yard to support Settegast. UP expects to complete these projects in 2027. Applicants expect these projects to increase Settegast's capacity to 180,000 lifts per year.[84]

- Merger-Related Investment: Applicants plan to add to Settegast 1,045 paved parking stalls, two working tracks (6,000 ft.), PGT automated gate technology, and a new administrative building. Applicants expect these projects to increase Settegast's capacity to 360,000 lifts per year.[85] Applicants estimate this project will cost $102.5 million and be completed by the end of Year 3.[86]

98. *Port Laredo (Laredo, Texas).* UP's Port Laredo intermodal facility currently has a fluid capacity of 160,000 lifts per year. Applicants project that Port Laredo will require post-merger capacity of approximately 233,000 lifts per year.[87] Applicants expect the combined railroad to accommodate projected growth through post-merger investment.[88] Specifically, Applicants plan to add 818 paved parking stalls, 5 support tracks (11,700 ft.), and two working track extensions (9,400 ft.) to the Port Laredo facility. Applicants expect these projects to increase Port Laredo's

[86] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H25.

[87] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Intermodal," Row 3.

[88] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Intermodal Terminal Inputs," Row 24.

capacity to 250,000 lifts per year.[89] Applicants estimate these projects will cost $63.7 million and be completed by the end of Year 2.[90]

99. *Council Bluffs (Iowa).* UP currently uses an intermodal ramp at Council Bluffs operated by Iowa Interstate Railroad ("IAIS"). Applicants project Council Bluffs will require post-merger capacity of approximately 157,000 lifts per year to accommodate expected traffic growth.[91] Because Applicants believe that the IAIS facility cannot meet the expected demand, they are exploring potential investment opportunities in the area to ensure that UP/NS will have adequate capacity to accommodate the projected traffic growth at Council Bluffs. For purposes of preparing their Application, Applicants are assuming a need for investment to accommodate projected growth at Council Bluffs.[92] Applicants plan to construct a new intermodal terminal at the site of UP's existing Council Bluffs Yard. This new facility would include 510 paved parking stalls, 588 stack slots, three working tracks (7,200 ft.), and pool yard support tracks (5,060 ft.). Applicants expect the new Council Bluffs

[89] *See* Workpaper "UP Intermodal Terminal Expansion Projects.pdf" at 6.

[90] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H27.

[91] *See* "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Intermodal," Row 16.

[92] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Intermodal Terminal Inputs," Row 7.

intermodal terminal will have a capacity of 165,000 lifts per year.[93] Applicants estimate this project will cost $75.4 million and be completed by the end of Year 2.[94]

100. *Sharonville (Ohio).* NS's intermodal facility in Sharonville currently has a fluid capacity of 90,000 lifts per year. Applicants project that Sharonville will require post-merger capacity of approximately 195,000 lifts.[95] Applicants expect to accommodate projected growth through a combination of pre-merger and post-merger investment.[96]

- Pre-Merger investment: In 2026, NS plans to begin constructing a terminal expansion that will add 472 stack slots and 2,570 feet of additional working track. NS expects to complete these projects by the end of 2026. Applicants expect these projects to increase Sharonville's capacity by 85,000 lifts per year.[97]

- Merger-Related investment: Applicants plan to add 5,900 feet of support track in Sharonville Yard and to develop a new wheeled parking lot with 350 stalls, complete with adequate lighting, drainage, and security infrastructure. Applicants expect this project to increase Sharonville's capacity to 206,000 lifts per year. Applicants estimate this project will cost $26.2 million and be completed in Year 2.[98]

101. *Appliance Park* (*Louisville, Kentucky).* The NS Appliance Park intermodal facility in Louisville currently has an annual capacity of 140,000 lifts.

---

[93] *See* Workpaper "UP Intermodal Terminal Expansion Projects.pdf" at 4.

[94] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H26.

[95] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 40.

[98] *See id.*, at 10; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H57.

Applicants project that the facility will require post-merger capacity for approximately 145,000 lifts.[99] Applicants expect to accommodate projected growth through pre-merger investment.[100] In 2025, NS began constructing a stack expansion at Appliance Park, intended to densify international stacking at the terminal and open wheeled parking for a new domestic service. The project will deliver 466 new stack slots and displace 130 former wheeled parking stalls. Scheduled for completion in early 2026, this expansion will increase Appliance Park's annual capacity to 161,000 lifts, surpassing projected post-merger demand.[101]

102. *Ayer (Massachusetts).* NS's intermodal facility in Ayer will have a fluid capacity of 98,000 lifts per year following the completion of an ongoing clearance project enabling double-stacked container movements into and out of Ayer. Applicants project that Ayer will require post-merger capacity of approximately 147,000 lifts per year.[102] Applicants expect to accommodate projected growth through pre-merger investment.[103] In 2026, NS expects to begin constructing a parking expansion at Ayer that will add 300 parking stalls with adequate lighting, drainage,

[99] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 38.

[100] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 22.

[103] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 19.

and security. NS expects to complete this project by the end of 2027. Applicants expect the project to increase Ayer's capacity to 156,000 lifts per year. [104]

103. *Charlotte (North Carolina).* The NS intermodal facility at Charlotte currently has a fluid capacity of 300,000 lifts per year. Applicants project that Charlotte will require post-merger capacity of approximately 345,000 lifts per year.[105] Applicants expect to accommodate projected growth through pre-merger investment.[106] In 2025, NS began constructing a parking expansion at Charlotte. The pre-merger project will add 463 wheeled parking spots, as well as adequate lighting, drainage, and security for the new lot. NS expects to complete these projects in mid-2026. Applicants expect the projects to increase Charlotte's capacity to 464,000 lifts per year.[107]

104. *Croxton (New Jersey).* NS's intermodal facility in Croxton currently has a fluid capacity of 420,000 lifts per year. Applicants project that Croxton will require post-merger capacity of 511,000 lifts per year.[108] Applicants expect to accommodate the projected growth through post-merger investment.[109] Applicants plan to increase

---

[104] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xslx," Tab "Intermodal Terminal Inputs," Rows 46 and 47.

[105] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 35.

[106] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 4; Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 23.

[108] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 39.

[109] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 4.

support yard capacity at Croxton by relocating a lead track that provides access to an adjacent industry, as well as adding 5,205 feet of new support track.[110] Applicants expect that, combined with increased daily working track turns by local switch crews, these projects will increase Croxton's capacity to 525,000 lifts per year. Applicants estimate these projects will cost $7.4 million and be completed by the middle of Year 2.[111]

105. *Livernois (Detroit, Michigan).* The NS Livernois intermodal facility in Detroit currently has a fluid capacity of 147,000 lifts per year. Applicants project that Livernois will require post-merger capacity of 219,000 lifts per year.[112] Applicants expect to accommodate this growth through pre-merger investment.[113] In 2026, NS plans to begin a major terminal expansion at Livernois, funded through a combination of public and private investment. The project will deliver 6,175 feet of new working track, 2,000 additional stack slots, and 200 parking stalls, along with upgrades to the operating surface and improved lighting, drainage, and security.[114]

---

[110] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 12.

[111] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Intermodal Terminal Inputs," Row 56; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H56.

[112] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 36.

[113] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 20.

[114] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 2.

Scheduled for completion by the end of 2028, this expansion will increase Livernois's annual capacity to 277,000 lifts, well above projected post-merger demand.[115]

106. *Rickenbacker (Columbus, Ohio).* NS's intermodal facility in Columbus currently has a fluid capacity of 358,000 lifts per year. Applicants project that Rickenbacker will require post-merger capacity of approximately 328,000 lifts per year.[116] NS is currently constructing a major track expansion at Rickenbacker. This pre-merger project includes 23,000 feet of new support track, 5,200 feet of new working track, and additional graded acreage for chassis and container storage. Applicants expect this project, which is scheduled for completion in early 2026, to increase Rickenbacker's annual capacity to 411,000 lifts, well above projected post-merger demand.[117]

107. *Toledo (Ohio).* The NS intermodal facility in Toledo currently has a fluid capacity of 194,000 lifts per year. Applicants project that Toledo will require post-merger capacity of approximately 227,000 lifts per year.[118] Applicants expect that the combined railroad will accommodate projected growth through post-merger investment.[119] Specifically, Applicants plan to relocate tracks within the expansion

---

[115] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Intermodal Terminal Inputs," Row 51.

[116] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 37.

[118] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Intermodal," Row 41.

[119] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 6.

area, construct 10,500 feet of additional support track and 2,450 feet of additional working track, and add 200 new parking stalls with adequate lighting, drainage, and security.[120] Applicants expect these projects to increase Toledo's capacity to 236,000 lifts per year. Applicants estimate these projects will cost $36.3 million and be completed by the end of Year 3.[121]

108. *McCalla (Birmingham, Alabama).* McCalla, the NS automotive ramp in Birmingham, currently supports only automotive distribution, since NS idled intermodal operations there several years ago. To accommodate projected merger-related intermodal growth, Applicants expect that the combined railroad will resume intermodal service at McCalla. Applicants have developed a plan to collocate intermodal and automotive operations at the ramp without requiring additional capital investment. Reintroducing intermodal operations at McCalla will provide 78,000 annual lifts of capacity, exceeding projected post-merger demand of approximately 50,500 lifts.[122]

109. *Lift Equipment.* In addition to making infrastructure improvements at intermodal terminals, Applicants plan to invest in additional lift equipment to support merger-related intermodal growth. Applicants plan to redeploy surplus

---

[120] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 11.

cranes from existing fleets where possible. Legacy UP intermodal terminals are expected to require $38.0 million of investment in new equipment to meet post-merger demand, including 9 new RTG cranes and 12 new reach stackers and packers.[123] Legacy NS intermodal terminals are expected to need $32.1 million of investment in new equipment to meet post-merger demand, including 4 overhead RTG cranes, 8 packer cranes, and one widespan RMG.[124]

b. Manifest Yard Projects

110. *North Little Rock (Arkansas).* UP's North Little Rock facility currently has a fluid capacity of 2,190 cars per day. Applicants project that North Little Rock will require post-merger capacity of approximately 2,675 cars per day.[125] Applicants expect that the combined railroad will accommodate projected growth through post-merger investment and operating plan adjustments.[126] Specifically, Applicants plan to add one new track (9,000 ft.) and extend two existing tracks to 9,000 feet at North Little Rock. Applicants expect these improvements to increase North Little Rock's capacity to 2,350 cars per day. Applicants estimate this project will cost $30.4 million

[123] *See* Workpaper "UP Intermodal Lift Equipment Capacity Model.xlsx," Tab "Capital Need-T3," Cells D7 and D13; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Tab H29.

[126] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Manifest Yard Inputs," Row 101.

and be completed by the end of Year 2.[127] UP/NS will address any additional capacity needs at North Little Rock by adjusting transportation plans, as described in Section 7.2.2 of the Operating Plan.

111. *Gateway Yard (A&S) (E. St. Louis, Illinois).* Gateway Yard currently has a fluid capacity of 2,100 cars per day. Applicants project that Gateway Yard will require post-merger capacity of 2,180 cars per day.[128] UP has a pre-merger project to install new track connections and crossovers to use the yard's track more efficiently by enabling multiple simultaneous moves. This project will be completed in 2026 and will bring Gateway Yard's capacity to 2,160 cars per day.[129] UP/NS will address any remaining capacity needs by modifying transportation plans as described in Section 7.2.2 of the Operating Plan.

112. *Livonia (Louisiana).* UP's manifest yard at Livonia currently has a fluid capacity of 1,950 cars per day. Applicants project that Livonia will require post-merger capacity of approximately 2,310 cars per day.[130] UP is currently constructing an improvement that includes adding a new 7,300-foot departure track and installing

powered switches to the receiving and departure yards.[131] Once this project is completed in 2026, Livonia will have a capacity of 2,040 cars per day.[132] UP/NS will address any remaining capacity needs through transportation planning, using nearby yards as described in Section 7.2.2 of the Operating Plan.

113. *Angleton (Texas).* UP's yard at Angleton currently has a fluid capacity of 610 cars per day. Applicants project that Angleton will require post-merger capacity of 635 cars per day.[133] UP is currently expanding Angleton by adding 4,500 feet of departure track and realigning crossovers to enhance fluidity of operations.[134] Once this project is completed in 2026, Angleton will have a fluid capacity of 650 cars per day. [135]

114. *Bloomington (Texas).* UP's yard in Bloomington, Texas, currently has a fluid capacity of 280 cars per day. Applicants project that Bloomington will require post-merger capacity of approximately 290 cars per day.[136] UP is currently expanding Bloomington by adding 22,000 feet of production trackage, two classification groups, three receiving and departure tracks, switching leads, crossovers, mainline powered

switch ingress/egress, and repair track.[137] Once this project is completed in 2026, Bloomington's capacity will be 430 cars per day.[138]

115. *Robinson (Dayton, Texas).* UP's Robinson yard at Dayton currently has a fluid capacity of 440 cars per day. Applicants project that Robinson Yard will require post-merger capacity of approximately 380 cars per day.[139] As part of its broader Houston terminal expansion strategy, UP is currently engaged in a construction project at Robinson Yard, which includes expanding double-end yard tracks, adding long receiving and departure track that can enable switching from the south, and adding a second north lead to improve switching.[140] Once completed in 2027, this project will increase Robinson Yard's capacity to 640 cars per day.[141] This significantly exceeds Robinson Yard's expected post-merger capacity needs and will allow the combined railroad to address capacity needs at Coady Yard in Baytown, Texas, as described in Section 7.2.2 of the Operating Plan.

116. *Francis (Texas).* UP's yard in Francis currently has a fluid capacity of 70 cars per day. Applicants project that Francis will require post-merger capacity of

[141] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Manifest Yard Inputs," Row 97.

approximately 90 cars per day.[142] UP is currently expanding Francis by adding 3 tracks, extending 2 tracks, and installing crossovers to support switching and work events clear of the main line.[143] Once this project is completed in 2026, the yard will have a fluid capacity of 180 cars per day.[144]

117. *Hoskins Junction (Texas).* UP's yard in Hoskins Junction currently has a fluid capacity of 160 cars per day. Applicants project that Hoskins Junction will require post-merger capacity of approximately 165 cars per day.[145] UP is currently expanding Hoskins Junction by extending five tracks, adding 4,500 feet of classification track.[146] Once this project is completed in 2026, Hoskins Junction will have a fluid capacity of 200 cars per day. [147]

118. *Birmingham (Alabama).* NS's classification yard in Birmingham currently has a fluid capacity of 1,890 cars per day. Applicants project that Birmingham will require post-merger capacity of approximately 2,030 cars per day.[148] Applicants expect to accommodate projected growth through a pre-merger

[145] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Manifest," Row 15.

[146] *See* Workpaper "UP Manifest Yard Expansion Projects.pdf" at 12.

[147] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Manifest Yard Inputs," Row 96.

[148] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Manifest," Row 4.

project that includes extending the pullback leads and improving track geometry at the north end of the classification tracks.[149] Applicants expect this project to be completed in 2027 and to increase Birmingham's capacity to 2,080 cars per day, above the expected Growth Plan demand.[150]

119. *Chattanooga (Tennessee).* NS's yard in Chattanooga currently has a fluid capacity of 2,100 cars per day. Applicants project that Chattanooga will require post-merger capacity of approximately 2,250 cars per day.[151] Applicants expect that UP/NS will accommodate projected growth through post-merger investment. Applicants plan to expand the classification and forwarding tracks at Chattanooga by 9,830 feet and 4,675 feet, respectively.[152] Upon completion of this project, Chattanooga's capacity will increase to 2,300 cars per day, surpassing post-merger demand. Applicants estimate this project will cost $17.1 million and be completed by the end of Year 3.[153]

120. *Decatur (Illinois).* The NS yards in Decatur and East Decatur currently have a combined fluid capacity of 1,420 cars per day. Applicants project that Decatur

[149] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 7.

[150] *See* Workpaper "NS Infrastructure Planned Table.xlsx," Tab "Terminal Capacity Projects," Row 26; Workpaper "NS Manifest Yard Capacity Calculations.xlsx," Tab "Manifest Yard Inputs," Row 45.

[152] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 13.

[153] *See* Workpaper "NS Manifest Yard Capacity Calculations.xlsx," Tab "Manifest Yard Inputs," Row 49; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H61.

will require post-merger capacity for approximately 1,500 cars per day.[154] As discussed above in the line capacity capital section, in 2026 NS plans to initiate construction on the CP Brush project, which will enable Decatur to accommodate the anticipated growth. Applicants expect Phase 1 of the project to enhance switching efficiency for yard jobs occupying CP Brush, increasing Decatur Yard's capacity to 1,500 cars per day, above the post-merger throughput demand.[155]

121. *Elkhart (Indiana).* NS's classification yard in Elkhart currently has a fluid capacity of 2,380 cars per day. Applicants project that Elkhart will require post-merger capacity of approximately 2,750 cars per day.[156] NS is addressing Elkhart's capacity needs through a pre-merger project that is already underway. That project will extend three receiving yard tracks, allowing for longer trains to be yarded without disrupting hump operations.[157] Applicants expect the project to be completed in early 2026 and to increase capacity to 2,620 rail cars per day.[158] UP/NS will address any additional capacity needs at Elkhart through lowering the daily throughput demand by routing a train directly between Bellevue and Calumet or Yard Center, bypassing Elkhart with Chicago area blocks created at Conway and Bellevue. Sufficient density exists in this lane to remove approximately 147 cars per day from

Elkhart in the Growth Plan without straining Bellevue, Conway, Calumet, or Yard Center.

c. Automotive Facility Projects

122. *Centreville (Illinois).* UP's automotive ramp in Centreville currently has a fluid capacity of 100,000 vehicles per year. Applicants project that Centreville will require post-merger capacity of approximately 113,500 vehicles per year.[159] Applicants plan to accommodate expected growth through post-merger investment. Applicants plan to add 536 paved parking stalls at Centreville.[160] Applicants project that, once complete, these improvements will increase Centreville's capacity to 120,000 vehicles per year.[161] Applicants estimate this project will cost $2.1 million and be completed by the end of Year 1.[162]

123. *Santa Rosa (New Mexico).* UP's automotive ramp in Santa Rosa currently has a fluid capacity of 40,000 vehicles per year. Applicants project that Santa Rosa will require post-merger capacity of approximately 41,275 vehicles per

[159] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Auto," Row 4.

[160] *See* Workpaper "UP Auto Terminal Expansion Projects.pdf" at 3.

[162] *See* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H31.

year.[163] Applicants expect to accommodate expected growth through a pre-merger investment project that will be completed in 2026.[164]

124. *Bayview (Baltimore, Maryland).* NS's Bayview automotive ramp is currently configured for collocated automotive and intermodal operations. Intermodal service at the ramp is idled, and UP/NS will not need to reinstate that service to accommodate merger-related intermodal growth. NS is currently engaged in a construction project to expand the automotive footprint into the former intermodal acreage. This expansion will provide capacity for 48,000 vehicles annually, exceeding projected post-merger demand.[165]

125. *Jacksonville (Florida).* NS's automotive ramp in Jacksonville currently has a fluid capacity of 97,000 vehicles per year. Applicants project that the terminal will require post-merger capacity to handle 152,000 vehicles per year.[166] Applicants expect that UP/NS will accommodate projected growth through post-merger investment. Through this investment, the combined railroad will extend each of the six existing working tracks at Jacksonville by 550 feet, add 562 new parking bays, construct 7,249 feet of new support track adjacent to the terminal, and install

---

[163] *See* Workpaper "UP Manifest-Intermodal-Automotive Terminal Volume-Capacity Summary.xlsx," Tab "Auto," Row 19.

[164] *See* Workpaper "UP Auto Terminal Expansion Projects.pdf" at 7; *see also* Workpaper "UP Manifest-Intermodal-Automotive Terminal Capacity Inputs & Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 32.

[165] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 5.

[166] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Auto," Row 20.

lighting, drainage, and security for the expanded footprint.[167] Upon completion of this project, Jacksonville's capacity will increase to 154,000 vehicles per year, greater than post-merger demand. Applicants estimate the project will cost $24.3 million and be completed by the end of Year 2.[168]

126. *Melvindale (Detroit, Michigan).* NS's Melvindale automotive ramp in Detroit currently has a fluid capacity of 189,000 vehicles per year. Applicants project that the terminal will require post-merger capacity to handle approximately 272,500 vehicles per year.[169] Applicants expect to accommodate projected growth through pre-merger investment. In 2026, NS plans to begin construction on a parking expansion at Melvindale, supported by both public and private funding. The project will add 1,106 new parking bays, as well as adequate lighting, drainage, and security for the new lot.[170] Scheduled for completion by the end of 2026, this expansion will increase Melvindale's capacity to 273,000 vehicles per year, well above projected post-merger demand.[171]

---

[167] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 14.

[168] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 28; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investments," Cell H60.

[169] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Auto," Row 19.

[170] *See* Workpaper "NS IM Auto Manifest Expansion Projects.pdf" at 8.

[171] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 25; Workpaper "NS Infrastructure Planned Table," Tab "Terminal Capacity Projects," Row 24.

127. *Shelbyville (Louisville, Kentucky).* NS's automotive ramp in Louisville currently has a fluid capacity of 88,000 vehicles per year.[172] Shelbyville automotive ramp is currently configured for collocated automotive and intermodal operations. Intermodal service at the ramp is idled, and there is no need to reinstate that service to accommodate merger-related intermodal growth in Louisville. To support post-merger automotive demand, Applicants have developed a plan to expand Shelbyville's automotive footprint into the former intermodal acreage without the need for additional capital investment. This expansion will provide capacity for 142,000 vehicles annually, exceeding projected post-merger demand.[173]

128. *Ramp Equipment*. In addition to making infrastructure improvements at automotive terminals, Applicants plan to invest in ramp equipment to support merger-related volume growth. While Applicants plan to redeploy surplus vehicle loading/unloading ramps from existing fleets where possible, Applicants expect that legacy NS automotive terminals will need $1.765 million of investment in 7 new mobile ramps to meet post-merger demand.[174] Applicants expect that legacy UP

[172] *See* Workpaper "NS Terminal Volume Review.xlsx," Tab "Auto," Row 18.

[173] *See* Workpaper "NS IM Auto Terminal Capacity Calculations.xlsx," Tab "Automotive Terminal Inputs," Row 24.

[174] *See* Workpaper "NS Auto Ramp Equipment Capital.xlsx," Tab "Capital Need-T3," Cell D9; *see also* Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Capital Investment," Cell H62.

automotive terminals will need $0.756 million of investment in 3 new mobile ramps to meet post-merger demand.[175]

C. Funding of Capital Improvements

129. Applicants summarize the projected investments in main line, yard, and terminal facilities below in Table 14.

Table 14[176]
Summary of Merger-Related Investments in Main Line, Yard, and Terminal Facilities (2023 dollars)

Investment Type	Project	Facility or Project Type	Location	Investment ($000s)
Yard and Terminal	North Little Rock Yard Expansion	Manifest	Little Rock, AR	$30,441
Yard and Terminal	Settegast Yard Expansion	Intermodal	Houston, TX	102,467
Yard and Terminal	Council Bluffs Yard (Greenfield)	Intermodal	Council Bluffs, IA	75,419
Yard and Terminal	Port Laredo	Intermodal	Laredo, TX	63,691
Yard and Terminal	Inland Empire Intermodal Terminal Yard Expansion	Intermodal	Colton, CA	58,059
Yard and Terminal	Lift Equipment (UP and NS Terminals)	Intermodal	Various	70,027
Yard and Terminal	Ramp Equipment (UP and NS Yards)	Auto	Various	2,521
Yard and Terminal	Centreville Yard Expansion	Autos	Centreville, IL	2,116
Yard and Terminal	Croxton Yard Expansion	Intermodal	Croxton, NJ	7,361
Yard and Terminal	Sharonville Yard Expansion	Intermodal	Sharonville, PA	26,216
Yard and Terminal	Toledo Parking Expansion	Intermodal	Toledo, OH	36,299

Main Line	Conway to Harrisburg CTC	Signal	Pittsburgh Line	37,308
		Total		**$1,023,445**

130. Applicants plan to fund these projects with available cash flow. Applicants' Proforma Income Statement (Exhibit 17) in Volume 1 of the Application shows UP/NS will have sufficient cash flow to support the capital improvements needed to accommodate the traffic levels projected in the Growth Plan.

V. Information Technology Systems

131. Accurate and timely integration of IT systems will be vitally important to achieving the benefits of the proposed merger, including maintaining and improving service performance. Running a railroad requires coordinating operations of main lines, terminals, crews, locomotives, and rail cars, interacting with customers and other railroads, and managing back-office activities. Data points are received, synthesized, and reviewed, and instructions must be transmitted so that freight moves safely and on time. IT systems make this possible.

132. Applicants have established guiding principles and implementation practices to ensure successful integration of their IT systems. Section V.A of this IT integration plan describes the guiding principles of our systems integration. Applicants have been critically assessing their existing IT systems and have developed plans to first maintain and then improve service quality after merger.

133. Immediately after the transaction closes, Applicants will continue to rely on their existing, effective IT systems, discussed in more detail in Section V.B Applicants will take steps to create visibility into each railroad's existing systems, data, and IT operations, which will allow the combined UP/NS to quickly address issues and support customers and their shipment needs.

134. Applicants plan to execute IT integration in phases. As discussed in Section V.C, the first phase will be to configure the existing UP and NS IT systems to execute a single strategic operating plan across the combined rail network. In subsequent phases, described in Section V.D, UP/NS will deepen integration of the UP and NS systems. This phased approach will give UP/NS time to ensure that integrated solutions are reliable and effective. Both railroads already operate at a high level in their own geographic footprints and can continue to function that way until systems are fully evaluated, integrated, and tested, and stakeholders are fully trained to use them. The phased approach will continue until all IT systems are consolidated into an integrated solution.

135. Applicants will follow a defined process for IT integration. Section V.E outlines the processes Applicants intend to use when integrating their systems. The

ultimate goal will be best-in-class systems that enable safe, reliable operations throughout the entire, combined network.

136. Applicants aim to complete integration in three years following the finalization of the transaction. Applicants will invest approximately $798 million over this period to fully integrate their technology portfolios.

137. As discussed in Section V.F, each railroad has a proven track record of successfully implementing new IT systems that provide benefits to stakeholders, including foundational operating systems. Applicants will use best practices from these experiences and the entire railroad industry.

A. Guiding Principles of the UP/NS IT Integration Plan

138. Applicants have developed guiding principles for the IT integration process, to help ensure the integration supports a more competitive company that better serves its customers. The principles are as follows.

139. *Safe operations, always*. Integration should prioritize the safety of employees, contractors, customers, and communities.

140. *No loss of service or capacity*. Integration should occur without material disruption to the systems needed to run the combined railroad. IT integration will be meticulously planned, executed incrementally where possible, and should avoid negative effects on operations or service.

141. *Prepare for contingencies*. The combined UP/NS will continuously monitor for and remediate any issues that arise in connection with the IT integration. The combined railroad will continue to maintain and enhance disaster recovery capabilities and business resumption plans.

142. *Maintain security*. There will be top-tier cybersecurity throughout the integration, protecting all platforms during the transition. Applicants are committed to ensuring the security of critical systems, maintaining the confidentiality and integrity of data, and restricting access appropriately. The combined railroad will maintain resilience of network infrastructure, as well as rigorous data protection protocols, continuous network monitoring, and integrated incident response processes.

143. *Execute integration thoughtfully*. UP/NS will leverage existing change management frameworks and other best practices, while tailoring plans to meet specific circumstances. Integration will take full advantage of lessons learned from past integrations, as described in Section 7. To minimize risk and ensure smooth transitions, deployments will be incremental where possible.

144. *Measure outputs and adjust with agility*. UP/NS will regularly assess its approach to IT integration and execution results, adapting quickly to recalibrate for the best outcomes. The railroad will be transparent and update key stakeholders on progress.

145. *Maintain flexibility in integration*. Integration will be engineered with strategic flexibility to incorporate future emerging technologies.

146. *Best-in-class portfolio*. Integration's ultimate aim is best-in-class transportation systems that meet stakeholder needs and enable safe, reliable, and secure operations for the country's first transcontinental railroad.

B. Applicants' Robust IT Systems That Will Support Integration

147. UP and NS are industry leaders in IT systems, and have implemented many state of the art solutions, including artificial intelligence technologies that enhance rail safety and enable successful operations. Applicants' existing IT systems are also flexible and scalable. This means they can be—and routinely are—changed and expanded to accommodate new business requirements. These existing systems, which are described in detail below, will continue to operate side by side while the combined company phases in its integrated IT systems.

1. IT Systems Supporting Operations

148. Applicants' railroad operations flow from their respective strategic operating plans, which are comprehensive schedules of train trips, akin to flight schedules for major airlines. UP and NS generate their strategic plans using specialized computer programs developed for the railroad industry and execute the plans using downstream IT systems. Below are the key systems that UP and NS each employ to execute their strategic plans.

149. *Shipment Management* systems serve as the primary means of tracking, recording, and managing shipments and waybills across each railroad's network. They ensure that each shipment is correctly documented and routed, so that it can move efficiently from origin to destination.

150. *Equipment Management* systems govern scheduling, tracing, and managing cycles for freight cars and other equipment. They help Applicants use their assets as efficiently as possible.

151. *Locomotive Management* systems contain planning tools for locomotive deployment. The systems provide real-time monitoring of locomotive status and location; fuel management tracking and optimization; and automated assignment of locomotives for trips based on operational demand and maintenance schedules.

152. *Train Management* systems facilitate building, managing, and monitoring train configurations, ensuring optimal train configurations for safety, efficiency, and regulatory compliance. UP's system, for example, includes a safety tool that simulates the entire train route from origin to destination, to help check for potential car sequencing issues.

153. *Terminal Management* systems address rail yard, intermodal, and auto facility operations, managing everything from switching activities to inbound and outbound flows.

154. *Crew Management* systems ensure that crews are qualified, rested, and available for service, and facilitate regulatory compliance. These systems also assign crews to trains, call the crews to report to work, and monitor their hours of service.

155. *Engineering Track and Signal* systems monitor the health and status of the infrastructure on which trains travel. For example, UP's Track Inspection System collects information from FRA-mandated inspections, as well as inspections driven by UP's own internal policies.

156. *Car Inspection and Repair* systems log inspections, direct cars that need service or repairs to appropriate facilities, and track components as they are removed

and installed. Each Applicant has thousands of safety appliances installed trackside to monitor the health of equipment as it traverses the network.

157. *Safety* systems facilitate incident management and reporting; provide simulations for engineer training; and assess train locomotive and consist configurations. Each applicant has a safety management system that provides a centralized solution to report, investigate, and manage safety-related events such as injuries, equipment accidents, and grade crossing collisions. Simulation solutions create realistic training environments where engineers and other railroad personnel can safely learn to operate trains across a variety of territories. These advanced simulation platforms use sophisticated physics engines to continuously calculate buff and draft forces, taking into account train consist, terrain, and environmental conditions. Beyond training, the simulation solutions are also leveraged to evaluate proposed train configurations. By simulating a train's journey from origin to destination, the system assesses potential issues with the specific consist and route, allowing for safe transit and proactive mitigation of risks before actual operations begin.

158. *Dispatching* systems control train movements to ensure safety and efficiency on a railway. These systems also manage mainline operations by integrating with signals, switches, and other infrastructure to facilitate the safe and efficient passage of trains throughout the network as well as controlling access to track structures, whether for mainline train movements or maintenance activities.

159. *PTC* is a safety system designed to prevent train-to-train collisions, over-speed derailments, injuries to track workers from trains entering work zones, and movements of trains through switches left in the wrong position. If another system or command would otherwise create an unsafe situation, PTC intervenes in the interest of safety.

160. These systems are extraordinarily reliable and available. These systems have a better than 99.95% overall availability rate in both the UP and NS networks. In the rare instance of an outage, procedures and tools are in place to detect and recover expeditiously.

2. Customer-Facing IT Systems

161. In addition to these operating systems, Applicants have customer-facing systems that help customers obtain rates, order cars, track shipments, and pay their bills. Customers can create individualized accounts to receive notifications and obtain customized reports regarding their service history. Applicants both use Salesforce as their primary customer relationship tool. Part VI of the Service Assurance Plan further describes customer service.

3. Back Office IT Systems

162. Applicants also have a number of back-office IT systems that support corporate operations, including finance, supply, and human resources. These systems allow Applicants to complete financial reporting, manage purchasing and procurement, administer employee benefits, train employees, and maintain union relationships. Applicants use a common provider, SAP, for many of these systems.

4. IT Policies and Processes, Including Cyber Incident Response

163. Applicants have developed and implemented policies and practices that allow their IT systems to function accurately and reliably. Both companies proactively monitor for issues, even if they do not affect system availability or performance. Both UP and NS have tools that track thousands of system performance metrics daily, enabling administrators to pinpoint and address emerging issues swiftly and maintain system reliability. Applicants also have established incident response plans for IT-related service interruptions. These plans activate upon defined trigger points and initiate resolution, escalation, and communication processes.

164. UP and NS have each established disaster recovery capabilities designed to ensure rapid recovery from physical facility and technical failures. Multiple computing centers provide redundancy in case of an outage. Applications and data are continuously replicated across data centers to support recovery, and additional backup solutions are in place to address scenarios such as data corruption or ransomware. UP and NS each perform tests annually to ensure all critical applications can be recovered in the event of a disruption.

165. Both companies also have comprehensive cyber incident response plans and playbooks that address a wide range of scenarios, including ransomware, denial of service, data loss, and privacy breaches. These technical plans include clear criteria for invoking incident response, defined roles and responsibilities, reporting obligations, and detailed communication protocols to ensure rapid detection and coordinated response to a cyber event. In parallel, business resumption plans are in

place to sustain services while technical teams recover affected systems, ensuring that essential services continue uninterrupted. In the extreme case of complete IT unavailability, non-digital methods can be used to conduct operations.

166. Integrated crisis management programs further support these efforts by coordinating mitigation activities and communication with customers, communities, and government agencies throughout the incident.

167. UP and NS routinely test these plans to validate their effectiveness and ensure stakeholders are prepared to respond. Both organizations also maintain relationships and retainers with outside counsel and incident response firms, ensuring expert support is available during significant cyber events. This layered approach enables Applicants to detect, respond, and recover from cyber incidents while maintaining reliable service and transparent engagement with all stakeholders.

168. Each company undertakes significant effort to minimize the possibility of cybersecurity related risk. Applicants are both fully compliant with the Transportation Security Administration ("TSA") Cybersecurity Directive requirements and actively participate in the rail industry's cybersecurity efforts through the Rail Information Security Committee ("RISC") that is managed and governed by the industry's trade association, the Association of American Railroads ("AAR"). RISC consistently engages with government agencies including the Federal Bureau of Investigation, the Cybersecurity and Infrastructure Security Agency, and TSA for threat intelligence and cybersecurity briefings.

169. Finally, both companies are committed to continued investment in industry-leading technology innovations that strengthen operational performance, safety, and customer value. UP has demonstrated this through automated gating technologies, advanced hump and yard control systems, and its resource optimization solutions. NS similarly has demonstrated this through its leadership role with RailPulse, an industry organization that outfits sensors on railcars and centrally collects and shares this information with customers and car owners. NS also has leveraged advanced analytics and machine learning to optimize train routing and maintenance planning.

5. Existing Collaboration

170. Applicants also have a decades-long history of successfully building interoperable systems that railroads can use to communicate with each other. Applicants will build on this success to ensure successful IT integration.

171. UP, NS, and other railroads have long acted as partners to serve common customers. This stems from the fact that railroads have tracks in different areas of the country. Indeed, interline shipments that involve more than one railroad comprise greater than 40% of UP's total traffic. Slightly more than 10% of UP's traffic is interline with NS.

172. To facilitate interline shipments, the industry has developed predefined Electronic Data Interchange ("EDI") standards for sharing the most common operating data, including waybills, and train interchange notifications. UP and NS will build on this foundation and expand it by establishing new message formats to support integration of applications across the broader application portfolio during the

interim state. Additionally, existing data-sharing practices, such as those used in PTC, further demonstrate the effectiveness of interoperable messaging systems in supporting safe and coordinated operations.

C. Initial IT System Integration

173. Applicants expect to implement the initial phase of their IT integration during roughly the first 90 days after the transaction is finalized. Immediately following close of the transaction, IT systems supporting each company will operate side-by-side, largely independent of each other. This will preserve current service operations until consolidated solutions can be deployed without disruption.

174. The first IT integration steps will support Applicants' implementation of a single strategic plan. Applicants expect that one master plan will account for all operational resources—track, locomotives, cars, crews, and terminals—across the UP/NS system. This will allow Applicants to begin to deliver the benefits of integration immediately, including reducing interchanges.

175. The existing IT systems of UP and NS will execute this unified strategic plan through their respective existing networks. These systems are designed to, and in practice regularly do, implement changes to strategic and tactical plans as business needs dictate.

176. UP/NS will build additional IT tools on top of these systems, and additional linkages between the companies as necessary, to support efficient operations and service reliability.

177. A critical early task will be to establish comprehensive visibility across the operations of both railroads. To achieve this, Applicants will create secure paths

and provision access between the two companies, ensuring that appropriate UP and NS users have access to each other's systems. This immediate step will allow staff in both organizations to begin sharing operational information and familiarizing themselves with each other's IT environments, laying the groundwork for seamless collaboration.

178. In parallel, Applicants will establish a shared platform that enables both companies to contribute and access operational performance data. This will enable real-time monitoring of nationwide train movements and system-wide availability of key resources such as cars and locomotives.

179. Applicants will also focus on defining and implementing a common set of key commercial and operational performance metrics. These metrics will allow data reported from different systems that perform similar functions to be effectively compared and analyzed, providing a unified understanding of operational performance.

180. Another key early priority will be developing and deploying solutions for customer-facing interactions. As described in more detail in Part VI of the Service Assurance Plan, Applicants intend for all customers to interact with the newly merged company through UP's current website. Through this page, customers will have access to the tools they previously used at NS and UP as well as information regarding their shipments, invoices, and customer service requests. Trained customer representatives will be available throughout the integration process to provide support to ensure the transition is seamless. As with transportation systems,

however, during the initial phase of integration the existing customer IT systems of UP and NS will continue to operate in parallel to accept, process, and resolve customer communications.

181. Finally, during the initial phase of integration, UP/NS intends to quickly begin work toward a unified cybersecurity incident response plan and a coordination of cyber policies across the combined UP/NS.

D. Subsequent Phases of IT System Integration

182. After the initial phase of integration, Applicants intend to begin deeper integration and optimization of their IT systems, including transportation systems and customer service and back-office systems. As explained above, many UP and NS systems will operate in parallel during Year 1. In particular, this will be true for most systems controlling train operations, which will require extensive testing and planning to integrate successfully. But substantial progress toward full integration is expected in Year 1, including the following actions.

183. *Safety Simulations*. UP/NS will expand upon existing train and locomotive simulation tools to cover the entire unified network, enhancing safety assessments of combined routes. As noted, UP's systems utilize a physics-based engine to simulate a train's journey from origin to destination, projecting how the proposed train consist will respond to expected track conditions. Applicants intend to include NS track data in UP's tools.

184. *Customer Experience*. In Year 1, UP/NS will work to provide integrated platforms for customer shopping, as well as a single customer support process.

185. *Policies and Processes*. Another early priority of UP/NS will be coordinating IT policies and processes across the combined operations. In Year 1, Applicants expect to coordinate infrastructure operations teams and their incident escalation processes, as well as implement common security policies and preventative controls.

186. *Reference Data*. Applicants will work to create an integrated set of reference data to support the operations and integration of existing systems. For example, Applicants will generate a single master list of customers with unique identifiers for internal use throughout the entire organization.

187. In Years 2 and 3, Applicants intend to begin integrating operating systems. Principally, Applicants expect that UP will deploy its NetControl system across the NS railroad. Fully deployed at UP in 2024, NetControl is a state-of-the-art transportation management system that facilitates critical functions related to train operations. NetControl encompasses, or is highly integrated with, most of the IT systems that support UP's operations, including train, terminal, shipment and waybill, crew calling, scheduling, locomotive, and equipment systems.

188. Beginning in Year 2, Applicants expect to complete development of an implementation package for NS operations that includes most of NetControl's core functions, such as train, terminal, shipment and waybill, crew calling, intermodal, locomotive, and health and equipment functions. UP/NS will build a virtual testing and validation environment to ensure that this package is effective for NS assets. It

will also establish a training environment to enable employee training in advance of a transition.

189. This package will be implemented in accordance with a phased plan, with contingencies for rollback in the event of an unexpected issue. For example, UP/NS may initially deploy NetControl for limited geographic areas or routes of the legacy NS system before expanding the implementation wider and eventually to the entire NS Network. This approach will minimize disruption risk while allowing early delivery of service benefits to customers.

190. Also beginning in Year 2, Applicants expect to start integrating the commercial systems of UP and NS, including by offering unified solutions for customer order submission and pricing.

191. Alongside these improvements to IT systems, Applicants intend to migrate each company's data into a single storage facility, thereby eliminating the need to query separate, corresponding databases to obtain complete information across the combined UP/NS operations.

192. In Year 3, Applicants plan to begin integrating other operating systems, including dispatching, mechanical, and engineering systems. Applicants also plan to consolidate PTC applications in Year 3.

193. Applicants intend to invest $798 million over this period to integrate their IT systems. This will enable them to realize synergies, manage transition risks, and ensure that the combined rail network operates on best-in-class, reliable, and effective systems.

E. Risk Management for IT Integration

194. When deciding whether and how to integrate IT systems, UP/NS will apply the principles and framework outlined above in Section V.A. Applicants' IT leadership will oversee the IT integration process in coordination with a centralized Integration Management Office.

195. Each integration decision for a specific application will follow one of three common approaches:

- **Interim Integration with Unified Access.** In some cases, UP/NS may implement a more integrated—but still interim—solution. For example, shortly after the transaction, customers will be provided with a single access point for service. From this access point, they may be directed to either the existing UP or NS system depending on the nature of their inquiry. In certain cases, customers may be able to conduct all business through a unified interface, even though the underlying systems remain separate. This approach allows for a seamless customer experience while full integration is still in progress.

- **Direct Transition to End-State Systems.** In other cases, it may be more effective to move directly to the intended end-state solution, such as transitioning additional operations to a preexisting solution currently in place, developing a new in-house solution, or acquiring a new solution from an external vendor.

- **Deferred or No Integration.** Some systems may not require integration in the near term—or at all. For instance, NS systems that support unique business processes, such as coal sorting and loading facilities not present in UP's network, may continue to operate independently without requiring direct interaction with UP systems.

196. System integration projects must manage common risks such as malfunctioning features, inaccurate or incomplete data migration, and issues with transactions initiated immediately before integration begins—all of which can disrupt service. These risks will be mitigated through thorough testing, phased rollouts, and post-implementation data validation. UP/NS will leverage third-party

validation as needed to supplement internal capabilities. Data migration strategies include using checkpoints and reconciliation tools to ensure data integrity, while legacy systems may be temporarily retained to support rollback and continuity.

197. As explained below, UP/NS will further support these projects with careful preparation, robust training, and clear and consistent communication. Effective training empowers internal users and external customers to adopt new systems seamlessly, which in turn makes data more accurate and complete. Coordinated communication across departments and field teams helps prevent delays and errors. Applicants intend to use early engagement with frontline staff, tailored training programs, and ongoing support to build momentum and buy-in for successful IT systems integration. Where possible, Applicants will implement integrations incrementally to minimize risk and support effective change management, such as phasing in use of NetControl across NS's different geographic territories and lines as discussed above.

198. Applicants will begin each IT integration project with a thorough analysis of how the change could impact different groups, using stakeholder and impact assessments to identify who may be affected and to what degree. This analysis will inform the design of a comprehensive change strategy. The strategy also will draw on successes with and lessons learned from analogous past integrations at UP and NS.

199. UP/NS will define in advance key metrics to track system health and service during integration and monitor progress in real time. These metrics will

include not only traditional indicators of system performance and availability, but also early indicators of potential issues, such as trouble tickets and defects reported. By tracking these issues closely, Applicants will be able to identify emerging problems, assess the effectiveness of mitigation strategies, and better ensure that any disruptions are addressed promptly.

200. UP/NS will also develop comprehensive plans for data migration to ensure the secure and accurate transfer of information between legacy and new systems, implement necessary changes to system interfaces so that applications can communicate effectively, and identify unique business process changes that must be accommodated in the integrated system.

201. UP/NS will conduct comprehensive functional and performance testing and validation using representative test data, as well as rigorous end-to-end testing to ensure that all features work as intended and integrate seamlessly with other solutions. This will create confidence that the systems will perform as intended before they are implemented. UP/NS will establish a dedicated test environment that includes all necessary and master reference data to support both functional and performance testing using representative test datasets. For example, testing of consolidated shipment management would involve running waybills through the test system to confirm successful processing of a wide variety of origin and destination pairs, commodity codes, weights, etc. By conducting these tests in pre-production environments, UP/NS will keep production systems unaffected by the testing process. Additionally, UP/NS will employ user acceptance testing to verify that new solutions

meet user requirements and expectations. This methodical, layered approach to testing—refined through UP's successful implementation of NetControl and other major IT projects at both UP and NS as discussed below—will help Applicants identify and resolve issues early, minimize risk, and support smooth, successful IT integration.

202. Drawing on best practices from recent integrations, such as the successful rollout of the A&S systems discussed in Section V.F, UP/NS will provide stakeholders appropriate training before implementation of system changes. Applicants intend to develop a comprehensive communication plan and related materials, provide milestones, and track current status. Training will be delivered through a combination of online modules, quick reference guides, and hands-on support. Resident experts and local advisors will be available on-site to address challenges, answer questions, reinforce learning, and support during and after the transition. Employees and customers will have the opportunity to familiarize themselves with new systems well in advance of integration. Multiple "dress rehearsal" sessions will be planned to ensure a seamless transition. Field implementation teams and trusted instructors will provide direct assistance, while train-the-trainer sessions will help cascade knowledge throughout the organization.

203. When a new system goes live, experts will provide support to address any questions that arise. Support staff typically will be on site, available to sit shoulder-to-shoulder with end-users during their transition. UP/NS will introduce significant technology changes with both on-site support and 24/7 expert availability.

204. Applicants plan to establish feedback loops to capture stakeholder input and monitor engagement throughout the IT integration process. Real-time feedback will be incorporated into future training materials and quick reference guides to address any previously encountered issues. This iterative approach, with a focus on safety and regulatory compliance, helps employees and customers gain confidence in the new system and supports long-term organizational success.

F. Applicants' Successful Management of Transition Risk in Prior IT Projects

205. When the combined UP/NS integrates the IT systems the two railroads use today, it will be building on a decades-long history of interoperable systems. UP, NS, and other railroads have long acted as partners to serve common customers using their respective tracks in different areas of the country. So-called "interline" shipments that involve more than one railroad comprise greater than 40 percent of UP's total traffic, and more than 10 percent of UP's traffic is interline with NS.

206. To facilitate interline shipments, the industry has developed predefined EDI standards for sharing common operating data including waybills, as well as train interchange notifications. Other data-sharing practices, such as those used in PTC, further demonstrate the effectiveness of interoperable messaging systems in supporting safe and coordinated operations. UP/NS intends to expand upon these existing practices by establishing new message formats to support integration of applications across the UP/NS system.

207. Both Applicants, moreover, have extensive track records of successful IT system integrations in their own operations. This experience shows that Applicants

can schedule and accomplish integrations without impacting operations, migrate large volumes of critical data without loss, prepare internal and external stakeholders to use new systems, and effectively implement process improvements based on lessons learned.

208. For instance, in January 2024, UP executed a complex change-over to NetControl without service interruption. As noted earlier, NetControl is UP's industry leading, internally designed and built transportation-management system. It synthesizes tremendous volumes of real-time operating data and is deeply integrated with many key operating, customer, and financial systems. UP executed a complex change-over from a 55-year-old mainframe system to a modern car scheduling system inside NetControl, transitioning the entire network within three hours with no service interruptions.

209. In October 2025, UP implemented NetControl (as well as several other platforms) in one of its operating subsidiaries, the A&S, without service disruption. UP trained all users in advance of implementation, and secured stakeholder buy-in regarding the benefits of the new system. This experience specifically demonstrates UP's ability to implement a mission-critical platform at a railroad that has its own employees, processes, and culture.

210. Beginning in 2020, UP implemented its dispatching system, CADX, without service interruption by utilizing an incremental change methodology. UP implemented CADX over 17 months, starting with just one territory or dispatcher desk in the Pacific Northwest. This location was selected for the initial rollout because

it had a relatively low volume of traffic and simple train movements. From that starting point, UP incrementally expanded CADX to cover all of its 32,880 route miles and related operations. A similar, phased-in approach is planned for dispatch changes in NS territory.

211. NS similarly used an incremental approach to implement its modernized dynamic train service registry ("DTSR") in 2025. DTSR is a core transportation component that manages the execution of NS's real-time train operating plan. The incremental migration of DTSR off of mainframe technology facilitated NS's ability to revert if an issue was identified. After its successful implementation, DTSR now provides NS flexibility to integrate with UP operational systems.

212. In the last two years, both UP and NS have replaced their core PTC data center infrastructure. UP's replacement occurred over multiple maintenance windows, while NS accomplished this as part of a routine hardware refresh. Despite the complexity and safety-critical nature of the task, both companies maintained uninterrupted PTC operations throughout their transitions.

213. UP's experience with IT system changes also includes successfully migrating large volumes of important business data. Specifically, UP recently transitioned its core financial services systems—including accounting, payroll, and accounts payable—to an SAP-managed cloud environment in just eight months. This rapid implementation is noteworthy given the scale and complexity of the upgrade, which included moving from an on-premises solution to a primarily cloud-based

platform. Despite these challenges, the transition was completed without service disruptions or data migration issues. In recognition of this achievement, SAP honored UP at its international conference for the speed and quality of the implementation.

214. UP likewise has had recent success in launching new customer-facing systems. In 2025, UP launched a new Customer Portal, providing a unified interface for customers to view and manage their shipments. This upgrade was rolled out through a collaborative approach, beginning with a pilot group of 40 customers who helped shape the design and requirements of the new system. UP adopted a segmented rollout, introducing the solution sequentially to specific customer groups to test and optimize before full deployment. Alongside the portal, UP introduced a centralized exception management tool that allows users to prioritize and resolve shipment issues within a single interface. These enhancements received positive customer feedback and broad adoption, confirming their thoughtful implementation with a focus on usability and customer benefits.

215. Indeed, both UP and NS well know that robust engagement with users can be essential to meeting IT goals. UP, for example, successfully implemented Terminal Command Center, a platform that provides a comprehensive dashboard of all activities within a terminal, by tailoring the solution to meet each terminal's unique business requirements and providing on-site training so that each team became fully comfortable with the system before it went live. UP also developed a mobile application called UPGo Dray Driver Mobile Experience that allows truck drivers to pre-clear their reservations and enter a terminal without stopping.

Coordinating with local trucking and driver communities, UP operating and tech personnel provided one-on-one support and training, assisting drivers with installing, registering, and using the application. The result of this sustained commitment has been an industry-leading 92% adoption rate for the UPGo mobile application.

216. In 2024, NS successfully implemented intermodal stacking technology at its core intermodal terminal in Austell, Georgia. This included introducing a reservation system that improved management of the flow of containers coming in and out of the terminal and reduced the time required for truckers to drop off or pick up containers. NS designed and built the system with input from multiple customers and local site personnel, provided training, and closely coordinated with stakeholders during launch. NS continues to successfully deploy this best-in-class system, each time providing extensive communications and training.

* * * *

217. In sum, Applicants are well positioned to integrate their IT systems while maintaining safe, reliable operations and uninterrupted customer service. UP and NS have developed and are operating industry-leading IT systems; they will bring this expertise to the implementation of advanced IT systems across the integrated entity. The existing UP and NS systems line up well from a functional perspective, which will facilitate integration. The process of IT integration has begun with extensive study of the railroads' existing systems and lessons learned from past integrations. After the transaction closes, UP/NS will follow a defined process,

informed by best practices, to plan and execute an incremental, phased integration that builds on both railroads' record of successful IT transitions.

VI. Customer Service Integration Plan

A. Overview

218. To realize the full benefits of the proposed merger, Applicants must successfully integrate the UP and NS customer service operations and meet high standards for customer interactions. Applicants have robust programs that provide excellent customer service and will continue to do so after integration. Applicants are dedicated to executing a careful and coordinated strategy to integrate their customer service functions, as outlined below. The existing customer service frameworks of both railroads are being meticulously evaluated, and Applicants are planning to deliver customer care benefits soon after the close of the transaction, along with longer-term improvements.

219. Applicants intend to integrate the customer service functions of UP and NS over a three-year period after close of the transaction, consistent with the framework detailed in Section VI.B. The objective of the framework is to maintain excellent customer service, including systems that support reliable operations across the combined network both during and after the integration.

220. Initially after the close of the transaction, UP/NS will continue utilizing the current customer service systems of UP and NS. The combined railroad will maintain the service levels of these systems and minimize customer disruption. The combined UP/NS will then integrate customer service in stages. Initially, as described in Section VI.D below, Applicants will implement a unified strategic operational plan

across the entire rail network to optimize routing and minimize car touches. This will provide immediate service improvements without overhauling existing frameworks, allowing customers to quickly receive benefits from the integration.

221. Creating transparency between the UP and NS customer service processes will be a top priority so that UP/NS personnel have access to operational status information across the combined system. This is essential for swiftly resolving issues and maintaining strong customer relations. Standardizing and enhancing communication points for customers will also be an early focus after the merger. This strategy for the initial stage of integration will allow safe and smooth operations to continue while new systems are thoroughly evaluated and tested, and stakeholders are trained.

222. Later phases will enhance integration further, with existing processes remaining in place until they are replaced by a unified approach. Interim solutions also may be used as more comprehensive, long-term systems are developed and deployed. Section VI.E discusses these phases of the integration.

223. As explained in Section VI.F, UP and NS both have histories of adopting new customer service systems that benefit stakeholders, with minimal disruption. Applicants are focused on the lessons learned from these successful implementations, as well as best practices from across the railroad industry. Applicants intend to apply those lessons to the integration process so that UP/NS customers will continue to receive excellent—and even better—customer service during and after merger integration.

B. Applicants' Guiding Principles

224. UP and NS take similar approaches to customer service, which will be continued following the merger. For both Applicants, the core principles of their customer care operations are the following:

225. *Prioritize Safety*. Safety is Applicants' highest priority, and the integration process will be conducted in a way that ensures customer shipments are handled safely, keeping customers, our employees, contractors, and communities safe.

226. *Ensure Service Continuity*. Applicants are dedicated to maintaining uninterrupted service and capacity throughout the merger. Integration of customer service operations will occur without disrupting the systems that facilitate critical railroad functions.

227. *Execute Thoughtfully*. By leveraging established change management frameworks, UP/NS will tailor its integration plans to specific needs and lessons learned from previous experiences. An incremental approach will be used where feasible to reduce risk and ensure smooth transitions.

228. *Measure Results*. UP/NS will continuously assess the effectiveness of its customer service integration, remaining agile to change course when necessary. Transparency with customers will be a key focus, and they will be kept informed of progress and changes.

229. *Uphold Security Standards*. UP/NS will maintain high standards of system security and availability during the integration. The integrity of all customer

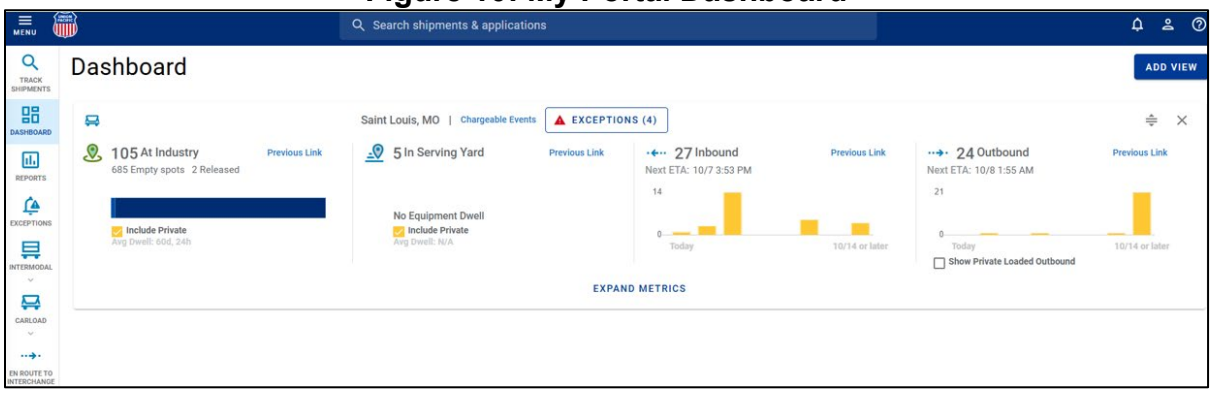
interactions will be safeguarded throughout this transition, ensuring transparency and trust.

230. *Prepare for Contingencies*. Applicants intend to sustain readiness for unexpected events or external disruptions by continuing to enhance disaster recovery capabilities and business resumption plans.

231. *Plan for the Future*. Recognizing that customer expectations and industry standards evolve, Applicants are planning integration with a long-term perspective. The aim is not only to maintain but to enhance current service offerings, delivering an improved experience for all stakeholders.

232. *Strive for Excellence*. The ultimate goal is for the combined UP/NS to achieve a best-in-class customer service portfolio that supports the reliable operations of the nation's first transcontinental railroad.

C. Current Practices



233. In practice, both Applicants implement these principles by focusing on solving problems at their root cause, aiming for lasting resolutions, and preventing recurrence. They educate both external and internal customers and position them for future self-help solutions, including by introducing customers to the various tools and technologies available, as well as making sure they have access to solution-oriented support.

234. *UP's Customer Service Systems and Staffing*. Most UP customers handle their interactions at UP.com, which features "MyPortal." MyPortal serves as a centralized landing page for customers to manage their shipments with UP. It consolidates several high-usage applications into a streamlined interface, enabling

users to quickly retrieve shipment details, monitor exceptions, and access tools without navigating across multiple pages. Upon initial login, customers are prompted to select preferred locations, allowing the system to tailor content and functionality to their specific operational footprint.

235. MyPortal provides real-time visibility into shipment exceptions, which empowers customers to address potential disruptions before they escalate and thereby mitigate risk and enhance supply chain reliability. The portal also introduces structured navigation under three categories—Plan, Ship, and Pay—promoting clarity in application access and usage.

Figure 10: My Portal Dashboard

236. Customers have expressed satisfaction with UP's MyPortal website. A few examples of customer feedback from 2025 are:

- From a major pulp and paper company: "Just keep doing what you're doing because you have the best user-friendly website of all the railroads operating in [the] U.S."
- From a premier transportation service provider: "Your site is so much better than your competitors. I love that it shows when [the shipment is] load pending, when it's on rail, the ETA when it's available, and the [Last Free Day]."
- From a leading household products manufacturer: "[E]very time more perfect, thank you for all the improvement on this web."

- From a top-tier poultry company: "Best railroad website. . . . [T]wo thumbs up as always!"

237. UPGo is UP's mobile app designed to enhance the intermodal terminal experience for dray carriers. UPGo has been a key part of UP's digital transformation, achieving high adoption rates and contributing to improved operational efficiency. It streamlines gate processes by enabling pre-ingate and pre-outgate validation, real-time parking updates, and access to electronic J1s (the ingate/outgate receipt), all of which significantly reduces dwell time and gate errors. The UPGo app is integrated with Precision Gating Technology, allowing for faster, automated entry using machine vision. UPGo also supports multiple languages and is available on both Android and iOS platforms.

238. When customers encounter an issue they cannot address through self-service via MyPortal or UPGo, UP's Customer Care & Support ("CC&S") Organization provides assistance. CC&S has two customer call centers—one for general inquiries, and one for international inquiries in which customer service agents offer bilingual English/Spanish assistance. These customer call centers are available 24/7 and support a variety of needs, including issues around transactional support, waybills, customer-facing technology, intermodal ramps, and user IDs. UP uses an automated call routing platform and internal applications to route customer calls to the agent that is best positioned to solve the customer's issue during a single interaction. UP's call centers are at the forefront of the railroad industry with a speed

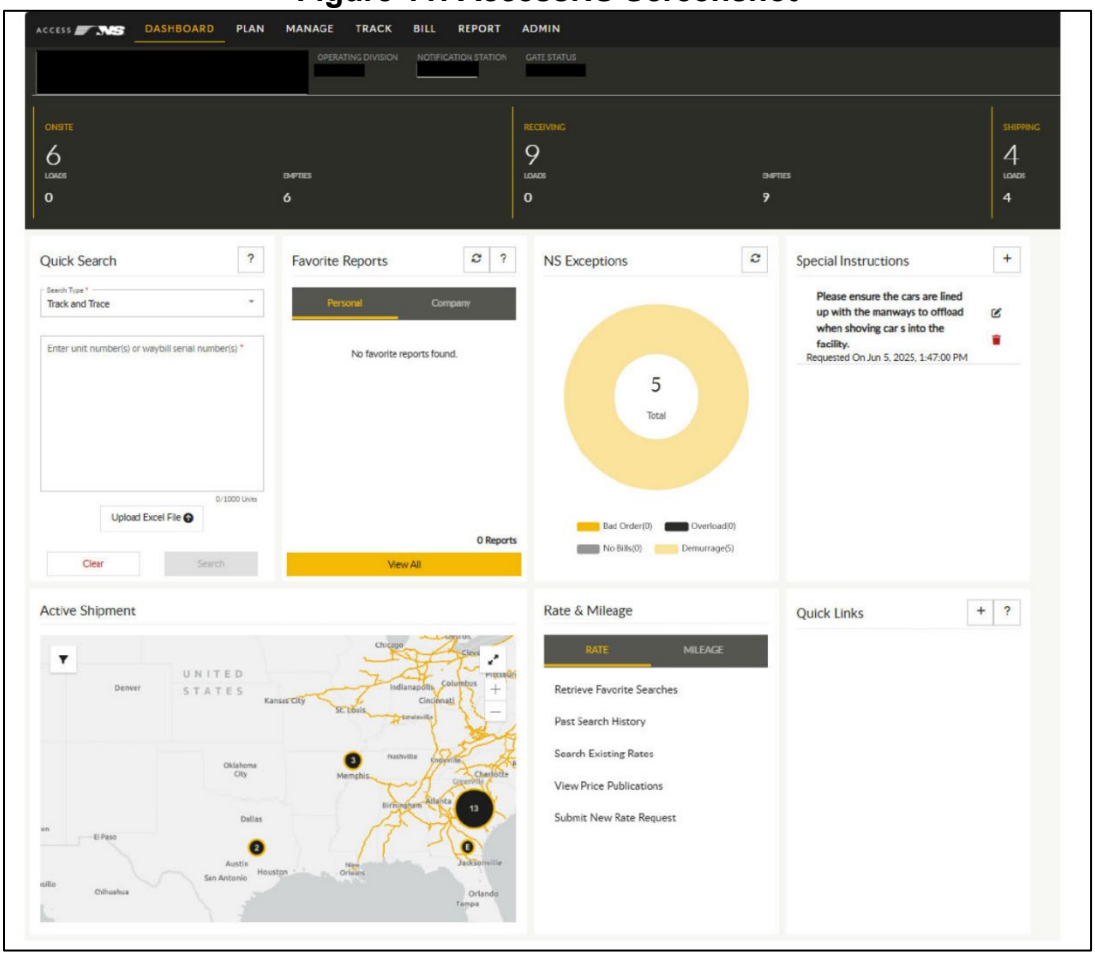
to answer time of less than 60 seconds, a call abandonment rate of just 1 percent, and a customer satisfaction rate of 92 percent.[177]

239. Behind these call centers and customer-facing applications stand the Customer and Transportation Solutions groups in the CC&S Organization. The Customer and Transportation Solutions groups work within the Case Management application and handle more complex, non-transactional issues. These groups are organized much like freight moves on the railroad, including a Manifest Solutions team that handles single car issues, an Intermodal Service Solutions team that handles the intermodal side of the industry, an Automotive Solutions team that handles finished vehicles and automotive parts, and a Unit Train Solutions team that handles full trains typically stocked with coal, soybeans, grain, and other commodities.

240. All customer interactions are tracked in Salesforce. In addition to serving as a comprehensive repository for customer communications and feedback, Salesforce enables the team to analyze collected data, identify trends, and resolve issues more efficiently. By leveraging this information, the CC&S Organization continuously improves its processes and technologies to enhance the overall customer experience.

241. *NS's Customer Service Systems and Staffing.* NS likewise provides exceptional customer experiences through proactive and effective communication,

[177] CC&S Tableau Scorecard and KPI Dashboard as of 11/21/2025.



advanced technologies, and best-practice processes, while maintaining a people-oriented approach.

242. AccessNS is the primary customer portal that allows NS customers to learn or confirm details of their service, including inventory management, current location, and ETA for railcars. Through AccessNS, customers can also manage subscriptions and exceptions, create and manage support cases, access internet bills of lading, view and dispute freight bills, receive waybill updates, submit rate inquiries and rate requests, and make intermodal reservations.

243. NS recently redesigned AccessNS to improve visibility into, among other things, the status of NS local service and delayed shipments. Based on customer feedback, NS designed the system so that notifications are customizable and proactive. For example, customers can choose a specific delay threshold for a notification and can specify their most critical commodities.

244. A screenshot of the AccessNS dashboard is below:

Figure 11: AccessNS Screenshot

245. NS customers can also use ExpressNS+, a mobile application that streamlines gate and terminal processes for NS's drayage community. Using ExpressNS+, drivers can verify billing, submit pre-gate information, obtain parking and pickup locations, receive electronic interchange receipts, and submit bad order information.

246. When customers cannot resolve an issue themselves, NS's virtual assistant is able to answer basic questions instantaneously. If more assistance is needed, the customer can use AccessNS to open a case with NS's customer logistics team, without having to make a phone call or send an email. Each case is routed to

teams of individuals who specialize in the particular customers' traffic type. NS's robust customer logistics team provides specialized service based on the type of cargo (*i.e.*, coal, grain, paper, consumer goods, metals, construction, chemicals, plastics, waste), with dedicated customer logistics teams for intermodal and automotive customers. Customer inquiries opened with AccessNS are fed directly into ConnectNS, which is NS's Customer Relationship Management tool, powered by Salesforce. ConnectNS supports superior case management and organization that in turn allows faster handling of issues and a high-quality experience for the customer.

247. Customers may choose to call NS for help with their specific inquiry or concern. NS has an integrated call routing platform that provides phone routing when customers call to talk to a Customer Logistics Specialist. All calls are logged as cases in ConnectNS.

D. Initial Customer Service Integration

248. Applicants have developed plans to ensure that from Day 1 of the UP/NS integration, UP and NS customers will experience an uninterrupted transition of customer service and only improvements in service quality. Initially, both UP and NS customers will continue to interact with the same contacts they have had, through the same channels. For example, the railroads' existing MyPortal and AccessNS systems and customer service contact phone numbers will still be used. UP and NS customer service centers will remain in place, following their established procedures. This continuity is intended to prevent confusion or disruption in how customers receive support immediately after the merger.

249. The immediate visible change for customer engagement will be an updated web presence: On the first day of combined operations, Applicants intend to launch a single public-facing website for the combined company, integrating UP and NS's online presence. NS's external website content will be consolidated into UP's site, giving customers a unified portal for information about the new network. This integrated website will clearly direct users to the appropriate customer tools (in particular, the MyPortal and AccessNS logins), so customers will not need to learn any new systems. The NS website will still remain operational, but it will funnel traffic toward the consolidated UP website for convenience. UP/NS will notify customers about the new unified portal and support channels, providing instructions to ensure the transition is seamless.

250. Even though existing personnel, systems, and processes will remain in place, shippers immediately should enjoy a better customer experience due to coordination between the UP and NS customer service teams. Shippers that previously had to interact with both UP and NS to investigate or address issues with transcontinental shipments will no longer need to do so, as UP and NS customer service teams will be able to coordinate behind the scenes. UP/NS will establish joint escalation paths and hand-off protocols for inquiries that span across the legacy UP and NS networks. For instance, UP's CC&S staff will have direct lines of communication with the NS Customer Support team, so shippers get unified, comprehensive answers even if both legacy territories are involved. These cross-company coordination and escalation channels will help ensure that even complex

transcontinental service issues are addressed promptly through internal collaboration, setting the tone for the broader integration to come.

251. To safeguard against unforeseen issues in the initial stages of the integration, UP/NS will also adopt a command center support model supported by joint performance reporting from the legacy UP and NS systems, enabling supervisors to monitor call volumes, case resolution times, and any customer complaints in real time. This close oversight, backed by redundant resources and contingency plans such as surge staffing protocols and dual-run system backups, will provide an extra layer of security for maintaining customer service continuity after the closing date.

E. Applicants' Plans for Subsequent Seamless Integration of Their Customer Service Systems

252. Integration of UP/NS's customer service functions relates closely to integration of the combined railroad's IT systems. For instance, both Applicants have IT systems that allow customers to obtain rates, order cars, track shipments, and pay their bills. One of the merger's benefits is that customers of each railroad will be able to use a single railroad's systems for all those functions when shipping coast to coast. Many customers, however, will have to learn to navigate new systems to fully enjoy those benefits. Applicants are carefully planning for that process, both in terms of staffing and training their customer support functions and steps to familiarize customers with new processes and procedures.

253. *Phased Integration.* Recognizing the inherent complexity of merging two distinct customer service systems, the combined UP/NS will proceed toward full

customer service integration deliberately and incrementally, drawing upon best-in-class tools and processes from both companies to ensure that every point of interaction between customers and the railroad achieves a high standard of excellence.

254. In the first year following the merger, customer service associates will be trained to resolve customer cases originating in either the UP or NS networks. There will also be mapping of customer data and records as well as data migration and system cutover planning.

255. As an interim step prior to full customer service system integration, Applicants plan to develop a single website that brings together the MyPortal and AccessNS customer service systems. Later, a consolidated customer portal will be launched so that MyPortal and AccessNS interface into a single platform. This consolidated customer portal will be accompanied by unified customer service network infrastructure and call center telephony.

256. Applicants expect that UP/NS will move towards having one customer service center in Omaha, Nebraska. The unified customer service center will be appropriately staffed to support the combined operations and is expected generally to reflect the existing structure of UP's customer service organization. The service center team will have end-to-end visibility across the combined railroad, allowing customers a unified customer service team with a single set of processes and language throughout the length of a shipment. This will reduce complexity for the customer and railroad customer service teams alike.

257. *Employee Training.* As part of the integration, UP/NS employees will undergo targeted training on the various customer support systems, with a focus on cross-platform familiarization and operational continuity. For legacy NS personnel, this training will include guided walkthroughs of UP systems such as MyPortal Dashboard, NetControl, and Salesforce Case Management. UP personnel will receive training on NS platforms like AccessNS and ExpressNS where applicable. System-specific training will be delivered through a combination of digital modules, live demonstrations, and job aids, ensuring that employees are equipped to navigate both legacy and integrated environments.

258. Team members from both the UP and NS systems will also participate in ongoing learning activities that cover not only technical systems and procedures, but also best practices in customer communication and problem-solving.

259. In addition to training on the UP and NS legacy systems and ongoing employee development, Applicants intend to implement targeted training on operational changes associated with the integration. These programs will include cross-system familiarization, updated workflow procedures, and customer interaction protocols aligned with the unified service model. Training will be delivered through a combination of instructor-led sessions, digital modules, and hands-on practice. There will also be feedback mechanisms to continuously refine training content and ensure alignment with evolving operational needs.

260. *Customer Experience.* A key focus of this integration is a thoughtful and thorough onboarding experience for customers as they are introduced to new tools,

technologies, and contact points. Applicants will provide informed guidance, personalized tutorials, and dedicated support to ensure customers feel confident and empowered as they navigate the integrated systems. The approach includes proactive outreach, clear communication about the benefits and functionalities of the new tools, and opportunities for customers to offer feedback and ask questions.

261. The overall objective for integrated customer service is centralized visibility and unified customer support, with a focus on:

- **Shipment Visibility:** Customers will gain access to all active shipments across the transcontinental network through the web, EDI, and API channels.
- **Unified Digital Experience:** There will be integration of shopping, planning, shipping, exception management, and invoicing into a single, best-of-breed suite of online tools.
- **Aligned Support Channels:** There will be standardization of communication via phone, cases, and inquiries, supported by a unified notification system.
- **Change Management:** UP/NS will deploy in-app guidance, replayable walkthroughs, and live webinars to facilitate customers' transition.

262. There will be harmonizing of knowledge bases and communication channels, so customers have continuity and clarity no matter how they had engaged with UP or NS previously, for example:

- **Customer Portal Enhancements:** UP/NS will introduce guided workflows, map visibility toggles, and exception detail improvements tailored to customer-specific solutions.
- **Exception Management Optimization:** Streamlining of case handling and dispute resolution processes will reduce friction and improve transparency.

- **Performance Benchmarking:** Finalization of UP/NS benchmarking will allow the combined railroad to identify best practices and solutions within the legacy UP and NS operations and draw on them to further enhance customer service offerings and processes.

263. The objective is a harmonized, joint operating model whereby customer service performance is analyzed and reported as one entity with standardized and continual training and development procedures designed to ensure that the new entity provides the highest level of customer service. This approach will draw upon proven best practices and procedures in the Applicants' existing operations as well as historical insights and plans developed by both companies.

F. Applicants' Record of Successfully Implementing Customer Service Improvements

264. Both UP and NS bring to the proposed combination a track record of investing in and successfully executing enhancements to their customer service systems and teams. For instance, the summer of 2025 launch of MyPortal enhanced the accessibility, efficiency, and responsiveness of UP's digital customer service platform and shows how UP uses customer feedback and priorities to continuously improve its customer experience. This upgrade was rolled out through a collaborative approach, beginning with a pilot group of 40 customers who helped shape MyPortal's design and requirements. UP then implemented a segmented rollout, introducing the solution sequentially to specific customer groups to test and optimize the platform before full deployment.

265. For each customer group, the launch was implemented in phases: cutover planning, pre-cutover, staging, cutover tasks, validation, and post-

implementation care. Cutover planning was an approximately two-week process that involved development of the launch plan itself, communicating the development team coding pause, scheduling planning meetings and walkthroughs, as well as identifying physical spaces for the technology team and in-person collaboration. The pre-cutover process took a week and required creating communications support channels, sending communications, and verifying technology code releases. Once the pre-cutover process was complete, the actual staging took a day, followed by cutover tasks that entailed deploying the changes over several days, as well as sending communications and monitoring the systems themselves. Finally, validation and testing continued along with a month-long "hypercare" process for ongoing monitoring, addressing feedback triage, and reporting data and metrics.

266. As part of this launch, UP communicated with customers through webinars, knowledge/self-help documents, website guided tours/tooltips, call center tactical responsive help, and emails. UP customer service teams were trained in advance of the MyPortal launch through guided walkthroughs, scenario-based exercises, and system simulations. This internal training enabled frontline staff to confidently support customers during the transition and respond to inquiries with accuracy and empathy.

267. For the post-merger integration, Applicants plan to replicate and expand upon this successful recent model, tailoring trainings to the specific tools and workflows being introduced. This proactive approach should ensure that UP/NS

employees are not only familiar with the new systems but also equipped to guide customers through the onboarding journey with clarity and confidence.

VII. Labor Plan

268. This Part of Applicants' Service Assurance Plan addresses Applicants' plans for reaching necessary labor implementing agreements and provides evidence that sufficiently qualified employees would be available at the proper locations to effect implementation, as required by 49 C.F.R. § 1180.10(g).

A. Labor Implementing Agreements

269. Applicants are committed to obtaining implementing agreements containing the changes necessary to permit the service enhancements and other public benefits made possible by the proposed transaction. To expedite integration of UP and NS operations after approval, Applicants intend while the application is pending to seek implementing agreements with labor organizations willing to engage. To further ensure Applicants' ability to maintain and enhance service following approval, Applicants have committed to provide employment opportunities for current craft employees so they may continue and finish their careers as employees of the combined railroad system, subject to the usual requirements for continued employment. This job security commitment encourages employees to continue their railroad careers and reduces the risk of employees leaving railroad service as a result of the transaction.

270. Both UP and NS are signatories to the "Cramdown Agreements." Consistent with the Cramdown Agreements and Board precedent, Applicants intend to honor existing collective bargaining agreements on each railroad. Applicants will

seek implementing agreements through the customary *New York Dock* procedures as necessary to permit achievement of the transaction's public benefits.

271. With respect to train, engine, and yard ("TEY") service, and mechanical crafts, Applicants will seek agreements focused on enabling the operational changes identified in the Operating Plan, in the sequence described. For example, implementing agreements will be required to address work opportunities for TEY and mechanical employees at current interchange locations. To the extent that aligning the workforce to the work requires relocation of such employees beyond the terms, practices, and interpretations of existing collective bargaining agreements, Applicants will seek agreements to enable such relocation or other changes necessary to protect service and to fulfill Applicants' commitment regarding craft employees.

272. With respect to clerical and dispatching crafts, Applicants will seek implementing agreements to support integration of their systems and operations, which will be driven largely by the phased approach to technology integration. For example, as the combined UP/NS implements uniform technologies as described in the Information Technology Systems Implementation Plan, most of the functions currently performed by craft employees in NS's headquarters in Atlanta, Georgia, will be relocated to UP's headquarters location in Omaha, Nebraska. When the combined company consolidates some or all of these functions, it will serve notice under Section 4 of the *New York Dock* conditions and obtain any necessary implementing agreements to support the relocations or process standardizations, for example, adopting a uniform crew calling process. Beyond three years after the

merger, as Applicants continue to evaluate automation, economies of scale, and/or efficiency opportunities related to the transaction, including elimination of redundant processes or procedures, the combined entity will obtain any necessary implementing agreements.

273. Applicants have factored employee attrition rates into this Service Assurance Plan. Applicants have a combined attrition rate of approximately 8.0 percent per year among their non-probationary craft employees.[178] This end-to-end transaction will not require large-scale employee transfers or dislocations, especially within Applicants' operating, engineering, mechanical, maintenance, and communications and signals crafts. Further, Applicants have made a commitment to provide employment in some capacity for all current craft employees. Thus, Applicants anticipate that their attrition rate will remain relatively constant, allowing Applicants to support the service described in the Operating Plan.

274. Applicants have taken a major step toward reaching implementing agreements by negotiating a landmark agreement with Sheet Metal, Air, Rail and Transportation Workers – Transportation Division ("SMART-TD"), the nation's largest railroad union. The agreement guarantees that SMART-TD members working in train and yardmaster service at the time of the transaction will have craft-specific job protection for the length of their careers, subject to the usual requirements for continued employment. Applicants have made similar agreements with the

[178] *See* Workpaper "Craft Attrition Rates by Union.xlsx," Tab "Attrition Chart," Cell E22.

National Conference of Firemen & Oilers, Brotherhood of Railroad Carmen, International Brotherhood of Boilermakers, Blacksmiths and Iron Shipbuilders, and United Supervisors Council of America for their respective represented workforces, which include commitments to provide jobs in the same or other crafts to represented employees working for Applicants at the time of the merger.

275. Experience also teaches that different arrangements and modifications to existing collective bargaining agreements may become necessary as circumstances change and shipping patterns evolve. These developments will provide greater long-term employment opportunities, while affording the combined railroad flexibility to meet its customers' needs, allocate its personnel, and efficiently operate its network.

B. Applicants' Plan to Ensure Sufficient Qualified Employees

276. Applicants will ensure that sufficient qualified employees are available at the proper locations to implement the merger of UP and NS. Applicants project they will need to fill more than 900 additional craft jobs within three years after the companies consolidate to support anticipated merger-related growth.[179] In part to help meet this projected need, Applicants have committed to preserving employment for all craft employees who are employed by UP or NS at the time of the merger.[180] In addition, UP/NS will have a robust hiring and training process to provide for the company's future additional hiring needs.

---

[179] *See* Employee Impact Exhibit, Electronic Appendix A; *see also* App. Vol. 1, Verified Statement of Maqui Parkerson ("Parkerson VS"), ¶ 10; Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Summary," Cell O15.

[180] *See* App. Vol. 1, Verified Statement of V. James Vena, ¶ 54; Parkerson VS ¶ 3.

277. As required by the Board's rules, Applicants analyzed the projected impacts of the proposed transaction on applicant carriers' employees at specific geographic points for three years after the consolidation.[181] The results of the analysis are set forth in the Employee Impact Exhibit. In performing the analysis, Applicants used the best information available, but their projections necessarily depend significantly on assumptions about future conditions. Most of Applicants' projections regarding the number and location of employees needed to operate the merged company depend on projections of future traffic levels, which are subject to economic forces beyond the merged company's control.

1. Craft Employees

278. Applicants analyzed the proposed transaction's projected impacts on craft employees in a three-step process. First, Applicants concluded UP and NS each currently has sufficient qualified employees in the appropriate locations to operate both railroads. Second, Applicants estimated the impacts of optimizing operations of the combined UP/NS based on Applicants' plans described in the Operating Plan. Third, Applicants estimated the impacts of accommodating projected traffic growth for the combined UP/NS based on Applicants' plans described in the Operating Plan. Applicants' method of applying steps 2 and 3 varied based on the amount of location-specific information practically available at this stage of the merger process. A summary of the impacts is provided below in Table 15.

[181] *See* 49 C.F.R. § 1180.6(b)(9).

Table 15[182]
Craft Employee Impact Summary

	Positions Abolished			Positions Created			Positions Transferred			Net Positions
Years	1	2	3	1	2	3	1	2	3	Year 1-3
Car Mechanical	35	32	-	86	91	71	8	8	-	181
Clerical	3	6	2	-	-	-	-	69	118	(11)
Communications	-	-	-	-	-	-	-	-	-	-
Equipment Mechanical	-	-	-	-	-	-	-	-	-	-
Locomotive Mechanical	39	40	0	154	116	116	60	57	-	307

Track Maintenance	7	2	-	5	31	-	-	-	-	27
Train Dispatching	8	17	8	-	-	-	-	-	-	(33)
Train Crews	288	338	256	449	508	382	-	-	-	457
Union Supervisors	-	-	-	-	-	-	-	-	-	-
Yard Controllers	-	-	27	-	-	-	-	-	-	(27)
Total	**380**	**435**	**293**	**694**	**746**	**569**	**68**	**134**	**118**	**901**

279. The vast majority of positions affected by Applicants' projected changes to craft positions involve Train Crew positions, that is, TEY employees working in road operations and yard operations.[183] Applicants project a net gain of 457 new positions, reflecting 882 positions abolished through optimization and 1,339 positions created through growth.[184] To estimate the number and location of positions

[182] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Summary."

[183] The "Train Crew" category includes employees working in Engineering or Trainpersons crafts in accordance with applicable collective bargaining positions.

[184] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Summary," Cells L12:O12.

abolished, Applicants used actual data to develop relationships between the number of employees and activity levels—daily crew starts for road crews and daily cars processed for yard and local crews—and applied those relationships to location-specific projections of activity levels under the Operating Plan's Optimized Plan and Growth Plan.[185] Applicants also separately estimated the number of positions that would be abolished through planned yard consolidations based on past experience with similar consolidations.[186] In addition, Applicants estimated the number of TEY positions affected by non-location-specific initiatives—such as application to legacy NS crews and locations of UP's train length and deadhead/heldaway processes[187]—and assigned those affected positions to the combined UP/NS system because the location of the impacts would vary based on operating conditions.[188] Finally, Applicants estimated the number of TEY positions affected by implementing UP's Remote Control Operations and SwitchPro eNtry eXit technologies in legacy NS yards[189] and assigned those affected positions to the UP/NS "system" rather than a

[186] *See* Workpaper "Yard-Local FTE Impacts by Yard.xlsx," Tab "Consolidation Summary."

[187] *See* Op. Plan § 10.1.2.1 (train length, deadhead/heldaway); Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "Train Length Synergy," Cells H47:H49.

[188] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Detail Impacted," Cells D340:F340.

[189] *See* Op. Plan § 10.1.2.3; Janke VS Workpaper "Synergies Transportation - Operating.xlsx," Tab "RCO NX," Cell P42.

specific location because site-specific evaluations are ongoing.[190] Ultimately, these efficiency-related "system" reductions are offset by the gains in location-specific positions described below.

280. To estimate TEY positions added, Applicants used the same location-specific projections of activity levels and employee/activity level relationships that they used to estimate positions that would be abolished.[191] Applicants' location-specific approach to matching employee levels to projected activity levels shows UP/NS will have sufficient qualified TEY employees available at the proper locations to support operations under the Operating Plan, although Applicants recognize the precise number and locations of employees will likely change as market conditions change.

281. Projected changes to craft positions also involve a substantial number of changes to Mechanical positions, which includes craft employees who perform repairs on locomotives and rail cars. Applicants project a net gain of 488 positions, reflecting 146 positions abolished and 634 positions created.[192] Applicants primarily used a location-specific approach to estimate reductions and transfers of Mechanical positions, focusing specifically on planned facility consolidations and projected

---

[190] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Detail Impacted," Cells D340:F340.

[192] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Summary," Cells L4:O4 and L8:O8.

changes in traffic patterns.[193] In addition, as with changes to TEY positions, Applicants estimated the number of Mechanical positions affected by non-location-specific productivity-improving initiatives that will reduce locomotive utilization,[194] and they assigned those changes to UP/NS "system" rather than a specific location.[195] Ultimately, these efficiency-related "system" reductions are offset by gains in non-location-specific "system" positions created.

282. To estimate Mechanical positions added, Applicants accounted for plans to insource work on wheel set assembly at UP's Jenks, Arkansas, facility and autorack rebuilds at UP's De Soto, Missouri, facility.[196] Applicants also used actual data to develop the relationship between the number of Mechanical positions and the size of the equipment fleet and applied those relationships to the locomotive and car fleets projected under the Growth Plan.[197] Applicants assigned those affected positions to the UP/NS "system" in recognition that, as UP/NS gains experience with

[197] *See* Janke VS Workpaper "Mech_Eng Synergies.xlsx," Tab "ThruFreight Fleet Plan," Cells E36 and E40.

the mechanical needs and traffic patterns of the combined network, it will continue to assess demand by location and allocate its workforce to meet those needs.[198] Where necessary, UP/NS will seek implementing agreements with impacted labor organizations.

283. Applicants are projecting only minor changes to the number of Engineering positions—those craft employees performing maintenance of way activities. Applicants estimate they will reduce a total of nine positions in locations where applicants plan to consolidate UP and NS yards.[199] And Applicants estimate they will need 36 additional maintenance-of-way employees based on plans to in-source certain work currently being contracted out by NS,[200] for a net gain of 27 maintenance-of-way positions, though they have not yet determined precisely where those employees would be located.[201]

284. Similarly, Applicants are projecting only minor changes to the number of Clerical employees. Applicants estimate efficiencies relating to implementing UP's crew calling system on the legacy network will result in the reduction of eleven

[201] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Detail All," Row 11.

clerical positions at NS's headquarters in Atlanta, Georgia,[202] and 187 other clerical positions will be transferred to Omaha, Nebraska,[203] as most headquarters operations of the combined company will be consolidated in Omaha. Applicants estimate they will reduce a total of 33 Train Dispatching positions in Atlanta as uniform processes are established and productivity levels of legacy NS dispatchers move into line with productivity levels of legacy UP dispatchers in accordance with the applicable collective bargaining agreement.[204] Finally, Applicants estimate that efficiencies related to implementing UP's Terminal Command Center technology in legacy NS yards will result in the reduction of 27 Yard Controller positions.[205] Applicants based these estimates on UP's experience in implementing its Terminal Command Center technology in its own yards.[206] Applicants assigned those affected positions to the UP/NS "system" rather than a specific location because site-specific evaluations are ongoing.[207]

---

[206] *See* Op. Plan § 10.1.2.6.

[207] *See* Workpaper "Craft Employee Impact Report.xlsx," Tab "Craft Impact Detail Impacted," Cell F382.

285. In sum, Applicants' plans for ensuring that sufficient qualified employees are available at the proper locations to implement the merger are based on expected merger-related synergies and actual operating experience.

2. Management Personnel

286. Applicants' process for estimating the number of qualified management personnel needed to operate the combined company is described in the Verified Statement of Joshua Perkes. As Mr. Perkes explains, Applicants' estimates are based on a careful analysis and leverage natural attrition to the extent possible to achieve appropriate employment levels, which will allow the combined company significant flexibility to adjust plans if conditions warrant.[208] Applicants are also taking great care to maintain employment levels in functions that will be most critical to successful integration of UP and NS. Consistent with Applicants' Information Technology Systems plan, as described in this Service Assurance Plan, planned reductions in the Technology function are limited to duplicative executive and administrative positions and certain support functions that are not needed under UP's approach to supporting the Technology function, leaving over 95 percent of technology positions unaffected.[209] In addition, consistent with Applicants' Customer Service plan, as described in this Service Assurance Plan, reductions in the CC&S function are limited to duplicative executive and administrative positions and positions that are currently vacant, leaving approximately 85 percent of CC&S

[208] *See* App. Vol. 1, Verified Statement of Joshua Perkes ("Perkes VS") ¶ 11.

[209] *See* Perkes VS Workpaper "Management_Workpapers_Employee Impact.xlsx," Tab "Workpaper_Impact by Department," Rows 27, 48, 74, and 85.

positions unaffected.[210] Similarly, planned reductions in the Marketing and Sales function are limited to duplicative positions, largely involving executives and analysts, rather than employees with day-to-day customer responsibilities, leaving approximately 85 percent of Marketing and Sales positions unaffected.[211] Applicants' measured approach will capture operational efficiencies while safeguarding essential functions, ensuring the combined company will be well-positioned to deliver reliable service, support employees, and grow.

3. Conclusion

287. Applicants estimate that craft jobs created by merger-related traffic growth will far exceed the number of job reductions from the operating efficiencies resulting from the merger. Applicants based their plans to reduce jobs on documented efficiencies, and they based their plans to increase jobs on documented relationships between employee levels and activity levels, so their plans are expressly designed to provide for a sufficient number of employees to handle projected activity levels. Regarding management jobs, Applicants' plans involve only limited, phased reductions that leverage natural attrition to the extent possible to achieve appropriate employment levels.

288. Applicants do not anticipate any difficulty in hiring the people they need in the proper locations. For a number of projected growth positions, Applicants cannot

---

[210] *See* Perkes VS Workpaper "Management_Workpapers_Employee Impact.xlsx," Tab "Workpaper_Impact by Department," Rows 9, 30, 56, and 77.

[211] Perkes VS Workpaper "Management_Workpapers_Employee Impact.xlsx," Tab "Workpaper_Impact by Department," Rows 24, 45, 71, and 92.

yet determine where new positions will be located. However, as described in the Training Integration section of this Service Assurance Plan, Applicants have well-established recruitment and training processes to ensure the combined railroad will have sufficient employees in the proper locations.

VIII. Training

A. Overview

289. UP and NS have built training programs that meet their current and projected needs as independent railroads and satisfy regulatory requirements. UP and NS develop their training programs either internally or using qualified vendors with recognized credentials in instructional design. To best fit the particular situation, both railroads provide their employees a mix of instructor-led training ("ILT"), computer-based training, on-the-job training ("OJT"), and blended training that incorporates two or more of these approaches. Training staff at both railroads include instructors, trainers, instructional designers, systems administrators, managers, and supervisors. Each company has effective systems to monitor compliance with training requirements and deadlines. UP and NS together provide initial training to approximately 5,000 new employees each year, as well as refresher training to around 15,000 existing employees annually.

290. Applicants have conducted a comprehensive review of UP's and NS's training programs to analyze the current state of training at each company and plan a seamless transition with uninterrupted service after the close of the UP/NS transaction. The joint evaluation concluded not only that each program delivers high-quality instruction that meets federal requirements and effectively prepares

employees to provide safe, reliable service, but also that there are notable similarities in the training offered by UP and NS, which will facilitate integration.

291. The post-transaction training plan and goals that Applicants describe below, while based on careful review and assessments to date, may evolve as UP and NS further consider their existing capabilities, identify additional synergies, and address any unexpected challenges. The ultimate goal, however, will continue to be an industry-leading training program at the combined UP/NS.

B. Applicants' Plan for Integrated Training

292. Applicants intend to establish a single training program that meets the needs of integrated operations across the combined UP/NS railroad. Applicants anticipate that UP's training system generally will continue in the legacy UP territory and will be applied to the legacy NS territory as well. Best-in-class elements from NS's training system will be incorporated into the integrated program. Applicants anticipate UP's training system, with any appropriate updates and improvements, will be fully implemented across the combined UP/NS operations within three years of the merger.

293. UP/NS will monitor staffing requirements and adjust where necessary. The integrated company will have sufficient training staff and resources to meet the needs of job creation projections,[212] as these merger-related new positions represent a manageable 18 percent addition to UP's and NS's current new hire training needs.

[212] Labor Impact Reports.xlsx *See* Tab 3, "Summary Sheet."

294. The current UP and NS training programs have key similarities that will aid integration. Applicants have similar curriculums, OJT structure, and use similar technology to promote learning. Each prioritizes instructors sourced from the Craft. Applicants each use a compatible learning management system ("LMS"), meaning that a course offering of one company can be uploaded into the other's system. These pervasive similarities can be seen, for example, in the Training discussion (Section IV) of the Safety Integration Plan.

295. When integrating the UP and NS training systems, UP/NS will prioritize safety, ensure regulatory compliance, and emphasize uninterrupted service and avoidance of disruption. UP's Training Department is well-equipped to lead in executing the integration consistent with these core principles. The team specializes in training development, process implementation, and change management. It has the tools and skills to internally develop curriculum, online training, instructional videos, interactive e-learning modules, webinars, simulation exercises, job aids, digital manuals, and assessment tools. The team also has experience in training integration, having successfully integrated the A&S employee base into UP's technology system and regulatory training standards in 2025. This experience will help guide the UP/NS integration strategy.

296. UP uses a rigorous, auditable training method that is flexible enough to keep pace with rapidly evolving technologies, changing safety protocols, and modern learning techniques. This ensures workers are prepared for new equipment, updated

procedures, and emerging risks. Applicants intend to maintain this flexible approach in the integrated UP/NS training system.

297. Applicants expect to adopt a decentralized training model, as is currently used by UP, for the combined railroad. This means training is held near the trainee rather than at a central location. In addition to being cost effective and more convenient for employees, decentralized training facilitates flexible training solutions tailored to the location's operational needs.

298. Immediately after the close of the transaction, all UP and NS training centers will remain open, and legacy UP and NS programs will remain separate to prevent potential disruptions or safety risks. Different aspects of the training programs will be integrated at different times, but in general there are three main areas of focus for the UP/NS training integration.

299. First, there is training that supports the overall integration of UP and NS. Applicants expect to move toward a single set of operating rules and systems for the combined railroad. Training will ensure that field staff are prepared to implement these unified rules. Additionally, after the transaction, employees of both UP and NS will be exposed to new systems and ways of doing business in the combined company. As departments participate in the integration of UP and NS, they will provide training to their own personnel to promote effective collaboration, skills development, and integration.

300. Second, there is integration of the training function itself. Applicants have separate systems to track and assign training to employees, as well as distinct

curricula. UP/NS initially will maintain these separate systems, while gradually transitioning its training program to a single, integrated operation. To prepare for this, additional training staff will be upskilled to deliver lessons through a "train-the-trainer" coaching process.

301. Third and finally, there is regulatory training. Significant employee training is required or otherwise overseen by the FRA, the Occupational Safety and Health Administration ("OSHA"), and other regulatory bodies. UP/NS will work to eliminate duplication of required trainings between the legacy UP and NS operations and create a unified set of best-in-class training materials that satisfy regulatory requirements. Applicants expect that combining the UP and NS regulatory training programs will be the majority of integration-related training work.

302. The subsections below discuss in detail each of the three elements of training integration: training that supports the overall UP/NS integration, training that supports integration of the UP and NS training systems, and regulatory training. In addition, Section IV of Applicants' Safety Integration Plan provides a granular view of how Applicants intend to integrate safety-related training across the combined UP/NS.

C. Integration Support

303. *Integration Training Structures*. Immediately after the merger, UP/NS will create structures to promote coordination between the UP and NS training organizations and support NS's onboarding training. Individuals will be appointed to serve on dedicated committees, councils, and work groups to streamline and integrate training across all targeted employee functions.

304. UP/NS will appoint Local Onboarding Coordinators ("LOCs") for major NS locations and work groups. LOCs will receive training to assist with adoption of UP operating systems and serve as points of contact for informing the NS workforce about merger-related process changes. A UP/NS Delegate Training Committee, consisting of UP/NS technical training subject matter experts, will work in tandem with Department Learning Advisors to support the LOCs. UP/NS will update the UP/NS Training Executive Advisory Council and union leadership on the training integration during regularly scheduled calls. To identify strengths and weaknesses in onboarding training, NS employees will be asked to complete onboarding surveys periodically for three years after the merger.

305. UP/NS will dedicate training subject matter experts to oversee and coordinate initial onboarding of NS staff into the combined railroad. Additional training staff will be assigned as necessary to support the transition process.

306. *Transportation and Dispatch.* UP and NS have different FRA-approved operating rules for trains running on their railroads. UP utilizes its General Code of Operating Rules ("GCOR"), while NS operates under its own proprietary rules. Similarly, while UP uses NetControl for transportation management and CADX for train dispatching, NS currently uses different systems. Ultimately, Applicants intend to conduct all traffic on their roads under UP's GCOR, and likewise will integrate their IT systems that govern transportation management and dispatching as described in the Information Technology section of this Service Assurance Plan.

307. When integration occurs, field employees will be trained on the integrated operating rules and process changes, as well as data entry into these systems. For instance, before UP's transportation systems are deployed, NS employees will be required to complete applicable training, and training resources will support the associated business process changes.

308. *Code of Conduct and Other Mandatory Training*. Following the merger, NS employees will be assigned to UP's company-wide mandatory training. This training focuses on ensuring employees remain knowledgeable, safe, vigilant, and compliant with corporate policies. Upon successful completion of their initial training, the former NS employees will be expected to meet annual, biennial, or triennial company training requirements based on current UP policy.

309. *Leadership Development*. After the merger, NS management employees will be eligible to participate in UP's flagship leadership development and operations programs. Training will be held in Omaha, Nebraska, or at field locations. UP/NS training staff will review NS's leadership programs and incorporate applicable best practices into the UP curriculum. This will ensure employees across the combined UP/NS benefit from a consistent set of professional growth opportunities.

310. *Payroll and Timekeeping*. Initially after the merger, the legacy UP and NS operations will continue to use their different platforms for payroll and time tracking. Within a three-year period, Applicants expect to integrate NS's systems into UP's platforms, resulting in centralized and streamlined payroll and timekeeping

processes throughout UP/NS. Training materials for this integration will include Quick Reference Guides, collective bargaining agreement training, and OJT.

311. *Other Department-Specific Training*. Integration of the two formerly separate railroads will create demands for training from departments across UP/NS as they collaborate, explore integration opportunities, and combine functions. For example, an early priority will be giving UP and NS teams visibility into each other's systems so operations can be quickly understood and information shared. To that end, departments may draw upon UP/NS's Department Learning Advisors to develop training aligned with the particular organization's learning needs. The integration training processes discussed above will be used to develop effective methods for educating and upskilling the various departments' employees.

D. Training Functions

312. *Integration of Training Systems*. The combined UP/NS will gradually shift all employees to a single set of training platforms, with regular evaluations to track progress and compliance. The principal applications used for training, all of which are expected to be integrated across UP/NS within three years of the merger, are:

- Class Scheduler – used to schedule crew for classes
- Concur – external software used to book travel and manage expense reports
- CPM – Compliance Management System
- DOCS – records retention database
- DMMS – train dispatcher scheduling system

- EDCS – timekeeping database
- EQMS – Employee Quality Management System
- Exam Tool – online testing platform
- HRT – student travel database
- LMS – Learning Management System (external software)
- Microsoft Teams – messaging and email (external software)
- MOQ – Machine Operator Qualification
- TEP – Time Entry Portal

313. Early in the integration process, UP/NS will begin to establish a consolidated Learning Management System. The UP and NS LMSs contain comprehensive directories of courses, including training videos, exams, and employee attestations that training has been completed. By Year 3, all applicable NS training and employee materials will be copied into UP's LMS. All LMS training files and course codes will be evaluated to identify and remove duplicative or obsolete material.

314. Another early focus will be establishing a single Compliance Management System. The CPM is used to notify supervisors of upcoming and overdue training deadlines so employees who lack complete and current regulatory training can be barred from performing certain tasks. UP/NS initially will maintain NS's manual system for tracking regulatory training compliance, but only until NS's trainings are integrated into UP's electronic CPM.

315. Before the expected cutover of NS operations to UP's GCOR, and while UP and NS training departments and class structures remain separate, NS technical instructors will adopt relevant portions of UP's training curriculum. This will allow

timely and effective delivery of UP-aligned trainings to support implementation of the GCOR across legacy NS operations.

E. Regulatory Training

316. For most of the first three years after the merger, regulatory training programs will continue to exist in parallel for the legacy UP and NS workforces. During this transition period, UP/NS will seek from the relevant regulators approval to add NS's initial and refresher training programs to the list of trainings offered through the legacy UP training system. UP/NS also will review the NS regulatory trainings to assess where they should be modified to reflect UP rules, policies, and procedures, or can be added immediately to UP's training programs.

1. Train and Engine Service

317. Conductor initial and refresher training will remain separate following the merger, with NS operations set to adopt UP's 49 C.F.R. Part 242 certification programs within three years. Student engineer initial and refresher training similarly will remain separate following the merger, with NS operations set to adopt UP's 49 C.F.R. Part 240 certification program within three years. The specific timeline for adopting UP practices will be determined by rule reviews, technology considerations, hiring strategy, prioritization of integration activities related to safety, and service assurance. To meet the expected demand for initial engineer training, UP/NS will utilize the existing UP training center in Omaha, Nebraska, and the existing NS training center in McDonough, Georgia.

2. Motive Power and Equipment

318. Qualification standards for mechanical and locomotive personnel will remain separate for a period after the merger, although Applicants plan for NS operations eventually to adopt UP's qualification standards. During the transition period, existing UP and NS qualification programs will be reviewed, and employees will receive training that addresses differences between those programs. As with train and engine service trainings, the exact timeline for adopting UP practices will be determined by rule reviews, technology considerations, hiring strategy, prioritization of integration activities related to safety, and service assurance.

319. Mechanical training likewise will remain separate for a period after the merger, with plans for UP's FRA-approved initial regulatory training to be implemented across UP/NS within three years. UP's initial regulatory training will be adopted in the new-hire program to recognize UP/NS employees as Qualified Mechanical Inspectors.

320. Similarly, UP's and NS's mechanical refresher trainings will remain separate for a period after the merger, with plans for UP's FRA-approved refresher training to be implemented within three years of the close of the transaction. Because coded cab signals are used only in NS territory and not UP territory, however, related NS refresher trainings may remain separate for a longer period until the underlying safety systems are aligned.

321. Locomotive PTC refresher training also will remain separate for a period after the merger, with plans to adopt UP's FRA-approved Locomotive PTC refresher

training across UP/NS. The training will be delivered online, followed by a proficiency checklist that instructors complete at field locations to verify competence.

322. Car recertification training is another training that will remain separate for a period after the merger, with plans to implement UP's FRA-approved UP refresher training within three years.

3. Track, Signal, Safety Standards, and Bridge Structures

323. Qualification standards for UP and NS track, signal, and bridge personnel will remain separate for a period after the merger to accommodate differences in technology related to existing track authority and PTC Change Management Systems, with plans for NS regions to ultimately adopt UP's qualification standards. The timeline for adopting UP practices in NS territory will be influenced by rule reviews, technology considerations, hiring strategy, prioritization of integration activities related to safety, and service assurance.

324. Engineering training too will remain separate for a period after the merger, with plans to implement UP's FRA-approved initial regulatory training for all relevant UP/NS personnel within three years. After the transition, UP/NS new hires will receive On Track Safety and Track Safety Standards training based on UP's approved initial trainings. Applicants expect that all new UP/NS hires will receive On-Track Safety training, and certain employees will receive Track Safety Standards training from the current UP and NS qualified instructors.

325. Signal training is another program that will remain separate for a specified period post-merger. Applicants expect to adopt the FRA-approved UP initial regulatory training within three years of the merger. UP's signal training meets

regulations for Grade Crossing Safety and PTC. UP/NS will assess signal equipment differences across the legacy UP and NS systems and align UP/NS trainings to those differences. As noted, Coded Cab Signal training currently applies only to NS territory.

326. Telecommunications training will remain separate for a period post-merger, with plans to adopt UP's FRA-approved initial regulatory training within three years. UP's telecommunications training meets regulatory requirements for Grade Crossing Safety and PTC. During the three-year period immediately after the merger, UP/NS will assess telecommunications equipment differences across the combined railroad and align telecommunications training to those differences.

327. Engineering Air Brake training will remain separate in the legacy UP and NS operations for a period after the merger, with plans to consolidate this training with Mechanical Air Brake training across the combined railroad within three years. This will include Air Brake training for Brandt trucks or power units used by track employees.

328. Engineering refresher training will remain separate for a period after the merger. Applicants expect that within three years the current qualified instructors from UP and NS will provide UP's FRA-approved refresher training for all of UP/NS.

329. UP and NS currently have similar prerequisites for enrollment in their Commercial Driver's License ("CDL") programs. Applicants plan to adopt the UP CDL training program for UP/NS within three years of the merger closing. Employees will

be required to complete online training and obtain a permit prior to being enrolled in the two-week driving program.

4. Hazardous Materials

330. Ensuring safe handling of hazardous materials will remain a top priority at UP/NS. UP's hazardous materials training standards are some of the highest in the industry. Applicants expect that legacy NS operations will adopt UP's hazardous materials training programs, which address the pillars of Prevention, Preparedness, Response, and Recovery. Specialized training programs, along with emergency preparedness, communication, and notification procedures will be conducted at the Omaha, Nebraska, and McDonough, Georgia, training centers, as well as at hiring locations.

331. Hazardous materials training of NS personnel will begin with bringing NS's Hazardous Materials Management ("HMM") Team into the UP program. Onboarding NS's HMM Team will include a comprehensive review of their qualifications and certifications to ensure they meet UP requirements and standards. All instructors must be Hazardous Waste Operations and Emergency Response certified under OSHA rules (29 C.F.R. § 1910.120), trained as a Qualified Individual, and certified as tank car specialists. In addition, HMM members will be trained (or re-trained) on National Incident Management System sections 100, 200, 300, 320, 400, 700, and 800, and their position-specific Incident Command System ("ICS")

roles.[213] Then, NS's HMM Team will participate in UP's Prevention Program to reduce enterprise risk through tasks such as tank car inspections. In addition, HMM employees will receive UP's training on industrial firefighter requirements, and they will learn to operate UP's mobile firefighting foam trailers and to manage hazmat railcar transfers (including non-hazardous materials). Applicants' goal is that all incoming NS HMM employees will complete training within six months of the merger.

5. Dispatching

332. During the initial phase of integration, UP/NS will maintain distinct train dispatcher training programs based on the different train dispatching software and operating rules UP and NS currently use.

333. UP and NS annually provide a combined 9,020 hours of dispatcher training—6,744 hours for UP and 2,276 hours for NS. NS's train dispatchers and 49 C.F.R. § 217.9 efficiency testing officers undergo computer-based refresher training every three years, while their UP counterparts complete ILT refreshers annually. Starting in Year 2, all NS train dispatchers and Section 217.9 efficiency testing officers will transition to annual ILT refresher training facilitated by a qualified instructor consistent with UP standards. In addition to annual rules refresher training, all NS train dispatchers and Section 217.9 efficiency testing officers, like their UP counterparts, annually will be required to complete an operating rules exam, Passenger Train Emergency Preparedness exam, and Hazardous Materials exam

[213] ICS roles include the Logistics Section Chief, Operations Section Chief, Planning Section Chief, and Safety Officer.

with a minimum passing score of 90% as required by UP's submission to FRA under 49 C.F.R. § 217.11. Existing NS instructors will be trained to deliver rules refresher training in accordance with UP's standards.

334. Following a comprehensive evaluation of the legacy UP and NS dispatcher training systems, UP/NS will select one system to serve as the primary application for all train dispatchers across the combined railroad. To enable a seamless transition, training staff will be familiarized with the selected system well in advance of the cutover date.

6. Contractor Training and Management

335. UP and NS currently use the same vendor for their contractor management. Applicants plan to use this shared vendor's documentation process to gather data on training, certification, and compliance for UP/NS contractors. Safety and background checks through eRailSafe will follow company and industry standards.

336. UP/NS will require all contractors to be trained and compliant with FRA, OSHA, and Federal Motor Carrier Safety Administration regulations as determined by their scope of work. Any NS contractors with an exemption for 49 C.F.R. Parts 219 and 243 will undergo a review to determine if the exemption will be sustained or revoked per UP's standards. In addition, all NS contractors will be evaluated and assigned a grade score and risk profile. A contractor's risk profile will determine their training requirements. When legacy NS territories cut over to UP's GCOR and System Special Service Instructions, UP/NS will require contractors to be trained on, and compliant with, these requirements as well.

337. Applicants have determined that UP's Safety Department will manage contractor oversight for the combined UP/NS. In general, Applicants expect that the legacy UP and NS operations will continue existing relationships with their respective contractors for at least the first six months after the merger. During this time and beyond, UP/NS will review contractor support needs and determine synergies, gaps, and realignment opportunities, with most merger-related changes taking effect by the end of Year One.

IX. Contingency Plans for Merger-Related Service Disruptions

A. Introduction

338. The UP/NS merger will protect against service disruptions because the combined company will be more resilient and better able to address conditions that cause service disruptions in three important ways. First, combining UP and NS will increase the availability of critical resources—main line track, terminals, crews, locomotives, and rail cars—required to keep traffic flowing and respond to temporary strains on the network.

339. Second, the merger will create new options for rapidly rerouting traffic to avoid congested areas and expand access to crews and locomotives—resources that are essential in responding to and recovering from disruptions caused by external forces.

340. Third, one of the primary operating changes resulting from the integration of UP and NS will be to implement new train and blocking plans designed to reduce rail car handlings, especially where the two railroads currently interchange traffic. This reduction in handlings will result in a reduction of events that can lead

to service disruptions by creating operational variability, particularly when interchanges are not fluid.

341. Accordingly, Applicants expect that the merger will improve service. Applicants do not expect customers to experience any merger-related service disruptions. They are committed to an integration process in which no changes will be made without careful planning, preparation, and execution.

342. While Applicants do not expect any merger-related service disruptions, they take the issue very seriously. As required by 49 C.F.R. § 1180.10(i), Applicants have established contingency plans to address potential merger-related service disruptions on the combined railroad and to promptly restore adequate service levels if disruptions should occur. They also have established a special problem resolution team and developed specific procedures for the combined railroad to use to resolve merger-related service disruptions.

343. Contingency plans are proactive: they are procedures designed to help an organization respond effectively to potential future events. More specifically, they are designed to ensure that an organization can quickly restore normal operations in the face of unexpected disruptions.

344. Problem resolution procedures are reactive: they are applied when a problem has already occurred. Problem resolution procedures become relevant when executing contingency plans. They involve diagnosing and resolving problems that a railroad detects. More specifically, problem resolution procedures include appraising the situation, analyzing the root cause of the problem, and deciding on the best course

of corrective action. In essence, problem resolution procedures are used when a contingency occurs and a specific response is required. Problem resolution teams are the personnel responsible for executing problem resolution procedures.

345. As part of their contingency planning process, Applicants have engaged in a risk assessment process that identified three broad areas that create risks of merger-related service disruptions:

- Changes in traffic levels and patterns. This refers to changes in the volume of traffic moving over the merged system's lines and through its yards and terminals as new train and blocking plans are implemented and yard and terminal operations are changed or consolidated. Although the effect of planned changes will be to streamline operations, and no changes will be made without careful planning, preparation, and execution, Applicants recognize that implementing operational change necessarily involves risks.

- Changes in procedures and processes. This refers to changes in the procedures and processes followed by employees as the combined railroad implements a uniform system of standards, practices, and procedures, as well as changes that customers and other railroads will have to make in interacting with and coordinating with the merged company as UP/NS personnel implement common protocols.

- Changes in systems. This refers to changes in information technology systems as the two companies migrate to common platforms, particularly for their operations-related systems.

346. Applicants' contingency plans and problem resolution procedures for merger-related service disruptions build on their well-established plans and procedures for promptly restoring adequate service levels in response to other types of potentially disruptive events.[214] UP and NS currently maintain procedures for

[214] Other parts of this Service Assurance Plan describe how Applicants expect the combined railroad to mitigate the risk of disruptions arising from other sources,

addressing factors that can influence service, including natural disasters, severe weather conditions, mechanical failures, and unexpected traffic surges.

347. In planning for the provision of rail service generally, Applicants focus on ensuring the availability of five critical resources to move traffic: main lines, terminals, crews, locomotives, and rail cars. In Applicants' experience, service disruptions, whatever the cause, ultimately manifest as an inability to move current traffic volumes because of a shortage of one or more of those five critical resources. To restore adequate service, railroad personnel must determine how to effectively deploy additional resources to address accumulated inventory while also taking steps to understand and resolve the root cause of the problem.

348. Applicants' contingency plans in general, and their plans for merger-related service disruptions in particular, incorporate a flexible problem resolution process to diagnose the causes of specific service disruptions and then develop and execute appropriate responses. Applicants' general approach to contingency planning for service thus involves:

- Identifying and assessing potential risks, including their location and magnitude.
- Maintaining buffer capacity for critical resources to help effectuate service recovery.
- Monitoring to detect potential service disruptions.
- Developing and executing response actions.
- Monitoring response effectiveness.

---

including risk relating to IT systems and changes in procedures and processes, and to changes in systems, through intensive planning, training, and coordination.

- Communicating with stakeholders.

349. Applicants provide additional details about their approach to contingency planning for service disruptions and their plans for potential merger-related service disruptions in the remaining sections of this Part.

B. Applicants' Development of Integration Plans to Protect Against Merger-Related Service Disruptions

350. Applicants' end-to-end combination will reduce the risk of service disruptions, not cause them. The UP/NS merger will not directly affect most traffic currently moving on the UP and NS systems. The merger's impacts will be concentrated on traffic UP and NS currently interchange, and the impacts of the merger on that traffic will be to reduce the risk of service disruptions. Furthermore, the increased buffer resources and routing optionality made available by their combination will strengthen resiliency across the entirety of the integrated network—protecting against service disruptions even for traffic not directly impacted by the merger.

351. For traffic UP and NS currently interchange, Applicants plan to optimize train and blocking plans to reduce handlings. Applicants also plan to reroute some of the affected traffic over more efficient routes. In addition, Applicants plan to consolidate certain yard and terminal facilities. These changes will produce faster transit times and eliminate variability, thus protecting against service disruptions.

352. UP and NS have established processes for planning and implementing operating changes to optimize train and blocking plans. They regularly make changes to train and blocking plans in response to changing demand conditions. Their

operating personnel have substantial expertise in designing and executing these types of efficiency-enhancing adjustments to their networks. UP/NS employees will apply that expertise to the operation of the combined railroad following the merger.

353. Applicants have taken particular care in developing new train and blocking plans and plans to optimize routing in their merger planning process. Applicants' planning teams analyzed each impacted line and yard to ensure those facilities will have sufficient capacity to implement the planned changes. Where Applicants identified a need for additional capacity, they developed appropriate investment plans. Applicants also reviewed staffing to ensure that there will be a sufficient number of qualified employees available at affected locations to affect the proposed changes.

354. UP/NS will take steps throughout the merger integration process to ensure that the railroad's implementation of operating changes protects against service disruptions. UP/NS will refrain from taking any actions that cannot be quickly reversed should unexpected issues emerge as operations transition. For example, where Applicants propose to consolidate yard operations, they plan to maintain the ability to unwind the changes and restore pre-merger service patterns for a substantial period of time after implementing new service patterns.[215] Similarly, where Applicants propose to reroute traffic to improve service, they plan to maintain

[215] Applicants have no plans to sell or remove track assets where they propose to consolidate yards. The consolidations are intended to create additional capacity to accommodate growth.

the ability to unwind those changes and restore former routings.[216] In addition, as discussed in detail below, UP/NS will closely monitor locations affected by operating changes to detect and address potential service disruptions.

355. Applicants expect the merged system will attract significant volumes of new traffic. Just as Applicants are carefully preparing for UP/NS to implement changes affecting existing traffic, they are taking care to ensure the combined railroad can accommodate additional traffic without disrupting service. Applicants' resource planning process has considered not only the impacts of operating changes for existing traffic, but also whether the combined railroad will have sufficient main line, yard, equipment, and workforce capacity to handle the anticipated new business.

356. Finally, Applicants recognize successful integration of IT systems and IT-related customer service functions is critical to achieving the merger's benefits. As described in other parts of this Service Assurance Plan, Applicants are engaged in a careful process of planning for integration of their IT systems and customer service functions and are confident their plan for integration will protect against merger-related service disruptions that could be caused by IT integration. Nevertheless, Applicants' contingency plans and problem resolution procedures address these risks and account for the possibility that service disruptions might stem from IT-related issues.

[216] Applicants have no plans to abandon any lines as a result of the merger.

C. Devotion of Significant Resources to Preventing and Addressing Service Disruptions

357. UP and NS design and execute their operating plans with the goal of never experiencing a service disruption. However, in their normal course of business, they face the constant risk of service disruptions from a wide range of causes, including natural disasters, severe weather conditions, mechanical failures, and unexpected traffic surges. To mitigate impacts from these ever-present risks, Applicants have developed contingency plans that include establishing buffer resources, monitoring their networks for warning signs of potential disruptions, using problem resolution teams to develop and execute response actions, monitoring the effectiveness of their response actions, and communicating with stakeholders. Applicants' plans for addressing potential merger-related service disruptions will build upon their existing plans and protocols that are effective at preventing and addressing service disruptions.

1. Assessing Potential Risks

358. UP and NS have extensive experience operating their networks, which has allowed them to understand the types of events most likely to trigger service disruptions and the locations most vulnerable to particular sources of disruption. In some instances, Applicants face recurring risks of such a similar nature that they have developed specific response "playbooks." For example, UP has developed lists of procedures to be followed in certain rail yards if temperatures are projected to remain below specified points for specified periods of time. Applicants have also developed more general plans for responding to recurring events that raise similar issues but

vary in location and scope, such as hurricanes and flooding. These more general plans include proactive interruption recovery preparation, such as pre-positioning generators, emergency ballast, and surfacing equipment so recovery can begin as soon as possible following an event.

359. In most cases, the causes and consequences of service disruptions are too varied to be addressed using an off-the-shelf playbook. Instead, flexibility is critical to successful recovery. UP's and NS's risk assessments have led them to create strategies that involve maintaining certain buffer capacity resources and placing them in proximity to vulnerable areas, as well as planning to use other resources as buffers both to prevent service disruptions and to mitigate and remedy any disruptions that were not preventable.

360. Applicants' buffer strategies are described in the next section.

2. Maintaining Buffer Capacity for Critical Resources

361. Service disruptions can arise from a multitude of factors, but they ultimately manifest as an inability to move current traffic volume because of a shortage of one or more of five critical resources: main lines, terminals, crews, locomotives, and rail cars. Maintaining a flexible capacity buffer therefore plays a critical role in contingency planning. UP and NS have distinct strategies for each critical resource. For fixed resources—main lines and terminals—Applicants maintain buffer capacity through built-in surge capacity and flexible transportation planning. For mobile resources that can be deployed across the network—crews, locomotives, and rail cars—Applicants have built buffer capacity through strategic placement of reserve units and rapid deployment strategies. These strategies allow

UP and NS to mitigate the symptoms of service disruptions even before they identify the underlying causes or implement more permanent solutions. In many cases, the deployment of additional buffer capacity resources can drastically reduce or even eliminate the impact of a network disruption on stakeholders. Applicants have therefore invested heavily in the ability to deploy buffer strategies with speed and flexibility.

a. Main Lines

362. Applicants' first line of defense to service disruptions on main lines is the excess capacity built into their operations. Applicants plan traffic flows so main lines operate below their maximum capacity. This buffer serves a preventative purpose. Applicants' main lines can absorb most temporary fluctuations without changing operations.

363. Applicants' strategy of building excess capacity into their main line operations also allows them to use main line resources reactively to respond to larger disruptions. While main lines are fixed in place, Applicants each have expansive networks that often allow them to route traffic around developing or existing trouble spots. This reactive measure would not be possible if those alternate routes lacked capacity to absorb the incremental traffic.

364. The UP/NS merger will increase the ability to use main lines flexibly to prevent and mitigate service disruptions because it will eliminate the delays involved when two companies must negotiate operating changes. For example, if a hurricane disrupts trains scheduled to move through New Orleans, the combined railroad will be able to rapidly reroute traffic via Memphis, which not only keeps those trains

moving, but also mitigates the risk that congestion on its main lines to New Orleans will compound and spread to its main lines and terminal outside of New Orleans.

b. Terminals

365. Terminals often become trouble spots when service is disrupted. Congestion in terminals can compound as processing times slow and dwell times increase. In addition, congestion in one terminal can spread to other portions of the network as upstream terminals hold cars rather than launch them toward already congested areas.

366. Applicants' buffer capacity strategy for terminals is largely like their strategy for main lines. In the first instance, Applicants plan operations so terminals operate below their maximum capacity. The buffer can be used to absorb temporary increases in terminal activity without disrupting operations.

367. In addition, while terminals, like main lines, are fixed in place, Applicants' strategy of building excess capacity into their terminal operations also allows them to use terminal resources to respond reactively to larger disruptions. Applicants often can alleviate congestion in one terminal by shifting certain traffic to alternative terminals.

368. The UP/NS merger will increase the combined railroad's ability to shift traffic between terminals, particularly in critical locations where UP and NS each have their own terminals today, including Chicago, Kansas City, and New Orleans.

c. Crews

369. Crew availability often becomes a critical constraint when networks experience service disruptions, especially because crew working hours are regulated

by federal law. When trains are delayed on main lines or in yards because of a service disruption, crews may not have time to complete their scheduled work, and additional crews are required to handle the same volume of traffic. If sufficient crews are not available, then trains cannot move, and congestion compounds.

370. Applicants both currently maintain larger crew bases than are necessary to handle the number of trains scheduled to move. They maintain this buffer of trained, experienced personnel in part so extra crews will be available when necessary to help mitigate service disruptions. Applicants also have a variety of tactical strategies they can employ to respond to short-term, unexpected surges in demand for train crews using their current workforce. For example, they can cancel non-essential training activities to maximize availability of the existing workforce and ensure they are ready for assignment. Applicants also have procedures that allow them to pivot crew assignments from low to high demand areas within a seniority hub. Similarly, Applicants have procedures to increase transportation and lodging options for crews to optimize the hours of service that crew members are available. If they still need additional crews, Applicants have several options they can pursue, including using "borrow out" employees from regions with sufficient capacity and redeploying them to locations in need of additional crew resources.

371. In addition to their more formal crew redeployment programs, Applicants have each adopted an all-hands-on-deck approach to addressing certain types of major service disruptions. UP operates "Rail Relief," a program in which management and other employees voluntarily travel to impacted locations where

they transport work crews, help set up mobile command centers, and handle other logistical functions to maximize the capacity of work crews. NS operates "go teams," a program in which employee volunteers from locations with sufficient capacity are rapidly deployed to provide additional support wherever needed.

372. Following the merger, the combined railroad will have an even broader workforce to call on if needed to respond to service disruptions.

d. Locomotives

373. For the same reasons relevant to crew availability, locomotive availability often becomes a critical constraint when networks experience service disruptions. When trains are delayed on main lines or in yards because of a service disruption, their locomotives are not available to move other trains, and additional locomotives are required to handle the same volume of traffic. If sufficient locomotives are not available, trains cannot depart from yards, and congestion compounds.

374. Applicants both maintain fleets of buffer locomotives. These locomotives serve three main purposes: (1) meeting surge needs at terminals, (2) replacing broken-down units during transit, and (3) handling unexpected volume surges for customers.

375. UP has invested significant resources in analyzing terminals, locations, and customers with the greatest need for accessible locomotive resources. UP currently has approximately 200 "at the ready" ("ATR") locomotives that it has strategically placed at its largest terminals to address service interruptions or a deficit of inbound locomotives that could cause significant terminal processing

backlogs.[217] UP keeps these locomotives fueled and maintained, so they are available for immediate deployment at the large terminals or distribution to nearby smaller terminals that might experience locomotive shortages.

376. UP also has approximately 100 Rapid Response locomotives that it has placed across the network at key intermodal terminals and in locations that have experienced elevated rates of engine failure—primarily locations with significant grades.[218] UP can quickly dispatch these locomotives to ensure the flow of premium intermodal products and protect main lines against locomotive failures.

377. UP also keeps approximately 35 stored grain locomotives at or near key customer locations to assist with bulk shipments and larger-than-expected volume. Finally, UP has an additional reserve fleet of approximately 350 stored serviceable locomotives, each of which could return to service within a few days to help respond to surges in car loadings.[219]

378. NS also maintains a buffer fleet of locomotives for immediate deployment, referred to as "Hot and Ready" or "HNR." NS's buffer fleet varies with the season and ranges from 25 to 50 locomotives.[220] NS needs a smaller buffer fleet than UP because NS can more readily reposition locomotives as needed across its more compact system. Like UP, NS has positioned these locomotives at or near key

[217] *See* Workpaper "UPRR ATR Locomotives 20251128.xlsx."

[218] *Id.*

[219] *See* Workpaper "UP Locomotive Shop Stored Servicable.png."

[220] *See* Workpaper "NS HNR for System 20251202.xlsx."

terminals and other critical network locations. NS also has approximately 70 locomotives that it could return to service after completing repairs.[221]

379. The UP/NS merger will increase the availability of buffer locomotives. The larger buffer fleet of the legacy UP will immediately be available to the combined railroad to help address service disruptions affecting what are currently NS main lines and yards.

e. Rail Cars

380. Rail car availability can also become a constraint when networks experience service disruptions. If customers cannot access sufficient rail cars, they cannot load traffic for pickup.

381. Applicants both keep ATR rail cars at strategic locations on their networks and at certain customer locations. UP maintains a fleet of approximately 145,000 owned, leased, and allocated TTX railcars.[222] NS maintains a fleet of approximately 96,000 owned, leased, and allocated TTX railcars.[223] Depending on storage type, reserve rail cars can be pressed into service within a matter of days. Applicants concentrate reserve cars around terminals and near customers most likely to experience short-term demand surges. Customers can call on these cars when they are tight on equipment—for example, when their inbound flows experience delays, they receive bad ordered cars, or they have unexpected business opportunities.

[223] *See* Op. Plan § 9.2.1, Table 15.

3. Monitoring to Detect Potential Service Disruptions

382. Applicants devote considerable time and effort to monitoring their networks for warning signs of potential service disruptions. The most effective way to address service disruptions is to prevent them from occurring in the first place by detecting the warning signs in time to utilize the buffer capacity resources described above. Even when disruptions cannot be prevented entirely, early detection and response can mitigate their severity.

383. In the normal course of business, Applicants actively monitor a variety of system-wide and local measures of network health, looking for signs that indicate actual or potential problems relating to excess inventory—that is, an accumulation of more rail cars than can be moved using immediately available assets. These measures provide information regarding the status of the critical resources discussed above.

- **Main lines.** Applicants monitor the overall health status of their networks and main line operations using network monitoring tools that track data regarding train velocity, car velocity, and various train and car inventory reports, as well as other system-wide metrics.
- **Yards.** Applicants monitor the status of their yards and terminals using metrics such as terminal dwell time, operating inventory, trains held, on-time train departures, and other measures designed to identify sub-optimal performance (*e.g.*, cars held more than 32 hours).
- **Crews.** Applicants continually compare train demand with crew supply using metrics that provide visibility into timely fulfillment of assignments. Applicants also use statistics identifying workforce utilization, which includes recrews, held-away time, and other measures of availability.
- **Locomotives.** Applicants use tools to calculate daily inbound locomotive supply and demand in terminals. Applicants also use metrics

such as trains held for power to detect potential localized and system-wide issues affecting locomotive availability.

- **Rail cars.** Applicants use a variety of metrics to maintain the health of the equipment fleet and understand possible constraints, including customer order fulfillment, customer on time placement, car dwell, and cars per carload.

384. Applicants have invested substantial effort in developing technologies to capture, compile, and deliver performance-related metrics to employees charged with monitoring network health and identifying and addressing resource constraints. As an example, both railroads use tools that provide managers real-time visibility into key operating data for yards, such as current inventory, current dwell, and en route volume. Both railroads also use locomotive planning tools that calculate expected locomotive demand in their terminals. In addition, UP is developing and testing a tool designed to identify potential service disruptions using indicators derived from analyses of past events. The tool flags deviations from normal levels in metrics that correlate with future service disruptions, providing UP with even earlier warnings of potential problems than were previously possible. Applicants expect that the combined railroad will deploy this advanced tool across the entirety of the merged network.

385. Applicants also monitor external data to identify and plan for events that might cause service disruptions. For example, both UP and NS have partnerships with AccuWeather to provide near-real-time alerts of changing weather conditions that feed into their operational systems so they can trigger plans for addressing excessive cold or excessive heat, or plan for other natural events including severe storms, flooding, and fires. They also monitor news reports and regularly

communicate with stakeholders so they can prepare for shifts in the demand for transportation caused by events ranging from labor action at ports to changes in market conditions that may affect commodity flows and thus the demand for rail transportation.

386. Finally, Applicants each have procedures in place for escalating issues identified through their monitoring processes. Applicants maintain escalation processes at the system and regional level to promptly respond to any other fluctuation that may pull operations off-plan, such as mechanical failures, stops for curfews, and traffic surges. Both railroads hold standing daily meetings between regional and central management to address sources of potential service disruption and develop action plans for the day's operations.

4. Developing and Executing Response Actions

387. When an issue is identified through monitoring, Applicants develop and execute response actions. In most cases, their monitoring processes alert Applicants to potential issues well before any service disruption occurs, and operating personnel with specific responsibilities for the resource at issue promptly develop and execute corrective actions. For example, when UP's locomotive managers receive alerts regarding potential locomotive shortages from UP's Unified Locomotive Planner or local operating personnel, they will alert UP's Locomotive Directors and General Directors. The locomotive management team will then develop and execute plans to reallocate resources using buffer locomotives or by shifting locomotives between terminals to address any shortfall. Similarly, when localized crew issues are observed, they are addressed by the Crew Management group.

388. Applicants address more significant service disruptions and threats of such disruptions using cross-departmental teams. At UP, these cross-departmental teams typically consist of representatives from UP's HDC (which includes UP's dispatching, crew, and locomotive management functions), Network Planning & Operations department (which is responsible for designing transportation plans and railcar distribution), CC&S department, and the affected regional Service Units. NS uses cross-departmental teams that typically include the NS-equivalents to the UP departments listed above.

389. At both railroads, the cross-departmental team has two basic functions related to problem resolution: (1) identifying the cause of the service disruption, and (2) determining how to deploy capacity buffer resources to protect against disruption or restore acceptable service levels. Identifying the disruption's cause helps determine the combination of resources and other actions that will most effectively resolve the disruption. However, Applicants often begin adding resources to protect or restore service before they completely understand the cause.

390. UP's problem resolution process begins by seeking to identify the service disruption's cause as either a non-execution issue, an execution issue, or some combination of each. Non-execution issues primarily involve issues arising from operations planning (*e.g.*, the plan requires moving too many cars through a yard) and customer patterns (*e.g.*, customers want to move traffic in unexpected amounts or between unexpected locations). Resolving disruptions caused by non-execution issues often requires revisiting the railroad's transportation plan or adjusting

network resources, as well as consulting with customers to determine whether their transportation needs have changed.[224] Execution issues involve disruptions caused by failures to execute the transportation plan. Resolving disruptions caused by execution issues generally requires deploying on-site teams to fully understand the reason for the execution failure and modify procedures or training to prevent recurrences.

391. UP's next step in the problem resolution process is determining the combination of capacity buffer resources to deploy that will most quickly and effectively restore acceptable service levels, and then executing the plan. The specific resources that are practically available to the railroad and their effectiveness will differ from situation to situation, and determining which resources to deploy and in what combinations involves the exercise of judgment based on experience and available information.

392. For example, in some situations, trains can be routed around problem areas to allow congested main lines to clear. However, the ability to reroute trains depends on the availability of alternate routings, as well as the impact of using those alternatives on other resources that might already be constrained, including line and terminal capacity on the alternate route and crew and locomotive availability. In some cases, Applicants will contact other railroads with requests to detour trains over

[224] The railroad would not necessarily need to revisit its transportation plan if the disruption is caused by severe weather or a transitory change in shipping patterns, but it would still engage in post-recovery analysis to determine whether future operational changes might help reduce the impact of similar events in the future.

their routes. Options for rerouting trains would be developed by network planners, but any decision to reroute trains would require substantial input from members of the cross-departmental team with responsibility for crew and locomotive management, as well as those familiar with the operations of potentially affected lines and terminals.

393. Similarly, in some situations, railroad personnel can change operating plans to shift traffic to alternate yards while a congested yard works through its backlog. The ability to use alternate yards depends on capacity limitations at those yards, capacity limitations on main line routes used to access those yards, and crew and locomotive availability. Again, network planners develop options for shifting traffic to alternative yards, but cross-departmental expertise and input are required to evaluate the feasibility of such plans considering the circumstances presented at the time.

394. In many instances, addressing and recovering from moderate and more severe service disruptions require adding crew resources to offset reductions in train velocity and work through backlogs on main lines and in yards. As discussed above, UP and NS have a series of strategies they can activate, either separately or in combination, to increase crew availability, ranging from cancelling non-essential training, repositioning crew resources to the impacted areas (borrow-outs), and combining trains to reduce crew demand. Crew management personnel develop and then execute options for increasing crew resources. However, cross-departmental expertise and input are required to help determine the number of additional crews

needed, the locations at which they are needed, and the length of time they will likely be needed, which will help inform the specific strategies used to increase crew resources.

395. Similarly, addressing and recovering from moderate and more severe service disruptions typically require additional locomotive resources. Locomotive management personnel are responsible for developing and executing plans for using buffer locomotives to provide needed resources. Cross-departmental expertise and input are used to help determine the number of additional locomotives needed, the locations at which they are needed, and the length of time they will likely be needed, which will help inform the specific strategies used to increase locomotive resources, including whether to use ATR locomotives, return other buffer locomotives to service, or both.

396. Recovering from moderate and more severe service disruptions sometimes requires directly addressing the number of rail cars moving on congested lines or in congested terminals. When a service disruption causes train and car velocity to slow, railroad personnel emphasize service performance to drive cars to customer facilities while working directly with customers and deploying additional resources when appropriate to reduce inventory. Another way to address excess cars online is to direct empty railroad-owned railcars to storage locations. Applicants' equipment management personnel proactively develop plans to reduce cars online. Cross-departmental expertise and input are used to evaluate which railroad-owned

cars can be removed from the active fleet while ensuring that the service recovery benefits of such actions take into account customer service performance.

397. While Applicants are deploying their buffer resources and, where an execution issue was identified, working on the ground in affected areas to retrain local personnel or restructure local processes, they continue analyzing the disruption to be certain they understand its root causes. They use the results of their analysis to develop and implement changes to transportation plans, resource allocations, or other practices and procedures to prevent future occurrences of similar disruptions. Changes might include revising operating plans to redirect traffic flows, increasing critical resources at key locations, and, in the case of execution issues, providing additional training or reworking processes at the local level. The root cause analysis also helps ensure that Applicants obtain sufficient information to communicate fully and accurately with customers and other external stakeholders.

5. Monitoring Response Effectiveness

398. Applicants use a combination of metrics-based analysis and, in certain circumstances, on-the-ground observation to measure the effectiveness of the actions taken in response to service disruptions. Applicants generally use the same metrics in monitoring their progress towards service recovery that they use to identify service disruptions. Applicants' cross-departmental teams conduct meetings at least once a day to review operating conditions and, if necessary, modify response plans in light of new information. The monitoring effort and regular cross-departmental meetings continue until normal operations are restored and conditions have stabilized.

6. Communicating with Stakeholders

399. Prompt and accurate communication with stakeholders—particularly customers, but also short lines, passenger railroads, and other affected rail carriers—is an integral part of Applicants' plans for responding to service disruptions. As Applicants pursue the steps described above to mitigate the impacts of service disruptions, they also take steps to ensure stakeholders receive timely, accurate information about the status of network operations and expected timelines for service restoration.

400. Effective stakeholder communication includes both proactive and reactive components. Applicants recognize the importance of gaining and maintaining stakeholder trust and confidence by providing early, accurate information directly to affected parties. If proactive communication is delayed, stakeholders will either be left in the dark or receive potentially incomplete information from secondhand sources. If proactive communication is inaccurate, stakeholders will not trust continued communication throughout the duration of the disruption. Applicants therefore seek to balance the need for both speed and accuracy when proactively communicating with stakeholders.

401. Applicants' proactive communications with stakeholders occur through several channels, including announcements on UP's and NS's web pages and email communications targeted to customers likely to be affected by a disruption. Applicants can target emails to customers based on their origin, destination, location, and commodity. Applicants use this information to inform customers when their service may be delayed by more than 24 hours due to major weather events,

derailments, strikes, or other disruptions. Applicants also continue to follow up with affected customers during and after the event. For example, during hurricanes and other major weather events, UP follows a structured communication process to ensure customers are informed, supported, and engaged throughout the disruption. When a weather event is imminent, UP notifies impacted customers with initial alerts describing the situation and the railroad's readiness to respond. From that point forward, UP engages in daily direct outreach—via email, phone, or its Salesforce case system—to provide updates, confirm service status, and collect feedback. After service is restored, UP provides the impacted customer a summary of actions taken and invites feedback.

402. Applicants also have well-developed systems for engaging in reactive communications with stakeholders—that is, responding to issues raised by customers directly with the railroads. UP and NS both have customer call centers, so customers can contact railroad representatives to obtain information about their shipments or raise issues requiring resolution. UP's and NS's call centers use similar processes to document interactions, track progress, and ensure accountability. Customers can also raise questions and concerns electronically using customer portals that provide real-time visibility into their shipments.

D. Applicants' Successful Contingency Planning Frameworks

403. UP's and NS's contingency planning frameworks described above have proven extraordinarily successful during recent service disruptions. The examples described below demonstrate both the efficacy and flexibility of their existing processes.

1. International Intermodal Rush (2024 to 2025)

404. In 2024, UP successfully absorbed a substantial increase in international intermodal traffic over a two-month period. This international traffic surge was caused by a series of overlapping events, including impending tariffs, a strike by the East Coast Longshoremen, and unforeseen delays in both the Suez and Panama canals.

405. UP's monitoring infrastructure flagged the change in shipping departures and inbound port activity as these conditions unfolded. UP immediately formed a cross-functional team that included representatives of its Service Design, Premium Operations, Fleet Distribution, HDC, and Marketing and Sales teams. This team worked around the clock to coordinate tasks among departments, monitor changes, respond to developments, and develop alternative transportation plans.

406. UP quickly determined that the traffic surge would require the deployment of additional assets to Southern California to meet demand. Within days, UP had repositioned locomotives within the Los Angeles Basin and prepared them for immediately deployment. UP also ensured sufficient onsite crew support by executing 15 borrow-outs and increasing staffing along key lanes with projected impacts. To meet the projected increase in intermodal traffic, UP also repositioned empty intermodal wells in strategically placed locations near the Los Angeles Basin.

407. UP's team held frequent calls with foreign carriers to understand changing flows into the main line network and the pipeline from Los Angeles to Chicago. At terminals, UP coordinated with vendors to secure the resources needed

to ensure that ramp productivity could meet demand. UP also worked with customers to maximize the efficiency of equipment flows on key portions of the network.

408. As it took all these steps, UP closely monitored metrics like train speed and car velocity both locally and throughout the network.

409. UP's response strategy minimized both the severity and duration of the surge while protecting the rest of the network from cascading effects. In the wake of the intermodal rush, UP invested in higher-frequency dock monitoring to provide even greater visibility into port infrastructure.

2. Upper Great Lakes (June 2024)

410. In June of 2024, UP faced a challenging rainy season in the Upper Great Lakes region. Over a two-week period, shifting weather and flood patterns caused daily changes in the lines the railroad could keep open for service. UP established a war room to coordinate operations across departments.

411. Each day, as new weather reports arrived, UP determined which lines would be affected and where affected traffic could be shifted. It readjusted transportation plans to accommodate the altered traffic flows and shifted ATR locomotives to support the revised plans. UP's Engineering team worked around the clock to restore routes and repair bridges as a result of the historic flooding events in Northern Iowa and throughout Minnesota. UP's CC&S team then identified which customers would be impacted and provided them updates on changes to operations. The next day, UP repeated the same process to ensure traffic continued flowing to the maximum extent possible and customers remained informed.

412. Throughout this episode, UP closely tracked inventory and traffic flow metrics to identify hot spots and divert additional resources where necessary. This response strategy enabled UP to contain the effects of the disruption to the affected region and substantially mitigated the impacts of the weather on customers.

3. Baltimore Key Bridge Collapse (March 2024)

413. On March 26, 2024, a cargo vessel struck the Francis Scott Key Bridge in Baltimore, Maryland, resulting in the collapse of the bridge and the blockage of a key East Coast Port for almost three months. This event severed one of NS's largest bulk lanes: export coal from Southwest Pennsylvania through the Port of Baltimore. In addition to the bulk impacts, the blockage created a supply chain disruption for international steamship lines, which were unable to get units into or out of the Port. NS responded to these rapidly changing customer needs through a multi-pronged approach that required close coordination between the Operations and Commercial teams. To restore the coal flows and enable a large customer to continue to operate their mines, NS shifted this globally significant export coal volume to NS's Lamberts Point Coal Pier in Norfolk, Virginia. This was a massive routing shift that required adding locomotive resources due to the extended distance and grade of the diversion route. Between the Pennsylvania mines and the Norfolk Pier, NS deployed more than 40 Train and Engine employees via "Go Teams" to handle the diverted traffic. The results achieved were record coal loadings at Lamberts Point in the two-month period following the bridge collapse, with over 2 million tons loaded in May, the first time this benchmark had been reached since April 2013.

414. To address the supply chain disruption experienced by the steamship lines, NS responded by popping up an international intermodal service at the Baltimore Intermodal ramp, which had previously processed only domestic shipments. To add the international service, Service Design quickly developed a train plan to and from the Port of New York and New Jersey into Baltimore, connecting to existing services where possible to maximize efficiency. The Intermodal Commercial team worked with customers to quantify shipping requirements and establish expectations for handling international shipments at this domestic ramp. In doing so, NS leveraged its Triple Crown Services, Inc. network to provide drayage to and from Seagirt Marine Terminal. This complex movement required constant communication between Intermodal Customer Logistics and shippers, along with close coordination with the Operating Team.

415. Overall, the comprehensive NS response to the disruption solved problems for our customers and kept the NS network moving fluidly.

4. Hurricane Helene (September 2024)

416. Hurricane Helene made landfall as a Category 4 hurricane near Big Bend, Florida, in late September 2024 and proceeded to cause significant damage throughout the Southeast, particularly in NS's Coastal, Gulf, and Blue Ridge Divisions. In advance of the storm, NS closely monitored the storm approach and established a war room within NS's Network Operations Center ("NOC") to ensure maximum coordination across the various Operating Groups. NS Engineering forces were able to strategically pre-position personnel, equipment, and material in key locations along core routes, including coordination with the NOC to stage loaded

Herzog ballast trains and GREX dump trains. Coordination even extended to Enterprise Resources (Sourcing), which worked to secure rock quarry support and local trucking support for anticipated restoration efforts. The NOC and the war room safely managed operations while NS Engineering restored the two most crucial routes —the GS&F and Southern Mains—within 24 hours. All core routes were restored within 72 hours except for the AS Line, which incurred catastrophic destruction. The immediate restoration efforts involved the clearing of over 15,000 downed trees. Following the track restoration, NS closely coordinated traffic flows and tactically managed the transportation plan to carefully reestablish service while ensuring yard resources were not overwhelmed. Throughout the process, NS's Customer Logistics group kept customers informed of impacts via broadcast messages and direct customer communication.

E. Applicants' Contingency Plans for Merger-Related Service Disruptions

417. Applicants modeled their contingency plans for merger-related service disruptions on Applicants' existing contingency plans and problem-solving procedures described above. The following sections describe how, post-merger, Applicants plan to address potential merger-related service disruptions, promptly restore adequate service levels, and utilize problem resolution teams and procedures.

1. Risk Identification and Assessment

418. As discussed above, Applicants engaged in a risk assessment process that identified three broad areas that create risks of merger-related service disruptions: changes in traffic levels and patterns, changes in procedures and

processes, and changes in IT systems. Applicants concluded that the risk of merger-related service disruptions would be highest at the classification yards and intermodal terminals with the most merger-related operational changes. Those classification yards and intermodal terminals are: Chicago, St. Louis, Kansas City, Memphis, and New Orleans. In those yards and terminals, not only could changes in traffic flows present risks, but any unexpectedly negative impacts arising from changes in procedures, processes, and systems during the integration process could also potentially pose additional risks to operations. Applicants also concluded that they should develop contingency plans for the main line from Kansas City to Butler via Sidney, which they will use for the first time as a significant route for traffic moving between the legacy UP and NS systems, as well as for the main lines from New Orleans to Birmingham and from Birmingham to Atlanta, because these corridors are expected to experience a significant amount of construction to accommodate projected growth.

419. Applicants have documented their contingency plans for addressing merger-related service disruptions on the main lines identified above and in Chicago, St. Louis, Kansas City, Memphis, and New Orleans, including the elements described in the following sections, in Appendix A.

2. Identification and Maintenance of Buffer Resources

420. As discussed above, service disruptions ultimately manifest as an inability to move current traffic volume because of a shortage of one or more of five critical resources: main lines, terminals, crews, locomotives, and rail cars. For each of the areas described above, Applicants have compiled information regarding likely

sources of buffer resources. Specifically, for the Kansas City to Butler, New Orleans to Birmingham, and Birmingham to Atlanta line segments, Applicants identified and show in their contingency plans in Appendix A:

- Main lines: alternate main lines that could be used to route traffic to avoid the line segment, including lines requiring detours over other railroads.
- Yards/Terminals: alternate yards/terminals that could be used to accommodate traffic that cannot access terminals on the line segment.
- Crews: the crew base used to crew trains that move over the line segment and the next closest crew base point on the network.
- Locomotives: the two terminals closest to the line segment with a sizable number of ATR locomotives and the projected number of ATR locomotives at each terminal.

421. Similarly, for each of the gateways identified above, Applicants identified and show in their contingency plans in Appendix A:

- Main lines: alternate main lines that could be used to route traffic to avoid the terminal, including lines requiring detours over other railroads.
- Yards/Terminals: alternate yards/terminals that could be used to accommodate traffic that cannot access the terminal.
- Crews: the crew base used by crews that report to the terminal and the next closest crew base point on the network.
- Locomotives: the two terminals closest to the terminal with a sizable number of ATR locomotives and the projected number of ATR locomotives at each terminal.
- Rail Cars: the two terminals closest to the line segment with a sizable number of available rail cars and the projected car needs at each terminal.

3. Monitoring to Detect Merger-Related Service Disruptions

422. Applicants believe that the operations monitoring they conduct in the ordinary course of business will be more than sufficient to detect merger-related service disruptions. However, as an added layer of protection, UP/NS will monitor operations in its principal classification yards using the terminal dwell benchmarks established in Part XII of this Service Assurance Plan.

423. Based on their experience, Applicants believe terminal dwell times in manifest yards are a meaningful indicator of network health in a terminal area and provide an important leading indicator of potential issues on the main lines leading into and out of the terminal area.[225] Terminal dwell time information from principal classification yards will provide information regarding network health in and around the gateways of Chicago (Proviso, Elkhart), St. Louis (A&S); Kansas City (18th Street), Memphis (North Little Rock, Sheffield), and New Orleans (Livonia). Information about network health in the Kansas City gateway will provide an indicator of potential issues involving the Kansas City to Butler main line. Terminal dwell times for principal classification yards will also provide a broad view of the combined network's health, as the principal classification yards connect key locations on all principal routes.

[225] As discussed below in Section XII.B.2, terminal dwell times for intermodal terminals are based on the time between when a railroad grounds a container and the time the container leaves the terminal, which often depends more on local drayage operations than the health of railroad operations.

424. In addition to the specific monitoring measures described above, UP/NS will increase the combined company's level of vigilance when portions of the combined network experience significant changes as part of ongoing integration efforts—for example, during and immediately after significant changes in terminal operations, during and immediately after IT system cut-overs that affect key operating systems, including systems related to customer car ordering and waybilling, and during and immediately after periods in which legacy NS employees become subject to legacy UP operating rules.

425. Further, as discussed below, UP/NS will establish "go teams" of managers, supervisors, and other personnel who will be prepared to travel to locations that are implementing significant changes as part of the integration process to provide on-the-ground guidance if service issues emerge.

426. In addition, as described in the Customer Service section of this Service Assurance Plan, UP/NS will ensure adequate numbers of trained customer service personnel are available to answer questions and respond to any issues that may arise when customer service functions are integrated and customers begin using new systems for car ordering and waybilling.

4. Developing and Executing Response Actions Through a Special Problem Resolution Team

427. UP/NS will create a special merger-related problem resolution team to address any merger-related service disruptions during the merger integration period. UP/NS will activate the special problem resolution team if the previous month's terminal dwell time in any of the combined railroad's principal classification yards

exceeds a predetermined threshold: 36 hours for yards on the legacy NS system, and 29 hours for yards on the legacy UP system. Exceeding the dwell-time threshold would not mean that a merger-related service disruption has occurred or that any special action is required. However, it would signal the need for attention and investigation.

428. Applicants developed these thresholds based on their experience with the correlation between terminal dwell times and service issues. They expect that the combined railroad will use a single standard for all yards on each legacy network, rather than separate standards for each yard, for manageability purposes. However, use of a lower threshold for legacy UP yards appropriately reflects UP's practice of using tighter terminal cutoff times and transportation plans that drive lower dwell times.

429. Applicants' benchmarking data show the 36- and 29-hour thresholds are appropriately calibrated to identify potential merger-related problems. During the 36-month period prior to Applicants' filing of their notice of intent to file their merger application, NS's operations would have activated the special problem resolution team 55 times, and UP's operations would have activated the special problem resolution team 47 times. The thresholds would have appropriately signaled UP's and NS's service difficulties during the post-Covid period, as well as other events that caused short-term service disruptions.

430. The special problem resolution team will be led by the relevant regional vice president and include senior representatives from at least the following functional areas:

- Network planning
- Crew management
- Locomotive management
- Car management
- Regional management of the affected region
- Service unit management of the affected service unit
- Terminal management of the affected terminal
- Information technology
- Passenger operations
- Customer care and support
- Short line management
- Safety
- Law

431. The special problem resolution team will coordinate (and may overlap) with UP/NS personnel who will address non-merger-related service disruptions. It will convene at least once a day until actual dwell-times in the yard or yards at issue fall below the threshold and remain below the threshold for seven consecutive days, or until the team determines that the issue causing the decline in the pre-merger baseline measures is not merger-related.

432. The special problem resolution team will follow the same basic problem resolution procedures in resolving merger-related service problems that UP/NS will apply to other service problems, and which are described in detail above, with one exception. The exception is that they will also assess whether the issue causing the increased dwell time is merger-related. If they determine the issue is merger-related, they will attempt to identify the underlying cause of the problem as a non-execution issue or an execution issue, and at the same time, they will use the menu of buffer resources described above, as well as their experience and judgment, to determine the most appropriate way to apply those resources to promptly restore adequate service levels. Further, as they direct resource changes, they will continue to monitor the results to evaluate the need for additional changes. The special problem resolution team will also be empowered to recommend rolling back any integration-related changes to reevaluate the change and the implementation process.

433. In addition, UP/NS will create "go teams" of managers, supervisors, and other personnel that the special problems resolution team can rapidly deploy to locations experiencing merger-related service disruptions that they determined resulted from execution errors at the local level. The precise configuration of the "go teams" will depend on the nature of the disruption and the resources needed to address the disruption, but the teams will include personnel with experience and judgment to identify and fix issues that require additional training and direct supervision to address.

434. Finally, the special problems resolution team will be tasked with identifying root causes of any merger-related service disruption and developing and supervising the execution of plans to ensure problems do not recur. This might include supervising transportation plan redesigns or supervising the development of additional training and testing tools and processes before integration activities proceed.

5. Monitoring Response Effectiveness

435. As discussed above, the special merger-related problem resolution team will monitor the effectiveness of UP/NS's response to any merger-related service disruptions and direct additional resource changes if it concludes such changes are necessary. The special team will remain responsible for monitoring any necessary service recovery efforts until actual dwell-times in the yard or yards at issue fall below the threshold and remain below the threshold for seven consecutive days.

436. Once the special problem resolution team's monitoring role is concluded, the team will prepare a report documenting both the cause of the issue and any lessons learned that would aid in future efforts. The special team will also consider, and its report will also address, whether monitoring additional metrics would provide earlier identification and correction of similar problems in the future.

6. Stakeholder Communications

437. In addition to the communications UP/NS would share with stakeholders following a substantial disruption of service from any cause, UP/NS would provide additional reporting for merger-related service disruptions.

438. If the special merger-related problem resolution team is activated, UP/NS will inform the Board's Office of Public Assistance, Government Affairs, and Compliance ("OPAGAC") and describe the railroad's efforts to identify the root cause of the increase in dwell time and its plan for promptly resolving any merger-related service disruption.

439. Unless UP/NS subsequently determines the root cause is not merger-related, the combined company will report to OPAGAC on a weekly basis until actual dwell-times in the yard or yards at issue fall below the threshold and remain below the threshold for seven consecutive days.

7. Commitment to Working with Other Carriers

440. In addition to committing to the measures described above, Applicants commit to ensuring that the combined railroad will work with other carriers to overcome serious service disruptions on their lines during the transition period and afterwards.

441. UP and NS have long worked with other carriers to establish detour arrangements and other cooperative efforts when they experience serious disruptions on their lines and other carriers are in a position to provide assistance to UP or NS, or when other carriers experience serious disruptions and UP or NS is in a position to provide them with assistance. The combined company will continue to seek cooperation from other carriers when the combined company needs assistance, and the merged company will continue UP's and NS's practices of cooperating when other carriers approach UP/NS for assistance.

F. Remedies for Service Disruptions

442. The Board's rules require Applicants to suggest a protocol for handling claims related to failure to provide reasonable service due to merger implementation problems and state that commitments to submit all such claims to arbitration will be favored. *See* 49 C.F.R. § 1180.1(h)(5). Applicants are carefully planning and staging the integration process to ensure the merger improves service for their customers. Their record of recent, successful cutovers of major systems provides good reason for confidence. Applicants are willing to offer customers the option of arbitration in the event they raise merger-related service claims. However, Applicants urge customers to raise any merger-related service concerns using well-established channels of communication with customer care personnel and contacts within the Marketing and Operating departments of the combined railroad. If a customer believes merger integration is causing a service problem, UP/NS should have the opportunity to hear and respond to the customer's concerns.

443. If a customer believes it has been damaged by a merger-related deterioration in service and is not satisfied with the combined railroad's response, Applicants are willing to resolve claims using a formal arbitration process. Applicants describe the process in detail in Appendix B to the Service Assurance Plan. Under the process, arbitration would be available to resolve damages claims filed by shippers of non-exempt commodities under common carrier service during the three-year merger integration period. The process would be administered by JAMS on a confidential basis and is designed to resolve the matter quickly through issuance of a final, binding, enforceable decision with only a limited right to appeal.

444. Applicants expect no customer will ever have cause to invoke the arbitration process, but the process will be available as an option to pursuing claims outside of formal judicial or regulatory proceedings.

X. Coordination of Freight and Passenger Operations

445. In this Part of the Service Assurance Plan, Applicants describe how they will continue to facilitate passenger operations, fulfill existing performance agreements for passenger services, ensure effective communication with passenger operators, and avoid potential negative impacts on passenger rail service that otherwise might be associated with a transaction of this type. Applicants also describe their current coordination with passenger operators, including communication and operating protocols. Applicants each work closely and collaboratively with their passenger rail partners, and the combined transcontinental railroad will continue to do so following the merger.

446. As hosts to Amtrak, Applicants devote significant time and resources to satisfying both contractual and statutory obligations. Under 49 U.S.C. § 24308(a), Applicants provide services to Amtrak under contractual arrangements. Under 49 U.S.C. § 24308(c), Amtrak has a statutory right to preference over freight transportation. Section 24308(f) contains a Congressionally established on-time performance standard that applies to Amtrak. Congress charged the Federal Railroad Administration with developing a metric for measuring on-time performance. FRA's metric is referred to as Customer On-Time Performance ("COTP").[226]

[226] *See* 49 C.F.R. § 273.5(a)(1).

447. As a regulatory mandate, COTP is separate from Applicants' contractual performance obligations under 49 U.S.C. § 24308(a). The Board's merger regulations, 49 C.F.R. § 1180.10(b), require Applicants to describe "how they would continue to facilitate [Amtrak or commuter] operations so as to fulfill existing *performance agreements* for those services" (emphasis added). Applicants therefore focus the following section on their contractual obligations to Amtrak and the other passenger services that operate over their lines.

A. Facilitating Passenger Operations to Fulfill Contractual Obligations

448. The accompanying Operating Plan describes in detail the current passenger services that operate over Applicants' lines. These services generally operate pursuant to commercial agreements, some of which contain negotiated performance standards, performance-related payment schemes, or other performance-related provisions as described below.

449. The UP/NS merger will not result in any adverse impact to passenger operations. UP/NS will facilitate passenger operations hosted on UP/NS lines. As described in the Operating Plan, the merger will not change—or will reduce—train counts on many of the lines on which the combined UP/NS will continue to host passenger operations. Where Applicants project that a route on which they host passenger operations will experience a merger-related increase in train counts, they have planned to ensure the route will have sufficient capacity to fulfill any contractual commitments to passenger carriers.

1. Passenger Rail Services on UP

450. On its network, UP hosts Amtrak, other passenger rail services, and commuter rail services, as described in more detail in the Operating Plan.

451. **Amtrak**. Except as described below for particular Amtrak services, UP's contractual obligations to Amtrak for Amtrak-operated services hosted by UP are governed by a January 1, 2000, agreement (as amended) between UP and Amtrak (the "UP-Amtrak Agreement") that sets forth terms and conditions for coordinating freight and passenger services over UP's network.[227] That agreement provides {{

}} As described in the Operating Plan, Applicants expect that the merger will remove freight trains from Amtrak's Lincoln (Illinois), Missouri River Runner, and Lincoln/Missouri routes, and a portion of the Texas Eagle route. Applicants do not expect that the merger will add freight trains to Amtrak's Cascade, Coast Starlight, Pacific Surfliner, or Winter Park (Ski Train) routes. For Amtrak routes where Applicants expect to add freight trains—the Sunset Limited, California Zephyr, and Gold Runner routes and a portion of the Texas Eagle route—the Operating Plan and accompanying workpapers show that (1) existing main line capacity is sufficient to accommodate projected traffic levels while maintaining

[227] *See* Workpaper "Amtrak - Agreement.pdf"; Workpaper "Amtrak - Amendment Agreement.pdf."

current passenger service levels or (2) Applicants' plans to increase main line capacity will accommodate projected freight traffic growth without disruption of passenger services.

452. *Amtrak's Capitol Corridor Service.* UP, the Capitol Corridor Joint Powers Authority, and Amtrak are parties to a December 1, 2003, Agreement on Performance Payment for Operation of Capitol Corridor Trains in California.[228] In that agreement, {{

}}

453. As described in the Operating Plan, Applicants' plan to institute a new intermodal service between Northern California and the Northeast would add one daily train pair to the Capitol Corridor route between Sacramento and Auburn, California. Also as shown in the Operating Plan, the Capitol Corridor route has sufficient capacity to accommodate the additional trains while maintaining current passenger service levels.[229]

454. *Amtrak's Pacific Surfliner Service.* The Pacific Surfliner is the subject of a December 15, 2022, agreement between UP and the Los Angeles-San Diego-San Luis Obispo Rail Corridor Agency ("LOSSAN") (the "UP-LOSSAN Agreement"), in

[228] *See* Workpaper "Capitol Corridor - Performance Payment Agreement.pdf."

[229] *See* Op. Plan § 7.1.1.2.

which the parties agreed that the incentive portion of the UP-Amtrak Agreement would not apply and instead established a separate incentive-based performance payment scheme for the Pacific Surfliner.[230] Under the UP-LOSSAN Agreement, UP receives incentive payments based on on-time performance levels. If end-point on-time performance falls below 75 percent of the stated levels, the parties must meet to discuss root cause issues and determine potential mitigation measures. Under the terms of a June 1, 2025, amendment to the UP-Amtrak Agreement, the penalty portion of the UP-Amtrak Agreement applies to the Pacific Surfliner service. As explained in the Operating Plan, Applicants do not expect that the merger will add trains to the Pacific Surfliner route.[231]

455. *Amtrak's Sunset Limited Service.* In a 2025 agreement with Amtrak, {{

}}[232] As explained in the Operating Plan, Applicants plan to increase main line capacity on the Sunset Limited route to ensure UP/NS has sufficient capacity to maintain passenger service levels while accommodating a projected merger-related increase in freight traffic moving over that route.[233]

---

[230] *See* Workpaper "Pacific Surfliner - Passenger Rail Cooperative Agreement.pdf."

[231] *See* Op. Plan § 7.1.1.8.

[232] *See* Workpaper "Sunset Limited - Settlement Agreement.pdf."

[233] *See* Op. Plan § 7.1.1.9.

456. **Rocky Mountaineer (Seasonal)**. UP and Rocky Mountaineer have a passenger rail operating agreement governing the Rocky Mountaineer's seasonal service.[234] Under the agreement, {{

}} As explained in the Operating Plan, Applicants do not expect the merger to increase the number of trains operating over the Rocky Mountaineer route.[235]

457. **ACE (Commuter).** UP and the San Joaquin Regional Rail Commission have a trackage rights agreement governing access to UP's lines for the Altamont Corridor Express ("ACE") service.[236] Under the agreement as amended, {{

[234] *See* Workpaper "Rocky Mountaineer - Operating Agreement.pdf."

[235] *See* Op. Plan § 7.1.3.6.

[236] Workpaper "ACE - Trackage Rights Agreement.pdf"; Workpaper "ACE - First Amendment to TRA.pdf"; Workpaper "ACE - Fourth Amendment to TRA.pdf"; Workpaper "ACE - Sixth Amendment to TRA.pdf."

}} As explained in the Operating Plan, Applicants' planned new intermodal service between Northern California and the Northeast would affect a small part of the ACE route, but the corridor's existing configuration supports Applicants' projected merger-related traffic increase while maintaining the current passenger service levels.[237]

458. **Caltrain (Commuter)**. This commuter service is governed by a trackage rights agreement between a UP predecessor and the Peninsula Corridor Joint Powers Board, the organization that owns and manages Caltrain.[238] Under the agreement, UP maintains dispatching control of the line used by Caltrain. There are no performance standards or performance payment schemes under the agreement. As explained in the Operating Plan, Applicants do not expect the merger will increase the number of trains operating over the line used by Caltrain.[239]

459. **Metra (Commuter)**. There are no contractual performance standards for Metra's operations on UP's lines in the Chicago area. The Purchase of Service Agreement that previously governed the relationship between UP and Metra expired in June 2025. The Board subsequently entered an order granting terminal trackage rights to Metra, and the parties are engaged in negotiations regarding terms and

[237] *See* Op. Plan § 7.1.3.1.

[238] *See* Workpaper "Caltrain - Trackage Rights Agreement.pdf."

[239] *See* Op. Plan § 7.1.3.2.

conditions. *See generally Commuter Rail Div. of the Regional Transp. Auth.—Terminal Trackage Rights—Union Pac. R.R.*, Docket No. FD 36844. As explained in the Operating Plan, UP/NS will have sufficient capacity to accommodate a projected merger-related increase in freight traffic moving over a portion of UP's Geneva Subdivision used by Metra while maintaining the current passenger service levels.[240]

460. **Metrolink (Commuter).** UP and the Ventura County Transportation Commission have agreements related to the Metrolink commuter services over UP's lines in California. A Commuter Train Access Agreement, as amended, governs Metrolink's use of UP's lines between Moorpark and North Montalvo.[241] The Riverside Operating Agreement, as supplemented, governs Metrolink's use of UP's lines between West Riverside and Los Angeles.[242] Under the agreements, UP has dispatching authority on the lines used by Metrolink and is generally required to give priority to Metrolink commuter trains in defined situations. There are no performance standards or performance-related payment schemes. As explained in the Operating Plan, the corridor's existing configuration supports a projected merger-related increase in freight traffic of approximately two trains per day while maintaining the current passenger service levels. [243]

---

[240] *See* Op. Plan § 7.1.3.3.

[241] *See* Workpaper "Metrolink - Commuter Access Agreement.pdf;" Workpaper "Metrolink - Third Amendment to CAA.pdf."

[242] *See* Workpaper "Metrolink - Riverside Operating Agreement.pdf"; Workpaper "Metrolink - Supplemental Agreement to Riverside OA.pdf"; Workpaper "Metrolink - Saugus and Ventura Shared Use Agreement.pdf."

[243] *See* Op. Plan § 7.1.3.4.

2. Passenger Rail Services on NS

461. On its network, NS hosts Amtrak, other intercity passenger rail services, and commuter rail services, as the Operating Plan describes in more detail.

462. **Amtrak.** Except as explained below for particular Amtrak services, Amtrak long-distance and state-supported intercity passenger services are covered by a 2006 Off-Corridor Operating Agreement, as amended, between Amtrak and NS (the "Off-Corridor Agreement").[244] Under that agreement, NS has agreed, among other things, to make reasonable efforts to deliver each train to all scheduled stops on NS within its scheduled running time, to avoid delays to trains and make up delays incurred, and to seek ways to reduce the scheduled running time between points. The agreement also contains performance payments and penalties based on the number of minutes of "NSR Delays" that specified Amtrak trains incur. NSR Delays are defined as delays based on certain delay codes and attributable to NS.

463. As described in the Operating Plan, Applicants expect that the merger will add freight trains to all of the routes used by Amtrak services that operate over NS's lines: the Blue Water, Cardinal, Carolinian and Piedmont, Crescent, Floridian (temporary combination of Capitol Limited and Silver Star services), Lake Shore Limited, Mardi Gras, Pennsylvanian, Pere Marquette, Richmond/Newport News/Norfolk, Roanoke, and Wolverine services. The Operating Plan and workpapers explain how there is either sufficient capacity to support the projected freight increase while maintaining the current passenger service levels or how Applicants

[244] *See* Workpaper "Amtrak - A&R Off-Corridor Operating Agreement.pdf."

plan to support the projected freight increase while maintaining the current passenger service levels.[245]

464. *Amtrak's Carolinian and Piedmont Services.* The Carolinian and Piedmont services are addressed in a 2011 Definitive Service Outcomes Agreement ("DSOA") among the North Carolina Department of Transportation, North Carolina Railroad Company, NS, and Amtrak.[246] Under the DSOA, as amended, NS committed to the service frequencies then occurring. The parties also agreed to the schedules for these services and achievement of certain service performance levels. NS's compliance with the contractual delay standard is based on two metrics. The first is Quarterly Endpoint OTP, which is the average endpoint on-time performance of all specified trains in a quarter. The second is based on NS-Controlled Trigger Delay Minutes, which is the sum of delay minutes as set forth in Amtrak's conductor delay reports that are determined to be within NS's control. The contract sets out provisions for root cause analyses, corrective action plans if necessary, remedies, and dispute resolution. As described in the Operating Plan, the route has sufficient existing capacity to support the projected merger-related increase in freight traffic without compromising passenger services.[247]

465. *Amtrak's Crescent Service.* In addition to the Off-Corridor Agreement's performance scheme based on delay minutes, an addendum to the Off-Corridor

[245] *See* Op. Plan §§ 7.1.2.1 to 7.1.2.13.

[246] *See* Workpaper "Carolinian & Piedmont - DSOA.pdf."

[247] *See* Op. Plan § 7.1.3.3 (Carolinian); *id.* § 7.1.2.10 (Piedmont).

Agreement provides for performance payments and penalties based on COTP.[248] Further, in 2024 the U.S. Department of Justice ("DOJ") filed a complaint against NS alleging that NS was failing to provide preference to Amtrak trains on the Crescent route. Without admitting liability, NS entered into a settlement agreement with DOJ on September 8, 2025, which, among other things, provided that NS would grant Amtrak the highest dispatching priority; clarified how dispatching decisions would be made; and mandated retention of certain data and the government's ability to access the data.[249] As described in the Operating Plan, UP/NS intends to implement targeted infrastructure enhancements at key locations, primarily focused on the corridor between New Orleans and Atlanta, ensuring the route has sufficient capacity to support a projected increase in freight traffic while maintaining current passenger service levels.[250]

466. *Amtrak's Roanoke Service.* In addition to the Off-Corridor Agreement discussed above, the Roanoke service is the subject of a 2024 Amended and Restated Comprehensive Rail Agreement between NS and the Virginia Passenger Rail Authority ("VPRA").[251] Under that agreement, the second round trip between Manassas and Roanoke will be subject to a performance regime based on FRA's COTP

[248] *See* Workpaper "Crescent - Addendum to Appendix V.pdf."

[249] *See* Workpaper "Crescent - DOJ Settlement Agreement.pdf."

[250] *See* Op. Plan § 7.1.2.4.

[251] *See* Workpaper "Roanoke - A&R Comprehensive Rail Agreement.pdf."

metric, measured on a quarterly basis.[252] NS is currently in discussions with VPRA in anticipation of that performance regime becoming effective. As described in the Operating Plan, there is sufficient capacity on the route to support a projected merger-related increase in freight traffic while maintaining the current passenger service levels.[253]

467. **VRE (Commuter)**. Virginia Railway Express's ("VRE") operations are conducted on NS's lines pursuant to an Operating Access Agreement among NS and the two owners of the VRE, the Northern Virginia Transportation Commission and the Potomac and Rappahannock Transportation Commission.[254] The operating agreement provides that NS will make reasonable efforts to avoid unnecessary interference with and to maintain specified schedules of VRE service and that NS will also make reasonable efforts to attain future schedules specified in the agreement. The agreement further provides that NS will make reasonable efforts to avoid delays or cancellations but does not contain specific performance standards. As explained in the Operating Plan, Applicants do not expect the merger to add trains to the VRE route.[255]

468. **Metra (Commuter)**. Metra's operation on NS's line is pursuant to a January 1, 1993, joint line (lease) agreement, as modified by a May 14, 1993, letter

---

[252] Future extension of passenger service to Christianburg, Virginia, would likewise be subject to this performance standard.

[253] *See* Op. Plan § 7.1.2.12.

[254] *See* Workpaper "VRE - Operating Access Agreement.pdf."

[255] *See* Op. Plan § 7.1.4.2.

agreement, between Metra and NS's predecessor.[256] The agreement provides that NS maintains dispatching authority; establishes time restrictions on NS operations to accommodate commuter operations; and contains incentive and reverse incentive compensation provisions relating to on-time performance of commuter trains. On-time performance under the agreement is based on either arrival time at specific points or aggregate delay minutes attributable to NS dispatching (within NS's control) for the commuter train. The agreement gives Metra's commuter trains priority over all other rail operations on the joint line. As explained in the Operating Plan, Applicants do not expect the merger to add trains to the NS line over which Metra operates.[257]

3. Future Passenger Services

469. Applicants are in different stages of discussions with various entities regarding potential future passenger services on their networks (including additional train runs on current services). For example, UP and the Illinois Department of Transportation have entered into a memorandum of agreement for future access to UP's lines for intercity passenger rail service between Chicago and Rockford, Illinois. Similarly, NS has worked collaboratively with the City of Charlotte, North Carolina, to incorporate future commuter rail service between Charlotte and northern towns in Mecklenburg County, North Carolina.

---

[256] Workpaper, "Metra - Joint Line Agreement.pdf"; Workpaper, "Metra - Letter Agreement.pdf."

[257] *See* Op. Plan § 7.1.4.1.

470. Because these and other possible future passenger services are not yet "commuter services . . . operated over the lines of applicant carriers," 49 C.F.R. § 1180.10(b), Applicants do not address them in detail here. To the extent that there are agreements in place regarding future service, Applicants intend that UP/NS will abide by those contractual commitments, as it will with respect to other commercial agreements.

4. Applicants' Freight Services on Passenger Providers' Lines

471. Although, as just noted, Board regulations require Applicants to address facilitation of operations only where passenger services "are operated over the lines of applicant carriers," *id.*, it bears mention that Applicants conversely operate freight services on some passenger lines.[258]

472. For example, UP conducts operations over Metrolink in the Los Angeles Basin and over Caltrain in the San Francisco Bay area pursuant to freight easements and separate operating agreements. UP also operates via trackage rights over portions of the Trinity Railway Express commuter rail system in Texas. The Utah Transit Authority's FrontRunner rail system generally runs parallel to UP's right-of-way, but UP operates on some portions of the FrontRunner system to reach local industries.

[258] There are also instances where passenger lines are adjacent to Applicants' lines, but where freight and passenger are not using the same track. For example, the Tri-County Metropolitan Transportation District of Oregon ("TriMet") operates light rail service in and around Portland, some of which shares a corridor with UP with UP and TriMet operating on separate tracks.

473. NS operates over three rail lines owned by Amtrak. It operates over the Northeast Corridor (Washington, District of Columbia, to Boston) and Keystone Corridor (Philadelphia to Harrisburg) pursuant to freight easements and over an Amtrak-owned line from Porter, Indiana, to Kalamazoo, Michigan, pursuant to trackage rights.

474. NS also has operating rights over certain rail lines owned by other passenger rail providers—including New Jersey Transit (trackage rights), SEPTA (trackage rights), and VPRA (freight easement).

B. Operating Protocols Ensuring Effective Communication with Passenger Rail Operators

475. Applicants understand the importance of effectively communicating with their passenger rail partners. Each has established protocols for facilitating operations of passenger services over its lines, including protocols for ensuring effective communications. This section describes Applicants' existing protocols relating to passenger services and plans to ensure the combined railroad's effective communication with passenger rail providers.

476. For both UP and NS, existing protocols effectively facilitate passenger operations on joint lines in three ways. First, Applicants each have teams with established protocols for communicating and coordinating freight and passenger operations. Second, Applicants each review performance data to better understand trends related to delays and take more effective action to reduce such delays. Finally, Applicants' dispatcher training programs ensure effective communication and coordination with passenger operators.

1. Communication & Coordination Protocols

a. Union Pacific

477. UP has robust communication protocols that ensure effective coordination with its passenger partners. These protocols include a centralized dispatch center for coordinating operations, recurring meetings with its passenger partners as well as avenues for instantaneous communication, and protocols for addressing service interruptions.

478. To support safe and efficient coordination of freight and passenger operations moving in real time on UP's lines, the railroad has integrated dispatching of passenger trains into the operations of its HDC. Within the HDC, a Senior Director of each territory or service unit has dispatching authority for their specific territory, including any passenger operations on UP's lines within their territory. Each Senior Director is responsible for both freight and passenger services within their territories. They analyze any delays and, depending on the service unit and in association with the Passenger Operations Director, communicate directly with the relevant passenger service.

479. In addition, the HDC has a dedicated passenger operations desk, known as the Passenger Ops Corridor Desk, that operates 24 hours per day, seven days per week. The Passenger Ops Corridor Desk monitors passenger trains on UP's network to proactively identify potential issues, collaborate with the responsible dispatcher, corridor manager, and/or foreign road to resolve issues, and communicate directly with the relevant passenger service contact. The Passenger Ops Corridor Desk is

strategically positioned within the HDC to facilitate real-time access and coordination with on-duty dispatchers and corridor managers.

480. The Passenger Ops Corridor Desk works closely with Amtrak, monitoring the location and performance status of Amtrak trains and corresponding network conditions and handling incident management support for Amtrak trains. Amtrak has a direct line to UP's Passenger Ops Corridor Desk. The Passenger Ops Corridor Desk coordinates services needed by Amtrak, such as when UP provides Amtrak with rescue locomotives and crews to pilot Amtrak trains when their locomotives fail. In addition, the Passenger Ops Corridor Desk participates in a Daily Network call with partners that covers Amtrak services, as well as Metra, Metrolink, and ACE commuter services, that operate over UP's lines. The Daily Network Call does not include Caltrain or the seasonal Rocky Mountaineer service because those entities do not regularly provide performance data to UP. The Senior Directors of the respective service units and the Passenger Ops team coordinate those passenger operations.

481. UP's Senior Directors within the HDC, in association with the Passenger Operations Director, are generally the primary contact for coordinating with ACE, Metrolink, Metra, Caltrain, and Rocky Mountaineer. The Senior Directors of the relevant territories are the Northern California Service Unit for Caltrain and ACE, the Los Angeles Service Unit for Metrolink, and the Great Plains Services Unit for Rocky Mountaineer. UP communicates and coordinates with Metra through two positions, in addition to the Passenger Operations Director: UP's General Manager

of the Chicago Service Unit and UP's Senior Director of the Great Lakes Service Unit (the latter of which handles the mainline operations of the Chicago Service Unit). The General Manager and Senior Director work closely with each other to coordinate UP's and Metra's operations.

482. In addition to the extensive communications that occur through the Senior Directors of the service units and Passenger Ops Corridor Desk, UP holds a variety of regular meetings with Amtrak and other passenger providers to coordinate and discuss passenger rail-related topics. For example, UP has bi-weekly meetings with Metra on performance, bi-weekly meetings with Metrolink on performance, monthly meetings with Amtrak and LOSSAN on performance, monthly meetings with Amtrak on engineering projects, and bi-monthly meetings with Amtrak on state rail projects, to name a few. As previously noted, because neither Caltrain nor Rocky Mountaineer provide regular performance data to UP, UP does not hold regularly scheduled meetings on performance for those services.

483. UP has Microsoft Teams channels dedicated to real-time communications for passenger operations on UP's lines. These channels facilitate the exchange of daily plans, information about service interruptions that could affect passenger operations, and any necessary real-time service adjustments. UP has established Teams chats with Amtrak, as well as with the Capitol Corridor Joint Powers Authority regarding Amtrak's Capitol Corridor service, LOSSAN regarding Amtrak's Pacific Surfliner service, Metrolink, the San Joaquin Regional Rail

Commission regarding ACE commuter service, Metra, and Rocky Mountaineer.[259] These channels enable direct, one-to-one chats between UP and passenger rail providers, including Amtrak personnel from Amtrak's operation centers (Consolidated National Operations Center ("CNOC") or Oakland Operations) and field teams to discuss various aspects of Amtrak operations.

484. As an additional resource, Amtrak has access to UP's National Railroad Passenger Corporation Officer ("NRPC Officer") within the Network Planning Department. The NRPC Officer is responsible for UP's overall contractual relationship with Amtrak. The NRPC Officer has the responsibility to administer the UP-Amtrak Agreement and to ensure UP's performance of its obligations thereunder. The NRPC Officer serves as a liaison and is available to meet with Amtrak representatives.

485. Using the channels described above, UP communicates regularly and effectively with its passenger rail partners to notify them of UP engineering projects related to passenger operations, service interruptions or adjustments, station updates, and other information pertinent to passenger train movements across the UP system.

486. For example, UP has an established protocol for communicating with passenger providers in the event of a main line service interruption. Whenever notified of a main line service interruption, the Passenger Operations Manager

[259] There is no Teams channel set up for Caltrain because the operations that occur on UP's line between San Francisco and Gilroy are predominantly Caltrain passenger operations requiring comparatively little coordination.

evaluates the potential impact to passenger operations. The Passenger Operations Manager is then responsible for communicating with the Passenger Operations Director, corridor manager, dispatcher, and the passenger provider (*e.g.*, contacting Amtrak's CNOC) to provide incident and recovery planning information. UP's protocols require the Passenger Operations Manager to maintain an open flow of communication—with updates every 60 minutes—and to coordinate relief crew efforts as necessary.

487. UP's Passenger Train Emergency Preparedness Plans prepared pursuant to 49 C.F.R. Part 239 sets out communication and notification protocols that take effect in the event of a passenger train incident or accident.

488. Complementing these mutually reinforcing communication channels, UP's operational practices facilitate passenger services. In planning for train meets, for instance, UP trains and instructs its dispatchers to prioritize all passenger trains. If a passenger train is delayed, dispatchers must notify the corridor manager, who must also notify the Passenger Ops Corridor Desk for prompt communication and escalation.

489. UP's Passenger Operations Managers are required throughout their shifts to monitor passenger train performance for host-responsible delay and to work to anticipate any possible delays based on train movement (*e.g.*, meets/passes) and the dynamic environment (*e.g.*, service interruptions). This monitoring reduces delay risk. The Passenger Operations Managers are required to communicate with dispatchers and corridor managers whenever passenger trains are below the delay

threshold and whenever a possible delay appears likely. Together, this team collaborates to determine the best course of action to avoid or mitigate delays.

490. Finally, UP uses standard dispatching processes to coordinate freight and passenger operations on passenger lines over which it operates. For example, where the passenger entity dispatches UP crews, the UP crews follow that entity's protocols. If there is any need to communicate with the operator of the line, UP's corridor managers communicate with the relevant contacts to ensure effective and safe coordination. If the owner of a passenger line is conducting maintenance, the engineering groups coordinate and discuss any potential issues.

b. Norfolk Southern

491. NS likewise works closely and collaboratively with its passenger partners to coordinate operations. NS's coordination and communication with passenger providers have many similarities to UP's processes and are grounded in three NS teams.

492. First, much like UP's HDC, NS's NOC, within its Transportation Department, is responsible for ensuring the safe, efficient, and real-time movement of all trains—including passenger trains—across NS's network. The NOC is responsible for dispatching and train movement coordination and communicates with Amtrak control centers and field personnel. Like UP's integrated dispatching at its HDC, passenger operations are integrated into the broader dispatching structure at NS's NOC. Regional dispatch desks—like UP's Senior Directors of territories—are responsible for coordinating passenger train movements within their territories, including communication with Amtrak and other passenger operators. Like UP's

Passenger Ops Corridor desk, NS's regional dispatch desks are staffed 24/7 to ensure continuous oversight and coordination. The NOC is also responsible for implementing operational strategies aligned with NS's two other passenger-related teams, Interline Services and Strategic Planning.

493. NS's Interline Services is responsible for managing day-to-day execution and compliance with operating agreements with Amtrak and other passenger providers, ensuring coordination across shared corridors and adherence to contractual obligations. Interline Services analyzes performance data including on-time performance, manages scheduling, and facilitates communication and recovery efforts during service interruptions. Within this team NS's National Railroad Passenger Corporation Operations Officer is the primary conduit for day-to-day operational coordination with Amtrak. Also within the team, NS's Manager of Interline Planning is responsible for monitoring on a daily basis historical passenger train delay, as discussed further below. NS's Chief Compliance Officer, who reports directly to NS's Chief Legal Officer, is responsible for overseeing the company's compliance function, including NS's compliance with its obligations under 49 U.S.C. § 24308(c).

494. NS's Strategic Planning team leads NS's engagement in long-term passenger rail initiatives and ensures alignment with NS's infrastructure capacity and applicable regulatory frameworks. This team evaluates proposals for new or expanded service and conducts modeling and analysis to determine infrastructure needs. Within Strategic Planning, the Manager of Passenger Policy has responsibility

for policy development and strategic initiatives related to passenger rail. This includes developing, implementing, and enforcing consistent policies for NS's interaction with passenger services. The role also includes evaluating service proposals, supporting regulatory and grant processes, and ensuring alignment with long-term infrastructure and operational goals.

495. NS has robust communication processes with Amtrak and commuter partners to ensure effective communication. To ensure operational alignment with Amtrak, NS participates in coordinating activities with Amtrak on a daily, weekly, bi-weekly, monthly, quarterly, and annual basis related to different lines or issues. For example, NS participates in a daily Northeast Corridor planning call, weekly coordination calls on Amtrak work outage planning, monthly performance reviews, and annual meetings for longer-term planning. Similar recurring communications are maintained for the commuter services that operate over NS lines.

496. Like UP, NS coordinates with affected passenger service providers in advance of planned engineering projects, including service modifications. For example, NS has provided Amtrak and state sponsors with a yearly preview of planned capital work, with increasingly frequent coordination as start dates for specific projects near.

497. In the event of a service interruption, NS contacts Amtrak and other passenger providers, typically over the phone. Like UP, NS regularly uses Teams for timely and effective communication with Amtrak.

498. NS's Passenger Train Emergency Preparedness Plans prepared pursuant to 49 C.F.R. Part 239 establish communication and notification protocols in the event of a passenger train incident or accident.

499. Like UP, NS handles coordination of freight and passenger operations on passenger-owned lines through standard dispatching and engineering communications. For effective and efficient coordination, the specifics of the communications depend on each service. NS runs only local traffic over the lines used by VPRA and New Jersey Transit, so coordination of operations for those lines is handled locally by the Manager of Train Operations and/or the Senior Road Manager. For SEPTA, NS runs both road and local trains over SEPTA's lines, so NS's Harrisburg East Dispatch desk coordinates communications. For example, if NS's allocated daily freight window is missed, the Harrisburg East Dispatcher coordinates an out-of-window move with SEPTA. NS similarly has weekly communications with Amtrak to coordinate outages on Amtrak's NEC or Keystone corridors.

2. Monitoring of Passenger Performance

a. Union Pacific

500. As noted above, UP's agreements with passenger rail providers include performance provisions. For Amtrak, the agreement includes a performance measurement system that Amtrak has named the Delay Avoidance Incentives system, which measures delay based on the concept of host-responsible delay minutes. Even where UP does not have contractual performance commitments with a passenger service partner, UP nonetheless monitors available performance data, as discussed further below.

501. For Amtrak service, Amtrak provides conductor delay information to UP every two hours; that data is then fed into UP's internal Conductor Delay Report program. UP's program categorizes Amtrak delays as host-responsible, Amtrak responsible, or third-party responsible and includes detailed information on each service, train, and schedule. UP's Passenger Operations Managers and Passenger Operations Director review this information regularly—from daily to quarterly—for accuracy and to request changes, as necessary. The data are then used to provide performance reports by service and train. The information enables UP to better understand trends related to host-responsible delays so that it can better reduce such delays.

502. Internally, UP's Passenger Operations Manager provides to relevant UP personnel a daily report with performance information for Amtrak trains. That report provides the prior day's performance and month-to-date performance for each Amtrak service with respect to the contractual on-time performance standard (host-responsible delay minutes). The report also provides information on Amtrak's active long-haul trains and potential weather issues. The Passenger Operations Manager also prepares bi-monthly reports that are specific to each Amtrak service. Each report contains information such as an overview of situations that have impacted performance for the Amtrak service, discussion of opportunities for improvement, and action items. Relevant UP personnel also receive a comprehensive monthly report on host-responsible delays to Amtrak services.

503. UP also regularly monitors performance of other passenger providers that provide performance data to UP. For example, the Southern California Regional Rail Authority provides UP with daily, train-by-train delay reports on Metrolink performance. Those reports indicate if a particular train experienced delay and provides an explanation of the delay (*e.g.*, track inspection, interference with freight or Amtrak trains, etc.). Metra similarly provides UP with daily reports on Metra performance, including a train-by-train summary of delay with delay codes and explanation. Metra also provides UP with a monthly report of on-time performance by commuter corridor, showing the total counts of trains it has recorded as delayed and on-time. UP also receives daily conductor delay reports for the ACE commuter service, which include explanations of delay. UP personnel review all these reports daily. Each morning as part of the Daily Network Call, the Passenger Operations Manager addresses passenger service performance, including commuter performance.[260]

504. In addition to internal monitoring and data-sharing, passenger train performance is a regular topic in UP's extensive discussions with its passenger partners. With Amtrak, UP holds a monthly discussion on performance, as well as more specific meetings on particular Amtrak services. For example, UP has a monthly discussion with Amtrak and the State of Illinois on the performance of Amtrak's Illinois passenger services (the Lincoln and Lincoln River Runner). UP also

[260] UP does not receive reports on performance for Caltrain. Rocky Mountaineer provides UP with an annual on-time performance report.

holds quarterly meetings with Amtrak relating to its Capitol Corridor, ACE, and San Joaquin services to discuss performance. UP meets every two weeks with Metrolink and with Metra to discuss passenger train performance.

b. Norfolk Southern

505. The Manager of Interline Planning leads NS's monitoring of passenger performance with support from the NOC, field operations, and Strategic Planning. NS's Manager of Interline Planning conducts a daily review of passenger delay data. This position also reviews historical delay data for Amtrak train performance. The Manager of Interline Planning has access to data Amtrak derives from its conductor delay reports. NS has also established daily data feeds to receive this information, which the NOC and Interline Planning then analyze.

506. NS's protocols for reviewing passenger performance data vary depending on the performance regime contained in the applicable contractual agreements. For example, NS has established separate committees with North Carolina, Pennsylvania, and Virginia to review specific state-supported services. These committees, led by Strategic Planning and Interline Planning, meet on a quarterly basis to discuss performance. NS's Off-Corridor Operating Agreement with Amtrak also establishes an administrative process for communication and review of performance data.

507. In addition to internally monitoring passenger performance data, NS provides Amtrak with access to its dispatching system so that Amtrak personnel are able to review NS's dispatching decisions in near real-time and monitor train performance and individual train delay.

3. Training

a. Union Pacific

508. Dispatcher training is another aspect of UP's current protocols that helps ensure effective communication and coordination with Amtrak and other passenger services that operate over UP's network.

509. UP dispatchers undergo extensive training for approximately six months before operating on their own. The first three months is classroom training with units on the GCOR, Timetables, System Special Instructions, Rules governing Train Dispatchers and Control Operators, CADX dispatcher software, train dispatcher policies, Amtrak's right to preference under 49 U.S.C. § 24308(c), Amtrak routes, and delay coding information. Students take periodic quizzes and must achieve a score of 90 percent or higher on three exams to complete the classroom section of training. Upon completion of the rigorous classroom training, student train dispatchers undergo at least 10 weeks of on-the-job training. This on-the-job training is designed to develop territory-specific knowledge, experience, and judgment.

510. And train dispatcher training never ends. UP train dispatchers must complete an annual rules refresher class, which includes refresher training on passenger operations and Amtrak's rights to preference. In addition to annual classroom refresher training, train dispatchers must successfully complete an annual GCOR test and are tested annually on the Passenger Train Emergency Preparedness Plans prepared pursuant to 49 C.F.R. part 239 with a minimum passing score of 90 percent on each exam.

511. In addition to this formal education, UP provides quarterly presentations to train dispatchers, Corridor Managers, and Senior Directors specifying UP's obligations under federal law and passenger/commuter contracts, as well as information on delay coding. UP employees involved in supporting passenger operations also have access to online Job Aids, including information relating to passenger rail service.

b. Norfolk Southern

512. Training is also a key component in how NS effectively communicates and coordinates with its passenger service partners.

513. Like UP dispatchers, NS dispatchers undergo extensive training. New dispatchers at NS receive up to 25 weeks of formal training that starts with classroom instruction, then training on hypothetical scenarios, followed by on-the-job training. This training covers operating rules and Amtrak's right to preference, among other things.

514. After completion of formal training, new dispatchers receive coaching in the early years in their position. NS provides recurring training for experienced dispatchers as well, including the use of hypothetical scenarios to test and refresh the dispatchers' knowledge of proper procedures.

515. Further, pursuant to NS's 2025 settlement agreement with DOJ, NS has committed to provide annual training to all NS dispatchers relating to NS's obligation to provide preference to Amtrak trains and to ensure that its general training programs will include training on providing preference to Amtrak trains in real-world dispatching situations.

516. NS instructs its dispatchers to notify the Chief Dispatcher any time an Amtrak train is going to be delayed or might be delayed. This early communication with the Chief Dispatcher regarding even potential delays helps minimize the impact to Amtrak trains.

C. Applicants' Plans for Effective Communication by the Combined Railroad

517. Applicants have engaged in thorough planning to ensure that the combined railroad will be able to continue to fulfill UP's and NS's performance obligations to passenger rail providers. As detailed in the Operating Plan, for routes where Applicants host passenger services, the proposed UP/NS combination will either add no additional trains, will reduce the number of trains, or, where additional trains are expected, will ensure sufficient capacity to continue to meet legal and contractual obligations. Where Applicants host passenger operations on lines expected to experience merger-related freight traffic growth, Applicants have reviewed capacity data to ensure the lines will have sufficient capacity to accommodate the expected additional trains without negatively impacting passenger operations. Furthermore, the new train and blocking plans for UP/NS are designed to reduce rail car handlings, which should lessen operational variability. Reduced operational variability will in turn bring performance benefits for passenger providers operating on the combined railroad's lines.

518. As additional assurance for passenger service partners as well as UP/NS customers, and as noted earlier in this Plan, the combined railroad will use change management procedures when implementing changes to train and blocking plans.

The change management process will consider potential impacts on passenger operations before UP/NS adopts any new train or blocking plan that would affect passenger operators. Specifically, when a change involves a line on which passenger trains operate, the planners will consider the impact of the change on passenger operations and all internal stakeholders—including personnel responsible for passenger operations—must approve an updated transportation plan before implementation can begin.

519. Applicants' existing protocols for communicating with Amtrak and other passenger rail services provide a strong foundation for effective communication with these partners after the transaction. Accordingly, following the merger the combined railroad initially will continue to use the legacy UP and NS passenger teams, dispatching systems, and communication protocols.

520. The combined railroad management then will move to coordinate and streamline, as appropriate, the legacy UP and NS recurring meetings with passenger service providers so that there is a unified point of contact at UP/NS. For example, personnel of the combined railroad will work with their Amtrak counterparts to consolidate the respective UP and NS monthly performance meetings into one consolidated UP/NS monthly performance meeting. Likewise, the combined railroad would work with Amtrak to consolidate into one meeting the current UP/Amtrak and NS/Amtrak bi-weekly contract coordination calls.

521. Applicants intend that UP/NS will leverage their existing communication structures to address any transaction-related issues or questions that

arise with passenger services. For example, in addition to reviewing contractual performance measures at its monthly performance meeting, Applicants expect the combined railroad will work with passenger partners to incorporate the system benchmarking metrics addressed below in Part XII of this Service Assurance Plan, as appropriate.

522. As described in the Information Technology Systems section of this Service Assurance Plan (Part V), prior to implementing any IT system changes, the combined railroad will provide to its passenger service partners a communication package that will include relevant training materials (*e.g.*, quick reference guides) to ensure the passenger rail entities are informed, prepared, and able to ask any clarifying questions prior to the transition. In addition, any IT integration project will involve a thorough analysis of how the planned changes could impact the passenger service partners, whose input will be requested to conduct the impact assessments. As with UP and NS currently, the combined railroad will continue to provide 24/7 contact points for its passenger service partners if they have questions or need support during or after the integration period.

523. As previously noted, because neither Caltrain nor Rocky Mountaineer provides regular performance data to UP, UP does not currently hold regularly scheduled meetings on performance for those services. Instead, coordination of those passenger operations by the Senior Directors of the respective UP service units and the Passenger Operations team has been successful. As discussed in both the Operating Plan and this Service Assurance Plan, the UP/NS merger will not increase

the number of freight trains operating over the lines used by Caltrain or Rocky Mountaineer. As a result, existing procedures should be more than adequate for the combined railroad to ensure effective communication with and facilitation of these services.

524. UP/NS will adopt Applicants' existing channels of communication to provide notifications to passenger rail providers regarding engineering projects, service interruptions or adjustments, and other service-related information. Merger-related projects that could impact passenger operations will be communicated in advance to passenger rail providers in the same manner.[261]

525. Applicants are confident the passenger rail monitoring that they conduct in the ordinary course of business and that will be adopted by the combined railroad will be more than sufficient to detect any issues relating to passenger rail performance. In addition to this monitoring, the legacy Passenger Operations Directors and NRPC Officers will monitor the passenger benchmarking metrics described in Part XII of this Service Assurance Plan and the overall performance of passenger services during integration.

526. Part IX, above, describes Applicants' contingency plans the combined railroad will use in the event of merger-related service problems. UP/NS will create a special problem resolution team that will address any merger-related service disruption during the merger integration period. That team will be activated based

[261] Other sections of this Service Assurance Plan describe in detail Applicants' post-merger plans relating to dispatcher training, the integration of dispatching systems, and plans for IT cutovers.

on terminal dwell metrics reflecting Applicants' experience regarding the correlation between terminal dwell times and service issues. The special problem resolution team will include senior representatives from various functional areas, including passenger operations so that the team can assess impacts on passenger rail operations. These efforts will help ensure that the combined UP/NS will fulfill existing performance agreements relating to passenger service and continue communicating effectively with passenger operations during the merger integration process.

XI. Timetable

527. This Part of the Service Assurance Plan identifies the major functional or system changes that would occur during the integration process and the timeline for successful completion.

528. The information below is organized into half-year periods, beginning with the day control authority is consummated ("Day 1"). It addresses the major functional areas that are the focus of the Service Assurance Plan—operations, information technology, customer service, and training—as well as safety, and key integration milestones in those areas. In substantial part, the information below consolidates timing-related information presented in the separate Parts of the Service Assurance Plan.

529. The Board's rules in § 1180.10(j) expressly request information about system changes that would occur during the integration process. Consequently, this Part does not address the extensive pre-control date preparation and planning

activities that are described in the Service Assurance Plan and that will continue up through Day 1.

A. Day 1 through Day 180

- Key objectives: Operate "as-is" in respective geographies with full enterprise visibility; cross-company access to critical information; aligned incident response and escalation; singular customer-facing entry point.

1. Safety

- Ensure and maintain Day 1 regulatory compliance.
- Align safety rules and disciplinary rules.
- Harmonize critical incident response and escalation.
- Enable cross-company access to risk identification and mitigation datasets.
- Launch integration of safety communication channels.

2. Operations

- Activate consolidated operating governance.
- Ensure full visibility into all network operating metrics.
- Negotiate implementing agreements with labor organizations that have not entered into implementing agreements.
- Implement shared oversight of train and crew management.
- Begin implementing improved operating practices and standardized escalation protocols for safety and incident response.
- Begin launching phased service changes using joint network planning tools (low-risk train and blocking enhancements).
- Begin prioritized terminal rationalizations and workflow redesigns.

- Begin execution of capital projects to enable service growth.
- Stand up problem-resolution team.
- Begin monitoring operational data as provided in contingency plan.

3. Information Technology

- Implement critical cybersecurity fundamentals (*e.g.*, cross-company incident response).
- Implement common data layer to enable network visibility and operational metrics.
- Enable cross-company access to key systems and data after ensuring security and risk protocols are fully implemented.
- Enable cross-company collaboration capabilities.
- Deploy re-branded public web presence and customer portal.
- Deploy interim data feeds for opportunity pipeline and case management reporting.
- Deploy interim solution for customer support (coordinate with customer support).

4. Customer Service

- Institute a single commercial "voice-to-the-customer," including harmonizing overlapping accounts, unifying customer support exception management resolution processes and quick reference guides, and initiating training across customer-facing teams.
- Institute joint customer support escalation protocols.

5. Training

- Launch onboarding for NS personnel.
- Initiate department specific training programs to include customer-facing teams.

- Operate separate FRA regulatory training.

B. Day 181 through Year 1

- Key objectives: Begin low-risk operational and customer-facing integration efforts, while building toward mid-cycle technology migrations.

1. Safety

- Adopt interim, rules-based process for Train Build (based on Physics Train Builder), enabled by interim tech solution.
- Initiate safety training programs.

2. Operations

- Continue and complete launching of phased service changes (train and blocking plan enhancements).
- Continue terminal rationalizations.
- Initiate unified dispatching and crew management standards.
- Centralize operating management.

3. Information Technology

- Harmonize reference data to serve as a foundation to enable operational and commercial business processes.
- Deliver interim platform to support singular customer experience across shopping, pricing, and onboarding.
- Provide expanded train and locomotive simulation tools.

4. Customer Service

- Deploy interim single customer experience (shopping, pricing, onboarding) with manual back-end orchestration.
- Establish interim pricing and quotations processes.
- Standardize sales Standard Operating Procedures ("SOPs") and performance management.

- Initiate alignment of case handling protocols and introduce integrated call-routing where feasible.

5. Training

- Deploy safety rules conformity and systems training.
- Complete UP mandatory training for former NS employees.
- Begin dispatcher training for eventual standards convergence.
- Operate regulatory training in compliance with FRA regulations and company standards, while reviewing curricula for alignment opportunities.

C. Year 2, Half 1

- Year 2 key objectives: Execute first wave of key system migrations and higher-impact operating changes that enable end-state efficiencies, supported by rigorous change management and training.

1. Safety

- Integrate monitoring, field support, call center operations into UP Operating Practices Compliance Center.
- Standardize rulebooks/discipline.
- Standardize training and qualifications.
- Expand centralized oversight of safety teams.

2. Operations

- Expand ramp/terminal consolidations.
- Continue execution of capital projects to enable service growth.
- Consolidate mechanical helpdesk.
- Begin launching new services.

3. Information Technology

- Implement the foundational NetControl capabilities, establish a dedicated NetControl training environment, and begin testing and validating NetControl integrations with NS applications.

4. Customer Service

- Continue leveraging interim solutions during end-state technology solution build.
- Align customer care and support protocols.

5. Training

- Review and align regulatory training.

D. Year 2, Half 2

1. Safety

- Initiate integration of Safety Management Systems.

2. Operations

- Align blocking and routing strategies.
- Advance NetControl deployment.
- Advance crew/locomotive planning convergence.
- Consolidate car and back shop operations.

3. Information Technology

- Initiate incremental deployment of NetControl package (including core capabilities like train, terminal, shipment and waybill, scheduling, locomotive, equipment, revenue systems, crew calling).
- Deploy unified data and analytics platforms for performance management and reporting.
- Plan and facilitate NetControl training for legacy NS employees.

4. Customer Service

- Continue leveraging interim solutions during end-state technology solution build.
- Align customer care and support protocols.

5. Training

- Maintain training centers and consolidate where applicable.
- Continue FRA-compliant recurrent training with adoption of UP certification programs aligned with cutover schedules.
- Scale train-the-trainer programs to enable integration changes.

E. Year 3, Half 1

- Year 3 key objectives: Complete full run-rate service with unified systems and processes across the combined railroad.

1. Safety

- Consolidate licensing and certifications for Engineers and Conductors (subject to FRA approvals).

2. Operations

- End-state network planning and execution of unified systems.
- Continue developing and launching new services.

3. Information Technology

- Continued incremental deployment of NetControl.
- Begin consolidation of dispatch, engineering, and mechanical systems.
- Consolidate Positive Train Control back-office systems.
- Deploy unified customer platforms.

4. Customer Service

- Deploy fully integrated customer experience (shopping, pricing, onboarding, and invoicing).
- Establish singular customer relationship management system with merged customer profiles.

5. Training

- Advance full integration of unified UP certification and qualification programs.

F. Year 3, Half 2

1. Safety

- Achieve fully integrated safety, training, and qualified system.
- Achieve fully integrated safety management systems with centralized oversight.
- Achieve unified Physics Train Builder system and processes.
- Implement system-wide predictive risk modeling and inspection.
- Implement engineering and conductor licensing under UP programs (subject to FRA approval).

2. Operations

- Enable predictive analytics and automated scheduling on unified system.
- Enable real-time KPI management across train, terminal, and corridor flows.
- Continue developing and launching new services.
- Complete execution of capital projects to support growth.

3. Information Technology

- Achieve full deployment of NetControl across the combined network.
- Achieve full system and data migration for dispatch, engineering, and mechanical systems.
- Implement unified crew management system.
- Complete consolidation of locomotive fleet and help desks.

4. Customer Service

- Implement standardized governance and claims processes.
- Implement unified company performance indicator reporting.

5. Training

- Complete payroll and timekeeping training.
- Establish harmonized training and certification cadence under UP standards.

* * *

Below, Applicants provide the information above divided into function-specific tables.

Table 16
Safety

Year 1	H1	• Maintain regulatory compliance (*e.g.*, permitting, licensing) • Review and align UP-NS Safety rules, discipline • Harmonize critical incident reporting • Visibility into risk identification and mitigation data • Launch integration of safety communication channels
	H2	• Adopt interim, rules-based safety train build process (based on Physics Train Builder (PTB) enabled by interim tech solution • Initiate safety training programs
Year 2	H1	• Integrate all monitoring, field support, call center ops into UP Operating Practices Compliance Center • Standardize rulebooks/discipline and training & qualification
	H2	• Initiate integration of Safety Management Systems
Year 3	H1	• Consolidate licensing and certifications for Engineers and Conductors (subject to FRA approvals)
	H2	• Achieve fully integrated safety training & qualification system, safety management systems • Unified PTB system and process • Implement system-wide predictive risk modeling and inspection • Implement engineering and conductor licensing under UP programs (subject to FRA approval)

Table 17
Operations

Year 1	H1	• Visibility into joint UP-NS operating metrics • Activate joint operating governance • Begin execution of capital projects to enable service growth • Implement shared oversight of train and crew management • Negotiate implementing agreements with labor organizations • Stand up problem-resolution team to monitor operational performance metrics • Begin prioritized terminal rationalizations and workflow redesigns • Launch T-Plan utilizing joint network planning tool
	H2	• Launch new blocking / services • Unify dispatching and crew management standards • Centralize operating management
Year 2	H1	• Expand ramp/terminal consolidations • Continue execution of capital projects to enable service growth • Continue developing and launching new services • Consolidate mechanical helpdesk
	H2	• Align blocking and routing strategies • Advance NetControl deployment and crew / locomotive planning convergence • Consolidate card and back shop operations
Year 3	H1	• End-state network planning and execution on unified systems • Continue implementing new services to accommodate merger-driven and organic growth
	H2	• Predictive analytics and automated scheduling enabled • Continue developing and launching new services • Real-time KPI management across train, terminal, and corridor flows

Table 18
Information Technology

Year 1	H1	• Combined operational metrics data and network visibility established • Implement singular digital branding • Enable cross-company access to systems and collaboration tools • Enable cybersecurity fundamentals (*e.g.*, cross-company security incident response)
	H2	• Establish harmonized reference data for combined organization • Expand train and locomotive simulation tools for NS territory • Implement a consolidated customer experience (shopping, pricing, onboarding, etc.)
Year 2	H1	• Establish NetControl training environment • Implement foundational NetControl capabilities • Begin testing and validation of NetControl integrations to NS systems • Begin incremental deployment of NetControl and crew solutions • Establish a unified data and analytics platform
	H2	
Year 3	H1	• Continued incremental deployment of NetControl and Crew capabilities • Deployment of consolidated dispatch, engineering, and mechanical systems • Consolidate PTC back-office systems
	H2	• Deploy fully integrated customer experience • Complete incremental deployment of NetControl and Crew capabilities • Complete deployment of dispatch, engineering, and mechanical systems

Table 19
Customer Service

Year 1	H1	• Harmonize overlapping accounts to establish a single voice-to-the-customer (Marketing & Sales) • Establish interim opportunity/case visibility and activate joint escalation protocols, hand-offs • Unify call scripts and quick-reference guides; initiate training across customer-facing teams
	H2	• Interim process for unified shopping / pricing / onboarding (via manual orchestration) • Initiate alignment of case handling protocols and integrated call-routing • Interim pricing & quotations processes • Standardize sales SOPs and performance management
Year 2	H1/H2	• Continue leveraging interim workarounds during end-state technology solution build • Align UP-NS CC&S service protocols
Year 3	H1	• Continue leveraging interim workarounds during end-state technology solution build • Fully integrated customer experience (incl. shopping, pricing, onboarding & invoicing) • Singular CRM instance
	H2	• Implement standardized governance and claims processes. • Implement unified company performance indicator reporting

Table 20
Training

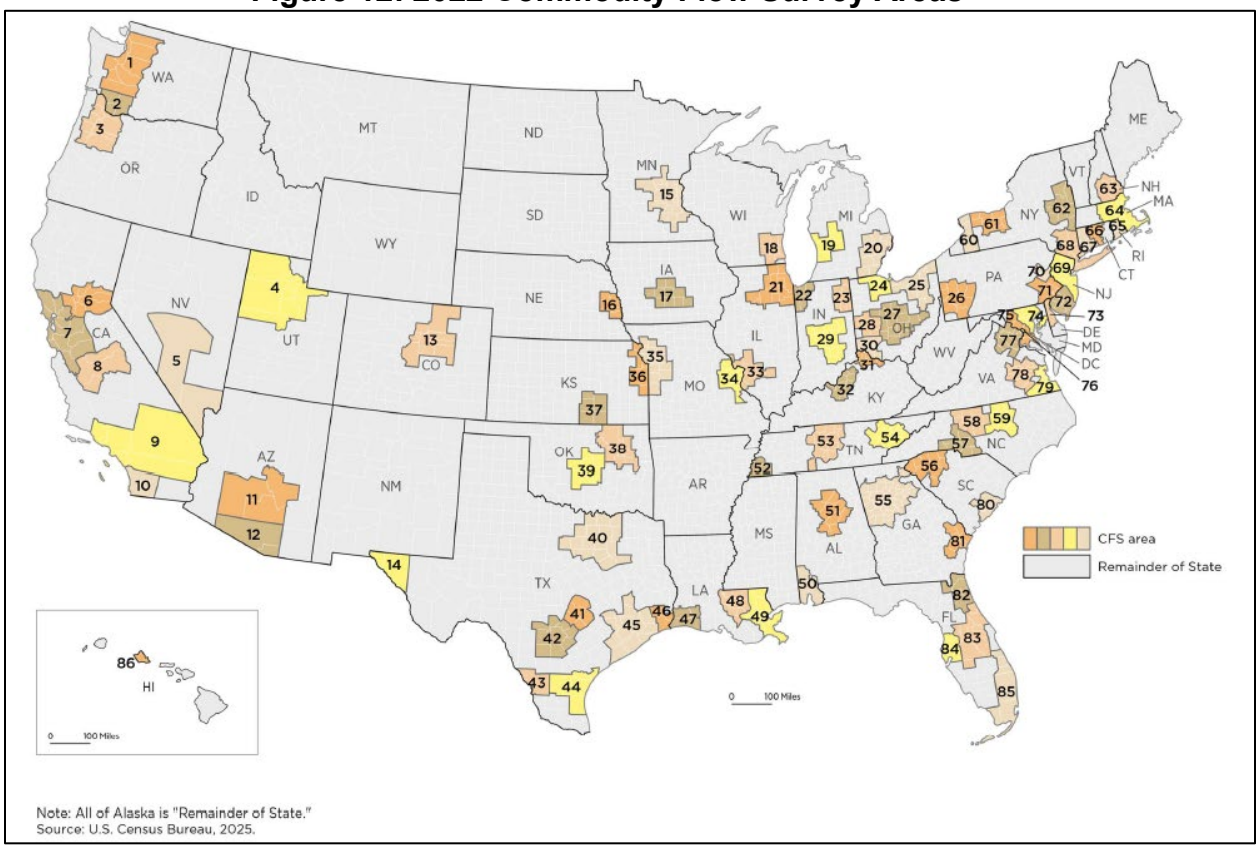
Year 1	H1	• Begin train-the-trainer programs for UP curricula • NS onboarding training[262]
	H2	• Deploy safety rules conformity and system training • NS completes UP company mandatory training • Begin dispatcher training for eventual standards convergence • Achieve compliance with Hazardous Materials training, certifications, and qualifications
Year 2	H1	• Review and align regulatory training
	H2	• Consolidate training centers where applicable • Continue FRA-compliant recurrent training
Year 3	H1	• Advance full integration of unified UP certification programs
	H2	• Complete payroll and timekeeping training • Harmonized training and certification cadence under UP standards

XII. Benchmarking

530. This Part of Applicants' Service Assurance Plan provides the benchmarking data required by 49 C.F.R. § 1180.10(k). In accordance with section 1180.11(k), Applicants are submitting benchmarking data based on the 36 monthly periods immediately preceding the filing date of the notice of intent to file the Application.

[262] Train-the-Trainer is a program that equips subject matter experts with instructional skills to effectively teach others, ensuring consistent knowledge transfer across the organization.

531. Applicants' benchmarking provides an historic monthly baseline against which the actual post-transaction levels of performance can be measured. Applicants' benchmarking data are detailed and encompassing to give a meaningful picture of operational performance of the newly merged system.



532. Applicants will report the benchmarking data in a matrix structure and provide for the reporting of actual monthly data during the monitoring period.

A. Corridor Performance Benchmarking

533. In accordance with 49 C.F.R. § 1180.10(k)(1), Applicants have developed corridor performance benchmarks consisting of route-level performance information including flow data for traffic moving on their systems. The data encompass flows to and from "major points."

534. For purposes of corridor performance benchmarking, Applicants defined "major points" as the Commodity Flow Survey ("CFS") areas used by the U.S. Census Bureau in its most recent Commodity Flow Survey. CFS areas are shown below in Figure 12.

Figure 12: 2022 Commodity Flow Survey Areas[263]

535. Applicants concluded that using CFS areas is appropriate for representing traffic flows to and from major points because the Census Bureau's CFS is designed to provide policy makers and transportation planners information to assess the demand for transportation facilities.[264]

536. Applicants also considered using individual railroad stations but concluded that the number of station-to-station flows required to fully represent system flows would make the service monitoring process unwieldy.

---

263 *See* https://www2.census.gov/programs-surveys/cfs/technical-documentation/geographies/2022%20CFS%20Areas%20Map.pdf.

264 *See* https://www.census.gov/programs-surveys/cfs.html.

537. To develop corridor performance benchmarks, Applicants mapped their rail stations to CFS areas. For each CFS-area-to-CFS-area flow, for the 36 monthly periods immediately preceding the filing of notice of intent to file the Application, Applicants calculated average transit times for all movements flowing between the CFS areas.[265]

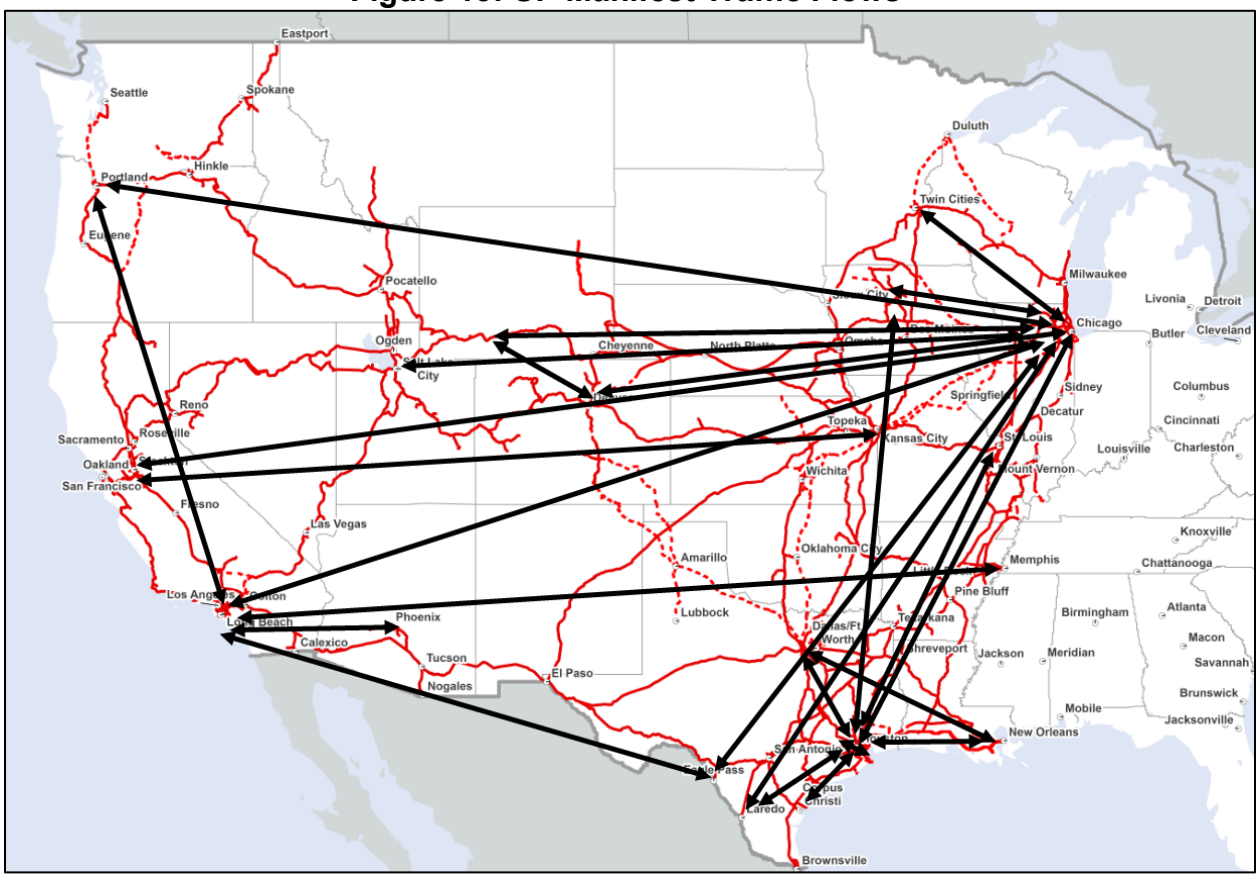
538. Applicants applied a uniformly constructed measure of average transit time to data from both UP and NS. Specifically, they measured the volume of cars and transit hours between a combination of CFS origin and destination groupings. Applicants sampled geographic locations based on the volume of cars that represent major network flows. Applicants sorted these flows into three categories: (1) UP intra-lanes, (2) NS intra-lanes, and (3) UP to NS interchanges. Applicants will be able to use the same measure for historic and post-transaction operations.

539. In addition to identifying traffic flows by areas, Applicants identified each movement by commodity sector—that is, as either Intermodal, Manifest/Automotive, Coal Unit, Grain Unit, or Ethanol Unit.

540. Applicants then identified enough corridors for reporting purposes to fully represent system flows, including interchanges with 104 short lines and 38 interchange locations with other Class I railroads, and internal traffic of UP and NS before the proposed transaction.[266]

---

[265] *See* Workpaper "Corridor Benchmarking Matrix.xlsx," Tab "Data"; *see also* Workpaper "Corridor benchmarking methodology UP 1180.10(k)(1).pdf."; Workpaper "Corridor benchmarking methodology NS 1180.10(k)(1).pdf."



[266] *See* Workpaper "Interchanges Impacted - Corridor Benchmarking.xlsx," Tabs "Class 1 Comp" and "SL Comp."

1. UP Internal Traffic Benchmarking

541. Applicants developed benchmarks for 25 flows of manifest traffic on the pre-transaction UP system.[267] The 25 flows represented 18 percent of manifest carloads moving in the benchmarking period. The 25 flows were chosen from among the top 88 flows to fully represent the geography of the network. These flows include areas where UP interchanges traffic with short lines and other Class I railroads, and the traffic flows over routes on which UP carries substantial volumes of traffic it interchanges with short line and other Class I railroads. The geographic areas covered by these flows are depicted below in Figure 13.

[267] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "UP OD Manifest."

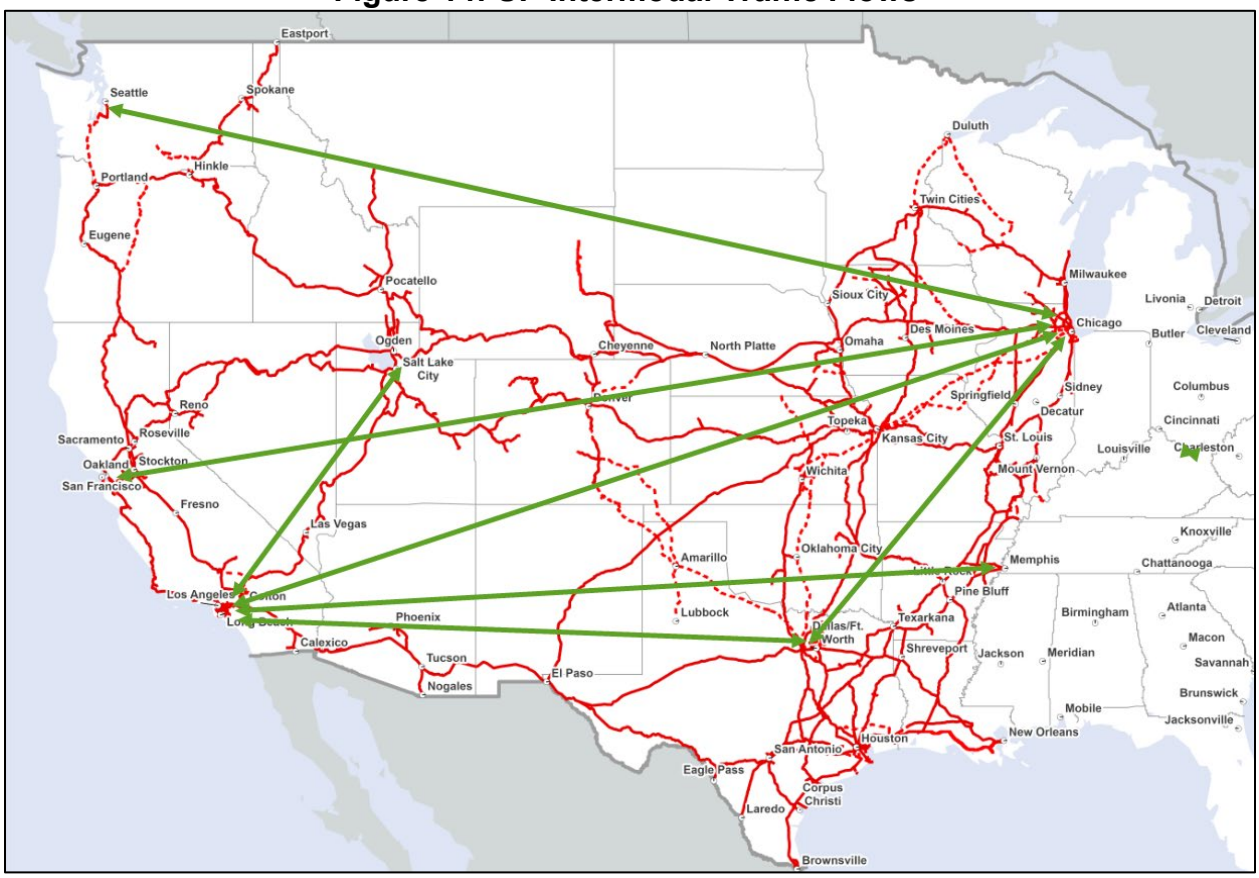


Figure 13: UP Manifest Traffic Flows

542. Applicants also developed benchmarks for the top 7 flows of intermodal traffic on the pre-transaction UP system.[268] The top 7 flows represented 54 percent of intermodal containers moving in the benchmarking period. The geographic areas covered by these flows are depicted below in Figure 14.

[268] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "UP OD Intermodal."

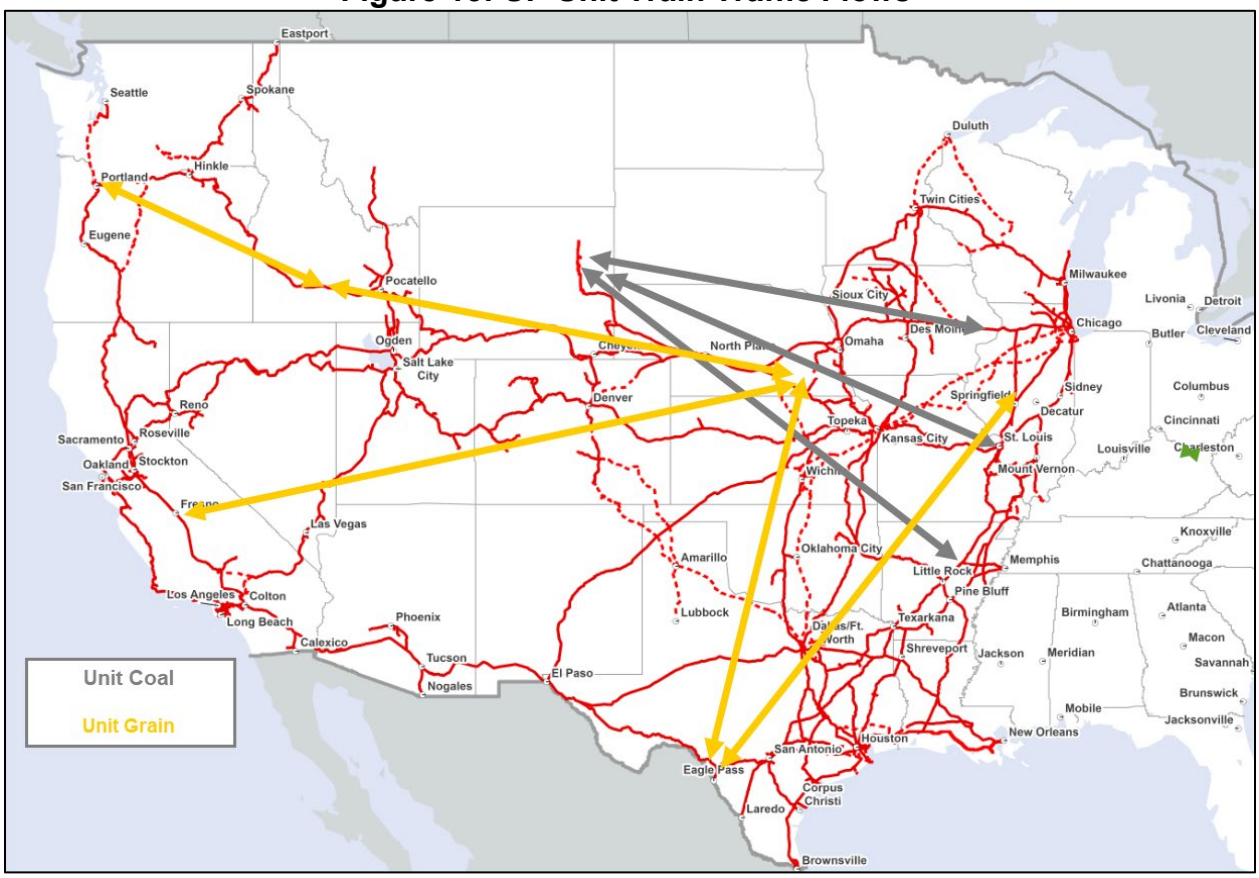

Figure 14: UP Intermodal Traffic Flows

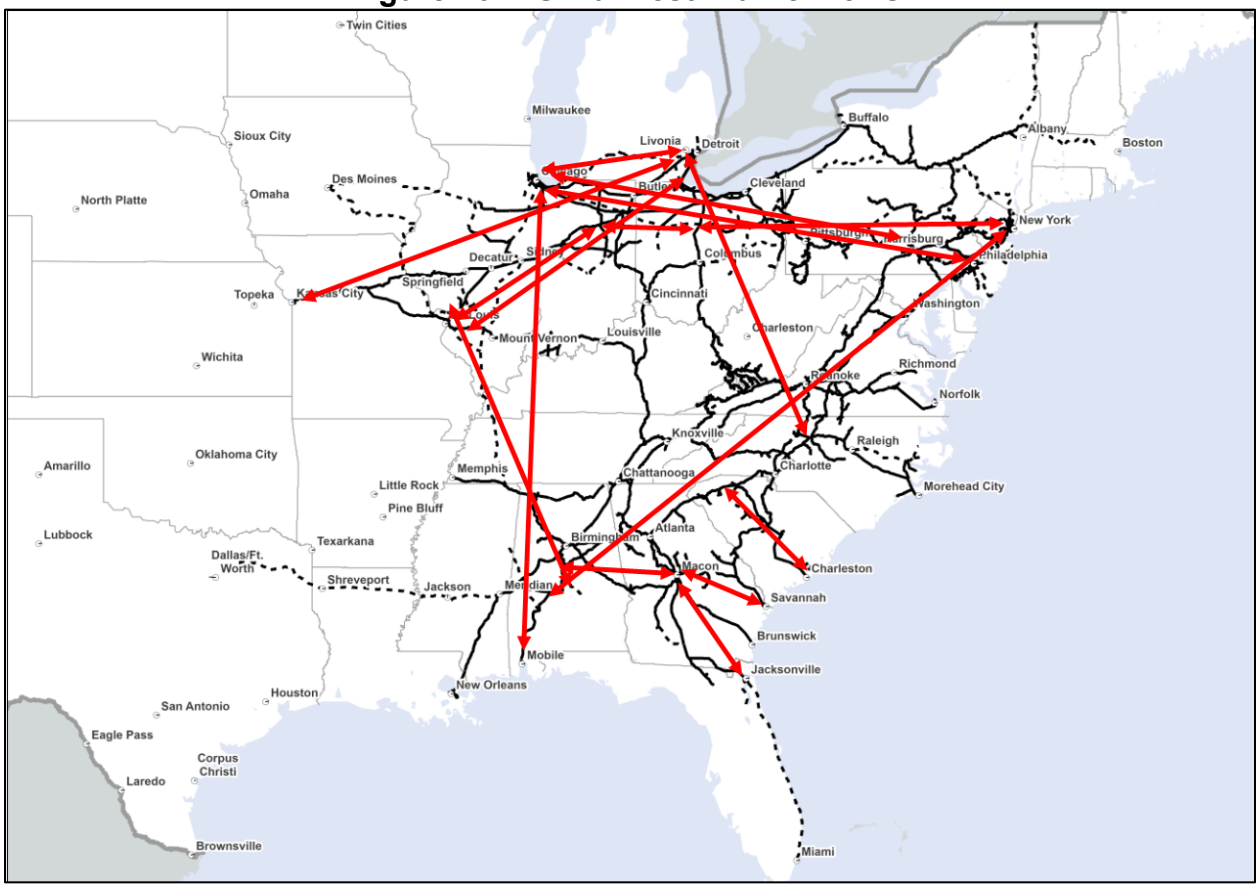
543. Applicants also developed benchmarks for representative flows of coal and grain traffic on the pre-transaction UP system.[269] For unit train traffic, the top flows represented 28 percent of coal traffic and 35 percent of grain traffic. The geographic areas covered by these flows are depicted below in Figure 15.

[269] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tabs "UP OD Coal" and "UP OD Grain."

Figure 15: UP Unit Train Traffic Flows



2. NS Internal Traffic Benchmarking

544. Applicants developed benchmarks for 15 flows of manifest traffic on the pre-transaction NS system.[270] The 15 flows represented 12 percent of manifest carloads moving in the benchmarking period. The 15 flows were chosen from among the top 62 flows to fully represent system flows. These flows include areas where NS interchanges traffic with short lines and other Class I's, and the traffic flows over routes on which NS carries substantial volumes of traffic it interchanges with short

[270] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "NS OD Manifest."

line and other Class I's. The geographic areas covered by these flows are depicted below in Figure16.

Figure 16: NS Manifest Traffic Flows

545. Applicants also developed benchmarks for the top 9 flows of intermodal traffic on the pre-transaction NS system.[271] The top 9 flows represented 40 percent of intermodal containers moving in the benchmarking period. The geographic areas covered by these flows are depicted below in Figure 17.

[271] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "NS OD Intermodal."

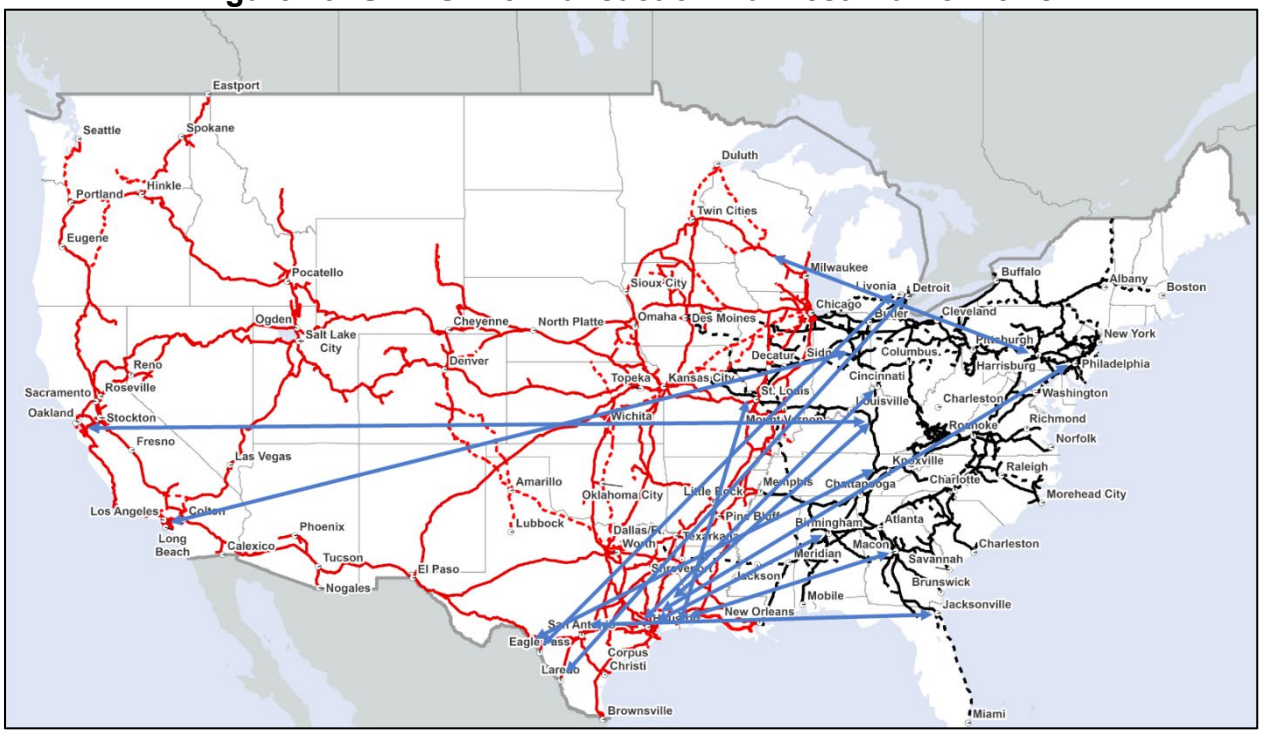
Figure 17: NS Intermodal Traffic Flows

546. Applicants also developed benchmarks for representative flows of coal, grain, and ethanol unit trains on the pre-transaction NS system.[272] For unit train traffic, the top flows represented 37 percent of coal traffic, 8 percent of grain traffic, and 43 percent of ethanol traffic moving in the benchmarking period. The geographic areas covered by these flows are depicted below in Figure 18.

[272] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tabs "NS OD Unit Coal," "NS OD Unit Grain," and "NS OD Unit Ethanol."

Figure 18: NS Unit Train Traffic Flows

3. UP-NS Pre-Transaction Benchmarking



547. Applicants also developed benchmarks for representative flows of manifest, intermodal, and unit train traffic between the pre-transaction UP and NS systems.

548. Applicants developed benchmarks for 15 flows of manifest traffic between the pre-transaction UP and NS systems.[273] The 15 flows represented 16 percent of UP-NS interline manifest carloads moving in the benchmarking period.

[273] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "UPNS Manifest."

The 15 flows were chosen from among the top 27 flows to fully represent system flows. The geographic areas covered by these flows are depicted below in Figure 19.

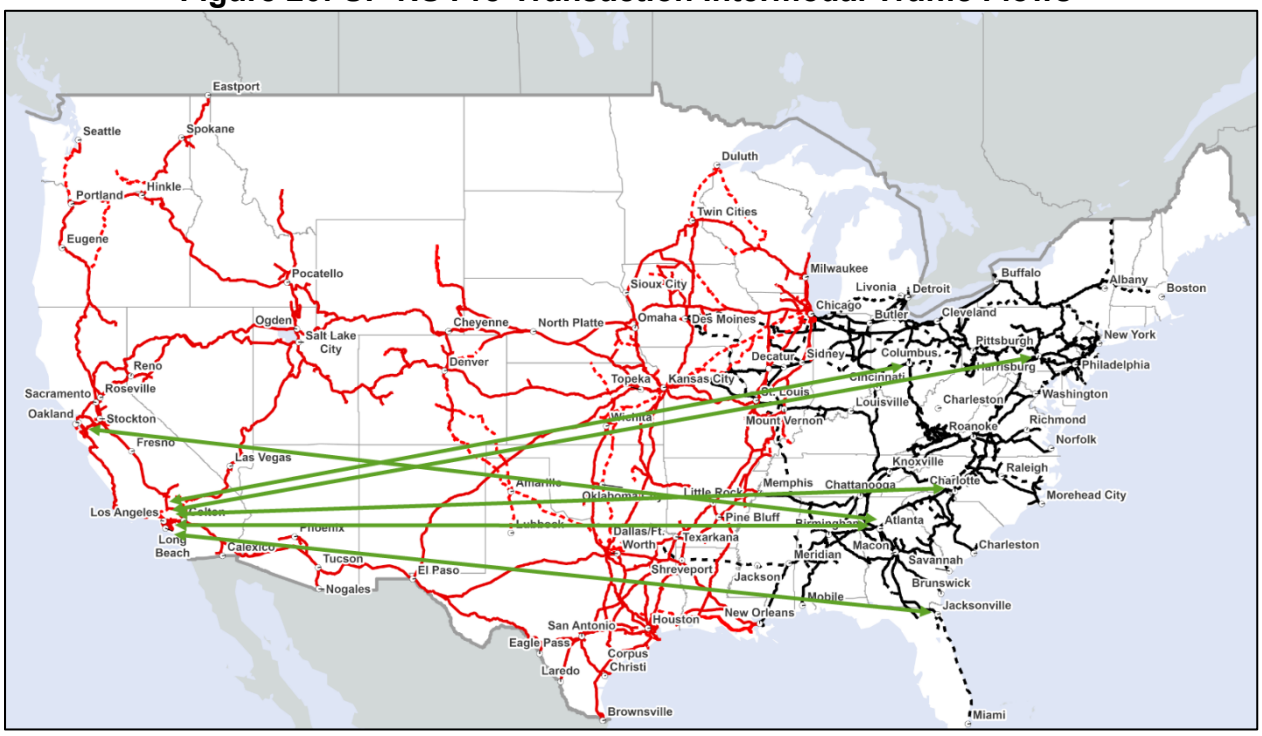


Figure 19: UP-NS Pre-Transaction Manifest Traffic Flows

549. Applicants also developed benchmarks for the top 6 flows of intermodal traffic between the pre-transaction UP and NS systems.[274] The top 6 flows represented 48 percent of UP-NS interline intermodal containers moving in the benchmarking period. The geographic areas covered by these flows are depicted below in Figure 20.

[274] *See* Workpaper "Consolidated Corridor Lane Selection.xlsx," Tab "UPNS Intermodal."

Figure 20: UP-NS Pre-Transaction Intermodal Traffic Flows

4. Corridor Benchmarking Data

550. Applicants are providing a matrix structure with historic monthly benchmark data for each flow, including traffic volumes in carloads (units), miles (area to area), and elapsed time in hours for loaded traffic, in Electronic Appendix Y.[275]

B. Yard and Terminal Benchmarking

551. In accordance with 49 C.F.R. § 1180.10(k)(2), Applicants have developed terminal dwell and on-time origination performance benchmarks for principal classification yards and major intermodal terminals, as defined for benchmarking

[275] *See* Workpaper "Corridor Benchmarking Matrix.xlsx," Tab "Corridor Benchmarking Matrix."

purposes, using data based on the 36 monthly periods immediately preceding the filing date of the notice of intent to file the Application.

552. The Board's rule titled "Yard and terminal benchmarking," literally requires benchmarking only for "major yards." However, to ensure compliance, Applicants provide benchmarking information regarding the same "principal classification yards" and "major intermodal terminals" they use for the yard and terminal benchmarking required by 49 C.F.R. § 1180.10(c).

1. Principal Classification Yards

553. Applicants list their principal classification yards for benchmarking purposes below in Table 16.

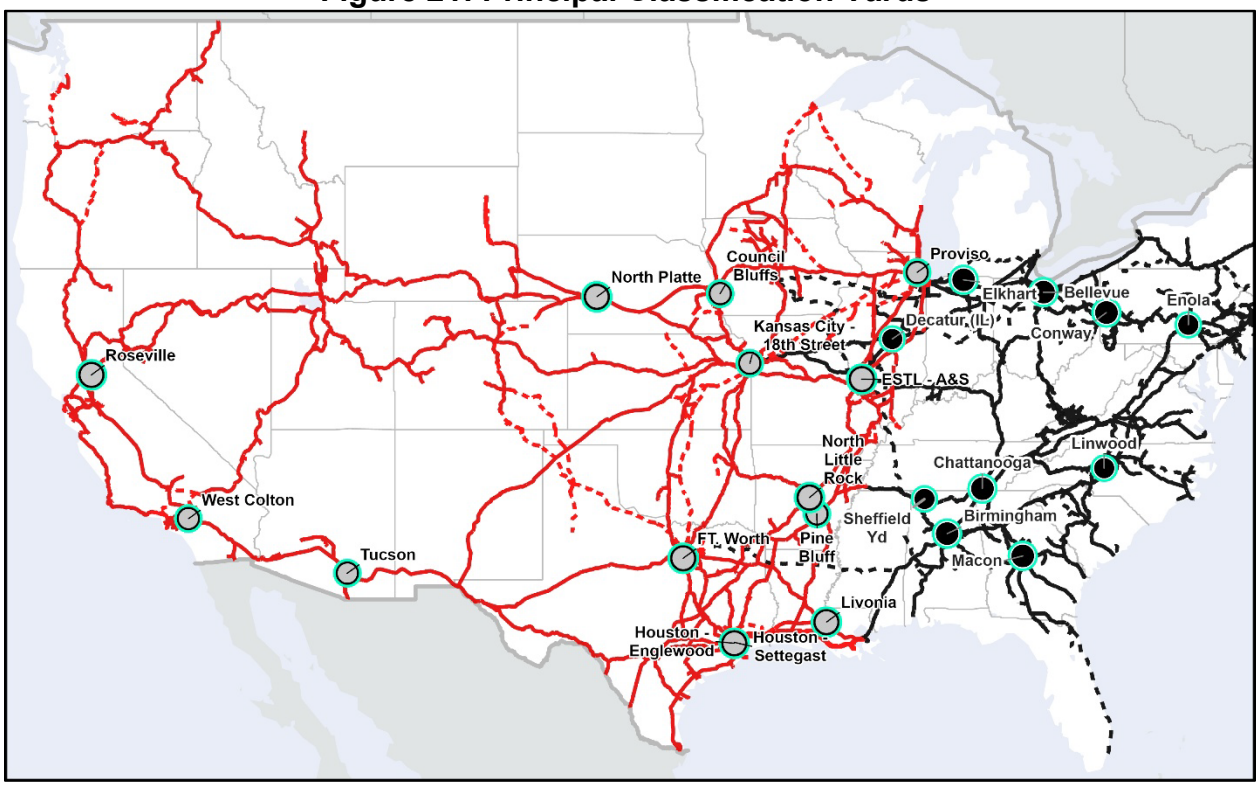

Table 21[276]
Principal Classification Yards

UP Yards	NS Yards
North Little Rock, AR	Elkhart, IN
Englewood (Houston), TX	Moorman (Bellevue), OH
Gateway Yard (St Louis), IL	DeButts (Chattanooga), TN
Livonia, LA	Birmingham, AL
Ft. Worth, TX	Conway, PA
North Platte East, NE	Brosnan (Macon), GA
North Platte West, NE	Decatur (Incl. East Decatur), IL
Roseville, CA	Enola (Harrisburg), PA
Settegast (Houston), TX	Sheffield, AL
West Colton (Los Angeles), CA	Linwood, NC
Proviso (Chicago), IL	
Council Bluffs, IA	
18th St (Kansas City), KS	
Tucson, AZ	
Pine Bluff, AR	

554. Applicants show the locations of their principal classification yards for benchmarking purposes below in Figure 21. The principal classification yards for benchmarking purposes were chosen using a threshold of more than 800 cars processed per day, with additional yards added to ensure all UP to NS gateways had a nearby terminal reported.

[276] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Principal Class Yards."

Figure 21: Principal Classification Yards

555. Applicants applied a uniformly constructed measure of terminal dwell time to data from both UP and NS. Specifically, they measured the average number of hours a car resides at the specified terminal location. The time a car resides at a location begins with train arrival, customer release, or interchange received, and ends with train departure, customer placement (actual or constructive), or interchange offering or delivery. Applicants' terminal dwell calculation excludes runthrough and bypass trains, maintenance of way cars, stored cars, and time spent in bad order status. Applicants will be able to use the same measure for historic and post-transaction operations.[277]

[277] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

556. Applicants also applied a uniformly constructed measure of on-time originations to data from both UP and NS. Specifically, they measured whether scheduled trains originating at a particular yard departed on time, where "on time" was measured as departing on time or early.[278] Applicants will be able to use the same measure for historic and post-transaction operations.

557. Applicants are providing a matrix structure with historic monthly benchmark data for terminal dwell times and on time originations for their principal classification yards in Electronic Appendix X.[279]

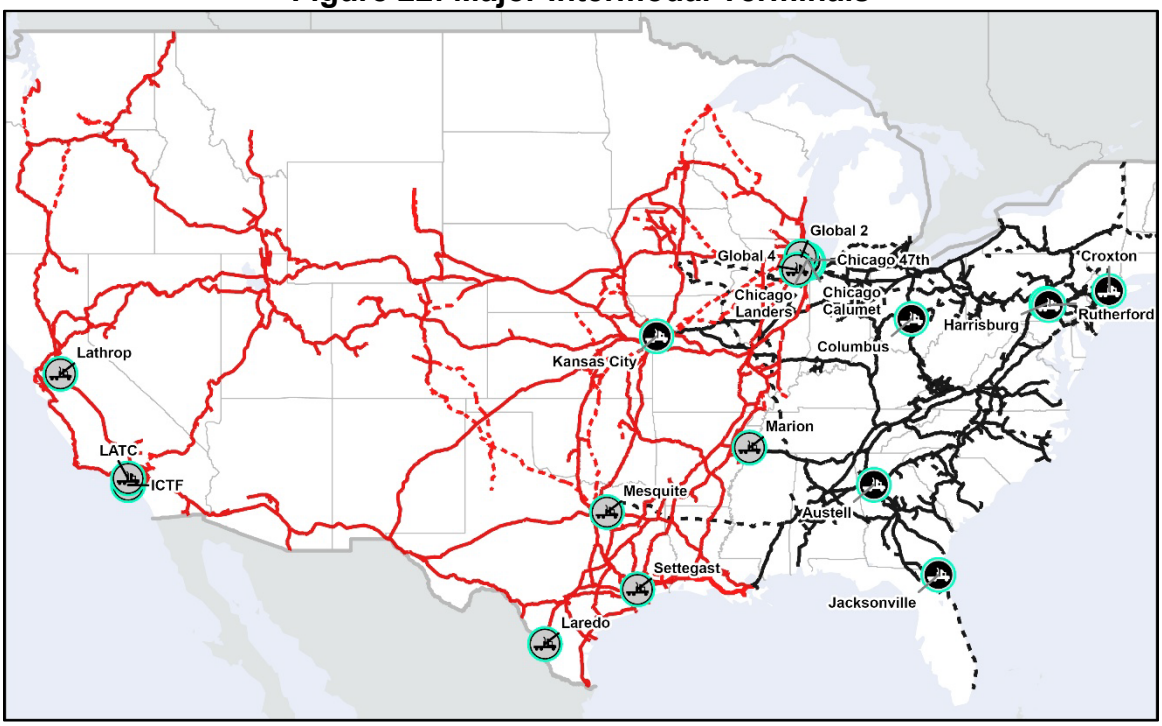
2. Major Intermodal Terminals

558. Applicants list their major intermodal terminals for benchmarking purposes below in Table 17.

[278] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

[279] *See* Workpaper "System, Yard and Terminal Benchmarking Matrix.xlsx," Tab "Yard and Terminal Matrix."

Table 22[280]
Major Intermodal Terminals



UP Intermodal Terminals	Base Plan Lifts/Day
Global 4 (Chicago), IL	1,945
Global 2 (Chicago), IL	1,381
East Los Angeles, CA	1,065
Mesquite (Dallas), TX	821
ICTF (Los Angeles), CA	817
Lathrop, CA	745
Marion (Memphis), AR	651
Port Laredo, TX	299
Settegast (Houston), TX	293

NS Intermodal Terminals	Base Plan Lifts/Day
47th St (Chicago), IL	1,269
Austell (Atlanta), GA	1,237
Harrisburg, PA	953
Calumet (Chicago), IL	856
Landers (Chicago), IL	876
Croxton (New York City), NJ	839
Rutherford (Harrisburg), PA	770
Rickenbacker (Columbus), OH	704
Voltz (Kansas City), MO	646
Jacksonville, FL	640

559. Applicants show the locations of their principal intermodal terminals for benchmarking purposes below in Figure 22. The major intermodal terminals for benchmarking purposes were chosen using a threshold of more than 800 lifts per day. Additional intermodal terminals were added to capture terminals projected to experience meaningful growth as a result of the transaction (Lathrop, Port Laredo, Settegast, Jacksonville) and to ensure coverage of all major UP to NS gateways (Marion, Voltz).

[280] *See* Workpaper "Consolidated Terminal Data.xlsx," Tab "D.1.c Major Intermodal Terminal."

Figure 22: Major Intermodal Terminals

560. Applicants applied a uniformly constructed measure of TA-VG (Terminal Arrival to Van Ground) time for intermodal terminals from both UP and NS. Specifically, they measured the average number of hours from when a container arrives at a terminal to being ready for customer pickup.[281] Applicants will be able to use the same measure for historic and post-transaction operations.

561. Applicants also applied a uniformly constructed measure of on time originations to data from both UP and NS. Specifically, they measured whether scheduled trains originating at a particular terminal departed on time, where "on

[281] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

time" was measured as departing on time or early.[282] Applicants will be able to use the same measure for historic and post-transaction operations.

562. Applicants are providing a matrix structure with historic monthly benchmark data for terminal dwell times and on time originations for their principal classification yards in Electronic Appendix X.[283]

C. System Benchmarking

563. In accordance with 49 C.F.R. § 1180.11(k)(3), Applicants are providing system benchmarking data for cars on line, average train velocity by train type, and locomotive fleet size and applicable bad order ratios. Applicants are also providing benchmark data on passenger train performance for commuter and intercity passenger services.

1. Cars on Line

564. In accordance with 49 C.F.R. § 1180.11(k)(3)(i), Applicants are providing 36 months of data showing cars on line for UP and NS using the official AAR cars on line number calculated using Railinc data. AAR's cars on line measure uses the average daily inventory of all freight cars in the revenue fleet regardless of location or status. The measure includes cars located on short line railroads, cars delivered to customer facilities, and stored cars. AAR's measure excludes maintenance of way cars

[282] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

[283] *See* Workpaper "System, Yard and Terminal Benchmarking Matrix.xlsx," Tab "Yard and Terminal Matrix."

and counts articulated cars as a single unit.[284] Applicants are providing a matrix structure with historic monthly benchmark data in Electronic Appendix Z.[285]

2. Average Train Velocity by Train Type

565. In accordance with 49 C.F.R. § 1180.11(k)(3)(ii), Applicants are providing 36 months of data showing average train velocity, by train type, for UP and NS. Applicants calculated train velocity by dividing train miles by total hours from origin to destination less intermediate terminal time. The calculations exclude yard, local, passenger, foreign, and maintenance of way trains.[286] Applicants are providing a matrix structure with historic monthly benchmark data in Electronic Appendix Z.[287]

3. Locomotive Fleet Size and Applicable Bad Order Ratios

566. In accordance with 49 C.F.R. § 1180.11(k)(3)(iii), Applicants are providing 36 months of data showing locomotive fleet size and applicable bad order ratios. Applicants calculate locomotive fleet size as the number of high horsepower and low horsepower locomotives not in storage and in service. Applicants calculate the applicable bad order ratio as the number of locomotives in bad order status (in shop, en route to shop, and past inspection) compared to the number of active

---

[284] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

[285] *See* Workpaper "System, Yard and Terminal Benchmarking Matrix.xlsx," Tab "System Matrix," Rows 16 and 27.

[286] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

[287] *See* Workpaper "System, Yard and Terminal Benchmarking Matrix.xlsx," Tab "System Matrix," Rows 17 to 24 and Rows 28 to 35.

locomotives.[288] Applicants are providing a matrix structure with historic monthly benchmark data in Electronic Appendix Z.[289]

4. System Benchmarking for Passenger Services

567. In accordance with 49 C.F.R. § 1180.11(k)(3)(iv), Applicants are providing 36 months of benchmarking data for passenger services, where available, in Electronic Appendix AA. Due to the different nature of passenger performance data available by service, Applicants are providing multiple benchmarks, as discussed below.

a. Amtrak Passenger Services

568. For Amtrak passenger services, including state-sponsored intercity passenger services operated by Amtrak, Applicants are providing historic benchmarking data based on FRA's COTP metric. FRA's definition of on-time performance is not necessarily the same as the on-time performance obligations that Applicants have separately negotiated pursuant to contracts they have entered with Amtrak under 49 U.S.C. § 24308(a), and which are discussed above in Part X of this Service Assurance Plan.

569. When FRA adopted COTP, it recognized that Amtrak's published train schedules had not been designed with the COTP metric in mind.[290] Thus, COTP can

---

[288] *See* Workpaper "System and Terminal Measures Documentation - UP.pdf"; Workpaper "System and Terminal Measures Documentation - NS.pdf."

[289] *See* Workpaper "System, Yard and Terminal Benchmarking Matrix.xlsx," Tab "System Matrix," Rows 25 to 26 and Rows 36 to 37.

[290] Metrics and Minimum Standards for Intercity Passenger Rail Service, 85 Fed. Reg. 72,971, 72,979 (Nov. 16, 2020).

be misleading. Despite these limitations, COTP data is already tracked by and available to both UP and NS for each Amtrak service and thus is the most sensible system-wide data to utilize for purposes of comparing Amtrak-related passenger service pre- and post-merger on a service-by-service basis.

570. Applicants have contractual performance agreements with Amtrak, and the reporting of COTP data should not be construed as creating a new or separate performance obligation. Rather, the COTP data provides historical context for these services and allows for benchmarking pursuant to § 1180.10(k)(3)(iv). The tables below show the three-year COTP range and COTP average and notes whether each service is certified or not. Underlying data is provided in the workpapers.

Table 23[291]
Amtrak Services on UP Lines

Amtrak Service	COTP 3-Year Range	COTP 3-Year Average*	Schedules Certified
California Zephyr	5% to 73%	40.6%	No
Capitol Corridor	73% to 93.9%	87.1%	Yes
Cascades	44.8% to 72.3%	60.2%	Yes
Coast Starlight	37% to 72.1%	55.9%	Yes
Gold Runner**	44% to 84%	70%	Yes
Lincoln (Illinois)	50.8% to 84%	69.9%	Yes
Lincoln/Missouri	23% to 79%	53.8%	Yes
Missouri River Runner	14% to 97.1%	69.8%	Yes
Pacific Surfliner	70% to 90.5%	82%	Yes
Sunset Limited	5% to 77.3%	47.9%	No
Texas Eagle	28% to 82%	53%	No

*July 2022 to July 2025

**Previously known as the San Joaquins

[291] *See* Workpaper "UP Passenger Benchmarking.xlsx," Tab "Amtrak."

Table 24[292]
Amtrak Services on NS Lines

Amtrak Service	COTP 3-Year Range	COTP 3-Year Average*	Schedules Certified
Blue Water	47.6% to 93.2%	70.3%	No
Capitol Ltd.	42.7% to 84.1%	66.2%	No
Cardinal	28.4% to 66.9%	53.1%	No
Carolinian	23.9% to 79.6%	56.8%	Yes
Crescent	33.8% to 82.1%	62.8%	Yes
Floridian**	9.2% to 43.2%**	25.7%**	No
Lake Shore Ltd.	37.6% to 87.3%	71.7%	No
Mardi Gras***	N/A***	N/A***	No
Pennsylvanian	53.2% to 92.6%	73.6%	Yes
Pere Marquette	70.1% to 96.1%	86.0%	No
Piedmont	52.7% to 90.2%	72.2%	Partially
Roanoke	50.7% to 84.6%	70.2%	Yes
Richmond/Newport News/Norfolk	51.3% to 86.8%	69.3%	Yes
Silver Star	60.6% to 15.4%	42.1%	No
Wolverine	44.6% to 84.1%	68.3%	No

*July 2022 to July 2025

**The Floridian is a service that began November 2024 combining the Capitol Limited and Silver Star services, which are temporarily discontinued. Applicants are providing COTP data for the current service rather than discontinued services.

***The Mardi Gras service commenced in August 2025, outside of the benchmarking period.

b. Other Passenger Services

571. Applicants are providing performance data, as available, for each commuter and other passenger service, as discussed below.[293]

[292] *See* Workpaper "NS Passenger Benchmarking.xlsx," Tab "Amtrak."

[293] UP does not receive monthly performance data for the Rocky Mountaineer or Caltrain in the normal course of business. UP contacted both passenger providers to request 36 months of historic performance data if available. As of the date of this Application, UP has been unable to obtain that data.

572. As with reported COTP data, the reported data for passenger services other than Amtrak services allows a comparison of passenger service against a historic benchmark as required by § 1180.10(k)(3)(iv) and should not be construed as creating a performance standard or obligation. Applicants note that the particular services below can vary significantly, including with respect to the number of freight trains that operate on the shared lines and the frequency of passenger services provided.

i. Metrolink (UP)

573. UP does not have a performance standard under its agreements with Metrolink, but Metrolink provides UP a daily train-by-train performance report. In response to a request by UP, Metrolink provided UP with 24 months of performance data. Metrolink measures whether trains arrive within 5 minutes of their scheduled arrival times. For the 24 months of benchmarking data provided by Metrolink, UP's on-time performance ranged from 72.2 percent to 98.2 percent, with an average of 89.8 percent.[294]

ii. ACE (UP)

574. UP {{ }} under its agreement with ACE, {{

}} In response to a request by UP, ACE provided UP with 36 months of

[294] *See* Workpaper "UP Passenger Benchmarking.xlsx," Tab "Metrolink." UP requested data going back to July 2022, but as of the date of this Application, Metrolink has not provided the data to UP.

performance data. On-time performance is measured based on {{

}} For the 36-month benchmarking period, UP's on-time performance ranged from 91.1 percent to 100 percent, with an average of 98.2 percent.[295]

iii. Metra (UP and NS)

575. Metra operates over both UP and NS lines and provides performance information to both UP and NS, though in different forms and frequencies. Metra also posts on-time performance reports on its website on a line-by-line basis.[296] Metra considers a train to be on time if it reaches its final destination within five minutes of its scheduled arrival, with its reporting standards filtering out some of the delays that are beyond a railroad's control.[297]

576. To compile 36 months of historic performance data for the Metra services that operate over UP's lines, UP used Metra's publicly available on-time performance reports for July 2022 through November 2022 and internal monthly reports provided by Metra for December 2022 through July 2025. For the 36-month benchmarking period, for all three UP lines over which Metra operates, on-time

---

[295] *See* Workpaper "UP Passenger Benchmarking.xlsx," Tab "ACE."

[296] *See* Metra, Ridership and On-Time Performance, https://www.metra.com/ridership-and-on-time-performance ("On-Time Performance Reports") (last visited Nov. 26, 2025).

[297] *See* Metra, Ridership and On-Time Performance, https://www.metra.com/ridership-and-on-time-performance ("How We Measure Delays") (last visited Nov. 26, 2025).

performance ranged from 81.0 percent to 97.6 percent, with an average of 92.7 percent.[298]

577. NS compiled 36 months of historic performance data from Metra's publicly available on-time performance reports. For the 36-month benchmarking period for Metra's SWS service on NS's Manhattan Sub, on-time performance ranged from 86.0 percent to 96.8 percent, with an average of 91.4 percent.[299]

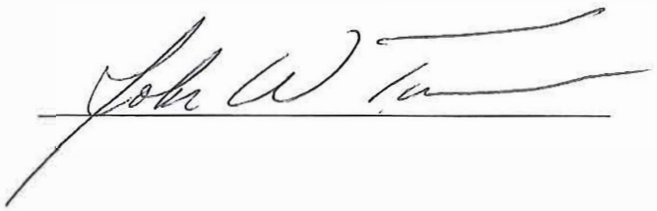
iv. VRE (NS)

578. For VRE's operations over NS's lines, NS is not subject to any contractual performance standards. VRE provides information about on-time performance on its website,[300] and VRE provided NS with 36 months of performance data for the Manassas line. The monthly data measures performance based on the number of trains that arrive at their last scheduled stop within six minutes of schedule. The data does not differentiate between host-responsible delays and other reasons for delays. For the 36-month benchmarking period, on-time performance for VRE's operations over NS's Manassas line ranged from 59.0 percent to 88.0 percent, with an average of 78.9 percent.[301]

---

[298] *See* Workpaper "UP Passenger Benchmarking.xlsx," Tab "Metra."

[299] *See* Workpaper "NS Passenger Benchmarking.xlsx," Tab "Metra." Data for March 2025 was not available on Metra's website (https://www.metra.com/ridership-and-on-time-performance) and thus is not included in the calculations.



[300] *See* VRE, *Reports*, https://www.vre.org/about/reports/ ("CEO Reports") (last visited Nov. 26, 2025).

[301] *See* Workpaper "NS Passenger Benchmarking.xlsx," Tab "VRE."

VERIFICATION

I, John W. Turner, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed this 17th day of December, 2025.

APPENDIX A

Appendix A – Contingency Plans

Contingency Plan for Chicago

I. Yards/Terminals

A. Manifest

1. Proviso
2. Yard Center
3. Intermediate Carriers (BRC/IHB)

B. Intermodal

1. Global 2
2. Global 4
3. Yard Center (Idled)
4. 47th St.
5. 63rd St. (Idled)
6. Landers
7. Colehour

C. Mixed

1. Global 3
2. Ashland Ave
3. Calumet

D. Post-Merger Facilities with Additional Capacity

1. Yard Center (Intermodal – consolidating into 47th)
2. 63rd St. (Intermodal – consolidating into G2)

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity

a) Utilize freed capacity from the former intermodal operations at Yard Center and 63rd Street.

b) Alternate switch at UP/NS locations, including all terminals in the Chicago complex, Elkhart, Indiana, and Butler, Wisconsin.

c) Leverage the IHB – Put cars into the IHB to switch (NS has partial ownership and can pay a rate to utilize their capacity and UP/NS could do the same).

d) Leverage the BRC – Put cars into the BRC to switch (UP has ownership and an allotment of capacity).

2. Intermodal Capacity

a) Utilize freed capacity from the former intermodal operations at Yard Center and 63rd Street.

b) Utilize excess intermodal capacity at Global 3.

c) Utilize idle intermodal capacity at Global 1.

3. Automotive Capacity

a) Leverage the IHB – Put cars into the IHB to switch (pay a rate to utilize their capacity).

b) Utilize idle automotive ramp capacity at Chicago Heights.

B. Crew Base Information

1. Crew base used: UP/NS would be able to negotiate a crew responsibility area through the collective bargaining process.

2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

C. Locomotive Information

1. UP/NS will maintain a fleet of 20 ATR locomotives at yards and terminals in the Chicago Gateway that can be deployed to assist with traffic surges and congestion.

2. Next closest locations with ATR locomotives: Additional ATR locomotives at North Platte and North Little Rock can be deployed to the Chicago Gateway within 1–2 days to meet additional locomotive needs.

D. Car Inventory Reduction Management

1. Excess cars will be stored in the first instance at terminals and mainlines adjacent to the Chicago Gateway likely to have excess capacity. Examples include facilities at Janesville, Belvedere, and the Peoria subdivision.

2. Next closest location with car storage capacity cars: Additional locations outside the Chicago Gateway, including the Great Lakes service unit and the Mid-America service unit.

III. Monitoring Trigger(s) (as applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. General Manager – Chicago Service Unit

B. Superintendent – Chicago Metro

C. Sr. Director Chicago and Great Lakes – Train Management (Harriman Dispatch Center)

Contingency Plan for St. Louis

I. Yards/Terminals

A. Manifest

1. Alton & Southern's Gateway Yard
2. TRRA's Madison Yard
3. Granite City

B. Mixed

1. Luther (Manifest & Intermodal) – Manifest switching consolidated at A&S's Gateway Yard.
2. Dupo (Manifest & Intermodal)

C. Automotive

1. Wentzville
2. Centreville

D. Post-Merger Facilities with Additional Capacity

1. Luther Yard (Manifest)

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity
   a) Utilize manifest capacity at Dupo Yard.
   b) Leverage freed up manifest capacity at Luther Yard.
2. Intermodal Capacity
   a) Dupo and Luther Intermodal facilities have excess surge capability.
3. Automotive
   a) Utilize latent capacity at Centreville.

B. Crew Base Information

1. Crew base used: UP/NS will be able to negotiate a crew responsibility area through the collective bargaining process.
2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

C. Locomotive Information

1. UP/NS will maintain a fleet of 15 ATR locomotives at yards and terminals in the St. Louis Gateway that can be deployed to assist with traffic surges and congestion.

2. Next closest location with ATR locomotives: North Little Rock (1 day), Chicago (1 day), and North Platte (2 days).

D. Car Inventory Reduction

1. UP/NS will store excess cars in the first instance at terminals and mainlines adjacent to the St. Louis Gateway likely to have excess capacity. These include Luther, Sparta Sub, Pinckneyville sub.

III. Monitoring Trigger(s) (as Applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. General Manager – MidAmerica Service Unit

B. Superintendent – St Louis District

C. Sr. Director MidAmerica – Train Management (Harriman Dispatch Center)

Contingency Plan for Kansas City

I. Yards/Terminals

A. Manifest

1. 18th St.
2. Neff Yard
3. North Kansas City (Idled)
4. Fairfax

B. Intermodal

1. Kansas City Intermodal Terminal

C. Mixed

1. Voltz (Intermodal and Auto)

D. Automotive

1. Muncie (Idled)

E. Post-Merger Facilities with Available Capacity

1. North Kansas City (Manifest) consolidated into 18th St.
2. Muncie (Auto) consolidated into Voltz.

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity
   a) Neff
   b) Utilize freed capacity from the former North Kansas City.
   c) North Platte
2. Intermodal Capacity
   a) Utilize excess capacity at Voltz and or Kansas City Intermodal Terminal.
3. Automotive
   a) Reopen Muncie.

B. Crew Base Information

1. Crew base used: Protected by a single source of supply from a pool and/or extra board.

2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs. To use additional sources of supply, UP/NS must negotiate additional crew responsibility area through the collective bargaining process.

C. Locomotive Information

1. UP/NS will maintain a fleet of 10 ATR locomotives at yards and terminals in the Kansas City Gateway that can be deployed to assist with traffic surges and congestion.

2. Next closest location with ATR locomotives: North Platte (less than 1 day), North Little Rock (1–2 days).

D. Car Inventory Reduction Management

1. UP/NS will store excess cars in the first instance at terminals and mainlines adjacent to the Kansas City Gateway likely to have excess capacity. Examples include facilities at Neff and North Kansas City.

2. Next closest location with car storage capacity: Additional locations outside the Kansas City Gateway, including the mainline sidings on the River Subdivision and Moberly, Missouri.

III. Monitoring Trigger(s) (as Applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. General Manager – Heartland Service Unit

B. Superintendent – Kansas City Metro District

C. Sr. Director Heartland – Train Management (Harriman Dispatch Center)

Contingency Plan for Memphis

I. Yards/Terminals

A. Manifest

1. Sargeant Yard

B. Intermodal

1. Marion
2. Rossville

C. Mixed

1. None

D. Automotive

1. Gavin

E. Post-Merger Facilities with Additional Capacity

1. Rossville (Intermodal)

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity
   a) North Little Rock
   b) Sheffield
   c) Chattanooga
   d) Pine Bluff
2. Intermodal Capacity
   a) Rossville Intermodal
3. Automotives
   a) Reisor, Louisiana
   b) Centreville (East St. Louis, Illinois)

B. Crew Base Information

1. Crew base used: UP/NS will be able to negotiate a crew responsibility area through the collective bargaining process.
2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

C. Locomotive Information

1. UP/NS will maintain a fleet of 20 ATR locomotives at North Little Rock, 5 ATR locomotives at Marion, and 5 ATR locomotives at Pine Bluff that can be deployed to assist with traffic surges and congestion.

2. Next closest location with ATR locomotives: Englewood (1–2 days)

D. Car Inventory Reduction Management

1. UP/NS will store excess cars in the first instance at terminals and mainlines adjacent to the Memphis complex. Examples include the idled Roseville Intermodal terminal.

2. Sidings of directional mainlines on the Mid-America Service Unit

III. Monitoring Trigger(s) (as Applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. General Manager – MidAmerica Service Unit

B. Superintendent – Road District

C. Sr. Director MidAmerica – Train Management (Harriman Dispatch Center)

Contingency Plan for New Orleans

I. Yards/Terminals

A. Manifest

1. Avondale
2. Oliver (Idled)

B. Intermodal

1. None

C. Mixed

1. None

D. Automotive

1. None

E. Post-Merger Facilities with Capacity

1. Oliver Yard (going into Avondale Yard)

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity
   a) Utilize freed capacity at Oliver Yard.
   b) Livonia
   c) Birmingham
   d) Addis, Louisiana
   e) Alexandria, Louisiana
2. Intermodal Capacity
   a) Not applicable
3. Automotives
   a) Not applicable

B. Crew Base Information

1. Crew base used: UP/NS will be able to negotiate a crew responsibility area through the collective bargaining process.
2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

C. Locomotive Information

1. UP/NS will maintain a fleet of 10 ATR locomotives in the New Orleans Gateway and 15 ATR locomotives at Livonia that can be deployed to assist with traffic surges and congestion. Additionally, UP/NS will maintain 5 ATR locomotives in Shreveport to ensure fluidity over the Meridian Speedway.

2. Next closest location with ATR locomotives: North Little Rock/Pine Bluff (1 day), Englewood (1 day).

D. Car Inventory Reduction Management

1. UP/NS will store excess cars in the first instance at terminals and mainlines adjacent to the New Orleans complex. Examples include Oliver Yard.

III. Monitoring Trigger(s) (as Applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. General Manager – Gulf Coast Service Unit

B. Superintendent – East District

C. Sr. Director Gulf Coast – Train Management (Harriman Dispatch Center)

Contingency Plan for Chattanooga

I. **Yards/Terminals**

A. Manifest

1. Chattanooga

B. Intermodal

1. None

C. Mixed

1. None

D. Post-Merger Idle Facilities

1. None

II. Buffer Resources

A. Yard/Terminal Substitutes

1. Manifest Capacity

a) Elkhart – Bypass Georgia/Florida traffic to Macon.

b) Macon – Utilize latent capacity to bypass Chattanooga to North Little Rock and to Louisville.

c) Bellevue – Utilize blocking capacity to drive Birmingham traffic from Detroit/Columbus past Chattanooga.

2. Intermodal Capacity

a) N/A

3. Automotive Capacity

a) N/A

B. Crew Base Information

1. Crew base used: Applicants can negotiate crew responsibility area through the collective bargaining process.

2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

C. Locomotive Information

1. Applicants will maintain a fleet of three ATR locomotives at Chattanooga, supported by the Chattanooga Diesel Shop. These locomotives can be deployed to assist with traffic surges and congestion.

2. Next closest location with ATR locomotives: Birmingham, Alabama.

D. Car Inventory Reduction Management

1. Excess cars will be stored in the first instance at terminals and mainlines adjacent to the Chattanooga yard likely to have excess capacity. Examples include facilities at Tyner, Georgia, and Knoxville, Tennessee.

III. Monitoring Trigger(s) (as Applicable)

A. Pre-merger dwell time benchmark/trigger

IV. Regional/Service Unit/Local Management

A. Regional General Manager – Southern Region

B. Superintendent – Gulf Division

C. Assistant Superintendent – Chattanooga

D. General Superintendent Transportation (Network Operations Center)

Contingency Plan for Mainline Route: Kansas City—Sidney—Butler

I. Line Segment:

A. Kansas City to Moberly (Missouri)

B. Moberly to Decatur, Illinois

C. Decatur to Peru, Indiana

D. Peru to Butler, Indiana

II. Buffer Resources

A. Alternate Main Lines

1. If issues occur at Kansas City, traffic for Sydney can be routed to St. Louis and from there to Springfield, and then Sidney.

2. For any disruption between Moberly and Butler, traffic can be routed via the W line from Kansas City towards Danville, Kentucky, and use the Cincinnati, New Orleans and Texas Pacific Railway. From there, traffic can be routed north or south.

3. For any disruption between Moberly and Kansas City, traffic can be routed from Moberly to St. Louis on the W Line, and from St. Louis to Decatur.

4. For disruptions between Sidney and Butler, there are two alternate routes to Chicago. From St. Louis to Sidney to Chicago, or from Springfield to Chicago.

B. Alternate Terminals

1. Utilize yards in St. Louis (A&S, Luther) as an alternative to Decatur.

C. Crew Base Information

1. Crew base: UP/NS will be able to negotiate a crew responsibility area through the collective bargaining process.

2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

D. Locomotive Information

1. Closest location with ATR locomotives: Major yards along the line, including Kansas City/Voltz, St. Louis, and Decatur maintain stores of buffer locomotives.

E. Car Storage

1. Decatur

III. Monitoring Trigger(s) (as Applicable)

A. 18th Street (Kansas City) dwell time (manifest)

B. Decatur (including East Decatur) dwell time (manifest)

C. Voltz (Kansas City) dwell time (intermodal)

IV. Regional/Service Unit/Local Management

A. General Manager – Heartland Service Unit

B. Superintendent – Kansas City Metro District

C. Sr. Director Heartland – Train Management (Harriman Dispatch Center)

V. Additional Notes Regarding Potential Recovery Actions

A. CN operates out of Decatur. CSX operates out of Decatur and St. Louis.

Contingency Plan for Mainline Route: New Orleans-Birmingham

I. Line Segment:

A. New Orleans to Meridian (NO&NE)

B. Meridian to Birmingham (AGS South)

II. Buffer Resources

A. Alternate main lines

1. If issues arise on the route from New Orleans to Birmingham, traffic can be diverted via the Memphis Gateway.
2. Traffic can be blocked to allow for separation of Chattanooga and Birmingham traffic at Sheffield, Alabama.
3. Traffic bound for Chattanooga can transit the Memphis East to Chattanooga.
4. Traffic bound for Birmingham can operate down the NA West from Sheffield to Birmingham.

B. Alternate Terminals

1. Utilize Oliver Yard for staging.

C. Crew Base Information

1. Crew base: Applicants can negotiate crew responsibility area through the collective bargaining process.
2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

D. Locomotive Information

1. Closest location with ATR locomotives: Birmingham, Alabama, and Chattanooga, Tennessee.

E. Car Storage

1. Oliver Yard (New Orleans, Louisiana)
2. Sheffield, Alabama

III. Monitoring Trigger(s) (as applicable)

A. Birmingham dwell time (manifest)

IV. Regional/Service Unit/Local Management

A. General Manager – Southern Region

B. Superintendent – Gulf Division

C. Assistant Superintendent – Birmingham

D. General Superintendent Transportation (Network Operations Center)

V. Additional Notes Regarding Potential Recovery Actions

A. N/A

Contingency Plan for Mainline Route: Meridian-Atlanta

I. Line Segment:

A. Birmingham to Atlanta (East End)

II. Buffer Resources

A. Alternate Main Lines

1. If issues arise on the route from Meridian to Atlanta, traffic can be diverted via the Memphis Gateway.
2. Traffic needing to get past Birmingham towards Atlanta can route via Chattanooga down the Georgia North End to Atlanta. This route has equal crew districts and can provide comparable transits.
3. Detoured traffic can be handled at Sheffield, Alabama, and/or Chattanooga, Tennessee, to process traffic for final destination.

B. Alternate Terminals

1. Sheffield, Alabama
2. Chattanooga, Tennessee

C. Crew Base Information

1. Crew base: Applicants can negotiate crew responsibility area through the collective bargaining process.
2. Next closest crew base: Utilize existing borrow-out strategy to fill additional labor needs.

D. Locomotive Information

1. Closest location with ATR locomotives: Chattanooga, Tennessee

E. Car Storage

1. Knoxville, Tennessee
2. Sheffield, Alabama

III. Monitoring Trigger(s) (as Applicable)

A. Birmingham dwell time (manifest)

B. Austell (Atlanta) dwell time (intermodal)

IV. Regional/Service Unit/Local Management

A. General Manager – Southern Region

B. Superintendent – Gulf Division

C. Assistant Superintendent – Birmingham

D. General Superintendent Transportation (Network Operations Center)

V. Additional Notes Regarding Potential Recovery Actions

A. N/A

APPENDIX B

Appendix B – Alternative Dispute Resolution Program

Alternative Dispute Resolution Agreement
A Three-Year Program for Merger-Related Service Arbitration via JAMS

Introduction

This Alternative Dispute Resolution ("ADR") program provides customers of the combined Union Pacific/Norfolk Southern with a voluntary, efficient means of resolving disputes concerning service during the service integration period. Surface Transportation Board rules and regulations require Union Pacific and Norfolk Southern to provide a protocol for handling claims related to failure to provide reasonable service due to merger implementation problems, and the Board has stated that commitments to submit all such claims to arbitration will be favored. *See* 49 C.F.R. § 1180.1(h)(5).

This program is designed to offer a streamlined process outside of formal regulatory proceedings and to satisfy the protocol requirements in § 1180.1(h)(5). Participation in this program is optional, and customers may instead seek relief directly from the STB.

Definitions

For purposes of this Agreement, the following terms shall have the meanings set forth below:

1. "**Arbitrator**" means the neutral decision-maker appointed pursuant to Section 1 to administer and resolve disputes under this Agreement.

2. "**Carrier**" means the combined Union Pacific/Norfolk Southern rail carrier that is subject to the jurisdiction of the STB.

3. "**Customer**" means the shipper on the bill of lading who is responsible for paying the freight charges for the transportation service that is the subject of the Service Dispute and that elects to participate in this ADR program.

4. "**STB**" means the Surface Transportation Board.

5. "**Service Dispute**" means a dispute concerning whether the carrier has failed to provide reasonable service as a result of merger implementation problems.

6. "**Notice of Intent to Arbitrate**" means a written notice served by a Customer on both the Carrier and JAMS to commence arbitration under this Agreement.

7. "**JAMS**" means the company Judicial Arbitration and Mediation Services ("JAMS"). *See* www.jamsadr.com.

1. Initiation and Appointment

1.1 A Customer may commence arbitration by serving a Notice of Intent to Arbitrate upon both the Carrier and JAMS.

1.2 Within 21 calendar days of receipt, JAMS shall appoint the Arbitrator if the parties have not agreed upon one.

1.3 If the parties cannot agree, JAMS shall appoint a neutral former federal judge from the United States district courts or courts of appeal.

1.4 The Arbitrator shall convene an initial conference within 14 calendar days of appointment to establish the schedule and procedures.

2. Confidentiality and Discovery

2.1 All aspects of the arbitration proceedings, including all submissions, arbitrator rulings, and the arbitrator's final decision, shall remain confidential.

2.2 The Arbitrator may order discovery of nonprivileged matters that is: (i) relevant to any claim or defense; and (ii) proportional to the needs of the case, considering the issues at stake, the amount in controversy, access to information, burdens of discovery, and cost–benefit balance.

3. Venue and Decision

3.1 Unless otherwise agreed by the parties, arbitration shall take place in the venue identified in the tariff that governs the transportation at issue. The parties may agree to conduct proceedings by videoconference.

3.2 The Arbitrator shall issue a reasoned written decision within 180 calendar days of the institution of the arbitration, unless the parties mutually agree to grant the Arbitrator additional time.

3.3 The decision shall be final, binding, and enforceable in any court of competent jurisdiction.

4. Right to Cure

4.1 To avoid unnecessary expenditure of time and costs, Carrier shall have the right to cure the alleged failure to provide reasonable service as a result of merger implementation problems (hereinafter referred to in this section as the "Service Issue") according to the terms of this section.

4.2 Prior to commencing arbitration as set forth in Section 1, Customer shall provide Carrier with at least 30 days' notice of Customer's intent to commence arbitration under this Program and shall describe the Service Issue it intends to allege in sufficient detail so that Carrier has the opportunity to cure the alleged Service Issue.

4.3 During the notice period described in 4.1, Carrier shall have the opportunity to cure the alleged Service Issue prior to Customer commencing arbitration.

4.4 It shall be a complete defense to liability if Carrier cures the alleged Service Issue during the notice period described in 4.1 (which will be prior to Customer commencing arbitration).

5. Standard for Relief

5.1 The Arbitrator may determine whether the Carrier failed to provide reasonable service due to merger implementation problems during the statute of limitations period.

5.2. Customer must demonstration that (a) it suffered a substantial deterioration in service that was not cured by the railroad prior to the commencement of arbitration, (b) that merger implementation was the proximate cause of that substantial deterioration in service, and (c) that the substantial deterioration in service caused direct damages to the customer.

6. Relief Limitations

6.1 This program applies only to non-exempt commodities shipped under tariff service (not contract service or exempt commodities, unless otherwise agreed).

6.2 The Arbitrator may not award injunctive or equitable relief.

6.3 Monetary relief is capped at $2,000,000. The Customer may not subdivide larger claims into multiple proceedings to avoid monetary limits. All claims during the statute of limitations period must be filed in a single arbitration.

6.4 Damages are limited to those incurred within one year prior to the notice of intent to arbitrate.

6.5 Customer may seek relief for direct damages only, not indirect damages (*e.g.*, lost profits). All further limitations on relief as set forth in the Interstate Commerce Act or in the governing tariffs that apply to the transportation at issue also govern.

7. Appeal

7.1 An appeal of right may be taken to the STB within 20 days of the arbitration decision.

7.2 Appeals are limited to cases where: (i) the decision is inconsistent with sound principles of rail regulation economics; (ii) a clear abuse of arbitral authority or discretion occurred; or (iii) award limitations were violated.

7.3 If the STB vacates the decision, the parties shall notify JAMS, which shall appoint a new Arbitrator within 30 days following final judgment (including appeals).

8. Costs & Arbitration Fees

8.1 Each party shall bear its own costs and an equal share of arbitration fees and expenses.

9. Preservation of Rights

9.1 Participation in this ADR program is voluntary, and customers retain their full rights to bring disputes before the STB at any time.

10. Duration and Review

10.1 This ADR program shall remain in effect for three years from the effective date of STB approval of the Union Pacific-Norfolk Southern merger transaction.

December 19, 2025

Union Pacific Corporation ("UPC"), Union Pacific Railroad Company ("UP"), Norfolk Southern Corporation ("NSC"), and Norfolk Southern Railway Company ("NS") (collectively, "Applicants") file this application for Board approval and authorization under 49 U.S.C. §§ 11323-25 for the acquisition of control of the Peoria and Pekin Union Railway Company ("PPU").

In the primary application to which this application relates, Applicants seek authority for the acquisition of control by UPC of NSC, and through NSC of NS and NS's rail carrier subsidiaries, and for the resulting common control by UPC of UP and NS and the consolidation of the rail operations of UP and NS. PPU is a non-operating Class III rail carrier in which UP currently holds a 12.5 percent interest and in which NS currently holds a 40.64 percent interest. PPU owns approximately 20 miles of rail line in Tazewell and Peoria counties in the state of Illinois. Upon consummation of the primary transaction following Board approval, the combined UP/NS will control a majority of shares of PPU. The proposed transaction accordingly requires Board approval under §§ 11323-25.

In the primary application, Applicants commit to divesting as much of NS's ownership interest in PPU as is required to reduce Applicants' combined holdings to 50 percent, unless PPU's other current owner—Illinois Central Railroad ("CN")—declines to acquire the additional shares. However, Applicants may need authority to control PPU before those arrangements can be made and effectuated. Applicants, therefore, are filing this related application.

APPLICATION INFORMATION

In support of this Application, and pursuant to the Board's regulations at 49 C.F.R. Part 1180, Applicants submit the following information:

- ***1180.6(a)(1)(i) A brief summary of the proposed transaction, the name of the applicants, their business address, telephone number, and the name of the counsel to whom questions regarding the transaction can be addressed.***

As described in the primary application, UPC and NSC entered into an Agreement and Plan of Merger dated as of July 28, 2025, under which UPC, through its wholly-owned subsidiary, Ruby Merger Sub 1 Corporation, will acquire control of NSC, and through it of NS and NS's rail carrier subsidiaries.

PPU is a Class III rail carrier in which UP currently holds a 12.5 percent interest and in which NS currently holds a 40.64 percent interest. PPU owns approximately 20 miles of rail line in Tazewell and Peoria counties in the state of Illinois. Upon consummation of the primary transaction following Board approval, Applicants will control PPU. Applicants' acquisition of control of PPU is a result of the primary transaction, but it is purely incidental to the transaction.

The Applicants involved in the transaction are:

Union Pacific Corporation
1400 Douglas Street
Omaha, NE 68179
Telephone: (402) 544-5000

Union Pacific Railroad Company
1400 Douglas Street
Omaha, Nebraska 68179
Telephone: (402) 544-5000

Norfolk Southern Corporation
650 W. Peachtree Street NW

Atlanta, GA 30308
Telephone: (470) 463-6314

Norfolk Southern Railway Company
650 West Peachtree Street NW
Atlanta, Georgia 30308
Telephone: (470) 463-6314

The names of counsel to whom questions regarding the proposed transaction can be addressed are shown on the cover of this Application.

- ***1180.6(a)(1)(ii) The proposed time schedule for consummation of the proposed transaction.***

Applicants' acquisition of control of PPU will occur following the receipt of all required approvals and satisfaction or waiver of all conditions to closing set forth in the Agreement and Plan of Merger for the primary transaction.

- ***1180.6(a)(1)(iii) The purpose sought to be accomplished by the proposed transaction, e.g., operating economies, eliminating excess facilities, improving service, or improving the financial viability of the applicants.***

Applicants' acquisition of control of PPU is related to the primary transaction, the purpose of which is described in Section 1180.6(a)(1)(iii) of that application.

- ***1180.6(a)(1)(iv) The nature and amount of any new securities or other financial arrangements.***

No new securities will be issued or other financial arrangements entered into specifically in connection with Applicants' acquisition of control of PPU. Securities and financial arrangements in connection with the primary transaction are addressed in Section 1180.6(a)(1)(iv) of that application.

- ***1180.6(a)(2) A detailed discussion of the public interest justifications in support of the application, indicating how the proposed transaction is***

consistent with the public interest, with particular regard to the relevant statutory criteria, including:

Applicants' control of PPU will unquestionably serve the public interest. As the primary application explains in Section 1180.6(a)(2) and as further detailed in the verified statements accompanying the primary application, the UP/NS merger will greatly intensify competition among railroads and competition between railroads and trucks, expand and improve rail transportation service and customer access to markets, increase transportation safety, strengthen the national defense, and promote job growth and economic expansion across the United States. Applicants' acquisition of control of PPU is a result of that larger transaction, but it is purely incidental to the transaction.

The control of PPU by Applicants will not affect rail operations. PPU is currently a non-operating carrier. The lines of PPU have been operated by the Tazewell & Peoria Railroad, Inc. ("TPR")—a Genesee & Wyoming subsidiary—since 2004. *See Tazewell & Peoria R.R.—Lease & Operation Exemption—Peoria & Pekin Union Ry.*, Docket No. FD 34544 (STB served Sep. 28, 2004). Operation of the PPU rail lines is under the exclusive direction and control of TPR. Applicants' control of PPU will have no impact on Amtrak.

- ***1180.6(a)(2)(i) The effect of the transaction on inter- and intramodal competition, including a description of the relevant market (see § 1180.7). Include a discussion of whether, as a result of the transaction, there is likely to be any lessening of competition, creation of a monopoly, or restraint of trade in freight surface transportation in any region of the United States.***

Applicants' acquisition of PPU is part of the primary transaction, which will offer substantial competitive benefits, as described in Section 1180.6(a)(2)(i) of the

primary application and as further detailed in the verified statements accompanying the primary application.

Applicants' acquisition of control of PPU will not have any effect on inter- or intramodal competition, nor will it cause any lessening of competition or create any monopoly or restraint of trade. As noted above, operations are not expected to change as a consequence of this transaction, as the lines of PPU are currently operated under the exclusive direction and control of TPR. Moreover, pursuant to a marketing and interchange agreement that accompanies the lease agreement, TPR is required to operate interchanges without discrimination toward any railroad and to provide equal access to PPU's rail lines with any and all other users.[1]

- ***1180.6(a)(2)(ii) The financial consideration involved in the proposed transaction, and any economies, to be effected in operations, and any increase in traffic, revenues, earnings available for fixed charges, and net earnings, expected to result from the consummation of the proposed transaction.***

There is no separately stated financial consideration for Applicants' acquisition of control of PPU. The financial consideration for the primary transaction is described in Section 1180.6(a)(2)(ii) of the primary application.

- ***1180.6(a)(2)(iii) The effect of the increase, if any, of total fixed charges resulting from the proposed transaction.***

Applicants' acquisition of control of PPU will not have any effect on fixed charges separate and apart from the primary transaction. The effect on fixed charges

[1] *See* Workpaper "PPU Operating, Marketing and Interchange Agreement.pdf."

of the primary transaction is addressed in Section 1180.6(a)(2)(iii) of the primary application.

- ***1180.6(a)(2)(iv) The effect of the proposed transaction upon the adequacy of transportation service to the public, as measured by the continuation of essential transportation services by applicants and other carriers.***

Applicants' acquisition of control of PPU will not affect the adequacy of transportation to the public. Applicants expect that TPR will continue to operate the lines of the PPU, as it has for the past 20 years. The effect of the primary transaction on the adequacy of transportation to the public is set forth in Section 1180.6(a)(2)(iv) of the primary application.

- ***1180.6(a)(2)(v) The effect of the proposed transaction upon applicant carriers' employees (by class or craft), the geographic points where the impact will occur, the time frame of the impact (for at least 3 years after consolidation), and whether any employee protection agreements have been reached.***

PPU does not have any of its own employees. Operations on PPU's rail lines are conducted by TPR. Applicants do not anticipate any effects on their rail carrier employees as a result of the incidental control of PPU.

The effects of the primary transaction on Applicants' employees are set forth in the primary application. As PPU has no employees who could be affected by the transaction, Applicants do not anticipate that any separate implementing agreements will be entered with respect to PPU.

- ***1180.6(a)(2)(vi) The effect of inclusion (or lack of inclusion) in the proposed transaction of other railroads in the territory, under 49 U.S.C. 11324.***

The inclusion of other railroads in the transaction giving Applicants control of PPU would not be in the public interest for the reasons discussed in Section 1180.6(a)(2)(vi) of the primary application. Further, Applicants' acquisition of control of PPU will not result in the loss of traffic or revenue by any other carrier and will not result in the loss of essential services. As explained herein, the lines of PPU are and will continue to be operated by TPR. Because no loss of essential services is threatened as a result of Applicants' control of PPU, any forcible inclusion of another railroad in the transaction would be unwarranted.

- ***1180.6(a)(3) Any other supporting or descriptive statements applicants deem material.***

Applicants' acquisition of control of PPU is incidental to the primary transaction, which will unquestionably provide substantial public benefits and enhance competition. Statements from shippers, public officials, and other industry stakeholders supporting the primary application are provided in Volume 3 of the primary application. Supporting statements from officers of UP and NS and expert witnesses are provided in Volumes 1 and 2 of the primary application.

- ***1180.6(a)(4) An opinion of applicants' counsel that the transaction meets the requirements of the law and will be legally authorized and valid, if approved by the Board. This should include specific references to any pertinent provisions of applicants' bylaws or charter or articles of incorporation.***

The primary merger application contains the opinion of Applicants' counsel that Applicants' acquisition of control of PPU, as a directly-related transaction that

involves Applicants, meets the requirements of the law and will be legally authorized and valid, if approved by the Board.

- ***1180.6(a)(5) A list of the State(s) in which any part of the property of each applicant carrier is situated.***

  PPU owns approximately 20 miles of rail line in the state of Illinois.

  The states in which Applicants conduct rail operations are listed in the primary application at Section 1180.6(a)(5).

- ***1180.6(a)(6) Map (exhibit 1). Submit a general or key map indicating clearly, in separate colors or otherwise, the line(s) of applicant carriers in their true relations to each other, short line connections, other rail lines in the territory, and the principal geographic points in the region traversed. If a geographically limited transaction is proposed, a map detailing the transaction should also be included. In addition to the map accompanying each application, 20 unbound copies of the map shall be filed with the Board.***

  The map required by Section 1180.6(a)(6) is attached hereto in Exhibit 1. That map shows the rail lines of PPU, which are operated by TPR, and other carriers, including UP and NS, in the area in which PPU is located. The relationship of the lines shown on that map to rail lines in other areas is shown on the maps provided in Exhibit 1 of the primary application.

- ***1180.6(a)(7)(i) Describe the nature of the transaction (e.g., merger, control, purchase, trackage rights), the significant terms and conditions, and the consideration to be paid (monetary or otherwise).***

  Applicants' acquisition of control of PPU is a result of the primary merger transaction, but it is purely incidental to the transaction, as described above. There are no specific terms, conditions, or consideration relating to Applicant's acquisition of control of PPU. The terms, conditions, and consideration for the primary transaction are described in the primary application.

- ***1180.6(a)(7)(ii) Agreement (exhibit 2). Submit a copy of any contract or other written instrument entered into, or proposed to be entered into, pertaining to the proposed transaction. In addition, parties to exempt trackage rights agreements and renewal of agreements described at § 1180.2(d)(7) must submit one copy of the executed agreement or renewal agreement with the notice of exemption, or within 10 days of the date that the agreement is executed, whichever is later.***

Applicants' acquisition of control of PPU will be effected pursuant to the primary transaction. The Agreement and Plan of Merger dated as of July 28, 2025, is provided in the primary application at Exhibit 2.

- ***1180.6(a)(7)(iii) If a consolidation or merger is proposed indicate: (A) The name of the company resulting from the consolidation or merger; (B) the State or territory under the laws of which the consolidated company is to be formed or the merged company is to file its certificate of amendment; (C) the capitalization proposed for the resulting company; and (D) the amount and character of the capital stock and other securities to be issued.***

Not applicable. No merger or corporate consolidation involving PPU is proposed. Applicants' acquisition of control of PPU is purely incidental to the primary transaction.

- ***1180.6(a)(7)(iv) Court Order (exhibit 3). If a trustee, receiver, assignee, or personal representative of the real party in interest is an applicant, submit a certified copy of the order, if any, of the court having jurisdiction, authorizing the contemplated action.***

Not applicable.

- ***1180.6(a)(7)(v) State whether the property involved in the proposed transaction includes all the property of the applicant carriers and, if not, describe what property is included in the proposed transaction.***

The proposed transaction involves all of the property of PPU.

- ***1180.6(a)(7)(vi) Briefly describe the principal routes and termini of the lines involved, the principal points of interchange on the routes, and the amount of main-line mileage and branch line mileage involved.***

PPU owns approximately 20 miles of rail line in Tazewell and Peoria Counties, Illinois. Its rail lines extend from: (1) approximately milepost 0.0 (at or near Peoria, Illinois) to approximately milepost 9.2 (at or near Pekin, Illinois); (2) approximately milepost 0.0 to approximately milepost 3.87N (at or near Iowa Interstate Junction, Illinois); (3) approximately milepost 0.0 to approximately milepost 5.1W (at or near P&PU Junction, Illinois); and (4) approximately Wesley Junction, Illinois, to approximately East Peoria, Illinois (approximately 1.7 miles of track). PPU also holds trackage rights over approximately 1.7 miles of main-line track owned by UP from approximately milepost 4.0 (at or near P&PU Junction) to approximately milepost 5.7 (at or near Sommer, Illinois) in Peoria County, Illinois. The lines of PPU are operated by TPR.

TPR connects with BNSF Railway Company, CN, Keokuk Junction Railway, Illinois & Midland Railroad, Iowa Interstate Railroad, NS, UP, and Toledo, Peoria & Western Railway in Creve Coeur, Illinois.

- ***1180.6(a)(7)(vii) State whether any governmental financial assistance is involved in the proposed transaction and, if so, the form, amount, source, and application of such financial assistance.***

No governmental financial assistance is involved.

- ***1180.6(a)(8) Environmental data (exhibit 4). Submit information and data with respect to environmental matters prepared in accordance with 49 CFR part 1105. In major and significant transactions, applicants shall, as soon as possible, and no later than the filing of a notice of***

intent, consult with the Board's Office of Environmental Analysis for the proper format of the environmental report.

Not applicable. Under 49 C.F.R. §§ 1105.6(c)(1) and 1105.8(b)(3), environmental documentation is not required for Applicants' acquisition of control of PPU because the transaction merely involves a corporate ownership change that will not result in significant changes in carrier operations. The lines of PPU will continue to be operated by TPR. Environmental data for the primary transaction will be separately provided in the primary docket.

- ***1180.8(c) Operational Data. For minor transactions: Operating plan-minor (exhibit 15). Discuss any significant changes in patterns or types of service as reflected by the operating plan expected to be used after consummation of the transaction. Where relevant, submit information related to the following: (1) Traffic level density on lines proposed for joint operations. (2) Impacts on commuter or other passenger service operated over a line which is to be downgraded, eliminated, or operated on a consolidated basis. (3) Operating economies, which include, but are not limited to, estimated savings. (4) Any anticipated discontinuances or abandonments.***

The Operating Plan for the primary transaction pursuant to 49 C.F.R. § 1180.8(a) (major transactions) is provided in Exhibit 13 to the primary application. The rail lines of PPU will continue to be operated by third-party TPR following the primary transaction.

- ***1180.11 Transnational and other informational requirements.***
- ***(a) For applicants whose systems include operations in Canada or Mexico, applicants must explain how cooperation with the Federal Railroad Administration would be maintained to address potential***

impacts on operations within the United States of operations or events elsewhere in their systems.

Not applicable. Transnational and other informational requirements relating to the primary transaction are contained in Section 1180.11 of the primary application.

- ***(b) All applicants must assess whether any restrictions or preferences under foreign or domestic law or policies could affect their commercial decisions, and discuss any ownership restrictions applicable to them.***

Not applicable. Transnational and other informational requirements relating to the primary transaction are contained in Section 1180.11 of the primary application.

CONCLUSION

For the reasons set forth above, Applicants respectfully request that the Board grant this application for control of PPU.

December 19, 2025

Union Pacific Corporation ("UPC"), Union Pacific Railroad Company ("UP"), Norfolk Southern Corporation ("NSC"), and Norfolk Southern Railway Company ("NS") (collectively, "Applicants") file this application for Board approval and authorization under 49 U.S.C. §§ 11323-25 for the acquisition of control of the Terminal Railroad Association of St. Louis ("TRRA").

In the primary application to which this application relates, Applicants seek authority for the acquisition of control by UPC of NSC, and through NSC of NS and NS's rail carrier subsidiaries, and for the resulting common control by UPC of UP and NS and the consolidation of the rail operations of UP and NS. TRRA is a Class III terminal and switching carrier that operates approximately 170 miles of rail line in and around St. Louis, Missouri. UP currently holds a 42.84 percent interest and NS currently holds a 14.29 percent interest in TRRA. Upon consummation of the primary transaction following Board approval, the combined UP/NS will control a majority of shares of TRRA. The proposed transaction accordingly requires Board approval under §§ 11323-25.

In the primary application, Applicants commit to divesting NS's ownership interest in TRRA and redistributing NS's shares equally to UP and TRRA's other current owners—which are BNSF Railway Company, CSX Transportation, Inc., and Illinois Central Railroad ("CN")—unless those owners decline to acquire the additional shares. However, Applicants may need authority to control TRRA before those arrangements can be made and effectuated. Applicants, therefore, are filing this related application.

APPLICATION INFORMATION

In support of this Application, and pursuant to the Board's regulations at 49 C.F.R. Part 1180, Applicants submit the following information:

- ***1180.6(a)(1)(i) A brief summary of the proposed transaction, the name of the applicants, their business address, telephone number, and the name of the counsel to whom questions regarding the transaction can be addressed.***

As described in the primary application, UPC and NSC entered into an Agreement and Plan of Merger dated as of July 28, 2025, under which UPC, through its wholly-owned subsidiary, Ruby Merger Sub 1 Corporation, will acquire control of NSC, and through it of NS and NS's rail carrier subsidiaries.

TRRA is a Class III terminal and switching carrier that operates approximately 170 miles of rail line in and around St. Louis, Missouri. TRRA's main yard is located in Madison, Illinois. UP currently holds a 42.84 percent interest and NS currently holds a 14.29 percent interest in TRRA. Upon consummation of the primary transaction following Board approval, Applicants will control TRRA. Applicants' acquisition of control of TRRA is a result of the primary transaction, but it is purely incidental to the transaction.

The Applicants involved in the transaction are:

Union Pacific Corporation
1400 Douglas Street
Omaha, NE 68179
Telephone: (402) 544-5000

Union Pacific Railroad Company
1400 Douglas Street
Omaha, NE 68179
Telephone: (402) 544-5000

Norfolk Southern Corporation
650 W. Peachtree Street NW
Atlanta, GA 30308
Telephone: (470) 463-6314

Norfolk Southern Railway Company
650 W. Peachtree Street NW
Atlanta, GA 30308
Telephone: (470) 463-6314

The names of counsel to whom questions regarding the proposed transaction can be addressed are shown on the cover of this Application.

- ***1180.6(a)(1)(ii) The proposed time schedule for consummation of the proposed transaction.***

Applicants' acquisition of control of TRRA will occur following the receipt of all required approvals and satisfaction or waiver of all conditions to closing set forth in the Agreement and Plan of Merger for the primary transaction.

- ***1180.6(a)(1)(iii) The purpose sought to be accomplished by the proposed transaction, e.g., operating economies, eliminating excess facilities, improving service, or improving the financial viability of the applicants.***

Applicants' acquisition of control of TRRA is related to the primary transaction, the purpose of which is described in Section 1180.6(a)(1)(iii) of the primary application.

- ***1180.6(a)(1)(iv) The nature and amount of any new securities or other financial arrangements.***

No new securities will be issued or other financial arrangements entered into specifically in connection with Applicants' acquisition of control of TRRA. Securities and financial arrangements in connection with the primary transaction are addressed in Section 1180.6(a)(1)(iv) of the primary application.

- ***1180.6(a)(2) A detailed discussion of the public interest justifications in support of the application, indicating how the proposed transaction is consistent with the public interest, with particular regard to the relevant statutory criteria.***

Applicants' control of TRRA will unquestionably serve the public interest. As the primary application explains in Section 1180.6(a)(2) and as further detailed in the verified statements accompanying the primary application, the UP/NS merger will greatly intensify competition among railroads and competition between railroads and trucks, expand and improve rail transportation service and customer access to markets, increase transportation safety, strengthen the national defense, and promote job growth and economic expansion across the United States. Applicants' acquisition of control of TRRA is a result of that larger transaction, but it is purely incidental to the transaction.

Applicants' acquisition of control of TRRA will not affect rail operations. TRRA is a terminal and switching carrier that operates in and around St. Louis. It provides local service to approximately 70 customers in the St. Louis area. TRRA will continue to provide these services following Applicant's acquisition of control.

TRRA's system includes two bridges over the Mississippi River—the Merchants Bridge and the MacArthur Bridge. Amtrak currently operates passenger trains into St. Louis and can use either of two routes, one utilizing the Merchants Bridge and the other utilizing the MacArthur Bridge. Applicants' control of TRRA will have no impact on Amtrak. In 2016, TRRA and its owners entered into an agreement regarding rehabilitation of the Merchants Bridge and also agreed to future cost allocations regarding replacement of the MacArthur Bridge.

As a result of the primary application, Applicants anticipate reducing yard activity in the St. Louis area by building certain blocks for eastbound traffic using the Alton & Southern Railway ("A&S") rather than have A&S transfer eastbound traffic to TRRA for blocking. TRRA will continue to play an important role in the St. Louis area in performing local operations and handling traffic interchanged in St. Louis. Applicants' plans will increase TRRA's capacity to serve other railroads in St. Louis.

- ***1180.6(a)(2)(i) The effect of the transaction on inter- and intramodal competition, including a description of the relevant market (see § 1180.7). Include a discussion of whether, as a result of the transaction, there is likely to be any lessening of competition, creation of a monopoly, or restraint of trade in freight surface transportation in any region of the United States.***

Applicants' acquisition of control of TRRA is part of the primary transaction, which will offer substantial competitive benefits, as described in Section 1180.6(a)(2)(i) of the primary application and as further detailed in the verified statements accompanying the primary application.

Applicants' acquisition of control of TRRA will not have any effect on inter- or intramodal competition, nor will it cause any lessening of competition or create any monopoly or restraint of trade. As noted above, TRRA will continue to operate as a terminal and switching carrier and no changes to operations are expected as a result of Applicants' control of TRRA.

Further, under Article XVI of TRRA's operating agreement, TRRA may not discriminate in any manner in favor of any company with respect to the use of its terminal system, nor may it discriminate with respect to the transfer or handling of

cars. The operating agreement provides that all companies shall have equal facilities and accommodations.[1] All carriers that currently have access to TRRA facilities and locally served industries will continue to have access, and Applicants' control of TRRA will not impair these other carriers' ability to obtain service from TRRA on equal terms.

In addition, notwithstanding the fact that Applicants will control four of the seven Director positions at TRRA, under an agreement entered into in 2016, any change in a rate or fee, or any establishment of a new rate or fee, charged by TRRA to any of its individual owners, including trackage rights fees, crossing charges, and/or local switching fees, requires a unanimous vote of the Directors of TRRA.[2] Further, under TRRA's bylaws, capital contributions would still require a vote of three-fourths of the Directors voting. And amendments to the bylaws pertaining to the expenditure of money for capital contributions must receive a three-fourths vote of all the Directors.[3]

- ***1180.6(a)(2)(ii) The financial consideration involved in the proposed transaction, and any economies, to be effected in operations, and any increase in traffic, revenues, earnings available for fixed charges, and***

[1] Workpaper, "TRRA Operating Agreement.pdf."

[2] Workpaper, "Merchants Bridge Rehabilitation Agreement.pdf" § 9.

[3] Workpaper, "Merchants Bridge Rehabilitation Agreement.pdf" Ex. D.

net earnings, expected to result from the consummation of the proposed transaction.

There is no separately stated financial consideration for Applicants' acquisition of control of TRRA. The financial consideration for the primary transaction is described in Section 1180.6(a)(2)(ii) of the primary application.

- ***1180.6(a)(2)(iii) The effect of the increase, if any, of total fixed charges resulting from the proposed transaction.***

Applicants' acquisition of control of TRRA will not have any effect on fixed charges separate and apart from the primary transaction. The effect on fixed charges of the primary transaction is addressed in Section 1180.6(a)(2)(iii) of the primary application.

- ***1180.6(a)(2)(iv) The effect of the proposed transaction upon the adequacy of transportation service to the public, as measured by the continuation of essential transportation services by applicants and other carriers.***

Applicants' acquisition of control of TRRA will not affect the adequacy of transportation to the public. The effect of the primary transaction on the adequacy of transportation to the public is set forth in Section 1180.6(a)(2)(iv) of the primary application.

- ***1180.6(a)(2)(v) The effect of the proposed transaction upon applicant carriers' employees (by class or craft), the geographic points where the impact will occur, the time frame of the impact (for at least 3 years after consolidation), and whether any employee protection agreements have been reached.***

TRRA has approximately 215 employees. Applicants do not anticipate any effects on TRRA employees, as the control of TRRA by Applicants is not expected to result in any changes to operations.

The effects of the primary transaction on Applicants' employees are set forth in the primary application. Because no changes in TRRA's operations are contemplated, Applicants do not anticipate that any separate implementing agreements will be entered with respect to TRRA.

- ***1180.6(a)(2)(vi) The effect of inclusion (or lack of inclusion) in the proposed transaction of other railroads in the territory, under 49 U.S.C. 11324.***

The inclusion of other railroads in the transaction giving Applicants control of TRRA would not be in the public interest for the reasons discussed in Section 1180.6(a)(2)(vi) of the primary application. Further, Applicants' acquisition of control of TRRA will not result in the loss of traffic or revenue by any other carrier and will not result in the loss of essential services. As explained above, Applicants' control of TRRA will not affect TRRA's operations. Because no loss of essential services is threatened as a result of Applicants' control of TRRA, any forcible inclusion of another railroad in the transaction would be unwarranted.

- ***1180.6(a)(3) Any other supporting or descriptive statements applicants deem material.***

Applicants' acquisition of control of TRRA is incidental to the primary transaction, which will unquestionably provide substantial public benefits and enhance competition. Statements from shippers, public officials, and other industry stakeholders supporting the primary application are provided in Volume 3 of the primary application. Supporting statements from officers of UP and NS and expert witnesses are provided in Volumes 1 and 2 of the primary application.

- ***1180.6(a)(4) An opinion of applicants' counsel that the transaction meets the requirements of the law and will be legally authorized and***

valid, if approved by the Board. This should include specific references to any pertinent provisions of applicants' bylaws or charter or articles of incorporation.

The primary merger application contains the opinion of Applicants' counsel that Applicants' acquisition of control of TRRA, as a directly-related transaction that involves Applicants, meets the requirements of the law and will be legally authorized and valid, if approved by the Board.

- ***1180.6(a)(5) A list of the State(s) in which any part of the property of each applicant carrier is situated.***

TRRA operates approximately 170 miles of rail line in and around St. Louis, in the states of Missouri and Illinois.

The states in which Applicants conduct rail operations are listed in the primary application at Section 1180.6(a)(5).

- ***1180.6(a)(6) Map (exhibit 1). Submit a general or key map indicating clearly, in separate colors or otherwise, the line(s) of applicant carriers in their true relations to each other, short line connections, other rail lines in the territory, and the principal geographic points in the region traversed. If a geographically limited transaction is proposed, a map detailing the transaction should also be included. In addition to the map accompanying each application, 20 unbound copies of the map shall be filed with the Board.***

The map required by Section 1180.6(a)(6) is attached hereto in Exhibit 1. That map shows the rail lines of TRRA and other carriers, including UP and NS, in the area in which TRRA is located. The relationship of the lines shown on that map to rail lines in other areas is shown on the maps provided in Exhibit 1 of the primary application.

- ***1180.6(a)(7)(i) Describe the nature of the transaction (e.g., merger, control, purchase, trackage rights), the significant terms and conditions, and the consideration to be paid (monetary or otherwise).***

Applicants' acquisition of control of TRRA is a result of the primary merger transaction, but it is purely incidental to the transaction, as described above. There are no specific terms, conditions, or consideration relating to Applicants' acquisition of control of TRRA. The terms, conditions, and consideration for the primary transaction are described in the primary application.

- ***1180.6(a)(7)(ii) Agreement (exhibit 2). Submit a copy of any contract or other written instrument entered into, or proposed to be entered into, pertaining to the proposed transaction. In addition, parties to exempt trackage rights agreements and renewal of agreements described at § 1180.2(d)(7) must submit one copy of the executed agreement or renewal agreement with the notice of exemption, or within 10 days of the date that the agreement is executed, whichever is later.***

Applicants' acquisition of control of TRRA will be effected pursuant to the primary transaction. The Agreement and Plan of Merger dated as of July 28, 2025, is provided in the primary application at Exhibit 2.

- ***1180.6(a)(7)(iii) If a consolidation or merger is proposed indicate: (A) The name of the company resulting from the consolidation or merger; (B) the State or territory under the laws of which the consolidated company is to be formed or the merged company is to file its certificate of amendment; (C) the capitalization proposed for the resulting company; and (D) the amount and character of the capital stock and other securities to be issued.***

Not applicable. No merger or corporate consolidation involving TRRA is proposed. Applicants' acquisition of control of TRRA is purely incidental to the primary transaction.

- ***1180.6(a)(7)(iv) Court Order (exhibit 3). If a trustee, receiver, assignee, or personal representative of the real party in interest is an applicant,***

submit a certified copy of the order, if any, of the court having jurisdiction, authorizing the contemplated action.

Not applicable.

- ***1180.6(a)(7)(v) State whether the property involved in the proposed transaction includes all the property of the applicant carriers and, if not, describe what property is included in the proposed transaction.***

  The proposed transaction involves all of the property of TRRA.

- ***1180.6(a)(7)(vi) Briefly describe the principal routes and termini of the lines involved, the principal points of interchange on the routes, and the amount of main-line mileage and branch line mileage involved.***

  TRRA operates approximately 170 miles of rail line in and around St. Louis. TRRA's system includes two bridges over the Mississippi River—the Merchants Bridge and the MacArthur Bridge. TRRA's main yard is located in Madison, Illinois.

- ***1180.6(a)(7)(vii) State whether any governmental financial assistance is involved in the proposed transaction and, if so, the form, amount, source, and application of such financial assistance.***

  No governmental financial assistance is involved.

- ***1180.6(a)(8) Environmental data (exhibit 4). Submit information and data with respect to environmental matters prepared in accordance with 49 CFR part 1105. In major and significant transactions, applicants shall, as soon as possible, and no later than the filing of a notice of intent, consult with the Board's Office of Environmental Analysis for the proper format of the environmental report.***

  Not applicable. Under 49 C.F.R. §§ 1105.6(c)(1) and 1105.8(b)(3), environmental documentation is not required for Applicants' acquisition of control of TRRA because the transaction merely involves a corporate ownership change that will not result in significant changes in carrier operations. Environmental data for the primary transaction will be separately provided in the primary docket.

- ***1180.8(c) Operational Data. For minor transactions: Operating plan-minor (exhibit 15). Discuss any significant changes in patterns or types of service as reflected by the operating plan expected to be used after consummation of the transaction. Where relevant, submit information related to the following: (1) Traffic level density on lines proposed for joint operations. (2) Impacts on commuter or other passenger service operated over a line which is to be downgraded, eliminated, or operated on a consolidated basis. (3) Operating economies, which include, but are not limited to, estimated savings. (4) Any anticipated discontinuances or abandonments.***

The Operating Plan for the primary transaction pursuant to 49 C.F.R. § 1180.8(a) (major transactions) is provided in Exhibit 13 to the primary application. That operating plan discusses changes to operations in the St. Louis area anticipated to result from the primary transaction.

- ***1180.11 Transnational and other informational requirements.***

- ***(a) For applicants whose systems include operations in Canada or Mexico, applicants must explain how cooperation with the Federal Railroad Administration would be maintained to address potential impacts on operations within the United States of operations or events elsewhere in their systems.***

Not applicable. Transnational and other informational requirements relating to the primary transaction are contained in Section 1180.11 of the primary application.

- ***(b) All applicants must assess whether any restrictions or preferences under foreign or domestic law or policies could affect their commercial decisions, and discuss any ownership restrictions applicable to them.***

Not applicable. Transnational and other informational requirements relating to the primary transaction are contained in Section 1180.11 of the primary application.

CONCLUSION

For the reasons set forth above, Applicants respectfully request that the Board grant this application for control of TRRA.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, IXM is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers, and ensure the safe, timely delivery of our products across the country. At IXM, we transport commodities to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that IXM has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.

- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Andrew Gray

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, 84 Lumber Company is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and their building projects and ensure the safe, timely delivery of our products across the country. At 84 Lumber Company we transport Lumber, OSB, and other miscellaneous building and construction projects alike to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that 84 Lumber has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

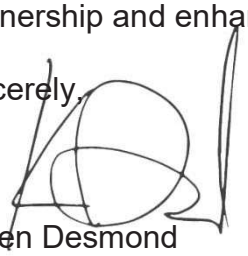
Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, A&K Railroad Materials, Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At A&K Railroad Materials, Inc., we transport railroad track materials to markets nationwide and then onto the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that A&K Railroad materials, Inc has a bright future.



We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific's partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Providing What Matters

09/26/2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Advanced Logistics and Distribution Systems LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and businesses to ensure the safe, timely delivery of our products across the country. At Advanced Logistics, we transport fuels, foods, aggregates, heavy steel, and recyclables to markets around the world and the United States. This reduces the carbon footprint for a better future for our families. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments and new commitments for growth and innovation, so that Advanced Logistics and companies alike have a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including: Us Steal Mills and Petroleum Producers and Farmers of America.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers and consumers nationwide.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

AERCO PACIFIC INC

EST. 1957 LANDSCAPE CONTRACTORS

September 8, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Aerco Pacific is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

At Aerco Pacific we rely on efficient, reliable, and cost-effective transportation to meet our needs and the needs of our customers. The American freight rail network is a critical component of our nations supply chain, allowing large volumes of material to move efficiently and sustainably. We understand the importance of rail to meet the needs of our people, customers, and our national economy. We also understand rail networks need new investments, and new commitments for growth and innovation, so we can all benefit and anticipate a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling railroads to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** The ability to access a broader geographic footprint will allow shippers to better serve customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on the broader economy.

Thank you for your consideration of our perspective.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that *A-fab,Inc* has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific *customers* like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more *customers* , faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-term customer of Union Pacific, Aferco,inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At Aferco, Inc, we transport Steel Coils to markets nationwide and Mexico. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Aferco, Inc. has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers and partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Adrian Fernandez

AGP
Ag Processing Inc

September 4, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Ag Processing Inc a cooperative ("AGP") is writing to express its support for the proposed merger between Union Pacific and Norfolk Southern. AGP is a leading agribusiness cooperative owned by more than 150 regional and local cooperatives, which, in turn, are owned by over 200,000 farmers in the United States.

AGP depends on efficient, reliable, and cost-effective rail service to meet its business needs and serve the needs of both AGP's member-owners and AGP's customers. AGP transports agricultural products to markets across the United States and internationally, and the American freight rail network is a critical component of our supply chain as it allows for the movement of large volumes of products efficiently and sustainably. As a company that has been in business for over 40 years, we understand firsthand how rail networks need new investments and new commitments for growth and innovation, and how those investments can positively impact the transportation of products for the benefit of companies like AGP and the end-customer both in the present and into the future.

AGP is offering this letter of support because it believes that the proposed merger between Union Pacific and Norfolk Southern will enhance the American freight rail network and yield benefits for Union Pacific customers like AGP. Among other things, AGP feels a combined network will offer more direct rail routes and greater flexibility, thereby reducing transit times for AGP's products and increasing the speed and service that AGP is able to provide its customers. AGP also believes the proposed merger would provide it with better access to a broader geographical footprint and open new markets through East Coast export channels thereby improving the U.S. agricultural industry's ability to compete in the global marketplace.

AGP understands that regulatory review is an important part of this process, and we appreciate the ability to comment on the proposed merger and the positive impact that we believe this merger will have. Thank you in advance for your consideration of our perspective.

Sincerely,

Chris Schaffer
Chief Executive Officer
Ag Processing Inc a cooperative

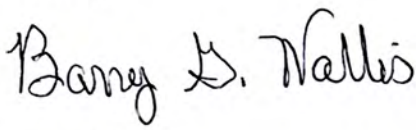
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Again Technologies, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of Clients and Manufacturing partners and ensure the safe, timely delivery of our products across the country. At Again Technologies, LLC we transport formulated plastics supporting the global recycling space supplying to our mechanical and chemical recycling partners across the US and even for our own finished goods division to markets nationwide and across the globe. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Again Technologies has a bright future.



We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more of our clients, customers and manufacturing partners, faster and more efficiently further reducing our CI Score for better environmental benefits.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-term partner of Union Pacific's customers, Agile Cold Storage LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Agile is a third-party provider of multi-temperature warehouse and logistics solutions and services. We depend on efficient, reliable, and cost-effective rail service to meet the needs of food manufacturers and consumers and ensure the safe, timely delivery of our products across the country. At Agile, we will use rail to transport refrigerated and frozen food for customers in Macon, GA; Newark, NJ and Bucks County, PA.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Agile Cold Storage and our team members have bright futures.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

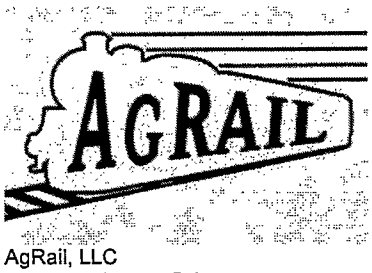
Dear Chairman Fuchs,

As a long-time customer of Union Pacific, AgMark is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of the end users we serve and ensure the safe, timely delivery of our products across the country. At AgMark, we transport hard red winter wheat, soybeans, yellow corn and grain sorghum to both domestic and export markets. The American rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our local producers and the cooperative owners we serve, and the key role that rail plays in connecting our local grain production to end user destinations.

We believe that the proposed merger will enhance competition and provide efficiencies for customers, like us, being served by the Union Pacific:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver grain products more timely.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.



We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, AgRail, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At AgRail, LLC we transport corn, soybeans and wheat to markets throughout the United States and also Mexico. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that AgRail LLC has a bright future.

We are one of very few customers that would move from having two Class 1 railroad options to just one. Union Pacific proactively reached out to ensure we maintain operational choices, underscoring their strong commitment to serving customers.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific shippers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Alliance Shippers is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Alliance Shippers competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

To Whom It May Concern:

AllTrans Terminal Companies, LLC is a 30+ year customer of Union Pacific. In addition to a close working relationship with Union Pacific, AllTrans buys freight from all American Class I railroads. AllTrans provides terminal services, railcar loading and unloading, and first/last mile trucking for industrial products. AllTrans is responsible for hundreds of jobs in the Houston area, where we operate our steel terminals.

Both domestic and imported industrial cargo benefit from streamlined and cost-effective railroad transit. Industrial cargo on rail benefits the economy as a whole, due to its economic efficiency compared to and job creation, and to the environment, due to its lower carbon footprint. Industrial companies such as AllTrans always prefer rail transit over trucking transit, due to safety, cost-savings over truck, and the carbon efficiency of rail.

Having access to a trans-continental route, as proposed in the UPRR-NS merger, would allow companies like AllTrans to use longer and more economically effective rail rates to move industrial freight. With more efficient transportation costs, the industrial economy will realize lower costs of goods and services, and those benefits will flow into the American economy.

Please do not hesitate to reach out for follow-up, or for any specific questions.

Warmest regards,

Tyler Brown

Subject: Endorsement of the Union Pacific–Norfolk Southern Merger

Dear Chairman Fuchs,

As a representative of the ATP–TPP–ISTASA group, I am pleased to express our firm support for the proposed merger between Union Pacific and Norfolk Southern. Through TPP's longstanding and close relationship with Union Pacific at Guaymas, our group is fully informed about this process and actively involved in its progress.

TPP has a long track record in the handling and movement of bulk commodities for international transit clients—particularly copper concentrate and coal—from major production hubs in the United States. Our operations depend on dependable, efficient and cost-competitive rail services to meet customer requirements and guarantee the secure, on-time delivery of these essential goods.

As an important connector between U.S. producers, international ports and world markets, we recognize the critical role of the American freight rail network in sustaining national and international supply chains. This system allows us to move large volumes in a safe and environmentally responsible way, and we value continued investment and innovation to ensure growth, competitiveness and resilience for businesses like ours.

We believe the planned merger will reinforce competition and create tangible advantages for Union Pacific partners such as TPP, including:

- Greater Service Reliability: A unified network will provide more direct routes and increased operational flexibility, reducing exposure to service disruptions.
- Shorter Transit Times: Eliminating interchanges will shave several days off shipping schedules, helping us deliver copper concentrate and coal to our global customers faster.
- Enhanced Investment Capacity: The combined railroad will be better positioned to invest in infrastructure, equipment and technology to improve service quality, safety and capacity.
- Broader Market Access: A larger geographic footprint will allow us to serve current customers more effectively and expand into new territories.

We understand that regulatory oversight is a necessary part of the review process and respectfully urge the Board to consider the significant benefits this merger offers to companies like ours and to the broader U.S. and international economy.

Thank you for your consideration. We look forward to continuing our collaboration and to the improved services this merger will bring.

Sincerely,

Capt. Adonay Navarro Saad
General Director

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

We are primarily a customer of the BNSF and UP shipping crop nutrients in both our private and railroad supplied covered hopper cars. We recognize the critical role freight rail plays in supporting our crop nutrient dealer customers and their growers who produce agricultural commodities who feed America and the world. Reliable rail service allows us to connect our business to our customers and to the ultimate grower of America's agricultural commodities. They depend on American Plant Food to deliver crop nutrients in a reliable, efficient and cost-effective manner.

To that end, American Plant Food would benefit from faster, more reliable rail service. A more efficient and resilient supply chain would allow us to access to compete in new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help allow us to grow our business by delivering single-line service and offering more direct routes.

We believe a merger that increases shipper transportation options, expands every freight railroad's geographic reach, encourages investment in infrastructure and technology is good news for us and every shipper. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, maintaining and improving competitive access, sustainability, and long-term benefits to rail shippers like ourselves and our customers. We trust that the Surface Transportation Board will safeguard these benefits when they

AMERICAN REFINING GROUP, INC.
Refine everything.

September 25, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, American Refining Group, Inc. strongly supports the proposed merger with Norfolk Southern.

At American Refining Group, Inc., we provide high-performance diesel engine lubricants for use in locomotive engines throughout the United States and Canada, which are essential to the safe and smooth operation of freight rail service across the country.

We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand as a result of the merger.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact delivery of our products and services.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster. Moreover, reduced transit times will lower our investment in inventory, allowing us to further invest in our business and employees.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology and equipment, further improving service quality, capacity and safety. Increased investment from the railroad translates to increased investment in our own business.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Anderson Columbia Co., Inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At Anderson Columbia, we transport aggregates to markets in the southeast. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Anderson Columbia has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

The Honorable Patric J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington DC 20423

Dear Chairman,

Apex Cold Storage is writing to express our support for the Union Pacific and the proposed merger Norfolk Southern. As a customer working with the Union Pacific Railroad for some 30 years, we are in hopes this merger will reward Apex and its customers with faster transit times through the mid-west to the PNW.

As a small cold storage in the PNW, a lot of our business and customer base relies on the railroad network to move their goods. Pork from Smithfield is a long-standing customer, and Wayne Farms is now shipping poultry from the south to us almost weekly, to meet our customer Plymouth Poultry's sales demands. We are also sending products east now for several seafood companies, Westward, UniSea, and Glasier seafoods, getting their Alaskan Pollock to the East Coast processors for Government Bids as well as other customers' needs.

It seems after twenty-five years in this location; our customers are seeing the value added by shipping via rail. We see no reason with the improved availability of equipment, improvement of reliability, and improved transit times, will increase business, adding value to all business across the network. As business talks about the improved efficiency that has been added, it can only bring additional value to the country for expediting goods.

We understand there are processes and reviews that must be part of the process, so we urge the proper authorities to consider the positive impact this will have on our great country and help business large and small.

Thank you for your time and consideration. Looking forward to what the upcoming improvements might bring to our business.

Sincerely.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, APL Logistics Ltd. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. Our company relies on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country.

The American freight rail network is a critical component of our supply chain, allowing us to transport a multitude of goods nationwide and to the rest of the world both efficiently and sustainably. We understand the importance of this network to our employees, our products, and our national economy. We also know firsthand that these rail networks need new investments and new commitments for growth and innovation to ensure a bright future for APL Logistics Ltd.

We believe that this proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us. These benefits include:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the merger will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The new transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our existing customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Atlas Roofing is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our roofing customers and ensure the safe, timely delivery of our products across the country. At Atlas Roofing, we transport complete roofing system, including asphalt shingles, underlayment's, and ventilation products to markets *nationwide.* The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Atlas Roofing has a bright future.

Atlas Roofing's support is contingent upon two critical factors:

1. **Service Levels Must Be Maintained and Improved** – It is imperative that current service standards, reliability, and transit times are not compromised as a result of the merger. We rely on consistent, predictable rail performance to meet customer demand and maintain efficient supply chain operations.
2. **Competition Must Be Preserved** – Maintaining a healthy level of competition among rail carriers is essential to prevent service degradation, cost escalation, and limited access for shippers. The merged entity must ensure open access, fair pricing, and transparent operational practices to preserve market balance and protect customers.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Re: Support for the Union Pacific–Norfolk Southern Merger

Chairman Fuchs and Members Schultz and Hedlund,

Barkley Seed, Inc. ships millions of pounds of agricultural grain every year, both domestically and internationally. Our supply chain relies on dependable rail service—particularly Union Pacific's routes that moves grain for delivery within the United States and export grain to Houston for export vessel loading. We believe the proposed Union Pacific–Norfolk Southern merger represents a rare opportunity to strengthen that network and create meaningful advantages for U.S. agriculture and export trade.

Why This Matters to Our Business

- **Stronger Service Reliability** – A unified UP-NS system promises a single, integrated operating plan, which should translate to fewer hand-offs and less disruption during peak shipping windows.
- **Faster, More Economical Access** – Eliminating interchanges and expanding direct routes can reduce days from current transit times and make domestic markets now out of reach by rail economically viable.
- **Broader Export Options** – Additional Gulf and East Coast port connections could lower costs and add flexibility when scheduling vessels for our overseas customers.
- **Commitment to Investment** – A combined carrier is better positioned to invest in equipment, technology, and infrastructure that improve capacity, safety, and environmental performance.

Our Request

We urge the Board to weigh these benefits as it evaluates the transaction. For Barkley Seed, any improvement in cost-effective, reliable rail service strengthens our ability to serve growers, processors, and international buyers alike.

Thank you for considering our perspective on this important matter.

Respectfully,

Dwayne T. Alford

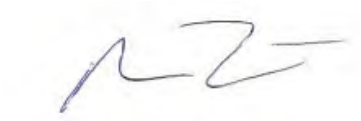
Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Bay and Bay strongly supports the proposed merger with Norfolk Southern.

Our business relies on efficient, reliable, and cost-effective rail service to meet customer demands and ensure safe, timely deliveries nationwide. As an intermodal marketing company competing with over-the-road trucking, rail is essential to offering scalable, sustainable transportation solutions.

We believe this merger will deliver meaningful benefits, including:



- **Greater Reliability**: A unified network will reduce service disruptions and offer more direct routing.
- **Faster Transit Times**: Eliminating interchanges will shorten delivery times by several days.
- **Stronger Investment**: A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment.
- **Expanded Reach**: A broader network will help us serve existing customers more effectively and reach new markets.

We're optimistic this merger will drive innovation, improve service, and enhance the overall customer experience. We also value marketplace flexibility. Continued access to other carriers like CSX and BNSF remains vital to our operations and the health of the freight ecosystem.

We appreciate the importance of regulatory review and encourage you to consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration. We look forward to the enhanced service and partnership this merger promises.

Sincerely,

Matt Carlton

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Beasley Forest Products LLC. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of SYP and crane mats customers and ensure the safe, timely delivery of our products across the country. At Beasley. we transport Lumber and Crane Mats to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Beasley has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and Beasley like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Truss Beasley

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Big Horn Ram LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to transport diesel fuel safely and on time to our customers throughout the United States. The American freight rail network is an essential part of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of continued investment and innovation in rail to ensure a secure and competitive market.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

• Improved Service Reliability: A combined network will create more direct routes and greater flexibility, reducing the risk of service disruptions.
• Reduced Transit Times: Fewer interchanges will shorten delivery schedules by several days, enabling faster deliveries.
• Increased Investment: A stronger transcontinental railroad will support upgrades in infrastructure, technology, and equipment, improving capacity and safety.
• Expanded Reach: Access to a broader geographic footprint will allow us to better serve our customers and reach new markets.

We encourage the Board to carefully consider the positive impact this merger will have on businesses like ours and the broader U.S. economy.

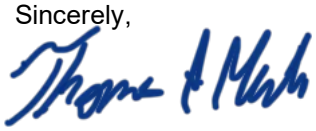
The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, and of other US Railroads, Binderholz Timber LLC, the Atlanta based sales branch of Austrian owned Binderholz is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

We are in the lumber business operating a US Sawmill in Live Oak, FL and Enfield, NC. These mills are located on the CSX Railroad. But we also import products to both East Coast and Gulf Coast ports which could ship either on the NS or Union Pacific.



The way the US Rail System is laid out and parceled up makes it difficult for us to reach customers in an efficient and cost-effective manner. Mergers that create companies that can seamlessly ship on one bill of lading with one rate can only be supported. Its ridiculous to ship from Lake Charles to the Northeast for example and being basically charged twice for the same railcar, making the entire transaction cost prohibitive.

This expanded reach argument makes the supply chain flexible and enables shippers to move things around in case of need. In particular, upcoming logistics challenges created through international conflicts will require such flexibility to create shock resilient supply chains.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD 36873

Dear Chairman Fuchs:

As Senior Vice President of Global Supply Chain of the Blue Diamond Growers farm cooperative, I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern.

Freight rail is a cornerstone of our state's economy, safely moving the goods that power our industries, support our farmers and connect our communities to markets across the nation and the world. Union Pacific has long been an essential transportation partner for our state, providing efficient, reliable and cost-effective service to large and small businesses. The American freight rail network is not only critical to our economic growth – it is also one of the most sustainable modes of transportation available, helping reduce highway congestion and emissions.
The proposed merger offers a unique opportunity to strengthen this network and deliver tangible benefits for shippers, consumers and communities, including:

- **Improved Service Reliability:** More direct routes and greater operational flexibility will help prevent service disruptions and improve schedule dependability.
- **Reduced Transit Times:** Eliminating certain interchanges will speed the movement of goods, helping our businesses reach customers faster and more competitively.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in modern infrastructure, advanced technology and enhanced safety systems.
- **Expanded Reach:** The broader geographic footprint will open new markets for our state's products and strengthen supply chain resilience.

This merger is about more than just railroads – it's about securing the future of our transportation network, supporting economic development and ensuring American freight rail remains globally competitive.

More than 70% of California's almonds are exported worldwide, making dependable, flexible, and sustainable transportation important for maintaining profitability and resilience. Blue Diamond Growers has benefited from the Union Pacific's ability to integrate multiple ports across the United States, and we are supportive of this merger as it only further creates agricultural resilience for multiple port capabilities.

I respectfully urge the Surface Transportation Board to give full and favorable consideration to this proposal, recognizing the benefits it will bring to our state and the national economy.

Sincerely,

Steve Schult

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Botavia Energy, LLC ("Botavia") is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our small company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At Botavia, we market and distribute energy products to markets [which include the United States, Canada and Latin American markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Botavia has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Boxlinks LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Boxlinks, we transport appliances, agricultural goods, chemicals, and paper goods to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Boxlinks has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific's customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers and consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Brandt Company Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the yellow corn needs of our cattle herd. Brandt Company Inc. is currently feeding 140,000 heads of cattle at our Calipatria, California feeding facility. Annually, the UP transports over 350,000 tons of yellow corn from the Midwest to All American Grain LLC, which is then delivered to our facility. The safe and timely delivery of feed products to our cattle is vital. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Brandt Company Inc. has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and UP customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to receive our grain faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the

broader economy. Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long time, customer of Union Pacific, Bravo Customs Broker Services is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our business depends on a reliable, efficient, and cost-effective rail network to serve a wide range of industries, with a particular focus on the automotive sector. We play pivotal role in moving critical parts and components to markets cross the country. And in some cases, to international destinations. By reducing bottlenecks, strengthening connections, and ensuring timely deliveries, rail service allows to help carriers, suppliers, and customers operate more smoothly and effectively.

The American freight rail system is a corner stone of our supply chain, it enables us to move large volumes of freight safely, sustainably, and on time, supporting not only our operation but also the broader economy. We know firsthand that rail networks require continuous investment, innovation, and long-term commitments to meet the demands of modern supply chains.

For Bravo Customs Broker Services, a stronger and more integrated rail system is essential to our future and to the success of the industries we serve. That is why we fully support this merger and the opportunities it creates for growth, reliability, and supply chain resilience.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability**: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times**: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment**: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment further improving service quality, capacity, and safety

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping cementitious products, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Todd Laker

BROWNSVILLE GULFSIDE WAREHOUSE, INC.

October 7, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Brownsville Gulfside Warehouse Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Brownsville Gulfside Warehouse Inc., we handle and transport a wide range of goods—including Aluminum Ingots, Aluminum Billets, Cal Flux 56, Lumber, Bagged Sugar, and Aluminum Fluoride—to markets nationwide and beyond. The American freight rail network is a vital part of our supply chain, enabling us to move large volumes efficiently and sustainably.

We understand the critical role rail plays not only in our operations, but also in supporting our workforce and contributing to the broader national economy. We also recognize the need for new investment, innovation, and long-term commitments to strengthen our rail infrastructure. For companies like ours, the future depends on a modern, resilient, and growth-oriented freight rail system.

We believe that the proposed merger will deliver meaningful benefits to customers, the rail network, and the economy at large. These include:

- **Improved Service Reliability:** A unified network will enable more direct routing and greater operational flexibility, reducing the likelihood of service disruptions.
- **Reduced Transit Times:** By eliminating handoffs and interchanges, the combined network can significantly reduce transit times, helping us serve customers more quickly and efficiently.
- **Increased Investment:** A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further enhancing service, capacity, and safety.
- **Expanded Reach:** With a broader geographic footprint, we will have greater access to new markets and be able to better serve our existing customers.

We recognize that regulatory review is an essential step in the merger process, and we respectfully urge the Surface Transportation Board to consider the strong, positive impact this merger would have on shippers like Brownsville Gulfside Warehouse Inc. and on the national freight transportation landscape.

Thank you for your consideration. We look forward to the enhanced service and new opportunities this merger will bring.

Sincerely,

Ernesto Gutierrez

100 Railroad Avenue
Washington, NJ 07882

October 14, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

CAD Logistics, LLC, one of the primary railcar produce handlers in America's largest produce market, is writing to express our support for the proposed merger between Union Pacific (UP) and Norfolk Southern (NS).

Since the United States was connected by a golden spike in Promontory Point, Utah, in 1869, America has enjoyed the benefits of the greatest freight rail system in the world. Over 150 years later, a vision that is the work of countless American men and women stands to be realized: shipping a railcar under a single bill over a single railroad from coast to coast.

Like many industries in America, our company and our customers need efficient, reliable, safe, and truck competitive rail service to do our part to employ American workers and feed American families. From our perspective, the proposed UP and NS merger will help us do so and grow the U.S. economy from a combination of the following benefits:

Reduced Railcar Handling – By eliminating interchanges where railcars are handed off from one railroad to another, service times from coast to coast will improve by several days. Current interchange points of Chicago, Kansas City, St. Louis and Memphis will be eliminated, which will keep railcars flowing more quickly from coast to coast. Less handling and delays also lessen the chance of product shift, damage and theft.

More Competitive Pricing – The UP and NS combination will result in more truck competitive pricing. Imagine when flying coast to coast; you receive a cheaper fare on a single airline than a combination of two, not to mention the additional delays and stops needed to travel across multiple providers. The same is true on rail through the reduction of interchange points and their associated costs. The watershed areas near current UP and NS interchange points along the Mississippi River will receive particularly enhanced economic competitiveness since the

combined railroad will not have to charge minimum rates on short haul moves that make existing opportunities impractical.

Eliminate Cross Towns – Intermodal companies currently tasked with trucking their containers between UP and NS intermodal yards in Chicago, Kansas City, St. Louis and Memphis will finally be able to leave their trailers and containers on railcars for the entirety of the move. This time and cost savings will help U.S. intermodal traffic grow over the next decade.

We only need to look north to Canada to see the benefits of a true Transcontinental railroad, where Canadian National and Canadian Pacific have both demonstrated the benefits of keeping railcars on a single line between their country's largest markets. The UP and NS merger will bring those benefits to America, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for taking the time to consider our perspective.

Sincerely,

Scott Harris

We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Grupo Calidra has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

CALIFORNIA TRANSIT SERVICES

September 29, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, California Transit Services writes to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company relies on efficient, reliable, and cost-effective rail service to meet our customers' needs and ensure the safe, timely delivery of our products nationwide. At California Transit Services, we transport oleochemicals and food-grade oils to markets across the country. The American freight rail network is a vital part of our supply chain, enabling us to move large volumes effectively and sustainably. We recognize the importance of rail to our employees, our products, and our nation's economy. We also see firsthand how these rail networks require new investments and commitments for growth and innovation, so California Transit Services can have a promising future.

We believe that the proposed merger will improve competition and bring significant benefits to Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We recognize that regulatory review is a crucial part of this process, and we urge the relevant authorities to thoughtfully consider the positive impact this merger will have on businesses like ours and the wider economy.

Thank you for considering our perspective. We look forward to ongoing partnership and improved service resulting from this merger.

Sincerely,

Allan Jara

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,
As a long-term customer of both the Union Pacific and Norfolk Southern, Carbon Partners Inc. ("CPI") is writing to express our strong support for the proposed merger between these two great Class I railroads.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our producers / consumers and ensure the safe, timely delivery of our products across the country. At CPI, we transport thermal and metallurgical grade coals to markets across the country as well as internationally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that CPI has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to a more diverse customer base, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Yours sincerely

Cedar Grove Warehouse Inc.

September 19, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, Cedar Grove Warehouse, Inc., and Cedar Grove Logistics, LLC, strongly supports the proposed merger with Norfolk Southern.

At Cedar Grove Warehouse, Inc and Cedar Grove Logistics, LLC, we provide a network of food grade cold storage facilities, and utilize railroad owned assets as well as a fleet of our own refrigerated railcars. Together we move our nation's food across the country, not only to feed America, but also out to the ports to feed the world. The smooth, consistent operation of freight rail service across the country benefits us all as it forms the backbone of our nation's supply chain. The extension of the Union Pacific's reach from coast to coast, by expanding their freight rail network, will enable us to move products sustainably and even more efficiently. This, while supporting great paying American jobs and economic growth.

We believe that the proposed merger will yield significant benefits for Union Pacific's supplier partners, like ourselves, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We truly believe our own business will grow as the company's supply demands expand as a result of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact supply schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology and equipment, further improving service quality, capacity and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Regulatory review is an important part of this process and should not be overlooked. We encourage the relevant authorities to carefully consider the positive impact this merger will have on supplier partners like us and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued growth, innovation and expanded partnership that this merger will bring.

Sincerely,

Andrew R. Selk

Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping building materials and lumber, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My Business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific-Norfolk Souther merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Carter Smith

CENTRAL VALLEY AG

September 24, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Central Valley Ag Cooperative (CVA) of York, Nebraska is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our grain producers/owners in Kansas, Nebraska, and Iowa and ensure the safe, timely delivery of our products across the country. At CVA, we transport corn, soybeans, wheat, and grain sorghum as well as import crop nutrients for crop production. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that the proposed merger will enhance Union Pacific's market position and yield significant benefits for customers like CVA, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.

CENTRAL VALLEY AG

- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to provide additional markets for our existing customers.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective.

Sincerely,

Jeff Bechard

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Central Valley Bean Cooperative is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers / consumers and ensure the safe, timely delivery of our products across the country. At Central Valley Bean Coop, we ship edible beans to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our customers, our growers, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that CVB has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific users like us, including:

- Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to our customers faster with no financial impact.
- Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration. We look forward to the continued partnership and enhanced service that this merger will bring.

Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

We are writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Tulsa Ports depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers at both the Tulsa Port of Catoosa, where the South Kansas & Oklahoma Railroad interfaces with Union Pacific to directly serve our customers, and at the Tulsa Port of Inola where the Verdigris Southern Railroad connects the industrial park to the Union Pacific network. Our customers transport steel coils and structural steel, soybeans, wheat, fertilizer, asphalt, market pulp, lumber and more by rail, and the Union Pacific Railroad is a crucial partner. The American freight rail network is a critical component of our supply chain allowing us to move large volumes efficiently and sustainably. Tulsa Ports understand the importance of rail to our industrial park tenants, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like Tulsa Ports, including improved service reliability, reduced transit times, increased investment, and expanded reach. We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

David Yarbrough, PE

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

On behalf of CJ Bio America, a leading producer of amino acids and sustainable bio-based solutions located in Fort Dodge, Iowa, I am writing to express our strong support for the proposed merger between Union Pacific Railroad and Norfolk Southern Railway.

As a manufacturer deeply reliant on efficient freight transportation, we recognize that the current rail system faces logistical challenges—ranging from inconsistent service schedules and limited network interoperability to congestion at key transfer points. These inefficiencies disrupt supply chains, delay deliveries, and increase operational costs for businesses like mine.

The merger between Union Pacific and Norfolk Southern offers a unique opportunity to address these deficiencies by creating a more unified and responsive rail network. A consolidated system would enhance coast-to-coast connectivity, reduce handoffs between carriers, and streamline routing—resulting in faster transit times and improved reliability. It would also allow for better coordination of assets, more flexible scheduling, and increased investment in infrastructure upgrades and digital technologies.

For CJ Bio America, these improvements would translate into greater supply chain stability, reduced transportation costs, expanded reach, and improved service to our customers across North America. Additionally, shifting more freight from road to rail through an optimized network supports our sustainability goals by lowering emissions and reducing highway congestion.

We ask that you consider the long-term economic, operational, and environmental benefits of this merger. It can strengthen American industry and deliver meaningful progress for communities across the Midwest and beyond.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, we at Clearfield Recycling want to share our strong support for the proposed merger with Norfolk Southern.

Rail service is more than just a mode of transportation for us, it's a lifeline. Our business depends on reliable, efficient, and cost-effective freight rail to deliver recyclable materials including but not limited to steel and other ferrous and nonferrous metals that are the building blocks to our infrastructure and keys to growth as a nation. The American freight rail network plays a vital role in our supply chain, helping us move large volumes safely and sustainably.

We've built our operations around the trust we place in Union Pacific, and we've seen firsthand how important continued investment and innovation are to keeping that trust strong. That's why we believe this merger is a smart and forward-looking move—not just for the railroads involved, but for businesses like ours that rely on them every day.

We're particularly excited about the potential benefits this merger could bring:

- **More Reliable Service**: A unified network means fewer handoffs and more direct routes, reducing delays and disruptions.
- **Faster Deliveries**: Streamlined operations could shave days off transit times, helping us serve our customers more quickly.
- **Stronger Infrastructure**: A transcontinental railroad will be better positioned to invest in technology, equipment, and safety—improving service quality and capacity.
- **Wider Reach**: Access to a broader geographic footprint will help us grow and reach new markets.

We understand that regulatory review is a key part of this process, and we encourage the relevant authorities to consider the positive impact this merger could ha

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers/partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more Customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Cody Group Inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Cody Group Inc, we transport petroleum products to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Cody Group Inc has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhance service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Cogent Energy Solutions, LLC ("**Cogent**") is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of friends across the border in Mexico and ensure the safe, timely delivery of our products across the United States and into Mexico. At Cogent, we transport hydrocarbons (e.g. gasoline, diesel, naphtha, ethanol and others to border markets, and many times across the border. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Cogent has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific Partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Reduced Costs:** Having throughput versus Rule 11 rates, plus reduced transit times will allow us to broaden our markets and lanes, thus expanding our overall business.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Letter of Support for the Proposed Union Pacific–Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Union Pacific, Cole Distributing Company is pleased to voice our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our business relies heavily on dependable, efficient, and cost-effective rail transportation to meet the needs of our customers and ensure timely delivery of our products nationwide. At Cole Distributing, we ship energy materials to markets across the United States and Rail service could play an essential role in our supply chain—supporting our workforce, our customers, and our ability to compete in both domestic and global markets. We recognize the importance of continuous investment in rail infrastructure to sustain economic growth and innovation for the future.

We believe this merger represents a positive step forward for the freight rail industry and for businesses like ours. The combined Union Pacific–Norfolk Southern network will provide meaningful improvements that include:

- **Greater Service Reliability**: A unified system will create more direct routes and operational flexibility, reducing congestion and minimizing service interruptions.
- **Shorter Transit Times**: Eliminating interchanges will streamline shipments, cutting days from delivery schedules and helping us better serve our customers.
- **Enhanced Investment** Opportunities: A larger, more efficient transcontinental network will be better positioned to invest in infrastructure, technology, and safety initiatives.
- **Expanded Market Reach**: The merged system will give our company access to a wider range of destinations and new customer opportunities.

We understand that thorough regulatory review is essential, and we respectfully urge the Surface Transportation Board to give full consideration to the significant benefits this merger will bring to shippers, consumers, and the national economy.

COLE

CORNERSTONE AG

CORNERSTONE SYSTEMS

September 25, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

At Cornerstone Systems, we've spent nearly three decades helping our customers solve complex logistics challenges with dependable, cost-effective transportation solutions. As a full-service, employee-owned 3PL, we specialize in intermodal, boxcar, truck brokerage, and railcar consolidation—moving freight across North America with precision and care.

Our long-standing partnership with Union Pacific has been instrumental in our ability to deliver on that promise. That's why we're writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

We believe this merger represents a strategic opportunity to strengthen the freight rail network in ways that directly benefit shippers like us. A transcontinental railroad would allow for more seamless service across regions, reducing transit times and minimizing handoffs. That kind of efficiency isn't just good for business—it's essential for maintaining supply chain reliability in a competitive and fast-moving market.

Beyond operational improvements, we see this merger as a catalyst for broader industrial growth. Rail is a cornerstone of American infrastructure, and a unified network would be better positioned to invest in the technology, equipment, and capacity needed to support the evolving needs of manufacturers, retailers, and consumers. It also enhances freight security—an increasingly important factor as supply chains become more complex and risk-sensitive.

At Cornerstone, we compete directly with over-the-road trucking, and rail is a vital part of how we offer scalable, sustainable solutions. The ability to access a broader geographic footprint, coupled with improved service reliability, would allow us to better serve our existing customers and reach new ones.

We understand that regulatory review is a critical part of this process, and we appreciate the thoughtful consideration that goes into evaluating a merger of this scale. From our perspective, this combination has the potential to raise the bar for performance, innovation, and value across the freight rail industry.

CORNERSTONE SYSTEMS

Thank you for considering our perspective. We look forward to continuing our partnership with Union Pacific and to the enhanced service and opportunities this merger could bring.

Sincerely,

Tim Clay

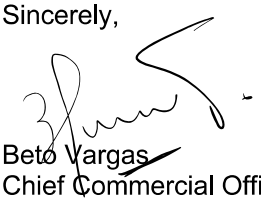
We understand the importance of rail to our employees, our products, and the economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Crossdock has a bright future.



We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones facilitating conversion from truck to rail.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Beto Vargas

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Crossroads Cooperative Assn, is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers/consumers and ensure the safe, timely delivery of our products across the country. At Crossroads Coop, we transport bulk agricultural commodities of all kinds, coast to coast. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Crossroads Coop has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific, and their shipper partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more agricultural end users, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Mike Rowan

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW Washington, DC 20423

Dear Chairman Fuchs,

I'm writing to express our company's support for the proposed merger between Union Pacific and Norfolk Southern.

Cyclyx International, LLC (along with its affiliates, "Cyclyx") depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products. Our company converts post-use plastic waste into high-quality feedstock for both mechanical and advanced recycling applications. Our customers are multinational chemical companies that further process the materials and deliver them to markets around the world, often by rail.

The American freight rail network is a critical component of our supply chain, allowing our customers to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so Cyclyx and other companies like ours have a bright future.

We believe the proposed merger will yield benefits for those, like us, who do business with Union Pacific. Those benefits include improved service reliability, reduced transit times, and expanded reach.

Regulatory review is an important part of this process, and we encourage the relevant authorities to consider the positive impact the merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective.
Sincerely,

Walter Sopp

We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments, for growth and innovation, so that Dirt Rocks Construction Industry Solutions, LLC, has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific Customers like us, including:

Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Diversified Entities LLS is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Diversified, we transport agricultural goods to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Diversified has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

DMA
DIVERSIFIED METALS & ALLOYS, LLC.

September 26, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Diversified Metals & Alloys LLC (DMA) is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

DMA depends on a reliable and cost-effective rail service to meet the needs of our key customer to ensure the safe and timely delivery of our product to them. DMA provides electrolytic manganese metal which is a critical product for a U.S. government agency. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently at a competitive cost. Rail transport is essential for the delivery of our material and for our national economy. Rail networks need new investment for growth and innovation to allow companies like DMA to continue to grow.

DMA believes this proposed merger should enhance competition and yield significant benefits for Union Pacific customers like us, to include improved service reliability with more direct routes, reduced transit time by eliminating interchanges and increased investment for improved infrastructure, equipment and technology.

DMA understands that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on small businesses like ours and the broader economy.

DMA appreciates your consideration of our perspective and look forward to the enhanced service this merger will bring.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Ronald Campbell

Re: Support for the Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Drax is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the southern part of the country. At Drax, we transport wood pellets from our various southern plants to coastal ports and ultimately, to our global customers. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

· Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

· Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.

· Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

· Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Dun Transportation & Stringing, Inc. ("Dun Transportation") is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our oil and gas infrastructure customers and ensure the safe, timely delivery of our products across the country. At Dun Transportation, we transport large diameter steel pipe for oil and natural gas pipelines to markets all over the country! The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that our company and our country has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partner's like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.
- **Extensive History:** The history we have built with Union Pacific has given them an extensive knowledge of our industry and our needs. The merger would streamline the use of these new lanes.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

DUNCAN & SON LINES

August 26, 2025

As an 83-year-old trucking company, we have seen dramatic changes in the logistics industry over the years and the creation of a seamless coast to coast rail carrier would be one more step towards improving the transportation infrastructure. We support the additional movement of goods by rail across the country while still maintaining a strong truck network for the final delivery miles. The potential improvement in transit times, and reduced transportation costs, across the US via a nationwide rail service is better for supply chains and consumers. We support the proposed Union Pacific - Norfolk Southern merger as the next phase of service improvements in the movement of goods within the US.

Dear Chairman Fuchs,

As a customer of Union Pacific, EarthSide is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our industrial hemp across the country. At **EarthSide**, we move large volumes of agricultural biomass and hemp-based raw materials to markets nationwide—and soon to partners around the world.

The American freight rail network is a vital part of our supply chain, allowing us to ship substantial volumes efficiently, sustainably, and at a scale no other transportation method can match.

We understand how important rail is to our employees, our products, and the broader U.S. economy. We also recognize the need for continued investment and a renewed focus on growth, modernization, and innovation across the rail system. These improvements are essential not only for national progress but also for ensuring that **EarthSide** continues to expand and lead in the years ahead.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.

At Empire Mining Co. LLC, we transport industrial minerals to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Empire Mining Co. LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and Empire Mining Co. LLC, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

David Hornsby

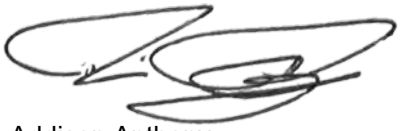
Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, EMTEK Matting Solutions is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

When large projects necessitate that we reposition our rental fleet of access matting across the country, we rely on rail to make that move as efficient and cost-effective as possible. Utilizing rail allows us to move our product in a volume that isn't economically feasible by flatbed.



We believe that the proposed merger will yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver our product to the jobsite faster. Our projects usually operate on tight timelines, so reduced transit times would make transporting our product via rail a more attractive option for some of our shorter notice projects.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones. Having a fully integrated East-West network would help us service the entire country via rail (when applicable) with minimal confusion and headaches.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-term customer of Union Pacific, MHF Services, an Energy*Solutions* Company (MHF/ES) is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely transportation of our freight across the country. At MHF/ES, we transport a wide variety of environmentally sensitive commodities to destinations both domestic and international. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the important role rail service plays in our overall effort to bring the highest quality logistics services to our clients and in doing so support our company, its employees, and our national economy. We also understand first-hand how these rail networks need new investments and new commitments for growth and innovation, and we feel that this merger will bring added opportunities for that investment and service improvement.

We believe that the proposed merger will present many opportunities for significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination is expected to reduce transit times, enabling us to reduce fleet sizes and maximize efficient use of our dedicated railcar fleet.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger could have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger should bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Environmental Rail Solutions, Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Environmental Rail Solutions, we transport hazardous and non-hazardous soils to disposal facilities all over the United States. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably, and most importantly, safely. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Environmental Rail Solutions has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to transport our waste safely, efficiently, and faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Farmers Cooperative

September 24, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Farmers Cooperative of Dorchester, NE is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our 5,000+ producers & stockholders, and end-users and ensure the safe, timely delivery of our products across the country. At Famers Cooperative, we ship over 20,000 carloads annually of corn, soybeans, wheat, milo and food grade specialty commodities to markets across the nation, Mexico; along with PNW and Gulf ports to satisfy demand for the rest of the world.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our owners, our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments; and new commitments for growth and innovation, so that Farmers Cooperative has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers and end markets, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Farmers Cooperative

Although there are some concerns about the eventual outcome from this merger, we foresee the positives greatly outweighing the potential negatives for Farmers Cooperative.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

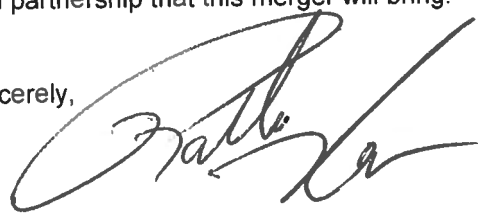
Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, Farmers Rice Milling Company strongly supports the proposed merger with Norfolk Southern.

At Farmers Rice Milling Company, we provide rice products to Mexico and throughout the United States, which are essential to the safe and smooth operation of freight rail service across the country. The American freight rail network is the backbone of our operations, enabling us to move products sustainably and efficiently while supporting jobs and economic growth.



We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand as a result of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact supply schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology and equipment, further improving service quality, capacity and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on suppliers like us and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Fitzgerald Trucking and Transloading is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Fitzgerald Trucking, we transport cement, fly ash, and other cementitious products for construction, paving and buildings to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Fitzgerald Trucking has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Joey Fitzgerald

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific and Norfolk Southern, the FLASH Family of Companies is writing to express our strong support for the proposed merger between these entities.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers across the many industries we serve. An enhanced rail network, with a merger between the UP and NS will further ensure the safe, timely delivery of our products across the country. The FLASH Family of Companies includes a trucking and transloading service company, along with a sand mine and aggregate company, not only moves our products by rail but also services many industries that move aggregate materials by rail across the US and Mexico. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so the FLASH Family of Companies can succeed and continue into the next generations of our family business.

We believe the proposed merger will enhance competition and yield significant benefits for Union Pacific customers and partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times. This will enable us to deliver more goods to more customers faster and allow our customers to do the same.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones. We can see a handful of excellent opportunities that will open for our businesses if this merger is successful.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

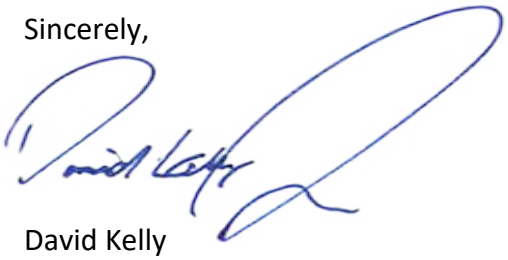
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Fondomonte California, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products. At Fondomonte, we transport agricultural goods to markets within the United States as well as the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Fondomonte and moreover the Agri-Business sector has a bright future.



We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

FOX LUMBER SALES, INC.

September 24, 2025

The Honorable Patrick J. Fuchs
Chairman Surface Transportation Board
395 E Street SW Washington, DC 20423

Subject: **Comments on Union Pacific and Norfolk Southern Merger**

Dear Chairman Fuchs:

As a customer shipping lumber products, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.
My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger appears to have a strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology.
At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.
Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.
I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Fox Lumber Sales, Inc.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Frontier Carbon Solutions ("Frontier") is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. Our company focuses on developing innovative solutions that enable freight customers to reduce their carbon footprint while maintaining efficient, reliable transportation. Frontier depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure safe, timely delivery across the country.

At Frontier, we specialize in decarbonization services and solutions, including CO_2 transportation and geologic sequestration, serving industrial emitters along Union Pacific's rail system. Our services are designed specifically for situations where CO_2 delivery via pipeline is not feasible, making rail transportation the critical link in the carbon capture and storage value chain. This collaboration represents a vital step forward in sustainable logistics, allowing Union Pacific's customers to meet their environmental goals while benefiting from rail's inherently lower carbon intensity compared to other transportation modes.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail infrastructure to our employees, our services, and our national decarbonization efforts. We also understand firsthand how these rail networks require continued investment and innovation to ensure that companies like Frontier can effectively support the nation's decarbonization goals.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions that could impact critical CO_2 transport schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver CO_2 to our geologic sequestration hub faster and more efficiently.

- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety—all essential for handling specialized CO_2 transportation.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve industrial emitters across more regions and connect them to additional sequestration sites.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours, the emerging carbon management industry, and the broader economy's decarbonization efforts.

Thank you for your consideration of our perspective. We look forward to continued partnership and the enhanced service capabilities that this merger will bring to support America's climate objectives.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, *General Wax and Candle Co.* is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of clients and ensure the safe, timely delivery of our products across the country. At *General Wax and Candle Co.*, we transport Several different wax formulations used to manufacture candles for households, religious institutions and retailers in markets nationwide and some exports to various regions of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that *General Wax and Candle Co.* has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific *customers* like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to maintain production schedule and deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, *Golden State Hemp* is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Golden State Hemp relies heavily on strong, affordable rail service to keep our industrial hemp moving across the country. Rail allows us to ship large volumes efficiently and on time, making it a key part of our supply chain.

We also recognize the need for continued improvements and investment in the rail network so it can support future growth—for our company, our customers, and the industries that depend on it.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

September 26th, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longstanding customer of Union Pacific, **Goya Foods, Inc.** writes to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Rail transportation is a critical component of our business — enabling us to deliver high-quality food products efficiently, reliably, and cost-effectively to customers across the United States and international markets. The strength and competitiveness of our supply chain, and by extension the broader food distribution network, rely on a modern, resilient rail system capable of meeting evolving market demands.

We believe this merger represents a forward-looking investment in that future. The combined network would deliver clear and measurable benefits to shippers like Goya Foods, including:

- **Greater Service Reliability:** More direct routes and enhanced network flexibility, reducing the risk of service disruptions.
- **Faster Transit Times:** Elimination of interchange delays, enabling more predictable and timely deliveries.
- **Enhanced Investment:** A stronger platform for infrastructure, technology, and equipment upgrades that improve capacity, safety, and performance.
- **Expanded Reach:** Broader geographic access that supports growth into new markets and improves service to existing customers.

We recognize the importance of a thorough regulatory review and are confident the Board will see the significant value this combination offers — not only to individual shippers but also to the strength and future competitiveness of the U.S. freight rail system.

Thank you for your consideration. We look forward to the enhanced service and expanded opportunities this merger will bring.

Sincerely,

Peter Unanue,
Goya Foods, Inc.

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

On behalf of GPOD of Idaho, a longstanding customer of Union Pacific, I write to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

GPOD of Idaho depends on the American freight rail network to ensure the safe, timely, and efficient delivery of our fresh-packed Russet Burbank potatoes to markets nationwide, including a substantial volume to the Hunts Point Terminal Market in New York. Rail service is an indispensable component of our supply chain, providing the capacity, sustainability, and reliability necessary to serve our customers and maintain our role in the national food system.

We recognize that the regulatory review of this proposed merger must carefully balance competition, service quality, and the long-term health of the rail industry. Based on our direct experience as a shipper, we believe this transaction will strengthen the freight rail network and produce benefits that are squarely in the public interest. Some of the benefits GPOD sees from this merger are service reliability with a combined network will reduce operational redundancies, provide more direct routing, and decrease the risk of service disruptions. We believe there will also be transit time reductions by eliminating interchanges which will shorten delivery times by several days, improving supply chain efficiency and the reliability of time-sensitive shipments. Also, a unified transcontinental railroad will be better positioned to commit capital toward infrastructure, technology, and equipment, thereby enhancing safety, capacity, and resilience. Lastly with this merger we feel there will be expanded market access. The merger will broaden

GREEN DIAMOND™
PERFORMANCE MATERIALS

ABRASIVE • ROOFING • FOUNDRY SANDS • FILLERS • CONSTRUCTION

September 24th, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping specialty sand to various industry markets, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

As a 100% U.S.-based company, Green Diamond competes directly with materials imported into the United States. Faster, more reliable transportation service, a resilient domestic supply chain, and improved access to the Midwest, Southwest, and East Coast markets are critical to our competitiveness.

The proposed Union Pacific–Norfolk Southern merger has strong potential to support our business by enabling single-line service, offering more direct routes, and expanding each railroad's geographic reach. These improvements would increase transportation options, encourage infrastructure investment, and modernize the rail network — all of which are essential to strengthening American manufacturing and supply chains. At the same time, it is important that these benefits are delivered in a way that supports long-term safety, sustainability, and fair access for customers. We trust the Surface Transportation Board will ensure that the final outcome delivers these broader public benefits, and we encourage support for this merger.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in it's consideration of the proposed transaction.

Thank you for your prompt attention to this matter.

Sincerely,

Brian Rebuck Jr.
President

GREY POINT SYSTEMS, LLC
330 S Second Ave, Suite 200 #1519
Minneapolis, MN 55401
11-13-2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Grey Point Systems, LLC is writing to offer our strong support for the proposed merger between Union Pacific and Norfolk Southern. As a Minnesota-based logistics and industrial development firm specializing in rail-served site evaluation, freight optimization, and transload project development, our business depends on a freight rail network that is reliable, efficient, and capable of supporting long-term investment across the regions we serve.

Our work centers on aligning manufacturers, agricultural shippers, and industrial end users with the rail infrastructure that allows them to grow. A resilient, high-capacity rail system is fundamental to America's industrial competitiveness, and the proposed Union Pacific–Norfolk Southern combination represents an opportunity to strengthen that system in ways that benefit both current and future rail-served enterprises.

From our perspective, the merger stands to deliver several meaningful advantages:

- Greater Network Fluidity and Reliability

A combined system would reduce interchanges, streamline routing, and enhance operational coordination across a transcontinental footprint. For industries reliant on rail—agriculture, manufacturing, energy, construction materials—these improvements translate directly into lower risk, fewer delays, and smoother supply chains.

- Improved Transit Times and Market Reach

The ability to ship across a unified western-to-eastern network opens the door to faster transit times and more competitive access to both domestic and export markets. For businesses evaluating new sites or expansions, an integrated network provides stronger value propositions and broader geographic optionality.

- Increased Infrastructure and Technology Investment

A larger, more financially resilient carrier will have the resources to invest in track capacity, terminals, modernized locomotives, and advanced digital tools. These improvements compound over time, raising service quality and supporting the continued growth of rail-oriented industrial development.

- Enhanced Opportunities for Rural and Industrial Communities

Projects like transload hubs, industrial parks, rail-served ag processing, and distribution facilities rely on predictable rail service. A strengthened network will encourage new capital investment and support the kind of long-term industrial growth that brings jobs, tax base, and opportunity to local communities.

Grey Point Systems supports robust regulatory review, and we encourage the Board to evaluate this proposal with both the economic and operational benefits in mind. From our vantage point as a firm working closely with railroads, shippers, and industrial developers, this merger has the potential to create a safer, more reliable, more competitive rail network that better serves American industries.

Thank you for your consideration of our perspective.

Sincerely,

Nick Jackson

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Haztrac, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our clients and ensure the safe, timely delivery of our products across the country. At Haztrac, LLC, we transport Petroleum Products to markets generally on the West Coast. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Haztrac, LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more clients, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a valued customer of Union Pacific, High Performance Services, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company relies on dependable, efficient, and cost-effective rail service to meet the needs of our clients and ensure the safe and timely movement of essential materials across the country. At High Performance Services, we specialize in providing logistics and performance-driven supply chain solutions that often depend on rail transportation to move industrial materials, manufactured products, and project freight to destinations nationwide. Freight rail plays a critical role in our operations—helping us serve our customers reliably, reduce environmental impact, and to maintain our competitive edge.

We believe that the proposed merger will enhance service quality and network efficiency in ways that directly benefit shippers like us. Specifically, we anticipate the following advantages:

- **Improved Service Reliability:** A unified network will allow for more consistent schedules and fewer handoffs, reducing delays and improving supply chain predictability.
- **Reduced Transit Times:** Streamlined routes between major regions will shorten delivery cycles, helping us better meet our customers' expectations.
- **Increased Investment:** The merged railroad will have greater capacity to invest in advanced technology, infrastructure, and equipment—enhancing safety, sustainability, and long-term competitiveness.
- **Expanded Market Reach:** Access to a broader, coast-to-coast rail network will help us reach new markets and serve our customers more efficiently.

We appreciate the importance of the Surface Transportation Board's review process and trust that the Board will recognize how this merger can strengthen the national rail system, promote innovation, and benefit American businesses and consumers alike.

Thank you for your thoughtful consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Lazaro Alberto

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Hiller Carbon, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of EAF Steel and Industrial Customers and ensure the safe, timely delivery of our products across the country. At Hiller Carbon, LLC., we transport metallurgical coal, anthracite coal, petroleum coke and other specialty graphite materials to the domestic and international markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Hiller Carbon, LLC. has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and suppliers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more locations, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

October 21, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for the Proposed Union Pacific–Norfolk Southern Merger

Dear Chairman Fuchs,

On behalf of HOBO Renewable Diesel LLC, I write to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. HOBO is a Houston-based renewable fuels company, and a long-standing Union Pacific customer. Our operations rely on dependable, efficient rail service to move renewable diesel feedstocks and finished product to markets across the country.

Rail is a critical backbone of our supply chain—enabling safe, economical, and lower-emissions transport for high-volume shipments. In today's evolving energy landscape, a resilient and better-connected rail network directly supports our ability to meet customer demand, maintain cost discipline, and advance our environmental commitments.

We believe the proposed combination will strengthen national freight connectivity and deliver practical benefits to shippers like us, including:

• Improved service reliability: More direct routing options and better network fluidity reduce interchange exposure and lower the risk of disruptions.
• Faster transit times: Streamlined end-to-end movements shorten cycle times, helping us meet

contractual delivery windows more consistently.
• Greater investment capacity: A unified system is better positioned to invest in infrastructure, technology, and equipment that enhance safety, capacity, and efficiency.
• Expanded market reach: Broader geographic coverage enables us to reach new customers and optimize lanes across key energy and industrial corridors.

We recognize the importance of the Board's review process and encourage careful consideration of the positive, system-wide impacts this merger can bring for shippers, workers, and the broader economy. Strengthening the nation's rail network will promote innovation, competitiveness, and long-term sustainability.

Thank you for your consideration of our perspective. We value our relationship with Union Pacific and look forward to the enhanced service and network benefits anticipated from this transaction.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Avondale Global Gateway, LLC, a subsidiary of Host Terminals, LLC, is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Avondale Global Gateway, LLC, we unload products from vessels such as steel, aluminum, copper, wood pulp and other breakbulk cargoes that are transported from all over the globe and delivered to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, because inland connectivity is crucial not just for us, but for US Ports in general.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers with improved efficiencies.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Hub Group

September 22, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-term provider of intermodal solutions and a substantial customer of both Union Pacific and Norfolk Southern, Hub Group, Inc. (Nasdaq: HUBG) writes to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Hub Group was founded over 50 years ago in Illinois as a family-owned intermodal provider and has grown into a publicly traded company offering comprehensive transportation and logistics management solutions to shippers across a wide range of industries. As we have grown to approximately $4 billion in revenue and 6,000 employees, intermodal freight solutions have remained our core service offering.

Hub Group owns over 50,000 intermodal containers that it uses to provide cost-effective, reliable, and fuel-efficient Intermodal freight transportation to thousands of intermodal shippers in industries such as consumer products, retail, durable goods, automotive, and food and beverage. For several years Hub Group has partnered with Union Pacific in the west and Norfolk Southern in the east to bring the many benefits of intermodal transportation to our customers. We believe that the formation of America's first transcontinental railroad through the merger of Union Pacific and Norfolk Southern will accelerate the full realization of the benefits of intermodal transportation for our customers and the United States economy.

The American freight rail network is a critical component of Hub Group's service offerings and of our customers' supply chains, allowing us to serve shippers by moving

large freight volumes efficiently and sustainably. As manufacturing in the United States further expands it is critical to have the reliable, efficient, and cost-effective freight rail service and offerings that Union Pacific and Norfolk Southern would more effectively provide as a combined company. Post-merger, Union Pacific and an integrated transcontinental railroad will provide significant competitive benefits, including:

- **Eliminating Interchanges:** Resulting in improved fluidity, shorter transit times for shippers and their end customers, enhanced fuel efficiency, and better asset utilization.
- **Improved Service Reliability:** Offering more direct routes and greater flexibility, thereby minimizing the risk of service disruptions.
- **Increased Investment:** Being better positioned to effectively invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** A broader, connected geographic footprint will allow Hub Group to better serve our customers and reach new ones.

We recognize that the STB's regulatory review is an important part of the merger process, and we encourage the STB to carefully consider the positive impact this merger will have on the United States economy, shippers across several industries, and Hub Group and its employees.

Thank you for your consideration of Hub Group's perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Phillip D. Yeager
President, Chief Executive Officer and Vice Chairman

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Union Pacific, I.C.E. Service Group, Inc.is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, dependable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At I.C.E. Service Group, Inc., we transport hazardous commodities to markets and disposal facilities nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes safely, efficiently, and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that I.C.E. Service Group, Inc., has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more material to its destination faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Gus Chirgott

IceCap Cold Storage
1720 16th Ave
Council Bluffs, IA 51501
www.icecapcoldstorage.com

September 30, 2025

TO WHOM IT MAY CONCERN:

I'm writing today to express my support as a cold storage business owner that uses rail for the pending merger of Union Pacific and Norfolk Southern.

Our 487,000 square foot facility, served by rail is located in Council Bluffs IA, adjacent to a Union Pacific rail yard and we'll start shipping pork on rail for a customer, Tyson Foods starting in November, 2025. We've been preparing for this for quite some time.

We're especially excited about shipping what is produced in the heart of America (pork, beef and chicken primarily) to the ports and this merger will connect around100 ports across 43 states! This is much easier and faster for one railroad to handle the entire distance vs a transfer.

Please feel free to reach out if any questions.

Thank you,
Monte Froehlich
President, IceCap Cold Storage

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Vantage Oleochemicals, Inc., is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Vantage Oleochemicals, Inc., we manufacture and transport our oleochemicals (stearic, oleic and glycerin) to markets throughout the United States. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Vantage Oleochemicals, Inc., has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more of our customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Maureen Hearne

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Independent Dispatch, Inc. (IDI) is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, IDI competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

Independent Dispatch Inc.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Independent Salt is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers. At Independent Salt, we rely on Union Pacific to transport rock salt to markets across the Midwest. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation. These investments will provide long-term benefits for not only us but to our growing base of customers as well.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

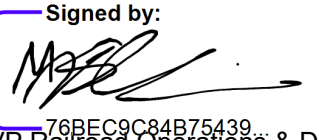
Dear Chairman Fuchs,

As a long standing shortline partner of Union Pacific and Norfolk Southern, Industrial Rail Group is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. We operate in 36 different states across the U.S. and rely on Union Pacific to provide efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of goods.

We believe that the proposed merger will enhance competition and yield significant benefits for shortline partners like us, including:

- **Improved Service:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, allowing rail to be an even more competitive solution vs other transportation alternatives.
- **Rail accessibility:** Merger would allow customers to easily develop rail solutions and avoid costly and time-consuming interchanges.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.



Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

INFINITE™
RECYCLED TECHNOLOGIES

October 9, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for the Proposed Merger Between Union Pacific and Norfolk Southern

Dear Chairman Fuchs,

On behalf of **Infinite Recycled Technologies**, I am writing to express our strong support for the proposed merger between **Union Pacific** and **Norfolk Southern**.

As a longtime Union Pacific customer, Infinite Recycled Technologies relies on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products nationwide. Our company transports recycled glass, also known as cullet, to markets across the United States. The American freight rail network is a vital part of our supply chain, allowing us to move large volumes of material efficiently and sustainably.

We recognize the essential role rail transportation plays in supporting our employees, customers, and the broader national economy. We also understand the importance of continued investment in rail infrastructure to ensure future growth, innovation, and sustainability.

We believe that this merger will enhance competition and deliver substantial benefits for both Union Pacific and businesses like ours, including:

- **Improved Service Reliability:** A unified network will create more direct routes and greater operational flexibility, reducing the risk of service disruptions.
- **Reduced Transit Times:** Eliminating interchanges between carriers will shorten transit times, enabling us to serve our customers more quickly and efficiently.
- **Increased Investment:** A transcontinental system will be better positioned to invest in infrastructure, technology, and equipment—enhancing service quality, capacity, and safety.
- **Expanded Market Reach:** A broader, integrated network will allow us to reach new markets and better serve our existing customers.

We appreciate the critical role of the Surface Transportation Board in evaluating this proposal and respectfully urge you to consider the significant positive impacts this merger will have on small businesses like ours and the overall U.S. economy.

Thank you for your consideration. We look forward to the continued partnership and improved service opportunities this merger will bring.

Sincerely,

Patrick Elmore
President

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, Integrated Proteins strongly supports the proposed merger with Norfolk Southern.

At Integrated Proteins, we provide Protein meal for Diamond Pet Food and a few other pet food companies across the United States and Abroad. The American freight rail network is essential for our operations, enabling us to move products sustainably and efficiently while supporting jobs and economic growth across many communities throughout the United States.

We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can meet demand while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand because of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact supply schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology and equipment, further improving service quality, capacity and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD 36873

Dear Chairman Fuchs:

As the Vice President – Environmental, Health, Safety & Security of International-Matex Tank Terminals LLC, I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern.

Freight rail is a cornerstone of our state's economy, safely moving the goods that power our industries, support our farmers and connect our communities to markets across the nation and the world. Union Pacific has long been an essential transportation partner for our state, providing efficient, reliable and cost-effective service to businesses large and small. The American freight rail network is not only critical to our economic growth – it is also one of the most sustainable modes of transportation available, helping reduce highway congestion and emissions.

The proposed merger offers a unique opportunity to strengthen this network and deliver tangible benefits for shippers, consumers and communities, including:

- **Improved Service Reliability:** More direct routes and greater operational flexibility will help prevent service disruptions and improve schedule dependability.
- **Reduced Transit Times:** Eliminating certain interchanges will speed the movement of goods, helping our businesses reach customers faster and more competitively.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in modern infrastructure, advanced technology and enhanced safety systems.
- **Expanded Reach:** The broader geographic footprint will open new markets for our state's products and strengthen supply chain resilience.

This merger is about more than just railroads – it's about securing the future of our transportation network, supporting economic development and ensuring American freight rail remains globally competitive.

I respectfully urge the Surface Transportation Board to give full and favorable consideration to this proposal, recognizing the benefits it will bring to our state and the national economy.

Sincerely,

Traci L. Johnson, P.E.
Vice President – Environmental, Health, Safety & Security

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Norfolk Southern, Interstate Waste Services is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our operations and ensure the safe, timely delivery of our services to our customers. At Interstate Waste Services, we transport municipal solid waste from our collection operations across the greater New York, New Jersey and Connecticut region to our landfill operations in eastern Ohio. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our operations and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Interstate Waste Services has a bright future.

We believe that the proposed merger will yield significant benefits for Norfolk Southern partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Iowa Corn Processors, L.C. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Iowa Corn Processors, we transport degermed, debranned dry-milled corn grits, meals and flours to the brewing, ready-to-eat cereals, snack food, batters and breading manufacturers nationwide, as well as exports. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Iowa Corn Processors has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Chris Giguere

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, JET Infrastructure is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company operates fuel infrastructure that supports the movement of sustainable aviation fuel (SAF), renewable diesel (RD), ethanol, and conventional jet fuel across key markets in California and beyond. Reliable, efficient rail service is a critical part of our supply chain, enabling us to move large volumes safely, cost-effectively, and with lower carbon intensity.

We understand firsthand how vital the American freight rail network is to our operations, our employees, and the broader economy. Continued investment and innovation in rail infrastructure are essential to ensuring that companies like JET can grow and meet the evolving needs of the energy transition.

We believe that the proposed merger will enhance competition and deliver meaningful benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.

re: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Jones Wholesales Lumber Co (Jones) and Union Pacific have engaged in business for some time. I am writing to you today to encourage your positive consideration on the proposed merger between Union Pacific and Norfolk Southern.

Jones depends on efficient, reliable, and cost-effective rail service to meet the needs of the markets we serve. In this effort we always attempt to ensure the safe and timely delivery of our products across the country. We transport lumber, engineered wood products and panels via rail to support regional markets (CA, AZ and NV) in the supply of construction materials. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that the proposed merger will enhance this effort and will sustain the critical supply of materials used in new construction, disaster recovery and are critical in the employment of a substantial portion of your national economy.

Union Pacific has been a leading provider through continued reinvestment and a committed focus the provides the following:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Regards,

John M Cencak, President

September 24, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD 36873

Dear Chairman Fuchs:

As President of the Jordan Foster Infrastructure Group, I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern.

Freight rail is a cornerstone of our state's economy, safely moving the goods that power our industries, support our farmers and connect our communities to markets across the nation and the world. Union Pacific has long been an essential transportation partner for our state, providing efficient, reliable and cost-effective service to businesses large and small. The American freight rail network is not only critical to our economic growth – it is also one of the most sustainable modes of transportation available, helping reduce highway congestion and emissions.

The proposed merger offers a unique opportunity to strengthen this network and deliver tangible benefits for shippers, consumers and communities, including:

- **Improved Service Reliability:** More direct routes and greater operational flexibility will help prevent service disruptions and improve schedule dependability.
- **Reduced Transit Times:** Eliminating certain interchanges will speed the movement of goods, helping our businesses reach customers faster and more competitively.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in modern infrastructure, advanced technology and enhanced safety systems.
- **Expanded Reach:** The broader geographic footprint will open new markets for our state's products and strengthen supply chain resilience.

This merger is about more than just railroads – it's about securing the future of our transportation network, supporting economic development and ensuring American freight rail remains globally competitive.

I respectfully urge the Surface Transportation Board to give full and favorable consideration to this proposal, recognizing the benefits it will bring to our state and the national economy.

Sincerely,

John Goodrich

Dear Chairman Fuchs,

As a long-term customer of Union Pacific, Kennedy Rice Mill, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Kennedy Rice Mill, LLC, we transport raw and finished agricultural goods to markets nationwide and then onto the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Kennedy Rice Mill, LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including: Anheuser Busch, Kellogg's, Kellanova, Vigo, Gulf Pacific, Post, and others.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers and consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Kens Foods LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and consumer and ensure the safe, timely delivery of our products across the country. At Kens Foods LLC we transport Soy Oil, Canola Oil, Corn Syrup, Tomato Paste and Pepper Sauce to markets across all of the USA and do a little exporting to other countries. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Kens Foods LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Fran Tarpey

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Key Cooperative is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of Key Cooperative's member owners and customers to ensure the safe, timely delivery of our products across the country. At Key Cooperative, we currently transport corn and soybeans to markets primarily to the West and Southwest. This merger would allow more reliable and efficient access to markets for our products in the East and Southeast. We also bring unit trains of crop nutrients which would benefit from expanded service corridors. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Key Cooperative has reliable and more efficient service far into the future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like Key Cooperative, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more timely and efficiently.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Robinson Nevada Mining Company is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of *our customers* and ensure the safe, timely delivery of our products across the country. At Robinson Nevada Mining Company, We transport copper concentrate to markets nationwide, reaching our customers and key port facilities via rail, with final destinations including Canada, the United States, and major international regions such as Japan, South Korea, and China. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Robinson Nevada Mining Company has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific *partners* like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more *customers*, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

KNICHEL
LOGISTICS

September 4, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Knichel Logistics is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Knichel Logistics competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will reduce transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

On behalf of Chemstar, LLC and Renstar, LLC, I am writing to express our support for the proposed Union Pacific–Norfolk Southern merger.

Our businesses rely heavily on rail-based logistics as the backbone of our supply chain. Chemstar provides logistical and marketing solutions for crude oil, condensate, refined products, blendstocks, chemicals, NGLs, and LPGs, while our affiliate Renstar focuses exclusively on low-carbon fuels such as biodiesel, renewable diesel, and sustainable aviation fuel (SAF).

Rail service is central to our ability to move these products safely, efficiently, and at scale. The reliability and reach of the rail network directly impacts our customers and partners across the U.S. and Canada, especially in New England and the Great Lakes, where rail connectivity is critical.

We believe this merger will deliver important benefits to shippers like us, including:

- Improved service reliability and reduced transit times, which are essential for both conventional and renewable fuels.
- Expanded market reach through stronger rail connectivity, linking origin supply points with key demand centers.
- Greater investment in rail infrastructure and safety, supporting the continued growth of rail-based energy logistics.

Chemstar and Renstar are committed to building a sustainable energy future. To achieve that, we need a strong, resilient rail network that can support both conventional fuels and the rapid scaling of renewables. We respectfully encourage the Board to approve this merger and the service improvements it represents.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Joe Natale
Director
Chemstar, LLC

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, Landwehr Construction, Inc. strongly supports the proposed merger with Norfolk Southern.

At Landwehr Construction, Inc., we provide crane offloading services, which are essential to the safe and smooth operation of freight rail service across the country. The American freight rail network is the backbone of our operations, enabling us to move products sustainably and efficiently while supporting jobs and economic growth.

We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand as a result of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact supply schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Lightle Sand & Construction is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Lightle Sand & Construction, we transport agricultural products, aggregate products, chemicals, crude oil, etc. to markets nationwide and then onto the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Lightle Sand & Construction has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster and more efficiently.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

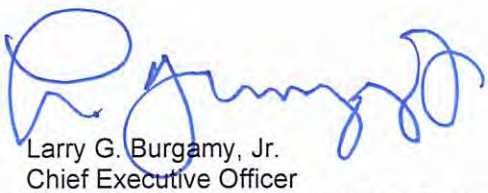
Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of, and contractor to Norfolk Southern, Lincoln Energy Solutions and Lincoln Terminal Company, respectively, are writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our companies depend on efficient, reliable, and cost-effective rail service to meet the needs of our shippers and end-use customers, and to ensure the safe, timely delivery of our products across the country. At Lincoln Energy, we ship large volumes of ethanol and biodiesel to markets across the US, but in particular to destinations in the Southeast. Specifically, in 2024 Lincoln Energy marketed and/or shipped nearly17,000 carloads of ethanol and biodiesel and nearly 16,000 carloads 2025 YTD. At Lincoln Terminal, we own, operate and/or control five rail-to-truck or rail-to-pipe transload facilities in the Southeast that are open to all interested customers. Further, we are working with Norfolk Southern to develop additional transload facilities in other markets and handling other commodities.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Lincoln Energy and Lincoln Terminal have a bright future.



We believe that the proposed merger will yield significant benefits for Norfolk Southern customers and service providers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more renewable fuels to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

LINDSEY & OSBORNE PINE BLUFF, LLC

7660 OLD 12 CROSSROADS

PO BOX 56

CHESTER, AR 72934

September 29, 2025

The Honorable Patrick J. Fuchs

Chairman

Surface Transportation Board

395 E Street SW

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Lindsey & Osborne Pine Bluff, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

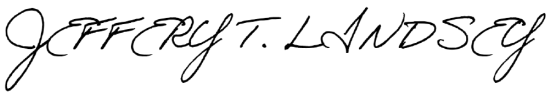
Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers, which include GATX Transportation, CIT, Trinity Rail, Dow Chemical, Equistar Chemical and Union Tank Car. Since we store railcars for private car owners, our customers ship their equipment to markets in the United States, Canada and Mexico. It is imperative to provide safe and timely delivery of the railcars we store to the rail customers across the Western Hemisphere. The American freight rail network is a critical component of our supply chain, allowing us to move our customers railcars efficiently and sustainably. We understand the importance of rail to our employees and the national economy. We also understand firsthand how these rail networks need new investments,

and new commitments for growth and innovation, so that Lindsey & Osborne Pine Bluff, LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for our company and other Union Pacific customers, including:

Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

Reduced Transit Times: Fast delivery of our customers' equipment is critical. By eliminating interchanges where railcars are handed off, the transit time to the end user of the railcars is reduced, allowing more turns of our customers' equipment per year.



Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service this merger will bring.

Sincerely,

Loblaws

September 10, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Loblaws is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Loblaws competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Loblaws

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Logintel is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers, like **Heinz Foods, Laboratorias PISA (Electrolit), G3 Group (spirits)** etc. and ensure the safe, timely delivery of our products across the country. At Logintel, we transport many kinds of products, for example agricultural goods, manufactured products, chemicals, and more to the national and the international markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably.

We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Logintel has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.
- **Best Rates:** This is a result of the combined assets and experience of both companies. We are eager to discuss how we can grow our business with you and the rate improvements once the merger is completed.

L.A. GRAIN

October 3, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime Union Pacific customer and as a former Mayor here in California, I write in strong support of the proposed merger between Union Pacific and Norfolk Southern. I respectfully urge the Surface Transportation Board to give this proposal careful and favorable consideration.

My company, **Los Angeles Harbor Grain Terminal**, is a third-generation, family-owned business and one of the largest agricultural export transloaders on the West Coast. Each year, we export **over 1 billion pounds** of U.S.-grown soybeans, corn, wheat, and other commodities—much of it originating from the Midwest, including points as far east as Ohio, Michigan, and Wisconsin—to key markets in **Asia, the Middle East, and South America**. Our success depends on **timely, reliable, and cost-effective rail service**.

In our experience, the current freight rail structure presents operational inefficiencies, particularly when shipments require interchange between carriers for cross country shipments. This merger represents a real opportunity to improve competition and modernize rail service in ways that benefit exporters like us and the broader U.S. economy. Specifically, we believe the combined UP–NS network would deliver the following benefits:

- **Enhanced Service Reliability** – A unified network that offers more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Quicker Transit Times** – Eliminating redundant interchanges cutting multiple days for long-haul shipments, enhancing our global competitiveness and bringing exports to market faster.
- **Private Sector Infrastructure Investment** – A stronger transcontinental carrier will be positioned to invest in capacity, safety, technology, and infrastructure.
- **Market Development Opportunities** – A more extensive and cohesive network opens new domestic and international market opportunities for US agricultural products.

As a stakeholder who directly contributes to U.S. exports and rural economies, I urge the STB to recognize the real-world benefits this merger would deliver for shippers and the national freight system.

Los Angeles Harbor Grain Terminal, LLC • 2422 E. Sepulveda Blvd., Long Beach, CA 90810 • 562-595-7559

L.A. GRAIN

As a former elected official, I understand that regulatory review is an important part of the process. Weighing public comment and listening to all sides allows you to get a full picture of the implications your decision will have. With that said, I encourage you to carefully consider the positive impact this merger will have on businesses like mine and the broader economy, especially as we strive to better balance international trade and strengthen our nation's economic position in the world.

Thank you for your leadership and thoughtful consideration of this matter. We stand ready to support a future of enhanced freight service and expanded rail capacity.

Washington, DC 20423

Re: Support for the Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Madden Contracting Company, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends upon efficient, reliable, and cost-effective rail service to meet the needs of ourselves and our customers and to ensure the safe and timely delivery of our products into the marketplace. At Madden Contracting, we furnish and deliver crushed stone aggregates and highway paving materials into our markets in Louisiana and Texas. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of the freight rail network to our companies, our marketplace, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Madden Contracting has a bright future.

We believe that the proposed merger will enhance competition, open new sources of supply and yield significant benefits for Union Pacific customers like ourselves including:

(1) Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
(2) Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to our customers faster.
(3) Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
(4) Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, MapleLeaf Distribution Services Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our distribution network and ensure the safe, timely delivery of our products across the country. At MapleLeaf Distribution Services Inc., we transport food, beverage and forest products to markets throughout the Northeast. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that MapleLeaf Distribution Services has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific 3PLs like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more food manufacturers, wholesale distributors, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Letter of Support for the Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Norfolk Southern, I am writing on behalf of **McPherson Oil** (a division of **The McPherson Companies**) to express our full support for the proposed merger between Union Pacific and Norfolk Southern. We are a top distributor in the US for ExxonMobil and share a duty to provide our customers in our assigned territories.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our thousands of customers and to ensure the safe, timely delivery of our products across the country. At The McPherson Companies, we transport oil, grease, diesel exhaust fluid and other critical-to-infrastructure products to markets throughout a territory ranging from the central US across the entire SE region of the country. We serve major industrial customers (steel, paper, drilling, mining, automotive), commercial and state services (ALDOT, MARTA) as well as numerous personal vehicle service locations.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that McPherson and all of our extended customers can continue to grow and prosper well into the future.

We believe that the proposed merger will yield significant benefits for Norfolk Southern customers like ourselves, including:

The McPherson Companies, Inc.
5051 Cardinal Street Trussville, AL 35173
phone 205.661.4400 fax 205.661.4597

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more of our customers more quickly and without fear of product runout or equipment shutdowns.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, **MERASI** is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

At Merasi, our business relies on dependable and cost-efficient rail service to keep products moving safely and on time to customers throughout the country. We specialize in transporting silica sand to Mexico's Foundry and Energy sectors, and the U.S. freight rail system forms the backbone of that supply chain.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Stronger Service Reliability:** A unified rail network creates more direct routing options and added flexibility, which helps reduce the likelihood of service interruptions.
- **Faster Deliveries:** Removing interchange points—where cars are traditionally handed off—cuts multiple days from transit times, allowing us to move goods more quickly and efficiently to customers.
- **Greater Investment Potential:** With a continent-spanning system, there's more capacity to reinvest in infrastructure, modern technology, and upgraded equipment, all of which enhance safety, capacity, and overall service quality.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

MIDWAY CO-OP, INC.

9/26/25

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Union Pacific, Midway Coop is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At *Midway Coop*, we transport wheat, corn, soybeans, and grain sorghum to markets throughout the country and for export across the globe. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that we at Midway Coop have a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Cullen Riner

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Minnesota Soybean Processors is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Minnesota Soybean Processors is a 2200 member cooperative that owns and operates a soybean crush facility and bio-diesel facility in Brewster, Minnesota. The MnSP mission is to provide the maximum value-added return to our investors by combining the latest soybean processing technologies with proven management. The Brewster facility started processing beans in our crushing facility in 2003 with the addition of the Bio-diesel refining facility in 2005. The process all starts with the farmer. Our farmers strive to deliver beans that are high in oil and protein content. Minnesota Soybean Processors goal, along with the assistance of our members, is to provide a high quality feed product for America's producers as well as providing a high quality renewable fuel source.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At MnSP, we transport soybean meal, soybean oil, soybean hulls, biodiesel and glycerin to markets in the United States, Canada and Mexico and across the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our shareholders, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that MnSP has a bright future.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Mode Global is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Mode competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has the potential to yield significant benefits for companies like ours, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD36873

Dear Chairman Fuchs:

As General Manager – ST of Monarch Litho, Inc., I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern. This is important because our New Mexico location serves as both a company presence in the state and a distribution center for our Juarez plants and Montebello headquarters, efficiently handling printed goods and raw materials nationwide.

We believe that the proposed merger will enhance competition and yield significant benefits for all Industries, including freight as:

Improved Service Reliability: More direct routes and greater operational flexibility.

Reduced Transit Times: By eliminating certain interchanges will speed goods.

Increased Investment: This railroad merger will be better positioned to bigger invest in advanced technology and safety infrastructure as well.

I respectfully urge the Surface Transportation Board to give full consideration to this proposal, taking into account the benefits to our State and to our National Economy.

Sincerely,

Guillermo Lopez – General Manager-ST

Mosher Products
ALL ORGANIC WHEAT

Oct, 4, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Organic Elevator on the Union Pacific Railroad, Moshers Organic Grain Co LLC support for the proposed merger between Union Pacific and Norfolk Southern.

Organic grain rail shipping to our customers for organic Flour, Milk and Eggs. Organic customers need to have a steady supply of grain and rail is the most efficient, reliable, and cost-effective service. Trucking cost over 500 miles is costly and not dependable. Rule 11 adds to the cost of shipping from rail company to another railroad. Now most of Moshers Organic customers are on the Union Pacific. Farmers within 300 miles bring organic grain to be loaded on rail to be shipped to the west coast with the merger the east coast. A lot of grain organic or non-organic on the east coast is imported from other counties and not the United States because of Rule 11. If United States in not importing grain this will help with the farm economy. Center part of the United States is the grain belt. A railcar holds 4 and half semi-truck loads. This merger will have a befit to the farmers with lower margin rates along with new flour mills. A WIN WIN. Any time a truck can be taken off our busy highways and replace with a more efficient form of transportation is a win win. Switching from one railroad to another takes time so transit time will be faster.

Sincerely,

Leonard Mosher

CEO
Moshers Organic Grain Co., LLC

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Mountain Reload is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At Mountain Reload we transport a variety of products including steel, lumber, soda ash, perlite, plastics, etc. to markets all over the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. Several of our customers purchase or sell products that requires interchange from NS to UP and vice versa. Eliminating the costly and inefficient interchange, will help our customers and us grow. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Mountain Reload has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers and partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longstanding Union Pacific customer, NAC LPT LLC strongly supports the proposed merger with Norfolk Southern.

Our operations rely on dependable, cost-effective rail service to transport low-level radioactive waste for clients such as the US DOE, EPA, and USACE to licensed sites in the western US. Freight rail is essential for our supply chain—offering efficient, sustainable transportation with the lowest carbon footprint per ton mile. We recognize the need for ongoing investments in rail infrastructure and innovation.

We believe this merger will deliver tangible benefits, including:

Improved Service Reliability: A unified network will provide more direct routes and flexibility, reducing service disruptions.

Shorter Transit Times: Fewer interchanges will speed up delivery, allowing us to serve more customers faster.

Greater Investment: The combined railroad can invest more in infrastructure, technology, and equipment, improving safety and capacity.

Broader Reach: Expanded network access helps us serve existing clients and reach new markets.

We encourage regulators to consider the positive impact this merger could have on our business and the wider economy.

Thank you for considering our perspective. We look forward to enhanced service through this partnership.

Public Record

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

The National Waste & Recycling Association (NWRA) appreciates the opportunity to provide comments on the proposed merger between the Union Pacific Railroad and Norfolk Southern. NWRA is a trade association that represents private-sector waste and recycling companies in the United States, and manufacturers and service providers who do business with those companies. NWRA's members operate in all fifty states and the District of Columbia. NWRA provides safety, education, research, leadership and advocacy expertise to promote the North American waste and recycling industries, and create a climate where members prosper and provide safe, economically sustainable, and environmentally sound services.

As the Association that represents the waste and recycling industry, I want to inform you that our members depend on efficient, reliable, and cost-effective rail service to meet the needs of the nation. The movement of solid waste by rail is a critical part of the nation's environmental infrastructure. It is vital for the health and welfare of the public.

We believe that the proposed merger will enhance competition and yield significant benefits, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling faster delivery to the ultimate disposal site.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like our members

Thank you for your consideration of our perspective.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Our names are Harry K. Neal & Harry J. Griffin, and we serve as Managing Director & President at Neal Brothers Charleston, Inc. As a longstanding customer & vendor of Union Pacific, we are writing to voice our strong support for the proposed merger between Union Pacific and Norfolk Southern.

At Neal Brothers Charleston, Inc., reliable and cost-effective rail transportation is essential to our daily operations. We rely on rail to move industrial products to customers across the country—and in many cases, around the world. The freight rail network is the backbone of our supply chain, and its efficiency directly affects our ability to serve our customers, retain jobs, and grow our business.

We've seen firsthand the critical role Union Pacific plays in supporting industries like ours. But we also recognize the challenges the current rail

infrastructure faces and the need for modernization, innovation, and expanded capacity. That is why we believe this merger represents a step forward.

From our perspective, the combination of Union Pacific and Norfolk Southern stands to bring meaningful benefits, including:

- Improved Service Reliability: A unified network would offer more direct routes, helping us avoid delays caused by interchanges and increase operational predictability.
- Faster Transit Times: By streamlining routes and eliminating handoffs, we can get products to market more quickly and meet the demands of a fast-moving economy.
- Greater Investment in the Network: A stronger, combined railroad would have the resources to invest in advanced technologies and infrastructure, ensuring safer, more efficient operations.
- Expanded Market Reach: With access to a broader geographic footprint, we would be better equipped to serve our current customers and grow into new markets.

We understand that regulatory oversight is a critical part of this process, and we appreciate the Surface Transportation Board's thorough review. We respectfully ask that the Board consider the positive implications this merger could have for businesses like ours and for the national economy.

Thank you for considering our viewpoint. We are excited about the opportunity this merger presents and hopeful for the future of rail service in America.

Sincerely,

Harry K. Neal & Harry J. Griffin

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, New Energy Blue LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At New Energy Blue, we transport renewable biomass feedstocks, biocarbon, and advanced bio-based fuel intermediates to markets nationwide and beyond. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments and new commitments for growth and innovation, so that companies like New Energy Blue have a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers and partners like us, including: improved service reliability, reduced transit times, increased investment in infrastructure and technology, and an expanded geographic reach to better serve customers.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely, James W Foster

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime partner of Union Pacific's, Ocean Network Express Pte. Ltd. ("ONE") through its U.S. agent, Ocean Network Express (North America) Inc., is writing to express its support for the proposed merger between Union Pacific and Norfolk Southern.

We believe that the proposed merger could yield significant benefits for Union Pacific partners like ONE, as well as for our U.S. - based customers by (as an example and not an exclusive list):

- **Reducing Transit Times**: By reducing the number of interchanges where rail cars are handed off, a process which regularly introduces a minimum of 1-2 days of transit delays, the merger has the potential to remove several days delay from existing transit times. This enables ONE and other stakeholders to deliver cargo to U.S. customers more efficiently and reliably.

- **Expanding Service Base**: The resulting improvement in continuity of service and transit times resulting will enhance ONE's ability to reliably serve our existing customer and expand our capacity to serve U.S. customers that require faster, more dependable cargo transportation.

We recognize that regulatory review is an important part of this process and requires thorough evaluation of the impact this merger will have on U.S. businesses and the broader economy. We believe the benefits to the supply chain would be substantial, and we appreciate your consideration of our perspective during your process.

Sincerely,

Tim Walsh

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific and an operator of critical chemical storage and distribution infrastructure in the United States, Odfjell Terminals is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

At Odfjell Terminals, we handle and store bulk liquids — including chemicals, clean petroleum products, and specialty liquids — at our facilities in Houston and Charleston. From these locations, we serve customers across the U.S. and around the world. Reliable and efficient rail service is essential to our operations: it ensures that products can move safely and cost-effectively between ship, storage, and inland markets. The American rail freight network is therefore a cornerstone of both our business and our customers' supply chains.

We believe that the proposed merger will bring meaningful improvements to rail service, which in turn will strengthen Odfjell's ability to support safe, efficient, and sustainable logistics for the chemical industry. In particular, we see benefits in the following areas:

- **Improved Service Reliability**: The combined network will offer more direct service lanes, reducing handoffs and interchange delays that often cause congestion at terminals like ours.
- **Reduced Transit Times**: By removing unnecessary interchanges, the merged network can cut days from delivery schedules, enabling faster product movement and improved supply chain performance for our customers.
- **Expanded Reach**: The broader geographic footprint will allow us to serve inland and East Coast markets more effectively, making our Gulf Coast terminals even more valuable as gateways for U.S. exports.
- **Increased Investment**: With greater scale, the merged railroad will be better positioned to invest in infrastructure, technology, and safety, aligning with our own commitment to safe and sustainable operations.

For Odfjell, these improvements would translate into more efficient tank utilization, greater throughput, and a stronger platform for serving both domestic and international customers. For the broader economy, it would enhance the competitiveness of U.S. chemical producers, exporters, and the industries that rely on them.

We understand the importance of a thorough regulatory review, and we respectfully encourage the Board to weigh the significant benefits this merger can deliver for shippers, terminal operators, and end customers across the country.

OTUS

Thank you for considering our perspective. We look forward to continuing our partnership with Union Pacific — and to the enhanced service capabilities that this merger with Norfolk Southern can bring.

Sincerely,

Brooke Buchanan
Integrated Planning Supervisor
Odfjell Terminals

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,
As a longtime partner of Norfolk Southern, Ohio Pickling & Processing is writing to express our support for the proposed merger between Union Pacific and Norfolk Southern. We operate in North-Western Ohio area, receive and ship material by rail from/to different parts of the US, Canada and Mexico and rely on Norfolk Southern to provide efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of goods.

We believe that the proposed merger will yield significant benefits for partners like us, including:

- Improved Service Reliability: The combined network will offer more direct routes, greater flexibility, minimizing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, allowing rail to be an even more competitive solution vs other transportation alternatives.
- Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.
Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Monday, September 22, 2025

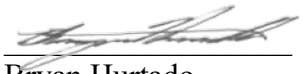
The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

I am writing as a long-time customer of both the Union Pacific and Norfolk Southern to express our company's strong support for the proposed merger between these two railroads.

We here at Oleum Energy Solutions, LLC ("OES") depend upon reliable and cost-effective transportation for our bulk materials that ship throughout the United States. We distribute silica sands and other forms of aggregate to customers in operationally intensive industries, including but not limited Oil and Gas, construction, and manufacturing. Timely, cost-efficient, and safe delivery is paramount to our business and that of our customers. While we have originated materials via truck and barge over the years, rail origination has represented one hundred percent (100%) of our business since 2017. As such, the American freight rail network is core to our foundation.



While we understand the complexity associated with a merger of the UP-NS size, we believe that this transaction will yield notable benefits and synergies, including but not limited to:

- **Increased Investment** – maintaining and improving the "bones" of a massive rail network is an expensive endeavor when done properly. The combined "firepower" of the NS and UP will help to ensure that this infrastructure continues to operate well and scales for the future.
- **Enhanced Reliability** – by combining the NS and UP networks, there will be fewer "handoffs" (i.e., more direct routes), which will, in turn, reduce the risk of service disruption and increase the likelihood of more efficient delivery. This also helps to optimize the utilization of rail assets that we contribute to freight moves, which further lowers our cost of operation.
- **Better Reach:** the larger network of a combined NS and UP provides OES with an improved ability to hit markets into which we have historically be unable to enter.

Again, we very much appreciate the complexities that come with a merger of this size, and we certainly realize that regulatory review is a critical and necessary part of this process; however and for what it's worth, OES as a customer of both railroads can attest to the value we perceive coming from this proposed deal.

Thank you in advance for your consideration of our perspective.

Sincerely,

Bryan Hurtado

Dear Chairman Fuchs,

As a proud supplier to Union Pacific, Omega Morgan strongly supports the proposed merger with Norfolk Southern.

At Omega Morgan, we provide Crane and Rigging Services as well as transportation services, which are essential to the safe and smooth operation of freight rail service across the country. The American freight rail network is the backbone of our operations, enabling us to move products sustainably and efficiently while supporting jobs and economic growth.

We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand as a result of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact supply schedules.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology and equipment, further improving service quality, capacity and safety.

Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Overdrive Transportation is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Overdrive Transportation competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

OVERDRIVE TRANSPORTATION
WE'RE ALWAYS IN OVERDRIVE!

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Tom Jordan

The Honorable Patrick J. Fuchs, Chairman

Surface Transportation Board

395 E Street SW

Washington, DC 20423

Subject: Endorsement of the Proposed Merger Between Union Pacific and Norfolk Southern (STB Docket No. FD 36873)

Dear Chairman Fuchs,

Owyhee Produce, operating in the **Eastern Oregon/Western Idaho region** and headquartered in Parma, Idaho, is a dedicated customer of **Union Pacific**. We are writing to unequivocally express our **strong support** for the proposed combination with Norfolk Southern.

As a primary shipper of **fresh yellow, red, and white onions**, our supply chain requires transportation that is efficient, dependable, and cost-effective. While we utilize multiple modes of transport, **rail service is a highly important and valuable component** that helps us meet customer demand and ensure the timely delivery of perishable products across the United States. Moving our high-volume, seasonal commodities by rail is a crucial and sustainable element of our logistics strategy. We recognize that the continued health and growth of the national freight rail network are dependent on new investments, and this merger represents a path toward securing a bright future for our operations.

We believe that the proposed integration of Union Pacific and Norfolk Southern will generate significant advantages for shippers and partners like Owyhee Produce, with the effect of **enhancing competition** in the broader freight market. Key benefits include:

- **Accelerated Transit Times:** By creating a seamless, single-line transcontinental network, this transaction promises to eliminate redundant interchanges. This reduction in terminal dwell time can cut days from transit schedules, allowing us to deliver **fresher produce to more consumers, faster,** thereby improving product quality and reducing logistics complexity.

- **Greater Service Reliability:** The unified network should offer more streamlined and flexible routing, which is essential for reducing service variability and minimizing the risk of costly disruptions to our temperature-sensitive supply chain.
- **Expanded Reach and Access:** A broader, single-line rail footprint will significantly enhance our ability to serve a wider geographic base of customers and access new markets across the nation.
- **Increased Infrastructure Investment:** We anticipate that the combined enterprise will be better capitalized and motivated to fund necessary investments in infrastructure, technology, and rolling stock, further improving overall service quality and capacity.

We urge the Surface Transportation Board to carefully consider the clear, pro-competitive, and positive impact this merger will have on American agricultural businesses like ours, which rely on a world-class supply chain to efficiently deliver our products.

Thank you for your time and serious consideration of our perspective. We are confident this merger will lead to enhanced service and a stronger partnership.

Sincerely,

Robin Froerer

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Pacific Recycling is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of steel mills and other metal consumers in the United States and ensure the safe, timely delivery of our products across the country. At Pacific Recycling, we transport recycled steel to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Pacific Recycling has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Pacific Transformer Corporation writes in strong support of the proposed merger between Union Pacific and Norfolk Southern.

Our company relies heavily on efficient, reliable, and cost-effective rail service to meet the needs of our partners and ensure the safe, timely delivery of products across the country. The American freight rail network is a cornerstone of our supply chain, allowing us to move goods at scale both sustainably and competitively. We also recognize the urgent need for continued investment, innovation, and modernization to secure the future of businesses like ours and strengthen the national economy.

We believe this merger will deliver meaningful benefits to shippers and customers, including:

- **Improved Service Reliability** – A unified network will provide more direct routes and greater flexibility, reducing the risk of service disruptions.
- **Reduced Transit Times** – By minimizing interchanges, the combined system can cut several days from shipping schedules, enabling faster delivery to our customers nationwide.
- **Increased Investment** – A transcontinental network will be better positioned to expand infrastructure, technology, and equipment, enhancing service quality, capacity, and safety.
- **Expanded Market Reach** – Broader geographic coverage will give companies like ours access to new regions and customers.

We fully appreciate the importance of regulatory review in this process and respectfully encourage the Board to carefully consider the positive impact this merger will have not only on businesses like ours but also on the broader U.S. economy. Thank you for your attention to this matter. We look forward to the continued partnership and enhanced service that this merger promises to bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Performance Produce LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of Retail customers and ensure the safe, timely delivery of our products. We transport fresh onions and potatoes from the Idaho region into our facility located in North Carolina on rail, then distribute to various regions.

The American freight rail network is a very useful component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail, and it is a part of our green initiatives. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation to accommodate the growing and changing needs of our company and our customers' businesses.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to rely on more consistent and timely deliveries which is critical when dealing in fresh produce.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our existing customers and help us reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your time and consideration. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Union Pacific, PERIN Resources, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of Trans-continental Rail customers and ensure the safe, timely delivery of our products across the country. At PERIN Resources, LLC. We transport key raw materials to numerous markets we have been working with for over 20 years now. This spreads nationwide and eventually internationally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We predominantly work with US origin production but that production while we try and keep within the country as much as possible has a growing interest internationally. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that PERIN Resources has a bright future. Asa Whitney dreamed of a transcontinental railroad, and we connected them in 1869 under U.S. Grant. However, we have yet to see one company truly have the capability of unlocking transcontinental shipments without having to interact with competitors driving up costs typically as they cross the Mississippi. The expediency which the UP provides rail freight and the thoroughness of their systems would deem deserved to be the one to connect the oceans under one banner.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers such as us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Phoenix Oil, Inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet our needs and ensure the safe, timely delivery of our products across the country. At Phoenix Oil, Inc, we transport various petroleum products from all over the county. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Phoenix Oil, Inc, has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific [*customers/partners*] like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more [*customers / consumers*], faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Phoenix Park Energy Marketing L.L.C. (PPEML), a subsidiary of Phoenix Park Gas Processors Limited, is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

As one of the largest exporters of propane to Northern Mexico, our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers to ensure a safe, cost competitive and timely delivery of our products to Mexico and the United States. At PPEML we transport approximately 25,000 barrels per day of propane to markets in Mexico and across the United States. Therefore, the American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably.

Consequently, the importance of the rail and logistics services provided by Union Pacific to our employees, our products, and our national economy cannot be overemphasized. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation. This investment being made by Union Pacific will be a significant enabler to PPEML's expansion plans in the US mid-west and US north-eastern LPG markets and would add further value arising from the economies of scale that the merger provides.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific's customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster and cheaper.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure in PPEML's markets while deploying advanced technology, and modernized equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Pioneer Oil, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Pioneer Oil, we transport asphalt and asphalt related products to markets across North America, from Canada to Mexico. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Pioneer Oil has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Improved East Coast Shipping** We have primarily focused on the western side of the US for the majority of our business, but this merger should help us be more competitive further East.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

INTEPLAST GROUP
Pitt Plastics

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Pitt Plastics is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to source raw materials essential to our manufacturing process. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and the national economy. We also recognize that these networks require ongoing investment and innovation to ensure companies like Pitt Plastics can continue to thrive in the years ahead.

We believe the proposed merger will enhance competition and deliver meaningful benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will provide more direct routes and greater flexibility, minimizing the risk of disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the merger will cut several days from transit times, enabling us to receive materials more quickly.
- **Increased Investment:** A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Access to a broader geographic footprint will allow us to better serve our existing customers and reach new markets.

We recognize that regulatory review is an essential part of this process, and we respectfully encourage the Board to consider the positive impacts this merger will have on businesses like ours and on the broader U.S. economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

We, at Pleasant Valley Potato, have been Union Pacific customers since we began business in 1987. In that time, we've seen many changes to the transportation industry and how it's regulated. Very few have been to our advantage. That's one reason why we're in favor of the proposed merger between Union Pacific and Norfolk Southern. Rail access from Idaho to the Southeastern markets has always been marked by lengthy transit delays. Most of the frustration we've had has been with the, all too often, delays caused by the handoff between the UP and NS. A merger would eliminate the interchange delay and allow for a freer flow of traffic from shipping point to destination. We also expect that, in eliminating the "handoff" of cars from one company to another, rates will be lowered, thereby making our product more competitive in all of the markets currently served by the NS.

We appreciate the opportunity to weigh in with our support of this merger and wish you the best Mr. Chairman.

Sincerely,

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Priefert Mfg. Co., Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of steel master coils for our customers and manufacturing and ensure the safe, timely delivery of our products across the country. At Priefert, we transport steel master coils in-bound to manufacturing locations. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Priefert has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to receive more goods to our locations, faster and safer.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Priefert®

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Lee Tyler

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, PVP Industries, Inc. (PVP) is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our diverse customer base in Horticultural, Industrial and Commercial markets and ensure the safe, timely delivery of our products across the country. At PVP, we transport mined minerals from a variety of domestic locations such as Oregon, California, New Mexico and Georgia to our location in Ohio. Transporting primarily unexpanded Perlite ore for our use as a Perlite expander. This essential, but little known material, is then modified through our furnacing operation and used in a wide variety of products such as soils, hydroponic applications, loose fill insulation, castings, refractory cements, grouts, prothesis, Lithium-ion/hazardous packaging, adsorbents, and many more uses.

Our markets are primarily domestic and south-central Canada. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that PVP remains competitive in a global marketplace and has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific's customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to receive our goods in a more timely fashion.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

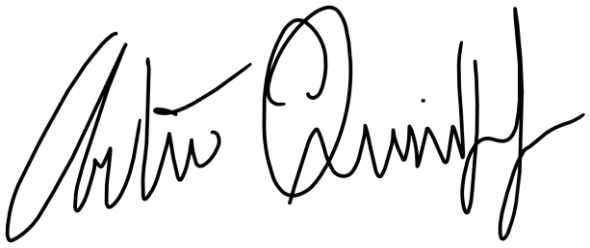
Re: Support for Union Pacific-Norfolk Southern Merger



Dear Members of the Surface Transportation Board,

I am writing on behalf of QA Pipe & Rail Service Inc., a company specializing in transloading OCTG Pipe and steel products. Our business depends heavily on reliable freight service to move these essential materials to energy, construction, and industrial customers across the region.

We believe the proposed Merger between Union Pacific Railroad and Norfolk Southern corporation will deliver significant benefits to shippers like us. By combining these two networks, we hope that this merger will improve service reliability for heavy and time sensitive shipments such as pipe and steel products, expand our market reach, enable more efficient delivery routes for our customers nationwide, reduce delays and congestion which directly impact our ability to serve the energy and steel sectors, and overall strengthen overall competitiveness in rail freight.

Our experience in the industry gives us confidence that the combined resources and expertise of Union Pacific and Norfolk Southern will deliver tangible benefits to the freight community and the broader economy. We urge the board to approve this merger so that businesses like ours can continue to thrive with stronger, more reliable rail service.
Thank you for considering our views. We appreciate your leadership in ensuring that the National Rail network remains competitive, efficient, and responsive to the needs of customers.

Sincerely,
Arturo Quintero Jr. (Owner/Director)
QA Pipe & Rail Service Inc

RADIANT ROAD & RAIL

September 10, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Radiant Road & Rail Inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Radiant competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger has the potential to enhance competition with OTR truck in particular and has the potential to yield significant benefits for companies like ours, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

Similarly, we appreciate the importance of maintaining flexibility and choice in the marketplace. Continued access to other carriers including CSX, BNSF, CN, and CPKC is important to our business and to the broader health of the freight ecosystem. Our support of this merger is contingent on a competitive

environment enduring that provides access to the full array of railroad choices without limitations or penalties for supporting alternative options where our business sees benefit or requires it.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Re: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a 20-year customer of Union Pacific, I am writing on behalf of Rail Logix to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Rail Logix depends on efficient, reliable, and cost-effective rail service to meet the needs of our clients and ensure the safe, timely delivery of our products across the country. At Rail Logix, we handle a broad array of freight; chemicals, fuels, polyethylene, steel coils, pipe, consumer products, etc. These products are shipped to us from all over the world and are ultimately distributed to other parts of the United States, and overseas via the extensive US Port system.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our customers, and the US economy. We also understand that our rail networks need new investment, and a commitment to growth and innovation, so that businesses like ours can prosper.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific companies like Rail Logix. Such benefits include:

- **Reduced Transit Times:** By eliminating unnecessary interchanges, where rail cars are handed off from one railroad to another, this merger will remove several days from our transit times, enabling us to deliver more goods to our customers, faster.
- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Increased Investment:** A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our existing customers and establish new relationships.

We understand that regulatory review is an important part of this process, and we encourage the you to carefully consider the *positive impact* this merger will have on businesses like ours and the broader economy.

Thank you for allowing us to express our views on this potential merger. We're strong supporters and would welcome any questions you might have.

Sincerely,

Michael J. Plank

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Reliant Gases is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Reliant Gases, we transport Carbon Dioxide for use in the food industry and water treatment within municipalities. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Reliant Gases has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,
Jeff Fry

RIO GRANDE PACIFIC

September 24, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

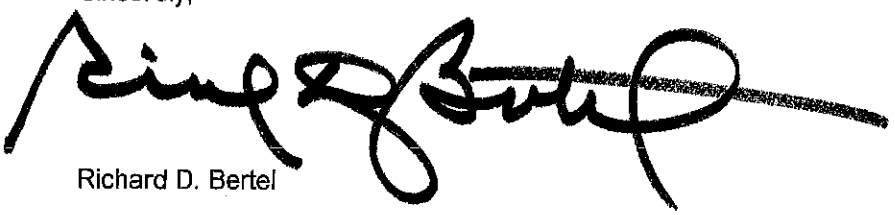
Dear Chairman Fuchs,

As the owner of four shortline railroads that connect with our longtime partner Union Pacific, Rio Grande Pacific Corporation is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. We operate in six states and rely on Union Pacific to provide efficient, reliable, and cost-effective rail service, until they interchange with us, to meet the needs of our customers and ensure the safe, timely delivery of goods.

We believe that the proposed merger will enhance competition and yield significant benefits for our customers whom we serve daily.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, allowing rail to be an even more competitive solution vs other transportation alternatives.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Rio Grande Pacific has previously expressed our public support for the merger in press release dated August 22, 2025, (See attached press release.)



We understand that regulatory review is an important part of this process, and we urge the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy and encourage early regulatory approval.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

FOR IMMEDIATE RELEASE

Rio Grande Pacific Corporation Endorses Union Pacific–Norfolk Southern Merger; Sees Historic Opportunity for U.S. Freight Efficiency

FORT WORTH, TEXAS — August 22, 2025 — Rio Grande Pacific Corporation today announced its enthusiastic support for the proposed merger between Union Pacific Railroad and Norfolk Southern Corporation. The merger will create the first coast-to-coast freight railroad in American history, linking over 50,000 route miles of track across 43 states and reshaping the national logistics landscape.

As a leading short line and regional rail operator, Rio Grande Pacific Corporation views the merger as a positive step toward a more efficient, and competitive domestic freight rail system.

Richard Bertel, Chairman and CEO of Rio Grande Pacific, praised the merger's potential to improve rail transportation nationally:

"The proposed merger represents a reasoned and logical step forward for the national rail system. The combined network should unlock efficiencies that benefit all stakeholders—from large and small shippers, communities and consumers, and railroads and logistics providers. Rio Grande Pacific looks forward to collaborating with the newly combined railroad to help our shippers capitalize on new routing options, new potential markets and growing service enhancements.

"We've long advocated for greater operational alignment in the freight rail industry," Bertel added. "Union Pacific and Norfolk Southern as one, will deliver world class safety cultures, more reliable service, and new opportunities for regional railroads like ours to contribute to a dynamic national freight solution."

Rio Grande Pacific Corporation urges early regulatory approval of the merger, confident that the first truly Transcontinental Railroad will deliver the highest industry standards of safety, service, and innovation, while preserving the skilled workforce that powers the industry.

About Rio Grande Pacific Corporation

Rio Grande Pacific Corporation (RGPC) is a diversified, privately held, railroad holding company with regional freight and commuter railroads, technology, energy, heavy manufacturing and a variety of supporting subsidiaries that provide associated services across the U.S. These include 3rd party train dispatching, civil and signal design engineering, industrial switching and commercial real estate. The firm has completed international railroad consulting services and due diligence for governments, railroads and major international clients on six (6) continents over the past forty (40) years.

Operating in 23 States, our business units serve many Fortune 500 companies and offer a continuum of transportation and related services across numerous industries through synergistic business relationships. This entrepreneurial and often non-conformist style translates into growth that is strong, yet stable.

At RGPC, we know what it takes to operate within complex political, regulatory and logistical situations to move freight and passengers efficiently.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Riviana Foods is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and brands, and ensure the safe, timely delivery of our products across the country. At Riviana Foods, we transport raw rice, milled rice, and rice by-products to markets nationwide and globally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Riviana Foods has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

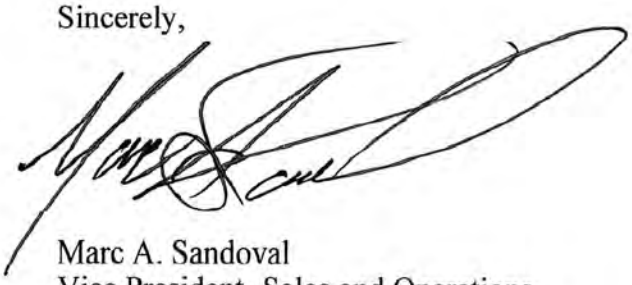
Dear Chairman Fuchs,

As a long-time customer of Union Pacific, ROAR Logistics is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, ROAR competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions to our customers. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and yield significant benefits for customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.



We are optimistic that the proposed merger will not only drive improved service and efficiency but will also lead to additional innovation and streamlined customer experience. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

Similarly, we appreciate the importance of maintaining flexibility and choice in the marketplace. Continued access to other carriers, including CSX and BNSF, is important to our business and to the broader health of the freight ecosystem.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Rock River Lumber and Grain Co. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our farmer customers and ensure the safe, timely delivery of our products across the country. At Rock River Lumber and Grain, we transport corn and soybeans to poultry companies, cattle feedlots and various exporter markets in Arkansas, Louisiana, Texas and Mexico. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Rock River and our farmer customers have a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific shippers like us, offering additional markets and better pricing opportunities for our farmer customers.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Rocky Mountain Industrials and its subsidiary, Rail Land Co., is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our rail-served industrial park, and ensure the safe, and timely delivery of products across the country. Rocky Mountain Industrials is developing the Rocky Mountain Rail Park (RMRP) - a 620-acre, rail-served industrial park east of Denver, with direct connection to the Union Pacific mainline — to serve heavy industrial, distribution, and bulk-commodity rail served tenants.

The American freight rail network is a critical component of our supply chain, allowing for the movement of large volumes efficiently and sustainably. We understand the importance of rail to our employees, products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that developments like ours can flourish.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more partners faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Salt Distributors Inc. has been a Union Pacific customer for over 3 decades and we are writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our business relies heavily on efficient, dependable, and cost-effective rail service to deliver bulk road salt to state, county, and city transportation departments across Washington, Idaho, and Oregon. The American freight rail network plays a vital role in our supply chain, enabling us to move large volumes of essential highway deicing supplies safely, sustainably, and on time.

We understand the importance of rail infrastructure not only to our operations, but also to our employees, the communities we serve, and the broader U.S. economy. At the same time, we recognize that the current network faces real challenges—challenges that require new investment, innovation, and a long-term commitment to growth. We believe the proposed merger is a positive step toward addressing those needs.

In particular, we see several meaningful benefits for companies like ours:

- **Improved Service Reliability:** A unified network would provide more direct routes and increased flexibility, reducing the risk of service delays.
- **Faster Transit Times:** Eliminating handoffs between carriers could shave days off delivery times, helping us meet our customers' needs more quickly and efficiently.
- **Stronger Investment in Infrastructure:** A combined, transcontinental railroad will be better positioned to invest in the infrastructure, technology, and equipment needed to enhance service quality, expand capacity, and improve safety.
- **Greater Geographic Reach:** Enhanced network coverage will allow us to better serve existing customers and access new markets.

We recognize the importance of a thorough regulatory review and trust that the relevant authorities will thoughtfully consider the long-term benefits this merger offers—not only to businesses like ours, but to the wider economy.

Thank you for your attention to our perspective. We value our relationship with Union Pacific and look forward to the opportunities this merger could bring.

Warm regards,

Sincerely,

Nic Binczewski

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, San Joaquin Refining Company (SJR), is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At SJR, we transport Transformer Oil, Asphalt Additives, Lubricating Oils and specialty products to markets within the United States, Canada, Mexico and internationally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that SJR has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more consumers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD 36873

Dear Chairman Fuchs:

As CEO of Santa Teresa Rail Transloading Services Inc. (STRTS Inc.), I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern.

Freight rail is a cornerstone of our state's economy, safely moving the goods that power our industries, support our farmers and connect our communities to markets across the nation and the world. Union Pacific has long been an essential transportation partner for our state, providing efficient, reliable and cost-effective service to businesses large and small. The American freight rail network is not only critical to our economic growth – it is also one of the most sustainable modes of transportation available, helping reduce highway congestion and emissions.

The proposed merger offers a unique opportunity to strengthen this network and deliver tangible benefits for shippers, consumers and communities, including:

- **Improved Service Reliability:** More direct routes and greater operational flexibility will help prevent service disruptions and improve schedule dependability.
- **Reduced Transit Times:** Eliminating certain interchanges will speed the movement of goods, helping our businesses reach customers faster and more competitively.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in modern infrastructure, advanced technology and enhanced safety systems.
- **Expanded Reach:** The broader geographic footprint will open new markets for our state's products and strengthen supply chain resilience.

This merger is about more than just railroads – it's about securing the future of our transportation network, supporting economic development and ensuring American freight rail remains globally competitive.

I respectfully urge the Surface Transportation Board to give full and favorable consideration to this proposal, recognizing the benefits it will bring to our state and the national economy.

Sincerely,

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Sawtooth Caverns is writing this letter regarding the proposed merger between Union Pacific and Norfolk Southern. Sawtooth Caverns is the largest salt cavern storage facility for Refined Products and Natural Gas Liquids in the Western United States. Not being connected to a pipeline, Union Pacific is the lifeline for our customers to deliver and receive products in and out of our facility. Our company depends on efficient, reliable, and cost-effective rail service. U.P. is a critical part of the supply chain to ensure industry has the petroleum products necessary to provide the transportation fuel, fuel components and heating fuels necessary to keep America productive. Union Pacific is in and out of our facility reliably, multiple times per week. Our customers rely on U.P. to ensure their own operations are efficient and sustainable.

We believe that there could be benefits to the proposed merger for our customers, such as improved service reliability, time savings through elimination of interchanges between the railroads, and the ability to economically deliver products from further geographic locations. We look forward to continuing our longstanding relationship with U.P. and we wish them the best in their pending merger with Norfolk Southern. Assuming any and all regulatory requirements are met; Sawtooth Caverns does not oppose this merger.

Sincerely,

J. Dan Myers

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Shay Grain is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of the country grain elevators we serve and the flour mills across the country we help supply. We believe this merger can help to ensure the safe, timely delivery of our products across the country. At Shay Grain we facilitate the transport of Hard Red Winter Wheat, sourced from Texas to North Dakota, to its final destinations in the flour milling markets across the North American rail network. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our customers, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Shay Grain has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more flour mills, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Washington, DC 20423

Re: Support for Union Pacific and NS Merger

Dear Chairman Fuchs,

Sherwood Lumber has been in business for 71 years and has been a customer of the Union Pacific for that entire period of time. Sherwood Lumber strongly supports the proposed merger between the Union Pacific and the Norfolk Southern railroads.

Sherwood Lumber ships thousands of cars a year on both the UP and NS rail lines and it is essential that we receive reliable service and as well cost-effective pricing. Our business transports dimension lumber and plywood products on flat bed, A-frame and box cars provided by the UP and NS. The rail freight network is critical for our day to day business and especially for our ability to service our customers. As our business has grown over the past 71 years we have full knowledge that the rail networks must continue to invest in their own growth and innovation.

We are convinced that this merger will enhance competition within the rail industry and have far reaching benefits for Sherwood Lumber.

We are aware that regulatory review is important before any decisions can be made. I do hope that during this review process that you will consider the positive impact on customers like Sherwood Lumber and the U.S. economy as a whole.

Sincerely,

Steve Parson

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Shriver Farms, LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Shriver Farms, LLC we transport Organic corn and soybeans from our farm and other organic farms in our area to markets mostly west of our location. It has not been cost effective for our products to go east on the rail because the Union Pacific line does not currently go to the east coast and changing rail carriers is costly and inefficient. However, with this merger we hope that a significant market will be opened up for our organic products to move to the east coast. We understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Shriver Farms, LLC has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more [customers / consumers], faster.
- Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping completed vehicles and freight shipments, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Cecelia Esparza

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing partner of Union Pacific, SM Line Corporation (hereinafter referred to as 'SM Line') respectfully submits this letter to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company relies on efficient, reliable, and cost-effective rail services to meet customer needs and to ensure the safe and timely delivery of products across the United States. SM Line transports industrial goods, consumer products, and agricultural commodities between the United States and Asia. The American freight rail network is a critical component of our supply chain, enabling us to move large volumes efficiently and sustainably. We recognize the importance of rail to our employees, our operations, and the national economy. We also recognize the need for new investment and long-term commitments to growth and innovation, which are essential to ensuring a strong future for our industry.

We believe the proposed merger will enhance competition and provide meaningful benefits to Union Pacific partners such as SM Line, including:

Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.

Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Soprema Canada inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of *our customers / consumers* and ensure the safe, timely delivery of our products across the country. At Soprema inc, we transport *insulation products* to markets *nationwide {and then onto the rest of the world*. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Soprema inc has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific *customers/partners* like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more *customers/consumers*, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Nathalie Hamel,
Logistics Director

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Soufflet Malt is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Soufflet Malt, we transport barley to our production facilities and malted barley direct to our brewing and distilling customers across North America or to other internal warehouse locations on then onto North American or internationally located customers. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Soufflet Malt has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping Beef Tallow, Lard and Palm, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Tarez McNeal
South Chicago Packing LLC

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, I am writing on behalf of South Coast Terminals to express our support for the proposed merger between Union Pacific and Norfolk Southern.

South Coast Terminals, based in Houston, Texas, is a leading provider of bulk liquid storage, specialty chemical toll manufacturing, and logistics services for the broader chemical and energy sectors. Our operations depend on efficient, reliable, and cost-effective rail service to move large volumes of raw materials and finished products—such as chemicals, additives, and industrial goods—across the country. Railroads are the backbone of our supply chain, enabling us to serve customers nationwide and connect to global markets through Gulf Coast ports.

Our business has made significant investments in rail infrastructure, including recent projects to expand track capacity and improve railcar throughput at our Houston facilities. These enhancements, coordinated closely with Union Pacific, are designed to support increased demand and ensure safe, timely delivery for our customers. The ability to receive and ship bulk commodities by rail is essential to our competitiveness and providing an exceptional service level to our customers.

We believe the proposed merger will deliver substantial benefits to South Coast businesses and the regional economy, including:

- **Improved Service Reliability:** A unified network will offer more direct routes and greater flexibility, minimizing service disruptions and reducing the risk of delays that can impact critical supply chains.

- **Reduced Transit Times:** By eliminating interchanges and streamlining operations, the merger will shorten transit times for bulk shipments, allowing us to deliver products to customers faster and more efficiently.
- **Increased Investment:** The combined railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety for industrial shippers like South Coast Terminals.
- **Expanded Reach:** Enhanced connectivity will allow South Coast businesses to access a broader geographic footprint, supporting growth and new market opportunities.

The continued success of South Coast Terminals is closely tied to the strength of the rail network. Railroads not only support major industries such as chemicals, energy, and manufacturing, but also drive job creation and local investment providing us with access to critical shipping hubs in a safe and reliable manner. The merger of Union Pacific and Norfolk Southern will help ensure that our region remains a hub for industrial growth and innovation.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, for over 60 years Southern Warehousing & Distribution is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At our company, we transport food products, building materials, steel products, etc. to markets in the South Texas area. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Steelscape LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

At Steelscape LLC, we manufacture and distribute galvanized and painted steel coils to markets across the United States. Our business depends on efficient, reliable, and cost-effective rail service to meet customer expectations and ensure safe, timely delivery of our products. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. As we continue to diversify our supply chain to remain competitive in today's market, our reliance on efficient rail service has never been greater.

We recognize the essential role rail plays not only in our operations but also in supporting employees, customers, and the broader economy. We also understand that rail networks require ongoing investment, innovation, and a commitment to growth so that companies like Steelscape can thrive in the years ahead.

We believe the proposed merger will strengthen that commitment and deliver meaningful benefits for Union Pacific customers such as us, including:

- **Improved Service Reliability:** The combined network will provide more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** Eliminating interchanges where railcars are handed off will cut several days from transit times, enabling faster delivery to customers.
- **Increased Investment:** A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, enhancing capacity, safety, and service quality.
- **Expanded Reach:** Access to a broader geographic footprint will allow us to better serve existing customers and reach new markets.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully weigh the positive impact this merger will have on businesses like ours and on the broader U.S. economy.

Thank you for considering our perspective. We look forward to continuing our partnership with Union Pacific and to the enhanced service opportunities this merger will create.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Strata Platforms is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of and ensure the safe, timely transport of our customers products across the country. At Strata Platforms, we support the transport of our customers' products to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Strata Platforms has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Charles Houser

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Sublime Intertrade is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Sublime Intertrade, we transport commercial goods and hazmat products to national and international markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Sublime Intertrade has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more of our customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Sub-Zero Group, Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of US distribution centers and ensure the safe, timely delivery of our products across the country. At Sub-Zero Group, Inc., we transport household appliances to markets within the entire US and globally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Sub-Zero Group, Inc. has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and manufactures and distributors like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to our distribution centers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

SUNTRAIN

San Francisco, CA

Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

SunTrain is pioneering the deployment of battery railcars to transport stored electricity over existing freight rail corridors. Our system allows utilities, data centers, ports, and industrial customers to bypass congested transmission lines and access reliable behind-the-meter power, directly leveraging the national rail network as a parallel backbone of the 21st-century energy economy. Union Pacific has been a critical collaborator in advancing this vision, and our success depends on a rail system that is both reliable and forward-looking.

For SunTrain, the benefits of the Union Pacific–Norfolk Southern merger are meanigful:

A more seamless energy corridor. Our projects span regions currently split between carriers, forcing unnecessary interchanges. A unified network reduces these handoffs, ensuring that battery trains carrying gigawatt-hours of energy can flow from renewable generation hubs to high-demand markets without delay.

Support for emerging freight classes. Energy storage by rail is not a traditional commodity. It requires reliable scheduling windows, secure handling, and priority routing. A stronger, integrated operator is better positioned to support innovative cargoes like ours that expand what freight rail can deliver.

Catalyst for investment and modernization. The merger's scale will accelerate adoption of advanced rail technologies, from electrification to digital scheduling. These upgrades dovetail with SunTrain's goals of safer, cleaner, and more reliable battery rail operations.

Resilience for the broader economy. By strengthening the nation's rail backbone, this merger supports not only SunTrain but also the many industries—energy, manufacturing, agriculture, ports—that depend on rail to remain competitive against trucking and global supply chain pressures.

SunTrain operates at the intersection of rail and energy infrastructure. We see firsthand the need for expanded capacity, reduced bottlenecks, and forward-looking investment. This merger is an opportunity to align the freight rail system with 21st-century priorities, from energy security to industrial resilience.

Sincerely,

Christopher D. Smith

Superior Farms
AMERICAN LAMB

October 24, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger, Docket Number: FD 36873

Dear Chairman Fuchs:

As EVP-Operations of Superior Farms, a national company that utilizes the rail system, I am writing to express my strong support for the proposed merger between Union Pacific and Norfolk Southern.

Freight rail is a cornerstone of our state's economy, safely moving the goods that power our industries, support our farmers and connect our communities to markets across the nation and the world. Union Pacific has long been an essential transportation partner for our state, providing efficient, reliable and cost-effective service to large and small businesses. The American freight rail network is not only critical to our economic growth – it is also one of the most sustainable modes of transportation available, helping reduce highway congestion and emissions.

The proposed merger offers a unique opportunity to strengthen this network and deliver tangible benefits for shippers, consumers and communities, including:

- **Improved Service Reliability:** More direct routes and greater operational flexibility will help prevent service disruptions and improve schedule dependability.
- **Reduced Transit Times:** Eliminating certain interchanges will speed the movement of goods, helping our businesses reach customers faster and more competitively.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in modern infrastructure, advanced technology and enhanced safety systems.
- **Expanded Reach:** The broader geographic footprint will open new markets for our state's products and strengthen supply chain resilience.

This merger is about more than just railroads – it's about securing the future of our transportation network, supporting economic development and ensuring American freight rail remains globally competitive.

I respectfully urge the Surface Transportation Board to give full and favorable consideration to this proposal, recognizing the benefits it will bring to our state and the national economy.

Sincerely,

Shane MacKenzie

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a decades long customer of Union Pacific, the purpose of this letter is to express our company's strong support for the proposed merger between Union Pacific and Norfolk Southern.

CalPortland Company was founded in 1891. Since our inception, CalPortland has been producing quality cement and building materials and delivering them on time with integrity, reliability and consistency. Our cement plays a vital role in shaping America's infrastructure, from historic landmarks like the Hoover Dam to modern icons like Allegiant Stadium.

Our company depends on an efficient, reliable, and cost-effective rail service to deliver our quality products across the country. CalPortland relies on rail to transport cement to our various terminals across the country. Our strategically located terminals provide cement to local customers and support construction and local economies. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that a company such as CalPortland can continue to help build America for decades to come.

We believe that the proposed merger between Union Pacific and Norfolk Southern will enhance competition and yield significant benefits for Union Pacific and CalPortland. Some of these benefits include:

- **Improved Service Reliability**: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more of CalPortland's customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy in continuing to help build our great Nation.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Target Freight Management is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Target Freight Management, we transport goods of all kinds to markets nationwide and onto the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Target Freight Management has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers/partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

TARGET FREIGHT MANAGEMENT

Don't wait to Save on Freight!

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Amber Tolentino

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Target Transportation is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Target competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has the potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Kirk Baxter

The Arthur Companies

429 Main Street
Arthur, ND 58006
701-997-6101

September 19, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for the Union Pacific / Norfolk Southern Merger

Chairman Fuchs,

It was great meeting with you earlier this year. We appreciated the chance to share our perspective as a family-owned agribusiness that depends heavily on rail. Thank you for hearing our concerns and engaging in an open dialogue.

The Arthur Companies is a fifth-generation, family-owned agribusiness headquartered in Arthur, North Dakota, where we were founded more than a century ago. What began as a single country elevator has grown into a diversified grain, agronomy, and research business with a footprint across North Dakota and Idaho. The proposed merger would impact our Idaho assets in particular, positioning us to reach new markets and end-users further east. We strongly believe this would have a positive impact on our business, our growers, and the supply chains we serve.

On behalf of The Arthur Companies, I want to express our strong support for the proposed Union Pacific and Norfolk Southern merger. A stronger, more connected rail network means better service, more reliable delivery, and new opportunities for growers. Expanded connectivity across regions will provide real opportunities for our farmers and for the customers we serve. With the right oversight, it represents a meaningful step forward for the long-term health of U.S. agriculture and supply chains.

Farmers don't have time or margin for delays. The sooner this merger is approved, the sooner we can all start seeing the benefits—fewer bottlenecks, better access, and lower costs across the supply chain. That's good for agriculture and it's good for the communities that depend on it.

We encourage the Board to move forward and approve this merger without delay.

James Burgum
Chief Executive Officer
The Arthur Companies

September 22, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Re: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a 20-year customer of Union Pacific, I am writing on behalf of Rail Logix to express our support for the proposed merger between Union Pacific and Norfolk Southern.

Rail Logix depends on efficient, reliable, and cost-effective rail service to meet the needs of our clients and ensure the safe, timely delivery of our products across the country. At Rail Logix, we handle a broad array of freight; chemicals, fuels, polyethylene, steel coils, pipe, consumer products, etc. These products are shipped to us from all over the world and are ultimately distributed to other parts of the United States, and overseas via the extensive US Port system.

The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our customers, and the US economy. We also understand that our rail networks need new investment, and a commitment to growth and innovation, so that businesses like ours can prosper.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific companies like Rail Logix. Such benefits include:

- **Reduced Transit Times:** By eliminating unnecessary interchanges, where rail cars are handed off from one railroad to another, this merger will remove several days from our transit times, enabling us to deliver more goods to our customers, faster.
- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Increased Investment:** A transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our existing customers and establish new relationships.

THE PLANK COMPANIES, INC.

We understand that regulatory review is an important part of this process, and we encourage the you to carefully consider the *positive impact* this merger will have on businesses like ours and the broader economy.

Thank you for allowing us to express our views on this potential merger. We're strong supporters and would welcome any questions you might have.

Sincerely,

Michael J. Plank

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Williams and Discovery Operations is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our many rail customers and ensure the safe, timely delivery of our products across the country. At Williams, we transport natural gas liquids to domestic markets as well as Mexican and Canadian markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Williams has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Austin McGinis

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a customer of Union Pacific, Three Crows Environmental LLC is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern. The importance of this merger has tremendous impact in the United States' overall ability to successfully compete in the global marketplace.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Three Crows, we transport hazardous waste residue so it can be converted into usable building products by domestic producers who in turn move them to international markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Three Crows has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific and partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Titan Terminal is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of customers and ensure the safe, timely delivery of our products across the country. At Titan Terminal, we transport liquid chemicals to and from markets worldwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Titan Terminal has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver and receive more goods to/from more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

TLTERMINALS

September 25 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,
As Founder and CEO of **TLTerminals**, I am writing to express our strong support for the proposed merger between **Union Pacific** and **Norfolk Southern**.

TLTerminals provides transloading, warehousing, and multimodal logistics solutions for a wide range of industries. Our operations depend on efficient, reliable, and sustainable rail service to ensure the safe and timely delivery of products across North America. Through our strategic location in Monterrey, we serve as a critical link in the cross-border supply chain, connecting U.S. railroads with Mexican markets.

We believe this merger will bring significant benefits for rail customers like us, including:

- **Improved Service Reliability**: A unified network will minimize interchanges and strengthen supply chain continuity for cross-border shipments.
- **Reduced Transit Times**: Faster, more direct connections between origins in the U.S. Southeast and Midwest with Mexico, removing days from current transit schedules.
- **Increased Investment**: A stronger transcontinental railroad will be able to invest in infrastructure, technology, and equipment that support capacity growth and safety.
- **Expanded Reach**: Access to a broader geographic footprint will enable us to provide our customers with new, competitive transportation options, aligned with nearshoring trends in Mexico.

Rail is the backbone of our operations, and enhancing connectivity between UP and NS networks is critical for advancing North American trade competitiveness. We respectfully urge the Surface Transportation Board to consider the positive impact this merger will have on businesses like ours, the communities we serve, and the broader economy.

Thank you for your consideration.

Sincerely,
Alejandro Rodríguez Villarreal

TPP TRANSFERENCIAS PORTUARIAS DEL PACÍFICO

October 15, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Strong Support for the Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

On behalf of Transferencias Portuarias del Pacífico, a long-standing customer of Union Pacific, I am pleased to express our unequivocal support for the proposed merger between Union Pacific and Norfolk Southern.

Our company specializes in the handling and transportation of bulk commodities for international transit customers—particularly copper concentrate and coal— from key markets across the United States. We rely on efficient, reliable, and cost-effective rail service to meet our customers' needs and ensure the safe, timely delivery of these critical materials.

As a vital link between U.S. producers, international ports, and global markets, we understand how essential the American freight rail network is to both national and international supply chains. It enables us to move large volumes efficiently and sustainably. We also recognize the importance of ongoing investment and innovation in rail infrastructure to support future growth, competitiveness, and resilience for companies like ours.

We are confident that the proposed merger will strengthen competition and deliver significant benefits for Union Pacific partners such as Transferencias Portuarias del Pacífico, including:

- Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, reducing the risk of service disruptions.
- Reduced Transit Times: By eliminating interchanges where rail cars are transferred, the merger will cut several days after transit times, enabling us to deliver more copper concentrate and coal to international customers more quickly.

- Increased Investment: The new transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment—enhancing service quality, capacity, and safety.
- Expanded Reach: Access to a broader geographic footprint will allow us to serve our existing customers more effectively and reach new markets.

We fully appreciate that regulatory review is an essential part of this process and respectfully urge the Board to consider the positive impact this merger will have on businesses like ours and on the broader U.S. and international economy.

Thank you for considering our perspective. We look forward to continuing our partnership and to the enhanced service this merger is poised to deliver.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Transmodal Group is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Transmodal Group, we lead intermodal logistics, adding value through security and sustainability across the supply chain. Specialized in consumer goods and wine & spirits industries to markets and then onto the rest of the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so Transmodal has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

TRINITY
A BURRIS LOGISTICS COMPANY

October 9, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping food & beverage, chemical, construction & manufacturing, I recognize the important role freight rail plays in supporting our local economy, businesses and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in its consideration of the proposed transaction.

Sincerely,

Stacey Howell

September 18, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E. Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

TrinityRail is a key supplier to Union Pacific of freight railcars and railcar services, which are essential to the safe and smooth operation of freight rail service across the country. The relationship between TrinityRail and Union Pacific has not only been beneficial for both companies economically but also for their many employees.

TrinityRail supports the proposed merger between Union Pacific and Norfolk Southern.

We believe that the proposed merger will yield significant benefits for Union Pacific's suppliers and partners, including:

- **Business Growth:** Union Pacific fosters an environment where suppliers can thrive while meeting the company's needs for safe, efficient and cost-effective solutions. We anticipate that our own business will grow as the company's supply demands expand as a result of the merger.
- **Improved Service Reliability:** The combined network will offer more direct routes and increased operational flexibility, helping reduce service interruptions that can impact delivery of our products and services.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster. Moreover, reduced transit times should create more opportunities for modal conversion.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity and safety. Increased investment from the railroad translates to increased investment in our own business.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on suppliers like us and the broader economy. We see the transaction as beneficial, and we do not anticipate negative impacts to our company or market competition.

Thank you for your consideration of our perspective. We look forward to the continued growth, innovation and partnership that this merger will bring.

Sincerely,

Trio Enterprises

September 7, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Trio Trucking is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As an intermodal marketing company, Trio Enterprises competes directly with over-the-road trucking, and rail is a vital component of our ability to offer sustainable and scalable transportation solutions. The American freight rail network is essential to our supply chain, and we recognize the importance of continued investment and innovation to meet the evolving needs of shippers like us.

We believe that the proposed merger will enhance competition and has potential to yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We are optimistic that the merger will lead to more competitive rail products—not only through improved service and efficiency, but also through innovation and responsiveness to customer needs. As the rail industry evolves, we believe this combination can help raise the bar for performance and value.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

TRUCK - RAIL HANDLING INC.

November 21, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-term customer of Union Pacific (1971), Truck-Rail Handling, Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of Customers and their consignee's to ensure the safe, timely delivery of our products across the country. At Truck-Rail Handling, Inc., we transload from rail car to bulk tankers a varied number of products (from petroleum, agriculture products, chemicals, minerals, etc. for manufacturing facilities in markets in the Western States as well as out of the Ports of Seattle, Tacoma and Oakland to the world. American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Truck-Rail Handling, Inc. has a bright future.

We believe that the proposed merger will enhance efficiencies and yield significant benefits for Union Pacific transloading companies like ours, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced/Consistent Transit Times:** By eliminating interchanges where rail cars are handed off, will remove several days from transit times, enabling our customers to have more reliable service and control inventories better and have an overall more efficient logistics movement.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.
- **Efficiencies/Lower Pricing:** The efficiencies in this merger will allow the Union Pacific to provide more efficient service for less cost than the current rail shippers are seeing now. This will open up the possibility of new customers shipping rail across the country with only one railroad involved.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

As a longtime customer of Union Pacific, TUBACERO is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of CUSTOMERS and ensure the safe, timely delivery of our products across the country. At TUBACERO, we transport STEEL PIPE to markets NATIONWIDE AND ONTO THE REST OF WORLD The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that TUBACERO has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific CUSTOMERS like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more CUSTOMERS, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Tuf-Tite, Inc is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet our production needs, and ensure the safe, timely delivery of our products across the country. At Tuf-Tite, Inc, we transport plastic resins to produce various construction and plastic packaging products. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy.
We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to receive resin pellets faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a potential new customer of Union Pacific, TULSACK is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company is pursuing efficient, dependable, cost-effective rail service to meet the needs of our converting operation, ensuring safe, timely delivery of our raw materials. At TULSACK we receive recycled paper rolls from various US manufacturers, converted by us into paper handle shopping bags used in the retail, food service and grocery markets throughout the US and the world. The American freight rail network provides my company the opportunity to transition from over the road truck transportation to rail, resulting not only in cost savings, but an environmentally sustaining reduction to our carbon footprint. While not a current customer, we understand firsthand how these rail networks need new investments, and new commitments for growth and innovation…and we are actively engaging with Union Pacific with those objectives in mind.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific for potential customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

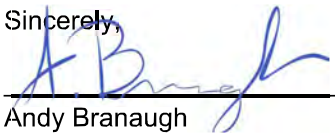
Subject: Support for Proposed Merger of Union Pacific and Norfolk Southern

Dear Chairman Fuchs,

Twin Eagle Terminals & Logistics (TETL) writes to express strong support for the proposed merger between Union Pacific and Norfolk Southern. As a provider of terminal and rail logistics services with prime locations along major rail corridors, our operations depend critically on a reliable, efficient, and integrated rail network.

At TETL, we provide transloading, bulk storage, switching, inventory management, and facility operations across our terminals in Texas, Wyoming, Colorado, and West Virginia. We handle diverse commodities including refined fuels, ethanol, aggregates, asphalt, crude oil, and construction materials—helping our customers move products safely, reliably, and cost effectively.



We believe the merger will benefit shippers and terminal operators like us through:

• Greater network efficiency by reducing delays and improving connectivity.
• Improved service reliability and capacity supported by infrastructure investments.
• Cost savings and sustainability through more efficient rail movements.
• Expanded market access with a broader, more consistent network.

We recognize the importance of thorough regulatory review, but believe this merger will strengthen U.S. supply chains and enhance service for businesses like ours. We respectfully urge the Surface Transportation Board to give full consideration to these benefits.

Thank you for your attention to this matter.

Sincerely,

Subject: Comments on Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs:

As a customer shipping building material, I recognize the key role freight rail plays in supporting our local economy, businesses, and residents. Reliable rail service helps connect our business to broader markets and provides an efficient transportation option for goods.

My business would benefit from faster, more reliable service, a more efficient and resilient supply chain and access to new markets. The proposed Union Pacific–Norfolk Southern merger has the strong potential to help my business by delivering single-line service and offering more direct routes that increase transportation options, expand each railroad's geographic reach and encouraging investment in infrastructure and technology. At the same time, it is important to ensure these benefits are achieved in a manner consistent with the need for safety, sustainability, and long-term benefits to customers, and I trust that the Surface Transportation Board will safeguard these benefits.

Freight rail contributes to reduced highway congestion and emissions, making it an important part of sustainable transportation. With thoughtful planning, the merger could improve service dependability, support local businesses, and create opportunities for infrastructure investment and job growth.

I respectfully encourage the Board to take these comments into account in their consideration of the proposed transaction.

Sincerely,

Christopher J Meyers

UFP INDUSTRIES

September 19th, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, I am writing of behalf of UFP Industries to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

UFP Industries is a $6 billion publicly traded American manufacturer serving the building, construction, and packaging sectors. With hundreds of locations and tens of thousands of customers nationwide, we rely heavily on efficient, reliable, and cost-effective rail service to distribute our products.

We believe this merger will help advance these priorities by integrating complementary rail networks and spurring new investment in the freight rail industry, enhance competition and deliver tangible benefits for customers like us, including improved service reliability through more direct routes, fewer disruptions, and greater flexibility. It will also reduce transit times, enabling us to deliver goods more efficiently and expand our reach to new and existing customers.

The products we make help power America's infrastructure and support a stronger supply chain:

- **UFP Retail** – Home to top brands used by many American customers like ProWood, North America's largest treated lumber supplier, and Deckorators, a premium composite decking line.
- **UFP Packaging** – Provides custom crating and packaging solutions for everything from hazelnuts to batteries to vehicles. We lead the industry with 31 million new pallets produced annually.

- **UFP Construction** – Supports residential and commercial projects, the RV and cargo trailer industries, and contributes to iconic skylines and communities across the country.

The domestic freight rail network is critical to our ability to move large volumes of product efficiently and sustainably, and to source the raw materials used in our products. We recognize the importance of regulatory review and respectfully urge the Board to consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration. We look forward to the continued strong partnership this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Salt Source LLC dba U.S. Salt is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

U.S. Salt depends on efficient, reliable, and cost-effective rail service to meet the needs of our many different customers located throughout the U.S. At U.S. Salt, we transport high purity solar salt, deicing salt and feed grade salt to various industrial and commercial markets. The Class One American freight rail network serves as the single most critical component to our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our customer base who rely on these commodities. There is no doubt that rail networks require new investments and a real commitment for growth and innovation so that U.S. Salt can continue to grow and prosper.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Rail Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduce Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers and markets faster.

Subject: Support for Union Pacific and Norfolk Southern Merger

Deware Chairman Fuchs,

As a longtime customer of Union Pacific, US1 Logistics is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company, like many others, depends on efficient, reliable, and cost-effective rail service to meet the needs of our growing customer base. US1 Logistics moves a variety of products from agricultural, manufactured, and military to name a few. We are also very excited to be at the forefront of the recently legalized industrial hemp industry. This agricultural product will be used worldwide for building materials, food products, and fiber which will play a big role in returning clothing manufacturing to the US. I personally have discussed opportunities in this field with representatives of Union Pacific and I am excited to say that this merger has the potential to bring millions of dollars in revenue to the merged rail system. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our national economy and we also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that companies like US1 Logistics have a bright future.

We believe the proposed merger will enhance competition and yield significant benefits for Union Pacific and customers like us, including:

Improved Service Reliability: The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.

Reduced Transit Times: By eliminating interchanges where rail card are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster and safer.

Increased Investment: The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

Expanded Reach: Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

USD Group LLC, and I personally, share a longstanding relationship with all of the Class 1 Railroads, including both Union Pacific and Norfolk Southern. We have been fortunate to work alongside all of our rail colleagues, developing new and unique supply chain solutions for our joint customers. A strong and efficient rail network is critical to our Country, economy and our citizens.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of joint customers and ensure the safe, timely delivery of our products across the country. At USD Group, we develop supply chain solutions across a wide range of commodities, modes of transport and transportation lanes to markets both nationally and internationally. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our business and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation.

We believe that there are many ways in which rail service can be enhanced, including actions like the proposed merger between Union Pacific and Norfolk Southern. It is critical that focus within the rail industry be squarely on growth and gains in market share through the following metrics:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions
- **Reduced Transit Times:** By eliminating inefficient interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster
- **Increased Investment:** Investment is critical towards improvements aimed at debottlenecking, velocity and capacity improvements to include technology, and equipment, further improving service quality, capacity, and safety
- **Expanded Reach:** More access to a broader geographic footprint will allow us to better serve our customers and reach new ones. **As a Texas-based company, we see the value in connecting the Gulf to each coast through one railroad, unlocking new markets and potential. While**

USD GROUP

our reach is nationwide, this strategic connection enhances our ability to serve customers across the continent.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger, and other rail strategies, will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

September 30, 2025

TO WHOM IT MAY CONCERN:

I'm writing today to express my support as a cold storage real estate developer that uses rail for the pending merger of Union Pacific and Norfolk Southern.

Our 487,000 square foot facility, served by rail is located in Council Bluffs IA, adjacent to a Union Pacific rail yard and we'll start shipping pork on rail for a customer, Tyson Foods starting in November, 2025. We've been preparing for this for quite a while.

We're excited about shipping what is produced in the heart of America (the breadbasket of the world) to the ports and this merger will create the first transcontinental freight railroad, connecting ~100 ports across 43 states! It is much easier and faster for one railroad to handle the entire distance.

Please feel free to reach out if any questions.

Thank you,
Monte Froehlich
President, USP Management

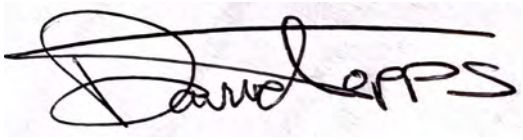
To Whom It May Concern:

On behalf of **Vantage Commodities LP**, I am writing to express our support for the proposed combination of **Union Pacific** and **Norfolk Southern** to create America's first transcontinental railroad.



As a valued transportation partner, both Union Pacific and Norfolk Southern have consistently demonstrated a commitment to reliability, efficiency, and innovation within the rail industry. We believe that the unification of these two historic networks will further enhance service quality, strengthen supply chain resiliency, and expand market connectivity across North America.

From our perspective as traders, this merger has the potential to streamline operations, reduce transit times, and provide greater consistency and flexibility in rail service benefits that will ultimately support continued growth and competitiveness for businesses like ours.

We appreciate the vision and leadership behind this initiative and are confident that the combined organization will be well positioned to deliver long term value to its customers and employees.

Vantage Commodities LP fully supports the proposed merger and looks forward to continuing our partnership under the unified network.

Washington, DC 20423

Subject: Support for the merger of Union Pacific and Norfolk Southern

Dear President Fuchs,

As a Union Pacific customer, we are pleased to support the proposed merger between Union Pacific and Norfolk Southern Railroads.

Our company Vengo Logistics LLC established in the United States since 2014, we offer 3PL services., some of our clients and potential clients have asked us for better proposals in cargo transport, for the handling of large volume shipments over long distances.

We believe that the alliance between the UP and NS railways will bring better benefits in the following aspects: coast to coast national coverage, since the fewer railways involved in a service route, the more efficient the railway operation, We also consider that both companies will be able to focus their human and financial resources in a more efficient way, which can translate into improved time and optimization of resources, with better transit times which will finally be impacted on the improvement of the economy of the United States and the final buyers of the transported products, thus improving the end consumer in the United States

For the above reasons, we hope that they will consider approving the merger between UP and NS

Sincerely

Luis Fernando Venegas

October 14, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Comments on the Proposed Union Pacific–Norfolk Southern Merger

Dear Chairman Fuchs:

As a long-time customer shipping hazardous waste from across North America—and a current customer of all six Class I freight railroads—Veolia recognizes the essential role that the rail system plays in supporting our economy and business operations. Reliable rail service connects our facilities to broader markets, providing not only more efficient transportation but also more environmentally responsible options for moving these materials.

Veolia's operations would clearly benefit from faster, more reliable rail service and a more efficient, resilient supply chain. The proposed Union Pacific–Norfolk Southern merger has strong potential to deliver these improvements by enabling single-line coast-to-coast service. This would create more direct routes, reduce transportation costs, and expand each railroad's geographic reach—benefits that would also extend to Veolia and our customers. With thoughtful implementation, this merger could enhance service dependability, support local economies, and create opportunities for infrastructure investment and job growth. These outcomes should, of course, be realized in a manner consistent with the highest standards of safety, sustainability, and long-term public benefit—areas in which we trust the Surface Transportation Board will remain diligent.

In our industry, rail freight offers a substantial sustainability advantage—one railcar can replace between four and ten trucks on the highway. This shift significantly reduces highway congestion and carbon emissions, making rail a critical component of sustainable logistics. Decarbonization is a core initiative at Veolia, and expanding our rail utilization is one of the ways we are making measurable progress. The proposed merger would provide another opportunity to broaden that impact.

We respectfully encourage the Board to consider these perspectives in its review of the proposed merger.

Sincerely,

Mike Bartholomew

Subject: Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

We understand that the Surface Transportation Board will soon be asked to consider the proposed merger between Union Pacific and Norfolk Southern.

Viserion Grain, LLC depends on efficient, reliable, and cost-effective rail service to deliver agricultural commodities to our customers in both domestic and international markets. We welcome initiatives undertaken by all our rail partners to address service issues and believe the proposed merger of the Union Pacific and Norfolk Southern Railroads would be positive for our business.

We have a vested interest in the health of the rail transportation sector and believe that the proposed merger can enhance competition and yield real benefits for our business, including:

- **Improved Service Reliability:** The promise of more direct routes and greater flexibility will minimize the risk of service disruptions.
- **Reduced Transit Times:** We believe the combination will remove several days from transit times via the elimination of interchanges where rail cars are handed off between lines. This will enable us to deliver goods to our customers faster and more efficiently.
- **Increased Investment:** We expect the synergies realized from the proposed merger, would better position the Union Pacific to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

We understand that regulatory review is an important part of this process and ask that the relevant authorities carefully consider all aspects of the proposed merger, including the anticipated positive impact this merger can have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective.

Sincerely,

Aaron Wiegand

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Vista Minerals is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At Vista Minerals, we transport high quality, fine-grade frac sand to markets throughout Texas. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Vista Minerals has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-standing customer of Union Pacific, VSS Emultech is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our business relies on efficient, reliable, and cost-effective rail service to deliver asphalt and asphalt emulsion products across California, Nevada, and Arizona. The American freight rail network is essential to our operations and to the broader economy, enabling the safe and sustainable movement of goods nationwide. We recognize that continued investment and innovation in rail infrastructure are critical to meeting future transportation demands.

We believe this merger represents a unique opportunity to strengthen the U.S. rail system and deliver meaningful benefits to shippers, communities, and the economy, including:

- **Improved Service Reliability:** A unified network will provide more direct routes and greater operational flexibility, reducing the risk of service disruptions.
- **Faster Transit Times:** Eliminating interchanges will shorten transit times by several days, helping us reduce heating costs for liquid asphalt and improve supply chain efficiency.
- **Greater Investment and Innovation:** A combined transcontinental railroad will be better positioned to invest in infrastructure, technology, and safety enhancements, ensuring long-term competitiveness and sustainability.
- **Expanded Market Reach:** Broader geographic coverage will allow us to serve customers more effectively and support economic growth in multiple regions.

We understand the importance of a thorough regulatory review and encourage the Board to consider the significant positive impact this merger will have on businesses like ours, the freight rail industry, and the national economy.

Thank you for your consideration. We look forward to the enhanced service, reliability, and innovation this merger will bring.

Vulcan
Materials Company

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As the leading producer of construction aggregates in North America, and a long-time customer of Union Pacific and Norfolk Southern, Vulcan Materials Company recognizes the vital role freight rail plays in building the nation's infrastructure. We rely on safe, efficient, and reliable rail network to transport essential materials-stone, sand, and gravel- that form the foundation of our roads, bridges, and buildings. To meet the growing demands of our country, it is critical that this network continue to evolve with innovation and investment.

We believe this merger has the potential to deliver meaningful benefits for shippers, businesses, and the broader economy, including:

- **Improved service reliability/reducing transit times.** By creating a more direct route, the combined network will reduce the risk of service disruptions and eliminate days of transit time. A larger network requires a strong commitment to both maintaining and improving existing service, as well as investing in new routes. The new company will be well-positioned to execute on this.
- **Increasing investment.** A stronger, transcontinental railroad will be better positioned to invest in the infrastructure, technology, and assets needed to improve service, increase capacity, and focus on safety, ultimately reducing costs for shippers and positively affecting the economy.
- **Expanding our reach.** As one of our foundational pillars, we are committed to expanding our footprint to better serve existing customers and reach new ones. While moving aggregates by rail presents a significant freight-cost challenge, we believe that the synergies created through this merger will deliver meaningful efficiencies and cost savings for our downstream customers who are helping build America.

We encourage the relevant authorities to consider the positive impact this merger will have on businesses and the broader economy. We look forward to the enhanced service and continued partnership it will bring.

Thank you for your consideration of our perspective.

"Recycling for the future now"

Thursday, September 25th 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of the American freight rail network, W Silver Recycling Inc is writing to express our strong support for strategic initiatives, such as the proposed combination of major rail carriers, that promise to enhance the overall efficiency and competitiveness of the rail system.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our consumers and ensure the safe, timely delivery of our products across the country. At W Silver Recycling Inc, we transport substantial volumes of scrap metal to markets nationwide. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these vital rail networks need new investments and new commitments for growth and innovation, so that W Silver Recycling Inc can continue to thrive.

We believe that strategically sound consolidations within the rail industry can yield significant benefits for shippers and partners like us, including:

- **Improved Service Reliability:** A more integrated network can lead to more cohesive operations and greater flexibility in managing logistics, thereby minimizing the risk of service disruptions that impact our critical delivery schedules.
- **Reduced Transit Times:** By optimizing network flows and eliminating redundancies inherent in multi-carrier routes, such combinations can reduce overall transit times, enabling us to deliver goods to more consumers faster and improve our inventory management.
- **Increased Investment:** Larger, stronger rail entities are often better positioned to make substantial investments in crucial infrastructure, advanced technology, and modern equipment. This enhances service quality, capacity, and safety across the entire network.
- **Expanded Reach and Simplification:** A broader, more integrated geographic footprint can simplify shipping logistics and allow businesses like ours to better serve existing customers and strategically reach new ones, supporting economic growth for both our company and the regions we serve.

We understand that a thorough regulatory review is an important and necessary part of this process. We respectfully encourage the relevant authorities to carefully consider the profound positive impact that such strategic enhancements to the rail system can have on businesses like ours, which rely on efficient rail for their very operations, and on the broader national economy.

"Recycling for the future now"

Washington, DC 20423

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, WE Soda Wyoming LP recognizes the importance of efficient, reliable and cost-effective rail service to meet our customers' needs and ensure the safe and timely delivery of our products. WE Soda transports soda ash and other sodium-based products to markets throughout the world, and the American freight rail network is a critical part of our supply chain. Reliable rail service allows us to move large volumes efficiently and sustainably, which supports both our customers and the broader U.S. economy.

We understand that rail networks must continue to receive new investments and commitments for growth and innovation so that shippers like us can continue to grow our operations and effectively serve our customers.

From our perspective as a shipper, the proposed combination of Union Pacific and Norfolk Southern could create opportunities for meaningful improvements in service. These may include:

- **Improved Service Reliability:** A more integrated network has the potential to provide greater flexibility by reducing interchanges, giving the railroad more options to reroute around disruptions, and improving equipment and crew utilization—all of which support more consistent and reliable service for shippers; and

- **Reduced Transit Times:** By reducing interchanges where rail cars are handed off, the combination could shorten transit times and allow us to deliver products to customers more quickly.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger could have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective.

WERNER | WE KEEP AMERICA MOVING®

September 3, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Werner Enterprises is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. As a leading truckload and intermodal company, Werner Enterprises understands firsthand that the American freight rail network is critical to our supply chain. We also recognize that continued investment and innovation in rail will allow us to continue to grow and drive efficient and sustainable transportation solutions to our customers.

We believe that the proposed merger will enhance competition and yield significant benefits for customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new markets.

We are optimistic that the proposed merger will not only drive improved service and efficiency but will also lead to additional innovation and a streamlined customer experience.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,

Nathan Browne

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a longtime customer of Union Pacific, West Fraser is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At West Fraser, we transport building products to global markets. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that West Fraser has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Sincerely,
Matt Tobin

22 October 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

Wheeler Brothers Grain Co. has been a customer of the Union Pacific for many years. I'm not quite old enough to remember exactly when we started our relationship as our company was founded in 1917 and remains family owned. However, I know that 40 years ago, our company purchased a shortline railroad that interchanges with the Union Pacific for further transport of our grain to export facilities and to domestic mills.

In the past 20 years, the percentage of world wheat trade from the United States has declined significantly. This makes trade with domestic end users much more important for our company. The UP / NS merger would allow us to trade more easily and more economically into the eastern domestic markets.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific rail shippers.

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.
- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and on the broader economy.

P.O. Box 29 Watonga, OK 73772 580.623.7223

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

WILDCAT MIDSTREAM
UTAH WAH BY RAIL

September 19, 2025

The Honorable Patrick J. Fuchs
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for Union Pacific and Norfolk Southern Merger

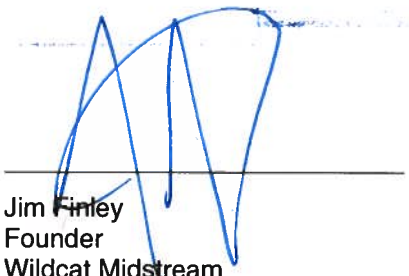
Dear Chairman Fuchs,

As a longtime customer of Union Pacific, Wildcat Midstream is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of refinery customers and ensure the safe, timely delivery of our products across the country. Wildcat Midstream transports natural petroleum wax, and time is of the essence during transportation. The wax is loaded in railcars as a liquid and if transport times are too long, the wax will solidify. This requires the application of a substantial amount of energy, in the form of steam, to reheat the wax. This results in increased CO2 emissions and increased labor costs and other inefficiencies. Nationwide reduction in transport times as foreseen by the merger will expand the domestic markets available to Wildcat Midstream. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that Wildcat Midstream has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific customers like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more refinery customers, and our producer customers in the Uinta Basin in Northeast Utah, faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.



WILDCAT MIDSTREAM
UTAH WAX BY RAIL

- **Expanded Reach:** Our ability to access a broader geographic footprint will allow us to better serve our customers and reach new ones.
- **Improved Environmental Impact**: These efficiencies will result in less energy consumption, less CO2 and other emissions.

We understand that regulatory review is an important part of this process, and we encourage the relevant authorities to carefully consider the positive impact this merger will have on businesses like ours and the broader economy.

Thank you for your consideration of our perspective. We look forward to the continued partnership and enhanced service that this merger will bring.

Subject: Support for Union Pacific and Norfolk Southern Merger

Dear Chairman Fuchs,

As a long-time customer of Union Pacific, Wilkinson Gary Iron & Metal, Inc. is writing to express our strong support for the proposed merger between Union Pacific and Norfolk Southern.

Our company depends on efficient, reliable, and cost-effective rail service to meet the needs of our customers and ensure the safe, timely delivery of our products across the country. At WGIM, we transport recyclable materials such as scrap steel to markets across the United States and ultimately the world. The American freight rail network is a critical component of our supply chain, allowing us to move large volumes efficiently and sustainably. We understand the importance of rail to our employees, our products, and our national economy. We also understand firsthand how these rail networks need new investments, and new commitments for growth and innovation, so that WGIM has a bright future.

We believe that the proposed merger will enhance competition and yield significant benefits for Union Pacific partners like us, including:

- **Improved Service Reliability:** The combined network will offer more direct routes and greater flexibility, minimizing the risk of service disruptions.
- **Reduced Transit Times:** By eliminating interchanges where rail cars are handed off, the combination will remove several days from transit times, enabling us to deliver more goods to more customers faster.
- **Increased Investment:** The transcontinental railroad will be better positioned to invest in infrastructure, technology, and equipment, further improving service quality, capacity, and safety.

www.willbanksmetals.com

November 5, 2025

The Honorable Patrick J. Fuchs, Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Subject: Support for the Proposed Union Pacific–Norfolk Southern Merger

Dear Chairman Fuchs:

Willbanks Metals, Inc. writes in support of the proposed merger between Union Pacific and Norfolk Southern. We are a **consignee**—not a shipper—and have been a Union Pacific customer for roughly **a year and a half**. In that time, we have been **well-pleased with UP's service quality and responsiveness**. Our facility is **dual-served**, and while we value the competition that dual service brings, we consistently receive **better service from Union Pacific** at our location. We also understand that, as part of this combination, **UP will pick up several of our shippers**, which we expect will streamline inbound flows to our site.

Our business depends on efficient, reliable, and cost-effective rail service to meet customer commitments and keep supply chains moving safely. We handle steel coils from our domestic producers, and dependable rail transportation is essential to maintaining inventory balance, production cadence, and downstream customer service.

From our perspective as a consignee, this merger offers clear, practical benefits:

- **Improved reliability at the dock:** A more integrated network and coordinated operations should reduce variability, bunching, and missed switches, helping us plan labor and staging more effectively.
- **Faster cycle times:** Fewer interchanges and better end-to-end coordination can **cut days from transit**, lowering our inventory carrying costs and improving order responsiveness.
- **Expanded commercial reach:** With **more of our shippers on the combined network**, we anticipate simpler routings and fewer handoffs, reducing exceptions and claims risk.
- **Stronger investment platform:** A larger, financially resilient carrier should be better positioned to invest in infrastructure, technology, and equipment that enhance **capacity, safety, and service**.

We recognize the importance of the Board's review and the need to preserve competition where it matters. From our vantage point, the transaction—as proposed—**supports service reliability while maintaining competitive discipline** at our location, and it offers tangible benefits to consignees like us.

Thank you for considering our experience and perspective. We look forward to continued partnership and the enhanced service we expect this merger to deliver.

Sincerely,

Kyle McKillip
