STB Finance Docket No. 35087

Date: Aug. 28, 2008

It is very disturbing to think that the town of Barrington could become a virtual rail yard with freight trains constantly passing through the entire town at all times of night and day. What about life saving vehicles such as fire trucks, ambulances, police will be stymied at all crossing. What about commuter trains? With mile long freights going through commuter trains will invariably be held up as the tracks cross in the middle of town. Traffic in town already is slow and with the railroad gates down for long periods of time it will become a nightmare. The sale to CN is a bad idea!
