Canadian Pacific Acquisition of Kansas City Southern

DRAFT ENVIRONMENTAL IMPACT STATEMENT

Docket No. FD 36500
Volume II: Appendices

LEAD AGENCY
Surface Transportation Board
Office of Environmental Analysis

Decision ID No. 51355

APPLICANTS
Canadian Pacific Railway
Kansas City Southern Railway

COMMENT DUE DATE
September 26, 2022

Appendix A

Public Involvement

Under the National Environmental Policy Act (NEPA) regulations, agencies shall make diligent efforts to involve the public in the environmental review process. Agencies shall also "Provide public notice of NEPA-related hearings, public meetings, and other opportunities for public involvement, and the availability of environmental documents so as to inform those persons and agencies who may be interested or affected by their proposed actions." (40 Code of Federal Regulations [C.F.R.] Section (§) 1506.6). For the Draft Environmental Impact Statement (Draft EIS) for the Proposed Acquisition of Kansas City Southern Railway (KCS) by Canadian Pacific (CP), the Surface Transportation Board's (Board) Office of Environmental Analysis (OEA) conducted public involvement activities to inform the public, including elected officials, of the scoping period and the availability of this Draft EIS and the associated comment period. The Draft EIS analyzes the potential environmental impacts of the Proposed Acquisition and presents OEA's preliminary environmental mitigation recommendations. OEA developed its public involvement approach to provide the public with opportunities to comment on the scope of the Draft EIS and on its content so that OEA can assess issues raised by the public and consider those concerns in developing the Final EIS.

Executive Order 12898, "Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations," requires enhanced outreach efforts to environmental justice (EJ) populations for public involvement opportunities. OEA conducted additional notification efforts to engage EJ communities, including the use of online banner advertisements and letters and postcards to community leaders, such as school principals, police and fire chiefs, library leadership, and religious leaders. Over 500 local leaders were notified about this environmental review process and the opportunities for engagement, identified in **Table A.1-1** at the end of this appendix.

This appendix contains examples of public involvement materials that OEA developed to inform the public of the scoping and Draft EIS comment periods, as well as the information shared at public meetings and other sources, such as the Board-sponsored project website.

A.1 Public Notification Materials

Attachment A, *Public Notification Materials*, includes the following materials used to notify the public of the scoping period, extension of the scoping period, and information about the project.

A.1.1 Public Notification Materials

- Federal Register Notices
  - Notice of Intent to Prepare an EIS: November 12, 2021
  - Notice of Public Scoping Comment Period Extension: December 17, 2021
  - Notice of Availability of the Final Scope of Study for the Environmental Impact Statement: February 18, 2022
- Board Press Releases
  - Notice of Intent: November 12, 2021
  - Scoping Period Extension: December 17, 2021
  - Notice of Availability of the Final Scope of Study for the Environmental Impact Statement: February 18, 2022

A.1.2 Scoping Period Materials

- Letters to Elected Officials
  - Federal: Emailed to U.S. Senators and Representatives representing states or districts, respectively, where the Proposed Acquisition could result in adverse environmental impacts, including states or districts where increased rail traffic resulting from the Proposed Acquisition would exceed thresholds for environmental review, states or districts where increased activity at rail yards or intermodal facilities would exceed thresholds for environmental review, and states or districts where CP and KCS intend to make capital improvements if the Board authorizes the Proposed Acquisition.
  - State: Emailed to governors and state legislators representing districts where the Proposed Acquisition could result in adverse environmental impacts.
  - Local: Emailed to the executive or highest ranking local elected official (e.g., mayor, county board chairperson)—identified through internet research—representing any county or locality where the Proposed Acquisition could result in adverse environmental impacts.
- Outreach to EJ Populations
  - Community Leaders: Letter emailed to community leaders in EJ population areas with a flier (also included) to post in their communities. Postcards were mailed to the community leaders when an email address was not available.
  - Banner Advertisement: Paid digital advertisement deployed in EJ population areas, linking to Board-sponsored project website.

A.1.3 Informational Materials

- Project Website (www.CP-KCSMergerEIS.com/)
- Public Meeting Materials
  - Pre-recorded Presentation
  - Virtual Meeting Room (https://vmr.vhb.com/v/ydjWGe0Jj32)

- Merger Process Overview Slides
- Environmental Review Process Overview Slides
- Review Schedule Slides
- Purpose and Need, Proposed Action, and Alternatives Slides
- Impact Topic Slides
- Meeting Booklet (PDF)
- Project Update Flyer

A.2 Draft EIS Materials

A.2.1 Public Notification Materials

- Federal Register Notices
  - EPA Notice of Availability (TBD)
- Board Press Release
- Email Notification to Elected Officials
  - Federal: Emailed to U.S. Senators and Representatives representing states or districts, respectively, where the Proposed Acquisition could result in adverse environmental impacts.
  - State: Emailed to governors and state legislators representing districts where the Proposed Acquisition could result in adverse environmental impacts.
  - Local: Emailed to the executive or highest ranking local elected official (e.g., mayor, county board chairperson), representing any county or locality where the Proposed Acquisition could result in adverse environmental impacts.
- Environmental Justice Outreach
  - Community Leaders: Letter emailed to community leaders in EJ population areas with a flier (also included) to post in their communities. Postcards were mailed to the community leaders when an email address was not available.
  - Banner Advertisement: Paid digital advertisement deployed in EJ population areas, linking to Board-sponsored project website.

Appendix A – Attachment 1: Public Notification Materials

50990 SERVICE DATE – NOVEMBER 12, 2021
OEA

SURFACE TRANSPORTATION BOARD

DECISION

Docket No. FD 36500

CANADIAN PACIFIC RAILWAY LIMITED; CANADIAN PACIFIC RAILWAY COMPANY; SOO LINE RAILROAD COMPANY; CENTRAL MAINE & QUEBEC RAILWAY US INC.; DAKOTA, MINNESOTA & EASTERN RAILROAD CORPORATION; AND DELAWARE & HUDSON RAILWAY COMPANY, INC.
—CONTROL—
KANSAS CITY SOUTHERN; THE KANSAS CITY SOUTHERN RAILWAY COMPANY; GATEWAY EASTERN RAILWAY COMPANY; AND THE TEXAS MEXICAN RAILWAY COMPANY

AGENCY: Surface Transportation Board

ACTION: Notice of Intent to Prepare an Environmental Impact Statement (EIS); Notice of Initiation of the Scoping Process; Request for Comments on Scope of the EIS; and Notice of Public Scoping Meetings.

SUMMARY: On October 29, 2021, Canadian Pacific Railway Limited, Canadian Pacific Railway Company, and their U.S. rail carrier subsidiaries Soo Line Railroad Company; Central Maine & Quebec Railway U.S. Inc.; Dakota, Minnesota & Eastern Railroad Corporation; and Delaware & Hudson Railway Company, Inc. (collectively, CP) and Kansas City Southern, The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company (collectively, KCS) filed an application with the Surface Transportation Board (Board) seeking the Board's approval of the acquisition of control by CP of KCS. The proposed acquisition has the potential to result in significant environmental impacts; therefore, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate pursuant to the National Environmental Policy Act (NEPA). The purpose of this Notice is to inform stakeholders—including members of the public; tribes; federal, state, and local agencies; and environmental groups—interested in or potentially affected by potential environmental impacts related to the proposed acquisition. OEA will hold online public scoping meetings as part of the NEPA process. Oral and written comments submitted during scoping will assist OEA in defining the range of alternatives and potential impacts to be considered in the EIS. Public scoping meeting dates are provided below.

DATES: Comments on the scope of the EIS are due by December 17, 2021. OEA will hold six online public scoping meetings on the following dates (times in Central Standard Time).

- Tuesday, November 30, 2021, 6-8 p.m.
- Wednesday, December 1, 2021, 2-4 p.m.
- Thursday, December 2, 2021, 6-8 p.m.
- Tuesday, December 7, 6-8 p.m.
- Wednesday, December 8, 2021, 2-4 p.m.
- Thursday, December 9, 2021, 6-8 p.m.

Information on how to attend and participate in an online public scoping meeting, including how to register in advance, is available on the Board-sponsored project website at www.CP-KCSMergerEIS.com.

ADDRESSES: Interested parties are encouraged to file their scoping comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com or through the Board's website at www.stb.gov by clicking on the "File an Environmental Comment" link. Please refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. Scoping comments submitted by mail should be addressed to: Joshua Wayland, Surface Transportation Board, c/o VHB, Attention: Environmental Filing, Docket No. FD 36500, 940 Main Campus Dr., Suite 500, Raleigh, NC 27606.

FOR FURTHER INFORMATION CONTACT: Joshua Wayland, Office of Environmental Analysis, Surface Transportation Board, c/o VHB, 940 Main Campus Dr., Suite 500, Raleigh, NC 27606, or call OEA's toll-free number for the project at 1-888-319-2337. Assistance for the hearing impaired is available through the Federal Information Relay Service at 1-800-877-8339. The website for the Board is https://www.stb.gov. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

SUPPLEMENTARY INFORMATION:

Background

On October 29, 2021, CP and KCS (collectively, the Applicants) filed an application with the Board under 49 U.S.C. §§ 11323-25 seeking its approval of the acquisition of control of KCS by CP. CP and KCS are two of the seven Class I railroads in the United States, which are the largest railroads defined as having annual revenue greater than $250 million. CP is one of Canada's two major railroads, extending across the country and connecting east and west coast ports. In the U.S., CP connects to Buffalo and Albany, New York and Searsport, Maine. CP also runs south into the U.S. Midwest and connects with KCS in Kansas City, Missouri. KCS is a Class I railroad that extends from Kansas City, Missouri to the Gulf Coast and into Mexico, operating across 10 states in the Midwest and Southeast. CP and KCS provide rail service for a variety of industries, including agriculture, minerals, military, automotive, chemical and petroleum, energy, industrial, and consumer products. CP and KCS are the two smallest Class I railroads, and the combined railroad would be the smallest Class I railroad by revenue. At the request of OEA, the Applicants have submitted information needed by OEA to initiate an environmental review of the proposed acquisition. Based on the information provided by the

Applicants, OEA has determined that the proposed acquisition has the potential to result in significant environmental impacts and that the preparation of an EIS is appropriate.

Summary of the Board's Review Processes for this Proceeding

The Board will review the proposed transaction through two parallel but distinct processes: (1) the transportation-related process that examines the competitive, transportation, and economic implications of the proposed acquisition on the national rail system, and (2) the environmental process conducted by OEA that assesses the potential environmental effects of the proposed acquisition on the human and natural environment through preparation of an EIS. Interested persons and entities may participate in either process or both. If interested persons or entities are primarily interested in potential environmental impacts on communities, such as noise, vibration, air emissions, grade crossing safety and delay, emergency vehicle access, and other similar environmental issues, the appropriate forum is OEA's environmental review process. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 CFR § 1180.4 (2000) require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board issues a final decision.

Environmental Review Process

The NEPA process is intended to assist the Board and the public in identifying and assessing the potential environmental consequences of a proposed action before a decision on that proposal is made. OEA is responsible for ensuring that the Board complies with NEPA (42 U.S.C. §§ 4321-4370m-12) and related environmental statutes, including Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108) and Section 7 of the Endangered Species Act (16 U.S.C. § 1536).

Purpose and Need

The proposed transaction involves an application for Board authority under 49 U.S.C. §§ 11323-25 for CP to acquire KCS. The proposed transaction is not a federal government-proposed or sponsored project. Thus, the project's purpose and need should be informed by both the private applicant's goals and the Board's enabling statute—the Interstate Commerce Act as amended by the ICC Termination Act, Pub. L. No. 104-188, 109 Stat. 803 (1996). See Alaska Survival v. STB, 705 F.3d 1073, 1084-85 (9th Cir. 2013).

According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks

annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions. Under the Interstate Commerce Act, as amended, the Board "shall approve and authorize a transaction" such as this when, after considering several factors, "it finds the transaction is consistent with the public interest." 49 U.S.C. § 11324 (b) & (c).

Proposed Action and Alternatives

The Proposed Action in this proceeding is the Applicants' proposed acquisition of KCS by CP. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap. The proposed acquisition would result in changes in rail traffic on portions of the combined rail network. Rail traffic would increase on certain rail line segments and would decrease on others. The largest change would occur on the CP mainline between Sabula, Iowa and Kansas City, Missouri, which would experience an increase in rail traffic of approximately 14.4 additional trains per day, on average. Increases in activities at rail yards and intermodal facilities would also occur. In addition, the Applicants propose to make certain capital improvements within the existing rail right-of-way, including adding approximately four miles of double track on the KCS Pittsburg Subdivision, adding approximately five miles of facility working track adjacent to the International Freight Gateway intermodal terminal near Kansas City, and adding or extending 24 passing sidings along the combined network. The Applicants do not propose to construct any new rail lines subject to Board licensing or to abandon any rail lines as part of the proposed acquisition.

The alternative to the Proposed Action is the No-Action Alternative, which would occur if the Board were to deny the proposed acquisition. Under the No-Action Alternative, CP would not acquire KCS.

Scoping

The first stage of the environmental review process is scoping. Scoping is an open process for determining the range of issues that should be examined and assessed in the EIS. In addition to announcing that the Board will prepare an EIS for this proceeding, this Notice also requests comments on the scope of the EIS and presents the schedule of public scoping meetings. With this notice, OEA is soliciting written comments on the scope, alternatives, and issues to be analyzed in the EIS. After the close of the comment period on the scope of the EIS on December 17, 2021, OEA will review all comments received and issue a final scope of study for the EIS. OEA anticipates issuing the final scope of study in early 2022.

Draft EIS

Following the issuance of the final scope, OEA will prepare a Draft EIS for the proposed acquisition. The Draft EIS will identify and analyze alternatives, including the Proposed Action and the No-Action Alternative, and will address potential impacts on the environment as well as issues and concerns identified during the scoping process. The Draft EIS will focus on (1) potential impacts from changes in rail operations along rail line segments and at rail yards that

would experience increases in rail traffic as a result of the proposed acquisition that would exceed OEA's thresholds for environmental review at 49 C.F.R. § 1105.7(e), (2) potential impacts related to changes in vehicular traffic on roadways and at facilities as a result of the proposed acquisition that would exceed OEA's thresholds for analysis, and (3) potential impacts that could result from making capital improvements within the rail right-of-way as part of the proposed acquisition.

The scope of the issues that will be analyzed in the Draft EIS may include potential impacts related to:

- Freight rail capacity and safety;
- Passenger rail capacity and safety;
- Grade crossing safety and delay;
- Motor vehicle traffic and roadway systems;
- Land use;
- Air quality;
- Noise;
- Biological resources;
- Water resources;
- Hazardous waste sites;
- Cultural resources;
- Environmental justice; and
- Cumulative impacts.

The thresholds for assessing environmental impacts from increased rail traffic on rail lines in railroad acquisition proceedings are an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase of at least eight trains per day. For air quality impacts, rail lines located in areas classified as being in nonattainment under the Clean Air Act (42 U.S.C. §§ 7401-7671q) are also assessed if they would experience an increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day. Based on the information provided by the Applicants to date, OEA has identified rail lines in Illinois, Iowa, Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas that would experience increases in rail traffic that would exceed the analysis thresholds as a result of the proposed acquisition.

In addition to assessing the environmental impacts of the proposed acquisition, the Draft EIS will also set forth OEA's preliminary recommendations for environmental mitigation measures. OEA anticipates issuing the Draft EIS in the spring of 2022.

Final EIS

Upon its completion, the Draft EIS will be made available for public and agency review and comment for 45 days. OEA will then prepare and issue a Final EIS that will address the comments on the Draft EIS from the public; and federal, state and local agencies; and other interested parties and will set forth OEA's final recommended environmental mitigation. Then,

in reaching its decision in this case, the Board will consider the Draft EIS, the Final EIS, public comments, and any final environmental mitigation proposed by OEA. OEA anticipates issuing the Final EIS in the fall of 2022.

Public Scoping Meetings

As noted above, scoping is the first stage of the environmental review process. OEA will hold online public scoping meetings at the dates and times listed below. All times are listed in Central Standard Time. There is no need to attend more than one online meeting, but all are welcome to attend as many meetings as desired.

- Tuesday, November 30, 2021, 6-8 p.m.
- Wednesday, December 1, 2021, 2-4 p.m.
- Thursday, December 2, 2021, 6-8 p.m.
- Tuesday, December 7, 6-8 p.m.
- Wednesday, December 8, 2021, 2-4 p.m.
- Thursday, December 9, 2021, 6-8 p.m.

The online public scoping meetings will include a brief presentation by OEA, followed by an opportunity for interested individuals to make oral comments. Participants who have registered in advance will be called upon first to deliver their oral comments and will be given three minutes in which to do so. If time permits, participants who did not register in advance will be given the opportunity to make oral comments. A court reporter will record the oral comments, and OEA staff will be available to listen and make notes of comments.

For information on how to attend an online public scoping meeting, including how to register in advance, please visit the Public Involvement page on the Board-sponsored project website (www.CP-KCSMergerEIS.com). Although individuals who would like to make oral comments are encouraged to register in advance, registration is not required to attend the public scoping meetings. OEA will consider all comments equally no matter how comments are received, and it is not necessary to attend an online public scoping meeting to provide scoping comments, as OEA will also be accepting written comments during the comment period, which ends on December 17, 2021.

Submitting Written Comments on the Scope of the EIS

Interested parties are encouraged to file their scoping comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Written comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E-FILING" link. Please refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. Scoping comments submitted by mail should be addressed to Joshua Wayland, Surface Transportation Board, c/o VHB, 940 Main Campus Dr. Suite 500, Raleigh, NC 27606, Attention: Environmental Filing, Docket No. FD 36500. Following these directions will help ensure that your comments are considered in the environmental review process for this proposed acquisition.

All comments submitted during scoping will be made available to the public on the Board-sponsored project website and the Board's website. OEA will add commenters' names to its email distribution list to announce the availability of the final scope of the EIS, the Draft EIS, and the Final EIS, which will be posted on the Board's website and the Board-sponsored project website. Commenters without email addresses will receive notifications by U.S. mail if accurate mailing addresses are provided, as needed.

All Board decisions, orders, and notices in this proceeding will also be available on the Board's website at www.stb.gov under "E-Library," and "Decisions & Notices" or "Filings." For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

By the Board, Danielle Gosselin, Acting Director, Office of Environmental Analysis.

OEA

SURFACE TRANSPORTATION BOARD

NOTICE

Docket No. FD 36500

CANADIAN PACIFIC RAILWAY LIMITED; CANADIAN PACIFIC RAILWAY COMPANY; SOO LINE RAILROAD COMPANY; CENTRAL MAINE & QUEBEC RAILWAY US INC.; DAKOTA, MINNESOTA & EASTERN RAILROAD CORPORATION; AND DELAWARE & HUDSON RAILWAY COMPANY, INC.
—CONTROL—
KANSAS CITY SOUTHERN; THE KANSAS CITY SOUTHERN RAILWAY COMPANY; GATEWAY EASTERN RAILWAY COMPANY; AND THE TEXAS MEXICAN RAILWAY COMPANY

Decided: December 17, 2021

Notice of Extension of Scoping Comment Period

The Surface Transportation Board's (Board) Office of Environmental Analysis (OEA) issued a Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS) in the above-captioned proceeding on November 12, 2021 and published it in the Federal Register on the same day. In the NOI, OEA invited public comments on the scope of the EIS by December 17, 2021. OEA has received requests for an extension of the scoping comment period and is issuing this Notice to advise the public and all interested parties that the comment period will be extended until January 3, 2022. **No further extensions of time will be granted**.

OEA will issue a Final Scope of Study for the EIS after the close of the scoping comment period. Scoping comments may be submitted electronically on the Board-sponsored project website at www.CP-KCSMergerEIS.com or the Board's website at www.stb.gov by clicking on the "E-FILING" link. Please refer to **Docket No. FD 36500** in all correspondence, including e-filings, addressed to the Board. Any comments previously submitted need not be resubmitted. Scoping comments are now due by **January 3, 2022**.

For additional information about the Board's environmental review process for this proposed acquisition please visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

By the Board, Danielle Gosselin, Acting Director, Office of Environmental Analysis.

SURFACE TRANSPORTATION BOARD

DECISION

Docket No. FD 36500

CANADIAN PACIFIC RAILWAY LIMITED; CANADIAN PACIFIC RAILWAY COMPANY; SOO LINE RAILROAD COMPANY; CENTRAL MAINE & QUEBEC RAILWAY US INC.; DAKOTA, MINNESOTA & EASTERN RAILROAD CORPORATION; AND DELAWARE & HUDSON RAILWAY COMPANY, INC.
—CONTROL—
KANSAS CITY SOUTHERN; THE KANSAS CITY SOUTHERN RAILWAY COMPANY; GATEWAY EASTERN RAILWAY COMPANY; AND THE TEXAS MEXICAN RAILWAY COMPANY

Decided: February 15, 2022

AGENCY: Surface Transportation Board.

ACTION: Notice of Availability of the Final Scope of Study for the Environmental Impact Statement.

SUMMARY: On October 29, 2021, Canadian Pacific Railway Limited, Canadian Pacific Railway Company, and their U.S. rail carrier subsidiaries Soo Line Railroad Company; Central Maine & Quebec Railway U.S. Inc.; Dakota, Minnesota & Eastern Railroad Corporation; and Delaware & Hudson Railway Company, Inc. (collectively, CP) and Kansas City Southern, The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company (collectively, KCS) filed an application with the Surface Transportation Board (Board) seeking the Board's approval of the acquisition of control by CP of KCS (Proposed Acquisition). The Proposed Acquisition has the potential to result in significant environmental impacts; therefore, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate to meet the Board's obligations under the National Environmental Policy Act (NEPA) and related laws, including Section 106 of the National Historic Preservation Act (NHPA). The purpose of this Notice is to inform stakeholders—including members of the public; elected officials; tribes; federal, state, and local agencies; and organizations—interested

in or potentially affected by potential environmental and cultural impacts related to the Proposed Acquisition that the Final Scope of Study for the EIS is available.

FOR FURTHER INFORMATION CONTACT: Joshua Wayland, Office of Environmental Analysis, Surface Transportation Board, c/o VHB, 940 Main Campus Dr., Suite 500, Raleigh, NC 27606, or call OEA's toll-free number for the project at 1-888-319-2337. Assistance for the hearing impaired is available through the Federal Information Relay Service at 1-800-877-8339. The website for the Board is https://www.stb.gov. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

SUPPLEMENTARY INFORMATION:

Background

On October 29, 2021, CP and KCS (collectively, the Applicants) filed an application with the Board under 49 U.S. Code (U.S.C.) §§ 11323-25 seeking the Board's approval of the Proposed Acquisition. CP and KCS are two of the seven Class I railroads in the United States, which are the largest railroads, defined as having annual revenue greater than $250 million. CP is one of Canada's two major railroads, extending across the country and connecting east and west coast ports. In the U.S., CP connects to Buffalo and Albany, New York and Searsport, Maine. CP also runs south into the U.S. Midwest and connects with KCS in Kansas City, Missouri. The KCS network extends from Kansas City, Missouri to the Gulf Coast and into Mexico, operating across 10 states in the Midwest and Southeast. CP and KCS provide rail service for a variety of industries, including agriculture, minerals, military, automotive, chemical and petroleum, energy, industrial, and consumer products. CP and KCS are the two smallest Class I railroads, and the combined railroad would be the smallest Class I railroad by revenue.

Summary of the Board's Review Processes for this Proceeding

The Board will review the Proposed Acquisition through two parallel but distinct processes: (1) the transportation-related process that examines the competitive, transportation, and economic implications of the Proposed Acquisition on the national rail system, and (2) the environmental process conducted by OEA that assesses the potential environmental effects of the Proposed Acquisition on the human and natural environment through the preparation of an EIS. Interested persons and entities may participate in either, or both, processes but if interested persons or entities are focused on potential environmental and historical impacts on communities, such as noise, vibration, air emissions, grade crossing safety and delay, emergency vehicle access, and other similar environmental issues, the appropriate forum is OEA's environmental review process. The statute setting forth the procedures for Board review of

acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000) require that the Board complete the process within approximately 15 months after the primary application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board decides whether to authorize the merger.

Environmental Review Process

On November 12, 2021, OEA issued a Notice of Intent (NOI) to inform interested agencies, tribes, and the public of its decision to prepare an EIS and to initiate the formal scoping process under NEPA (42 U.S.C. §§ 4321-4370m-12) and the Section 106 consultation process under the NHPA (54 U.S.C. § 306108). The NEPA process is intended to assist the Board and the public in identifying and assessing the potential environmental consequences of a proposed action before a decision on that proposal is made. OEA is responsible for ensuring that the Board complies with NEPA and related statutes, including Section 106 of the NHPA and Section 7 of the Endangered Species Act (16 U.S.C. § 1536).

Purpose and Need

The Proposed Acquisition involves an application for Board authority under 49 U.S.C. §§ 11323-25 for CP to acquire KCS. The Proposed Acquisition is not a federal government-proposed or sponsored project. Thus, the project's purpose and need is informed by both the Applicants' goals and the Board's enabling statute—the Interstate Commerce Act as amended by the ICC Termination Act, Pub. L. No. 104-188, 109 Stat. 803 (1996). See Alaska Survival v. STB, 705 F.3d 1073, 1084-85 (9th Cir. 2013).

According to the Applicants, the purpose of the Proposed Acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and competitive rail network. The Applicants state that the Proposed Acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the Proposed Acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads; as well as less noise pollution in the places where those trucks would have driven; and lowered air emissions, including greenhouse gas emissions. Under the Interstate Commerce Act, as amended, the Board "shall approve and authorize a transaction" such as this when, after considering several factors, "it finds the transaction is consistent with the public interest." 49 U.S.C. §§ 11324 (b) & (c).

Proposed Action and Alternatives

The proposed federal action in this proceeding is the Applicants' Proposed Acquisition of KCS by CP. If the Board authorizes the Proposed Acquisition, CP and KCS would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The combination of these two railroads would be an end-to-end merger because the CP and KCS railroad networks do not overlap. The Proposed Acquisition would result in changes in rail traffic on portions of the combined rail network. Rail traffic would increase on certain rail line segments and would decrease on others. The largest change would occur on the CP mainline between Sabula, Iowa, and Kansas City, Missouri, which would experience an increase in rail traffic of approximately 14.4 additional trains per day, on average. Increases in activities at rail yards and intermodal facilities would also occur.

If the Board authorizes the Proposed Acquisition, the Applicants plan to make capital improvements within the existing rail right-of-way to support the projected increases in rail traffic. The capital improvements would include extending 13 existing passing sidings, adding 10 new passing sidings, adding approximately four miles of double track in Blue Valley near Kansas City, Missouri, and approximately five miles of facility working track adjacent to the International Freight Gateway intermodal terminal near Kansas City. The Applicants have stated that they would add the capital improvements only as needed based on increasing traffic and that design-level engineering for each capital improvement would only occur if and when the capital improvement is needed. The Applicants do not propose to construct any new rail lines subject to Board licensing or to abandon any rail lines as part of the Proposed Acquisition.

As discussed in the NOI, the Applicants initially informed OEA that they intended to add 11 new passing sidings as part of the Proposed Acquisition. Following the issuance of the NOI, however, the Applicants submitted information clarifying that one of the sidings, located near Brownsville, Minnesota, had been previously designed to accommodate projected increases in rail traffic unrelated to the Proposed Acquisition. The Applicants previously obtained a permit for the siding from the U.S. Army Corps of Engineers (Corps) under Section 404 of the Clean Water Act (33 U.S.C. §§ 1251–1387) (CWA), and the Corps conducted an environmental and historic review of the siding as part of the permitting process. Because the Brownsville siding is a preexisting proposed project, OEA has concluded that this capital improvement would not occur as a result of the Proposed Acquisition and, therefore, it would not be appropriate to assess the potential environmental impacts of the planned siding as part of the EIS for the Proposed Acquisition. Accordingly, the EIS will evaluate a total of 25 capital improvements. An interactive map showing the locations of those capital improvements is available on the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Railroads have the right to increase efficiency by improving their rail lines and rerouting their traffic without seeking authority from the Board. Therefore, railroad capital improvements that are designed to improve operational efficiency (such as sidings, double tracking, and industry track) typically do not require Board authorization or environmental review by OEA. Where capital improvements are related to a proposed merger or acquisition requiring Board approval, OEA considers, as appropriate, the potential environmental impacts from such capital improvements on a case-by-case basis. In this case, the Applicants have stated that certain capital improvements would be necessary to accommodate the increase in rail traffic that the Applicants expect would occur as a result of the Proposed Acquisition. Further, the Applicants have identified the location and general layout of these 25 planned capital improvements in sufficient detail to support an environmental review. Therefore, OEA will assess the potential impacts of the planned capital improvement projects, as appropriate, as part of the EIS.

The alternative to the Proposed Acquisition is the No-Action Alternative. The No-Action Alternative would occur if the Board were to deny authority for the Proposed Acquisition. Under the No-Action Alternative, CP would not acquire KCS and the projected changes in rail operations, rail yard activity, and intermodal facility activity would not occur. Rail traffic on rail lines and activities at rail yards and intermodal facilities could change to support regular railroad operations or as a result of changing market conditions, such as general economic growth, but would not change as a result of the Proposed Acquisition. Similarly, the Applicants would not construct the 25 planned capital improvement projects under the No-Action Alternative. However, CP and KCS could construct sidings, extend existing sidings, or add additional track within the rail right-of-way in the future without seeking Board authority if needed to support rail operations on their respective rail networks. Under the No-Action Alternative, none of the anticipated adverse or beneficial environmental impacts of the Proposed Acquisition would occur.

During the public comment period for the scoping process, the U.S. Environmental Protection Agency (EPA) recommended that the EIS assess alternatives for sidings, double tracking, and other new infrastructure components. OEA notes that potential locations for siding extensions, new sidings, and other capital improvements along the combined CPKC system are limited. The locations of the 13 planned siding extensions are determined by the locations of the existing sidings that would be extended, so no alternative locations can be considered. The locations of the 10 planned new sidings are based on system-wide requirements, including the need for sidings to be placed at regular intervals along the mainline. The start and end points of new sidings are also constrained by site-specific conditions, such as the curvature of the existing mainline. For example, the start and end points for passing sidings are generally placed on straight sections of track for operational reasons. OEA understands that the planned double tracking and the planned facility working track are intended to serve site-specific operational needs and could not be constructed in other locations to serve those needs. Further, because the

capital improvements would be constructed only as needed if traffic were to increase, the final engineering and design of these improvements has not been completed to allow for comparison of alternatives that would differ in terms of final engineering and design (such as the final placement of switches or the locations of construction laydown areas).

Responsive Applications

Certain railroads have notified the Board that they may submit Responsive Applications for consideration by the Board. Responsive Applications are proposals that parties other than the Applicants file with the Board to request modifications or conditions to the primary application. After the Board receives any Responsive Applications, OEA will determine what, if any, environmental review would be required. If any environmental review would be required, that review would be conducted separately from the EIS for the Proposed Acquisition.

Summary of Scoping Process

The scoping process began on November 12, 2021, when OEA issued the NOI and published the NOI in the *Federal Register*. OEA also distributed the NOI to agencies, organizations, and tribes with jurisdiction or interest in areas where the Proposed Acquisition could result in environmental and cultural impacts, including along the CP and KCS mainlines from Chicago, Illinois to Sabula, Iowa and from Sabula, Iowa, to Laredo, Texas, where projected increased rail traffic resulting from the Proposed Acquisition would exceed the Board's thresholds for environmental review. OEA distributed the NOI via:

- Letters to local, state, and federal elected officials;
- Letters to community leaders, such as school principals, police and fire chiefs, library leadership, and religious leaders;
- Geotargeted online banner advertisements for minority and low-income populations;
- Letters to tribal governments and Tribal Historic Preservation Officers (THPOs);
- Letters to federal, state, and local agencies; and
- A press release to television stations, radio stations, and newspapers.

OEA held six online public scoping meetings during the scoping period. To promote participation in the meetings, OEA published meeting information in the NOI and circulated information to elected officials (federal, state, and local) and local community leaders through direct mail and email. OEA also used Google banner advertisements to advertise the public scoping meetings in minority and low-income communities.

Project information was and continues to be available for public review on the Board-sponsored project website and the online meeting room. OEA considered all comments equally

no matter how comments were received, and it was not necessary to attend an online public meeting to provide scoping comments. Public scoping meeting participants had the option to deliver their oral comments during the meeting. Interested parties were encouraged to file their written scoping comments electronically on the Board's website, https://www.stb.gov, or through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Scoping comments could also be submitted by mail. All comments submitted during scoping are available to the public on the Board's website and OEA has added commenters' email addresses to its email distribution list.

The deadline for submitting comments regarding the scope of the EIS was originally set for December 17, 2021. However, based on requests from the public, OEA extended the comment period to January 3, 2022. In total, OEA received 492 comments, 49 of which were oral comments at the public scoping meetings and 443 of which were written comments, between November 12, 2021 and the end of the scoping comment period on January 3, 2022.

OEA has and will continue to update and monitor the Board-sponsored project website, project email inbox, and toll-free information phone line throughout the environmental review process to provide current project information.

Summary of Scoping Comments

- **Environmental Review Process:** Commenters requested an extension of the scoping comment period, an extended comment period on the Draft EIS, an extension of the Board's oversight period of the Proposed Acquisition, and that OEA publish a draft Scope of Study for the EIS. As discussed above, OEA extended the scoping comment period in response to requests from commenters. Requests for other extensions will be considered if filed at the appropriate time. Regarding the issuance of a draft Scope of Study, the Board's regulations at 49 C.F.R. § 1105.10(a)(2) only require the issuance of an NOI with a description of the proposed action and a request for written comments on the scope of the EIS. The NOI and public involvement and agency consultation materials that OEA issued in this case provided the list of topics that the EIS might address and, therefore, the public and agencies had information necessary to provide comments regarding the scope of the EIS.

  Commenters requested that the EIS consider projected changes in rail operations extending at least 10 years after authorization of the Proposed Acquisition. Consistent with past practice, OEA will assess impacts related to changes in rail operations projected over five years from the authorization of the Proposed Acquisition because five years is not too long to produce reasonable and reliable freight rail forecasts. The 10-year

projections recommended by commenters, however, would be too long to produce reasonable estimates.

- **Proposed Action and Alternatives:** Commenters requested that OEA consider reasonable alternatives to the Proposed Acquisition. As discussed above, the EIS will evaluate the Proposed Acquisition and the No-Action Alternative.

- **Freight Rail Capacity and Safety:** Commenters requested that the EIS evaluate potential public health and safety impacts that could be associated with the accidental release of oil and other hazardous substances that could be transported on the combined network. Commenters expressed concerns about safety, citing their understanding of CP's safety record, specific incidents, and the potential for derailments. Commenters requested that the Board impose mitigation measures to address rail safety, including measures requiring reduced train speeds and preventative measures for reducing the risk of derailments. Commenters requested additional information regarding the potential changes in operations that could occur as a result of the Proposed Acquisition, including changes to lengths of trains, and questioned some data provided by the Applicants regarding operations changes, including the projected number of trains per day and the projected volumes of oil and other hazardous materials that trains operating on the combined network could transport. The EIS will provide additional available information regarding potential changes in operations, will disclose the potential impacts of those changes on freight rail capacity and safety, and will consider potential appropriate mitigation measures to address impacts related to freight rail capacity and safety.

- **Passenger Rail Capacity and Safety:** Commenters expressed concern regarding increased delays and service impacts to passenger rail service, such as the Metra commuter rail service. As described below in the Final Scope, the EIS will address passenger rail capacity and safety, including impacts to commuter rail, and will consider potential appropriate mitigation measures to address impacts related to passenger rail capacity and safety.

- **Roadway/Rail At-Grade Crossing Safety and Delay:** Commenters expressed concern regarding the increased number and length of trains causing traffic delays and delays to emergency services. Commenters recommended that the EIS estimate the impact of the Proposed Acquisition on extended blockages at each crossing, develop mitigation to address those impacts, and then measure the actual changes using gate monitoring during the Board's oversight period if the Board authorizes the Proposed Acquisition. Commenters expressed concern about trains using the new sidings and blocking access to roads, public land access, and private driveways (including delays for emergency response services). Commenters expressed concern regarding decreased safety for drivers, pedestrians, and bicyclists as a result of projected increased train traffic at grade

crossings. Commenters also expressed concern regarding increased delays at grade crossings blocking access to important economic activities, recreational facilities, and schools. Commenters requested that OEA consider mitigation measures, such as grade separations, to address impacts associated with increased rail traffic at grade crossings. As described below in the Final Scope, the EIS will address grade crossing safety and delay impacts and will consider potential appropriate mitigation measures to address impacts related to grade crossing safety and delay.

- **Traffic and Roadway Systems:** Commenters requested additional information regarding truck traffic increases at intermodal facilities and requested that the analysis of traffic operations include a morning, afternoon/evening, and off-peak period analysis. As described below in the Final Scope, the EIS will address traffic and roadway system impacts and will consider potential appropriate mitigation measures to address impacts related to traffic and roadway systems.

- **Noise:** Commenters recommended that the impact of noise and vibration on people and animals living in proximity to the rail lines be considered. Commenters expressed concern about their communities experiencing negative impacts from increased train noise. Commenters also expressed concern regarding vibrations damaging utilities, roadways, and buildings in their communities. Commenters recommended mitigation measures for noise impacts on their communities, including quiet zone restrictions, idling policies, gate crossing policies, and horn policies. As described below in the Final Scope, the EIS will address noise and vibration impacts and will consider potential appropriate mitigation measures to address impacts related to noise and vibration.

- **Air Quality and Climate Change:** Commenters expressed concern regarding potential air quality impacts on human health, communities, and wildlife due to emissions from locomotives, vehicles delayed at at-grade crossings, and from activities at rail yards and intermodal facilities. Commenters recommended that the EIS evaluate the short- and long-term emissions and associated potential health impacts using best available methods, particularly in areas with special air quality protections and areas where vulnerable community are located. Commenters also recommended a "hotspot" analysis be conducted at rail yards, intermodal terminals, grade crossings, junctions, and other places of concentrated rail activity. Commenters further requested that the EIS consider measures to reduce air emissions, such as vegetative barriers, staging zones, and using electric switching locomotives. Commenters requested that the EIS evaluate the potential air quality benefits of the Proposed Acquisition. Commenters requested that OEA evaluate the impact of the Proposed Acquisition on climate change in terms of greenhouse gas emissions and consider climate change resiliency and adaptation measures or plans to ensure that infrastructure would maintain structural integrity under

changing climate conditions. The Final Scope reflects that the EIS will consider beneficial and adverse impacts related to air quality and climate change, as well as potential appropriate mitigation measures to address air quality and climate change impacts.

- **Energy:** Commenters expressed concern that the Proposed Acquisition could increase rail transportation of crude oil. As described below in the Final Scope, the EIS will analyze the effect of the Proposed Acquisition on the transportation of energy resources and will consider potential appropriate mitigation measures to address impacts related to energy.

- **Cultural Resources:** Commenters expressed concern that the 25 planned capital improvements could affect cultural resources. Commenters recommended consultation with tribal governments and THPOs regarding the Proposed Acquisition. Commenters expressed concerns regarding vibration impacts to historic districts, sites, and landmarks. The Final Scope reflects that the EIS will consider impacts on cultural resources, as well as potential appropriate mitigation measures to address impacts on cultural resources.

- **Natural Resources (Water Resources and Biological Resources):** Commenters expressed concerns regarding impacts from increased train traffic, including noise and vibration impacts, and impacts from the use of chemical and herbicides along the rail right-of-way on wildlife and vegetation, including migratory birds, forest preserve assets, and threatened and endangered species. Commenters recommended that OEA consult with the U.S. Fish and Wildlife Service, state natural resources departments, and regional and local wildlife experts regarding impacts on wildlife and vegetation and appropriate mitigation measures, potentially including wildlife crossings, methods to prevent the spread of invasive species, and alternative management practices to limit herbicide use. The Final Scope reflects that the EIS will consider impacts on wildlife and vegetation, as appropriate.

  Commenters recommended that the EIS identify impacts on water resources, including wetlands, and discuss compliance with Sections 404, 402, and 303(d) of the CWA. Commenters expressed concern that increased rail traffic could worsen existing impacts related to rail operation, such as by increasing structural fatigue and maintenance costs for water crossings, increasing the potential for harmful runoff from the rail right-of-way, and increasing the risk of derailments or spills that could affect water quality. The Final Scope reflects that the EIS will consider potential impacts on water resources, as well as potential appropriate mitigation measures to address impacts on water resources.

- **Environmental Justice:** Commenters expressed concerns regarding potentially disproportionate impacts on minority and low-income populations, including impacts from increased rail traffic and increased activity at rail yards and intermodal facilities on economic advancement, business development, healthcare and pharmacy access, commute times, education access, and food access in minority and low-income communities. Commenters recommended expanded outreach to minority and low-income populations, including multilingual outreach to impacted communities.

  Commenters suggested mitigation measures for environmental justice communities living adjacent to the tracks and near rail yards to protect their health, including air quality monitoring and air filters in schools. As described below in the Final Scope, the EIS will address environmental justice impacts and will recommend potential appropriate mitigation measures to address disproportionately high and adverse impacts on environment justice communities.

- **Cumulative Impacts:** Commenters expressed concern that cumulative impacts from the Proposed Acquisition and other projects and activities could result in impacts on people, communities, and the environment, including impacts related to increased noise, increased air pollution, decreased economic activity, and decreased safety. As described below in the Final Scope, the EIS will address cumulative impacts, as appropriate.

Based on the comments received and OEA's own analysis, OEA has prepared the Final Scope of Study for the EIS, which is detailed below.

FINAL SCOPE

Environmental Impact Analysis

The EIS will address proposed activities and their potential environmental impacts, as appropriate. OEA will evaluate only the potential environmental impacts of operational and physical changes that are related to the Proposed Acquisition.

The scope of the analysis will include the following types of activities:

1. Anticipated changes in level of operations on rail lines (for instance, an increase in average number of trains per day) for those rail line segments that meet or exceed the Board's thresholds for environmental review in 49 C.F.R. § 1105.7(e).
2. Expected changes in activity at rail yards and intermodal facilities to the extent such changes may exceed the Board's thresholds for environmental analysis in 49 C.F.R. § 1105.7(e).

3. Planned capital improvements, including new sidings, siding extensions, and installation of double track and industry track.

Based on OEA's initial screening of topics pertinent to the Proposed Acquisition and on the fact that no comments were received on the topics of land use, recreation, geology, soils, and aesthetics, the Draft EIS will not analyze these topics.

Environmental Impact Categories

The EIS will analyze potential impacts of the Proposed Acquisition on the environment, including the areas of: freight and passenger rail capacity and safety, including hazardous materials transport safety; roadway/rail at-grade crossings, including safety, delay, and emergency response delay; transportation systems; noise; air quality and climate change; energy; cultural resources; hazardous waste sites; natural resources, water resources, and navigation; environmental justice; and cumulative impacts as described below.

1. **Freight and Passenger Rail Capacity and Safety**
   The EIS will:
   A. For rail line segments on which rail traffic is projected to meet or exceed the Board's thresholds for environmental review as a result of the Proposed Acquisition, describe projected freight rail operations and analyze the potential for increased probability of train accidents including derailments, as appropriate.
   B. For rail line segments with existing passenger rail traffic and a projected average increase of one or more freight trains per day, describe projected passenger rail operations and analyze the potential for increased probability of train accidents including derailments, as appropriate.
   C. Determine adequacy of freight rail capacity.
   D. For rail line segments with existing passenger rail traffic and a projected increase of one or more freight trains per day, determine adequacy of existing and proposed passenger rail capacity and any impacts to passenger rail service.
   E. Identify hazardous materials that would be transported on the combined network, the materials and quantity; the projected frequency of service; whether chemicals are being transported that, if mixed, could react to form more hazardous compounds; safety practices (including any speed restrictions); the Applicants' safety record on derailments, accidents, and hazardous spills; the contingency plans to deal with accidental spills; and the likelihood of an accidental release of hazardous materials.
   F. Describe the Applicants' emergency management or emergency response plans.

2. **Roadway/Rail At-Grade Crossing Safety and Delay**
   The EIS will:

A. For all roadway/rail at-grade crossings on rail line segments where increased traffic would exceed applicable thresholds for environmental review, describe the existing crossing delay and analyze the potential for an increase in delay related to the proposed rail operations, as appropriate.
B. For all roadway/rail at-grade crossings on rail line segments where projected increases in rail traffic would exceed applicable thresholds for environmental review, describe the probability of vehicle accidents, as appropriate.
C. For the 25 planned capital improvements, evaluate the potential for trains stopped on sidings to block roadway/rail at-grade crossings.
D. Evaluate the potential for disruption and delays to the movement of emergency vehicles.

3. Traffic and Roadway Systems

The EIS will:

A. Describe the effects of the Proposed Acquisition on regional or local transportation systems and patterns. Estimate the amount of traffic (passenger or freight) that would be diverted to other transportation systems or modes because of the Proposed Acquisition.
B. Describe potential diversions of freight traffic from trucks to rail and from rail to trucks that would occur as a result of the Proposed Acquisition, as appropriate.
C. Analyze increased truck traffic to and from intermodal facilities where the Proposed Acquisition would result in an increase of 50 or more trucks per day or a 10 percent increase in ADT on affected roadways.

4. Noise

The EIS will:

A. For rail line segments, analyze noise impacts where an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase of at least eight trains per day is projected to occur as a result of the Proposed Acquisition.
B. For rail yards, analyze noise impacts where an increase in rail yard activity of at least 100 percent (measured by carload activity) is projected to occur.
C. For intermodal facilities, analyze noise impacts where an average increase in truck traffic of more than 10 percent of the ADT or 50 vehicles per day on any affected road segment is projected to occur.
D. Analyze noise and vibration impacts resulting from the 25 planned capital improvements, as appropriate.
E. If any of the thresholds above would be exceeded, determine whether the Proposed Acquisition would cause:
    i. An incremental increase in noise levels of three decibels (dB) day-night average sound level (Ldn) or more; and

ii. An increase to a noise level of 65 dB Ldn or greater. If so, identify sensitive receptors (e.g., schools, libraries, hospitals, residences, retirement communities, and nursing homes) in the project area, and quantify the noise increase for these receptors if the thresholds are surpassed.

5. Air Quality and Climate Change

The EIS will:

A. Quantify air emissions in areas where the Proposed Acquisition would result in:
   i. An increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase of at least eight trains per day on any segment of rail line affected by the proposal, or
   ii. An increase in rail yard activity of at least 100 percent (measured by carload activity), or
   iii. An average increase in truck traffic of more than 10 percent of the average daily traffic or 50 vehicles per day on any affected road segment.

B. If the Proposed Acquisition would affect Class I or nonattainment areas under the Clean Air Act, quantify air emissions where the Proposed Acquisition would result in:
   i. An increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day on any segment of rail line,
   ii. An increase in rail yard activity of at least 20 percent (measured by carload activity), or
   iii. An average increase in truck traffic of more than 10 percent of the average daily traffic or 50 vehicles per day on a given road segment.

C. State whether any expected increased emissions are within the parameters established by the applicable State Implementation Plan.

D. Discuss potential air emissions increases from vehicle delays at roadway/rail at-grade crossings where the crossing is projected to experience a change in rail traffic arising from the Proposed Acquisition that would exceed the threshold described above.

E. Evaluate the air emissions and air quality impacts from potential changes in operation of trains and changes in truck traffic that would result from the Proposed Acquisition, including potential greenhouse gas emissions, as appropriate.

F. Analyze the potential impacts of climate change on the 25 planned capital improvements.

6. Energy

The EIS will:

A. Describe the effect of the Proposed Acquisition on transportation of energy resources.

B. Describe the effect of the Proposed Acquisition on recyclable commodities.

C. State whether the Proposed Acquisition would result in an increase or decrease in overall energy efficiency and explain why.

7. Cultural Resources

For the 25 planned capital improvements, the EIS will:

A. Identify historic buildings, structures, sites, objects, or districts eligible for listing on or listed on the National Register of Historic Places (National Register) within the Area of Potential Effect (APE).

B. In consultation with federally recognized tribes participating in the Section 106 process, identify properties of traditional religious and cultural importance to tribes and prehistoric or historic archaeological sites evaluated as potentially eligible, eligible, or listed on the National Register (archaeological historic properties) within the APE and analyze potential project-related impacts to them, including indirect visual effects.

8. Hazardous Waste Sites

For the 25 planned capital improvements, the EIS will:

A. Identify known hazardous waste sites or sites where there have been known hazardous materials spills within 500 feet of the capital improvement locations, identify the location of those sites and the types of hazardous waste involved.

9. Natural Resources

For the 25 planned capital improvements, the EIS will:

A. Based on consultation with the U.S. Fish and Wildlife Service, state whether the Proposed Acquisition would be likely to adversely affect endangered or threatened species or areas designated as a critical habitat, and if so, describe the effects.

B. State whether the Proposed Acquisition would affect wildlife sanctuaries, refuges, or rearing facilities; national or state parks, forests, or grasslands; critical, unique, or high-value habitats that support threatened or endangered species; and riparian habitats and describe any effects.

C. Evaluate the existing biological resources within the project area, including vegetative communities, wildlife, fisheries, wetlands, and federally and state-listed threatened and endangered species (including candidate species).

10. Water Resources

A. For the existing mainline, the EIS will, identify any movable-span bridges that an increase in trains per day might affect.

B. For the 25 planned capital improvements, the EIS will:

i. State whether the Proposed Acquisition would be consistent with applicable federal, state, or local water quality standards and describe any inconsistencies.
ii. State whether the capital improvements would require permits under Section 404 of the CWA and whether any designated wetlands or 100-year floodplains would be affected.
iii. State whether the capital improvements would require permits under Section 402 of the CWA.
iv. Describe the existing surface water and groundwater resources within the project area, including lakes, rivers, streams, stock ponds, wetlands, and floodplains.
v. Evaluate potential impacts from the Proposed Acquisition on the aquatic habitat environment and fish, including the potential effects of stream-crossing structures (i.e., culverts and bridges) on fish passage.
vi. Consider the potential impacts on groundwater and surface water quality, including 303(d) listed impaired surface waters, from the capital improvements.
vii. Evaluate potential alterations of stream morphology and surface water and groundwater movement and flow from the presence of culverts, bridges, and rail embankments for each capital improvement.
viii. Identify existing navigable waterways within the project area.

11. Environmental Justice

The EIS will:

A. Evaluate whether the Proposed Acquisition would adversely or beneficially affect low-income or minority populations.
B. Conduct enhanced outreach efforts to environmental justice populations.
C. Identify potentially high and adverse impacts to minority and low-income populations.
D. Determine whether those impacts are disproportionately borne by minority and low-income populations.

12. Cumulative Impacts

The EIS will:

A. Evaluate the cumulative and incremental impacts of the Proposed Acquisition when added to other past, present, and reasonably foreseeable future actions in the project area, as appropriate.

13. Mitigation Measures

The EIS will:

A. Describe any actions that are proposed to mitigate adverse environmental impacts, indicating why the proposed mitigation is appropriate.

By the Board, Danielle Gosselin, Acting Director, Office of Environmental Analysis.

STB ISSUES FINAL SCOPE OF STUDY FOR CP/KCS MERGER ENVIRONMENTAL IMPACT STATEMENT

The Surface Transportation Board's Office of Environmental Analysis (OEA) today issued the Final Scope of Study (Final Scope) for the Environmental Impact Statement (EIS) that OEA is preparing in connection with the proposed acquisition of Kansas City Southern (KCS) by Canadian Pacific (CP) in Docket No. FD 36500.

OEA will now prepare and issue a Draft EIS, which will discuss the potential environmental impacts of the proposed acquisition of KCS by CP and set forth OEA's preliminary recommendations for appropriate mitigation measures. OEA will request public comments on the Draft EIS and will hold public meetings after the Draft EIS is issued. More information regarding the environmental review process for the proposed acquisition is available on the Board-sponsored project website at www.CP-KCSMergerEIS.com.

The Final Scope, in Canadian Pacific Railway Limited; Canadian Pacific Railway Company; Soo Line Railroad Company; Central Maine & Quebec Railway US Inc.; Dakota, Minnesota & Eastern Railroad Corporation; and Delaware & Hudson Railway Company, Inc.—Control—Kansas City Southern; The Kansas City Southern Railway Company; Gateway Eastern Railway Company; and The Texas Mexican Railway Company, Docket No. FD 36500, may be viewed and downloaded here.

STB ISSUES NOTICE OF INTENT TO PREPARE EIS FOR CP/KCS MERGER APPLICATION

The Surface Transportation Board's Office of Environmental Analysis (OEA) today issued a Notice of Intent (NOI) to prepare an Environmental Impact Statement (EIS) in connection with the proposed acquisition of control of Kansas City Southern and its U.S. rail carrier subsidiaries (collectively, KCS) by Canadian Pacific Railway Limited, Canadian Pacific Railway, and their U.S. rail carrier subsidiaries (collectively, CP) in Docket No. FD 36500.

Because the proposed acquisition has the potential to result in significant environmental impacts, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an EIS is appropriate pursuant to the National Environmental Policy Act. The issuance of the NOI begins the scoping period, the first step of the environmental review process.

OEA will be accepting comments on the scope of the EIS, including alternatives and issues to be analyzed in the EIS, until the close of the scoping comment period on December 17, 2021. OEA will hold six online public scoping meetings during the scoping comment period, as set forth in the NOI.

To view the NOI, click here.

For more information on the environmental review process for the proposed acquisition or to submit a written comment, visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Office of Environmental Analysis

Letter for Elected Officials

November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS.

Because the proposed acquisition has the potential to result in significant environmental impacts, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate. This letter is to formally announce that the Board has issued a Notice of Intent (NOI) to prepare an EIS for this proceeding (https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf). In addition to announcing that the Board will prepare an EIS for this proceeding, the NOI also requests comments on the scope of the EIS and presents a schedule for public scoping meetings; interested parties are encouraged to participate.

Scoping is the first step of the EIS process. Scoping is an open process to determine the range of issues that should be examined and assessed in an EIS. Comments submitted during scoping will assist OEA in defining the range of alternatives and potential impacts to be considered in the EIS.

OEA will hold six online public scoping meetings at the dates and times listed below (all times are listed in Central Standard Time). There is no need to attend more than one meeting,

but all are welcome to attend as many meetings as desired. Interested parties can access the online meetings in one of two ways:

- Join online: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 and using the call-in information below:

Public Scoping Meeting Dates and Times

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

These meetings will comply with the Americans with Disabilities Act. Persons who need additional special accommodations should call the project information line: 1-888-319-2337. Assistance for the hearing impaired is available through the Federal Information Relay Service at 1-800-877-8339. For further information about the Board's EIS process, visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Interested parties are encouraged to file their comments on the scope of the EIS electronically through the Board-sponsored project website. Comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E_FILING" link and then on "Environmental Comments." Alternatively, written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments are due no later than December 17, 2021.**

For further information or questions pertaining to the scoping process, please contact Joshua Wayland at the address provided above, or call the project line at 1-888-319-2337. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com. We look forward to receiving your comments.

Letter for Local Community Leaders

November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

Hello,

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization from the Board for CP to acquire KCS. The proposed acquisition has the potential to result in significant environmental impacts; therefore, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate. This letter is to formally announce that the Board has issued a Notice of Intent (NOI) to prepare an EIS for this proceeding (https://cp-kcsmergereis.com/documents.htm). In addition to announcing that the Board will prepare an EIS for this proceeding, the NOI also requests comments on the scope of the EIS and presents a schedule for public scoping meetings; interested parties are encouraged to participate.

Scoping is the first step of the EIS process. Scoping is an open process to determine the range of issues that should be examined and assessed in an EIS. Comments submitted during scoping will assist OEA in defining the range of alternatives and potential impacts to be considered in the EIS. OEA will hold six online public scoping meetings at the dates and times listed below (all times are listed in Central Standard Time). There is no need to attend more than one meeting, but all are welcome to attend as many meetings as desired. Interested parties can access the online meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 (Toll Free) and using the call-in information below:

Public Scoping Meeting Dates and Times

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

These meetings will comply with the Americans with Disabilities Act. Persons who need additional special accommodations should call the project information line: 1-888-319-2337. Assistance for the hearing impaired is available through the Federal Information Relay Service at 1-800-877-8339. For further information about the Board's EIS process, please visit the Board-sponsored project website at www.CP-KCSMergerEIS.com .

Interested parties are encouraged to file their comments on the scope of the EIS electronically through the Board-sponsored project website. Comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E_FILING" link and then on "Environmental Comments." Alternatively, written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

Dear :

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS.

Because the proposed acquisition has the potential to result in significant environmental impacts, the Board's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate. This letter is to formally announce that the Board has issued a Notice of Intent (NOI) to prepare an EIS for this proceeding (https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf). In addition to announcing that the Board will prepare an EIS for this proceeding, the NOI also requests comments on the scope of the EIS and presents a schedule for public scoping meetings; interested parties are encouraged to participate.

Scoping is the first step of the EIS process. Scoping is an open process to determine the range of issues that should be examined and assessed in an EIS. Comments submitted during scoping will assist OEA in defining the range of alternatives and potential impacts to be considered in the EIS.

OEA will hold six online public scoping meetings at the dates and times listed below (all times are listed in Central Standard Time). There is no need to attend more than one meeting,

but all are welcome to attend as many meetings as desired. Interested parties can access the online meetings in one of two ways:

- Join online: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 and using the call-in information below:

Public Scoping Meeting Dates and Times

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

These meetings will comply with the Americans with Disabilities Act. Persons who need additional special accommodations should call the project information line: 1-888-319-2337. Assistance for the hearing impaired is available through the Federal Information Relay Service at 1-800-877-8339. For further information about the Board's EIS process, visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Interested parties are encouraged to file their comments on the scope of the EIS electronically through the Board-sponsored project website. Comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E_FILING" link and then on "Environmental Comments." Alternatively, written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments are due no later than December 17, 2021.**

For further information or questions pertaining to the scoping process, please contact Joshua Wayland at the address provided above, or call the project line at 1-888-319-2337. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com. We look forward to receiving your comments.

Sincerely,

Danielle Gosselin
Acting Director
Office of Environmental Analysis

CP-KCS RAILROAD MERGER

Project Update: Public Scoping Period

ENVIRONMENTAL IMPACT STATEMENT

The Canadian Pacific Railway (CP) and Kansas City Southern Railway (KCS) filed an application with the Surface Transportation Board (Board) seeking the Board's approval for CP to acquire control of KCS. This acquisition would create the first railroad that connects Canada, the United States, and Mexico.

As part of the approval review process, the Board will evaluate potential impacts of the project on the environment. The Board will hold online meetings to present the project and take comments. The public scoping meeting schedule and other information is available below and on the project website at **www.CP-KCSMergerEIS.com**.

Contact the Surface Transportation Board as soon as possible if you require any accommodations under the Americans with Disabilities Act (ADA) to participate in the scoping process.

FUSIÓN DE CP-KCS

Actualización del Proyecto: El Periodo Público de Evaluación

DECLARACIÓN DEL IMPACTO AMBIENTAL

Canadian Pacific Railway (CP) y Kansas City Southern Railway (KCS), por sus siglas en inglés, presentaron una solicitud ante la agencia Surface Transportation Board solicitando la aprobación para que CP adquiera el control de KCS. Esta adquisición crearía el primer ferrocarril que conecta Canadá, Estados Unidos y México.

Parte del proceso de aprobación, la agencia Surface Transportation Board evaluará los impactos potenciales del proyecto en el medio ambiente. La agencia tendrá reuniones virtuales para presentar el proyecto y recibir comentarios. El cronograma de la reunión de alcance público y otra información está disponible a continuación y en la página web del proyecto: **www.CP-KCSMergerEIS.com**.

Comuníquese con la agencia Surface Transportation Board lo mas antes posible si necesita adaptaciones según la Ley de Estadounidenses con Discapacidades (ADA, por sus siglas en inglés) para participar en el proceso de determinación del alcance.

1-800-877-8339 para asistencia para personas con problemas de audición

AVAILABILITY OF FINAL SCOPE OF STUDY

Update on Proposed CP-KCS Merger

ENVIRONMENTAL IMPACT STATEMENT

Scan the QR Code above to go to the Final Scope of Study.

On October 29, 2021, Canadian Pacific Railway (CP) and Kansas City Southern Railway (KCS) filed an application with the Surface Transportation Board (Board) seeking the Board's approval of the acquisition of control by CP of KCS. The proposed acquisition has the potential to result in significant environmental impacts and the preparation of an Environmental Impact Statement (EIS) is appropriate. This notice is to inform stakeholders that the Final Scope of Study for the EIS is available.

The Notice of Intent to prepare an EIS was distributed November 12, 2021. Interested parties were encouraged to file their scoping comments electronically, by mail, or at the online public scoping meetings through January 3, 2022. All comments submitted during the scoping process are available to the public on the Board's website (www.stb.gov). The Final Scope of Study is available on the Board-sponsored project website (www.CP-KCSMergerEIS.com) or at the QR code to the left.

Contact the Surface Transportation Board as soon as possible if you require any accommodations under the Americans with Disabilities Act.

Appendix B

Agency and Tribal Consultation

Appendix B discusses agency and tribal consultation for the development of this Draft EIS for the Proposed Acquisition. Consultation correspondence is provided in the following three attachments.

- *Attachment A, Agency Consultation*
- *Attachment B, Tribal Consultation*
- *Attachment C, National Historic Preservation Act [NHPA], Section 106 Consultation*

Attachment A, Agency Consultation, contains a selection of OEA's written correspondence with federal, state, and local agencies. The first three letters, sent to the U.S. Environmental Protection Agency (EPA), U.S. Army Corps of Engineers (Corps), and U.S. Fish and Wildlife Service (USFWS), invited these federal agencies to participate in agency consultation, particularly in relation to their respective jurisdictions, such as, air and water quality; threatened, and endangered species; and wetlands, as detailed in Draft EIS *Section 1.4.2, Other Agencies*. The fourth letter type was sent to local and state agencies, such as departments of transportation, environment, and conservation, to solicit their input regarding the scope of this Draft EIS. *Attachment A, Agency Consultation* also includes responses from agencies. Letters were also provided to tribal governments to inform them of the Proposed Acquisition and solicit interest in formal government-to-government consultation (see *Attachment B, Tribal Consultation*). No tribal governments expressed interest in government-to-government consultation; therefore, no responses are included in *Attachment B, Tribal Consultation*. Additional letters were prepared to initiate consultation between OEA and State Historic Preservation Officers (SHPOs), Tribal Historic Preservation Officers (THPOs), which are included in *Attachment C, National Historic Preservation Act, Section 106 Consultation*. Responses from SHPOs and THPOs are also included in *Attachment C, National Historic Preservation Act, Section 106 Consultation.*

B.1 Agency Consultation

Following issuance of the Notice of Intent, OEA engaged with federal and state agencies through tailored meetings based on geography or resource topics. OEA sent letters to federal, state, and local agencies providing background information on the Proposed Acquisition and how to participate in the process. The state agency letters extended invitations to relevant state agency staff for state-specific officials' briefings. Separately, OEA sent letters for individual agency meetings to the local regional offices, as applicable, of federal agencies with jurisdiction or interest in potentially affected resources. OEA held eight agency consultation meetings during the scoping period:

- Tuesday, November 30, 2021, Corps Agency Meeting
- Wednesday, December 1, 2021, Minnesota and Michigan Agency Meeting
- Wednesday, December 1, 2021, USFWS Agency Meeting
- Thursday, December 2, 2021, Illinois and Iowa Agency Meeting
- Monday, December 6, 2021, EPA Agency Meeting
- Tuesday, December 7, 2021, Kansas and Missouri Agency Meeting
- Wednesday, December 8, 2021, Louisiana and Arkansas Agency Meeting
- Thursday, December 9, 2021, Texas and Oklahoma Agency Meeting

Attachment A, Agency Consultation, contains a selection of OEA's written correspondence with federal, state, and local agencies and responses from these agencies; these different types of agencies are detailed below. Note that Section 7 correspondence with the USFWS are available in **Appendix O, Biological Resources**.

- Letters to Federal Agencies with Jurisdiction
    - Emailed (or mailed if emails were not available) letters to staff of federal agencies (regional offices where applicable) that have permitting or approval roles, including the EPA, Corps, and USFWS.
- Letters to Other Agencies
    - **Federal:** Emailed (or mailed if emails were not available) letters to staff of federal agencies (regional offices where applicable) that may have an interest in the Proposed Acquisition and related impacts but without official permitting or approval roles, including the National Park Service (NPS), Federal Emergency Management Agency (FEMA), Natural Resources Conservation Service (NRCS), and the U.S. Department of Commerce.
    - **State:** Emailed (or mailed if emails were not available) letters to staff of state agencies that have interests in topics related to the Proposed Acquisition, such as transportation, natural resources, and conservation, in states where the Proposed Acquisition could result in adverse environmental impacts, including states where increased rail traffic resulting from the Proposed Acquisition would exceed thresholds for environmental review, states where increased activity at rail yards or intermodal

facilities would exceed thresholds for environmental review, and states where CP and KCS plan to make capital improvements if the Board authorizes the Proposed Acquisition.

- **Local:** Emailed (or mailed if emails were not available) letters to staff of local agencies (for example, city, town, village, parish, county) that have interests in topics related to the Proposed Acquisition, such as transportation, natural resources, and conservation, in localities where the Proposed Acquisition could result in adverse environmental impacts.

Table B.1-1 lists all the federal, state, and local agencies to whom OEA sent correspondence.

B.2 Tribal Consultation

OEA consulted with tribes pursuant to the NHPA, NEPA, and Executive Order (EO) 13175. Consultation under Section 106 of the NHPA is discussed in *Section B.3*. EO 13175 requires that federal agencies conduct government-to-government consultations with federally recognized Indian tribes in the development of federal policies (including regulations, legislative comments or proposed legislation, and other policy statements or actions) that have tribal implications. OEA's outreach extended beyond the required federally recognized tribes to engage tribes that have expressed cultural interest in the counties/parishes where the Applicants expect adverse environmental impacts. Tribes may have concerns about natural resources and other potential impacts that would not be brought up during the Section 106 process and these concerns can be voiced during government-to-government consultation.

This section contains a record of written consultation from OEA to federally recognized tribes. On November 12, 2021, OEA sent letters to the tribes listed below to determine their interest in participating in government-to-government consultation. The letters also provided information on the broader public involvement process described in *Appendix A, Public Involvement*. The letter from OEA to tribes contained information about the

Proposed Acquisition as well as a response questionnaire to determine their interest in consultation. Follow-up phone calls were placed to tribes between November 30, 2021 and December 10, 2021 to provide tribes with additional opportunity to respond to the request for their interest in consultation.

- United Keetoowah Band of Cherokee Indians in Oklahoma
- Upper Sioux Community, Minnesota
- White Earth Band of the Minnesota Chippewa Tribe
- Wichita and Affiliated Tribes (Wichita, Keechi, Waco & Tawakonie), Oklahoma
- Winnebago Tribe of Nebraska

Of the tribes that responded to OEA, only one tribe, the Santee Sioux Nation, requested government-to-government consultation during a phone call. The Tribe subsequently indicated that it did not wish to participate in consultation. All other tribes will continue to be invited to participate in public involvement activities throughout the course of the environmental review process. Several tribes directed OEA to coordinate with their THPO and/or elected to participate in the Section 106 consultation described in *Section B.3, Section 106 Consultation under the National Historic Preservation Act*.

B.3 Section 106 Consultation under the National Historic Preservation Act

The Section 106 regulations at 36 C.F.R. Part 800 require federal agencies to consider the impact of their "undertakings" on "historic properties" listed or eligible for listing in the National Register of Historic Places prior to licensing or providing funds for a project. In considering project impacts, federal agencies are required to consult with their applicants (CP and KCS, in this case), the SHPO and THPO, tribes, and other consulting parties. Agencies must also make their findings available to the public and provide the Advisory Council on Historic Preservation an opportunity to comment on the undertaking.

Attachment C, National Historic Preservation Act, Section 106 Consultation, contains formal written correspondence between OEA, the SHPOs, and federally recognized tribes.

OEA sent letters to initiate Section 106 consultation to SHPOs and to tribes in or having a cultural interest in the project area. The letters in *Attachment C, National Historic Preservation Act, Section 106 Consultation*, were sent to initiate consultation with SHPOs and tribes. Responses from SHPOs and tribes are also included in *Attachment C, National Historic Preservation Act, Section 106 Consultation*.

OEA hosted meetings with each SHPO from states where the Proposed Acquisition could result in effects on historic properties during the scoping period to initiate Section 106 consultation. These state SHPOs and meeting dates are summarized below in **Table B.3-1**.

Table B.3-1. SHPO Meetings

SHPO	Date
Texas	December 1, 2021
Illinois	December 3, 2021
Minnesota	December 3, 2021
Iowa	December 6, 2021
Oklahoma	December 7, 2021
Missouri	December 7, 2021
Louisiana	December 9, 2021
Arkansas	December 13, 2021
Kansas	December 16, 2021

In addition to the letters sent November 12, 2021, phone calls were placed to tribes between November 30, 2021 and December 10, 2021 to provide tribes with additional opportunity to respond to the request for their interest in consultation. **Table B.3-2** below lists tribes with an expressed interest in Section 106 consultation.

Table B.3-2. Tribes with Interest in Section 106 Consultation

Tribe	Response Type
Iowa Tribe of Kansas and Nebraska	Letter
Choctaw Nation	Email
Osage Nation	Letter
Alabama-Coushatta Tribe of Texas	Verbal
Bois Forte Band (Nett Lake) of the Minnesota Chippewa Tribe	Verbal

Upper Sioux Community of Minnesota	Verbal

Appendix B – Attachment 1: Agency Consultation

Appendix B – Attachment 1a: Example Agency Letters

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

EPA Letter November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system currently runs east to west across Canada, connecting east and west coast ports. CP's rail lines also run south into the U.S. Midwest and connects with the KCS system in Kansas City. The KCS rail lines run from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on the environment, in accordance with the National Environmental Policy Act of 1969 (NEPA) and the Board's environmental regulations (49 C.F.R. Part 1105). To comply with NEPA, the Board's Office of Environmental Analysis (OEA) initiated preparation of an Environmental Impact Statement (EIS) by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. The issuance of the NOI began the scoping period, the first step in the environmental review process. A copy of the NOI can be found here https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf .

The EIS will describe the potential environmental impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions,

or deny the application. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000) require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board issues a final decision.

Description of the Proposed Action

According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. The thresholds for assessing environmental impacts from increased rail traffic on rail lines in railroad acquisition proceedings are an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase in rail traffic of at least eight trains per day. For air quality impacts, rail lines located in areas classified as being in nonattainment under the Clean Air Act are also assessed if they would experience an increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day. Based on our preliminary review, we have identified rail lines in Illinois, Iowa, Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas that could experience increases in rail traffic that would exceed our analysis thresholds as a result of the proposed acquisition. The EIS will analyze the potential environmental impacts of increased rail traffic along those rail lines, as appropriate.

To support increased rail traffic on the combined network, the Applicants propose to add new passing sidings or extend existing passing sidings at 24 locations within the rail right-of-way as part of the proposed acquisition. Sidings would be added or extended at locations in Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The EIS will analyze potential environmental impacts, as appropriate, from these capital improvement projects.

The interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm shows the locations of the rail lines, rail yards, and intermodal facilities that would experience operational changes that would exceed the Board's environmental analysis threshold, as well as the locations of proposed capital improvements within the rail right-of-way.

Request for Comments and Consultation

OEA requests your comments on the potential impacts of the proposed acquisition. We propose a conference call with the EPA on **Monday, December 6h at 10:00 a.m. CST** to discuss this with all potentially impacted EPA Regions (letters have been sent to EPA Regions 5, 6, and 7).

How to Comment

We encourage you to file your written comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Written comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E_FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including e-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021.**

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 (Toll Free) and using the call-in information below:

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

Next Steps

Following the end of the scoping period on December 17, 2021, OEA will review the comments and issue a Final Scope of Study for the EIS. OEA will then proceed with the preparation of the Draft EIS. You will be notified of the publication of the Draft EIS and will have the opportunity to review and comment on it. At this time, OEA anticipates issuing the Draft EIS in the spring of 2022. In the meantime, OEA may contact you with questions pertaining to the resources under your jurisdiction or purview.

Additional information on this project and the Board's environmental review process is available on the Board-sponsored project website at www. CP-KCSMergerEIS.com. If you have any questions or would like to discuss the proposal in more detail, please contact Joshua Wayland at 202-245-0330 (e-mail address: Joshua.Wayland@stb.gov). We look forward to your participation in the Board's environmental review process.

Sincerely,

Danielle Gosselin

Office of Environmental Analysis

Army Corps Letters November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

Dear

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system currently runs east to west across Canada, connecting east and west coast ports. CP's rail lines also run south into the U.S. Midwest and connect with the KCS system in Kansas City. The KCS rail lines run from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on the environment, in accordance with the National Environmental Policy Act (NEPA) and the Board's environmental regulations (49 C.F.R Part 1105). To comply with NEPA, the Board's Office of Environmental Analysis (OEA) initiated preparation of an Environmental Impact Statement (EIS) by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. A copy of the NOI is available here: https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf .

The EIS will describe the potential environmental impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions,

or deny the application. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000) require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board issues a final decision.

Description of the Proposed Action

According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. The thresholds for assessing environmental impacts from increased rail traffic on rail lines in railroad acquisition proceedings are an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase in rail traffic of at least eight trains per day. For air quality impacts, rail lines located in areas classified as being in nonattainment under the Clean Air Act are also assessed if they would experience an increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day. Based on the information provided by the Applicants to date, OEA has identified rail lines in Illinois, Iowa, Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas that could experience increases in rail traffic that would exceed the analysis thresholds as a result of the proposed acquisition. The EIS will analyze the potential environmental impacts of increased rail traffic along those rail lines, as appropriate.

To support increased rail traffic on the combined network, the Applicants propose to add new passing sidings or extend existing passing sidings at 24 locations within the rail right-of-way as part of the proposed acquisition. Sidings would be added or extended at locations in Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The EIS will analyze potential environmental impacts, as appropriate, from these capital improvement projects. If capital improvement projects would affect waters of

the United States, then the Applicants would need to apply for appropriate permits under Section 404 of the Clean Water Act.

The interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm shows the locations of the rail lines, rail yards, and intermodal facilities that would experience operational changes that would exceed the Board's environmental analysis threshold, as well as the locations of proposed capital improvements within the rail right-of-way.

Request for Comments and Consultation

OEA requests your comments on the potential environmental impacts from the proposed new sidings and siding extensions. We propose a conference call on **Tuesday, November 30th at 9:00 a.m. CST** to discuss this with your District and the other Districts where capital improvements might affect waters of the United States, including wetlands (OEA has sent letters to the Little Rock, Chicago, Rock Island, St. Louis, Louisville, Detroit, Fort Worth, Galveston, New Orleans, Vicksburg, Tulsa, and Kansas City Districts).

How to Comment

We encourage you to file your written comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Written comments can also be submitted electronically on the Board's website, www.stb.gov, by clicking on the "E_FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including e-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021**.

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 (Toll Free) and using the call-in information below:

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

Next Steps

Following the end of the scoping period on December 17, 2021, OEA will review the comments and issue a Final Scope of Study for the EIS. OEA will then proceed with the preparation of the Draft EIS. You will be notified of the publication of the Draft EIS and will have the opportunity to review and comment on it. At this time, OEA anticipates issuing the Draft EIS in the spring of 2022. In the meantime, OEA may contact you with questions pertaining to the resources under your jurisdiction or purview.

Additional information on this project and the Board's environmental review process is available on the Board-sponsored project website at www. CP-KCSMergerEIS.com. If you have any questions or would like to discuss the proposal in more detail, please contact Joshua Wayland at 202-245-0330 (e-mail address: Joshua.Wayland@stb.gov). We look forward to your participation in the Board's environmental review process.

Sincerely,

Danielle Gosselin

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

All USFWS Regions - Letter to Regional offices November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system runs east to west across Canada, connecting the east and west coast ports. It runs south into the U.S. Midwest and connects with KCS in Kansas City. KCS runs from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on the environment, in accordance with the National Environmental Policy Act (NEPA) and the Board's environmental regulations (49 C.F.R. Part 1105). To comply with NEPA, the Board's Office of Environmental Analysis (OEA) has initiated preparation of an Environmental Impact Statement (EIS) by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. A copy of the NOI can be found here https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf .

The EIS will describe the potential environmental impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions, or deny the application. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000)

require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board issues a final decision.

Description of the Proposed Action

According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. The thresholds for assessing environmental impacts from increased rail traffic on rail lines in railroad acquisition proceedings are an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase in rail traffic of at least eight trains per day. For air quality impacts, rail lines located in areas classified as being in nonattainment under the Clean Air Act are also assessed if they would experience an increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day. OEA has preliminarily identified rail lines in Illinois, Iowa, Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas that would experience increases in rail traffic that would exceed the analysis thresholds as a result of the proposed acquisition. The EIS will analyze the potential environmental impacts of increased rail traffic along those rail lines, as appropriate.

To support increased rail traffic on the combined network, the Applicants propose to add new passing sidings or extend existing passing sidings at 24 locations within the rail right-of-way as part of the proposed acquisition. Sidings would be added or extended at locations in Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The EIS will analyze potential environmental impacts, as appropriate, from these capital improvement projects, including impacts on threatened and endangered species.

The interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm shows the locations of the rail lines, rail yards, and intermodal facilities that would experience operational changes that would exceed the Board's environmental analysis threshold, as well as the locations of proposed capital improvements within the rail right-of-way.

Request for Comments and Consultation

OEA requests your comments on the potential impacts of the proposed acquisition. We propose a conference call for all U.S. Fish and Wildlife Service (USFWS) officials on **Wednesday, December 1 at 10:30 AM CST**. OEA has sent letters to the Midwest, Southeast, Southwest, and Mountain Prairie regional offices, in addition to all relevant field offices. Initial USFWS Information for Planning and Consultation (IPaC) database search results are included in the letters to the field offices.

How to Comment

We encourage you to file your written comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Written comments can also be submitted electronically on the Board's website, https://www.stb.gov, by clicking on the "E-FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021**.

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 (Toll Free) and using the call-in information below:

Public Meeting Dates and Times

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

Next Steps

Following the end of the scoping period on December 17, 2021, OEA will review the comments and then issue a Final Scope of Study for the EIS. OEA will then proceed with the preparation of the Draft EIS. You will be notified of the publication of the Draft EIS and will have the opportunity to review and comment on the document. At this time, OEA anticipates issuing the Draft EIS in the spring of 2022. In the meantime, OEA may contact you with questions or queries pertaining to the resources under your jurisdiction or purview.

For further information or questions pertaining to the scoping process, please contact Joshua Wayland at the address provided above, or call the project line at 1-888-319-2337. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com. We look forward to receiving your comments.

Melvin_Tobin@fws.gov

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Mr. Tobin:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

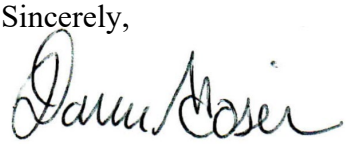
The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Arkansas, those planned capital improvements would include adding one new passing siding and extending one existing siding. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Arkansas are appended to this letter.

Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

In Arkansas, the planned capital improvements would include extending one existing siding and adding one new siding adjacent to the existing rail line, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Arkansas Natural Heritage Commission to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at both planned capital improvements in Arkansas. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Arkansas fatmucket (*Lampsilis powelli*), Eastern black rail (*Laterallus jamaicensis*), gray bat (*Myotis grisescens*), Missouri bladderpod (*Physaria filiformis*), monarch butterfly (*Danaus plexippus*), Ozark big-eared bat (*Corynorhinus townsendii ingens*), Ozark cavefish (*Amblyopsis rosae*), piping plover (*Charadrius melodus*), rabbitsfoot (*Quadrula cylindrica cylindrica*), red knot (*Calidris canutus*), and red-cockaded woodpecker (*Leuconotopicus borealis*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned capital improvement locations in Arkansas. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Arkansas

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	Gentry (Benton County) MP 377 (Polk County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Gentry (Benton County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. For further information or questions, please contact Joshua Wayland at Joshua.Wayland@stb.gov or 202-245-0330. For further information about the Proposed Acquisition, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Sincerely,

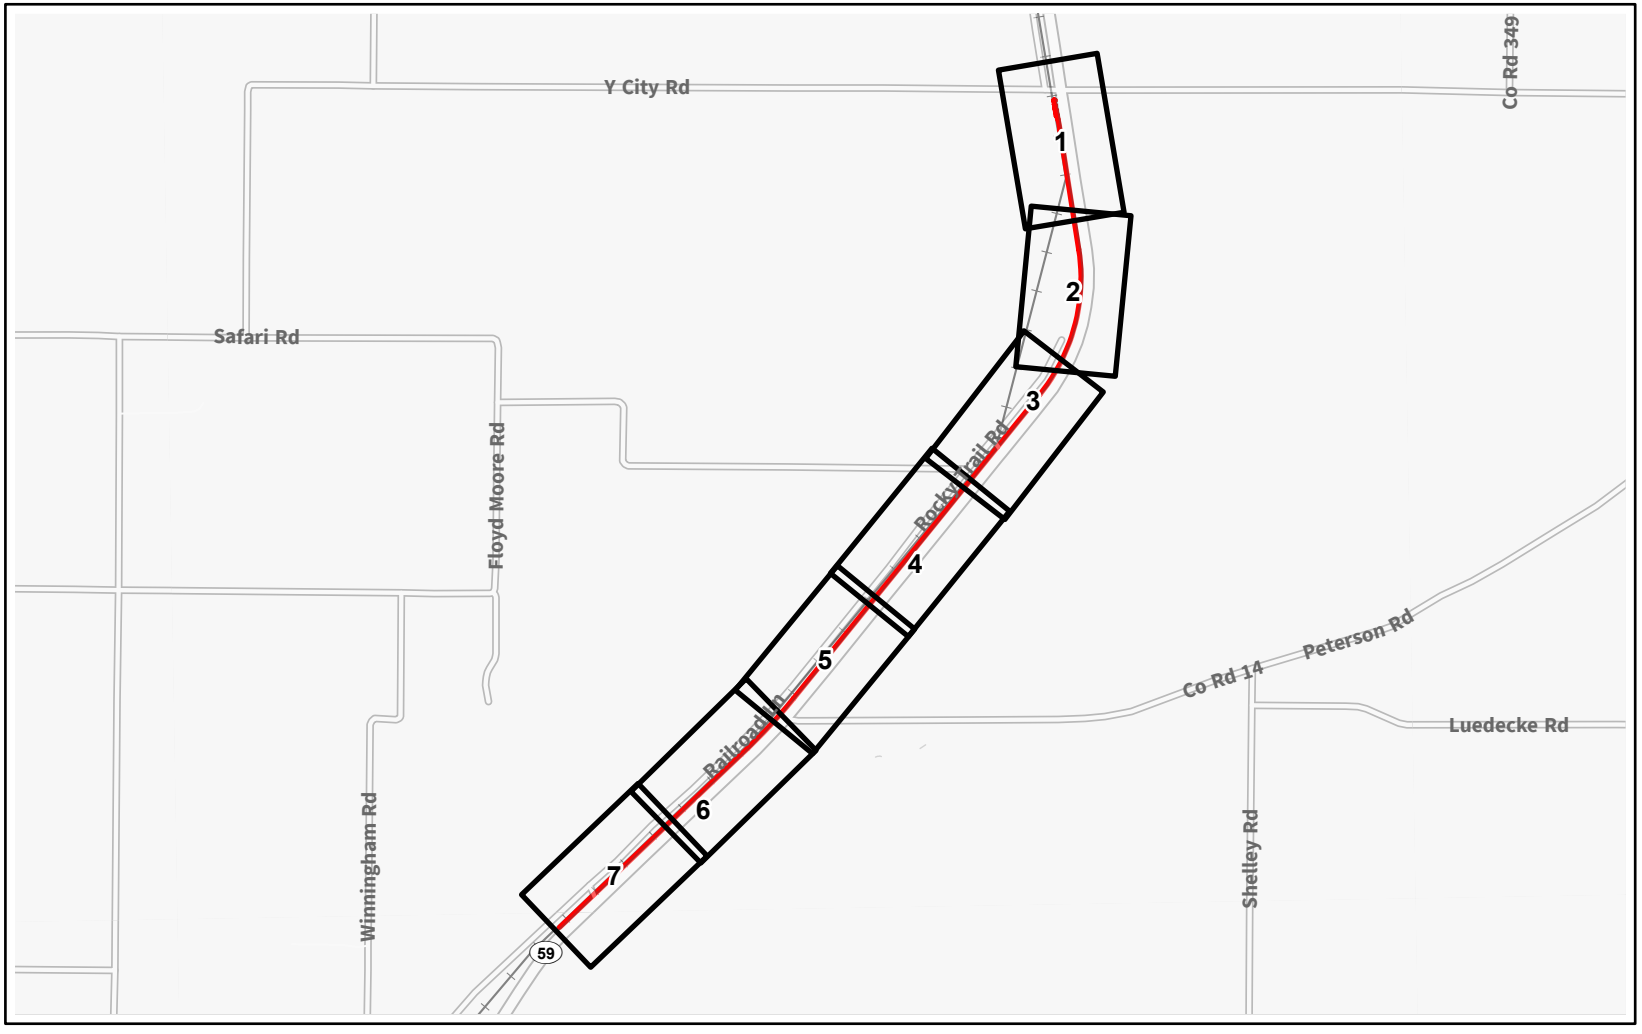
Danielle Gosselin
Director
Office of Environmental Analysis

ATTACHMENT A: NORTHERN LONG-EARED BAT AND INDIANA BAT VOLUNTARY MITIGATION MEASURES

Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) (collectively, the Applicants) have voluntarily proposed the following measures to avoid impacts on northern long-eared bat and Indiana bat. If the Surface Transportation Board (Board) authorizes the Proposed Acquisition of KCS by CP, the Applicants, their employees, and their contractors would be required to strictly adhere to these measures during construction of planned capital improvements related to the Proposed Acquisition, as well as any additional mitigation measures recommended by the Board's Office of Environmental Analysis (OEA) and imposed by the Board in its final decision.

- The Applicants will not conduct construction-related tree removal for the planned capital improvements during the active season for the Indiana bat and the northern long-eared bat (April 1 to October 31).

- During the construction of the planned capital improvements, the Applicants will take steps to reduce the unnecessary removal of bat habitat outside of active bat season by limiting tree removal to only the areas necessary to safely construct and operate the new siding or second track, marking the limits of tree clearing through the use of flagging or fencing, and ensuring that construction contractors understand clearing limits and how they are marked in the field.



- Where practicable, the Applicants will conduct any culvert or bridge removal as part of the planned capital improvements outside of the roosting period of bat species, specific to each planned capital improvement location. Where practicable, if bridge or culvert removal is required during the bat roosting period where the individual planned capital improvement is located, the Applicants will consult with OEA and the local office of the U.S. Fish and Wildlife Service (USFWS) on appropriate methods to determine if bats are using the bridge or culvert as a roost.

- If construction of the planned capital improvements would require removal or alteration of bridges, culverts, or other structures that provide suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31), the Applicants will first conduct an inspection for the presence of or evidence of use by bats. The inspection will be completed by a qualified biologist. If the inspection finds bats or evidence of bats, then the Applicants will not commence work on the structure until coordinating with OEA and USFWS to determine appropriate follow-up or mitigative actions. The inspection must be completed during the same year that the work takes place.

- During construction of the planned capital improvements, the Applicants will direct any temporary lighting away from suitable habitat for the northern long-eared bat or the

Indiana bat during the active season for those species (April 1 to October 31). The Applicants will use downward-facing, full cut-off lens lights for any temporary lighting used during the construction of the planned capital improvements.

- If the planned capital improvements would involve installing any new, or replacing any existing, permanent lights, the Applicants will use downward-facing, full cut-off lens lights (with the same intensity or less for replacement lighting).

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

June 6, 2022

Aleshia Kenney
Fish and Wildlife Biologist
USFWS Illinois-Iowa Ecological Services Field Office
1511 47th Ave
Moline, IL 61265
Aleshia_Kenney@fws.gov

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Ms. Kenney:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Iowa and Illinois, those planned capital improvements would include adding five new passing sidings and extending four existing sidings. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species, if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Illinois and Iowa are appended to this letter.

Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

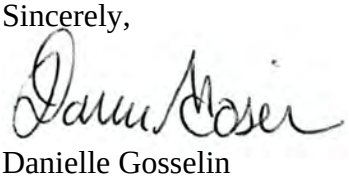
In Iowa, the planned capital improvements would include extending four existing sidings and adding four new sidings adjacent to the existing rail line, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

In Illinois, the single planned new siding would be located within the footprint of a second railroad track that used to extend adjacent to the mainline but has since been removed. Therefore, the planned new siding in Illinois would be located within a previously disturbed area and would not result in any new impacts on habitats, plants, or wildlife.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Iowa Department of Natural Resources and Illinois Department of Natural Resources to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at each of the eight planned capital improvements in Iowa. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Eastern massasauga (*Sistrurus catenatus*), eastern prairie fringed orchid (*Platanthera leucophaea*), Higgins eye pearlymussel (*Lampsilis higginsii*), Iowa pleistocene snail (*Discus macclintocki*), monarch butterfly (*Danaus plexippus*), northern wild monkshood (*Aconitum noveboracense*), prairie bush-clover (*Lespedeza leptostachya*), sheepnose mussel (*Plethobasus cyphyus*), spectaclecase (*Cumberlandia monodonta*), and western prairie fringed orchid (*Platanthera praeclara*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the

planned capital improvement locations in Iowa and Illinois. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Iowa

Common and Scientific Name	**Capital Improvement Location**	**Federal Status**	**Suitable Habitat**	**Recommended Effects Determination**
Northern long-eared bat (*Myotis septentrionalis*)	MP 71 (Clayton County) MP 24 (Jackson County) Deer Creek (Clinton County) Camanche (Clinton County) Letts (Louisa County) MP 255 (Washington County) Ottumwa (Wapello County) Moravia (Monroe County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Letts (Louisa County) MP 255 (Washington County) Ottumwa (Wapello County) Moravia (Monroe County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. For further information or questions, please contact Joshua Wayland at Joshua.Wayland@stb.gov or 202-245-0330. For further information about the Proposed Acquisition, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Sincerely,

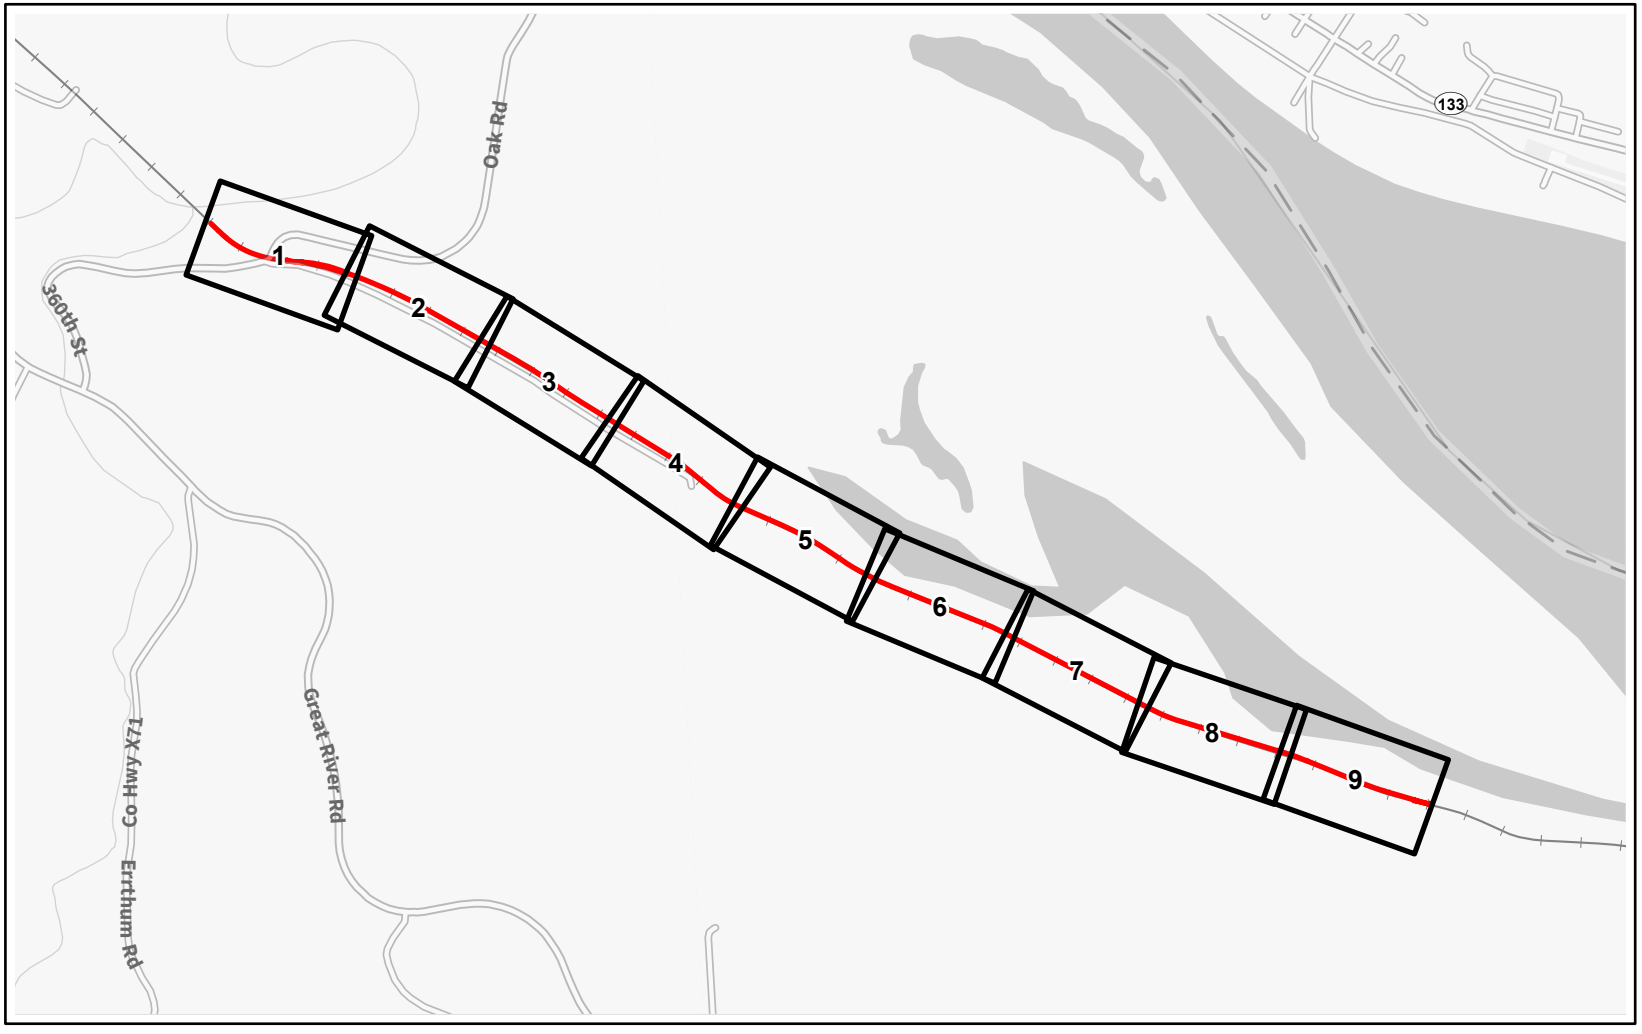
Danielle Gosselin
Director
Office of Environmental Analysis

ATTACHMENT A: NORTHERN LONG-EARED BAT AND INDIANA BAT VOLUNTARY MITIGATION MEASURES

Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) (collectively, the Applicants) have voluntarily proposed the following measures to avoid impacts on northern long-eared bat and Indiana bat. If the Surface Transportation Board (Board) authorizes the Proposed Acquisition of KCS by CP, the Applicants, their employees, and their contractors would be required to strictly adhere to these measures during construction of planned capital improvements related to the Proposed Acquisition, as well as any additional mitigation measures recommended by the Board's Office of Environmental Analysis (OEA) and imposed by the Board in its final decision.

- The Applicants will not conduct construction-related tree removal for the planned capital improvements during the active season for the Indiana bat and the northern long-eared bat (April 1 to October 31).

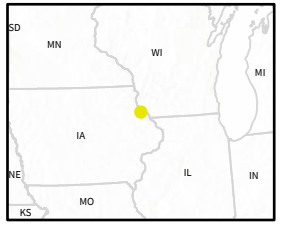
- During the construction of the planned capital improvements, the Applicants will take steps to reduce the unnecessary removal of bat habitat outside of active bat season by limiting tree removal to only the areas necessary to safely construct and operate the new siding or second track, marking the limits of tree clearing through the use of flagging or fencing, and ensuring that construction contractors understand clearing limits and how they are marked in the field.



- Where practicable, the Applicants will conduct any culvert or bridge removal as part of the planned capital improvements outside of the roosting period of bat species, specific to each planned capital improvement location. Where practicable, if bridge or culvert removal is required during the bat roosting period where the individual planned capital improvement is located, the Applicants will consult with OEA and the local office of the U.S. Fish and Wildlife Service (USFWS) on appropriate methods to determine whether bats are using the bridge or culvert as a roost.

- If construction of the planned capital improvements would require removal or alteration of bridges, culverts, or other structures that provide suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31), the Applicants will first conduct an inspection for the presence of or evidence of use by bats. The inspection will be completed by a qualified biologist. If the inspection finds bats or evidence of bats, then the Applicants will not commence work on the structure until coordinating with OEA and USFWS to determine appropriate follow-up or mitigative actions. The inspection must be completed during the same year that the work takes place.

- During construction of the planned capital improvements, the Applicants will direct any temporary lighting away from suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31). The



Applicants will use downward-facing, full cut-off lens lights for any temporary lighting used during the construction of the planned capital improvements.

- If the planned capital improvements would involve installing any new, or replacing any existing, permanent lights, the Applicants will use downward-facing, full cut-off lens lights (with the same intensity or less for replacement lighting).

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

June 6, 2022

Karen Herrington
Field Supervisor
USFWS Missouri Ecological Services Field Office
101 Park Deville Drive
Suite A
Columbia, MO 65203
Karen_Herrington@fws.gov

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Ms. Herrington:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Missouri, those planned capital improvements would include adding two new passing sidings, extending three existing sidings, adding a double track, and adding a facility working track. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species, if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Missouri are appended to this letter.

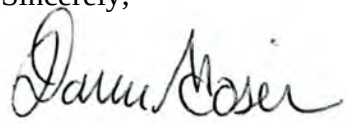
Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

In Missouri, the planned capital improvements would include adding two new passing sidings, extending three existing sidings, adding a double track, and adding a facility working track, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Missouri Department of Conservation to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at six of the seven planned capital improvements in Missouri. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

OEA identified a bald eagle nest within the existing ROW of the MP 431 (Dawn) capital improvement site in Livingston County. If activities for the planned capital improvement requires the removal of the nest tree, the Applicant would obtain an Eagle Nest Take Permit (50 C.F.R. 22.27) prior to removing the nest tree. The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Eastern prairie fringed orchid (*Platanthera leucophaea*), gray bat (*Myotis grisescens*), Mead's milkweed (*Asclepias meadii*), monarch butterfly (*Danaus plexippus*), Neosho madtom (*Noturus placidus*), Neosho mucket (*Lampsilis rafinesqueana*), Ozark cavefish (*Amblyopsis rosae*), and rabbitsfoot (*Quadrula cylindrica cylindrica*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned

capital improvement locations in Missouri. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Missouri

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	Newtown (Sullivan County) Laredo (Grundy County) MP 431 (Livingston County) Blue Valley (Jackson County) Grandview/IFG (Jackson and Cass Counties) MP 186 (McDonald County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Newtown (Sullivan County) Laredo (Grundy County) MP 431 (Livingston County) Blue Valley (Jackson County) Grandview/IFG (Jackson and Cass Counties) MP 186 (McDonald County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. For further information or questions, please contact Joshua Wayland at Joshua.Wayland@stb.gov or 202-245-0330. For further information about the Proposed Acquisition, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

Sincerely,

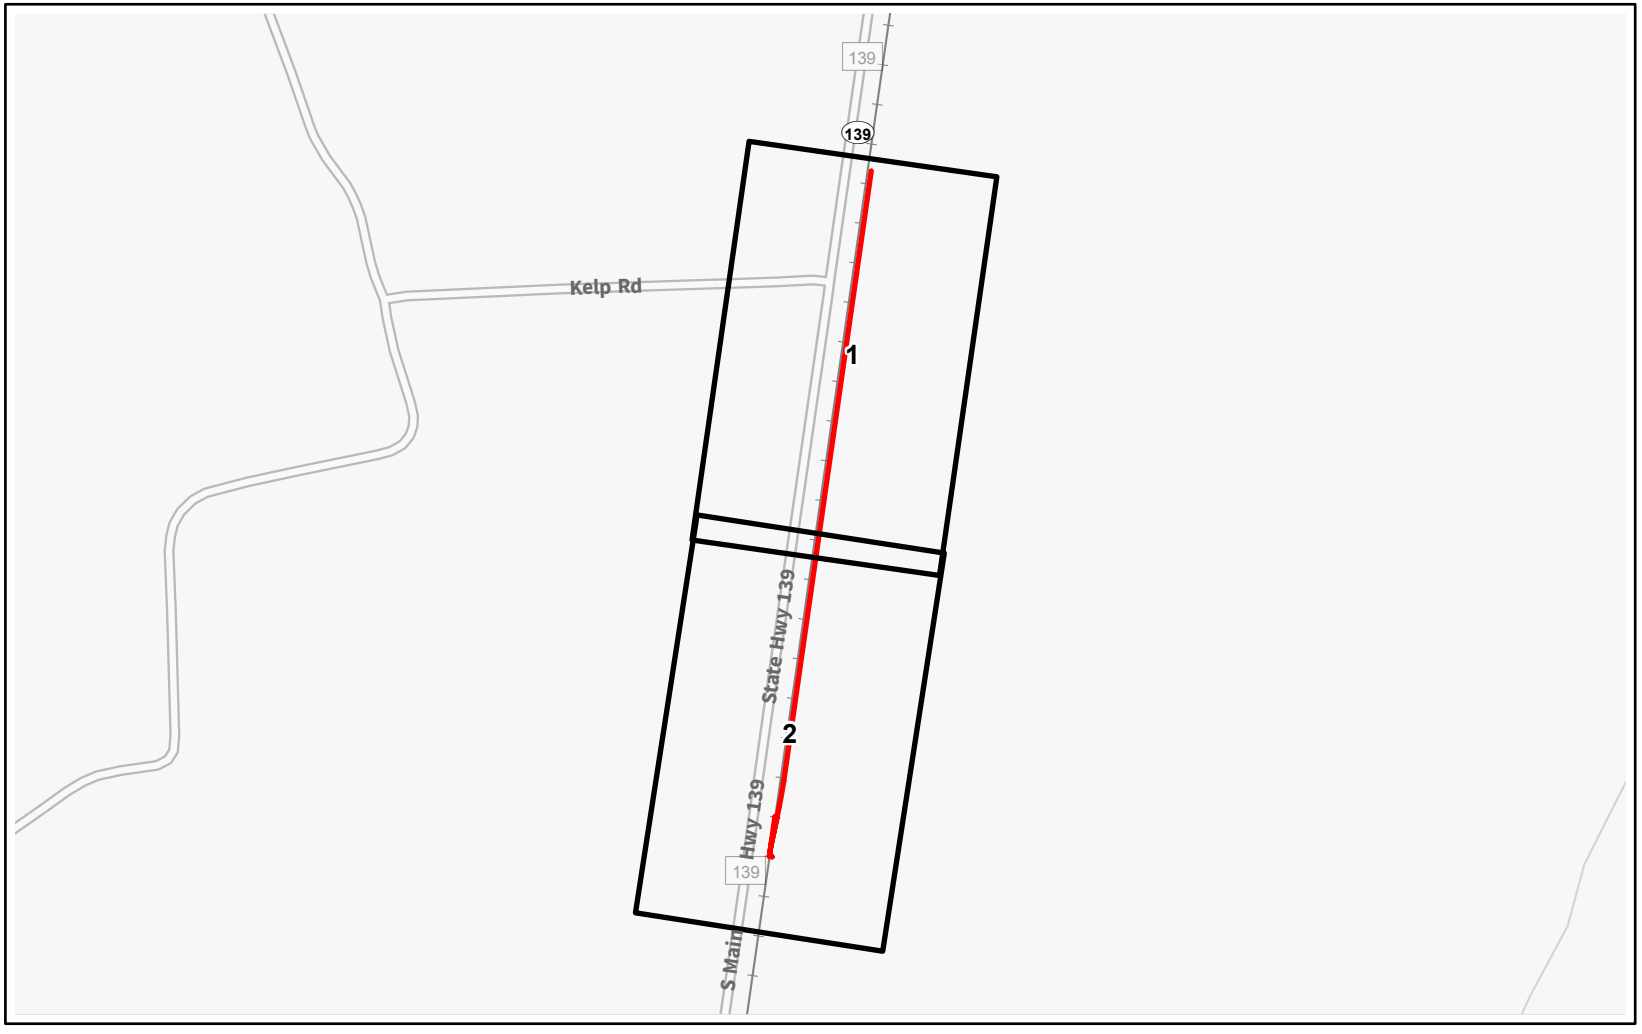
Danielle Gosselin
Director
Office of Environmental Analysis

ATTACHMENT A: NORTHERN LONG-EARED BAT AND INDIANA BAT VOLUNTARY MITIGATION MEASURES

Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) (collectively, the Applicants) have voluntarily proposed the following measures to avoid impacts on northern long-eared bat and Indiana bat. If the Surface Transportation Board (Board) authorizes the Proposed Acquisition of KCS by CP, the Applicants, their employees, and their contractors would be required to strictly adhere to these measures during construction of planned capital improvements related to the Proposed Acquisition, as well as any additional mitigation measures recommended by the Board's Office of Environmental Analysis (OEA) and imposed by the Board in its final decision.

- The Applicants will not conduct construction-related tree removal for the planned capital improvements during the active season for the Indiana bat and the northern long-eared bat (April 1 to October 31).

- During the construction of the planned capital improvements, the Applicants will take steps to reduce the unnecessary removal of bat habitat outside of active bat season by limiting tree removal to only the areas necessary to safely construct and operate the new siding or second track, marking the limits of tree clearing through the use of flagging or fencing, and ensuring that construction contractors understand clearing limits and how they are marked in the field.



- Where practicable, the Applicants will conduct any culvert or bridge removal as part of the planned capital improvements outside of the roosting period of bat species, specific to each planned capital improvement location. Where practicable, if bridge or culvert removal is required during the bat roosting period where the individual planned capital improvement is located, the Applicants will consult with OEA and the local office of the U.S. Fish and Wildlife Service (USFWS) on appropriate methods to determine if bats are using the bridge or culvert as a roost.

- If construction of the planned capital improvements would require removal or alteration of bridges, culverts, or other structures that provide suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31), the Applicants will first conduct an inspection for the presence of or evidence of use by bats. The inspection will be completed by a qualified biologist. If the inspection finds bats or evidence of bats, then the Applicants will not commence work on the structure until coordinating with OEA and USFWS to determine appropriate follow-up or mitigative actions. The inspection must be completed during the same year that the work takes place.

- During construction of the planned capital improvements, the Applicants will direct any temporary lighting away from suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31). The

Applicants will use downward-facing, full cut-off lens lights for any temporary lighting used during the construction of the planned capital improvements.

- If the planned capital improvements would involve installing any new, or replacing any existing, permanent lights, the Applicants will use downward-facing, full cut-off lens lights (with the same intensity or less for replacement lighting).

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

Letter for all Other Agencies November 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system runs east to west across Canada, connecting the east and west coast ports. It runs south into the U.S. Midwest and connects with KCS in Kansas City. KCS runs from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on the environment, in accordance with the National Environmental Policy Act (NEPA) and the Board's environmental regulations (49 C.F.R Part 1105). To comply with NEPA, the Board's Office of Environmental Analysis (OEA) has initiated preparation of an Environmental Impact Statement (EIS) by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* November 12, 2021. A copy of the NOI is available here: https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf .

The EIS will describe the potential environmental impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions, or deny the acquisition. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000)

require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental process before the Board issues a final decision.

Scoping

Scoping is the first step in the preparation of an EIS. Scoping is an open process that helps define the range of issues that should be considered in the EIS. This letter describes OEA's proposed approach to the EIS and asks you to review and comment on the proposed approach as well as provide any information you believe may be relevant when considering impacts, either negative or beneficial, to environmental resources under your jurisdiction or purview.

Description of the Proposed Action

According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. The thresholds for assessing environmental impacts from increased rail traffic on rail lines in railroad acquisition proceedings are an increase in rail traffic of at least 100 percent (measured in gross ton miles annually) or an increase in rail traffic of at least eight trains per day. For air quality impacts, rail lines located in areas classified as being in nonattainment under the Clean Air Act are also assessed if they would experience an increase in rail traffic of at least 50 percent (measured in gross ton miles annually) or an increase of at least three trains per day. Based on our preliminary review, we have identified rail lines in Illinois, Iowa, Missouri, Kansas, Oklahoma, Arkansas, Louisiana, and Texas that could experience increases in rail traffic exceeding our analysis thresholds as a result of the proposed acquisition. The EIS will analyze the potential environmental impacts of increased rail traffic along those rail lines, as appropriate.

To support increased rail traffic on the combined network, the Applicants propose to add new passing sidings or extend existing passing sidings at 24 locations within the rail right-of-way as part of the proposed acquisition. Sidings would be added or extended at locations in

Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The EIS will analyze potential environmental impacts, as appropriate, from these capital improvement projects.

The interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm shows the locations of the rail lines, rail yards, and intermodal facilities that would experience operational changes that would exceed the Board's environmental analysis threshold, as well as the locations of proposed capital improvements within the rail right-of-way.

How to Comment

We encourage you to file your written comments electronically through the Board-sponsored project website at www.CP-KCSMergerEIS.com. Written comments can also be submitted electronically on the Board's website, https://www.stb.gov, by clicking on the "E_FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021**.

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.
- Join by phone by calling (888) 788-0099 (Toll Free) and using the call-in information below:

Public Scoping Meetings Dates and Times

Date	Time	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

Next Steps

Following the end of the scoping period on December 17, 2021, OEA will review the comments and then issue a Final Scope of Study for the EIS. OEA will then proceed with the preparation of the Draft EIS. You will be notified of the publication of the Draft EIS and will have the opportunity to review and comment on the document. At this time, OEA anticipates issuing the Draft EIS in the spring of 2022. In the meantime, OEA may contact you with questions or queries pertaining to the resources under your jurisdiction or purview.

For further information or questions pertaining to the scoping process, please contact Joshua Wayland at the address provided above or call the toll-free project line at 1-888-319-2337. For further information about the Board's environmental review process and the EIS, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com. We look forward to your comments.

Sincerely,

Danielle Gosselin
Acting Director
Office of Environmental Analysis

Appendix B – Attachment 1b: Responses from Federal Agencies

EI-31439

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 6
1201 ELM STREET, SUITE 500
DALLAS, TEXAS 75270-2102

December 14, 2021

Mr. Joshua Wayland
Surface Transportation Board
c/o VHB
940 Main Campus Dr.
Suite 500
Raleigh, North Carolina 27606

Attention: Environmental Filing, Docket No. FD 36500

Dear Mr. Wayland:

Regions 5, 6, and 7 of the U.S. Environmental Protection Agency (EPA) have reviewed the November 12, 2021, U.S. Department of Transportation (DOT), Surface Transportation Board (STB), Notice of Intent (NOI) to prepare a Draft Environmental Impact Statement (EIS) for the Canadian Pacific Railway Limited, Canadian Pacific Railway Company, and their U.S. rail carrier subsidiaries Soo Line Railroad Company; Central Maine & Quebec Railway U.S. Inc.; Dakota, Minnesota & Eastern Railroad Corporation; and Delaware & Hudson Railway Company, Inc. (collectively, CP) proposed acquisition of control and merger with the Kansas City Southern, The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company (collectively, KCS). The STB is the lead agency under NEPA, and CP and KCS are the project applicants.

The proposed acquisition has the potential to result in significant environmental impacts; therefore, STB's Office of Environmental Analysis (OEA) has determined that the preparation of an Environmental Impact Statement (EIS) is appropriate pursuant to the National Environmental Policy Act (NEPA). STB is now requesting comments on the scope of the Draft EIS. STB will use this Draft EIS in its decision-making process to assess the associated impacts on natural resources and the human environment and to determine whether this project is in the public's best interest.

To assist in the scoping process, we enclosed detailed scoping comments for STB's consideration. Our scoping comments are provided pursuant to NEPA, Council on Environmental Quality (CEQ) regulations (40 CFR Parts 1500 -1508) and Section 309 of the Clean Air Act. EPA is most interested in the following issues: environmental justice (EJ), climate change, alternative development, impacts to water and biological resources, wetlands, endangered species, invasive species management, habitat protection, air quality, cumulative impacts, and cultural/historic resource impacts.

EPA looks forward to continued involvement and cooperation in the EIS development for this project. Please send one hard copy of the Draft EIS and a web link to this office when completed and submitted for public comment. You may now electronically file your EIS using our *e-NEPA Electronic Filing* by linking to EPA's web site at http://www.epa.gov/compliance/nepa/submiteis/index.html.

If you have any questions, please contact Michael Jansky of my staff at (214) 665-7451 or by e-mail at jansky.michael@epa.gov.

Sincerely,

ROBERT HOUSTON

Detailed Scoping Comments
Construction Emission Control Checklist

DETAILED SCOPING COMMENTS
FOR THE
U.S. DEPARTMENT OF TRANSPORTATION (DOT)
SURFACE TRANSPORTATION BOARD (STB)
NOTICE OF INTENT (NOI)
TO PREPARE AN
ENVIRONMENTAL IMPACT STATEMENT (EIS)
FOR THE PROPOSED
CANADIAN PACIFIC RAILWAY
AND
KANSAS CITY SOUTHERN RAILWAY
MERGER

BACKGROUND

The STB plans to assess the environmental impacts of the proposed Canadian Pacific (CP)-Kansas City Southern (KCS) merger. The STB's OEA on November 12, 2021, issued a NOI to prepare an EIS. STB determined the statement is necessary because the CP-KCS merger has the potential to result in "significant environmental impacts." The EIS will focus on how changes in rail operations and vehicular traffic on roadways and in intermodal facilities, as well as capital improvements, could impact the environment if CP and KCS were to combine. EPA offers the following detailed comments for consideration in the development of the Draft EIS.

DETAILED COMMENTS

Statement of Purpose and Need

The Draft EIS should clearly identify the underlying purpose and need to which the STB is responding in proposing the alternatives (40 CFR 1502.13). The purpose of the proposed action is typically the specific objectives of the activity, while the need for the proposed action may be to eliminate a broader underlying problem or take advantage of an opportunity. The purpose and need should be a clear, objective statement of the rationale for the proposed project.

Project Description

The NOI explains that the proposed project would make capital improvements within the existing right-of-way, including adding or extending 24 sidings, adding four miles of double track, and adding five miles of facility working track. In addition, operational changes would alter rail traffic on portions of the combined rail network. Rail yards and intermodal facilities would experience an increase in activity.

Recommendations for the Draft EIS:

- Clarify whether any activity, including staging, would take place outside of the existing right-of-way.

- Provide descriptions and maps for all project features, including any permanent or temporary access roads, staging areas, and changes to infrastructure.

- For all changes to sidings and new double track areas, disclose: (a) the mileage of new track and (b) the proximity of tracks to residences, schools, parks, and other populated places.

- Evaluate locations where train traffic is expected to increase significantly as a result of the railroad merger. Describe impacts associated with increased rail traffic in those locations, such as increased congestion at highway/rail and rail/rail grade crossings, emergency vehicle access at those locations, noise/vibration, air quality, and spill risks. Consider mitigation measures, such as installing grade separations, to address these issues.

- Describe the extent to which activity would increase at maintenance and multimodal facilities and measures to minimize associated environmental impacts.

- Discuss potential indirect impacts that would result from this project. Consider environmental impacts associated with any induced changes to vehicle traffic patterns, increased jobs at maintenance and multimodal facilities, and development patterns.

Alternatives Analysis

NEPA requires evaluation of reasonable alternatives, including those that may not be within the jurisdiction of the lead agency (40 CFR Section 1502.14(c)). A robust range of alternatives will include options for avoiding significant environmental impacts. The Draft EIS should provide a clear discussion of the reasons for the elimination of alternatives which are not evaluated in detail.

The environmental impacts of the proposal and alternatives should be presented in comparative form, thus sharply defining the issues and providing a clear basis for choice among options by the decision maker and the public (40 CFR 1502.14). The potential environmental impacts of each alternative should be quantified to the greatest extent possible (e.g., acres of wetlands impacted, tons per year of emissions produced).

Recommendations for the Draft EIS:

- Briefly describe any alternatives that were considered but dismissed prior to the Draft EIS, and explain why they were not carried forward.

- Describe and fully analyze a reasonable range of alternatives in the Draft EIS. Develop reasonable alternatives that consider different placements of track sidings, double tracked portions, and other new infrastructure components. Locate infrastructure components with the goal of avoiding or minimizing impacts to natural and community resources.

- For each alternative, describe and assess all components, including, but not limited to, staging areas, access roads, sidings, double tracks, rail spurs, power stations, and storage/maintenance yards.

Stormwater Considerations

The Draft EIS should describe the original (natural) drainage patterns in the project locale, as well as the drainage patterns of the area during project operations. Also, the Draft EIS should identify whether any components of the proposed project are within a 50 or 100-year floodplain. The Draft EIS should note that, under the Federal Clean Water Act (CWA), any construction project disturbing a land area of one or more acres requires a construction stormwater discharge permit.

Surface Water and Groundwater Quality

The Draft EIS should fully discuss potential direct, indirect, and cumulative impacts from the proposed project to surface and groundwater quality.

Recommendations for the Draft EIS:

- Identify all water bodies that are listed as impaired under CWA Section 303(d) and could be directly or indirectly impacted by this project. Describe each water body's specific impairments, the causes of the impairments, and whether a Total Daily Maximum Load (TMDL) plan is in place.

- Analyze project impacts on impaired waters and TMDLs and commit to any necessary mitigation measures to avoid further impairment or delay of timely remediation.

- Evaluate potential direct or indirect impacts to public and private drinking water supply intakes and wells from project construction and operation and identify any wellhead protection areas and protective measures as needed.

- Discuss plans for managing stormwater and complying with the National Pollution Discharge Elimination System under CWA Section 402.

Waters of the United States and Compliance with Section 404 CWA

The impacts from the construction, operation and maintenance of the proposed merger may result in impacts to aquatic resources that require permit authorization under Section 404 of the CWA for the placement of dredged or fill material. As such, the Draft EIS should include a thorough evaluation that demonstrates planning efforts to avoid, minimize, and compensate for stream and wetland losses associated with the construction, operation, and maintenance of the proposed project. This evaluation is necessary to demonstrate the project's compliance with the Federal Guidelines for Specification of Disposal Sites for Dredged or Fill Materials (40 CFR 230), promulgated pursuant to Section 404(b)(1) of the CWA. Impacts to aquatic resources and wetlands should include direct, indirect (i.e., secondary) and cumulative effects reasonably associated with the proposed project. Along with the CWA 404 (b)(1)

analysis, all unavoidable direct and indirect impacts would need to be compensated. We recommend that an aquatic resource and wetland mitigation plan, consistent with the 2008 Final Rule for Compensatory Mitigation for Losses of Aquatic Resources, be included within Draft EIS.

Specific to the existing documentation, please ensure stream and wetland impacts are consistently identified and quantified throughout the project documentation. If portions of the current evaluation of stream and wetland impacts is based upon a desktop analysis, the EPA recommends a field-based assessment of the project impacts to be included as soon as possible and be available with the Draft EIS. For the evaluation of alternatives, providing a clear comparative analysis of project alternatives with all associated wetland impacts (preferably in a tabular form with supporting map of alternatives) would be beneficial. The alternatives evaluation should include a thorough discussion of avoidance and minimization measures.

The mitigation plan should include all components as required by the 2008 Mitigation Rule and compensate for unavoidable impacts to aquatic resources, including the conversion of wetland resources along with any temporal losses that may result from project construction. The mitigation plan should incorporate an analysis of lost stream and wetland functions along with the stream and wetland functions to be enhanced, restored, or created. The proposed mitigation should be in the same watershed as the proposed impacts and should be of the same type to ensure adequate compensation is provided for the types and quantities of aquatic resources impacted by the project. Please provide the draft mitigation plan in the Draft EIS. Providing this material for public review allows for the optimum analysis of the entire range of significant potential environmental impacts by the U.S. Army Corps on Engineers (USACE) , the EPA, and other interested stakeholders.

Recommendations for the Draft EIS:

- As discussed above, align NEPA and CWA section 404 processes to ensure that this Draft EIS will fulfill future NEPA requirements for permitting actions.

- Quantify waters within the project area and adjacent areas using USACE preliminary or approved jurisdictional determinations. Include clear maps and describe water quality, functions, and values.

- Identify all waters with special designations, such as Outstanding State and National Resource Waters, and those waters located within state and federally-owned lands. Take additional steps to avoid and minimize impacts to these waters.

<u>Biological Resources, Habitat and Wildlife</u>

Section 7 of the Endangered Species Act (ESA) directs all Federal agencies to ensure that any action they authorize, fund, or carry-out does not jeopardize the continued existence of a threatened or endangered species or proposed or designated critical habitat. Implementing regulations found at 50 CFR Part 402 specify how Federal agencies are to fulfill their ESA Section 7 consultation requirements. The Draft EIS should identify all petitioned and listed threatened and endangered species and critical habitat that might occur within the project area, including any areas. The Draft EIS should identify which species or critical habitat might be directly, indirectly, or cumulatively affected by each

alternative and describe possible mitigation for each of the species. EPA recommends that the STB consult with the U.S. Fish and Wildlife Service (FWS) under Section 7 of the ESA. We also recommend that the STB coordinate across field offices and with USFWS and the appropriate State Wildlife and Fisheries Department (SWD) to ensure that current and consistent surveying, monitoring, and reporting protocols are applied in protection and mitigation efforts.

Recommendations for the Draft EIS:

- Use the FWS "Information for Planning and Conservation" tool to obtain a list of trust resources in the project area, which would include species that are listed as threatened or endangered under ESA, candidate species for listing, critical habitat, and migratory birds protected under the Migratory Bird Treaty Act.[1]
- Once the list is obtained, determine whether the proposed action may affect trust resources. If trust resources may be affected, engage in consultation with FWS. Document all coordination and formal consultation in the Draft EIS with the goal of aligning NEPA and ESA Section 7 consultation processes.
- Describe the presence of ESA-listed threatened and endangered species, candidate species, migratory birds, and critical habits in the project area. Describe the extent and nature of potential direct, indirect, and cumulative project impacts.
- Consult with the FWS and regional and local wildlife experts to explore specific locations and design features for any necessary wildlife crossings. Include findings in the Draft EIS.
- Coordinate with state Departments of Natural Resources (DNRs) to determine if any state-listed species could be impacted by the proposed project, and document coordination in the Draft EIS.
- Consult with FWS and state wildlife agencies under the Fish and Wildlife Coordination Act (FWCA),[2] which requires consultation when federal actions would result in the control or modification of a natural stream or body of water. This includes discharges of fill material. Discuss requirements of FWCA, interagency coordination, and measures to protect wildlife.

Invasive Species

Human actions are the primary means of invasive species introductions. Railway construction causes disturbance of right-of-way (ROW) soils and vegetation through the movement of people and vehicles along the ROW, access roads, and lay down areas. These activities can contribute to the spread of invasive species.

Executive Order 13112, *Invasive Species* (February 3, 1999), mandates that federal agencies take actions to prevent the introduction of invasive species, provide for their control, and minimize the economic,

[1] FWS Information for Planning and Conservation (IPaC) tool is available at: https://ecos.fws.gov/ipac/
[2] The Fish and Wildlife Coordination Act is available at 16 U.S.C. 661-666c; Public Law 85-624

ecological, and human health impacts that invasive species cause. Executive Order 13112 also calls for the restoration of native plants and tree species. If the proposed project will entail new landscaping, the Draft EIS should describe how the project will meet the requirements of Executive Order 13112.

In addition, we encourage alternative management practices that limit herbicide use (as a last resort), focusing instead on other methods to limit invasive species vegetation and decrease fire risk. Possible alternatives include mowing and weed control fabric, which may need a layer of soil to prevent degradation due to ultraviolet light.

Air Quality

The Draft EIS should discuss the existing, or baseline, ambient air conditions in the vicinity of the project. This includes identification of applicable National Ambient Air Quality Standards (NAAQS), non-NAAQS pollutants, and criteria pollutant nonattainment areas. The project must be evaluated for cumulative and indirect air quality impacts, with potential impacts from temporary, long-term, or cumulative degradation of air quality also addressed. This evaluation should estimate and quantify project-related criteria and hazardous air pollutant (air toxics) emissions, identify specific emissions sources, and consider any expected air quality/visibility impacts to any Class I Federal Areas identified in 40 CFR Part 81, Subpart D. Such discussions should describe and estimate air emissions from potential construction and maintenance activities and proposed mitigation measures as part of a construction emissions mitigation plan..

The proposed project would result in temporary fugitive dust and diesel exhaust emissions from construction activities, such as material hauling and use of heavy machinery. Long-term direct emissions sources include operating additional trains and increased activity at maintenance and intermodal facilities. Long-term indirect operational emissions sources include, but are not limited to, any induced growth in nearby supporting facilities. In 2002, EPA classified diesel emissions as a likely human carcinogen, and in 2012 the International Agency for Research on Cancer concluded that diesel exhaust is carcinogenic to humans. Diesel exhaust can also lead to other serious health conditions and can worsen heart and lung disease, especially in vulnerable populations, such as children and the elderly. Temporary and long-term emissions and potential health impacts should be fully evaluated and considered in developing alignment locations and protective measures for this project.

EPA's General Conformity Regulations ensure that federal actions comply with the NAAQS. To meet this Clean Air Act requirement, a federal agency must demonstrate that every action that it undertakes, approves, permits, or supports in areas that do not meet or previously have not met air quality standards will conform to the appropriate state implementation plan. Further, projects funded or approved by the STB in areas that do not meet or previously have not met the NAAQS are subject to Transportation Conformity Regulations.[3] Potential elements of this project that could require funding or approval include, but are not limited to, the modification of existing grade crossings, road networks, or transit infrastructure. To comply with EPA's Transportation Conformity Regulations, such elements would need to be included in a conforming transportation plan and a transportation improvement program.

[3] Information on Transportation Conformity is available at: https://www3.epa.gov/otaq/stateresources/transconf/

Recommendations for the Draft EIS:

- Discuss the air quality benefits described in the NOI, which stated that Applicants found that the proposed project would result in 60,000 fewer truck trips on highways annually. Provide context for how the calculation was developed and the associated miles traveled.

- Provide a detailed discussion of existing air quality conditions and criteria pollutant maintenance and nonattainment areas in the project study areas.

- Include an analysis of direct, indirect, and cumulative air quality impacts (positive and negative) from each alternative. Include estimates of all criteria pollutant emissions and any anticipated exceedances of NAAQS.

- Identify potential hotspot impacts, especially where idling locomotives, maintenance yards, storage yards, or new multi-modal centers are proposed, if applicable.

- Analyze health risks associated with construction and operational air emissions from the proposed project to nearby sensitive receptors. Discuss siting decisions and protective measures to avoid, minimize, or mitigate human exposure to harmful emissions.

- Use the most current EPA-approved model to estimate emissions and present all methods and assumptions for analyses.

- Discuss general and transportation conformity requirements and their applicability to the proposed project. If applicable, include a draft General Conformity Determination with related mitigation commitments.

- Commit to require construction contractors to use measures from the enclosed Construction Emission Control Checklist when applicable.

- Specify how impacts to sensitive receptors, such as children, elderly, and the infirm will be minimized. For example, commit to locate construction equipment and staging zones away from sensitive receptors and fresh air intakes to buildings and air conditioners.

- Recommend that the project proponent and other companies that would operate trains on the proposed railroad system use electric switching locomotives, or other low emission locomotive technologies, whenever possible to reduce air emissions during operations. If that is deemed infeasible at this time, discuss a strategy to move toward cleaner technologies.

- When schools, medical facilities, and other places where people gather are within 500 feet from the project, especially where idling is expected, consider whether vegetative barriers may reduce exposure to air pollution. If this option is pursued, we recommend working with

EPA as careful design of the barrier is key to reducing exposure.[4] Elevation changes, gaps between trees, and length of the barrier all must be considered.

Climate Change, Resilience and Adaptation

Many of the proposed action areas may be vulnerable to the impacts of climate change, including but not limited to, sea level rise, changes in local hydrologic conditions, increased precipitation, more severe drought, etc. EPA recommends that the description of the affected environment include an analysis of projected future changes, including future climate scenarios, that may affect the proposed action. The U.S. Global Change Research Program's Fourth National Climate Assessment (NCA) provides a starting place for analyzing changing climate conditions in the project area.[5] The NCA provides an in-depth look at climate change impacts on the U.S. now and in the future. Considering findings for each geographic region of the proposed project can help STB and the Applicants to incorporate resiliency measured into the proposed project.

As stated in Executive Order 14008: *Tackling the Climate Crisis at Home and Abroad*, "The United States and the world face a profound climate crisis. We have a narrow moment to pursue action…to avoid the most catastrophic impacts of that crisis and to seize the opportunity that tackling climate change presents." The proposed project would release greenhouse gas (GHG) emissions from both construction and operations. As described below, opportunities are available to reduce GHG emissions. EPA also recognizes that a well-planned rail system using best practices to minimize air pollution has the potential the benefit air quality by reducing emissions from trucks.

In addition, EPA recommends using the 2016 Council on Environmental Quality Final guidance on consideration of GHG emissions and the effects of climate change (issued Aug. 1, 2016; withdrawn Apr. 5, 2017; under review Feb. 19, 2021, for revision and update) as a resource for addressing, as appropriate, greenhouse gas emissions, disclosing climate change impacts associated with any of the reasonable alternatives considered, including the "no action" alternative, and considering practicable mitigation to reduce potential greenhouse gas emissions.

Recommendations for the Draft EIS:

- Use the 2016 CEQ Final guidance on consideration of GHG emissions and the effects of climate change (issued Aug. 1, 2016; withdrawn Apr. 5, 2017; under review Feb. 19, 2021, for revision and update) as a resource for addressing GHGs and disclosing climate change impacts associated with each alternative.

- Quantify the GHG emissions from project alternatives to inform decision-making. Consider modifications to alternatives to reduce GHG emissions.

[4] See EPA's Recommendations for Constructing Roadside Vegetation Barriers to Improve Near-Road Air Quality https://www.epa.gov/air-research/recommendations-constructing-roadside-vegetation-barriers-improve-near-road-air-quality

[5] USGCRP, 2018: *Impacts, Risks, and Adaptation in the United States: Fourth National Climate Assessment, Volume II* [Reidmiller, D.R., C.W. Avery, D.R. Easterling, K.E. Kunkel, K.L.M. Lewis, T.K. Maycock, and B.C. Stewart (eds.)]. U.S. Global Change Research Program, Washington, DC, USA, 1515 pp. doi: 10.7930/NCA4.2018. https://nca2018.globalchange.gov/

- Discuss reasonably foreseeable effects that changes in the climate may have on the study area and the proposed project. While this will vary by geographic region, the Midwest, for example, is expected to see increasing frequency and severity of storm events and flooding. Such considerations could inform the development of resiliency and adaption measures.

- Consider resiliency and adaptation measures or plans to ensure that the proposed infrastructure would maintain structural integrity and safe operating conditions under changing climate conditions. For example, consider anticipated frequencies of severe precipitation events when sizing stormwater control features, bridges, and culverts. See EPA's Adaptation Resource Center[6] for assistance.

- Discuss opportunities and commit to measures to reduce short and long-term releases of GHG emissions from implementation of the proposed project, such as appliable measures from the enclosed Construction Emission Control Checklist.

Hazardous Materials/Hazardous Waste/Solid Waste

The Draft EIS should address potential direct, indirect, and cumulative impacts of hazardous waste from construction and operation of the proposed transmission line and other facilities. The document should identify projected hazardous waste types and volumes and expected storage, disposal, and management plans. It should address the applicability of state and federal hazardous waste requirements. Appropriate mitigation should be evaluated, including measures to minimize the generation of hazardous waste (i.e., hazardous waste minimization). Alternate industrial processes using less toxic materials should be evaluated as mitigation since such processes could reduce the volume or toxicity of hazardous materials requiring management and disposal as hazardous waste.

Hazardous Substances and Emergency Response

The proposed project could result in releases of hazardous substances through accidental spills during construction and, if rail cars carry hazardous substances, through accidents during operation of the railroad. Comprehensive, upfront planning and preparedness are needed to avoid such incidents and establish response contingencies. EPA has engaged in response planning and training with Class I railroads for the purposes of: (1) better understanding the nature of commodity flows, (2) providing joint training to state and local response agencies, and (3) ensuring that railroad spill response plans, as required by the U.S. Department of Transportation (USDOT), are consistent with both the Oil and Hazardous Substances National Contingency Plan and the applicable EPA Regional Contingency Plans for spills of oil and hazardous substances.

Recommendations for the Draft EIS:

- Disclose hazardous substances that would be used during project construction.

- Discuss plans to avoid accidental releases during construction and respond to any accidental releases.

[6] EPA's Climate Adaptation Resource Center, available at: https://www.epa.gov/arc-x

- Disclose hazardous substances that freight trains could carry along the proposed merged rail network. To the extent that information is available, describe all elements of commodity flow, such as material description, volume, frequency, types of containers, shippers, and carriers.

- Discuss plans and controls designed to avoid accidents during operations and to respond to any accidental releases.

- Evaluate potential public health and safety impacts associated with an accidental release of oil and other hazardous substances during project construction and operations.

- Discuss how STB and/or the railroads would coordinate with communities, states, EPA, Federal Railroad Administration, and USDOT to develop integrated spill response plans, including Geographic Response Plans. Such plans are needed to prepare to respond to incidents involving the transport of oil and hazardous substances on the merged rail network. Include a discussion of training and exercises involving all the above parties.

- Consult with the appropriate EPA Region for assistance with emergency preparedness and contingency planning.

Indirect Impacts

Per CEQ regulations at CFR 1508.8(b), the indirect effects analysis "may include growth inducing effects and other effects related to induced changes in the pattern of land use, population density or growth rate, and related effects on air and water and other natural systems, including ecosystems." We recommend the Draft EIS consider available information about the extent to which construction activity might be stimulated by the construction of additional track sidings and parallel track construction and expanded train traffic utilization and the potential environmental effects associated with that activity as result of the merger.

Cumulative Impacts

The cumulative impacts analysis should identify how resources, ecosystems, and communities in the vicinity of the project have already been, or will be, affected by past, present, or future activities in the project area. These resources should be characterized in terms of their response to change and capacity to withstand stresses. Trends data should be used to establish a baseline for the affected resources, to evaluate the significance of historical degradation, and to predict the environmental effects of the project components.

For the cumulative impacts assessment, we recommend the Draft EIS focus on resources of concern or resources that are “at risk” and/or are significantly impacted by the proposed project before mitigation. For this project, the STB should conduct a thorough assessment of the cumulative impacts, especially in the context of the other developments occurring and proposed in the area, including pending and proposed projects.

A cumulative impacts assessment is also required under Section 404. Cumulative impacts are defined in 40 CFR 230.11(g)(1) as "the changes in an aquatic ecosystem that are attributable to the collective effect of a number of individual discharges of dredged or fill material. Although the impact of a discharge may constitute a minor change in itself, the cumulative effect of numerous such piecemeal changes can result in a major impairment of the water resources and interfere with the productivity and water quality of existing aquatic ecosystems."

Coordination with Tribal Governments

Executive Order 13175, *Consultation and Coordination with Indian Tribal Governments* (November 6, 2000), was issued in order to establish regular and meaningful consultation and collaboration with tribal officials in the development of federal policies that have tribal implications, and to strengthen the United States government-to-government relationships with Indian tribes. If applicable, the Draft EIS should describe the process and outcome of government-to-government consultation between the STB and with each of the tribal governments with current or historical ties to the project area, issues that were raised (if any), and how those issues were addressed in the selection of the proposed alternative.

National Historic Preservation Act and Executive Order 13007

Consultation for tribal cultural resources is required under Section 106 of the National Historic Preservation Act (NHPA). Historic properties under the NHPA are properties that are included in the National Register of Historic Places or that meet the criteria for the National Register. Section 106 of the NHPA requires a federal agency, upon determining that activities under its control could affect historic properties, consult with the appropriate State Historic Preservation Officer (SHPO)/Tribal Historic Preservation Officer (THPO), Indian tribes, or any other interested party. Under NEPA, any impacts to tribal, cultural, or other treaty resources must be discussed and mitigated. Section 106 of the NHPA requires that Federal agencies consider the effects of their actions on cultural resources, following regulation in 36 CFR 800. The Draft EIS should address the existence of cultural and historic resources, including Indian sacred sites, in the project areas, and address compliance with Section 106 of the NHPA. The Draft EIS should provide a summary of all coordination with Tribes, the SHPO/THPO, or any other party; and identify all NHPA listed or eligible sites, and the development of a Cultural Resource Management Plan.

Environmental Justice and Impacted Communities

Executive Order 12898, *Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations* (February 11, 1994) and the Interagency Memorandum of Understanding on EJ (August 4, 2011) direct federal agencies to identify and address disproportionately high and adverse human health or environmental effects on minority and low-income populations, allowing those populations a meaningful opportunity to participate in the decision-making process. Guidance[7] by CEQ clarifies the terms low-income and minority population (which includes Native Americans) and describes the factors to consider when evaluating disproportionately high and adverse human health effects.

[7] Environmental Justice Guidance under the National Environmental Policy Act, Appendix A (Guidance for Federal Agencies on Key Terms in Executive Order 12898), CEQ, December 10, 1997.

The STB should evaluate EJ populations within at least one-mile radius of the proposed project boundaries. The NOI explained that certain parts of the rail corridor would experience increases in train traffic, which would result noise and air pollution. In addition, new sidings and double track may require property acquisition and displacement of goods and services, altering local character, among other impacts. Strong upfront planning, in close collaboration with affected communities, is key to identifying siting locations and project designs that minimize impacts and protect residents' quality of life and protect vulnerable communities.

Recommendations for the Draft EIS:

- Include a detailed community outreach strategy aimed at gaining local input from impacted communities along the corridor, and specify targeted activities to reach low income and minority communities. Describe actions to date and future plans, including the use of public input to inform project development.

- Describe baseline conditions and potential impacts to communities along the rail corridor, including unincorporated communities.

- Identify low income and minority populations that may be impacted by the proposed project. Compare percentages of low income and minority residents in the project area to an appropriate reference community to determine whether the project could have disproportionately high and adverse effects. Include maps and summary tables.

- For communities with EJ concerns, consider the impacts of the proposed project along with other environmental burdens faced by the community (i.e., nearby sources of pollution, known contaminated sites, etc.). Use the cumulative environmental burdens to inform decision-making about project actions (e.g., siding and double track siting, traffic volumes, idling policies, etc.) in these areas.

- Consider increases in use of existing intermodal yards and associated impacts (noise, air quality, traffic, etc.) on communities, especially communities with EJ concerns. For example, from a high-level assessment, it appears that the three CP intermodal yards in EPA's Region 5 (Detroit, Schiller Park, and Bensenville) are adjacent to minority communities.

- Consider the "Promising Practices for EJ Methodologies in NEPA Reviews" report. Discuss its applicability to this project and any best practices utilized from the report.

- Use EPA's "EJSCREEN" tool[8] to screen for potential impacts to communities living with or vulnerable to EJ concern.

[8] EPA's EJSCREEN Environmental Justice and Mapping Tool is available at: https://www.epa.gov/ejscreen

- Provide specific measures to avoid, minimize, and mitigate any anticipated adverse impacts to communities (e.g., siding and double track siting, traffic volumes, idling policies, adoption of EPA's air quality recommendations, etc.).

Children's Health and Safety:

Executive Order 13045 on children's health and safety directs each Federal agency to make it a high priority to identify and assess environmental health and safety risks that may disproportionately affect children, and to ensure that its policies, programs, activities, and standards address these risks. Children can be particularly vulnerable to the toxic effects of contaminants because their bodies and systems are not fully developed and they generally eat more food, drink more water, and have higher inhalation rates relative to their size. There may be opportunities to develop the proposed project in a way that increases protections for children's health.

Recommendations for the Draft EIS:

- Evaluate potential direct, indirect, and cumulative impacts from the proposed project on children's health.

- Commit to specific measures to protect children's health from project impacts. Site staging areas, material hauling truck routes, and other sources of air emissions away from places where children congregate to the extent possible. Require strict implementation of applicable measures from the enclosed Construction Emissions Control Checklist in these areas.

- Require construction contractors to establish material hauling routes away from places where children live, learn, and play, to the extent feasible. Consider homes, schools, daycare centers, and playgrounds. In additional to local air quality benefits, careful routing may protect children from vehicle-pedestrian accidents.

Noise and Vibration Impacts:

Potential noise and vibration impacts to human health and welfare and wildlife activity are particularly important for this project because of the increases in the number of trains that may use the tracks each day and increases in activity and maintenance and intermodal facilities. Under NEPA, noise and vibration impacts should be fully disclosed in the Draft EIS and used to inform siting decisions and protective measures. EPA's website explains that there are direct links between noise and health.[9] Upfront assessment of noise impacts could inform alternative selection and mitigation measures, if needed.

Recommendations for the Draft EIS:

- Identify residential, commercial, community, and wildlife receptors that could be impacted by noise and vibration from the proposed project and fully analyze potential impacts.

[9] https://www.epa.gov/clean-air-act-overview/clean-air-act-title-iv-noise-pollution

- Commit to specific measures to avoid or minimize impacts. For noise impacts, consider siting of sidings, idling policies, gate crossings and horn policies, among other opportunities to protect communities from noise and vibration.

- Address nocturnal and diurnal impacts to wildlife activities, such as foraging, predator avoidance, and nesting that may be affected by new noise and vibration introduced to natural habitats.

U.S. Environmental Protection Agency
Construction Emission Control Checklist

Diesel emissions and fugitive dust from project construction may pose environmental and human health risks and should be minimized. In 2002, EPA classified diesel emissions as a likely human carcinogen, and in 2012 the International Agency for Research on Cancer concluded that diesel exhaust is carcinogenic to humans. Acute exposures can lead to other health problems, such as eye and nose irritation, headaches, nausea, asthma, and other respiratory system issues. Longer term exposure may worsen heart and lung disease.[10] We recommend STB and the project proponent consider the following protective measures and commit to applicable measures in the subsequent NEPA document.

Mobile and Stationary Source Diesel Controls

Purchase or solicit bids that require the use of vehicles that are equipped with zero-emission technologies or the most advanced emission control systems available. Commit to the best available emissions control technologies for project equipment in order to meet the following standards.

- On-Highway Vehicles: On-highway vehicles should meet, or exceed, the EPA exhaust emissions standards for model year 2010 and newer heavy-duty, on-highway compression-ignition engines (e.g., long-haul trucks, refuse haulers, shuttle buses, etc.).[11]

- Non-road Vehicles and Equipment: Non-road vehicles and equipment should meet, or exceed, the EPA Tier 4 exhaust emissions standards for heavy-duty, non-road compression-ignition engines (e.g., construction equipment, non-road trucks, etc.).[12]

- Locomotives: Locomotives servicing infrastructure sites should meet, or exceed, the EPA Tier 4 exhaust emissions standards for line-haul and switch locomotive engines where possible.

- Marine Vessels: Marine vessels hauling materials for infrastructure project should meet, or exceed, the latest EPA exhaust emissions standards for marine compression-ignition engines (e.g., Tier 4 for Category 1 & 2 vessels, and Tier 3 for Category 3 vessels).[13]

- Low Emission Equipment Exemptions: The equipment specifications outlined above should be met unless: 1) a piece of specialized equipment is not available for purchase or lease within the United States; or 2) the relevant project contractor has been awarded funds to retrofit existing equipment, or purchase/lease new equipment, but the funds are not yet available.

[10] Carcinogenicity of diesel-engine and gasoline-engine exhausts and some nitroarenes. *The Lancet.* June 15, 2012
[11] http://www.epa.gov/otaq/standards/heavy-duty/hdci-exhaust.htm
12 https://www.epa.gov/emission-standards-reference-guide/epa-emission-standards-nonroad-engines-and-vehicles
[13] https://www.epa.gov/emission-standards-reference-guide/all-epa-emission-standards

Consider requiring the following best practices through the construction contracting or oversight process:

- Establish and enforce a clear anti-idling policy for the construction site.

- Use onsite renewable electricity generation and/or grid-based electricity rather than diesel-powered generators or other equipment.

- Use electric starting aids such as block heaters with older vehicles to warm the engine. Regularly maintain diesel engines to keep exhaust emissions low. Follow the manufacturer's recommended maintenance schedule and procedures. Smoke color can signal the need for maintenance (e.g., blue/black smoke indicates that an engine requires servicing or tuning).

- Where possible, retrofit older-tier or Tier 0 nonroad engines with an exhaust filtration device before it enters the construction site to capture diesel particulate matter.

- Replace the engines of older vehicles and/or equipment with diesel or alternatively fueled engines certified to meet newer, more stringent emissions standards (e.g., plug-in hybrid-electric vehicles, battery-electric vehicles, fuel cell electric vehicles, advanced technology locomotives, etc.), or with zero emissions electric systems. Retire older vehicles, given the significant contribution of vehicle emissions to the poor air quality conditions. Implement programs to encourage the voluntary removal from use and the marketplace of pre-2010 model year on-highway vehicles (e.g., scrappage rebates) and replace them with newer vehicles that meet or exceed the latest EPA exhaust emissions standards, or with zero emissions electric vehicles and/or equipment.

Fugitive Dust Source Controls

- Stabilize open storage piles and disturbed areas by covering and/or applying water or chemical/organic dust palliative, where appropriate. This applies to both inactive and active sites, during workdays, weekends, holidays, and windy conditions.

- Install wind fencing and phase grading operations where appropriate, and operate water trucks for stabilization of surfaces under windy conditions.

- When hauling material and operating non-earthmoving equipment, prevent spillage and limit speeds to 15 miles per hour (mph). Limit speed of earth-moving equipment to 10 mph.

Occupational Health

- Reduce exposure through work practices and training, such as maintaining filtration devices and training diesel-equipment operators to perform routine inspections.

- Position the exhaust pipe so that diesel fumes are directed away from the operator and nearby workers, reducing the fume concentration to which personnel are exposed.

- Use enclosed, climate-controlled cabs pressurized and equipped with high-efficiency particulate air (HEPA) filters to reduce the operators' exposure to diesel fumes. Pressurization ensures that air moves from inside to outside. HEPA filters ensure that any incoming air is filtered first.

- Use respirators, which are only an interim measure to control exposure to diesel emissions. In most cases, an N95 respirator is adequate. Workers must be trained and fit-tested before they wear respirators. Depending on the type of work being conducted, and if oil is present, concentrations of particulates present will determine the efficiency and type of mask and respirator. Personnel familiar with the selection, care, and use of respirators must perform the fit testing. Respirators must bear a National Institute for Occupational Safety and Health (NIOSH) approval number.

Chicago Metropolitan Agency for Planning

December 28, 2021

Ms. Danielle Gosselin
Acting Director, Office of Environmental Analysis
Surface Transportation Board
395 E Street, S.W.
Washington, DC 20423

RE: FD 36500, Environmental Filing, Canadian Pacific Railway – Control of – Kansas City Southern.

Dear Ms. Gosselin:

Thank you for the opportunity to comment on the scope of the Environmental Impact Statement (EIS) for the proposed acquisition of the Kansas City Southern (KCS) by the Canadian Pacific Railway (CP). The Chicago Metropolitan Agency for Planning (CMAP) believes both the positive and negative impacts of any merger on the freight network should be studied. Anticipated transportation benefits should be balanced along with impacts at the local, regional and national levels.

As the federally designated metropolitan planning organization for northeastern Illinois, CMAP is charged with safeguarding and enhancing the region's transportation system. CMAP is focused on strengthening the viability of the region's freight and passenger networks as a key part of the economy and overall transportation system. CMAP intends to play an active role during the EIS process by analyzing the impacts and benefits from a regional perspective and supporting our local partners' analysis and review of the impacts of this transaction on their communities.

As the Surface Transportation Board (STB) finalizes the scope of the EIS process for this potential merger, CMAP submits the following comments for consideration:

Transit services. CP and KCS trains will be running on Metra commuter-rail lines. The Milwaukee District West Line will be most affected by the CP-KCS merger. Prior to the COVID-19 pandemic, the Milwaukee District West Line served more than 20,800 weekday boardings with 58 trains per weekday. Metra operations, including scheduled trains, deadheads, terminals, and station operations, must be fully addressed, and any potential conflict fully mitigated to ensure a full transit system recovery in the coming years. Planning must fully account for a staged recovery in the number of commuter trains per day as ridership rebounds from pandemic lows.

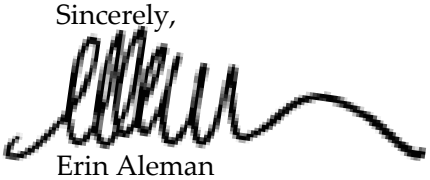
Extended blockages of highway-rail grade crossings. Extended delays at grade crossings (gate-down intervals of 10 minutes or more) have a detrimental impact on quality of life and are a threat to public safety when emergency vehicles are affected. Data collected during the STB's monitoring period for the CN acquisition of the Elgin Joliet & Eastern Railway (EJE) showed the potential extent of such blockages after an acquisition. Blockages greater than 10 minutes in length totaled 74,754 over a 53-month period, with 1,756 of those blockages lasting more than an hour in duration. Twenty-four crossings had more than 1,000 blockages longer than 10 minutes. Any merger that increases long-duration blockages is unacceptable. The EIS should estimate the impact of the CP-KCS transaction on extended blockages at each crossing, develop mitigations to those impacts, and then measure the actual changes using gate monitoring during STB's oversight period so that grade crossing blockages are not made worse.



Air quality considerations. "Hotspot" analysis should be undertaken at rail yards, intermodal terminals, rail-rail grade crossings ("diamonds"), junctions, and other places of concentrated rail activity, considering the cumulative and marginal burdens of pollutants from not only the direct operations of CP-KCS operations, but the additional truck trips that are forecast to take place in the vicinity of the intermodal terminals as a result of this transaction. The impacts of the transaction on low-income and minority communities must be fully understood and mitigated, consistent with environmental justice requirements. Air-quality mitigation strategies for locomotives, yard equipment, and drayage trucks entering and leaving the terminal must be considered.

Noise and vibration. We have concerns about expected increases in noise and vibration along CP-KCS facilities. We would like to be assured that the CP-KCS will be required to take a central role in the planning and development of quiet zones as mitigations, including the construction of improvements to establish quiet zones.

STB oversight period. Longer STB oversight will be necessary than the typical three to five years to consider the impacts of network changes, increased market access, and mitigations. To assure performance, it is necessary to monitor the effectiveness of mitigations, not simply to ascertain whether the mitigations were completed. We suggest a minimum oversight period of an additional three years following the completion of all mitigations and network changes. Further, a longer oversight period will be necessary to assure that CP-KCS trains do not interfere with Metra operations as Metra returns to pre-pandemic operating levels, a process that will take several years.

Once again, thank you for the opportunity to comment on the proposed scope of the EIS process. We look forward to working with your office and the applicants as this merger and its potential impacts are being reviewed.

Sincerely,

Erin Aleman
Executive Director

Mr. Joshua Wayland
Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Drive, Suite 500
Raleigh, NC 27606

Dear Mr. Wayland:

This is in response to your letter, dated November 12, 2021, requesting comments regarding the Notice of Intent to prepare an environmental impact statement for the merger of the Canadian Pacific Railway and Kansas City Southern railroad companies. The proposed combined rail lines of these two companies span multiple U.S. Army, Corps of Engineers Districts, including the Kansas City District.

The Corps of Engineers has jurisdiction over all waters of the United States. Discharges of dredged or fill material in waters of the United States, including wetlands, require prior authorization from the Corps under Section 404 of the Clean Water Act (33 USC 1344) and /or Section 10 of the Rivers and Harbors Act of 1899 (33 USC 403).

We have reviewed the locations of the existing rail lines and associated facilities that may experience operational changes resulting from the proposed merger. We will further evaluate any necessary permit considerations for the work when an application and more detailed descriptions for the impacts of that work to waters of the United States has been submitted for review. These locations may include the Leeds or Kansas City Intermodal facilities, the addition of new or improved track and/or rail sidings, or other work and locations within our District.

Thank you for providing us the opportunity to review the Notice of Intent for the project. If you have any questions concerning this matter, please feel free to write or contact Mr. Brian Donahue at 816-389-3703 or by email at brian.t.donahue@usace.army.mil. Please reference Permit file number NWK-2021-0859 in all comments and/or inquiries relating to this project. This letter is only being provided to electronically through the project website at www.stb.gov.

Sincerely,

Mark D. Frazier

MEMORANDUM

TO: Donna Fisher

CC: Ken Powell, Julie Coleman

FROM: Kevin Heit – Bureau of Waste Management

DATE: November 22nd, 2021

RE: Intergovernmental Agency Review requested by US Surface Transportation Board on behalf of the Canadian Pacific Acquisition of Kansas City Southern for proposed merger of the afore mentioned railway corporations. Proposed areas of impact in Kansas are in Linn, Crawford, and Cherokee Counties.

The Canadian Pacific Railway Limited (CP) & Kansas City Southern (KCS), and any respective contractor(s) should review the attached Technical Guidance Document and ensure all waste is properly disposed. Waste that does not meet the definition of clean rubble or construction/demolition waste should be disposed at a permitted municipal solid waste landfill. If further information is required, I may be reached via email at kevin.heit@ks.gov or by phone at (785) 296-1757.

Kansas Department of Health and Environment
Bureau of Waste Management
1000 SW Jackson, Suite 320, Topeka, Kansas 66612-1366

Construction and Demolition Wastes and Clean Rubble

Technical Guidance Document SW-1994-G2

Construction and Demolition (C&D) waste is solid waste generated during construction or demolition activities. Clean rubble is also generated during construction or demolition activities, but it differs in composition from C&D waste. This document explains the definitions of C&D waste and clean rubble and acceptable methods for disposal of both.

Construction and Demolition Waste

Definition of C&D waste

C&D waste is defined in KSA 65-3402 (u) as:

- solid waste resulting from the construction, remodeling, repair and demolition of structures, roads, sidewalks and utilities;
- untreated wood and untreated sawdust from any source;
- treated wood from construction or demolition projects;
- small amounts of municipal solid waste generated by the consumption of food and drinks at construction or demolition sites, including, but not limited to, cups, bags and bottles;
- furniture and appliances from which ozone depleting chlorofluorocarbons have been removed in accordance with the provisions of the federal clean air act;
- solid waste consisting of motor vehicle window glass; and
- solid waste consisting of vegetation from land clearing and grubbing, utility maintenance, and seasonal or storm related cleanup.

Such wastes include, but are not limited to, bricks, concrete, and other masonry materials, roofing materials, soil, rock, wood, wood products, wall or floor coverings, plaster, drywall, plumbing fixtures, electrical wiring, electrical components containing no hazardous materials, non-asbestos insulation and construction related packaging.

Other statutes and regulations further refine the definition:

Construction related packaging means small quantities of packaging wastes that are generated in the construction, remodeling or repair of structures and related appurtenances. "Construction related packaging" does not include packaging wastes that are generated at retail establishments selling construction materials, chemical containers generated from any source or packaging generated during maintenance of existing structures. *KSA 65-3402(dd)*

Furniture and appliances do not include computer monitors and other computer components, televisions, videocassette recorders, stereos, and similar waste electronics.
KAR 28-29-300(a)(4)(A)

Treated wood includes wood treated with any of the following:
(i) Creosote;
(ii) oil-borne preservatives, including pentachlorophenol and copper naphthenate;

Disposal options for C&D wastes
Acceptable C&D wastes may be disposed of in either a municipal solid waste landfill (MSWLF) or in a C&D landfill. Both MSWLFs and C&D landfills must be approved by KDHE through a permit process. But because of the relatively inert nature of the wastes disposed in C&D landfills, these landfills do not have to meet design standards as strict as those for MSWLFs.

Most C&D landfills will, on occasion, receive waste that is not appropriate for disposal. Therefore, all C&D landfills should conduct waste screening (i.e., inspect incoming waste and remove unacceptable materials) and maintain a dumpster or roll-off container onsite for unacceptable wastes which are received at the landfill. Waste screening is covered in Technical Guidance Document SW 02-01, and storage of unapproved wastes screened from construction and demolition landfills is addressed in Bureau of Waste Management Policy 02-01.

Clean Rubble

Definition of clean rubble
According to KSA 65-3402 (w), "Clean rubble means the following types of construction and demolition waste: concrete and concrete products including reinforcing steel, asphalt pavement, brick, rock and uncontaminated soil as defined in rules and regulations adopted by the secretary."

KSA 65-3415b lists "clean rubble" as a waste which is exempt from the state solid waste tonnage fee. The definition of "construction and demolition waste" in KSA 65-3402(u) states: "Clean rubble that is mixed with other construction and demolition waste during demolition or transportation shall be considered to be construction and demolition waste. "

Clean rubble that is brought separately to a construction and demolition landfill or a municipal solid waste landfill is not subject to the tonnage fee, even if the clean rubble is mixed with construction and demolition waste or municipal solid waste upon disposal.

Disposal of clean rubble
The stable nature of the materials in clean rubble means it may be disposed of with C&D waste, or it may be disposed of separately at a clean rubble site. However, clean rubble that is mixed with other C&D waste during demolition or transportation is considered to be C&D waste and must be disposed of at either a MSWLF or at a C&D landfill.
Unlike a C&D landfill, state statutes do not require a solid waste permit for operation of a site that accepts only clean rubble. However, a clean rubble site may be subject to local city or county requirements such as local approval (zoning or land use) and local ordinances.

Approval from the Division of Water Resources (DWR) may be required if the site is located in the 100-year flood plain. The operation and appearance of the site must not create a public nuisance or adversely affect the public health or the environment.

For additional information regarding the proper management of solid or hazardous waste in Kansas, you may visit the Bureau of Waste Management website at http://www.kdheks.gov/waste/ or contact the Bureau at: (785) 296-1600, bwm_web@kdheks.gov, or the address at the top of this document.

MEMORANDUM

TO: Donna Fisher

FROM: Christopher Wierman

DATE: November 23, 2021

RE: Intergovernmental Agency Review requested by Surface Transportation Board for Railroad Merger and Improvements in Cherokee County

---

The Kansas Department of Health and Environment Bureau of Environmental Remediation (KDHE/BER), Assessment and Restoration Section, Dry Cleaner / Superfund Unit, has not identified contaminated Drycleaner sites within the vicinity of the proposed project.

The following identified Superfund site may impact the proposed work:
Cherokee County Superfund within Cherokee County (KDHE ISL: C3-011-00012)
(also see Cherokee Co Operable Unit 8 Railroad; KDHE ISL: C3-011-73152)

During the lead and zinc ore mining period within the Cherokee County Superfund Site (Site) railroad construction used ballast material from surrounding mine process waste piles to join conventional large-scale railroads to individual mining operations. Residual heavy metals including lead and zinc may be present in the railroad ballast if the ballast material came from mine process waste, colloquially known as chat. Potential contamination transport mechanisms include leaching into native soil underlying the rail bed chat, airborne dust, and surface water runoff. Site workers and adjacent residents may, therefore, be exposed to contaminated materials from historic lead-zinc mining within Cherokee County (via ingestion, inhalation, and/or dermal contact exposure pathways) due to the railroad improvement activities. The primary ecological receptor exposure routes to the chemicals of concern are heavy metals-contaminated mine waste and soil ingestion.

Staff members or representatives for the Surface Transportation Board, Canadian Pacific Railway Limited, et al., Kansas City Southern, et al. or Cherokee County are welcome to come and view the KDHE/BER files in accordance with the Kansas Open Records Act. Please contact me at (785) 296-5548 or by email at christopher.wierman@ks.gov if you have any questions.

December 14, 2021

Joshua Wayland, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Dear Mr. Wayland,

The Louisiana Department of Transportation and Development (DOTO) is in receipt of your letter providing notice of the Surface Transportation Board's intent to prepare an Environmental Impact Statement for the proposed acquisition of Kansas City Southern (KCS) by Canadian Pacific. While the Highway/Rail Safety Unit at DOTO looks forward to working with Canadian Pacific and welcoming them into Louisiana, we do have some concerns.

Louisiana is one of the few states that hosts six Class 1 railroads and KCS is one of the more proactive and enthusiastic railroad safety partners. Their upper management appear to provide support and empowerment to Chris Ashley (Signal Project Engineer) and Danny Lites (Public Safety Director). This is evident by their participation in Operation Lifesaver, AREMA, and NCUTCD. This is also shown by how they partnered with DOTO to apply for and win two competitive FRA Grants, voluntarily providing financial commitments (even up to 50%). Other railroads have shown interest in pursuing a grant, but few had flexibility and support at the front line level to be successful.

When it comes to project timelines and managing the Section 130 program for the state, there is some uncertainty because DOTD relies on the railroads to develop the plans and estimates. KCS is one of our more responsive railroads and has been flexible enough to prioritize some projects allowing us to initiate projects sooner than planned if needed to use all of our funding for the year. They were especially helpful when FHWA unexpectedly changed their policy to require matching funds for railroad safety project several years ago. Louisiana laws generally do not allow DOTD to spend state transportation funds on non-state routes and our parishes (counties) and local towns do not have exh·a funding to provide the match. Therefore, we relied on railroads to provide the matching funds.

As mentioned above, Chris and Danny provide excellent customer service, not just to the State, but also the local entities and general public. There is an additional level of effectiveness by having them in Louisiana. Meetings with local entities can be scheduled around a car trip rather than an airline flight. They are able to patticipate in person with Operation Lifesaver events.

One of the tools we use in improving railroad safety is crossing consolidation. When there are several crossings very close to each other with good connectivity between them, we look to close one of the crossings and make sure the remaining ones have adequate warning for the additional

traffic. As you can imagine, this is not always popular and can require negotiation with the local entity (city, town, or parish/county). Sometimes this can require connector roads, sidewalks, or other infrastructure to mitigate the closed crossing and it may not be practical for DOTO or the local entity to design and construct them. On many more than just a few occasions, KCS has stepped up and helped by providing these services. While this was not uncommon with other Class 1 railroads even 10 years ago, many railroads have shied away from this practice.

While Louisiana is a relatively small state, DOTO tries to be proactive in Highway/Rail Safety. We look forward to working with Canadian Pacific if the merger is successful and, while we realize it may not be possible, we hope CP is able to maintain some of the flexibility and proactive nature KCS currently exercises in Highway/Rail Safety.

In the interest of aiding future coordination associated with the acquisition, DOTO is offering the contact information for our rail staff below:

Office of Engineering:

Atlanta, Georgia 30309-3269

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al. - Control of Kansas City Southern Railway, et al.; USFWS Informal Section 7 Consultation

Dear Ms. Gosselin:

The U.S. Fish and Wildlife Service (Service) has reviewed your assessment, determinations, and your written request for concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973. We received your request on June 6, 2022.

Your letter stated the following (abbreviated):

> Based on habitat-level field work, Office of Environmental Analysis (OEA) identified suitable roosting and foraging habitat within the existing ROW for the Northern Long-eared Bat (*Myotis septentrionalis*) and Indiana Bat (*Myotis sodalis*) at both planned capital improvements in Arkansas. The Applicants have proposed multiple measures to protect the Northern Long-eared and Indiana Bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the Northern Long-eared Bat and Indiana Bat.
>
> The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Arkansas Fatmucket (*Lampsilis powelli*), Eastern Black Rail (*Laterallus jamaicensis*), Gray Bat (*Myotis grisescens*), Missouri Bladderpod (*Physaria filiformis*), Monarch Butterfly (*Danaus plexippus*), Ozark Big-eared Bat (*Corynorhinus townsendii ingens*), Ozark Cavefish, (*Amblyopsis rosae*), Piping Plover (*Charadrius melodus*),

Rabbitsfoot (*Quadrula cylindrica cylindrica*), Red Knot (*Calidris canutus*), and Red-cockaded Woodpecker (*Leuconotopicus borealis*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned capital improvement locations in Arkansas. If you agree with these recommended determinations, please send your written concurrence.

The Service concurs with the "no effect" determinations for the listed species identified. No further consultation for this project is required for these species. Furthermore, due to the location of the area being affected occurring immediately adjacent to the existing railway, limited and poor habitat located immediately adjacent to the action area, ongoing constant noise and disturbance, inactive season only clearing restrictions for suitable habitat and bridges, commitment to perform bridge inspections prior to construction, the distance to known species locations, and the implementation of voluntary mitigation measures, the Service concurs with your determination of "may affect, but is not likely to adversely affect" the Indiana Bat and Northern Long-eared Bat. This concurrence concludes your ESA Section 7 responsibilities for this action.

The Service recommends that your agency contact the Arkansas Ecological Services Field Office or re-evaluate this key in IPaC if: 1) the scope, timing, duration, or location of the proposed project changes, 2) new information reveals the action may affect listed species or designated critical habitat; and 3) a new species is listed or critical habitat designated. If any of the above conditions occurs, additional consultation with the Arkansas Ecological Services Field Office should take place before project changes are final or resources committed.

For further assistance or if you have any questions, please contact Lindsey Lewis at (501) 513-4489 or lindsey_lewis@fws.gov.

Sincerely,

Melvin L. Tobin
Field Supervisor

Dear Ms. Feldt,

The U.S. Fish and Wildlife Service (Service) has reviewed the information provided in your June 6, 2022 letter regarding the proposed Canadian Pacific Railway Limited, et al. and Kansas City Southern Railway, et al. Capital Improvement Projects in Cass, Grundy, Jackson, Jasper, Livingston, McDonald, and Sullivan counties, Missouri. The Service offers the following comments pursuant to the Endangered Species Act of 1973, as amended (16 U.S.C. 1531-1544).

The Service concurs with your "may affect, but not likely to adversely affect" (NLAA) determination for the Indiana bat (*Myotis sodalis*) and northern long-eared bat (*Myotis sepentrionalis*).

Thank you for your interest in the conservation of threatened and endangered species.

Electronic Mail

Danielle Gosselin
Director
Surface Transportation Board
Office of Environmental Analysis

Dear Ms. Gosselin,

This transmits the U.S. Fish and Wildlife Service's (Service) concurrence for your "may affect, but not likely to adversely affect" determinations for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*), as described in your memo received June 6, 2022. The project (Docket No. FD 36500) includes the proposed merging of Canadian Pacific Railway Limited and Kansas City Southern Railway to form the Canadian Pacific Kansas City system (CPKC).

The purpose of the proposed project is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The proposed project would cause rail traffic to increase on certain rail lines within the CPKC network. To accommodate for the projected increase in rail traffic, capital improvements within the existing rail right-of-way (ROW) in both Illinois and Iowa are proposed. In Illinois, the improvements would be located within a previously disturbed area and would not result in any new impacts to habitats, plants, or wildlife. However, suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat and Indiana bat were identified at seven of the eight proposed capital improvement locations in Iowa within the cities of Guttenberg, Bellevue, Clinton, Letts, Washington, Ottumwa, and Moravia.

These improvements include the addition of five new passing sidings and the extension of four existing sidings. This would involve tree clearing, grading, and filling within the existing rail ROW. Additionally, replacement or extension of the existing railroad bridges and culverts is proposed to accommodate the new or extended sidings. This informal consultation addresses potential effects to the species in accordance with section 7 of the Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 et seq.) and 50 CFR § 402 of our interagency regulations governing section 7 of the Act.

Threatened and Endangered Species

As described in your memo, nine federally listed species in addition to the northern long-eared bat and Indiana bat have ranges overlapping the project area. These species include the Eastern massasauga (*Sistrurus catenatus*), eastern prairie fringed orchid (*Platanthera leucophaea*), Higgins eye pearlymussel (*Lampsilis higginsii*), Iowa pleistocene snail (*Discus macclintocki*), northern wild monkshood (*Aconitum noveboracense*), prairie bush-clover (*Lespedeza leptostachya*), sheepnose mussel (*Plethobasus cyphyus*), spectaclecase (*Cumberlandia monodonta*), and western prairie fringed orchid (*Platanthera praeclara*), in addition to one candidate species, the monarch butterfly (*Danaus plexippus*). You made "may affect, but not likely to adversely affect" determinations for the northern long-eared bat and Indiana bat. Due to the lack of suitable habitat within the project area, you made "no effect" determinations for the remaining

species in the above list. The Illinois-Iowa Ecological Services Field Office has no regulatory or statutory authority for concurring with "no effect" determinations. However, we recommend you maintain a written record of your "no effect" determination and include it in your decision record.

Bats

The project, as proposed, includes the removal of potential northern long-eared bat and Indiana bat habitat and hibernaculum. As described in your memo dated June 6, 2022, all tree removal will occur outside the maternity roosting season, between October 1 and March 31. In addition, voluntary mitigation measures are proposed that include limiting tree removal where practical, conducting culvert and bridge removal or alterations outside of the roosting period when practical, conducting presence/absence surveys prior to culvert and bridge removal or alterations if required during the active season and coordination with OEA and Service if presence is found, directing temporary lighting away from suitable habitat during the active season, and using downward-facing full cut-off lens lights if permanent lighting is required. As a result of the conditions and conservation measures described above, we concur that the project as proposed “may affect, not likely to adversely affect” the northern long-eared bat and Indiana bat.

Migratory Birds and Eagles

The Service removed bald eagles from protection under the Endangered Species Act on August 8, 2007. However, they remain protected today under the Migratory Birds Treaty Act and the Bald and Golden Eagle Protection Act (Eagle Act). The Eagle Act prohibits take, which is defined as, “pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, destroy, molest, or disturb” (50 CFR 22.3). Disturb is defined in regulations as, “to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, or 2) decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior.” In accordance with the avoidance measures described in the Eagle Act (16 U.S.C. 668-668c), any activities resulting in potential disturbance should be restricted within 660-ft of any identified active eagle nest to dates outside of the nesting season. Please contact the Region 3 Migratory Bird Office (https://www.fws.gov/midwest/eagle/contactus.html) should activities that have the potential to result in take or disturbance of eagles or their nests.

Conclusion

The above comments are provided in accordance with the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.), provisions of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.). This precludes the need for further action on this project as required under Section 7 of the Endangered Species Act of 1973, as amended. If project plans change or portions of the proposed project were not evaluated, consultation should be reinitiated. Thank you for the opportunity to provide comments. If you have any questions regarding these comments, please feel free to contact me at the email address below.

Thank you,

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The attached species list identifies any federally threatened, endangered, proposed and candidate species that may occur within the boundary of your proposed project or may be affected by your proposed project. The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Counties: Clayton County, Iowa

Endangered Species Act Species

There is a total of 10 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Project Name: Camanche IA Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The attached species list identifies any federally threatened, endangered, proposed and candidate species that may occur within the boundary of your proposed project or may be affected by your proposed project. The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Name: Camanche IA Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@41.80237395,-90.2399657849693,14z

Counties: Clinton County, Iowa

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Consultation Code: 03E18000-2022-SLI-0403
Event Code: 03E18000-2022-E-01043
Project Name: Moravia MO Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The attached species list identifies any federally threatened, endangered, proposed and candidate species that may occur within the boundary of your proposed project or may be affected by your proposed project. The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

- Wetlands

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Illinois-Iowa Ecological Services Field Office
Illinois & Iowa Ecological Services Field Office
1511 47th Ave
Moline, IL 61265-7022
(309) 757-5800

Project Summary

Consultation Code: 03E18000-2022-SLI-0403
Event Code: Some(03E18000-2022-E-01043)
Project Name: Moravia MO Railroad Siding - New
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@40.91746245,-92.79231424922497,14z

Counties: Monroe County, Iowa

Endangered Species Act Species

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
Eastern Prairie Fringed Orchid *Platanthera leucophaea*	Threatened
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/601	
Prairie Bush-clover *Lespedeza leptostachya*	Threatened
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/4458	
Western Prairie Fringed Orchid *Platanthera praeclara*	Threatened
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/1669	

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

Event Code: 03E14000-2022-E-01325
Project Name: Newtown MO Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Karen Herrington

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Missouri Ecological Services Field Office
101 Park Deville Drive
Suite A
Columbia, MO 65203-0057
(573) 234-2132

Project Summary

Consultation Code: 03E14000-2022-SLI-0411
Event Code: Some(03E14000-2022-E-01327)
Project Name: Laredo MO Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@39.9972256,-93.4417227539041,14z

Counties: Grundy County, Missouri

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Gray Bat *Myotis grisescens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6329	Endangered
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949 General project design guidelines: https://ecos.fws.gov/ipac/project/ZBHLNCUT5NG3LBHBV3E26XWLYY/documents/generated/6868.pdf	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045 General project design guidelines: https://ecos.fws.gov/ipac/project/ZBHLNCUT5NG3LBHBV3E26XWLYY/documents/generated/6868.pdf	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
Eastern Prairie Fringed Orchid *Platanthera leucophaea*	Threatened

No critical habitat has been designated for this species.

Species profile: https://ecos.fws.gov/ecp/species/601

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Project Name: MP 431 MO Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Project Name: MP 186 MO Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Karen Herrington

Event Code: Some(03E14000-2022-E-01337)
Project Name: MP 186 MO Railroad Siding - New
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@36.7046662,-94.42888411031643,14z

Counties: McDonald County, Missouri

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

REFUGE INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Event Code: 04ER1000-2022-E-01171
Project Name: Gentry AR Railroad Siding

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies endangered, threatened, proposed, and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). **This letter only provides an official species list and technical assistance; if you determine that listed species and/or designated critical habitat may be affected in any way by the proposed project, even if the effect is wholly beneficial, consultation with the Service will be necessary.**

If you determine that this project will have no effect on listed species and their habitat in any way, then you have completed Section 7 consultation with the Service and may use this letter in your project file or application.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found on our website.

Please visit our website at http://www.fws.gov/arkansas-es/IPaC/home.html for species-specific guidance to avoid and minimize adverse effects to federally endangered, threatened, proposed, and candidate species. Our web site also contains additional information on species life history and habitat requirements that may be useful in project planning.

If your project involves in-stream construction activities, oil and natural gas infrastructure, road construction, transmission lines, or communication towers, please review our project specific guidance at http://www.fws.gov/arkansas-es/IPaC/ProjSpec.html.

The karst region of Arkansas is a unique region that covers the **northern third of Arkansas** and we have specific guidance to conserve sensitive cave-obligate and bat species. **Please visit http://www.fws.gov/arkansas-es/IPaC/Karst.html to determine if your project occurs in the karst region and to view karst specific-guidance.** Proper implementation and maintenance of best management practices specified in these guidance documents is necessary to avoid adverse effects to federally protected species and often avoids the more lengthy formal consultation process.

If your species list includes any mussels, Northern Long-eared Bat, Indiana Bat, Yellowcheek Darter, Red-cockaded Woodpecker, or American Burying Beetle, your project may require a presence/absence and/or habitat survey prior to commencing project activities. Please check the appropriate species-specific guidance on our website to determine if your project requires a survey. We strongly recommend that you contact the appropriate staff species lead biologist (see office directory or species page) prior to conducting presence/absence surveys to ensure the appropriate level of effort and methodology.

Under the ESA, it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make “no effect” determinations. If you determine that your proposed action will have “no effect” on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally-listed threatened or endangered fish or wildlife species without the appropriate permit.

Through the consultation process, we will analyze information contained in a biological assessment that you provide. If your proposed action is associated with Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a habitat conservation plan) is necessary to harm or harass federally listed threatened or endangered fish or wildlife species. In either case, there is no mechanism for authorizing incidental take “after-the-fact.” For more information regarding formal consultation and HCPs, please see the Service’s Consultation Handbook and Habitat Conservation Plans at www.fws.gov/endangered/esa-library/index.html#consultations.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, **the accuracy of this species list should be verified after 90 days.** This verification can be completed formally or informally as desired. The Service recommends that verification be

completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

Consultation Code: 02EKOK00-2022-SLI-0486
Event Code: 02EKOK00-2022-E-01740
Project Name: MP 247 OK Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened
Ozark Big-eared Bat *Corynorhinus (=Plecotus) townsendii ingens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/7245	Endangered

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

Clams

NAME	STATUS
Neosho Mucket *Lampsilis rafinesqueana* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/3788	Endangered
Rabbitsfoot *Quadrula cylindrica cylindrica* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5165	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

---

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

THERE ARE NO FWS MIGRATORY BIRDS OF CONCERN WITHIN THE VICINITY OF YOUR PROJECT AREA.

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical

Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

United States Department of the Interior

Tulsa, OK 74129-1428
Phone: (918) 581-7458 Fax: (918) 581-7467
http://www.fws.gov/southwest/es/Oklahoma/

In Reply Refer To: December 06, 2021
Consultation Code: 02EKOK00-2022-SLI-0487
Event Code: 02EKOK00-2022-E-01747
Project Name: Cave Springs OK Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Project Name: Cave Springs OK Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@35.73656545,-94.72590687881953,14z

Counties: Adair County, Oklahoma

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Gray Bat *Myotis grisescens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6329	Endangered
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened
Ozark Big-eared Bat *Corynorhinus (=Plecotus) townsendii ingens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/7245	Endangered

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

Insects

NAME	STATUS
American Burying Beetle *Nicrophorus americanus* Population: Wherever found, except where listed as an experimental population No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/66	Threatened
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Critical habitats

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10

Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

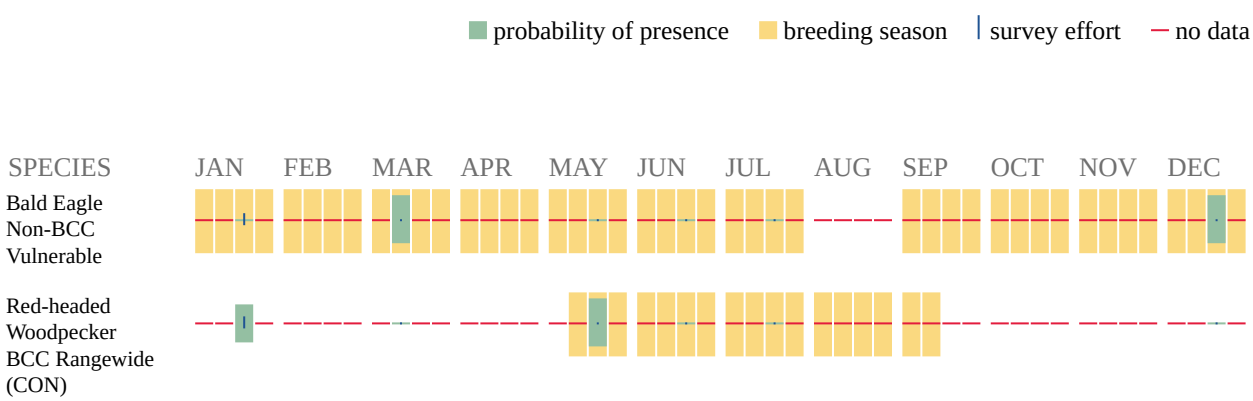
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)



Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Oklahoma Ecological Services Field Office
9014 East 21st Street
Tulsa, OK 74129-1428
(918) 581-7458

Project Summary

Consultation Code: 02EKOK00-2022-SLI-0488
Event Code: Some(02EKOK00-2022-E-01749)
Project Name: Spiro OK Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@35.21976985,-94.64233700036402,14z

Counties: Le Flore County, Oklahoma

Endangered Species Act Species

There is a total of 7 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

Clams

NAME	STATUS
Scaleshell Mussel *Leptodea leptodon*	Endangered

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/5881

Insects

NAME	STATUS
American Burying Beetle *Nicrophorus americanus*	Threatened

Population: Wherever found, except where listed as an experimental population
No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/66

Monarch Butterfly *Danaus plexippus*	Candidate

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/9743

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

---

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31

Probability Of Presence Summary

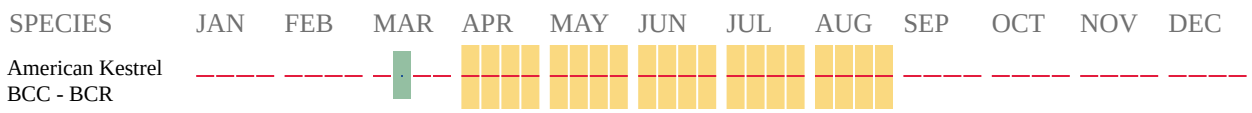
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.



Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort – no data

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Event Code: 02EKOK00-2022-E-01751
Project Name: Heavener OK Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31

NAME	BREEDING SEASON
Kentucky Warbler *Oporornis formosus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 20 to Aug 20
Prairie Warbler *Dendroica discolor* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Wood Thrush *Hylocichla mustelina* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Aug 31

Probability Of Presence Summary

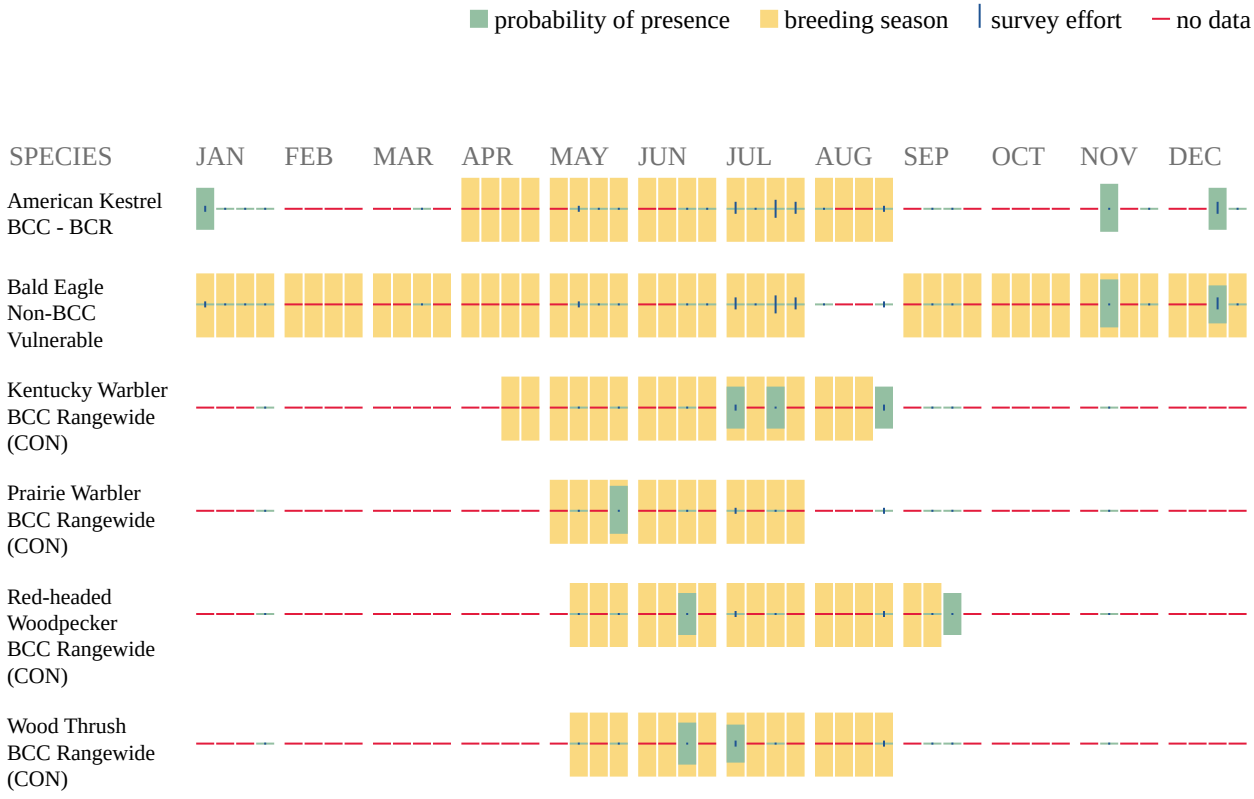
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.



3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

United States Department of the Interior

FISH AND WILDLIFE SERVICE
Arkansas Ecological Services Field Office
110 South Amity Suite 300
Conway, AR 72032-8975
Phone: (501) 513-4470 Fax: (501) 513-4480
http://www.fws.gov/arkansas-es

In Reply Refer To: December 06, 2021
Consultation Code: 04ER1000-2022-SLI-0263
Event Code: 04ER1000-2022-E-00818
Project Name: MP 377 AR Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies endangered, threatened, proposed, and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). **This letter only provides an official species list and technical assistance; if you determine that listed species and/or designated critical habitat may be affected in any way by the proposed project, even if the effect is wholly beneficial, consultation with the Service will be necessary.**

If you determine that this project will have no effect on listed species and their habitat in any way, then you have completed Section 7 consultation with the Service and may use this letter in your project file or application.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found on our website.

Please visit our website at http://www.fws.gov/arkansas-es/IPaC/home.html for species-specific guidance to avoid and minimize adverse effects to federally endangered, threatened, proposed, and candidate species. Our web site also contains additional information on species life history and habitat requirements that may be useful in project planning.

If your project involves in-stream construction activities, oil and natural gas infrastructure, road construction, transmission lines, or communication towers, please review our project specific guidance at http://www.fws.gov/arkansas-es/IPaC/ProjSpec.html.

The karst region of Arkansas is a unique region that covers the **northern third of Arkansas** and we have specific guidance to conserve sensitive cave-obligate and bat species. **Please visit http://www.fws.gov/arkansas-es/IPaC/Karst.html to determine if your project occurs in the karst region and to view karst specific-guidance.** Proper implementation and maintenance of best management practices specified in these guidance documents is necessary to avoid adverse effects to federally protected species and often avoids the more lengthy formal consultation process.

If your species list includes any mussels, Northern Long-eared Bat, Indiana Bat, Yellowcheek Darter, Red-cockaded Woodpecker, or American Burying Beetle, your project may require a presence/absence and/or habitat survey prior to commencing project activities. Please check the appropriate species-specific guidance on our website to determine if your project requires a survey. We strongly recommend that you contact the appropriate staff species lead biologist (see office directory or species page) prior to conducting presence/absence surveys to ensure the appropriate level of effort and methodology.

Under the ESA, it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make “no effect” determinations. If you determine that your proposed action will have “no effect” on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally-listed threatened or endangered fish or wildlife species without the appropriate permit.

Through the consultation process, we will analyze information contained in a biological assessment that you provide. If your proposed action is associated with Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a habitat conservation plan) is necessary to harm or harass federally listed threatened or endangered fish or wildlife species. In either case, there is no mechanism for authorizing incidental take “after-the-fact.” For more information regarding formal consultation and HCPs, please see the Service’s Consultation Handbook and Habitat Conservation Plans at www.fws.gov/endangered/esa-library/index.html#consultations.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, **the accuracy of this species list should be verified after 90 days.** This verification can be completed formally or informally as desired. The Service recommends that verification be

completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

Project Name: MP 377 AR Railroad Siding - New
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@34.6022879,-94.22390475419573,14z

Counties: Polk County, Arkansas

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Birds

NAME	STATUS
Eastern Black Rail *Laterallus jamaicensis ssp. jamaicensis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10477	Threatened
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened
Red-cockaded Woodpecker *Picoides borealis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/7614	Endangered

Clams

NAME	STATUS
Arkansas Fatmucket *Lampsilis powellii*	Threatened
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/2213	
Rabbitsfoot *Quadrula cylindrica cylindrica*	Threatened
There is **final** critical habitat for this species. The location of the critical habitat is not available.	
Species profile: https://ecos.fws.gov/ecp/species/5165	

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus*	Candidate
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/9743

Project Name: Mansfield LA Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

December 06, 2021

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Louisiana Ecological Services Field Office
200 Dulles Drive
Lafayette, LA 70506
(337) 291-3100

Project Summary

Consultation Code: 04EL1000-2022-SLI-0558
Event Code: Some(04EL1000-2022-E-01576)
Project Name: Loring LA Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@31.5894147,-93.5484028440243,14z

Counties: Sabine County, Louisiana

Endangered Species Act Species

There is a total of 2 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

42.3126/-90.4318; Jackson County
Sec. 19/T87N/R05E

Thank you for inviting Department comment on the impact of this project. The Department has searched for records of rare species and significant natural communities in the project area and found no site-specific records that would be impacted by this project. However, these records and data are not the result of thorough field surveys. If listed species or rare communities are found during the planning or construction phases, additional studies and/or mitigation may be required.

This letter is a record of review for protected species, rare natural communities, state lands and waters in the project area, including review by personnel representing state parks, preserves, recreation areas, fisheries and wildlife but does not include comment from the Environmental Services Division of this Department. This letter does not constitute a permit. Other permits may be required from the Department or other state or federal agencies before work begins on this project.

If you have questions about this letter or require further information, please contact me at (515) 330-6432.

Environmental Review requests can be submitted electronically to: SLER@dnr.iowa.gov.

Sincerely,

Seth Moore | Environmental Specialist

RE: STB CPR KCS Merger EIS
Project Number(s): 2207101
County: DeKalb, Ogle

Dear Applicant:

This letter is in reference to the project you recently submitted for consultation. The natural resource review provided by EcoCAT identified protected resources that may be in the vicinity of the proposed action. The Department has evaluated this information and concluded that adverse effects are unlikely. Therefore, consultation under 17 Ill. Adm. Code Part 1075 is terminated.

This consultation is valid for two years unless new information becomes available that was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. If the project has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary.

The natural resource review reflects the information existing in the Illinois Natural Heritage Database at the time of the project submittal, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, you must comply with the applicable statutes and regulations. Also, note that termination does not imply IDNR's authorization or endorsement of the proposed action.

Please contact me if you have questions regarding this review.

Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records identify no wildlife preserves, no designated wilderness areas or critical habitats, and no federal-listed species records within the project area, or in the public land survey section or sections adjacent.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams

and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Indiana Bats and Northern Long-eared Bats** occur in Sulivan County and could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Project type:	Transportation		
Location/Scope:	T60N R23W S24, 25		
County:	Grundy		
Query reference:	CR-KCS passing sidings improvements Laredo		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate a Bald Eagle nest within 1 mile of the project area.

- **Bald Eagles:** Bald Eagles (*Haliaeetus leucocephalus*) nest near streams or water bodies in the project area. Nests are large and fairly easy to identify. While no longer listed as endangered, eagles continue to be protected by the federal government under the Bald and Golden Eagle Protection Act. Work managers should be alert for nesting areas within 1500 meters of project activities, and follow federal guidelines at: https://www.fws.gov/midwest/eagle/permits/index.html if eagle nests are seen.

Following USFWS Incidental Take Guidelines: To avoid the incidental take of bald eagles we recommend:

- a buffer of at least 660 feet between project activities and the nests (including active and inactive nests).
- If project activities are within 660 feet of the nest, please restrict activities to outside the nesting season. The nesting season in Missouri is January 1 – July 15.
- If these recommendations cannot be implemented, incidental take of bald eagles may occur and a permit from USFWS may be necessary.
- Do not clear nests or nest trees.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records identify no wildlife preserves, no designated wilderness areas or critical habitats, and no federal-listed species records within the project area, or in the public land survey section or sections adjacent.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams

and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Bald Eagles:** Bald Eagles (*Haliaeetus leucocephalus*) nest near streams or water bodies in the project area. Nests are large and fairly easy to identify. While no longer listed as endangered, eagles continue to be protected by the federal government under the Bald and Golden Eagle Protection Act. Work managers should be alert for nesting areas within 1500 meters of project activities, and follow federal guidelines at: https://www.fws.gov/midwest/eagle/permits/index.html if eagle nests are seen.

- **Indiana Bats and Northern Long-eared Bats** occur in Livingston County and could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T49N R33W S13, 18, 24, 25, 36		
County:	Jackson		
Query reference:	CR-KCS passing sidings improvements Blue Valley		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

The project crosses multiple streams connected to the Blue and the Missouri Rivers. Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species. See General Recommendations for additional information on minimizing impacts to aquatic resources.

- **Missouri River:** The Missouri River (together with its tributary mouths) is home to many aquatic species of federal and state concern, including federal-listed Pallid Sturgeon, state-listed Lake Sturgeon, Flathead Chub, and others. Bluffs, banks, and floodplains may also include habitat used by listed Gray bats, Indiana bats and Bald Eagles. All these are sampled at points but must be assumed to be present in suitable habitats through extended river reaches.
  - Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species.
  - Regulations enforced by other agencies to protect water quality and human health are generally adequate to protect the needs of wildlife as well.
  - Projects that place fill in or discharge water to the river are subject to federal permits, and strict observance of conditions required in those permits is important to minimize risk of damage to endangered species.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate Tri-colored bats (*Perimyotis subflavus*, S2 – Imperiled) occur near the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Karst:** Jackson County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.

- Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
- Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
- When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate several Bald Eagle nests within 3 miles of the project area.

- **Bald Eagles:** Bald Eagles (*Haliaeetus leucocephalus*) nest near streams or water bodies in the project area. Nests are large and fairly easy to identify. While no longer listed as endangered, eagles continue to be protected by the federal government under the Bald and Golden Eagle Protection Act. Work managers should be alert for nesting areas within 1500 meters of project activities, and follow federal guidelines at: https://www.fws.gov/midwest/eagle/permits/index.html if eagle nests are seen.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate the following state-ranked species near the project area:

Scientific Name	Common Name	State Rank	Proximity (miles)
Agalinis auriculata	Auriculate False Foxglove	S3	<1
Calephelis borealis	Northern Metalmark	S1	<1
Plestiodon obsoletus	Great Plains Skink	S2	<2

Speyeria idalia	Regal Fritillary	S3	<2

State Rank Definitions:

- S1: Critically imperiled in the state because of extreme rarity of or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically, 5 or fewer occurrences or very few remaining individuals (<1,000).
- S2: Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state (6 to 20 occurrences or few remaining individuals).
- S3: Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.
- S4: Uncommon but not rare, and usually widespread in the nation or state. Possible cause of long-term concern. Usually more than 100 occurrences and more than 10,000 individuals.
- S#S#: Range Rank: A numeric range rank (e.g., S2S3) is used to indicate the range of uncertainty about the exact status.
- ?: Denotes inexact or uncertain numeric rank.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S.**

Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.

- **Karst:** Jackson County and Cass County have known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Missouri Department of Conservation

Natural Heritage Review Report

November 23, 2021

Science Branch
P. O. Box 180
Jefferson City, MO 65102
Prepared by: Hannah Roos

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T29N R34W S03, 02		
County:	Jasper		
Query reference:	CR-KCS passing sidings improvements Asbury		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records identify no wildlife preserves, no designated wilderness areas or critical habitats, and no federal-listed species records within the project area, or in the public land survey section or sections adjacent.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate the following state-ranked species near the project area:

Scientific Name	Common Name	State Rank	Proximity (miles)
Circus hudsonius	Northern Harrier	S2	<2
Gryllotalpa major	Prairie Mole Cricket	S3	<1
Lithobates areolatus circulosus	Northern Crawfish Frog	S3	<2

State Rank Definitions:

- S1: Critically imperiled in the state because of extreme rarity of or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically, 5 or fewer occurrences or very few remaining individuals (<1,000).

- S2: Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state (6 to 20 occurrences or few remaining individuals).
- S3: Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.
- S4: Uncommon but not rare, and usually widespread in the nation or state. Possible cause of long-term concern. Usually more than 100 occurrences and more than 10,000 individuals.
- S#S#: Range Rank: A numeric range rank (e.g., S2S3) is used to indicate the range of uncertainty about the exact status.
- ?: Denotes inexact or uncertain numeric rank.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Greater Prairie Chicken:** The proposed project occurs in the historic range of Greater Prairie Chickens (*Tympanuchus cupido*), a bird on the state's list of endangered species. Populations have been in serious decline for decades, and have reached a point where Greater Prairie Chickens could be gone from Missouri within a few years. The dominant factor in their decline is conversion of native prairie habitats to other uses. Other prairie dependent species are also in serious decline for the same reason. Greater Prairie Chickens range over a broad territory perhaps nesting, breeding and foraging in grasslands several miles apart. Even if Greater Prairie Chickens are not present, it is important to conserve as much as possible any grasslands dominated by native plant cover in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/GreaterPrairieChickenBMP.pdf for best management recommendations.

- **Karst:** Jasper County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by

the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- **Conservation Opportunity Areas:** The project is within Spring River Priority Watershed Conservation Opportunity Area. COAs are key landscapes that represent the greatest opportunities for sustainable conservation of the Missouri's diverse flora and fauna and the natural communities they depend upon, including: grasslands (including prairie and savanna), glades, forests and woodlands, wetlands, caves and karst, and rivers and streams. COAs have been identified based on several factors, including the diversity and rarity of species and natural communities present, and the comparative likelihood/importance of projects to maintain them in the area over time. COAs have no regulatory role, but do reflect interest as a planning tool from multiple government agencies, non-governmental organizations and citizen groups to facilitate conservation in the area. Maintenance of high quality natural terrestrial and aquatic communities will help provide important habitat for the COA's biodiversity. Funding might be available to manage for important habitats within the COA. Please contact Missouri Department of Conservation for more information.

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T23N R32W S19, 30		
County:	McDonald		
Query reference:	CR-KCS passing sidings improvements MP186		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate several aquatic species of conservation concern associated with nearby Indian Creek, including the federally endangered Neosho Mucket and the state endangered Slippershell Mussel. Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species.

- **Mussels:** Mussels are relatively immobile animals that are vulnerable to pollutants, sediment discharges, channel alterations and other activities destructive to mussel habitat. Activities that alter or destabilize stream bottoms or banks or introduce silt, chemical or organic pollutants should be avoided. Avoid crossing flowing water but, if unavoidable, minimize crossing distance and use temporary crossings that do not restrict water flow. See https://mdc.mo.gov/sites/default/files/2020-06/FreshwaterMusselsBMP.pdf for Best Management Practices regarding these animals.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Gray Bats:** Gray Bats (*Myotis grisescens*, federal and state-listed endangered) occur in McDonald County and could occur in the project area, as they forage over streams, rivers, and reservoirs. Avoid entry or disturbance of any cave inhabited by gray bats and when possible retain forest vegetation along the stream and from the gray bat cave opening to the stream.

- **Indiana Bats and/or Northern Long-eared Bats** occur in McDonald County and could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- **Karst:** McDonald County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.

- Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
- Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
- When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Date: December 3, 2021
Subject: Elements of Conservation Concern
Railroad Siding Locations
Benton and Polk Counties, Arkansas
Dorsey, MP 377
ANHC No.: P-CF..-21-090

Ms. Kaitlyn Torrey
VHB Environmental
1355 Peachtree St, NE
Suite 100
Atlanta, GA 30309-3269

Dear Ms. Torrey:

Staff members of the Arkansas Natural Heritage Commission have reviewed our files for records indicating the occurrence of rare plants and animals, outstanding natural communities, natural or scenic rivers, or other elements of special concern within or near the two proposed railroad siding locations in Benton (Dorsey) and Polk (MP377) Counties, Arkansas. The results of this review are provided as Geographic Information System (GIS) shapefiles. Documentation explaining the information in the shapefiles is included.

No elements of special concern have been recorded within the area delineated for the Dorsey site in Benton County, Arkansas. However, Wolf Creek appears to run along the west side of the railroad right-of-way. Wolf Creek is known to support the following species of state conservation concern approximately 0.5 – 1.0 mile upstream of the project site:

Faxonius macrus, Neosho Midget Crayfish
Nocomis asper, redspot chub

Efforts should be made to avoid and minimize impacts to Wolf Creek. Best Management Practices should be used and carefully monitored to maintain water quality and reduce sedimentation. It is also of note that the project falls within a Karst region of the state characterized by caves, springs, and sinkholes. These Karst ecosystems support a variety of rare species, including several that are listed by the U.S. Fish and Wildlife Service as Endangered or Threatened. Although your project is outside of any known cave recharge zones, I've provided a link to a U.S. Fish and Wildlife Service Document entitled "Community Growth Best Management Practices for Conservation of Karst Recharge Zones." This document provides useful recommendations on Best Management Practices within a Karst region:

https://www.fws.gov/arkansas-es/docs/General%20Karst%20big%20BMP%20packet.pdf

One species of state conservation concern has been mapped within the MP377 siding site:

Ambystoma annulatum, Ringed Salamander

This species occurs in Arkansas, Missouri and Oklahoma where it occupies hardwood and mixed hardwood-pine forests usually in damp areas near small, shallow ponds used for breeding. Loss of breeding ponds and degradation of forested habitat are the primary threats to this species. Efforts should be made to minimize impacts to forested habitat to the extent possible.

Benton and Polk County Element lists are enclosed for your reference. Represented on these lists are elements for which we have records in our database. The lists have been annotated to indicate those elements known to occur within a one and a five-mile radius of the project areas. A legend is enclosed to help you interpret the codes used on this list.

Please keep in mind that the siding sites may contain important natural features of which we are unaware. Staff members of the Arkansas Natural Heritage Commission have not conducted a field survey of these locations. Our review is based on data available to the program at the time of the request. It should not be regarded as a final statement on the elements or areas under consideration. Because our files are updated constantly, you may want to check with us again at a later time.

Thank you for consulting us. It has been a pleasure to work with you on this study.

Sincerely,

Cindy Osborne

Date: March 15, 2022
Subject: Elements of Conservation Concern
Railroad Siding Location
Gentry, Benton County, Arkansas
ANHC No.: P-CF..-22-019

Ms. Kaitlyn Torrey
VHB Environmental
1355 Peachtree St., NE
Suite 100
Atlanta, GA 30309-3269

Dear Ms. Torrey:

Staff members of the Arkansas Natural Heritage Commission have reviewed our files for records indicating the occurrence of rare plants and animals, outstanding natural communities, natural or scenic rivers, or other elements of special concern within or near the proposed railroad siding project in Gentry, Arkansas. We find no records at present time.

It is of note that the project site falls within an area that was likely open savanna historically, with pockets of prairie, and could harbor some remnant grassland flora including species of conservation concern (we are aware of several older records for sensitive species in the vicinity of this railroad right-of-way outside of the project area). However, because the strip is very narrow and has been highly impacted by past management, in its current condition, it is unlikely to support rare species in the long term. If the project presented the opportunity to enhance or support native prairie vegetation, it could offset some of the potential adverse impacts.

This portion of Benton County falls within a Karst region of the state characterized by caves, springs, and sinkholes. These Karst ecosystems support a variety of rare species, including several that are listed by the U.S. Fish and Wildlife Service as Endangered or Threatened. Although your project is outside of any known cave recharge zones, I've provided a link to a U.S. Fish and Wildlife Service Document entitled "Community Growth Best Management Practices for Conservation of Karst Recharge Zones." This document provides useful recommendations on Best Management Practices within a Karst region:

https://www.fws.gov/arkansas-es/docs/General%20Karst%20big%20BMP%20packet.pdf

A Benton County element list is enclosed for your reference. Represented on this list are elements for which we have records in our database. The list has been annotated to indicate

those elements known to occur within a one and a five-mile radius of the project area. A legend is enclosed to help you interpret the codes used on the list.

Please keep in mind that the siding site may contain important natural features of which we are unaware. Staff members of the Arkansas Natural Heritage Commission have not conducted a field survey of this location. Our review is based on data available to the program at the time of the request. It should not be regarded as a final statement on the elements or areas under consideration. Because our files are updated constantly, you may want to check with us again at a later time.

OBS Ref. 2021-667-BUS-VBH

Dear Ms. Torrey, Nov. 16, 2021

We have reviewed occurrence information on federal and state threatened, endangered or candidate species, as well as non-regulatory rare species and ecological systems of importance currently in the Oklahoma Natural Heritage Inventory database for the following location you provided:

Sec. 13 and 24-T17N-R25E and Sec. 18-T17N-R26E, Adair County

We found no occurrences of relevant species within the vicinity of the project location as described. However, absence from our database does not preclude such species from occurring in the area.

If you have any questions about this response, please send me an email, or call us at the number given below.

Although not specific to your project, you may find the following links helpful.

OBS Ref. 2021-668-BUS-VBH

Dear Ms. Torrey, Nov. 16, 2021

We have reviewed occurrence information on federal and state threatened, endangered or candidate species, as well as non-regulatory rare species and ecological systems of importance currently in the Oklahoma Natural Heritage Inventory database for the following location you provided:

Sec. 35-T15N-R24E, Adair County

We found 12 occurrence(s) of relevant species within the vicinity of the project location as described.

Species Name	Common Name	Federal Status
Myotis septentrionalis	**Northern Long-eared Bat**	**Threatened**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	2
Adair	Sec. 30-T15N-R25E	1
Adair	Sec. 32-T15N-R25E	1
Corynorhinus townsendii ingens	**Ozark Big-eared Bat**	**Endangered**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	1
Adair	Sec. 23-T15N-R24E	1
Adair	Sec. 31-T15N-R25E	1
Adair	Sec. 32-T15N-R25E	1
Myotis grisescens	**Gray Myotis**	**Endangered**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	1
Adair	Sec. 22-T15N-R24E	1
Adair	Sec. 23-T15N-R24E	1
Haliaeetus leucocephalus	**Bald Eagle**	**Protected**
County	***TRS***	***Count***
Adair	Sec. 20-T15N-R25E	1

Additionally, absence from our database does not preclude such species from occurring in the area.

If you have any questions about this response, please send me an email, or call us at the number given below.

Project ID	
Invoice Number	21120308

Personnel of the Coastal & Nongame Resources Division have reviewed the preliminary data for the captioned project. After careful review of our database, no impacts to rare, threatened, or endangered species or critical habitats are anticipated for the proposed project. No state wildlife refuges, wildlife management areas, or scenic streams are known to occur at the specified site within Louisiana's boundaries.

The Wildlife Diversity Program (WDP) has compiled data on rare, endangered, or otherwise significant plant and animal species, plant communities, and other natural features throughout the state of Louisiana. WDP reports summarize the existing information known at the time of the request regarding the location in question. The quantity and quality of data collected by the WDP are dependent on the research and observations of many individuals. In most cases, this information is not the result of comprehensive or site-specific field surveys; many natural areas in Louisiana have not been surveyed. This report does not address the occurrence of wetlands at the site in question. WDP reports should not be considered final statements on the biological elements or areas being considered, nor should they be substituted for on-site surveys required for environmental assessments. WDP requires that this office be acknowledged in all reports as the source of all data provided here. If at any time WDP tracked species are encountered within the project area, please contact the WDP Data Manager at 225-763-3554. If you have any questions, or need additional information, please call 225-765-2357.

Sincerely,

for Carolyn Michon

Appendix B – Attachment 2: Tribal Consultation

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

November 12, 2021

Tribal Government to Government Letter

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

The purpose of this letter is to determine your interest in initiating formal government-to-government consultation regarding the above-referenced project. On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system runs east to west across Canada, connecting the east and west coast ports. It runs south into the U.S. Midwest and connects with KCS in Kansas City. KCS runs from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on the environment, in accordance with the National Environmental Policy Act (NEPA) and the Board's environmental regulations (49 C.F.R. Part 1105). To comply with NEPA, the Board's Office of Environmental Analysis (OEA) has initiated preparation of an Environmental Impact Statement (EIS) by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. A copy of the NOI is available here: https://cp-kcsmergereis.com/docs/cp-kcs-noi.pdf . The EIS will describe the potential environmental impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions, or deny the application.

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

SHPO Letter

November 17, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; **Notice of Intent to Prepare an Environmental Impact Statement**

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system runs east to west across Canada, connecting the east and west coast ports. It runs south into the U.S. Midwest and connects with KCS in Kansas City. KCS runs from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project-website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on historic properties, in accordance with Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108), the Section 106 implementing regulations (36 C.F.R. Part 800), and the Board's environmental regulations (49 C.F.R. Part 1105). As a concurrent process, the Board's Office of Environmental Analysis (OEA) has initiated preparation of an Environmental Impact Statement (EIS) under the National Environmental Policy Act by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. The issuance of the NOI began the scoping period, the first step in the environmental and historic review process. A copy of the NOI is available here: https://cp-kcsmergereis.com/documents.htm .

The EIS will analyze the potential environmental and historic impacts related to the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions, or deny the application. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000) require that the Board complete its review within approximately 15

months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental and historic review process before the Board issues a final decision.

Description of the Proposed Undertaking

The Proposed Undertaking in this case is the proposed acquisition of KCS by CP. According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve: (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities (e.g., an increase in the average number of train cars loaded and unloaded per day) that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. No construction of new rail lines that would require a license from the Board or abandonments of existing rail lines are planned. Consistent with past practice in merger cases, OEA will focus the Section 106 review on the capital improvement projects that the Applicants would undertake as part of the proposed acquisition because those projects are the only components of the proposed acquisition that could have the potential to affect cultural resources.

The capital improvement projects that the Applicants have proposed include adding new passing sidings or extending existing passing sidings at 24 locations within the rail right-of-way in Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The interactive map on the Board-sponsored project website shows the locations of the proposed capital improvements within the rail right-of-way. The table below shows the planned capital improvements in the state of [State Name]:

Site Name	Nearest Town	Type of Construction	Latitude (midpoint)	Longitude (midpoint)	Length (ft)

Area of Potential Effects

The area of potential effects (APE) for historic properties will be defined in accordance with 36 C.F.R. Part 800, 49 C.F.R. § 1105.8, and precedent set by previous mergers. OEA expects that the APE for the proposed acquisition will comprise 26 discontiguous linear areas corresponding to the 26 locations set forth above where capital improvements are planned. Each component area of the APE will extend the length of the proposed capital improvement project and will extend the width of the rail right-of-way to encompass the entire area within which ground disturbing activities could potentially occur. In addition, OEA proposes to add a 500-foot buffer to each component area of the APE (250 feet on either side of the right-of-way and 250 feet at each end) to account for potential setting, visual, noise, or other impacts from construction activities. Based on the information available to date, OEA anticipates that all of the construction activity would take place within the existing right-of-way and may be in previously disturbed areas. The APE will be further refined as additional information about the proposed acquisition and its potential to affect cultural resources becomes available.

Request for Comments and Consultation

OEA requests that you provide information regarding your interest in participating as a Consulting Party under Section 106 for this project by filling out the attached questionnaire. Please return to Alan Tabachnick at alan.tabachnick@stb.gov . OEA also requests your comments on the proposed APE and the potential effects of the proposed acquisition. We will be following up with you soon to discuss the Section 106 process and to answer any questions you may have.

How to Comment

We also encourage you to file your written comments electronically through the Board-sponsored website, www.CP-KCSMergerEIS.com . Written comments can also be submitted electronically on the Board's website www.stb.gov by clicking on the "E-FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Alan Tabachnick, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021**.

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings for the EIS and the Section 106 process on the dates

listed below. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.

- Join by phone by calling toll free at (888) 788-0099 and using the call-in information below:

Date	Time (CST)	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859
Wednesday, December 1, 2021	2-4 PM	834 1445 3134	140066
Thursday, December 2, 2021	6-8 PM	860 6003 9544	510488
Tuesday, December 7, 2021	6-8 PM	891 6903 1796	598592
Wednesday, December 8, 2021	2-4 PM	884 5338 0280	470936
Thursday, December 9, 2021	6-8 PM	899 8627 2409	227867

Next Steps

Following the end of the scoping period on December 17, 2021, OEA will review the comments and then issue a Final Scope of Study for the EIS, which will also include the scope of the concurrent Section 106 process. OEA will then issue a Draft EIS for public review and comment, followed by a Final EIS addressing the comments and completing the environmental and historic review process. At this time, OEA anticipates issuing the Draft EIS in the spring of 2022. In the meantime, OEA may contact you with questions or queries pertaining to the resources under your jurisdiction or purview.

Please complete the attached Consultation Questionnaire to provide feedback on your interest in participating in the Section 106 process. Additional information on this project and the Board's environmental and historic review process is available on the Board-sponsored project website at www. CP-KCSMergerEIS.com . If you have any questions or would like to discuss the proposal in more detail, please contact Alan Tabachnick at 202-245-0367 (e-mail address: Alan.Tabachnick@stb.gov). We look forward to your participation in the Board's environmental and historic review process.

Sincerely,

Danielle Gosselin

Office of Environmental Analysis

THPO Letter

January 12, 2021

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern, et al.; Notice of Intent to Prepare an Environmental Impact Statement

Dear Alina Shively:

The purpose of this letter is to initiate Section 106 consultation with the aforementioned tribe regarding the above referenced project.

On October 29, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern, et al. (KCS) (collectively, Applicants) filed an application with the Surface Transportation Board (Board) seeking authorization for CP to acquire KCS. This acquisition would create the first railroad to connect Canada, the United States, and Mexico. CP's system runs east to west across Canada, connecting the east and west coast ports. It runs south into the U.S. Midwest and connects with KCS in Kansas City. KCS runs from Kansas City to the Gulf Coast and into Mexico. The combination of these two railroads would be an 'end-to-end' merger because the CP and KCS railroad networks do not overlap (see the interactive map on the Board-sponsored project-website here: https://cp-kcsmergereis.com/maps.htm).

As part of the approval process, the Board must evaluate the potential impacts of the proposed acquisition on historic properties, in accordance with Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108), the Section 106 implementing regulations (36 C.F.R. Part 800), and the Board's environmental regulations (49 C.F.R. Part 1105). As a concurrent process, the Board's Office of Environmental Analysis (OEA) has initiated preparation of an Environmental Impact Statement (EIS) under the National Environmental Policy Act by issuing a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* on November 12, 2021. The issuance of the NOI began the scoping period, the first step in the environmental and historic review process. A copy of the NOI is available here: https://cp-kcsmergereis.com/documents.htm.

The EIS will analyze the potential environmental and historic impacts of the proposed acquisition and assist the Board with making its decision about whether to approve, approve with conditions, or deny the application. The statute setting forth the procedures for Board review of acquisitions at 49 U.S.C. § 11325 and the Board's implementing regulations at 49 C.F.R. § 1180.4 (2000) require that the Board complete its review within approximately 15 months after the application is accepted for a "major" transaction such as this, and OEA must complete the environmental and historic review process before the Board issues a final decision.

Description of the Proposed Undertaking

The Proposed Undertaking in this case is the proposed acquisition of KCS by CP. According to the Applicants, the purpose of the proposed acquisition is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The Applicants state that the proposed acquisition would further the need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of current and future customers in more reliable and economical rail transportation options serving important North-South trade flows. The Applicants also state that the proposed acquisition would generate environmental benefits by reducing truck transportation on highways in North America by more than 60,000 trucks annually, resulting in less congestion, less maintenance, and improved safety on those roads, as well as less noise pollution in the places where those trucks would have driven, and lowered air emissions, including greenhouse gas emissions.

The proposed acquisition would involve: (1) changes in level of operations (e.g., an increase in average trains per day) on certain segments of the combined rail network that would exceed the Board's thresholds for environmental review at 49 C.F.R. § 1105.7(e); (2) changes in activity at some rail yards and intermodal facilities (e.g., an increase in the average number of train cars loaded and unloaded per day) that would exceed the Board's thresholds for environmental analysis; and (3) capital improvements within the existing rail right-of-way. No construction of new rail lines that would require a license from the Board or abandonments of existing rail lines are planned. Consistent with past practice in merger cases, OEA will focus the Section 106 review on the capital improvement projects that the Applicants would undertake as part of the proposed acquisition because those projects are the only components of the proposed acquisition that could have the potential to affect cultural resources.

The capital improvement projects that the Applicants have proposed include adding new passing sidings or extending existing passing sidings at 24 locations within the rail right-of-way in Louisiana, Oklahoma, Arkansas, Kansas, Minnesota, Illinois, Iowa, and Missouri. The Applicants also propose to add approximately four miles of double track within the right-of-way along the KCS Pittsburg Subdivision in Missouri and to add approximately five miles of facility working track within the right-of-way adjacent to the International Freight Gateway intermodal terminal in Missouri. The interactive map on the Board-sponsored project website (https://cp-kcsmergereis.com/maps.htm) shows the locations of the proposed capital improvements within the rail right-of-way.

Area of Potential Effects

The area of potential effects (APE) for historic properties will be defined in accordance with 36 C.F.R. Part 800, 49 C.F.R. § 1105.8, and precedent set by previous mergers. OEA expects that the APE for the proposed acquisition will comprise 26 discontiguous linear areas corresponding to the 26 locations where capital improvements are planned. Each component area of the APE will extend the length of the proposed capital improvement project and will extend the width of the rail right-of-way to encompass the entire area within which ground disturbing activities could potentially occur. In addition, OEA proposes to add a 500-foot buffer (250 feet on either side of the right-of-way and 250 feet at each end) to account for potential setting, visual, noise, or other impacts from construction activities. Based on the information available to date, OEA anticipates that all of the construction activity would take place within the existing right-of-way and may be in previously disturbed areas. The APE will be further refined as additional information about the proposed acquisition and its potential to affect cultural resources becomes available.

Request for Consultation

OEA requests that you provide information regarding your tribe's interest in participating as a Consulting Party under Section 106 for this project by filling out the attached questionnaire. Please return to Alan Tabachnick at Alan.Tabachnick@stb.gov . OEA also requests your comments on the proposed APE and the potential impacts of the proposed acquisition.

How to Comment

We also encourage you to file your written comments electronically through the Board-sponsored website, www.CP-KCSMergerEIS.com. Written can also be submitted electronically on the Board's website www.stb.gov by clicking on the "E-FILING" link, then clicking on "Environmental Comments." Alternatively, your written comments may be sent by mail to:

Alan Tabachnick, Surface Transportation Board, c/o VHB
Attention: Environmental Filing, Docket No. FD 36500
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Please make sure to refer to Docket No. FD 36500 in all correspondence, including E-filings, addressed to the Board. **All scoping comments must be sent no later than December 17, 2021**.

Public Scoping Meetings

Additionally, to provide an opportunity for the public to provide oral comments, OEA will hold six online public scoping meetings. We invite you to attend those meetings if you are interested. You can attend the online public scoping meetings in one of two ways:

- Join online at: https://bit.ly/cp-kcs .
    - Project information will be available for review at this link prior to the public meeting dates.

- Join by phone by calling toll free at (888) 788-0099 and using the call-in information below:

Date	Time (CST)	Meeting ID	Passcode
Tuesday, November 30, 2021	6-8 PM	899 9411 9431	336859

RE: Benton and Polk Counties: Gentry and Mena
Section 106 Review: FRA
Proposed Undertaking: Docket No. 36500, Canadian Pacific Railway Limited, et al. – Control of – Kansas City Southern, et al.; Notice of Intent to Prepare an Environmental Impact Statement
AHPP Tracking Number: 109127

Dear Mr. Tabachnick:

The staff of the Arkansas Historic Preservation Program (AHPP) reviewed the submission for the above-referenced project and notice of intent to prepare and environmental impact statement. The proposed undertaking entails the merger of Canadian Pacific Railroad with Kansas City Southern, which would create the first railroad to connect Canada, the United States and Mexico. In reference to Arkansas, two locations have been proposed for capital improvements in Benton and Polk Counties. The first location is located north of Gentry in Sections 24 and 25, Township 19 North, Range 33 West. There are no previously recorded archeological sites in the railroad right of way and the likelihood of finding intact historic properties is small as the area of potential effect (APE) is highly disturbed from previous railroad construction. The second location is located northeast of Mena in Section 5, Township 2 South, Range 30 West. There are no previously recorded archeological sites in the railroad right of way and as the APE is already highly disturbed from previous construction, the likelihood of finding intact historic properties is minimal.

Based on the provided information, the AHPP believes **no historic properties will be affected pursuant to 36 CFR § 800.4(d)(1)** for the proposed undertaking and that the capital improvement work should be able to proceed.

Tribes that have expressed an interest in these areas include the Caddo Nation, the Cherokee Nation, the Choctaw Nation of Oklahoma, the Osage Nation, the Quapaw Nation, the Shawnee Tribe, and the United Keetoowah Band of Cherokee Indians. We recommend consultation in accordance with 36 CFR § 800.2(c)(2).

Thank you for the opportunity to review this notice of intent. Please refer to the AHPP Tracking Number listed above in all correspondence. If you have any questions, call Jessica Cogburn at 501-324-9357 or email jessica.cogburn@arkansas.gov.

Sincerely,
Jessica H. Cogburn

Re: Canadian Pacific Railway Limited, et al. – Control of Kansas City Southern, et al.
Docket No. FD 36500
Crawford and Cherokee Counties

Staff of the State Historic Preservation Office (SHPO) has reviewed the information received November 19, 2021, regarding the above-referenced project in accordance with 36 CFR Part 800. In reviews of this nature, the SHPO determines whether a federally funded, licensed, or permitted project will adversely affect properties that are listed or determined eligible for listing in the National Register of Historic Places. As confirmed in our meeting today, the proposed project will not involve any facility expansions or new ground disturbance in Kansas. The SHPO therefore concurs that the proposed rail merger will not adversely any property listed or determined eligible for listing in the National Register. As far as this office is concerned, the project may proceed.

Please refer to the Kansas State Review & Compliance number (KSR&C#) listed above on any future correspondence. Please submit any comments or questions regarding this review to Tim Weston at 785-272-8681 ext. 214 (tim.weston@ks.gov) or Lauren Jones at 785-272-8681 ext. 225 (lauren.jones@ks.gov).

Dear Mr. Tabachnick:

Thank you for notifying our office of this project. We look forward to reviewing the results of your background investigations into the archaeological and built environment resources which may be affected by this project. In addition to known archaeological resources previously identified within the project area of potential effect and vicinity, we anticipate receiving your contextual documentation for the rail line and associated documentation for individual resources 45 years of age or older. Buildings and structures should be documented on Historic Preservation Resource Identification (HPRI) forms. Bridges should be documented on Oklahoma Historic Bridge Inventory (OHBI) forms.

For guidance in completing and submitting the above-referenced documentation to our office, please see the following resources available on our website:

Review and Compliance Manual: https://www.okhistory.org/shop/programs/106/rcmanual2015.pdf

OK/SHPO Fact Sheet #2, Review and Compliance: https://www.okhistory.org/shop/docs/fs2rc.pdf

OK/SHPO Fact Sheet #4, Historic Preservation Resource Identification:
https://www.okhistory.org/shop/docs/fs4hpri.pdf

OK/SHPO Fact Sheet #16, Guidelines for Developing Archaeological Survey Reports in Oklahoma and Report Components: https://www.okhistory.org/shop/docs/fs16archreports.pdf

We would like to offer the following references to help support a contextual discussion of the railroad:

- The Encyclopedia of Oklahoma History and Culture includes several entries related to railroads in Oklahoma, including an entry on the Kansas City Southern:
https://www.okhistory.org/publications/encyclopediaonline

- Donovan Hofsommer, ed., Railroads in Oklahoma (Oklahoma Historical Society, 1977), available on the Gateway to Oklahoma History:
https://gateway.okhistory.org/ark:/67531/metadc862892/m1/1/

RE: File #0349-22; Canadian Pacific Railway Limited (CP) & Kansas City Southern (KCS) Application for CP to Acquire KCS, Docket #FD-36500

In addition to our review, you must contact the Oklahoma Archeological Survey (OAS), 111 E. Chesapeake, #102, Norman OK 73019-511 I (#405/325-7211, https://www.ou.edu/archsurvey) to obtain a determination about the presence of prehistoric resources that may be eligible for the National Register of Historic Places.

Please note the proximity of this project to the Trail of Tears National Historic Landmark and to associated disbandment sites. Tribes have knowledge regarding cultural associations that the OK/SHPO would not have in our files. Considering this project crosses Cherokee Nation and Choctaw Nation reservation lands, and due to its proximity to the Trail of Tears National Historic Landmark and associated disbandment sites, we strongly encourage you to engage in consultation with tribal governments and Tribal Historic Preservation Offices (THPOs) with reservation lands and/or current or historic cultural associations with these lands.

Thank you for the opportunity to review this project. Please reference the above underlined file number when responding.

Sincerely,

Lynda Ozan
Deputy State Historic
Preservation Officer

Re: Project Review Under Section 106 of the National Historic Preservation Act, Proposed Canadian Pacific Railway Acquisition of Kansas City Southern Railway, Notice of Intent to Prepare an Environmental Impact Statement, Docket No. FD 36500 (106/STB, THC #202203791)

Mr. Tabachnick:

Thank you for the recent correspondence from the Surface Transportation Board (STB) regarding the above-referenced project. This letter serves as comment on the proposed undertaking from the State Historic Preservation Officer, the Executive Director of the Texas Historical Commission (THC).

The THC staff, led by Justin Kockritz, Bill Martin, and Lydia Woods-Boone, has completed their review of the submission, which notifies THC of the STB's intent to prepare an Environmental Impact Statement for the proposed acquisition of the Kansas City Southern Railway (KCS) by the Canadian Pacific Railway (CP). Based on your letter and our subsequent meeting on December 1, 2021, THC understands that the proposed acquisition requires approval by the STB, which constitutes a federal undertaking, but there are no capital improvements, construction activity, or ground disturbance proposed within Texas as part of the undertaking. Accordingly, THC concurs that there is no area of potential effects in Texas and thus no historic properties that will be affected in the state.

Should the undertaking be revised to ultimately include capital improvements, construction activity, or ground disturbance in Texas, further consultation will be required. As proposed, no further consultation with our office is necessary, though we would appreciate notification when the Draft and Final Environmental Impact Statements are available.

Thank you for your cooperation in this federal review process. If you have any questions concerning our review or if we can be of further assistance, please contact Justin Kockritz at justin.kockritz@thc.texas.gov or 512-936-7403.

Sincerely,

Justin Kockritz, Lead Project Reviewer, Federal Programs

Re: Canadian Pacific Railway Acquisition of Kansas City Southern, FC 36500

Mr. Alan Tabachnick:

The Cherokee Nation (Nation) is in receipt of your correspondence about the proposed **Canadian Pacific Railway Acquisition of Kansas City Southern, FC 36500**, and appreciates the opportunity to provide comment upon this project. Please allow this letter to serve as the Nation's interest in acting as a consulting party to this proposed project.

The Nation maintains databases and records of cultural, historic, and pre-historic resources in this area. Our Historic Preservation Office reviewed this project, cross referenced the project's legal description against our information, and found no instances where this project intersects or adjoins such resources for the following defined locations: MP 247 in Adair County; Spiro; Heavener; and Gentry, Arkansas. Thus, the Nation does not foresee this project imparting impacts to Cherokee cultural resources at this time for these aforementioned locations. However, the Nation requests that the Surface Transportation Board (STB) halt all project activities immediately and re-contact our Offices for further consultation if items of cultural significance are discovered during the course of this project.

However, this Office reviewed this project for Cave Springs and found instances where this project is within close proximity to land held by the Nation and culturally sensitive resources. Thus, the Nation recommends that a cultural resources survey is conducted for the Cave Springs location, and requests a copy of the related report. The Nation requires that cultural resources survey personnel and reports meet the Secretary of Interior's standards and guidelines. The Nation respectfully requests that STB halt all survey activities immediately and re-contact our Offices for further consultation if items of cultural significance are discovered during the course of this survey.

Additionally, the Nation requests that the STB conduct appropriate inquiries with other pertinent Historic Preservation Offices regarding historic and prehistoric resources not included in the Nation's databases or records.

If you require additional information or have any questions, please contact me at your convenience. Thank you for your time and attention to this matter.

Wado,

Elizabeth Toombs, Tribal Historic Preservation Officer

Kansas City Southern, et al.; Notice of Intent to Prepare an
Environmental Impact Statement

Dear Mr. Tabachnick:

In response to your request, the above reference project has been reviewed by staff of this office to identify areas that may potentially contain prehistoric or historic archeological materials. The location of your project has been cross referenced with the Comanche Nation site files, where an indication of ***"No Properties"*** have been identified. (IAW 36 CFR 800.4(d)(1)).

Please contact this office at (580) 595-9960/9618) if you require additional information on this project.

This review is performed in order to identify and preserve the Comanche Nation and State cultural heritage, in conjunction with the State Historic Preservation Office.

Re: Docket No. FD 36500 Canadian Pacific Railway Ltd. Control of Kansas City Southern – Comments of the Miami Tribe of Oklahoma

Dear Mr. Wayland:

Aya, kikwehsitoole – I show you respect. The Miami Tribe of Oklahoma, a federally recognized Indian tribe with a Constitution ratified in 1939 under the Oklahoma Indian Welfare Act of 1936, respectfully submits the following comments regarding Docket No. FD 36500.

The Miami Tribe has interest in the following areas affected by this project. Exceeded Threshold Segments: C-Chic-01, C-Chic-02, C-Chic-03, C-DAVE-01, C-DAVE-02, C-DAVE-03, C-LARE-01, C-OTTU-01, C-OTTU-02. Capital Improvement Areas: Camanche, Iowa; Chicago, Illinois; Grandview, Missouri; Letts, Iowa; MP 24 (Iowa); MP 255 (Iowa); MP 71 (Iowa); Ottumwa, Iowa.

The Tribe offers no objection to the project at this time, as we are not currently aware of existing documentation directly linking a specific Miami cultural or historic site to any of the project sites. However, given the Miami Tribe's deep and enduring relationship to its historic lands and cultural property within areas of this project, if any human remains or Native American cultural items falling under the Native American Graves Protection and Repatriation Act (NAGPRA) or archaeological evidence is discovered during any phase of this project, the Miami Tribe requests immediate consultation with the entity of jurisdiction for the location of discovery. In such a case, please contact me at 918-541-8966 or by email at dhunter@miamination.com to initiate consultation.

The Miami Tribe requests to serve as a consulting party to the proposed project. In my capacity as Tribal Historic Preservation Officer, I am the point of contact for consultation. I can be reached at 918-541-8966 or by email at dhunter@miamination.com.

Respectfully,

Diane Hunter

RE: STB, Docket No. FD 36500, Canadian Pacific Railway Limited, et al. - Control of - Kansas City Southern, et al., Multiple Counties, Multiple States

Surface Transportation Board, c/o VHB
Alan Tabachnick
940 Main Campus Dr., Suite 500
Raleigh, NC 27606

Dear Mr. Tabachnick,

The Osage Nation has received notification and accompanying information for the proposed project listed as STB, Docket No. FD 36500, Canadian Pacific Railway Limited, et al. - Control of - Kansas City Southern, et al., Multiple Counties, Multiple States. The Osage Nation has a vested interest in the proposed acquisition of Kansas City Southern Railway by Canadian Pacific Railway and requests Consulting Party status in the Section 106 process.

In accordance with the National Historic Preservation Act, (NHPA) [54 U.S.C. § 300101 et seq.] 1966, undertakings subject to the review process are referred to in 54 U.S.C. § 302706 (a), which clarifies that historic properties may have religious and cultural significance to Indian tribes. Additionally, Section 106 of NHPA requires Federal agencies to consider the effects of their actions on historic properties (36 CFR Part 800) as does the National Environmental Policy Act (43 U.S.C. 432 I and 4331-35 and 40 CFR 1501.7(a) of 1969).

The Osage Nation has a vital interest in protecting its historic and ancestral cultural resources. **The Osage Nation looks forward to participating in future consultation in regards to the proposed STB, Docket No. FD 36500, Canadian Pacific Railway Limited, et al. - Control of - Kansas City Southern, et al., Multiple Counties, Multiple States.**

Should you have any questions or need any additional information please feel free to contact me at the number listed below. Thank you for consulting with the Osage Nation on this matter.

The Shakopee Mdewakanton Sioux Community is a federally recognized, sovereign Indian tribe located southwest of Minneapolis/St. Paul. With a focus on being a good neighbor, good steward of the earth, and good employer, the SMSC is committed to charitable donations, community partnerships, a healthy environment, and a strong economy.

Appendix C

Rail Line Segments, Intermodal Facilities, and Rail Yards

Appendix C provides maps and tables for the rail line segments, yards, and intermodal facilities where the Proposed Acquisition would cause rail traffic or operational activities to exceed the environmental thresholds established by the Board's regulations at 49 C.F.R. § 1105.7(e). **Figure C.1-1** through **Figure C.1-16** identify the rail line segments within the proposed combined system, which are detailed in **Table C.1-1**, which contains data from the CPKC Master Rail Line Segment Table. **Table C.1-1** contains pre- and post-Acquisition traffic densities and indicates the rail line segments on which increased rail traffic resulting from the Proposed Acquisition would exceed environmental analysis thresholds. **Table C.1-2**, CPKC Intermodal Facilities Master Table, and **Table C.1-3**, CPKC Rail Yards Master Table, show the projected changes in activity at intermodal facilities and rail yards, respectively.

Appendix D

Capital Improvements

Appendix D includes two sections. *Section D-1* contains maps depicting the locations of capital improvements that CP and KCS plan to make within the rail right-of-way if the Board authorizes the Proposed Acquisition of KCS by CP. *Section D-2* contains sample cross-sections of the planned capital improvements, including new and extended sidings.

D.2 Capital Improvement Sample Cross-Sections

TURNOUT PAD
N.T.S.
A TS01

STA 4196+26.16 TO STA 4199+31.93
STA 4287+18.56 TO STA 4290+79.73

NEW SIDING
N.T.S.
B TS01

STA 4199+31.93 TO STA 4287+18.56

GENERAL NOTES

① IF THE BACK SLOPE IS LESS THAN 1 FOOT HIGH, CONTRACTOR SHALL SLOPE EMBANKMENT AWAY FROM TRACK.

② BOTTOM DITCH CHANGES TO V-SHAPE WHERE CONSTRAINING BY RIGHT OF WAY. SEE CROSS SECTION FOR MORE DETAILS.

③ CONTRACTOR SHALL PERFORM NO WORK WITHIN 9' OF THE CENTERLINE OF THE MAIN TRACK.

④ PLACE FIBER ROLL DITCH CHECKS AT APPROPRIATE INTERVALS ACROSS DITCH OR AT EDGE OF CONSTRUCTION LIMITS.

⑤ HYDRO MULCH ALL SLOPES GREATER THAN 3:1.

⑥ PLACE EROSION CONTROL BLANKET ON DITCH BOTTOM. TYPE OF BLANKET TO BE DETERMINED.

⑦ ACTUAL TOP OF RAIL DIFFERENCES VARIES.

Summary of Impacts by Community

OEA developed the Summary of Impacts by Community Table to provide readers with one source for data about the Proposed Acquisition's potential impacts at a community level. OEA included communities that have receptors that could potentially experience noise impacts, increased trains per day (TPD), and grade crossing safety or delay. For a complete understanding of the approach to the analysis, the affected environment, and the environmental consequences, the reader should consult the individual impact analysis topics in their respective chapters and appendices.

Accompanying notes for the community impacts table are as follows:

[1] TPD – Trains Per Day. Passenger trains are in parentheses where passenger trains use the segment.

[2] Noise sensitive receptors (receptors) include residences, schools, hospitals, nursing homes, and places of worship. The Proposed Acquisition would adversely affect a receptor if increased rail traffic would cause an increase in noise level of 3 or more A-weighted decibels (dBA) at the receptor and would cause the day-night average noise level (Ldn) to reach or exceed 65 dBA. Refer to *Section 3.6, Noise and Vibration* for more information about the noise analysis.

[3] Refer to Table 3.2-9 in *Section 3.2, Grade Crossing Safety* for more information about crossing safety for specific crossings.

[4] Refer to Table 3.3-11 in *Section 3.3, Grade Crossing Delay* for more information about vehicle delay at specific grade crossings.

[5] Environmental Justice (EJ) Block Groups refer to U.S. Census Block Groups that meet the definition of potentially containing an EJ population, such as low-income or minority populations. For more information about the EJ analysis, refer to *Section 3.13, Environmental Justice*.

* Community with planned capital improvements nearby. Refer to **Table 2.2-4** in *Chapter 2* for more information on planned capital improvements.

Table E.1-1. Summary of Impacts by Community

Appendix F

Freight and Passenger Rail Safety

F.1 Freight Operations Safety

This appendix provides technical information on the approach used in the analysis of the safety impacts that may result from the Proposed Acquisition (*Chapter 3, Section 3.2.1 Freight Rail Safety,* and *Section 3.2.2, Hazardous Materials, and 3.2.3 Passenger Rail Safety*).

F.1.1 Data Sources

OEA reviewed all accident/incident[1] data (herein referred to solely as "incident(s)") for the most recent full five years of available historic data (2015-2019), excluding 2020[2], from the Federal Railroad Administration (FRA) Accident/Incident database via the FRA's Office of Safety Analysis website[3]. For freight rail operations safety, OEA only examined "Group II"[4] data. Group I data are covered in *Chapter 3, Section 3.3, Grade Crossing Delay* and *Section 3.4, Grade Crossing Delay*.

The FRA's Office of Safety Analysis organizes and reports out a variety of information, including the number of incidents per year, yearly incident rates, and train miles all by railroad and year.

OEA used Group II data for three types of analyses:

1. Using the FRA-calculated historic incident rates, OEA calculated systemwide safety rates for the Proposed Acquisition and No-Action Alternative, for both KCS, CP, and the integrated system to be known as the CPKC network in the year 2027; and
2. Changes in incidents on a segment level for segments with an increase of eight or more trains per day.

1 See 49 CFR § 225.5 Definitions for inclusive definition

2 Year 2020 was excluded due to disruptions in rail traffic because of Covid-19 causing the year to be a statistical outlier.

3 The FRA Office of Safety Analysis website provides railroad safety information, including accidents/incidents, inventory, and highway-rail crossing data readily available to the public.

4 49 CFR § 225.19

(b) Group I – Highway-rail grade crossing accident/incident (Form FRA F 6180.57)

(c) Group II – Rail equipment. Rail equipment accidents/incidents are collisions, derailments, fires, explosions, acts of God, and other events involving the operation of on-track equipment (standing or moving) that result in damages higher than the current reporting threshold to railroad on-track equipment, signals, tracks, track structures, or roadbed, including labor costs and costs for acquiring new equipment and material.

F.1.2 Data

For the systemwide and segment specific safety analyses, OEA reviewed data from the FRA's Office of Safety Analysis website, specifically the following data organization outputs:

a. Train Accidents and Rates (Form 54)
   i. Reporting Railroad Codes:
      1. CP
      2. KCS
      3. CMQX
      4. DH
      5. DME
      6. GWWE
      7. STMZ
   ii. Region & State: All
   iii. Type of Accident/Incident: All
   iv. Type of Track:
      1. All for the Systemwide Analysis, which includes:
         a. Main
         b. Yard
         c. Siding
         d. Industry
         e. Not reported
      2. For the Segment Specific Analysis
         a. Main
   v. Track Class: All
   vi. Reporting Years: 2015 – 2019
   vii. *Data excludes accidents/incidents at highway-rail grade crossings*

Delaware & Hudson (DH), Dakota, Minnesota & Eastern (DME), Gateway Eastern Railway (GWWE), Texas Mexican Railway (STMZ) are absent from the data set either because they had no reportable Rail Equipment Accidents or report under their parent markings, CP or KCS. Central Maine & Quebec (CMQX) was removed from the dataset as it was purchased in November 2019 and no full reporting years as outlined above were available.

OEA reviewed and analyzed data to include years 2015 through 2019, and only for CP and KCS (collectively, the Applicants). Duplicate incident entries are produced when multiple pieces of equipment are involved in the same incident. These duplicate entries were identified in the "Accidents by State/Railroad" data output and are labeled by FRA as duplicates via the same Account Number. Since FRA counts duplicate incident entries only once in their calculation of the total incidents per year by railroad, OEA did not have to do any further manipulation to the data.

All data used in this analysis are specific to the U.S. only.

F.1.3 Approach

F.1.3.1 Systemwide Safety Effects Analysis Approach

OEA used FRA's reported annual incident rates for the entire system for each of the five analysis years. FRA calculated these annual incident rates using the equation as follows, and as described below:

$$Annual\ Rate = \frac{Number\ of\ Accidents/Incidents\ (Annually)}{Total\ Million\ Train\ Miles\ (Annually)}$$

The systemwide number of incidents in the FRA database includes incidents that have occurred on all track types. FRA determines systemwide million train miles annually by dividing the total train miles by railroad per year (main track train miles + yard switching miles) by one million.

Under the No-Action Alternative, OEA averaged the five years of data for both CP and KCS individually to determine the expected individual systemwide annual rates for CP and KCS, respectively, in the year 2027 (See **Table F.1-1**). Under the Proposed Acquisition, OEA took the average of CP's five-year average to determine the expected combined CPKC systemwide annual rate in the year 2027.

F.1.3.2 Rail Line Segment-Specific Safety Effects Analysis Approach

For the segment-specific safety analysis, OEA used FRA's reported annual incident rates for mainline incidents only for each of the five analysis years. FRA calculated these annual incident rates for mainlines using the equation as follows, and as described below:

$$Mainline\ Annual\ Rate = \frac{Number\ of\ Main\ Line\ Accidents/Incidents\ (Annually)}{Million\ Train\ Miles\ (Annually) - Yard\ Switching\ Miles}$$

For the segment-specific analysis, OEA calculated the incident rates for the segment-specific analysis using only incidents from the FRA database that occurred on mainlines (see **Table F.1-3**). FRA determines mainline million train miles annually subtracting the yard switching miles from the total train miles.

OEA calculated the five-year average rates for KCS and CP in the same manner as described in *Section F..1.3, Systemwide Safety Effects Analysis Approach*. OEA then applied each railroad's calculated No-Action Alternative mainline incident rate to each of their respective rail segments to calculate the expected risk by segment under the No-Action Alternative. OEA obtained Trains Per Day (TPD) and Segment Length (mi) from the Master Segment Table provided by the Applicants and multiplied by 365 days to calculate train miles per year – or annual train miles. OEA then divided this number by 1,000,000 to convert to million-annual-train-miles. This translates into the following formula:

$$i_{NA} = Mainline\ No\text{-}Action\ Rate \times \frac{(2027\ Without\ Merger\ TPD\ \times Segment\ Length\ \times 365\ Days)}{1{,}000{,}000}$$

OEA used CP's five-year incident rate and applied it to all rail segments under the Proposed Acquisition analysis.

Lastly, OEA converted the data from "incidence per year" to "years between incidence" as described below:

$$CP\ Years\ Between\ Incidence = \frac{1\ incidence}{CP\ Incidences\ per\ Year}$$

And

$$KCS\ Years\ Between\ Incidence = \frac{1\ incidence}{KCS\ Incidences\ per\ Year}$$

And

$$CPKC\ Years\ Between\ Incidence = \frac{1\ incidence}{CPKC\ Incidences\ per\ Year}$$

These calculations allowed OEA to evaluate the change in risk on a segment level between the Proposed Acquisition and the No-Action Alternative. **Table F.1-5** presents select segments (those with an increase of eight or more trains per day).

F.1.4 Safety Analysis

F.1.4.1 Systemwide Safety Effects Analysis

OEA calculated the five-year average rates for all Class 1 railroads based off of the FRA's 2015-2019 reported data. **Table F.1-1** below presents the annual and average rates.

Table F.1-1. US Class 1 Incident Rates 2015-2019

Railroad	2015	2016	2017	2018	2019	5-Year Average
CP	1.70	1.61	1.56	1.06	1.26	1.44
BNSF	2.28	2.09	2.01	2.14	2.21	2.15
CN	2.67	1.63	2.06	2.90	2.68	2.39
NS	2.21	2.6	2.33	2.76	3.31	2.64
CSX	2.63	2.84	3.14	3.71	2.36	2.94
KCS	4.02	2.62	3.68	3.40	3.03	3.35
UP	3.29	3.25	3.41	3.85	4.76	3.71
All Class 1	**2.69**	**2.38**	**2.60**	**2.83**	**2.80**	**2.66**

Source: https://safetydata.fra.dot.gov/officeofsafety/publicsite/summary.aspx

Under the No-Action Alternative, OEA calculated the year 2027 systemwide incident rates for both CP (1.44) and KCS (3.35), as described in *Section F.1.3, Systemwide Safety Effects Analysis Approach.*

Under the Proposed Acquisition, OEA calculated the year 2027 systemwide incident rate for CPKC (1.44), as described in *Section F.1.3, Systemwide Safety Effects Analysis Approach*.

Table F.1-2 below presents the forecasted 2027 systemwide incident rates.

Table F.1-2. Forecasted 2027 Systemwide Incident Rates

Railroad	No-Action Alternative	Proposed Acquisition
CP	1.44	-
KCS	3.35	-
CPKC	-	1.44

F.1.4.2 Rail Line Segment-Specific Safety Effects Analysis

For the rail line segment-specific safety analysis, OEA calculated the annual mainline incident rates for both railroads for the previous five years as outlined above in *Section F.1.3, Rail Line Segment-Specific Safety Effects Analysis Approach.* OEA then analyzed the data on rail line segments expected to see an increase of eight or more trains per day. **Table F.1-3** below presents the annual and average rates.

Table F.1-3. 2015-2019 Main Line Incident Rates

Year	Incidents	Million-Train-Miles	Incident Rate
Canadian Pacific Railway			
2015	8	10.06	0.80
2016	6	8.05	0.75
2017	7	8.46	0.83
2018	6	8.96	0.67
2019	6	9.10	0.66
Five-year average	**6.**	**8.93**	**0.74**
Kansas City Southern Railway			
2015	14	8.79	1.59
2016	4	8.32	0.48
2017	18	8.96	2.01
2018	12	8.65	1.39
2019	**7**	**9.00**	**0.78**
Five-year average	**11**	**8.74**	**1.25**

Under the No-Action Alternative, OEA calculated the year 2027 mainline incident rates for both CP (0.74) and KCS (1.25). OEA then applied these CP and KCS mainline incident rates to each segment, depending on their respective associated railroad, as described in *Section F.1.3. Rail Line Segment-Specific Safety Effects Analysis Approach.*

Under the Proposed Acquisition, OEA applied the five-year average CP mainline incident rate to each segment under the Proposed Acquisition, again as described in *Section F.1.3, Rail Line Segment-Specific Safety Effects Analysis Approach*. **Table F.1-4** below presents the assumed 2027 segment-specific incident rates.

Table F.1-4. Assumed 2027 Segment-Specific Incident Rates

Railroad	No-Action Alternative	Proposed Acquisition
CP	0.74	-
KCS	1.25	-
CPKC	-	0.74

Table F.1-5 presents the outcome of the rates in **Table F.1-4** being applied to rail line segments expected to see an increase of eight or more trains per day under both the No-Action Alternative and the Proposed Acquisition.

Table F.1-5. Incident Rates on CP and KCS Segments with ≥8 Trains Per Day of Merger Related Growth

Between	And	Segment Code	Segment Length	No-Action	Proposed Action	Anticipated Change	Projected Years between incidents No Merger	Projected Years between incidents: Merger

F.2 Freight Hazardous Materials Transport

F.2.1 Data Sources

OEA reviewed hazardous material release records provided by the Applicants in Information Request 2. These data contain records of all hazardous material releases, including locomotive fueling and maintenance-related spills. OEA sorted the data by release location type (main, rail yard), and by locomotive/non-locomotive related releases. Since locomotive fueling and service-related releases do not directly corollate with the increase of hazardous material carloads being transported by the railroad, OEA excluded those release data from the calculations.

OEA additionally used Group II data for the analyses:

- Changes in release rates of hazardous materials on main lines and in rail yards.

F.2.2 Data

For hazardous materials transport safety, OEA reviewed data from the Applicants, specifically:

- Hazardous material release
  - On mains
  - In yards
- Excluding: Hazardous material release from locomotives

All data used in this analysis are specific to the U.S. only.

F.2.3 Approach

F.2.3.1 Mainline Hazardous Materials Safety Effects Analysis Approach

OEA calculated annual mainline release rates for each of the five analysis years for CP, KCS, and a combined historical average of the two networks, using the following equation:

$$Annual\ Release\ Rate = \frac{Number\ of\ Mainline\ Releases\ (Annually)}{Hazardous\ Material\ Carmiles\ (Annually)}$$

The historical release rate data from 2015 to 2019 were generally flat and near zero. OEA chose a five-year average to represent year 2027. OEA took an average of each of the rates (CP and KCS) for each of the five analysis years, as shown in **Table F.2-1**, to get the averaged mainline release rates for CP and KCS under the No-Action Alternative, and for CPKC under the Proposed Acquisition, which OEA assumed would be the same as the five-year release rate for CP.

OEA applied each railroad's No-Action Alternative release rate to each of their respective rail line segments in order to calculate the expected risk without the Proposed Acquisition. OEA

applied the No-Action Alternative mainline release rates, as described above, to the 2027 No-Action Alternative hazmat car-miles.

To determine the release rates under the Proposed Acquisition, OEA applied the five-year mainline release rate for CP, as shown in **Table F.2-1**, to the same segments as in the No-Action Alternative analysis. OEA applied the CP mainline average release rate to the 2027 Proposed Acquisition hazmat carloads count, multiplied by the segment length, to calculate car-miles.

Lastly, OEA converted the data from "releases per year" to "years between releases" as described below:

$$CP\ Years\ Between\ Releases = \frac{1\ release}{CP\ Releases\ per\ Year}$$

And

$$KCS\ Years\ Between\ Releases = \frac{1\ release}{KCS\ Releases\ per\ Year}$$

And

$$CPKC\ Years\ Between\ Releases = \frac{1\ release}{CPKC\ Releases\ per\ Year}$$

These calculations allowed OEA to evaluate the change in release rates, at a segment level, between the Proposed Acquisition and the No-Action Alternative. **Table F.2-2** below presents all segments with an annual increase of one or more hazardous material carloads.

F.2.3.2 Yard Hazardous Materials Safety Effects Analysis Approach

OEA calculated annual yard release rates for each of the five analysis years for CP and KCS, as shown in **Table F.2-3**, using the following equation:

$$Annual\ Rate = \frac{Number\ of\ Yard\ Releases\ (Annually)}{Cars\ Processed\ per\ Day\ (Annually)}$$

OEA took an average of each of the rates (CP and KCS) for each of the five analysis years, as shown in **Table F.2-4**, to get the averaged rail yard release rates for CP and KCS under the No-Action Alternative.

To calculate the expected risk without the Proposed Acquisition, OEA applied each railroad's No-Action Alternative rail yard release rate to each of their respective rail yards. The No-Action Alternative rail yard release rates for CP and KCS, as described above, were respectively applied to the CP or KCS 2027 No-Action Alternative cars processed per day, multiplied by 365:

$$CP\ Releases\ per\ Year = (CP\ Release\ Rate) \times 2027\ No\text{-}Action\ Alternative\ Cars\ Processed\ per\ Day \times 365\ Days$$

And

$$KCS\ Releases\ per\ Year = (KCS\ Release\ Rate) \times 2027\ No\text{-}Action\ Alternative\ Cars\ Proccessed\ per\ Day \times 365\ Days$$

OEA applied the five-year average release rate for CP to the same rail yards to the 2027 Proposed Acquisition cars processed per day, and multiplied by 365 to get annual cars processed under the Proposed Acquisition:

$$CPKC\ Releases\ per\ Year = (CP\ Release\ Rate) \times 2027\ Proposed\ Acquisition\ Cars\ Processed\ per\ Day \times 365\ Days$$

Lastly, OEA converted the data from "releases per year" to "years between releases" as described below:

$$CP\ Years\ Between\ Releases = \frac{1\ release}{CP\ Releases\ per\ Year}$$

And

$$KCS\ Years\ Between\ Releases = \frac{1\ release}{KCS\ Releases\ per\ Year}$$

And

$$CPKC\ Years\ Between\ Releases = \frac{1\ release}{CPKC\ Releases\ per\ Year}$$

These calculations allowed OEA to evaluate the change in release rates at all rail yards between the Proposed Acquisition and the No-Action Alternative. **Table F.2-5** below presents all yards with merger related growth.

F.2.4 Hazardous Materials Transport Analysis

F.2.4.1 Mainline Hazardous Materials Safety Effects Analysis

For the mainline hazardous materials release safety analysis, OEA calculated the release rates as described above and shown in **Table F.2-1.** Additionally, OEA analyzed the data on rail line segments with any Proposed Acquisition-related increase in hazardous materials transport. **Table F.2-2** lists the results sorted by segment miles and filtered by merger related growth greater than or equal to one carload per year.

On average, over the five years period from 2015 to 2019, there has been only one hazardous material release for approximately every 37.8 million miles a hazmat car traveled (See *Chapter 3, Section 3.2.2.2, Affected Environment* for more information). These near zero trends are expected to continue in the future, although the trends would change some due to the overall increase in expected hazmat carloads under the Proposed Acquisition.

Table F.2-1. 2015-2019 Average Mainline Release Rates

Year	Releases	Hazmat Car miles	Release Rate
Canadian Pacific Railway			
Five-year Average	5.4	207,217,406	2.61E-08
Kansas City Southern Railway			
Five-year Average	2.8	102,790,252	2.72E-08

F.2.4.2 Yard Hazardous Materials Safety Effects Analysis

For the rail yard hazardous materials release safety analysis, OEA calculated the release rates as described above, and analyzed the data for all rail yards. **Table F.2-4** presents the results.

On average, between 2015 and 2019, there has been only one hazardous material release for approximately every 300,000 carloads processed in yards (See *Chapter 3, Section 3.2.2.2, Affected Environment* for more information). These near zero rate are expected to continue in the future, although the total number of releases would change due to the overall increase in expected hazmat carloads under the Proposed Acquisition.

Table F.2-3. 2015-2019 Historical Yard Hazmat Releases

Year	Releases	Carloads	Release Rate
Canadian Pacific Railway			
2015	16	1,085,863	1.47E-05
2016	9	987,005	9.12E-06
2017	10	1,071,967	9.33E-06
2018	6	1,138,855	5.27E-06
2019	14	1,113,237	1.26E-05
Kansas City Southern Railway			
2015	13	1,206,859	1.08E-05
2016	17	1,149,640	1.48E-05
2017	12	1,214,621	9.88E-06
2018	17	1,253,296	1.36E-05
2019	15	1,263,804	1.19E-05
Combined Systems			
2015	29	2,292,722	1.26E-05
2016	26	2,136,645	1.22E-05
2017	22	2,286,588	9.62E-06
2018	23	2,392,151	9.61E-06
2019	29	2,377,041	1.22E-05

F.3 Passenger Rail Operations Safety

This section presents the rail segments where freight trains and passenger train operations overlap within the combined CPKC system and the segments where the number of daily freight trains would increase as a result of the Proposed Acquisition. All segments where freight trains and passenger trains overlap are listed in **Table F.3-1**. The segments where freight trains and passenger trains overlap, in descending order of change in freight activity, are listed in **Table F.3-2**.

Where daily freight train traffic is projected to increase by one or more freight train per day as a result of the Proposed Acquisition, OEA performed a quantitative analysis of collisions between passenger trains and freight trains on all rail line segments carrying both passenger trains and freight trains. The analysis excludes all other accident types. OEA evaluated data for an 11-year period between January 2008 and December 2018 (the most recent year passenger train miles data are available).

OEA determined that the national accident rate for collisions occurring between passenger trains and freight trains is 0.0047 collisions per million commuter and intercity passenger train miles. On rail line segments where daily freight train traffic would increase by one or more trains as a result of the Proposed Acquisition, OEA calculated a collision rate for the future with the Proposed Acquisition using the following formula:

$$A = TM_{WA} * CR/TM_{EC}$$

Where:

A	=	Rail Line Segment Predicted Annual Collision Rate
CR	=	National Collision Rate, which was determined to be 0.0047 collisions per million intercity and commuter train miles
TM_{EC}	=	Train Miles in Existing Conditions (2008-2018), which is a combination of freight and passenger train miles
TM_{WA}	=	Train Miles in the future with the Proposed Acquisition, which is a combination of freight and passenger train miles

OEA calculated the value of the Train Miles (TM) terms by assuming a 365-day operating year for freight trains and intercity (Amtrak) passenger train operations. OEA calculated train miles for commuter trains using a proportion, which reflects the number of weekdays (five), Saturdays (one), and Sundays (one) per seven-day week; OEA used this approach because Metra and Northstar operate a different schedule for different day(s) of the week. OEA multiplied the segment overlap length by the number of daily trains and then 365 (see formula below). In Metra's and Northstar's cases, OEA multiplied the weekday, Saturday, and Sunday respective number of trains per day (TPD) by the proportion of the week that each of the three types of day comprises.

$$\text{TM} = \frac{(\text{TPD} \times \text{Segment Length} \times 365 \text{ Days})}{1{,}000{,}000}$$

For the No-Action Alternative, OEA adjusted the national passenger train – freight train accident rate to account for increases in freight train traffic anticipated by 2027 in the absence of the Proposed Acquisition. OEA multiplied the national accident rate by the total train miles

under the No-Action Alternative divided by the total train miles in the existing condition to get the predicted annual collision rate for the No-Action Alternative. The total train miles reflect a combination of passenger train miles and freight train miles for each segment. OEA then multiplied the adjusted national passenger train – freight train collision rate by the annual total train miles on a rail line segment to get the "No-Action Alternative Predicted Interval between Collisions Expressed in Years."

For the future under the Proposed Acquisition, OEA followed a similar method as above, incorporating the change in the number of freight trains per day as a result of the Proposed Acquisition. OEA determined the change in the number of freight trains per day by subtracting the number of freight trains under the No-Action Alternative from the number under the Proposed Acquisition. The increment reflects the change in total train miles over a segment due to the increase in daily freight trains that would occur as a result of the Proposed Acquisition. OEA multiplied the national accident rate by the total train miles in the future under the Proposed Acquisition divided by the total train miles in the existing condition to get the predicted annual collision rate. OEA then multiplied that number by the total train miles on a segment basis. This predicted the "Proposed Acquisition Predicted Interval between Collisions Expressed in Years." OEA also calculated the percent change between the total train miles under the No-Action Alternative and the Proposed Acquisition.

Re: Federal Railroad Administration's Review of Proposed Safety Integration Plan
Canadian Pacific Railway Limited et al.—Control— Kansas City Southern et al.
Finance Docket No. 36500

Dear Chairman Oberman:

The Federal Railroad Administration (FRA), an operating administration of the United States Department of Transportation (DOT), presents its findings and conclusions related to the proposed acquisition of Kansas City Southern and its affiliates (collectively, KCS) by Canadian Pacific Railway Limited and its affiliates (collectively, CP), as specified in the applicants' submissions to the Board. On December 28, 2021, CP submitted its Safety Integration Plan (SIP), which describes the process and timetable for merging its operations with KCS, as well as the safety implications of merging these operations. FRA staff had previously met periodically with the applicants and other affected parties to review earlier drafts of the SIP and related materials, to ask questions, and to recommend modifications. CP and KCS responded to FRA's safety concerns during this series of meetings, and the SIP submitted to the Board addresses the issues that FRA raised. FRA is therefore satisfied that the SIP provides a reasonable assurance of safety for the proposed transaction, consistent with governing regulations.

Should CP's acquisition of KCS be approved, FRA will monitor CP's implementation of the SIP during the operations integration period, consistent with the governing FRA regulations at 49 C.F.R. part 244 and the Board's regulations at 49 C.F.R. part 1106. In this regard, if the Board approves CP's acquisition of KCS, FRA will periodically review the implementation status and timeliness of the SIP through special field audits and safety reviews consistent with the governing SIP regulations and other applicable law. In addition, FRA will provide the Board with updates as appropriate during the acquisition implementation period.

FRA requests that, as a condition of any approval of the proposed merger and adoption of the SIP, the Board require the applicants to comply with all of their representations in the SIP. Under 49 C.F.R. 1106(b)(4), FRA will advise the Board when, in its view, the integration of the applicants' operations has been fully and safely completed.

Sincerely,

Amit Bose
Administrator

CERTIFICATE OF SERVICE

I hereby certify that on this 28th day of February, 2022, I filed the foregoing document electronically via the Board's e-filing system, and caused a copy to be served via electronic mail upon Parties of Record in this proceeding.

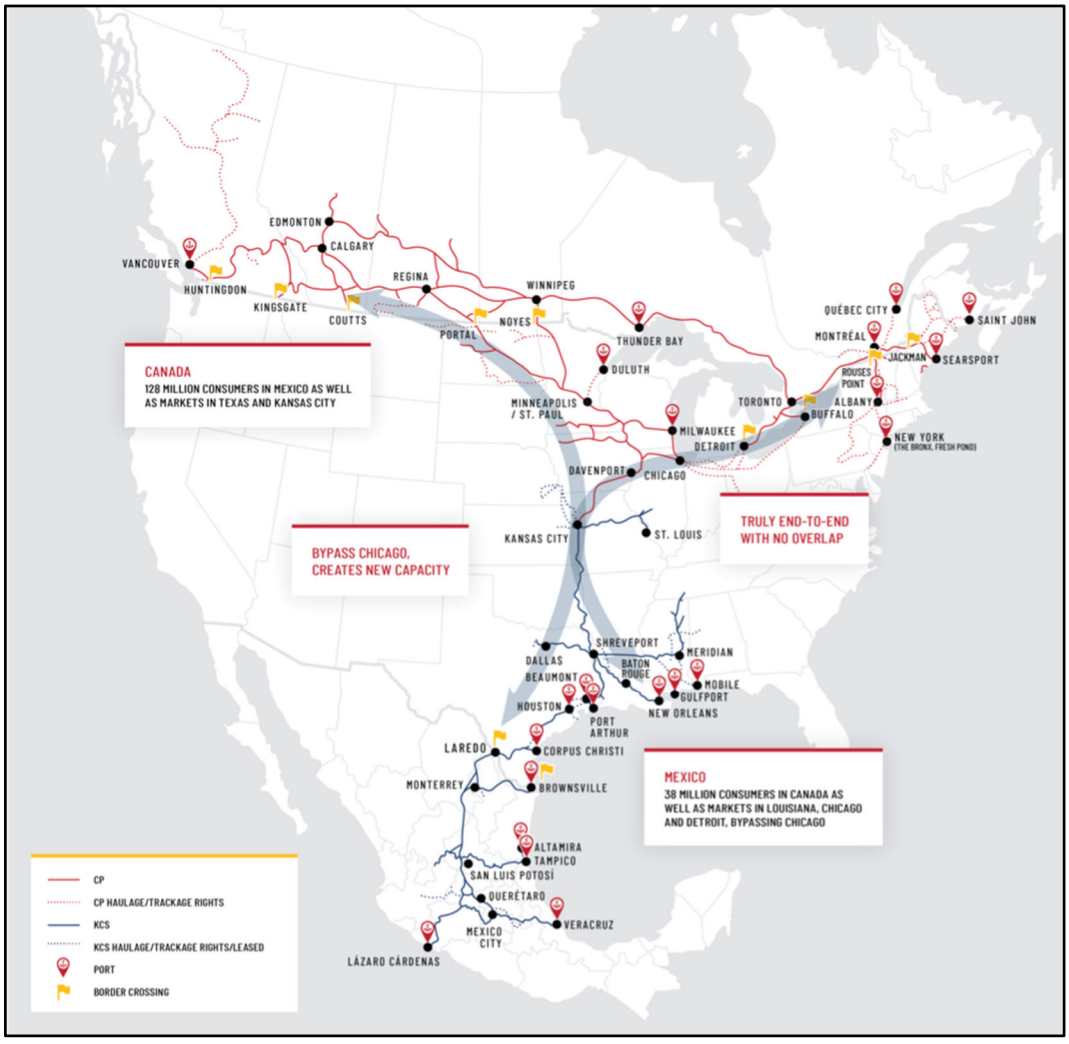
I. INTRODUCTION AND OVERVIEW OF THE PROPOSED TRANSACTION

On October 29, 2021, Canadian Pacific Railway Limited, Canadian Pacific Railway Company ("CPRC"), and their U.S. rail carrier subsidiaries Soo Line Railroad Company ("Soo Line"), Central Maine & Quebec Railway US Inc. ("CMQ"), Dakota, Minnesota & Eastern Railroad Corporation ("DM&E"), and Delaware and Hudson Railway Company, Inc. ("D&H") (collectively "CP") and Kansas City Southern ("KCS") filed an application seeking authority from the Surface Transportation Board (the "Board") pursuant to 49 U.S.C. §§ 11323–11325 for the acquisition of control by CP through its wholly owned subsidiary Cygnus Merger Sub 2 Corp., of KCS, and, through it, of The Kansas City Southern Railway Company and its U.S. rail carrier subsidiaries ("KCSR"), and for the resulting common control by CP of its U.S. railroad subsidiaries, and KCSR and its railroad affiliates. The Board issued a decision, effective on November 26, 2021, accepting this application (the "Application") and adopting a procedural schedule. *Canadian Pacific Limited,* et al.*—Control—Kansas City Southern,* et al. FD 36500 (STB Decision No. 11, served November 23, 2021).

In the United States, CPRC owns rail property in Michigan through its subsidiary the Detroit River Tunnel Company, Soo Line owns rail property in Illinois, Minnesota, North Dakota, South Dakota, and Wisconsin, CMQ owns rail property in Maine and Vermont, DM&E owns rail property in Illinois, Iowa, Minnesota, Missouri, and Wisconsin, and D&H owns rail property in New York. CP's main routes in the United States extend from six Canada/United States border crossings: North Portal, SK/Portal, ND; Emerson, MN/Noyes, MN; Windsor, ON/Detroit; Buffalo; Rouses Point, NY; and a point near Jackman, ME, on the Quebec/Maine border. CP also operates a short stretch of branch line trackage between Abercorn, QC and Richford, VT.



The KCS rail network extends in a north-south corridor from Kansas City south to the Pacific Ocean at the Port of Lazaro Cardenas, Mexico. In the United States, KCSR owns rail property in Alabama, Arkansas, Illinois, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas while Gateway Eastern Railway Company owns rail property in Illinois, and The Texas Mexican Railway Company ("Tex Mex") owns rail property in Texas. KCSR's network is centered on Shreveport, LA, with lines radiating in five directions. KCSR's key north-south corridor extends from the Mexican border at Laredo, TX, to Kansas City through Shreveport through a combination of KCS's own line and trackage rights. The "Meridian Speedway" line runs east-west through Shreveport, between the Dallas, TX area and a connection with Norfolk Southern Railway Company at Meridian, MS. The portion of this line from Shreveport to Meridian is 70% owned by KCS affiliate Meridian Speedway, LLC and operated by KCSR. In addition, KCSR operates a secondary line that extends southeast from Shreveport to New Orleans, LA. KCSR also operates the former "Gateway Western" lines extending east from Kansas City to Springfield, IL, and East St. Louis, IL, and several former "MidSouth" branch lines in Mississippi and Tennessee.

The proposed CP/KCS combination is purely "end-to-end" because the CP and KCS networks do not overlap anywhere. CP and KCS connect only at Kansas City, with joint agency only at Kansas City, where they already share a joint-facility rail yard (Knoche Yard, also known as the Joint Agency). Because of this end-to-end orientation, the transaction will not result in any internal re-routes, integration of terminal facilities, or downgrading or rationalization of rail lines. In addition, the lack of competitive overlap means that the CP/KCS combination will strengthen competition among rail carriers and with trucks in every market served by the integrated Canadian Pacific Kansas City ("CPKC," the future name of the parent company of CP/KCS following Board

approval) and will result in no shippers facing any reduction in competition. Below is Figure 1, showing both CP's and KCS's networks.

FIGURE 1

FUTURE CPKC SYSTEM

Further, because the CP and KCS systems are complementary, CP and KCS anticipate a smooth and seamless transition to a combined system and will take steps to ensure this smooth and seamless transition.

II. EXECUTIVE SUMMARY

CP is the safest carrier in North America and has been for 15 years. CP will continue to maintain its safety standards during and following its integration with KCS. CPKC will spend more than $275 million to upgrade the main lines between Louisiana and Minnesota by adding double track, adding and lengthening sidings, and installing Centralized Traffic Control ("CTC") to enable increased capacity, service reliability, and safety.

Present in both Canada and the United States for at least one hundred years, CP has also showcased its ability to operate safely across borders and effectively navigate regulations and requirements in two different countries. CP has a well-established track record of careful planning and flawless execution. For example, CP has been successful in implementing precision scheduled railroading ("PSR") and bringing disciplined attention to the level of service every rail shipment receives.

CP intends to keep learning from the best practices in its cross-border operations and to apply them to its integration with KCS and KCS's own cross-border operations.

In addition, CP will bring its deep expertise related to its network and its capabilities and to the integration process. CP's ability to deploy this institutional knowledge to facilitate the smooth integration in the acquisition context was demonstrated during its combination with DM&E in 2009 and most recently with CMQ in 2020, during which there were no material service disruptions. KCS similarly has a proven safety record and maintains strong operating practices. KCS's ability to successfully and safely integrate was demonstrated during its combination with Tex Mex and Transportación Ferroviaria Mexicana in 2005, which, like CP's recent acquisitions, involved no material service disruptions. Particularly because the CP/KCS combination involves two Class I railroads with mature processes, demonstrated safety performance, a history of

successful integrations, and no geographic overlap, CP and KCS ("Applicants") have no doubt that the integration of CP and KCS will be safe and successful.

This Safety Integration Plan ("SIP"), developed in accordance with the regulations of the Federal Railroad Administration ("FRA") and the Board, describes how CP and KCS intend to implement the combination safely and in compliance with applicable safety laws and regulations. While integration planning has already begun, the integration process will continue over the three years following Board approval of CP control (the "Control Date") to ensure that there will be no disruptions in safe operations or the service provided to customers.

This SIP will address all the subjects required to be addressed in a combination involving an amalgamation of operations at 49 C.F.R. § 244.13, including corporate culture, training, operating practices (including operating rules, alcohol drug, qualification and certification of locomotive engineers, and hours of service laws), motive power and equipment, signal and train control, track safety standards and bridge structures, hazardous materials, dispatching operations, highway-rail grade crossing systems, personnel staffing, capital investment, and information systems compatibility. Each section of the SIP will also include the requisite discussion of integration issues.

Because this SIP is being filed early in the process, as required, CP's planning of the integration remains underway. Applicants have been engaging with the FRA in advance of filing the SIP and have incorporated the FRA's input into the SIP. Applicants will continue to engage in these discussions with the FRA as integration plans are refined to ensure that the SIP is comprehensive. **Appendix 1** sets forth the major workstreams, the estimated resource allocation for each, and the corresponding estimated start and completion dates for the elements of the SIP.

Further, CP is committed to using the period before and after the Control Date to assess and understand each company's practices and plan a successful integration while both CP and KCS continue to operate safely. But because the CP/KCS combination is "end-to-end," CP anticipates fewer issues than combinations where overlaps and rationalization were key motivators for the transaction. For these reasons and as described in the SIP, CP does not anticipate any adverse impact to safety as a result of the combination. In fact, as described in various sections throughout the SIP, it is expected that safety will be improved through investment, growth, enhanced use of technology, strengthened processes, and an even greater focus on employees.

The remainder of the Executive Summary provides an overview of the distinct sections of the SIP.

Corporate Culture. CP places a premium on safety, which is reflected in its corporate culture. In fact, one of CP's five foundational principles, as described in Section III.A.1, is to "operate safely." CP's focus on safety starts at the very top with its leadership. Every year, CP's leadership sets goals and targets, establishes strategies and specific tactics to address issues, creates and adjusts policies and processes to manage issues and monitor progress, and recognizes and rewards safety achievements, while recommitting to CP's Corporate Safety Policy. Each territory is represented by a senior manager and a workplace and health safety committee that jointly address and discuss concerns and remedial actions. Employees actively engage in the development and evaluation of safety items through various channels, programs, and committees. These efforts are supported by CP's implementation of manager safety accountabilities and the use of audits as well as CP's prioritization of investments in technology to enhance safety. CP's stellar safety record is proof that these efforts have been successful.

KCS's culture likewise values safety and this like-mindedness ensures CPKC will continue CP's legacy as the safest Class I railroad, particularly once CPKC adopts certain of CP's proven programs. Applicants have identified certain safety aspects it deems critical to CPKC's safety operations, and they intend to implement the following programs, which are further described in the SIP:

- *Adopting CP's coordinated, centralized safety management system ("SMS").*
- *Deploying CP's safety technology across the combined system.*
- *Consequence Leadership program.*
- *Home Safe.*
- *Workplace Health and Safety Committees.*
- *Risk Reduction Program.*
- *Efficiency Testing and Manager Accountabilities.*

Training. Consistent with its focus on safety, CP maintains a robust training program, which involves a dedicated team of safety-minded professional Training Instructors, along with a state-of-the-art training facility in St. Paul, MN. A range of CP professionals participate in the training program, as demonstrated by the fact that CP Training Instructors deliver more than 100 training courses and programs. KCS maintains similar facilities in the United States and Mexico, as well as virtual options.

CP conducted an initial review of CP's and KCS's training programs and determined that both CP and KCS deliver quality training programs that meet or exceed applicable federal requirements. Applicants anticipate that, immediately following the Control Date, the training centers in St. Paul and Shreveport will remain open as their locations in the network will aid in efficient training across the combined system. CPKC will ultimately adopt CP's training

programs, adapted to KCS best practices, but CPKC will maintain separate training programs while KCS training staff are brought up to speed on CP's training material and processes. CP and KCS will work together to identify a comprehensive list of differences surrounding safety and operating rules. Once the differences are appropriately assessed, a comprehensive package of rules will be developed and delivered and CPKC will adopt uniform training across the United States. Maintenance of a single training program will, in turn, enable efficient internal and external oversight, as delivery will be the same at each location across the new property.

Operating Practices. Both CP and KCS have operating practices relating to operating rules, alcohol and drugs, the qualification and certification of locomotive engineers, and hours of service laws. Applicants expect that these operating practices will remain separate for some period post-Control Date. Following the CP/KCS combination, CPKC will perform a comprehensive review of all operating rules and practices to determine the best fit for the combined company. Once CPKC has sufficient information to determine the best path forward toward one common set of operating practices in a safe and efficient manner, it will implement that plan and submit the appropriate joint filings to the FRA.

Motive Power and Equipment. CP maintains eight major locomotive inspection and repair facilities across its network, including a facility in St. Paul, while KCS has locomotive maintenance facilities at Shreveport and San Luis Potosi in Mexico. Following the CP/KCS combination, CP expects the mechanical facilities in St. Paul and Shreveport to remain the primary U.S. locations for locomotive maintenance. Once operations are integrated post-Control Date and operating patterns are established, CPKC will assess the appropriateness of any changes to network repair and service locations.

Qualification standards for mechanical and locomotive personnel will remain separate for a period following the combination but CPKC will eventually adopt CP's qualification standards.

Signal and Train Control. Given the complexity of signal and train control and the Applicants' goal of ensuring a smooth and safe integration, CP and KCS have created a team to lead planning and integration post-Control Date. The team is currently developing a detailed plan to integrate signal and train control design, maintenance, and construction activities, systems, and processes, including integration of the Positive Train Control ("PTC") system by analyzing which processes, standards, and systems are the most appropriate fit for CPKC. Once the team has identified the appropriate processes, standards and systems, it will prepare an integration plan including milestones and checkpoints to determine progress and considerations for testing prior to implementation as well as generating back-up procedures.

Track Safety Standards and Bridge Structures. CP's policies and processes governing inspection and maintenance of bridges, retaining walls, tunnels, and culverts are set forth in its Engineering Red Book of Track & Structures Requirements ("Engineering Red Book") and its Bridge Management Plan ("BMP"). The Engineering Red Book also details CP's standards and processes governing inspection and maintenance of track assets. CP uses the Structures Asset Management ("SAM") system to maintain data on bridge inspections and assets while KCS uses two programs to store the same information: Bridge Inspection Management System ("BIMS") to store data on bridge inspections and Task Order Management System ("TOMS") to monitor the repair of defects found during inspections in the U.S. Though CP and KCS both currently use Digital Track Notebook ("DTN") to ensure inspection compliance, CP has slowly been rolling out Track Asset Management ("TAM") across the CP system as a replacement for DTN.

Post-Control Date, CP and KCS will continue to follow their current guidelines while CPKC employees are trained on the Engineering Red Book and BMP. CPKC will transition to the Engineering Red Book after the requisite training occurs. Similarly, CPKC will use SAM after it migrates all data in BIMS and TOMS to SAM and employees are sufficiently trained on SAM. CPKC will also use DTN until the mapping of assets is complete and all employees are trained on TAM.

Regarding earthquake response protocol and weather monitoring, post-Control Date, CPKC will perform a comprehensive review of earthquake response protocol and weather monitoring, and will determine what practices will be used for CPKC. On track and roadway maintenance and testing and internal rail flaw detection, CP and KCS will continue with the programs and inspections in place at the legacy railroad while evaluating the best way forward for CPKC. This will be accomplished by performing a comprehensive review of Track and Roadway Maintenance and Testing and internal flaw detection practices, while also determining what inspection frequencies and practices are the best fit for CPKC.

Regarding the training of roadway workers, a comprehensive analysis will be completed post-Control Date to determine where and how training on these topics can be effectively handled but, during the process, CPKC will use CP training standards to train all employees. The CP new hire training program will also be implemented across CPKC to ensure proper training and proficiency and safety in tasks being performed.

Hazardous Materials. To ensure the safe handling of hazardous materials, CP employs various training programs, emergency procedures, and communication and notification systems. Additionally, CP conducts periodic inspections and tests to ensure its programs are operating effectively. Applicants anticipate that, following an initial transition period post-Control Date,

KCS will adopt many of CP's program and systems, including CP's training programs, CP's Integrated Contingency Planning process, and CP's documentation system. CPKC will also incorporate KCS's emergency response third-party contract resources into CP's emergency response contractor network and KCS-owned emergency response assets into CP's response network.

For a short period following the combination, CP and KCS will maintain their own sets of United States Hazardous Materials Instructions for Rail ("USHMI") and their own reporting systems for hazardous materials. However, CPKC staff will analyze these plans and work together to develop one set of materials and systems for the combined CP/KCS.

During this process, KCS's staff will be incorporated into CP's Hazardous Materials organizational structure and CPKC will continuously review staffing levels and other resource levels to ensure there are sufficient resources to manage the Hazardous Materials program.

Dispatching. Currently, CP dispatches trains in the United States from an Operations Center ("OC") based in Minneapolis, MN while KCS dispatches trains in the United States from OCs in Kansas City and Spring, TX. During the early stages of integration, the former CP and KCS territories will continue operating separately according to their established train control systems. However, CP plans to migrate the Minneapolis, MN OC to Kansas City, and to integrate CP's OC with KCS's at the appropriate time post-Control Date. While relocation of employees is underway, the move will focus on maintaining safe operational practices in Minneapolis, MN, including the use of qualified train dispatchers to fill vacancies that may result from employee relocation.

With regard to systems, CPKC will carefully evaluate each independent train control system, focusing on operating rule requirements, operational safeguards, efficiencies, and the

ability to accommodate the needs of customers and the newly merged company. Appropriate stakeholders in affected departments will conduct this review and establish implementation plans. CPKC will ensure that train control changes are properly vetted and tested prior to implementation, and that no changes will be made unless and until safe operations can be maintained.

Highway-Rail Grade Crossing Systems. CP and KCS are both committed to the safety of citizens of the local communities in which they operate and CPKC will continue this dedication to safety. CP and KCS have similar established practices and programs for managing and improving the safety of at-grade crossings. Both companies work closely with state and local road authorities and emergency responders to support grade crossing safety improvements. The current practices and programs will continue with CPKC adopting the best practices of both railroads.

Personnel Staffing. CP anticipates that KCS's Kansas City headquarters will become the U.S. headquarters for the combined railroad, creating net-positive impacts on employment there, and that CP's Minneapolis, MN headquarters will eventually close. As a result, the operational consolidations arising from the combination of these two railroads will entail some adjustments in work arrangements, including (1) in the region centered on Kansas City, the one point where CP and KCS's rail networks connect, and (2) as a result of the relocation of CP's U.S. headquarters from Minneapolis to Kansas City. Though these moves will yield some changes in the level of employment and assignment of personnel, CPKC will take action to prevent these changes from raising safety issues. CPKC will ensure that all personnel receive the requisite training and recertification required to prevent any adverse impacts on safety and personnel.

Capital Investment. Both CP and KCS spend heavily to ensure that their respective networks are safe and efficient. For example, CP spent $1.26 billion on capital expenditures in 2020 including on track and roadway, while in the past five years, KCS has invested heavily in

foundational programs, including over $1.8B in roadway (infrastructure) and equipment, and $440M in capacity enhancements to promote service levels for customers and to achieve growth opportunities. As previously discussed, CPKC will invest more than $275 million in capital improvement projects to add capacity and improve safety on its core North-South rail corridor. These capital investments will transform the North-South lines on the combined system into a more efficient and higher-capacity network. CPKC plans to install additional sidings and extend sidings as set out in the Application, to support longer trains and accommodate the expected increase in train volume, expand the railcar fleet, invest in line infrastructure, among others.

Information systems compatibility. Because of the importance of information systems to the safety of a railroad, the overall goal while integrating CP and KCS information technology is to minimize train network disruption by having operations that focus on providing a safe working environment. This goal will be made easier by the fact that the CP/KCS combination is "end-to-end" and lacks geographical overlaps.

Currently, CP and KCS each possess information systems that meet each railroad's freight operations' needs. To ensure a safe and efficient transition, CP and KCS plan to continue to use each railroad's existing systems for an initial period following the Control Date. However, CP and KCS have been and will continue to assess the information systems from multiple angles: their intended functions, their capabilities, and issues relating to integration with comparable systems on the other railroad. Over time, CPKC will migrate operations across both networks to a single set of platforms, choosing the best options based on the following factors: technological capabilities, ability to meet current and future needs of the CPKC network, and the ease with which a platform can accommodate a seamless transition.

III. SAFETY INTEGRATION PLAN

A. CORPORATE CULTURE

1. Focus on Safety at CP

CP's safety culture starts at the top with its leadership. As stated in the Verified Statement of Keith Creel, CP's CEO (filed in Volume 1 of the Application), "CP's commitment to safety is ingrained in every aspect of [its] business and at every level of [its] organization."[1] Safety is foundational to everything CP does, and as such, CP never prioritizes business objectives above safety. CP strongly believes that safeguarding people and communities contributes to long-term sustainable growth and success, and continues to enhance its safety measures to ensure ongoing safety compliance. In addition to its leadership, CP maintains its safety culture through a variety of measures, including its coordinated, centralized SMS, effective employee safety programming, and emergency preparedness. CP's commitment to safety is demonstrated by its safety performance: CP has led the industry with the lowest train accident frequency rate in North America for 15 years, illustrating the effectiveness of its efforts to enhance public safety and protect the environment.

Centralized Safety Management System. The foundation for CP's safety culture is grounded in SMS. SMS is an organizational framework that contains CP's safety activities, programs, and approaches that make up CP's safety culture. SMS provides a structural template for managing all safety-related procedures and standards, and includes CP's efficiency testing, safety accountabilities, employee engagement, and workplace inspections. SMS is based on a plan, do, check, and act model. CP understands the importance of continual improvement and the

---

[1] Unless otherwise noted, referenced verified statements were submitted in connection with the Application.

importance of system audits, and conducts rigorous internal, external, and regulatory auditing of its SMS.

Leadership. Leadership is the primary driving force behind CP's culture of safety. *See* Keith Creel's Verified Statement. Senior executives in CP's Operations team and Corporate Risk team are responsible for setting the tone and direction for safety management. This includes setting goals and targets, establishing strategies and specific tactics to address issues, creating policies and processes to manage issues and monitor progress and recognizing and rewarding safety achievements. Each year, CP's President/CEO and Executive Vice President of Operations review and recommit to CP's Corporate Safety Policy. This commitment empowers the executive leadership group to develop, maintain and adjust any aspect of its SMS in a continual effort to operate safely. CP's Managing Director of Safety manages CP's safety team, and reports to the Assistant Vice President of Operations Support, who in turn, reports to the Executive Vice President of Operations.

CP believes that feedback is at the core of improving safety. CP created a centralized program for its leadership known as Consequence Leadership ("CL") that equips each leader with the tools necessary to navigate simple and complex situations alike, and implement positive change through feedback and action. CL is founded on sound, data-driven behavioral science that develops the safest, most effective, and efficient railroad in the industry.

Foundations and Values. CP's foundations and values foster a culture of safety. Each employee at CP strives to align with the following five foundational principles: provide service, control costs, optimize assets, operate safely, and develop people. In addition, CP's core values of accountability, diversity, and pride promote a family-like culture, in which employees work together with courage and integrity to provide world-class service. Employees at CP are taught

and incentivized to do what is right, even when it is not easy, which promotes CP's overall safety-centered culture.

***Technology*.** CP prioritizes investments in technology to enhance safety. CP has invested in the following technology: wheel life forecasting, cracked wheel detection technology, wheel impact load detectors, predictive bearing failure using acoustic sensors, broken rail detection in dark territory (non-signaled track), enhanced rail flaw detection, and autonomous track geometry measurement systems. These technological advancements enable CP to approach safety from a preventative standpoint and to enhance CP's operational safety overall.

***Employee Involvement, Collaboration, and Communication*.** CP views its unions and employees as critical partners in its safety culture, success, and systems. In order to achieve safety excellence, CP communicates and collaborates with its employees on safety items, and regularly involves them in safety planning and discussions. CP's employees actively engage in the development and evaluation of the SMS through various channels, including local and executive-level health and safety committees.

For example, CP's Workplace Health and Safety Committees ("WHSCs") identify, evaluate, and control hazards across CP's property by participating in workplace inspections and customer safety audits. WHSC representatives conduct peer observations of various tasks and provide feedback to individual employees on their observations. Management is not provided any individual employee results and receives only the blended results for a given location. This anonymized approach encourages committee representatives to provide open and honest feedback. As a result, management receives direct insight into compliance at the ground level.

CP's quarterly Safety Walkabouts are another example of employee involvement in safety-related processes. The Safety Walkabouts involve all levels of the Operations Department

(including Vice Presidents and General Managers) conducting on-property tours with local managers, WHSC members, and craft employees. During the Safety Walkabouts, leaders in the Operations Department seek employee ideas regarding safety exchange views with employees that drive employee engagement.

CP also employs a reporting feature by which employees are able to report hazards that are not immediately resolvable to protect others from the hazard. Using CP's online application, "Report a Safety Hazard" and the related safety hazard dashboard, employees are instructed to report hazards into the safety hazard reporting tool, which enables any employee to report a safety hazard. Following the report, management informs the employee how the hazard will be resolved. These tools and the supporting policies are designed to facilitate immediate reporting and enhance employee engagement. In 2020, CP management resolved over 1,600 employee-reported hazards.

Programming. CP's employee engagement initiative, "Home Safe," requires the following commitment and action, which work together to create a "team" approach to safety:

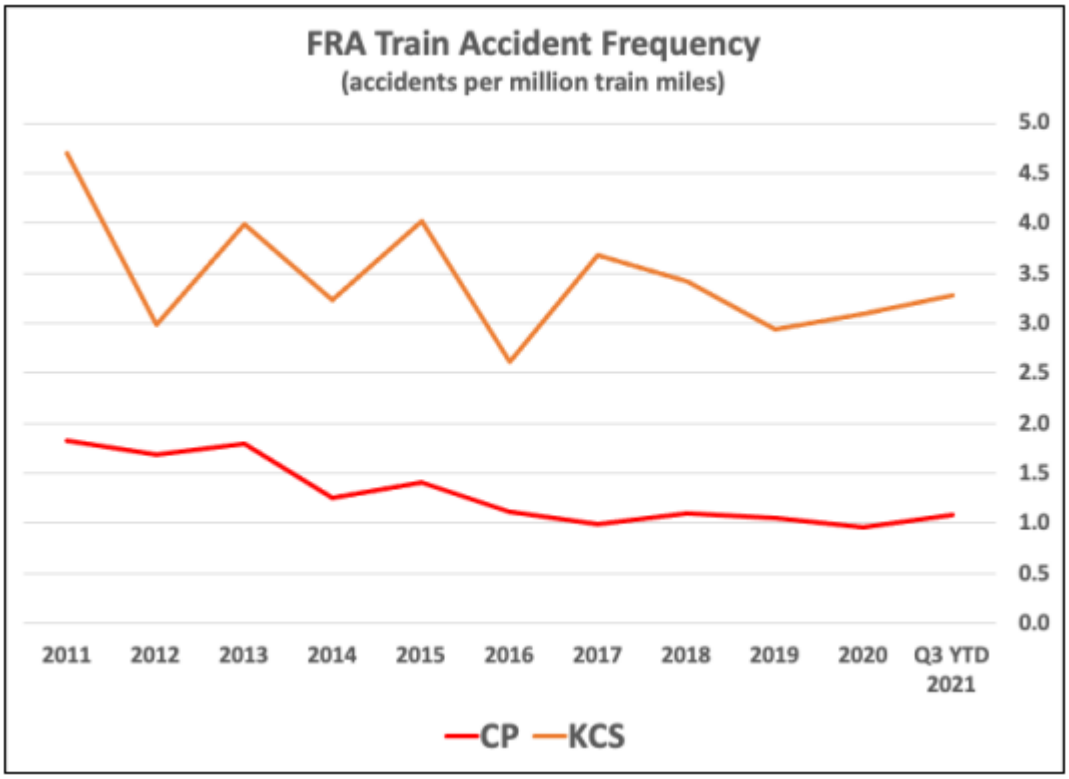
- give a heads-up;
- offer and ask for help;
- warn people who are putting themselves at risk; and
- identity, report, and remove hazards.

Home Safe embodies CP's desire to improve safety by tapping into the human side of safety and promoting employee engagement and feedback. This program—among others—conveys the message that every employee is responsible for instilling a culture of safety at CP. Through Home Safe, CP empowers its employees to take responsibility and do everything in their power to make sure that everyone goes home safe, every day. Following the inception of Home

Safe in 2016, CP observed a steady decrease in personal injury frequency rates. In 2020, CP remained a leader in the FRA reportable train accident frequency rate and had the lowest FRA-reportable personal injury frequency rate in CP's company history, demonstrating the effectiveness of its efforts to strengthen safety and protect the environment. Today, CP can proudly characterize its safety culture as being among the most progressive of all North American rail companies.

Public Safety and Emergency Preparedness. CP proactively plans and trains for emergency events to protect its workforce, the environment and the communities in which it operates. CP strategically invests in personnel, infrastructure, resources, and training to maintain high standards for public safety. CP is prepared to quickly deploy hazardous materials and emergency response teams to implement its Integrated Contingency Plan in cooperation with local emergency response organizations and CP's network of emergency response contractors. CP's Emergency Operations Centre personnel interface directly with field operators to ensure that the right resources are in place should an incident arise.

Moreover, CP's emergency preparedness goes beyond its workforce. Each year, CP supports local firefighters across its network to obtain rail-specific hazardous materials training at the Security and Emergency Response Training Center. Since 2012, CP has trained more than 30,000 emergency responders on hazardous materials response.

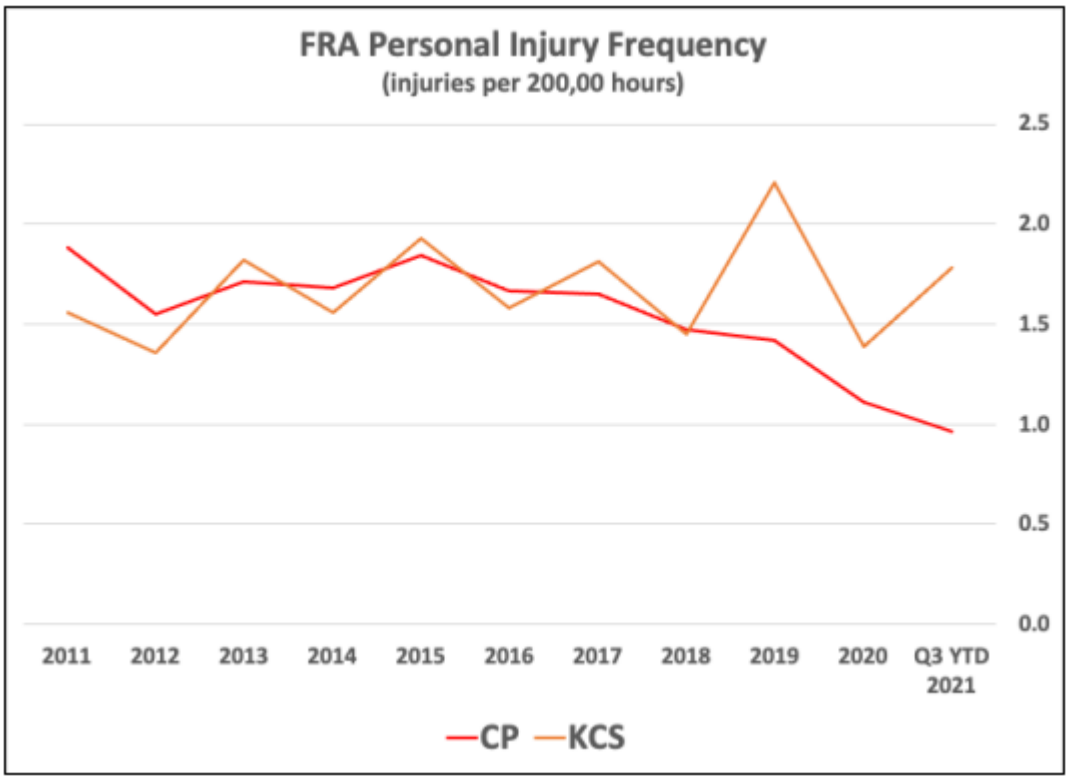


***Supervision and Monitoring*.** The success of any safety requirement or initiative relies not only on a strong plan, but also the ability to validate a successful execution of that plan. CP's supervision and monitoring practices are developed to ensure safety compliance is regularly audited and operational practices are executed according to its safety policies. To ensure the quality and effectiveness of its safety rules, managers conduct efficiency testing to validate employee compliance with safety requirements, and also conduct safety audits to ensure safety

rules regarding operational practices are followed. The Manager Safety Accountabilities standards document prescribes which managers must perform efficiency testing along with the frequency at which the tests should be performed. During efficiency testing, managers observe employees to validate their ability to follow rules and requirements and provide feedback to employees. Managers also engage in joint testing, in which two or more managers provide feedback to each other following safety testing activities. Managers conduct visual inspections of workplace and customer locations to ensure no hazards exist, and also engage in Safety Walkabouts described above. Managers provide mentoring and coaching to employees regarding safety standards, and assist with training new hires during orientation. Select managers utilize locomotive event recorder data and video analysis to monitor whether employees comply with operating rules and practices. Additionally, Road Foremen perform inward facing camera audits to ensure compliance. WHSCs assist in supervision and monitoring by participating in hazard identification, escalation, and correction.

Safety Performance. CP's commitment to safety is reflected in its record-setting performance against two of the FRA's leading safety metrics. CP has achieved the lowest FRA train accident frequency of all large railroads for 15 years straight, and in July 2021, announced that it set a new record all-time low for any large railroad for a calendar quarter. CP's reportable accident rate has fallen 80 percent since 2013, as shown in Figure 2.

FIGURE 2



CP SAFETY PERFORMANCE

CP has also achieved steady improvement in the key FRA personal injury frequency metric, as shown in Figure 3 below:

FIGURE 3

CP SAFETY PERFORMANCE

Risk Reduction Program. Separate from the Application, and as required by 49 C.F.R. § 271, CP filed its Risk Reduction Program Implementation Plan ("CP Risk Reduction Plan") prior to the FRA deadline of August 16, 2021. Per regulation, all Class I railroads are required to develop a Risk Reduction Plan. The CP Risk Reduction Plan is designed to be implemented as part of CP's overall SMS. CP's Executive Vice President of Operations will serve as the Risk Reduction Program's Chief Official, and is responsible for overseeing the Risk Reduction Program. CP's Managing Director of Safety will manage the Risk Reduction Program. The CP

Risk Reduction Plan covers topics such as overall objectives, roles and responsibilities, and hazard management for CP's Risk Reduction Program.

2. Focus on Safety at KCS

Safety is the foundation for KCS operations. KCS is similarly deeply committed to operating a safe railroad. To this end, KCS has built a strong corporate culture focused on safety and has instituted a number of supporting safety programs. At KCS, safety is first and foremost, and KCS approaches safety as an obligation rather than an option. KCS always demonstrates its commitment to safety for its employees, customers, contractors and others. KCS's goal is to achieve the highest level of safety performance while meeting or exceeding regulatory standards.

KCS's executive leaders care deeply about their employees and regularly demonstrate the value of safety through their actions. As expressed in KCS's Vision, Values & Culture statement, safety is its most important value. Each year, the Chief Operating Office and Chief Safety Officer together set enterprise goals for safety improvement; achievement of those goals is a critical component of variable compensation for the operations teams. Also, the "President's Award" ranks the Injury Frequency Rate for each operating function (i.e., Transportation, Engineering and Mechanical) by location, recognizing each top-performing group with the Vice President's award, and the overall top performer with the President's award. The KCS Health, Safety, Security and Environmental Statement, publicly available on its website, further affirms top leadership's commitment to, among other things, workplace and public safety.

KCS's Vice President, Health, Safety, and Environmental, leads KCS's Health, Safety, and Environmental group within KCS's Operations Department. This group consolidates occupational health, workplace and public safety, Critical Incident Desk ("CID"), and Environmental, Social, and Governance reporting functions in both the United States and Mexico under a single

management head who is a peer to the Vice Presidents of Transportation, Mechanical, and Engineering Department. These reporting functions work together in the Operations Department and report to KCS's Chief Operating Officer.

In an effort to continuously improve its safety performance, KCS reorganized its safety department in 2021, increasing and realigning its staff of field safety managers. Previously, three subject matter experts (one each for mechanical, transportation and engineering) in the U.S. and the same number in Mexico were responsible for Safety Department responsibilities across the network for their specialty. Following the reorganization, 12 cross-functional field safety managers (six of whom work in the United States) are strategically placed throughout KCS's U.S. and Mexican enterprise. Each safety professional is responsible for all Safety Department responsibilities for his/her assigned territory. These highly trained and experienced safety professionals promptly respond to incidents and assist with investigations, attend all safety committee meetings, routinely audit for hazards, identify mitigation strategies and assure they are implemented, perform operational testing, assist with operational testing plans, are familiar with people, facilities, and safety concerns on a local level, have a deep and personal responsibility for safety on his/her territory, maintain relationships with local managers, front-line workers, and union leadership, and otherwise are a consistent and reliable safety presence for the assigned section of KCS's railroad.

These safety professionals report the Assistant Vice President for Safety in the United States, who reports to KCS's Vice President of Health, Safety and Environmental ("HSE"). Through this organization, KCS strategically manages safety assets through the U.S. and Mexico to provide support to all parts of the cross-border network. KCS's HSE team also includes hazmat

preparedness and response, internal safety reporting, compliance programs, public safety, and critical incident personnel.

At the core of KCS's safety administration is its Health, Safety, Security & Environment Management System ("HSSE MS"), which sets out KCS's safety policies and procedures. The HSSE MS was initially designed in compliance with the American Chemistry Council's ("ACC") Responsible Care Management System 2013 Technical Specification, and the KCSR rail network is certified by an independent, accredited auditing firm as a Responsible Care partner company. HSSE MS uses a risk-based hazard analysis approach to evaluate and prioritize identified potential hazards. Key areas in which KCS monitors risks include workforce health and safety, community awareness, emergency response, product safety, pollution prevention, and security. KCS uses standardized methods to evaluate and continually improve the HSSE MS. The HSSE MS covers topics such as KCS's expectations about how to conduct audits, continuous improvement plans, and safety committee meetings. Most recently, KCS has taken the further step of evolving its Safety Management System to make it International Standards Organization compliant, which KCS aims to accomplish by the first quarter of 2022. KCS continuously improves work practices in consultation with its works and their representatives.

KCS educates and empowers its employees to work safely. Through its *One Team: Living a Speak Up Culture* initiative, KCS fosters an environment of learning and growth by soliciting, embracing, and positively acting on relevant information from all workers so that opportunities are promptly addressed and relationships are strengthened. Among other benefits, the initiative is shifting the safety culture from "compliant" to "committed," as employees learn to speak up confidently and receive feedback in the spirit of continuous improvement. KCS also administers or facilitates a number of other initiatives to promote safety, including:

- CIDs in both the United States and Mexico, 24/7 call service centers that KCS personnel may use to report service interruptions; the Desk also makes phone calls to give important safety-related updates;
- a trained hazardous materials response team;
- safety tariffs that shift the costs of hazardous materials cleanup to customers whose negligence has resulted in spills, incentivizing customers to better secure their cargo for transport;
- safety-related compensation goals for executives;
- local safety committee meetings that allow workers to discuss and resolve concerns with safety conditions and to escalate unresolved issues to KCS's Network Safety Steering Committee, which includes the Vice President for Health, Safety, and Environmental; and
- 50 internal dashboards that allow KCS to dissect and detect trends in safety data.

KCS developed the Transportation, Engineering, and Mechanical ("TEaM") Training Center in the U.S. (Shreveport) and the Technical Training Center in Mexico (TEaM Capacitacion Mexico). These centers offer certification and training programs for all operations groups, both on-site and remotely, as business needs require. Due to the COVID-19 pandemic, many training programs were moved to virtual settings in 2020, but the important work continued:

- In 2020, the TEaM Training Center provided 12,110 employee training hours in the U.S., covering safety, operating rules, and proper work practices.
- In 2020, the KCSM Operations Training Group provided 46,442 employee training hours in Mexico, covering safety, operating rules, and proper work practices.

From 2017 to 2020, KCS's reportable train accidents per million train miles steadily decreased from 3.68 to 3.09, a 16% improvement.[2] KCS has safety committees at every major location on its network. These committees have monthly meetings to discuss safety issues at that location. Some larger locations, such as major yards, will have separate committees for specific functions. For example, at Shreveport there are separate committees for mechanical, engineering, and transportation, with a terminal committee that coordinates for the entire location. These committees are required by law in Mexico but in the United States they are a mix of negotiated agreements with unions and KCS practice, and are required by KCS's HSSE MS. Safety concerns that are not promptly resolved at a local level are referred to the Network Safety Steering Committee ("NSSC") through an escalation process. The NSSC is comprised of the Chief Operating Officer, Chief Transportation Officer, Chief Engineer, Chief Mechanical Officer, and the Chief Safety Officer.

KCS filed its Risk Reduction Program Implementation Plan ("KCS Risk Reduction Plan") with the FRA in advance of the August 16, 2021 filing deadline. The KCS Risk Reduction Plan describes KCS's safety program vision and operation. KCS's U.S. Vice President Health Safety and Environmental will be the KCS Risk Reduction Program's Chief Official. The KCS Risk Reduction Plan covers topics such as overall objectives, roles and responsibilities, and hazard management, to name a few.

---

[2] In 2017, there were 3.68 reportable train accidents per million train miles. In 2018, there were 3.40 reportable train accidents per million train miles. In 2019, there were 2.94 reportable train accidents per million train miles.

3. Safety Integration – Corporate Culture

CPKC will bring a new standard of safety to the North American rail landscape. As the Verified Statement of Keith Creel explains, CP has been the safest North American railroad for many years, and it will implement the CP/KCS combination with safety at the forefront of its goals. CP's and KCS's company cultures are complementary to one another. CP's culture of safety will integrate well with KCS's like-minded safety-oriented culture, allowing the combined system to operate at the apex of rail safety. CP and KCS's plan for integration intends to draw from the best aspects of both cultures and the best practices that reinforce the dedication for both cultures to safety. The integration plan includes integration of the following:

- *Safety Management System*. CP's SMS will become the core of the combined system three years following the Control Date. CP will assess KCS's SMS and appropriately augment CP's SMS to enhance the combined SMS.
- *Deploying CP's safety technology across the combined system*. The CP/KCS network will be supported by the infrastructure investments in signaling and line capacity on the core North-South mainline of the combined system. CP and KCS are actively working to plan for the safe integration of the two systems, giving attention to all of the modern threats to safe train operations.
- *Consequence Leadership Program.* CPKC will maintain CP's Consequence Leadership program, and intends to implement this program across the combined entity within two years following the combination.
- *Home Safe*. Consistent with CP's current practice, CPKC will continue CP's Home Safe Program, and train employees of all crafts and locations in line with CP's Home Safe practices.

- *WHSC.* CPKC will adopt CP's WHSC structure within the first year following the combination to facilitate a seamless transition of safety reporting across the combined entity.
- *Risk Reduction Program*. CPKC will adopt CP's Risk Reduction Program by 2024. CP and KCS developed their respective Risk Reduction Programs with integration in mind, and CP and KCS are committed to ensuring safety and compliance are adhered to before integration of the respective programs is complete.
- *Efficiency Testing and Manager Accountabilities*. CPKC will adopt CP's program within three years. CP relies heavily on its efficiency testing program to identify focus areas that require supervisor validation, and coaching opportunities to correct or reinforce existing work practices and ensure compliance with regulatory requirements.

B. TRAINING

1. Training at CP

CP's Technical Training department ("Training Department") is comprised of a dedicated team of safety-minded, professional Training Instructors. CP's Training Instructors are committed to the development of each employee's ability to perform to their highest level of proficiency within their respective craft. CP's state of the art training facility is located in St. Paul, and is CP's main location for major training in the United States. The facility has ten Training Instructors and houses six training rooms and two locomotive simulators. Three additional Rules Instructors are located at remote locations across the network to supplement major training or offer safety and training programs that do not require the use of CP's main training facility.

To facilitate their professional development, CP's Training Instructors are encouraged to participate in continuing education to enhance their technical training abilities. Examples of

continuing education include university course work, completion of certification programs, and computer software skill coursework. Focusing on improvement for CP's Training Instructors increases the quality of delivery for participants in CP's training programs.

In total, CP Training Instructors deliver more than 100 training courses and programs. Training Instructors lead the majority of these programs which are comprised of three categories: safety, rule, and technical training. To enhance the learning experience, many programs include computer-based training ("CBT") and simulations. Simulations are beneficial as they allow employees to engage in realistic activities while maintaining a controlled environment, can be repeated as needed until employees are able to demonstrate knowledge and understanding, and prepare employees for real-life situations they may encounter outside of training or may experience once promoted.

Internal instructional designers or contractors with instructional design credentials design the training programs. Design processes are mapped and reviewed, and train-the-trainer sessions are conducted for all new courses. CP records training results in its Learning Management System and retains them in accordance with regulatory requirements. The Learning Management System allows CP to access historical information and enables appropriate managers to generate reports and monitor progress. Additionally, CP submits its in-house training program to the FRA as 49 C.F.R. § 243 requires.

All training is organized into cycles in alignment with federal requirements. CP provides training programs for the following employees:

Employees who perform train and engine service. CP's Training Department delivers all new hire employee training. New hire Conductor candidates receive classroom training covering all aspects of the Conductor roles and responsibilities. During the course training, each candidate

is required to pass examinations related to operating rules and practices, safety, federal regulations, and hazardous materials. Each examination requires a passing score of 90 percent. The classroom training includes multiple days of simulated training that focuses on job tasks such as paperwork completion, radio communication with various craft employees such as Dispatching and Engineering employees, proper job briefing, and rules compliance. Prior to beginning on-the-job training ("OJT"), new hire Conductors will participate in field exercises and receive critical task sign-off by Training Instructors. During OJT, management will perform evaluation rides with each candidate to validate performance and ensure the employee is on track or ready for promotion.

CP's Training Department also delivers all Locomotive Engineer training programs. Locomotive Engineer students receive instruction on locomotive operation, machinery, air brake systems, relevant FRA regulations, General Code of Operating Rules ("GCOR"), safety, hazardous materials, train handling, track and train dynamics, PTC, and distributed power operations, where required. A minimum score of 90 percent is required on all mechanical and operating rule examinations.

Type II Simulators are incorporated into the Locomotive Engineer training program to connect the theory of practice with hands-on experience. These simulations place the candidate at the controls of a variety of trains operating over different territories. Each simulation introduces the candidate to a rule or practice, and includes instructor oversight and a lecture on proper operation and execution.

Locomotive Engineer trainees are required to perform OJT for a set duration or amount of throttle time. Each candidate participates in evaluation rides with a designated supervisor of Locomotive Engineers who is responsible for validating performance and ensuring the employee is on track or ready for promotion.

Remote Control Operator candidates receive a total of 80 hours of training, including classroom and OJT. The candidate must complete an examination and achieve a passing grade of 90 percent. OJT is conducted under the direction of a qualified Remote Control Operator. A designated supervisor of Remote Control Operators performs an evaluation ride to evaluate whether the candidate is eligible for promotion.

All promoted Conductors, Remote Control Operators, and Locomotive Engineers in the United States receive recertification training and testing within a period not to exceed 36 months as required by regulation.

Employees who inspect and maintain track and bridges. Prior to beginning a rules-qualified position, each Engineering employee attends a four-hour class covering the U.S. Rulebook for Engineering Employees and Timetable Special Instructions, which includes current General Orders. After completing the class, each employee must pass a comprehensive examination with a minimum score of 90 percent.

Engineering employees receive training on FRA track safety standards with a program developed with requirements sourced from CP's Engineering Red Book of Standards and federal regulations. In addition, engineering employees receive training on CP's Standard Practice Circulars, which contain construction standards, best practices and work methods, as well as the Engineering Red Book requirements, which provides Track Inspectors, Track Foremen and other qualified track maintenance staff with specific track standards in a clear and readable format.

Engineering employees who perform track maintenance receive training on various topics including:

- on track safety ("OTS");
- lockout / tag out procedures;

- use of respirators;
- hazardous communication;
- crane operation;
- basic machine operator orientation;
- 49 C.F.R. § 213 awareness;
- track basics and confined spaces; and
- field orientation on the use of tools and basic track components.

Track inspection training at CP includes an FRA-approved seven day track inspection training program, a track maintenance Foreman course, a Foreman leadership skills course, and periodic supervisor best practices workshops. The track inspection course includes classroom training on roadbed and track structure, rail, turnout inspection, track geometry, records input, movement over rail breaks, plan reading, shimming, continuous welded rail, and handling of vehicle track interaction exceptions. The course also includes a hands-on practical where the trainee identifies defects in a track, inspects turnouts, and plots a curve. All new Track Inspector trainees' complete a task-based checklist to ensure feedback is received on their performance. At intervals throughout the training, management performs validation checks to ensure the employee is in compliance with performance standards and on track for completion of the program. The track inspection course must be recertified every three years.

Employees who inspect, maintain and repair any type of on-track equipment, including locomotives, passenger cars, and freight cars of all types. All mechanical car and locomotive employees receive CP Training Department classroom instruction, which covers the GCOR, safety, and other duty specific rules and best practices. Training also covers topics such as job briefings, blue flag protection, hazard communication, annual safety, emergency response, rail

security, and fall protection. After participating in the classroom instruction, each employee is required to pass a comprehensive examination with a minimum score of 90 percent.

CP qualifies all mechanical employees who inspect, maintain, or repair locomotives or freight cars through a combination of Designated Instructor-led classroom-based training, OJT, and CBT under the direct supervision of a Qualified Person. Competency evaluations are conducted by a Designated Instructor. Designated Instructor-led classroom-based training is facilitated through CP's training center located in Saint Paul, Minnesota, and OJT and qualification checks are conducted in each candidate's respective location throughout the network.

Candidates participate in a training program which utilizes periods of directed OJT under the direct supervision of a Qualified Person accompanied with Designated Instructor-led classroom-based training. The program is designed for candidates to develop fundamental skills and competencies, consolidate OJT learning in a Designated Instructor-led classroom-based environment, and graduate to advanced topics upon demonstrating competency of the fundamental learning objective. OJT tracking and progress is facilitated through the use of an application deployed in all facilities, which is used by each candidate's respective supervisor. Qualified management provide sign-off using OJT checklists, required by 49 C.F.R. § 243, which are utilized to ensure trainees can perform the tasks required by their positions.

Employees also receive training specific to their duties covering topics such as:

- freight car inspection;
- locomotive service inspection;
- electrical and mechanical safety;
- track mobile operations (including remote operation);
- utility vehicles;

- shop track operations program (fueling and sanding locomotives); and
- dimensional load measuring and reporting, and FRA equipment safety inspections.

Mechanical Machinists and Electricians receive an extensive training curriculum that covers aspects of inspection and maintenance of locomotives. This training covers topics such as:

- trucks, body, air brake systems;
- draft gear; and
- fuel systems, cooling system, electrical systems, and PTC.

Dispatchers or Operators. CP's Training Department delivers all Train Dispatcher training. The Train Dispatcher training program is up to 20 weeks long and covers GCOR, Timetable Special Instructions, Train Dispatcher Manual, General Operating Instructions, and OTS. Candidates must pass periodic quizzes and receive a score of 90 percent or higher on a promotional exam. Training includes use of the train dispatching computer systems, train control simulation exercises, OJT, and a territory familiarization trip for the candidate's training territory. Train Dispatcher trainees receive simulation training before working on the desk to become familiar with required tasks and controls of the job. Candidates spend multiple weeks on the various subdivision desks working under the guidance of that day's dispatcher—in this program, they perform all facets of the job.

Train Dispatchers are required to pass a GCOR rules exam biannually with a score of 90 percent or higher. In addition, Train Dispatchers attend daily job briefings to ensure they understand any rule changes and any operational abnormalities.

Employees who inspect and maintain signal and train control devices and systems and employees who maintain or upgrade communication systems affecting rail operations. CP's Training Department delivers all signal and communication training programs. Signal Maintainer

trainees attend class in St. Paul, Minnesota where they learn in a training lab, which includes all of the necessary equipment with which a Signal Maintainer must be acquainted. As part of the training, Signal Maintainer trainees simulate trouble calls and make adjustments in an effort to build proficiency. Each employee receives ten weeks of training delivered in classrooms or on-site locations. This training covers numerous topics such as track circuitry, crossings, signalized control methods, and PTC. Employees also receive training specific to the equipment and control systems present on the territories where they will be working.

Job-specific training includes topics such as:

- crane operation;
- fall protection;
- software management control protocols;
- radio and wayside interface training;
- signal and communication standards;
- grade crossing maintenance; and
- trackside warning detectors.

To ensure continual compliance with safety and knowledge standards, CP has an internal efficiency testing system, which is customized for Signals and Communications employees to ensure targeted knowledge-based training.

Hazardous materials personnel, including information technology personnel who affect the transportation of hazardous materials. CP prioritizes training programs for personnel handling dangerous goods and hazardous materials. In the United States, employees covered by DOT's hazardous materials regulations receive hazardous materials training. This includes train crews, dispatchers, engineering maintenance of way employees, mechanical employees, and

customer service staff who produce waybills. This training covers general awareness, familiarization, function specific items, safety training, and rail security training.

Select field managers also attend the Transportation Technology Center in Pueblo, CO, to receive specialized hazardous materials training.

Supervisors of Employees. CP trains its craft supervisors on topics such as:

- job briefings;
- safety training;
- GCOR or OTS rules;
- hazardous materials, hazard communication, and emergency response;
- air brake and train handling;
- switching operations fatality analysis; and
- rail security awareness.

Supervisors must complete efficiency test training in order to conduct efficiency tests in the field. The training covers testing, manuals, and data entry. The training also includes a hands-on piece, which includes exposure to qualified managers entering test results into the compliance management program. Training sessions are followed by OJT in the field with an experienced manager. Final qualification is determined by an experienced manager and reported to the Manager of Rules on the appropriate document.

2. Training at KCS

KCS has a similarly robust set of training programs offered through sites in the United States and Mexico, as well as virtual options. All programs comply with regulatory requirements but also go above and beyond to make sure the workforce is adequately prepared for the array of

challenges they may face. KCS also submits its in-house safety training programs to the FRA under 49 C.F.R § 243.

KCS's catalog of training programs contains hundreds of courses, almost all of which are safety-related. KCS's Technical Training and Organizational Development Group is responsible for the development and delivery of training across KCS's network and reports to the Assistant Vice President of Organizational Development and Employee Relations.

Employees who perform train and engine service. KCS training staff provide formal classroom training, written examinations, and informal training on an ongoing basis to ensure safe operations and rules compliance. Training classes include: operating and safety rules, air brake and train handling, system timetable, system special instructions, emergency response, PTC, Conductor training, Locomotive Engineer training, and Remote Control Operator training.

Initial Locomotive Engineer training in the United States includes five weeks of classroom training and 17 weeks of training with an experienced engineer. Initial Hostler Helper training in Mexico consists of five weeks of classroom training and 12 weeks of training with an experienced Hostler Helper. Subsequent promotions to Hostler, Yard Engineer and Road Engineer require the same classroom and field training as the initial Hostler Helper course. Classroom training is provided at the TEaM training center in Shreveport or San Luis Potosi. All field training is conducted at the trainee's home location.

Initial training for Conductors in the United States includes four weeks of classroom training and 12 weeks of field training with an experienced Conductor. All new Yard Brakeman in Mexico receive five weeks of classroom training and 12 weeks of field training. Subsequent promotions to Yard Foreman, Road Brakeman and Conductor require the same classroom and field

training as the initial Yard Brakeman. Classroom training is provided at the TEaM Training Center in Shreveport or San Luis Potosi. All field training is conducted at the trainee's home location.

All promoted Conductors, Remote Control Operators, and Locomotive Engineers in the United States receive recertification training and testing within a period not to exceed 36 months as required by regulation.

Safety focus blitzes, operations testing, peer coaching and CBT all provide learning opportunities for transportation employees. Testing and observation continue to be an integral part of these programs.

Employees who inspect and maintain track and bridges. All KCS bridge inspectors must successfully complete formal bridge inspection training as provided by KCS. All Track Inspectors (Track Supervisors, Roadmasters and Division Engineers) on KCS are trained on FRA track inspection standards and receive OJT. The Track Inspectors attend FRA track inspection classes that are offered in-house by KCS instructors. Division Engineers provide oversight, records review, and coaching of inspectors to help ensure that high standards are maintained.

Below are some examples of training programs KCS provides to Engineering Department employees:

- GCOR, safety, lone worker, and roadway worker protection;
- fork truck, platforms, man lifts, and ladder safety;
- lockout / tag out procedures and electrical safety;
- crane safety, rigging, and fall protection;
- job briefings, hazard communication, and emergency preparedness;
- CPR / first aid and fire extinguisher training; and
- hazardous materials.

Employees who inspect, maintain and repair any type of on-track equipment, including locomotives, passenger cars, and freight cars of all types. New hire mechanical employees attend rules and safety training at the TEaM Training Center in Shreveport or San Luis Potosi. Based on a three-year topic rotation, the TEaM Training Center also delivers annual Occupational Safety and Health Administration ("OSHA") and OSHA refresher training.

All KCS Carmen must attend an apprentice program delivered by the Railroad Education Bureau ("REB") based in Omaha, NE. The apprentice training program contains 108 lessons, which must be completed within three years as a condition of employment. The apprentice training program complies with FRA regulations.

Locomotive employees at KCS also participate in a formal apprentice program for both Machinists and Electricians through REB. This program also contains 108 lessons, which must be completed within three years as a condition of employment, and complies with FRA regulations.

In order to meet the new training requirements of 49 C.F.R. § 243, all newly hired employees receive OJT checklist assignments, which are specific to each job to ensure they are meeting knowledge and skill levels required for those positions.

Mechanical employees returning to work after having been off for an extended period of time due to injury, illness, discipline or other reasons will also receive manager consultation with any required rules training and / or OJT prior to returning to full duty.

Below are some examples of training programs KCS provides to Mechanical employees:

- operating and safety rules / PTC;
- lockout / tag out procedures and electrical safety;
- emergency preparedness, job briefings, and hazard communication;

- CPR / first aid and fire extinguisher training;
- fall protection, crane safety, and rigging;
- fork truck safety, platforms, man lift, and ladder safety;
- Qualified Mechanical Inspector; and
- Locomotive Mover.

Dispatchers or Operators. New Train Dispatchers participate in a ten-section, 64-hour class which covers all aspects of dispatching and the Train Dispatch Manual. The course includes use of home study modules and as well as a Train Management and Dispatch System simulator for virtual real-world training and assessment. Each candidate is required to participate in on-the-job training under the direction of a qualified dispatcher, which runs for no less than 60 days. Additional training time may be allowed based on railroad assessment. Each week, Train Dispatchers are required to submit an evaluation form for student dispatchers to management.

During the training phase, and when possible, student dispatchers take road trips on the territories or districts for which they will have dispatching responsibility. Upon completion of each road trip, student dispatchers are required to submit a review of their findings to the supervisor.

Train Dispatchers are also required to attend and complete an annual rules class which covers rules related to GCOR, air brake and train handling, train dispatcher manual, hazardous materials, PTC, passenger train emergency preparedness, roadway worker rules, and safety rules. Each course is four to eight hours.

Employees who inspect and maintain signal and train control devices and systems and employees who maintain or upgrade communication systems affecting rail operations. Signal employees receive the same rules training as other Engineering Department employees as

identified above. All new employees also attend Signal Training School for a six-week training course. The course covers basic to advanced signaling. KCS suppliers also provide product-specific training as new products are approved and become available. Remedial training is also offered on a case-by-case basis. Employees and contractors who maintain or upgrade communications systems and equipment on or adjacent to the right-of-way are trained annually in OTS, as Roadway Workers, and Watchmen / Lookouts, and every other year on hazardous materials and GCOR. Changes to the operating rules are communicated through General Order, and all GCOR qualified personnel are required to have copies of all active and current General Orders in their possession prior to fouling track. New employees and contractors are prohibited from fouling the track until they have completed the necessary OTS and/or GCOR classes.

Hazardous materials personnel, including information technology personnel who affect the transportation of hazardous materials. Applicable KCS employees receive hazardous materials training at least once every three years. The course has been customized based on the area of responsibility and complies with the applicable federal regulatory requirements. Applicable Transportation, Engineering, and Mechanical Department employees are provided traditional classroom training and testing. Testing is an integral part of both classroom and CBT.

Supervisors of Employees. Supervisors are expected to attend training equivalent to the individuals under their supervision. In addition, supervisors will receive periodic Management Development Training. Management Development Training includes training in areas such as safety leadership, safety fundamentals, drugs and alcohol, time management, regulatory reporting, operations testing, and derailment prevention.

3. Safety Integration – Training

CP realizes the importance of training and is dedicated to applying the focus and attention necessary to ensure a seamless transition when CP and KCS are combined. Given the remarkable job creation projected as a result of the transaction, CP has analyzed the current estimated maximum training levels at both railroads. Collectively, CP and KCS provide initial training to approximately 540 new hires and re-certifies 2,225 employees each year.

As noted in Table 1 below, in the 36-month period following combination, the projected initial training requirement does not exceed 304 employees in any given year. This equates to only 56% of the average training counts provided by both railroads today. Additionally, it has been determined that each railroad will be able to manage peak training beyond the average initial training provided. For example, in 2021, CP alone is expected to deliver initial training to almost 500 employees, which is substantially higher than the expected initial training needs for CPKC in a typical year. This highlights CPKC's ability to accommodate increased training demands and maintain world-class training for all employees.

TABLE 1

CPKC JOB GROWTH PROJECTIONS

CPKC Job Growth Projections	Job Creation Counts		
	Year		
Role Description	**1**	**2**	**3**
Car Mechanical	28	35	47
Engineers	126	71	113
Locomotive Mechanics	10	10	0
Signals Maintainers	4	4	5
Track Maintainers	8	17	34
Trainmen	119	65	105
Total	295	202	304

To ensure continued safety, CPKC will also monitor staffing requirements and make adjustments to staffing, where necessary.

CPKC's training will continue unabated. Applicants expect the training centers located in St. Paul and Shreveport to remain open as their locations in the network will aid in efficient training across the combined system.

Immediately following the Control Date, CPKC will maintain separate training programs while KCS training staff are brought up to speed with CP training material and processes. CP and KCS each deliver quality training programs that meet or exceed applicable federal requirements. To ensure uniform training exists across the CPKC U.S. network, KCS will adopt CP's training programs and methodology. This will enable efficient internal and external oversight, as delivery will be the same at each location across the new property.

CPKC will also work to identify a comprehensive list of differences between CP and KCS safety and operating rules for employees in Train and Engine, Engineering, Dispatching, Mechanical, and Signal and Communication roles. Once the differences are appropriately assessed, a comprehensive package of rules will be developed and delivered to each KCS craft as needed.

Post-Control Date, CPKC intends to consolidate both Mechanical and Engineering qualification programs and using CP's programming and standards. CPKC programs will meet requirements set forth by the FRA. CPKC will use the FRA-approved CP training program for qualifying new Inspectors and also use a course to retrain existing track Inspectors every three years. This requalification system also meets the requirements set forth by the FRA.

To promote a positive training experience, CP will also assess technological differences that exist between each railroad. CP will look to expand use of its Smart Board system and other

CBT methodologies. These decisions will be based on varying needs and the overall information system review.

Train the trainer sessions will be conducted as needed to familiarize training staff with new content and ensure consistent delivery. CPKC will provide appropriate support and guidance to training staff while delivering new material. The timelines surrounding delivery will be based on the complexity of differences found during the review, training of KCS staff, and timelines associated with rulebook alignment.

C. OPERATING PRACTICES

1. Operating Rules

a) Operating Rules at CP

At CP, responsibility for operating rules and practices falls under the Corporate Risk umbrella. The Manager of Rules – U.S. ("MOR"), based in St. Paul, is responsible for developing, implementing, and enforcing operating rules, OTS Rules, Timetables and Special Instructions, and General Orders. The MOR function reports to the Director of Operations, Standards and Rules. The MOR also oversees CP's Operational Testing Program (pursuant to 49 C.F.R. § 217.9), which has been filed with the FRA. This program contains safety tests and efficiency tests, both of which are performed by field supervisors and documented in CP's Compliance Management system. If an employee fails these tests, this information is communicated to the relevant employee and CP undertakes corrective measures to ensure proper understanding. Progress is monitored closely and completion is compared against pre-defined quarterly standards. Minimum manager requirements are assigned by position and are detailed within CP's 49 C.F.R. § 217.9 Efficiency Testing program.

CP's Manager Operating Practices – U.S. ("MOP") is responsible for developing, implementing, and enforcing rules related to air brake and train handling, conductor and engineer certification, and remote control operations. This position works directly with ten designated supervisors of locomotive engineers, who are located across the United States and are strategically spaced to execute annual monitoring and other federally required activities. The MOP also provides oversight to CP's Random Inward Camera Audit program, which utilizes state-of-the-art in-cab audio, video, and event recorder systems to monitor operations rule compliance. Information regarding the certification of locomotive engineers and conductors is covered later in the Operating Practices section.

Both MOP and MOR positions work closely with the training center to ensure the delivery of current and relevant content and interact with employees in the field to provide uniform interpretation of rules.

CP uses timetables, tabular general bulletin orders, and other circulars to provide operating instructions to operations employees. CP makes updates to rulebooks by General Order or MOP notice. CP groups General Orders by letter. A-Orders are applicable to all employees and contain the following nine streams: Designated Clinics, Utility Radio Instructions Manual, Safety Manual Changes, Manuals in Effect, USHMI, PTC Instructions, Mechanical Safety Manual Changes, Engineering Safety Manual Changes, and Rule Changes. MOP Notices are divided into four streams: Remote Control Locomotive Changes, Technical Bulletins, Positive Train Control Operating Instructions, and General Operating Instructions ("GOI") Changes.

Rulebooks are available on CP-provided electronic devices through an application called "E-Binder." This application allows the Operating Practices and Rules team to deliver newly created or modified rules information to Operating Crews expeditiously.

CP utilizes the following rulebooks and documents to inform its employees, create a safe work environment, and give its employees the information that they need to remain compliant with federal regulations, operating rules, and safety rules:

- GCOR 8th Edition, effective April 1, 2020;
- GOI, effective September 15, 2013;
- Chicago Operating Rules Association Guide in the Chicago Terminal for movements over foreign line railroads;
- Timetable, dated March 25, 2021;
- U.S. Rulebook for Engineering Employees (OTS Manual) in compliance with 49 C.F.R. § 214, effective January 25, 2021;
- Train Dispatcher and Control Operator Manual, which supplements operating rules and procedures;
- Safety Rules and Recommended Practices/Safe Work Procedures for Intermodal, March 2014;
- Train & Engine Safety Rule Book, May 2013;
- Mechanical Safety Book, May 2017;
- Engineering Safety Book, January 2014;
- U.S. Hazardous Material Instructions for Rail, November 2015;
- General Managers Notices; and
- Superintendent Bulletins.

b) Operating Rules at KCS

The Operating Practices group at KCS helps ensure the highest degree of safety and productivity in day-to-day operations. The Operating Practices group is responsible for developing, implementing, and enforcing the Operating Rules, Safety Through Awareness and Responsibility ("STAR") Rules, Air Brake and Train Handling Rules, System Timetables, and System Special Instructions, as well as the Program of Operational Testing and the Locomotive Engineer Certification Program.

KCS has adopted a modified version of the GCOR, and also maintains its own safety rulebook, the STAR Rulebook, which addresses safety rules for all crafts. KCS maintains separate rulebooks for handling hazardous material, air brake and train handling, on-track safety and roadway worker rules, and maintenance of way and signal department rules. KCS's core and general safety rules include rules on air brake and train handling, train dispatch, hazmat, PTC, passenger train emergency preparedness, roadway worker rules, and general safety rules. Train-specific information and restrictions are communicated to the train and engine crews through General Track Bulletins. KCS timely issues General Orders, Circulars, or Bulletins to reflect changes in the GCOR or special instructions for essential operating instructions and information. These rulebooks are updated as necessary.

In compliance with 49 C.F.R. § 217, the KCS Program of Operational Testing ensures each manager has specific testing targets for each month to evaluate employee knowledge and application of the rules. The operational test results are entered into the Operational Testing System to monitor each employee's history and identify non-compliance trends for developing action plans as needed.

KCS utilizes the follow rulebooks and documents:

- Air Brake Systems and Train Handling Rules and Instructions, effective April 1, 2020;
- OTS and Roadway Worker Rules, effective April 1, 2020;
- Maintenance of Way and Signal Department Rules, effective April 1, 2020;
- Remote Control Operating Rules, effective April 1, 2020;
- Safety Rules, effective April 1, 2020;
- GCOR 8th Edition, effective April 1, 2020;
- System Special Instructions and Instructions for Handling Hazardous Materials No. 15, Effective April 1, 2020 and Updated through General Order No. 137 effective October 29, 2021;
- Train Dispatcher's Manual, Effective April 1, 2020 and updated through Corridor Manager Circular #26; and
- System Special Instructions and Instructions for Handling Hazardous Materials No. 15, effective April 1, 2020 and updated through General Order No. 137 effective October 29, 2021.

c) Safety Integration

Applicants expect that Operating Practices governance, operational testing programs, and related rulebook information will remain separate in the early stages of safety integration. CPKC expects to continue utilizing the GCOR rules in the United States, as it was in effect with regards to each railroad prior to the combination. This will minimize integration hurdles with respect to rulebook adoption.

Following the combination, CPKC will perform a comprehensive review of all other operating rules and practices to determine the best fit for the combined company. This review includes Air Brake and Train Handling, Remote Control Operations, Train Dispatcher instructions, System Timetables and Special Instructions, and hazardous materials, as well as the other rulebooks listed above. To ensure proper communication and efficient integration, CPKC's Operating Practices and Rules team will work closely with the Training Department team during an interdepartmental review to ensure that chosen rule sets and training programs are properly aligned. Once the comprehensive review is complete, CPKC will move toward one common set of Operating Rules and Practices.

Applicants anticipate that CPKC will retain each railroad's established Operational Testing program, at least in the near term, following the combination. Applicants anticipate amalgamating Operational Testing programs, with timing dependent on other integration decisions, such as information systems and organizational structure. CPKC will ensure that the consolidation of its Operational Testing program will align with federal requirements and be filed with the FRA as required. CPKC will also ensure that affected employees receive appropriate training.

CPKC will implement a standard format for the communication of rule changes across the United States. To accomplish this, CPKC will perform a review of the processes used by each railroad to update, modify, or otherwise communicate Operating Rules and Practices information to employees. Once complete, CPKC will provide the training necessary to bring employees up to speed on delivery processes and adopted rules.

Finally, CPKC will monitor rules performance throughout the integration process and make adjustments necessary to ensure safe operations. CPKC will carefully consider existing rules before making modifications, and will ensure that it is providing sufficient training to employees.

CPKC will also keep FRA apprised of rule consolidation plans, when necessary, and provide updated rulebooks when consolidation occurs.

2. Alcohol and Drug

a) Alcohol and Drug Program at CP

CP is committed to the safety and health of its employees and the general public and complying with DOT's drug and alcohol testing requirements, including the FRA's Control of Alcohol and Drug Use regulations set forth at 49 C.F.R. § 219. CP's Designated Employer Representative ("DER") manages CP's Federal and Company Regulated Drug and Alcohol Programs.

In accordance with applicable federal regulations, CP's drug and alcohol programs apply to individuals regulated by the federal hours of service laws, i.e., covered employees as defined at 49 C.F.R. § 219.5, as well as roadway workers, i.e., maintenance-of way employees as defined at 49 C.F.R. § 214.7.

Canadian Pacific prohibits:

- Alcohol and drug use as defined by 49 C.F.R. § 219.101
- Abuse of controlled substances as defined by 49 C.F.R. § 219.102

CP's established programs also require employees to submit to the following tests when appropriate:

- urine screens to detect the presence of marijuana, cocaine, opioids, phencyclidine, and amphetamines;
- breath alcohol tests to detect the unauthorized use of alcohol; and

- breath, urine, blood and tissue (fatality) testing after qualifying FRA post-accident events.

There are numerous situations when Federal drug and/or alcohol tests must be administered for the railroad to be in compliance with 49 C.F.R. § 219 and 49 C.F.R. § 40. Personnel performing these functions will be required to submit to a drug and/or alcohol test in the instances set forth, as follows:

- Pre-employment testing (49 C.F.R. Part 219, Subpart F)
- Reasonable suspicion testing (49 C.F.R. Part 219, Subpart D)
- Reasonable cause testing (49 C.F.R. Part 219, Subpart E) (CP performs federal reasonable cause testing when applicable)
- Post-accident testing (49 C.F.R. Part 219, Subpart C)
- Random testing (49 C.F.R. Part 219, Subpart G)
- Return to duty and follow-up testing (49 C.F.R. Part 40, Subpart O)

Supervisors responsible for regulated employees are trained in the signs and symptoms of alcohol and drug influence, intoxication, and misuse, and how to properly identify such circumstances, and in the determination of whether or not an accident or incident meets the qualifying criteria for post-accident toxicological testing contained in 49 C.F.R. Part 219, Subpart C . Training methods are both computer-based and instructor-led programs.

CP has developed and published educational materials, specifically designed for regulated employees, that clearly explain the requirements of 49 C.F.R. § 219.23. Each regulated employee will be given information concerning the available methods of intervening when an alcohol or controlled substance problem is suspected. This information is accessible to each regulated employee through the CP's intranet site and upon hire.

Additionally, resources and programs are available to any employee who is affected by an alcohol or substance use problem. CP's internal policies encourage employees to self-report alcohol and drug abuse problems, and to report employees who appear to be unsafe to work with due to the possible use or misuse of prohibited drugs and/or alcohol.

b) Alcohol and Drug Program at KCS

Like CP, KCS is committed to the safety and health of its employees and the general public and complying with DOT's drug and alcohol testing requirements, including the FRA's Control of Alcohol and Drug Use regulations set forth at 49 C.F.R. § 219. KCS's DER manages KCS's Federal and Company Regulated Drug and Alcohol Programs.

In accordance with applicable federal regulations and in line with CP's practices, KCS's drug and alcohol programs apply to individuals regulated by the federal hours of service laws and roadway workers.

KCS prohibits:

- Alcohol and drug use as defined by 49 C.F.R. § 219.101
- Abuse of controlled substances as defined by 49 C.F.R. § 219.102

KCS's established programs require employees to demonstrate their safety posture with:

- urine screens to detect the presence of marijuana, cocaine, opioids, phencyclidine, and amphetamines;
- breath alcohol tests to detect the unauthorized use of alcohol; and
- breath, urine, blood and tissue (fatality) testing after qualifying FRA post-accident events.

Personnel performing these functions will be required to submit to a drug and/or alcohol test in the instances described at 49 C.F.R. § 219 and 49 C.F.R. § 40, including:

- Pre-employment testing (49 C.F.R. Part 219, Subpart F)
- Reasonable suspicion testing (49 C.F.R. Part 219, Subpart D)
- Reasonable cause testing (49 C.F.R. Part 219, Subpart E) (KCS performs company cause testing)
- Post-accident testing (49 C.F.R. Part 219, Subpart C)
- Random testing (49 C.F.R. Part 219, Subpart G)
- Return to duty and follow-up testing (49 C.F.R. Part 40, Subpart O)

KCS trains its supervisory employees to identify the signs and symptoms of alcohol and drug influence, intoxication, and misuse. The training covers the physical, behavioral, speech and performance indicators of probable alcohol misuse and use of controlled substances. The training also includes information on the qualifying criteria for post-accident toxicological testing contained in 49 C.F.R. Part 219, Subpart C, and the role of the supervisor in post-accident collections described in 49 C.F.R. Part 219, Subpart C, Appendix C. This training is instructor-led.

KCS has developed and published educational materials, specifically designed for regulated employees, that clearly explain the requirements of 49 C.F.R. § 219, as well as the Company's policies and procedures for meeting those requirements. These educational materials are provided to each regulated employee hired for or transferred to a "regulated" position and will be accessible to each regulated employee in the future via the internet.

Additionally, each regulated person is provided access to resources concerning the misuse of alcohol or controlled substances and available methods of intervening when an alcohol or

controlled substance problem is suspected, including referral to an employee assistance program and/or referral to management personnel.

c) Safety Integration

Post-Control Date, CP's and KCS's drug and alcohol programs will operate independently. Recognizing the importance of having a combined program, CPKC will move towards consolidation of the two programs. To accomplish this, CPKC's drug and alcohol program management team will perform a full review of both programs to determine the best course for safe integration and continued compliance. CPKC will ensure all regulated service personnel, both supervisors and employees, are adequately trained on the applicable aspects of 49 C.F.R. § 219.11 and 49 C.F.R. § 219.23 so that CPKC's consolidated program and policy is fully compliant with federal regulations. CPKC will also test international crews when required. The timing for this integration depends on other integration timelines, such as the integration of the human resources department and other information systems.

3. Qualification and Certification of Locomotive Engineers and Conductors

a) Qualification and Certification at CP

49 C.F.R. Part 240. CP's Manager of Operating Practices – U.S. is responsible for developing, implementing, and maintaining operating practices required by 49 C.F.R. Part 240. The FRA prescribes minimum safety standards for eligibility, training, testing, certification, and monitoring of locomotive engineers to ensure that only qualified persons operate a locomotive or train. In response, CP has submitted to the FRA, and the FRA has approved, a comprehensive program which meets or exceeds each minimum FRA standard.

With respect to persons not previously certified, the Student Engineer Training Program is designed to run for a duration of up to 26 weeks. During this Program, classroom training must comprise a minimum of three-and-a-half weeks, and OJT must comprise a minimum of 12 weeks or 480 hours of throttle time, though this timeframe may be adjusted depending on experience. During classroom training, candidates are required to pass exams and simulator evaluations with a score of 90 percent or higher. During OJT, candidates receive a minimum of three evaluation rides with a Designated Supervisor of Locomotive Engineers ("DSLE").

Remote control operators receive a total of 80 hours of training in order to be certified. This consists of two days of classroom, two days of field training, one day of review and testing, and 40 hours of OJT. Each candidate must pass a final exam with a score of 90 percent or higher. Each candidate receives a skills performance evaluation administered by a Designated Supervisor of Remote Control Operators ("DSRCO").

Continuing education is provided for certified Locomotive Engineers and Remote Control Operators during each 36-month certification cycle to ensure these employees maintain the knowledge necessary to perform their duties. Recertification requires classroom training and passing a written exam with a passing score of 90 percent or higher.

CP requires that DSRCOs and DSLEs have at least two years of experience operating as a Locomotive Engineer or Remote Control Operator to be eligible for a supervisorial designation. Both designations require the employee to maintain yearly qualifications over the territory they supervise and to receive continuing education on an annual basis.

49 C.F.R. Part 242. CP's Manager of Operating Practices – U.S. is responsible for developing, implementing, and maintaining operating practices required by 49 C.F.R. Part 242. This federal regulation prescribes minimum safety standards for the eligibility, training, testing,

certification and monitoring to ensure that only persons who meet minimum federal standards serve as Conductors. CP has submitted a comprehensive program to the FRA, which the FRA has approved, and this program meets or exceeds each minimum FRA standard.

The new hire conductor program is designed to run for up to 23 weeks with a minimum of five weeks of classroom training. OJT training lasts up to 18 weeks, depending on the candidate's competence and work location. CP requires student conductors to complete rules exams and achieve a passing score of 90 percent or higher. Each candidate receives a minimum of three evaluation rides with a field placement coordinator or manager to ensure their skills support certification.

Continuing education is provided for certified Conductors during each 36-month certification cycle to ensure these employees maintain the knowledge necessary to perform their duties. Recertification requires classroom training and passing a written exam with a passing score of 90 percent or higher.

b) Qualification and Certification at KCS

49 C.F.R. Part 240. KCS's Assistant Vice President ("AVP") Operating Practices is responsible for developing, implementing, and maintaining operating practices required by 49 C.F.R. Part 240. In regards to this requirement, KCS has submitted a comprehensive program to the FRA, which the FRA has approved that meets or exceeds each minimum FRA standard.

Student engineers, who are not previously certified, receive training and are tested in compliance with regulations. This training includes five weeks of classroom training and a minimum of 500 hours of locomotive operation under the direction of a certified engineer. To become certified, student engineers must successfully pass oral and written exams as well as a

simulator check ride. The student engineer must also pass a check ride over his/her territory as determined by a Road Foreman of Engines.

Remote Control Locomotive ("RCL") operators receive two-and-a-half days of classroom training, which includes exams. Students complete both classroom and field testing and are evaluated to ensure performance standards are met. The field training, classroom instructions, and final exams total 80 hours of training. RCL operators are also reviewed annually by a DSRCO to maintain their certification.

KCS also certifies, through an FRA approved program, some KCSM employees to allow trains to be operated on the approximately 9.2 miles in the United States between the Laredo International Rail Bridge and the Laredo Yard.

Continuing education is provided to Locomotive Engineers and Remote Control Operators during each 36-month certification cycle to ensure these employees maintain the knowledge necessary to perform their duties. Recertification requires classroom training and passage of a written exam with a score of 90 percent or higher.

KCS requires that DSCROs and DSLEs have at least two years of experience operating as a Locomotive Engineer or Remote Control Operator to be eligible for a supervisorial designation. Both designations require the employee to maintain yearly qualifications over the territory they supervise and require continuing education on an annual basis.

49 C.F.R. Part 242. KCS's AVP Operating Practices is responsible for developing, implementing, and maintaining practices required by 49 C.F.R. Part 242. In regards to this requirement, KCS submitted a comprehensive program to the FRA, which the FRA has approved as meeting or exceeding each minimum FRA standard.

New hire Conductors without previous experience are required to complete a minimum of 80 hours of classroom training, covering numerous subjects such as safety rules, operating rules, timetable instructions, applicable federal regulations, and hazardous materials. OJT is conducted with input from a qualified instructor and will last a minimum of 240 hours. Training occurs under the direct supervision of a person who possesses necessary operating experience.

Employees who have worked for the railroad in other capacities (i.e., who have had previous training on the railroad's operating and safety rules) may receive an abbreviated training curriculum based on the evaluation of their proficiency by a qualified instructor. These employees must also complete certain certification requirements.

Continuing education is provided to certified conductors during each 36-month certification cycle to ensure these employees maintain the knowledge necessary to perform their duties. Recertification requires classroom training and passing a written exam with a passing score of 90 percent or higher.

c) Safety Integration

For a period following the combination, Applicants expect that CPKC will continue operating with the above-referenced program submissions to the FRA. During this time, CPKC's Operating Practices team will perform a thorough review of 49 C.F.R. Part 240 and 49 C.F.R. Part 242. Timing will be dependent upon the integration efforts described above in Sections III.B (Training) and III.C.1 (Operating Rules), as each area has the potential to influence certification requirements of 49 C.F.R. Part 240 and C.F.R. Part 242. The consolidated filings will detail CPKC's certification practices and will meet or exceed applicable regulatory requirements. CPKC will obtain FRA approvals where required.

While this review is underway, CPKC's Operating Practices team will also perform a thorough review of 49 C.F.R. Part 240 and 49 C.F.R. Part 242. After this review is conducted, CPKC will generate a combined filing to meet the requirements of 49 C.F.R. Part 240 and 49 C.F.R. Part 242. The new submissions will cover certification practices for the newly formed railroad, and the plans will meet regulatory requirements and acquire federal approval where required. This will ensure full compliance with all applicable laws.

4. Hours of Service Laws

a) Hours of Service at CP

Train Crews. CP utilizes the Crew Management Application ("CMA") system to capture all time on duty, limbo time, and rest cycles of operations employees. The CMA operates in real-time, and employs the use of local rules and regulatory requirements to determine when to call employees to work. The CMA is capable of calling employees automatically and is integrated into other train management applications for managing and monitoring train and crew operations.

CP provides train line-up information to crews through Voice Response Units ("VRU") and internet interfaces, which employees can access from home. Information is updated in real-time as the data in CMA changes. Each system allows employees to identify their position in the pool or extra board, review applicable vacancies, and retrieve planned train schedules. Train accuracy information is recorded and is made available to appropriate stakeholders on an interactive dashboard. All Hours of Service ("HOS") violations are reported to the FRA as required by regulation.

Collective bargaining agreements lay out structured work and rest cycles, depending on assignment and work location. If collective bargaining agreements do not cover rest requirements, HOS requirements are still followed.

Signals and Communication. Signals employees record their HOS information in an electronic tracking system called RailDocs. The system contains an internal reporting functionality that provides visibility to hours worked and HOS violations. All HOS violations are reported to the FRA as required by regulation.

Dispatchers. Regularly assigned Train Dispatcher positions are bulletined and have assigned hours of work and rest each week. Train Dispatchers on the Extra Board are provided two days of rest per week and a minimum of eight hours of notice when called to work on their rest days. For known vacancies, if a regularly assigned Train Dispatcher is required to work on their scheduled rest day, every effort is made to advise them that they will have to work before the day starts.

In addition, the Operations Center Management team considers collective bargaining agreement requirements when building Train Dispatcher schedules. Train Dispatchers are required to enter their time into a Systems, Applications and Products ("SAP") system and hours are monitored by Operations Center management. All HOS violations are reported to the FRA as required by regulation.

b) Hours of Service at KCS

Train Crews. In the United States, KCS documents, monitors, and reports train crew HOS compliance electronically using Enterprise Workforce Management ("EWM"). EWM is a contracted service provided by PS Technology. This program aligns with FRA regulations and ensures compliance for events such as:

- final release cannot be more than three minutes in the future and the employee may not certify a final release time for a current tour of duty that is in the past;
- the employee must have on-duty status to certify any FRA record; and

- Federal rest will be based on a rolling 24-hour period instead of a calendar day.

Train Dispatchers. In the United States, KCS documents, monitors, and reports Train Dispatcher HOS compliance electronically, utilizing EWM. Requirements for accuracy and compliance of Train Dispatchers can be found in the Train Dispatchers manual.

Signals and Communications. In the United States, KCS documents, monitors, and reports Signalmen HOS compliance electronically, utilizing RailDocs, a Wabtec corporation contracted service. Requirements for accuracy and compliance of covered service Signal employees can be found in the Signal department's Rules Standards and Instructions ("RS&I") manual.

c) Safety Integration

CP and KCS are both subject to federal HOS requirements, and each railroad employs compliance processes that meet or exceed those federal requirements. Immediately following the combination, CPKC expects to maintain separate HOS tracking while evaluating available options for moving toward a single unified process. The evaluation will be conducted with insight and feedback from members of affected departments, namely Crew Management and Information Systems, which will steer the direction of HOS tracking at CPKC. CPKC will ensure that HOS integration occurs without disruption while maintaining compliance with applicable federal regulations.

D. MOTIVE POWER AND EQUIPMENT

1. Motive Power and Equipment at CP

CP utilizes eight major locomotive inspection and repair facilities across its network, one of which is located in the United States. The U.S. facility is located in St. Paul. At the St. Paul facility, Locomotive Mechanics, Electricians, and Laborers perform regular inspections,

maintenance, servicing, and repair of locomotives. CP ensures that all repairs comply with federal regulations and manufacturer warranty service agreements. Locomotives are delivered to the nearest facility when they require repairs or become due for scheduled inspections and maintenance.

CP maintains owned and leased freight cars at 20 locations across the network. Three of these locations, St. Paul, Bensenville, IL, and Davenport, IA, are located in the United States. Defective equipment identified en route is repaired by road trucks at designated repair locations filed with the FRA as required by 49 C.F.R § 232. Additionally, CP has other minor freight car and locomotive maintenance locations for U.S. branch lines where light repairs are performed.

Qualification standards for CP employees who inspect, maintain, or repair railroad freight or passenger cars and locomotive meet or exceed federal standards, and the applicable trainings and programs are described in detail above in Section III.B (Training). CP uses a combination of Designated Instructor-led classroom-based training, OJT, and CBT to qualify all mechanical employees who inspect, maintain, or repair locomotives or freight cars. Further, all mechanical car and locomotive employees receive instruction covering the GCOR, safety, and other duty specific rules and best practices.

2. Motive Power and Equipment at KCS

KCS utilizes two main locomotive maintenance facilities which are located in Shreveport and San Luis Potosi. Locomotives can reach either of these two shops within 48 hours of failure. In the United States, the majority of unscheduled repairs and scheduled work occurs at the Shreveport facility. KCS also maintains locomotive service tracks in various locations throughout its network in United States and Mexico. These locomotive service tracks can perform minor

running repairs and servicing such as fueling, sanding, daily inspections, and locomotive derailment response.

KCS has nine main car repair shop facilities in the United States where car repair and service work is performed. In addition, there are seven locations that are equipped with repair tracks, mobile wheel trucks, or some combination thereof. Together, these locations assist KCS in providing timely repair and service to on-track equipment. KCS ensures that all service and repair work complies with federal regulations.

Qualification standards for KCS employees who inspect, maintain, or repair railroad freight or passenger cars and locomotive meet or exceed federal standards, and the applicable trainings and programs are described in detail above in Section III.B (Training). For example, new hire mechanical employees attend rules and safety training at a KCS TEaM Training Center in either Shreveport or San Luis Potosi, and all KCS Carmen must attend an apprentice program delivered by the REB based in Omaha. Locomotive employees at KCS also participate in a formal apprentice program for both Machinists and Electricians through REB.

3. Safety Integration – Motive Power and Equipment

Following the combination, Applicants expect the mechanical facilities in St. Paul and Shreveport to remain the primary locations for locomotive maintenance. CPKC does not anticipate making any changes to mechanical repair locations within the first year following control of KCS. Once operations are integrated and established, CPKC will perform assessments, if necessary, to determine if any changes to network repair and service locations are needed. CPKC will consider equipment differences and intends to repair and service locomotives at all locations across the

combined system. Given the similarities that exist between the CP and KCS equipment that would be serviced on a combined system, Applicants do not anticipate any issues in this area.

Qualification standards for mechanical and locomotive personnel will remain separate for a period following the combination, though CPKC expects to adopt CP's qualification standards. To accomplish this, CPKC will perform a comprehensive review of qualification programs as described above in Section III.B (Training). Employees will be provided with the training necessary to account for any differences in the previous programs. The timelines associated with the adoption of CP practices will be dependent upon the training practice and rules review discussed above in Sections III.B (Training) and III.C (Operating Practices), as well as prioritization of other integration work in relation to safety impact.

E. SIGNAL AND TRAIN CONTROL

1. Signal and Train Control at CP

CP employs over 4,000 miles of CTC, Automatic Block Signal System ("ABS") as a method of train control across the system. Over 1,100 miles of this signaled track is located in the United States. CP's Minneapolis office manages train dispatching (CTC, ABS, Track Warrant Control ("TWC")) in the United States. The disaster recovery system is also located within the United States.

CP's signal system is based on FRA rules and requirements. It is comprised of wayside signals, train detection equipment, switch machines, electric locks, relay-based interlocking, vital microprocessors interlocking, and wayside detectors (i.e., high water, slide detectors, level crossing warning systems, communication systems, yard controllers, power systems and fiber optic systems). CP has implemented signal and communications equipment throughout its network, including approximately 3,242 total crossing warning systems (1,348 of which are

located in the United States, while the remaining 1,894 are located in Canada),[3] 4,251 total miles of CTC, 702 miles of ABS, and 4,943 miles of Occupancy Control System ("OCS") / TWC.

CP's signal system meets all FRA, vendor, and industry best practices and requirements. All vital signal equipment is compliant with the American Railway Engineering and Maintenance-Of-Way Association ("AREMA") standards. All signal systems are also designed, installed, commissioned and maintained in a manner that ensures compliance with CP's Redbook of Requirements and Standard Practices. The wiring of new signal equipment is completed by qualified staff internally and by third-party vendors. CP has a multi-year plan to upgrade aging signal equipment prior to end of lifecycle. In addition, CP has a Signals and Communication Wayside Reliability Lab where the testing and qualification of new signal equipment and technologies is performed.

All signal engineering is performed by qualified individuals using industry best practices. CP uses the regulatory testing compliance tool RailDocs to ensure equipment is maintained at applicable standards. Signal system reliability issues are managed by CP's engineering service desk, which is located at CP's Canadian headquarters. The engineering service desk tracks all system issues, and dispatches appropriate personnel to ensure all system failures are repaired. CP S&C field employees are Efficiency tested per FRA and CP standards**.** Furthermore, employees that are considered covered service employees under FRA regulations have their hours documented and monitored for compliance in the RailDocs Hours of Service system. CP also ensures all Federal Communications Commission requirements for radio licensing are followed.

---

[3] The Crossing Warning System numbers change frequently as crossing warning systems are added or removed from service.

CP PTC System. In accordance with U.S. regulations, CP implemented the Interoperable Electronic Train Management System ("I-ETMS") for its PTC system. PTC technology, in conjunction with existing train control systems, functions as an overlay to existing signal systems to prevent train-to-train collisions, over-speed derailments, incursions into work zones, and movements through an improperly lined main track switch in dark territory.

CP's PTC operations are based in its Minneapolis head office, both for Back Office System and dispatching functions. CP's PTC system has met all regulatory requirements and has been certified for mixed-mode service since December of 2020. In addition to its own 806 locomotives that are now PTC-equipped, CP also ensures compliancy by its tenant railroads. With an eye toward continuous improvement, CP is an active participant in numerous PTC committees, including AREMA Committee 39.

CP has successfully installed PTC on 24 subdivisions with over 2,100 miles of PTC track, and has equipped over 800 locomotives. CP identified a PTC test subdivision in 2012 and developed a plan to equip the subdivision with PTC, perform PTC locomotive certifications, and perform PTC revenue demonstration runs. CP amended its PTC safety plan and submitted a mixed mode PTC safety plan to the FRA in June 2020. Since then, CP has received full certification from the FRA. CP has worked closely with the rail industry to ensure interoperability success with each of its tenant and host railways. CP continues to participate in various Association of American Railroads ("AAR") committees, the purpose of which is to enhance the PTC system to provide additional functionality and safety. CP typically operates more than 200 PTC train segments per day and over 1,800 PTC train miles per day.

CP has a 24/7 PTC help desk located in Calgary at its international headquarters. With the goal of keeping train operations efficient and safe, the help desk provides support, triages incidents

and monitors the system. In addition, CP has one designated PTC repair facility in the United States, which is located in St. Paul.

2. Signal and Train Control at KCS

KCS manages the signal and train control function across its United States and Mexican network from facilities in Shreveport and Monterrey, Mexico respectively. The communications function is managed within the information technology department at KCS. This group maintains a radio shop in Shreveport for its U.S. radios, Automatic Equipment Identification ("AEI") systems, and other wayside equipment.

The KCS network includes approximately 2,514 miles of CTC and 2,511 miles of TWC. Of the approximately 2,511 miles of TWC, about 1,163 miles are equipped with Broken Rail Detection and 65 miles are equipped with ABS. KCS's communications infrastructure consists of a combination of leased and owned technologies, including fiber optic, microwave, data radio, and copper circuits. KCS uses a combination of owned and leased facilities to ensure a comprehensive critical communications function. The KCS signals and communications network includes 313 radio base stations (132 of which are in the United States, 181 of which are in Mexico), approximately 1,600 automatic highway grade crossing warning systems, 1,220 power switches, and 160 miles of KCSM-owned fiber along the right-of-way. The fiber along the KCSR right-of-way is not owned or used by KCS. KCS has a multi-year plan to upgrade signal equipment prior to end of lifecycle.

KCS maintains centralized CIDs in Kansas City and Monterrey for S&C incident reporting, including any signal outages for which it needs to dispatch S&C personnel. KCS has a network of approximately 351 wayside inspection systems along its lines in the United States and Mexico, consisting of integrated Wheel Impact Load Detectors, Hot Box Detectors, and Dragging

Equipment Detectors. To enable the proactive identification of any potentially emerging problems, alarm condition information is immediately conveyed to train crews, using radio talkers, and to a central network computer.

KCS utilizes other electronic detection systems as part of its safety technology, including highway grade crossing power monitoring in high-risk areas along with bridge strike, and high water alarm detectors integrated into the PTC systems where deployed.

KCS Signal RS&I describe in detail the processes and procedures necessary to perform the inspections and tests mandated by the FRA. KCS has implemented electronic documentation and scheduling of tests, using laptop computers.

As noted above in Section III.B (Training), KCS signals personnel receive training compliant with 49 C.F.R. Part 243. New hires (assistant signalmen) attend signals training school at FRA-accredited Signal Training Solutions in Grain Valley, MO prior to OJT, development, and certification. Rail tasker software is used to track the progress and qualifications of employees who receive annual or biannual refresher trainings common to all of the engineering department functions on conventional safety, GCOR (biannual), track safety, and roadway worker protection.

KCS PTC System. The FRA approved and certified KCS's Mixed PTC system in July 2021. Like CP, KCS uses the I-ETMS PTC system developed by Wabtec Railway Electronics ("Wabtec"). It operates in conjunction with the Wabtec Train Management Dispatch System ("TMDS") system that KCS uses for dispatch.

KCS's use of PTC has improved safety, achieved interoperability with its tenants, and satisfied the regulatory requirements. The goal of KCS is to deliver the highest quality technology solutions, building on the backbone that enables PTC. KCS is advancing a number of opportunities to automate existing processes, streamline interdepartmental communications, upgrade outdated technology and components to leverage the latest functionality, and visualize its data across the company to drive business decisions. Some of the examples are listed below:

- Brake Event Analysis Tool
    - Through a machine learning model, KCS leverages logs pulled off the locomotive and trackside devices to automatically determine the root cause for locomotive braking events. This reduces the burden of log investigation for the Operations Center and the field. The information is used to continually improve the safety and reliability of PTC.
- Centralized Repository for PTC Component Logs and PTC System Logs
    - Provides a single hub for all KCS operations and PTC data that can be utilized to:
        - automate regulatory reporting requirements;
        - detect systematic problems spread across multiple applications/data sources; and
        - provide operations and field departments with visualizations of current and historical performance data so appropriate action can be taken.
- Automated System Error Monitoring/Alerting

- KCS utilizes several different monitoring platforms to automatically alert signals management when certain errors/events occur including:
  - wayside and locomotive issues;
  - federation links between KCS's partner railroads; and
  - server/Applications utilization and processing.

- Security
  - KCS is compliant with all security requirements for certificates making it secure on the Interoperable Train Control Messaging platform.
- Change Automation/Configuration Management Database ("CMDB") updates for PTC Locomotive Components
  - KCS manages locomotive PTC hardware upgrades by leveraging live locomotive data. This enables KCS to have records of component replacements, thus satisfying regulatory requirements while keeping its CMDB current with the latest installed hardware.
- Autonomous Change Detection – Track Assets
  - KCS has improved auditing and maintenance of track assets in the field, and is increasing safety by reducing the amount of time spent under track warrant authority. KCS has the ability to quickly generate artifact reports to the FRA. Autonomous change detection also has benefits outside of PTC assets with KCS's engineering, real estate, and environmental departments.

KCS remains active with all the industry committees to ensure that it stays in line with any and all interoperable requirements or future enhancements that impact the functionality of PTC.

3. Safety Integration – Signal and Train Control

Applicants expect that the CP and KCS portions of the CPKC system will continue to operate with independent systems on the Control Date. Members of CP's and KCS's signal and operations teams will lead the planning and implementation of the integration. In particular, this group will meet to determine which processes, standards, and systems are most appropriate for CPKC. The team is currently developing a detailed plan to integrate S&C design, maintenance, and construction activities, as well as systems and processes. This includes the integration of the PTC systems. Once the most suitable systems, processes, and standards are identified, this group will make a plan for the safe integration of these systems. This plan will include milestones or checkpoints to determine progress and maintain focus on safety during integration. The plan will also include considerations for testing prior to implementation and back-up procedures to ensure a safe and seamless operation. The plan will maintain compliance with all federal regulations. CPKC will meet with the FRA to ensure compliance with regulatory requirements.

CP will select a new site for data center operations in the United States to host computer systems, including PTC back office and dispatch systems. Current back office and dispatch systems will be migrated to the new site as part of the merger integration scope.

Applicants plan to integrate Signal and Train Control within three years of the Control Date. During the transition period, CPKC's S&C team will have access to all relevant regulatory compliance systems, such as the RailDocs regulatory database and HOS systems. In addition, the team will have access to applications that provide the health status of S&C systems, ensuring regulatory compliance and safe operations.

F. TRACK SAFETY STANDARDS AND BRIDGE STRUCTURES

1. Track Safety Standards and Bridge Structures at CP

Bridges and Structures. CP maintains policies and processes governing the inspection and maintenance of bridges, retaining walls, tunnels, and culverts. These are contained within CP's Engineering Red Book and BMP. CP's inspection of structures meets or exceeds FRA regulatory inspection frequency requirements, and CP employs risk-based protocols to increase the frequency of inspections of bridges and structures as deemed necessary.

Employees inspect bridge and structures' assets for any unusual conditions or changes since the asset's last inspection. If the initial inspection indicates any issues, such as those involving deteriorating timber or high water, railroad bridge engineers determine whether to perform a more detailed inspection or to increase the frequency of inspections over that asset. A more detailed inspection may include taking measurements, taking core samples on timber piles, monitoring the bridge for movement, measuring the thickness of bridge members, and inspecting underwater for evidence of scouring from high-velocity water movement.

CP utilizes special bridge inspection vehicles, which are hi-rail vehicles equipped with a moveable inspection platform. CP bridge inspectors use this platform to access difficult to reach areas of the structure to perform visual inspections as well as take any necessary measurements and photos. Employees are trained based on the requirements of the BMP and use checklists to record inspection results electronically in CP's SAM Program. Inspection records attach photographs where necessary and include condition ratings of individual structural components and overall bridge condition ratings that correlate to the safe load capacity of the structure being inspected.

Employees performing routine bridge inspections receive bridge inspection certification training, while structures specialists are generally either engineers or individuals who have, at minimum, a technical degree from a community college.

Track Infrastructure. CP maintains policies and processes governing the inspection and maintenance of track assets in a manner that meets or exceeds FRA regulations, as detailed in CP's Engineering Red Book. Visual Track inspection frequencies meet or exceed all required regulations. CP has standard protocols for additional special inspections in times of extreme temperatures (hot or cold), flooding, or severe weather.

CP records compliance with inspections frequencies and completed inspections in its electronic system of record, called DTN. This allows management to track and review all inspections and allows for all defects to be recorded, monitored, and closed with remedial actions noted. CP is currently upgrading and replacing DTN with TAM, which has been implemented in some CP territories.

Earthquake Response Protocol. CP's earthquake response protocol minimizes potential consequences of an earthquake on train operations by stopping or slowing rail traffic until the condition of the right-of-way can be assessed. This includes immediate notifications to the field and CP's Operations Center when set thresholds, based on magnitude and distance from the identified epicenter, are exceeded.

Weather Monitoring. CP subscribes to a weather watch service to assist in determining when train operations might be affected. CP has timetable special instructions to slow-order trains during very hot and very cold weather, as well as instructions for severe weather warnings.

Hotbox detectors are equipped with temperature sensors, and the crews are notified by the hotbox "talker" system of the local temperatures. Established procedures govern maximum train speeds during times of extreme hot or cold temperatures.

Track and Roadway Maintenance and Testing. CP owns and employs a fleet of sophisticated technology and testing vehicles to measure and analyze track conditions. The testing and data collected regarding infrastructure conditions are utilized to perform immediate maintenance actions and informs annual capital investment strategies. When geometry defects are identified by any of CP's testing vehicles, the location is Global Positioning System ("GPS") tagged, and employees can locate the exact position of any defect using hand-held GPS devices. In 2021, CP will complete approximate 180,000 miles of geometry testing on its network.

A summary of CP-owned geometry testing assets is provided below:

- one manned Heavy Geometry Testing consist (equipped with gauge restraint measurement system);
- three Autonomous Heavy Geometry Measurement System vehicles (instrumented boxcars operating in revenue service);
- three Heavy Geometry Inspection Vehicle truck (Hi-rail truck, also equipped with rail profile measurement);
- one Light Geometry Inspection Vehicle truck (with load axle and rail profile measurement); and
- three Light Geometry Inspection Vehicle trucks (geometry only).

Internal Rail Flaw Detection. CP utilizes ultrasonic test vehicles for rail flaw detection. CP's approach includes a mix of five owned vehicles operated by CP staff with additional vehicles used on a contract basis. CP performs rail flaw testing at frequencies well above the regulatory

requirements and anticipates completing 72,000 miles of testing in 2021. The Engineering Red Book includes requirements for rail flaw testing completed on maintenance rail.

Rail Grinding and Friction Management. CP uses preventative rail grinding and friction management techniques to control surface cracks before they become internal flaws and to improve the reliability of ultrasonic rail testing. Depending on tonnages carried, rails are re-profiled through grinding from one to four times annually in order to control wheel/rail contact stresses, eccentric loading, and vehicle steering. Each year CP grinds approximately 14,000 miles of track across its entire system.

Automated Tie Inspection. CP employs hi-rail mounted high-definition digital infrared 3-D imaging technology to inspect tie condition. This is a contract service that CP utilizes to validate planned tie renewal projects and to identify any regulatory defect issues.

Training and Qualifications. For information about training and qualifications standards for roadway workers, *see* above Section III (Training Programs).

2. Track Safety Standards and Bridge Structures at KCS

Bridges and Structures. KCS's engineering department has a director of bridges who oversees maintenance, inspections, and bridge construction with a team of approximately 125 craft and management employees in the United States and Mexico. KCS uses BIMS in the United States and Mexico as a repository for bridge inventory, inspection cycles, and rating conditions, which allows supervisors access to real time inspection and trending data. The maintenance of bridges is planned and conducted by incorporating conditions observed through the inspection process and by performing condition load ratings as required.

The inspection of bridges is conducted in conformity with the KCS Bridge Safety Program, which complies with 49 C.F.R. Part 237. In conformity with the KCS Bridge Safety Program,

inspections are performed when special circumstances such as earthquakes or floods warrant, and are in accordance with optimal railway engineering procedures. KCS bridge inspectors attend AREMA-sanctioned or-accredited bridge inspection training courses, or similar certified training offered through various universities.

KCS uses TOMS to monitor the repair of defects found during inspections for bridges in the United States. The TOMS is housed within the BIMS system and uses an electronic workflow to monitor the progress of repairs performed by KCS or contractor crews.

Track Infrastructure. The maintenance and inspection of KCS's roadway in the United States complies with 49 C.F.R. Part 213. The engineering department's track and roadway function is organized by divisions throughout KCS territory. In the United States, division engineers are based in Kendleton TX, Kansas City, and Shreveport. Roadmasters oversee all track maintenance and inspection functions and report to the division engineers. Track inspections are performed in accordance with 49 C.F.R. § 213.233, which establishes the inspection schedule based on the FRA class of track.

KCS uses technology to make data-driven decisions aimed at eliminating hazards and reducing risks. KCS uses technology to supplement visual inspections and deploys various test cars and state-of-the-art equipment to facilitate these activities. KCS uses a third-party test car to measure track geometry and rail in compliance with 49 C.F.R. Part 213 track safety standards, and is in the process of acquiring its own Automated Track Inspection Program Car to augment track inspections. All tracks are tested at least twice per year and are analyzed for surface conditions, elevation, gauge, alignment, and railhead profile.

KCS performs extensive ultrasonic rail testing for purposes of rail flaw detection, using state-of-the-art third-party and owned technologies. KCS meets all FRA requirements under 49

C.F.R. § 213.237, and has worked extensively with the FRA recently to develop and implement a continuous rail testing program at KCS in compliance with 49 C.F.R. Section 213.240, which has provided operational efficiencies in KCS's rail testing program.

Rail grinding is performed annually across KCS's U.S. and Mexican network, with an average of over 3,000 pass miles per year ground across both countries. Grinding optimizes rail head profile, and removes rail defects caused by rail surface conditions or fatigued metal.

Training. In addition to substantive training on bridge-and track-related maintenance and inspection procedures outlined in the training section of this SIP, KCS provides annual training for all roadway worker employees. Additional classroom training is provided on continuous welded rail procedures, track inspection standards, bridge worker fall protection, and boom truck/crane training. OJT of new hires is performed by qualified personnel and the operations testing programs described above in Section III.B (Training), ensure proficiency and safety in the tasks being performed.

3. Safety Integration – Track Safety Standards and Bridge Structure

Bridges and Structures. Following the Control Date, CPKC will continue operating with the bridges and structures plans currently in place. This approach will be maintained until a comprehensive review of assets and programs is completed. After the review is complete, CPKC will incorporate inspection and maintenance software and bridge and structure processes. After the CP/KCS combination, CP's Engineering Red Book will be used by the legacy KCS organization. Employees will be trained on the Engineering Red Book and BMP and the use of risk-based protocols to increase the inspections of bridges and structures as deemed necessary.

As discussed above, CP uses SAM to input and track all bridge inspections, assets, and data, which are stored inside SAP using a linear asset management system, while KCS uses BIMS

to input bridge inspections and TOMS to monitor the repair of defects found during inspections in the United States. Post-Control Date, CP's SAM program will be adopted by the KCS portion of the CPKC network and will replace the BIMS and TOMS systems KCS is currently utilizing. This will be done after details of all the structures assets are recorded, mapped, and inputted into SAM and training is complete. The linear asset management team will determine how structures asset details are integrated.

Track Infrastructure. Following the Control Date, CP and KCS will continue operating their legacy programs while a comprehensive review is conducted. CPKC will use this review to determine what training is required and how long it will take to implement. After the CP/KCS combination, CPKC expects to move from DTN to TAM and to adopt CP's Engineering Red Book. KCS will continue to follow the guidelines of 49 C.F.R. Part 213 until training on CP's Engineering Red Book can be completed.

CP and KCS both use DTN to ensure inspection compliance. CP will continue the rollout of TAM across the CP system as a replacement for DTN. After the CP/KCS combination, KCS will continue the use of DTN in both Mexico and the United States to ensure inspection compliance. Ultimately, TAM will be adopted by KCS once the mapping of assets is complete and all employees are trained. A timeline will be established for the rollout of TAM in KCS post-Control Date. The linear asset management team will be involved in helping to develop a timeline for full implementation.

Earthquake Response Protocol & Weather Monitoring. After the CP/KCS combination, CPKC will perform a comprehensive review of earthquake response protocols and weather monitoring, and will determine what practices will be used for CPKC. The CP protocol for warm

weather and cold weather inspections will be adopted by KCS as the Engineering Red Book is incorporated.

Track and Roadway Maintenance and Testing & Internal Rail Flaw Detection. CP and KCS will continue with the programs and inspections in place at the legacy railroad while evaluating the best way forward for CPKC. This will be accomplished by performing a comprehensive review of Track and Roadway Maintenance and Testing and internal flaw detection practices, while also determining what inspection frequencies and practices are the best fit for CPKC. The timeline for full implementation of CP's methodology of rail flaw testing and geometry testing will be heavily impacted by the availability of both assets and funding. The handling of defects will be based on CP's Engineering Red Book.

Training. CP and KCS have similar training requirements for all track and structures employees as it relates to GCOR and OTS. Both also have training on continuous welded rail procedures, track inspection standards, fall protection, and boom truck/crane training. All employees are required to take annual rules training. Following the Control Date, CPKC will perform a comprehensive analysis to determine the type of training that will be required and performed at the new company. As described above in Section III.B (Training), CP's training standards will be used to train all employees to ensure all required annual training is complete. CPKC will adopt CP's new-hire training program to ensure proper training, proficiency, and safety in tasks being performed.

G. HAZARDOUS MATERIALS

1. Hazardous Materials at CP

Managing the safe and reliable transportation of hazardous materials is an important priority at CP. To ensure the safe handling of hazardous materials, CP employs various training

programs, emergency procedures, and communication and notification systems. Additionally, CP conducts periodic inspections and tests to ensure its programs are operating effectively. CP offers comprehensive training to ensure that its employees are well equipped to handle hazardous materials safely. Additionally, CP has implemented various procedures and systems to appropriately respond to any type of hazardous materials incident, including emergency situations. To ensure that hazardous materials are transported safely, CP conducts internal inspections and audits of its systems.

In the United States, training is provided to all "hazmat employees" covered by DOT's Hazardous Materials Regulations, which includes train crews, dispatchers, engineering maintenance of way employees, mechanical employees, and customer service staff who produce waybills. Training is completed on a three-year cycle in compliance with DOT requirements. Training includes general awareness, familiarization, function specific items, safety training, and security training.

Certain employees receive additional training specific to their roles. For example, select Field Managers responsible for managing or responding to hazardous materials incidents are provided technical training and incident command training applicable to their roles. Specialized training and medical monitoring is provided to CP hazardous materials officers based on OSHA and National Fire Protection Association ("NFPA") standards. Lastly, as a member of the Bureau of Explosives of the AAR, CP employees participate in the annual specialized training programs offered by AAR.

CP is committed to maintaining a safe working environment for all its employees by preventing adverse health effects from occupational exposure to hazardous controlled products used in the workplace. All controlled products used in the workplace must be identified and

handled in accordance with CP's Hazcom[4] Procedures. CP's Health and Safety Procedure is aligned with and satisfies OSHA's Hazard Communication Standard, 29 C.F.R. § 1910.1200.

The CP Public Safety Communication Centre ("PSCC") is CP's primary 24/7 communications center for coordinating with first responders across CP's network. In the United States, the PSCC coordinates with local emergency responders to address and to properly communicate reported emergencies. Additionally, the 24/7 Minneapolis Operations Center is responsible for communicating with various federal and state authorities. Anyone, anywhere on CP's network, can call the PSCC's emergency number at any time to report railroad incidents such as blocked crossings, crossing collisions, signal problems, materials released, theft, vandalism, or trespassing. Once provided with such information, the CP response organization is collectively activated, as warranted, to aid in response actions or management activities. In the case of a derailment or a spill involving hazardous materials, specified individuals within the CP response organization are immediately notified and are responsible for initiating response activities, including the commitment of CP resources.

The CP response organization is comprised of a diverse array of multi-disciplinary personnel who are available to assist local communities with emergency planning and response. For example, Regional CP HazMat Officers coordinate with local fire chiefs, local and state agencies, environmental experts, and shippers' representatives to manage the dangerous commodity/hazardous materials response activities of the railroad. Where required, CP has an

---

[4] "Hazcom" refers to the Hazard Communication Standards required by OSHA regulations and other related U.S. legislation.

additional team of environmental officers who are available to manage longer-term site remediation.

Public transparency around the safe movement of hazardous materials on CP's network is an important component of CP's hazardous materials program. As part of its effort to increase transparency in this area, CP has a website dedicated to information regarding dangerous goods and hazardous materials. The website is regularly updated and contains important information for first responders and emergency planners and includes details on how to obtain the types and volumes of dangerous goods and hazardous materials moving through their respective jurisdiction.

The Integrated Contingency Plan (the "ICP" or the "Plan") is CP's all-encompassing emergency response plan for managing any emergency situation. The Plan applies to all operations involving CP property or employees and covers accidents and/or incidents that may present a potential hazard to people, property, or the environment.

The ICP is CP's primary response tool for any emergency on its network. The Plan was broadly constructed to allow CP operations to address a wide range of risks. Despite its breadth, the ICP is able to address each incident in a manner tailored to the specific needs of the event. Additionally, each major facility on CP's network has developed a written Emergency Action Plan to provide CP with a single guidance document for each applicable fixed facility operation.

In addition to the ICP, CP has prepared a Comprehensive Oil Spill Response Plan ("COSRP") in accordance with the U.S. Pipeline and Hazardous Materials Safety Administration's ("PHMSA") Final Rule for Oil Spill Response Plans ("OSRP") and Information Sharing for High-hazard Flammable Trains. A COSRP is required for any railroad with routes or route segments used to transport a single train transporting 20 or more loaded tank cars of liquid petroleum oil in

a continuous block or a single train carrying 35 or more loaded tank cars of liquid petroleum oil throughout the train.

To provide timely, 24-hour emergency response services, CP retained third-party contractors for the provision of specialized response equipment and personnel. By supplementing its in-house resources with third-party services and equipment, CP is well prepared to manage the scope of services listed in the ICP and to provide emergency response services throughout Canada and the United States.

To effectively mitigate a rail response involving hazardous materials and/or non-regulated commodities, a railroad must have the tools and equipment necessary for that particular incident. Further, this specialized equipment must be properly inspected and maintained so that it can be deployed when those assets are needed. Relying on outside resources to provide this equipment in a response-ready condition can lead to gaps or delays in having the necessary equipment on scene during an emergency. To provide better service to CP's customers, protect public safety, and ensure that the necessary equipment is available when it is needed, CP has invested in its own in-house response assets, including the following:

- **Transfer Trailers**: Large units containing the specialized fittings, pumps, transfer hoses and other equipment required to transfer a wide variety of commodities.
- **Fire Trailers**: Assets such as firefighting foam, pumps, hoses, fittings, and water bladder used for fighting fire.
- **Emergency Operations Posts**: Command posts to provide meeting/briefing location and enhanced communication capabilities.
- **Water Response Equipment**: Assets such as containment booms, ropes, buoys, anchoring systems, and deployment vessels used to contain spills in waterways.

- **Cold Water Ice Response**: Units equipped with ice suits, ropes, heaters, and tools to recover oil from frozen bodies of water.

All rail employees regularly interact with the employees of other railroads. By implementing a consistent set of rules and regulations, the safety of rail employees and communities in which CP operates is significantly enhanced. Those railroads, therefore, worked together to develop the USHMI in order to create standardized instructions for employees who transport hazardous materials.

CP was one of the railroads involved in developing the USHMI. These instructions cover all aspects of rail transportation of hazardous materials, including documentation, car inspection, placards and markings, switching, train placement, key trains, and emergency response. Train crews are trained in these instructions and are required to carry a copy while on duty. In addition, train crews and managers carry copies of the Emergency Response Guidebook while on duty. In addition, Key Trains are automatically identified in the header of the train consist lists, to ensure train crews are aware of the need for special train handling measures. Furthermore, if the train consist is modified during its route, train crews must determine their Key Train status.

CP employs numerous automated systems to monitor and document the shipment and transportation of hazardous materials. For example, Train and Yard Execution System ("TYES") is an inventory management system CP uses to track the movement of CP's fleet, build crew work orders, and generate train consists. CP also utilizes various systems and procedures to detect and report errors. For instance, CP's Car Location and Validation Service checks for the proper "in train" placement of hazardous materials. Additionally, train lists include automatically generated emergency response information for hazardous materials in the train.

As an additional component of its hazardous materials documentation program, CP utilizes an interface between the train consist program and CP's network of wayside AEI readers. The AEI readers scan tags affixed to each rail car to verify the location of the equipment and provide a listing of the order of all cars in the train. The information obtained from the AEI readers is automatically compared to the train consist, and if they do not match, a message is sent to TYES, which is monitored by both the Network Service Center ("NSC") and the field support personnel for resolution and train crew notification.

This documentation, including train consists, compressed waybills, and other documents related to hazardous materials shipments, is stored in CP's Train Documents system. Original shipping documents are also stored and cross-referenced in CP's imaging system. This information is readily accessible to CP employees for emergency response purposes, who can then provide the information to first responders in the event of an incident. Providing information related to the commodity involved in the incident and the placement (location) of hazardous materials in a train aids in the emergency response effort. In addition, the NSC obtains safety data sheet information from customers for non-regulated materials to first responders.

CP successfully utilizes existing databases to fulfill a number of regulatory reporting commitments and to share information related to hazardous materials. For example, CP leveraged an internal database to create a dataset of disparate elements particularly suited to the needs of CP's Hazmat Team's. In addition, CP is able to use the data to fulfil the hundreds of Hazardous Materials Commodity Flow studies to the communities through which CP operates, as required by AAR Circular No. OT-55 in the United States. The dataset is also used to report the weekly High Hazardous Flammable Train count to the State Emergency Response Commission and the Tribal Emergency Response Commissions of each state CP traverses, as required by the FAST Act. CP

also utilizes the dataset to determine which of its lines are designated as key routes per AAR Circular No. OT-55.

Finally, CP provides data to AskRail, a safety tool which gives emergency responders immediate access to accurate and timely data about railcar contents so that they can make informed decisions in the event of a rail emergency. Through its simple search function, AskRail gives emergency responders access to vital information, including the type of material that railcars are carrying, railway emergency contact information, and reference resources.

CP employs a variety of inspection practices and audit programs to ensure that hazardous materials are being transported safely. For example, two times per year, the NSC conducts audits of waybill data accuracy by reviewing one in four dangerous commodity waybills over a seven-day period. If any deficiencies are identified, they are reviewed with individual customers or employees. Corrective action is then implemented, and coaching is provided to improve future performance.

In addition, CP conducts a variety of efficiency tests to ensure satisfaction with the appropriate regulations and operating procedures. The U.S. efficiency testing program is designed to comply with 49 C.F.R. § 217.9. This program provides operational testing and inspections under the various operating conditions at CP, focusing on operating rules that relate to activities posing the greatest risk of accidents or other incidents. Additionally, CP conducts tests based on the requirements of the USHMI regarding required documentation, emergency response, train placement, switching, car inspection, placards/markings, and key trains.

Responsible Care® is the chemical industry's world-class environmental, health, safety, and security performance initiative, which CP uses to ensure that certain policies, practices, procedures, and inspections are in place. Developed as a voluntary initiative by member

companies of the Chemistry Industry Association of Canada and the ACC, Responsible Care partners commit to a set of guiding principles to significantly enhance employee safety, community health, and environmental sustainability in the locations in which they operate. CP is an active transportation service provider to the North American chemical industry and has long been a partner of the Responsible Care program since formally joining in 1998. In 2007, CP implemented the Responsible Care Management System ("RCMS"), an integrated, structured management system designed to improve company performance in the following key areas: community awareness and emergency response, security, distribution, employee health and safety, pollution prevention, and process and product safety. CP's RCMS system includes regular third-party verification of a member's management system and programs against the RCMS standard.[5]

2. Hazardous Materials at KCS

KCS is dedicated to working toward zero accidents, zero injuries, and zero harm to the environment and is committed to meeting the principles, practices, and obligations associated with membership in Responsible Care®. KCS has been an ACC – Responsible Care® Partner company since 1999. KCS employs a comprehensive data driven hazmat inspection program to ensure railroad hazmat transportation compliance. KCS routinely partners with local FRA hazmat inspectors to maximize corrective actions and to process improvements with its shippers.

KCS utilizes various methods to effectively communicate hazards to its employees, contractors, and emergency responders. For fixed facilities, KCS employs a written Hazard Communication Program, which inventories and describes all hazardous controlled products used

---

[5] The RCMS standard is a management system standard for environment, health, safety, and security ("EHS&S"). Pursuant to RCSM, an independent auditor evaluation is undertaken every three years to ensure CP has policies, practices, and procedures in place for EHS&S.

in the workplace. In addition to providing training, the KCSR Hazard Communication Program equips each applicable employee with the knowledge necessary to access and understand detailed safety and chemical information through Safety Data Sheets.

KCS provides the following training for all railroad hazmat employees: general awareness/familiarization, function-specific requirements, hazmat safety, and security. Employees are then tested on the subjects covered in each course. Employees are retrained on a three-year cycle in compliance with DOT requirements. *See* 49 C.F.R. § 172.704. Selected managers who are responsible for managing or responding to hazmat incidents are provided additional trainings, including technical level training, specialist level training, and incident commander level training. Specialized training and medical surveillance are also provided to first responders, pursuant to OSHA regulations (29 C.F.R. § 1910.120) and NFPA standards (NFPA 472).

Additionally, KCS provides applicable employees with hazmat security plan training as required under the security plan. KCS has also developed a centralized notification process, which directs all emergency notifications to the CIDs. In addition, emergency handling instructions are included with each train consist. Lastly, all applicable employees are required to carry the DOT Emergency Response Guide Book. Copies of the Bureau of Explosives Tariff No. BOE-6000 (49 C.F.R. Parts 105–107, 109, 110, 130, 171–180, 209, 397, and 1580) are available to applicable employees upon request.

KCS has also developed a comprehensive program to communicate, notify, and respond to any release or potential release (of any quantity) of hazmat, chemical, oil or an emergency condition, accident, incident, exposure, evacuation, road closure or fire resulting from or related to such materials. As part of its commitment to public transparency, KCS employs a process that

allows first responders and emergency planners to receive information on the types and volumes of dangerous goods and hazardous materials moving through their jurisdictions for training and planning purposes. All notifications are directed to the KCS CID, located in the Kansas City, Network Operations Center. The CID is KCS's primary communications center and is responsible for coordinating with first responders and communicating with various federal, state, and local authorities. The CID operates a 24-hour emergency number so that anyone can report railroad incidents anywhere on KCS's network. The dedicated and professional staff of the CID is trained to extract, capture, and document all incident information. All incident notifications are then logged directly into the KCS Service Interruption Database. This system provides for immediate incident documentation and event tracking.

Once the information is gathered, the CID then executes internal and external notifications pursuant to the procedures laid out in the applicable plan, including the KCS COSRP, the KCS Emergency Response Plan for Hazmat and Environmental Rail Transportation Incidents, and the Local Emergency Preparedness Plans ("LEPPs") for fixed facility operations. In addition to federal, state, local, and KCS internal notifications, the KCS Environmental and Hazardous Material Department is also informed. Once apprised of the situation, the KCS Environmental and Hazardous Material Department evaluates the incident and responds appropriately.

KCS has established a system-wide network of on-call responders, blending in-house resources with fully contracted, qualified third-party emergency responders. This response network blankets every track mile of the KCS system and provides for the immediate and timely response to any hazmat or environmental incident.

Additionally, KCS has developed LEPPs for individual yards and facilities that are tailored to the applicable KCS facility. LEPPs detail employee roles and responsibilities, communication systems, response equipment, evacuation procedures, and specific emergency response actions.

KCS is an active member of TransCAER, a chemical industry program. TransCAER provides information, training, and support outreach programs for communities through which hazardous materials are transported. KCS engages in outreach efforts with community leaders and responders regarding emergency procedures for responding to incidents involving hazmat. KCS collaborates closely with states, local communities, and first responders where hazardous materials are transported to ensure that emergency response plans are established in the event of an incident. KCS shares its technical expertise with local first responders to ensure preparedness and training.

To further improve communication standards regarding hazardous materials, KCS participated in the roll-out of AskRail. AskRail is an application that was launched in 2014 by North American Class I Railroads to provide participating first responders with immediate access to accurate and timely data about hazardous materials contained in rail equipment. KCS complies with all aspects of the Routing Assessments, per 49 C.F.R. § 172.820 requiring rail carriers to, among other things, compile annual data on certain shipments of explosives, poisonous inhalation hazard materials, and radioactive materials, and to use that information to analyze safety and security risks along rail routes, assess alternative routings, and select the safest and most secure practicable routes for the specified hazardous materials.

Finally, KCS Complies with AAR Circular No. OT-55's recommended operating practices. Accordingly, KCS has identified applicable Key Routes and Key Train operating practices, as outlined in the KCS Instructions for Handling Hazardous Materials. Technology

systems are incorporated into the KCS Management Control System ("MCS") to assist in compliance with AAR's OT-55.

3. Safety Integration – Hazardous Materials

Following the CP/KCS combination, Applicants anticipate that, following an initial transition period, the KCS portion of the CPKC system will adopt many of CP's programs and systems, as described below:

- *Organizational Structure*. Following the combination, existing KCS staff responsible for their Hazardous Materials Program and emergency response will be incorporated into CP's Hazardous Materials organizational structure. As part of the merger of additional staff, CPKC will review staffing levels to determine if there are sufficient resources to manage CP's Hazardous Materials program.
- *Training Programs*. Both CP and KCS provide quality hazardous materials-related training programs that meet or exceed federal requirements. To ensure consistency in the training programs across the United States, the KCS portion of the CPKC system will adopt the majority of CP's training programs and methodology. For a period following the combination, CPKC will maintain separate training programs while KCS training staff are transitioned to CP training material and processes. During the initial integration phase, employees of both CP and KCS will work together to identify a comprehensive list of differences between the Hazcom procedures, "hazmat employee" training, and specialized emergency response training at CP and KCS. CPKC will then assess whether any aspects of KCS's training programs will be retained in the uniform training program. A uniform training program, one in which the delivery is identical

at each location across the new property, will allow for efficient internal and external oversight.

- *Emergency Response Plan*. CP and KCS each have emergency response plans that meet or exceed federal requirements. For a period following the combination, CPKC will maintain separate emergency response plans, as employees of CP and KCS work together to identify the best way to integrate emergency response plans as part of their regular review process. To ensure that uniform emergency response planning exists across the United States, Applicants anticipate that applicable KCS emergency response plans will be incorporated into CP's Integrated Contingency Planning process.
- *Emergency Response Contractor Network*. KCS has an emergency response contractor network that is well positioned to provide emergency response capabilities. Following the combination, CPKC will incorporate KCS's emergency response third-party contract resources into CP's emergency response contractor network for the combined properties.
- *Emergency Response Assets*. KCS has a finite number of emergency response assets and relies primarily on contract resources for emergency response. Following the combination, Applicants anticipate that CPKC will incorporate all KCS-owned emergency response assets into CP's response network and CP's maintenance and inspection program for the combined CPKC network. CPKC will review the capabilities of KCS's third-party emergency response contractors and determine if additional resources are required.

- *U.S. Hazardous Materials Instructions for Rail*. Both CP and KCS have USHMI based on federal requirements that covers all aspects of rail transportation, including documentation, car inspection, placards and markings, switching, train placement, key trains and emergency response. Furthermore, train crews for both CP and KCS are trained in these instructions and are required to carry a copy while on duty. For a period following the combination, CPKC will maintain separate sets of USHMIs. During this time, CP and KCS staff will work together to identify a list of differences between the USHMI for CP and KCS. Once the differences in USHMIs are identified, CP and KCS staff will work together to develop a revised USHMI for the combined CPKC network, if necessary.
- *Hazardous Materials Documentation*. Applicants expect that, following the combination, CPKC will review KCS's existing systems and processes for hazardous materials documentation. For a period following the combination, CPKC will maintain separate hazardous materials documentation systems, while KCS staff are transitioned to CP hazardous material documentation systems and processes. In addition, once CP's and KCS's hazardous materials documentation systems are fully integrated, CP's waybilling audit program will include reviewing KCS waybill information.
- *Data Reporting Systems*. Both CP and KCS have data reporting systems to meet AAR Circular No. OT-55 and High Hazard Flammable train reporting requirements. Following the combination, CPKC will review KCS's existing systems and processes for hazardous materials regulatory reporting. For a period following the combination, CPKC will maintain two separate reporting systems for hazardous materials until all waybill and train data are integrated into a single system.

- *AskRail*. Applicants anticipate that, following the combination, KCS's emergency contact information in the AskRail application will be removed, and all queries entered into the app on KCS property will be directed to CP's emergency response contact information. Once CP's and KCS's data systems are integrated, CPKC will conduct additional testing of the AskRail application to ensure that it is reporting the correct information for hazardous materials car queries and train consist queries on the integrated rail network.
- *Efficiency Testing Programs*. Both CP and KCS have efficiency testing programs to evaluate compliance with operating requirements including the requirements of the USHMI. For a period following the combination, CPKC will maintain separate processes for efficiency testing. Applicants expect to integrate efficiency testing programs based on the integration plan as outlined in the Operating Rules section.
- *Responsible Care*. Following the combination, CPKC will review KCS's last third-party verification of its RCMS. Both CP and KCS have been through multiple verifications as part of their participation in the Responsible Care program. As a result, Applicants expect that KCS's operations will be incorporated into CP's next verification cycle following the combination.

H. DISPATCHING OPERATIONS

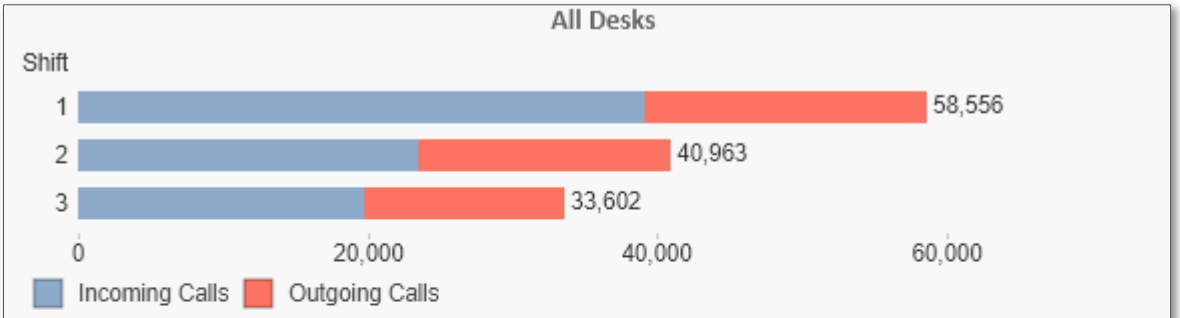
1. Dispatching Operations at CP

CP dispatches trains from an OC based in Minneapolis, MN. Territories dispatched from Minneapolis include Soo Line, D&H, DM&E, and CMQ. CP has a second OC located in Calgary, AB. CP has two Business Continuity Facilities ("BCFs"), one in St. Paul to support the U.S.

dispatching function and one in Calgary, AB to support the Canadian function. The BCFs are regularly tested, as described below in Section III.L (Information System Compatibility).

The U.S. East Timetable and U.S. West Timetable contain specific information on dispatching for all hosted trackage. CP dispatches all U.S. main track authority from the Minneapolis OC using the following systems and process:

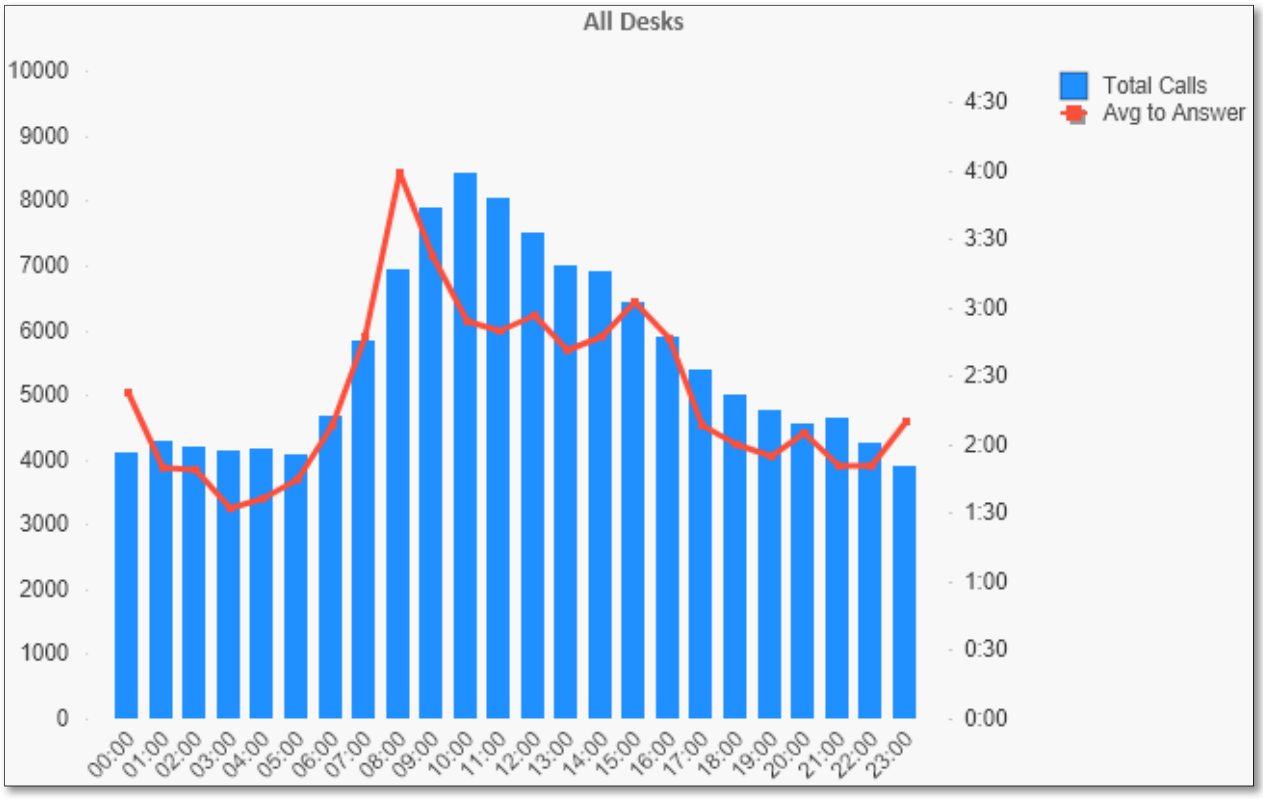
Track Bulletins. Train Dispatchers issue track bulletins to trains using the Tabular General Bulletin Orders ("TGBO") system. When a track bulletin is created, the TGBO system generates a protection list that advises the Train Dispatcher of all active trains that do not have the track bulletin. The TGBO system creates a list of restrictions for each active train in the order in which the train will encounter the restriction. TGBO are delivered electronically to train crews through automated and manual means.



Centralized Traffic Control. Dispatchers use the CTC signal control system, which provides control of signals, switches, bridges, and certain track side devices such as switch heaters. Dispatchers monitor and control the system through a graphic display of the territory. Train and track worker authorities are issued through a text interface that is represented on a graphic screen. Authority issuance involves a two-step process: (1) an initial rules check ensures only valid choices are presented, and (2) a secondary rules check confirms accuracy upon completion of the authority. Written authorities are issued by voice and are underscored word-by-word and digit-by-digit to ensure accuracy. Authorities remain in effect until cancelled or fulfilled.

Track Warrant Control. Train Dispatchers use the system OCS-2 for the issuance and protection of train movement and track worker authorities in a non-signaled TWC territory. OCS-2 verifies continuity among authorities and tracks the position of manual switches. OCS-2 also requires the underscoring of voiced authorities, word-by-word and digit-by-digit, to ensure

accuracy. Further, OCS-2 also provides a graphic representation of all authorities in effect on a given subdivision.



Minneapolis Operations Center TrakCom Dashboard. CP utilizes a workload analysis application referred to as the Minneapolis Operations Center TrakCom Dashboard. This application detects and archives all activity that occurs using the Dispatcher radio and phone systems. The categories of archived information include Dispatcher desk, Dispatcher shift, total calls, incoming calls, outgoing calls, time of call, duration of call, and the delay for Dispatcher to answer each call. Facility management uses customized filters to analyze activity ranges from years down to minutes of a shift, to identify trending workload changes and potential dispatcher territory adjustments for continued optimal customer service. Examples are shown in Tables 2 and 3 below.

TABLE 2

Desk	Total Calls	Avg Calls per Day	Incoming Calls	Outgoing Calls	Total Call Duration	Average Call Length	Average Time to Answer
Iowa	22,866	401	15,792	7,074	918:43:34	0:02:24	0:04:10
Minnesota	18,815	324	12,541	6,274	893:36:39	0:02:51	0:03:03
Portal	16,660	298	10,461	6,199	862:42:54	0:03:06	0:02:48
Wisconsin	16,318	291	9,420	6,898	975:39:25	0:03:36	0:01:33
D&H	15,144	270	9,972	5,172	574:12:42	0:02:16	0:02:14
Kansas City	14,393	257	8,325	6,068	596:01:25	0:02:29	0:01:26
River	8,381	195	5,641	2,740	306:57:52	0:02:12	0:02:01

Missouri	6,399	160	3,976	2,423	253:11:22	0:02:23	0:01:48
Elgin	5,400	93	1,970	3,430	1176:46:42	0:13:06	0:01:43

TABLE 3

2. Dispatching Operations at KCS

KCS has two dispatching centers for the managing and dispatching of trains across KCS's U.S. network: (1) the Network Operations Center in Kansas City and (2) the Spring Dispatch Center in Spring, TX. Kansas City dispatches lines from St. Louis, MO to Dequincy, LA including the Meridian Speedway, former Gateway Western Railway, and former Louisiana and Arkansas Railway. Spring, TX manages train movement from Dequincy, LA to the International Bridge in Laredo, TX.

Train Management and Dispatch System. The IT backbone of dispatch at KCS in the United States is the TMDS. All dispatch functions are performed through TMDS which controls signals, switches, bridges, and switch heaters, issuance of Track and Time, Track Warrants, and

Foul Time, creates General Track Bulletins ("GTBs"), applies required device blocks and restrictive tags, and delivers electronically Mandatory Directives to trains running with Positive Train Control.

KCS provides Dispatchers with detailed training of TMDS as detailed above in Section III.B (Training). KCS utilizes the Train Dispatcher's Manual for Dispatcher specific rules in addition to the GCOR. Specific territory instructions are provided to Dispatchers where applicable.

Centralized Traffic Control. Dispatch functions for CTC territory are done through TMDS and include: lining dual control switches, clearing CTC signals, issuing Track and Time, and applying required blocking devices. When a request is initiated, the track line segment flashes on the TMDS computer monitor for the Dispatcher to verify before executing.

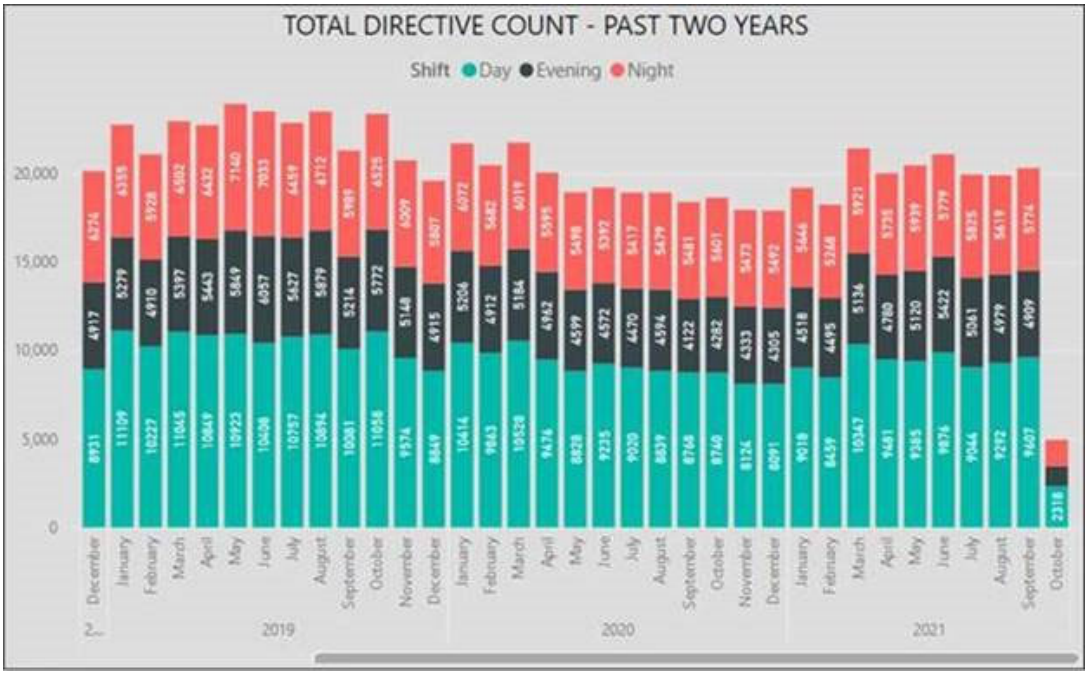
Track Warrant Control. Track Warrants for TWC territory are issued through TMDS. Dispatchers use a mouse to select the requested limits on the TMDS monitor, then the track line segment on the TMDS computer monitor will flash for verification. Once verification is complete, the Track Warrant form will populate for required information to be entered. After all fields in the Track Warrant form are complete, Dispatchers select the "Read" button, and a form is populated for Dispatchers to read information to field personnel. This form is in line format for easy reading and allows Dispatchers to follow along with field repeat. After a line is repeated correctly, Dispatchers click the line changing the color to green to ensure all information is repeated correctly. This same process is used when issuing Track and Time in CTC territory mentioned above.

General Track Bulletins. Train Dispatchers issue Track Bulletins to trains in the form of GTBs in TMDS. TMDS has a System Summary Screen that includes a GTB tab where all bulletins

and GTB's are documented for Dispatchers to view. When a Track Bulletin is created, TMDS generates a protection list that advises the Train Dispatcher of all trains that require the track bulletin. Before executing the bulletin, dispatchers have the ability to remove trains that have passed the location and those that will not traverse the location. After executing the bulletin, the bulletin and the GTB for each train requiring the bulletin will turn red on the System Summary screen to visually notify Dispatchers. At this time, Track Bulletins are delivered verbally and electronically to train crews.

Workload Analysis Tool. KCS utilizes the Workload Analysis Tool to understand certain aspects of Dispatcher workload. This tool utilizes data from the TMDS database and enables teams to assess the number of track authorities issued, GTBs created, and Track Tags and Device Blocks used. Information, as shown in Tables 4 and 5, can be sorted by year, month, console, shift, directive, and Dispatcher. Additionally, KCS management considers power planning, train traffic, duration of radio and phone conversations, and planning work performed with foreign line carriers, to determine an appropriate Dispatcher workload. Management makes adjustments, when necessary, based on the information explained above.

TABLE 4



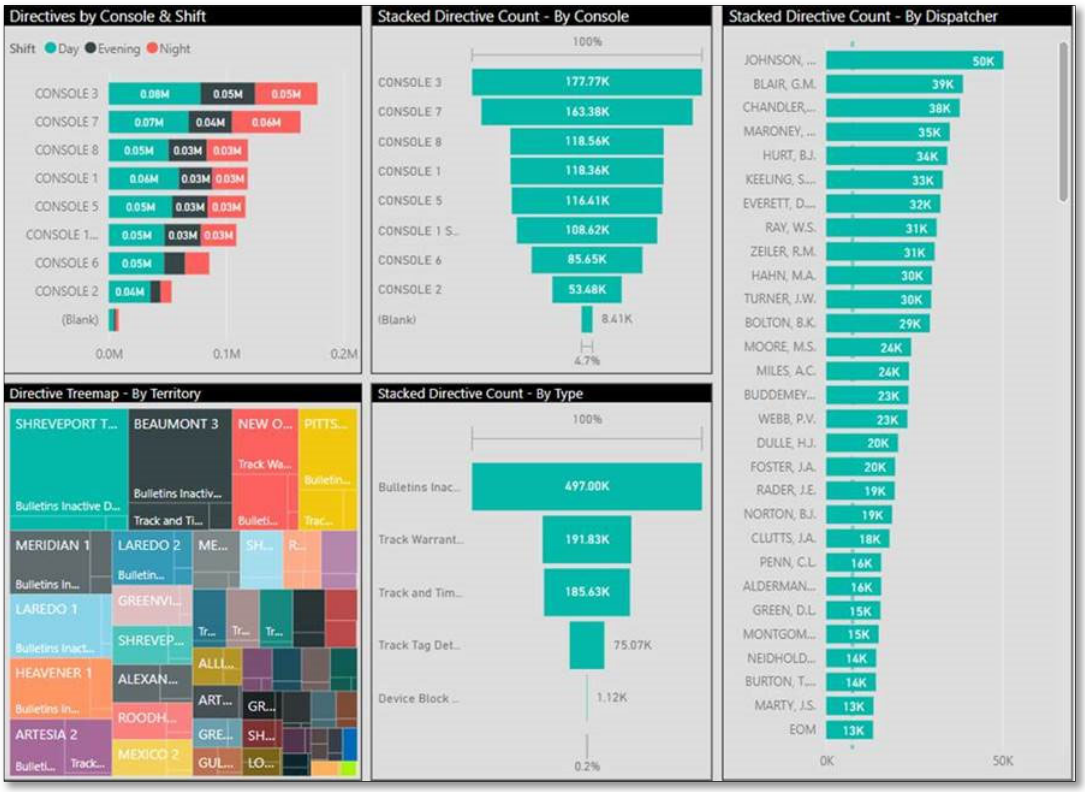


TABLE 5

3. Safety Integration – Dispatching Operations

CPKC will migrate the CP Minneapolis Dispatching Center to Kansas City and integrate it with the KCS Dispatching Center. While the relocation of employees is underway, CPKC will focus on the sustainment of safe operational practices in both Kansas City and Minneapolis. CPKC will utilize qualified Train Dispatchers to fill vacancies that may result from employee relocation.

Dispatch center management will be present in both facilities and provide continual operational oversight during each relocation of dispatched territory. Information Services and Train Control Departments will be available during each movement of Computer Aided Dispatch ("CAD") System equipment. This will provide the necessary quality control and rollback measures necessary for transition.

During early stages of integration, the former CP and KCS territories will continue operating separately, with their established train control systems: TMDS, CTC, and TWC, respectively. Additionally, Dispatcher workloads will continue to be assessed using the tools and processes listed in the railroad specific explanations listed above.

CPKC will carefully evaluate each independent train control system, focusing on operating rule requirements, operational safeguards, efficiencies, and the ability to accommodate the needs of the newly merged company and customers. Appropriate stakeholders in affected departments will conduct this review and establish implementation plans. Applicants anticipate that CPKC will complete the amalgamation of dispatching operations within three years of the Control Date.

Prior to any transition of train control systems, a thorough review of rules specific to KCS and CP, as outlined above in Section III.C.1 (Operating Rules), will take place to ensure differences in dispatching rules and procedures are addressed and mitigated. The Training Department will provide training or certification when changes require.

CPKC will ensure that train control changes are properly vetted and tested prior to implementation, and that no changes will be made unless safe operations can be maintained. CPKC will maintain compliance with all federally mandated requirements.

CPKC will create a process to monitor Dispatcher workloads once a control system is chosen and an integration plan is complete. CPKC will provide regular oversight to Dispatcher workload and make adjustments when necessary. CPKC will ensure that the processes in place regarding Dispatcher workload maintain a safe and effective operation.

I. HIGHWAY-RAIL GRADE CROSSING SYSTEMS

1. Highway-Rail Grade Crossing at CP

CP is committed to the safety of citizens of the local communities in which it operates. CP teams work together around the clock to improve at-grade highway crossing safety. The CP Public Safety Communications Center ("PSCC") handles emergency calls 24 hours a day, 365 days a year, through calls placed to (800) 716-9132. CP has installed and maintains Emergency Notification Signs ("ENS") at all at-grade crossings per federal regulations. ENS provide the emergency contact number and the crossing's FRA/DOT number to allow members of the public to call in an emergency, issue, or concern. Communication from the public to the PSCC allows CP to collect emergency crossing signal information in real time and to forward this information to CP Public Safety Officers, Engineering Teams, and the Signal & Communication Department. CP's vegetation management programs improve at-grade highway crossings equipped with passive warning signs and provide better approaching sight lines to motorists. CP utilizes constant

warning detection technology and regularly identifies locations where upgrades to crossing signals would be beneficial.

CP collaborates with local, state, and federal agencies as stakeholders in CP's Crossing Safety Program. States provide governance over grade crossings in their jurisdictions, and state highway agencies determine appropriate traffic control device requirements at public crossings. The Federal Highway Administration ("FHWA") is responsible for public grade crossing issues affecting highway safety, and the FRA regulates the aspects of grade crossing safety pertaining specifically to the railroads such as track safety, train-activated warning devices, and train safety. CP actively partners with the department of transportation in each state where it operates to obtain federal funding through the Railway-Highway Crossings Section 130 Program ("Section 130"), which provides funding for the elimination of hazards at railroad crossings. Each year, CP identifies potential crossings eligible for funding through Section 130, and for those crossings identified, CP submits Section 130 applications to the relevant states. Local road authorities also identify potential crossings eligible for funding, and CP partners with these local road authorities to submit Section 130 applications for those crossings identified. The Section 130 Program continues to be authorized and appropriated by Congress, most recently through the Infrastructure Investment and Jobs Act.

The DOT's FHWA publishes the Manual on Uniform Traffic Control Devices ("MUTCD") as the national standard for planning, designing, and applying traffic control devices, including all signage and warning devices at railroad crossings. The MUTCD requires uniformity of devices, signage, signals and movement markings to promote safety for highway traffic and for users of railroad crossings. CP's signage and warning devices at crossings are compliant with the MUTCD standards.

CP also actively works with road authorities and government agencies to identify and negotiate crossing closures and consolidation. CP's crossing closure efforts align with the FRA and DOT's goal of reducing the number of at-grade crossings, both public and private, through consolidation, elimination, and grade separation.

CP strives to avoid blocking or obstructing highway-rail crossing systems with trains, locomotives, railroad cars, or other pieces of rolling stock equipment through operational planning, controlled train meets, and dedicated operating rules. Additionally, CP devotes appropriate resources to manage service interruptions, which can help to reduce the duration of any obstruction.

CP actively updates the FRA/DOT crossing database per federal regulations, which includes regular reviews and updates to grade crossing data to ensure accuracy of the database. CP monitors the database to ensure each crossing is updated at least every three years.

CP supports the Operation Lifesaver, Inc. ("Operation Lifesaver") national organization as well as organizational chapters in all states where it operates. Operation Lifesaver presenters train the CP Police Service ("CPPS") officers. CP has representatives on the Operation Lifesaver National Advisory Committee as well as on the Operation Lifesaver Board of Directors. CPPS delivers hundreds of presentations every year to schools, community groups, boys and girls clubs, recreational groups such as snowmobile and ATV clubs, municipal and provincial police agencies, school bus drivers, and truck drivers. In 2020, CPPS made 709 Operation Lifesaver presentations and 453 joint force operations presentations to public groups to raise awareness about trespass and grade-crossing safety. CP has a number of Safety & Security Outreach programs to enhance public awareness—these programs include first responder and law enforcement agency training, as well as 1-800 Safe Passage and Operation Lifesaver training, national programs that educate members

of the public about the potential dangers and penalties related to trespassing on railway Rights-of-ways and disobeying railway crossing warning signs and signals. Along with Operation Lifesaver, CPPS creates fact sheets and educational information about trespassing issues, which it distributes to the public.

2. Highway-Rail Grade Crossing at KCS

KCS has been successful in reducing crossing collisions on its system. KCS employs a full-time public safety director, has more than 47 KCS Operation Lifesaver Authorized Volunteers, and trains law enforcement as well as educates the public. KCS works diligently to maintain and improve crossing conditions by maintaining the right-of-way and clearing vegetation from the four quadrants of the crossing. KCS places emphasis on the consolidation of at-grade crossings and since 2015 has closed 45 public and 40 private at-grade crossings. The latest corridor project completed was in New Roads, LA between 2019 and 2020. The project included building a connector road and two Tee turnarounds. This allowed the closure of five public crossings. The Louisiana Department of Transportation and Development also worked with KCS on this project and used Section 130 funding to install eight sets of flashers and gates. Vertical road approaches were also repaired, and new pavement markings and signage was installed.

Emergency contact numbers have been posted on the ENS at all public and private grade crossings for use in contacting the CID 24 hours per day, seven days per week with concerns regarding crossings or related questions. ENS allow motorists who become stalled or in any way obstruct railroad tracks to call and simply provide the information on the sign. ENS also include the DOT identification number that pinpoints the location for KCS's dispatching center and allows it to warn or stop trains in the affected area.

Grade crossing collision training is provided to local law enforcement officers to enhance their initial response and scene assessment, as well as their understanding of the available enforcement and investigative options. Firefighters and Emergency Medical Services responders are included in KCS's task-specific training—the Operation Lifesaver approved, Railroad Investigation and Safety Course. "No Trespassing" signs have been installed at bridges, crossings, and in areas where pedestrians commonly trespass on railroad property to try to prevent dangerous situations.

KCS also strives to avoid blocked or obstructed highway-rail crossing systems by trains, locomotives, railroad cars, or other pieces of rolling stock equipment through operational planning, controlled train meets, and dedicated operating rules. Additionally, KCS devotes appropriate resources to manage service interruptions which can help to reduce the duration of any obstruction.

3. Safety Integration – Highway-Rail Grade Crossing

CP and KCS have similar established practices and programs for managing and improving crossing safety. Both companies work closely with state and local road authorities and emergency responders to support grade crossing safety improvements. Following the Control Date, CPKC will continue to operate with separate crossing programs. CPKC will perform a comprehensive review of available programs and practices to determine the best fit for the combined company. This review will govern consolidated actions.

Based on an analysis by CP Service Design, CP has identified specific corridors across the future CPKC network where rail traffic is expected to increase. CPKC will coordinate with each state department of transportation to review the anticipated increased traffic and develop a strategy to review the adequacy of existing crossing warning devices. The states have overall oversight and accountability for the adequacy of crossing warning devices and will be critical partners in

this assessment. Each state handles oversight through different procedures and processes, and therefore, strategies will be established based on each state's requirements, and CPKC will work with those agencies to establish programs that implement modifications and improvements at crossings where deemed necessary.

Appendix 2 includes a list of crossings where an increase in rail traffic is anticipated through existing quiet zones.

Where changes to the rail infrastructure are proposed, such as adding a track through a crossing, CPKC will continue current practices—i.e., it will perform crossing diagnostics reviews with the local road authorities and state departments of transportation to evaluate the adequacy of the existing warning devices and consider if changes are required. All changes to warning devices, including signage and active devices, will be designed and installed per the MUTCD. CPKC will continue to strive to avoid blocking or obstructing highway-rail crossing systems with trains, locomotives, railroad cars, or other pieces of rolling stock equipment through a continuation of current practices, including operational planning, controlled train meets, and dedicated operating rules. Additionally, CPKC will continue to devote appropriate resources to manage service interruptions and to alleviate the durations of which a crossing is obstructed.

J. PERSONNEL STAFFING

Applicants anticipate minimal impact to workforce duties or responsibilities for employees covered by 49 C.F.R. § 244.13(j) as a result of changes to operations following the Control Date. As detailed in this section, Applicants do not anticipate the CP/KCS combination to result in any adverse changes to personnel staffing or a reduction in work force, and instead expects the combination to drive growth in employment across the entirety of the combined CPKC system.

The operational consolidations arising from the combination of these two railroads will entail only minor adjustments in work arrangements, limited to (1) the region centered on Kansas City, the one point where CP's and KCS's rail networks connect, and (2) as a result of the relocation of CP's U.S. headquarters from Minneapolis to Kansas City. CP anticipates that KCS's Kansas City headquarters will become the U.S. headquarters for CPKC, creating net-positive impacts on employment there, and that the Minneapolis headquarters will eventually close. The operational consolidations will yield some changes in the level of employment, with changes to safety personnel set forth in Table 6, CPKC Assignment Projections.

Table 6 shows that, within the enumerated categories in 49 C.F.R § 244.13(j), only 38 of the jobs will be affected. Specifically, 38 dispatchers currently working in Minneapolis will be transferred as a result of the headquarters consolidation, and no jobs will be abolished. For any employees affected by the consolidation, CP anticipates that, in accordance with the requirements of 49 U.S.C. § 11326(a), the Board will impose on this Transaction the employee protective conditions as set forth in *New York Dock Ry. – Control – Brooklyn Eastern Dist. Terminal*, 360 I.C.C. 60, *aff'd, New York Dock v. United States*, 609 F.2d 83 (2d Cir. 1979). In instances where Dispatchers choose not to transfer, CP will honor all protective conditions imposed by the STB.

As also shown in Table 6, a total of 801 jobs will be created in the three years following the CP/KCS combination. Applicants do not expect reductions in hazardous materials employees or managers responsible for the oversight of safety programs. Alignment of hazardous employees and oversight managers will be determined following other departmental reviews following the combination. CPKC will provide the necessary training for operating employees in the Consolidated Territory, the area encompassing train and engine, signal, car repair/maintenance, and engineering personnel on certain lines radiating from Kansas City.

CPKC will strive to ensure that no safety issues arise as a result of the CP/KCS combination, and specifically that none occur in the region centered on Kansas City or as a result of the relocation of CP's headquarters from Minneapolis to Kansas City. Given the projected job growth in safety-related positions, CPKC will, through its personnel staffing, continue to maintain and improve its safety operations. Further, to support the anticipated job growth, CPKC will ensure that all safety-related positions receive initial training and recertification training as set forth in Section VII.B Training. Therefore, because CPKC anticipates job growth in safety-related positions and is prepared to support that growth through proper safety-related trainings, Applicants do not expect the CP/KCS combination to result in any adverse impacts related to safety and personnel staffing.

TABLE 6

CPKC ASSIGNMENT PROJECTION

CPKC Assignment Projections		Jobs Created			Jobs Transferred			Jobs Abolished		
		Year			Year			Year		
Role Description	**Role Mapped to 49 C.F.R § 244.13(j)**	1	2	3	1	2	3	1	2	3
Car Mechanical	(5) Freight car and locomotive maintenance	28	35	47	0	0	0	0	0	0

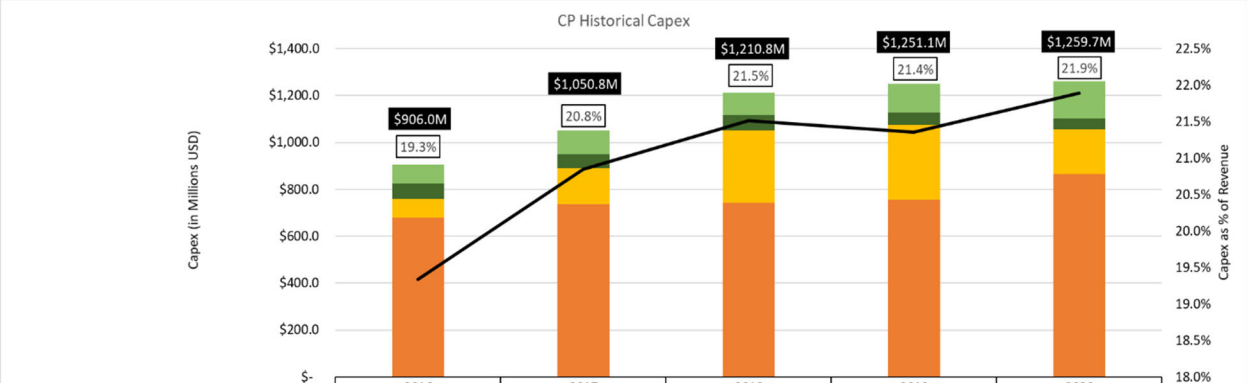
Train Dispatchers	(3) Dispatching operations	0	0	0	37	0	0	0	0	0
Trainmen	(1) Train and engine service (2) Yard and terminal service	119	65	105	0	0	0	0	0	0
Total		**295**	**202**	**304**	**38**	**0**	**0**	**0**	**0**	**0**



K. CAPITAL INVESTMENT

1. Capital Investment at CP

Each year, CP makes significant investments in capital programs in order to enhance the service, efficiency, and safety of its network. Capital is allocated based on the safety and expansion needs of the business, independent of the jurisdictions in which particular projects are located. As Figure 4 below shows, CP invested $1.26B in 2020 and $1.25B in 2019 in total capital expenditures.

FIGURE 4

CP CAPITAL INVESTMENTS

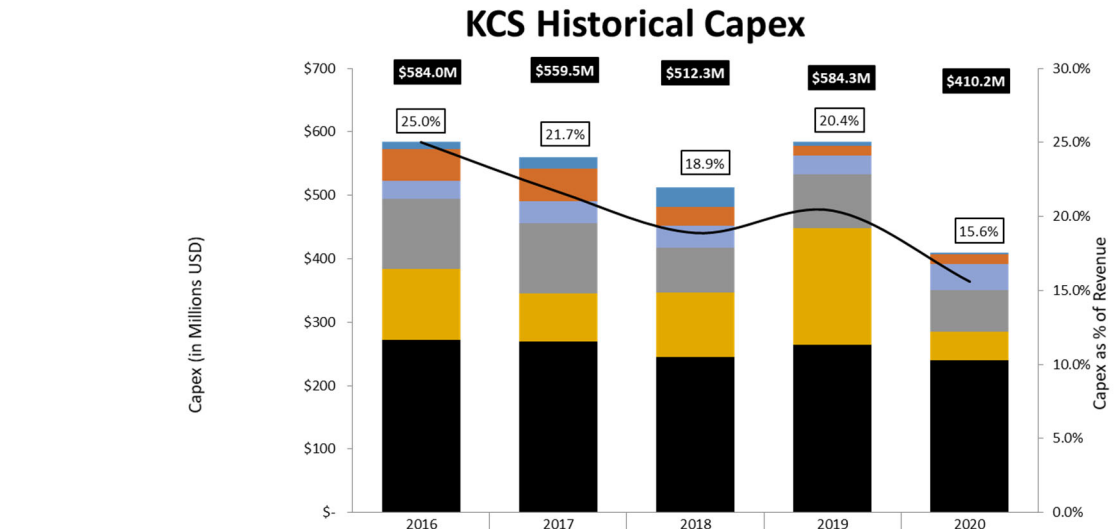
	2016	2017	2018	2019	2020
Buildings & Other	$81.2	$101.5	$93.8	$123.3	$156.0
Information Systems	$66.2	$60.0	$66.2	$52.6	$46.3
Rolling Stock and Containers	$78.9	$152.3	$308.5	$320.3	$191.04
Track and Roadway	$679.7	$736.9	$742.3	$754.9	$866.4
Total Capital Expenditures	$906.0	$1,050.8	$1,210.8	$1,251.1	$1,259.7
Capital Expenditures as a percentage of revenue	19.3%	20.8%	21.5%	21.4%	21.9%

The largest portion of CP's capital investment program is spent on track and roadway. The vast majority of CP's track and roadway investment is spent on the basic replacement and renewal of depleted assets, including rail, ties, and ballast, among other assets. CP also invests significant resources in rolling stock and containers. CP has already invested $1.107B in capital investments year to date through November 2021. Other key initiatives in the 2021 capital plan include:

- track upgrades on the newly acquired CMQ to improve the efficiency and safety of the operations;
- the modernization of 30-high horsepower locomotives to improve reliability and efficiency;
- the purchase of 1,400 high-capacity covered hopper cars to increase efficiency of the grain handling and transportation system; and
- investments in innovative wayside detectors, broken rail protection, and CTC to improve operational safety.

CP's continued and ongoing investments have allowed it to handle additional volume while also providing "room to grow." These investments have underpinned CP's recent growth. These investments show that CP is committed to improving the reliability and safety of its network while expanding its operations.

CP utilizes a wide variety of technology and testing vehicles to analyze track conditions in the variety of terrains in which it operates in order to determine its annual capital improvement program. CP collects data through visual track and bridge inspections, geometry test vehicles, ultrasonic rail testing vehicles, signals and communications testing, and other specialized inspection technologies. The high frequency with which CP tests and inspects its system provides CP with extensive data under differing conditions. These data are then analyzed to inform CP's short term maintenance projects as well as its medium-and long-term capital investment strategy. This approach ensures the reliability of the network, and has allowed CP to mitigate safety-related risks.



A list of CP federal and state funding grants is available in **Appendix 3** and a list of KCS grants is included below in Table 7. CP will continue to advance these projects, as will CPKC post-Control Date.

2. Capital Investment at KCS

KCS strongly believes in investing in its core business. A sufficient line of road and terminal capacity, ample assets, such as locomotives and equipment, and a solid infrastructure are foundational to the operation of a successful railroad. KCS allocates capital spending based on system-wide project needs, without regard to the jurisdiction in which the work happens to be located. As illustrated in Figure 5 below, over the past five years, KCS has invested in such foundational programs, including over $1.8 billion in roadway (infrastructure) and equipment, and $440 million in capacity enhancements to promote service levels for customers and to achieve growth opportunities. Over the past five years, KCS has allocated 20 percent of revenue to invest back into its core business.

FIGURE 5

KCS CAPITAL INVESTMENTS

	2016	2017	2018	2019	2020
Other	11.1	17.7	31.3	6.5	3.3
Positive train control	49.6	51.7	28.9	15.5	15.9
Information technology	29.3	33.7	35.4	29.8	40.6
Capacity	109.6	111.4	69.8	84.8	65.4
Locomotives and freight cars	112.6	75.7	101.2	182.8	45.2
Roadway capital program	271.8	269.3	245.7	264.9	239.8
Total capital expenditures (accrual basis)	584.0	559.5	512.3	584.3	410.2
Capital Expenditures as a percentage of revenue	25.0%	21.7%	18.9%	20.4%	15.6%

Additionally, ongoing investments in KCS's information systems, including operating systems, data analytics functionality, and customer facing systems, are enabling improvements in efficient network operations.

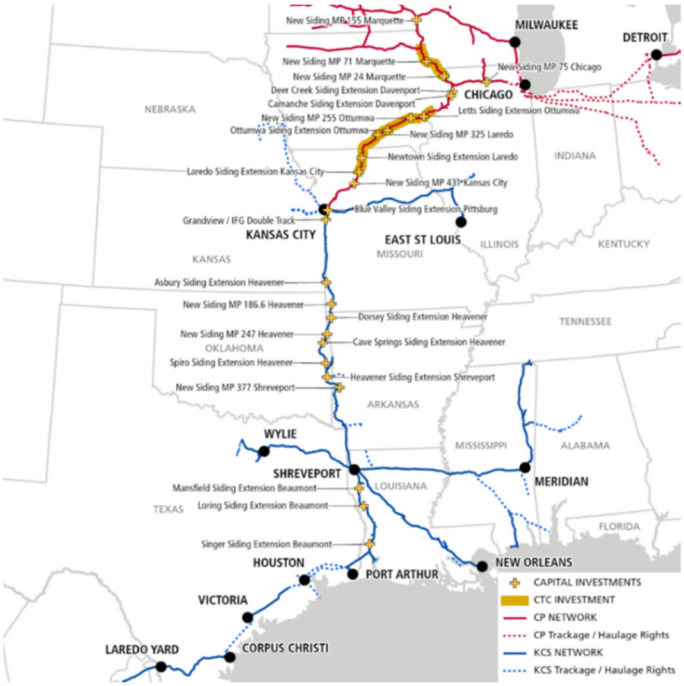
As set forth in Table 7 below, KCS has two active grant programs: (1) the 2015 FRA Railroad Safety Grants for the Safe Transportation of Energy Products by Rail Program ("STEP") LADOT and (2) the 2020 Consolidated Rail Infrastructure and Safety Improvements ("CRISI") Grant. The 2015 FRA STEP Grant will improve the safety of railroad crossings in high-traffic areas in Louisiana. In order to reduce the potential for grade crossing collisions, the 2020 CRISI Grant will (1) add gates, signals, and predictive controllers to approximately 20 crossings and aging gates, (2) replace four crossings, and (3) close four crossings with low roadway traffic

volumes. KCS remains committed to these projects. CP intends to continue to work on these projects, as does CPKC post-Control Date.

TABLE 7

KCS' ACTIVE GRANT PROGRAMS

Grants Awarded	Project Location	Total Project Amount	RR Contribution
2015 FRA Step Grant	Baton Rouge, Louisiana on the KCSR's New Orleans Subdivision between Mile Post 788 and Mile Post 794	$2,920,269.30	$656,053.86
2020 CRISI Grant	Beaumont Subdivision between Frierson and Starks, Louisiana	Approximately $7,898,900	Approximately $3,949,450



3. Safety Integration – Capital Investment

CPKC will continue steady state levels of investment in maintenance, safety, and technology. CPKC will continue CP's proactive approach to maintenance by continually testing and analyzing track conditions. Similarly, Applicants expect that CPKC will maintain similar levels of maintenance spending, thereby mitigating safety-related risks.

In addition, to integrate KCS and CP and to support the projected growth in traffic, as well as to improve service, CPKC will make significant investments in line infrastructure to support new north-south rail capacity in this corridor. To determine the location, type, and scope of each specific infrastructure investment, detailed capacity modeling was performed. Based on this analysis, CPKC plans to spend a total of $276 million in the first three years on new infrastructure ($157.6 million on CP lines north of Kansas City and $118.8 million on KCS lines between Beaumont and Kansas City). The new investments in CPKC's core North-South Corridor between Louisiana and the Upper Midwest via Kansas City are depicted in Figure 6 below.

FIGURE 6

TRANSACTION-RELATED INVESTMENTS IN CAPACITY AND SAFETY

In particular, CPKC will add double track, add and extend sidings, and install CTC signaling systems on the core CPKC North-South corridor lines between Louisiana and St. Paul/Chicago. These capital investments will expand capacity, improve safety, and ultimately, transform the North-South lines on the combined system into a more efficient and higher-capacity network. CPKC expects that the capital investments described above will be completed within three years of the Control Date.

Given the traffic volumes resulting from the transaction and the rail capacity needed to support the expected growth, Applicants identified 26 locations in the United States to add or extend sidings or add double track. CPKC will also add CTC signaling systems in three previously "dark" territories to improve capacity, operating efficiency, and safety. Additional details regarding the planned infrastructure investments can also be found in Table 8 below.

TABLE 8

TRANSACTION-RELATED CAPITAL PROJECTS

Subdivision	Location	Type	Segment	Estimated Total ($ USD)
Chicago	MP 75	New Siding	Randall Rd - Kittredge	8.47M
Marquette	96 Miles	CTC	Sabula Jct. to Marquette	15.06M
Marquette	MP155 (Brownsville)	New siding	River Jct - Kains	13.31M
Marquette	MP71	New siding	Eckards - Edmore	15.40M
Marquette	MP24	New siding	Dubuque - Green Island	12.42M
Davenport	Deer Creek	Siding Extension	Green Island - Camanche	12.66M
Davenport	Camanche	Siding Extension	Camanche - Nahant	1.95M
Ottumwa	62 Miles	CTC	CTC Subdivision	13.39M
Ottumwa	Letts	Siding Extension	Letts - Nahant	1.31M
Ottumwa	MP 255	New siding	Letts - Ottumwa	9.49M
Laredo	102 Miles	CTC	CTC Subdivision	24.18M
Laredo	Ottumwa	Siding Extension	Ottumwa	2.11M
Laredo	Moravia	New siding	Ottumwa - Newtown	9.84M
Laredo	Newtown	Siding Extension	Laredo - Ottumwa	3.06M
Kansas City	Laredo	Siding Extension	Polo - Newtown	3.70M
Kansas City	MP 431	New siding	Laredo - Polo	11.21M
CP Total				157.56M
Pittsburg	Blue Valley (MP 8.1)	Siding Extension	Blue Valley	30.13M
Pittsburg	Grandview/IFG (MP 28.5)	Double track	Blue Valley – Grandview	12.81M
Heavener	Asbury (MP 140.4)	Siding Extension	Asbury	6.14M
Heavener	MP 186.6	New siding	McElhany - Noel	12.08M
Heavener	Dorsey (MP 214.2)	Siding Extension	Dorsey - Gentry	2.77M
Heavener	MP 247	New Siding	Watts - Stilwell	11.28M

Beaumont	Singer (MP 705.1)	Siding Extension	Neame - Singer	4.63M
KCSR Total				**118.82M**
Grand Total				**276.39M**

Execution of these investments will be among the highest priorities of the combined CPKC system in the first three years following the Control Date. Accordingly, in order to stay ahead of the anticipated traffic growth, CPKC has identified concrete steps, beginning with concept and design work, permitting, environmental assessment, and proceeding with grading, track, and signals, necessary to complete these capital projects. CPKC also anticipates reallocating a portion of the infrastructure investment budgets of CP and KCS to adequately fund these projects so they

can be executed in a timely manner.[6] As discussed in the Operating Plan submitted with the Application, CPKC plans to implement these projects in the following phases:

- La Crosse to Davenport
  - Year 1
    - New CTC Installation: 46 miles;
    - environmental permitting and engineering design for one new siding and one siding extension;
    - grading: two new sidings; and
    - track construction and in service one siding extension.
  - Year 2
    - New CTC Installation: 26 miles;
    - environmental permitting and engineering design for one new siding; and
    - grading track, track construction and in service three new sidings and one siding extension.
  - Year 3
    - Grading/Track construction and in service one new siding.
- Davenport to Kansas City
  - Year 1
    - New CTC Installation: 30 miles; and

[6] CPKC expects to reallocate approximately $50mm annually from the two railroads' combined infrastructure investment budgets during the integration period, which represents approximately 2.6 percent of the combined CPKC capital envelope.

        - track construction and in service three new sidings and three siding extensions.
    - Year 2
        - New CTC Installation: 63 miles; and
        - environmental permitting and engineering design for one siding extension.
    - Year 3
        - New CTC Installation: 72 miles; and
        - grading/Track construction and in service one siding extension.
- Kansas City to Shreveport
    - Year 1
        - Environmental permitting and engineering design for two new sidings, and one siding extension;
        - environmental permitting and engineering design/Grading one siding extension; and
        - environmental permitting and engineering design/Grading/Track construction and in service one siding extension.
    - Year 2
        - Environmental permitting and engineering design for one new siding;
        - environmental permitting and engineering design/Grading/Track construction and in service, three siding extensions, portion of Double track; and

        - grading/Track and in service two new sidings and one siding extension and a portion of one siding extension.
    - Year 3
        - Grading, track construction, and in service one double track project, one new siding and one siding extension.
- Shreveport to Beaumont
    - Year 1
        - Environmental permitting, engineering design/Grading/Track construction and in service two siding extensions.
    - Year 2
        - Environmental permitting and engineering design/Grading/Track construction and in service one siding extension.
    - Year 3
        - None

Table 9 shows the planned investment per year by railroad.

Table 9

	Year 1	Year 2	Year 3	Total
CP	$77.3	$47.3	$33.0	$157.6
KCS	$26.2	$63.6	$28.9	$118.8
Total	**$103.5**	**$110.9**	**$61.9**	**$276.4**

To accommodate the anticipated growth in traffic resulting from the combination of CP and KCS, CPKC will also invest in an expanded railcar fleet. To determine the size of the incremental investment in railcars, Applicants compared the forecasted fleet size against projected demand for each car type, taking into consideration network operating improvements. Based on

this analysis, to support the increases in traffic contemplated in the Growth Plan discussed in the Application, CPKC plans to acquire, by Year 3, a minimum of:

- 265 multilevel autorack cars, to support increased business originating in Mexico;
- 831 intermodal cars, to support both domestic and international intermodal services;
- 194 boxcars, to support the growth in manifest traffic originating in Mexico; and
- 604 covered hoppers, to support increased demand for bulk shipments of agricultural products.

Additionally, CPKC will continue to upgrade all fleets as cars age out, continuing the normal operating practice of both CP and KCS. This turnover will improve the quality of the fleet, as, for example, older and smaller "Plate C" boxcars age out and are replaced with more efficient and higher-capacity "Plate F" cars over the next five years. Lastly, CPKC will continue the work related to the grant programs described above.

The combined network will allow for a more optimal and cost-effective deployment of various testing technologies. As discussed above, CP utilizes a wide variety of technology to build its maintenance and capital plans. Combining the assets used for the testing of fixed infrastructure owned by CP and KCS will allow the current approach to continue and expand on the combined network. The higher frequency of testing will provide improved data and trending analytics, such as the development of track quality indices, alerts for growth in defect levels, and triggers for maintenance intervention.

In pursuit of the integration of information systems, Applicants anticipate that CPKC will invest approximately $138.6 million in IT-related capital. Despite this investment in common systems and supporting hardware, it is expected that the combination of the CP and KCS

information systems will actually result in capital savings. The conversion to single-system solutions will reduce duplicative spending, resulting in millions of dollars of discretionary IT capital savings. Ultimately, CPKC estimates that the consolidation of information systems will result in capital savings of approximately $21.6 million annually. CPKC will continue to invest capital in technology, such as the ongoing replacement of certain hardware, in order to maintain and enhance the programs of the combined entity.

L. INFORMATION SYSTEM COMPATIBILITY

1. Information System Compatibility at CP

Given its reputation as the safest North American railroad, CP places a large premium on maintaining top-of-the-line information systems and field devices. Accordingly, CP has invested heavily in IT solutions to support a safe and fluid train operation.

CP employs over 600 employees and 25 contractors who report to the Vice President and Chief Information Office of Information Services. Employees are typically aligned to CP functional business areas, though additional teams, who report directly to the Vice President and Chief Information Office of Information Services, and provide foundational IT internal services, cross all lines of business.

Dispatchers at CP use the advanced CAD system, including CP's CTC and TWC systems, to safely dispatch, monitor and execute train movements. The dispatch systems are fully integrated into CP's PTC ecosystem. Dispatch systems are accompanied by a training program with a proven safety record.

CP developed a proprietary Railway Performance Monitoring ("RPM") system that provides an integrated network view of CP train movements and inventory (including locomotives and shipments), train performance, operating plan adherence, and the overall health of the network.

RPM consolidates information from the NEXUS train management system, the TYES and TRIEX inventory management systems, and the Locomotive Management Planning ("LMP") systems. Together, these systems comprise CP's key operational IT landscape.

RPM captures detailed planned and actual train information for all en route trains with movement events. Operating data are combined with train, customer, shipment, and location information to present train location and performance information in geographical and detailed views. The RPM dashboard provides CP's operating teams with graphical representations of the entire CP network, displaying all trains running and on-time performance with a "red/yellow/green" status and key performance indicators. Using this tool, employees can hover over any train for details (including train type and kind, power, current train speed, destination, last location, origin, length, weight, planned and actual horsepower per ton, load/empty count, last event, crew information, marshalling, key train data, presence of poison inhalation hazard/toxic-inhalation hazard carloads, dangerous cars, and dimensional compliance).

Combined, these systems ensure the ability to quickly terminate operations in times of emergency.

To ensure safe movement of freight, including the handling of hazardous materials, CP has an integrated service design, shipment, order fulfillment, asset distribution, crew management, and train operations suite of applications. These include: (i) MultiRail which is used to create and distribute the operating plan, (ii) FastWay, which provides waybill management, (iii) LMP, which is used for planning, distributing, and assigning locomotives, (iv) CMA, which manages crew assignments and payroll, and (v) NEXUS which, as described above, is a network schedule management tool.

CP's Crew Management suite prevents unintentional violations of hours of service requirements, contributing to CP's stellar safety record. The suite also provides train crews with access to up-to-date train line-up information through VRUs, kiosks across CP's yards and the internet, and has extended functionality available for crew balancing, auto crew calling and inbound/outbound VRU solutions. Access to this information allows individuals to better manage their time off-duty to improve the quality and quantity of rest.

CP also uses other advanced technology to improve the safety and efficacy of its operations such as the Trip Plan Engine ("TPE"). The TPE generates for each carload shipment a plan for handling and train service to get the car from origin to destination. This information is visible to the operating team so they can execute the plan. The TPE is also linked to CP's service design operating model and generates a plan for which a specific train will pick up the railcar from the customer at the "first mile," which specific trains the railcar will be moved in over the road, and which specific local train will deliver the car over the "last mile." This trip-planning function generates a baseline estimated time of arrival for customers and estimated time of interchange for CP's rail carrier interline partners.

To ensure maintenance information is readily available for those planning locomotive assignments, CP tracks locomotive maintenance and defects through SAP. SAP feeds other systems used by Operations to ensure maintenance information is accurate and available. Front-line supervisors record locomotive failures and defects at each major locomotive facility and provide 24-hour, seven-day-a-week support for train crews by radio or telephone. Prior to releasing any locomotive from a maintenance facility, the scheduled and unscheduled notifications in SAP must have all tasks signed off by the employee who completed the work and then be verified and closed by the mechanical supervisor. Similarly, inspection and repairs are tracked

with the Car Repair Billing ("CRB") application. This CRB application feeds both inventory management and other reports to provide the visibility necessary for timely repair and movement of on-track equipment.

CP's BCFs in Calgary, AB and St. Paul protect continuity of rail operations. These facilities are dedicated live back-up facilities that would be used as work locations for employees who perform critical business processes such as train control, crew calling and work order processing if the primary buildings were uninhabitable. BCFs are "live tested" once per year to ensure the facilities, their infrastructure, and their technology are functioning as intended to continue key business functions, and that critical staff remain familiar with these facilities.

In addition, CP continues to advance and evolve its cyber security program through investments, including ongoing reviews of its incident detection identification and response capabilities, continuous improvements of processes and practices to identify risks across the enterprise, and the extension of automation procedures to reduce the time required to identify threats. CP maintains the Enterprise Security Unit that manages the cyber security program following a risk-based, business-focused approach to security. The different teams within the Enterprise Security Unit collaborate with business units across Information Services and CP to identify risks facing information assets and develop the appropriate controls to help mitigate the risk. The Enterprise Security Unit also protects information assets by taking actions such as deploying anti-virus/anti-malware protection to endpoints across the enterprise, enabling encryption on enterprise endpoints (workstations/laptops and mobile devices), deploying endpoint detection and response agents to enterprise endpoints, laptops, workstations, and servers, installing vulnerability management scanning software to provide greater visibility into endpoints and servers, deploying enhanced network access control in exposed network areas identified as being

at risk to rogue devices and unauthorized network access, having a robust assets discovery process that regularly validates assets connected to the network, and working to ensure the security of data in cloud instances through technology and the use of cloud security services.

2. Information System Compatibility at KCS

KCS uses information systems in all aspects of its railroad operation in the United States, including all safety-related functions.

KCS uses MCS as its overall operating system in both the United States and Mexico to switch cars, assemble trains, manage the Transportation Service Plan, and measure performance. Specifically, MCS is a modular system used for numerous operating functions of the railroad involving waybill activities, car and train scheduling, and tracking of car movement records. MCS has built-in safety features to aid in achieving the correct train makeup by enforcing hazardous material in-train placement rules. Additional safety features involve the following categories: train blocking compliance, car placement, hazardous material cars, train make-up profile, bad order car handling, track capacities, and car scheduling. Within each category, KCS maintains checks and specific rules for train marshaling, weight and length capacity, dimensional loads, and speed restriction tables that are linked to waybills.

The KCS Mechanical Department uses third-party software to record railcar bad order defects, communicate which railcars have been inspected, identify repairs made to railcars, and capture CRB information, and this software is integrated with the KCS MCS Operating System and SAP. The Managers of Locomotive Utilization and locomotive mechanical teams use KCS's Locomotive Management System to record locomotive defects, assign locomotives to trains, track inspection dates for scheduled inspections, and release locomotives from maintenance facilities once repairs have been completed. The U.S. car and locomotive parts inventory is recorded in

SAP, while a third-party software program called Infor System allows work orders to be completed to assign parts to locomotives or to deliver the car parts to the shop tracks to consume on railcars. This system allows KCS to order parts from SAP inventory and to install parts on individual locomotives. Only the Shreveport and Kansas City car shops utilize this software for inventory purposes. All other locations order directly out of SAP.

KCS uses Power Bi, which provides an integrated network view of KCS train movements and inventory (including locomotives and shipments), train performance, operating plan adherence, and the overall health of the network. Power Bi consolidates information from KCS's TMDS, MCS, and locomotive distribution systems, which comprise KCS's key operational IT landscape. Power Bi captures detailed planned and actual train information for all en route trains with movement events. Operating data are combined with train, customer, shipment, and location information to present train location and performance information in geographical and detailed views. The Power Bi dashboard provides KCS's operating teams with graphical representations of the entire KCS network displaying all trains running and on-time performance with a "red/yellow/green" status and key performance indicators. Using this tool, employees can drill down any train for details including: train type and kind, power, current train speed, destination, last location, origin, length, weight, planned and actual horsepower per ton, load/empty count, last event, crew information, marshalling, key train data, presence of poison inhalation hazard/toxic-inhalation hazard carloads, dangerous cars, and dimensional compliance.

Combined, these systems ensure the ability to quickly terminate operations in times of emergency.

As previously discussed, for crew management in the United States, KCS uses EWM system. For dispatch, KCS uses TMDS.

The KCS cybersecurity strategy follows the NIST Cybersecurity Framework and utilizes two main defense layers—one on the perimeter and the other at the interior network level. Perimeter defense layers include ISP protection, firewalls, load balancers, dedicated DNS security, and an email gateway to evaluate and "clean" all incoming email. On the interior level, KCS employs firewalls for segmentation, behavioral analysis systems, and robust endpoint protection. Employees and contractors also receive mandatory security training, monthly awareness newsletters, and are subjected to mock phishing campaigns to bring additional awareness to the dangers of phishing attacks.

KCS controls access to its network by using VPN and Citrix. In addition, multi-factor authentication and a 15-character password are required. Privileged account access is protected with SecureAuth and MFA.

KCS has initiated a Threat Intelligence Program based on the MITRE ATT&CK[7] framework. Using specially curated threat feeds from services such as Recorded Future and Crowd Strike, the program will alert KCS to potential threats within the industry and from vendors and will provide information on security trends. If any compromise is indicated, the system will detect it. A third party will also annually test both external and internal networks by attempting to penetrate the systems.

KCS security policies govern KCS and its partners and vendors. The policies are reviewed and updated on an annual basis. An Acceptable Use Policy is an annual mandatory

---

[7] MITRE ATT&CK® is a globally-accessible knowledge base of adversary tactics and techniques based on real-world observations. The ATT&CK knowledge base is used as a foundation for the development of KCS-specific threat models and methodologies.

acknowledgment for every employee, as well as any contractor or vendor accessing the KCS network.

3. Safety Integration – Information System Compatibility

The overall goal to integrating CP and KCS information technology is to avoid train network disruption through a concept of operations that focuses on providing a safe working environment. This environment will be achieved during system integration by ensuring operational systems contain accurate information, avoiding or mitigating scheduled outages through operating practices, and maintaining a strict and well-planned migration sequence until all systems are fully integrated.

CP and KCS are assessing each network's information systems from the perspective of their intended functions and capabilities to evaluate issues relating to integration with comparable systems on the other railroad, among many other factors. CP and KCS held a number of joint IT integration planning sessions in November 2021 to understand each carrier's information systems and to begin the advance planning necessary to ensure a smooth IT integration process. CP and KCS will begin detailed planning and design for the first Post-Control Date and End State starting in January 2022.

Currently, CP and KCS each possess information systems that are adequate to meet each railroad's freight operations. To ensure a safe and efficient transition, CPKC will continue to use each railroad's existing systems for an initial period following the Control Date. However, the integration of information systems will begin, on the Control Date, with the integration of KCS information and master data into a CP Service Design system, providing the ability for consolidated strategic operational planning and operating plans to be implemented on day one. The resulting consolidated operating plans will then be published to both the CP and KCS portions

of the CPKC system. Network designs generated using this common system will subsequently be published to both CP and KCS critical traffic systems, so that train movements can continue to be executed by each railroad using their separate existing systems. This will enable the transaction synergies and CP's mature PSR principles to start on day one. CPKC will perform a review of business critical systems that must be integrated on or shortly after the Control Date, CPKC plans to advance test data in "non-production" environments to ensure compatibility of KCS data with CP applications and business processes.

Following the Control Date, as CPKC completes its system integration planning and training, the improved data exchange across the combined system will enable more efficient handling of formerly interlined traffic. Concurrently, CPKC will complete detailed plans for implementing the best practices of the two roads on a system-wide basis. Over time, CPKC will migrate operations across both networks to a single set of platforms, choosing the best options based on the following factors: technological capabilities, the ability to meet current and future needs of the CPKC network, and the ease with which a platform can accommodate a seamless transition for use by additional portions of the CPKC network. Within three years of the Control Date, shipment functions will be moved to the centralized CPKC systems.

B. c.	Consolidate training programs	43	Q4 2022	Q4 2024	• Training
B. d.	Provide train the trainer sessions	44	Q4 2022	Q4 2024	• Training
B. e.	Perform review of Mechanical and Engineering qualification programs	43	Q4 2022	Q4 2024	• Training • Mechanical • Engineering
B.f.	Consolidate Mechanical and Engineering qualification programs	43	Q4 2022	Q4 2024	• Training • Mechanical • Engineering
B. g.	Provide support to training staff	44	Q4 2022	Ongoing	• Training
B. h.	Assess technological differences and expand smart board technology, where applicable	43–44	Q4 2022	Ongoing	• Training • Information Systems

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
C. OPERATING PRACTICES					
C.1 Operating Rules					
C.1.a.	Review rulebooks and instructions	49	Q4 2022	Q4 2023	• Operating Practices and Rules
C.1.b.	Consolidate rulebooks and instructions	49	Q1 2023	Q4 2025	• Operating Practices and Rules
C.1.c.	Review operational testing programs	49	Q4 2022	Q4 2023	• Operating Practices and Rules
C.1.d.	Consolidate operational testing programs	49	Q4 2022	Q4 2025	• Operating Practices and Rules
C.1.e.	Provide training	49–50	Q4 2022	Ongoing	• Operating Practices and Rules
C.1.f.	Review process for communicating rule changes	49	Q4 2022	Q42024	• Operating Practices and Rules
C.1.g.	Consolidate process for communicating rule changes	49	Q4 2024	Q4 2025	• Operating Practices and Rules
C.1.h.	Monitor rules performance and make adjustments, where necessary	49	Q4 2022	Ongoing	• Operating Practices and Rules
C. 2. Alcohol and Drug					
C.2.a.	Review drug and alcohol programs	54	Q4 2022	Q3 2023	• Drug & Alcohol
C.2.b.	Consolidate drug and alcohol programs	54	Q4 2022	Q4 2023	• Drug & Alcohol
C.2.c.	Train employees on applicable regulations	54	Q4 2023	Ongoing	• Drug & Alcohol • Training

C.3. Qualification and Certification					
C.3.a.	Perform review of 49 C.F.R. Part 240 and 49 C.F.R. Part 242	58	Q4 2022	Q4 2023	• Operating Practices • Training
C.3.b.	Consolidate 49 C.F.R. Part 240 and C.F.R. Part 242 programs	58–59	Q4 2023	Q4 2024	• Operating Practices • Training
C.3.c.	File consolidated 49 C.F.R. Part 240 and C.F.R. Part 242 programs	58–59	Q4 2024	Q4 2025	• Operating Practices
C.4. Hours of Service					
C.4.a.	Review Hours of Service programs and processes	61	Q4 2022	Q4 2024	• Crew Management • Operations • Signals and Communication • Dispatching
C.4.b.	Consolidate Hours of Service programs and processes	61	Q4 2024	Q4 2025	• Crew Management • Operations • Signals and Communication • Dispatching
C.4.c.	Maintain compliance with federal regulation	61	Q4 2022	Ongoing	• Signals & Communication

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
D. MOTIVE POWER AND EQUIPMENT					
D. a.	Perform review of qualification programs to identify differences	64	Q4 2022	Q4 2024	• Mechanical Training
D. b.	Consolidate qualification programs	64	Q4 2024	Q4 2025	• Mechanical • Training
D. c.	Provide training	64	Q4 2022	Ongoing	• Mechanical

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
E. SIGNAL AND TRAIN CONTROL					
E. a.	Review processes, standards, and systems	71	Q4 2022	Q4 2023	• Signals and Communication • Dispatching • Engineering
E. b.	Create detailed integration plan	71	Q4 2023	Q4 2024	• Signals and Communication • Dispatching • Engineering
E. c.	Integrate Signal and Train Control	71	Q4 2024	Q4 2025	• Signals and Communication • Dispatching • Engineering
E. d.	Meet with the FRA to ensure compliance with regulatory requirements	71	Q4 2022	Ongoing	• Signals and Communication

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
F. TRACK SAFETY STANDARDS AND BRIDGE STRUCTURES					
F. a.	Review structure programs and assets	77	Q4 2022	Q4 2023	• Engineering
F. b.	Adopt the Redbook of Track & Structures Requirements	77	Q4 2022	Q4 2023	• Engineering • Training
F. c.	Map and record assets into SAM	78	2023	2025	• Engineering • Information Systems
F. d.	Adopt SAM	78	2025	2026	• Engineering • Information Systems
F. e.	Move from DTN to TAM	78	2027	2030	• Engineering • Information Systems
F. f.	Review and consolidate weather monitoring and earthquake response protocol	78–79	TBD	TBD	• Risk Management
F. g.	Review and consolidate Track and Roadway Maintenance and Testing and Internal Flaw Detection practices	79	Q4 2022	Q4 2025	• Engineering
F. h.	Provide training	79	2023	2024	• Training • Engineering

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
G. HAZARDOUS MATERIALS					
G. a.	Incorporate KCS Hazmat staff and monitor staffing levels	91	Q4 2022	Ongoing	• Hazmat
G. b.	Review Hazmat-related training programs and determine differences	91–92	Q4 2022	Q2 2023	• Hazmat Training
G. c.	Consolidate Hazmat-related training	91–92	Q3 2023	Q4 2023	• Hazmat • Training
G. d.	Review and consolidate emergency response plan	92	Q4 2022	Q4 2023	• Hazmat
G. e.	Review and incorporate KCS third-party contractors into emergency response network	92	Q4 2022	Q1 2023	• Hazmat
G. f.	Incorporate emergency response assets and adopt maintenance and inspection program	92	Q4 2022	Q2 2023	• Hazmat
G. g.	Review and consolidate USHMI	93	Q4 2022	Q3 2023	• Hazmat • Operating Rules and Practices
G. h.	Review hazardous material documentation systems and processes	93	Q4 2022	Q4 2023	• Hazmat • Information Systems
G. i.	Review regulatory reporting systems and processes	93	Q4 2022	Q4 2023	• Hazmat • Information Systems
G. j.	Continue use of AskRail	94	Q4 2022	Ongoing	• Hazmat • Information Systems

G. k.	Consolidate efficiency testing	94	Q4 2022	Q4 2025	• Hazmat • Operating Rules and Practices
G. l.	Review KCS's last Responsible Care verification and incorporate into CPKC's next verification cycle	94	Q4 2022	2026	• Environmental

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
H. DISPATCHING OPERATIONS					
H. a.	Migrate Minneapolis Dispatching Center to Kansas City	101	Q4 2022	Q4 2023	• Dispatching • Information Systems
H. b.	Evaluate train control systems	101	Q4 2022	Q4 2023	• Dispatching • Information Systems
H. c.	Amalgamate dispatching operations	101	Q4 2023	Q4 2025	• Dispatching • Information Systems
H. d.	Develop process to determine Dispatcher workload	102	TBD	TBD	• Dispatching • Information Systems

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
I. HIGHWAY-RAIL GRADE CROSSING SYSTEMS					
I. a.	Perform review of programs	106	Q4 2022	Q4 2023	• Public Works
I. b.	Determine consolidation measures and consolidate, if necessary	106	Q4 2022	Ongoing	• Public Works
I. c.	Coordinate with each state department of transportation and other roadway authorities, where required	107	Q4 2022	Ongoing	• Public Works

Subject Matter Safety Action Items:

Item	Description	SIP Ref. Page	Estimated Start	Estimated Completion	Resource Allocation
L. INFORMATION SYSTEM COMPATIBILITY					
L. a.	Review Information Systems	129	Underway	Q1 2022	• Information Systems
L. b.	Identify business critical systems	130	Underway	Q1 2022	• Information Systems
L. c.	Information System planning and design	129	Q1 2022	TBD	• Information Systems
L. d.	Integrate and publish master data	129	Q4 2022	TBD	• Information Systems
L. e.	Integrate shipment functions	130	Q4 2022	Q4 2024	• Information Systems
L. f.	Integrate Corporate Systems	130	Q4 2022	Q4 2024	• Information Systems

Appendix H

Grade Crossing Safety and Delay

H.1 Grade Crossing Safety Approach

For grade crossing safety, the analyses are based on future conditions under the No-Action Alternative and Proposed Acquisition. Specifically, the No-Action Alternative analysis was conducted for 2027, the future condition of five years after the anticipated year of the Board's final decision. The No-Action condition reflects the projected train and vehicle traffic levels in the analysis year 2027 without the Proposed Acquisition. The Proposed Acquisition analysis was also conducted for 2027, accounting for projected train traffic levels as a result of the acquisition. The following data sources serve as the basis for the grade crossing safety analysis.

Crash data are from the Federal Railroad Administration (FRA) database. During the latest five years (2017-2021), there were 168 crashes reported at the 1,352 grade crossings within the study area. This equates to an average of 0.025 crashes per grade crossing per year, or approximately one crash per grade crossing every 40 years. For the 1,134 grade crossings included in the safety analysis, there were 90 crashes reported during the five-year analysis period (2017-2021). This equates to an average of 0.016 crashes per grade crossing per year, or approximately one crash per grade crossing every 62.5 years. In 2020, FRA published a report that includes statistics on the safety performance of similar grade crossings nationally (FRA 2020). The analysis included more than 105,000 public grade crossings in the U.S. that are not closed and not grade separated. During the five-year period from 2014 to 2018, there were 8,467 crashes at those grade crossings, representing an average of 0.016 crashes per grade crossing per year, or approximately one crash per grade crossing every 62.5 years, which is identical to the average crashes per grade crossing included in the safety analysis for this study.

Average Annual Daily Traffic (AADT) data are from the FRA database (FRA 2021) with updates from state and local transportation agencies where available. The AADT values are based on data that represent years ranging from 1970 to 2021. As such, there is a need to normalize the AADT values to a common year and then extrapolate the values to the analysis year of 2027. The general approach used to estimate 2027 AADT values was to identify the most recent available AADT value, adjust that value to a common base year of 2019, and then grow all values to the analysis year of 2027. Based on common industry practice, the specific approaches used to adjust historical AADT values 2027 AADT values include:

If two years of historical traffic data are available and the volume for the more recent year is greater than the volume for the earlier year, then straight-line growth is used to adjust the most recent AADT value to 2019.

If two years of historical traffic data are available and the volume for the more recent year is equal to or less than the volume for the earlier year, then a growth factor of 1.0 is used to adjust the most recent AADT value to 2019 (such as, assume most recent AADT as 2019 AADT).

If one year of historical traffic data is available, then data from the United States Census Bureau (Decennial Census data and American Community Survey data) are used to develop growth factors. Specifically, the growth factors are based on the ratio of the number trips to work by car, truck, or van from one year to another.

For historical AADT values from 2010 or older, the growth factor is based on the ratio of trips to work by car, truck, or van in 2019 compared to 2000. If the growth factor is less than or equal to 1.0, then no growth is assumed from the most recent year to 2019 (such as, assume most recent AADT as 2019 AADT).

For historical AADT values from 2011 or newer, the growth factor is based on the ratio of trips to work by car, truck, or van in 2019 compared to 2011. If the growth factor is less than or equal to 1.0, then no growth is assumed from most recent year to 2019 (such as, assume most recent AADT as 2019 AADT).

If 2020 or 2021 traffic data are available, then these values are used instead of growing older values.

A two-percent annual growth rate is used to grow the AADT values to 2027, starting with 2019, 2020, or 2021 AADT values as applicable.

Existing train traffic (average number of trains per day) is based on multiple sources of information, including both freight train and passenger train activity. The number of freight trains on CP and KCS tracks is based on estimates by CP (*Chapter 2, Section 2.2.1 Changes in Rail Operations*). The freight trains on BNSF and Union Pacific tracks are based on the Federal Railroad Administration database for base values, applying CP organic growth factors to estimate 2027 freight train volumes for the No-Action Alternative, and adding CP Proposed Acquisition-related growth to estimate freight train volumes with the Proposed Acquisition. Passenger trains are based on 2019 General Transit Feed Specification data and confirmed using Metra data. For consistency across the multi-state geography of the project, the assumption is that passenger rail trains per day would be the same in future 2027 as in base year 2019.

Future train traffic (average number of trains per day) is based on estimates by CP (*Chapter 2, Section 2.2.1, Changes in Rail Operations*).

A weighted average of freight train length and passenger train length is used to estimate the average train length for grade crossing safety analyses. Freight train characteristics, including length and speed, are based on data provided by CP and updated using timetables and the FRA database. For any crossings with head-in restrictions, the train speed is based on head-in speeds. For passenger trains, train length is based on the Metra 2018 State of the System Report (Metra 2018), Amtrak website (Amtrak 2022), and Near Map to check a sample of actual train consist lengths. The assumed length is based on an average of two Amtrak P42 locomotives at 69 feet each, and 10 Amtrak superliner cars at 85 feet each (used

on both Sunset Limited and Empire Builder), which results in an average passenger train length of 988 feet.

Table H.1-1 presents an inventory of all the 1,352 public grade crossings within the study area. The table includes basic details for the crossing roadway and the railway, including AADT, train speed, train length, number of trains per day, and average gate down time. Separate values are presented for the No Action and Proposed Acquisition scenarios as applicable. The crossings are located by State, County, City, Street, and Crossing ID. For subsequent tables in this appendix, the Crossing ID can be used to cross-reference grade crossings.

H.1.1 Grade Crossing Safety Analysis Methods

The predicted crashes at highway/rail at-grade crossings is calculated using Equation (1) (FRA 2019). This method is similar to the method described in FRA's *Summary of the DOT Rail-Highway Crossing Resource Allocation Procedure-Revised* (FRA 1987a), but with updated adjustment factors in Equation (1). The results include expected vehicle/train crash rates at all at-grade crossings that meet the threshold under future conditions with and without the Proposed Acquisition.

$$NC = \frac{(a \times T_0)+N}{T_0+5} \times adj \quad (1)$$

Where:

NC = Predicted number of train-vehicle crashes per year at the grade crossing;

a = Initial predicted train-vehicle crashes per year (based on Equation (2));

T_0 = Weighting factor in the DOT crash prediction formula (based on Equation (3));

N = Number of train-vehicle crashes in previous five years at grade crossing; and

Adj = Coefficient to normalize predicted train-vehicle crashes in year with actual counts (current values are normalized for year 2013).

The initial predicted train-vehicle crashes per year (a) is based on several factors as shown in Equation (2). **Table H.1-2** presents the values and formulas used to compute each of these factors based on the type of grade crossing control. The type of control includes passive, flashing lights, and lights and gates.

$$a=K \times EI \times DT \times MS \times MT \times HP \times HL \quad (2)$$

Where:

K = Basic crash prediction formula constant;

EI = Exposure index factor (Expose = AADT * trains per day);

DT = Factor for the number of through trains per day during daylight (dthru = number of through trains per day during daylight), which is derived from train schedule in combination with train traffic;

MS = Factor for maximum timetable speed (ms = maximum timetable speed at crossing);

MT = Factor for number of main tracks (tracks = number of main tracks);

HL = Factor for number of roadway lanes (lanes = number of highway lanes);

HP = Factor for paved roadway (1 if highway is paved; 2 if unpaved); and

Adj = Coefficient to normalize predicted train-vehicle crashes in year with actual counts.

The weighting factor in the DOT crash prediction formula (T_0) is based on Equation (3).

$$T_0 = \frac{1}{0.05+a} \quad (3)$$

Where:

All terms as previously defined.

Table H.1-2 Factors to Predict Train-Vehicle Crashes

Factor	Passive Control	Flashing Lights	Lights and Gates
K	0.0006938	0.0003351	0.0005745
EI	$\left(\frac{Expose+0.2}{0.2}\right)^{0.37}$	$\left(\frac{Expose+0.2}{0.2}\right)^{0.4106}$	$\left(\frac{Expose+0.2}{0.2}\right)^{0.2942}$
DT	$\left(\frac{dthru+0.2}{0.2}\right)^{0.1781}$	$\left(\frac{dthru+0.2}{0.2}\right)^{0.1131}$	$\left(\frac{dthru+0.2}{0.2}\right)^{0.1781}$
MS	$e^{0.0077*ms}$	1	1
MT	1	$e^{0.1917*tracks}$	$e^{0.1512*tracks}$
HL	1	$e^{0.1826*(lanes-1)}$	$e^{0.142*(lanes-1)}$
HP	$e^{-0.5966*(paved-1)}$	1	1
Adj	0.5086	0.3106	0.4846

The predicted number of crashes by severity is based on the predicted number of train-vehicle crashes per year (NC) at the grade crossing. The predicted crash frequency by severity is subdivided into two categories, fatal crashes and casualty crashes. Fatal crashes are those that result in at least one fatality, independent of injuries or property damage. Casualty crashes are those that result in at least one fatality or injury, independent of property damage. The predicted number of injury crashes is simply the difference between the predicted number of fatal crashes and predicted number of casualty crashes. The equations are based on the Rail-Highway Crossing Resource Allocation Procedure-User's Guide (FRA 1987b).

The probability of a fatal crash, given a crash occurs, is based on Equation (4).

$$P(F|C) = \frac{1}{1+KF*MS^{-0.9981}*(TT+1)^{-0.0872}*(TS+1)^{0.0872}*e^{0.3571*UR}} \quad (4)$$

Where:

$P(F|C)$ = Probability of a fatal crash, given a crash occurs;

KF = Constant (440.9);

MS = Maximum timetable speed (mph);

TT = Number of thru trains per day;

TS = Number of switch trains per day; and

UR = Urban or rural crossing (urban = 1; otherwise, 0).

The predicted number of fatal crashes is based on Equation (5).

$$F = P(F|C) * NC \quad (5)$$

Where:

F = Predicted fatal crashes per year;

$P(F|C)$ = Probability of a fatal crash, given a crash occurs; and

NC = Predicted number of train-vehicle crashes per year at the grade crossing.

The probability of a casualty crash, given a crash occurs, is based on Equation (6).

$$P(C|C) = \frac{1}{1+KC*MS^{-0.343}*e^{0.1153*TK}*e^{0.296*UR}} \quad (6)$$

Where:

$P(C|C)$ = Probability of a casualty crash, given a crash occurs;

KC = Constant (4.481);

MS = Maximum timetable speed (mph);

TK = Number of tracks; and

UR = Urban or rural crossing (urban = 1; otherwise, 0).

The predicted number of casualty crashes is based on Equation (7).

$$C = P(C|C) * NC \quad (7)$$

Where:

C = Predicted casualty crashes per year;

$P(C|C)$ = Probability of a casualty crash, given a crash occurs; and

NC = Predicted number of train-vehicle crashes per year at the grade crossing.

The predicted number of injury crashes is based on Equation (8).

$$I = C - F \quad (8)$$

Where:

I = Predicted injury crashes per year;

C = Predicted casualty crashes per year; and

F = Predicted fatal crashes per year.

H.1.1.1 Quiet Zones

There are many measures that can be employed to reduce the risk of a collision between a train and a road user. Train horns are one such measure. Train horns alert road users of approaching trains near highway-rail at-grade crossings. As per the Code of Federal Regulations Title 49, Part 222 (49 C.F.R. 222), the Federal Railroad Administration Train Horn Rule requires the engineer to sound the horn under specific conditions when a train is approaching and passing through a public highway-rail at-grade crossing.

While train horns reduce crash risk and increase awareness of approaching trains, some oppose the noise generated by horns. A community, in cooperation with the applicable agency(ies), may apply to create a quiet zone. A quiet zone is a Federal Railroad Administration exemption to the Train Horn Rule. The quiet zone is a section of rail line at least one-half mile in length that contains one or more consecutive public at-grade crossings.

In general, one of the following four conditions must be met to establish a quiet zone:

- One or more Supplemental Safety Measures (SSMs) are installed at each public crossing in the quiet zone.
- The risk at the crossing(s) is less than or equal to the nationwide average risk level.
- Additional safety measures are implemented to reduce the risk at the quiet zone crossing(s) to a level that is less than or equal to the nationwide average risk level.
- Additional safety measures are implemented to reduce the risk at the quiet zone crossing(s) to a level that is less than or equal to the risk level with train horns (such as, the risk level that would exist if train horns were sounded at every public crossing in the quiet zone).

A quiet zone could be disqualified, even after it is established. If the conditions change, resulting in the quiet zone no longer being qualified, then the public authority would have to implement additional measures that create a condition that qualifies. Otherwise, the quiet zone would no longer remain in effect. **Table H.1-3** provides a summary of the four conditions that can help to establish a quiet zone and the corresponding conditions, if applicable, that could disqualify the quiet zone.

Table H.1-3 Conditions to Establish and Disqualify Quiet Zones

Conditions to Establish a Quiet Zone (1 or more must be met)	**Conditions to Disqualify a Quiet Zone**
One or more SSMs are installed at each public crossing in the quiet zone.	Quiet zone could be disqualified if the SSMs are removed and one of the other 3 conditions is not met.
Risk at the crossing(s) is less than or equal to the nationwide average risk level.	Quiet zone could be disqualified if the risk at the crossing(s) exceeds the national average risk. The national average risk changes over time, so there is no guarantee that the quiet zone will remain qualified under this condition.
Additional safety measures are implemented to reduce the risk at the quiet zone crossing(s) to a level that is less than or equal to the nationwide average risk level.	Quiet zone could be disqualified if the risk at the crossing(s) exceeds the national average risk. The national average risk changes over time, so there is no guarantee that the quiet zone will remain qualified under this condition.
Additional safety measures are implemented to reduce the risk at the quiet zone crossing(s) to a level that is less than or equal to the risk level with train horns (such as, the risk level that would exist if train horns were sounded at every public crossing in the quiet zone).	Quiet zone could be disqualified if the SSMs are removed and one of the other 3 conditions is not met.

H.1.2 Grade Crossing Safety Results

Table H.1-4 presents the grade crossing safety results by individual crossing, organized by state and city. The AADT, train speed, type of protection, number of roadway lanes, and road surface type represent the expected 2027 conditions common to both the No-Action Alternative and the Proposed Acquisition. The trains per day, train length, and safety-related performance measures represent the expected conditions and estimated performance in 2027 for the No-Action Alternative and Proposed Acquisition. The final two columns indicate the expected change in predicted crashes and years between crashes, representing the expected impact of the Proposed Acquisition compared to the No-Action Alternative.

Table H.1-4 Grade Crossing Safety for Affected Environment by State and City

H.1.2.1 Quiet Zones

Table H.1-5presents the grade crossing safety results for the 44 at-grade crossings within the threshold area that are in quiet zones. The trains per day, train length, and safety-related performance measures represent the expected conditions and estimated performance in 2027 for the No-Action Alternative and Proposed Acquisition. The final two columns indicate the expected change in predicted crashes and years between crashes, representing the expected impact of the Proposed Acquisition compared to the No-Action Alternative. All 44 of the crossings have lights and gates installed as crossing protection and 39 of the 44 crossings have a supplemental safety measure installed such as a median barrier.

H.2 Grade Crossing Delay

H.2.1 Grade Crossing Delay Approach

For grade crossing delay, the analyses are based on future conditions under the No Action Alternative and Proposed Acquisition. Specifically, the No-Action Alternative analysis was conducted for 2027, the future condition of five years after the anticipated year of the Board's final decision. The No-Action condition reflects the projected train and vehicle traffic levels in the analysis year 2027 without the Acquisition. The Proposed Acquisition analysis was also conducted for 2027, accounting for projected train traffic levels as a result of the acquisition. The following data sources serve as the basis for the grade crossing delay analysis.

AADT data are from the Federal Railroad Administration database (FRA 2021) with updates from state and local transportation agencies where available. The AADT values are based on data that represent years ranging from 1970 to 2021. As such, there is a need to normalize the AADT values to a common year and then grow the values to the analysis year of 2027. The general approach used to estimate 2027 AADT values was to identify the most recent available AADT value, adjust that value to a common base year of 2019, and then grow all values to the analysis year of 2027. Based on common industry practice, the specific approaches used to adjust historical AADT values to 2019 and to grow 2019 AADT values to 2027 include:

- If two years of historical traffic data are available and the volume for the more recent year is greater than the volume for the earlier year, then straight-line growth is used to adjust the most recent AADT value to 2019.
- If two years of historical traffic data are available and the volume for the more recent year is equal to or less than the volume for the earlier year, then a growth factor of 1.0 is used to adjust the most recent AADT value to 2019 (such as, assume most recent AADT as 2019 AADT).
- If one year of historical traffic data is available, then data from the United States Census Bureau (Decennial Census data and American Community Survey data) are used to develop growth factors. Specifically, the growth factors are based on the ratio of the number trips to work by car, truck, or van from one year to another.
- For historical AADT values from 2010 or older, the growth factor is based on the ratio of trips to work by car, truck, or van in 2019 compared to 2000. If the growth factor is less than or equal to 1.0, then no growth is assumed from the most recent year to 2019 (such as, assume most recent AADT as 2019 AADT).
- For historical AADT values from 2011 or newer, the growth factor is based on the ratio of trips to work by car, truck, or van in 2019 compared to 2011. If the growth factor is less than or equal to 1.0, then no growth is assumed from most recent year to 2019 (such as, assume most recent AADT as 2019 AADT).
- If 2020 or 2021 traffic data are available, then these values are used instead of growing older values.

- A two-percent annual growth rate is used to grow the AADT values to 2027, starting with 2019, 2020, or 2021 AADT values as applicable.

Existing train traffic (average number of trains per day) is based on multiple sources of information, including both freight train and passenger train activity. The number of freight trains on Canadian Pacific (CP) and Kansas City Southern (KCS) tracks is based on estimates by CP (*Chapter 2, Section 2.2.1 Changes in Rail Operations*). The freight trains on BNSF and Union Pacific tracks are based on the Federal Railroad Administration database for base values, applying CP organic growth factors to estimate 2027 freight train volumes for the No-Action Alternative, and adding CP Proposed Acquisition-related growth to estimate freight train volumes with the Proposed Acquisition. Passenger trains are based on 2019 General Transit Feed Specification data and confirmed using Metra data. For consistency across the multi-state geography of the project, the assumption is that passenger rail trains per day would be the same in future 2027 as in base year 2019.

Future train traffic (average number of trains per day) is based on estimates by CP (*Chapter 2, Section 2.2.1, Changes in Rail Operations*).

A weighted average of freight train length and passenger train length is used to estimate the average train length for grade crossing delay analyses. Freight train characteristics, including length and speed, are based on data provided by CP and updated using timetables and the Federal Railroad Administration database (FRA 2021). For any crossings with head-in restrictions, the train speed is based on head-in speeds. For passenger trains, train length is based on the Metra 2018 State of the System Report (Metra 2018), Amtrak website (Amtrak 2022), and Near Map to check a sample of actual train consist lengths. The assumed length is based on an average of two Amtrak P42 locomotives at 69 feet each, and 10 Amtrak superliner cars at 85 feet each (used on both Sunset Limited and Empire Builder), which results in an average passenger train length of 988 feet.

H.2.1.1 Grade Crossing Delay Analysis Methods

The grade crossing delay analysis includes the two general components, one focused on individual train crossings and one focused on cumulative events over an entire day. The performance measures for individual train crossings include blocked crossing time per train, crossing delay per stopped vehicle, and maximum vehicle queue. The performance measures for cumulative events over an entire day include number of vehicles delayed per day, average delay for all vehicles, and level of service (LOS) for vehicular traffic. For simplification purposes, it is assumed that both rail and road traffic are uniform throughout the day.

The blocked crossing time per train (T) includes the time for the train to pass and the time for any warning device to engage and disengage as shown in Equation (4) (FRA 2019). The blocked crossing time per train is based on Equation (9).

$$T = T_W + \frac{L}{V*88} \quad (9)$$

Where:

T = Blocked crossing time per train (minutes);

T_W = Lead time (assumed 0.6 minutes for gate closing and opening as well as for passive crossings at which point motorists would not venture a crossing);

L = Average train length (feet);

V = Average train speed (miles per hour); and

88 = Conversion factor from miles per hour to feet per minute.

The number of vehicles delayed per day (N_V) is the number of vehicles that would be stopped for trains in a 24-hour period as shown in Equation (10).

$$N_V = \frac{T}{1{,}440} N * AADT \quad (10)$$

Where:

N_V = Number of vehicles delayed per day;

T = Blocked crossing time per train (minutes);

1,440 = Factor to convert vehicles per day to vehicles per minute;

N = Number of trains per day; and

AADT = Annual average daily traffic (vehicles per day).

The average delay per vehicle in a 24-hour period (D_V) is shown in Equation (11).

$$D_V = \frac{N_V}{AADT} * \frac{T * \frac{R_D}{R_D - R_A}}{2} \quad (11)$$

Where:

D_V = Average delay per vehicle in a 24-hour period (minutes);

N_V = Number of vehicles delayed per day;

T = Blocked crossing time per train (minutes);

R_D = Vehicle departure rate (vehicles per minute per lane), which can vary by location;[1]

[1] Vehicle departure rate varies by location based on factors such as number of lanes, lane width, grade, and sight distances. This information is not readily available for the grade crossings included in this analysis. As such, this analysis assumed common values based on the Highway Capacity Manual (Transportation Research Board 2016). The assumed vehicle departure rates (in vehicles/minute/lane) are 30 for highways, 23.3 for arterials, 15 for collectors, and 11.7 for local roads.

R_A = Vehicle arrival rate (vehicles per minute per lane), which is based on AADT data from the Federal Railroad Administration database with updates from state and local transportation agencies where available;

AADT = annual average daily traffic volume for the highway at the grade crossing (in vehicles per day), which is based on AADT data from the Federal Railroad Administration database with updates from state and local transportation agencies where available; and

2 = Averaging factor to account for vehicles that do not experience delays from the entire time the train blocks the crossing.

Total vehicle delay (D) is the product of average delay per vehicle (D_V) and the AADT as shown in Equation (12).

$$D = D_V * AADT \quad (12)$$

Where:

D = Total vehicle delay (minutes);

D_V = Average delay per vehicle in a 24-hour period (minutes); and

AADT = annual average daily traffic volume for the highway at the grade crossing (in vehicles per day), which is based on AADT data from the Federal Railroad Administration database with updates from state and local transportation agencies where available.

The LOS for vehicular traffic in this analysis is based on the average delay per vehicle at each grade crossing and the LOS criteria for signalized intersections from the 2016 Highway Capacity Manual (Transportation Research Board 2016). LOS is a qualitative measure of motor vehicle traffic flow, indicated by letters from A to F, where A represents free-flow conditions and F indicates extreme congestion. **Table H.2-1** presents the LOS categories along with the applicable ranges of average delay per vehicle and general descriptions.

Table H.2-1. Level of Service Designations

LOS	Average Delay per Vehicle (DV) (seconds/vehicle)	General Description
A	DV ≤ 10	Free flow
B	10 < DV ≤ 20	Stable flow (slight delays)
C	20 < DV ≤ 35	Stable flow (acceptable delays)
D	35 < DV ≤ 55	Approaching unstable flow
E	55 < DV ≤ 80	Unstable flow
F	80 < DV	Forced flow (congested and queues fail to clear)

Source: Highway Capacity Manual, Sixth Edition: A Guide for Multimodal Mobility Analysis. (Transportation Research Board 2016)

The maximum vehicle queue (Q) is the estimated length of the longest line of vehicles expected to occur at the grade crossing. It is assumed that the maximum vehicle queue

would occur during the peak hour for vehicle traffic and that the peak-hour traffic represents 10 percent of the AADT. The calculation is given by Equation (13).

$$Q = AADT * \frac{0.1*0.6}{60} * \frac{T}{NL/2} \quad (13)$$

Where:

Q = Maximum vehicle queue length (in number of vehicles);

AADT = annual average daily traffic volume for the highway at the grade crossing (in vehicles per day), which is based on AADT data from the Federal Railroad Administration database with updates from state and local transportation agencies where available;

0.1 = Factor to convert AADT (in vehicles per day) to peak-hour traffic (in vehicles per hour);

0.6 = Factor to convert two-way traffic to peak direction traffic, assuming traffic is split 60/40 during the peak hour;

60 = Factor to convert vehicles per hour to vehicles per minute;

T = Blocked crossing time per train (minutes);

NL = Number of highway lanes at the grade crossing, which was obtained from the Federal Railroad Administration database; and

2 = Factor to convert total lanes to lanes in peak direction.

H.2.1.2 Emergency Vehicle Delay

The same general methods apply to estimating the potential delay for emergency vehicles, including fire, police, and emergency medical service vehicles at at-grade crossings. While an emergency vehicle could cross any at-grade crossing, there are some at-grade crossings where an emergency vehicle would be more likely to cross. The OEA delay threshold is used to determine which at-grade crossings should be analyzed for potential changes in delay, and hence changes in emergency vehicle response time. Recall for non-attainment areas, this includes all grade crossings on rail segments with three or more additional freight trains per day or a 50 percent increase in annual gross ton-miles (49 C.F.R. 1105.7(e)). In air quality attainment areas, the threshold is all grade crossings on rail segments with eight or more additional freight trains per day or 100 percent increase in annual gross ton-miles (49 C.F.R. 1105.7(e)) **(Table H.2-2)**. In addition, the Federal Railroad Administration database is used to identify those highways designated is as “emergency route” within the threshold areas for a separate summary of potential delay impacts.

For at-grade crossings that would meet or exceed the threshold for freight train traffic increases, and are located on highways designated as “emergency route” in the Federal Railroad Administration database, OEA analyzed the effects on emergency vehicle response by evaluating site-specific conditions including:

- Emergency service routes;
- Existing highway and road networks;
- Locations of nearby at-grade or grade-separated crossings; and
- Time to access the opposite side of the crossing if a train is encountered.

Delay Impacts from New Sidings

One final aspect of the delay analysis is related to sidings. In particular, the construction of new sidings near at-grade crossings can impact delay beyond the through trains at the crossing. The sidings and related crossings considered for potential delay impacts are all new sidings proposed under the Proposed Acquisition where the location of the new siding crosses a highway at-grade with the potential to block vehicle traffic.

For at-grade crossings that would meet these criteria, OEA analyzed the potential delay impacts on vehicle traffic by evaluating site-specific conditions including:

- Existing highway and road networks;
- Locations of nearby at-grade or grade-separated crossings; and
- Time to access the opposite side of the crossing if a train is encountered.

H.2.2 Grade Crossing Delay Results

Table H.2-2 presents the grade crossing delay results by individual crossing, organized by state and city. The AADT, train speed, and number of roadway lanes represent the expected 2027 conditions common to both the No-Action Alternative and the Proposed Acquisition. The trains per day, train length, and delay-related performance measures represent the expected conditions and estimated performance in 2027 for the No-Action Alternative and Proposed Acquisition. The final two columns indicate the expected change in average delay per vehicle and level of service, representing the expected impact of the Proposed Acquisition compared to the No-Action Alternative.

Appendix I

Truck-to-Rail Diversion and Intermodal Facilities

This appendix includes detailed information on the approach that OEA used to analyze the impact of the Proposed Acquisition on truck-to-rail diversion and intermodal facility traffic, as summarized in *Section 3.4, Truck-to-Rail Diversion* and *Section 3.5, Intermodal Facility Traffic*. In addition, detailed tables showing the results of the analysis are included. **Table I.0-1** lists the data sources used for the analysis.

Table I.0-1. Data Sources

Source Name	Description
Illinois Annual Average Daily Traffic (AADT) Maps	Statewide, Chicago Area, and East St. Louis AADT Traffic Maps
Minnesota Department of Transportation (DOT)	AADT for Minnesota
Michigan DOT	Michigan Traffic Volumes Map
Michigan DOT	Michigan Traffic Volumes Sources
Kansas DOT	AADT for Kansas

HPMS Field Manual Appendix N	Estimating highway capacity

I.1 Roadway Capacity Formula

I.1.1 Freeway Capacity

Based on *Highway Capacity Manual (6th Edition)* (HCM) (Transportation Research Board 2016), the capacity of a basic freeway segment varies with the Free Flow Speed (FFS), which is determined based on roadway design speed under ideal conditions with reductions applied due to lane width, right side clearance, and interchange ramp density when these parameters are under less-than-ideal conditions.

$$FFS = BFFS - f_{LW} - f_{RLC} - 3.22 \times TRD^{0.84}$$

$$c\ (\text{basic freeway segment}) = 2{,}200 + 10 \times (FFS_{adj} - 50)$$

Where:

FFS	=	free-flow speed (miles per hour)
BFFS	=	base free-flow speed (miles per hour)
f_{LW}	=	adjustment for lane width (miles per hour)
f_{RLC}	=	adjustment for right side lateral clearance (miles per hour)
TRD	=	total ramp density (ramps per mile)
c	=	capacity (passenger cars per mile per lane)
FFS_{adj}	=	adjusted free flow speed (miles per hour)

I.1.2 Multilane Highway Capacity

The capacity of a multilane highway is similarly related to the FFS, while speed and capacity reductions are factored with lane width, total clearance, type of median, and access density.

$$FFS = BFFS - f_{LW} - f_{TLC} - f_M - f_A$$

$$c\ (\text{multilane highway segment}) = 1{,}900 + 20 \times (FFS_{adj} - 45)$$

Where:

FFS	=	free-flow speed (miles per hour)
BFFS	=	base free-flow speed (miles per hour)
f_{LW}	=	adjustment for lane width (miles per hour)

f_{TLC} = adjustment for total lateral clearance (miles per hour)

f_M = adjustment for median type (miles per hour)

f_A = adjustment for access point density (miles per hour)

c = capacity (passenger cars per mile per lane)

FFS_{adj} = adjusted free flow speed (miles per hour)

I.1.3 Two-Lane Highway Capacity

The capacity calculation of a two-lane highway is more complicated in the HCM. In addition to the FFS with reduction factors due to lane width, right side clearance, type of median, and access density, the average travel speed is also affected by other factors such as traffic mix, terrain, and passing opportunities. For the planning level analysis, a fixed value of 1,490 passenger cars per hour is recommended (FHWA 2017) which is used in this analysis for two-lane highways.

I.1.4 Signalized Highways

The capacity of signalized highways is determined not only by roadway geometrics, but also traffic signal types, timings, and lane use regulations such as parking, bike lane, and transit stops. For simplicity purposes (FHWA 2017), the product of 1,900 passenger cars per lane and the ratio of green time for through movement over cycle length is used in this analysis.

$$\text{Capacity} = \frac{g}{c} \times lanes \times 1{,}900$$

Where:

g / c = proportion of dwell time during effective green time

Lastly, it should be noted that in traffic flow theory, highway capacity is defined by the maximum number of passenger cars that can be processed by a highway facility without causing unacceptable levels of traffic congestion. To calculate actual capacity of a specific roadway facility, a heavy vehicle factor needs be applied to account for capacity impacts due to terrain and vehicle mix. Based on the HCM, heavy vehicle factors are determined based on vehicle mix (proportion of heavy vehicles) and terrain passenger car equivalent are different for level, rolling and mountainous terrain (Transportation Research Board 2016):

$$f_{HV} = \frac{1}{(1 + PT \times (ET - 1))}$$

Where: f

HV = heavy vehicle adjustment factor (decimal)

PT = proportion of heavy vehicles in traffic stream (decimal)

ET = passenger car equivalent of one heavy vehicle in traffic stream

Capacity calculations are conducted for each roadway segment, and the performance measures such as Vehicle Miles Traveled (VMT), truck miles diverted, and Volume Over Capacity (V/C) ratios are aggregated using a roadway length weighted average. A summary table of roadway V/C, as well as some key variables and default value assumptions, are included in **Table I.1-1** through **Table I.1-4** below.

I.1.5 Truck to Rail Diversion – Table I.1-1 to Table I.1-4

Traffic data in the Applicants' application included approximately 115 origin destination pairs covering approximately seven Canadian Metropolitan Areas (CMA) in Canada, seven Business Economic Areas (BEA) in the U.S., and eight states in Mexico. OEA conducted traffic assignment between these origins and destinations (O/D) pairs on the Freight Analysis Framework (FAF) roadway network, and the results are mostly consistent with the truck-to-rail diversion network map provided in the application.

I.1.6 Truck-to-Rail Diversion – Figure I.1-1 to Figure I.1-3

The FAF is a transportation modeling tool produced through a partnership between the Bureau of Transportation Statistics and the Federal Highway Administration (FHWA) that integrates data from a variety of sources to create a comprehensive picture of freight movement among states and major metropolitan areas by all modes of transportation. For truck-to-rail diversion analysis, Annual Average Daily Traffic (AADT) data are available from HPMS files as well as AADT for single unit trucks and composite trucks. OEA applied a growth rate of 1.5 percent to project the collected AADT to the base year of 2022. HPMS also has D-Factor[1] and K-Factor[2] for most highways.

OEA conducted additional evaluation by merging the FAF framework with roadway geometrics and traffic data included in the HPMS. The HPMS is a national level highway information system that includes data on the extent, condition, performance, use and operating characteristics of the nation's highways. The HPMS contains administrative and extent of system information on all public roads, while information on other characteristics is represented in HPMS as a mix of universe and sample data for arterial and collector functional systems. HPMS data were available in ArcGIS format, and OEA used the spatial merging function to fetch relevant information based on geolocation data.

Note that, based on the data and illustrations provided by the Applicants, some routes are discontinuous. OEA understands that this is because the traffic assignment algorithms for some O/D pairs resulted in predicted truck traffic volumes that would fall below the thresholds for environmental analysis. These discontinuous routes are retained as such in this analysis to be consistent with the methodology in the Applicants' application, while excluding highway segments below thresholds is not expected to impact the conclusions of this analysis.

[1] Directional Distribution (D)-Factor - The proportion of traffic traveling in the peak direction during a selected hour

[2] K-Factor - The proportion of the AADT occurring in the peak hour

I.2 Intermodal Facility Traffic

I.2.1 Local Roadway Effects – Table I.2-1 to Table I.2-9

OEA used available state and local resources to identify the AADT on roadways in the study area. Along roadways where truck data was not available, OEA used the HCM to determine the default truck percentages for identified segments. OEA obtained the service volumes used in the capacity evaluations by using the FHWA's Simplified Highway Capacity Calculation Method for the HPMS. The additional truck trips as a result of the Proposed Acquisition were distributed along the identified routes based on a combination of AADT distribution, proximity to freeways and major regional routes, and engineering judgement. The AADT distribution was used to identify a historical baseline distribution of trips along the existing network. The route proximity to freeways and major regional routes as well as any additional collected information, (e.g., the designation of truck routes) was used in conjunction with engineering judgement to determine appropriate deviations from the historical data.

Along roadways where truck data, D-Factor, and K-Factor are not available, OEA used the HCM to determine the default truck percentages for the identified segments. OEA used the state specific default values from Exhibits 26-1 and 26-2 for Illinois, Kansas, Michigan, Minnesota, Missouri, and Texas. OEA utilized the approach outlined in Chapter 3 of the HCM to characterize the roadway type for each segment.

The service volumes used in the capacity evaluations were obtained using the Simplified Highway Capacity Calculation Method for the Highway Performance Monitoring System. The values are published by FHWA's Office of Highway Policy Information. The service volumes used in the analysis are associated with the vehicle capacity Level of Service E for the roadway types.

Table I.2-1. Intermodal Facility Truck Traffic Projections

Terminal	State	2019 Truck Traffic	2027 Truck Traffic Under the No-Action	2027 Truck Traffic Under the Proposed Acquisition	Truck Per Day Increase	Percent Increase
Bensenville Intermodal management system (IMS)	IL	303	383	698	315	82%
Detroit Container Terminal	MI	111	141	228	87	62%
Minneapolis IMS	MN	221	279	332	53	19%
Schiller East IMS	IL	150	190	324	134	70%
International Freight Gateway	MO	41	51	104	53	103%
Jackson	MS	5	6	6	0	0%

Table I.2-1. Intermodal Facility Truck Traffic Projections

Terminal	State	2019 Truck Traffic	2027 Truck Traffic Under the No-Action	2027 Truck Traffic Under the Proposed Acquisition	Truck Per Day Increase	Percent Increase
Kendleton	TX	9	12	12	0	0%
Laredo	TX	25	31	31	0	0%
Wylie	TX	258	326	474	148	45%

Note: Applicant's traffic projections indicate that truck traffic at six intermodal facilities would increase by 50 trucks per day, 10 percent of the average number of trucks per day, or both.

Table I.2-2. Intermodal Facility V/C Summary Table

Terminal	Description	2022 Base Year	2027 No-Action	2027 Proposed Acquisition

Appendix J

Cultural Resources

J.1 Regulatory Setting

This section describes OEA's analysis of potential impacts on cultural resources that could result from the Proposed Acquisition. The Board's decision whether to grant authority for CP to acquire KCS is a federal action under NEPA and is also a federal undertaking under Section 106 of the National Historic Preservation Act (NHPA) (54 U.S.C. § 306108). The Section 106 regulations at 36 C.F.R. Part 800 require federal agencies to consider the effects of their undertakings on historic properties that are listed in or are eligible for listing in the National Register of Historic Places (National Register). Historic properties can include buildings, prehistoric and historic archaeological sites, districts, objects, and structures, as well as traditional cultural properties and landscapes. The term "historic property" includes properties of religious or cultural significance to tribes. In this case, OEA is coordinating the environmental review process under NEPA with the Section 106 process. The NEPA term "cultural resources" as used in this section is interchangeable with the Section 106 term "historic properties."

Pursuant to 36 C.F.R. § 800.3(a), OEA has determined that sales, leases, or transfers of operational rail lines for the purpose of continued rail operation are generally not a type of activity that has the potential to cause effects to historic properties. This determination is reflected in the Board's environmental regulations at 49 C.F.R. § 1105.8(b)(1), which exempt such sales, leases, and transfers from historic review requirements. However, if the acquisition of one railroad by another would result in constructing new rail lines, abandoning existing rail lines or causing physical changes within the existing rail right-of-way (ROW), then the acquisition may have the potential to affect historic properties. In this case, if the Board authorizes the Proposed Acquisition, the Applicants intend to build 25 capital improvements within the rail ROW. Those capital improvements would include adding 10 new passing sidings, extending 13 existing sidings, adding a section of facility working track, and adding a section of double track. These 25 planned capital improvements have the potential to alter historic properties, including previously unidentified archaeological sites. Accordingly, OEA's historic review, as summarized in this section, addresses the potential effects of the 25 planned capital improvements.

J.1.1 Consultation

In a letter dated November 17, 2021, OEA initiated consultation with State Historic Preservation Officers (SHPOs), Tribal Historic Preservation Officers (THPOs), and tribal governments with an interest in the planned capital improvements. OEA also conducted consultation meetings with SHPOs, the Advisory Council on Historic Preservation (ACHP), and THPOs/tribal governments with an interest in the areas where the Applicants intend to

add the planned capital improvements. OEA conducted further consultation with parties based upon their level of interest in cultural resources; these consultations are described below in greater detail.

J.1.2 SHPOs

In addition to the notification letter, OEA conducted initial consultation meetings with SHPOs in order to introduce them to the project and to gather initial feedback about the approach to Section 106. **Table J.1-1** provides the results of these initial consultation meetings.

Table J.1-1. SHPO Consultation Meetings

Meeting	Date	Result
Texas SHPO	12/1/21	Stated there was no Area of Potential Effect (APE) in state; provided a letter (12/9/21) with a finding of no effect
Illinois SHPO	12/3/21	Requested survey of above-ground resources
Iowa SHPO	12/6/21	Requested survey of above-ground and below-ground resources
Oklahoma SHPO	12/7/21	Requested survey of above-ground and below-ground resources; recommended further consultation with tribes for reservation lands (Cherokee Nation, Choctaw Nation)
Missouri SHPO	12/7/21	Requested survey of above-ground and below-ground resources
Louisiana SHPO	12/9/21	Requested survey of above-ground resources
Arkansas SHPO	12/13/21	Provided a letter (12/14/21) with a finding of no effect
Kansas SHPO	12/16/21	Stated there was no APE in state; provided a letter (12/16/21) with a finding of no effect

Additional consultation has occurred as the environmental analysis has developed, including requests for information and project updates. OEA will provide Section 106 consultation materials to all SHPOs prior to the Final EIS.

J.1.3 THPOs

In addition to the initial notification letter, OEA has undertaken extensive efforts to contact tribes that could have a cultural interest in the planned capital improvements. **Table J.1-2** summarized these consultation efforts.

Table J.1-2. Tribal Outreach

Tribe	Outreach Efforts	Results
Alabama-Coushatta Tribe of Texas	Letter dated 11/12/21; Phone call in December 2021; Emailed letter again on 1/6/22; Follow-up emails on 1/25/22 and 2/16/22	Verbal interest in December 2021, but no response to repeated follow-up efforts
Alabama-Quassarte Tribal Town	Letter dated 11/12/21; Phone call and left message in December 2021; Additional phone call and left	No response

Table J.1-2. Tribal Outreach

Tribe	Outreach Efforts	Results
	message on 2/1/22; Emailed letter again on 2/9/22	
Apache Tribe of Oklahoma	Letter dated 11/12/21; Phone call and left message in December 2021; Emailed letter on 1/10/22; Follow-up emails on 1/25/22 and 2/15/22	No response
Bad River Band of the Lake Superior Tribe of Chippewa Indians of the Bad River Reservation, Wisconsin	Letter dated 11/12/21; Phone call and left message in December 2021; Phone call and left message on 2/2/22; Emailed letter on 2/8/22	No response
Bois Forte Band (Nett Lake)of the Minnesota Chippewa Tribe	Letter dated 11/12/21; Phone call and left message in December 2021; Emailed letter on 1/6/22; Follow-up emails on 1/25/22 and 2/16/22	No response
Caddo Nation of Oklahoma	Letter dated 11/12/21; Phone call and left message in December 2021; Emailed letter over on 1/12/22; Follow-up phone call and left message on 2/2/22	No response
Cherokee Nation	Letter dated 11/12/21; Phone call and left message in December 2021; Phone call and left message on 1/11/22 and 1/12/22; Emailed letter on 1/13/22; Follow-up email on 1/24/22 and phone call and left message on 1/31/22; Additional information provided on 2/12/22; Follow-up email requesting consultation meeting on 2/22/22	Email received 2/1/22 requesting additional information; no response to provided additional information or meeting request
Cheyenne and Arapaho Tribes, Oklahoma	Letter dated 11/12/21; Phone call and left message in December 2021; Phone call and left message 2/3/22	No response
Chitimacha Tribe of Louisiana	Letter dated 11/12/21; Phone call and left message in December 2021; Phone call and left message 2/3/22	Letter received 12/2/21 indicating no interest in the project
Choctaw Nation of Oklahoma	Letter dated 11/12/21; Phone call and left message in December 2021; Emails on 1/4/22 and 1/20/22	Email received 1/3/22 requesting cultural resource surveys in the area of ground-disturbing activity; meeting held 2/24/22 where Choctaw Nation inquired if pedestrian survey or Phase I survey would occur for below-ground resources within their areas of cultural concerns. OEA

J.1.4 State and Local Governments

Within the scope of the Draft EIS, OEA notified state and local government representatives of the project in letters that OEA sent on November 12, 2021. OEA invited these officials to attend public meetings held on the following dates:

- November 30, 2021
- December 1, 2021
- December 2, 2021
- December 7, 2021
- December 8, 2021
- December 9, 2021

Table J.1-3 summarizes the comments received from state and local governments**.**

Table J.1-3. State and Local Government Comments

Local Government	State	Comment
City of Dubuque	Iowa	Concern about impacts to Dubuque Freight House and the Metz Manufacturing Company
Village of Pingree Grove	Illinois	Concern about impacts to Heritage District

J.1.5 Other Interested Parties

Other parties with an interest in cultural resources have commented on effects of the Proposed Acquisition on cultural resources. During the public meetings, OEA received a comment from the Dubuque, Iowa Chamber of Commerce expressing concerns about impacts to Dubuque Freight House and the Metz Manufacturing Company. The U.S. Environmental Protection Agency (EPA) Office of Communities, Tribes and Environmental Assessment noted that the Draft EIS would need to address cultural and historic resources, including tribal sacred sites, and provide information about consultation under Section 106. In addition, OEA held a meeting with the ACHP on January 28, 2022 to provide the agency with an overview of the Proposed Acquisition and the Section 106 approach.

J.2 Area of Potential Effects

As a result of these consultation efforts, OEA developed an APE. The APE as defined in 36 C.F.R. § 800.16(d), is the geographic area or areas within which an undertaking may directly or indirectly cause changes in the character or use of historic properties if any such properties exist. Based on the nature and scope of the undertaking, as well as consultation, the above-ground APE consists of noncontiguous areas within the existing rail ROW in the area of the planned capital improvements as well as a buffer on each side of the ROW to account for potential setting, visual, noise, or other impacts from construction activities. For below-ground resources, the APE includes all areas where ground disturbing activities could potentially occur and extends from the railroad centerline to the limits of the existing ROW for the entire length of each planned capital improvement.

J.3 Identification and Evaluation

Prior to field investigation, OEA conducted background research using available sources, including state surveys, state archaeological site records, National Register files, state context documents, historic mapping and aerial photography, tribal documentation, and other information, as available. OEA is providing detailed information on the results of these background research efforts to consulting parties as part of the Section 106 documentation.

J.3.1 Methodology

OEA developed the methodologies for above-ground and below-ground surveys in accordance with 36 C.F.R. § 800, as well as state and tribal guidelines for the identification of historic properties.

J.3.1.1 Above-Ground

Arkansas

OEA conducted a Historic and Architectural Resource Survey at the planned capital improvements in Benton and Polk Counties, Arkansas, for the purposes of identifying any resources over 50 years old within the APE and evaluate those resources for listing on the National Register through the application of criteria set forth in 36 C.F.R. Section 60.4. This survey was designed to comply with Section 106 of NHPA and implementing regulations of the NHPA as outlined in 36 C.F.R. Part 800. The surveys were conducted in accordance with the Secretary of the Interior's Standards and Guidelines for Identification and Evaluation. This survey was completed using standard field and reporting methodologies and was subject to the requirements of the Arkansas Historic Heritage Program's (Arkansas SHPO) current Guidelines for Historic and Architectural Surveys in Arkansas. The Arkansas SHPO provided Resource ID numbers for identified properties.

Illinois

OEA reviewed works of local history, historic aerial photography, historic mapping, and records from the office of the Ogle County Tax Assessor, in addition to conducting a field survey of the historic resources within the APE. Research was conducted in the Illinois Railway Museum collection of the Strahorn Library in Marengo, Illinois, the HARGIS database, and with staff of the Illinois SHPO. The data obtained from survey was evaluated based on the National Register criteria for eligibility.

Iowa

Prior to and after the field survey, OEA conducted background research to develop historic contexts pertinent to the types of resources surveyed and their geographical area. OEA followed the guidelines for intensive-level survey put forth by the National Park Service (NPS) in their National Register Bulletin Guidelines for Local Surveys: A Basis for Preservation Planning (#24, dated 1977, Revised 1985). OEA also followed the Iowa SHPO Guidelines for Historic Architectural Survey in Iowa, including Intensive Level survey guidelines and General Fieldwork Guidance portions of the document.

Louisiana

OEA reviewed the Division of Historic Preservation's (Louisiana SHPO) Cultural Resources Map and consulted with Louisiana SHPO staff and the Louisiana State Library staff to confirm that no previously identified above-ground resources exist within the APE. Historic aerial photographs were analyzed and compared to current aerial photographs, as were historic USGS topographic maps of the APE and vicinity. Pedestrian and vehicular

surveys were undertaken to locate historic resources 50 years old or older within the APE for each planned capital improvement location. The surveys were conducted in accordance with the *Secretary of the Interior's Standards and Guidelines for Identification and Evaluation*. Each identified resource was photographed, mapped (using the ArcGIS Field Maps mobile application), and described in field notes to assist in documenting material, style, and construction details. The survey was conducted from the public ROW, and the surveyors did not enter the railroad ROW or any private property.

Missouri

Pedestrian and vehicular surveys were undertaken to locate resources 50 years old or older within the APE for each planned capital improvement location. The survey was conducted in accordance with the Secretary of the Interior's Standards and Guidelines for Identification and Evaluation. Each identified resource was photographed, mapped (using the ArcGIS Field Maps mobile application), and described in field notes to assist in documenting material, style, and construction details. The survey was conducted from the public ROW, and the surveyors did not enter the railroad ROW or any private property.

Oklahoma

Prior to conducting the above-ground survey, OEA undertook a desktop review to identify the potential resources 45 years old or older within the APE for each planned capital improvement. OEA reviewed information available from the Oklahoma SHPO, consulted staff at the SHPO, and accessed the Oklahoma State Library to confirm that no previously identified above-ground resources exist within the APEs. Historic aerial photographs were analyzed and compared to current aerial photographs, as were historic USGS topographic maps of the APE and vicinity. Pedestrian and vehicular surveys were undertaken to locate historic resources 50 years old or older within the APE for each capital improvement location. The surveys were conducted in accordance with the Secretary of the Interior's Standards and Guidelines for Identification and Evaluation. Each identified resource was photographed, mapped (using the ArcGIS Field Maps mobile application), and described in field notes to assist in documenting material, style, and construction details. The survey was conducted from the public ROW, and the surveyors did not enter the railroad ROW or any private property.

J.3.1.2 Below-Ground

Arkansas

Phase I archaeological field survey methods are defined in *Guidelines for Archaeological Fieldwork and Report Writing in Arkansas* (2010), and consist primarily of two methods, visual inspection (pedestrian survey) and systematic shovel testing. Where visibility is 25 percent or greater within the APE, pedestrian survey should be conducted along transects spaced apart by 20 meters. In areas of poor visibility, pedestrian survey should be augmented through subsurface investigation by means of Shovel Test Pit (STP) excavation. OEA excavated STPs within the APE along linear transects at 20-m intervals. STPs measured at least 25 centimeters in diameter and were excavated at least 10 cm into culturally sterile substrates. OEA collected standardized data at each test, including soil

descriptions, depths, and observation or collection of cultural material. All excavated soils were screened through ¼-inch hardware cloth for uniform artifact recovery and backfilled into each test.

Standardized data for each STP were collected on forms and in notebooks; information recorded consisted of the depth for each stratum encountered, Munsell soil color for each stratum, and the number and type of each artifact encountered, if applicable. Once excavated, the walls of each STP were inspected for artifacts, features, and other indications of an archaeological site. All excavated STPs were excavated with round-nosed shovels and backfilled upon completion.

STPs that were positive for the presence of historic cultural material, or any above ground historic feature encountered, were further investigated through additional delineation STPs excavated at close interval (such as, at 5 m) in cardinal directions where possible within the APE. These delineation STPs were excavated until two negative STPs were encountered in any one direction. Artifacts recovered were bagged and labeled according to their provenance and then processed. Sketch maps were made of selected areas and shovel test transects, as needed. Representative photographs were taken to document the general topography, vegetation, and environmental condition in the APE. Systematic auguring was completed at 100 m intervals to determine rail berm depth of fill. In instances where water or stream crossings were present, augur tests were placed on both sides of the crossing to evaluate depths of soil deposition.

OEA surveyed two planned capital improvement locations for cultural resources in Arkansas. The Applicants plan to construct sidings or siding extensions at these locations (**Table J.3-1).**

Table J.3-1. Field Effort by Planned Capital Improvement Location (Arkansas)

Capital Improvement Location	County	Type of Investigation	No. of Completed Shovel Tests
Gentry	Benton	Subsurface	160
Mena/MP 377	Polk	Subsurface	151

Illinois

OEA conducted phase I archaeological survey fieldwork using two primary methods: visual inspection (pedestrian survey) of the study area and systematic shovel testing along transects situated parallel to the railway corridor. The field survey methods followed guidelines in the Illinois SHPO's *Guidelines for Archaeological Reconnaissance Surveys and Reports* (n.d.).

Where visibility was 25 percent or greater within the APE, OEA conducted pedestrian surveys along transects spaced at 5 m apart. In areas of poor visibility, OEA augmented pedestrian surveys through subsurface investigation by means of STP excavation. Excavation of STPs occurred along linear transects, at 15-m intervals. STPs measured at least 40 cm in diameter and were excavated to at least 10 cm into cultural sterile substrates. OEA did not excavate STPs in areas that were inundated, paved, or developed (for example,

railroad tracks or buildings). All excavated soils were screened using ¼-inch hardware mesh for uniform artifact recovery.

OEA collected standardized data for each STP on forms and in notebooks; information recorded consisted of the depth for each stratum encountered, Munsell soil color for each stratum, and the number and type of each artifact encountered, if applicable. Once the STPs were excavated, OEA inspected the walls of each test for artifacts, features, and other indications of an archaeological site. OEA backfilled all excavated STPs upon completion and took representative photographs to document the general topography, vegetation, and environmental conditions in the APE.

OEA surveyed one planned capital improvement location for cultural resources in Illinois. In total, OEA completed 196 STPs to complete the archeological field survey (**Table J.3-2**).

Table J.3-2. Field Effort by Planned Capital Improvement Location (Illinois)

Capital Improvement Location	County	Type of Investigation	No. of Completed Shovel Tests
Chicago MP 75	Ogle	Subsurface	196

Iowa

The Phase I archaeological field methodology for the state of Iowa is presented by the Association of Iowa Archaeologists in *Guidelines for Archaeological Investigations in Iowa* (2021). Field methods for the Iowa portions of the APE only included visual inspection (pedestrian survey). Agricultural fields are generally sites for pedestrian surveys and transect intervals are based on ground surface visibility (GSV) and current surface conditions within the APE (**Table J.3-3**).

Table J.3-3. Survey Intervals Based on Ground Visibility (Iowa)

GSV	Condition	Survey Interval
80-100%	Rain washed/weathered	15 meters
80-100%	Freshly turned	10 meters
40-80%	Any condition	10 meters
25-40%	Rain washed/weathered	5 meters
25-40%	Freshly turned	3 meters
Less than 25%	Systematic subsurface sampling	

Source: Association of Iowa Archaeologists 2021

Field surveys have recently been completed in Iowa. More detailed information on the results of those surveys will be included in the Section 106 documentation that will be provided to consulting parties.

Louisiana

The state of Louisiana provides guidelines for archaeological field survey through the Louisiana SHPO's *Fieldwork Guidelines for Cultural Resource Investigations* (2021). OEA completed a Phase I survey using the following methods in the spring of 2022.

OEA conducted Phase I surveys using a combination of methods including systematic pedestrian surveys and subsurface investigation. OEA conducted shovel testing along linear transects spaced at intervals based on probability; as the planned capital improvements are positioned within 100 feet of a historic railroad, the survey area is considered high probability and was therefore tested at 30-meter intervals. Additionally, OEA completed supplemental auguring at 90-meter intervals and at both sides of water or stream crossings to further evaluate depths of soil deposition within the APE.

Following the guidelines provided by the Louisiana SHPO, OEA collected standardized data from each shovel test, including depth and Munsell soil color for each stratum, and the number and type of each artifact, if applicable. The soil was screened through ¼-inch hardware cloth or mesh and backfilled into the test location. The following table provides information on the planned capital improvement locations and numbers of shovel tests that OEA conducted in the Spring of 2022 (**Table J.3-4**).

Table J.3-4. Field Effort by Planned Capital Improvement Location (Louisiana)

Capital Improvement Location	County	Type of Investigation	No. of Completed Shovel Tests
Mansfield	De Soto	Subsurface	77
Loring	Sabine	Subsurface	74
Singer	Beauregard	Subsurface	114

Missouri

The Missouri SHPO provides baseline procedures for the conduct of Phase I cultural resource surveys via its *Guidelines for Phase I Archaeological Surveys and Reports* (n.d.). OEA completed a Phase I survey using two primary methods: visual inspection (pedestrian survey) of the APE and systematic shovel testing along transects placed parallel to the railway corridor.

According to the guidelines, where ground surface visibility (GSV) is 25 percent or greater within the APE, such as in areas subjected to agricultural furrowing and/or plowing, pedestrian survey should be conducted along 5-meter interval transects within the APE. In areas of poor visibility (such as less than 25 percent GSV), pedestrian survey should be augmented through subsurface investigation. Shovel testing, or STP excavation, should be conducted systematically within the APE along two linear transects running parallel along either side of the existing railroad track. STPs should measure at least 25 cm in diameter and be excavated into culturally sterile substrates (B horizon). If the B horizon is not encountered within 1 meter of the surface, deep testing should be conducted in every third test using a hand auger to verify the depths of the A horizon soils.

OEA further refined these baseline methods, as defined by the Missouri SHPO, for the purposes of this study. OEA generated probability models using available environmental data (i.e., soil maps, National Wetlands Inventory wetland designation areas, historic maps) to define portions of the APE as having high, moderate, or low potential for above-ground archaeological features and subsurface cultural deposits. Transect intervals were determined based on the probability of cultural deposits at each planned capital improvement location (**Table J.3-5**).

Table J.3-5. Survey Intervals Based on Probability (Missouri)

Probability	Intervals	Transects
Low	50 m	1
Intermediate	30 m	1
High	15 m	1

OEA screened shovel test soils through ¼-inch hardware mesh for uniform artifact recovery, and collected standardized data from each test, including soil descriptions, depths, and cultural material encountered/recovered (if applicable). All tests were then backfilled upon completion.

During the survey of the APE in Missouri, OEA investigated seven (7) planned capital improvement locations for cultural resources (**Table J.3-6**).

Table J.3-6. Field Effort by Planned Capital Improvement Location (Missouri)

Oklahoma

OEA employed field survey methods that meet the requirements of the guidelines stipulated in the U.S. Army Corps of Engineers' *Guidelines for Cultural Resource Investigations in Oklahoma* (2019) and the Osage Nation Historic Preservation Office's *Archaeological Survey Standards* (2018). Field personnel completed Phase I archaeological survey fieldwork using two methods based on these standards: pedestrian survey of the APE and systematic shovel testing complemented by probing and augering along transects placed parallel to the railway corridor within the APE.

OEA completed pedestrian survey along the shovel test transects as well as in 10-meter transects in areas of slope 20 degrees or greater, where shovel testing could not be completed. Field personnel excavated STPs at 30-meter intervals along linear transects also at 30-meter intervals. STPs measured at least 30 cm in diameter and were excavated to a depth of at least 20 centimeters into culturally sterile substrates. OEA did not excavate shovel tests in areas that were inundated, paved, developed (for example, railroad tracks, paved crossings, buildings), or on hillsides with slopes greater than 20 degrees. Field personnel excavated by natural soil horizon and screened all excavated soil through ¼-inch hardware mesh for uniform artifact recovery.

OEA collected standardized data for each STP on forms and in notebooks; information recorded consisted of the depth for each stratum encountered, Munsell soil color for each stratum, and the number and type of each artifact encountered, if applicable. Once the STPs were excavated, OEA inspected the walls of each test for artifacts, features, and other indications of an archaeological site. OEA backfilled all excavated STPs upon completion and took representative photographs to document the general topography, vegetation, and environmental conditions within the APE.

During the survey of the APE in Oklahoma, OEA investigated four locations for cultural resources where the Applicants plan to construct or extend sidings (**Table J.3-7**).

J.4 Preliminary Results and Evaluations

In compliance with NEPA and Section 106 of the NHPA, OEA has surveyed the APE for above-ground and below-ground historic properties. The purpose of the surveys was to locate, identify, and evaluate the significance of any historic resources within the APE and to determine if these resources were listed, or were eligible for listing, in the National Register. OEA conducted surveys within the APE for above-ground and below-ground resources between January and June of 2022. **Table J.4-1** summarizes the results of the surveys; **Attachment G** depicts the locations of the resources. **Attachments A-F** describe the detailed information on these identified properties in a series of state-specific attachments.

J.5 Preliminary Effects Analysis

OEA evaluated the effects to historic properties using conceptual designs provided by the Applicants. The following is a description of eligible cultural resources and preliminary effects analysis for each.

J.5.1 Above-Ground Resources

J.5.1.1 K-HEAV-01

Table J.5-1. K-HEAV-01: Historic Railway Segment

Location	Arkansas, Kansas, Missouri, Oklahoma
Associated Capital Improvement Location	Asbury and Goodman/MP 186, Missouri; Gentry, Arkansas
National Register Criteria	A, B
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This property is a 107.8-mile segment of the KCS rail line that travels south from Pittsburg, Kansas, to Watts, Oklahoma. The railroad passes through the communities of Pittsburg, Kansas; Asbury, Joplin, and Kelly Springs, Missouri; Gentry, Arkansas; and Watts, Oklahoma. Portions of this line were built by the Kansas City, Pittsburg, and Gulf Railroad (KCP&G) during the 1890s while other portions consist of existing railroads purchased by Arthur Stilwell, president of the KCP&G, and incorporated into the line. The portion of this railroad segment from Joplin, Missouri, to Sulphur Springs, Arkansas, was built by the Kansas City, Fort Smith, and Southern Railroad. The remainder of the subject railroad segment was built by the KCP&G. As the line progressed south, the KCP&G passed through established towns, providing these communities with an outlet for their goods,

shipping them to the Gulf Coast or Kansas City. The KCP&G, reorganized as the KCS after 1900, became the primary driver of trade and economic activity in this rural segment of Missouri, Arkansas, and Oklahoma. Built as the second major stretch of the KCP&G, this segment connected Kansas City to multiple small agrarian communities in Missouri, Arkansas, and Oklahoma, including Joplin, Missouri, which was a major center of zinc and lead mining. Though Joplin possessed several rail connections by the arrival of the first KCS train in 1893, none of these existing connections had the same impact as the KCS which allowed the lead and zinc extracted from Joplin to travel the length of the country and overseas. Joplin's population grew during the final decades of the nineteenth century; however, the most marked growth happened between 1890 and 1900, when the population rose from 9,000 to 26,000.

The KCP&G was, for many small towns in Arkansas and Oklahoma, the first railroad to pass through, and in some cases, the location of the railroad directly determined where communities first developed. This was particularly true for Benton County in northwestern Arkansas. Between 1880 and 1900 the county's population grew from 20,000 to 31,000; new towns like Gentry were established and existing towns such as Siloam Spring expanded significantly. The railroad's passage through Benton County led to the establishment of significant fruit orchards, stock farms, and the expansion of existing wheat farms. The railroad also directly motivated settlements such as Asbury, Missouri, and Watts, Oklahoma, which both developed after the KCS made the town a division headquarters in 1912. The construction of rail yards and other infrastructure at Watts led to speculative real estate development within the town and encouraged the development of stock farms in the surrounding countryside. Based on the introduction and expansion of Transportation and Commerce, this rail segment is recommended eligible for listing in the National Register under Criterion A.

Additionally, this rail segment is recommended eligible under Criterion B due to its association with Arthur Stilwell, founder and driving force behind the expansion of KCP&G. Arriving in Kansas City in 1888, Arthur Stilwell began to operate his first railroad, the Kansas City Suburban Belt Railway, in 1889. Extending the line south to Pittsburg, Kansas, Stilwell renamed the line the KCP&G Railroad. Through the 1890s Stilwell pushed his railroad further south, consolidating his tracks with other lines and laying new railbeds as he strove to reach the Gulf of Mexico. Stilwell secured financial backing for the railroad by selling railroad stock to Dutch investors, a necessity after the United States was rocked by the Panic of 1893. To thank his Dutch investors, Stilwell named several towns in Arkansas, Texas, and Louisiana after them and their wives. In 1897, Stilwell's railroad reached the Gulf of Mexico where he built the City of Port Arthur, named after himself. In total, Stilwell's enterprise laid over 1,200 miles of track through the center of the country and created an alternative shipping corridor that allowed farmers and industrialists in middle America to efficiently export their products and circumvent more distant eastern seaports.

OEA anticipates that the planned capital improvements would have No Adverse Effect on K-HEAV-01. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. The capital improvement designs are only at a conceptual stage; however, direct, physical impacts may include the replacement or extension of

structures spanning waterways and drainage systems. Although this construction would occur within the eligible National Register boundary of the resource, the overall impacts to the railroad would be minimal and would not constitute an adverse effect. Planned alterations to the railroad features would be within the existing ROW and would not result in a substantial visual change to the corridor. Existing sidings are already integral to the operation of the railroad. Therefore, the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements would only physically impact less than a total of six miles of this 100-mile railroad segment, in three separate discontiguous locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segment. The capital improvements would not alter the physical features of the railroad that makes it eligible for the National Register in the area of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.2 K-SHRE-01

Table J.5-2. K-SHRE-01: Historic Railway Segment

Location	Oklahoma, Arkansas
Associated Capital Improvement Location	Heavener, Oklahoma and Mena/MP 377, Arkansas
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation, Exploration/ Settlement

This 94.6-mile segment of KCS travels south from Heavener, Oklahoma, to De Queen, Arkansas. Originally built between 1893 and 1897, this railroad segment was created as part of the KCP&G as the line traveled south to the Gulf of Mexico, passing through Mena, Arkansas; Hatfield, Arkansas; and Cove, Arkansas. In Oklahoma, the KCP&G was responsible for the development of multiple towns, including Heavener which grew around the railroad station and expanded significantly when the KCS made the town a division headquarters. For other towns in Oklahoma and Arkansas the railroad facilitated the movement of crops and livestock. In both states farmers brought cotton, cattle, fruit, and grain to the nearest railroad town and used the KCS to ship their products to the Gulf coast or Kansas City. The railroad also provided opportunities for capital investment in previously unexplored mining and timber extraction ventures. This process tied these farmers into a national economy and helped to sustain communities like Heavener and De Queen.

The railroad segment is regionally significant under Criterion A in the areas of Transportation, Exploration and Settlement, and Commerce. Built by the KCP&G, this segment of the railroad connected the major hub of Kansas City to multiple small agrarian

communities in Oklahoma and Arkansas on its way to the Gulf of Mexico. The railroad, the first major line to pass through this portion of Oklahoma, opened a major regional shipping corridor from the Gulf coast to Kansas City in central Missouri that didn't previously exist, becoming the primary factor for the capital investment in mining, logging, and agricultural enterprises in this area. Additionally, because the United States began its takeover of land in eastern Oklahoma long after many of the surrounding states, the railroad played a critical role in determining the location of many towns.

OEA anticipates that the planned capital improvements would have No Adverse Effect on K-SHRE-01. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Additional elements of the planned capital improvement may include the extension of contributing features spanning waterways and drainage systems. Although this construction would occur within the eligible National Register boundary of the resource, the effect would not be adverse. Existing sidings are already integral to the operation of the railroad and the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements would only physically impact less than a total of six miles of this 95-mile railroad segment, in two separate locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.3 C-MARQ-03

Table J.5-3. C-MARQ-03: Historic Railway Segment

Location	Iowa
Associated Capital Improvement Location	Bellevue/MP 24 and Turkey River/MP 71, Iowa
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This 98-mile segment of CP travels between Sabula and Marquette, Iowa, running parallel to the Mississippi River. The portion of this rail segment north of Dubuque was constructed by Chicago, Dubuque, and Minnesota Railroad in approximately 1870, while the portion between Dubuque and Sabula was constructed by the Clinton and Dubuque Railroad around the same time. In 1878, these companies combined to form the Chicago, Clinton, Dubuque and Minnesota Railroad, which the Chicago, Milwaukee & St. Paul Railroad purchased in 1880. Under the ownership of the latter, this line was a secondary trackage connecting riverport towns like Sabula, Bellevue, and Guttenberg to the greater Chicago, Milwaukee,

and St. Paul Railroad (CM&StP) network. Sanborn maps from Bellevue, Guttenberg, and Sabula each show that soon after the CM&StP's arrival industrial buildings were built in each town to take advantage of the railroad. The 1893 Sanborns show a major slaughterhouse in Sabula while Sanborns from 1886 show Guttenberg with major lumber yards and grain elevators all with access to the railroad. By 1914 Bellevue possessed similar agricultural infrastructure as well as lumber mills, machine shops, and a piano factory.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. This segment of railroad travels through towns that were well established prior to the widespread construction of railroads in Iowa; however, these towns shift orientation following the arrival of the railroad. Maps show Guttenberg, Sabula, and Bellevue as highly developed communities with industrial buildings oriented towards the Mississippi River, at that time the area's most important transportation corridor. After the arrival of the railroad, river commerce remained an important part of the region's economy; however, by the late 19th century industrial development in Guttenberg and Bellevue had migrated closer to the CM&StP's tracks, highlighting the shift of industry from river-based transportation to rail-based transit. For residents of rural Clayton and Jackson Counties the CM&StP Railroad was equally important. Driving their animals and crops to the railroad stops in Sabula, Guttenberg, and Bellevue allowed these farmers to sell their goods to a national audience, creating regional commercial-level agriculture.

OEA anticipates that the planned capital improvements would have No Adverse Effect on C-MARQ-03. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Although this construction would occur within the eligible National Register boundary of the resource, the overall impacts to the railroad would be minimal and would not constitute an adverse effect. Planned alterations to the railroad features would be within the existing ROW and would not result in a substantial visual change to the corridor. Existing sidings are already integral to the operation of the railroad. Therefore, the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements would only physically impact less than a total of six miles of this 98-mile railroad segment, in two separate locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.4 C-OTTU-02

Table J.5-4. C-OTTU-02: Historic Railway Segment

Location	Iowa
Associated Capital Improvement Location	Letts and Washington/MP 255, Iowa

Table J.5-4. C-OTTU-02: Historic Railway Segment

National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This property is an 82.5-mile segment of the CP rail line that stretches from Washington, Iowa to Muscatine, Iowa. Traveling in a generally easterly direction the railroad segment passes through the towns of Washington, Ainsworth, Cotter, Columbus Junction, Fredonia, Letts, and Muscatine. This rail line segment appears to have been constructed as part of the Mississippi and Missouri Railroad (M&M Railroad), which was established by the Chicago, Rock Island, and Pacific Railroad (Rock Island Line) and was later incorporated into it. Between 1856 and 1860 the first railroads were developed between Washington and Muscatine. Washington, located on the fertile prairie, immediately became a major collection point for grain and animals raised in the surrounding county. Washington possessed some of the earliest railroad connections in Iowa and by 1875 four railroad lines came together in Washington. Farmers brought wagonloads of corn or drove their herds to the city and after conducting their business left with finished goods that had been purchased from one of the city's merchants.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. This segment of railroad played a critical role in transporting agricultural products from regional hubs like Washington to major distribution centers like Chicago. The early establishment of the railroad in Washington enabled the city to grow into a regionally important settlement. Nearby Letts, Iowa, was similarly sustained by the passage of the railroad, which permitted foodstuffs from within the township to be gathered and efficiently transported east. Sanborn maps from 1897 show major agricultural buildings such as stock yards and grain elevators along the railroad tracks. Established in the 1850s, the relationship between farmers in Washington County and the railroad was formative to the development of agriculture in the region.

OEA anticipates that the planned capital improvements would have No Adverse Effect on C-OTTU-03. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Although this construction would occur within the eligible National Register boundary of the resource, the overall impacts to the railroad would be minimal and would not constitute an adverse effect. Planned alterations to the railroad features would be within the existing ROW and would not result in a substantial visual change to the corridor. Existing sidings are already integral to the operation of the railroad. Therefore, the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements construction would only physically impact less than a total of ten miles of this more than 82--mile railroad segment, in two separate discontiguous locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it

eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.5 C-LARE-01

Table J.5-5. C-LARE-01: Historic Railway Segment

Location	Iowa
Associated Capital Improvement Location	Ottumwa and Moravia, Iowa
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This 61.2-mile segment of the CP rail line stretches from Ottumwa, Iowa to the Iowa/Missouri border. Traveling in a general southwesterly direction this railroad segment passes through the towns of Ottumwa, Blakesburg, Moravia, Rathburn, Mystic, Seymour, and Sewal. This segment was constructed about 1887 as part of the Chicago, Milwaukee & St Paul Railroad (CM&StP). At the time, the CM&StP was constructing lines through this area of Iowa to compete with the Rock Island Line. This segment of the railroad was strategically positioned to take advantage of the significant coalfields in Wapello County. Iowa coal was a critical resource to powering many of the railroads crisscrossing the state and Wapello County was, by the late 19th century, among the ten most productive coal producers in the state. Sitting at the heart of the Wapello County coalfields, Ottumwa developed into a major regional rail magnet.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. As it expanded in the 1880s the CM&StP built tracks, passenger depots, and freight stations along this 61.2-mile stretch of track. For the residents of these towns the presence or absence of the railroad often determined a community's future. With the establishment of a railroad, a small village or town could become a critical hub of commercial activity. For example, communities like Ottumwa grew rapidly, enabling the growth of local industry and providing employment opportunities. This railroad segment is important for the role it played in connecting the CM&StP to significant coal fields. As a resource, Iowa coal was a crucial power source to the railroads. Companies like the CM&StP built lines specifically to capture strategic coalfields. Passing through Ottumwa and traveling to the Missouri border this rail segment likely took advantage of the city's coal, stopping to refuel trains prior to journeying southwest towards Kansas City. Additionally, local farmers brought their crops and animals to the nearest railroad town to be shipped out by freight car to major collection points such as Chicago. To assist in this collection process, the CM&StP built grain elevators and warehouses along the company's tracks. As a result, millions of dollars' worth of livestock, grain, coal, iron, and other goods were funneled from the agrarian areas of southwest Iowa to the more industrialized East.

OEA anticipates that the planned capital improvements would have No Adverse Effect on C-LARE-01. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Additional elements of the planned capital improvements may include the extension of contributing features spanning waterways and drainage systems. Although this construction would occur within the eligible National Register boundary of the resource, the effect would not be adverse. Existing sidings are already integral to the operation of the railroad and the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements would only physically impact less than nine miles of this 61.2-mile railroad segment, in two separate locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.6 K-PITT-01

Table J.5-6. K-PITT-01: Historic Railway Segment

Location	Kansas, Missouri
Associated Capital Improvement Location	Blue Valley and Grandview/IFG, Missouri
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This is a 124.5-mile segment of the KCS rail line that travels south from Kansas City, Missouri, to Pittsburg, Kansas. The railroad segment passes through the communities of Kansas City, Grandview, Cleveland, Amoret, Hume, Richards, and Pittsburg. For much of its length the railroad segment travels through a rural agrarian landscape along the border between Kansas and Missouri. Built as the first segment of the KCP&G, this rail segment was the first link of what would develop into one of the most important north/south transportation routes in the United States. Extending to Pittsburg, Kansas, the railroad was connected to significant coalfields in Hume, Missouri, and Pittsburg. Additionally, as it expanded the KCP&G built tracks, depots, and other rail related infrastructure across the south, enabling the flow of agricultural products, oil, metals, chemicals, and people through the center of the country and southward.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. Built by railroad magnate Arthur Stilwell and his financial backers, this stretch of railroad was the first portion of what would become KCS, the first major land transportation corridor to link the Midwest and a port at the Gulf of Mexico. This particular railway segment connected Kansas City to major coal fields in Hume,

Missouri, and Pittsburg, Kansas, providing the raw materials to run the new rolling stock, as well as providing the multiple small agrarian communities along the Kansas, Missouri border with their first opportunity to develop commercial agricultural instead of subsistence farming.

OEA anticipates that the planned capital improvements would have No Adverse Effect on K-PITT-01. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. The capital improvement designs are only at a conceptual stage; however, direct, physical impacts may include the replacement or extension of structures spanning waterways and drainage systems. Although this construction would occur within the eligible National Register boundary of the resource, the overall impacts to the railroad would be minimal and would not constitute an adverse effect. Planned alterations to the railroad features would be within the existing ROW and would not result in a substantial visual change to the corridor. Existing sidings are already integral to the operation of the railroad. Therefore, the construction of new or extended sidings would be compatible with the historic use and character of this resource. Less than 10 miles of the nearly 125-mile segment would be physically impacted by the planned capital improvements. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.7 K-BEAU-01

Table J.5-7. K-BEAU-01: Historic Railway Segment

Location	Louisiana
Associated Capital Improvement Location	Mansfield and Loring, Louisiana
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This property is a 91.4-mile segment of the KCS rail line that extends south from Frierson, Louisiana, to Leesville, Louisiana. The railroad segment travels through the towns of Frierson, Mansfield, Converse, Noble, Zwolle, Loring, Many, Hornbeck, and Leesville. Originally built in 1897 this portion of the railroad was originally part of the KCP&G. The railroad reached Shreveport, Louisiana, in March 1897 and by September of that same year the line had reached the Gulf coast. After the Civil War companies like KCP&G began to build trackage in Louisiana, and rural towns throughout the state relocated to take advantage of the developing railroad infrastructure. Louisiana railroads typically handled passengers, foodstuffs, and lumber, much of which was directed to major Gulf coast ports like New Orleans and Port Arthur, Texas.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. Built as one of the final portions of KCP&G this segment of the railroad played a major role in the ultimate fulfillment of the vision of a link between the Midwest and the Gulf of Mexico. The railroad, the first major line to pass through this section of Louisiana, enabled capitalists and investors to develop large scale farms and timber operations in rural Louisiana. These operations took advantage of the railroad as a primary shipping corridor and would not have developed at this time without the opportunity provided by KCP&G.

OEA anticipates that the planned capital improvements would have No Adverse Effect on K-BEAU-01. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Although this construction would occur within the eligible National Register boundary of the resource, the effect would not be adverse. Existing sidings are already integral to the operation of the railroad and the construction of new or extended sidings would be compatible with the historic use and character of this resource. Physical impacts resulting from the planned capital improvements would only occur along less than six miles of this nearly 92-mile segment, divided among two separate locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.8 K-BEAU-02

Table J.5-8. K-BEAU-02: Historic Railway Segment

Location	Louisiana
Associated Capital Improvement Location	Singer, Louisiana
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation

This property is a 50.6-mile segment of the KCS rail line that travels south from Leesville, Louisiana, to De Quincy, Louisiana. The railroad segment travels through the towns of Leesville, Rosepine, Deridder, Singer, and De Quincy. Originally built in 1897, this portion of the railroad was originally part of the Kanas City, Pittsburg, and Gulf Railroad. The railroad reached Shreveport, Louisiana, in March 1897 and by September of that same year the line had reached the Gulf coast. After the Civil War, companies like the Kanas City, Pittsburg, and Gulf Railroad began to build trackage in Louisiana and rural towns throughout the state relocated to take advantage of the developing railroad infrastructure. Louisiana

railroads typically handled passengers, foodstuffs, and lumber, much of which was directed to major Gulf coast ports like New Orleans and Port Arthur, Texas.

The railroad segment is regionally significant under Criterion A in the areas of Transportation and Commerce. Built as one of the final portions of the KCP&G, this segment of the railroad helped to facilitate the movement of people and goods throughout this rural segment of Louisiana. The towns built along KCP&G's tracks benefitted from the railroad which provided jobs and encouraged merchants to open shops in the communities. The railroad, the first major line to pass through this section of Louisiana, also enabled capitalists and investors to develop large scale farms and timber operations. These operations took advantage of the railroad as a primary shipping corridor.

OEA anticipates that the planned capital improvement would have No Adverse Effect on K-BEAU-02. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Although this construction would occur within the eligible National Register boundary of the resource, the effect would not be adverse. Existing sidings are already integral to the operation of the railroad and the construction of new or extended sidings would be compatible with the historic use and character of this resource. Physical impacts resulting from the planned capital improvement would be limited to less than three miles of the nearly 51 miles comprising this segment. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvement would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.9 K-HEAV-02

Table J.5-9. K-HEAV-02: Historic Railway Segment

Location	Oklahoma
Associated Capital Improvement Location	Baron/MP 247, Spiro, and Cave Springs, Oklahoma
National Register Criteria	A
Significance	Regional
Area(s) of Significance	Commerce, Transportation, Settlement/Exploration

This property is a 90.4-mile segment of the KCS rail line that travels south from Watts, Oklahoma, to Poteau, Oklahoma. The railroad passes through the towns of Watts, Westville, Stilwell, Sallisaw, Spiro, Panama, and Poteau. Originally built between 1893 and 1897, this railroad segment was built as part of the KCP&G as the line traveled south to the Gulf of Mexico. In Oklahoma, the KCP&G was responsible for the development of multiple towns, including Spiro which grew around the railroad station. In the late 19th

century, many small Oklahoma towns were agrarian communities where grain, fruit, and cotton were grown. For these communities the KCP&G, later KCS, was critical to facilitating trade and economic activity. Foodstuffs grown in these communities were shipped along the railroad to major distribution centers like Kansas City.

The railroad segment is regionally significant under Criterion A in the areas of Transportation, Exploration and Settlement, and Commerce. Built by the KCP&G, this segment of the railroad connected Kansas City to multiple small agrarian communities in Oklahoma as well as regions rich in coal, fruit trees, and other metals. The KCP&G was, for many of these towns, the first railroad to pass through. In its passage the railroad opened opportunities for industrial development, mining, logging, and more diversified agriculture. The railroad also facilitated regional shipping on a critical transportation corridor from the Gulf coast to Kansas City in central Missouri. Additionally, the railroad was the critical factor in determining the location of many new towns and can be directly tied to the establishment and initial growth of multiple settlements on Indigenous territory throughout eastern Oklahoma, which occurred much later than in other surrounding states.

OEA anticipates that the planned capital improvements would have No Adverse Effect on K-HEAV-02. The Applicants would construct new sidings adjacent to the existing rail line and within the existing rail ROW. Although this construction would occur within the eligible National Register boundary of the resource, the overall impacts to the railroad would be minimal and would not constitute an adverse effect. Planned alterations to the railroad features would be within the existing ROW and would not result in a substantial visual change to the corridor. Existing sidings are already integral to the operation of the railroad. Therefore, the construction of new or extended sidings would be compatible with the historic use and character of this resource. The planned capital improvements would only physically impact less than a total of six miles of this more than 90-mile railroad segment, in three separate discontiguous locations. Some individual historic features of the rail line segment may be impacted, for example, stone culverts or small timber trestles. However, the overarching character of the property would be unaffected due to the large number of similar contributing features throughout the railroad segments. The capital improvements would not alter the physical features of the property that make it eligible for the National Register in the areas of transportation. OEA expects that such changes would have no adverse effect on the historic rail line segment because they would support the continued use of the corridor for rail transportation and would therefore not diminish the characteristics of the property that makes it eligible for inclusion in the National Register under Criterion A.

J.5.1.10 IA-CA-001

Table J.5-10. IA-CA-001: Water Treatment Plant

Location	1901 Beaver Channel Parkway, Clinton, Iowa
Property Type	Utility Building
Temporal Association	1958
Associated Railroad	Chicago, Rock Island, & Pacific
Associated Capital Improvement Location	Camanche

Table J.5-10. IA-CA-001: Water Treatment Plant

National Register Criteria	A and C
Significance	Local
Area(s) of Significance	Industry, Community Planning, Architecture

The former City of Clinton Water Pollution Control Plant was constructed in 1958 and expanded into the late twentieth century. It was largely displaced in 2013 when a new regional facility opened, but a pump station on the property is still in use during periods of high-water flows. The property is considered eligible for the National Register under Criterion A for its development as a critical public utility to serve the post-WWII residential, industrial, and commercial growth in the region. The property is also considered eligible under Criterion C as a good example of a mid-twentieth century industrial complex. The Central Administration Building has very distinctive elements of the International Style on its northeast wing, which features a bank of floor-to-ceiling aluminum casement windows with spandrels across its entire front elevation, while other elevations exhibit brick veneer. The use of these materials and the mid-century aesthetic carry over into other, secondary buildings in the complex developed through the end of the century, including an additional building as well as circular and rectangular holding tanks, a salt storage shed, and gabled equipment sheds. The complex retains integrity of location and setting in this industrial area, supplemented by integrity of association with regional industry and infrastructure. The two main buildings are well-preserved with intact materials, resulting in integrity of materials, design, workmanship, and feeling.

The Proposed Acquisition would result in No Adverse Effect to this property. The complex is approximately 290 feet south of the rail ROW, and no direct, physical impacts are anticipated. The planned capital improvement would be consistent with the existing size and scale of the existing rail infrastructure, and no visual impacts are anticipated in this already highly industrial setting.

J.5.1.11 LA-MA-004

Table J.5-11. LA-MA-004

Location	270 Holley Hill Drive, Mansfield, Louisiana
Property Type	Ranch House
Temporal Association	ca.1965
Associated Railroad	KCS
Associated Capital Improvement Location	Mansfield
National Register Criteria	C
Significance	Local
Area(s) of Significance	Architecture

This residential property consists of a Ranch house constructed during the 1960s. It is set back from Holley Hill Road within a wooded setting of conifer trees; the rail ROW is approximately 175 feet east, on the other side of Holley Hill Road. The property is considered eligible for the National Register under Criterion C. It is a well-preserved

example of a mid-to-late twentieth century Ranch house, retaining its one-story form with a sense of horizontality emphasized by the wide, overhanging eaves. Original features and materials include characteristic brick veneer, cast iron porch supports, aluminum sash windows, and an integrated carport. In addition to integrity of design, materials, and workmanship, the house retains integrity of location, feeling, and setting as a residential property set along a rural route but sheltered by several trees.

The Proposed Acquisition would result in No Adverse Effect to this historic property. Construction would result in no direct, physical impacts to the property. As its historic significance is associated with Criterion C, the key characteristics that convey that significance are associated with its form, plan, and materials. However, the property is also removed at a distance from the rail ROW and visibility of the ROW is limited due to the wooded setting. The planned capital improvement would be consistent with the existing rail infrastructure and would not introduce an incongruous visual element.

J.5.1.12 LA-MA-009

Table J.5-12. LA-MA-009

Location	12669 LA Highway 175, Mansfield, Louisiana
Property Type	Ranch House
Temporal Association	ca. 1965
Associated Railroad	KCS
Associated Capital Improvement Location	Mansfield
National Register Criteria	C
Significance	Local
Area(s) of Significance	Architecture

This property consists of a Ranch house dating from the 1960s, with an appreciable setback from the road. The rail ROW is located approximately 250 feet away, running along the opposite side of the roadway. It is eligible under Criterion C as a good representative example of this residential building type, with a form and extant materials specifically associated with the time period of construction. Distinctive features include an asymmetrical plan, integrated carport, and a long, horizontal massing; despite a cross-gabled roofline, the shallow roof slope and deep overhanging eaves emphasize the horizontal axis and keep it low to the ground. Characteristic extant materials include a combination of exterior cladding, consisting of board and batten siding and brick veneer. As a result, the property retains a high degree of integrity of materials, design, and workmanship, as well as integrity of location, feeling, and setting associated with the siting of the house within a wooded lot set back from the road.

The planned capital improvement would result in No Adverse Effect to this property, as no impacts are anticipated that would alter the qualities that make the property eligible for the National Register. The Proposed Acquisition would not result in direct physical impacts to the property. The Ranch house's historic significance is primarily derived from its high degree of intact original features and materials, as well as the immediately surrounding wooded landscape. A rather dense concentration of trees on the property and large setback

limits visibility of the rail ROW, which is further impeded by the intervening LA Highway 175. Therefore, the Proposed Acquisition would not introduce a visual element that is incompatible with the setting of the property.

J.5.1.13 MO-GO-004

Table J.5-13. MO-GO-004: Mitchell Cemetery

Location	Blackstock Lane, Goodman, Missouri
Property Type	Cemetery
Temporal Association	Mid-19th Century
Associated Railroad	KCS
Associated Capital Improvement Location	Goodman (MP186)
National Register Criteria	A
Significance	Local
Area(s) of Significance	Exploration/Settlement

This approximately 0.85-acre cemetery is located 195 feet west of the rail ROW, with a gently rolling landscape and a partial border of black walnut and oak trees. The cemetery is eligible under Criterion A for its association with the nineteenth century settlement and community development in the region. Grave markers exhibit various forms and materials, including tablets and flush markers of marble, granite, and bronze. They are mostly arranged in a linear fashion with occasional family plots set off by curbing. Engravings indicate dates between 1864 and the late 1980s; approximately 97% of the burials are over 50 years old. With respect to Criteria Consideration D, burials in the cemetery are associated with some of the earliest European settlers of the area and their families, granting historic significance as part of early settlement of Goodman. The cemetery has integrity of location, setting, and association due to its continued use through the late twentieth century. Headstones of various materials exhibit designs incorporating burial and organizational symbols and appear to be in their original configuration, with a high degree of integrity of design, materials, and workmanship.

The Proposed Acquisition would result in No Adverse Effect to this historic property. The rail ROW is located 195 feet east of the cemetery and there would be no direct physical impacts. Its significance under Criterion A is associated with the early European settlement families represented by the burials and the surrounding setting is not one of the key characteristics that make the cemetery eligible for the National Register. That said, the planned new capital improvement would be in keeping with the existing rail ROW infrastructure and would not result in visual impacts to the property.

J.5.1.14 OK-HE-020

Table J.5-14. OK-HE-020

Location	412 Norvell Road, Heavener, Oklahoma
Property Type	Side-Gabled Bungalow
Temporal Association	1940s

Table J.5-14. OK-HE-020

Associated Railroad	KCS
Associated Capital Improvement Location	Heavener
National Register Criteria	C
Significance	Local
Area(s) of Significance	Architecture

This 1940s one-story, wood-framed bungalow is located approximately 215 feet west of the rail ROW, on a 1.6-acre lot with a dense tree cover of deciduous trees. The property is considered eligible under Criterion C as a good representation of an early twentieth century residential architecture style. The house retains a high degree of original materials and exhibits key characteristics associated with the early twentieth century construction of the bungalow building form and plan. The side-gable roof has exposed rafter tails, the original wood shiplap siding is extant, and the fenestration includes original wood-sash windows with wood trim. Enclosed porches extend across most of the façade and south side elevation, also presumed to be original. The retention of the original materials and form indicates a high degree of integrity of design, materials, feeling, and workmanship. As the building is still in use as a single-family residence located along a local rural highway in a wooded setting, the property also retains integrity of location, feeling, and setting.

The Proposed Acquisition would result in No Adverse Effect to this property. Construction would result in no direct, physical impacts to the property. As an eligible property under Criterion C, its primary significance is associated with the extent of the original materials, plan, and form. The planned capital improvement would be compatible with the existing setting, location, and feeling of the property, which was developed after the roadway and the rail corridor were in place. Additionally, the trees on the property and the tree line along the rail corridor limit visibility of the corridor. No visual impacts to the historic property are anticipated, as the planned capital improvement would not impact the key characteristics that make this property eligible for the National Register.

J.5.1.15 OK-HE-024

Table J.5-15. OK-HE-024

Location	19943 Stand Pipe Road, Heavener, Oklahoma
Property Type	Ranch House
Temporal Association	1960s
Associated Railroad	KCS
Associated Capital Improvement Location	Heavener
National Register Criteria	C
Significance	Local
Area(s) of Significance	Architecture

This 2.5-acre property is improved with a one-story Ranch house with a detached carport constructed in the 1960s and at least three outbuildings, one of which appears to have been

constructed at the same time as the house. The property is considered eligible under Criterion C, as a good representation of a mid-twentieth century Ranch house. It retains its original form, plan, windows, and cladding material and exhibits characteristics of its period of significance. Integrity of design, materials, and workmanship are conveyed through the long, one-story Ranch house plan, complete with a combination of wood clapboard and brick veneer cladding and original aluminum sash windows. While the house and outbuildings are sited immediately south of the rail corridor and a state highway, both of which predated the construction of the house and oldest outbuilding, the building cluster is otherwise surrounded by cleared land that transitions into dense woodland further away from the house, and a roughly 50-feet. wide tree line buffer separates the house from the rail ROW. Thus, the property retains integrity of location, setting, and feeling.

The Proposed Acquisition would result in No Adverse Effect to this property, as no impacts are anticipated that would alter the qualities that make the property eligible for the National Register. The planned capital improvement near Heavener would not result in direct, physical impacts to the property. The planned capital improvement would be compatible with the existing infrastructure of the main line and highway that runs parallel to it. Both the railroad and the highway predate the construction of the historic buildings. The historic buildings are sited close to the rail ROW, but the railroad predates the development of the property. Therefore, the planned capital improvement would be consistent with the existing setting and would not result in visual impacts to the property.

J.5.1.16 OK-HE-027

Table J.5-16. OK-HE-027, Oil Branch Channel through Downtown Heavener, Oklahoma

Location	Heavener, Oklahoma
Property Type	WPA Structure, OK Landmarks inventory 96399
Associated Railroad	KCS
Associated Capital Improvement Location	Heavener
National Register Criteria	A and C
Significance	Local
Area(s) of Significance	Social History, Engineering

The Oil Branch flows within a 0.9-mile stone-lined drainage channel through downtown Heavener. At the south end of downtown, the channel runs adjacent to the rail ROW at the bottom of a slope on the east side, ending approximately 260 feet south of Avenue I. The structure is eligible for the National Register under Criteria A and C. Constructed in 1939, the Oil Branch channel was a Works Progress Administration (WPA) project and is individually significant within the context of New Deal-era WPA infrastructure improvement projects completed in the region. Under Criterion C, the channel is a particularly good example of its type, period, method of construction, and use of local materials. Its walls are constructed of wet laid native Oklahoma sandstone cut into long, rough-hewn blocks. The walls range from four to eight feet in height. At the base of the

walls, the last courses step down to the bottom of the channel, which is also lined with native Oklahoma sandstone pavers. The channel retains its original form and function.

The Proposed Acquisition would result in No Adverse Effect to this historic property. Approximately 0.1 miles of the channel is located in the APE, and nearly the entire length of this section occurs outside the construction area, making visual impacts the only potential effect for much of its extent. The planned capital improvement would be located within the existing rail ROW on the berm upslope of the channel, adjacent to the main line track. The south portion of the Oil Branch channel was purpose-built proximate to the rail ROW, likely to concentrate infrastructure for minimum impact. The planned capital improvement would not introduce an element that would alter the setting or its significance as a WPA improvement project, resulting in no visual impact.

J.5.2 Below-Ground Resources

J.5.2.1 34AD283

Table J.5-17. 34AD283

Location	Oklahoma
Property Type	Late Archaic/Eastern Woodland Lithic Scatter
Associated Railroad	KCS
Associated Capital Improvement Location	Baron/MP 247
National Register Criteria	D

Site 34AD283 is a horizontally expansive scatter of lithic tools and debitage identified through the subsurface recovery of approximately 80 non-diagnostic Keokuk, John's Valley Gravel, Boone, and Reed Springs chert artifacts of mostly debitage, and 3 PP/K fragments (distal and proximal halves) from 14 positive shovel tests. Site 34AD283 is located on a well-defined, elevated terrace to the west of a river. The landform on which the site is located rises approximately 1.5 to 2 meters above the existing railroad bed which is located to the east down a 20-degree slope. Current conditions suggest that excavation for, and subsequent construction of the railroad during the late nineteenth century cut directly through the landform. The site measures approximately 162 meters in length northeast to southwest and is approximately 9 meters wide northwest to southeast. Elevations across the site are a flat 307 meters above mean sea level (amsl). Vegetation encountered within the site consisted of grass and shrub. Ground surface visibility was moderate to poor. The western edge of the ROW in this area was bounded by an existing fence line.

Shovel testing within the site boundaries generally encountered deep soils. A typical shovel test excavated within the boundaries of 34AD283 was characterized by dark brown (10YR3/3) silty clay loam from 0 to 40 cmbs (Stratum I), underlain by a layer of strong brown (7.5YR 5/6) silty clay loam from 40 to 80 cmbs (Stratum II), followed by a layer of strong brown (7.5YR 5/8) clay from 80 to 85 cmbs (Stratum III). Impenetrable gravel and compacted cobble prevented further examination of the underlying strata at depths below 85 cmbs.

The site was initially identified through the surface recovery of the partial distal end of a PP/K. Altogether, Phase I survey at 34AD283 recovered an artifact assemblage consisting of 83 artifacts (Table 7). The site and resulting assemblage can be characterized as a large horizontal scatter of lithic material with a primary deposit (n=65) located between 0 and ~40-50 cmbs, within the identified A horizon soil layer (i.e., Stratum I). All of the recovered artifacts from this stratum consisted of primary, secondary, and tertiary lithic flakes, all of which are waste resulting from lithic tool manufacturing and refining activities. A few of these flakes show evidence of thermal alteration. A secondary, or underlying, deposit at 34AD283 is located within Stratum II and Stratum III between 40 and 85 cmbs. Like the lithics recovered from Stratum I, lithics recovered from Stratum II also showed evidence of being thermally altered.

Three diagnostic artifacts were recovered from 34AD283. Two of the three PP/Ks are most similar in form to the contracting stemmed Standlee tradition which dates from the Late Archaic to Early Woodland transitional period (ca. 200 B.C. – 400 AD). One of the two Standlee PP/K fragments was collected from the surface, while the other was recovered between 50 and 80 cmbs. This most likely implies the surface find was displaced from its original context, perhaps resulting from the historic development of the railroad corridor adjacent to the site area. The other fragmentary PP/K (partial distal end fragment) is corner notched and most probably a Kings or Patterson Springs PP/K, which dates from the Late Archaic period (ca.2000 – 1000 B.C.). The Kings/Patterson Springs PP/K was the deepest artifact recovered from survey and was recovered within the matrix of Stratum III (i.e., 80 to 85 cmbs).

The identified depositional strata at 34AD283 were observed to be relatively uniform in soil consistency with little to moderate cobble inclusions. Fragments of FCR were noted in the site's fill matrix but were not collected. It does not appear that atop the preserved landform, west of the railroad berm and ballast, that the deposit at 34AD283 has been disturbed by prior land use activities, whether by prior railroad construction or agricultural activity. There is suggested evidence that a portion of the site has been disturbed nearby and deposited material at the surface. No modern or historic material was recovered during subsurface examination at the site which indicates that the landform to the northwest of the railroad berm and ballast is intact.

The site was delineated within the APE and remains undefined outside of the APE. Artifact frequency averaged approximately 6 lithic artifacts per shovel test with an overall average artifact density (non-volumetric) per of .05 artifacts/m2. Although no subsurface features were identified, the presence of thermally altered chert in the assemblage and the observed presence of FCR within the strata suggest that heat treating activities took place at 34AD283, and that features are likely to be identified through additional testing. The absolute representation of lithic debitage and fragmentary lithic tools in the assemblage points to this site dating to a time before ceramics were in widespread use. The deficiency in ceramics indicates that a preceramic phase of the Archaic. Diagnostic artifact recovery suggests an occupation dating from the Late Archaic to Early Woodland transitional period. The soil matrices and differences in lithic assemblage may be indicative of a stratified occupation, where different traditions or peoples inhabited the same landform non-sequentially. In the case of 34AD283, this may be indicated by the presence of a probable

Late Archaic form at the lowest and earliest level, followed by a transitional Late Archaic to Early Woodland occupation. Further understanding the interface between these strata at the Phase II level would provide clarification on whether the deposit is stratified. Furthermore, additional testing may provide additional context on how precontact peoples occupying 34AD283 may have exploited their environment for tools.

The overlying lithic debitage component, identified between approximately 0 to 40 centimeters below surface (cmbs), lacks intact temporal diagnostics which could definitively date the overlying habitation. Although a PP/K was recovered from the surface, the lack of depositional information associated with this artifact makes it find context unknown and unreliable. The underlying strata from 40 to 85 cmbs is undisturbed, contains diagnostic artifacts, evidence of feature activity, and concentrations most likely show discrete activity/functional use areas within the identified portion of the site. The identified deposit at 34AD283 appears to retain good integrity of location, materials, design, and association. The site could potentially yield valuable data regarding our understanding of lithic tool manufacturing, resource procurement activities, subsistence, and potentially seasonal exploitation of landforms adjacent to riverine features. The expansive size of the site also suggests that the habitation(s) may not have been ephemeral and may have been the result of longer-term occupations. Long-term precontact habitations have the ability to better inform our understanding of Archaic period lifeways and 34AD283 may be a good example of this type of site. Therefore, within the APE, 34AD283 retains good integrity and has significant data potential under Criterion D and is recommended eligible for the National Register. The Applicants have clarified that they intend to design the planned capital improvements so as to maintain the existing rail footprint (such as, that does not expand the existing rail footprint between the current toe of slope of the railroad ballast or embankment on each side of the existing tracks) in locations immediately adjacent to National Register-eligible sites, such as 34AD283, and that they would not conduct any construction activities within the boundaries of such sites. Therefore, the Proposed Acquisition would have No Adverse Effect on the significant and eligible deposits associated with 34AD283.

J.5.2.2 34AD286

Table J.5-18. 34AD286

Location	Oklahoma
Property Type	Archaic Lithic Scatter
Associated Railroad	KCS
Associated Capital Improvement Location	Baron/MP 247
National Register Criteria	D

Site 34AD286 is a moderately dense lithic artifact scatter that measures roughly 52 meters in length (northeast/southwest) and 14 meters in width. Existing conditions encountered onsite consist of a sparse hardwood overstory of elm and oak with undergrowth of grass and brush. Observed surface visibility was poor (<25 percent). The site was identified atop a flat terrace. Elevations across the known site area are a flat 299 meters amsl.

Delineation shovel testing of the site occurred in 5- and 10-meter intervals in areas of the APE that demonstrated natural ground surface. The railroad berm was covered in dense gravel ballast and prohibited subsurface examination. Artifacts recovered during the Phase I survey were identified from just below the ground surface to depths over 1 meter. Positive shovel tests were augured to sterile subsoils, which were reached around 110 cmbs. Artifacts were recovered from depths as deep as 110 cmbs and were recovered just above Pleistocene sediments. A typical shovel test was characterized by dark brown (10YR3/3) silty clay loam from 0 to 35 cmbs (Stratum I), underlain by a brown (10YR 5/3) silty clay loam from 35 to 60 cmbs (Stratum II), underlain by brown clay (10YR 4/3) from 60 to 90 cmbs (Stratum III). Below this layer was a strong brown (7.5YR5/8) compacted and gravelly clay from 90 to 160 cmbs (Stratum IV). Culturally sterile soils were encountered below 110 cmbs.

The site was identified through the excavation of eight positive shovel tests containing 108 lithic artifacts. The artifacts recovered consist of primary, secondary, and tertiary flake fragments, and a chert core; some of which show evidence of thermal alteration. Chert types recovered include Keokuk, John's Valley Gravels, Boone, and Reed's Springs varieties. No diagnostic artifacts were recovered during survey. Among the sites identified during the current survey of the MP 247 capital improvement location, 34AD286 demonstrated the highest average of artifacts per positive at 13.5 lithics per shovel test. Spatially, there is little horizontal diffusion across the site with an average artifact density of 0.16 artifacts/m2.

The depths at which artifacts were recovered indicate the strong potential for 34AD286 to date to either the Paleoindian or Early Archaic periods. As these periods coincide with the onset of the Holocene, 34AD286 may be indicative of very early human activity in the region. As a whole, Adair County has not seen very much archaeological survey, and as a result, precontact sites are not well known or frequently recorded. Judging by the number of sites identified during the current survey of the MP 247 capital improvement location, it is more appropriate to state that the lack of overall survey in the region has led to an underrepresentation of archaeological components and sites in the County. The deeply buried nature of the deposit implies that potentially dynamic geomorphological processes may have been involved during site formation. In these types of instances and settings, site formation (post occupation) could have occurred quickly. The result of these fast sedimentation actions can bury cultural deposits in discrete lens of soil, which provide archaeological data snapshots of specific time periods. In this regard, 34AD286 retains good integrity of location. The overall density and frequency of the artifact deposit indicates that substantial lithic refinement took place in a horizontally discrete area, and it is possible (with a higher probability than elsewhere along MP 247) that features related to heat treating may exist in-situ. These factors imply that the site retains good integrity of design. These data sets may in turn be associated with answering questions related to human occupation, movement, and subsistence strategies during the Paleoindian or Archaic periods, which imply the data sets retain good integrity of association. The identified portion of 34AD286 within the APE demonstrates good integrity and has significant data potential related to our understanding of how people interacted with their environment during the Paleoindian and Early Archaic periods (ca. 12000 B.C. – 3050 B.C.). Therefore, 34AD286 is recommended eligible for the National Register under Criterion D. The Applicants have clarified that they intend to design the planned capital improvement so as to maintains the existing rail

footprint (i.e., that does not expand the existing rail footprint between the current toe of slope of the railroad ballast or embankment on each side of the existing tracks) in locations immediately adjacent to National Register-eligible sites, such as 34AD286, and that they would not conduct any construction activities within the boundaries of such sites. Therefore, the Proposed Acquisition would have No Adverse Effect on the significant and eligible deposits associated with 34AD286.

J.6 Conclusion

The Proposed Acquisition would not adversely affect the 16 above-ground National Register-eligible historic properties that OEA identified because it would not result in any physical impacts to the properties; change the character of the properties' use or of physical features within the properties' setting that contribute to their historic significance; or introduce visual, atmospheric or audible elements that would diminish the integrity of the properties' significant historic features. Although two National Register-eligible archaeological sites are located within the APE at the planned capital improvement at MP 247 near Baron, the Applicants have clarified that the planned capital improvement would be located within the current limits of the rail line footprint in the areas adjacent to National Register-eligible archaeological sites and that no construction activities would take place within the limits of the sites. Therefore, the planned capital improvement would not physically affect any eligible below ground resources. In addition, OEA is recommending that the Board impose mitigation requiring the Applicants to develop and implement an unanticipated discoveries plan and archaeological monitoring plan for the planned capital improvements, in consultation with consulting parties.

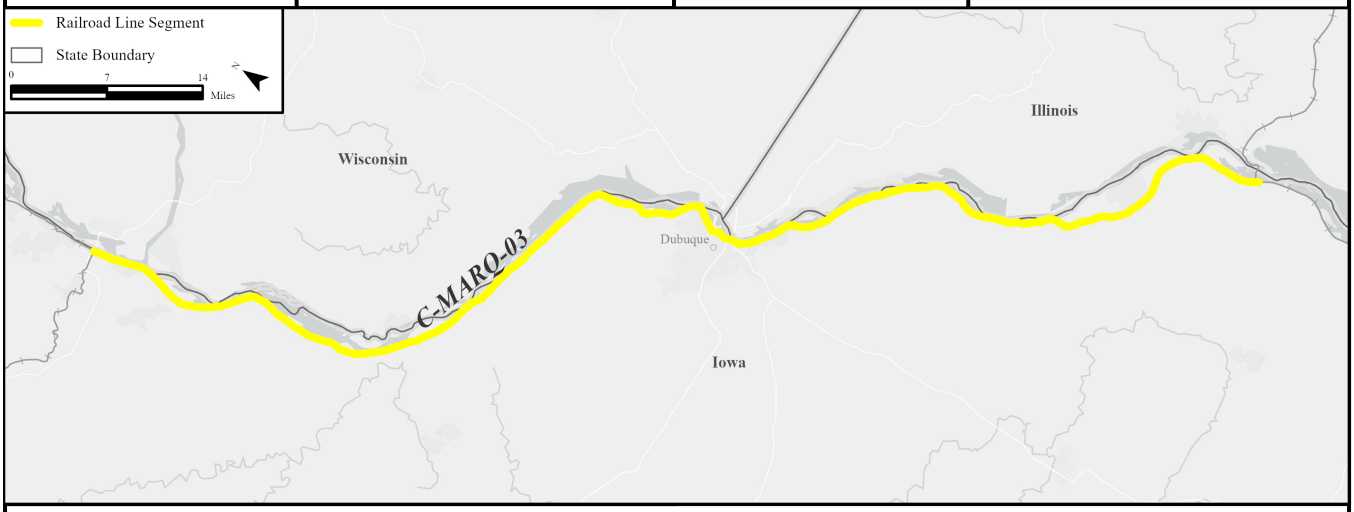
Appendix J – Attachment 1: Historic Railroad Segments

Resource ID:	C-CHIC-03	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Randall Road to Davis Junction, IL



Description: The property is a 38.7-mile segment of the Canadian Pacific Railway that stretches from Randall Road, Illinois to Davis Junction, Illinois. The railroad segment travels in a general westerly direction and passes through small communities such as Genoa, Kingston, Kirkland, Fairdale, Monroe Center, and Davis Junction. Surrounding these settlements is an agrarian landscape of farmland and fields. Capital improvements are planned around Monroe Center. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

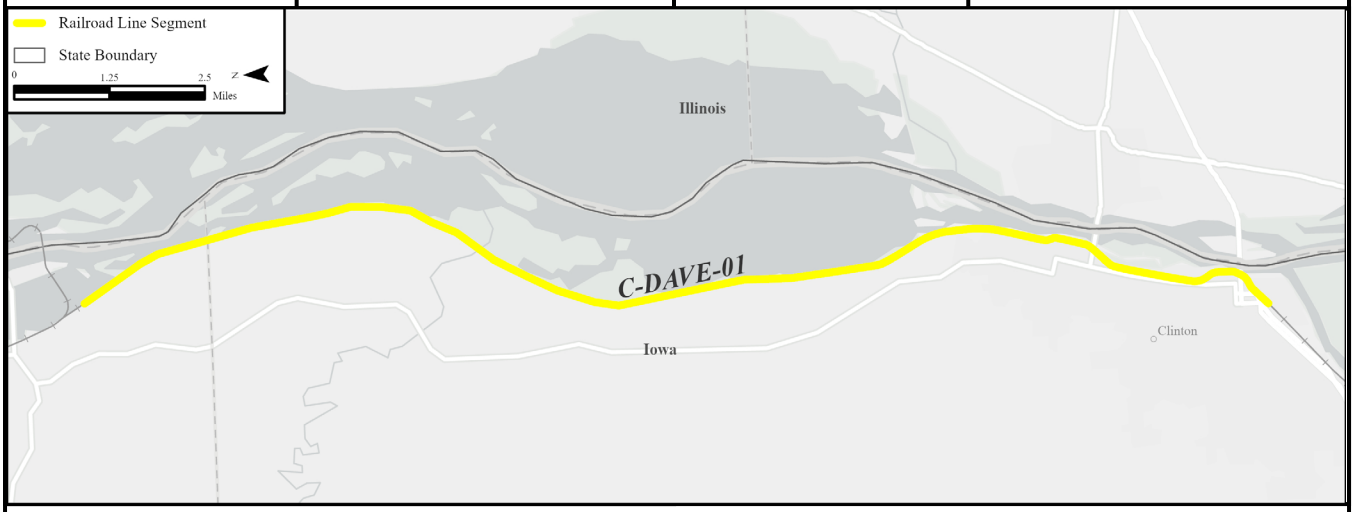
National Register Evaluation: This rail segment is recommended **not eligible** for listing in the National Register. Originally constructed between 1873 and 1876 as part of the Chicago Milwaukee & St. Paul Railroad (CM&StP), the tracks through Ogle County connected small communities like Monroe Center to regional commercial hubs like Chicago. Maps of Monroe Center show that by 1912 the community had a train depot, creamery, and other buildings to store agricultural products that would be later shipped to Chicago. This line was not the first railroad to pass through Ogle County. Lines such as the Illinois Central Railroad, and the Chicago and Northwestern Railroad were established during the 1850s. These were the first lines to provide freight and passenger service to residents of Ogle County. The CM&StP Railroad segment passing through Ogle County was a secondary line that connected small rural communities, supplementing already extant rail services. The railroad segment was evaluated for significance under **Criterion A** in Transportation and Commerce. This railroad segment travels through a lightly populated rural landscape and provided duplicate services to the already existing railroads of Ogle County. None of the communities the railroad segment passed through grew into significant settlements due to the railroad's presence, though historic maps show agricultural buildings such as creameries and grain elevators near the railroad's depots. Based on its impact in rural Ogle County this segment of Railroad does not possess significance under Criterion A. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE in the vicinity of Monroe Center along a 2.53-mile section of this 37.7-mile-long segment of railroad. Within the APE, the railroad retains its engineered grade, alignment, track, culverts, access roads, and grade crossings. The original second track was removed in the late 20th century. Since the APE contains only a small portion of the overall 37.7-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time, and the National Register eligibility of this resource under Criterion C is unknown. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Resource ID:	C-CHIC-03	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Randall Road to Davis Junction, IL

Integrity: The CM&StP corridor segment between Randall Road, Illinois and Davis Junction, Illinois, retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the railroad segment remains in operation within its historic footprint. The railroad corridor retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when features were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad segment has also been largely maintained. The segment's setting is also generally intact with the railroad passing through a rural landscape in northern Illinois.

Resource ID:	C-MARQ-03	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Sabula to Marquette, IA

Description: This property is a 98-mile railroad segment which travels in a northerly direction and stretches between Sabula and Marquette, Iowa. The railroad segment parallels the Mississippi River and passes through the communities of Sabula, Bellevue, Dubuque, Guttenberg, and Marquette. The landscape outside of these communities is largely rural and consists of protected Mississippi River shoreline and farmland. Capital improvements are planned in the vicinity of Bellevue and Guttenberg. The railroad segment remains in active use by the Canadian Pacific Railway and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.



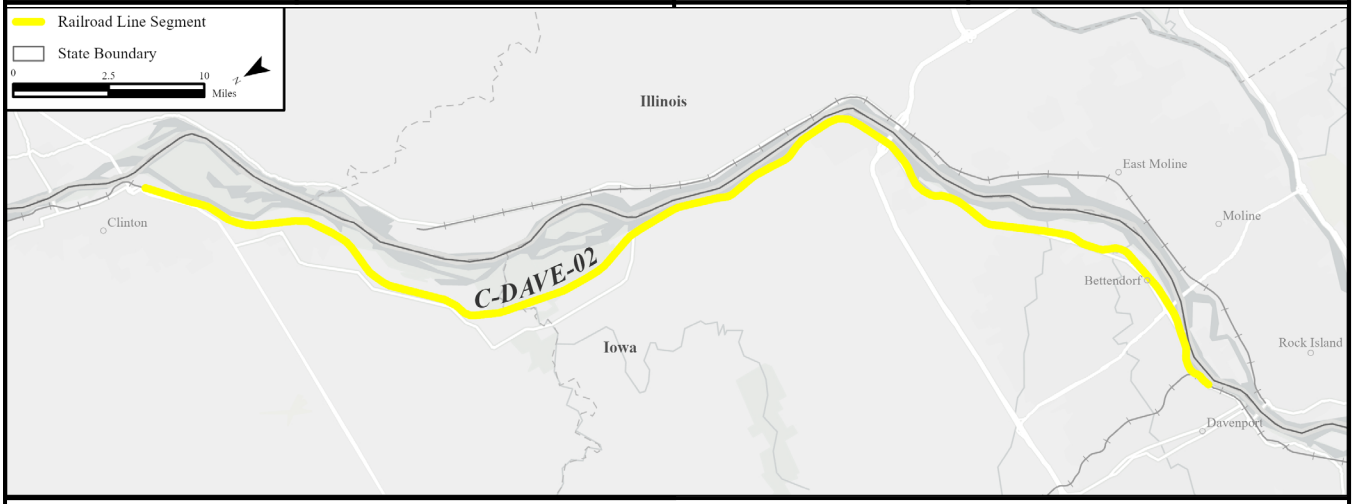
National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. This segment of railroad was originally constructed circa 1872 as part of the Chicago, Dubuque and Minnesota Railroad (north of Dubuque) and the Clinton and Dubuque Railroad (from Dubuque to Sabula). In 1878, these companies combined to form the Chicago, Clinton, Dubuque and Minnesota Railroad, which the Chicago, Milwaukee & St. Paul Railroad purchased in 1880. Under the ownership of the latter, this line was a secondary trackage connecting riverport towns like Sabula, Bellevue, and Guttenberg to the greater Chicago, Milwaukee, and St. Paul Railroad (CM&StP) network. Sanborn maps from Bellevue, Guttenberg, and Sabula each show that soon after the CM&StP's arrival industrial buildings were built in each town to take advantage of the railroad. The 1893 Sanborns show a major slaughterhouse in Sabula while Sanborns from 1886 show Guttenberg with major lumber yards and grain elevators all with access to the railroad. By 1914 Bellevue possessed similar agricultural infrastructure as well as lumber mills, machine shops, and a piano factory. The railroad segment is regionally significant under **Criterion A:** in Transportation and Commerce. Although this segment of railroad travels through towns that were well established prior to the widespread construction of railroads in Iowa, maps from the mid-19th century show Guttenberg, Sabula, and Bellevue as highly developed communities with industrial buildings oriented towards the Mississippi River, at that time an important transportation corridor and an important log shipping way. After the arrival of the railroad, river commerce remained an important part of the region's economy; however, by the late 19th century industrial development in Guttenberg, Bellevue, and Sabula had migrated closer to the CM&StP's tracks, highlighting the shift of industry from river-based transportation to rail-based transit. In Guttenberg, stacked lumber lined the CM&StP's tracks and while major sawmills such as Zimmerman and Ives maintained their riverfront mills, they used the railroad to ship their products.

Resource ID:	C-MARQ-03	Resource Type:	Above-Ground
Inventory Number:	TBD	Potential Effect:	Direct/ Physical
Previous Documentation:	N/A	Location:	Sabula to Marquette, IA

National Register Evaluation (con't): In Bellevue, Sanborn maps show a near identical arrangement of trackside lumber ready for shipment, having been produced at water powered sawmills along the Mississippi and nearby Mill Creek. Bellevue also had a large stockyard, which would have been important for residents of rural Jackson County. For farmers, driving their animals and crops to the railroad stops in Sabula, Guttenberg, Bellevue, and Dubuque was critical to their livelihoods. Without a rail connection it was impossible for farmers to raise crops or animals on a large scale. To make the change from subsistence farming and local trade to commercial farming, farmers needed a national market; access to that market in Jackson, Dubuque, and Clayton Counties was supplied by the CM&StP. Dubuque drew additional benefits from the CM&StP when in 1880 the railroad opened a large repair shop in the city. The CM&StP's shops employed over 800 men by 1900, many of them German immigrants and the company's shops covered fifty acres of land within Dubuque. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE along a 2.70-mile section of this 98-mile-long segment of railroad near Guttenberg. A similar 2.07-mile segment was examined near Bellevue. Within the APE, the railroad retains its engineered grade, alignment, tracks, bridges, culverts, and grade crossings. Since the APE contains only a small portion of the overall 98-mile long rail segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The CM&StP corridor segment between Sabula and Marquette, Iowa retains integrity of location, design, materials, workmanship, feeling, and association. The railroad segment remains in operation within its historic footprint, and the corridor retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroad passing through a rural landscape interspersed with river towns situated along the Mississippi River .

Resource ID:	C-DAVE-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Sabula to Clinton, IA

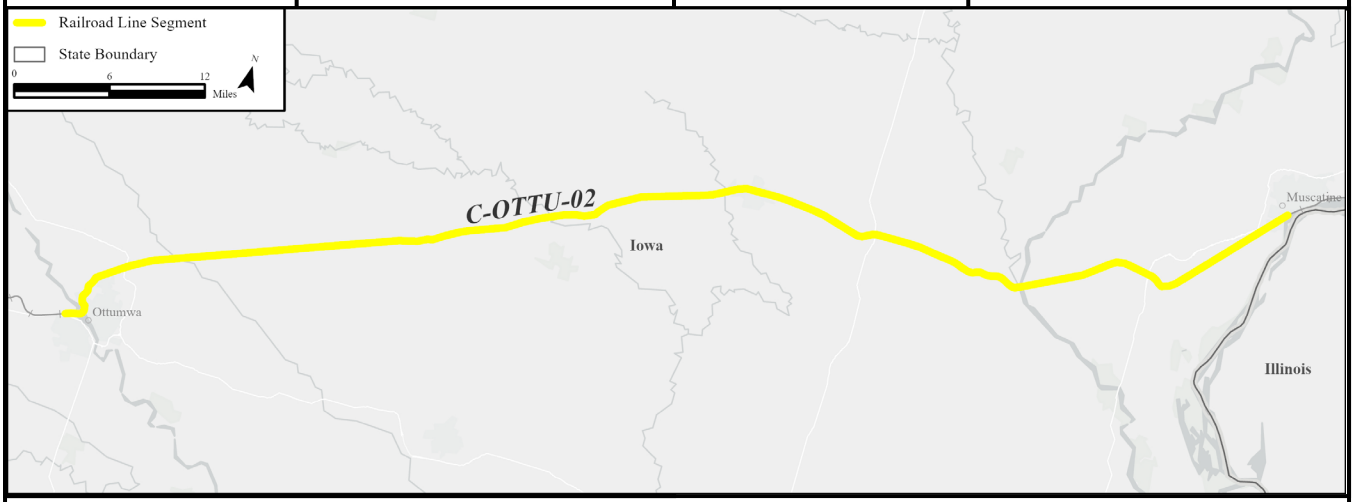


Description: The property is a 17.5-mile segment of the Canadian Pacific Railway that stretches from the northern outskirts of Clinton, Iowa to Sabula, Iowa. The rail segment travels generally north and traverses a rural landscape between these two cities along the western bank of the Mississippi River. Capital improvements are planned on a partial segment between the two cities. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

National Register Evaluation: This rail segment is recommended **not eligible** for listing in the National Register. Developed after the initial flurry of railroad construction which followed the construction of the Clinton Railroad Bridge, this railroad segment was a secondary line, connecting riverport towns like Sabula and Bellevue to the greater Chicago, Milwaukee, and St. Paul Railroad (CM&StP) network. The railroad segment was evaluated for significance under **Criterion A** in Transportation and Commerce. This segment of railroad travels through a rural landscape; no settlements were developed to take advantage of the railroad's passage between Clinton and Sabula, and the rail segment did not itself generate commercial activity within this specific region. Though the segment was part of the CM&StP, it was a secondary line built during the late 1860s and 1870s. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey only occurred for 1.18-miles of this 17.5-mile-long segment of railroad. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, and bridges. Since the APE contains only a small portion of the overall 17.5-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The CM&StP corridor segment between Clinton and Sabula, Iowa retains integrity of location, design, materials, workmanship, feeling, and association. The railroad segment remains in operation within its historic footprint, and the corridor retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad segment has also been largely maintained. The segment's setting is also generally intact with the railroad passing through a rural landscape along the Mississippi River.

Resource ID:	C-DAVE-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Clinton to Water Works, IA



Description: This property is a 33.2-mile railroad segment that travels in a northeasterly direction and stretches between Camanche and Clinton, Iowa. This railroad segment is located on the banks of the Mississippi River while the surrounding landscape consists of a mix of residential properties, commercial buildings, and heavy industry. Capital improvements are planned in the vicinity of Camanche and Clinton. The railroad segment remains in active use by the Canadian Pacific Railway and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

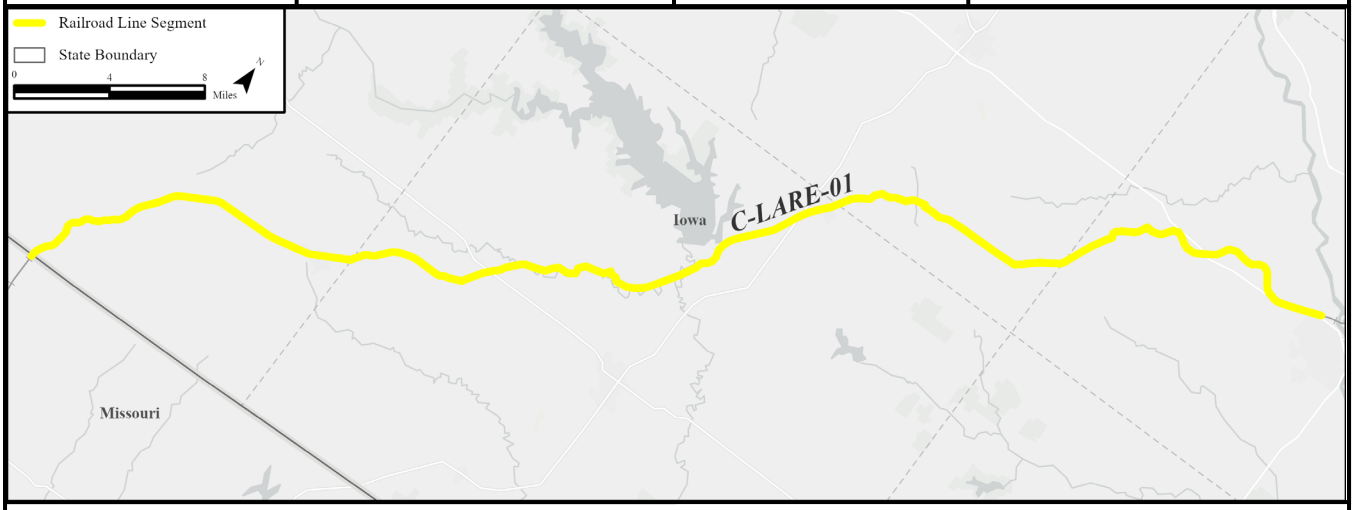
National Register Evaluation: This rail segment is recommended **not eligible** for listing in the National Register. Constructed in the late 19th century this segment of railroad was built much later than most of the area's railroad infrastructure and trackage. Railroads have played a vital role in the development of Clinton, Iowa since 1855 when the Chicago and Northwestern Railroad Company made known its intentions to cross the Mississippi River at Little Rock Island which sat opposite Clinton. This crossing made Clinton one of Iowa's most important railroad communities and infrastructure and tracks from multiple significant railroad lines were built in the community to take advantage of the railroad bridge. Following the bridge's completion in 1865 Clinton's population boomed and the city became a major railroad nexus. The railroad segment was evaluated for significance under **Criterion A** in Transportation and Commerce. Railroads played a significant role in the development of Clinton, Iowa owing to the presence of the Clinton Railroad Bridge. This railroad segment however was developed after the city's boom period by which time much of the city's trackage and railroad infrastructure had already been established. The railroad segment provided freight and passenger services and encouraged the development of industry along the Mississippi River in the early 20th century; however, this development occurred after the most significant period of development for Clinton's rail corridors. Though it made some level of impact on the local economy, the railroad segment provided duplicate services which had been established since the late 1850s. In Camanche, the railroad segment did not lead to significant population growth or an expansion of industry; the community even lost population between 1890 and 1900. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE along a 0.66-mile section of this 33.2-mile-long segment of railroad as it passes between Clinton and Camanche. Within the APE, the railroad retains its engineered grade, alignment, tracks, grade crossings, a flood wall, a culvert, a bridge, and turnouts. Since the APE contains only a small portion of the overall 33.2-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Resource ID:	C-DAVE-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Clinton to Water Works, IA

Integrity: The CM&StP corridor segment between Camanche and Clinton Iowa retains integrity of location, design, materials, workmanship, feeling, and association. The railroad segment remains in operation within its historic footprint, and the corridor retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroad passing through a heavily industrialized area along the Mississippi River.

Resource ID:	C-OTTU-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Muscatine to Ottumwa, IA

Description: The property is an 82.5-mile segment of the Canadian Pacific Railway that stretches from Washington, Iowa to Muscatine, Iowa. Traveling in a generally easterly direction the railroad segment passes through the towns of Washington, Ainsworth, Cotter, Columbus Junction, Fredonia, Letts, and Muscatine. For much of its length the railroad segment passes through rural farmland. Capital improvements are planned in the vicinity of Washington and Letts. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.



National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. This segment of the Canadian Pacific Railway between Washington and Muscatine appears to have been constructed as part of the Mississippi and Missouri Railroad (M&M Railroad), which was established by the Chicago, Rock Island, and Pacific Railroad (Rock Island Line) and was later incorporated into it. Between 1856 and 1860 the first railroads were developed between Washington and Muscatine. Washington, located on the fertile prairie, immediately became a major collection point for grain and animals raised in the surrounding county. Washington possessed some of the earliest railroad connections in Iowa and by 1875 four railroad lines came together in Washington. Farmers brought wagonloads of corn or drove their herds to the city and after conducting their business left with finished goods that had been purchased from one of the city's merchants. The railroad segment is regionally significant under **Criterion A** in the areas of Transportation and Commerce. This segment of railroad played a critical role in transporting agricultural products from regional hubs like Washington to major distribution centers like Chicago. The number and scale of agricultural buildings developed in the towns during the late 19th century are indicative of the commercial and economic opportunities that were a direct result of railroad access. For example, the early establishment of the railroad in Washington enabled the city to grow into a regionally important settlement, where Sanborn maps from 1897 show major agricultural buildings such as stock yards, corn cribs, coal and grain elevators along the railroad tracks. Nearby Letts, Iowa was similarly sustained by the passage of the railroad, which permitted foodstuffs from within the township to be gathered and efficiently transported. Established in the 1850s, the relationship between farmers in Washington County and the railroad was formative to the development of agriculture in the region. To the northeast, the City of Muscatine developed into a major settlement in part due to the Rock Island Line which had run trains through the city since 1855. Sanborn maps from the 1880s show Muscatine with planing mills, furniture factories, boiler makers, pottery factories, cold storage facilities and stock yards.

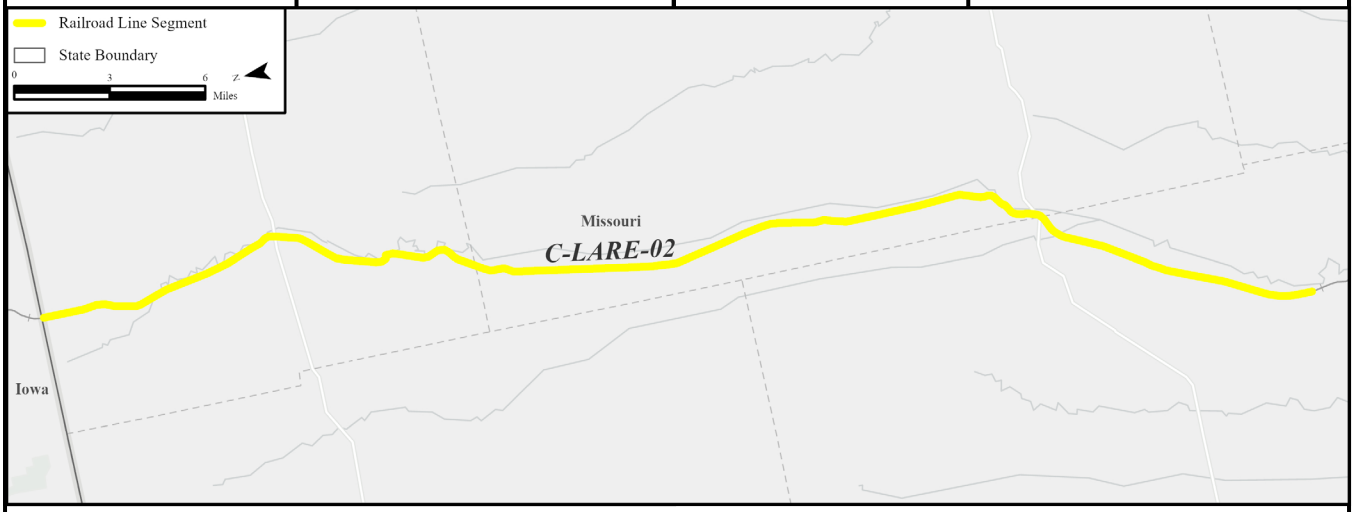
Resource ID:	C-OTTU-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Muscatine to Ottumwa, IA

National Register Evaluation (con't.): The presence of all this industrial activity, activity aided directly by the railroad's passage, led to Muscatine's population growing by roughly 25% in each census from 1870 to 1900. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE for 2.16 miles of this 82.5-mile-long segment of railroad near Washington Iowa and a separate 0.34-mile segment near Letts. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, grade crossings, access roads, and bridges. Since the APE contains only a small portion of the overall 82.5-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The Rock Island Line corridor segment between Washington and Muscatine retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, especially the Pacific extension, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	C-LARE-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Ottumwa, Iowa to Missouri/Iowa Border

Description: The property is a 61.2-mile segment of the Canadian Pacific Railway that stretches from Ottumwa, Iowa to the Iowa/Missouri border. Traveling in a general southwesterly direction this railroad segment passes through the towns of Ottumwa, Blakesburg, Moravia, Rathburn, Mystic, Seymour, and Sewal; for much of its length however the railroad segment passes through rural farmland. Capital improvements are planned in the vicinity of Ottumwa and Moravia. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.



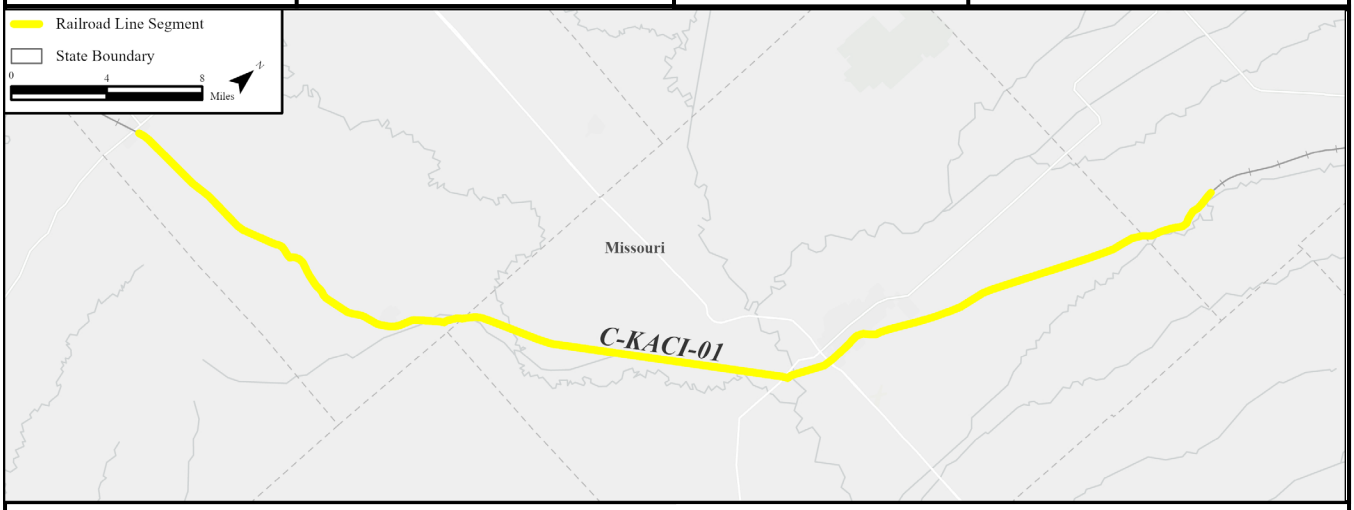
National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. This segment was constructed about 1887 as part of the Chicago, Milwaukee & St Paul Railroad (CM&StP). At the time, the CM&StP was constructing lines through this area of Iowa to compete with the Rock Island Line. This segment of the railroad was strategically positioned to take advantage of the significant coalfields in Wapello County. Iowa coal was a critical resource to powering many of the railroads crisscrossing the state and Wapello County was, by the late 19th century, among the ten most productive coal producers in the state. Sitting at the heart of the Wapello County coalfields, Ottumwa developed into a major regional rail magnet. The railroad segment is regionally significant under **Criterion A** in the areas of Transportation and Commerce. As it expanded in the 1880s the CM&StP built tracks, passenger depots, and freight stations along this 61.2-mile stretch of track. For the residents of these towns the presence or absence of the railroad often determined a community's future. With the establishment of a railroad, a small village or town could become a critical hub of local commercial activity. For this rail segment, coal mining became particularly important. Along the Des Moines River there were significant deposits of bituminous and anthracite coal and by 1889 there were fifteen active mine shafts in Ottumwa, Wapello County's largest community. Similarly, the town of Mystic in Appanoose County had a number of active coal mines by the 1880s. The coal dug around Ottumwa and Mystic was vital to the CM&StP's operation. In general, Iowa coal was a crucial power source to the railroads. Companies like the CM&StP built lines specifically to capture strategic coalfields. Passing through Ottumwa and Mystic on its way to the Missouri border this rail segment took advantage of the local coal supply, stopping to refuel trains prior to journeying southwest towards Kansas City. For Ottumwa in particular the demands of the CM&StP and other regional and nationally important railroads for coal encouraged significant population growth. They also encouraged industrial growth in the city, which developed significant ironworks, machine shops, and foundries. As a result of the mining, and manufacturing, aided by the railroad, Ottumwa's population grew from 5,200 in 1870 to 14,000 in 1890.

Resource ID:	C-LARE-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Ottumwa, Iowa to Missouri/Iowa Border

National Register Evaluation (con't.): Additionally, grain and animals were brought to stock yards and grain elevators along the railroad's more rural stops such as Moravia. From these gathering points freight cars sent the animals and grain on to major collection points such as Chicago. As a result, millions of dollars' worth of livestock, grain, coal, iron, and other goods were funneled from the agrarian areas of southwest Iowa to the more industrialized East. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE along a 0.56-mile segment of this 61.2-mile-long segment of railroad near Ottumwa as well as a 2.15-mile segment near Moravia. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, a retaining wall, grade crossings, and access roads. Since the APE contains only a small portion of the overall 61.2-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The CM&StP corridor segment between Ottumwa and the Missouri border retains integrity of location, design, materials, workmanship, feeling, and association. The railroad segment remains in operation within its historic footprint, and the corridor retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	C-LARE-02	Resource Type:	Above-Ground
Inventory Number:	TBD	Potential Effect:	Physical
Previous Documentation:	N/A	Location:	Missouri/Iowa border to Laredo, MO



Description: The property is a 41.1-mile segment of the Canadian Pacific Railway that stretches from the border of Missouri and Iowa to Laredo, Missouri. Traveling in a general southwesterly direction the railroad segment passes through a rural agrarian landscape as well as the small towns of Powersville, Lucerne, Newtown, Harris, Osgood, and Laredo. Capital improvements are planned in the vicinity of Newtown. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

National Register Evaluation: This rail segment is recommended **not eligible** for listing in the National Register. Built between 1885 and 1887 to connect the Chicago, Milwaukee & St. Paul Railroad (CM&StP) to Kansas City, this segment of railroad passed through rural Putnam and Grundy Counties which had a combined low population of about 32,000 people in 1890. This was the second major line to pass through northwest Missouri as the Chicago, Rock Island, and Pacific Railroad had established a line through the area in 1870. Both Grundy and Putnam Counties were lightly populated agrarian regions at this time and the coming of the CM&StP Railroad enabled farmers to travel to communities like Newtown and Laredo to ship their goods along the CM&StP's tracks to major markets like Kansas City or Chicago. This practice and the presence of the railroad tied these small towns into a national market and in the case of Laredo aided the town's development. Laredo became a division headquarters of the CM&StP in 1904 with repair shops built in the town, significantly boosting its population. The railroad segment was evaluated under **Criterion A** in the areas of Transportation and Commerce. This segment of railroad was the second major rail line to pass through this section of rural Missouri. Though the railroad played a role in transporting agricultural products from this segment of the Missouri countryside to major population centers like Kansas City and Chicago, it was providing services similar to the Chicago, Rock Island, and Pacific Railroad. Moreover, the communities serviced by the CM&StP were small agrarian centers which, with the exception of Laredo, did not grow markedly following the railroad's arrival. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken within the APE along a 0.55-mile section of this 41.1-mile-long segment of railroad near Newtown. Within the APE, the railroad retains its engineered grade, alignment, tracks, a bridge, and a grade crossing. Since the APE contains only a small portion of the overall 41.1-mile long rail segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time.
Criterion D: This railroad segment does not appear to have the potential to yield further important information or data.

Resource ID:	C-LARE-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Missouri/Iowa border to Laredo, MO

Integrity: The CM&StP corridor segment between the Missouri/Iowa border and Laredo, Missouri retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	C-KACI-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Direct/ Physical
Previous Documentation:	N/A	**Location:**	Laredo to Polo, MO (includes planned capital improvements at Dawn/MP 431 and Laredo)

Description: The property is a 51.6-mile segment of the Canadian Pacific Railway that stretches from Laredo, Missouri to Polo, Missouri. Traveling in a generally southwesterly direction the railroad segment passes through the towns of Laredo, Chula, Chillicothe, Ludlow, Braymer, Cowgill, and Polo. However, for much of its length the railroad segment passes through rural farmland. Capital improvements are planned in the vicinity of Laredo and Dawn/MP 431. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

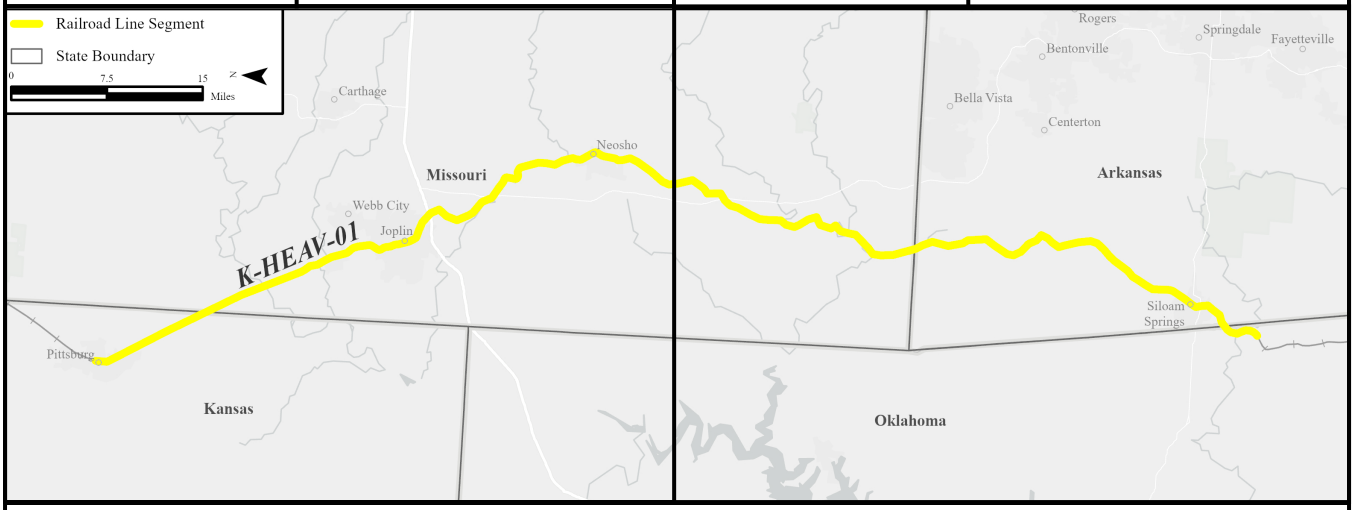
National Register Evaluation: This rail segment is recommended **not eligible** for listing in the National Register. This segment of the CP between Laredo and Polo was built between 1885 and 1887 to connect the Chicago, Milwaukee & St. Paul Railroad (CM&StP) to Kansas City. The CM&StP Railroad was not the first major line to pass through this area, as the Chillicothe and Brunswick Railroad had been completed in about 1870, the coming of the CM&StP Railroad aided regional commerce and agriculture as it provided locals with another outlet for their goods and agricultural products. The railroad enabled farmers to travel to communities like Polo and Laredo to ship their goods along the CM&StP's tracks to major markets like Kansas City or Chicago. The railroad segment was evaluated under **Criterion A:** in Transportation and Commerce. This segment of railroad was the second major rail line to pass through this section of rural Missouri. Though the railroad played a role in transporting agricultural products from this segment of the Missouri countryside to major population centers like Kansas City and Chicago it was providing duplicate services those of already established railroads. Moreover, the communities serviced by the CM&StP were small agrarian centers which did not grow markedly following the railroad's arrival. **Criterion B:** Research has not identified any connection between the property and historically significant individuals. **Criterion C:** Detailed survey was undertaken along a 0.68-mile of this 51.6-mile-long segment of railroad near Laredo and along a 2.15-mile segment near Dawn/MP431. Within the APE, the railroad retains its engineered grade, alignment, tracks, a bridge, and a grade crossing. Since the APE contains only a small portion of the overall 51.6-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time.
Criterion D: This railroad segment does not appear to have the potential to yield further important information or data.

Resource ID:	C-KACI-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Direct/ Physical
Previous Documentation:	N/A	**Location:**	Laredo to Polo, MO (includes Dawn/MP 431 and Laredo sidings)

Integrity: The CM&StP corridor segment between the Laredo and Polo Missouri retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	K-PITT-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Pittsburg, KS to Kansas City, MO

Description: This property is a 124.5-mile segment of the Kansas City Southern Railway that travels south from Kansas City, Missouri to Pittsburg, Kansas. The railroad segment passes through the communities of Kansas City, Grandview, Cleveland, Amoret, Hume, Richards, and Pittsburg. For much of its length the railroad segment travels through a rural agrarian landscape along the border between Kansas and Missouri. Capital improvements are planned in the vicinity of Kansas City and Grandview. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.



National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. Built as the first segment of the KCS, this rail segment was the first link of what would develop into one of the most important north/south transportation routes in the United States. Traveling to Pittsburg, Kansas, the railroad was connected to significant coalfields in Hume, Missouri and Pittsburg. Additionally, as it expanded the KCS built tracks, depots, and other rail related infrastructure across the south, enabling the flow of agricultural products, oil, metals, chemicals, and people through the center of the country. The railroad segment is regionally significant under **Criterion A** in the areas of Transportation and Commerce. Built by railroad magnate Arthur Stilwell and his financial backers, this stretch of railroad was the first portion of what would become the KCS, the first major land transportation corridor to link the Midwest and a port at the Gulf of Mexico. This particular railway segment connected Kansas City to major coal fields in Hume, Missouri and Pittsburg, Kansas, providing the raw materials to run the new rolling stock, as well as providing the multiple small agrarian communities along the Kansas, Missouri border with their first opportunity to develop commercial agricultural instead of subsistence farming. Immediately after the KCS's arrival the towns of Amoret, Richards, and Cleveland were platted, creating new town centers on the Missouri prairie. Though small, these towns acted as collection points for grain which was shipped in KCS freight cars. The KCS's passage also led to a major population spike in several communities, most notably Pittsburg, Kansas which grew from 624 residents in 1880 to over 6,600 residents in 1890, and over 10,000 residents by 1900. Already an important local site for zinc mining and smelting by the time of the KCS's arrival, Pittsburg, Kansas benefitted greatly from a direct connection first to Kansas City, and after 1897, to the harbor of Port Arthur. Though its population growth cannot be exclusively tied to the KCS, it is worth noting that between 1880 and 1900 Kansas City's population grew from 55,000 to 163,000 as the city became a major rail nexus.

Resource ID:	K-PITT-01	Resource Type:	Above-Ground
Inventory Number:	TBD	Potential Effect:	Physical
Previous Documentation:	N/A	Location:	Pittsburg, KS to Kansas City, MO

National Register Evaluation (con't.): Criterion B: This railroad segment was built between 1887 and 1892 for the Kansas City, Pittsburg and Gulf Railroad (KCP&G), a precursor to the Kansas City Southern. This segment of railroad is significant for its association with Arthur Stilwell, the founder and driving force behind the expansion of the KCP&G. Arriving in Kansas City in 1888, Arthur Stilwell began to operate his first railroad, the Kansas City Suburban Belt Railway, in 1889. Extending the line south to Pittsburg, Kansas, Stilwell renamed the line the KCP&G. Through the 1890s Stilwell pushed his railroad further south, consolidating his tracks with other lines and laying new railbeds as he strove to reach the Gulf of Mexico. Stilwell secured financial backing for the railroad by selling railroad stock to Dutch investors, a necessity after the United States was rocked by the Panic of 1893. To thank his Dutch investors Stilwell named several towns in Arkansas, Texas, and Louisiana after them and their wives. In 1897 Stilwell's railroad reached the Gulf of Mexico where he built the City of Port Arthur, named after himself. In total Stilwell's enterprise laid over 1,200 miles of track through the center of the country and created an alternative shipping corridor that allowed farmers and industrialists in middle America to efficiently export their products and circumvent more distant eastern seaports. **Criterion C:** Detailed survey was undertaken within the APE along a 2.25-mile segment of this 124.5-mile segment of railroad near Kansas City. Another 2.36-mile segment near Grandview was also surveyed. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, grade crossings, bridges, and retaining walls. Since the APE contains only a small portion of the overall 124.5-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The Kansas City Southern corridor segment between Kansas City, Missouri and Pittsburg, Kansas retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	K-HEAV-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Watts, OK to Pittsburg, KS

Description: This property is a 107.8-mile segment of the Kansas City Southern Railway (KCS) that travels south from Pittsburg, Kansas to Watts, Oklahoma. The railroad passes through the communities of Pittsburg, Kansas; Asbury, Joplin, and Kelly Springs, Missouri; Gentry, Arkansas; and Watts, Oklahoma. For much of its length the railroad segment travels through a rural agrarian landscape. Capital improvements are planned in the vicinity of Asbury, Missouri, Kelly Springs, Missouri, and Gentry, Arkansas. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. Portions of this line were built by the Kansas City, Pittsburg, and Gulf Railroad (KCP&G) during the 1890s while other portions consist of existing railroads purchased by Arthur Stilwell, president of the KCP&G, and incorporated into the line. The portion of this railroad segment from Joplin, Missouri to Sulphur Springs, Arkansas was built by the Kansas City, Forth Smith, and Southern Railroad. The remainder of the subject railroad segment was built by the KCP&G as the line traveled south towards the Gulf of Mexico. As it traveled south, the KCP&G passed through established towns, providing these communities with an outlet for their goods which could be shipped to the Gulf coast or Kansas City. The KCP&G, reorganized as the Kansas City Southern after 1900, was the primary driver of trade and economic activity in this rural segment of Missouri, Arkansas, and Oklahoma. The railroad segment is regionally significant under **Criterion A** in the areas Transportation and Commerce. Built as the second major stretch of the KCP&G, this segment of the railroad connected Kansas City to multiple small agrarian communities in Missouri, Arkansas, and Oklahoma as well as Joplin, Missouri, which was a major center of zinc and lead mining. Though Joplin possessed several rail connections by the arrival of the first KCS train in 1893, none of these existing connections had same impact as the KCS which allowed the lead and zinc extracted from Joplin to travel the length of the country and overseas. While the city's population increased between 1880 and 1890, it was between 1890 and 1900 that the most marked population growth happened as the city went from 9,000 residents to 26,000. Though not solely attributed directly to the KCS, it can be assumed this major population increase was aided by the new opportunities afforded by the railroad.

The KCP&G was, for many small towns in Arkansas and Oklahoma, the first railroad to pass through or directly determined where communities first developed. This was particularly true for Benton County in northwestern Arkansas.

Resource ID:	K-HEAV-01	Resource Type:	Above-Ground
Inventory Number:	TBD	Potential Effect:	Physical
Previous Documentation:	N/A	Location:	Watts, OK to Pittsburg, KS

National Register Evaluation (con't.): Between 1880 and 1900 the county's population grew from 20,000 to 31,000; new towns like Gentry were established and towns such as Siloam Spring expanded significantly. The railroad's passage through Benton County led to the establishment of significant fruit orchards, stock farms, and the expansion of existing wheat farms. The railroad also directly motivated settlement such Asbury, Missouri and Watts, Oklahoma which developed after the KCS made the town a division headquarters in 1912. The construction of rail yards and other infrastructure at Watts led to speculative real estate development within the town and encouraged the development of stock farms in the surrounding countryside. **Criterion B:** This railroad segment was built between 1887 and 1892 for the Kansas City, Pittsburg and Gulf Railroad, a precursor to the Kansas City Southern. This segment of railroad is significant for its association with Arthur Stilwell as the founder and driving force behind the expansion of the KCP&G. Arriving in Kansas City in 1888, Arthur Stilwell began to operate his first railroad, the Kansas City Suburban Belt Railway, in 1889. Extending the line south to Pittsburg, Kansas, Stilwell renamed the line the KCP&G. Through the 1890s Stilwell pushed his railroad further south, consolidating his tracks with other lines and laying new railbeds as he strove to reach the Gulf of Mexico. Stilwell secured financial backing for the railroad by selling railroad stock to Dutch investors, a necessity after the United States was rocked by the Panic of 1893. To thank his Dutch investors Stilwell named several towns in Arkansas, Texas, and Louisiana after them and their wives. In 1897 Stilwell's railroad reached the Gulf of Mexico where he built the City of Port Arthur, named after himself. In total Stilwell's enterprise laid over 1,200 miles of track through the center of the country and created an alternative shipping corridor that allowed farmers and industrialists in middle America to efficiently export their products and circumvent more distant eastern seaports. **Criterion C:** Detailed survey was undertaken within the APE along a 2.03-mile stretch of track near Kelly Springs, Missouri, a 1.10-mile segment near Asbury, Missouri, and a 2.02-mile segment near Gentry, Arkansas. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, bridges, and grade crossings. Since the APE contains only a small portion of the overall 98-mile long rail line segment, the overall segment has not been surveyed in detail and no determinations about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The Kansas City Southern corridor segment between Pittsburg, Kansas and Watts, Oklahoma retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The railroad's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Resource ID:	K-HEAV-02	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	Poteau to Watts, OK

Description: This property is a 90.4-mile segment of the Kansas City Southern Railway that travels south from Watts, Oklahoma to Poteau, Oklahoma. The railroad passes through the towns of Watts, Westville, Stilwell, Sallisaw, Spiro, Panama, and Poteau. Outside of these towns and cities, the railroad passes through a rural agrarian landscape. Capital improvements are planned around the unincorporated communities of Cave Springs and Baron, and near Spiro. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.

National Register Evaluation: This rail segment is recommended **eligible** for listing in the National Register. Originally built between 1893 and 1897, this railroad segment was built as part of the KCP&G as the line traveled south to the Gulf of Mexico. In Oklahoma, the KCP&G was responsible for the development of multiple towns, including Spiro which grew around the railroad station. In the late 19th century, many small Oklahoma towns were agrarian communities where grain, fruit, and cotton were grown. For these communities the KCP&G, later the Kansas City Southern, was critical to facilitating trade and economic activity. Foodstuffs grown in these communities were shipped along the railroad to major distribution centers like Kansas City. The railroad segment is regionally significant under **Criterion A:** in the areas of Transportation, Exploration and Settlement, and Commerce. Built by the KCP&G, this segment of the railroad connected Kansas City to multiple small agrarian communities in Oklahoma as well as regions rich in coal, fruit trees, and other metals. In 1912 the KCS's Immigration Department documented some of the resources and opportunities that had developed in Oklahoma along its trackage in a booklet entitled *Eastern Oklahoma Along the Kansas City Southern Railway*. Similar books were produced to promote the Ozark Mountain region, and coastal Louisiana. The KCS highlighted how its Oklahoma trackage acted as magnets for farm products such as wheat and cotton, timber, coal, and metals. At Poteau, gas and oil wells were developed, while at Sallisaw, Spiro, and Panama, anthracite coal seams were developed. The local climate also permitted the growth of hay, making stock farms another viable undertaking. The extraction and development of these resources was made viable by the passage of the KCS which created a cost-effective shipping corridor to major markets in Kansas City or international markets which could be accessed from the harbor at Port Arthur. The KCP&G was, for many of these towns, the first railroad to pass through the area and the railroad was the critical factor in determining the location of many new towns.

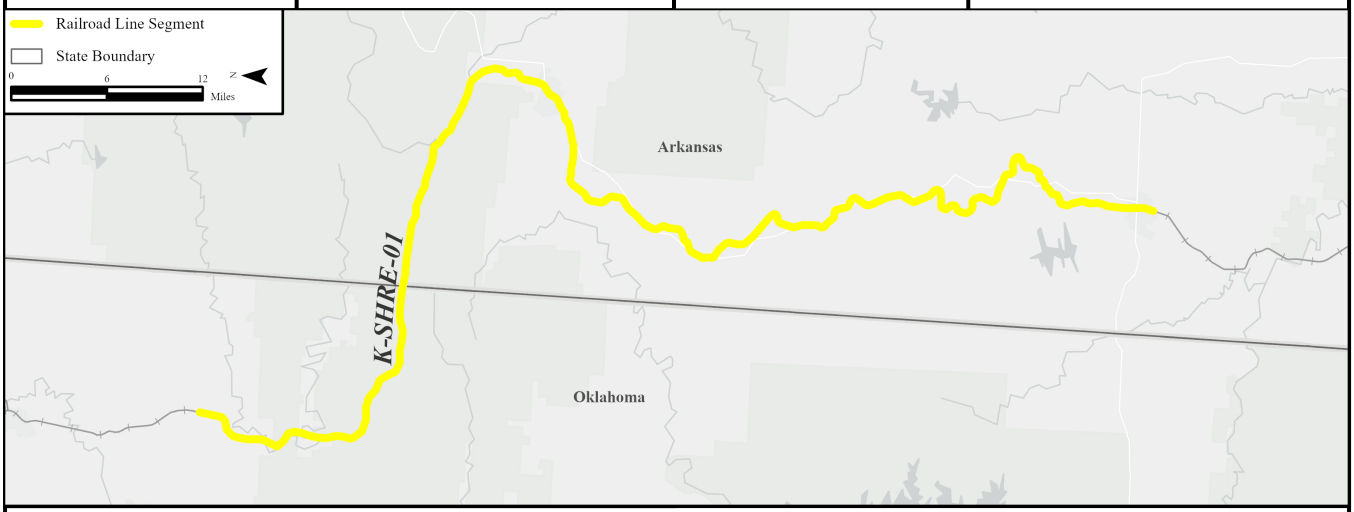
Inventory Number:	TBD	Potential Effect:	Physical
Previous Documentation:	N/A	Location:	Poteau to Watts, OK



National Register Evaluation (con't): Criterion B: The passage of the KCS can be directly tied to the establishment and initial growth of multiple settlements including Westville, Stilwell, Spiro, and Panama all of which were established in the 1890s on formerly Indigenous territory throughout eastern Oklahoma. This railroad segment was built between 1887 and 1892 for the Kansas City, Pittsburg and Gulf Railroad, a precursor to the Kansas City Southern. This segment of railroad is significant for its association with Arthur Stilwell as the founder and driving force behind the expansion of the KCP&G. Arriving in Kansas City in 1888, Arthur Stilwell began to operate his first railroad, the Kansas City Suburban Belt Railway, in 1889. Extending the line south to Pittsburg, Kansas, Stilwell renamed the line the KCP&G. Through the 1890s Stilwell pushed his railroad further south, consolidating his tracks with other lines and laying new railbeds as he strove to reach the Gulf of Mexico. Stilwell secured financial backing for the railroad by selling railroad stock to Dutch investors, a necessity after the United States was rocked by the Panic of 1893. To thank his Dutch investors Stilwell named several towns in Arkansas, Texas, and Louisiana after them and their wives. In 1897 Stilwell's railroad reached the Gulf of Mexico where he built the City of Port Arthur, named after himself. In total Stilwell's enterprise laid 1,200 miles of track through the center of the country and created an alternative shipping corridor that allowed farmers and industrialists in middle America to efficiently export their products and circumvent more distant eastern seaports. **Criterion C:** Detailed survey was undertaken within the APE along a 2.22 mile segment of the line near Baron, a 1.10-mile segment near Cave Springs, and a 0.82-mile segment near Spiro. Within the APE, the railroad retains its engineered grade, alignment, tracks, culverts, grade crossings, and bridges. Since the APE contains only a small portion of the overall 90.4-mile long rail line segment, the overall segment has not been surveyed in detail and no determination about the overall segment under Criterion C can be made at this time. **Criterion D**: This railroad segment does not appear to have the potential to yield further important information or data.

Integrity: The Kansas City Southern corridor segment between Watts, Oklahoma and Poteau, Oklahoma retains integrity of location, design, materials, workmanship, feeling, and association. Though trackage loss has occurred, the portions of the railroad corridor that remain in operation are in their historic footprint. The railroad corridor, still in active use, retains its association and feeling with railroad transit and freight transportation. Though maintenance and upgrades along the line have surely resulted in the loss or alteration of several individual features such as bridges, tracks, culverts, stations, and depot buildings, when structures were replaced, they were often similar in size, scale, and materials to the original features. The workmanship and design of this railroad corridor segment has also been largely maintained. The segment's setting is also generally intact with the railroads generally passing through the outskirts of small towns and long stretches of rural farmland.

Eastern Oklahoma Along the Kansas City Southern Railway. Kansas City: Kansas City Southern Immigration Department, 1912.

Resource ID:	K-SHRE-01	**Resource Type:**	Above-Ground
Inventory Number:	TBD	**Potential Effect:**	Physical
Previous Documentation:	N/A	**Location:**	De Queen to Heavener, OK

Description: This property is a 94.6-mile segment of the Kansas City Southern Railway that travels south from Heavener, Oklahoma to De Queen Arkansas. The railroad passes through the communities of Heavener, Oklahoma, Mena, Arkansas, Hatfield, Arkansas, Cove, Arkansas, and De Queen, Arkansas. Capital improvements are planned near Heavener, Oklahoma and Mena, Arkansas. For much of its length the railroad segment travels through a rural agrarian landscape. The railroad segment remains in active use and has typical features such as steel rail, wooden ties, grade crossings, culverts, bridges, and signaling equipment.
