Appendix N

Energy

This appendix provides technical information on the approach and results used in the analysis of energy resources *(Chapter 3, Section 3.8)*.

N.1 Approach

Based on the Board's environmental regulations, 49 C.F.R. § 1105.7(e)(4), there are four factors for considering energy resources in NEPA analyses: (1) effects on transportation of energy resources; (2) effects on recyclable commodities; (3) increases or decreases in overall energy efficiency; and (4) effects on freight diversions from rail to motor carriage. The approach for each of these factors is described below. OEA did not analyze the effect of the Proposed Acquisition on recyclable commodities and freight diversions from rail to motor carriage because the Applicants' Operating Plan did not indicate any changes in those two areas.

Below are the approaches for the various analyses conducted for energy resources:

- Effects on Transportation of Energy Resources: OEA considered the Applicants' proposed Operating Plan and traffic studies, commodities transported by CP and KCS in 2019 during a normal operational year, gross ton miles (GTM) for 2019, and other data sources as necessary.
- Increases or Decreases in Overall Energy Efficiency: Energy efficiency and fuel consumption effects of the Proposed Acquisition were estimated for single-line service; truck-to-rail diversions; operations at intermodal facilities; and vehicle delays at roadway/rail at-grade crossings (grade crossings). Effects on freight diversions were evaluated as part of the energy efficiency analysis. The energy analysis is consistent with data, approaches, and assumptions used in *Section 3.4, Truck-to-Rail Diversions, Section 3.5, Intermodal Facility Traffic, and Section 3.7, Air Quality and Climate Change.*
- Single-Line Service: To determine the impact of single-line service on energy efficiency, OEA followed the data and methodology for rail segment divisions as described in *Section 3.7, Air Quality and Climate Change*, and used information provided in the Applicants' Operating Plan. Note that single-line service was estimated, but not included in the overall energy efficiency analysis because the increase in fuel consumption on the CPKC rail lines would likely be offset by a decrease in fuel consumption on the rail lines of competing railroads.

- Truck-to-Rail Diversions: To determine the impact of truck-to-rail diversions on energy efficiency, OEA followed the data and methodology for truck-to-rail diversions as described in *Section 3.7, Air Quality and Climate Change*. Annual reduction in truck vehicle miles traveled (VMT) was provided by the Applicants and is consistent with the transportation analysis. Using the energy consumption factor of 0.018452369 metric million British thermal units (MMBtu) of energy used per mile, the VMT reduction was converted to a reduction in diesel energy consumption (MMBtu) per year. This energy value for diesel consumption was then converted to gallons of diesel using the conversion factor of 137,381 Btu per gallon as provided by the U.S. Energy Information Administration (2021).

  To account for the increase in rail operations as a result of the anticipated mode shift from truck to rail, and therefore accurately offset the substantial decrease in fuel use from truck VMT reduction, OEA used accepted fuel efficiency factors for truck and rail transport to determine the increase in rail fuel consumption that would correspond to a truck fuel reduction of 10,795,150 gallons per year. To do this, OEA used a truck to rail fuel efficiency ratio of 4:1, indicating that rail transport is approximately four times more fuel efficient than trucks transporting the same amount of material. The resulting increase in fuel consumption on the CPKC rail line as a result of truck-to-rail diversions would be 2,698,787 gallons per year compared to the No-Action Alternative. Therefore, truck-rail-diversions would comprise 7.3 percent of the total increase (36,909,385 gallons per year) in fuel consumption on the combined CPKC rail lines, with the remaining 92.7 percent resulting from rail-to-rail diversions. The 2,698,787 increase was combined with the decrease in truck fuel consumption (-10,795,150 gallons) for an overall change of -8,096,362 gallons.

- Intermodal Facilities: OEA used the data and assumptions described below to estimate the change in fuel consumption from intermodal facility vehicles, including dray trucking and the use of lift equipment and yard trucks. Changes in fuel consumption from operational changes at intermodal facilities were analyzed with focus on operational changes that would result from truck-to-rail diversions of intermodal freight. The increased energy use at the Applicants' intermodal facilities from rail-to-rail diversions of freight would be offset by a corresponding reduction in energy use at intermodal facilities operated by other railroads.

  OEA used the following Over-the-Road (OTR) truck data:

  - The Applicants' estimated changes in OTR trucks per day at intermodal facilities.
  - The Applicants' estimated average time that an OTR truck is present in an intermodal facility, derived from market research and used in the Air Quality analysis.
  - OTR trucks' energy consumption of 0.0965 MMBtu per hour (0.7 gallons per hour) while in an intermodal facility, based on the Air Quality analysis.
  - Operating days per year for each intermodal facility based on current operating schedules.
  - Truck-to-rail diversions would account for 22.8 percent of the total change in intermodal freight on the integrated CPKC rail system. This ratio was developed

using Applicant information on the number of diverted rail-to-rail containers and diverted truck-to-rail containers.

OEA used the following lift equipment data:

- The estimated change in the annual operating hours of lift equipment, which was derived from the estimated change in the number of primary lifts per year. The change in primary lifts per year was calculated from the change in primary lifts (origin/destination [O/D]+ switch lifts) per day that was provided by the Applicants and the operating days per year for each intermodal facility. The ratio of primary lifts to total lifts was estimated using an average of available data.
- Average lifts per hour, which were estimated for each intermodal facility based on 2019 handling data from the Applicants and current facility operating hours.
- Average fuel efficiency of lift equipment adapted from *Section 3.7, Air Quality and Climate Change* and converted to gallons per hour.
- Truck-to-rail diversions would account for 22.8 percent of the total change in intermodal freight on the integrated CPKC rail system.

OEA used the following yard truck data:

- Average fuel efficiency of yard trucks adapted from *Section 3.7, Air Quality and Climate Change* and converted to gallons per hour.
- Yard trucks make an average of 1.2 moves for each primary lift, using conservative values chosen for the Air Quality analysis.
- Yard trucks make an average of 4.5 moves per hour, based on yard work and rail work completed in an 8-hour shift in existing guidelines.
- Truck-to-rail diversions would account for 22.8 percent of the total change in intermodal freight on the integrated CPKC rail system.

- Vehicle Delays at Roadway/Rail At-Grade Crossings: The grade crossing analysis is consistent with the approach used in *Section 3.7, Air Quality and Climate Change*. OEA calculated total energy consumption (MMBtu) per year using the average vehicle delay and number of vehicles delayed per day for each Federal Railroad Administration crossing ID associated with the Proposed Acquisition. The total hours of delay were used to calculate total energy consumption based on the idle energy consumption conversion factor of 0.065596 MMBtu per hour, which was then converted to gallons of gasoline per year.

N.2 Results

Table N.2-1 through **Table N.2-4** below provide additional detailed information on changes in energy consumption.

Table N.2-1. Energy Changes from Truck-to-Rail Diversions

State	Annual Truck Reduction (VMT)[1]	Diesel Energy Reduction (MMBtu/year)[2]	Diesel Energy Reduction (gallons/year)[3]

Rail Increases	-	-	2,698,787
TOTAL	**-**	**-**	**-8,096,362**

[1] Annual Truck VMT Reduction was provided from the transportation study which adapted analysis from the Verified Statement of Bengt Muten (2021).
[2] Diesel energy reduction calculated as part of *Section 3.7, Air Quality and Climate Change.*
[3] Conversion factor used for gallons of diesel from British thermal units (Btu) was 137,381 Btu for 1 U.S. gallon (U.S. Energy Information Administration 2021).

Table N.2-2. Changes in Energy Consumption at Intermodal Facilities, OTR Trucks

Facility	County	State	Change in OTR Trucks per Day	Operating Days/Year[1]	Average Time Truck Spends at Intermodal Facility (minutes/ truck)[2]	Hour/ Minute Conversion	OTR Truck Fuel Consumption at Intermodal Facility (MMBtu/ hour)[3]	OTR Truck Fuel Consumption at Intermodal Facility (gallons/ hour)[4]	Percentage of Total Change in Intermodal Freight from Truck-to-Rail Diversions[5]	Change in Fuel Consumption from OTR Trucks at Intermodal Facilities (gallons/ year)

Total Change in Fuel Consumption from Yard Trucks at Intermodal Facilities (gallons/year)									70,561

[1] Truck moves per primary lift assumed to be 1.2 using conservative value in the range provided by Lindhjem (2008).

[2] Truck moves per hour assumed to be 4.5, estimated based on yard work and rail work completed in an 8-hour shift (The Port of Long Beach and The Port of Los Angeles 2017).

[3] Fuel Efficiency of Average Yard Truck (grams/hour) adapted from nonroad fuel consumption rate used at part of *Section 3.6, Air Quality and Climate Change*.

[4] Conversion factor used for gallons of diesel from grams was 100 grams Btu for 0.03 U.S. gallons (U.S. Department of Energy).

[5] Percentage of Total Change in Intermodal Freight from Truck-to-Rail Diversions calculated based on "Estimated Volume of Existing 2019 Rail Traffic Flows Diverted to CP/KCS" found in Table 1[3]: Summary of 2019 Rail-to-Rail Diversions Likely to Occur Due to CP/KCS Combination in the Applicants' Operating Plan [216,675 intermodal containers] and estimate from the Verified Statement of Bengt Muten (2021) regarding diverted truck-to-rail containers [64,018 intermodal containers]. This total only considers truck-to-rail and rail-to-rail diversion effects on intermodal freight, not post-Acquisition changes in traffic patterns or investments by CPKC in growth opportunities made available by a combined CPKC network.

Appendix O

Biological Resources

Appendix O includes four sections. *Section O.1, Figures*, contains maps depicting the general habitat and land use and water resources at the planned capital improvements and maps depicting the suitable bat habitat at the planned capital improvements. *Section O.2, Special Status Species*, contains tables of the federally listed and state listed species by capital improvement site as well as a table of critical habitat located within 1 mile of the combined CPKC railroad network. *Section O.3, Field Work Data*, contains the field work data collected by OEA during the field work of the planned capital improvements. *Section O-4, Agency Consultation and Coordination*, contains documentation of U.S. Fish and Wildlife Service (USFWS) and state agency correspondence.

O.2 Special Status Species

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
MP 71 (Turkey River), IA	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, multiple snags with small cavities and basal hollows along the study area provide suitable summer roosting habitat. Three bridges and one concrete box culvert with suitable cracks and crevices also provide suitable roosting habitat. The railroad right-of-way (ROW) and streams not only act as flight corridors, but along with the forested wetlands on-site, provide foraging habitat for bats.**
	Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Endangered	No, OEA did not observe bodies of water in the study area suitable for the Higgens eye mussel due to the near lentic conditions observed in bodies of water that were not frozen over.
	Sheepnose mussel (*Plethobasus cyphyus*)	Endangered	No, stream crossings in the study area were small (<16' wide), extremely shallow (<2' deep), and with little flow, and therefore would not likely serve as suitable habitat. Open waters in the study area were frozen over at the time of the survey but likely have lentic conditions unsuitable for the Sheepnose mussel.
	Spectaclecase (mussel) (*Cumberlandia monodonta*)	Endangered	No, OEA did not observe large streams or rivers with suitable habitats bordering a main channel in the study area.
	Iowa pleistocene snail (*Discus macclintocki*)	Endangered	No, no talus slopes present within the study area.
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Northern wild monkshood (*Aconitum noveboracense*)	Threatened	No, no talus slopes present.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, no prairies present.
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, no prairies present.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
MP 24 (Bellevue), IA	Northern Long-eared Bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, forested areas along the study area, the bridge over Spruce Creek bridge, and multiple culverts provide roosting habitat. Forested edges and the Spruce Creek riparian corridor provide also provide foraging habitat.**
	Higgens Eye Pearlymussel (*Lampsilis higginsii*)	Endangered	No, there are no large rivers with deep water and moderate current within the study area.
	Sheepnose Mussel *(Plethobasus cyphyus)*	Endangered	No, there are no large rivers or streams present within the study area.
	Iowa Pleistocene Snail (*Discus macclintocki*)	Endangered	No, there are no algific talus slopes within the study area.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern Prairie Fringed Orchid (*Platanthera leucophaea*)	Threatened	No, there are no mesic prairies within the study area.
	Northern Wild Monkshood (*Aconitum noveboracense*)	Threatened	No, there are no algific talus slopes or partially shaded cliffs within the study area.
	Prairie Bush-clover (*Lespedeza leptostachya*)	Threatened	No, there are no prairies within the study area.
	Western Prairie Fringed Orchid (*Platanthera praeclara*)	Threatened	No, there are no prairies within the study area.
MP 75 (Monroe), IL	OEA did not conduct field work at the location of the planned new siding at MP 75 near Monroe Township in Ogle County, Illinois because the planned new siding would be located within the footprint of a previously removed second track and would therefore not result in any new impacts.		
Deer Creek, IA	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, forested areas provide suitable summer roosting habitat. Multiple snags with small cavities along the railroad edge provide suitable roosting habitat. Two bridges and one concrete box culvert with suitable cracks and crevices provide roosting bats. The railroad ROW and streams not only act as flight corridors, but along with the forested wetlands on-site, provide foraging habitat for bats.**

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Eastern massasauga (*Sistrurus catenatus*)	Threatened	No, there are no suitable wet prairies or low areas on the side of the mainline where the siding extension would be located.
	Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Endangered	No, stream crossings in the study area were frozen over at the time of the survey but appeared to be too small (<30' wide).
	Iowa Pleistocene snail (*Discus macclintocki*)	Endangered	No, no talus slopes present within the study area.
	Monarch butterfly (*Danaus plexippus*)	Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, no prairies present.
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, no prairies present.
Camanche, IA	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	No, the study area is characterized by industrial land use and disturbed ROW. There are no suitable snags or live trees large enough for roosting bats. Though there are some bridges and culverts present, they provide poor quality roosting habitat with few to no cracks or crevices suitable for resting bats.
	Eastern massasauga (*Sistrurus catenatus*)	Threatened	No, the study area contained no suitable wet prairies or low areas.
	Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Endangered	No, Mill Creek appeared to have a lentic flow regime, whereas the Higgens eye mussel prefers moderately flowing water. Mill Creek was covered in patches of ice at the time of the survey. The other stream was fragmented and too small (<10' wide) to support the Higgens eye mussel.
	Iowa Pleistocene snail (*Discus macclintocki*)	Endangered	No, no talus slopes present within the study area.
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, no prairies present.
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, no prairies present.
Letts, IA	Indiana Bat (*Myotis sodalis*)	Endangered	**Yes, forested areas provide suitable roosting habitat. Cracks and crevices on the US 61 NB and SB bridges over the CP rail line provide marginal roosting habitat. Forested edges along the study area provide suitable foraging habitat.**
	Northern Long-eared Bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, forested areas provide suitable roosting habitat. Cracks and crevices on the US 61 NB and SB bridges over the CP rail line provide marginal roosting habitat. Forested edges along the study area provide suitable foraging habitat.**
	Higgens Eye Pearlymussel (*Lampsilis higginsii*)	Endangered	No, there are no large rivers with deep water and moderate current within the study area.
	Sheepnose Mussel (*Plethobasus cyphyus*)	Endangered	No, there are no large rivers or streams present within the study area.
	Spectaclecase Mussel (*Cumberlandia monodonta*)	Endangered	No, there are no large rivers present within the study area.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern Prairie Fringed Orchid (*Platanthera leucophaea*)	Threatened	No, there are no mesic prairies within the study area.
	Prairie Bush-clover (*Lespedeza leptostachya*)	Threatened	No, there are no prairies within the study area.
	Western Prairie Fringed Orchid (*Platanthera praeclara*)	Threatened	No, there are no prairies within the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
MP 255 (Washington), IA	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, multiple structures and forested areas on the eastern end of the study area provide suitable summer roosting habitat is present. The railroad ROW and streams act as foraging or flight corridors.**
	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, multiple structures and forested areas on the eastern end of the study area provide suitable summer roosting habitat is present. The railroad ROW and streams act as foraging or flight corridors.**
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, no prairies present.
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, no prairies present.
Ottumwa, IA	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Cracks and crevices within a 4'x6' concrete box culvert provide marginal roosting habitat. Forested edges along the study area provide suitable foraging habitat.**
	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Cracks and crevices within a 4'x6' concrete box culvert provide marginal roosting habitat. Forested edges along the study area provide suitable foraging habitat.**
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, there are no mesic prairies within the study area.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, there are no prairies within the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, there are no prairies within the study area.
Moravia, IA	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, the study area provides scattered marginally suitable summer roosting habitat. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.**
	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, the study area provides scattered marginally suitable summer roosting habitat. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.**
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Prairie bush-clover (*Lespedeza leptostachya*)	Threatened	No, no prairies present.
	Western prairie fringed orchid (*Platanthera praeclara*)	Threatened	No, no prairies present.
Newtown, MO	Gray Bat (*Myotis grisescens*)	Endangered	No, no caves are within the study area. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat is present.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Indiana Bat (*Myotis sodalis*)	Endangered	**Yes, a wood/metal bridge provides marginal roosting habitat. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat.**
	Northern Long-eared Bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, a wood/metal bridge provides marginal roosting habitat. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat.**
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Mead's Milkweed (*Asclepias meadii*)	Threatened	No, no mesic tallgrass prairies present within the study area.
Laredo, MO	Gray Bat (*Myotis grisescens*)	Endangered	No, no caves were identified within or near the study area.
	Indiana Bat (*Myotis sodalis*)	Endangered	**Yes, the study area provides scattered marginally suitable summer roosting habitat. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only approximately 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.**
	Northern Long-eared Bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, the study area provides scattered marginally suitable summer roosting habitat. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only approximately 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.**
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Eastern prairie fringed orchid (*Platanthera leucophaea*)	Threatened	No, no mesic prairies or wet sedge meadows present.
	Bald eagle (*Haliaeetus leucocephalus*)	None (BGEPA)	No, despite the occurrence record within one mile of the site, no suitable roost trees were identified within the study area. No typical foraging habitat such as large rivers, lakes, or marshes were present in the study area, though the Grand River is located approximately 0.25 miles to the east of the study area. OEA did not identify any nests at the time of the field survey.
MP 431 (Dawn), MO	Gray Bat (*Myotis grisescens*)	Endangered	No, no caves present within the study area. Foraging habitat is present along railroad corridor, forested edges of adjacent agricultural fields, and riparian corridor of adjacent stream (Shoal Creek).
	Indiana Bat (*Myotis sodalis*)	Endangered	**Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Cracks and crevices on two concrete railroad bridges provide marginally suitable roosting habitat. Forested edges along the study area and the riparian corridor of the adjacent stream (Shoal Creek) provide suitable foraging habitat.**
	Northern Long-eared Bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Cracks and crevices on two concrete railroad bridges provide marginally suitable roosting habitat. Forested edges along the study area and the riparian corridor of the adjacent stream (Shoal Creek) provide suitable foraging habitat.**
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Bald eagle (*Haliaeetus leucocephalus)*	None (BGEPA)	**Yes, OEA observed one bald eagle nest on site within study area and a solitary, perching eagle in the vicinity of the nest outside of the study area. OEA also observed foraging habitat in Shoal Creek, just outside the study area.**
Blue Valley, MO	Gray bat (*Myotis grisescens*)	Endangered	No, no caves present within the study area.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, bridges and culvert provide suitable roosting habitat.**

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, bridges and culvert provide suitable roosting habitat.**
Grandview/IFG, MO	Gray bat (*Myotis grisescens*)	Endangered	No, no caves present within the study area.
	Mead's milkweed (*Asclepias meadii*)	Threatened	No, no mesic tallgrass prairies present within the study area.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, bridges provide suitable roosting habitat.**
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, bridges provide suitable roosting habitat.**
Asbury, MO	Gray bat (*Myotis grisescens*)	Endangered	No, no caves present within study area.
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	No, no forested area or suitable roosting structures present within study area.
	Indiana bat (*Myotis sodalis*)	Endangered	No, no forested area or suitable roosting structures present within study area.
	Neosho madtom (*Noturus placidus*)	Threatened	No, no rivers present within study area.
	Neosho mucket (*Lampsilis rafinesqueana*)	Endangered	No, no suitable streams with shallow riffles, gravel substrate or backwater areas are within study area.
	Rabbitsfoot (*Quadrula cylindrica cylindrica*)	Threatened	No, no suitable streams with gravel substrate are within study area.
	Monarch Butterfly *(Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
MP 186, MO	Gray bat (*Myotis grisescens*)	Endangered	No, no caves are present in the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, forested areas provide suitable roosting habitat.**
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, forested areas provide suitable roosting habitat.**
	Neosho Mucket (*Lampsilis rafinesqueana*)	Endangered	No, a perennial stream is present within the study area and contains gravel substrate; however, swift currents are not present.
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Gentry, AR	Gray bat (*Myotis grisescens*)	Endangered	No, no caves are present within the study area.
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, potential suitable summer roosting habitat within forested areas.**
	Northern long-eared bat (*Myotis septentrionalis*)	Threatened (Proposed Endangered)	**Yes, potential suitable summer roosting habitat within forested areas.**
	Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Endangered	No, no caves are present within the study area.
	Eastern black rail (*Laterallus jamaicensis spp. Jamaicensis*)	Threatened	No, no saltmarshes or brackish marshes with dense cover are present within the study area.
	Piping plover (*Charadrius melodus*)	Threatened	No, no beaches or suitable nesting habitat are present within the study area.
	Red knot (*Calidrus canutus rufa*)	Threatened	No, no elevated tundra areas are present within the study area.
	Ozark cavefish (*Amblyopsis rosae*)	Threatened	No, no caves are present within the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Benton County cave crayfish (*Cambarus aculabrum*)	Endangered	No, no caves are present within the study area.
	Missouri bladderpod (*Physaria filiformis*)	Threatened	No, no limestone glades are present within the study area.
MP 247 (Baron), OK	Gray bat (*Myotis grisescens*)	Endangered	No, no caves are present within the study area.
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, potential suitable summer roosting habitat within forested areas.**
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, potential suitable summer roosting habitat within forested areas.**
	Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Endangered	No, no caves are present within the study area.
	Piping plover (*Charadrius melodus*)	Threatened	No, wetlands are within the study area; however, given the high level of disturbance along the corridor the study area does not provide suitable habitat. There is no breeding habitat either.
	Red knot (*Calidrus canutus rufa*)	Threatened	No, there is no breeding or non-breeding habitat within the study area.
	Neosho mucket (*Lampsilis rafinesqueana)*	Endangered	No, there are no perennial streams located within the study area.
	Rabbitsfoot mussel (*Quadrula cylindrica cylindrica)*	Threatened	No, there are no perennial streams located within the study area.
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
Cave Springs, OK	Gray bat (*Myotis grisescens*)	Endangered	No, no caves are present within the study area.
	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, potential suitable summer roosting habitat within forested areas.**
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, potential suitable summer roosting habitat within forested areas.**
	Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Endangered	**Yes, no caves are present within the study; however, a cave is located 1.5 miles that is known to be occupied by the Ozark big-eared bat. Therefore, foraging habitat is present within forested areas.**
	Piping plover (*Charadrius melodus*)	Threatened	No, there is a small creek is within the study area; however, given the high level of disturbance along the corridor, the creek would not be suitable nesting habitat.
	Red knot (*Calidrus canutus rufa*)	Threatened	No, there is no breeding or non-breeding habitat within the study area.
	American burying beetle (*Nicrophorus americanu*s)	Threatened	No, oak and hickory forests are present, and a farm animal dump is present with substantial carrion within the study area; however, the American burying beetle prefers large intact areas with little to no human disturbance.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Bald eagle (*Haliaeetus leucocephalus)*	None (BGEPA)	No, no suitable nesting trees observed within the study area.
Spiro, OK	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, bridge provides suitable roosting habitat.**
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, bridge provides suitable roosting habitat.**
	Piping plover (*Charadrius melodus*)	Threatened	No, there is a stream and wetlands within the study area; however, given the high level of disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Red knot (*Calidrus canutus rufa*)	Threatened	No, there is no breeding or non-breeding habitat within the study area.
	Scaleshell mussel (*Leptodea leptodon*)	Endangered	No, the medium-sized perennial stream within the study area does not contain good water quality and has been excavated near the culvert.
	American burying beetle (*Nicrophorus americanu*s)	Threatened	No, grasslands and open understory oak hickory forests are not present within the study area. The study area is disturbed and has been cleared.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Heavener, OK	Indiana bat (*Myotis sodalis*)	Endangered	**Yes, bridges and culverts provide suitable roosting habitat.**
	Northern long-eared bat (*Myotis septentrionalis)*	Threatened	**Yes, bridges and culverts provide suitable roosting habitat.**
	Piping plover (*Charadrius melodus*)	Threatened	No, there are streams and wetlands within the study area; however, given the high level of disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.
	Red knot (*Calidrus canutus rufa*)	Threatened	No, there is no breeding or non-breeding habitat within the study area.
	Scaleshell mussel (*Leptodea leptodon*)	Endangered	No, the perennial streams within the study area have been heavily disturbed and altered due to excavation and straightening.
	American burying beetle (*Nicrophorus americanu*s)	Threatened	No, grasslands and open understory oak hickory forests are not present within the study area. The study area is disturbed and has been cleared.
	Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
MP 377 (Mena), AR	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	**Yes, culverts provide suitable roosting habitat.**

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Eastern black rail (*Laterallus jamaicensis* spp. *Jamaicensis*)	Threatened	No, sedge meadows with dense cover are not present within the study area.
	Piping plover (*Charadrius melodus*)	Threatened	No, there are streams and wetlands within the study area; however, given the high level of disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.
	Red knot (*Calidrus canutus rufa*)	Threatened	No, there is no breeding or non-breeding habitat within the study area.
	Red-cockaded woodpecker (*Picoides borealis*)	Threatened	No, there are no longleaf pine forests within the study area.
	Arkansas fatmucket (*Lampsilis powellii*)	Threatened	No, the streams within the study area have been heavily altered due to excavation and straightening and do not provide suitable habitat.
	Rabbitsfoot (*Quadrula cylindrica cylindrica*)	Threatened	No, the streams within the study area have been heavily altered due to excavation and straightening and do not provide suitable habitat.
	Monarch butterfly (*Danaus plexippu*s)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Mansfield, LA	Northern long-eared bat (*Myotis septentrionalis)*	Threatened (Proposed Endangered)	No, there are no suitable forested areas and no suitable roosting structures.
	Red-cockaded woodpecker (*Picoides borealis*)	Threatened	No, there are no longleaf pine forests within the study area.
	Monarch butterfly (*Danaus plexippu*s)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	Geocarpon (*Geocarpon minimum*)	Threatened	No, saline prairies are not present within the study area.
Loring, LA	Red-cockaded woodpecker (*Picoides borealis*)	Threatened	No, there are no longleaf pine forests within the study area.

Table O.2-1. Federally listed species and their potential occurrence at planned capital improvement sites and presence of suitable habitat

Capital Improvement	Species	Federal Status	Suitable Habitat Present within the Study Area?
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Singer, LA	Red-cockaded woodpecker (*Picoides borealis*)	Federally Threatened	No, there are no longleaf pine forests within the study area.
	Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
	American chaffseed (*Schwalbea amwericana*)	Federally Endangered	No, fire-maintained longleaf pine flatwoods and savannas are not present in the study area.

Table O.2-2. State-listed species known to occur or potentially occur in or near the planned capital improvement sites

Capital Improvement	Species	State Status	Suitable Habitat Present within the Study Area?
MP 71 (Turkey River), IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
MP 24 (Bellevue), IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
MP 75 (Monroe), IL	OEA did not conduct field work at the location of the planned new siding at MP 75 near Monroe Township in Ogle County, Illinois because the planned new siding would be located within the footprint of a previously removed second track and would therefore not result in any new impacts.		
Deer Creek, IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
Camanche, IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
Letts, IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
MP 255 (Washington), IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
Ottumwa, IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
Moravia, IA	Review letter from the Iowa Department of Natural Resources stated no state species or rare community records were found in the study area.		
Newtown, MO	Review letter from the Missouri Department of Conservation stated no state species or rare community records were found in the study area.		
Laredo, MO	Bald eagle (*Haliaeetus leucocephalus*)	Bald & Golden Eagle Protection Act (BGEPA)	No, despite the occurrence record within one mile of the site, no suitable roost trees were identified within the study area. No typical foraging habitat such as large rivers, lakes, or marshes were present in the study area, though the Grand River is located approximately 0.25 miles to the east of the study area. No nests were identified at the time of the field survey.

Table O.2-2. State-listed species known to occur or potentially occur in or near the planned capital improvement sites

Capital Improvement	Species	State Status	Suitable Habitat Present within the Study Area?
MP 431 (Dawn), MO	Bald eagle (*Haliaeetus leucocephalus*)	Bald & Golden Eagle Protection Act (BGEPA)	**Yes, a nest on site within the study area and a solitary, perching eagle in the vicinity of the nest was observed outside of the study area. Shoal Creek provides suitable foraging habitat outside of the study area.**
Blue Valley, MO	Tri-colored bat (*Perimyotis subflavus*)	S2 (Imperiled)	**Yes, bridges and a culvert provide suitable roosting habitat.**
Grandview/I FG, MO	Bald eagle (*Haliaeetus leucocephalus*)	Bald & Golden Eagle Protection Act (BGEPA)	No, despite the occurrence record within three miles of the site, no suitable roost trees were identified within the study area. No typical foraging habitat such as large rivers, lakes, or marshes were present in the study area.
	Auriculate false foxglove (*Agalinis auriculata*)	S3 (Vulnerable)	No, despite the occurrence record less than one mile of the study area, no prairies or prairie remnants were identified during field work.
	Northern metalmark (*Calephelis borealis*)	S1 (Critically imperiled)	No, despite the occurrence record less than one mile of the study area, no streams were identified during field work.
	Great plains skink (*Plestiodon obsoletus*)	S2 (Imperiled)	No, despite the occurrence record less than two miles of the study area, no rocky outcrops, canyons, prairies, or grasslands were identified during field work.
	Regal fritillary (*Speyeria idalia*)	S3 (Vulnerable)	No, despite the occurrence record near the study area, no open sites such as damp meadows, marshes, wet fields, or mountain pastures were identified during field work.
	Northern Harrier (*Circus hudsonius*)	S2 (Imperiled)	No, fields surrounding the study area provide suitable habitat for this species, but not within the study area. As surveyors approached the capital improvement site, they observed several individuals of this species; however, surveyors did not see any individuals of this species in the study area along the ROW.

Table O.2-2. State-listed species known to occur or potentially occur in or near the planned capital improvement sites

Capital Improvement	Species	State Status	Suitable Habitat Present within the Study Area?
Asbury, MO	Prairie Mole Cricket (*Gryllotalpa major*)	S3 (Vulnerable)	**Yes, grassland and herbaceous vegetation within the study area provide suitable habitat for this species. Surveyors did not identify any individuals of this species during field work.**
	Northern Crawfish Frog (*Lithobates areolatus circulosus*)	S3 (Vulnerable)	**Yes, wetland-upland mosaic within and adjacent to the study area provides suitable habitat for this species. Surveyors did not identify any individuals of this species during field work.**
MP 186, MO	Review letter from the Missouri Department of Conservation stated no state species or rare community records were found in the study area.		
Gentry, AR	Review letter from the Arkansas Heritage Commission stated no state species records were found in the study area.		
MP 247 (Baron), OK	Review letter from the Oklahoma Natural Heritage Inventory stated no state species records were found in the study area.		
Cave Springs, OK	Review letter from the Oklahoma Natural Heritage Inventory stated no state species records were found in the study area.		
Spiro, OK	Review letter from the Oklahoma Natural Heritage Inventory stated no state species records were found in the study area.		
Heavener, OK	Review letter from the Oklahoma Natural Heritage Inventory stated no state species records were found in the study area.		
MP 377 (Mena), AR	Ringed salamander (*Ambystoma*	INV (Inventory Element)	No, despite the occurrence record of this species within the study area, surveyors did not identify habitat for this species during field work. The area outside the railway ROW consisted almost entirely of cattle pasture with some upland scrub-shrub habitat along the ridges

Table O.2-2. State-listed species known to occur or potentially occur in or near the planned capital improvement sites

Capital Improvement	Species	State Status	Suitable Habitat Present within the Study Area?
	annulatum)		
Mansfield, LA	Review letter from the Louisiana Wildlife and Fisheries Department stated no state species or rare community records were found in the study area.		
Loring, LA	Review letter from the Louisiana Wildlife and Fisheries Department stated no state species or rare community records were found in the study area.		
Singer, LA	Review letter from the Louisiana Wildlife and Fisheries Department stated no state species or rare community records were found in the study area.		

Table O.2-3. Critical Habitat within 1 Mile of the Combined CPKC Railroad Network

Species Name	Species Type	Status	State	Segment	Description of Critical Habitat
Neosho Mucket (*Lampsilis rafinesqueana*)	Mussel	Endangered	Missouri	K-HEAV-01	Within the Elk River 0.5 mile from the railroad Within Shoal Creek, the railroad crosses over the creek and the creek runs parallel to the railroad for 4.5 miles Within the Spring River, the railroad crosses over the river
			Oklahoma		Within the Illinois River, the railroad crosses over the river
Poweshiek skipperling (*Oarisma poweshiek*)	Butterfly	Endangered	Minnesota	C-ELLA-04	Native prairie 0.5 mile from the railroad
				C-DELA-02	Native prairie 0.8 mile from the railroad
Rabbitsfoot (Quadrula cylindrica)	Mussel	Threatened	Arkansas	K-SHRE-02	Within the Little River, the railroad crosses over the river
			Missouri	K-HEAV-01	Within the Spring River, the railroad crosses over the river
Texas fawnsfoot (*Truncilla macrodon*)	Mussel	Proposed Threatened	Texas	U-BEAU-01	Within the Brazos River, the railroad crosses over the river
				K-ROSE-01	Within the Brazos River; 0.4 mile from the railroad
				K-ROSE-02	Within the Colorado River; the railroad crosses over the river
Texas pimpleback (*Cyclonaias petrina*)	Mussel	Proposed Endangered	Texas	K-ROSE-02	Within the Colorado River; the railroad crosses over the river

O.3 Field Work Data

O.3.1 Capital Improvement Field Work Site Summaries

MP 71 (Turkey River), IA

Field Work Date: 1/24/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Open Water (Mississippi Backwaters)	N/A	
Wetland (Forested)	N/A	
Open Water (Mississippi Backwaters)	N/A	
Intermittent Stream	4 feet	24” reinforced concrete pipe (RCP)
Wetland (Forested)	N/A	None
Perennial Stream	4 feet	24” corrugated metal pipe (CMP)
Perennial Stream	16 feet	Crosses under wooden rail bridge
Perennial Stream	4 feet	24” RCP

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, suitable summer roosting habitat is present throughout the study area. Multiple snags with small cavities and basal hollows were present along the railroad edge and directly adjacent to the study area. Three bridges and one concrete box culvert with suitable cracks and crevices for roosting bats were also present. The railroad ROW and streams not only act as flight corridors, but along with the forested wetlands on-site, provide foraging habitat for bats.
Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Federally Endangered	No, bodies of water in the study area were not suitable for the Higgens eye mussel due to the near lentic conditions observed in bodies of water that were not frozen over.
Sheepnose mussel (*Plethobasus cyphyus*)	Federally Endangered	No, stream crossings in the study area were small (<16' wide), extremely shallow (<2' deep), and with little flow, and therefore would not likely serve as suitable habitat. Open waters in the study area were frozen over at the time of the survey but likely have lentic conditions unsuitable for the Sheepnose mussel.
Spectaclecase (mussel) (*Cumberlandia monodonta*)	Federally Endangered	No, large streams or rivers with suitable habitats bordering a main channel were not observed in the study area.
Iowa pleistocene snail (*Discus macclintocki*)	Federally Endangered	No, no talus slopes present within the study area.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Northern wild monkshood (*Aconitum noveboracense*)	Federally Threatened	No, no talus slopes present.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, no prairies present.
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, no prairies present.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Wooden Bridge	No	No	No, no suitable cracks or crevices	
Wooden Bridge	No	No	Yes, but poor quality	
11 x 7 x 50 Double box culvert	Yes (1 barn swallow)	No	Yes, suitable cracks, crevices, and rough surfaces for roosting bats	High quality, cracks within the culvert are deep and open.
Concrete and steel bridge	No	No	Yes, roosting habitat within expansion joints, cracks, crevices, and rough surfaces	Bridge very low to ground, unable to fully survey due to safety concerns.

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Wetlands: The most abundant habitat type across the site, wetlands were located directly adjacent to the railroad ROW, sloping gradually down to the backwaters of the Mississippi River. Wetland classifications include a mix of forested, scrub/shrub, and emergent wetlands.
- Rail/Transportation ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.
- Mississippi Backwaters – Consist of the "open waters" as delineated and described in the waters section. These are portions of the Mississippi River where the current does not reach, and the water is stagnant.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Acer saccharum	Sugar Maple	FACU
Agastache nepetoides	Yellow Giant-Hyssop	FACU
Alopecurus sp. or *Setaria* sp.	Foxtail	---
Amorpha canescens	Lead Plant	UPL

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Chasmanthium latifolium	Indian wood oats	FACW
Cirsium vulgare	Bull Thistle	FACU*
Daucus carota	Queen Anne's-Lace	UPL
Fraxinus pennsylvanica	Green Ash	FACW
Gleditsia triacanthos	Honey-Locust	FAC
Juniperus virginiana	Eastern Red-Cedar	FACU
Paniucum sp.	Panic Grass	---
Populus deltoides	Eastern Cottonwood	FAC
Rhus typhina	Staghorn Sumac	UPL
Rubus occidentalis	Black Raspberry	---
Salix nigra	Black Willow	OBL
Solidago sp.	Goldenrod	UPL/FACU
Verbascum thapsus	Great Mullein	FACU
Vitis aestivalis	Summer Grape	FACU
Xanthium strumarium	Rough Cockleburr	FAC

** = Invasive; FACU = Facultative Upland, UPL = Upland, FACW = Facultative Wet, FAC = Facultative, UPL = Upland, OBL = Obligate/wetland*

MP 24 (Bellevue), IA

Field Work Date: January 24, 2021

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial Stream	50-60 feet wide	Spruce Creek. Flowing east to west, towards Mississippi River; fed by two tributaries that are outside the project limits

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Northern Long-eared Bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, roosting habitat present in forested areas along edges of railroad ROW, on Spruce Creek bridge, and in multiple culverts along study area. Foraging habitat is present along forested edges of railroad ROW, adjacent roads, and Spruce Creek riparian corridor.
Higgens Eye Pearlymussel (*Lampsilis higginsii*)	Federally Endangered	No, there are no large rivers with deep water and moderate current within the study area.
Sheepnose Mussel *(Plethobasus cyphyus)*	Federally Endangered	No, there are no large rivers or streams present within the study area.
Iowa Pleistocene Snail (*Discus macclintocki*)	Federally Endangered	No, there are no algific talus slopes within the study area.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern Prairie Fringed Orchid (*Platanthera leucophaea*)	Federally Threatened	No, there are no mesic prairies within the study area.
Northern Wild Monkshood (*Aconitum noveboracense*)	Federally Threatened	No, there are no algific talus slopes or partially shaded cliffs within the study area.
Prairie Bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, there are no prairies within the study area.
Western Prairie Fringed Orchid (*Platanthera praeclara*)	Federally Threatened	No, there are no prairies within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
6' x 7' Concrete Box Culvert	None	None	Suitable summer roosting habitat in crevices and rough surfaces	
30-inch RCP	None	None	Low roosting potential due to size	Snow covered
30-inch RCP	None	None	Low roosting potential due to size	Snow covered
Concrete Railroad Bridge	None	None	Suitable summer roosting habitat in crevices, expansion joints, and rough surfaces	Several bird nests

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- General Land Use/Habitat:
  - Residential – low density residential developments extending along most of the eastern side of the study area between CP line and Mississippi River
  - Agricultural – Agricultural fields extending along most of the western side of the study area between CP line and 395th Street
  - Spruce Creek Park – located in the southeastern portion of the study area along Spruce Creek between CP line and Mississippi River
  - Bottomland Forest – two small portions of bottomland forest. One is located just north of Spruce Creek Park and the other at the northern end of the study area. Both provide roosting and foraging habitat for federally protected bats
  - Railroad ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Acer negundo	Boxelder	FAC
Acer saccharinum	Silver maple	FACW
Daucus carota	Queen Ann's lace	UPL
Dipsacus fullonum	Fuller's teasel	FACU
Fraxinus americana	White ash	FACU
Juniperus virginiana	Eastern redcedar	FACU
Oxypolis rigidior	Stiff cowbane	OBL
Populus grandidentata	Bigtooth aspen	UPL
Quercus palustris	Pin oak	FACW
Quercus rubra	Northern red oak	FACU
Rubus armeniacus	Himalayan blackberry	UPL
Solidago canadensis	Canada goldenrod	FACU

** = Invasive; FACU = Facultative Upland, UPL = Upland, FACW = Facultative Wet, FAC = Facultative, UPL = Upland, OBL = Obligate/wetland*

Deer Creek, IA

Field Work Date: 1/25/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial Stream	6 feet	42" CMP
Perennial Stream	3 feet	5 ft x 3 ft concrete box culvert
Perennial Stream	10 feet	Concrete bridge
Wetland (Forested)	N/A	
Perennial Stream	30 feet	Concrete bridge
Wetland (Forested)	N/A	

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, suitable summer roosting habitat is present throughout the study area. Multiple snags with small cavities were present along the railroad edge and directly adjacent to the study area. Two bridges and one concrete box culvert with suitable cracks and crevices for roosting bats were also present. The railroad ROW and streams not only act as flight corridors, but along with the forested wetlands on-site, provide foraging habitat for bats.
Eastern massasauga (*Sistrurus catenatus*)	Federally Threatened	No, side of impact contained no suitable wet prairies or low areas.
Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Federally Endangered	No, stream crossings in the study area were frozen over at the time of the survey but appeared to be too small (<30' wide).
Iowa Pleistocene snail (*Discus macclintocki*)	Federally Endangered	No, no talus slopes present within the study area.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, no prairies present.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, no prairies present.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
42" CMP	0	0	No	No suitable cracks, crevices, or surfaces for roosting bats. Appears to be flooded too regularly.
Concrete box culvert (5' x 3')	0	0	Yes	Interior of culvert not surveyed for bats due to unsafe conditions. Contains suitable cracks and crevices for roosting bats.
Concrete and steel bridge	0	0	Yes	Bridge not surveyed for bats from underneath due to unsafe conditions.
Concrete and steel bridge	0	0	Yes	Bridge not surveyed for bats from underneath due to unsafe conditions.

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Upland Mixed Hardwood – This habitat type was present on the western side of the track, typically on relatively steep slopes. Characterized by hardwood overstory and scattered herbaceous species.
- Bottomland Hardwood – This habitat type was present on the eastern side of the rail towards the south of the site's boundary, sloping down to the Mississippi River. Majority of habitat type covered by a forested wetland.
- Rail/Transportation ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.
- Mississippi River – The Mississippi River dominates the eastern portion of the existing ROW, though is not in the area of the proposed construction.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Agastache nepetoides	Yellow Giant-Hyssop	FACU
Alopecurus sp. or *Setaria* sp.	Foxtail	---
Amorpha canescens	Lead Plant	---

Camanche, IA

Field Work Date: 1/25/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	**Width (stream)**	**Other Notes**
Perennial Stream	60 feet	Mill Creek, blue line stream flowing to Mississippi River, steel rail bridge.
Perennial Stream	10 feet	Drains from wastewater treatment area to pond. May be jurisdictional. 36" RCP leads out of study area to pond.

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	**Federal/State Protected**	**Suitable Habitat Present? If yes, please describe**
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	No, the study area is characterized by industrial land use and disturbed ROW. There are no suitable snags or live trees large enough for roosting bats. Though there are some bridges and culverts present, they provide poor quality roosting habitat with few to no cracks or crevices suitable for resting bats.
Eastern massasauga (*Sistrurus catenatus*)	Federally Threatened	No, the study area contained no suitable wet prairies or low areas.
Higgens eye (pearlymussel) (*Lampsilis higginsii*)	Federally Endangered	No, Mill Creek appeared to have a lentic flow regime, whereas the Higgens eye mussel prefers moderately flowing water. Mill Creek was covered in patches of ice at the time of the survey. The other stream was fragmented and too small (<10' wide) to support the Higgens eye mussel.
Iowa Pleistocene snail (*Discus macclintocki*)	Federally Endangered	No, no talus slopes present within the study area.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, no prairies present.
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, no prairies present.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Steel Rail Bridge	0	0	No	Not fully surveyed for bats due to unsafe conditions underneath the bridge.

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Rail/Transportation ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.
- Industrial – Industrial complexes were present directly adjacent to the site, though only their paved and gravel parking lots were within the study area.
- Disturbed Scrub/Shrub – Early-successional habitats surrounding the perennial stream draining from the water treatment plant. Still maintained, but not as frequently as the rail/transportation ROW.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Acer sp.	Maple	---
Alopecurus sp. or *Setaria* sp.	Foxtail	---
Amorpha canescens	Lead Plant	---
Asclepias syriaca	Common Milkweed	FACU

Letts, IA

Field Work Date: 1/25/2022

Waters

Field Name	Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Railside Ditch (Object IDs: 822-829)	Ephemeral ditch running parallel to track for the length of the project	2-4 feet	Two culverts under railroad equipment – one 36" CMP, one 36" corrugated plastic pipe

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana Bat (*Myotis sodalis*)	Federally Endangered	Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Marginal roosting habitat present in cracks and crevices on US 61 NB and SB Bridges over CP rail line. Foraging habitat is present along railroad corridor and forested edges of adjacent agricultural field.
Northern Long-eared Bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Marginal roosting habitat present in cracks and crevices on US 61 NB and SB Bridges over CP rail line. Foraging habitat is present along railroad corridor and forested edges of adjacent agricultural field.
Higgens Eye Pearlymussel (*Lampsilis higginsii*)	Federally Endangered	No, there are no large rivers with deep water and moderate current within the study area.
Sheepnose Mussel (*Plethobasus cyphyus*)	Federally Endangered	No, there are no large rivers or streams present within the study area.
Spectaclecase Mussel (*Cumberlandia monodonta*)	Federally Endangered	No, there are no large rivers present within the study area.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern Prairie Fringed Orchid (*Platanthera leucophaea*)	Federally Threatened	No, there are no mesic prairies within the study area.
Prairie Bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, there are no prairies within the study area.
Western Prairie Fringed Orchid (*Platanthera praeclara*)	Federally Threatened	No, there are no prairies within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Concrete Bridge (US 61 Southbound)		None	Yes, in cracks, crevices, and expansion joints	
Concrete Bridge (US 61 Northbound)		None	Yes, in cracks, crevices, and expansion joints	
36" Corrugated Plastic Pipe	None	None	No	Carrying rail side ditch under railroad equipment
36" CMP	None	None	No	Carrying rail side ditch under railroad equipment
24" CMP	None	None	No	Drainage from adjacent bridge abutment

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- General Land Use/Habitat:
  - Railroad ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren. The railroad sits lower than the surrounding area and has wet ditches running along the sides. The northern ditch runs the full length of the study area and has multiple culverts. The southern ditch is intermittent and appears to have wet areas and dry areas.
  - Agricultural – entire length of project is surrounded by agricultural fields
  - Forested buffer zone – 80-120-foot-wide narrow strip of forest separating CP line and adjacent agricultural fields

Representative Plant Species List

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial Stream	3 feet	42" CMP
Ephemeral Channel	3 feet	48" CMP
Perennial Stream	30 feet	Concrete arch culvert, blue line stream, South Fork Long Creek

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, suitable summer roosting habitat is present, but only within the various structures within the study area as well as within the mixed hardwood forest on the eastern end of the project. The railroad ROW and streams act as foraging or flight corridors.
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, suitable summer roosting habitat is present, but only within the various structures within the study area as well as within the mixed hardwood forest on the eastern end of the project. The railroad ROW and streams act as foraging or flight corridors.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, no prairies present.
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, no prairies present.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Concrete arch culvert	0	0	Yes	Structure not surveyed completely for bats due to unsafe conditions within the culvert.
42” CMP	0	0	No	Culvert looks too short to support bats. Not fully surveyed for bats due to unsafe conditions.
48” CMP	0	0	No	Culvert looks too short to support bats. Not fully surveyed for bats due to unsafe conditions.
Concrete/Stone arch culvert	0	0	Yes	Not fully surveyed for bats due to unsafe conditions.
Concrete arch culvert	0	0	Yes	Not fully surveyed for bats due to unsafe conditions.

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Agriculture – Agricultural fields with corn crops dominated the majority of the area within and directly adjacent to the study area for this site.
- Rail/Transportation ROW - heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.
- Scrub Shrub – Portions of scrub shrub habitat directly abut the rail ROW with larger sections on the eastern end of the project.
- Mixed Hardwood Forest – The mixed hardwood habitat is present on the eastern end of the project, especially in the riparian zone surrounding South Fork Long Creek. Though dominated by overstory trees, this forest was more cluttered with understory shrubs and saplings than other sites.

Field Work Date: 1/26/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Ephemeral channel – railside ditch	4 feet	Railside ditch flowing east
Ephemeral channel – agricultural drainage	3 feet	Draining adjacent agricultural field towards rail side ditch. Flowing south
Ephemeral channel – erosional ditch	4 feet	Draining adjacent forested area; flowing south
Ephemeral channel – railside ditch	4 feet	Railside ditch flowing northeast towards Stream 1
Wetland (Shrub-scrub). Riparian wetland surrounding Stream 1	N/A	Extends north outside of study area. PSS within study area, PFO to the north
Perennial Stream	4-6 feet	Flowing south through 5'x6' concrete box culvert. Draining adjacent wetland
Ephemeral channel – railside ditch	3 feet	Flowing southwest. Drains into wetland
Ephemeral channel – agricultural drainage	2 feet	Drainage for adjacent agricultural field. Flowing south
Ephemeral channel – railside ditch	2 feet	Flowing southwest along railway

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat(*Myotis sodalis*)	Federally Endangered	Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Marginal roosting habitat present in cracks and crevices within 5'x6'

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
		concrete box culvert. Foraging habitat present along railroad study area and forested edges of adjacent agricultural fields.
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, roosting habitat present in edges of forested areas bordering railroad ROW. Marginal roosting habitat present in cracks and crevices within 4'x6' concrete box culvert. Foraging habitat present along railroad study area and forested edges of adjacent agricultural fields.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, there are no mesic prairies within the study area.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, there are no prairies within the study area.
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, there are no prairies within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
5'x6' Concrete Box Culvert	None	None	Marginal roosting habitat in cracks and crevices	
30" RCP	None	None	No – partially buried and snow covered	

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- General Land Use/Habitat:
  - Railroad ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren
  - Agricultural – northern side of study area bordered by agricultural fields and an oil wholesaler – Buckeye Terminal
  - Bottomland Forest – two portions of riparian bottomland forest bordering drainages at the western end of the study area and in the center
  - Highway 34 ROW – maintained ROW corridor of adjacent roadway borders study area along the entire study area on the southern side

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, marginally suitable summer roosting habitat is scattered within study area. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, marginally suitable summer roosting habitat is scattered within study area. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Prairie bush-clover (*Lespedeza leptostachya*)	Federally Threatened	No, no prairies present.
Western prairie fringed orchid (*Platanthera praeclara*)	Federally Threatened	No, no prairies present.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes

Wooden rail bridge	0	0	Yes	Low quality roosting habitat

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Scrub Shrub – Scrub shrub habitat was most prevalent on the northern side of the rail line, directly abutting crop fields and livestock pastures up slope.
- Rail/Transportation ROW - heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren.
- Mixed Hardwood Forest – Most prevalent on the northeastern side of the site, this habitat was characterized by overstory trees with a cluttered understory of shrubs and saplings.

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial stream	8-10 feet wide	Flowing west to east under CP rail line
Ephemeral channel – rail side ditch	2-4 feet wide	Flowing south
Ephemeral channel – rail side ditch	2 feet	Flowing north

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray Bat (*Myotis grisescens*)	Federally Endangered	No, no caves are within the study area. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat is present.
Indiana Bat (*Myotis sodalis*)	Federally Endangered	Yes, marginal roosting habitat is present in wood/metal bridge. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat.
Northern Long-eared Bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, marginal roosting habitat is present in wood/metal bridge. The study area is heavily maintained and contains no forested areas. Mostly open edges of ROW and adjacent agricultural areas. No suitable foraging habitat.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Mead's Milkweed (*Asclepias meadii*)	Federally Threatened	No, no mesic tallgrass prairies present within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Wood/Metal Bridge	None	None	Marginal summer roosting habitat	Wooden bridge structure on east side

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- General Land Use/Habitat:
  - Railroad ROW – heavily maintained railroad corridor. Use of herbicides, mechanical clearing, and placement of ballast leaves most of this study area barren
  - Agricultural – eastern side of study area bordered by agricultural fields. Little to no woody buffer between CP line and agricultural fields
  - Highway 139 ROW – maintained ROW corridor of adjacent roadway borders study area along the entire study area on the western side. Little to no woody vegetation

Representative Plant Species List

Laredo, MO

Field Work Date: 1/28/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Intermittent Stream	3 feet	Small iron pipe culvert
Wetland (Forested)	N/A	
Perennial Stream	4 feet	48” CIP

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray Bat (*Myotis grisescens*)	Federally Endangered	No, no caves were identified within or near the study area.
Indiana Bat (*Myotis sodalis*)	Federally Endangered	Yes, marginally suitable summer roosting habitat is scattered within the study area. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only approximately 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.
Northern Long-eared Bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, marginally suitable summer roosting habitat is scattered within the study area. Though most of the habitat adjacent to the railway had scattered trees in scrub/shrub habitat or was forested, these habitats are only approximately 50 feet wide and directly abut cropland and livestock pastures. Additionally, all of the pipes carrying the rail line over streams were too small to provide suitable roosting habitat, though the one wooden rail bridge provided low-quality roosting habitat. The railroad ROW and streams act as flight and foraging corridors.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Eastern prairie fringed orchid (*Platanthera leucophaea*)	Federally Threatened	No, no mesic prairies or wet sedge meadows present.
Bald eagle (*Haliaeetus leucocephalus*)	None (BGEPA)	No, despite the occurrence record within one mile of the site, no suitable roost trees were identified within the study area. No typical foraging habitat such as large rivers, lakes, or marshes were present in the study area, though the Grand River is located approximately 0.25 miles to the east of the study area. No nests were identified at the time of the field survey.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
48" CIP	0	0	No	The culvert is too small and too frequently inundated for roosting bats. Also, no suitable cracks or crevices are present.

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Agricultural – Small parcel of agricultural land present on the southernmost portion of the study area.
- Rail/Transportation ROW - Areas on and around the rail line. These sections were clear and dominated by herbaceous and shrubby species. ROW maintained with mechanical clearing, herbicides, and ballast placement.
- Mixed Hardwood Forest – Habitat was characterized by overstory trees with a cluttered understory of shrubs, saplings, and herbaceous species. On the side of the proposed re-alignment, this mixed hardwood habitat was only approximately 50 feet wide, directly abutting crop and pastureland. On the eastern side of the rail opposite of the proposed realignment, the hardwood forest was wider, with the largest portion along the riparian zone of a tributary stream to the Grand River.
- Scrub Shrub - Scrub shrub habitat was most prevalent on the western side of the rail line, directly abutting crop fields and livestock pastures.

Wetland (Forested)	N/A	Wet forested bowl with standing water
Intermittent stream	3 ft	Ditch from wetland 2022-103 with standing water
Perennial stream	8 ft	Stream parallels tracks before joining 2022-OHW-103
Perennial stream	40 ft	OHW for perennial stream flowing through culvert under tracks
Intermittent stream	4 ft	Ditched stream emerging from wetland 2022-105
Wetland (Emergent)	N/A	Wetland between access road and toe of slope.

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves present within the study area.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, bridges and culvert provide suitable roosting habitat.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, bridges and culvert provide suitable roosting habitat.
Tri-colored bat (*Perimyotis subflavus*)	State (S2)	Yes, bridges and culvert provide suitable roosting habitat.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Stormwater drain	No	No	No	
Bridge	No	No	Yes	
Culvert/ Bridge	No	No	Yes	
Rail over pass	No	No	Yes	

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Part 1 (northern) surrounding ROW land use is industrial.
- Part 2 (southern) surrounding ROW land use is a mix of forest and industrial
- Suitable bat habitat restricted to structures
- Most of the ROW is ballast/gravel fill, but multiple limestone bedrock outcrops are present

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Ailanthus altissima	Tree-of-heaven	FACU*
Asclepias syriaca	Common milkweed	FACU
Platanus occidentalis	American sycamore	FACW
Cirsium arvense	Canada thistle	FACU*
Erechtites hieraciifolius	American burnweed	---
Erigeron canadensis	Horseweed	FACU
Lemna minor	Duckweed	OBL
Persicaria sp.	Smartweed	OBL
Populus deltoides	Cottonwood	FAC
Populus grandidentata	Bigtooth aspen	FACU
Setaria faberi	Chinese foxtail	FACU*
Setaria pumila	Yellow foxtail	FAC*
Sorghum halepense	Johnsongrass	FACU*
Ulmus rubra	Slippery Elm	FAC
Verbascum thapsus	Common mullein	UPL

** = Invasive; FACU = Facultative Upland, UPL = Upland, FACW = Facultative Wet, FAC = Facultative, UPL = Upland, OBL = Obligate/wetland*

Grandview/IFG, MO

Field Work Date: **1/11/2022**

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Emergent)	N/A	Small, wet depression between tracks
Wetland (Emergent)	N/A	Small cattail patch in swale
Wetland (Emergent)	N/A	Bowl fed by culvert outflow

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves present within the study area.
Mead's milkweed (*Asclepias meadii*)	Federally Threatened	No, no mesic tallgrass prairies present within the study area.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, bridges provide suitable roosting habitat.
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, bridges provide suitable roosting habitat.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Control Point	No	No	No	
Culvert (1)	No	No	No	
Unknown	No	No	No	Old infrastructure leftover from airfield
Culvert (2)	No	No	No	36 inches
Culvert (3)	No	No	No	
Culvert (4)	No	No	No	
Culvert (5)	No	No	No	
Bridge (1)	No	No	Yes	
Bridge (2)	No	No	Yes	

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Two-part study area, in the northern study area grading and fill already completed.

- Second section of site (southern) is near NSA facility and located on old flight facility land. Some leftover infrastructure is located within ROW from flight facility. Pasture on the west (non-survey side) of ROW.
- Not suitable habitat for Mead's milkweed (*Asclepias meadii*) because soil is disturbed and/or introduced and vegetation community is primarily non-native. *Apocynum* species observed, which provide nectar but not host habitat for Monarch butterflies.
- Suitable bat habitat restricted to structures; forested habitat not present.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Andropogon gerardi	Big bluestem	FAC
Bromus spp.	Brome spp.	---
Cichorium intybus	Chicory	FACU
Dipsacus laciniatus	Cut-leaf teasel	UPL
Gleditsia triacanthos	Honey locust	FACU
Helianthus tuberosus	Tuberous sunflower	FACU
Juniperus virginiana	Eastern redcedar	FACU
Lespedeza cuneata	Chinese bushclover	UPL*
Lonicera spp.	Honeysuckle spp.	---*
Panicum virgatum	Switchgrass	FAC
Platanus occidentalis	American sycamore	FACW
Schizachyrium scoparium	Little bluestem	FACU
Setaria pumila	Yellow foxtail	FAC*

** = Invasive; FACU = Facultative Upland, UPL = Upland, FACW = Facultative Wet, FAC = Facultative, UPL = Upland*

Asbury, MO

Field Work Date**: 1/11/2022**

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Emergent)	N/A	Wide swale between road and tracks with standing water
Ephemeral channel	1.5 ft	Natural ephemeral channel associated with culvert under tracks
Wetland (Emergent)	N/A	Cattail patch in swale
Wetland (Emergent)	N/A	Wide swale between road and tracks with culvert inlet and outlet to wetland complex across road
Perennial stream	15 ft	Culvert connects wetland 2022-112 to wetland/pond complex across road

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves present within study area.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	No, no forested area or suitable roosting structures present within study area.
Indiana bat (*Myotis sodalis*)	Federally Endangered	No, no forested area or suitable roosting structures present within study area.
Neosho madtom (*Noturus placidus*)	Federally Threatened	No, no rivers present within study area.
Neosho mucket (*Lampsilis rafinesqueana*)	Federally Endangered	No, no suitable streams with shallow riffles, gravel substrate or backwater areas are within study area
Rabbitsfoot (*Quadrula cylindrica cylindrica*)	Federally Threatened	No, no suitable streams with gravel substrate are within study area.
Monarch Butterfly *(Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Northern Harrier (*Circus hudsonius*)	State (S2)	No, several individuals of this species were seen driving towards the site but none seen along the ROW. ROW does not present suitable habitat for this species, but surrounding fields do.
Prairie Mole Cricket (*Gryllotalpa major*)	State (S3)	Yes, grassland/herbaceous/savannah habitat present.

Northern Crawfish Frog (*Lithobates areolatus circulosus*)	State (S3)	Yes, wetland/upland mosaic landscape setting.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
None				

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Northern Harriers were noted on way to site location, none seen when field work was conducted. ROW did not contain ideal habitat for Northern Harrier, abuts rail corridor and major roadway on the east side. The ROW also contains larger woody species instead of entirely non-woody grassland areas which Northern Harriers prefer.
- ROW is disturbed soil and/or fill. Outside ROW is grazed prairie.
- Suitable bat habitat is not present.

Representative Plant Species List		
Scientific Name	**Common Name**	**Status**
Campsis radicans	American trumpet vine	FACU
Juncus effusus	Lamp rush	OBL
Juniperus virginiana	Eastern red cedar	FACU
Penthorum sedoides	Ditch stonecrop	OBL
Rhus glabra	Smooth sumac	---
Schizachyrium scoparium	Little bluestem	FACU
Setaria pumila	Yellow foxtail	FACU*
Sorghum halepense	Johnsongrass	FACU
Typha latifolia	Broad-leaved cattail	OBL
Verbascum thapsus	Common mullein	UPL

** = Invasive; FACU = Facultative Upland, UPL = Upland, UPL = Upland, OBL = Obligate/wetland*

MP 186, MO

Field Work Date**: 1/12/2022**

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial Stream	2 ft	Gravel
Wetland (Emergent)	N/A	Historic oxbow/river terrace at toe of slope
Wetland (Emergent)	N/A	Flat topography at toe of slope collects surface runoff and drains through culvert
Wetland (Emergent)	N/A	Wet swale at toe of slope
Perennial Stream	4 ft	Perennial stream, sand and cobble, drains to culvert
Wetland (Emergent)	N/A	Wet swale at toe of slope
Wetland (Emergent)	N/A	Wet swale at toe of slope

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves are present in the study area.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, roosting habitat present in edges of forested areas bordering railroad ROW.
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, roosting habitat present in edges of forested areas bordering railroad ROW.
Neosho Mucket (*Lampsilis rafinesqueana*)	Federally Endangered	No, perennial stream is present within the study area and contains gravel substrate; however, swift currents are not present.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Ephemeral channel	2.5 ft	Natural ephemeral drainage, connects to culvert
Ephemeral channel	2.5 ft	Flows from culvert to culvert. Gravel substrate
Wetland (Emergent)	N/A	Wet swale between road and tracks
Wetland (Forested)	N/A	Low bowl between road and tracks
Wetland (Forested)	N/A	Wet swale

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves are present within the study area.
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, potential suitable summer roosting habitat within forested areas.
Northern long-eared bat (*Myotis septentrionalis*)	Federally Threatened (Proposed Endangered)	Yes, potential suitable summer roosting habitat within forested areas.
Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Federally Endangered	No, no caves are present within the study area.
Eastern black rail (*Laterallus jamaicensis spp. Jamaicensis*)	Federally Threatened	No, no saltmarshes or brackish marshes with dense cover are present within the study area.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, no beaches or suitable nesting habitat are present within the study area.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, no elevated tundra areas are present within the study area.
Ozark cavefish (*Amblyopsis rosae*)	Federally Threatened	No, no caves are present within the study area.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Benton County cave crayfish (*Cambarus aculabrum*)	Federally Endangered	No, no caves are present within the study area.
Missouri bladderpod (*Physaria filiformis*)	Federally Threatened	No, no limestone glades are present within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Culvert (1)	No	No	No	
Culvert (2)	No	No	No	
Culvert (3)	No	No	No	
Culvert (4)	No	No	No	
Culvert (5)	No	No	No	

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- ROW was northeast of rail trail and southwest of Highway 59.
- Large section of forested area adjacent to ROW in northern portion.
- Wetlands generally small and no open water habitat.
- No naturally tree-less areas present within ROW.
- No bedrock outcrops or caves observed.
- Soils within ROW very sandy.

Representative Plant Species List

Ephemeral channel	2.5 ft	Natural ephemeral channels flow into ROW from the northwest
Wetland (Emergent)	N/A	Depression on northwest side of track
Wetland (Forested)	N/A	Wet swale associated with ditch
Wetland (Emergent)	N/A	Depression/bowl where ditch hydrology collects

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves are present within the study area.
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, Potential suitable summer roosting habitat within forested areas.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, Potential suitable summer roosting habitat within forested areas.
Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Federally Endangered	No, no caves are present within the study area.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, wetlands are within the study area; however, given the high level of disturbance along the corridor the study area does not provide suitable habitat. There is no breeding habitat either.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, there is no breeding or non-breeding habitat within the study area.
Neosho mucket (*Lampsilis rafinesqueana)*	Federally Endangered	No, there are no perennial streams located within the study area.
Rabbitsfoot mussel (*Quadrula cylindrica cylindrica)*	Federally Threatened	No, there are no perennial streams located within the study area.

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Bird nest	Yes, woven, open top, organic matter	No	No	Bird nest in shrub, 6 ft off the ground
Culvert (1)	No	No	No	
Bird nest	Yes, older nest	No	No	3 ft off the ground
Unknown	No	No	No	Likely electrical structure
Bird nest	Yes	No	No	Found in boxelder, 7 ft off the ground
Culvert (2)	No	No	No	
Culvert (3)	No	No	No	Stone culvert
Bird nest	Yes	No	No	Found in multiflora rose
Culvert (4)	No	No	No	

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Surrounding land use in the north section of ROW is dominated by cow/horse pasture.
- There is limestone bedrock just north of the ROW. No caves were observed within the study area.
- Open upland forest slopes common adjacent to ROW.
- The southern portion of ROW is a very flat, sandy terrace.

Perennial Stream	15 ft	Perennial stream with gravel, algae and mussels present
Wetland (Forested)	N/A	
Perennial Stream	2.5 ft	Silt, gravel, cobble bottom, leaf litter in stream, algae on rocks

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	**Federal/State Protected**	**Suitable Habitat Present? If yes, please describe**
Gray bat (*Myotis grisescens*)	Federally Endangered	No, no caves are present within the study area.
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, potential suitable summer roosting habitat within forested areas.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, potential suitable summer roosting habitat within forested areas.
Ozark big-eared bat (*Corynorhinus (=Plecotus) townsendii ingens)*	Federally Endangered	Yes, no caves are present within the study; however, a cave is located 1.5 miles that is known to be occupied by the Ozark big-eared bat. Therefore, foraging habitat is present within forested areas.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, there is a small creek within the study area; however, given the high level of disturbance along the corridor, the creek would not be suitable nesting habitat.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, there is no breeding or non-breeding habitat within the study area.
American burying beetle (*Nicrophorus americanus*)	Federally Threatened	No, oak and hickory forests are present, and a farm animal dump is present with substantial carrion within the study area; however, the American burying beetle prefers large intact areas with little to no human disturbance.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
		areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Bald eagle (*Haliaeetus leucocephalus)*	BGEPA	No, no suitable nesting trees observed within the study area.

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Emergent)	N/A	Wetland seep located at base of railbed; Disturbed and composed of early successional species.
Perennial	12 ft	Perennial stream; flowing west through culvert under railbed; Channel is excavated adjacent to culvert.
Intermittent stream/Ephemeral channel	3 ft	Tributary to perennial stream; Lower channel intermittent stream; Upper channel is a wetland swale with no bed/bank structure; Channel formed in depression adjacent and parallel to railbed.
Wetland (Emergent)	N/A	Wetland seep located at base of railbed; Recently disturbed and composed of early successional species.
Wetland (Shrub-scrub/Emergent)	N/A	Stream side Shrub-scrub/Emergent wetland located within the depression adjacent to the railbed.
Intermittent stream	3 ft	Channel formed in depression adjacent and parallel to railbed; Upper end connects to a roadside ditch/swale that is obviously upland excavated for roadside drainage.
Wetland (Emergent)	N/A	Wetland seep located in depression between roadway, railbed, and adjacent cattle pasture; connects into roadway drainage system.
Wetland (Shrub-scrub)	N/A	Wetland seep located in depression between railbed and adjacent cattle pasture; connects into stream.

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, bridge provides suitable roosting habitat.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, bridge provides suitable roosting habitat.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, there is a stream and wetlands within the study area; however, given the high level of

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
		disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, there is no breeding or non-breeding habitat within the study area.
Scaleshell mussel (*Leptodea leptodon*)	Federally Endangered	No, the medium-sized perennial stream within the study area does not contain good water quality and has been excavated near the culvert.
American burying beetle (*Nicrophorus americanus*)	Federally Threatened	No, grasslands and open understory oak hickory forests are not present within the study area. The study area is disturbed and has been cleared.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Bridge	0	0	Yes	25 ft wide X 20 ft tall; Deep water prevented close examination, results from view with binoculars
Culvert	0	0	Poor	10 ft corrugated pipe; poor roosting habitat

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- The study area consists of disturbed, previously cleared habitat between the railbed and cattle pasture. All habitats whether upland or wetland consisted of early successional herbaceous vegetation with sparse shrubs and small saplings. One natural stream crosses the study area, and several streams formed in the depression between the streambed and adjacent cattle pasture that is a higher elevation.
- Generally, the land use is cattle pasture, with some residential. The study area/railroad ROW is fenced from the pasture.
- USGS karst map indicates karst geology is likely present along the Spiro segment.

Heavener, OK

Field Work Date: 1/13/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Intermittent stream	3 ft	Small disturbed and dredged stream channel; From culvert through railbed; Flowing southeast.
Perennial stream	10-15 ft	Modified stream; flowing east from culvert through railbed.
Intermittent stream	5 ft	Modified stream; incorporated into the roadway drainage system.
Perennial stream	8 ft	Flowing west from culvert under railbed; Flows into Stream (Oil Branch).
Perennial stream	8-12 ft	Oil Branch; Altered stream (excavated and straightened to parallel railroad) and northern section has constructed stone walls; North end has two channel braids as it flows under the bridge.
Wetland (Forested)	N/A	Bottomland hardwood swamp; Beaver impoundment in center due to dam blocking culvert.
Wetland (Forested)	N/A	Bottomland hardwood swamp remnant along base of railroad bed.
Wetland (Shrub-scrub/Emergent)	N/A	Seep in depression at base of railbed; Disturbed and composed of early successional species.
Wetland (Emergent)	N/A	Seep in depression at base of railbed; Disturbed, cleared, and occasionally maintained.
Wetland (Emergent)	N/A	Seep in depression at base of railbed; Disturbed, cleared, and occasionally maintained.
Wetland (Shrub-scrub)	N/A	Stream side wetland; Seep in depression at base of railbed; incorporated into roadway drainage system.
Wetland (Forested/Shrub-scrub)	N/A	Seep in depression at base of railbed; Disturbed; Connected to nearby waters by upland cut ditches.

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Indiana bat (*Myotis sodalis*)	Federally Endangered	Yes, bridges and culverts provide suitable roosting habitat.
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, bridges and culverts provide suitable roosting habitat.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, there are streams and wetlands within the study area; however, given the high level of disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, there is no breeding or non-breeding habitat within the study area.
Scaleshell mussel (*Leptodea leptodon*)	Federally Endangered	No, the perennial streams within the study area have been heavily disturbed and altered due to excavation and straightening.
American burying beetle (*Nicrophorus americanus*)	Federally Threatened	No, grasslands and open understory oak hickory forests are not present within the study area. The study area is disturbed and has been cleared.
Monarch Butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Bridge	0	0	Yes	Poteau River; Large bridge with good roosting habitat
Culvert	0	0	Yes	Wetland; Roosting habitat created by beaver dam
Culvert	0	0	No	Stream; Culvert is too small
Culvert	0	0	No	Stream; Culvert is too small
Culvert	0	0	Yes	Stream; Abundant crevices with potential for bats/birds

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Bridge	0	0	Yes	Stream; Smooth surfaces on ceiling and walls, poor bat habitat

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- South end of segment began immediately north of the Poteau River, and most of the south portion is bottomland hardwoods or remnants of bottomland hardwoods, both upland and wetland. Cleared areas outside of the study area consisted of wet prairie. In the central portion, north of the bottomlands, the study area consisted of early successional forested wetlands and uplands and cleared areas associated with residential, industrial, and agricultural land uses. Wetland and water features are primarily disturbed seeps at the base of the railbed, which are in various stages of early successional development. This portion extended to Oil Creek. At Oil Creek, the study area is composed primarily of the creek itself, which covered the study area from the base of the railbed to the outside boundary. At its southern end, Oil Creek turned away from the railbed to the southeast.
- Land use consists of disturbed bottomland hardwoods, cattle pasture, residential, and light industrial.
- USGS karst map indicates that karst geology is likely present along the Heavener segment.

MP 377 - Mena, AR

Field Work Date: 1/12/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Perennial stream	7 ft	Culvert under railbed, approx. 10-12 ft wide; ditched and straightened stream in early successional forest
Intermittent stream	5 ft	From culvert under railbed; Altered stream channel, with vine overgrowth; Flows southeast
Wetland (Emergent)	N/A	Seep at base of railbed
Wetland (Shrub-scrub/Emergent)	N/A	Stream side wetland fringe
Intermittent stream	6 ft	Altered stream at edge of cattle pasture; From culvert through railbed; Deep pool east of culvert; Flows southeast
Intermittent stream	6 ft	Altered/straightened stream through cattle pasture; From culvert through railbed; Flows southeast into excavated cattle pond
Wetland (Shrub-scrub)	N/A	Seep in depression at base of railbed; Historically cleared composed of early successional species
Wetland (Shrub-scrub/Emergent)	N/A	Seep in depression at base of railbed; Historically cleared, composed of early successional species
Pond	N/A	Excavated pond in cattle pasture with little to no wetland fringe
Wetland (Shrub-scrub/Emergent)	N/A	Seep in depression at base of railbed; Historically cleared, composed of early successional species
Perennial stream	5 ft	Altered/straightened stream in cattle pasture
Wetland (Shrub-scrub/Emergent)	N/A	Seep in depression at base of railbed; Recently cleared, composed of early successional species
Wetland (Emergent)	N/A	Seep in depression at base of railbed; Recently cleared,

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
		composed of early successional species
Wetland (Shrub-scrub/Emergent)	N/A	Seep at base of railbed; some water input from culvert through railbed; Recently cleared
Wetland (Forested)	N/A	Stream associated wetland fringe in early successional forested wetland

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	Yes, culverts provide suitable roosting habitat.
Eastern black rail (*Laterallus jamaicensis* spp. *Jamaicensis*)	Federally Threatened	No, sedge meadows with dense cover are not present within the study area.
Piping plover (*Charadrius melodus*)	Federally Threatened	No, there are streams and wetlands within the study area; however, given the high level of disturbance along the corridor, these would not be suitable nesting habitats. There is no breeding habitat present within the study area.
Red knot (*Calidrus canutus rufa*)	Federally Threatened	No, there is no breeding or non-breeding habitat within the study area.
Red-cockaded woodpecker (*Picoides borealis*)	Federally Threatened	No, there are no longleaf pine forests within the study area.
Arkansas fatmucket (*Lampsilis powellii*)	Federally Threatened	No, the streams within the study area have been heavily altered due to excavation and straightening and do not provide suitable habitat.
Rabbitsfoot (*Quadrula cylindrica cylindrica*)	Federally Threatened	No, the streams within the study area have been heavily altered due to excavation and straightening and do not provide suitable habitat.
Monarch butterfly (*Danaus plexippu*s)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Ringed salamander (*Ambystoma annulatum*)	State (INV)	No, the study area was almost entirely cattle pasture with some upland scrub-shrub habitat on ridges with high disturbance.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Culvert	0	0	Yes	12ft wide, 10ft tall, Possible roosting site, some small crevices
Culvert	1/Swift or swallow	0	Yes	10ft wide, 15ft tall, no crevices, marginal bat roosting habitat

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Northern portion of the site is located on a hillslope in primarily early successional scrub and upland forest, with a few wetland seeps in the hillside. Moving south, the terrain dropped into bottomland areas separated by low ridges. Each valley had a stream with some wetland, both generally modified, cleared, or otherwise disturbed. Much of the southernmost portion of the ROW had been recently cleared, and forested fragments consisted primarily of early successional trees and shrubs. Seeps were present in recently cleared depressions at the base of the railbed, and recent disturbance may be responsible for development of wetland hydrology.
- Land use consists primarily of cattle pasture with some industrial use at the south end of the segment.

Mansfield, LA

Field Work Date: 1/11/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Forested)	N/A	Depressional wetland; Disturbed; dominated by invasive species
Wetland (Shrub-scrub)	N/A	Disturbed (historically cleared); early successional shrub species and young saplings; within utility/road ROW
Wetland (Emergent)	N/A	Depression between railbed and roadway; Disturbed (historically cleared) with early successional species; within utility/road ROW
Wetland (Emergent)	N/A	Depression at base of railbed between ballast and adjacent roadway; Disturbed (historically cleared) with early successional species; utility/road ROW
Wetland (Emergent)	N/A	Depression at base of railbed between ballast and adjacent roadway; Disturbed (historically cleared); utility/road ROW
Wetland (Shrub-scrub/Emergent)	N/A	Disturbed (historically cleared); within utility/road ROW; at ballast edge; drains to east under adjacent roadway

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Northern long-eared bat (*Myotis septentrionalis)*	Federally Threatened (Proposed Endangered)	No, there are no suitable forested areas and no suitable roosting structures.
Red-cockaded woodpecker (*Picoides borealis*)	Federally Threatened	No, there are no longleaf pine forests within the study area.
Monarch butterfly (*Danaus plexippu*s)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
Geocarpon (*Geocarpon minimum*)	Federally Threatened	No, saline prairies are not present within the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Culvert	0	0	No	Small culvert, ~18-24 inch, for road drainage

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- The study area is located between the railroad bed and a highway. A natural gas utility corridor runs through the center of the study area. The entire area had been historically cleared, and there were some areas of early successional forest that had been allowed to regenerate. The vast majority of the study area was cleared and occasionally to regularly maintained.
- Wetlands formed in depression between the elevated railroad and roadway.
- Land use included transportation corridors and utility ROWs.

Loring, LA

Field Work Date: 1/10/2022-1/11/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Forested)	N/A	Mature forest
Wetland (Forested)	N/A	Mature forest
Perennial stream	10-20 ft	Hurricane Creek; Flowing south through large culvert/bridge; culvert approximately 20 feet wide
Intermittent stream	5 ft	Tributary to Stream 2c; water in pools, but eastern portion does not exhibit bed and bank structure that would define it as a stream
Wetland (Forested)	N/A	Mature forest with signs of disturbance consisting of invasive exotics (typical edge effect)

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Red-cockaded woodpecker (*Picoides borealis*)	Federally Threatened	No, there are no longleaf pine forests within the study area.
Monarch butterfly (*Danaus plexippus*)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Bridge/culvert	0	0	Yes	Approx. 20 feet wide

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- Habitat consists primarily of mature forest. Some signs of disturbance (edge effect) were present including vine overgrowth and stands of invasive exotic species, particularly *Ligustrum sinense*. Large stream (Hurricane Creek) flowing from north to south through the right-of-way. Stream is deeply incised with virtually vertical banks, and stream structure appeared to have reduced the hydrology within the floodplain. Signs of spoil are apparent along the top of bank along the length of the stream. Spoil piles were eroded and appeared very old, with mature vegetation growing on top of them.

Singer, LA

Field Work Date: 1/10/2022

Waters

Type (wetland, perennial stream, intermittent stream, ephemeral channel, other—describe)	Width (stream)	Other Notes
Wetland (Forested/Emergent)	N/A	Wetland at base of fill for railroad bed
Perennial stream	8 ft	Flowing west; culvert under road to east and culvert through railbed
Wetland (Shrub-scrub/Emergent)	N/A	Depression wetland at base of railbed; sparse vegetation with stained leaves
Wetland (Shrub-scrub/Emergent)	N/A	Depression between road and railbed; saturated with pools of water; separated from Wet 2d by spoil with early successional shrub species.
Wetland (Shrub-scrub/Emergent)	N/A	Depression parallels railbed; similar quality and composition to Wet 2c
Wetland (Forested)	N/A	Small depression with ponded water, perpendicular to railbed
Intermittent stream	5 ft	Flowing west; culverts under road and through rail bed

Federal and State Protected Species with Potential to Occur in Study Area

Species Name	Federal/State Protected	Suitable Habitat Present? If yes, please describe
Red-cockaded woodpecker (*Picoides borealis*)	Federally Threatened	No, there are no longleaf pine forests within the study area.
Monarch butterfly (*Danaus plexippu*s)	Federal Candidate	No, though sunny right-of-way is present throughout the study area along the tracks, these areas are heavily maintained with herbicide or mechanical clearing, rending them unsuitable.
American chaffseed (*Schwalbea amwerican*a)	Federally Endangered	No, fire-maintained longleaf pine flatwoods and savannas are not present in the study area.

Structures

Structure Type	Bird Nests Observed? (#/Type)	Bats Observed? (#/Type)	Suitable Bat Roosting Habitat?	Other Notes
Box culvert	0	0	Yes	6-8 ft wide
Pipe culvert	0	0	No	3 ft pipe

Other Notes (tree/plant species identified on-site, general land use/habitat identified, etc.)

- The site consists of a small strip of disturbed habitat between the railroad bed and a two-lane highway. Apparent disturbances include clearing and fill/spoil. Wetlands consisted primarily of wet prairie with some saplings and shrubs. Small areas of longleaf and loblolly pine and early successional hardwoods were scattered through right-of-way.
- Land use consists of transportation corridors and utility ROWs.

O.4 Agency Consultation and Correspondence

O.4.1 USFWS Informal Consultation

SURFACE TRANSPORTATION BOARD
Washington, DC 20423

Office of Environmental Analysis

June 6, 2022

Melvin Tobin
Field Supervisor
USFWS Arkansas Ecological Field Office
110 South Amity Road
Suite 300
Conway, AR 72032
Melvin_Tobin@fws.gov

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Mr. Tobin:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

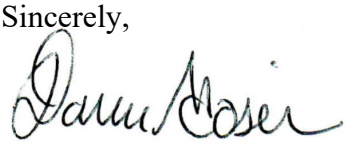
The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Arkansas, those planned capital improvements would include adding one new passing siding and extending one existing siding. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Arkansas are appended to this letter.

Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

In Arkansas, the planned capital improvements would include extending one existing siding and adding one new siding adjacent to the existing rail line, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Arkansas Natural Heritage Commission to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at both planned capital improvements in Arkansas. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Arkansas fatmucket (*Lampsilis powelli*), Eastern black rail (*Laterallus jamaicensis*), gray bat (*Myotis grisescens*), Missouri bladderpod (*Physaria filiformis*), monarch butterfly (*Danaus plexippus*), Ozark big-eared bat (*Corynorhinus townsendii ingens*), Ozark cavefish (*Amblyopsis rosae*), piping plover (*Charadrius melodus*), rabbitsfoot (*Quadrula cylindrica cylindrica*), red knot (*Calidris canutus*), and red-cockaded woodpecker (*Leuconotopicus borealis*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned capital improvement locations in Arkansas. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Arkansas

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	Gentry (Benton County) MP 377 (Polk County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Gentry (Benton County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. For further information or questions, please contact Joshua Wayland at Joshua.Wayland@stb.gov or 202-245-0330. For further information about the Proposed Acquisition, you may also visit the Board-sponsored project website at www.CP-KCSMergerEIS.com.

ATTACHMENT A: NORTHERN LONG-EARED BAT AND INDIANA BAT VOLUNTARY MITIGATION MEASURES

Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) (collectively, the Applicants) have voluntarily proposed the following measures to avoid impacts on northern long-eared bat and Indiana bat. If the Surface Transportation Board (Board) authorizes the Proposed Acquisition of KCS by CP, the Applicants, their employees, and their contractors would be required to strictly adhere to these measures during construction of planned capital improvements related to the Proposed Acquisition, as well as any additional mitigation measures recommended by the Board's Office of Environmental Analysis (OEA) and imposed by the Board in its final decision.

- The Applicants will not conduct construction-related tree removal for the planned capital improvements during the active season for the Indiana bat and the northern long-eared bat (April 1 to October 31).

- During the construction of the planned capital improvements, the Applicants will take steps to reduce the unnecessary removal of bat habitat outside of active bat season by limiting tree removal to only the areas necessary to safely construct and operate the new siding or second track, marking the limits of tree clearing through the use of flagging or fencing, and ensuring that construction contractors understand clearing limits and how they are marked in the field.

- Where practicable, the Applicants will conduct any culvert or bridge removal as part of the planned capital improvements outside of the roosting period of bat species, specific to each planned capital improvement location. Where practicable, if bridge or culvert removal is required during the bat roosting period where the individual planned capital improvement is located, the Applicants will consult with OEA and the local office of the U.S. Fish and Wildlife Service (USFWS) on appropriate methods to determine if bats are using the bridge or culvert as a roost.

- If construction of the planned capital improvements would require removal or alteration of bridges, culverts, or other structures that provide suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31), the Applicants will first conduct an inspection for the presence of or evidence of use by bats. The inspection will be completed by a qualified biologist. If the inspection finds bats or evidence of bats, then the Applicants will not commence work on the structure until coordinating with OEA and USFWS to determine appropriate follow-up or mitigative actions. The inspection must be completed during the same year that the work takes place.

- During construction of the planned capital improvements, the Applicants will direct any temporary lighting away from suitable habitat for the northern long-eared bat or the

Indiana bat during the active season for those species (April 1 to October 31). The Applicants will use downward-facing, full cut-off lens lights for any temporary lighting used during the construction of the planned capital improvements.

- If the planned capital improvements would involve installing any new, or replacing any existing, permanent lights, the Applicants will use downward-facing, full cut-off lens lights (with the same intensity or less for replacement lighting).

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Ms. Kenney:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Iowa and Illinois, those planned capital improvements would include adding five new passing sidings and extending four existing sidings. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species, if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Illinois and Iowa are appended to this letter.

Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

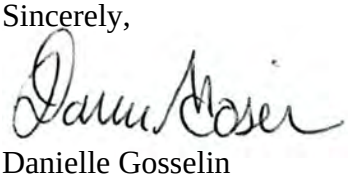
In Iowa, the planned capital improvements would include extending four existing sidings and adding four new sidings adjacent to the existing rail line, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

In Illinois, the single planned new siding would be located within the footprint of a second railroad track that used to extend adjacent to the mainline but has since been removed. Therefore, the planned new siding in Illinois would be located within a previously disturbed area and would not result in any new impacts on habitats, plants, or wildlife.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Iowa Department of Natural Resources and Illinois Department of Natural Resources to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at each of the eight planned capital improvements in Iowa. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Eastern massasauga (*Sistrurus catenatus*), eastern prairie fringed orchid (*Platanthera leucophaea*), Higgins eye pearlymussel (*Lampsilis higginsii*), Iowa pleistocene snail (*Discus macclintocki*), monarch butterfly (*Danaus plexippus*), northern wild monkshood (*Aconitum noveboracense*), prairie bush-clover (*Lespedeza leptostachya*), sheepnose mussel (*Plethobasus cyphyus*), spectaclecase (*Cumberlandia monodonta*), and western prairie fringed orchid (*Platanthera praeclara*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the

planned capital improvement locations in Iowa and Illinois. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Iowa

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	MP 71 (Clayton County) MP 24 (Jackson County) Deer Creek (Clinton County) Camanche (Clinton County) Letts (Louisa County) MP 255 (Washington County) Ottumwa (Wapello County) Moravia (Monroe County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Letts (Louisa County) MP 255 (Washington County) Ottumwa (Wapello County) Moravia (Monroe County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Ms. Herrington:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Missouri, those planned capital improvements would include adding two new passing sidings, extending three existing sidings, adding a double track, and adding a facility working track. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species, if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Missouri are appended to this letter.

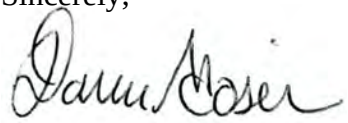
Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

In Missouri, the planned capital improvements would include adding two new passing sidings, extending three existing sidings, adding a double track, and adding a facility working track, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Missouri Department of Conservation to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at six of the seven planned capital improvements in Missouri. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

OEA identified a bald eagle nest within the existing ROW of the MP 431 (Dawn) capital improvement site in Livingston County. If activities for the planned capital improvement requires the removal of the nest tree, the Applicant would obtain an Eagle Nest Take Permit (50 C.F.R. 22.27) prior to removing the nest tree. The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Eastern prairie fringed orchid (*Platanthera leucophaea*), gray bat (*Myotis grisescens*), Mead's milkweed (*Asclepias meadii*), monarch butterfly (*Danaus plexippus*), Neosho madtom (*Noturus placidus*), Neosho mucket (*Lampsilis rafinesqueana*), Ozark cavefish (*Amblyopsis rosae*), and rabbitsfoot (*Quadrula cylindrica cylindrica*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned

capital improvement locations in Missouri. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Missouri

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	Newtown (Sullivan County) Laredo (Grundy County) MP 431 (Livingston County) Blue Valley (Jackson County) Grandview/IFG (Jackson and Cass Counties) MP 186 (McDonald County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	Newtown (Sullivan County) Laredo (Grundy County) MP 431 (Livingston County) Blue Valley (Jackson County) Grandview/IFG (Jackson and Cass Counties) MP 186 (McDonald County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. For further information or questions, please contact Joshua Wayland at Joshua.Wayland@stb.gov or 202-245-0330. Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al.—Control of—Kansas City Southern Railway, et al.; **USFWS Informal Section 7 Consultation**

Dear Ms. Minnick:

As you may recall from my letter dated November 12, 2021, Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) have filed an application with the Surface Transportation Board (Board) under 49 U.S.C. §§ 11323-25 seeking the Board's approval of the acquisition of control of KCS by CP (Proposed Acquisition). If the Board authorizes the Proposed Acquisition, CP and KCS (collectively, the Applicants) would combine to form an integrated system to be known as Canadian Pacific Kansas City (CPKC). The Board's Office of Environmental Analysis (OEA) is currently preparing a Draft Environmental Impact Statement (EIS) that assesses the potential environmental impacts of the Proposed Acquisition, pursuant to the National Environmental Policy Act (NEPA) and related environmental laws. The purpose of this letter is to request your written concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973.

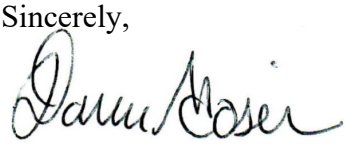
The Applicants expect that the Proposed Acquisition would cause average rail traffic to increase on certain rail lines within the combined CPKC network because freight would be diverted from rail lines owned by other railroad companies and from truck transportation to rail transportation. To accommodate the projected increase in rail traffic, the Applicants plan to make certain capital improvements within the existing rail right-of-way (ROW) if the Board authorizes the Proposed Acquisition. In Oklahoma, those planned capital improvements would include adding two new passing sidings and extending two existing sidings. Construction activities associated with those capital improvements have the potential to affect federally listed threatened or endangered species, if any are present within the existing rail ROW at the planned capital improvement locations. Maps of the planned capital improvement locations in Oklahoma are appended to this letter.

Although OEA is evaluating the potential environmental impacts of the planned capital improvements as effects of the Proposed Acquisition, the Applicants would only add the capital improvements as needed to support increased rail traffic. Therefore, the Applicants have not completed detailed design and engineering and would not do so until after the Board has issued its final decision on the Proposed Acquisition. Accordingly, OEA's analysis of the potential impacts from constructing the planned capital improvements is based on largely conceptual design information, as well as conservative assumptions about how construction would proceed. OEA expects that all construction activity associated with the planned capital improvements would take place within the existing rail ROW.

In Oklahoma, the planned capital improvements would include extending two existing sidings and adding two new sidings adjacent to the existing rail line, which would involve tree clearing, grading, and filling within the existing rail ROW. To be conservative, OEA assumed that each planned capital improvement could affect the entire area extending from the existing tracks to the edge of the rail ROW (study area), but the actual affected area would likely be smaller. The planned capital improvements could also involve replacing or extending existing railroad bridges and culverts to accommodate the new or extended siding.

OEA conducted field work in January 2022 to characterize the existing habitat at each planned capital improvement location. Prior to conducting field work, OEA used the USFWS Information for Planning and Consultation tool and correspondence from the Oklahoma Natural Heritage Inventory to determine the species of concern for each planned capital improvement location. Based on habitat-level field work, OEA identified suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*) at all planned capital improvements in Oklahoma. The Applicants have proposed multiple measures to protect the northern long-eared and Indiana bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the northern long-eared bat and Indiana bat.

The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: American burying beetle (*Nicrophorus americanus*), gray bat (*Myotis grisescens*), monarch butterfly (*Danaus plexippus*), Neosho mucket (*Lampsilis rafinesqueana*), Ozark big-eared bat (*Corynorhinus townsendii ingens*), piping plover (*Charadrius melodus*), rabbitsfoot (*Quadrula cylindrica cylindrica*), red knot (*Calidris canutus*), and scaleshell mussel (*Leptodea leptodon*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned capital improvement locations in Oklahoma. If you agree with these recommended determinations, please send your written concurrence.



Please see **Table 1** below for a summary of ESA-listed species with suitable habitat and the attached maps showing suitable forested bat habitat and suitable bat roosting structures within the ROW of the planned capital improvement locations.

Table 1. ESA-listed species with suitable habitat at the planned capital improvement locations in Oklahoma

Common and Scientific Name	Capital Improvement Location	Federal Status	Suitable Habitat	Recommended Effects Determination
Northern long-eared bat (*Myotis septentrionalis*)	MP 247 (Adair County) Cave Springs (Adair County) Spiro (Le Flore County) Heavener (Le Flore County)	Threatened (Proposed Endangered)	Suitable roosting and foraging habitat for the northern long-eared bat was present throughout the study area. Roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect
Indiana bat (*Myotis sodalis*)	MP 247 (Adair County) Cave Springs (Adair County) Spiro (Le Flore County) Heavener (Le Flore County)	Endangered	Suitable summer roosting and foraging habitat for the Indiana bat was present throughout the study area. Summer roosting habitat was identified in the forested areas along edges of railroad ROW, under multiple bridges, and in multiple culverts throughout the study area. Foraging habitat was present in the canopy-enclosed flyways of forested edges of railroad ROW, adjacent roads, and throughout riparian corridors.	May affect, not likely to adversely affect

We appreciate your review and assistance in the consultation process and look forward to hearing from you. Danielle Gosselin
Director
Office of Environmental Analysis

ATTACHMENT A: NORTHERN LONG-EARED BAT AND INDIANA BAT VOLUNTARY MITIGATION MEASURES

Canadian Pacific Railway Limited, et al. (CP) and Kansas City Southern Railway et al. (KCS) (collectively, the Applicants) have voluntarily proposed the following measures to avoid impacts on northern long-eared bat and Indiana bat. If the Surface Transportation Board (Board) authorizes the Proposed Acquisition of KCS by CP, the Applicants, their employees, and their contractors would be required to strictly adhere to these measures during construction of planned capital improvements related to the Proposed Acquisition, as well as any additional mitigation measures recommended by the Board's Office of Environmental Analysis (OEA) and imposed by the Board in its final decision.

- The Applicants will not conduct construction-related tree removal for the planned capital improvements during the active season for the Indiana bat and the northern long-eared bat (April 1 to October 31).

- During the construction of the planned capital improvements, the Applicants will take steps to reduce the unnecessary removal of bat habitat outside of active bat season by limiting tree removal to only the areas necessary to safely construct and operate the new siding or second track, marking the limits of tree clearing through the use of flagging or fencing, and ensuring that construction contractors understand clearing limits and how they are marked in the field.

- Where practicable, the Applicants will conduct any culvert or bridge removal as part of the planned capital improvements outside of the roosting period of bat species, specific to each planned capital improvement location. Where practicable, if bridge or culvert removal is required during the bat roosting period where the individual planned capital improvement is located, the Applicants will consult with OEA and the local office of the U.S. Fish and Wildlife Service (USFWS) on appropriate methods to determine if bats are using the bridge or culvert as a roost.

- If construction of the planned capital improvements would require removal or alteration of bridges, culverts, or other structures that provide suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31), the Applicants will first conduct an inspection for the presence of or evidence of use by bats. The inspection will be completed by a qualified biologist. If the inspection finds bats or evidence of bats, then the Applicants will not commence work on the structure until coordinating with OEA and USFWS to determine appropriate follow-up or mitigative actions. The inspection must be completed during the same year that the work takes place.

- During construction of the planned capital improvements, the Applicants will direct any temporary lighting away from suitable habitat for the northern long-eared bat or the Indiana bat during the active season for those species (April 1 to October 31). The

Applicants will use downward-facing, full cut-off lens lights for any temporary lighting used during the construction of the planned capital improvements.

- If the planned capital improvements would involve installing any new, or replacing any existing, permanent lights, the Applicants will use downward-facing, full cut-off lens lights (with the same intensity or less for replacement lighting).

Re: Docket No. FD 36500, Canadian Pacific Railway Limited, et al. - Control of Kansas City Southern Railway, et al.; USFWS Informal Section 7 Consultation

Dear Ms. Gosselin:

The U.S. Fish and Wildlife Service (Service) has reviewed your assessment, determinations, and your written request for concurrence of OEA's determination of effects for the Proposed Acquisition on federally listed species, in accordance with Section 7(a)(2) of the Endangered Species Act (ESA) of 1973. We received your request on June 6, 2022.

Your letter stated the following (abbreviated):

> Based on habitat-level field work, Office of Environmental Analysis (OEA) identified suitable roosting and foraging habitat within the existing ROW for the Northern Long-eared Bat (*Myotis septentrionalis*) and Indiana Bat (*Myotis sodalis*) at both planned capital improvements in Arkansas. The Applicants have proposed multiple measures to protect the Northern Long-eared and Indiana Bat during the construction of the planned capital improvements, as detailed in Attachment A to this letter. These measures include commitments to conduct tree clearing and work on structures that provide suitable roosting habitat outside of the active season (April 1 to October 31), as well as measures related to installing lighting. Based on the Applicants' voluntary commitments, OEA has determined that the Proposed Acquisition **may affect, but is not likely to adversely affect** the Northern Long-eared Bat and Indiana Bat.
>
> The following species do not have suitable habitat within the rail ROW at any of the planned capital improvement locations: Arkansas Fatmucket (*Lampsilis powelli*), Eastern Black Rail (*Laterallus jamaicensis*), Gray Bat (*Myotis grisescens*), Missouri Bladderpod (*Physaria filiformis*), Monarch Butterfly (*Danaus plexippus*), Ozark Big-eared Bat (*Corynorhinus townsendii ingens*), Ozark Cavefish, (*Amblyopsis rosae*), Piping Plover (*Charadrius melodus*),

Rabbitsfoot (*Quadrula cylindrica cylindrica*), Red Knot (*Calidris canutus*), and Red-cockaded Woodpecker (*Leuconotopicus borealis*). Therefore, OEA has determined that the Proposed Acquisition would have **no effect** on these species**.** There is no critical habitat within any of the planned capital improvement locations in Arkansas. If you agree with these recommended determinations, please send your written concurrence.

The Service concurs with the "no effect" determinations for the listed species identified. No further consultation for this project is required for these species. Furthermore, due to the location of the area being affected occurring immediately adjacent to the existing railway, limited and poor habitat located immediately adjacent to the action area, ongoing constant noise and disturbance, inactive season only clearing restrictions for suitable habitat and bridges, commitment to perform bridge inspections prior to construction, the distance to known species locations, and the implementation of voluntary mitigation measures, the Service concurs with your determination of "may affect, but is not likely to adversely affect" the Indiana Bat and Northern Long-eared Bat. This concurrence concludes your ESA Section 7 responsibilities for this action.

The Service recommends that your agency contact the Arkansas Ecological Services Field Office or re-evaluate this key in IPaC if: 1) the scope, timing, duration, or location of the proposed project changes, 2) new information reveals the action may affect listed species or designated critical habitat; and 3) a new species is listed or critical habitat designated. If any of the above conditions occurs, additional consultation with the Arkansas Ecological Services Field Office should take place before project changes are final or resources committed.

For further assistance or if you have any questions, please contact Lindsey Lewis at (501) 513-4489 or lindsey_lewis@fws.gov.

Sincerely,

Melvin L. Tobin
Field Supervisor

Dear Ms. Feldt,

The U.S. Fish and Wildlife Service (Service) has reviewed the information provided in your June 6, 2022 letter regarding the proposed Canadian Pacific Railway Limited, et al. and Kansas City Southern Railway, et al. Capital Improvement Projects in Cass, Grundy, Jackson, Jasper, Livingston, McDonald, and Sullivan counties, Missouri. The Service offers the following comments pursuant to the Endangered Species Act of 1973, as amended (16 U.S.C. 1531-1544).

The Service concurs with your "may affect, but not likely to adversely affect" (NLAA) determination for the Indiana bat (*Myotis sodalis*) and northern long-eared bat (*Myotis sepentrionalis*).

Thank you for your interest in the conservation of threatened and endangered species.

July 28, 2022
Electronic Mail

Danielle Gosselin
Director
Surface Transportation Board
Office of Environmental Analysis

Dear Ms. Gosselin,

This transmits the U.S. Fish and Wildlife Service's (Service) concurrence for your "may affect, but not likely to adversely affect" determinations for the northern long-eared bat (*Myotis septentrionalis*) and Indiana bat (*Myotis sodalis*), as described in your memo received June 6, 2022. The project (Docket No. FD 36500) includes the proposed merging of Canadian Pacific Railway Limited and Kansas City Southern Railway to form the Canadian Pacific Kansas City system (CPKC).

The purpose of the proposed project is to combine America's two smallest but fastest-growing Class I railroads to build a more efficient and more competitive rail network. The proposed project would cause rail traffic to increase on certain rail lines within the CPKC network. To accommodate for the projected increase in rail traffic, capital improvements within the existing rail right-of-way (ROW) in both Illinois and Iowa are proposed. In Illinois, the improvements would be located within a previously disturbed area and would not result in any new impacts to habitats, plants, or wildlife. However, suitable roosting and foraging habitat within the existing ROW for the northern long-eared bat and Indiana bat were identified at seven of the eight proposed capital improvement locations in Iowa within the cities of Guttenberg, Bellevue, Clinton, Letts, Washington, Ottumwa, and Moravia.

These improvements include the addition of five new passing sidings and the extension of four existing sidings. This would involve tree clearing, grading, and filling within the existing rail ROW. Additionally, replacement or extension of the existing railroad bridges and culverts is proposed to accommodate the new or extended sidings. This informal consultation addresses potential effects to the species in accordance with section 7 of the Endangered Species Act of 1973 (Act), as amended (16 U.S.C. 1531 et seq.) and 50 CFR § 402 of our interagency regulations governing section 7 of the Act.

Threatened and Endangered Species

As described in your memo, nine federally listed species in addition to the northern long-eared bat and Indiana bat have ranges overlapping the project area. These species include the Eastern massasauga (*Sistrurus catenatus*), eastern prairie fringed orchid (*Platanthera leucophaea*), Higgins eye pearlymussel (*Lampsilis higginsii*), Iowa pleistocene snail (*Discus macclintocki*), northern wild monkshood (*Aconitum noveboracense*), prairie bush-clover (*Lespedeza leptostachya*), sheepnose mussel (*Plethobasus cyphyus*), spectaclecase (*Cumberlandia monodonta*), and western prairie fringed orchid (*Platanthera praeclara*), in addition to one candidate species, the monarch butterfly (*Danaus plexippus*). You made "may affect, but not likely to adversely affect" determinations for the northern long-eared bat and Indiana bat. Due to the lack of suitable habitat within the project area, you made "no effect" determinations for the remaining

species in the above list. The Illinois-Iowa Ecological Services Field Office has no regulatory or statutory authority for concurring with "no effect" determinations. However, we recommend you maintain a written record of your "no effect" determination and include it in your decision record.

Bats

The project, as proposed, includes the removal of potential northern long-eared bat and Indiana bat habitat and hibernaculum. As described in your memo dated June 6, 2022, all tree removal will occur outside the maternity roosting season, between October 1 and March 31. In addition, voluntary mitigation measures are proposed that include limiting tree removal where practical, conducting culvert and bridge removal or alterations outside of the roosting period when practical, conducting presence/absence surveys prior to culvert and bridge removal or alterations if required during the active season and coordination with OEA and Service if presence is found, directing temporary lighting away from suitable habitat during the active season, and using downward-facing full cut-off lens lights if permanent lighting is required. As a result of the conditions and conservation measures described above, we concur that the project as proposed “may affect, not likely to adversely affect” the northern long-eared bat and Indiana bat.

Migratory Birds and Eagles

The Service removed bald eagles from protection under the Endangered Species Act on August 8, 2007. However, they remain protected today under the Migratory Birds Treaty Act and the Bald and Golden Eagle Protection Act (Eagle Act). The Eagle Act prohibits take, which is defined as, “pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, destroy, molest, or disturb” (50 CFR 22.3). Disturb is defined in regulations as, “to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause, based on the best scientific information available, 1) injury to an eagle, or 2) decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior.” In accordance with the avoidance measures described in the Eagle Act (16 U.S.C. 668-668c), any activities resulting in potential disturbance should be restricted within 660-ft of any identified active eagle nest to dates outside of the nesting season. Please contact the Region 3 Migratory Bird Office (https://www.fws.gov/midwest/eagle/contactus.html) should activities that have the potential to result in take or disturbance of eagles or their nests.

Conclusion

The above comments are provided in accordance with the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.), provisions of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.). This precludes the need for further action on this project as required under Section 7 of the Endangered Species Act of 1973, as amended. If project plans change or portions of the proposed project were not evaluated, consultation should be reinitiated. Thank you for the opportunity to provide comments. If you have any questions regarding these comments, please feel free to contact me at the email address below.

Thank you,

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The attached species list identifies any federally threatened, endangered, proposed and candidate species that may occur within the boundary of your proposed project or may be affected by your proposed project. The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species

There is a total of 10 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Summary

Consultation Code: 03E18000-2022-SLI-0397
Event Code: Some(03E18000-2022-E-01031)
Project Name: Chicago MP 75 IL Railroad Siding - New
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@42.09757925,-88.96752826524055,14z

Counties: DeKalb and Ogle counties, Illinois

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
Eastern Prairie Fringed Orchid *Platanthera leucophaea* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/601	Threatened
Prairie Bush-clover *Lespedeza leptostachya* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/4458	Threatened

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

The list also includes designated critical habitat if present within your proposed project area or affected by your project. This list is provided to you as the initial step of the consultation process required under section 7(c) of the Endangered Species Act, also referred to as Section 7 Consultation.

Section 7 of the Endangered Species Act of 1973 requires that actions authorized, funded, or carried out by Federal agencies not jeopardize federally threatened or endangered species or adversely modify designated critical habitat. To fulfill this mandate, Federal agencies (or their designated non-federal representative) must consult with the Service if they determine their project "may affect" listed species or critical habitat.

Under 50 CFR 402.12(e) (the regulations that implement Section 7 of the Endangered Species Act) the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally. You may verify the list by visiting the ECOS-IPaC website http://ecos.fws.gov/ipac/ at regular intervals during project planning and implementation and completing the same process you used to receive the attached list. As an alternative, you may contact this Ecological Services Field Office for updates.

Please use the species list provided and visit the U.S. Fish and Wildlife Service's Region 3 Section 7 Technical Assistance website at - http://www.fws.gov/midwest/endangered/section7/s7process/index.html. This website contains step-by-step instructions which will help you determine if your project will have an adverse effect on listed species and will help lead you through the Section 7 process.

For all wind energy projects, please contact this field office directly for assistance, even if no federally listed plants, animals or critical habitat are present within your proposed project or may be affected by your proposed project.

Although no longer protected under the Endangered Species Act, be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 et seq.) and Migratory Bird Treaty Act (16 U.S.C. 703 et seq), as are golden eagles. Projects affecting these species may require measures to avoid harming eagles or may require a permit. If your project is near an eagle nest or winter roost area, see our Eagle Permits website at http://www.fws.gov/midwest/midwestbird/EaglePermits/index.html to help you determine if you can avoid impacting eagles or if a permit may be necessary.

We appreciate your concern for threatened and endangered species. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Project Summary

Consultation Code: 03E18000-2022-SLI-0401
Event Code: Some(03E18000-2022-E-01039)
Project Name: MP 255 IA Railroad Siding - New
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@41.299634600000005,-91.61092964027384,14z

Counties: Washington County, Iowa

Endangered Species Act Species

There is a total of 6 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
Eastern Prairie Fringed Orchid *Platanthera leucophaea* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/601	Threatened
Prairie Bush-clover *Lespedeza leptostachya* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/4458	Threatened
Western Prairie Fringed Orchid *Platanthera praeclara* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/1669	Threatened

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Event Code: 03E14000-2022-E-01325
Project Name: Newtown MO Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Karen Herrington

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Missouri Ecological Services Field Office
101 Park Deville Drive
Suite A
Columbia, MO 65203-0057
(573) 234-2132

Project Summary

Consultation Code: 03E14000-2022-SLI-0410
Event Code: Some(03E14000-2022-E-01325)
Project Name: Newtown MO Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@40.34974905,-93.33835675641826,14z

Counties: Sullivan County, Missouri

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Gray Bat *Myotis grisescens* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6329	Endangered
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949 General project design guidelines: https://ecos.fws.gov/ipac/project/VCPJDFYMVNF2XICYFC7J7FDO6Y/documents/generated/6868.pdf	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045 General project design guidelines: https://ecos.fws.gov/ipac/project/VCPJDFYMVNF2XICYFC7J7FDO6Y/documents/generated/6868.pdf	Threatened

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	Candidate

Flowering Plants

NAME	STATUS
Mead's Milkweed *Asclepias meadii*	Threatened

No critical habitat has been designated for this species.

Species profile: https://ecos.fws.gov/ecp/species/8204

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Project Name: Laredo MO Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Karen Herrington

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Event Code: 03E14000-2022-E-01331
Project Name: Blue Valley MO Railroad Siding - Double Track

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Karen Herrington

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Missouri Ecological Services Field Office
101 Park Deville Drive
Suite A
Columbia, MO 65203-0057
(573) 234-2132

Project Summary

Consultation Code: 03E14000-2022-SLI-0413
Event Code: Some(03E14000-2022-E-01331)
Project Name: Blue Valley MO Railroad Siding - Double Track
Project Type: TRANSPORTATION
Project Description: Installation of double track as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@39.0634047,-94.50220406439199,14z

Counties: Jackson County, Missouri

Endangered Species Act Species

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Missouri Ecological Services Field Office
101 Park Deville Drive
Suite A
Columbia, MO 65203-0057
(573) 234-2132

Project Summary

Consultation Code: 03E14000-2022-SLI-0415
Event Code: Some(03E14000-2022-E-01335)
Project Name: Asbury MO KS Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@37.253815349999996,-94.58883330490121,14z

Counties: Jasper County, Missouri

Endangered Species Act Species

There is a total of 8 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

December 06, 2021

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

This response has been generated by the Information, Planning, and Conservation (IPaC) system to provide information on natural resources that could be affected by your project. The U.S. Fish and Wildlife Service (Service) provides this response under the authority of the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d), the Migratory Bird Treaty Act (16 U.S.C. 703-712), and the Fish and Wildlife Coordination Act (16 U.S.C. 661 et seq.).

Threatened and Endangered Species

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and may be affected by your proposed project. The species list fulfills the requirement for obtaining a Technical Assistance Letter from the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. N**ote that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days.** The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

Consultation Technical Assistance

Refer to the Midwest Region S7 Technical Assistance website for step-by-step instructions for making species determinations and for specific guidance on the following types of projects: projects in developed areas, HUD, pipelines, buried utilities, telecommunications, and requests for a Conditional Letter of Map Revision (CLOMR) from FEMA.

Federally Listed Bat Species

Indiana bats, gray bats, and northern long-eared bats occur throughout Missouri and the information below may help in determining if your project may affect these species.

Gray bats - Gray bats roost in caves or mines year-round and use water features and forested riparian corridors for foraging and travel. If your project will impact caves, mines, associated riparian areas, or will involve tree removal around these features – particularly within stream corridors, riparian areas, or associated upland woodlots –gray bats could be affected.

Indiana and northern long-eared bats - These species hibernate in caves or mines only during the winter. In Missouri the hibernation season is considered to be November 1 to March 31. During the active season in Missouri (April 1 to October 31) they roost in forest and woodland habitats. Suitable summer habitat for Indiana bats and northern long-eared bats consists of a wide variety of forested/wooded habitats where they roost, forage, and travel and may also include some adjacent and interspersed non-forested habitats such as emergent wetlands and adjacent edges of agricultural fields, old fields and pastures. This includes forests and woodlots containing potential roosts (i.e., live trees and/or snags ≥5 inches diameter at breast height (dbh) for Indiana bat, and ≥3 inches dbh for northern long-eared bat, that have exfoliating bark, cracks, crevices, and/or hollows), as well as linear features such as fencerows, riparian forests, and other wooded corridors. These wooded areas may be dense or loose aggregates of trees with variable amounts of canopy closure. Tree species often include, but are not limited to, shellbark or shagbark hickory, white oak, cottonwood, and maple. Individual trees may be considered suitable habitat when they exhibit the characteristics of a potential roost tree and are located within 1,000 feet (305 meters) of other forested/wooded habitat. Northern long-eared bats have also been observed roosting in human-made structures, such as buildings, barns, bridges, and bat houses; therefore, these structures should also be considered potential summer habitat and evaluated for use by bats. If your project will impact caves or mines or will involve clearing forest or woodland habitat containing suitable roosting habitat, Indiana bats or northern long-eared bats could be affected.

Examples of unsuitable habitat include:

- Individual trees that are greater than 1,000 feet from forested or wooded areas;
- Trees found in highly-developed urban areas (e.g., street trees, downtown areas);
- A pure stand of less than 3-inch dbh trees that are not mixed with larger trees; and
- A stand of eastern red cedar shrubby vegetation with no potential roost trees.

Using the IPaC Official Species List to Make No Effect and May Affect Determinations for Listed Species

1. If IPaC returns a result of “There are no listed species found within the vicinity of the project,” then project proponents can conclude the proposed activities will have **no effect** on any federally listed species under Service jurisdiction. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

2. If IPaC returns one or more federally listed, proposed, or candidate species as potentially present in the action area of the proposed project – other than bats (see #3 below) – then project proponents can conclude the proposed activities **may affect** those species. For assistance in determining if suitable habitat for listed, candidate, or proposed species occurs within your project area or if species may be affected by project activities, you can obtain Life History Information for Listed and Candidate Species through the S7 Technical Assistance website.

3. If IPac returns a result that one or more federally listed bat species (Indiana bat, northern long-eared bat, or gray bat) are potentially present in the action area of the proposed project, project proponents can conclude the proposed activities **may affect** these bat species **IF** one or more of the following activities are proposed:

a. Clearing or disturbing suitable roosting habitat, as defined above, at any time of year;
b. Any activity in or near the entrance to a cave or mine;
c. Mining, deep excavation, or underground work within 0.25 miles of a cave or mine;
d. Construction of one or more wind turbines; or
e. Demolition or reconstruction of human-made structures that are known to be used by bats based on observations of roosting bats, bats emerging at dusk, or guano deposits or stains.

If none of the above activities are proposed, project proponents can conclude the proposed activities will have **no effect** on listed bat species. Concurrence from the Service is not required for **No Effect** determinations. No further consultation or coordination is required. Attach this letter to the dated IPaC species list report for your records. An example "No Effect" document also can be found on the S7 Technical Assistance website.

If any of the above activities are proposed in areas where one or more bat species may be present, project proponents can conclude the proposed activities **may affect** one or more bat species. We recommend coordinating with the Service as early as possible during project planning. If your project will involve removal of over 5 acres of suitable forest or woodland habitat, we recommend you complete a Summer Habitat Assessment prior to contacting our office to expedite the consultation process. The Summer Habitat Assessment Form is available in Appendix A of the most recent version of the Range-wide Indiana Bat Summer Survey Guidelines.

Other Trust Resources and Activities

Bald and Golden Eagles - Although the bald eagle has been removed from the endangered species list, this species and the golden eagle are protected by the Bald and Golden Eagle Act and the Migratory Bird Treaty Act. Should bald or golden eagles occur within or near the project area

please contact our office for further coordination. For communication and wind energy projects, please refer to additional guidelines below.

Migratory Birds - The Migratory Bird Treaty Act (MBTA) prohibits the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests, except when specifically authorized by the Service. The Service has the responsibility under the MBTA to proactively prevent the mortality of migratory birds whenever possible and we encourage implementation of recommendations that minimize potential impacts to migratory birds. Such measures include clearing forested habitat outside the nesting season (generally March 1 to August 31) or conducting nest surveys prior to clearing to avoid injury to eggs or nestlings.

Communication Towers - Construction of new communications towers (including radio, television, cellular, and microwave) creates a potentially significant impact on migratory birds, especially some 350 species of night-migrating birds. However, the Service has developed voluntary guidelines for minimizing impacts.

Transmission Lines - Migratory birds, especially large species with long wingspans, heavy bodies, and poor maneuverability can also collide with power lines. In addition, mortality can occur when birds, particularly hawks, eagles, kites, falcons, and owls, attempt to perch on uninsulated or unguarded power poles. To minimize these risks, please refer to guidelines developed by the Avian Power Line Interaction Committee and the Service. Implementation of these measures is especially important along sections of lines adjacent to wetlands or other areas that support large numbers of raptors and migratory birds.

Wind Energy - To minimize impacts to migratory birds and bats, wind energy projects should follow the Service's Wind Energy Guidelines. In addition, please refer to the Service's Eagle Conservation Plan Guidance, which provides guidance for conserving bald and golden eagles in the course of siting, constructing, and operating wind energy facilities.

Next Steps

Should you determine that project activities **may affect** any federally listed species or trust resources described herein, please contact our office for further coordination. Letters with requests for consultation or correspondence about your project should include the Consultation Tracking Number in the header. Electronic submission is preferred.

If you have not already done so, please contact the Missouri Department of Conservation (Policy Coordination, P. O. Box 180, Jefferson City, MO 65102) for information concerning Missouri Natural Communities and Species of Conservation Concern.

We appreciate your concern for threatened and endangered species. Please feel free to contact our office with questions or for additional information.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies endangered, threatened, proposed, and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). **This letter only provides an official species list and technical assistance; if you determine that listed species and/or designated critical habitat may be affected in any way by the proposed project, even if the effect is wholly beneficial, consultation with the Service will be necessary.**

If you determine that this project will have no effect on listed species and their habitat in any way, then you have completed Section 7 consultation with the Service and may use this letter in your project file or application.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found on our website.

Please visit our website at http://www.fws.gov/arkansas-es/IPaC/home.html for species-specific guidance to avoid and minimize adverse effects to federally endangered, threatened, proposed, and candidate species. Our web site also contains additional information on species life history and habitat requirements that may be useful in project planning.

If your project involves in-stream construction activities, oil and natural gas infrastructure, road construction, transmission lines, or communication towers, please review our project specific guidance at http://www.fws.gov/arkansas-es/IPaC/ProjSpec.html.

The karst region of Arkansas is a unique region that covers the **northern third of Arkansas** and we have specific guidance to conserve sensitive cave-obligate and bat species. **Please visit http://www.fws.gov/arkansas-es/IPaC/Karst.html to determine if your project occurs in the karst region and to view karst specific-guidance.** Proper implementation and maintenance of best management practices specified in these guidance documents is necessary to avoid adverse effects to federally protected species and often avoids the more lengthy formal consultation process.

If your species list includes any mussels, Northern Long-eared Bat, Indiana Bat, Yellowcheek Darter, Red-cockaded Woodpecker, or American Burying Beetle, your project may require a presence/absence and/or habitat survey prior to commencing project activities. Please check the appropriate species-specific guidance on our website to determine if your project requires a survey. We strongly recommend that you contact the appropriate staff species lead biologist (see office directory or species page) prior to conducting presence/absence surveys to ensure the appropriate level of effort and methodology.

Under the ESA, it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make “no effect” determinations. If you determine that your proposed action will have “no effect” on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally-listed threatened or endangered fish or wildlife species without the appropriate permit.

Through the consultation process, we will analyze information contained in a biological assessment that you provide. If your proposed action is associated with Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a habitat conservation plan) is necessary to harm or harass federally listed threatened or endangered fish or wildlife species. In either case, there is no mechanism for authorizing incidental take “after-the-fact.” For more information regarding formal consultation and HCPs, please see the Service’s Consultation Handbook and Habitat Conservation Plans at www.fws.gov/endangered/esa-library/index.html#consultations.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, **the accuracy of this species list should be verified after 90 days.** This verification can be completed formally or informally as desired. The Service recommends that verification be

completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Arkansas Ecological Services Field Office
110 South Amity Suite 300
Conway, AR 72032-8975
(501) 513-4470

Project Summary

Consultation Code: 04ER1000-2022-SLI-0387
Event Code: Some(04ER1000-2022-E-01171)
Project Name: Gentry AR Railroad Siding
Project Type: TRANSPORTATION
Project Description: Siding construction within the existing railroad right-of-way
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@36.29100085,-94.45494982436801,14z

Counties: Benton County, Arkansas

Endangered Species Act Species

There is a total of 11 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Consultation Code: 02EKOK00-2022-SLI-0486
Event Code: 02EKOK00-2022-E-01740
Project Name: MP 247 OK Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

---

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

THERE ARE NO FWS MIGRATORY BIRDS OF CONCERN WITHIN THE VICINITY OF YOUR PROJECT AREA.

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical

Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Project Name: Cave Springs OK Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9743	

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

---

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10

Probability Of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

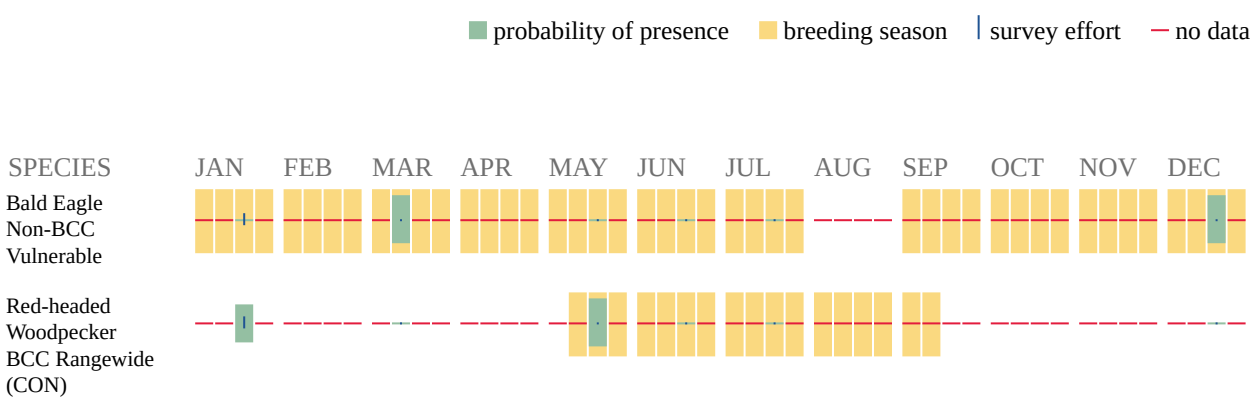
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)



Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Project Name: Spiro OK Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Event Code: Some(02EKOK00-2022-E-01749)
Project Name: Spiro OK Railroad Siding - Extension
Project Type: TRANSPORTATION
Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@35.21976985,-94.64233700036402,14z

Counties: Le Flore County, Oklahoma

Endangered Species Act Species

There is a total of 7 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

Clams

NAME	STATUS
Scaleshell Mussel *Leptodea leptodon*	Endangered

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/5881

Insects

NAME	STATUS
American Burying Beetle *Nicrophorus americanus*	Threatened

Population: Wherever found, except where listed as an experimental population
No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/66

Monarch Butterfly *Danaus plexippus*	Candidate

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/9743

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31

Probability Of Presence Summary

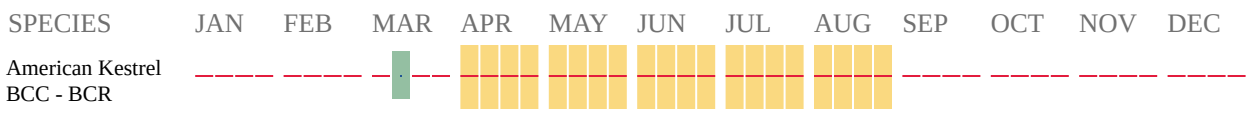
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.



Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

■ probability of presence ■ breeding season | survey effort – no data

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Event Code: 02EKOK00-2022-E-01751
Project Name: Heavener OK Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Non-federal entities conducting activities that may result in take of listed species should consider seeking coverage under section 10 of the ESA, either through development of a Habitat Conservation Plan (HCP) or, by becoming a signatory to the General Conservation Plan (GCP) currently under development for the American burying beetle. Each of these mechanisms provides the means for obtaining a permit and coverage for incidental take of listed species during otherwise lawful activities.

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit through our Project Review step-wise process http://www.fws.gov/southwest/es/oklahoma/OKESFO%20Permit%20Home.htm.

Project Description: Installation/extension of railroad sidings as part of rail merger project.
Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@34.873141950000004,-94.60611363345602,14z

Counties: Le Flore County, Oklahoma

Endangered Species Act Species

There is a total of 7 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

---

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Mammals

NAME	STATUS
Indiana Bat *Myotis sodalis* There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/5949	Endangered
Northern Long-eared Bat *Myotis septentrionalis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/9045	Threatened

Birds

NAME	STATUS
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened

Clams

NAME	STATUS
Scaleshell Mussel *Leptodea leptodon*	Endangered

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/5881

Insects

NAME	STATUS
American Burying Beetle *Nicrophorus americanus*	Threatened

Population: Wherever found, except where listed as an experimental population
No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/66

Monarch Butterfly *Danaus plexippus*	Candidate

No critical habitat has been designated for this species.
Species profile: https://ecos.fws.gov/ecp/species/9743

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

USFWS National Wildlife Refuge Lands And Fish Hatcheries

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS OR FISH HATCHERIES WITHIN YOUR PROJECT AREA.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

---

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31

NAME	BREEDING SEASON
Kentucky Warbler *Oporornis formosus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Apr 20 to Aug 20
Prairie Warbler *Dendroica discolor* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Wood Thrush *Hylocichla mustelina* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Aug 31

Probability Of Presence Summary

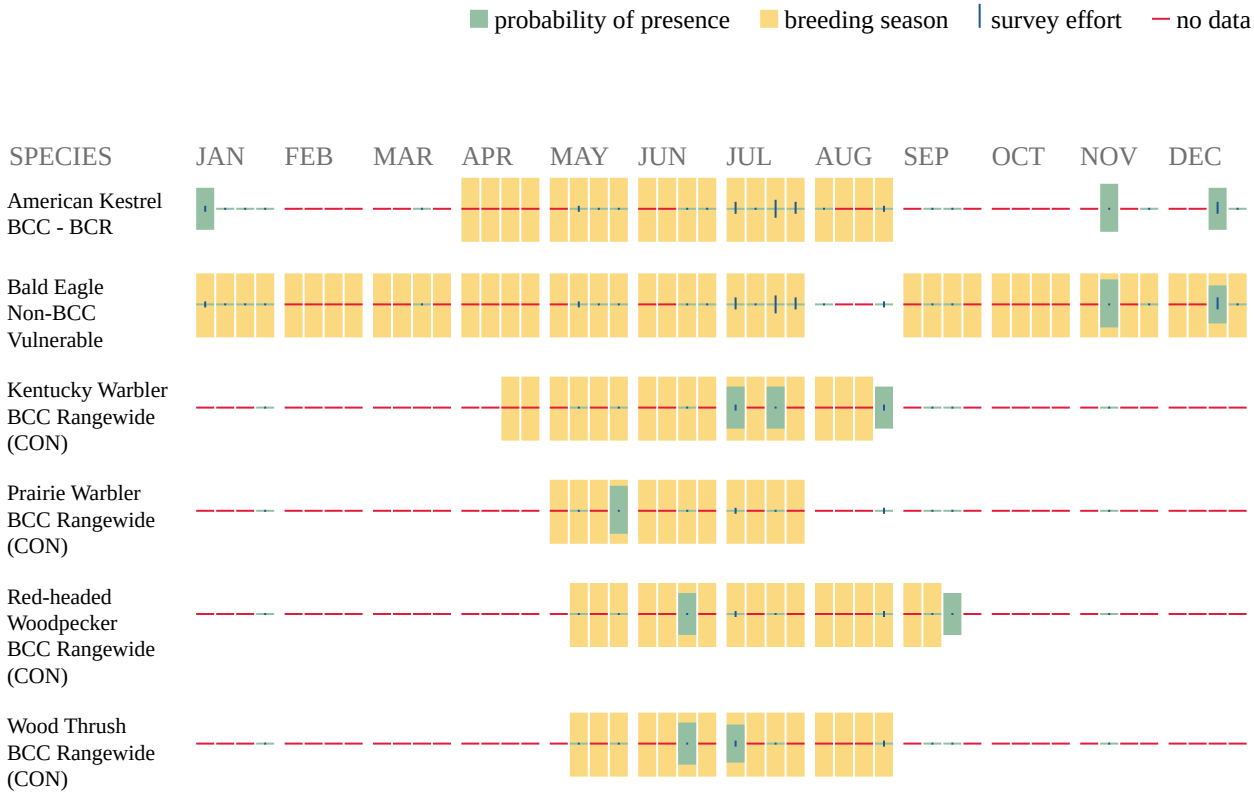
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.



3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Wetlands

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

WETLAND INFORMATION WAS NOT AVAILABLE WHEN THIS SPECIES LIST WAS GENERATED. PLEASE VISIT HTTPS://WWW.FWS.GOV/WETLANDS/DATA/MAPPER.HTML OR CONTACT THE FIELD OFFICE FOR FURTHER INFORMATION.

Project Name: MP 377 AR Railroad Siding - New

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies endangered, threatened, proposed, and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). **This letter only provides an official species list and technical assistance; if you determine that listed species and/or designated critical habitat may be affected in any way by the proposed project, even if the effect is wholly beneficial, consultation with the Service will be necessary.**

If you determine that this project will have no effect on listed species and their habitat in any way, then you have completed Section 7 consultation with the Service and may use this letter in your project file or application.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found on our website.

Please visit our website at http://www.fws.gov/arkansas-es/IPaC/home.html for species-specific guidance to avoid and minimize adverse effects to federally endangered, threatened, proposed, and candidate species. Our web site also contains additional information on species life history and habitat requirements that may be useful in project planning.

If your project involves in-stream construction activities, oil and natural gas infrastructure, road construction, transmission lines, or communication towers, please review our project specific guidance at http://www.fws.gov/arkansas-es/IPaC/ProjSpec.html.

The karst region of Arkansas is a unique region that covers the **northern third of Arkansas** and we have specific guidance to conserve sensitive cave-obligate and bat species. **Please visit http://www.fws.gov/arkansas-es/IPaC/Karst.html to determine if your project occurs in the karst region and to view karst specific-guidance.** Proper implementation and maintenance of best management practices specified in these guidance documents is necessary to avoid adverse effects to federally protected species and often avoids the more lengthy formal consultation process.

If your species list includes any mussels, Northern Long-eared Bat, Indiana Bat, Yellowcheek Darter, Red-cockaded Woodpecker, or American Burying Beetle, your project may require a presence/absence and/or habitat survey prior to commencing project activities. Please check the appropriate species-specific guidance on our website to determine if your project requires a survey. We strongly recommend that you contact the appropriate staff species lead biologist (see office directory or species page) prior to conducting presence/absence surveys to ensure the appropriate level of effort and methodology.

Under the ESA, it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make “no effect” determinations. If you determine that your proposed action will have “no effect” on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally-listed threatened or endangered fish or wildlife species without the appropriate permit.

Through the consultation process, we will analyze information contained in a biological assessment that you provide. If your proposed action is associated with Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a habitat conservation plan) is necessary to harm or harass federally listed threatened or endangered fish or wildlife species. In either case, there is no mechanism for authorizing incidental take “after-the-fact.” For more information regarding formal consultation and HCPs, please see the Service’s Consultation Handbook and Habitat Conservation Plans at www.fws.gov/endangered/esa-library/index.html#consultations.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, **the accuracy of this species list should be verified after 90 days.** This verification can be completed formally or informally as desired. The Service recommends that verification be

completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. **Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.**

Birds

NAME	STATUS
Eastern Black Rail *Laterallus jamaicensis ssp. jamaicensis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10477	Threatened
Piping Plover *Charadrius melodus* Population: [Atlantic Coast and Northern Great Plains populations] - Wherever found, except those areas where listed as endangered. There is **final** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/6039	Threatened
Red Knot *Calidris canutus rufa* There is **proposed** critical habitat for this species. The location of the critical habitat is not available. Species profile: https://ecos.fws.gov/ecp/species/1864	Threatened
Red-cockaded Woodpecker *Picoides borealis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/7614	Endangered

Clams

NAME	STATUS
Arkansas Fatmucket *Lampsilis powellii*	Threatened
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/2213	
Rabbitsfoot *Quadrula cylindrica cylindrica*	Threatened
There is **final** critical habitat for this species. The location of the critical habitat is not available.	
Species profile: https://ecos.fws.gov/ecp/species/5165	

Insects

NAME	STATUS
Monarch Butterfly *Danaus plexippus*	Candidate
No critical habitat has been designated for this species.	
Species profile: https://ecos.fws.gov/ecp/species/9743	

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

United States Department of the Interior

Event Code: 04EL1000-2022-E-01574
Project Name: Mansfield LA Railroad Siding - Extension

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Endangered Species Act Species

There is a total of 4 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

***Due to the Louisiana Governor's mandatory quarantine order for the coronavirus (COVID-19), and in order to keep our staff and the public safe, we are unable to accept or respond in a timely manner to consultation request or project review/concurrence that we receive through the U.S. Mail. Please submit your request electronically to lafayette@fws.gov or call 337-291-3100.**

The enclosed species list identifies threatened, endangered and candidate species, as well as designated and proposed critical habitat that may occur within the boundary of your proposed project and may be affected by your proposed project. The Fish and Wildlife Service (Service) is providing this list under section 7 (c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). Changes in this species list may occur due to new information from updated surveys, changes in species habitat, new listed species and other factors. Because of these possible changes, feel free to contact our office (337/291-3126) for more information or assistance regarding impacts to federally listed species. The Service recommends visiting the ECOS-IPaC site or the Louisiana Ecological Services website (www.fws.gov/lafayette) at regular intervals during project planning and implementation for updated species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the habitats upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of Federal trust resources and to determine whether projects may affect Federally listed species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected (e.g. adverse, beneficial, insignificant or discountable) by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF or by contacting our office at the number above.

Bald eagles have recovered and were removed from the List of Endangered and Threatened Species as of August 8, 2007. Although no longer listed, please be aware that bald eagles are protected under the Bald and Golden Eagle Protection Act (BGEPA) (16 U.S.C. 668 *et seq.*). The Service developed the National Bald Eagle Management (NBEM) Guidelines to provide landowners, land managers, and others with information and recommendations to minimize potential project impacts to bald eagles, particularly where such impacts may constitute "disturbance," which is prohibited by the BGEPA. A copy of the NBEM Guidelines is available at: http://www.fws.gov/southeast/es/baldeagle/NationalBaldEagleManagementGuidelines.pdf. Those guidelines recommend: (1) maintaining a specified distance between the activity and the nest (buffer area); (2) maintaining natural areas (preferably forested) between the activity and nest trees (landscape buffers); and (3) avoiding certain activities during the breeding season. On-site personnel should be informed of the possible presence of nesting bald eagles within the project boundary, and should identify, avoid, and immediately report any such nests to this office. If a bald eagle nest occurs or is discovered within or adjacent to the proposed project area, then an evaluation must be performed to determine whether the project is likely to disturb nesting bald eagles. That evaluation may be conducted on-line at: http://www.fws.gov/southeast/es/baldeagle. Following completion of the evaluation, that website will provide a determination of whether additional consultation is necessary. The Division of Migratory Birds for the Southeast Region of the Service (phone: 404/679-7051, e-mail: SEmigratorybirds@fws.gov) has the lead role in conducting any necessary consultation. Should you need further assistance interpreting the guidelines or performing an on-line project evaluation, please contact this office.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g. cellular, digital television, radio and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm ; http://www.towerkill.com; and http://fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

Activities that involve State-designated scenic streams and/or wetlands are regulated by the Louisiana Department of Wildlife and Fisheries and the U.S. Army Corps of Engineers, respectively. We, therefore, recommend that you contact those agencies to determine their interest in proposed projects in these areas.

Activities that would be located within a National Wildlife Refuge are regulated by the refuge staff. We, therefore, recommend that you contact them to determine their interest in proposed projects in these areas.

Additional information on Federal trust species in Louisiana can be obtained from the Louisiana Ecological Services website at: www.fws.gov/lafayette or by calling 337/291-3100.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

O.4.3 State Agency Correspondence

From: seth.moore@dnr.iowa.gov
To: Kaitlyn Torrey
Subject: [External] 2021-2164 Environmental Review Request - MP 24 IA Railroad Siding
Date: Friday, November 19, 2021 5:11:17 PM

42.3126/-90.4318; Jackson County
Sec. 19/T87N/R05E

Thank you for inviting Department comment on the impact of this project. The Department has searched for records of rare species and significant natural communities in the project area and found no site-specific records that would be impacted by this project. However, these records and data are not the result of thorough field surveys. If listed species or rare communities are found during the planning or construction phases, additional studies and/or mitigation may be required.

This letter is a record of review for protected species, rare natural communities, state lands and waters in the project area, including review by personnel representing state parks, preserves, recreation areas, fisheries and wildlife but does not include comment from the Environmental Services Division of this Department. This letter does not constitute a permit. Other permits may be required from the Department or other state or federal agencies before work begins on this project.

If you have questions about this letter or require further information, please contact me at (515) 330-6432.

Environmental Review requests can be submitted electronically to: SLER@dnr.iowa.gov.

Sincerely,

Seth Moore | Environmental Specialist
Iowa Department of Natural Resources
P 515-330-6432 | F 515-725-8202 | 502 E. 9th St., Des Moines, IA 50319

RE: STB CPR KCS Merger EIS
Project Number(s): 2207101
County: DeKalb, Ogle

Dear Applicant:

This letter is in reference to the project you recently submitted for consultation. The natural resource review provided by EcoCAT identified protected resources that may be in the vicinity of the proposed action. The Department has evaluated this information and concluded that adverse effects are unlikely. Therefore, consultation under 17 Ill. Adm. Code Part 1075 is terminated.

This consultation is valid for two years unless new information becomes available that was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. If the project has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary.

The natural resource review reflects the information existing in the Illinois Natural Heritage Database at the time of the project submittal, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, you must comply with the applicable statutes and regulations. Also, note that termination does not imply IDNR's authorization or endorsement of the proposed action.

Please contact me if you have questions regarding this review.

Thank you for inviting Department comment on the impact of this project. The Department has searched for records of rare species and significant natural communities in the project area and found no site-specific records that would be impacted by this project. However, these records and data are not the result of thorough field surveys. If listed species or rare communities are found during the planning or construction phases, additional studies and/or mitigation may be required.

A Sovereign Lands Construction Permit pursuant to Chapter 461A of the Iowa Code will be required for this project if construction extends below the ordinary high water line of the Mississippi River. Information regarding this matter is available from the Department website:

http://www.iowadnr.gov/InsideDNR/RegulatoryLand/SovereignLandsPermits.aspx

This letter is a record of review for protected species, rare natural communities, state lands and waters in the project area, including review by personnel representing state parks, preserves, recreation areas, fisheries and wildlife but does not include comment from the Environmental Services Division of this Department. This letter does not constitute a permit. Other permits may be required from the Department or other state or federal agencies before work begins on this project.

If you have questions about this letter or require further information, please contact me at (515) 330-6432.

Environmental Review requests can be submitted electronically to: SLER@dnr.iowa.gov.

Sincerely,

Seth Moore | Environmental Specialist

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T64N R22W S14		
County:	Sullivan		
Query reference:	CR-KCS passing sidings improvements Newtown		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records identify no wildlife preserves, no designated wilderness areas or critical habitats, and no federal-listed species records within the project area, or in the public land survey section or sections adjacent.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams

and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Indiana Bats and Northern Long-eared Bats** occur in Sulivan County and could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate a Bald Eagle nest within 1 mile of the project area.

- **Bald Eagles:** Bald Eagles (*Haliaeetus leucocephalus*) nest near streams or water bodies in the project area. Nests are large and fairly easy to identify. While no longer listed as endangered, eagles continue to be protected by the federal government under the Bald and Golden Eagle Protection Act. Work managers should be alert for nesting areas within 1500 meters of project activities, and follow federal guidelines at: https://www.fws.gov/midwest/eagle/permits/index.html if eagle nests are seen.

Following USFWS Incidental Take Guidelines: To avoid the incidental take of bald eagles we recommend:

- a buffer of at least 660 feet between project activities and the nests (including active and inactive nests).
- If project activities are within 660 feet of the nest, please restrict activities to outside the nesting season. The nesting season in Missouri is January 1 – July 15.
- If these recommendations cannot be implemented, incidental take of bald eagles may occur and a permit from USFWS may be necessary.
- Do not clear nests or nest trees.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T49N R33W S13, 18, 24, 25, 36		
County:	Jackson		
Query reference:	CR-KCS passing sidings improvements Blue Valley		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

The project crosses multiple streams connected to the Blue and the Missouri Rivers. Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species. See General Recommendations for additional information on minimizing impacts to aquatic resources.

- **Missouri River:** The Missouri River (together with its tributary mouths) is home to many aquatic species of federal and state concern, including federal-listed Pallid Sturgeon, state-listed Lake Sturgeon, Flathead Chub, and others. Bluffs, banks, and floodplains may also include habitat used by listed Gray bats, Indiana bats and Bald Eagles. All these are sampled at points but must be assumed to be present in suitable habitats through extended river reaches.
  - Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species.
  - Regulations enforced by other agencies to protect water quality and human health are generally adequate to protect the needs of wildlife as well.
  - Projects that place fill in or discharge water to the river are subject to federal permits, and strict observance of conditions required in those permits is important to minimize risk of damage to endangered species.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate Tri-colored bats (*Perimyotis subflavus*, S2 – Imperiled) occur near the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Karst:** Jackson County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.

- Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
- Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
- When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T47N R33W S14, 23, 22, 27, 34 T46N R33W S03, 09		
County:	Jackson/Cass		
Query reference:	CR-KCS passing sidings improvements Grandview		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate several Bald Eagle nests within 3 miles of the project area.

- **Bald Eagles:** Bald Eagles (*Haliaeetus leucocephalus*) nest near streams or water bodies in the project area. Nests are large and fairly easy to identify. While no longer listed as endangered, eagles continue to be protected by the federal government under the Bald and Golden Eagle Protection Act. Work managers should be alert for nesting areas within 1500 meters of project activities, and follow federal guidelines at: https://www.fws.gov/midwest/eagle/permits/index.html if eagle nests are seen.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate the following state-ranked species near the project area:

Scientific Name	Common Name	State Rank	Proximity (miles)
Agalinis auriculata	Auriculate False Foxglove	S3	<1
Calephelis borealis	Northern Metalmark	S1	<1
Plestiodon obsoletus	Great Plains Skink	S2	<2

Speyeria idalia	Regal Fritillary	S3	<2

State Rank Definitions:

- S1: Critically imperiled in the state because of extreme rarity of or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically, 5 or fewer occurrences or very few remaining individuals (<1,000).
- S2: Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state (6 to 20 occurrences or few remaining individuals).
- S3: Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.
- S4: Uncommon but not rare, and usually widespread in the nation or state. Possible cause of long-term concern. Usually more than 100 occurrences and more than 10,000 individuals.
- S#S#: Range Rank: A numeric range rank (e.g., S2S3) is used to indicate the range of uncertainty about the exact status.
- ?: Denotes inexact or uncertain numeric rank.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S.**

Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.

- **Karst:** Jackson County and Cass County have known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T29N R34W S03, 02		
County:	Jasper		
Query reference:	CR-KCS passing sidings improvements Asbury		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records identify no wildlife preserves, no designated wilderness areas or critical habitats, and no federal-listed species records within the project area, or in the public land survey section or sections adjacent.

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records indicate the following state-ranked species near the project area:

Scientific Name	Common Name	State Rank	Proximity (miles)
Circus hudsonius	Northern Harrier	S2	<2
Gryllotalpa major	Prairie Mole Cricket	S3	<1
Lithobates areolatus circulosus	Northern Crawfish Frog	S3	<2

State Rank Definitions:

- S1: Critically imperiled in the state because of extreme rarity of or because of some factor(s) making it especially vulnerable to extirpation from the state. Typically, 5 or fewer occurrences or very few remaining individuals (<1,000).

- S2: Imperiled in the state because of rarity or because of some factor(s) making it very vulnerable to extirpation from the state (6 to 20 occurrences or few remaining individuals).
- S3: Vulnerable in the state either because rare and uncommon, or found only in a restricted range (even if abundant at some locations), or because of other factors making it vulnerable to extirpation. Typically 21 to 100 occurrences or between 3,000 and 10,000 individuals.
- S4: Uncommon but not rare, and usually widespread in the nation or state. Possible cause of long-term concern. Usually more than 100 occurrences and more than 10,000 individuals.
- S#S#: Range Rank: A numeric range rank (e.g., S2S3) is used to indicate the range of uncertainty about the exact status.
- ?: Denotes inexact or uncertain numeric rank.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

- **Greater Prairie Chicken:** The proposed project occurs in the historic range of Greater Prairie Chickens (*Tympanuchus cupido*), a bird on the state's list of endangered species. Populations have been in serious decline for decades, and have reached a point where Greater Prairie Chickens could be gone from Missouri within a few years. The dominant factor in their decline is conversion of native prairie habitats to other uses. Other prairie dependent species are also in serious decline for the same reason. Greater Prairie Chickens range over a broad territory perhaps nesting, breeding and foraging in grasslands several miles apart. Even if Greater Prairie Chickens are not present, it is important to conserve as much as possible any grasslands dominated by native plant cover in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/GreaterPrairieChickenBMP.pdf for best management recommendations.

- **Karst:** Jasper County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by

the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- **Conservation Opportunity Areas:** The project is within Spring River Priority Watershed Conservation Opportunity Area. COAs are key landscapes that represent the greatest opportunities for sustainable conservation of the Missouri's diverse flora and fauna and the natural communities they depend upon, including: grasslands (including prairie and savanna), glades, forests and woodlands, wetlands, caves and karst, and rivers and streams. COAs have been identified based on several factors, including the diversity and rarity of species and natural communities present, and the comparative likelihood/importance of projects to maintain them in the area over time. COAs have no regulatory role, but do reflect interest as a planning tool from multiple government agencies, non-governmental organizations and citizen groups to facilitate conservation in the area. Maintenance of high quality natural terrestrial and aquatic communities will help provide important habitat for the COA's biodiversity. Funding might be available to manage for important habitats within the COA. Please contact Missouri Department of Conservation for more information.

- **Indiana Bats and Northern Long-eared Bats** could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.
  - Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
  - Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
  - When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Natural Heritage Review Report

November 23, 2021

Kaitlyn Torrey
VHB
ktorrey@vhb.com

NHR ERT ID:	NA	NHR ERT Level:	
Project type:	Transportation		
Location/Scope:	T23N R32W S19, 30		
County:	McDonald		
Query reference:	CR-KCS passing sidings improvements MP186		
Query received:	11/16/2021		

This NATURAL HERITAGE REVIEW is not a site clearance letter. Rather, it identifies public lands and records of sensitive resources located close to and/or potentially affected by the proposed project. If project plans or location change, this report may no longer be valid. On-site verification is the responsibility of the project. Natural Heritage records were identified at some time and location. This report considers records near but not necessarily at the project site. Animals move and, over time, so do plant communities. To say "there is a record" does not mean the species/habitat is still there. To say that "there is no record" does not mean a protected species will not be encountered. These records serve as one reference and additional information (e.g. wetland or soils maps, on-site inspections or surveys) should be considered. Look for additional information about the biological and habitat needs of records listed to avoid or minimize impacts. More information is at https://mdc.mo.gov/discover-nature/places/natural-areas and https://mdc12.mdc.mo.gov/applications/mofwis/mofwis_search1.aspx

Level 3: Records of federal-listed (also state-listed) species or critical habitats near the project site:

Natural Heritage records indicate several aquatic species of conservation concern associated with nearby Indian Creek, including the federally endangered Neosho Mucket and the state endangered Slippershell Mussel. Terrestrial projects that manage construction and include operation plans to avoid runoff of sediment or pollutants are unlikely to affect the aquatic species.

- **Mussels:** Mussels are relatively immobile animals that are vulnerable to pollutants, sediment discharges, channel alterations and other activities destructive to mussel habitat. Activities that alter or destabilize stream bottoms or banks or introduce silt, chemical or organic pollutants should be avoided. Avoid crossing flowing water but, if unavoidable, minimize crossing distance and use temporary crossings that do not restrict water flow. See https://mdc.mo.gov/sites/default/files/2020-06/FreshwaterMusselsBMP.pdf for Best Management Practices regarding these animals.

- **Stream Protection:** Streams in the area should be protected from soil erosion, water pollution and in-stream activities that modify or diminish aquatic habitats. Best management recommendations relating to streams and rivers may be found at https://live-mdcd8.pantheonsite.io/sites/default/files/2020-06/Streams.pdf

FEDERAL LIST species/habitats are protected under the Federal Endangered Species Act. Contact the U.S. Fish and Wildlife Service (101 Park Deville Drive Suite A, Columbia, Missouri 65203-0007; 573-234-2132) for Endangered Species Act coordination and concurrence information).

Level 2: Records of state-listed (not federal-listed) endangered species AND / OR state-ranked (not state-listed endangered) species and natural communities of conservation concern. The Department tracks these species and natural communities due to population declines and/or apparent vulnerability.

Natural Heritage records identify no state-listed endangered species within the project area.

Natural Heritage records identify no state-ranked species/natural communities within the project area.

There are no regulatory requirements associated with this status, however we encourage voluntary stewardship to minimize the risk of further decline that could lead to listing.

STATE ENDANGERED species are protected under the Wildlife Code of Missouri (3CSR10-4.111). See https://mdc.mo.gov/sites/default/files/mo_nature/downloads/2021_SOCC.pdf for a complete list of species and communities of conservation concern.

General recommendations related to this project or site, or based on information about the historic range of species (unrelated to any specific Natural Heritage records):

- **Transportation:** Transportation related projects typically change the plants and animals that live on the right-of-way or in the vicinity. Minimize erosion and sedimentation/runoff to nearby streams and lakes by carefully adhering to any "Clean Water Act Permit" conditions (Missouri DNR or US Army Corps of Engineers); and include design elements to manage stormwater so that present water discharge rates from the site to streams during heavy rain events are not increased. Revegetation of disturbed areas is recommended to minimize erosion, as is restoration with native plant species compatible with the local landscape and wildlife needs. Annuals like ryegrass may be combined with native perennials for quicker green-up. Avoid aggressive exotic perennials such as Crown Vetch and Sericea lespedeza.

- **Gray Bats:** Gray Bats (*Myotis grisescens*, federal and state-listed endangered) occur in McDonald County and could occur in the project area, as they forage over streams, rivers, and reservoirs. Avoid entry or disturbance of any cave inhabited by gray bats and when possible retain forest vegetation along the stream and from the gray bat cave opening to the stream.

- **Indiana Bats and/or Northern Long-eared Bats** occur in McDonald County and could occur in the project area. Indiana Bats *(Myotis sodalis*, federal and state-listed endangered) and Northern Long-eared Bats (*Myotis septentrionalis,* federal-listed threatened) hibernate during winter months in caves and mines. During the summer months, they roost and raise young under the bark of trees in riparian forests and upland forests near perennial streams. During project activities, avoid degrading stream quality and where possible leave snags standing and preserve mature forest canopy. Do not enter caves known to harbor Indiana Bats and/or Northern Long-eared Bats, especially from September to April. **If any trees need to be removed by your project, please contact the U.S. Fish and Wildlife Service (Ecological Services, 101 Park Deville Drive, Suite A, Columbia, Missouri 65203-0007; Phone 573-234-2132 Ext. 100 for Ecological Services) for further coordination under the Endangered Species Act.**

- **Karst:** McDonald County has known karst geologic features (e.g. caves, springs, and sinkholes, all characterized by subterranean water movement). Few karst features are recorded in Natural Heritage records, and ones not noted here may be encountered at the project site or affected by the project. Cave fauna (many of which are species of conservation concern) are influenced by changes to water quality, so check your project site for any karst features and make every effort to protect groundwater in the project area. See https://mdc.mo.gov/sites/default/files/2020-06/Karst.pdf for best management recommendations.

- Invasive exotic species are a significant issue for fish, wildlife and agriculture in Missouri. Seeds, eggs, and larvae may be moved to new sites on boats or construction equipment, so inspect and clean equipment thoroughly before moving between project sites.

- Remove any mud, soil, trash, plants or animals from equipment before leaving any water body or work area.
- Drain water from boats and machinery that has operated in water, checking motor cavities, live-well, bilge and transom wells, tracks, buckets, and any other water reservoirs.
- When possible, wash and rinse equipment thoroughly with hard spray or HOT water (≥140° F, typically available at do-it-yourself carwash sites), and dry in the hot sun before using again.

These recommendations are ones project managers might prudently consider based on a general understanding of species needs and landscape conditions. Natural Heritage records largely reflect sites visited by specialists in the last 30 years. Many privately owned tracts have not been surveyed and could host remnants of species once but no longer common.

Date: December 3, 2021
Subject: Elements of Conservation Concern
Railroad Siding Locations
Benton and Polk Counties, Arkansas
Dorsey, MP 377
ANHC No.: P-CF..-21-090

Ms. Kaitlyn Torrey
VHB Environmental
1355 Peachtree St, NE
Suite 100
Atlanta, GA 30309-3269

Dear Ms. Torrey:

Staff members of the Arkansas Natural Heritage Commission have reviewed our files for records indicating the occurrence of rare plants and animals, outstanding natural communities, natural or scenic rivers, or other elements of special concern within or near the two proposed railroad siding locations in Benton (Dorsey) and Polk (MP377) Counties, Arkansas. The results of this review are provided as Geographic Information System (GIS) shapefiles. Documentation explaining the information in the shapefiles is included.

No elements of special concern have been recorded within the area delineated for the Dorsey site in Benton County, Arkansas. However, Wolf Creek appears to run along the west side of the railroad right-of-way. Wolf Creek is known to support the following species of state conservation concern approximately 0.5 – 1.0 mile upstream of the project site:

Faxonius macrus, Neosho Midget Crayfish
Nocomis asper, redspot chub

Efforts should be made to avoid and minimize impacts to Wolf Creek. Best Management Practices should be used and carefully monitored to maintain water quality and reduce sedimentation. It is also of note that the project falls within a Karst region of the state characterized by caves, springs, and sinkholes. These Karst ecosystems support a variety of rare species, including several that are listed by the U.S. Fish and Wildlife Service as Endangered or Threatened. Although your project is outside of any known cave recharge zones, I've provided a link to a U.S. Fish and Wildlife Service Document entitled "Community Growth Best Management Practices for Conservation of Karst Recharge Zones." This document provides useful recommendations on Best Management Practices within a Karst region:

https://www.fws.gov/arkansas-es/docs/General%20Karst%20big%20BMP%20packet.pdf

One species of state conservation concern has been mapped within the MP377 siding site:

Ambystoma annulatum, Ringed Salamander

This species occurs in Arkansas, Missouri and Oklahoma where it occupies hardwood and mixed hardwood-pine forests usually in damp areas near small, shallow ponds used for breeding. Loss of breeding ponds and degradation of forested habitat are the primary threats to this species. Efforts should be made to minimize impacts to forested habitat to the extent possible.

Benton and Polk County Element lists are enclosed for your reference. Represented on these lists are elements for which we have records in our database. The lists have been annotated to indicate those elements known to occur within a one and a five-mile radius of the project areas. A legend is enclosed to help you interpret the codes used on this list.

Please keep in mind that the siding sites may contain important natural features of which we are unaware. Staff members of the Arkansas Natural Heritage Commission have not conducted a field survey of these locations. Our review is based on data available to the program at the time of the request. It should not be regarded as a final statement on the elements or areas under consideration. Because our files are updated constantly, you may want to check with us again at a later time.

Thank you for consulting us. It has been a pleasure to work with you on this study.

Sincerely,

Cindy Osborne

Atlanta, GA 30309-3269

Dear Ms. Torrey:

Staff members of the Arkansas Natural Heritage Commission have reviewed our files for records indicating the occurrence of rare plants and animals, outstanding natural communities, natural or scenic rivers, or other elements of special concern within or near the proposed railroad siding project in Gentry, Arkansas. We find no records at present time.

It is of note that the project site falls within an area that was likely open savanna historically, with pockets of prairie, and could harbor some remnant grassland flora including species of conservation concern (we are aware of several older records for sensitive species in the vicinity of this railroad right-of-way outside of the project area). However, because the strip is very narrow and has been highly impacted by past management, in its current condition, it is unlikely to support rare species in the long term. If the project presented the opportunity to enhance or support native prairie vegetation, it could offset some of the potential adverse impacts.

This portion of Benton County falls within a Karst region of the state characterized by caves, springs, and sinkholes. These Karst ecosystems support a variety of rare species, including several that are listed by the U.S. Fish and Wildlife Service as Endangered or Threatened. Although your project is outside of any known cave recharge zones, I've provided a link to a U.S. Fish and Wildlife Service Document entitled "Community Growth Best Management Practices for Conservation of Karst Recharge Zones." This document provides useful recommendations on Best Management Practices within a Karst region:

OBS Ref. 2021-667-BUS-VBH

Dear Ms. Torrey, Nov. 16, 2021

We have reviewed occurrence information on federal and state threatened, endangered or candidate species, as well as non-regulatory rare species and ecological systems of importance currently in the Oklahoma Natural Heritage Inventory database for the following location you provided:

Sec. 13 and 24-T17N-R25E and Sec. 18-T17N-R26E, Adair County

We found no occurrences of relevant species within the vicinity of the project location as described. However, absence from our database does not preclude such species from occurring in the area.

If you have any questions about this response, please send me an email, or call us at the number given below.

Although not specific to your project, you may find the following links helpful.

OBS Ref. 2021-668-BUS-VBH

Dear Ms. Torrey, Nov. 16, 2021

We have reviewed occurrence information on federal and state threatened, endangered or candidate species, as well as non-regulatory rare species and ecological systems of importance currently in the Oklahoma Natural Heritage Inventory database for the following location you provided:

Sec. 35-T15N-R24E, Adair County

We found 12 occurrence(s) of relevant species within the vicinity of the project location as described.

Species Name	Common Name	Federal Status
Myotis septentrionalis	**Northern Long-eared Bat**	**Threatened**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	2
Adair	Sec. 30-T15N-R25E	1
Adair	Sec. 32-T15N-R25E	1
Corynorhinus townsendii ingens	**Ozark Big-eared Bat**	**Endangered**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	1
Adair	Sec. 23-T15N-R24E	1
Adair	Sec. 31-T15N-R25E	1
Adair	Sec. 32-T15N-R25E	1
Myotis grisescens	**Gray Myotis**	**Endangered**
County	***TRS***	***Count***
Adair	Sec. 4-T14N-R24E	1
Adair	Sec. 22-T15N-R24E	1
Adair	Sec. 23-T15N-R24E	1
Haliaeetus leucocephalus	**Bald Eagle**	**Protected**
County	***TRS***	***Count***
Adair	Sec. 20-T15N-R25E	1

Additionally, absence from our database does not preclude such species from occurring in the area.

If you have any questions about this response, please send me an email, or call us at the number given below.

Invoice Number	21120308

Personnel of the Coastal & Nongame Resources Division have reviewed the preliminary data for the captioned project. After careful review of our database, no impacts to rare, threatened, or endangered species or critical habitats are anticipated for the proposed project. No state wildlife refuges, wildlife management areas, or scenic streams are known to occur at the specified site within Louisiana's boundaries.

The Wildlife Diversity Program (WDP) has compiled data on rare, endangered, or otherwise significant plant and animal species, plant communities, and other natural features throughout the state of Louisiana. WDP reports summarize the existing information known at the time of the request regarding the location in question. The quantity and quality of data collected by the WDP are dependent on the research and observations of many individuals. In most cases, this information is not the result of comprehensive or site-specific field surveys; many natural areas in Louisiana have not been surveyed. This report does not address the occurrence of wetlands at the site in question. WDP reports should not be considered final statements on the biological elements or areas being considered, nor should they be substituted for on-site surveys required for environmental assessments. WDP requires that this office be acknowledged in all reports as the source of all data provided here. If at any time WDP tracked species are encountered within the project area, please contact the WDP Data Manager at 225-763-3554. If you have any questions, or need additional information, please call 225-765-2357.

Sincerely,

for Carolyn Michon

Wildlife Diversity Program

Appendix P

Environmental Justice

This appendix provides a summary of the data OEA collected to evaluate the potential for the Proposed Acquisition to result in disproportionately high and adverse human health or environmental effects on potential Environmental Justice (EJ) populations.

P.1 System-wide Demographic Analysis

Table P.1-1 lists the census block groups (block group) that met the thresholds established for identifying potential minority populations. As described in *Section 3.13.1, Approach*, OEA assumed minority populations exist in the study area when either:

- At least 50 percent of the people in the block group self-identify as being of minority status; or
- The percentage of the population of minority status in the block group is at least 10 percentage points higher than for the entire county in which the population is located.

OEA identified a total of 49 block groups as areas with potential minority populations. This represented approximately 23 percent of the study area data set, which included 217 total block groups. The block groups identified as potential minority populations contained predominantly individuals who selected "Black or African American alone" on the U.S. census (approximately five percent of block groups in the data set), followed by "Asian alone" (three percent of the block groups in the data set), then "Some Other Race alone" (approximately two percent of the block groups in the data set). Approximately 14 percent of the block groups were identified as potential "Hispanic or Latino" populations.

Table P.1-2 lists the block groups that met the thresholds established for identifying potential low-income populations. As described in *Section 3.13.1, Approach*, OEA defined low-income to mean individuals with an income less than 200 percent of the federal poverty level (less than or equal to twice the federal poverty level). Consistent with the U.S. Environmental Protection Agency's guidance and OEA's practice in past railroad merger cases, OEA identified a block group as potentially containing low-income populations when one or both of the following conditions was met:

- At least 50 percent of the population for whom poverty status is determined in the block group qualifies as low-income; or
- The percentage of the population for whom poverty status is determined in the block group that qualifies as low-income is at least 10 percentage points higher than for the entire county in which the population is located.

OEA identified a total of 62 block groups as areas with potential low-income populations, which represents approximately 29 percent of the total block groups in the data set.

Table P.1-3 lists the census block groups in the study area that OEA identified as populations with comparatively high rates of limited English-speaking households. Although not a threshold applied to identify potential EJ populations, identifying potential populations in the study area who are limited in English proficiency enables OEA to facilitate meaningful engagement and informed participation, and to determine where it may be appropriate for OEA to provide interpretation and translation services. As described in *Section 3.13.1, Approach,* OEA identified potential block groups in the study area where limited English-speaking populations may exist by identifying block groups where:

- At least 50 percent of households in the census block group were limited English speaking; or
- The percentage of limited English-speaking households in the census block group was at least 10 percentage points higher than for the entire county in which the block group is located in.

OEA identified 12 block groups (approximately six percent of the total block groups) within the study area as potentially needing English language assistance. Among these block groups, the predominant language spoken is Spanish, with some concentrations of households speaking "Other Indo-European Languages" and "Asian and Pacific Island Languages." The block groups identified as limited English-speaking are located in Illinois (eight of the 12 block groups), Iowa (two of the 12 block groups), and Texas (two of the 12 block groups).

Bold and italicized font in **Table P.1-1** through **Table P.1-3** is used for emphasis in displaying which EJ thresholds are exceeded.

P.2 Direct Outreach to Community Leaders

In addition to the public outreach during the scoping process for this EIS, OEA conducted direct outreach to local, county, and regional planning organizations, community-based organizations (for example, churches and civic groups), and government representatives to identify local concentrations of potential minority and low-income populations at the scale of neighborhoods or specific developments. Additionally, OEA conducted direct outreach to identify representatives of those groups in support of project notifications and engagements. **Table P.2-1** lists these locations, including their names, locations, and use types. After collecting contact information from the local, county, and regional planning organizations and government representatives, OEA conducted direct outreach to community leaders, which included representatives of community centers, food pantries, shelters, police stations, fire stations, worship leaders, principals and other school representatives within areas with minority and low-income populations. OEA attempted to contact 225 community leaders from Illinois to Texas. The aim of these engagements was to make sure they were familiar with the Proposed Acquisition, inform them of the environmental and comment process, and collect information on their concerns for use in the EJ analysis.

Table P.2-1. EJ Populations Provided by Community Leaders

Name	Address	City/Town/ Village	State	Zip Code	Type	Within Identified EJ Block Group from Desktop Analysis?	Within Noise Impact Area?
Cedar Heights Mobile Home Park	1720 S. Washington Blvd.	Camanche	IA	52730	Mobile Home Park	Yes	No

-	South of Mill St.	Liberty	MO	64068	Single Family	Yes	Yes

P.3 Community Analysis

OEA also examined the distribution of receptors that would experience adverse noise impacts as a result of the Proposed Acquisition at the community scale.[1] OEA identified a total of 70 incorporated areas within the EJ study area and then determined the percentage of adversely affected receptors in each of those 70 communities that were located within EJ block groups within. For some communities—including Bensenville, Elgin, Savanah, and Lanark in Illinois; Columbus Junction, Fredonia, Muscatine, Seymour, and Washington in Iowa; Chillicothe and Excelsior Springs in Missouri; and Deweyville, Rose City, and Vidor in Texas—most of the adversely affected receptors are located within EJ block groups. However, for the vast majority of communities (56 out of 70 communities or 80 percent of the total), most of the adversely affected receptors are located in non-EJ block groups. **Table P-3.1** provides a table showing the 70 communities with receptors subject to adverse noise impacts under the Proposed Acquisition and the distribution of adversely affected receptors within each community in EJ and non-EJ block groups.

[1] Incorporated areas were the unit of analysis in this community-based analysis; unincorporated areas were not included.

Table P.3-1. Communities in the Study Area with Receptors Subject to Adverse Noise Impacts (65 dBA Ldn and 3 dBA Increase) under the Proposed Acquisition (Receptors within (65 dBA Ldn) under Existing Conditions, No Action, and Proposed Acquisition Provided for Context)

Appendix Q
List of Preparers

Q.1 Surface Transportation Board, Office of Environmental Analysis

Danielle Gosselin	Director
David Navecky	Acting Deputy Director
Joshua Wayland, PhD	Project Manager / Environmental Protection Specialist
Victoria Rutson	Attorney Advisor
Alan Tabachnick	Historic Preservation Specialist

Q.2 Contractors

VHB supported the Surface Transportation Board's Office of Environmental Analysis in the performance of its environmental analyses and preparation of this Environmental Impact Statement.

Name, Project Function	Qualifications
VHB Project Management	
Alan Summerville, Project Manager	M.A. City Planning, B.A. Economics and Political Science; 30 years of experience participating in and managing the preparation of National Environmental Policy Act (NEPA) reviews, including 25 years on STB projects.
Carmen Bernett, PhD, ENV SP, Deputy Project Manager	PhD Environmental Science and Policy, M.S. Biology, B.A. English Literature; 8 years of experience in managing the preparation of NEPA reviews, including 6 years reviewing rail infrastructure projects.
Candice Andre, AICP, Deputy Project Manager	M.A. Urban & Regional Planning, B.S. Zoology; 19 years of experience participating in and managing the preparation of NEPA reviews, including multiple rail infrastructure projects.
Sydney Feldt, Data and Issue Management, Biological Resources	M.A. Environmental Science, B.S. Biology; 5 years of experience in ecological assessments, environmental planning, and preparing NEPA reviews.
VHB Project Staff	
Kathleen Arbogast, PE, Traffic and Roadway Systems	B.S. Civil Engineering; 8 years of experience in traffic engineering.

Name, Project Function	Qualifications
VHB Project Management	
Mark Arnoldy, PE, Air Quality	B.S. Civil Engineering; 7 years of experience in air quality assessments.
Dan Belin, AICP, Cumulative Impacts, Energy	M.S. Forestry, B.A. Environmental Studies/History; 25 years of experience in energy analysis and NEPA.
Josh Bendyk, PE, Freight Rail Safety	B.S. Civil Engineering; 12 years of experience in rail operations and signals.
Nicole Benjamin-Ma, Cultural Resources	B.A. Anthropology; 22 years of cultural resources management experience identifying, recording, and evaluating cultural resources.
Kimberly Blossom, Climate and Greenhouse Gas	B.S. Biology, B.A. French; 18 years coordinating with federal, state, and local regulatory agencies in preparation of permit documents and NEPA reviews.
Paul Carbone, PE, Passenger Rail and Freight Rail Safety	B.S. Civil Engineering; 12 years of railroad engineering, rail operations planning and NEPA experience.
David Coate, Independent Consultant, Noise and Vibration Advisor	M.S. Energy Technology, B.A. Mathematics, Physics and Chemistry; 34 years of experience in acoustics, rail noise, and vibration, support for NEPA reviews, including 25 years on STB projects.
Paige Cornell, Hazardous Materials Waste Sites	B.S. Environmental Science; 8 years of experience in environmental due diligence and hazardous waste assessments.
Valarie Discafani, AICP, PP, Passenger and Freight Rail Safety	M.A. City Planning, B.A. Geography; 29 years of experience in rail planning and preparation of NEPA reviews.
Lee Farmer, AICP, Mitigation	Master of City and Regional Planning, M.Phil Irish Studies, B.A. History; 18 years of experience in preparation of NEPA reviews.
Donny Goris-Kolb, AICP, Environmental Justice, Energy	Master of Urban Planning, Urban and Regional Planning; 15 years of experience in preparation of NEPA reviews.
Frank Gross, PhD, PE, Grade Crossing Safety and Delay	PhD Civil Engineering, M.S. Civil Engineering, B.S. Civil Engineering; 20 years of experience in transportation engineering and safety.
John Hansel, NEPA Strategist, Compliance Reviewer	J.D. and B.A. Economics; 40 years of experience participating in NEPA reviews and delivering NEPA training.
Todd Hill, AICP, PP, Biological Resources, Water Resources	B.S. Marine Biology; 33 years of experience in ecological evaluations, 23 years of experience preparing NEPA reviews.
Katherine Kudzma, Hazardous Materials Waste Sites	M.S. Sustainability and Environmental Management, B.S. Environmental Geosciences; 14 years of experience in due diligence, hazardous waste site assessments.
Ian Leidner, Passenger Rail	Master of Urban Planning, B.A. Urban Studies; 7 years of professional transportation/urban planning experience.
Christine Mavrick, RPA, Cultural Resources and Archaeology	M.A. and B.S. Anthropology, M.A. Sustainable Development; 12 years of experience identifying, recording, and evaluating cultural resources.

Name, Project Function	Qualifications
VHB Project Management	
Ellie McCurdy, Purpose and Need, Proposed Acquisition and Alternatives, Summary, Mitigation	M.A. Transportation Policy, Operations, and Logistics, B.A. Journalism and Political Science; 7 years of experience, including NEPA reviews and transportation planning.
Jennifer Morrissey, Document Development	M.S. Natural Resource Planning, B.A. History; 20 years of experience preparing NEPA reviews.
Erin Murphy, Cultural Resources	Masters of Heritage Preservation; 16 years of experience identifying, recording, and evaluating cultural resources.
Kara Opel, Document Development, Climate Change	M.A. Sustainable Cities, B.A. Government and Politics; 7 years working with federal agencies on environmental initiatives, 3 years of experience preparing NEPA reviews.
Andrew Pappas, RPA, Cultural Resources and Archaeology	M.A. Classical Archaeology, B.A. Anthropology; 18 years of experience identifying, recording, evaluating, and assessing cultural and archaeological resources.
Stephanie Pelletier, GISP, Geographic Information Systems	B.S. Environmental Sciences and Geography; 7 years of professional experience in Geographic Information Systems.
Heidi Richards, PE, Air Quality	B.S. Civil Engineering; 25 years of experience working on air quality assessments for state and federal agencies, including for NEPA reviews.
Jason Ross, PE, Noise and Vibration	M.E. Acoustics, B.S. Mechanical Engineering; 24 years of experience conducting transit and rail noise and vibration studies, including for NEPA reviews.
Lara Seltzer, Freight Rail Safety	M.A. City & Regional Planning, B.A. American Studies and Sociology; 2 years of professional transportation planning and railroad operations experience.
Rebecca Shedd, Noise and Vibration	B.A. Engineering, B.S. Environmental Engineering; 3 years of experience working on air quality and noise impact assessments.
Darrell Smith, Freight Rail Safety	B.A. Urban Studies and Planning; 30 years of experience conducting railroad and transit operations analysis and planning.
Ian Smith, PE, Water	M.B.A., B.S. Civil Engineering; 28 years of experience in water resource mapping, design and permitting.
Eben Sweetser, Freight Rail Safety	B.S. Transportation; 6 years of experience in railroad operations, safety, emergency response, and emergency management.
Andrew Topp, PE, PTOE, Traffic and Roadway Systems	B.S. Civil Engineering, Master of Civil Engineering; 23 years of experience conducting traffic engineering/capacity analyses.
Lauren Triebert, PE, Quality Control	B.S. Civil Engineering; 12 years of experience preparing NEPA reviews.
Casey Venzon, LEED AP^{BD+C}, Environmental Justice	B.A. Economics & Business Administration; 14 years of experience preparing NEPA reviews for transportation projects and environmental and sustainability planning.

Name, Project Function	Qualifications
VHB Project Management	
Baohong Wan, PhD, PE, Traffic and Roadway Systems	PhD in Civil/Transportation Engineering; 22 years of experience in traffic engineering/capacity analysis.
Meghan Wrenn, Energy, Cumulative Impacts	M.A. Sustainability, B.S. Biology; 5 years of experience in sustainability and climate action planning.

Appendix R

List of Agencies, Organizations, Tribes, and Persons to Whom Copies of this Draft EIS Are Sent

Board regulations identify the types of agencies and officials to receive environmental documentation (49 Code of Federal Regulations [C.F.R.] Part 1105.7) for comment. In addition, Council on Environmental Quality (CEQ) regulations identify appropriate distribution (40 C.F.R. Parts 1500–1508). This appendix lists the agencies, officials, and other interested persons receiving this Draft EIS for the Proposed Acquisition by CP of KCS. OEA has provided specific information about how to comment on this Draft EIS. The Board has distributed and made the Draft EIS available on August 5, 2022. The U.S. Environmental Protection Agency (EPA) will publish a Notice of Availability of the Draft EIS in the *Federal Register* on August 12, 2022. OEA has also made the Draft EIS available for viewing and downloading via the Board's website (www.stb.gov) and the Board-sponsored project website (www.CP-KCSMergerEIS.com).

OEA maintains an environmental distribution list composed of individuals with a specific role in the environmental process and individuals who have expressed an interest in the Proposed Acquisition. OEA has notified, by email or postcard, all parties on the environmental distribution list of the availability of the Draft EIS. In addition, OEA has notified the public through online advertising.

This appendix lists the federal, state, and local agencies; tribes; federal, state, and local elected officials; and other organizations that will receive or be notified of the availability of this Draft EIS. This appendix does not list the private individuals on the distribution list. Private individuals include people who attended public meetings, who requested to be put on the OEA distribution list through the project website, or who submitted scoping comments.

If you wish to receive a copy of the Draft EIS or have questions about where to find the Draft EIS, please call the toll-free phone number for the project at 1-888-319-2337 and leave your name, email address, and phone number.
