Docket # 35952

EI-24761

I will greatly appreciate your time in this matter. If this rail line goes through it will cut our County in half! Porter Hospital is north of proposed rail lines - Emergency vehicles will be delayed. In 2006 my husband had a serious heart issue. I shudder to think what would have happened if the ambulance had been delayed by trains or if the ambulance had to travel additional time to get to an overpass.

Please consider how important this is to our community.

Also we already have to have our vehicles tested for emissions to improve the quality of our air. How will all of those trains affect our air? And the quality of our air during construction?

I don't usually write or complain - but this is so very important to our county. Thank you again for your consideration.
