Washington, D.C. 20423-0001

Dear Mr. Williams:

RE: Docket numbers: FD - 34917 (CIRY Alternative Rail Service)
AB - 1066 (CIRY Abandonment)
AB - 878 (CIRY Abandonment)

218087
218086
218080

This letter is addressed to you regarding the Trails vs. Rails issue in Peoria, IL, involving what is known as the Kellar Branch.

I am the president of the Illinois Prairie Railroad Foundation and we have been working on this project since the beginning, when the city of Peoria gave the Peoria Park District permission to turn the Kellar Branch railroad line into a trail before pursuing the proper sequence of affairs to allow this to happen. The Kellar Branch was at the time a working railroad line.

We have done extensive investigation into the situation and do believe and can support the fact that the trail and rail line can share a joint right-of-way. Very little of the trail would have to be moved over a block or two along the way to accommodate it. The actual length of the rail line is 8.29 miles and the trail advocates want less than four miles of that.

Vernon A. Williams, Secretary
Rails vs. Trails
Peoria, IL
Page 2

At this point in time there is one business left on the Kellar Branch located in what is known as Pioneer Industrial Park. It is being served by CIRC (Central Illinois Railway). This company is not serving the user (Carver Lumber Co.) properly and the customer has incurred a lot of transloading fees, along with other problems. CIRC does not deliver on a regular basis thus interfering with Carver's business and affecting its bottom line. They (CIRC) have let it be known that they do not want to serve Carver on what is now called the West End Line that connects with UP. The cost of using CIRC for service has put Carver in a tenuous financial position and may force it out of business or to move from Peoria. There are 50 people employed by this company and they and their families will be drastically affected. There are approximately 200 people that will be affected. Their livelihood will be lost and the city will lose the tax base and the customers will lose a much used and needed business that has been here in this community paying taxes and employing people for 60 years.

A simple solution to the problem is to reinstate PIRC as the operator the Kellar Branch and build the trail alongside the rail line. It can be done and would solve the problem for everyone, which is the true definition of a "win-win" situation. Pioneer Railcorp has offered to assist in the building of the trail alongside the rail line if allowed a long-term lease or even purchase of it.

We have been in touch with the Park District in the past and they said that their engineering research said that the trail could not be built along side the rail line. We asked them for copies of this study and they couldn't find them. This was several years ago. Recently, we asked for a copy of this study and they still said they couldn't find it. In effect, they are refusing to produce this document and yet are continuing to say that the trail and rail line can't co-exist. We have proof that it is being done in other areas in the state and in fact is being done right here in Peoria on the riverfront. The same trail and rail run side-by-side right down Water St., in Peoria, IL, having done so for several years with a fence separating the two.

We are also working with a number of groups in the area to use the Kellar Branch for a park-n-ride trolley for use as a tourist draw and also to provide commuter rail service if deemed feasible by the community. Along with its continuing use for rail freight service, the Kellar Branch right-of-way would provide three different functions.

Vernon A. Williams, Secretary
Rails vs. Trails
Peoria, IL
Page 3

This would be beneficial for all of Peoria and not just for a select few. It will increase economic development in the area and also assist in increasing the local tax base.

We are building a \$65 million museum along Peoria's downtown riverfront fronting a railroad mainline. This line also connects to the Kellar Branch and can be very beneficial to the tourism of Peoria and the new museum. Given the opportunity for economic development, tourism, and competitive rail service, it's imperative that the Kellar Branch be preserved as a rail corridor.

Carver Lumber has been a good citizen to the City of Peoria for many years. They have produced services and goods for this community and have employed dozens and dozens of people over the years. It would be a shame for them to be forced out of business because of the short sightedness of local officials. Not only will keeping the Kellar Branch as a freight line help Carver, but if it is reinstated, other businesses will then move into the area because they will be assured of rail service.

This rail service will be subject to competition of several rail lines that serve Peoria, whereas the "western connection" only connects to UP, which has no competition and therefore has total control of rates and service. At this point they are charging Carver nearly twice the amount it originally paid per car as when they used the Kellar Branch. Many businesses have not come to the area because of the uncertainty over whether rail service would be available and that the lack of competitive rail access has given an advantage to other communities in the region.

If cooler heads will prevail over this problem, and joint-use of the railroad right-of-way is allowed, then everyone can win. No segment of the local population will be left out.

Nearly a decade ago, a previous city council made the decision to convert the Kellar Branch to a hiking and biking trail, failing to use the proper process before the Surface Transportation Board. We do believe that the existing city council desires to do what is right and beneficial to the entire community.

Vernon A. Williams, Secretary
Rails vs. Trails
Peoria, IL
Page 4

Nearly a decade ago, a previous city council made the decision to convert the Kellar Branch to a hiking and biking trail, failing to use the proper process before the Surface Transportation Board. We do believe that the existing city council desires to do what is right and beneficial to the entire community.

Technically there are two users of the Kellar Branch at this time - O'Brien Steel and Carver Lumber. O'Brien Steel is on the south end of the track where it connects to the Tazewell & Peoria Railroad (TZPR) and therefore is not affected by the closure of the Kellar Branch.

Carver Lumber, however, is being forced to use an inefficient, slow and much more costly "western connection" for rail service, and thus is deeply affected by the closure, financially, since their costs have nearly doubled, not including the \$41,000 in transloading fees they had to absorb because the Kellar Branch was closed and the western connection was not yet opened, forcing them to use trucking to receive their materials. The city of Peoria had promised them in writing that they would receive comparable service and rates if they would agree to go with the western connection. Carver went along with the city's promises and ended up with no rail service for a time and transloading fees which no one has seen fit to reimburse since the city's written promises were broken.

We are enclosing several copies of articles from the local newspaper the Journal Star. These show the past users of the Kellar Branch and include Carver Lumber Co. Another article is the Industrial Directory showing the other companies formerly serviced by the Kellar Branch as far back as 1971, as per this directory.

The potential future use of this line is for freight starting with Carver Lumber Co., and other companies that can and will buy the old Cohen Furniture Company location on the Kellar Branch in Peoria Heights, and any other companies that will come into Pioneer Industrial Park and into Growth Cell Two that was especially built for attracting manufacturing companies that need rail service. If the Kellar Branch is restored to service, Peoria's only greenfield zoned for industrial development will finally be competitive with others in the region. This promotes business and economic development to the area and increased tax base for the community and employment.

Vernon A. Williams, Secretary
Rails vs. Trails
Peoria, IL
Page 5

We are also looking at "park-n-ride" along the Kellar Branch. Many people live out of the city and come in town to work every day. According to IDOT statistics, 29,817 come into Peoria to work everyday. We are the type of community that has a lot of small suburbs on the outskirts, thus allowing people to "live in the country" and work in the city. Those using the park-n-ride, would leave their vehicles in secure lots along the line, board the trolley and ride downtown to the riverfront and disembark and get on a city run bus line, which would deliver them to their various places of employment. This would free up the traffic on the downtown streets of Peoria, which are undergoing problems at this time. It would also reduce emissions by cutting vehicular traffic and there would be money saved from not having to build more parking decks and surface lots downtown. At this time leaving a parking deck in downtown Peoria at 5 p.m. in the afternoon is a horrendous chore. Another thing the park-n-ride would do is promote entrepreneurship by allowing a company to create enclosed trolley stops which would market newspapers, coffee, etc., at each stop. The drivers of the vehicles would not have to negotiate the stop and go traffic all the way through town, and still would leave them within the city limits after work so they could go shopping, to dinner or some other event in the city.

The trolley is also slated to be used as a tourism addition to the new museum being built on the riverfront and the newly-remodeled civic center just four blocks from the riverfront and the newly built O'Brien Ball Field also just three blocks from the rail line. Tourism dollars are among the largest dollars spent in the United States, but they only count if the tourist stays overnight. Then they visit the museum, ride the trolley, go to an event at the civic center or to the ball field, stay overnight in a hotel, have meals, buy gas and shop. This is Tourism dollars that add to our community and increase economic development.

The trolley will also be used for rental to corporate businesses for meetings, weddings, retirement parties, etc. The Trolley itself can be obtained by Economic Development Grants without cost to the city, but it has to have the Kellar Branch open to run on.

The second and definitely the highest dollar spent in the country is advertising. Marketing people tell us that advertisers love having the trolley and its park n ride stop stations to advertise in.

Vernon A. Williams, Secretary
Rails vs. Trails
Peoria, IL
Page 6

It's what they call a "captive" audience They can use inside billboards as you have seen on busses. They can use LED signs and monitors both in the trolley and the station stop. They can change their ads daily if they wish and this gives them a much bigger market. These advertising dollars along with small user fees from passengers are what will pay for the maintenance of the trolley and the line. This along with the efforts and money from the freight rail user will maintain the track and no one company will bear all of the burden and it will bring money to the city coffers and not take money from it.

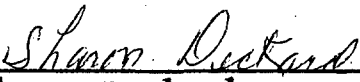

So with freight, park-n-ride trolley, tourism use and business rental and advertisers income this is a major impact on the Peoria community.

And the biggest bonus of all is that the freight, trolley and the trail can run side-by-side, and thus everybody from all segments of the community wins.

We appreciate your taking the time to read this letter and hope that it may help you to understand a little better what a problem we have here. Most of it is the "me, me" situation; Everyone wants their pet project and can't think out of the box to include everyone.

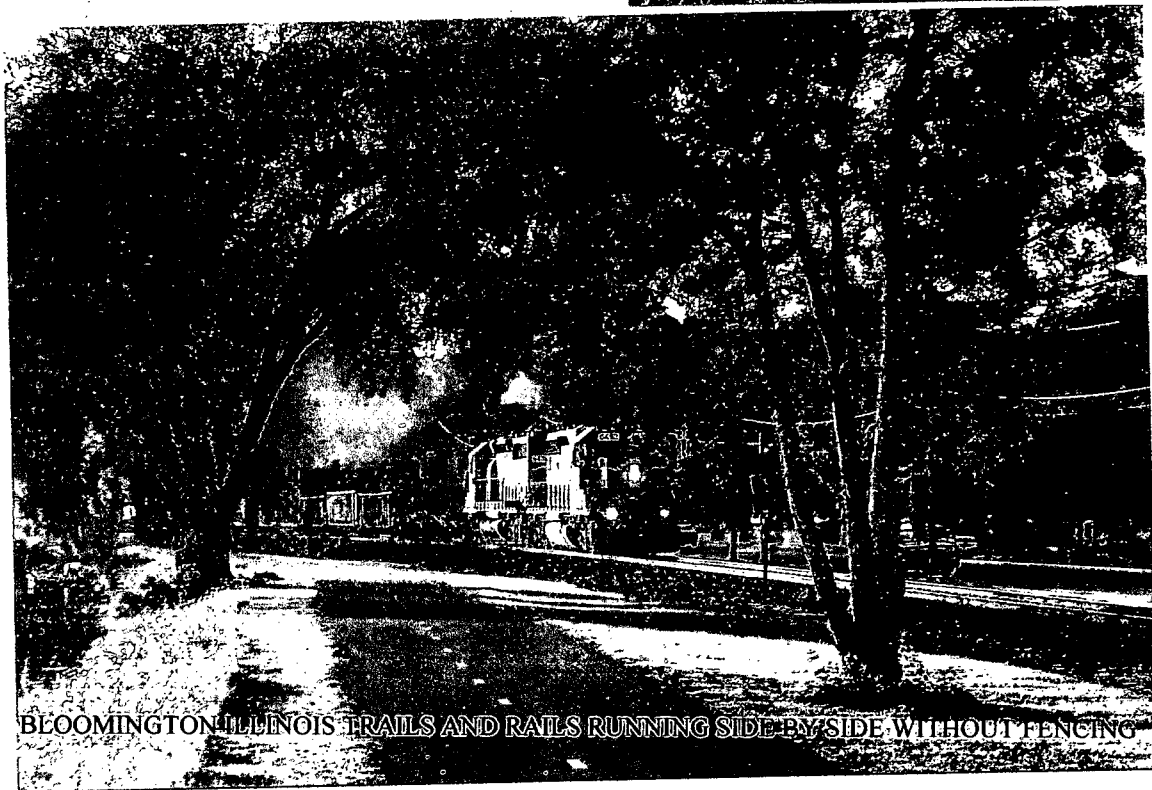

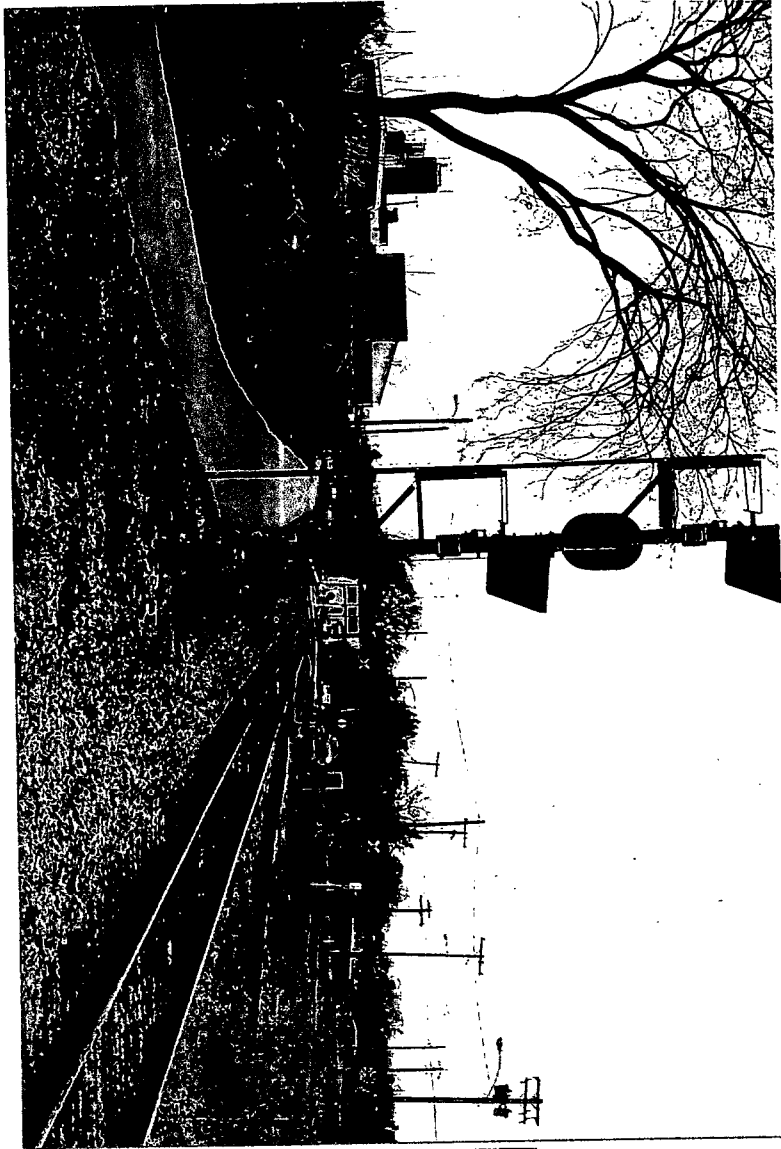

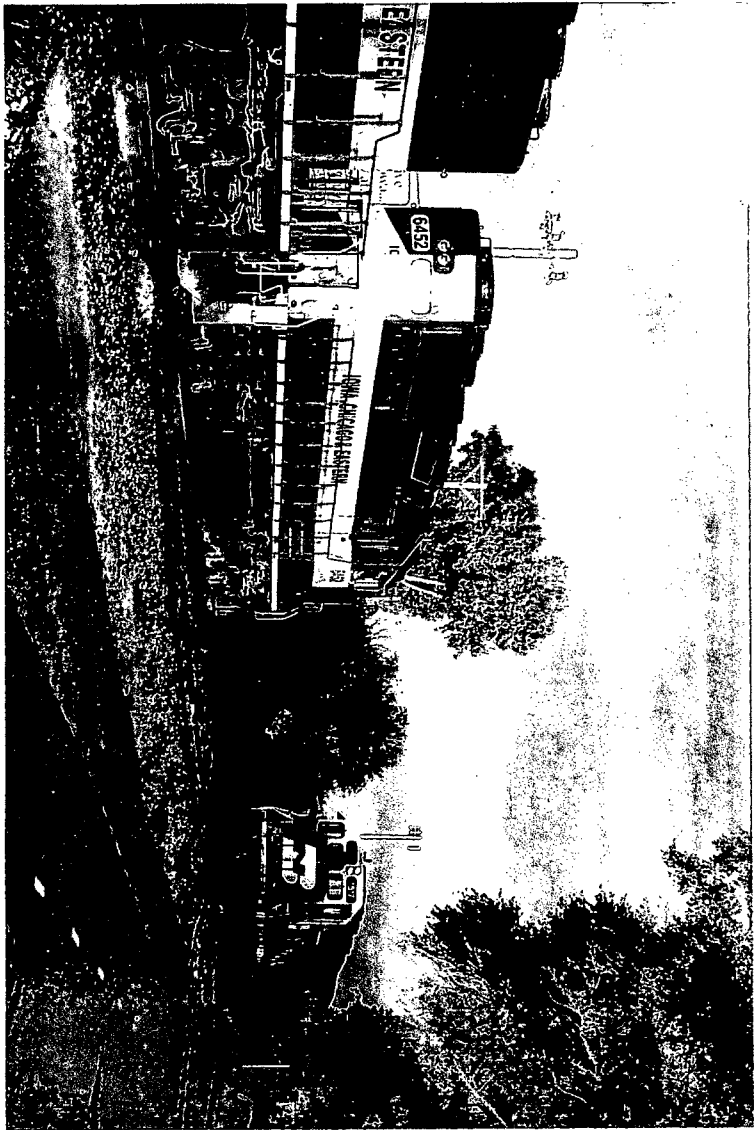

Attached are signatures of those who feel that this win-win situation for the Kellar Branch will benefit the community and keep the Kellar Branch alive and well and productive

Sincerely

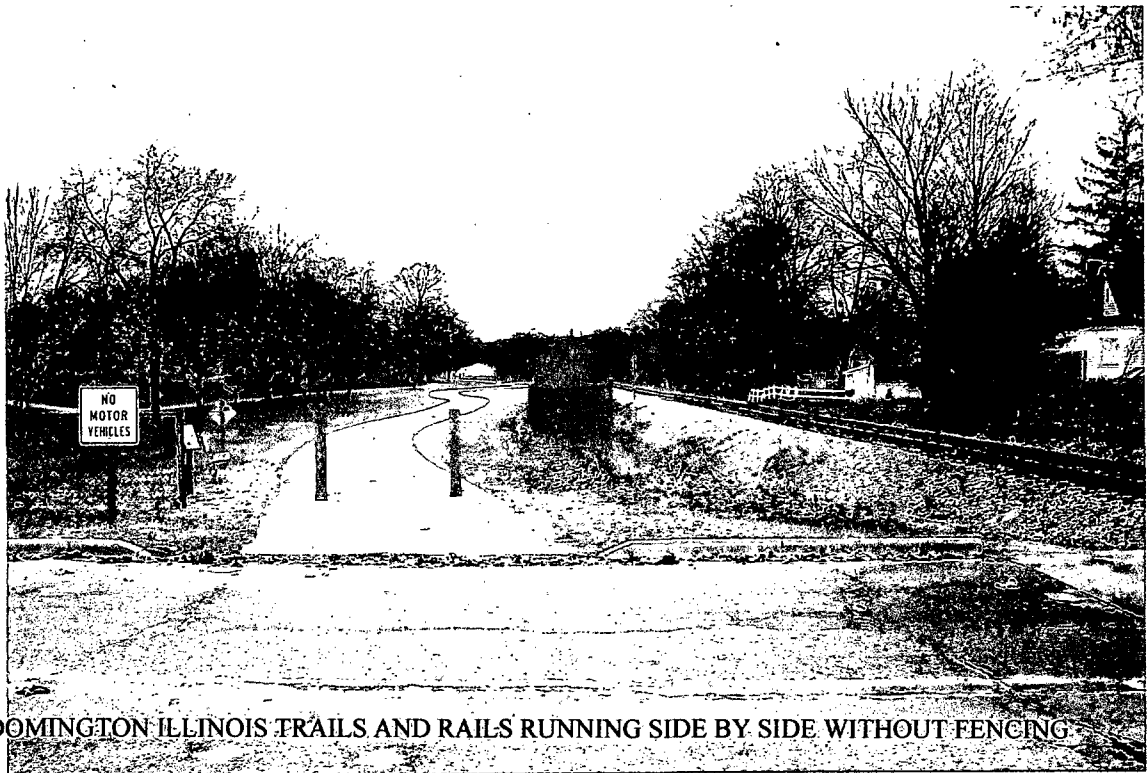

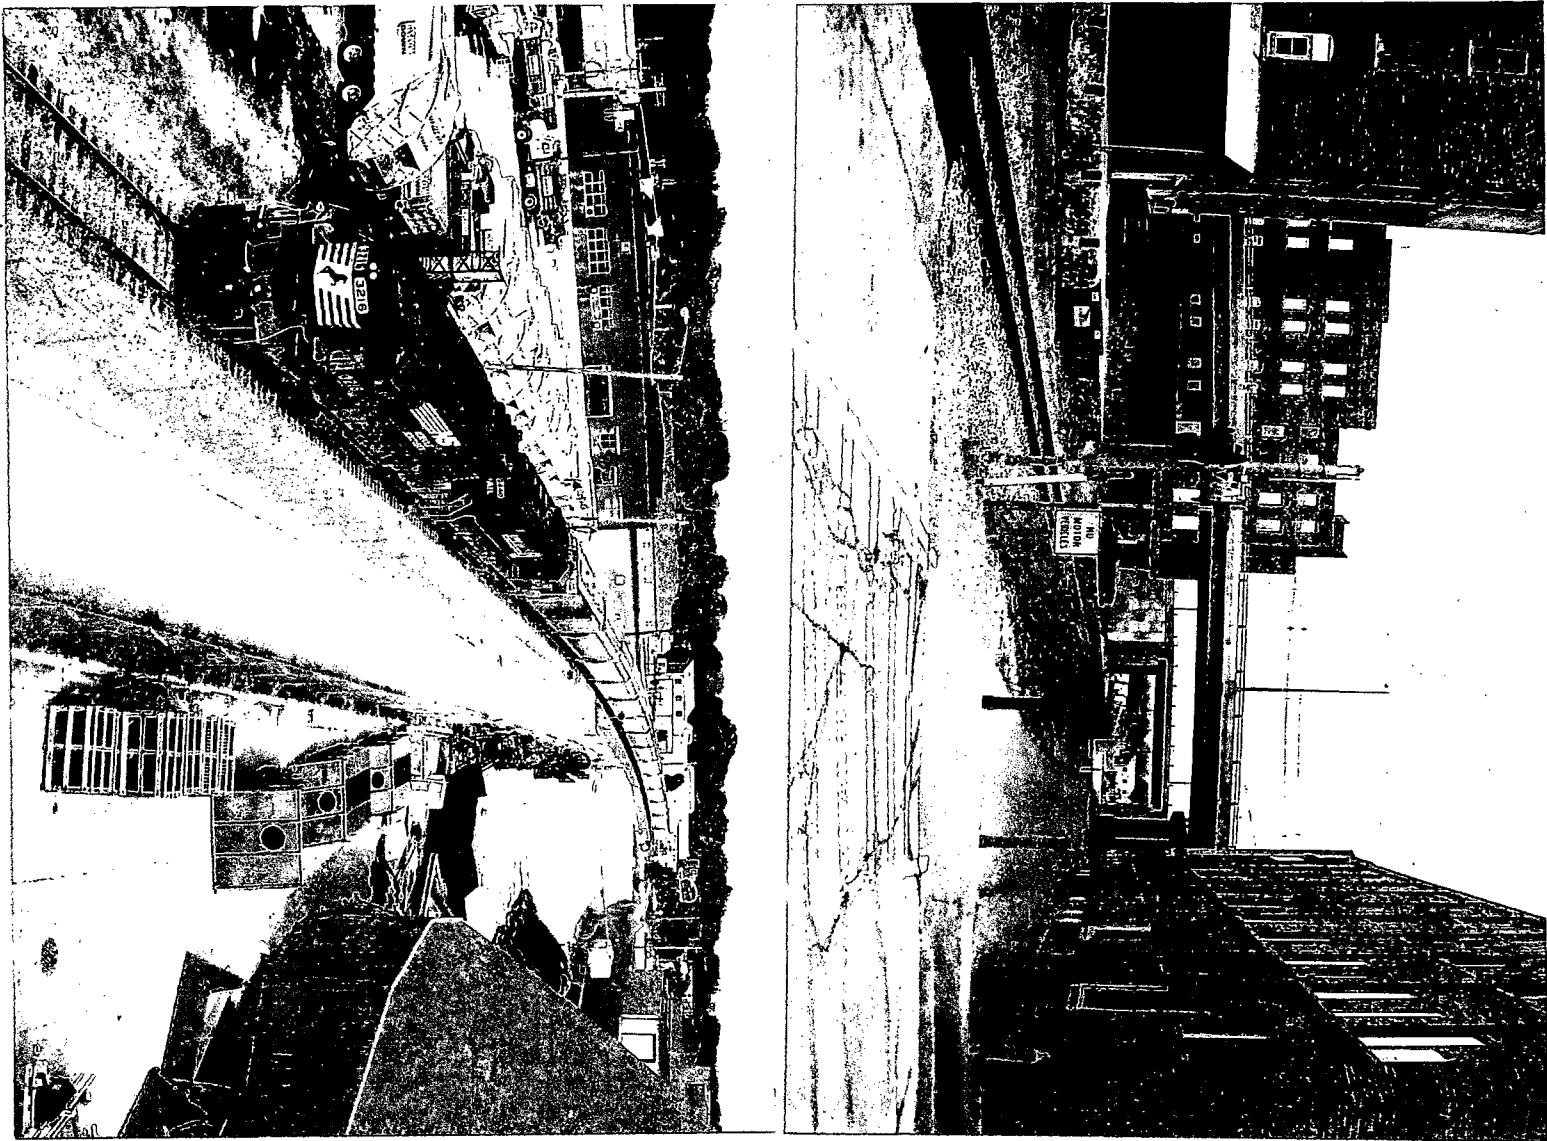

Sharon Deckard

City ponders its future in train business

□ Part of the debate on Peoria's role focuses on linking Rock Island trail, those downtown

By STEPHEN WITMER

of the Journal Star

Peoria soon might be getting out of the railroad business, calling it quits on the eight-mile leg of the former Rock Island line.

Or the city might be getting back into the business, pumping more money into maintenance of the Peoria, Peoria Heights & Western line.

A railroad oversight commission is reviewing options and will make its recommendations to the City Council and Peoria Heights Village Board. Also drawn into the debate is the ambition to use the rail corridor to link the Rock Island recreation trail to downtown Peoria and a net-

work of trails east of the Illinois River.

The city bought the track-age and right of way from the bankrupt Rock Island line in 1984, paying \$856,000 for the railroad's Kellar Branch line.

At the time, city leaders viewed the acquisition as a way to pump up Pioneer Park. Peoria was entering its darkest hour economically, and the industrial/commercial strip was not developing as fast as expected.

Providing rail service to Pioneer Park, it was believed, would bolster existing businesses and make the development more attractive for new arrivals.

City officials and those from the Peoria Pekin & Union shook hands on a deal requiring the railroad to operate the short line for 20 years, with an escape clause for PP&U in the 13th year.

Less than 10 years into the

pact, the parties involved are looking for ways either to keep the city line rolling for another decade or gracefully bow out together.

Derailed

The original financing plan hinged on a combination of user fees, a Pioneer Park special service district and special assessments of properties along the rail line. Track acquisition and repair cost \$1.3 million, and the city expected to collect \$600,000 in special service fees and levies and about \$150,000 in special assessments.

The city had a comfort margin in the deal: Jordan Manufacturing, a wooden patio furniture manufacturer at 1625 W. Altorfer.

The company, which began in the mid-1970s in owner David Jordan's basement, grew to a local work force of more than 200 employees. Its

heavy use of the rail line was expected to pay the freight for much of the rail line's costs.

The comfort margin vanished in 1985, when Jordan declared Chapter 11 bankruptcy and moved his operations to Monticello, Ind.

"That really put a torpedo in the railroad ship," said Stephen Van Winkle, the city's public works director.

Van Winkle said the city projected about 460 railroad cars would be hauled on the line each year, with the city user fee of \$175 per boxcar used to abate the special assessment charges. The boxcar fee was dropped after Jordan left Peoria in an attempt to woo new business.

Paradoxically, the newly repaired tracks carried few users in the early years, but Van Winkle noted that business is starting to pick up now while

Please see RAIL, Page A10

Peoria Journal Star Nov. 25, 1993 Cover

FROM PAGE A1

RAIL

The tracks are in dire need of maintenance and upgrading. "Almost from the beginning, we have not made a profit," PP&U President Charles Hellums said. "In fact, we've made losses on the line."

Hellums said PP&U's losses on the city line are "relatively small" — in the neighborhood of \$50,000 a year.

The users

Only a few businesses use the line. Gateway Molding, a wholesale bakery and restaurant distributor and feed ingredient distributor, runs 250 to 275 cars a year to its site at 1610 Altoner and Carver Lumber. 8700 N. University, moves about 37 cars a year on the city line.

John's Furniture also runs a few cars a year up to its Peoria Heights warehouse in the former Babst complex. "Officials say Gateway is the only business that would be affected significantly if the rail line goes out of business," said Mayor President Charles Picher and Carver general manager Robert Hoppach refused comment on their rail usage, each citing the ongoing negotiations with the city rail commission.

Van Winkle said the list of needed repairs or upgrades includes about 300,000 in street crossings; an every-five-years track maintenance program of \$60,000 to \$80,000; and a general maintenance program running \$105,000 to \$110,000 a year.

Under the contract, the latter two costs would fall in PP&U's lap, but Van Winkle said the commission is looking at other ways of sharing those costs, such as asking the remaining users to again pay a per-car fee.

Another option would be connecting Pioneer Park with the Chicago & North Western line to the west.

Some critics, like Peoria City Councilman David Koehler, say the deteriorating rail line should be put to other uses.

"I don't think it generates that much of a benefit for the users up there," he said, adding that he would rather see the city subsidize an alternative transportation mode for Gateway than prop up the city railroad.

Rails to trails

Railroad commission members rode the rails last month in an observation car, amounting to a low-speed inspection of the line.

"It's not bad. The crossings were good, most of the track was good, there were some washout areas that need repair," said commission member Steve Ballistreri, an eco-trails enthusiast and a member of the park district's trails task force. "It would be easier to pull up the rails and ties."

A recreational trail would extend from Pioneer Park at least as far south as Knoxville or Prospect, and potentially as far as Arlington Street. Plans could incorporate bicycle lanes on city streets or route a portion of the trail through Springfield Cemetery.

"Then what we'd have on our side of the river is a continuation of the trail through the city."

The Peoria Park District plans next year to extend the Rock Island Trail from its current end point, Alta, to Pioneer Park, and envisions the city rail line as the next logical extension.

Jack Fuller, the park district's administrative assistant, said trail development could take place side by side with the railroad trackage. However, several sources estimated that the dual use would add \$500,000 to \$1 million to the trail's costs, as the track bed traverses a gully south of

Pioneer Park

The topography is such you'd have to spend a lot of money to bring (the trail) up," said George Burdett, a rail-to-trails enthusiast and a member of the park district's trails task force. "It would be easier to pull up the rails and ties."

A recreational trail would extend from Pioneer Park at least as far south as Knoxville or Prospect, and potentially as far as Arlington Street. Plans could incorporate bicycle lanes on city streets or route a portion of the trail through Springfield Cemetery.

"Then what we'd have on our side of the river is a continuation of the trail through the city."

ious bike trail 50 miles or more," Koehler said. "If be comes a real magnet for us in terms of people in search of recreational opportunity, it's in 1001's archives, and he could not estimate how much of the original grant the city would need to repay if they ceased operations before that date."

The PP&U also could exercise its "reopener" clause in 1997, effectively terminating its part of the deal. The railroad commission will meet again in December or January, Van Winkle said, and forward its recommendation to City Manager Peter Som-

Railroad to run through mid-1997

□ Future of little-used city line unclear after that; issue interests rails-to-trails advocates

By STEPHEN WITMER

of the Journal Star

PEORIA — The city will remain in the railroad business for at least three more years.

A decision by the Peoria, Peoria Heights and Western Railroad Commission ensured the little-used railroad will operate through mid-1997, and the panel also trimmed about a mile of track from the line.

The future beyond that date remains unclear. The city and the Peoria Pekin & Union Railroad signed an agreement in 1984 requiring the railroad to operate the short line for 20 years, but the railroad has the right to terminate the agreement at the 13-year mark, July 10, 1997.

"It really will depend on the traffic levels up there," PP&U

president Charles Hellums said. "We're watching it on a year-to-year basis."

The railroad commission spent more than a year looking at its options.

"We're in a wait-and-see mode," Peoria Public Works Director Steve Van Winkle said. "We feel comfortable PP&U will operate without any hitches through the 13-year period."

Though Van Winkle did not rule out a continuation of service past 1997, he did not offer much hope. "We're really not sinking any money into it for a longer-term stay," he said.

City records show four users of the line in 1993: Carver Lumber (27 rail cars); Gateway Milling (230 cars); Cohen's Furniture (20 cars); and O'Brien Steel (271 cars).

The eight-mile rail line, the former Rock Island Railroad's Keller Branch Line, runs from the PP&U line near Detweiler Marina up to Pioneer Park. The

city bought the line in 1984 for \$856,000, but usage has lagged below expectations.

If the city-owned line went out of business, the city would likely sell or lease 300 or 400 feet of track to PP&U to service O'Brien Steel, 1800 NE Adams, Van Winkle said. That would leave Gateway Milling, 1610 W. Altorfer, as the only substantial user left seeking other transportation modes.

Rails-to-trails advocates are watching the railroad issue, viewing the corridor as a potential expansion of the Rock Island Trail recreational path to downtown.

"I would like to see them phase (the city railroad) out," Councilman David Koehler said. "That piece, when it is done, will give us one of the best trail systems in the Midwest."

Jack Fuller, Peoria Park District administrative assistant and a member of the railroad commission, said the trail extension would cost several mil-

lion dollars if the track remains in place, but only about \$500,000 if the railroad bed is abandoned.

"We're going to have to wait on that decision," Fuller said. The Park District is extending the trail south into Pioneer Park and is in the process of applying for federal funding for the city railroad section.

The railroad commission reached its decision at its January meeting, and the City Council approved another of the commission's findings April 5: removing the northernmost 0.9 miles of the city rail line. Hellums said none of the businesses north of Carver Lumber have used the line in the last five years; the seven businesses will no longer pay a total of \$17,000 a year in special service area taxes.

All properties along the rail line — including the seven in the disconnected area — will continue to pay special assessment taxes, Van Winkle said.

Kellar Branch rail line's service getting up steam

By MIKE DEACON

OF THE JOURNAL STAR

Rail service along Peoria's 8.3-mile Kellar Branch of the old Rock Island line has been running smoothly since returning in early October, according to customers and a railroad executive.

"There have been no problems that I'm aware of," said E.L. Moyers, vice president of operations for the Peoria & Pekin Union Railroad. "All we need now is some business."

Three Peoria businesses have used the line thus far, Moyers said. They are Jordan Manufacturing Co., Baumgarten Distributing Co. and Carver Lumber Co. Reserve Supply Cooperative Corp. is expecting its first railroad order in a few days.

"We're glad to have it back," said Bud Howe, Carver Lumber Co. vice president, who estimated the company would use 50 to 100 carloads of lumber supplies per year.

"The two times we've used it, everything went smoothly," said Jim Brown, warehouse manager for Baumgarten Distributing.

Mary Strenn, assistant city manager for

programs, said the city had not received any complaints about service.

The city's railroad consultant, Fran Mueller, is continuing an effort to attract more businesses to the rail line, Strenn said.

Herman Brummell, president of Apollo Oil Co., and Earl Malchow, vice president of Peoria Plastic division of S.C.G. Toys, both said their companies are examining the possibility of using rail service. Malchow said his company may use 100 carloads annually to transport supplies and raw materials.

The rail line was purchased by the city to help Pioneer Industrial Park businesses and to help recruit new businesses to Peoria. The cost of buying and rehabilitating the line, estimated at \$1.3 million, eventually will be recovered through special assessments for businesses with property on the line and from rail users.

Any business with property on the line will pay \$200 annually even if it doesn't use rail service. Another \$75 is added if the business has more than 250 feet of frontage. Rail users will pay a surcharge of \$175 per railroad car.

Strenn said it will take an average of 284 cars per year for 13 years to retire the debt.
