Transcript:

My comments are: There is only one set of tracks with no side rails for the trains. If one freight is going one way and the second freight going the other, traffic could be held up for hours. Rails pass several grammar schools and would block emergency vehicles if needed. School busses would be delayed to and from schools with no way around as alternate routes would have the same problem. No railroad crossing bars at several crossings, no over or under passes except one through Plainfield which is already is a traffic mess. Commuter trains which were planned previously would have to be cancelled because the freights would have the right of way. Thank you.
