MASTER TABLE OF CONTENTS

VOLUME I OF III
NARRATIVE

I. INTRODUCTION 4

II. MANY COMMENTERS PAY INSUFFICIENT ATTENTION TO THE GOVERNING LEGAL STANDARD 16

A. The Board Has Established that this Transaction Will Be Reviewed Under the Pre-2001 Merger Rules and Related Board Precedents 16

B. Pre-2001 Precedents Require that Conditions Be Linked to Concrete Transaction-Specific Harms 18

III. THE TRANSACTION WILL RESULT IN SIGNIFICANT PUBLIC BENEFITS 21

A. There Is No Merit to Claims by Class 1 Rivals that CPKC Will Not Provide Valuable New Competitive Options 23

1. The Class 1 Critique of CPKC Traffic Estimates Misses the Fundamental Point that the Stronger Competition that Comes with the Transaction Is What Really Matters 24

2. Applicants' Estimates of the Traffic CPKC Will Attract Are Reasonable and Sound 26

3. Applicants' Estimates Are Validated by the Transaction's Extensive Shipper Support and Real-World Developments 34

4. The KCS Board's Highly Conservative Pre-Agreement Synergies Estimates Do Not Undermine Applicants' Anticipated Benefits 39

B. There is Zero Risk to CPKC's Financial Viability and Continued Investment, Regardless of How Much New Traffic Is Attracted to the CPKC System, or at What Rates 40

C. The Class 1 Critique of the Operating Efficiencies Generated by the Transaction Is Invalid 41

D. CN's Continuing Criticisms of the Operating Plan Lack Merit and Are Irrelevant to the Board's Evaluation of the Transaction's Impacts 42

IV. THERE ARE NO VALID COMPETITIVE CONCERNS 45

A. There Is No Basis for Concern About "Vertical" Competition 47

1. The Board Has Extensive Experience with End-To-End Mergers and the Net Benefits They Have Brought 52

2. Commenters Offer No New Economic or Other Learning that Calls into Question the Board's Consistent Precedents and Factual Conclusions 59

3. KCS Has Not Used Its Control of Tex Mex and KCSM to Foreclose UP or BNSF Routings Through the Laredo Gateway, and Neither Will CPKC 68

4. The Same Forces that Ensured There Was Not Foreclosure Following *KCS/Tex Mex* and Other Cases Will Apply Here 90

5. Applicants' Commitments – Enforced as Appropriate By Shippers – Are the Tried-And-True Way To Address Concerns About Vertical Foreclosure 95

6. The Rate-Setting Mechanism Proposed by UP and BNSF Is Both Unnecessary and Would Be Affirmatively Anticompetitive 97

B. Shipper Group Desires for "Open Access" and Other Reregulatory Remedies Are Not Merger-Related 109

1. Certain Requests Relating to "Gateways" and "Bottlenecks" Represent an Improper Effort to Revisit the Board's Bottleneck Rate Rules 109

2. Requests for "Reciprocal Switching Access" Are Similarly Unrelated to this Transaction 116

V. APPLICANTS ARE DEDICATED TO ENSURING THAT THE TRANSACTION WILL BE IMPLEMENTED WITHOUT SERVICE DISRUPTION 119

A. The Transaction Will Not Lead to Service Disruption 120

B. Applicants' "CP/KCS Service Promise" 124

C. Additional Service-Related Conditions Would Unduly Burden CPKC's Competition for No Valid Purpose 127

VI. THE "CAPACITY CONCERNS" ADVANCED BY UP, BNSF, AND CN HAVE NO MERIT 130

A. Basic Features of the Transaction Will Prevent CPKC Traffic Growth From Overwhelming Rail Capacity 131

B. The Transaction Will Not Cause Disruption on the Lines KCS Shares with UP and BNSF in Texas 133

1. UP and BNSF Proceed from the False Premise that CPKC Needs Their Permission to Use Shared Trackage to Compete Against Them 135

2. The Facts Show that CPKC's Potential New Trains Will Not Exceed Capacity on UP/BNSF Trackage Rights Segments in Texas 137

a) There Will Be No Capacity Shortfall in the Houston Terminal Complex 138
b) There Is Adequate Capacity on the UP-Owned Lines Between Houston and Beaumont 144
c) Concerns About the Neches River Bridge at Beaumont Are Unwarranted 146
d) There Is Adequate Capacity on the UP-Owned Lines Between Victoria and Robstown 148

3. UP and BNSF Demands that CPKC Fund 100 Percent of Any New Infrastructure Is Overreaching and Inappropriate. 149

C. There Will Be Adequate Capacity for the Traffic that CPKC Hopes to Attract Elsewhere on Its Network 150

VII. METRA'S CONCERNS ARE UNFOUNDED 152

A. The Transaction Will Not Adversely Impact Metra's Commuter Services..... 155

1. The Transaction Will Not Meaningfully Increase Freight Traffic on Lines Shared with Metra. 155

2. Metra Further Misunderstands the Transaction's Impacts Because Its Expert's RTC Model Is Fundamentally Flawed.....159

3. The MD-W Line West of Bensenville Yard Has Ample Capacity to Accommodate Eight Additional Daily Freight Trains. 165

4. Developments Independent of the Transaction Will Further Improve the Performance of Metra's Trains on Lines Shared with CP.....167

B. CP Values Its Partnership with Metra and Regrets that Metra's Comments Have Mischaracterized Metra's Solid Performance on Lines Shared with CP 168

1. Metra Has Consistently Performed Well on CP's Lines 169

2. CP Leadership Is Committed to Supporting Metra's Operations, Consistent with Its Contractual Obligations.....180

C. None of Metra's Complaints About CP Are Related to the Transaction 185

1. Most of Metra's Pre-Transaction Dispatching Concerns Relate to Operations that Will Be Unaffected by the Transaction.....185

2. Dispatching Metra Trains on the "Wrong Track" Is A Pre-Transaction Concern Without Merit 188

3. Metra's Disagreement with CP About Changes to Its Off-Peak MD-N Line Schedules in 2019 Are

Pre-Transaction Issues Having No Bearing on this Proceeding....190

4. Metra's Complaints About PTC Implementation Issues Are Irrelevant and Unfair....191

D. Applicants Are Committed to Reassure Metra and Its Ridership that the Transaction Will Not Impact Metra's Passenger Service.... 192

1. Metra's Requests to Force a Shift of Dispatching to Metra Would Override CP's Contractual Rights and Undermine Rather Than Improve the Handling of Metra Trains....193

a) The Trackage Agreements Allocate to CP the Right to Operate and Dispatch Traffic on the MD-W and MD-N Lines 194

b) Metra Has Long Sought Control of Dispatching on the MD-W and MD-N Lines 195

c) The Board's Precedents Sharply Disfavor Forced Shifts in Dispatching 197

d) Transferring Dispatching Control to Metra Would Create More Issues Than It Resolves 198

2. Metra's Request to Alter the Compensation Terms of the CP-Metra Agreement Are Overreaching....201

3. Demands for Hundreds of Millions in New Infrastructure Are Either Wildly Overreaching or Already in Progress....203

4. Metra's Request For a Binding Standard and Process For Schedule Changes and New Trains Improperly Seeks to Improve Its Contractual Rights....205

5. Metra's Requested Oversight Conditions Are Inappropriate and Unnecessary....207

VIII. OTHER DEMANDS BY CLASS 1 RAILROADS FOR PROTECTION AND OTHER RELIEF SHOULD BE REJECTED 208

A. The Board Should Reject CN's Proposed "Inconsistent" Purchase of CPKC's Springfield/East St. Louis Line.... 208

1. CN's Gambit Is Yet Another Round in CN's Effort to Disrupt or Delay the CP/KCS Transaction....210

2. There Is No Competitive Harm to Address....212

3. Any Divestiture of the Springfield/East St. Louis Line Would Harm the Public Interest, Not Enhance It....229

4. If CN Is Right About the "Truck Diversion" Potential of Joint Investments in the Springfield Line, a Divestiture Would Not Be Necessary to Achieve It....241

5. Were the Board to Conclude that a Remedy is Required, It Should Not Order a Sale of the Line, Much Less Specify CN as the Buyer....244

B. NS's Requested Relief Is Based on a Misreading of the Operating Plan and Would Inappropriately Alter Pre-Existing Contractual Rights to NS's Commercial Advantage.... 246

1. CPKC Will Be Highly Motivated to Continue to Reap the Rewards of the Successful MSLLC Joint Venture....248

2. The Facts Contradict NS's Concerns About Service Impacts....249

3. The Wylie Intermodal Terminal Has Ample Capacity to Support Applicants' Projected Traffic Increases....253

4. NS's Proposed Contingent Trackage Rights Make No Sense as a "Remedy" for Potential Service Concerns....256

5. NS's Request for Contingent Trackage Rights Would Improperly Convey to NS Commercial Rights that NS Did Not Negotiate or Pay for in 2006....258

C. The Board Should Reject the Relief Requested by CSX.... 263

1. CSX's Arguments about the Meridian Speedway Are Unrelated to the Transaction and Should Be Ignored....263

2. CPKC Will Be Eager to Maintain or Explore Efficient Interline Relationships With CSX Via All Available Gateways, and There Is No Need for Relief Protecting CSX....265

D. BNSF's Veiled Threats to Demand Future Trackage Rights It Chose Not to Seek in this Proceeding Should Be Rejected with Prejudice.... 268

1. BNSF's Desire for Board Intervention in Support of Its Quest for a Future Mexican Concession Is Not Merger-Related and Would Improperly Involve the Board in Mexican Affairs....270

2. BNSF's Proposed Rights Between Dallas and Shreveport Would Grant Commercial Rights BNSF Chose Not to Acquire....273

3. BNSF's Proposed Rights Between Savanna, IL and Clinton, IA Would Grant Commercial Rights BNSF Has Previously Sought....275

E. The Board Should Not Grant UP's Demand for Conditions Granting Compulsory Access to KCS's Self-Funded New Bridge at Laredo.... 277

IX. COMMENTS FROM RAIL LABOR.... 280

X. THE BOARD SHOULD NOT IMPOSE CONDITIONS TO ADDRESS COMMENTERS' ALLEGED ENVIRONMENTAL CONCERNS 280

A. The Coalition Communities Demand Mitigation Measures Disproportionate to the Likely Effects on the Community 282

B. Hennepin County Concerns Fail For Similar Reasons 287

C. The Sierra Club's Requested Conditions Have No Nexus to the Transaction, Which is Expected to Lower Greenhouse Gas Emissions 289

XI. OTHER ISSUES 291

A. Concerns About CP's Tariff Provisions Applicable to Hazardous Shipments Are Not Competitive Issues or Transaction-Related and Should Be Rejected 291

B. Concerns of Certain Wheat Growers' Associations About Potential Competition from Canadian Grain Suppliers Reflect More Competition, Not Less 298

C. Conditions Are Not Needed to Protect Evergy's Service Levels 302

D. Texas International Terminals' Concerns Are Not Transaction-Related 304

E. LyondellBasell's Proposed Reciprocal Switching Conditions Should Be Rejected 306

F. The Late-Submitted Concerns of Certain FMC Commissioners About Diversions to Canadian Ports Are Meritless 310

XII. THE BOARD SHOULD RESIST ALL CALLS TO HANDICAP CPKC'S POTENTIAL NEW COMPETITION WITH BURDENSOME CONDITIONS 312

APPENDICES

APPENDIX A: PRIOR CLASS 1 RAILROAD MERGERS OF THE PAST 40 YEARS WERE CONSISTENTLY APPROVED BASED ON THE BENEFITS OF NEW SINGLE-LINE SERVICES AND A LACK OF COMPETITIVE CONCERN ABOUT "GATEWAY FORECLOSURE"

APPENDIX B: STATEMENTS OF CLASS 1 RAILROADS EXTOLLING VIRTUES OF THE SINGLE-LINE BENEFITS THEIR MERGERS BROUGHT

APPENDIX C: SELECTED EXCERPTS FROM SHIPPER SUPPORT STATEMENTS REGARDING PROCOMPETITIVE BENEFITS OF CP/KCS TRANSACTION

FINANCE DOCKET NO. 36500

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL*. – CONTROL – KANSAS CITY SOUTHERN, *ET AL*.

APPLICANTS' RESPONSE TO COMMENTS AND REQUESTS FOR CONDITIONS, OPPOSITION TO RESPONSIVE APPLICATIONS, AND REBUTTAL IN SUPPORT OF THE APPLICATION

Applicants submit this response to the Comments, Amended Comments, and Amended Responsive Applications filed in this and all related dockets. As we demonstrate in the Application and the evidence and argument submitted herewith, the Application is compellingly in the public interest and should be approved without conditions beyond those embodying the commitments Applicants are making – summarized herein – to ensure that the public interest benefits of the combination of CP and KCS come to pass.[1]

The Transaction is supported by hundreds of shippers, shortlines, passenger rail interests, labor organizations, and others. No shipper or shipper association requests that the Transaction be denied. The Federal Railroad Administration endorses Applicants' Safety Implementation Plan. Amtrak and other passenger rail interests support the Transaction. Amtrak stresses "CP's excellent record as an Amtrak host railroad and CP's commitments to Amtrak's efforts with

[1] To avoid confusion, we refer herein to "unconditioned approval" to encompass the conditions Applicants have stated that they will accept, as summarized in Section I and the Reply Verified Statement of Keith Creel.

states and others as detailed in the agreement" reached between Amtrak and CP, and believes that the CP/KCS Transaction "promises significant public benefits for the U.S. rail network."[2] What opposition there is comes principally from the five Class 1 railroads. The protection these Class 1 railroads seek is itself evidence that they see the CP/KCS Transaction an injecting new competition into the North American rail network.

As the record reflects, the Transaction will deliver extraordinary public benefits, both quantified and unquantified, but all of tremendous value to shippers, the U.S. rail network, and the broader public interest. Among them:

- Competition will be strengthened and intensified by the new, single-line service offerings unlocked by the Transaction;
- Shippers will have new, better options and alternatives to the Class 1 services on which they depend today;
- CPKC's investments in its network to support the Transaction will further strengthen the U.S. rail network, adding capacity and enabling new, more robust transportation arteries;
- CPKC's improved network will uniquely support North American trade, better connecting the United States with both Mexico and Canada and supporting vital and evolving trade patterns;
- CPKC's new capabilities will shift tens of thousands of trucks off the Nation's roads, bringing emissions, infrastructure and economic benefits;
- The integration of CP and KCS will deliver concrete and quantifiable cost savings, enabling them to do more with less;
- CPKC's anticipated growth will deliver new jobs to America's heartland; and

[2] Amtrak Letter to Board (filed Feb. 2, 2022) at 1. Numerous communities across CP's and KCS's service territories echo Amtrak's support, expressing excitement about the transaction and CPKC's commitment to constructive cooperation with efforts by Amtrak and others to expand passenger services that may use parts of the CPKC network.

- CPKC will facilitate the expansion of passenger rail service on the CPKC network by being a good partner for Metra and the other commuter agencies that share CPKC lines and being an "A+" Amtrak host.

As we demonstrated in the Application and reinforce herein, the Transaction will deliver all of this without any offsetting public interest harms: no reduction in competition, no adverse impact on rail service or passenger operations on lines CPKC will use; and no material unmitigated impacts on local communities.

We are submitting this response in three volumes. Volume I (this volume) provides a narrative response to the comments and responsive applications, with citations to supporting verified statements and other evidence. In Volume II we provide Reply Verified Statements from a number of witnesses – including shippers – supporting approval of the Application. Volume III provides a number of additional documentary exhibits, including deposition excerpts and documents produced by other parties in discovery, for including in the record of this proceeding. Those exhibits are authenticated by the accompanying Verified Statement of Samantha Hynes.

In the sections that follow, we explain why the Board should reject the pleas of the parties seeking to have conditions imposed on the Transaction – or in CN's case seeking to undo a significant part of it through an unprecedented divestiture of an important part of the KCS network, a divestiture that no shipper on that line supports. We also explain why conditions are *not necessary* and why they would *do affirmative harm* by uniquely burdening CPKC in its quest to provide shippers and the U.S. rail network with robust and improved new transportation options connecting the North American continent.

I. INTRODUCTION

The most vehement opposition to the Transaction comes not from shippers, but rather from the Class 1 railroads who will compete most directly with the new transportation services that the CP/KCS Transaction will enable. Their opposition, and the self-serving conditions they seek, are not motivated by any need to protect the public interest from harm but by desire to protect themselves from change – i.e., the new, more intense competition CPKC will provide – or to get something valuable for themselves in the process. The Board should reject their efforts. The Board and its predecessor agency have recognized for a half century or more that the hard competitive truth is that "[n]o carrier is entitled to its existing level of traffic simply because it presently serves a given market."[3]

One of the most vigorous condition-seeking Class 1s in this proceeding, BNSF, warned the Board in 2000 when the agency was considering whether to change its rules governing Class 1 mergers that the Board should not use its merger rules to create "opportunities for competitors and other third parties to *abuse the merger approval process by using it to stop or to delay a pro-competitive merger* or to use it as *a means to extract special favors unrelated to the proposed merger*."[4] BNSF was right then, and little did it know then that its words would describe perfectly its own efforts in this proceeding, along with those of its Class 1 brethren and many of the other participants here.

[4] *Major Rail Consolidation Procedures*, Ex Parte No. 582 (Sub-No. 1), Comments of BNSF Railway Company, Verified Statement of Richard J. Pierce, Jr. (filed Nov. 17, 2000), at 12 (emphasis added) (Vol. 3, Exh. 1).

The Application demonstrated that the proposed CP/KCS Transaction would be procompetitive and serve the public interest in numerous other ways. The Class 1 railroads' response to the Application – and especially their efforts to seek delay and to restrain or prevent the competition that CPKC will bring to them as a result of the Transaction – strongly reconfirms its procompetitive character. As we demonstrate in this response to Comments and the two Responsive Applications, the Board should approve the Transaction without conditions beyond those that are customary in end-to-end merger cases such as this.

Applicants will demonstrate the following:

- ***Under the pre- 2001 Merger Rules, Conditions Must Be Narrowly Tailored to Remedy Proven Harm Caused by the Transaction***

In Section II, we show that many of the commenters have not met the standards for merger relief under the Board's pre-2001 Merger Rules, which govern this proceeding. Under the pre-2001 Merger Rules, the Board has long emphasized that, in determining whether a transaction is in the "public interest," the focus is on competition, not harm to individual competitors, and the Board has thus consistently rejected competitors' arguments that they should be protected from the new competition generated by a transaction.[5] To grant any condition, the condition must be predicated on a showing of harm caused by the Transaction. Any relief must be narrowly tailored to remedy any such harm, and relief that would upend

[5] *N&W/Southern*, 366 I.C.C. at 213 ("In assessing the probable impacts of consolidation, and evaluating any harm arising from the consolidation, our concern is the preservation of essential services, not the survival of particular carriers."); *see, e.g.*, ***Error! Main Document Only.****Wisconsin Central Transp. Corp., et al. – Continuance in Control – Fox Valley & Western Ltd.*, Finance Docket No. 32036, 1992 I.C.C. LEXIS 279, at *10 (ICC served Dec. 4, 1992) ("**Error! Main Document Only.**A showing of expected substantial harm to a particular competitor as a result of a transaction is not equivalent to a showing of harm to competition.").

pre-Transaction relationships and provide the Commenters (and Responsive Applicants)[6] with rights that that they never previously had.[7]

The pre-2001 Rules do not require CPKC to "enhance" competition in the form of grants of trackage rights, divestitures, mileage pro-rate schemes, or by rewriting privately negotiated agreements to provide even rights to the large Class 1s others that they do not have in the pre-Transaction world. Nonetheless, this Transaction *does affirmatively enhance competition* by unlocking new single-line services and major new investments in CPKC's North-South transportation artery. The conditions sought by the Class 1 railroads would blatantly undermine the competition they would face from CPKC. And worse, many of the proposed conditions would in effect restructure the rail industry, with the unpredictable effects except insofar that they would be certain to hobble the future competitive initiatives of the CPKC network that this Transaction will unlock.

- ***The Application Provides Ample Evidence of the Transaction's Public Interest Benefits***

In Section III we respond to criticisms directed at the Application's public benefits showing. First, we note that hundreds of shippers, shipper associations, passenger rail interests, labor organizations, and others support approval of the Transaction. Next we demonstrate that,

---

[6] For convenience, references herein to "Commenters" is intended to encompass all parties who have filed comments addressing the Application, including Responsive Applicants CN and NS.

[7] *See, e.g.*, *Canadian National Railway Co. & Grand Trunk Corp. – Control – EJ&E West Co.*, Finance Docket No. 35087, 2008 STB LEXIS 220, at *10 (STB served Apr. 25, 2008) ("*CN/EJ&E*") (must be a sufficient nexus between the condition imposed and the transaction; mitigation is not imposed to correct pre-existing conditions, and the condition imposed must be reasonable.); *Union Pacific Corp, Union Pacific R.R., & Missouri Pacific R.R. – Control & Merger – Southern Pacific Rail Corp., Southern Pacific Trans. Co., St. Louis Southwestern Ry., SPCSL Corp., & The Denver & Rio Grande Western R.R.* ("*UP/SP*"), 1 S.T.B. 233, 418 (1996) (STB served Aug. 6, 1996) (internal citations omitted) (conditions must be narrowly tailored, operationally feasible, produce net public benefits and "will not be imposed unless the merger produces effects harmful to the public interest (such as a significant loss of competition) that a condition will ameliorate or eliminate").

contrary to the assertions of the opportunistic Class 1s, Applicants' forecasts of the traffic that CPKC's new, competitive offerings are likely to attract were reasonable and derived from a thorough evaluation. Applicants reasonably expect to attract traffic from other Class 1s and from other modes by offering customers services that will meet their needs, including new single-line options that customers have never had before. Applicants' rail-to-rail and truck-to-rail traffic studies are one reflection of the implications of the more efficient and improved new single-line services CPKC will be able to offer, and CPKC's new traffic gains will be a product of that affirmative new competition and not a disabling – through "foreclosure" – of any existing interline options. CPKC will not – and need not – resort to "foreclosure" to win that traffic, and CPKC would shoot itself in the foot if it tried.

Applicants have also demonstrated that CPKC will be financially healthy and capable of making the significant new investments in its rail network while simultaneously repaying Transaction-related debt. That health – and prompt debt repayment – is not at all dependent on realizing any of the traffic growth or revenue gains anticipated from the Transaction, and thus CPKC will have no incentive to act irrationally by engaging in foreclosure to try to force short-run shifts in traffic to the CPKC network.

Finally, we demonstrate that the specific criticisms of the Operating Plan and Applicants' operating efficiency calculations – mostly from CN witnesses – are without merit. Applicants have presented reliable evidence of the traffic and operational changes arising from the Transaction and the efficiencies that those changes will generate.

This evidence strongly supports multiple compelling categories of public benefits: the concrete and quantifiable efficiencies generated by the combination of CP and KCS, and the less quantifiable but much larger, and no less real, benefits to competition and the public interest

from the new, more robust single-line offerings the Transaction will enable, backed up by hundreds of millions of dollars of new investment in critical rail infrastructure. In short, the Transaction is a once-in-a-lifetime opportunity to bring to the U.S. railroad industry new, market-based competition, which the other Class 1 railroads sadly appear to fear and seek to limit.

- ***The Transaction Will Not Cause Harm to Competition; It Will Increase Competition***

In Section IV, we respond to various arguments about the competitive effects of the Transaction.[8] We start with the settled fact that the Transaction will not reduce the number of independent rail transportation options for any shippers, period. Nobody disputes that. In fact, the Transaction, will deliver substantial new competition, which hundreds of shippers note in their support.

The arguments that Commenters make about harm to competition are premised almost entirely on "vertical" concerns about "gateway foreclosure." Ironically, these arguments are put forward most vociferously by the same Class 1 railroads – UP and BNSF especially – who have loudly and consistently extolled the procompetitive virtues of their own end-to-end combinations. The Board's precedents, including its decision approving KCS's acquisition of Tex Mex where UP and BNSF made the same arguments they seek to retread here, show the way to address these concerns: to reject them in light of the economic facts, as backed up by the commitments Applicant are making to keep gateways open on commercially reasonable terms. Section IV reviews the extensive evidence – economic and otherwise – showing that there has been, and will be, no anticompetitive foreclosure, whereas the conditions UP and BNSF demand

[8] We address CN's spurious argument about the "parallelism" of KCS's Kansas City-Springfield line in Section VIII.

would themselves be highly anticompetitive, serving to tax CPKC's own aggressive competition and subsidize UP and BNSF.

Section IV also addresses a variety of other claims by shipper associations and others that, while couched in terms of "competition," in fact seek relief having nothing to do with this Transaction. Their calls for open gateways, reciprocal switching, and other sweeping remedies echo their longstanding efforts to seek re-regulation on an industry-wide basis, and are untethered to this Transaction.

- ***The Transaction Will Not Disrupt Rail Service***

In Section V, we respond to concerns voiced by some – likely based on bad memories of the *UP/SP* and *CSX/NS/Conrail* mergers – that the Transaction will cause disruptions to the service levels customers receive today. As we explain, this will not happen, not just because of the core features of the Transaction (especially its purely end-to-end character), but because of Applicants' dedication to careful and methodical merger implementation. As we summarize in Section V, and John Brooks explains in more detail in his Reply Verified Statement, Applicants are making several commitments that go beyond what merging parties have offered in the past – and which they anticipate would be conditions of the Transaction – to help assuage concerns about the effect of the Transaction on future service levels.

- ***CPKC's Implementation of the Transaction Will Not Outstrip Available Rail Capacity***

In Section VI, we respond to Comments from the three Class 1 railroads most threatened by the new competition CPKC will bring – UP, BNSF, and CN – contending that CPKC's growth will outstrip capacity and cause congestion.[9] UP and BNSF focus on the lines in Texas

[9] We address the capacity issues raised by Metra in Section VII.

where they share (primarily UP) trackage with KCS, and seek a condition forcing CPKC to get their permission, and pay for whatever UP and BNSF claim is necessary, before adding a single carload to these line. Such a condition has never before been imposed in any merger, and it ignores the many existing trackage rights provisions that already govern when, how, and who pays for capacity required by increased traffic volumes on the shared lines.

As we demonstrate, there will be no capacity shortfall. Many of these lines have successfully handled more trains than the Transaction anticipates in the past using less robust infrastructure than exists today (even before additional infrastructure will be added by CPKC and others). With the capacity expansion projects already underway along with the additional investments CPKC will make to expand capacity, the lines CPKC uses will support CPKC's added trains alongside all of the other uses of that trackage, including UP, BNSF, Amtrak, Metra, and others. It would be particularly unwarranted to expand the contractual rights of UP and BNSF given that under the trackage rights agreement imposed on UP by the Board, it is UP's responsibility to install the infrastructure necessary to support the needs of all of the users of that trackage, with KCS obligated to share in the cost alongside the other users. CPKC will be a cooperative partner in supporting whatever new infrastructure may end being needed over time, as well as supporting the good operating practices necessary to get the most out of today's infrastructure. But it would be contrary to the public interest to give UP and BNSF a veto over CPKC's new competition.

- ***The Transaction Will Not Cause Harm to Metra's Passenger Operations***

In Section VII, we address the concerns raised by Metra, which are based on a fundamental misunderstanding of the Transaction's impacts on the lines shared by Metra and CP in the Chicago area. As we demonstrate, the Transaction will not outstrip CPKC capacity along

the Mississippi River, and it will not drive CPKC trains between Kansas City and St. Paul over Metra's lines. Train counts will increase (by eight trains a day) on one portion of one of Metra's lines (the MD-W line west of Bensenville) – and nowhere else on Metra. On that one line, there is more than enough capacity to support that growth without any adverse impact on Metra's passenger operations. Applicants back up these conclusions with comprehensive RTC modeling, built by correcting the many fatal flaws in the model presented by Metra's own expert.

Most of Metra's concerns, which form the predicate for a request to override existing agreements and force a transfer of dispatching from CP to Metra, reflect complaints about various practices that pre-date the Transaction. We demonstrate that those concerns are extraordinarily exaggerated, and that CP in fact performs quite well for Metra. We also make clear, however, that CPKC is determined to be an even better partner for Metra than CP has been, and Creel communicates several commitments that Applicants are making to ensure that CP follows though in that objective.

- ***No Class 1 Railroad Is Entitled to the Self-Serving Relief It Seeks***

In Section VIII, we address the additional self-serving requests for relief put forward by the Class 1 railroads, none of which has offered any valid predicate for that relief. Their requests for conditions are transparent attempts to lock in what they have today or to produce windfalls for themselves rather than go out to the market to fight for it. The Board should reject the Class 1 railroads' invitations to stifle competition at the public's expense.

CN requests that the Board require divestiture of the Springfield Line to CN's U.S. subsidiary, Illinois Central. But there is no competitive reason for why such a drastic remedy is

necessary, especially since divestiture of a line in the merger context has never been ordered, at least not since the Staggers Act. That line is not an active parallel route.[10]

Equally significant, the divestiture CN proposes would do violent harm not only to Transaction benefits, but to the single-line KCS service that on-line shippers (who account for almost all of the line's traffic) have come to rely upon. Tellingly, those shippers overwhelmingly oppose CN's request.

CN's call for a divestiture is on its face predicated on a 2001-Rules principle (and even then a faulty one) that the Board has authority to impose whatever conditions it wishes to "enhance competition." But far from enhancing competition, that relief would harm the competition that CPKC will provide, to the advantage of CN alone. Were CN right about the unique truck-diversion potential of the investments it proposes, CPKC would be an eager participant in working with CN to pursue them. A divestiture would be unjustified and counterproductive.

NS has requested various conditions meant to change the commercial terms of the Meridian Speedway agreements, all to favor NS. These are longstanding and negotiated agreements. NS wants changes to improve its profit at the expense of CPKC and expand the scope. NS seeks these conditions even though the CP/KCS Transaction has no adverse effect at all on the Meridian Speedway traffic carried by NS.

BNSF "reserves the right" to seek to have the Board impose on CPKC a host of new trackage rights that BNSF has long coveted, that would be unrelated to any Transaction-related harm, and would interfere with CPKC's operation of its own network. BNSF should be told no

[10] *See infra* Section VIII.A.2.

now, so that it is not given incentives to look for ways to cause problems as an excuse to ask for those rights later.

CSXT asks the Board to alter long-settled contracts to its advantage. CSX's desire to unwind aspects of the long-established Meridian Speedway agreements is unconnected to the Transaction and unwarranted, as is its demand that the Board make permanent a temporary pre-Transaction arrangement entered into between CSX and KCS regarding their interchange at New Orleans.

For its part, UP requests access to the to-be-built second rail bridge across the Rio Grande River at Laredo Bridge on the "same terms" as its access to the current bridge even though the new bridge will be privately funded by KCS and will increase the efficiency of cross-border traffic movements. Like all of the rest of the Class 1 requests, UP's request for the Board to override whatever terms the parties might negotiate has no nexus to the Transaction.

Without exception, these are requests untethered to any Transaction related harm that would give these railroads more rights than they have today. Also without exception, these request would give these railroads something they may have also wanted but were unable to negotiate. The complaints from Class 1 railroads show their fears that a CP-KCS transaction will improve service, provide better options for shippers, and increase competition. But as the Board has repeatedly recognized, arguments that a transaction's overall benefits to competition will, like virtually any marketplace event, be detrimental to some individual competitors is not relevant to the question of whether the Transaction is in the public interest.

- ***Applicants Have Accepted Standard Labor Protective Conditions***

Section IX briefly addresses the comments filed by rail labor organizations. As we demonstrate, Applicants are making good progress entering the implementing agreements with

affected labor organizations, and they reconfirm their acceptance of standard labor protective conditions.

- ***Other Requests for Conditions Should Be Rejected***

In Sections X and XI, we demonstrate that there is no merit to other miscellaneous request for relief.

In Section X, we show that requests for conditions from commenters raising environmental issues are being addressed through the Board's environmental review process, and in any event are not supported by any evidence of actual environmental harm. The "Coalition to Stop CPKC's" demand for more than nine billion dollars in infrastructure investments to address the addition of only eight additional freight to lines that daily host upwards of 70 total trains (including Metra passenger trains), and have historically hosted more freight trains than CPKC will operate, is particularly egregious. They are happy to have CPKC's anticipated freight traffic foisted on other communities but not in their backyards. CPKC is determined to be a good neighbor to all of the communities in which it will operate – even those that make outrageous demands – but the Board should recognize that the interest of the broader public would not be well served by policies that encourage a handful of communities to hold the competitive benefits of this Transaction hostage to their local demands.

Finally, in Section XI, we take on a handful of miscellaneous requests for relief that have no actual relationship to the Transaction: efforts by some TIH shippers to obtain a long-sought the rollback of CP's tariff covering TIH/PIH shipments; concerns expressed by various wheat associations about the possible effects on certain of their members of competition from other producers who will benefit from the Transaction, even though they have nothing to fear; Evergy's concern about its post-Transaction service levels; Texas International Terminal's effort

to resuscitate a dormant set of rights granted to KCS in 1986; LyondellBasell's effort to create new competitive access for BNSF and UP out of whole cloth; and the misguided comments of three individual FMC commissioners, who apparently do not desire for CP to continue offering efficient intermodal services from the Ports of Vancouver and St. John to the U.S. Midwest, none of which will be materially affected the Transaction.

- ***Applicants Accept a Discrete Set of Conditions Aimed at Confirming that the Transaction Will Serve the Public Interest***

Applicants have made – and discuss in this Response – a number of specific commitments that reflect Applicants' confidence that their proposed Transaction is in the public interest. Applicants understand and accept that they will be held to those commitments, specifically:

- Applicants' commitment to keep gateways open on commercially reasonable terms, as spelled out in greater detail in the Reply Verified Statement of John Brooks;
- Applicants' "Service Promise" and the other specific commitments respecting post-Transaction service protection set forth in the Reply Verified Statement of John Brooks;
- Applicants' representations to the Board and FRA set forth in their Safety Implementation Plan, which the FRA has accepted;
- Applicants' Voluntary Mitigation Measures filed with OEA on May 3, 2022; and
- As referenced above, Applicants' acceptance of the Board's standard labor protective conditions.

In addition, Applicants have entered into a number of agreements with parties in this proceeding that address concerns raised by those parties or reflect commitments that Applicants have made that have led those parties to support the Transaction. Applicants anticipate that the Board may impose their compliance with those agreements as a condition of the Transaction. Those agreements include:

CP's agreement with {{ }}

- CP's agreement with Amtrak committing to support Amtrak's previously-planned expansion of Amtrak service between Chicago and St. Paul in exchange for Amtrak's commitment to add certain infrastructure that would support those operations;

- CP's agreement with Bayer CropScience LP committing to provide three years advance notice to Bayer's chloring suppliers of a change in certain of KCS's tariff provisions relating to IH transportation, provided that those shippers make use of the safest railcars available; and

- CP's agreements with certain communities relating to their environmental concerns.

Applicants acknowledge the Board's view that all of these commitments should become part of the Transaction that Applicants are asking the Board to approve.

* * *

In sum, the Transaction as presented in the Application promises to bring extraordinary benefits to the US rail network, its shippers, and other beneficiaries. It should be approved as promptly as possible so that CPKC can get started delivering those benefits.

II. MANY COMMENTERS PAY INSUFFICIENT ATTENTION TO THE GOVERNING LEGAL STANDARD

A. The Board Has Established that this Transaction Will Be Reviewed Under the Pre-2001 Merger Rules and Related Board Precedents

The Board has provided clear direction that the Transaction will be reviewed under the pre-2001 Merger Rules set forth at 49 C.F.R. part 1180 (2000). On April 23, 2021, following fervent efforts by most of the other Class 1 railroads to have the 2001 rules applied to this

Transaction,[11] the Board issued Decision No. 4, finding "the waiver provision under 49 C.F.R. § 1180.0(b) should apply to this Transaction" and that the Board's "review of this Transaction will be governed by the regulations contained in 49 C.F.R. part 1180, subpart A in effect before July 11, 2001." Decision No. 4 (served Apr. 23, 2021) at 2. The Board based this determination in part on its conclusion that "a merger of the CP and KCS networks would appear to result in the fewest overlapping routes when compared to a merger between KCS and any other Class I carrier" and that the "interrelationship between the CP and KCS networks in fact appears to be end-to-end in nature . . . which likely raises fewer competitive concerns than a transaction that is not end-to-end." *Id.*

Decision No. 4 did not end the efforts by the Class 1 railroads and others to persuade the Board to change its mind and apply the more onerous requirements of the 2001 merger rules to this Transaction. Indeed, the procedural history of this proceeding has been littered with efforts by the Class 1s to delay the Transaction and interpose further procedural hurdles and costs. Throughout, however the Board has been steadfast, emphasizing again and again that the review here will be conducted under the pre-2001 rules and related precedents. *See, e.g.*, Decision No. 8 (served Sept. 30, 2021) at 2, 9 n.9; Decision No. 11, (served Nov. 23, 2021) at 3; Decision No. 13 (served Feb. 18, 2022) at 2 n.3, 5 n.10.

Unfortunately, many of the Comments (and all of the Responsive Applications) continue to ignore that the pre-2001 rules apply. They predicate requests for relief – in some cases extraordinary relief – on principles that have no grounding in Board precedent under the pre-

[11] One Class 1 has acknowledged that the pre-2001 rules properly apply to this Transaction. CSX advised the Board that "it expects the Transaction will be reviewed under the 2000 Rules and not the undefined, untested 2001 Rules which do not appear to have application to a consolidation involving KCS." CSX Comment with Respect to Rules Applicable to this Proceeding (CSXT-1) (filed Apr. 1, 2021) at 1.

2001 rules, but emanate instead from requirements established in the 2001 rules – most notably the notion the Board might impose conditions to "enhance" competition relative to the pre-merger status quo and mandate the preparation of a formal "Service Assurance Plan." As Applicants will explain when they address each of these overreaching requests below, they reflect an unabashed unwillingness to accept the Board's repeated rulings that its "review of this Transaction will be governed" by the pre-2001 rules.

B. Pre-2001 Precedents Require that Conditions Be Linked to Concrete Transaction-Specific Harms

The Board's pre-2001 rules and the many precedents under those rules establish a well-understood set of ground rules for this proceeding. The Board has extensive discretion in assessing whether the Transaction as proposed is in the public interest, but if it serves the public interest the Board's precedents require its approval. Under 49 U.S.C. § 11324(c), of course, the Board "may impose conditions governing the transaction." *See* Decision No. 13. But the Board's pre-2001 precedent – as reviewed extensively in the Board's Decision No. 13 – makes clear that this authority is not an untethered power to regulate Applicants (or their Transaction) in service of the public interest. Instead, that conditioning power applies only to remedy specific Transaction-related harms.

As the Board has held over and over again, the Board "will not impose public interest conditions on a railroad consolidation" unless, at a minimum, four elements are satisfied: "[1] that the consolidation may produce effects harmful to the public interest (such as an anticompetitive reduction of competition in an affected market), [2] that the conditions to be imposed will ameliorate or eliminate the harmful effects, [3] that the conditions will be operationally feasible, and [4] that the conditions will produce public benefits (through reduction or elimination of the possible harm) outweighing their harm to the merger." *Union Pacific Corp.*

– *Control -- Missouri Pacific R.R., Western Pacific*, 366 I.C.C. 462, 565 (1982) ("*UP/MP/WP*").[12] As the Board summarized in Decision No. 13 herein (at 4), it "will not impose conditions on a railroad consolidation unless it finds that the merger produces effects harmful to the public interest (such as a significant loss of competition) that a condition will ameliorate or eliminate."

The Board's precedents have developed several important corollaries to this core principle that have significant bearing on the conditions sought in this proceeding.

First, because the predicate for any condition is a finding of Transaction "effects harmful to the public interest," *UP/MP/WP*, 366 I.C.C. at 565, the Board "will not normally impose conditions on a consolidation to protect a carrier," *N&W/Southern*, 366 I.C.C. at 235 (1982). The only exception to this rule is when "essential services are threatened and the condition: (1) is shown to be related to the impact of the consolidation; (2) is designed to enable shippers to receive adequate service; (3) would not pose unreasonable operating or other problems for the consolidated carrier; and (4) would not frustrate the ability of the consolidated carrier to obtain the anticipated public benefits." *Id.* No carrier makes a claim in this proceeding that the CP/KCS Transaction would threaten essential services.

Second, because conditions "must address an effect of the transaction," *UP/SP*, 1 S.T.B. at 418, the Board "will not impose conditions 'to ameliorate longstanding problems which were not created by the merger,' nor will [it] impose conditions that 'are in no way related either

---

[12] The ICC and Board have repeated or cited this set of elements in nearly every Major Merger decision since 1982. *See, e.g.*, *Burlington Northern Inc., et al. – Control & Merger – Santa Fe Pacific Corp., et al.* ("*BN/Santa Fe*"), 10 I.C.C.2d 661, 729 (1995); *UP/SP*, 1 S.T.B. at 418 ("[c]onditions will not be imposed unless the merger produces effects harmful to the public interest (such as a significant loss of competition) that a condition will ameliorate or eliminate"); *CSX Corp. & CSX Trans., Inc., Norfolk Southern Corp. & Norfolk Southern Ry. – Control & Operating Leases/Agreements – Conrail, Inc. & Consolidated Rail Corp.* ("*CSX/NS/Conrail*"), 3 S.T.B. 196, 277-78 (1998); *Canadian National Ry., et al. – Control – Illinois Central Corp., et al.* ("*CN/IC*"), 4 S.T.B. 122, 141 (1999).

directly or indirectly to the involved merger.'" *Id.* (citing *BN/Santa Fe*, 360 I.C.C. at 952); *see also CSX/NS/Conrail*, 3 S.T.B. at 278; *UP/MP/WP*, 366 I.C.C. at 562-65. Likewise, the Board rejects conditions that "would put the proponent of a condition in a better position than before the merger," *UP/SP*, Finance Docket No. 32760 (Decision No. 103, STB served May 1, 2008) at 6, such as conditions that would "offset revenue losses by competitors." *BN/Santa Fe*, 10 I.C.C. at 730.

Third, the mere presence of some public interest concern associated with the Transaction is "*by no means sufficient"* to warrant imposition of a proposed condition. Decision No. 13 at 4 (citing *UP/SP*, 1 S.T.B. at 419) (emphasis added). "The condition must also be, among other things, narrowly tailored to remedy those effects." Decision No. 13 at 4. The Board will "closely scrutinize conditions that could alter the competitive balance otherwise to be realized from the merger, including whether those conditions could have unpredictable effects." *Id.* (citing *UP/SP*, 1 S.T.B. at 418); *see also* Decision No. 13 at 4 (citing *UP/MP/WP*, 366 I.C.C. at 564 for the proposition that the agency "should not use our conditioning powers to make consolidation proceedings vehicles for rail system restructuring").

Fourth, potential adverse impacts of the condition on the public interest – and on the Transaction itself – are central to the Board's assessment whether a particular condition is warranted. The Board "will consider evidence demonstrating the operational and competitive impacts of a requested condition on the primary transaction." Decision No. 13 at 4 (citing *CN/IC*, Finance Docket No. 33556 (Decision No. 7, STB served Sept. 18, 1998); *see also UP/MP/WP*, 366 I.C.C. at 564 (discussing the effects of conditions on the potential consummation of a transaction, and under certain circumstances, net public benefits).

Finally, the Board's precedents emphasize that the central focus of any consideration of potential conditions is on the Transaction's impact on competition. Although competition is not the sole consideration the Board may consider in assessing the public interest, it is the dominant one. As the Board said when approving the *CN/IC* transaction: "Conditions will generally not be imposed unless a merger produces effects harmful to the public interest that a condition will ameliorate or eliminate. The principal harms for which conditions are appropriate are a significant loss of competition or the loss by another rail carrier of the ability to provide essential services." *CN/IC*, 4 S.T.B. at 141; *see also CSX/NS/Conrail*, 3 S.T.B. at 277-78.

As we explain in this response, the requests for conditions fail under these governing principles. They are not required to overcome any public interest harm from the Transaction as proposed (including the commitments that Applicants are making with respect to the Transaction's implementation, as set forth below); they would reach far beyond any conceivable impact of the Transaction, with unpredictable consequences; in many cases they are designed to address pre-existing grievances having nothing to do with the Transaction; and they would do affirmative harm to the Transaction and the public interest (and in particular the new competition the Transaction would bring). The standards governing CN's extraordinary divestiture request are even more onerous – and even more clearly not satisfied, as we address in Section VIII.A below.

III. THE TRANSACTION WILL RESULT IN SIGNIFICANT PUBLIC BENEFITS

As recognized by many hundreds of shippers, this Transaction will deliver extraordinary benefits for rail customers, the robustness of the U.S. rail network, and the broader public interest. The Application contains extensive evidence of those benefits, which we need not rehash in this Response.

At the core of the Transaction's public benefits is its role in stimulating – without the need for any Board regulatory intervention – new competition in U.S. (and international) transportation markets. Some of those benefits are readily quantified, such as the concrete efficiencies the Transaction will achieve by combining the CP and KCS networks. Others flow from the improved competitive capabilities of the combined network, the new single-line services the Transaction will enable, and the further improvements in CPKC services through the virtuous cycle of investment and innovation that Transaction-related traffic growth will support. The full measure of these competitive benefits will be much more extensive than just the new traffic that CPKC attracts from other railroads, from other modes, and by generating entirely new marketing opportunities. CPKC will bring the benefits of greater competition to its existing customers, as well as to those of other railroads who end up deciding (perhaps as a result of competitive responses from CPKC's rivals) to keep these traffic where it is today.

The Comments of interested parties largely take these benefits as a given, with many acknowledging them outright.[13] The critics of Applicants' benefits evidence are, perhaps not surprisingly, CPKC's future Class 1 commenters. Some, led by UP, mock CP's new single-line services, asserting that they are unlikely to be particularly attractive to shippers, especially when measured against UP's supposedly shorter and faster routes. UP suggests that for CPKC to achieve its forecasted traffic growth, it will surely have to resort to foreclosure strategies that degrade UP's own existing interline routing options. UP and its allies are wrong. New CPKC single-line services will be attractive to customers, as the Board (and even UP itself) has consistently recognized in evaluating the benefits of end-to-end mergers in the past. CPKC will

[13] *See* Appendix C, Selected Excerpts from Shipper Support Statements Regarding Procompetitive Benefits of CP/KCS Transaction.

be a stronger and better competitor to these other Class 1s, and they know it. It is resoundingly in the public interest that CP and KCS be allowed to come together to achieve that goal.

Other Class 1 commenters, led by CN, quibble with some of the technical details of Applicants' quantifications of Transaction-related cost savings and data underlying the base year CP and KCS traffic that the Transaction will augment. None of these critiques have any merit either, and even if valid could not change the fact that the Transaction is in the public interest.

A. There Is No Merit to Claims by Class 1 Rivals that CPKC Will Not Provide Valuable New Competitive Options

Several of the Class 1 commenters take issue with Applicants' estimates of the traffic they will attract from other railroads or from trucks, and the revenues associated with those traffic gains.[14]

All of these critiques lack merit. Fundamentally, the combination of the end-to-end CP and KCS networks will serve the public interest by injecting new competition into the industry. Competition is a dynamic and fluid process, and it is obviously never possible to predict the outcome of that process with the precision of a diamond cutter. Now are the specific traffic gains that CPKC realizes the only measure of the public benefits of that competition: all shippers benefit whether or not they choose to shift their traffic to CPKC.

---

[14] UP and CN contend that Applicants have overestimated the projected traffic diversions. *See* Union Pacific Railroad Company's Comments and Request for Conditions (UP-10), Verified Statement of Thomas C. Haley ("Haley V.S.") (filed Feb. 28, 2022); CN's Comments on Application and Request for Conditions, Verified Statement of David T. Hunt ("Hunt V.S.") (filed Feb. 28, 2022). While BNSF, on the other hand, contends that Applicants *understate* the attractiveness of the combined CPKC networks. *See* Comments of BNSF Railway Company (filed Feb. 28, 2022) ("BNSF-9"), Verified Statement of Benton V. Fisher ("Fisher V.S.") at 13 (claiming "applicants' estimated diversions and growth traffic likely understate the additional volumes that will traverse the CPKC network"). This disagreement alone likely confirms the reasonableness of Applicants estimates.

Nonetheless, the Application has presented thorough, sophisticated, and reasonable estimates of the traffic that CPKC anticipates it will attract from other railroads and other modes of transportation, as well as the new traffic that its improved services and accompanying investments will generate. Those estimates are sound and fully consistent with Board precedent. Those estimates are validated in significant part by the groundswell of shipper support for the Transaction, and excitement about the specific new opportunities it will create.

The fact that CPKC's network will in some corridors require CPKC to move freight somewhat farther than its larger rivals will not hinder CPKC's new competition. CPKC will be capable of providing reliable, economical, and compelling new alternatives even where it may have a modest disadvantage in route length.

1. The Class 1 Critique of CPKC Traffic Estimates Misses the Fundamental Point that the Stronger Competition that Comes with the Transaction Is What Really Matters

Some of the Class 1 railroads criticize the precise quantification of traffic that CPKC will attract, often emphasizing their own views that their services are faster, more efficient, or otherwise superior to the CPKC routes.[15] Those critiques are unfounded. To start, estimating with precision the exact amount of traffic that CPKC will win away from other transportation options is not a precondition to finding that the Transaction will serve the public interest – nor

[15] *See* CN-13 at 18 (claiming that "the majority of the CPKC single-line routes that will be created by the merger are substantially longer than the already-existing route options available to shippers."); UP-10, Rocker/Turner V.S. at 2 (claiming that "Applicants' plans require CPKC to divert significant volumes of traffic from both UP and BNSF using longer, less efficient routes."); *id.*, Haley V.S. at 5.

even possible.[16] As described in detail below, Applicants developed their estimates based on a thorough assessment of the marketplace, and they are reasonable and sound.

But more fundamentally, the Class 1s are missing the forest for the trees: whatever measure of success CPKC achieves, the combination of the end-to-end CP and KCS networks will be a catalyst for investment in a new and improved North-South rail option that will inject new competition into the industry. If it really were the case that CPKC's estimates were wildly off base, and the Class 1 railroads did not expect much of their own traffic to be diverted to the CPKC network, they would not be objecting so vigorously. It is telling that the Class 1 railroads say nothing about their own competitive responses to CPKC. Their preferred strategy is to prevent new competition from CPKC from ever getting off the ground, using regulatory tools, rather than meeting CPKC in the marketplace.

It is also curious that the principal critics of the benefits available from Applicants' proposed end-to-end merger have themselves previously lauded the very same benefits when advancing their own end-to-end mergers, as recounted in detail in Appendix B. For example, BNSF has claimed that its formative transaction enabled it to "improve its service and grow the combined railroads' business in every major traffic category."[17] And CN has described how own U.S. origin story – the *CN/IC combination*, a transaction quite similar to CP/KCS – "was implemented with real gains in efficiency," and allowed CN to "offer new and improved

---

[16] *See* 49 C.F.R. § 1180.7 (1999) (requiring Applicants to prepare analyses of the "anticipated effects of the transaction on traffic patterns, market concentrations, or transportation alternatives available to the shipping public."). Of course, whether the CPKC diversions are underestimated or overestimated is not a factor in the Board's review of the competitive effects of the Transaction, which is the primary focus of the public interest standard under the pre-2001 Merger Rules. Diversion analysis prove nothing about potential competitive harm.

[17] *Competition in the Railroad Industry*, Ex Parte No. 705, BNSF Reply Comments, Verified Statement of John P. Lanigan (filed May 27, 2011) at 2, 8 (emphasis added).

services."[18] These critics have unanimously failed to provide a coherent explanation of why these same kinds of benefits cannot be achieved or would be of a lesser value in the context of this Transaction.

2. Applicants' Estimates of the Traffic CPKC Will Attract Are Reasonable and Sound

Contrary to the insinuation of some Class 1 commenters, Applicants' estimates of the traffic that CPKC will attract from other railroads and other transportation modes was thorough, sophisticated, and reasonable. It was based on a rigorous and holistic assessment of the marketplace and the capabilities CPKC will bring to the market. Those estimates were based, in part, on the work of Richard W. Brown and Nathan S. Zebrowski of FTI Economic Consulting, who analyzed 2019 traffic flows reported in CP and KCS internal traffic tape data and the Carload Waybill Sample, and the potential for CPKC to attract traffic now handled by other Class 1 railroads in lanes where CPKC will offer significantly improved capabilities relative to the separate offerings of CP and KCS. In addition, Bengt Mutén of IHS performed a thorough analysis of the traffic moving by truck today in highway lanes.

The conclusions reached by Brown, Zebrowski, and Mutén were then validated by Jonathan Wahba (CP's Vice President of Commercial Integration) and Michael J. Naatz (KCS's Chief Marketing Officer), both of whom have extensive familiarity with the commodity flows and customer opportunities in the affected markets. Wahba and Naatz confirmed the analysis and supplemented it with a detailed examination of new opportunities for rail traffic growth, identifying movements that were not included in the rail-to-rail diversion analysis based on 2019

---

[18] *Canadian National Railway Company, Grand Trunk Corp., and WC Merger Sub, Inc. – Control – Wisconsin Central Transportation Corp., Wisconsin Central Ltd., Fox Valley & Western Ltd., Sault Ste. Marie Bridge Company, and Wisconsin Chicago Link Ltd. ("CN/WC")*, Finance Docket No. 34000, Application, Verified Statement of Paul Tellier (filed Apr. 9. 2001) at 3 (Vol. 1) (Vol. 3, Exh. 3).

data (primarily because these moves did not exist in 2019, and would not exist but for the Transaction occurring).

Applicants' findings show that customers will be attracted to the new service options, including more competitive intermodal services that CPKC will provide. Together, these five witnesses present a reasonable and reliable view of the likely degree to which CPKC will offer a compelling value proposition that attracts large volumes of rail traffic. Of course, none of these witnesses – including those of the Class 1 objectors – purport to predict exactly which carloads shippers will choose to ship on CPKC routes. No analyst possesses that kind of crystal ball. But the analysis of Applicants' witnesses and their process and conclusions are sound, reasonable, and fully consistent with methodologies previously approved in transactions involving the Class 1 opponents.

The Class 1s' criticisms of Brown's and Zebrowski's analysis are lacking in substance and reveal that the Class 1 railroads really do not know how to attack a Transaction that produces the positive benefits that their mergers created. On the one hand, most railroads simply assert, without any analytical support, that Applicants' rail-to-rail diversion estimates as provided in the Brown/Zebrowski Verified Statement are overstated because the CPKC routes are longer than the routes from which traffic is expected to be diverted, and thus diversion would only occur by foreclosure. BNSF, on the other hand, claims the diversion estimates are understated.[19] The fact that one railroad argues the estimates are overstated and others argue the estimates are understated may itself reveal that CPKC's middle-ground estimates are reasonable (where the goal of estimates is not perfection).

- ***Modest Route Length Disadvantages Will Not Disqualify CPKCS from Offering Shippers Value They Find Attractive***

[19] BNSF-9, Fisher V.S. at 13-14.

We begin with UP's attack because it aims at the heart of CPKC's competitive benefits – contending that shippers will not much value CPKC's new offerings. UP wonders why "customers would willingly choose longer CPKC routes over existing interline routes."[20] But UP widely misses the mark. The hard data underlying Applicants traffic analyses shows that UP's effort to equate "route length" or even "simulated run times" with the best service option is fundamentally wrong, and UP should know it. Shippers routinely choose transportation options based on a wide array of factors that are entirely unrelated – or only loosely related – to the variables upon which UP fixates. Applicants marketing witnesses and traffic analysts thoroughly debunk UP's false premise. Reply Verified Statement of Jonathan Wahba and Michael J. Naatz ("Wahba/Naatz R.V.S.") at ¶¶ 8-18; Reply Verified Statement of Richard W. Brown and Nathan S. Zebrowski ("Brown/Zebrowski R.V.S.") at ¶¶ 33-47.

At the outset, Applicants note that the decisions as to whether CPKC routes will be competitive will not be for UP to make. Those decisions will be made by rail customers, whom CPKC will have to attract to CPKC's offerings by meeting their needs for reasonable rates, reliable service, and cycle times that enable equipment savings. CPKC is confident that many customers will find CPKC's offers compelling. The history of railroading and CP's own success in delivering value to customers shows that CPKC will certainly not be disqualified from consideration because of longer routes, which is merely one factor that rail customers consider.

But the hard data drives an even more powerful stake through the heart of UP's simplistic assertions. As Brown and Zebrowski show, mileage alone does not actually have very much to say about the overall competitiveness of a route or shippers' choices among competing

---

[20] *See, e.g.*, UP-10 at 25.

alternatives. Longer routes can be more efficient and can provide faster, or more reliable, service. Brown/Zebrowski R.V.S. at ¶¶ 34-47; *see also* Wahba/Naatz at ¶ 13.[21] Longer routes, even supposing they have somewhat higher costs, can still be rate competitive and have relatively low prices where railroads are motivated to compete, as CPKC will be here. Brown/Zebrowski R.V.S. at ¶¶ 49-52; Wahba/Naatz R.V.S. at ¶¶ 13-18.

Brown and Zebrowski based their traffic on data presented with the Application showing the relatively low influence of route mileage (within a reasonable range) on shippers' actual routing choices, and that analysis was not seriously challenged. *See* Brown/Zebrowski R.V.S. at ¶ 24; Verified Statement of Richard W. Brown and Nathan S. Zebrowski at Appendix B (App. Vol. 2 at 175-184).

In response to UP's attack, these witnesses took a harder look at data obtained in discovery from UP and BNSF, and they confirmed without a doubt that UP's simplistic assumptions about the role of route length in driving transit time differences is incorrect. In fact, the data confirm that CPKC's somewhat longer routes in some corridors will not make CPKC's routing options unattractive to shippers as new competitive alternatives.

Again, all of this is beside the point because shippers value reliability and many other attributes, not just speed. But even taking UP's claims about speed at face value, the actual data (drawn from UP and BNSF's own car event and waybill data records) show:

---

[21] "This poses both challenges and opportunities for each railroad contending to provide the ideal service parameters demanded by shippers in a myriad of individual circumstances. Many elements of CPKC's operating plan, including train schedules, line capacity and velocity, planned maintenance outages, switching frequency, and intermediate handlings, will affect the transit times and service levels CPKC is able to provide to customers. It is unfounded to discount CPKC's opportunities to compete on the narrow basis of relative route length." Brown/Zebrowski R.V.S. at ¶ 41.

- For UP's movements via the Laredo gateway, {{[redacted]}} Brown/Zebrowski R.V.S. at ¶¶ 39-40 & Figure 2 (emphasis added).
- Narrowing the focus to the specific corridor between Laredo and Chicago yields the same conclusion. The variation in UP's carload and intermodal shipments on this one corridor is {{[redacted]}}. Brown/Zebrowski R.V.S. at {¶¶ 43-46 & Figures 3-4.
- Examining the performance of UP and BNSF intermodal shipments in the Chicago-Laredo lane confirms that CPKC offerings are fully capable of competing successfully. UP witness Haley points to a 14-hour transit time differential between UP and CPKC for Laredo-Chicago lane, but the data show that that modest differential is {{[redacted]}} the amount of time UP (and BNSF) trains actually take to traverse those networks between Laredo (or Robstown) and Chicago). Brown/Zebrowski R.V.S. at ¶ 47-48 & Figure 5.
- UP's own evidence about market outcomes also contradicts UP's claims. UP witness Haley suggests that CPKC will not be competitive because of a route-length disadvantage that is no greater than the disadvantage that BNSF already possesses relative to UP, yet BNSF historically has attracted {{[redacted]}} of traffic on this route. Brown/Zebrowski R.V.S. at ¶ 47.

CN witness Hunt attacks Applicants' traffic analyses with a somewhat similar, more technical assertion that Brown and Zebrowski's analysis should have given greater weight to route-length (i.e., "circuity").[22] Hunt is equally wrong.

As already shown, Brown and Zebrowski conducted detailed traffic distribution analyses that revealed that circuity is not determinative of traffic shares at the relevant distance thresholds. Their approach used that data to reasonably and reliably estimate the impact of CPKC's new single-line routes, taking into account the degree to which relative distance influences shipper choices, and they explicitly excluded from consideration potential traffic shifts where CPKC routes would be more than 500 miles (or 50%) longer than the shortest available route. Brown/Zebrowski R.V.S. at ¶¶ 24. Moreover, as Applicants' witnesses demonstrate, Hunt's analysis is contradicted by his own work. His estimates of the traffic that CN would attract away from CPKC were it to purchase KCS's Springfield/St. Louis Line demonstrates that relative route-mileage is not dispositive:

First, Hunt's core methodology treats single-line routes as equivalent in "impedance" (or relative attractiveness to shippers) to interline routes that are 350 to 650 miles shorter. Brown/Zebrowski R.V.S. at ¶ 25; *see* CN-13, Hunt V.S. at 8.[23] Applying those parameters, the CPKC single-line diversion routes that Hunt states are 217-miles longer on average than existing interline routes, would, in fact, be *more efficient than* and highly competitive with existing interline routes. Brown/Zebrowski R.V.S. at ¶ 25.

Second, unlike Applicants' witnesses, Hunt's analysis concluded that traffic would shift to new CN single-line routes that would be more than 500 miles longer that existing alternatives

---

[22] *See* CN-13 at 18; *id.*, Hunt V.S. at 8.

[23] Canadian National Application (CN-14), Verified Statement of David T. Hunt in Support of Springfield Line Divestiture to CN ("Hunt Application V.S.") (filed Feb. 28, 2022) at 37.

(*e.g.*, in the Kansas City-Calgary lane). Brown/Zebrowski R.V.S. at ¶ 24. Applicants do not credit this analysis, but it shows that CN's claims that CPKC's single-line routes will be competitively disadvantaged is not credible.

Third, Hunt's insistence that Brown and Zebrowski should have used diversion percentages that vary with route length is contrary to his own use of diversion percentages that *barely change* in response to changes in route length, and in some cases even *increase* precisely because the diversion route is longer. Brown/Zebrowski R.V.S. at ¶¶ 26-28.

CN's own evidence thus confirms the reasonableness (and indeed superiority) of the data-driven approach taken by Applicant witnesses in this case.

- ***Other Attacks on Applicants' Traffic Estimates Are Equally Insubstantial***

CN's smattering of additional criticisms of Applicants' traffic analyses are likewise and easily rejected.

Hunt asserts that Brown and Zebrowski should not have identified potential shifts of lumber traffic from Canada to Dallas or grain traffic from the Midwest to Mexico because those diversions are not tied directly to station moves in the 2019 traffic data is also easily discarded. Hunt overlooks the detailed explanations as to why each of these traffic shifts are likely following CPKC's creation of single-line service connecting destinations with existing demand to additional origin supply. Brown/Zebrowski R.V.S. at ¶¶ 15-18; Wahba/Naatz V.S. at ¶¶ 21-31, 96-101 (App. Vol. 1 at 253-258, 288-292). Specifically, CPKC's lumber and grain diversion estimates were based on Wahba's and Naatz's knowledge of the dynamics and trends in those markets, and were quantified and validated with the support of Brown and Zebrowski. Brown/Zebrowski R.V.S. at ¶ 16.

Hunt's own work in support of CN's Responsive Application reveals Hunt's self-serving inconsistency. He too recognizes that it may be appropriate to find that new single-line routes

could shift traffic currently moving in one origin-destination corridor to another. In his analysis, 15% of volumes currently moving through New York and New Jersey ports to Kansas City would instead move through the Port of Montreal were CN to gain a single-line route to Kansas City. Brown/Zebrowski R.V.S. at ¶ 18 n.26. Applicants do not endorse the correctness of this conclusion – in fact, Hunt provides significantly less detail and support for his assumption than Brown and Zebrowski. But it shows that consideration of such shifts is appropriate in a rail traffic impact analysis. *Id.* at ¶ 18.

- ***CPKC's Revenue Estimates Are Reasonable***

The Class 1s also criticize Applicants for not providing more details concerning the prices CPKC will charge in the marketplace, suggesting that Applicants have not reliably estimated the revenues they will earn in the post-Transaction world. Brown and Zebrowski explain why these criticisms are unwarranted. Brown/Zebrowski R.V.S.at ¶¶ 57-62.

The Class 1 railroads take Applicants to task for not precisely cataloguing the rates that they will earn from each carload of traffic they anticipate attracting to the CPKC network, or telegraphing exactly what rate discounts they may offer in competition with customers' existing transportation alternatives. UP even suggests, falsely, that CPKC's competitive strategies would necessarily entail charging the same rates as shippers pay today.[24] But it would be exceedingly inappropriate for Applicants to be required to develop and divulge to these Class 1s every detail of their strategies to bring new competition to the market. Applicants have not telegraphed – and should not telegraph – the customer-by-customer marketing plans that they will be rolling out to the marketplace if they are allowed to combine. To do so would undermine the very competition that the CPKC transaction is intended to enhance. Applicants recognize that they will need to

[24] UP-10 at 27.

present shippers with a package of rate and service terms that better meet their needs. Those packages will vary shipper-by-shipper, market-by-market, and will encompass a broad array of attributes from rate levels, equipment availabilities, cycle time expectations, reliability, transit times, and many other variables.[25]

3. Applicants' Estimates Are Validated by the Transaction's Extensive Shipper Support and Real-World Developments

Were the thoroughness of Applicants' market analyses and the track-record of end-to-end railroad combinations not enough to support Applicants' traffic forecasts, they would be validated by the extensive shipper support – and in many cases excitement about concrete new potential CPKC services – and real-world developments, including plans that many shippers are making to invest alongside CPKC to take advantage of the improved transportation linkages made possible by the Transaction.

Appendix C recites numerous examples of from the extensive record of shipper support for the Transaction,[26] which Applicants are augmenting with a number of additional verified statements from shippers targeting specific ways in which the Transaction will bring better rail transportation options, stronger competition, and likely resulting traffic growth opportunities for CPKC. These shippers understand the multi-faceted benefits of the new CPKCS single-line routes that will be created by the Transaction.

---

[25] Brown and Zebrowski also explain why the specific criticisms of their revenue estimates levied by CN witness Hunt are incorrect. They show that (a) their use of a "segment approach" to revenue estimation was superior to "end to end approach" (Brown/Zebrowski R.V.S. at ¶ 58); (b) Hunt's claim that certain estimates exceeded actual historical non-CPKC revenues failed to account for re-billing (*id.* at ¶ 59); and (c) a minor currency conversion error identified by Hunt affects a total of 21 units of traffic and would impact revenues by less than 0.01% (*id.* at ¶ 61).

[26] For a complete list, see the Application (Volume 3-4 and the Table of Contents herein (Exhibits S-AC).

Real-word developments since last October and other concrete market facts further underscore the reasonableness of Applicants' estimates of the Transaction's potential.

First, numerous shippers have been developing their own plans to make investments to take advantage of the new, more efficient transportation linkages made possible by the transaction. CP's Chief Marketing Officer John Brooks and KCS's Chief Marketing Officer Michael Naatz separately summarize what KCS and CP are hearing from their current and future customers. Brooks R.V.S. at ¶¶ 5-6; Naatz R.V.S. at ¶105. Several of these shippers are communicating their plans directly to the Board. *See* Verified Statement of Mr. Bob Knief, President of Bartlett Grain Co. ("Knief V.S.") (filed June 22, 2022) at ¶ 15.[27]

Second, post-Application developments and other real-world facts further confirm precisely those new opportunities about which Applicants' Class 1 rivals are most skeptical. For example, CN witness Hunt claims that Applicants' forecasts of intermodal traffic from the Port of Lazaro Cardenas are "implausible because they fail to account for the reality of global supply chains or the circuity of the longer rail and maritime routes that would make it difficult for CPKC to capture that traffic."[28] Hunt also opines that "[t]he Port of Lazaro Cardenas is simply

---

[27] *See also* Reply Verified Statement of NEW Cooperative, Inc. (Vol. II, Ex. X) ("I write today to advise the STB of a potential investment that is contingent on the approval of the CP-KCS combination. This combination provides us the possibility to build a greenfield grain elevator to ship corn and soybeans in Northern Iowa, to capitalize on new, efficient single-line routes on CP-KC from Iowa to grain destinations on the KCS, including Mexico."); Reply Verified Statement of Kevin Hall, Vice President, Supply Chain & Continuous Improvement, Agriculture for CHS Inc. (Vol. II, Ex. U) ("The increased efficiencies and market access created by the CP-KCS merger would be an impetus for rail-using companies, such as CHS, to make the most of those benefits by considering making new investments in supply chain infrastructure to be served by CPKC."); Reply Verified Statement of Ray Carroll County Grain Growers, Inc. (Vol. II, Ex. Y) ("We are pleased to support the CP-KC transaction and believe that it opens up more possibilities for us. In fact, we anticipating making new investments in this corridor in the foreseeable future.").

[28] CN-13, Hunt V.S. at 27-31; *see also* UP-10 at 24-25 ("Applicants describe aspirations to draw substantial quantities of new traffic to their combined system, anchored by vague plans to attract international intermodal traffic to the Port of Lazaro Cardenas…").

not a realistic alternative to Los Angeles/Long Beach, given the increased distances and the presence of more competitive alternatives, such as the Port of Vancouver."[29] However, the reality of this opportunity has been proven by shipper interest in this transportation option and CP and KCS's now-proven ability to deliver service levels meeting customer needs even *before* the benefits of their combined network have been unlocked. Wahba/Naatz R.V.S. at ¶¶ 34-35.

Working on an interline basis, CP and KCS demonstrated the capabilities of their route between Lazaro Cardenas and Chicago, enabling steamship companies and intermodal shippers to bypass the congested Southern California ports. As one of those shippers – Sparx Logistics – testifies here:

> "We have proven through our actions that we believe ocean shipping from Asia to Lazaro Cardenas is a viable way to reach destinations in the Central and Eastern United States. We believe that the CP-KCS Transaction can only strengthen this exciting new option, making it better for our shippers and their customers."[30]

The president of the steamship line that handled those containers via Lazaro and the CP-KCS inland rail route similarly testifies that:

> "The combined CP-KCS network . . . will create efficient, single-line service from Lazaro Cardenas to those U.S. and Canadian population centers, making Lazaro a valuable relief value for freight that would otherwise further clog other ports."[31]

As this testimony confirms, UP and CN simply have their facts wrong. Maritime distances are not a barrier to Lazaro's competitiveness, especially for trade from Southeast Asia (Vietnam, Singapore, etc.), where vessel routes are not more circuitous. Nor is the modest

---

[29] CN-13, Hunt V.S. at 32.

[30] Verified Statement of Markus Heiken, VP Global Ocean Procurement, Sparx Logistics Inc. (Vol. II, Ex. AA).

[31] Reply Verified Statement of Uffe Ostergaard, President of Hapag-Lloyd (America) LLC, at 1 (Vol. II, Ex. V).

differential in rail route mileage as compared to UP's and BNSF's rail routes from Southern California to Chicago. Other Pacific Coast ports will remain viable – indeed, dominant – options for containerized cargo moving to the U.S. Midwest, but Lazaro Cardenas has real and yet-untapped potential to prove efficient transportation options for many shippers' needs. Wahba/Naatz R.V.S. ¶ 28-31.

UP and CN are also critical of Applicants' anticipated ability to attract additional DRUbit traffic moving between Canada and the Gulf, supporting the transition of crude-by-rail to this non-hazardous form. Citing a 2019 press release announcing the first phase of the Hardisty project, they assert that this opportunity does not require the Transaction to be achieved.[32]

Those assertions, however, don't relate to the real-world market facts, as presented here by the rail shippers involved in this project. As the Chief Commercial Officer of USD Group explains in his Reply Verified Statement, CPKC's new routes promise to incentivize further investment in DRUbit infrastructure, thereby speeding up the transition to more efficient, safer DRUbit:

> "We believe the Transaction will create more efficient, new single line routes from origins near the Alberta oil sands, on CP's network, to destination refineries on KCS's network, without which new DRUbit traffic is much less likely to arise. We understand that CPKC will support new investment in capacity (longer sidings, etc.) on the CP-KCS North-South route connecting Canada with the Gulf Coast, enabling improved cycle times and reliability and the ability to move more product on the same number of trains, which impacts cost, efficiency, and capacity. These efficient new routes promise to incentivize further investment in DRUbit infrastructure, thereby speeding up the transition to more efficient, safer DRUbit."[33]

---

[32] *See* UP-10 at 24-25; CN-13, Hunt V.S. at 25-27.

[33] Reply Verified Statement of Brad Sanders, Executive Vice President, Chief Commercial Officer, USD Group LLC, at 3 (Vol. II, Ex. AC).

As Wahba and Naatz explain, UP and CN are confusing the first phase of the Hardisty project with the second and third phases, which have not been undertaken and which may not be undertaken without the transportation benefits that the Transaction will bring. The improved cycle times and service reliability made possible by the CP/KCS Transaction will support the new investments necessary to unlock this traffic and displace more hazardous forms of crude-by-rail moving across North America's rail network. Wahba/Naatz R.V.S. at ¶¶ 43-46.

Similarly devoid of connection with market facts is CN's assertion that Wahba and Naatz "claim approximately $122 million in diversions that were apparently 'missed' by Applicants' diversion experts in LPG, grain, and perishable commodities."[34] As Applicants' witnesses explain, there are clear and compelling opportunities in each of these commodity groups to support rail movements to alternative destinations, or from alternative origins, that would not have been captured by a narrowly focused analysis only of 2019 origin-to-destination rail flows, and recent experience confirms the validity of these forecasts. For LPG, CP gained new business after 2019 from specific customers that would benefit from the new capabilities of single-line CPKC routes. The same is true of grain, where CP has identified concrete new opportunities for CP origins to supply a major KCSM grain customer in Mexico. Brown/Zebrowski R.V.S. at ¶ 64; Wahba/Naatz R.V.S. at ¶ 39. And for perishables, CN ignores the fact that the CP/KCS combination would not merely replicate existing highway movements, but shift perishables that move by truck form a two-stage route via warehouses in the south to a longer-haul rail movements directly into the U.S. Midwest closer to end consumers. Wahba/Naatz R.V.S. at

[34] *See* CN-13, Hunt V.S. at 32.

¶ 41; Mutén R.V.S. at ¶¶ 10-11.[35] The concrete potential of these and other new marketing opportunities underscores the procompetitive potential of the CP/KCS transaction.

4. The KCS Board's Highly Conservative Pre-Agreement Synergies Estimates Do Not Undermine Applicants' Anticipated Benefits

Finally, the fact that KCS's board of directors was presented with a "more conservative" assessment of revenue synergies and operating savings in the course of its consideration whether to enter into a merger agreement with CP does not undermine the magnitude of benefits that Applicants now anticipate. As Naatz explains, it made sense for KCS's board to view potential future synergies conservatively, for they were deciding whether to accept consideration in the form of shares the value of which would be based in part on those synergies. Naatz R.V.S. at ¶¶ 108-112. Further, the KCS team developing those conservative estimates – which nonetheless showed extraordinary potential for new growth from a CP/KCS combination – had not yet had the benefit of the more detailed, collaborative analysis of that potential undertaken in conjunction with CP, and ultimately informed by the analysis of Applicants' traffic experts with the benefit of confidential data sources. *Id*. at ¶ 112. As the passage of time has shown, moreover, the desire of the marketplace for the transportation and competitive benefits that CPKC will unlock has only grown stronger. *See* above at Section III.A.3.

[35] These witnesses demonstrate that Applicants traffic analyses did not double count any of these new market opportunities, contrary to CN's assertions. Brown/Zebrowski R.V.S. at ¶ 64.

B. There is Zero Risk to CPKC's Financial Viability and Continued Investment, Regardless of How Much New Traffic Is Attracted to the CPKC System, or at What Rates

Echoing UP's false suggestion that CPKC's somewhat longer routes will compel it to "foreclose" UP interline routes in order to achieve forecasted traffic gains, CN contends that CPKC will be under financial pressure to do the same thing. CN is equally wrong.

As Velani and De Bruyn explain, CPKC will be financially strong and fully capable of rapidly repaying its Transaction-related debt regardless of how much new traffic it attracts – or how much revenue it reaps from that traffic. They demonstrate that CPKC will have ample free cash flow to pay down debt and invest in the railroad even in the absurdly unrealistic scenario where CPKC attracted no new traffic at all as a result of the Transaction. Reply Verified Statement of Nadeem Velani and Chris De Bruyn, ("Velani/DeBruyn R.V.S.") at ¶¶ 23-29.

CN's suggestion that Velani's analysis of CN's failed 2021 bid to acquire KCS has a bearing on the financial pressures CPKC will face here is also incorrect. CN claims that, "[i]n opposing CN's proposed merger with KCS, CP conducted a financial analysis of the transaction" and concluded that "CN's targeted rate of return will not be achieved based on the synergies CN forecasts, which will place pressure on CN to boost returns in other ways, such as through cost-cutting, or—more plausibly—reaping the benefits of reduced competition . . . ."[36] As Velani and De Bruyn explain, however, the facts of this Transaction are quite different:

- CN was offering substantially more cash consideration, which in turn would have driven substantially higher levels of debt;
- CN's public statements to investors and the public established that it was sharply focused on hitting "return-on-invested-capital" (ROIC) targets, which would have been challenging with the KCS transaction absent sharp revenue increases; and

[36] *See* CN-13 at 59-60, citing Exhibit 4, Verified Statement of Mark E. Zmijewski ("Zmijewski V.S."), at ¶ 5 (quoting Verified Statement of Nadeem Velani at 11).

- CN's proposed transaction involved combining two railroads with substantial amounts of competitive traffic and overlapping routes, creating very real risks that had a voting trust been authorized, it would have had to be unwound via divestiture, with attendant financial risks.

Velani/DeBruyn R.V.S. at ¶¶ 36-41.

None of these factors are at play with CP's acquisition of KCS.

C. The Class 1 Critique of the Operating Efficiencies Generated by the Transaction Is Invalid

Several of the Class 1s critique the magnitude of the operating efficiencies the CP/KCS Transaction will generate.[37] UP's critique is insular, focusing on static and narrow interchange cost savings without appreciating the rippling effect of operational redesign coupled with traffic growth and investment. These opportunities for greater efficiency extend well beyond the narrow body of traffic currently interchanged at Kansas City and cannot be achieved without the Transaction. CPKC's ability to re-optimize operations across a broader network will be the foundation for growth. Reply Verified Statement of Raymond A. Elphick and John F. Orr ("Elphick/Orr R.V.S.").

CN's quibbles with Applicants' estimates of operating efficiencies are no less meritorious, as Michael Baranowski explains in his Reply Verified Statement. Baranowski R.V.S. at ¶¶ 11-13. As Baranowski explains, Applicants have based their estimates on the same approaches that are used in the ordinary course in the railroad industry and that undergird the Board's regulatory processes. Baranowski R.V.S. at ¶ 38. They are entirely reliable.

---

[37] *See, e.g.*, UP-10 at 23 ("CPKC would not generate significant merger benefits through cost savings"); UP-10, Haley V.S. at 5-14 (claiming that "applicants' projected operating cost savings are very small, and almost all could be achieved without a merger"); CN-13, Zmijewski V.S., at 59 (claiming claimed mechanical savings "are not cognizable efficiencies, or, at best, cognizable for a limited time period).

CN's witness on this subject, Dr. Mark E. Zmijewski, is a prolific testifying expert for parties in merger litigation seeking to attack the merging parties' efficiencies estimates. Courts considering his testimony have recognize that it is impossible to predict the future with certainty, such that efficiencies cannot be rejected based on the parties' inability to provide precise quantification with certainty. As recently as 2020, a district court judge considered Dr. Zmijewski's testimony on behalf of the Department of Justice and stated:

> "While Dr. Zmijewski's testimony identified several flaws with Defendants' process, and the Court commends his rigor, the Court also has no doubt that there is truth to Defendants' claim that the JV is likely to achieve significant efficiencies" and "[t]he Court is, of course, concerned about the fundamental unverifiability of efficiencies that are grounded in the business judgments of Defendants' employees. Also, as the FTC's examples make clear, some portion of Defendants' projected efficiencies are unrealistic or oversimplified. But Defendants have shown that they used a process substantially similar to that used in the ordinary course of business to determine the anticipated efficiencies arising from this transaction, and they have supported their claims with evidence from past transactions. Thus, the issues identified by the FTC *do not render Defendants' efficiencies wholly unverifiable*."[38]

Applicants' estimates of the efficiencies the Transaction will generate are likewise well founded in experience and the tools of the railroad industry. Baranowski R.V.S. at ¶¶ 36-38. There is no doubt that the CP/KCS Transaction will generate material efficiencies, to the benefit of the U.S. rail network, CPKC's customers, and the competitive process.

D. CN's Continuing Criticisms of the Operating Plan Lack Merit and Are Irrelevant to the Board's Evaluation of the Transaction's Impacts

CN continues its pattern of attacking the traffic density data reported in Applicants' Operating Plan. Applicants' prior submissions have thoroughly addressed CN's spurious claims

---

[38] *FTC* v. *Peabody Energy Corp.*, No. 4:20-cv-00317-SEP, Memorandum Opinion (E.D. Mo. Oct. 5, 2020) (Vol. 3, Exh. 4) at 82-83 (emphasis added).

that Applicants' methodology for developing and presenting density data was invalid.[39] As the Amended Operating Plan shows, Applicants' approach in fact provides the best and most reliable means of assessing the *impacts of the Transaction*, which is the purpose of the Board's review in this proceeding. The data presented in the Amended Operating Plans supports a reliable assessment of the changes in traffic volume – in terms of train counts and tonnage – resulting from the traffic and operating changes associated with the Transaction.

CN's new volley of attacks appears to acknowledge this key fact thus turns its sights on criticisms of Applicants "base period" data, most centrally CN witness Van Dyke's assertion that "Applicants' *base year* operating plan is based on traffic density data that is conceptually flawed and demonstrably incorrect."[40] None of this matters for purposes of determining how many more trains (or fewer trains in some instances), or how much more tonnage, the Transaction will result in CPKC handling on the various segments of its post-Transaction network. Instead, CN's new criticisms go only to the degree of precision associated with the base Operation Plan as a perfect measure of exactly what one would see if you stood trackside during 2019 and counted trains or weighed the passing railcars.

In any event, Elphick and Orr explain in detail why Van Dyke is simply wrong in suggesting that building a 2019 base the Van Dyke claims to prefer would have enabled more reliable – or even reliable at – assessments of the transaction's impacts.

First, Van Dyke criticized Applicants for using data "to construct a '2019 base year' [that] does not actually include *any* data from 2019."[41] As explained in the Reply Verified

---

[39] *See* Applicants' Response to Decision No. 16 (CP-43/KCS-30) (filed Mar. 21, 2022); Applicants' Amended Operating Plan (Exhibit 13) (CP-47/KCS-34) (filed May 13, 2022).

[40] CN-17, Verified Statement of Carl Van Dyke ("Van Dyke V.S.") at 6 (emphasis added).

[41] *See* Van Dyke V.S. at 7-8 (emphasis added).

Statement of Raymond A. Elphick and John F. Orr, CN's criticisms are based on the mistaken premise that it would have been realistic, or even possible, to use FY2019 reported data to build a base that could have been used as the starting point for layering on Transaction-related changes. Elphick/Orr R.V.S. at ¶¶ 6-9. Applicants' approach, by enabling apples-to-apples comparisons between the pre- and post-transaction periods, was more reliable, not less.

A FY 2019 train plan was neither available nor representative of current operations, so Applicants reasonably chose the most current design at the time, and applied it to October 2020 traffic. That period was chosen because it was the nearest peak month to the period covered by the current design and because its volume levels were representative of the typical monthly range experienced in full year 2019. As discussed by Elphick and Orr, the operating statistics generated by that approach provide the best available and most accurate reflection of current pre-Transaction levels. Elphick/Orr R.V.S. at ¶ 4.

Van Dyke also criticizes CP's decision to use KCS data for the period from February to early May 2021 data to develop pre-Transaction demand train levels (*e.g.,* unit trains carrying grain and other bulk commodities). That choice made sense for many reasons, including because it was aligned with KCS's current train design and also representative of KCS's pre-Transaction operations and 2019 average traffic levels. This period is not skewed due to seasonality. Elphick/Orr R.V.S. at ¶ 13.

Additionally, KCS reported segment density data available for FY2019 did not include corresponding train counts, so it could not have been used by Applicants to develop counts of trains per day ("TPD") or cars per day ("CPD"). As a result, Van Dyke's proposed approach would have left Applicants with no ability to develop an accurate assessment of Transaction-related operating changes, much less one linked to the pre-Transaction base plan. Elphick/Orr

R.V.S. at ¶ 6, 11. As discussed by Elphick and Orr, an apples-to-apples measure of base and synergy TPD/CPD counts was critical. *Id.* at 11. Applicants' methodological choice was thus made consciously and appropriately, weighting the tradeoffs associated with modeling 2019 operations rather than relying on 2019 data, which would simply not have supported the analysis that the Operating Plan was designed to advance, or the role it plays in the Board's assessment of the Transaction's true impacts.

Van Dyke's other criticisms are equally without merit, as Elphick and Orr explain. Elphick/Orr R.V.S. at ¶¶ 5, 13-19.[42] CN's quest to defeat Applicants' merger on a set of "data technicalities" is both misguided and ultimately just wrong. It is also disingenuous: Van Dyke's workpapers show that his preferred method for modelling segment densities produces results that are less aligned with CP and KCS 2019 reported segment densities than the Applicants' planned for the operations of CPKC the same way they would plan for any future traffic and operational changes in the ordinary course. They used the best data available, and the best analytical tools available, to analyze the impacts of those plans, assure their feasibility, and present the resulting statistics to the Board. The Board has all the information it needs to form and support reliable judgments that the operating impact of the Transaction will serve the public interest.

IV. THERE ARE NO VALID COMPETITIVE CONCERNS

Despite the end-to-end character of the proposed Transaction, and extensive evidence of its competitive effects – covered in small part in the preceding section – a number of commenters

[42] Had Applicants followed Van Dyke's proposed methodologies, moreover, the resulting differences in operating statistics would have been trivial in scope and magnitude. Elphick/Orr R.V.S. at ¶¶ 17-18.

seek to articulate competitive concerns. They do this because they understand that the Board's precedents demand that a transaction "produce[]effects harmful to the public interest (such as a significant loss of competition)" in order to justify any "condition [to] ameliorate or eliminate" that harm.[43] However, there will be no such harm, and thus no predicate for any competition-preserving conditions. The Transaction will not reduce the number of serving railroads for any shipper or in any corridor (CN's claims notwithstanding), and CPKC will not eliminate any existing interline option that shippers would prefer to use over CPKC's new single-line alternatives. CPKC will have strong incentives to preserve those options, which is why Applicants did not hesitate to make robust commitments at the outset of this case to keep all gateways open both operationally and commercially for traffic that might be affected by the Transaction. With these commitments, which Applicants accept may be enforced by the Board, the public is assured that the Transaction will be every bit as procompetitive as Applicants foresee.

In this Section we address in detail the claims – primarily by a handful of opportunistic Class 1s seeking protection from CPKC's competition – that the Transaction will have anticompetitive vertical effects. We also explain why the requests of numerous shipper associations for open access, reciprocal switching, and other sweeping regulatory strictures predicated on their dissatisfaction with the level of competition in the industry have no place in this proceeding. The only threat to competition here is from the overreaching condition requests—by Class 1s and shipper associations alike – that would hobble CPKC's efforts to inject new competitive alternatives into the rail industry.

---

[43] Decision No. 13 at 4 (quoting *UP/SP*, 1 S.T.B. at 418).

A. There Is No Basis for Concern About "Vertical" Competition

The Transaction is undeniably an end-to-end merger, a form of a vertical merger that "by its very nature, is not likely to generate the kinds of competitive problems that often arise in connection with a 'parallel' consolidation."[44] Apart from one self-motivated commenter – CN – no party has even suggested that the Transaction would reduce head-to-head competition among CP and KCS, and we demonstrate in Section VIII.A below that CN's contentions regarding the competitive role of KCS's Kansas City-Springfield Line are contradicted by the facts. The resounding support of hundreds of shippers extolling the procompetitive virtues of the Transaction and urging its approval speak loudly, and arrayed against them are precisely none that assert any true loss of competitive rail options – zero. Even CN's own communications with its shippers currying support for its divestiture proposal have readily acknowledged that {{ }}[45]

Given the Board's decades of consistent precedents – and the Class 1s own decades of (nearly) consistent advocacy – regarding the procompetitive virtues of end-to-end mergers and the lack of any basis for thinking that competition is likely to be harmed rather than intensified, our Class 1 opponents have painted themselves into a bit of a corner, especially given that they all acknowledge that this Transaction is fundamentally a pure end-to-end transaction.[46] The Class 1 opponents must answer a number of questions: What has changed to warrant a departure from the Board's consistent precedents? What has changed to motivate an about face by the

---

[44] *Kansas City Southern – Control – The Kansas City Southern Railway Company et al.*, Finance Docket No. 34342 ("*KCS/Tex Mex*") (Decision No. 12 served Nov. 29, 2004) ("KCS/Tex Mex Decision") at 17.

[45] CN0000185-HC, {{ }} (Vol. 3, Exh. 6).

[46] *See, e.g.*, BNSF-9, Verified Statement of David Reishus ("Reishus V.S.") at ¶ 10; UP-10, Rocker/Turner V.S. at 8.

Class 1 railroads in their attitude toward end-to-end consolidations? And, what if anything is different about this particular end-to-end Transaction to bring it outside the Board's consistent findings that transactions like this one – such as *CN/IC* – actually do intensify rather than harm competition in the transportation marketplace?

The answer to all of these questions, unfortunately for Applicants' opponents, is that *nothing has changed*, except that in this particular case – as in the *KCS/Tex Mex* proceeding of 17 years ago – UP and BNSF in particular feel threatened by the potential (indeed, likelihood) of new, more intense competition from CPKC single-line routes and want protection. As the Board's precedents establish, however, they are not entitled to protection.[47] Only harm to *competition – not harm to competitors – is entitled to* the Board's protection. Here, competition will be strengthened, not reduced.

The procompetitive nature of the CP/KCS Transaction is thoroughly addressed throughout the evidence in this case. That evidence encompassed the testimony of CP and KCS personnel regarding how they plan to bring new competitive options to rail customers, the analysis of Applicants' experts showing those new options likely will entice significant numbers of shippers to choose CPKC over other available alternatives, the testimony of hundreds of shippers who look forward to the day when CPKC operations become available, and the thorough economic testimony of Applicants' economic witness, Dr. W. Robert Majure, who has reviewed countless mergers in his prior role as a senior economist at the Department of Justice Antitrust Division, and concludes in this case that "a CP/KCS combination is a vertical

---

[47] KCS/Tex Mex Decision at 17-18 ("harm to a competitor (UP, BNSF)" is not the same as "harm to competition"). Neither UP nor BNSF, nor any other railroad has raised any hint of concern about harm to their essential services, nor could they, particularly given the financial and network strengths of CPKC's much larger Class 1 rivals.

transaction of two complementary networks that would create opportunities for procompetitive benefits throughout the CP/KCS network and would not substantially lessen competition."[48]

In this Section, we demonstrate that the arguments regarding potential vertical competitive harm – and vaguer concerns of some about the potential loss of existing interline options in cases where CPKC will have a new single-line or longer potential haul – are not valid. In particular, the arguments of the Class 1 opponents are contradicted by:

- The Board's consistent conclusions, arrived at in case after case assessing the concrete factual contexts presented by the end-to-end aspects of specific railroad industry consolidations, that vertical foreclosure is unlikely to occur and that end-to-end merger create new opportunities for shippers, not less;
- The consistent and sworn testimony of Applicants' opponents on the exact same issues in their own proposed consolidations;
- The Board's considered conclusions in a prior case that is factually indistinguishable from this one: KCS's acquisition of Tex Mex and TFM in 2005, in which UP and BNSF advances exactly the same arguments they retread here regarding the likelihood of foreclosure at the Laredo gateway. Their predicted foreclosure did not come to pass then, and it will not come to pass in this case either; and
- The Board's consistent and successful reliance on conditions enforcing prior applicants' commitments to "keep gateways open on commercially reasonable terms" in lieu of more formalistic – and anticompetitive – mechanisms for regulating the interline rates of merging parties. Applicants here have made even

[48] Reply Verified Statement of W. Robert Majure ("Majure R.V.S.") at ¶ 11.

> more robust commitments in this regard, which far exceed what would truly be necessary (nothing) to ensure that they have incentives to maintain existing interline options that shippers may prefer in the future despite the advent if new, more efficient CPKC single-line routes.

UP and BNSF have very little to say about these issues that has not been said many times before, and thoroughly rejected by the Board. As Dr. Majure explains, the basic economics have not changed at all. The railroad industry facts have not changed at all. This end-to-end merger will be every bit as (and Applicants believe) procompetitive as the end-to-end mergers that came before – such as the *CN/IC* transaction, which nobody, ever, has suggested led to anything but new, procompetitive single-line route options to the benefit of shippers and the U.S transportation network.

What do UP and BNSF try to argue beyond a rehash of the arguments that the Board has previously rejected? Three things, principally. One: that the Board's prior analysis was entirely beholden to a discredited economic theory known as the "one lump" doctrine, and that (they claim) more modern economists view vertical mergers with suspicion. As Dr. Majure explains in detail, this is nonsense. The Board never based its conclusions about the procompetitive effects of end-to-end mergers in the rail industry on abstract economic theories, but on an assessment of the hard facts, and the facts here line up with those in prior cases and the vertical integration of CP and KCS will create more competition, not less. Dr. Majure also shows that the Class 1 economists really have nothing new to offer beyond the same old arguments, except dressed up to sound and look different, but the conclusion should be the same: the arguments about the potential for harm in a vertical merger do not stand up to the facts of this

Transaction. As the Board has done, and the ICC before it, the Board should once again find that these "vertical competition is bad" theories do not support a finding of likely competitive harm.

Two: UP appears to contend (with some allies) that this case is somehow different because CPKC's new single-line routes add nothing of value – viewed from Omaha, they appear longer and slower than UP's routes via Laredo – so the only way CPKC could hope to succeed would be via foreclosure of UP's "better routes." This is hubris speaking rather than fact. As we have already demonstrated in Section III, CPKC will offer shippers real value and success in attracting customers on the merits, with no need – and no incentive – to try to disable UP's routes.

Three: BNSF makes the aggressive claim (never previously presented to the Board or KCS) that for the past 17 years KCS has been foreclosing it brutally at Robstown/Laredo, and things will only get worse under CPKC. This is egregiously false, as a sober analysis of the underlying facts, confirmed by the deposition testimony of the BNSF witness making this claim, establishes.

As Applicants have previously made clear, and as Brooks explains in further detail, they will not shut down any existing interline option that shippers seek to preserve. Stated in the terminology of the Board's well-established precedents, they will not close any affected gateways (commercially or otherwise) and they will keep those gateways open on commercially reasonable terms.

Against this backdrop, there is only one threat to competition here, and that is the overreaching demand for protective conditions put forward by both UP and BNSF (and echoed in the comments of ACC/NITL/TFI). Any requirement that CPKC provide interline rate factors (or Rule 11 rates) that are a fixed, mileage-based percentage of the single-line rates that CPKC

will offer in competition with other Class 1 railroads (or any other mandated linkage to those rates) would be truly anticompetitive. As Dr. Majure and other witnesses explain, it would disclose to CPKC's competitors the rates it was charging in the marketplace in an effort to win traffic from them. Further, it would impose a direct tax on CPKC in the form of compulsory reductions on CPKC's interline revenue divisions that would subsidize UP and BNSF. This would not help shippers, but simply transfer money from CPKC to its larger rivals. The exact same condition request was rejected in *KCS/Tex Mex* and it should be rejected here.[49]

At bottom, there is no vertical competitive concern in this case, and even if there were the tried and true solution would be enforcement of Applicants' commitment to keep gateways open, not a new regulatory mechanism that would interfere with precisely the new competition that this Transaction promises to bring shippers and the U.S. economy.

1. The Board Has Extensive Experience with End-To-End Mergers and the Net Benefits They Have Brought

Board precedent – developed over decades under the pre-2001 merger rules and applied in numerous non-major end-to-end transactions since then – teaches two things: vertical competitive issues are not a significant concern in these cases, and the appropriate way for the Board to assure the public of that is to hold applicants to their commitments that they will not close gateways, commercially or operationally. The Board's unbroken line of precedents, up to and including its most recent decision earlier this year in a merger case, establishes that the end-to-end character of the Transaction that certain commenters now assail is precisely what will make CPKC a more formidable competitor and what will lead to improved transportation options for shippers.

---

[49] KCS/Tex Mex Decision at 24.

The Board recognized this fact in every one of the pre-2000 major merger decisions that built the systems of the five largest Class 1s. Appendix A recounts, chronologically and case-by-case, the extraordinarily consistent record developed by the Board's evaluation of the end-to-end aspects of those past mergers, starting with *BN/Frisco* in 1982. To be sure many of those transactions – like *UP/SP* – also had extensive horizontal overlaps (unlike here) that required trackage rights and other remedies, but the end-to-end aspects were uniformly regarded as procompetitive.

This precedent was founded on a recognition that, unlike in the pre-Staggers era, the public interest was best served not by protecting individual railroad rivals from change, but by allowing railroads to come together to offer new, better single-line services in the marketplace. In 1982, the Board's predecessor, the Interstate Commerce Commission ("ICC"), went so far as to eliminate the "protective conditions" that had been routinely imposed on past mergers, and that insulated competing railroads from having to compete harder against new single-line transportation options made possible by mergers. The ICC explained, relying on its conclusion on the record of the end-to-end *BN/Frisco* of earlier that same year:

> "[R]ailroads *do not have a proprietary right in the future to the traffic they have carried in the past*. Therefore, we need not protect railroads from the possible loss of traffic through diversion to a merged railroad. On the contrary, *protecting competing railroads tends to limit a shipper's ability to obtain the best service from the merged company and dampens the incentives for competitive response to the merged company from existing railroads*."[50]

As the precedents set forth in Appendix A demonstrate time and again, this core finding has stood the test of time in major merger after major merger up to and including *CN/IC*.

---

[50] *Rulemaking Concerning Traffic Protective Conditions in Railroad Consolidation Proceedings* ("Traffic Protective Conditions"), 366 I.C.C. 112, 117-18 (1982) (quoting BN/Frisco) (emphasis added) (alterations in original). This rationale behind the decision to rescind the so-called DT&I conditions was described as "well reasoned and persuasive" by the court of appeals. *Detroit, Toledo & Ironton R. Co.* v. *United States*, 725 F.2d 47, 51 (6th Cir. 1984).

In the non-major mergers since 2001, the Board has reached exactly the same conclusion after having reevaluated deeply in the Major Merger Rules proceeding the record of prior mergers and their potential competitive effects. For example:

- ***CN/Wisconsin Central (2001)***: The "end-to-end configuration of the CN/WC control transaction will benefit shippers by enabling CN to secure, and to increase to the maximum extent possible the efficiency of, its Superior-Chicago NAFTA route connecting Western Canada and the Central United States" and allow CN/WC to "offer expanded single-line service and other large network advantages."[51]
- ***CP/Dakota, Minnesota & Eastern Railroad ("DM&E") (2008)***: "The evidence demonstrates that this essentially end-to-end transaction will benefit shippers by enabling CPRC/DM&E/IC&E to provide single-system service where none currently exists."[52]
- ***CSX/Pan Am (2022)***: The Board "has often recognized more efficient single-line service as a benefit of mergers."[53]

Even though the Board decided these cases against the backdrop of its having adopted the 2001 Major Merger Rules, the Board consistently rejected calls for conditions based on alleged vertical competitive effects. Instead, in every case – and indeed based on calls to carry out the spirit of the 2001 rules, the Board merely required compliance with the applicants' own

commitments to keep gateways open and not create new regulatory bottlenecks – exactly the commitments Applicants have made here.

The ICC and the Board were not voices in the wilderness in assessing the competitive effects of end-to-end railroad mergers. Each of the Class 1 railroads that now seek protection in this case, in each of the mergers that build their current networks, told the Board that – as a matter of economics, fact, and law – there was no basis for competitive concern about end-to-end railroad combinations. They did so without exception when their own transactions were under Board (or ICC) review – in *CN/IC, CSX/NS/Conrail, UP/SP*, *BN/Santa Fe, UP/CNW*, and many other merger cases that preceded those, as shown in Appendix A.

In the *BN/Santa Fe* proceeding, for example, Applicants argued vociferously – and correctly – that the "vertical" aspects of their mergers were precisely what made them procompetitive, not anticompetitive. Applicants' economist Joseph Kalt explained: "the bulk of the impacts of the BN/Santa Fe merger on the merged company's traffic movements are 'vertical.' That is, *one of the primary benefits of the merger is the ability to provide expansions of single-line service*."[54] Professor Kalt elaborated:

> "In the case at hand, the term 'vertical foreclosure' is particularly inapposite. Not only are the traffic diversions from other carriers and other modes … *not* the consequence of any exercise of market power; they arise from improvements in service offerings to customers. The BN/Santa Fe merger does not portend the vertical foreclosure of competition. If anything, the merger promises the introduction of a more effective single-line competitor where previously the BN and Santa Fe were at a competitive disadvantage."[55]

---

54 *BN/Santa Fe*, Verified Statement of Joseph P. Kalt. (filed Oct. 1994) at 97 (Vol. 3, Exh. 6).

55 *Id.* at 99.

This statement captures the core thesis of the CP/KCS combination almost precisely. To paraphrase: *If anything, the merger promises the introduction of a more effective single-line competitor where previously CP and KCS were at a competitive disadvantage*.

When the record of those prior mergers was being reviewed in 2000 and 2001 in connection with the Board's revisions to its major merger rules, the same Class 1s doubled down to extoll the procompetitive benefits that their end-to-end mergers had brought to the marketplace. There was not a whisper of "foreclosure" concerns from all these past mergers, for the simple reasons that the end-to-end aspects of these transactions were plainly procompetitive. They enabled new, more efficient routing options, and they gave shippers new choices to select the routes they preferred: efficient ones stayed open and available, and inefficient ones fell into disuse in preference to new single-line options. Appendix B provides a detailed catalogue of the testimony before the Board that was offered by Applicants' Class 1 opponents. A small sampling is provided below:

- ***BNSF***: "Economic analysis indicates that end-to-end mergers are unlikely to cause competitive harm."[56]
- ***BNSF***: "Because this is predominantly an end-to-end combination, situations in which there might be a potential reduction in competition have been limited from the outset."[57]
- ***NS***: Proponents of imposing conditions mandating trackage rights for another carrier when a railroad that exclusively serves a shipper merges with another

---

[56] *Major Rail Consolidation Procedures – Advance Notice of Proposed Rulemaking,* Ex Parte No. 582 (Sub-No. 1), Comments of the Burlington Northern and Santa Fe Railway Co. (filed Nov. 17, 2000) ("BNSF Comments in Major Rail Consolidation Procedures") (Vol. 3, Exh. 7).

[57] BNSF0001135 (Applicants' Brief in *BN/SF*) (Vol. 3, Exh. 8).

connecting carrier "simply seek to use the fact of an end-to-end consolidation transaction as a convenient opportunity to force two-carrier rail access to exclusively served shippers whose situations would not change at all as a result of the transaction."[58]

- ***UP***: "UP does not share the view of many shippers that end-to-end mergers generally have anticompetitive vertical effects."[59]

Even more important, the record developed over multiple decades contains far more than mere argument by the Class 1 opponents about the benefits of end-to-end mergers. It is filled with *evidence* of their actual procompetitive effects.

The Class 1s themselves repeatedly extolled those benefits: in the *Major Rail Consolidation Procedures*, BNSF, CN, and UP praised end-to-end mergers at length. For example, BNSF stated: "Unlike parallel mergers, end-to-end mergers do not involve significant network overlaps, so that few or no shippers face a potential reduction in the number of railroads that serve them. Moreover, end-to-end mergers are the equivalent to vertically integrating the various routes served by railroads, and the overall impact of integrating and rationalizing the ownership of the rail network is pro-competitive through reduced costs and improved overall service."[60] And the Board's own merger oversight proceedings, in which it took evidence and carefully assessed whether prior mergers had achieved their procompetitive goals, consistently led to the same conclusion: end-to-end mergers invigorated competition and did not harm it.

---

[58] *Major Rail Consolidation Procedures*, Ex Parte No. 582 (Sub-No. 1) NS's Comments (filed May 16, 2000) (Vol. 3, Exh. 9) at 33-34.

[59] *Major Rail Consolidation Procedures*, Ex Parte No. 582 (Sub-No. 1) UP's Comments and Initial Proposals (filed May 16, 2000) (Vol. 3, Exh. 10) at 11.

[60] *Major Rail Consolidation Procedures*, Ex Parte No. 582 (Sub-No. 1), Comments of the Burlington Northern and Santa Fe Railway (filed Nov. 17, 2000) at 15.

For example, in *CN/IC*, the STB stated that the merger "has been implemented successfully and without significant complaints" and found no "competitive or other problems stemming from the *CN/IC* combination."[61] In *CSX/NS/Conrail*, the STB found that as a result of the transaction, "[b]alanced rail competition ha[d] been brought to many points throughout the Eastern United States.[62] And in *UP/SP*, the Board noted in terminating oversight that "the record demonstrates that the conditions we imposed on the UP/SP merger have maintained and fostered rail competition in the Western United States."[63]

Arrayed against this unbroken wall of precedent, there is exactly zero evidence (at least over the past multiple decades) that mergers have even led merging railroads to shut down efficient routing options that shippers had preferred pre-merger by implementing "foreclosure" strategies. To be sure, they won traffic away from less-efficient interline routes by persuading shippers to switch, but in the decades-long history of oversight of end-to-end mergers there has *never* once been a finding that a gateway was closed, much less in the face of commitments made to the Board to keep those gateways open.

CN/IC illustrates this point. The Board has imposed a condition requiring CN to keep the Chicago gateway open for certain shipments of North Dakota grain. During the oversight process, the Board determined that CN had no incentive to ignore North Dakota grain traffic by closing the gateway and concluded that CN had in fact kept the gateway open.[64]

All of this learning has consistently led the Board to reject demands for conditions that railroads and others have sought to impose to insulate themselves against vertical competitive hard.

2. Commenters Offer No New Economic or Other Learning that Calls into Question the Board's Consistent Precedents and Factual Conclusions

The Commenters seeking to revisit these precedents – principally UP and BNSF – offer no legitimate basis for doing so. They proceed from the false premise that modern economics has moved on from the outdated ideas of yore, and now recognizes the grievous concerns with vertical mergers. For example, BNSF claims that while vertical rail mergers previously were presumed to cause "no harm," the "[a]dvances in the economic understanding of the potential harms that can arise from vertical mergers have led to a far more skeptical view of the presumption of no harm."[65]

They are wrong on multiple counts:

- First, as Dr. Majure explains, the Board's precedents were never based on rigid adherence to an abstract economic theory, but by a case-by-case assessment of the hard facts presented by specific proposed transactions, informed by the Board's (or ICC's) experience with the actual effects of previous transactions.
- Second, under the guise of "updating" the Board on the state of economic learning, the UP and BNSF economists provide an entirely vacuous set of theories of their own: namely, they want the Board to buy into the idea that the features of end-to-end railroad mergers that make them procompetitive (as Professor Kalt

[65] BNSF-9, Reishus V.S. at ¶ 12; *see generally* UP-10 at § 3.

testified for BNSF in 1995) instead make them inherently suspect and presumptively bad. That view may serve these railroads' new-found parochial interests in this case, but it is both at odds with the historical record and unhelpful in supporting any serious examination of the actual likely consequences of this or any other transaction, as Dr. Majure explains.

- Third, UP and BNSF ignore that the supposedly "new" theories they espouse here are in fact exactly the same ones that they tried, and failed, to convince the Board to adopt in *KCS/Tex Mex*.

The Board's Precedents Were Not Built on Abstract Theory. Certain Class 1 railroads suggest that the world of vertical merger analysis has suddenly changed from when their mergers were approved from one where such mergers presented no possibility of harm to one where all such mergers should be presumed to have anticompetitive concerns in every end-to-end case. That is false. The Board has long maintained that vertical mergers are never "per se" legal. Rather, the Board analyzes the facts presented by each case.

Dr. Majure explained in detail in his Verified Statement why this particular Transaction "would create opportunities for procompetitive benefits throughout the CP/KCS network." Verified Statement of W. Robert Majure ("Majure V.S.") App. Vol. 2 at ¶ 10. Dr. Majure described why in a vertical merger, one of the merging parties must have the ability and incentive to preclude or control a rival's ability to compete in order to foreclose, and explained the factual underpinnings of the Board's application of the "one-lump theory" in prior proceedings. *Id.* at ¶ 14. Dr. Majure further explained why neither CP nor KCS will have any incentive or ability to foreclose rivals or otherwise lessen competition as a combined firm, using

as an example UP's and BNSF's unfounded claims of foreclosure at Laredo post-*KCS//Tex Mex*. *Id.* at ¶ 12, Section III.2.[66]

Instead of attacking the foundations of Dr. Majure's findings that *this* vertical merger is procompetitive, the Class 1 railroads' economists hang their collective hats on the idea that the Board's findings in earlier proceedings were premised *solely* on a set of presumptions derived from the "one lump" theory. They aggressively attack the theory – which they had previously long supported – on the premise that if they poke holes in the "one lump" theory, the Transaction becomes ipso facto anti-competitive.

The Class 1 railroads' economists are attacking a strawman. As Dr. Majure explains in his Reply Verified Statement, the Board's decisions in prior merger proceedings did not rigidly apply a *presumption* derived from abstract economic theory. Majure R.V.S. at ¶ 19. Instead, the Board drew from the economic insights informing the "one lump" theory to address – on the particular facts – whether the merging railroads would have the incentive or ability to seek to expand their "lump" by foreclosing efficient interline options. *Id.* at ¶ 23.

Neither the Board nor the courts have said that application of the "one lump" theory creates a "no possibility of harm" standard.[67] As the D.C. Circuit explained, the Board (and its predecessor, the ICC) "do[] not treat the one-lump theory as an absolute, precluding the possibility of adverse effects from vertical integration," but rather "regard[] the theory as strong

---

[66] *See* Section IV.A.3.

[67] As Dr. Majure's Reply Verified Statement explains, the Board discussing the "one lump" theory in prior cases did not assume an absolute ability to extract rents in those cases absent the relevant merger. The Board was simply using the theory to describe the issues in vertical competition. In addition, commenters' critique that the one-lump theory cannot apply here because Applicants do not have perfect information was squarely rejected by the D.C. Circuit, who stated the argument that Santa Fe did not have perfect information precluded the application of this theory left it "baffled." *Western Resources, Inc.* v. *STB*, 109 F.3d 782, 790 (D.C. Cir. 1997).

enough to create a presumption of bottleneck maximization of monopoly profits, subject to rebuttal."[68] But as explained by Dr. Majure and other Applicant witnesses, the facts here demonstrate that the Transaction is procompetitive.

Class 1 railroads also seem to suggest that new developments in world of antitrust law and economics call into question the Board's end-to-end merger precedents, as discussed *infra*. But the potential harms from vertical mergers were well known by the ICC and the Board when it was deciding merger cases over the past four decades. Antitrust merger cases outside the railroad industry in the 1970s and 1980s made clear that "vertical" did not automatically equate with "legal." *See, e.g., Fruehauf v. FTC*, 603 F.2d 345 (2d Cir. 1979) (rejecting the FTC's vertical merger challenge under a foreclosure theory and finding a lack of proof of likely anticompetitive effects); *see also Alberta Gas Chemicals Ltd*. v. *E.I. Du Pont De Nemours & Co.*, 826 F.2d 1235 (3d Cir. 1987) (finding no antitrust injuries from a vertical merger). The fact that the Board and ICC gave serious consideration to vertical theories in its past cases – and rejected them – demonstrates that the Board's precedents have never simply waved away the possibility of competitive harm in such cases.[69]

The Alternative Theories Put Forward by UP and BNSF Economists Merely Presume that Vertical Mergers Are Bad. In their efforts to upend the Board's longstanding approach to end-to-end railroad mergers, the UP and BNSF economists propose an alternative framework that is built entirely on abstract economic theory suggesting that some vertical mergers in some situations can, in theory cause competitive harm. As Dr. Majure explains, however, this counter-presumption (reflected most explicitly in the testimony of UP witness Salop) ignores many

---

68 *Id.*

69 *See* Appendix A.

efficiencies stemming from vertical mergers and consequently, would find an anticompetitive concern in *every vertical merger across all industries*—an absurd result inconsistent with fact, law, and common sense. Majure R.V.S. at ¶¶ 46, 47.

In the new World Order these Class 1s propose, their status quo market positions would be protected because all end-to-end mergers would be seen as competitively "dangerous" in the precise circumstances where they are most likely to be good for shippers by offering new single-line options that encourage shipper to make different transportation choices. As Dr. Majure explains, Professor Salop's misguided framework would find that "any instance where CP and KCS have identified an opportunity to win business with the enhanced single-line service their combination allows would instead be an opportunity that CPKC would win through anticompetitive effects." Majure R.V.S. at ¶ 21; *see generally* Majure R.V.S. § 2.1.2. These commenters fail to show why CPKC would have the incentive to win traffic by foreclosing competitors instead of through competition. *See* Majure R.V.S. ¶¶ 26, 28. By contrast, Applicants have shown that CPKC would be incentivized to win traffic through competition. *See generally* Majure V.S. § 3.[70] And that is exactly what CPKC intends to do.

Professor Salop, among others, essentially argues that evidence that a vertical transaction has had pro-competitive benefits should *never* be credited because that same evidence could also be consistent with an anticompetitive effect. Importantly, Professor Salop's own academic work addressing vertical mergers (which dates back many decades) was debated and rejected in the *BN/Santa Fe* proceeding. Applicants' economic witness Richard Schmalensee took on Professor Salop's thesis directly, concluding that: "All of the theories of anticompetitive foreclosure agree

[70] Dr. Majure addresses specific critiques of his analyses by Class 1s' economists in the Majure R.V.S.

that it is extremely difficult, if not impossible to distinguish efficient from inefficient vertical mergers or practices."[71] In other words, Professor Salop is able to see competitive harm in procompetitive transactions because that is the presumption he starts with. Majure R.V.S. at ¶ Section 2.2.3. Professor Salop admits as much when he examines shifts in UP's share of northbound traffic via all U.S./Mexico gateways before and after the *KCS/Tex Mex* transaction, and acknowledges that the trends he found were "equally 'consistent'" with foreclosure and no foreclosure.[72] UP is well aware of its lack of any economic evidence in support of its foreclosure theory when its repeat critique of Dr. Majure's analysis is that it "is at least as consistent with anticompetitive foreclosure as with any procompetitive explanation."[73]

UP and BNSF Presented the Very Same Theories to the Board in KCS/Tex Mex, and They Were Correctly Rejected. Not only is there nothing new or helpful about UP's and BNSF's economic theories, the very same theories, nay the *same arguments*, about foreclosure at the Laredo and Robstown gateway, were presented and rejected in the *KCS/Tex Mex* case in 2005. The Board's findings in *KCS/Tex Mex* in 2005, based on an extensive economic record put forward by UP and BNSF in support of their predictions of dire foreclosure consequences if the board did not act to protect them, is the strongest evidence available that their retreaded arguments do not hold water.

In *KCS/Tex Mex*, there was abundant focus on gateway foreclosure issues, with UP and BNSF making the same arguments they advance here. For example, UP expressed concerns that

---

71 *BN/SF*, Verified Statement of Richard Schmalensee at 34 (Vol. 3, Exh. 11).

72 UP-10, Verified Statement of Steven C. Salop at ¶ 90. Dr. Majure also explains why Dr. Salop's analyses are flawed in the Majure R.V.S.

73 UP-10 at 5.

there would be an "anticompetitive rate increase in rates [*sic*] or reduction in service levels" for competing carriers travelling through the Laredo Gateway, and "higher prices" for certain shippers "through evasion of the Mexican regulatory provisions prohibiting price discrimination."[74] BNSF similarly raised concerns about the Laredo gateway, stating that KCS could divert traffic to the KCS system by raising rates at Laredo for any traffic going over TFM that did not originate from the KCS/Tex Mex system, or "discriminate against competing carriers."[75] And both UP and BNSF advocated for a pricing scheme similar to the I-5 Agreement between UP and BNSF, where as part of a commercial quid pro quo BNSF agreed to a matrix of rate factors UP could use in making quote to shippers for movement to/from certain BNSF-stations in the Pacific Northwest.

Table 1 compares the arguments UP and BNSF made then with the ones they make now to demonstrate that the Board has already heard and rejected the positions they advance in this proceeding.

---

[74] *KCS/Tex Mex*, Union Pacific Railroad Company's Comments (UP-7) ("KCS/Tex Mex, UP-7"), Verified Statement of Jerry Hausman at ¶ 14 (filed Aug. 4, 2003) (Vol. 3, Exh. 12).

[75] *KCS/Tex Mex*, Comments of the Burlington Northern and Santa Fe Railway Company (BNSF-4) ("KCS/Tex Mex, BNSF-4"), Verified Statement of Peter J. Rickershauser at 9-12 (filed Aug. 4, 2003) (Vol. 3, Exh. 13).

TABLE 1
COMPARISON OF BNSF AND UP POSITIONS IN 2004 AND 2022

BNSF	
2004	**2022**
KCS could "discriminate against its competitors" by "rais[ing] rates at Robstown for any traffic going over Tex Mex unless it originates from the KCS system or is routed to give KCS its longest haul," (ii) "raise rates at Laredo for any traffic going over TFM that again does not originate from the KCS/Tex Mex system or does not give the system its longest haul," (iii) "discriminate against competing carriers on TFM by charging higher bridge fees or by reducing the crossing access that it would charge itself," (iv) "cause TFM and Tex Mex to discontinue providing value-added services" to "KCS's competitors." (KCS/Tex Mex, KCS/Tex Mex, BNSF-4 at 11)	"This combination of Mexican law elements allows KCS to engage in the following obvious strategy: it could first raise rates in Mexico on movements that could be handled in the United States by both BNSF and KCS, and then lower KCS's U.S. portion of the rate, allowing the higher Mexican KCSM rate to subsidize the U.S. transportation." (BNSF-9 at 29)
"KCS' diversion analysis confirms KCS' intent to divert traffic from BNSF, even if that diversion results in inefficient routings of rail traffic."[76] (KCS/Tex Mex, KCS/Tex Mex, BNSF-4 at 11)	"[T]he combined CP-KCS will be incentivized to divert its traffic through rate manipulations away from competitive routings on BNSF and other railroads."[77] (BNSF-9 at 2)

[76] KCS/Tex Mex, BNSF-4 at 11.

[77] BNSF-9 at 2.

UP	
2004	**2022**
"Armed with control of both Tex Mex and TFM, however, KCS will have the incentive and ability to manipulate competitive outcomes to favor routes in which its U.S. railroads (KCS and Tex Mex participate)." (KCS/Tex Mex, UP-7 at 45)	"CPKC would have a significant incentive to manipulate competitive outcomes for crossborder traffic to favor routes in which it participates in the United States." (UP-10 at 22)
"In this case, however, KCS control of Tex Mex and TFM poses serious threats to the competitive process by undermining the transportation options available to shippers at the Laredo Gateway." (KCS/Tex Mex, UP-7 at 47.)	"However, CP control of KCS poses a serious threat to the competitive process because it would likely undermine the transportation options available to shippers for traffic moving via the Laredo Gateway." (UP-10 at 43)
"An even more serious threat to competition is the prospect that KCS would use its control of TFM to increase TFM rate factors in order to disable competition from UP-TFM offerings" by causing "TFM to raise its rates in relation to KCS rates north of the border which Mexican non-discrimination rules would allow." (KCS/Tex Mex, UP-7 at 49)	"CPKC could maintain the veneer of charging non-discriminatory KCSM rates in Mexico, while structuring KCSM-UP and CPKC single-line rates it offers to foreclose competition from UP." (UP-10 at 28)
"Once Tex Mex is under KCS control, Tex Mex and TFM will have greater incentives to prefer Tex Mex-TFM traffic over UP-TFM traffic. Preferential treatment would reduce service levels for UP customers and inefficiently divert traffic to Tex Mex-TFM routes." (KCS/Tex Mex, UP-7 at 56)	"CPKC could also reduce competition by giving preferential treatment to its own traffic moving over the International Bridge at Laredo." (UP-10 at 31)

The theories espoused by UP and BNSF have not changed in 17 years, and the Board systematically rejected each and every one of them, as well as UP's and BNSF's requested conditions predicated on those theories. The Board found that "approval of the KCS/TM application will not foreclose any horizontal competition, and therefore a 'competition-preserving' condition is not needed for the Laredo gateway." Instead, the Board acknowledged, and required KCS to adhere to the five pledges concerning the Laredo gateway that KCS has

made voluntarily, including its pledge to keep the Laredo gateway open on "commercially reasonable terms."[78]

The Board's decision was a thorough endorsement, on well-developed facts specific to the Laredo gateway, of the Board's longstanding approach to end-to-end mergers. The Board again reiterated that potential harm to a competitor does not equate to harm to competition, which is the touchstone of the Board's public interest inquiry. UP's and BNSF's concerns all went to the former, not the later. As the Board explained, if "control of TFM would lead KCS to favor its own routings for those few points that are served both by KCS and UP (or KCS and BNSF), KCS might earn more revenue than in the past, and UP (or BNSF) might earn less, but that is not going to result in higher costs to shippers. This could well mean some harm to a competitor (UP, BNSF), but not harm to competition."[79]

3. KCS Has Not Used Its Control of Tex Mex and KCSM to Foreclose UP or BNSF Routings Through the Laredo Gateway, and Neither Will CPKC

As we have shown, whereas both UP and BNSF predicted severe foreclosure consequences in *KCS/Tex Mex*, including that KCS/KCSM's "share" of "traffic moving via Laredo will be 100 percent," [80] the Board disagreed and specifically rejected the need for conditions of the sort UP and BNSF propose here. Time and experience have proven the Board right, and UP and BNSF wrong.

---

[78] KCS/Tex Mex Decision at 6. Separately, KCS has embodied these commitments in an agreement with NITL, which incorporated an arbitration remedy. Naatz R.V.S at 68. ¶ __.

[79] *Id.* at 18.

[80] *KCS/Tex Mex*, Union Pacific Railroad Company's Comments, UP-7A ("KCS/Tex Mex UP-7A") (filed Aug. 4, 2003) at 8 (Vol. 3, Exh.12).

Recognizing the significance of the Board's ruling in 2005 rejecting their prediction that KCS would engage in foreclosure if allowed to control Tex Mex and TFM, UP and BNSF each attempt to come up with some explanation for what is different this time around. To UP it is largely that "economics" have somehow changed, which we addressed fully above. Beyond that, UP merely tries to deflect attention away from the magnitude of the concerns it expressed in *KCS/Tex Mex*, since UP's predictions demonstrably did not come to pass. UP implies that, really, KCS by itself *never* had the network reach to support real foreclosure concerns, but CP will fundamentally change the game. That is revisionist history, but is also a telling endorsement of the degree to which the combination of CP and KCS will dramatically extend the market reach of shippers served by both railroads, stimulating new competitive options. In 2005, UP extensively detailed the parade of horribles that would occur with "unconditioned KCS control of Tex Mex and TFM," including that KCS "will be eager to seize every available opportunity to shift traffic from UP-TFM routes to KCS-Tex Mex-TFM (or BNSF-Tex Mex-TF) routes" and that "KCS control of TFM will also allow" them "to circumvent" non-discrimination requirements imposed by Mexican law, which would "shift traffic away" in "anticompetitive ways by forcing shippers to pay more and accept poorer service."[81]

For its part, BNSF takes an entirely different approach. It argues, for the first time in 17 years and long after the fact, that KCS has been foreclosing BNSF line since 2005. The fact that UP builds no case of foreclosure at Laredo ought to end any serious debate about whether KCS foreclosed BNSF – in no world would KCS have an incentive and ability to drive away BNSF-KCSM interline traffic *in order to advantage UP*, BNSF's arch Western competitor.

---

[81] KCS/Tex Mex UP-7A at 45, 47

Similarly, the complete lack of any complaint by any BNSF shipper (or any other shipper) should be dispositive. Shippers had not one but two separate fora in which they could have brought any bring complaints about KCS shutting down their preferred interline options: (a) the formal Board oversight process, where the Board could have enforced KCS's commitment to keep gateways open; and (b) KCS's agreement with NITL (which is still in effect), which provided for arbitration of any dispute about KCS's allege closure of those gateways. As KCS witnesses explain, however, there were no such complaints. BNSF has failed to present a single document, verified statement, support letter, or other shred of evidence that a *shipper* – as opposed to BNSF – believes that KCS's rate division between Robstown and Laredo for BNSF/KCS routings to Laredo is "commercially unreasonable." This is not surprising, as no KCS employee or officer has ever received a complaint that KCS was violating its commitments to provide "commercially reasonable" rates for BNSF or UP movements through Laredo to/from Mexico. Naatz R.V.S. at ¶ 4.

BNSF contends the fact that no shipper has ever voiced a concern about KCS's rates is "little more than recognition that KCS has exercised its enhanced market power in such a way as to forestall any complaints."[82] That is nonsense and an insult to shippers. If anyone would know whether KCS was charging commercially unreasonable rates, it would be the shippers. They would see the level of KCS's Rule 11 rates, and they would also see their preferred routing option becoming operationally or commercially infeasible. That not one shipper complained that KCS took action to force them to switch to KS single-line routes speaks volumes. In fact, several shippers – including KCS's largest, Bartlett Grain – have come forward to explain why they switched to KCS single-line routes between the United States and Mexico: because those

[82] BNSF-9 at 44.

routes offered better, more efficient single-line service, not because they were "forced to" by foreclosure of their other options. Knief V.S. at ¶ 14.

Unable to offer any affirmative evidence that the commitments are ineffective, BNSF asks the Board to infer that KCS must not be honoring its commitments because KCS did not produce in discovery documents reflecting that KCS has policies, protocols, or a compliance program in place to train its employees to ensure that KCS abides by the pledges.[83] KCS has not needed such formal policies or compliance programs because no shippers have complained – either to KCS or to the Board. But this does not mean that KCS is not cognizant of its obligations. As Ottensmeyer testified in his deposition, KCS has an "affirmative obligation to provide commercially reasonable rates"[84] and that "there is a general awareness of KCS's open gateway commitments."[85] Moreover, as discussed below, KCS could not charge "commercially unreasonable" rates even if it wanted to, because KCS lacks the market power that would be necessary to foreclose BNSF and UP efficient routings to and from Laredo.

Consistent with the lack of any complaint by a shipper (or even BNSF) in 17 years, BNSF's assertions about foreclosure beginning in 2005 are flatly contradicted by the cold hard facts. Even the BNSF witness who lobbed these allegations acknowledges that the issue boiled down to BNSF's unwillingness to accept any less contribution from Tex Mex interchange traffic, which led BNSF to shift its traffic to other gateways and away from Tex Mex.

85 Ottensmeyer Dep. Tr. 40:14-41:7. While originally marked "Confidential" under the Protective Order, Applicants hereby reclassify that information as "Public."

BNSF's Specific Allegations About Tex Mex Rate Increases. As its sole "evidence" of "foreclosure," relies on the testimony of Paul Hirsch, the Assistant Vice President of BNSF's Mexico Business Unit. Hirsch testifies that BNSF and its shippers were "effectively foreclosed" from access to certain Mexican markets through the Laredo gateway after KCS's 2004 acquisition of Tex Mex.[86] According to Hirsch, "when [BNSF] compete[s] head-to-head with KCS for a movement through Laredo, [BNSF] invariably lose[s] that competition to KCS despite offering competitive rates and service."[87] On that basis, Hirsch concludes that BNSF has been "foreclosed from effectively competing for carload traffic through Laredo because of the control that a combined KCS/KCSM has over pricing and routing."[88]

Hirsh was not at BNSF when this alleged foreclosure took place. He did not join BNSF until 11 years later, in 2015.[89] How is that he concludes that BNSF was foreclosed? He connects two dots: First, KCS decided to increase Tex Mex's rate for movement of BNSF interline traffic between Corpus Christi/Robstown and the Mexican border at Laredo; and, second, BNSF volumes at Laredo declined. From this he concludes that BNSF cannot compete. That is all there is to it. He does not identify any specific customer rate quote, routing, or origin and destination pair establishing that it is the KCS division that was "too high" or "commercially unreasonable" to prohibit BNSF from competing. Nor can he recall a single bid scenario where

---

86 BNSF-9, Verified Statement of Paul M. Hirsch ("Hirsch V.S.") at 2.

87 *Id.* at at 8.

88 *Id.*

89 Hirsch admits that he "was not in [his] current position" at the time of KCS/Tex Mex, but states that he has "spoken with BNSF employees and former employees" who claim that KCS rate increases "were responsible for BNSF's loss of traffic." At his deposition, Hirsch admitted that this testimony is based on conversations with mainly one individual (of which there are no notes) and two charts in his verified statement that he did not prepare. Deposition of Paul Hirsch on June 3, 2022 ("Hirsch Dep. Tr.") (Vol. 3, Exh. A) at 51:22-52:18, 54:20-22, 55:1-22. Much later in the deposition and after conferring with counsel, Hirsch named additional individuals. Hirsch also admitted that he lacked "direct personal knowledge of the effect of the KCS/Tex Mex merger on BNSF." *Id.* at 48:20-49:8.

a shipper claimed that KCS had quoted it a joint-line rate for a Robstown interchange that was "commercially unreasonable" or was so high as to foreclose a more efficient BNSF routing so that the customer was forced to use a less efficient KCS routing. Hirsch also contradicts himself: his claims that BNSF has "no visibility into the pricing practices of KCS and KCSM" and "have not been able to challenge KCS's conduct or avoid foreclosure," is directly at odds with his claim that "BNSF employees and former employees who were involved in marketing efforts at the time" were aware of this alleged foreclosure.[90] He has no explanation for why, if BNSF was well aware of the alleged forclosure, {{ }},[91] and neither BNSF nor any shipper lodged a complaint.

Instead, his deposition confirmed that his testimony is based entirely on the assumption that, if BNSF lost a piece of business to KCS on a route where KCS's rate had increased from pre-merger levels, BNSF must have been the victim of "foreclosure," not competition.[92] That, of course, is not true.

Unfortunately for BNSF, its story does not hold up under even the slightest examination of the facts.

- ***First, the Tex Mex's rate increase was not "foreclosure."***

When asked about the Tex Mex rate increases that allegedly foreclosed BNSF from competing at Laredo, Hirsch could not state what the rate increases were, what the rates increased to, how often the rates were increased, or when the rate increases occurred.[93] As

---

90 BNSF-9, Hirsch V.S. at 7, 10.

91 Hirsch Dep. Tr.at 91:13-94:2, 95:5-9.

92 Hirsch Dep. Tr.at 63:11-22.

93 Hirsch Dep. Tr.at 62:11-63:13.

KCS's witnesses explain in detail, KCS did increase Tex Mex's division requirements after the *KCS/Tex Mex* transaction. The reason was not to drive traffic away from BNSF interline routes, but to cover Tex Mex's costs. As Naatz explains, Tex Mex's rate prior to the merger was significantly below market, had not been raised in years, and was below URCS costs. Naatz R.V.S. at ¶¶ 12, 21.[94] Before *KCS/Tex Mex*, Tex Mex was charging $260 per car or less for grain, intermodal, and automotive traffic interlined with BNSF, or well below most switching charges to move BNSF's cars more than 150 miles. *Id*. After it obtained control, KCS increased Tex Mex's rate by about $265, to $525. *Id.* at ¶ 20. But even at this increased level, the Tex Mex rate barely covered variable costs, and was nowhere near the 180% threshold required to bring a rate complaint. Naatz R.V.S. at Table 2. Today, KCS's rate factors for BNSF interline moves Robstown and Laredo still barely cover variable costs. *Id.* at ¶ 19, Table 1.

It is no wonder that when KCS raised Tex Mex's rates to a compensatory level, and BNSF refused to lower its own division, BNSF shifted some of its traffic to the Eagle Pass and El Paso gateways. But one thing is clear: the shift of BNSF traffic was not the result of KCS using its control of Tex Mex to foreclose BNSF from using the Laredo gateway. KCS would have no incentive to discourage BNSF from using the Tex Mex route as using any other gateway further west eliminates KCSM from receiving traffic on the south side of the border.

Nothing about this rate increase forced BNSF or any shipper away from the Laredo gateway. BNSF could easily have absorbed the increase out of its own rate factors, which {{{ }}} *Compare* Baranowski R.V.S. at Table 6 *with* Naatz R.V.S. at Table 1. In fact, if anyone

[94] As Dr. Majure explains, a common benefit of mergers is that new management can lead to re-evaluations, such as benchmarking against the market. Majure R.V.S. at ¶ 103.

has the right to complain about increased prices, it is KCS. Beginning in 2005, BNSF has raised its grain rates by thousands of dollars per carload. Naatz R.V.S. at ¶ 22. Today, the BNSF single-line rates for grain to Eagle Pass are lower than the BNSF/Tex Mex rate to Laredo – thus favoring a BNSF single-line route to Eagle Pass. *Id.* at ¶ 23. KCS has requested BNSF to take a lower division to make a BNSF/Tex Mex route competitive to increase both BNSF's and Tex Mex's share of grain and other carload traffic to Laredo, but BNSF has refused to do so – favoring its single-line route to Eagle Pass. Naatz R.V.S. at ¶ 24. BNSF is in no position to criticize KCS for refusing to lower Tex Mex's division on routes where KCS has a competing single-line option, when BNSF is doing the same thing – favoring its single-line options by refusing to lower its division for movements through Laredo.

- ***Second, BNSF's volume shifts away from Laredo had nothing to do with "foreclosure."***

Hirsch points to two figures in his Verified Statement purporting to show that BNSF traffic over the Laredo gateway decreased from 2005 forward as evidence of foreclosure.[95] However, at his deposition, Hirsch admitted that he did not know the {{[redacted]}}, the year of the merger, or what the actual cause was.[96] He also did not know who prepared these two charts and did not review the data underlying these charts.[97]

In fact, the supposed trends Hirsch points to eviscerate BNSF's claims of foreclosure. As Dr. Majure demonstrates through detailed analysis of traffic data, and as we show below through

---

95 BNSF-9, Hirsch V.S. at 6, 11.

96 Hirsch Dep. Tr.at 43:18-44:10.

97 Hirsch Dep. Tr.at 55:19-21.

a detailed review of BNSF's own internal documents, numerous marketplace developments were driving the trends that Hirsch points to as evidence of supposed foreclosure, not least of which was {{[redacted]}}

Pricing by KCSM Subsequent to the Tex Mex/KCSM Transaction. UP's theory of foreclosure, unlike BNSF's, is entirely dependent on the level of rates that KCSM charges south of the border on UP-KCSM interline moves. Despite asserting that CPKC will have an incentive to jack up KCSM rates so as to render UP interline moves less "competitive" (but in reality to force UP to reduce its divisions and thus its profit margins), UP undertakes no examination of what happened to KCSM rates after KCS took control of TFM.

Had it done so, it would have learned that their TFM rates went {[redacted]} than UP's own rates during the period after the *KCS/Tex Mex* transaction, a pattern that is fatal to UP's foreclosure thesis. Figure 1 below focused on rates for grain (which BNSF cites as the commodity flow most affected by KCS's supposed foreclosure). It shows that KCSM's rates for grain (measured as revenue per unit ("RPU")) increased at a {[redacted]} percent compounded annual growth rate since 2005. Over the same period, UP's public reports show that its growth rate for all traffic has been {[redacted]} percent while BNSF's has been {[redacted]} percent. KCSM prices to the market, not to foreclose. Naatz R.V.S. at ¶ 26.

FIGURE 1
KCS GRAIN REVENUE PER UNIT INCREASES ARE ON PAR WITH OTHER RAILROADS

{

}

The same pattern emerges when examining overall RPU trends for all commodities. Figure2, below shows that post-2005 after taking control of KCSM and Tex Mex, KCS did not unreasonably raise rates or adopt commercially unreasonable divisions. Naatz R.V.S. at ¶ 27. In fact, KCSM rates {[redacted]} than rail rates charged by UP, BNSF, or other railroads in the United States.

FIGURE 2
KCSM RATES DID NOT INCREASE FASTER THAN OTHER RAIL RATES AFTER KCS ACQUIRED CONTROL[98]

{

[98] KCS Consolidated and KCSM information before 2005 are based upon Pro-forma financial statements as KCSM and Tex Mex were not yet consolidated with KCSR.

There Are Many Reasons Unrelated to "Foreclosure" That Explain Declines in BNSF Traffic via Laredo. Although BNSF would have the Board assume the only possible explanation for why BNSF's traffic at Laredo declined after 2004 is that KCS foreclosed BNSF from the Laredo gateway, the truth is that there are many causes for that decline, none of which include foreclosure by KCS. Hirsch admitted at his deposition that {{ }}[99] We discuss just a few of those reasons here.

- ***First, Good Old-Fashioned Competition Affected Traffic Patterns at Laredo/Robstown.***

As Dr. Majure explains, it would not be surprising if BNSF's traffic volumes via Laredo would fluctuate as a result of competition with the two other railroads serving that gateway: UP

[99] Hirsch Dep. Tr.at 87:13-91:1.

and KCS. In this instance, of course, KCS was improving its services by offering single-line transportation across the gateway for the first time. Majure R.V.S. at ¶ 88. There is no question that single-line service is typically both less expensive and more efficient than an interline route. Any carrier, including BNSF and UP, can usually offer a lower rate on single-line service versus an interchange to another carrier. So it is to be expected that where KCS and BNSF both serve a U.S. destination or origin, there is a strong probability that the KCS system is going to be able to provide an efficient single-line rate that is better than the joint-line rate with BNSF. As Naatz explains:

> "KCS can provide a single-line service that shippers choose because it is both less expensive and a more efficient route. Any carrier, including BNSF, can usually offer a lower rate on single-line service versus an interchange to another carrier. So, yes, where KCS and BNSF both serve the U.S. destination or origin, the KCS/KCSM system is of course going to be able to provide an efficient single-line rate that is better than the joint-line rate with BNSF."

Naatz R.V.S. at ¶ 9. BNSF also faces strong competition from UP. {{ }}[100] In its comments in the *KCS/Tex Mex* proceeding, BNSF conceded that it had a "relatively small percentage of the traffic moving through Laredo" and that UP "carried 84% of the traffic at Laredo in 2001" because "UP enjoys a more direct route to Laredo."[101]

---

[100] BNSF0000932 at -38 (Vol. 3, Exh. 14) ({{ }}). *See also* BNSF0003021 at -025 (Vol. 3, Exh. 15) {{ }}; BNSF0003279 at -087 (Vol. 3, Exh. 16) { }; BNSF0003606 at -616 (Vol. 3, Exh. 17) {{ }}

[101] *KCS/Tex Mex,* BNSF-9 at 3, 9.

The record in this proceeding illustrates these competitive forces in action. Bob Knief, President of Bartlett Grain, Co. LP, explains in his Verified Statement in support of the Transaction that in 2005, Bartlett Grain could choose to ship via UP, BNSF, or KCS, and ended up choosing to ship to Mexico via KCS single-line routes "because they best met our transportation needs by serving our end-markets best." Knief V.S. at ¶14. But Knief made clear that they were never "forced to choose [that] option." Knief V.S. at ¶14. As another example, a shipper decided in the 2009 time frame to transition all of its Mexican business from BNSF to UP. Naatz R.V.S. at ¶ 36. In another case, KCS simply won a contract (bidding against UP and BNSF). Naatz R.V.S. at ¶ 44. These losses of traffic, and similar losses of traffic, are due to *competition*, not foreclosure.

- ***Second, BNSF Chose to Shift Traffic to Eagle Pass and El Paso.***

Second, despite BNSF's claims of foreclosure by KCS, its witnesses and internal documents tell a different story. BNSF chose to deemphasize Laredo and shift traffic to Eagle Pass and El Paso. Hirsch explained that BNSF chose not to compete to keep traffic at Laredo because its profit margins would not be at BNSF's self-imposed {{[redacted]}}[102] As Hirsch conceded, the profitability of using a particular gateway impacts the decision to use a gateway, and BNSF would choose the most profitable gateway, assuming all other considerations were held equal.[103] Notably, the rate BNSF earns on Mexican traffic it does serve via Laredo is {{{[redacted]}}} for carload traffic, recovering on average {{{[redacted]}}} BNSF's URCS-based variable costs. Baranowski

---

102 Hirsch Dep. Tr. at 149:11-150:11.

103 *Id.* at 162:19-164.

R.V.S. at Table 6. BNSF therefore has the ability to reduce rates if they truly wanted to compete and has chosen to direct traffic to other gateways, which are presumably more profitable.

KCS witness Naatz agrees with this view, testifying that BNSF is the party keeping its rates high, not KCS, and has steadfastly refused to lower its division requirements so as to make a joint BNSF/Tex Mex interline movement competitive with a UP or a BNSF single-line movement. Naatz R.V.S. at ¶ 6. BNSF has even offered a lower single-line rate than what the joint BNSF/Tex Mex rate would be to encourage shippers to use the Eagle Pass and El Paso gateways. *Id.* at ¶ 8. In short, BNSF was not foreclosed; it took a pass on competing for the business through the Laredo gateway.

Indeed, a review of the BNSF documents produced in discovery shows {{[redacted]}} That strategy continues to this day. Internal BNSF documents reveal that, {{[redacted]}}[104] BNSF {{[redacted]}}[105] and {{[redacted]}}[106] By {{[redacted]

[104] BNSF0003550 at -55 ({{[redacted]}}) (Vol. 3, Exh. 18).

[105] BNSF0003355 at -56 ({{[redacted]}}) (Vol. 3, Exh. 19); BNSF0003606 ({{[redacted]}}) (Vol. 3, Exh.16).

[106] BNSF0003331 at -33 ({{[redacted]}} (Vol. 3, Exh.20)); *see also*, BNSF0000932 at -38, the {[redacted]}} (Vol. 3, Exh.14); BNSF0003606 at -19

[redacted]}}[107] while {{[redacted]}}[108] {{[redacted]}}[109] {{[redacted]}}[110] Given all of these efforts, corporate goals, and investments, it is no wonder that today the substantial majority of BNSF traffic is now interchanged with FXE, not KCSM. And this strategy has proven to be quite profitable for BNSF. In fact, Hirsch admits that BNSF during the very years that KCS was allegedly foreclosing BNSF from using the Laredo gateway, {{[redacted]}}[111]

- ***Third, Other Market Developments Affected BNSF Gateway Volumes***

Third, there have been significant changes in the marketplace that have affected the traffic available for BNSF to move via Laredo, and BNSF incentives to pursue that traffic.

111 Hirsch Dep. Tr. 152: 2-10, 153: 1-13.

Applicants and BNSF agree that the Mexican marketplace has changed dramatically since the *KCS/Tex Mex* transaction.[112] There has been significant investment into the Mexican markets by grain companies, automotive and intermodal companies, and energy companies. The Eagle Pass gateway has responded to that growth by investing in additional infrastructure and customs and brokerage houses that previously did not exist. All of these changes have resulted in market shifts in cars, equipment, routes, gateways, and shipper choices.

During that time, UP and BNSF have developed long-term relationships (many exclusive) with numerous automotive, intermodal marketing companies, trucking companies, third-party logistic providers, and large customers. Naatz R.V.S. at ¶ 61. These exclusive relationships mean that KCS cannot today, and CPKC will not be able to in the future, simply raise KCS's division in an attempt to force these shippers to choose CPKC options. Undertaking such a strategy would risk losing traffic to other UP and BNSF routes and/or to trucking and maritime transport options.

BNSF-KCSM Intermodal and Automotive Traffic. An examination of the intermodal and automotive traffic since *KCS/Tex Mex* further shows that KCS and BNSF have worked together to provide joint-line intermodal and automotive service to Mexico from BNSF origins, *see* Naatz R.V.S. at ¶ 40, a partnership BNSF itself admits has drawn support from KCS and has been fruitful for both parties.[113] CPKC has the same incentive to continue this partnership.

Grain Traffic. BNSF blames its loss of market share of grain traffic through the Laredo gateway on KCS's division requirement for the Tex Mex portion of a joint-line BNSF/Tex Mex movement through Laredo. According to BNSF, KCS's division prevents BNSF from

---

112 *See, e.g.,* BNSF-9 at 19-20; Naatz R.V.S. at ¶ 45.

113 BNSF-9 at 21, 35-36.

competing with KCS's single-line option through Laredo.[114] The data tell the real story: the decline in market share of the joint BNSF-Tex Mex-KCSM routing through Laredo is the direct result of BNSF favoring its single-line route through Eagle Pass or El Paso, not foreclosure by KCS.

This result is exactly what neutral observers predicted would happen one day. As explained by the Railroad Commission of Texas, and as adopted by the Board in its review of the *UP/SP* merger in 1996, BNSF has always had little incentive to route its grain traffic to Mexico using joint-line service with TexMex via Laredo:

> "Were it not for the fact that Laredo currently enjoys a competitive advantage over the other gateways to Mexico because there is a larger infrastructure of customs brokers located at Laredo than at the other gateways, there would be little or no incentive for BN/SF to route traffic via TexMex. Certainly, there is no reason to assume that BN/SF would deliberately route unit trains of grain in joint-line service with TexMex via Laredo when it will have a comparatively direct shot in single-line service at Eagle Pass. Given the admitted concentration of BN/SF's traffic from the grain belt and the Pacific Northwest and the industrial Midwest, it is only logical to assume that BN/SF would favor the less circuitous, single-line routing via Eagle Pass."[115]

Of course in the 26 years since those findings, the customs infrastructure at Eagle Pass has been upgraded such that it is now comparable to Laredo, removing the only impediment to BNSF taking advantage of its own single-line routing via Eagle Pass. [116]

Today, it is BNSF, not KCS, that has the option of using multiple gateways to Mexico. BNSF can choose to direct traffic through Laredo, Eagle Pass, or El Paso, and BNSF leverages that flexibility during contract negotiations with KCS concerning intermodal traffic. For example, KCS understands BNSF has a long-term exclusive contract with {[redacted]} that

---

114 BNSF-9, Hirsch V.S. at 7-8.

115 *UP/SP*, 1 S.T.B. at 423.

116 UP-10-17.

requires{ } to use BNSF service when shipping to a location on BNSF's network. Naatz R.V.S. at ¶ 29. When KCS and BNSF were in the process of re-negotiating an intermodal agreement that had expired on December 31, 2021, BNSF used the threat of switching its routings with all customers, including { }, to the Eagle Pass gateway as leverage to get KCS to agree to its demands. Naatz R.V.S. at ¶¶ 30-31. This example shows that BNSF possess the market power to foreclose KCS routings, not the other way around.[117]

As another example, BNSF recently requested through rates from KCS on the Mexico–St. Paul, MN route. After negotiations over the rates and divisions, KCS and BNSF were able to reach an agreement covering multiple customers' traffic to include this route, interchanging at Robstown. Naatz R.V.S. at ¶ 33. If KCS had requested too high of a division (or was in fact foreclosing BNSF from using the Robstown/Corpus interchange), BNSF would not have partnered with KCS and instead, would have used its own long-haul route to Kansas City and/or moved traffic through the Eagle Pass or El Paso gateways. The Naatz R.V.S. contains several other examples of how and why KCS partners with BNSF to provide a joint BNSF-KCSR-KCSM routing through Laredo for intermodal and automotive traffic, including movements with { }.

BNSF also attempts to blame its loss of market share of Mexican cross-border intermodal traffic after *KCS/Tex Mex* on KCS, when in fact its loss of business was due to market forces, such as changes in the types of equipment preferred by customers and aggressive competition by UP. Naatz R.V.S. at ¶ 34. As an example, { }, a U.S.-based intermodal shipper with

[117] Due to the potential of KCS losing all of this traffic and KCSM losing a substantial amount as well (some of this traffic would have to eventually be switched to a KCSM destination, but KCSM would have lost the long haul), KCS and BNSF, at the urging of the customer, agreed to a one-year extension of the existing agreement with no changes. This preserved the BNSF/KCSR/KCSM routing through Laredo, at least for the near term. Naatz R.V.S. at ¶ 32.

offices in Mexico, had a long-term contract with BNSF before *KCS/Tex Mex*, and routed traffic via the BNSF/Tex Mex interchange through Laredo. This service was part of and dependent upon the North American Container System ("NACS") box system, in which all Class 1s but UP participated. UP and NS started a competing box system, the Equipment Management Pool ("EMP"), in which {[redacted]} also participated. *Id.* at ¶ 35. After *KCS/Tex Mex*, BNSF began to partner directly with asset owners such as {[redacted]} for boxes, instead of participating in pool arrangements, such as NACS and EMP. *Id.* at ¶ 36. Around 2009, {[redacted]} decided to transition all of its western carrier business, including its Mexico business, to UP because it preferred the equipment available through the EMP pool arrangement over the equipment BNSF sourced directly from asset owners. *Id.* The decision had nothing to do with KCS or KCSM pricing.

Taken together, these examples show KCS has partnered with BNSF to develop Laredo interchange traffic, and CPKC will be incentivized to do the same. In fact, it is within KCS's self-interest to work with BNSF to provide a joint routings that would compete with UP, and these efforts thus far have been highly successful touting joint-line traffic gains, as shown in Figure 3 below.

FIGURE 3[118]

RAPID INCREASE IN BNSF-KCS CROSS-BORDER INTERMODAL TRAFFIC

[118] Naatz R.V.S. at ¶ 40.

KCS's network already connects Laredo with Dallas, yet KCS has partnered closely with BNSF via Laredo/Robstown because it has an interest in participating in the revenue from interline options that best meet shipper needs. For this traffic in particular, KCS would rather have a share of the revenue than none at all were BNSF (and its customers) to send the intermodal trains via another route that cut KCSM out entirely. Internal BNSF documents in fact show that that {{

}}[119]

These marketplace dynamics will not disappear with the Transaction. CPKC will have no incentive to "foreclose" BNSF routings, especially given the success of the KCS/BNSF interline route. BNSF will continue to hold leverage over CPKC with the threat of shifting

[119] BNSF0000166 ({

}}) (Vol. 3, Exh. 27); *see also* Majure R.V.S. at fn.131.

routings to Eagle Pass via a BNSF/FXE route, and thus if CPKC charges a high division, it will risk losing BNSF as a partner, thus reducing CPKC's overall revenues. Accordingly, it remains in CPKC's self-interest to work with BNSF to continue to provide shippers with options, especially to and from origins and destinations that are served only by UP and BNSF. The only change will be a new single-line option for shippers, especially Chicago and Detroit/Eastern Canada shippers, to move traffic to and from Mexico via Laredo, which will *enhance* competition, not lessen it.

Energy. An examination of the petroleum and energy products markets in the Gulf region likewise shows that KCS is winning the traffic due to its customer relationships, its service, its efficient routings, and its single-line rates – not foreclosure.

For example, the Jefferson Energy Terminal is served by UP, BNSF, and KCS. ExxonMobil received bids from all three of those railroads for its movements from the Jefferson Energy Terminal to Mexico. KCS won the bid and continues to handle the entire movement today. Naatz R.V.S. at ¶ 44. ExxonMobil has made no allegations that KCS was using undue market power to price the KCSR portion of a BNSF routing at a commercially unreasonable rate or that KCS was using its control of KCSM to force a KCS routing over a UP move. Nor could it, given that KCSM has to give the same rate for the Mexico portion of the move to UP, BNSF, and KCS. Indeed, under its contract with KCS, ExxonMobil has the option to use the UP single-line rate to Laredo and at Laredo, KCSM must charge the same rate as it charges KCSR. KCSM does receive both UP and KCSR ExxonMobil traffic at Laredo. The simple fact is that ExxonMobil awarded the business to KCS given the single-line nature of KCS's move, KCS's

service focus, and KCS's willingness to undertake a long-term partnership with ExxonMobil. *Id.* at ¶ 46.[120]

Other Gulf Coast energy customers make the same choices. Where it is more efficient to move traffic over a single-line rail network, customers will do so. If the customer prefers a joint-line move, or a joint-line move is more efficient, that is the choice the customer will make. For example, the Entergy coal-fired electric plant in Lake Charles, Mississippi, is served by UP, KCS, and BNSF. Both UP and BNSF serve the coal origins and the destination and can provide single-line service. KCS can only serve the destination, and must interchange with either UP or BNSF to complete the route. In the past, KCS was able to provide routings, service, and division requirements that allowed for competitive joint-line service via UP/KCS or BNSF/KCS. However, in the two most recent rounds of bidding, the customer selected a single-line service over a joint-line move, even though KCS offered the same division to both UP and BNSF for a Kansas City interchange. Naatz R.V.S. at ¶ 47. KCS is certainly not contending, as BNSF seems to do here, that because it lost the traffic, BNSF or UP have exercised undue market power to "foreclose" a KCS routing option. Rather, KCS understands that the customer chooses the routes and rates, and, generally, a single-line option can be more competitive than a joint-line option and that KCS can only price its division so low before it drops below its costs.

[120] To further underline the competitive nature of the marketplace, ExxonMobil recently solicited bids from UP, BNSF, and KCS for various lanes of traffic, including both FXE and KCSM routings. ExxonMobil chose a UP/FXE routing over the BNSF/FXE routing for traffic to the west and chose KCS/KCSM for traffic to the Gulf and the Southeast. There was no allegation from ExxonMobil that KCS was manipulating the rates to disfavor a BNSF/KCSM routing. Naatz R.V.S. at ¶ fn.22.

4. The Same Forces that Ensured There Was Not Foreclosure Following *KCS/Tex Mex* and Other Cases Will Apply Here

The 17 years of post *KCS/Tex Mex* history tell a story of competition rather than foreclosure. All of the same marketplace realities that led KCS to continue to cooperate with UP and BNSF on interline services via Laredo will continue to apply with equal force to CPKC following this transaction:

- ***CPKC will continue to have strong incentives to provide shippers with the interline transportation options that best meet their needs.***

For many reasons, CPKC will have strong incentives to make sure that they maintain efficient interline routes over every gateway they serve, lest they lose traffic to other transportation options or simply drive remunerative rail traffic away. These incentives will apply no less strongly at Laredo and Robstown.[121]

First, the Transaction will not affect the options shippers have to choose FXE or other transportation modes for shipments between the United States and Mexico, and as any cursory examination will show UP and BNSF have extensive ability to tap U.S.-Mexico traffic opportunities via the Eagle Pass and El Paso gateways. Majure R.V.S. at ¶¶ 74-75. Even CN participates directly in U.S.-Mexico flows, via boat-to-train automotive service between the ports of Veracruz and Mobile. And the majority of Mexican freight still moves by truck across the border, including to UP's intermodal ramp in Laredo.

Any move by CPKC to foreclose efficient UP-KCSM or BNSF-KCSM options would be contrary to CPKC's incentives. Majure R.V.S. at ¶ 28. As the Board found in *KCS/Tex Mex*, "KCS's experts credibly explained that market conditions would prevent KCS from raising rates

---

[121] Indeed, as one Class 1 railroad has observed: {{[redacted]}}(Vol. 3, Exh. 28).

to shippers or foreclosing UP and BNSF from the Mexican market, because the latter two carriers account for more than 90% of the rail traffic interchanged with TFM at Laredo, and it would be unprofitable for KCS to use its control of TFM to take actions that would foreclose this traffic."[122] The same logic applies here. In 2019, KCSM interchanged {{ }} of shipments with UP and BNSF at the Laredo gateway for which KCS can serve the final destination. Majure V.S. at ¶ 30. And as Naatz testifies, much of KCS's auto traffic is still interchanged with UP at Laredo. Naatz R.V.S. at ¶ 57. Given the amount of traffic interchanged with UP and BNSF at Laredo, efforts other than to compete on price and service could result in KCSM losing existing business it has with that shipper both on the lane in question to an FXE-routing and to many other locations where the CPKC system could not reach without interlining. Brown/Zebrowski R.V.S. at fn.75.

Put another way, just as it was not in KCS's self-interest to force BNSF-KCS-KCSM interline traffic away by setting commercially unreasonable rates for to Robstown, it would not in CPKC's interest either. BNSF would just divert its traffic away from KCS to one of its several alternative routing options into and out of Mexico.[123] UP and BNSF have the choice to use five different gateways into and out of Mexico and the choice to use FXE as an alternative to KCSM: Brownsville (KCSM), Laredo (KCSM), El Paso (FXE), Eagle Pass (FXE), and San Diego (FXE). KCSM faces extensive competition from FXE, of which UP owns 26 percent.[124] UP and BNSF connect with FXE at the Eagle Pass gateway, the "principal alternative" to the

---

122 KCS/Tex Mex Decision at 17.

123 While BNSF and its customers have options if they don't like the rates offered by KCS, such choices and options being the definition of a competitive market, KCS has only one integrated gateway in and out of Mexico and also can interchange with BNSF and UP at Brownsville/Matamoros.

124 UP-10 at 17.

Laredo gateway.[125] Documents reveal that {{ }} For example, UP itself noted {{ }}[126] In addition, BNSF {{ }}[128] And BNSF notes that {{ }}[129]

CPKC's only real gateway option is Laredo. (Brownsville is not realistic as it does not connect the two halves of KCS's network). Naatz R.V.S. at Figure 1. If CPKC tried to undertake the foreclosure strategy hypothesized by UP and BNSF, UP and BNSF would simply shift gateways. Indeed, as BNSF's comments and evidence shows, BNSF can and does shift its Mexican traffic from Laredo to its other gateways (El Paso, Eagle Pass, and Brownsville) when it is in BNSF's economic interest to do so. In short, KCS lacks the market power to make foreclosure of UP or BNSF rational.

Naatz fully sets out why and how the marketplace prevents KCS from foreclosing BNSF routings. His statement shows that not only does KCS not foreclose BNSF routings, but that KCS works with BNSF to bring as much traffic over to the Laredo gateway as possible. This is

---

125 *Id.* UP and BNSF also connect with FXE at the El Paso gateway. { }

126 UP-HC-001387 at -410 ({{ }}) ((Vol. 3, Exh.30)).

127 Hirsch Dep. Tr. at 36:14-21.

128 UP-HC-001106 ({{ }}) ((Vol. 3, Exh. 29).

129 BNSF0000932 at -34 ((Vol. 3, Exh. 14). {{ }} *See* Hirsch Dep. Tr. at 71:17-19.

true not only for traffic served by UP and BNSF that KCS cannot serve directly, but also for BNSF grain, automotive, and energy products traffic, all of which compete against KCS traffic. Naatz further shows that when BNSF does not use a BNSF/KCS routing, the reason is BNSF's deliberate choice to use its other gateways and its refusal to lower its division to make a BNSF/KCS routing through Laredo competitive, not foreclosure by KCS.

Even where KCSM's Mexican network may provide shippers with the only way to get their goods by rail to the U.S. border, the result would be no different. KCS today – and CPKC in the future – will have strong incentives to support efficient routes that meet shippers' needs. Majure R.V.S. at ¶ 17.

- ***The Mexican regulatory regime will inhibit the foreclosure that BNSF and UP advance.***

The regulatory regime that KCSM must abide by on movements *within Mexico* will help prevent the kinds of foreclosure theories that UP and BNSF advance. Those theories depend in the notion that KCSM would manipulate upwards the rate that BNSF or UP must imbed in its interline services. BNSF and UP both argue that CPKC might raise prices for movements within Mexico (disadvantaging UP and BNSF) and offset those higher prices by lowering CPKC's prices in the United States.[130] But Mexican rate regulation requires parity for like traffic to and from the border regardless of whether the movement is handled at the border by UP, BNSF, or KCS. Reply Verified Statement of Oscar Del Cueto ("Del Cueto R.V.S.") at ¶ 25; Naatz R.V.S. at 62. The same regulatory constraint would apply to KCSM after this Transaction. This means that if KCSM were to try to jack up its rate for movements to Laredo for ultimate deliver via UP

[130] BNSF-9, Reishus V.S. at ¶¶ 44-50; UP-10, Verified Statement of Luis F. de la Calle ("de la Calle V.S.") at 4-5.

to Chicago or St. Paul, it likely would have to raise rates for similar movements to the many more U.S. destinations that CPKC's network will not reach at all. This would be commercially counterproductive. Naatz R.V.S. at ¶ 62.[131]

Understanding the damage these Mexican regulations do to their foreclosure theories, UP and BNSF put forward the testimony of two witnesses who claim Mexican regulation is ineffective.[132] As Del Cueto explains, this perception of Mexican regulatory regime is not how KCSM sees the world. KCSM abides by those regulations, in no small part because it must do so to protect its extremely valuable government-issued concession in order to continue operating. Del Cueto R.V.S at ¶¶ 30, 40; Naatz R.V.S. at ¶ 62.

- ***CPKC will be bound by the "keep gateways open" commitment that has applied to KCS since 2005.***

Finally, as a backstop, just as KCS adhered to its commitment to keep the Robstown and Laredo gateways open, if any shipper feels that CPKC has acted in a way that forces them away form a pre-Transaction interline routing that would prefer, they will be free to bring that complaint forward to CPKC for efficient resolution, or if necessary to the Board in its oversight process.

---

[131] BNSF witness Reishus also bases his analysis of Mexican regulation on a misunderstanding of the degree to which Mexican regulations allow KCSM to differentiate between unlike flows of traffic and thereby maximize profits without needing to force traffic cover inefficient routes in the United States. *See* Majure R.V.S. at ¶ 51.

[132] UP-10, de la Calle V.S. at 5; BNSF-9, Verified Statement of Aaron Dychter Poltolarek ("Poltolarek V.S.") at § 3.

5. Applicants' Commitments – Enforced as Appropriate By Shippers – Are the Tried-And-True Way To Address Concerns About Vertical Foreclosure

As in *KCS/Tex Mex*, in case after case the Board and shippers have been fully protected from theoretical foreclosure by exactly the kinds of commitments that Applicants are making in this case: to create no new bottlenecks and to keep gateways open on commercially reasonable terms. *See* Section I and Brooks R.V.S. at ¶ 15. In *CSX/Pan Am*, where serious concerns about foreclosure of competitive routings were raised, the Board endorsed the effectiveness of CRT commitments, stating that the "'commercially reasonable' requirement has been imposed as part of an open gateway condition by the Board in past merger decisions."[133] Similarly, in *CN/WC*, the Board denied more stringent conditions requested by other commenters and merely held CN/WC to its commitment to "keep all existing active gateways affected by the Transaction open on commercially reasonable terms."[134]

Given extensive experience and success with these kinds of commitments, it should come as no surprise that there is widespread support among shippers for that approach. NITL formally supported the approach in *CN/WC* and *KCS/Tex Mex*, and indeed the KCS-NITL agreement remains in full force (though it has never been used by a shipper to arbitrate any dispute). NITL is a participant here, and it has raised no issue or concern with ow well those prior agreements (and the related commitments they formalized) have worked. The National Grain and Feed Association has stated that it "commends CP and KCS for their commitments to keep existing gateways with other Class 1 railroads open."[135] And the Iowa Interstate Railroad ("IAIS") has

---

{{[redacted]}}

This approach is more than sufficient to provide a reliable backstop to CPKC's already-strong incentive to maintain efficient interline routes because shippers will know if CPKC takes any action to shut off those options. Shippers will be able to demand a Rule 11 rate from CPKC and they will know if that rate is the reason why an interline route they previously relied upon is no longer viable. As noted above, following *KCS/Tex Mex* not a single shipper raised any concerns or complained about rates to/from Laredo or internal points in Mexico. Naatz R.V.S. at ¶ 4. Applicants expect the same result here. CPKC will be aggressive in demonstrating to shippers the benefits of CPKC's new single-line services, but they know that they must sell shippers on the advantages of those routes and will not be successful if they try to force shippers to switch by downgrading shippers existing options. *See* Brooks R.V.S. at ¶¶ 8-9.

Even UP, when it was not seeking to insulate its own traffic from competition, told the Board that commitments such as Applicants have already made in this case *far exceed* what would be necessary to preserve shipper routing options in an end-to-end merger setting. In the "Merger Rules" proceeding in 2000, UP proposed that transcontinental mergers be subject to concrete gateway protection rules that it viewed as sufficient to keep gateways open commercially without requiring "the merged carrier to short-haul itself, depriving the carriers of the returns upon which they depend to attract capital, reinvest in their rail networks and maintain and improve service."[136] Specifically, UP proposed a narrowly cabined rule applicable to affected traffic only (i.e., where the merged carrier would newly serve both the origin and

[136] *Major Rail Consolidation Procedures*, STB Ex Parte No. 582 (Sub-No. 1) Union Pacific's Comments and Initial Proposals (filed May 16, 2000) at 14.

destination) requiring that the merging carrier establish a segment rate applicable to the new "bottleneck" over the most-frequently used gateway for traffic to/from a solely served customer. UP observed that "such a condition would go somewhat beyond merely preserving the exclusively-served shipper's routing options." In some cases, as where the traffic is now moving under joint or proportional rates, the reasonableness of the rate between Point A and Gateway B is not separately challengeable today."[137]

Applicants' commitment to quote Rule 11 rates (or cooperate with connecting carriers on through rates) for affected traffic via gateways is *much broader than what UP proposed* apply to its own potential transcontinental merger under the new merger rules. As examples, Applicants do not (i) limit their commitment only to "exclusively-served" traffic, (ii) exclude intermodal, automotive and transload traffic, or (iii) limit their commitment only to the "most-frequently used gateway."[138] *Id.*

UP, BNSF, and others who demand more onerous gateway conditions in this case are motivated by the commercial and competitive advantages such conditions would convey to themselves, not to vindicate any valid public interest concern.

6. The Rate-Setting Mechanism Proposed by UP and BNSF Is Both Unnecessary and Would Be Affirmatively Anticompetitive

UP and BNSF seek to improve their position by asking the Board to constrain rates in a way that they would never accept and have opposed in the past. The "mileage prorate" mechanism both UP and BNSF ask for is, at its core, an attempt to preserve (or improve) their own financial returns in the face of the fierce new competition from CPKC. Specifically, UP and

---

137 *Id.*

138 *Id.*

BNSF ask the Board to impose a condition that, any time CPKC offers a single-line price on a movement that crosses the Mexican border, UP and BNSF are entitled to use KCSM at a mileage prorated portion of the CPKC single-line price.[139] Though both Class 1 railroads may claim this proposal is narrowly tailored and competition enhancing, it is neither and should be rejected.[140]

- ***Revenue Divisions Set in the Marketplace Are Not Based on Any Mileage Formula***

First, UP and BNSF's "mileage prorate" mechanism would impose a rigidity on CPKC's ability to set rates that would have the effect of locking-in UP and BNSF's competitive position and hamstringing CPKC's ability to compete aggressively with its new single-line service. UP and BNSF's proposal might make sense if market rate for interline revenue divisions were based on mileage alone. Both BNSF and UP are well aware of how revenue divisions are determined in the marketplace and they both know that divisions are not set based on any mileage formula; they are set by market forces. To that end, they have repeatedly argued against mileage-based rules in Board proceedings. BNSF's testimony in opposition to a mileage-based rule in its own merger case speaks eloquently: such a condition would "uproot the existing revenue divisions, require[ing] that new ones be set on the basis of comparative mileage."[141] Likewise, in the *McCarty Farms* rate case, BN "object[ed] to a straight mileage proration, noting that railroad revenue divisions *are negotiated and are generally not based on mileage formulae*."[142] In *Public*

---

139 *See* BNSF-9 at 46-47; UP-10 at 9.

140 In addition to its many obvious flaws, the proposed condition would explicitly involve the Board in the regulation of rates for transportation within Mexico, which is not appropriate given the Mexican government's role in regulating KCSM. *See* Del Cueto R.V.S. at ¶ 44.

141 *Burlington Northern, Inc. & Burlington Northern R.R. – Control & Merger – Santa Fe Pacific Corp. & The Atchison, Topeka & Santa Fe Ry.*, Finance Docket No. 32549, Applicants' Response to Comments ("BNSF Response to Comments") (filed June 9, 1995).

142 *McCarty Farms, Inc., et al. v. Burlington Northern, Inc.*, 2 S.T.B. 460, 471 (1997) (emphasis added).

Service Company of Colorado D/B/A/ Xcel Energy v. The Burlington Northern And Santa Fe Railway Company,[143] BNSF claimed that a method other than a mileage prorate mechanism was "superior" because it can "cover both attributable and unattributable costs," citing a Board decision stating "[t]he revenue each carrier receives should cover the attributable costs of the service it provides and make some contribution to its unattributable costs." More recently, addressing the Board's tools for allocating cross-over traffic revenue in SAC rate cases, BNSF explained that mileage-based rules adopted in those cases were never intended to reflect "real-world negotiated divisions."[144] UP has similarly criticized the use of "mileage prorate" divisions in SAC rate cases as not accurately reflecting actual market-based divisions.[145]

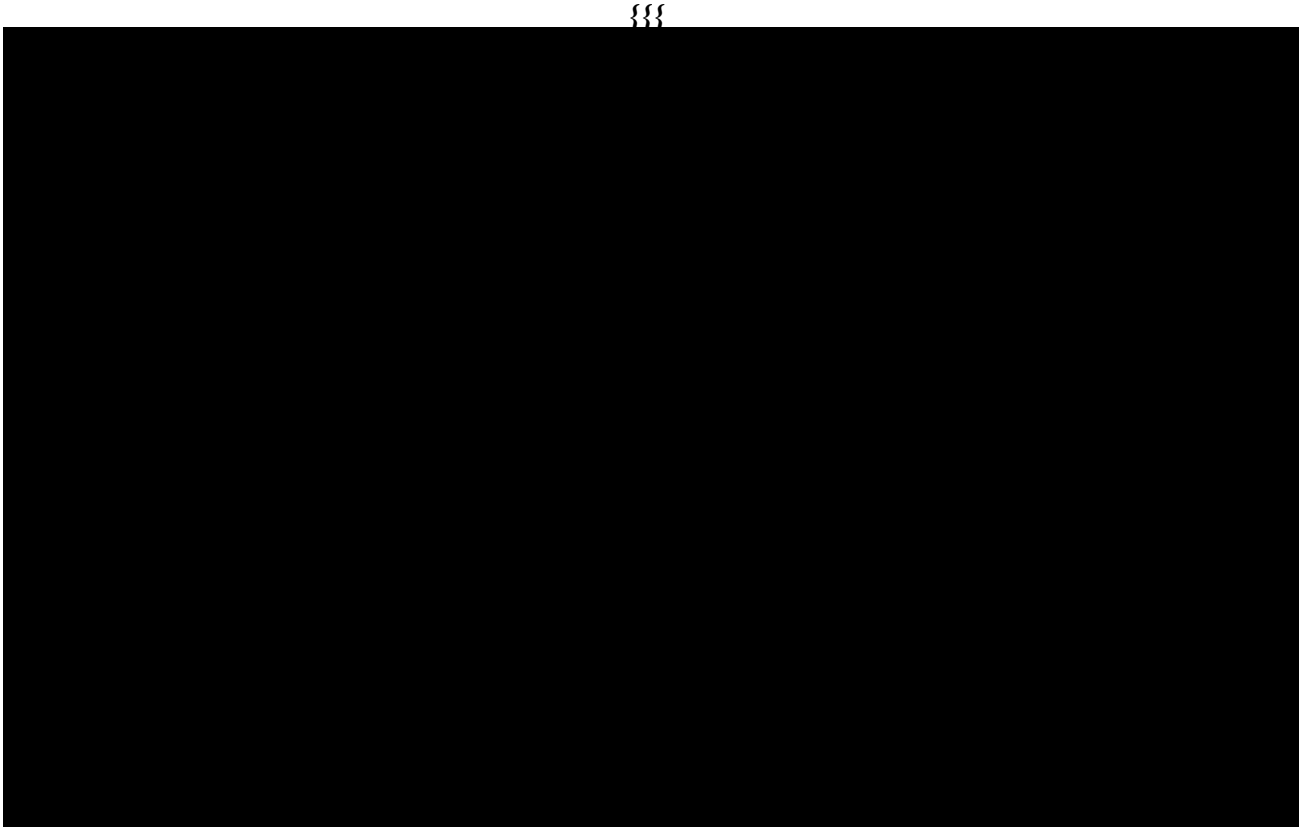
So it is not surprising that actual revenue divisions bear no fixed relationship to the carrier's relative share of miles on the movement. Instead, revenue divisions set in the marketplace – and a carrier's revenue share as compared to its share of miles – vary widely from movement to movement based on a variety of factors. Majure R.V.S. at ¶¶ 146, 147; Brooks R.V.S. at ¶ 22; Naatz R.V.S. at ¶ 77. Those factors include the relative operating costs associated with the carrier's portion of the move, the costs associated with interchanging the

---

143 *Public Service Company of Colorado d/b/a Xcel Energy v. The Burlington Northern and Santa Fe Railway Company*, STB Docket No. 42057, Final Brief of Defendant The Burlington Northern and Santa Fe Railway Company (served Sept. 8, 2003) at 21-22 ((Vol. 3, Exh. 32).

144 *Major Issues in Rail Rate Cases*, Ex Parte No. 657 (Sub-No. 1), Reply Comments of BNSF (filed May 31, 2006) (Vol. 3, Exh. 32) at 22. BNSF cited multiple Board precedents making the point that market-based divisions were not mileage-based: *Duke Energy Corp. v. Norfolk Southern R.R.*, Docket No. NOR 42069 (STB served Nov. 6, 2003) at 20 n.29 (real world divisions between NS and other carriers would not "be particularly instructive, as those divisions presumably reflect a wide range of commercial considerations across a broad spectrum or traffic and gateways"); *Bituminous Coal – Hiawatha, UT to Moapa, NV*, 10 I.C.C.2d 259, 280 (1994) ("market-based divisions result from the interaction of supply considerations (the relative costs incurred by carriers in providing the interline movement and demand considerations (the relative bargaining power of the two carriers").

145 *FMC Wyoming Corp. & FMC Corp. v. Union Pacific R.R.*, Docket No. NOR 42022 (STB served May 12, 2000) at 28, 30, 31.



traffic, potential equipment costs, the need for infrastructure investment (or lack thereof), the level of service (over the road and first mile/last mile), the commodity, the volume of traffic, the availability of capacity, and the carrier's role in attracting the traffic in the first place. *Id.*

Dr. Majure examined the available data – including 100 percent traffic data from CP, KCS, UP, and BNSF – to assess the potential impact of the rate-setting mechanism UP and BNSF propose. That analysis confirms that carriers' market-based revenue divisions for interline movements are not set based on mileage alone and do not align with the prorated mileage covered by the segment. *Id.* at ¶ 147. This finding is illustrated in Figure 4 below, which includes four panels – one each for CP, KCS, UP, and BNSF – showing how each carrier's share of interline revenues for movements within the U.S. or between the U.S. and Canada compares to its mileage across the full array of movements in which it participates. In each panel, the x-axis describes the share of miles for that carrier's portion of each route and the y-axis describes the share of total movement revenue earned by that carrier on the same movement. *Id.* at ¶ 149. Each dot is a separate interline movement.

FIGURE 5

KCS, UP, BNSF, AND CP INTERLINE REVENUE DIVISIONS DO NOT ALIGN WITH ANY MILEAGE PRORATE FORMULA

{{{

}}}

If interline rates were typically set based on mileage, then the colored dots would tend to fall along the 45-degree line (where the share of revenues corresponds to the share of miles, *i.e.,* the "mileage prorate"). *Id.* at ¶ 150. Not surprisingly, that is not where they fall – confirming that market-based rates on interline movements do not vary in lockstep with the carrier's relative share of mileage. *Id.*

- ***The Fact That UP and BNSF Entered into a "Prop Rate" Agreement in 1996 Is Not a Reason to Impose One Here***

To be sure, interline partners from time to time do use "mileage prorate" allocation metrics as a simplifying tool to divide revenues for certain categories of interline traffic. In those

instances, as Naatz explains, the arrangements are negotiated, consensual, and often tightly cabined, such as to a specific group of new traffic opportunities. Naatz R.V.S. at ¶ 27.

UP and BNSF point to one such agreement, which they entered into in 1996 as part of the vast bundle of quid pro quos agreed to between those two railroads in connection with the proposed UP/SP merger, and they propose that it be used as a model for conditions they ask the Board to impose here. Specially, when UP agreed to give BNSF a bundle of rights (including trackage rights and the sale of a former Western Pacific line in California) to remedy competitive issues, it knew it would be giving BNSF a new single-line route between the Pacific Northwest (and Vancouver) and Southern California, which UP/SP would lack. UP therefore asked BNSF to negotiate the so-called "I-5 Prop Rate Agreement," pursuant to which BNSF would provide UP with a set of agreed rate factors allowing UP to quote rates for certain categories of traffic between BNSF stations in the Pacific northwest and certain parts of the UP/SP network.

The crucial point is that, contrary to UP's and BNSF's implication here, the I-5 Agreement (and all the other uses of mileage-prorate arrangements that UP cites)[146] were not imposed as a condition to remedy any vertical harm from UP/SP. It was a *commercial agreement* hammered out between UP and BNSF at arm's length as part of a set of agreements providing each with mutual commercial benefits. And as an internal BNSF document {{[redacted]}}. There is no simple "mileage prorate" principal established by this agreement, much less one that could be

[146] UP-10 at 74 (citing other examples).

imported into a Board mandate. Tellingly, even the BNSF witness who proposes a mileage prorate mechanism modelled on the I-5 Agreement fails to understand the complexities, and ramifications, of such a condition.[147]

The fact that the "I-5" framework represented a mutually agreeable commercial trade between UP and BNSF 25 years ago is no reason to impose it here, an in fact the Board has already rejected UP's request to do so in the *KCS/Tex Mex* proceeding, when it asked the Board to force KCS into agreeing to a "proportional rate agreement" that was "modelled on an agreement reached between UP and BNSF," *i.e.* the I-5 Agreement, as UP's favored method to "hold Applicants to their basic commitment to keep the Laredo Gateway open."[148] The Board did not require such a condition, finding a commitment to keep the Laredo gateway open on "commercially reasonable terms" sufficient.[149]

- ***The Mileage Prorate Mechanism Would Immediately Transfer Millions of Dollars from CPKC to UP and BNSF***

Were the Board to impose the UP/BNSF "mileage prorate" principle in this case, one immediate effect would be to transfer tens of millions of dollars of revenues into the pockets of UP and BNSF. Consider all CP and KCSM interline traffic for which, CP's and KCSM's existing interline division reflects a higher share of revenues than its share of miles on a potential CPKC single-line alternative. For any of this traffic in lanes where CPKC will set a new single-line rate, the immediate consequence (even if CPKCs single line rate is at the same level as existing interline rates rather than lower) will be a transfer to UP and BNSF as their share of

147 *See* Hirsch Dep. Tr. 186:21-187:4 {{[redacted]}}

148 UP-7A, Verified Statement of John Gray at 41-42.

149 KCS/Tex Mex Decision at 18-19.

revenue (i.e., their division) goes up and CPKC's is forced down. As Dr. Majure demonstrated the magnitude of this effect would be significant. Dr. Majure finds that the proposed mechanism would immediately impact approximately {{ }} of existing KCS single-line revenues via Laredo. Majure R.V.S. ¶ 159.

One concrete illustration of this involved the interline rates for intermodal traffic that KS and BNSF agreed to in 2016. As KCS witness Naatz explains, between KCSM-served terminals in Mexico and BNSF-served terminals in Texas and the West, KCS and BNSF negotiated interline rates covering joint-line KCS-BNSF intermodal services via the Laredo gateway in 50 different origin-destination lanes. Naatz R.V.S. at ¶ 40. As BNSF documents show and Naatz testifies, {{ }}[150]

BNSF's proposed mileage prorate condition would immediately upend this arrangement. As Naatz shows, KCS's share of revenues {{ }} As soon as CPKC puts single-line rates into the market, the mileage prorate condition would hand BNSF a {{ }} on moves in any lane where CPKC tried to compete. Naatz R.V.S. at ¶¶ 88, 29. This is, in a word, anticompetitive.

- ***The Mileage Prorate Mechanism Would Be a Tax on CPKC Competition and a Windfall Subsidy to UP and BNSF***

As Dr. Majure explains, moreover, the anticompetitive impacts of the proposed mileage prorate mechanism would not stop there. Majure R.V.S. at ¶ 151; *see generally* Majure R.V.S. at § 4.1.2. By linking CPKC's future interline revenue divisions to new CPKC single line rates, the

[150] *See, e.g.,* BNSF0002691({{ }}) (Vol. 3, Exh. 33); Naatz R.V.S. at ¶ 40.

UP/BNSF mechanism would operate on a tax on CPKC's competition, and a subsidy that would insulate UP and BNSF against that competition, and disable CKC from properly reflecting its single-line economics in its new rate offerings.

Dr. Majure explains this feature in detail, *see* Majure R.V.S. at § 4.1.2, but the simple illustrations below capture the basic point:

- Assume a KCSM-UP origin-to-destination rate today is $3,000, with KCSM collecting $1,200 and UP collecting $1,800, and that KCSM's share of the miles is one-third. KCSM's percentage of revenue is 40 percent, above the level that would be dictated by a strict mileage-prorate allocation (reflecting whatever the full array of cost and other market-based factors).
- Post-Transaction, if CPKC offered a single-line rate of $3,000, the UP/SP mechanism would cap CPKC's rate applicable to UP-KCSM or BNSF-KCSM interline moves at $1,000 (*i.e.*, 33 percent of $3,000, reflecting the mileage pro-rate allocation), $200 less than its pre-Transaction division. UP could maintain a $3,000 interline rate by pocketing the $200 (by increasing its division up to its two-thirds share of miles).

Now consider that CPKC would choose to take advantage of its new single-line economics to compete aggressively on price.

- If CPKC offered a single line rate that was $600 (or 20%) below pre-Transaction interline rate levels (creating an effective rate of $2,400), its share of interline revenues would now be capped at $800 (or $400 further below its pre-Transaction revenue share).

- With the subsidy of a forced reduction in CPKC's revenue division. UP could match CPKC's $2,400 single-line rate by only reducing its rate factor by $200, because CPKC would have in effect paid a $400 tax to subsidize UP's competition.

Naatz R.V.S. ¶¶ 85 and 86.

As Dr. Majure explains, this alleged "remedy" is "anticompetitive and would ensure UP and BNSF do not face the full competitive pressure they would otherwise face from a combined CPKC." Majure R.V.S. at ¶ 140.

The Board's own regulatory history shows that imposing regulatory mechanisms like these on post-merger rate-making is in fact anticompetitive experience. Despite UP and BNSF's protestations to the contrary, their proposed mechanism would resurrect key features of the long-discredited and anticompetitive "DT&I Conditions." As the Board is aware, in the pre-Staggers era the ICC developed a standard set of six conditions that it imposed almost automatically and identically in every merger proceeding, including (1) requiring "a consolidated carrier to 'maintain and keep open all routes and channels of trade via existing junctions and gateways unless otherwise authorized by the Commission'"; (2) "prohibit[ing] discrimination 'in the arrangement of schedules'"; (3) "requir[ing] a consolidated carrier to continue 'present traffic and operating relationships'"; (4) "prohibit[ing] discrimination . . . 'in promptness [and] frequency of service,'"; (5) "preclud[ing] a consolidated carrier from restraining 'the right of industries located on the acquired line to route traffic over any or all existing routes and gateways'"; and (6) "provid[ing] standing to seek later modification of the Conditions."[151] These

[151] *Rulemaking Concerning Traffic Protective Conditions in Railroad Consolidation Procedures*, 366 I.C.C. 112, 112-13 (I.C.C. 1982) (citing *Detroit, T. & I. R. Co. Control*, 275 I.C.C. 455, 492 (1950)).

standard merger conditions drew their name from *Detroit, Toledo & Ironton R.R. – Control*, 275 I.C.C. 455 (1950), and were explicitly aimed at *protecting carriers from competition*, not *protecting competition*.

By 1982, the ICC's experience with these conditions had shown that these conditions were inhibiting competition and "must be removed." The ICC found that their "anticompetitive elements" limited carriers' ability to "compete both in service and price," with a "chilling effect on innovative rate and routing practices" that "discourage[d] price and service innovations and dissuade[d] carriers from pricing according to actual cost." *Id*.[152] As Dr. Majure explains, the mileage-prorate mechanism proposed by UP and BSNF would resurrect exactly the same kind of rigid regulation of interline pricing that would impede the new competition CPKC promises. Majure R.V.S. at ¶¶ 168, 171.[153]

The anticompetitive nature of the rate-setting mechanism UP and BNSF propose is well summarized by BNSF's own criticism of similar conditions proposed by IC when BN and Santa Fe combined to form BNSF. IC proposed a 15-year condition that would "prescribe, for a period of 15 years, mileage-prorated divisions or rates ensuring mileage-prorated revenue for all traffic interchanged by Applicants and IC moving between specific points in thirteen states."[154] BN and Santa Fe pointed out that this condition would "create the risk of inefficient, non-market-responsive revenue divisions and inflict harm on the public.[155] Indeed, they argued it would go

---

152 *Id.* at 115-116.

153 As Dr. Majure also points out, the mechanism has a further anticompetitive feature. Implementation of, and UP and BNSF's auditing of CPKC's compliance therewith, the "mileage prorate" mechanism would inevitably give CPKC's competitors access to the single-line rate quotes it was offering its customers. *See* Majure R.V.S. at ¶ 141.

154 BNSF Response to Comments at 92-93.

155 *Id.* at 97.

beyond even the abandoned DT&I Conditions by requesting that the Commission "uproot existing revenue divisions, requir[ing] that new ones be set on the basis of comparative mileage."[156]

BNSF was right then and it is wrong now. As both BNSF and UP have repeatedly contended in past Board proceedings – and as the objective facts in this case conclusively demonstrate – revenue divisions established in the marketplace do not hew to any "mileage prorate" formula, and any effort to impose them by regulation would be anticompetitive.

- ***UP and BNSF Give Away Their Lack of Any True Remedial Goal By Seeking to Apply Their Mechanism to Traffic Unaffected by the Transaction***

The best evidence of what is really motivating UP and BNSF is their explicit effort to have their rate-setting mechanism applied to all interline traffic between them and CPKC, even traffic that would be entirely *unaffected* by the Proposed Transaction, such as traffic flowing over Laredo to parts of UP's and BNSF's networks that CPKC will not service, and where it will not gain any longer haul than KCS could achieve today.[157] The only conceivable purpose of this would be to transfer revenue from CPKC to these larger railroads. Any condition the Board might consider to "keep gateways open" should be limited – in the same way Applicants' commitments are – to the preservation of interline routing options for traffic that might conceivably be affected by the Transaction. Brooks R.V.S. at 10.[158]

---

156 *Id.*

157 *See* UP-10 at 71-72 (asking that the mechanism be applied to routes not remotely impacted by the Transaction, when they ask for the mechanism on any "competitive" route, where competitive is defined as when "CPKC and another railroad are competing for the same traffic" even when "CPKC and the other railroad d[o] not serve the identical origin or destination facility"); BNSF-9 at 73 (not limiting the application of the mechanism to only affected traffic).

158 Even shipper groups recognize this. *See* Comments and Request for Conditions of The American Chemistry Council, The Fertilizer Institute, and The National Industrial Transportation League ("ACC-6/TFI-5/NITl-3") (filed Feb. 28, 2022)at 7-8.

B. Shipper Group Desires for "Open Access" and Other Reregulatory Remedies Are Not Merger-Related

In addition to the overreaching requests by several Class 1 railroads, discussed above, a few shipper associations seek gateway and bottleneck-related relief that would extend well beyond any conceivable effect of the Transaction. They seek to capitalize on this Transaction to pursue long-standing efforts by these associations to reform the Board's "bottleneck" rate-making standards and further their open access crusade.[159] Their requests would unnecessarily and unfairly alter the regulatory landscape applicable to CPKC alone. There is no basis to award such drastic relief that does not relate to any Transaction-related harm, and they are inappropriately raised in this proceeding.[160]

1. Certain Requests Relating to "Gateways" and "Bottlenecks" Represent an Improper Effort to Revisit the Board's Bottleneck Rate Rules

Applicants have proactively committed to keep affected gateways open on commercially reasonable terms, and CPKC has specifically committed to waive its right to create new bottleneck segments by providing Rule 11 rates for the former-CP or former-KCS portions of origin-to-destination routings. *See* Section IV.5 above. These commitments are consistent with those made by participants in previous consolidations and accepted as sufficient to avoid any Transaction-related harm.[161] No further conditions should be required – especially under the pre-2001 merger rules.

---

159 *See, e.g.*, ACC-6/TFI-5/NITl-3 at 13-19.

160 *See UP/SP*, 1 S.T.B. at 418.

161 *Kansas City Southern – Control – The Kansas City Southern Ry.*, 7 S.T.B. 933, 938 (2004) ("In addition, we are requiring KCS to comply with its commitment to keep the Laredo gateway open on commercially reasonable terms."); *Canadian National Ry. – Control – Wisconsin Central Transportation Co.*, 5 S.T.B. 890, 894 (2001) ("We are imposing a condition holding applicants to their representations:

Despite these commitments, ACC/TFI/NITL, in addition to seeking gateway protections where the Transaction "creates the opportunity for a longer haul" (*i.e.*, where Applicants' commitments would apply), seek to impose on CPKC a sweeping, five-pronged obligation, including that Applicants quote challengeable Rule 11 rates to/from "*all interchanges* with Class I and II railroads that were active at any time from January 1, 2018," regardless whether the Transaction affects the traffic in question.[162] Similarly, The Chlorine Institute appears to seek some form of condition maintaining "commercial neutrality at interchanges CP and KCS now maintain with other railroads."[163]

These proposals – if interpreted literally – would go far beyond keeping existing gateways open on commercially reasonable terms or ensuring that new bottlenecks are not created, which as discussed extensively above Applicants have committed to do. By definition, they would be untethered to any effect of the Transaction, and must be rejected for that reason alone.[164] The associations acknowledge that their arguments have long been rejected by the

(1) that the unified CN/WC will keep all existing active gateways affected by the transaction open on commercially reasonable terms; and (2) that applicants will waive defenses they might otherwise have (as a result of the transaction) under our bottleneck rates policy (where prior to the transaction a shipper would have been entitled to regulation of a bottleneck rate)."); *CSX/Pan Am* (Decision No. 9 served Apr. 14, 2022) at 15 ("CSX also commits 'to (a) keep all existing active gateways affected by the Proposed Transaction open on commercially reasonable terms, and (b) waive any right CSXT might otherwise have under the Board's rules to refuse requests by shippers to establish local, separately challengeable rates for movements on the PAR System to an interchange with another rail carrier.'").

162 *See* ACC-6/TFI-5/NITl-3 at 9-13 (emphasis added).

163 Amended Comments of the Chlorine Institute ("CI-3") (filed June 9, 2022) at 3-4.

164 *See, e.g.*, *Norfolk Southern Railway Co. – Acquisition & Operation – Certain Rail Lines of the Delaware & Hudson Railway Co.*, FD No. 35873, (Decision No. 6 served May 15, 2015) at 32 ("These requested conditions will be denied . . . . [T]he record indicates that this alleged bottleneck existed prior to this proceeding . . . . The condition requested . . . is thus unrelated to the competitive effects of the proposed transaction."). This proposal would be inappropriate even under the 2001 Merger Rules. *See Major Rail Consolidation Procedures*, 5 S.T.B. 539, 564 (June 7, 2001) (bottleneck rate relief should be denied where the requesting "parties have not shown that this [proposed bottleneck rate relief] has the requisite nexus to mergers.").

Board, observing that "[t]he Board also has rejected arguments that vertical integration would foreclose efficient through routes, summarily concluding that, 'there is no reason for a carrier to foreclose an efficient connecting carrier just to achieve a long-haul.'"[165]

Still more problematic, these proposed conditions would alter the regulatory landscape *applicable uniquely to CPKC* for no reason other than these associations' longstanding desire for open gateway routing options. To illustrate, these groups appear to be demanding that, for CP traffic to destinations that KCS's network could not reach (such as traffic moving between Canada and points in the West on the UP or BNSF networks, or in the Northeast on the CSX or NS networks), CPKC nonetheless must quote Rule 11 rates over every possible interchange. And CPKC would have to do the same for KCS traffic to destinations that CP's network could not reach (such as KCS traffic moving to points in the Southeastern United States on the NS or CSX networks, or in the West on the UP and BNSF networks). *See* Brooks R.V.S. at ¶ 28. But no other railroad in the United States would have to do the same.

Requiring Rule 11 rates to every interchange regardless of merger impact would upend the rules established by Congress as set forth in the Bottleneck rate cases and impose on CPKC alone a regulatory regime to which no other railroad in North America is subject. The *Bottleneck Cases* establish that the governing statutory framework generally gives to the originating carrier the initiative to quote rates over its own long haul, unless the chosen routing is inefficient, and limit the application of the Board's rate reasonableness review to the origin-destination rates in whole, not individual segments thereof.[166] The Board has consistently rejected calls to revisit the

---

[165] ACC-6/TFI-5/NITl-3 at 15.

[166] *Central Power & Light Co.* v. *Southern Pacific Transportation Co.*, 1 S.T.B. 1059, 1064 (1996); *Central Power & Light Co.* v. *Southern Pacific Transportation Co.*, 2 S.T.B. 235, 238-39 (1997) (collectively the "Bottleneck Cases").

seminal interpretation of the governing statutory framework set forth in these precedents. Even when it adopted new merger rules in 2001, which do not apply to this Transaction, the Board refused to "overrule [its] *Bottleneck Decision* so as to permit separate rate challenges to all segments of through or joint rates" as the shipper groups request.[167]

This is the framework that will govern CPKC, except in those limited cases where the Transaction will give CPKC a longer haul (or new single-line route) as compared to pre-Transaction conditions. It is these situations, and only these situations, to which Applicants' commitments apply and where the Board has imposed conditions in the past protecting shippers' access to routes that might be affected by a merger. *See* Verified Statement of John Brooks ("Brooks V.S.") (App. Vol. 1 at ¶¶ 46, 48); Brooks R.V.S. at ¶ 13.[168] Applicants' commitments will fully preserve shippers' pre-Transaction options.[169]

Going even a step beyond seeking to require CPKC to provide Rule 11 rates to every interchange regardless of Transaction impact, ACC/TFI/NITL further overreach by making the unprecedented proposal that the Board violate the statutory scheme by limiting CPKC's statutory right to pricing freedom.[170] Like BNSF and UP, they seek to dictate how CPKC must set

---

167 *See Major Rail Consolidation Procedures*, 5 S.T.B. 539, 564 (2001).

168 Contrary to ACC/TFI/NITL's implication (ACC-6/TFI-5/NITL-3 at 10), Applicants have not committed to quote Rule 11 rates for all traffic regardless of whether the Transaction provides a new longer or single-line haul. The Application made clear that the commitment to preserve gateways was limited to those affected by the Transaction. *See* Brooks V.S. at ¶ 46, App. Vol. 1 at 233; *see also* Brooks R.V.S. at ¶ 13.

169 As a result, for example, shippers will have the option of challenging the Rule 11 gateway rates offered by Applicants, as the NGFA has requested. Opening Comments of the National Grain and Feed Association ("NGFA-1") (filed Feb. 28, 2022) at 7-8.

170 49 U.S.C. 10701(a); *see also BN/Santa Fe*, 10 I.C.C.2d at 750 ("Each utility party has proposed a specific remedy to address the merger-related harm it alleges. The remedies . . . [including] some form of rate prescription . . . are generally broader than the harms . . . . [I]t would be inappropriate to grant relief that substantially exceeds the harm threatened by the merger.").

bottleneck rates, precluding Applicants from charging higher bottleneck rates on a per-mile basis than the corresponding long-haul rate costs per mile.[171] This restriction would not merely be unfair to Applicants, given that no other railroad is subject to it, but it would also be affirmatively anticompetitive and nonsensical as a matter of economic policy, for the reasons discussed in Section IV.A.3 above and in the testimony of Applicants' witnesses. *See* Majure R.V.S. at § 4.1.1 ("[M]arket rates for interline traffic generally are not set based on prorated mileage") and ¶ 186.[172]

In a similar vein, The Chlorine Institute seeks to impose upon CPKC a unique rule that it maintain "commercial neutrality at interchanges CP and KCS now maintain with other railroads."[173] Requiring "neutrality" among gateways – and giving unfettered choice to shippers – would prevent Applicants from aggressively competing using their single-line and longer-haul routes. The Board has already tried and rejected a similar "commercial neutrality" regime when it jettisoned the "commercial closing doctrine," under which "any rate differential [*i.e.*, *non-neutrality*] was deemed to close a gateway."[174] The Board found six reasons why the commercial closing doctrine was anticompetitive, and it took the extraordinary step of reversing

---

171 *See* ACC-6/TFI-5/NITl-3 at 9-10.

172 It was Congress's goal in deregulating the railroad industry to "allow[] railroads to achieve revenue adequacy by competing on a free-market basis." *MidAmerican Energy Co.* v. *STB*, 169 F.3d 1099, 1104-05 (8th Cir. 1999). And "[t]he Board has recognized that an important part of achieving revenue adequacy is differential pricing," i.e., allowing carriers to "charge a higher mark-up on rail segments where demand elasticity is low, such as bottlenecks, to compensate for low mark-ups on competitive segments." *Id.* at 1106-07 (citing *Coal Rate Guidelines, Nationwide*, 1 I.C.C.2d 520, 526-27 (1985)).

173 CI-3 at 3-4.

174 *Major Rail Consolidation Procedures*, 5 S.T.B. at 563.

the doctrine retroactively, withdrawing conditions that were already in place on previously approved transactions given the competitive harm that they had caused.[175]

Of particular import here, the Board found that the commercial closing doctrine was anti-competitive because it prevented a "newly consolidated carrier from realizing potential cost savings from consolidation" and forced new carriers to compete solely on service quality instead of price. *Traffic Protective Conditions*, 366 I.C.C. at 123-24. As the Board explained, each carrier should be "free to compete both in service and price to establish the price-service combinations that best meet shipper needs." *Id.* Forcing carriers to compete solely on service keeps prices artificially high, and may make rail transport less attractive to shippers than truck or barge transport since such a "commercial closing" regime is not imposed on those carriers. *Id.* at 114, 123-24. Similarly, here, preventing CPKC from leveraging new efficiencies unlocked by the Transaction to offer lower prices hamstrings CPKC's ability to compete, keeping prices artificially high. As the Board has recognized, although "[r]ate equalization . . . is in the[] best interests" of "some shippers," – and perhaps CI is one of those shippers – "it is contrary to the public interest as well as that of carriers and shippers." *Id.* at 123.

It is perhaps not surprising that these shipper groups are trying to use this proceeding to undo the statutory framework governing "bottleneck" rate-making. These organizations have been unhappy with the bottleneck rate regime for many years and are well aware that it requires an industry-wide change in regulatory (indeed, statutory) standards.[176] This proceeding is not the

(filed Apr. 12, 2011)) (Vol. 3, Exh. 34) ("Shipper Ass'n EP 705 Comments") at 44-46 (comments of, inter alia, ACC, TFI, NITL, Chlorine Institute, NGFA favoring change in the Board's bottleneck rate standards); Brief for Respondent NITL in Support of Petitioner, *Western Coal Traffic League* v. *STB*, 120 S. Ct. 372 (1999) (No. 99-135) (Vol. 3, Exh. 35) at 1-4 (seeking Supreme

proper forum for consideration of these groups' regulatory agenda; that forum is Congress. There is no reason why CPKC should be subjected to conditions that the associations have failed to convince the legislature and regulators to implement on an industry-wide level.[177] Imposing such conditions on CPKC would effect an industry restructuring of the sort the Board has already said in this case is inappropriate.[178]

Such conditions are not merely unwarranted; they would be affirmatively harmful to CPKC's ability to compete effectively. Requiring "open routing" at the shipper's initiative – or worse, "neutrality" among gateways – would inject new inefficiencies into CPKC's combined network and impede efforts by CPKC to compete more effectively against other Class 1 railroads and other modes. The damage would not be limited to the new competition CPKC hopes to offer using its more efficient and more capable single-line routes, but would extend as well to traffic flows unaffected by this end-to-end combination Transaction. *See* Brooks R.V.S. at ¶ 29. The net result would be anticompetitive, and should be rejected for the same reasons that the ICC

Court review of Eighth Circuit opinion affirming Board's bottleneck rate precedent); *see also Major Rail Consolidation Procedures*, 5 S.T.B. at 564.

[177] *See Major Rail Consolidation Procedures*, 5 S.T.B. at 564, 793 (rejecting comments by shippers groups including NITL and ACC); *see also* Shipper Ass'n EP 705 Comments (Apr. 12, 2011) (Vol. 3, Exh. 34) at 44 (arguing unsuccessfully that "[t]he Board's 'Bottleneck Decisions' facilitate conscious parallelism and should be reversed" because "[a] shipper seeking a bottleneck rate from an origin to a destination served by the same carrier will almost always be rebuffed or have the quoted rate limited to a local movement with no combination rate beyond allowed.").

[178] *See* Decision No. 13 at 4 ("[T]he agency 'should not use our conditioning powers to make consolidation proceedings vehicles for rail system restructuring.'") (quoting *UP/MP/WP*, 366 I.C.C. 462, 564); *see also UP/MP/WP*, 366 I.C.C., at 564 ("[U]s[ing] our conditioning powers to make consolidation proceedings vehicles for rail system restructuring . . . would not be consistent with the Congressional intent underlying the statutory scheme governing railroad consolidations.").

rescinded the "open-routing" and "gateway neutrality" conditions it had once imposed routinely in merger cases.[179]

2. Requests for "Reciprocal Switching Access" Are Similarly Unrelated to this Transaction

Certain shipper groups have used their comments in this proceeding to advance their longstanding efforts to have the Board order railroads to grant other railroads "reciprocal switching" access to on-line customers.[180] This relief is simply another chapter in the efforts of these groups to achieve industry-wide change in competitive access standards, most prominently in the pending Ex Parte No. 711 proceeding. The relief is untethered to any effect of the Transaction and should be rejected.

---

[179] *See Traffic Protective Conditions*, 366 I.C.C. at 112; *CSX Corp. – Control – Chessie Sys., Inc.* 363 I.C.C. 518, 578 (1980) ("We have reappraised our policy in recent decisions and have examined the possibility that anticompetitive effects of the DT&I conditions outweigh any competitive benefits . . . . We have broadened our reappraisal of DT&I conditions by instituting a rulemaking to determine the advisability of eliminating DT&I-type conditions in all past and future rail consolidations."); *see also id.* at 536-37 ("DOJ opposes the DT&I traffic protective conditions requested by numerous railroads in this proceeding, as anticompetitive and without countervailing public benefits."). Among the rescinded conditions, "Condition 1" of the DT&I conditions had required a consolidated carrier to "keep open all routes and channels of trade via existing junctions and gateways' unless otherwise authorized by the Commission," while "Condition 5" had precluded such a carrier from "restraining 'the right of industries located on the acquired line to route traffic over any or all existing routes and gateways." *Traffic Protective Conditions,* 366 I.C.C. at 112-13.

[180] *See* NGFA-1 at 9 (condition "requiring the merged railroad to enter into reciprocal switching arrangements when circumstances require them to facilitate rail-to-rail competition post-merger"); Wheat Growers Comments at 2 (proposing "condition of guaranteeing captive shippers of the new CPKC open access to reciprocal switching"); Comments of U.S. Wheat Associates (filed Feb. 28, 2022) at 13 ("statutory competitive access as conditions on this transaction for use by any shipper on the new CP/KCS system that is subject to market dominance or receives inadequate service"); IMA Comments (filed Feb. 28, 2022) at 12 (identical to U.S. Wheat Associates Comments); Private Railcar Food and Beverage Association Request For Condition (filed Feb. 28, 2022) ("PRFBA Comments") at 12 ("reciprocal switching as a condition on this transaction for use by any shipper on the new CP/KCS system that is subject to market dominance or receives inadequate service"); North Dakota Wheat Commission Request for Conditions (filed on Feb. 28, 2022) ("North Dakota Wheat Commission Comments") at 16 (identical to U.S. Wheat Associates Comments).

Not one of these commenters offer any predicate evidence of *a single shipper* losing access to an existing rail option as a result of this Transaction, or any evidence at all of any adverse impact on competition. The "reciprocal switching" conditions they seek are precisely the kind of broad industry restructuring that the Board's precedents forbid.[181] Conditions of this sort are especially inappropriate in light of the Board's conclusion that the pre-2001 rules should apply,[182] under which the "competitive enhancements" these commenters propose are out of place.[183]

As these groups are well aware, the Board is presently considering the role of reciprocal switching access in Ex Parte No. 711, and that is where these issues should be addressed so that any regime of forced switching applies to all railroads, not just CPKC. All of these commenters (excepting only the North Dakota Wheat Commission) are among the participants in that case advocating industry-wide reciprocal switching.[184] The position of these shipper groups in favor

---

[181] *See, e.g.*, *UP/MP/WP*, 366 I.C.C. at 564 ("[W]e should not use our conditioning powers to make consolidation proceedings vehicles for rail system restructuring. To do so would not be consistent with the Congressional intent underlying the statutory scheme governing railroad consolidations."); Decision No. 13, at 4 ("[U]s[ing] our conditioning powers to make consolidation proceedings vehicles for rail system restructuring . . . would not be consistent with the Congressional intent underlying the statutory scheme governing railroad consolidations").

[182] Decision No. 4 at 3.

[183] *See, e.g.*, *Major Rail Consolidation Procedures*, 5 S.T.B at 547 (adopting the new rules and explaining they include "competitive enhancements" such as "reciprocal switching arrangements"). While some shippers have cited CP's proposal to offer a form of reciprocal switching access in connection with its interest in acquiring Norfolk Southern in 2016 (*see, e.g.*, North Dakota Wheat Commission Comments at 15, n.16), that prior proposal has no bearing in this proceeding. A potential CP-NS transaction would have involved much more complex competitive issues and also been subject to the Board's 2001 merger rules, which allow for such "competitive enhancements."

[184] *See, e.g.*, Ex Parte No. 711 (Sub-No. 1), Comments of National Association of Wheat Growers (filed Feb. 14, 2022) (Vol. 3, Exh. 36); U.S. Wheat Associates Testimony (filed Feb. 14, 2022) (Vol. 3, Exh. 37); Industrial Minerals Association-North America Testimony (filed Feb. 14, 2022) (Vol. 3, Exh. 38); National Grain and Feed Association Comments (filed Feb. 14, 2022) (Vol. 3, Exh. 39); Private Railcar Food and Beverage Association Testimony (filed Feb. 14, 2022) (Exhibit Vol. 3, Exh. 40).

of *industry-wide* changes to the Board's reciprocal switching rules dates back at least two decades.[185]

Applicants understand that these groups may be duty-bound to try to advance their preferred competitive-access framework in every available forum. Their requests, however, have no place in this proceeding.

Applicants have no hesitation in reiterating that CPKC will compete using whatever access tools might become available as a result of Board action in Ex Parte No. 711.[186] But no condition should be imposed on this Transaction.

* * *

This is not the first time participants in the Board's merger proceedings tried to hijack those processes as a vehicle for imposing sweeping new competitive access relief. The Board resoundingly rejected those efforts before, and should so again.

As Board concluded in the Houston Gulf Coast Oversight proceeding, "[w]hatever the merits of the "more-competitors-enhance-infrastructure-investment" argument, they are more appropriately made in an open access debate before Congress involving the entire rail system

---

185 *See, e.g.*, *Competition in the Railroad Industry*, Shipper Ass'n Comments, EP 705 (filed Apr. 12, 2011) (Vol. 3, Exh. 34) at 21-44 (comments of, *inter alia*, ACC, TFI, NITL, Chlorine Institute, and NGFA favoring change in Board standards for grant of reciprocal switching); *see also Hearing on Revenue Adequacy,* NGFA Supplemental Submission, EP 761 (filed Feb. 13, 2020) (Vol. 3, Exh. 41); *Regulatory Reform Task Force,* TFI Written Statement, EP 738 (STB filed July 24, 2017) (Vol. 3, Exh. 42); *Railroad Revenue Adequacy,* NGFA Comment, EP 722 (filed Feb. 13, 2020) (Vol. 3, Exh. 41); *Hearing on Revenue Adeqaucy,* NITL Written Comments, EP 761/722 (filed Nov. 26, 2019) (Vol. 3, Exh. 43); *Railroad Revenue Adequacy,* IMA North America Comments, EP 722 (filed Nov. 25, 2019) (Vol. 3, Exh. 44.

186 *See* Ex Parte No. 711, Hearing (Mar. 15, 2022 and Mar. 16, 2022) available at https://www.youtube.com/watch?v=jM0N1zkQYi8 and https://www.youtube.com/watch?v=VWwUIRf0hGo.

than in this case."[187] As the Board explained in that case: "Because the railroad industry is not an open access industry, and because some shippers may pay more than others under the law that we administer, merger proceedings are not used as vehicles to equalize the competitive positions of shippers generally."[188] The Board added that "we cannot determine here, and do not need to determine here, how the railroad system would evolve if open access were adopted in Houston and, ultimately, the rest of the Nation: it could have unknown but significant effects on infrastructure, employment, and traffic patterns."[189] Conditions untethered to Transaction impacts and with such unpredictable effects are not permitted under the Board's pre-2000 rules and precedents.

V. APPLICANTS ARE DEDICATED TO ENSURING THAT THE TRANSACTION WILL BE IMPLEMENTED WITHOUT SERVICE DISRUPTION

Several commenters – perhaps thinking back to a few bad experiences with large rail mergers in the 1990s – express generalized concerns about the potential for implementation of the Transaction to cause service disruptions, and seek a variety of conditions aimed at addressing these worries. As we explain in this Section,[190] there is no valid cause for concern about this particular railroad merger. As an end-to-end Transaction, like the *CN/IC* combination of 1998, there is no basis for thinking that implementation of the Transaction will cause disruption. Nonetheless, Applicants have taken, and will continue to take, extraordinary steps to plan ahead

---

187 *Union Pacific Corp. – Control – Southern Pacific Rail Corp.*, Finance Docket No. 32760 (Sub-No. 26) (Decision No. 10 served Dec. 21, 1998) at 4.

188 *Id.* at 2.

189 *Id.* at 3-4.

190 We separately address (and refute) the particularized assertions by UP and BNSF that the Transaction might lead to congestion on portions of the CPKC network that overlap with or interconnect with the UP and BNSF networks (*see* Section VI), and by Metra that the Transaction would adversely impact service on lines in the Chicago area shared with Metra (*see* Section VII).

and prepare for the implementation so that no unexpected disruptions arise. To allay any residual concerns, Applicants are committed to – and accept as a condition – a program of rigorous monitoring, reporting and Board oversight. As with previous transactions reviewed under the Board's pre-2001 rules, any more onerous requirements relating to purely speculative service concerns would be inappropriate.

A. The Transaction Will Not Lead to Service Disruption

The Transaction is highly unlikely to lead to any service disruption warranting onerous service-related conditions. This is so for many reasons.

First, this is a *purely end-to-end Transaction*. Analogies to the service disruptions observed during the integrations of UP/SP and CSX/NS/Conrail, which led the Board to implement the Service Assurance Plan requirement of the Board's 2001 Major Merger Rules, are inapplicable. The UP/SP and CSX/NS/Conrail transactions involved complex integrations of networks that had numerous elements not present here: the frailty of SP's infrastructure, the immediate restructuring of internal routings among the extensive parallel routes of the UP and SP networks, the need to disintegrate the Conrail network on Day 1 and reallocate routes and traffic among NS and CSX, and many more. *See* Verified Statement of Keith Creel ("Creel V.S.") at ¶ 38. From the perspective of likely service impacts, the closest historical analog to the CP/KCS Transaction is the *CN/IC* transaction, as to which the Board terminated the oversight period prematurely because it was so clear that merger implementation was proceeding smoothly.[191]

[191] *CN/IC*, (STB Decision No. 4).

By comparison with *UP/SP* and *CSX/NS/Conrail*, integrating CP and KCS will be simple. CP and KCS already share the one and only and terminal where they both operate. There will no new terminal consolidations. Likewise, there will be no opportunity for internal re-routings; all traffic moving between the two networks will continue to move via Kansas City. As a corollary to this, and perhaps most fundamentally, the traffic changes occasioned by the Transaction will not result from CPKC flipping some sort of "merger integration switch" and hoping for the best. Rather, on Day 1 the traffic of CPKC be the same as the traffic on CP and KCS on Day 0, routed the same way in accord with these railroads' tried and true operational design. "Integration" of the two networks will begin immediately, of course, bringing the operational efficiencies that Applicants have detailed in the Application. But the new Transaction-related traffic Applicants anticipate will only come as – *and when, and if* – Applicants demonstrate to shippers that the service CPKC is able to deliver on its new single-line routes offers advantages as compared to shippers' existing rail and truck options. Traffic changes will occur incrementally over time, allowing CPKC to adapt its operation with the benefit of experience and learning. And traffic will not come at all if CPKC has not shown that it can provide reliable and disruption-free service in its new single-line routes. In a very real sense, the very same traffic changes that commenters worry will disrupt operations will in fact be a *barometer of CPKC's success in delivering improved operations*.

Second, this Transaction will bring together two railroads with ***excellent operational track records***. Both railroads have previous experience implementing consolidations that should give shippers and the Board confidence that integration here will be successful. CP combined with DM&E in 2009 and acquired CMQ in 2002, and both transactions proceeded smoothly.

Creel VS at ¶ 39. KCS acquired control of Tex Mex and TFM in 2005, and the implementation of those end-to-end transactions went smoothly as well. *Id.*

Both railroads' recent operational track records further demonstrate that their managements – and thus the management of the combined CPKC – will know what it takes to carry on reliable and effectively-resourced service during times of change. As reflected in the testimony and data presented in the Board's Ex Parte No. 770 proceeding, both CP and KCS have performed well through the post-COVID recovery, and their service is highly regarded by the shipper community (a point with which none of the commenters suggests any disagreement).

The consistency of CP's and KCS's operating performance explains in no small part why these two railroads have been among the most successful in growing their traffic bases over the past several years. From CP's perspective in particular, its successful PSR transformation (which began in 2013) allowed it to build a foundation of highly reliable service execution and resource utilization that created the foundation for attracting more traffic to the railroad. CP's industry-leading growth trajectory was the result. Brooks V.S. at ¶ 21.

CP has embraced that growth – as it will the growth unlocked by the CP/KCS Transaction – by allocating sufficient resources to its operations and deploying those resources efficiently and effectively. CP's operational success also stems in no small part to its unique culture of accountability, with operating personnel down to level of trainmaster expected to understand what the railroad has promised that customer, and given the responsibility to ensure that CP delivers on what it promised. Reply Verified Statement of Raymond A. Elphick ("Elphick R.V.S.") at ¶ 92; Clements V.S. at ¶ 17. This culture will empower CPKC no less than it does CP today.

Third, the operational integrations that will be implemented will only occur after Applicants have spent *countless hours and extraordinary care planning for that integration* and preparing their IT systems and other processes to ensure that it goes smoothly. These preparations were described in the Application (*see* Brooks V.S., Clements V.S., and the Operating Plan), and Brooks provides an update on the status of those efforts in his Reply Verified Statement.

Applicants agree with the observation in USDA's comment that it would be prudent for CPKC to proactively allocate locomotives, labor, and equipment to potential pain points to avoid any transitional service impacts.[192] This is exactly the kind of planning that Applicants already have well underway, and that work will continue to, and through, the day in 2023 when they begin the integration process.

Applicants also have fully embraced USDA's recommendation regarding the importance of investing over the longer term in their infrastructure to avoid (or relieve) any congestion that may arise from traffic growth on the CPKC network.[193] Such investment is not merely an afterthought or reactionary measure to avoid service disruption. For CPKC, it is an integral part of Applicants' plan to expand the capacity and capability of their North-South route. Applicants have detailed hundreds of millions of dollars of specific investments they will make starting on Day 1, which will augment extensive projects that the two separate railroads already have planned or underway. But Applicants are not stopping there. Consistent with their ordinary course approach to capital planning, they will constantly monitor traffic trends and devote

---

193 *Id.*

sufficient resources to ensure that the capabilities of CPKC's future infrastructure (and other resources) stay ahead of the growth curve. Brooks R.V.S. at ¶ 35.

B. Applicants' "CP/KCS Service Promise"

Applicants well understand that their confidence about their ability to implement the CP/KCS Transaction without inadvertently undermining the levels of service that CP and KCS customers have come to expect may not be shared by everyone. As a result, as explained in Brooks's Reply Verified Statement, Applicants are making a "CP/KCS Service Promise" to every one of our customers. Brooks R.V.S. at ¶ 32. Excerpted below, that Promise has five key pillars that together provide an assurance that CPKC will not take its eye off the service ball, will communicate about Transaction-related changes in service openly with its customers, and will proactively address any issues that arise.

FIGURE 6
THE CP/KCS SERVICE PROMISE

OUR CP/KCS SERVICE PROMISE

Pillar 1 – We Will Plan Thoroughly for Transaction Implementation

- Our goal is for Transaction-related changes to yield service that provides each customer with as good as or better service overall than what our customers received pre-Transaction.
- Our planning for Transaction implementation is already well underway.
- We will not implement Transaction-related changes until we are prepared to do so without causing disruption.

Pillar 2 – We Will Monitor Our Post-Transaction Performance

- We will proactively monitor our own performance so as to identify areas requiring adjustment before problems arise.

Pillar 3 – We Will Transparently Report on Our Post-Transaction Performance

- During an oversight period of up to five years, we will report regularly to the Board and the public on our service levels, with metrics tailored to lines and facilities most affected by Transaction-related traffic growth.
- We will supplement this reporting with proactive engagement with our customers (on a confidential basis) regarding CPKC services that affect their shipments.

Pillar 4 – We Will Proactively Communicate and Consult with Customers About Our Post-Transaction Performance

- We will meet regularly with our customers to discuss progress on Transaction implementation.
- We will add customers served by the KCS network to CP's Customer Advisory Council.
- We will seek regular input from our customers on ways we can improve our service to better meet their needs, or make adjustments to address issues as they arise.

Pillar 5 – We Will Resolve Concerns and Promptly Fix Any Issues that Arise

- CPKC will have a cross-functional team with authority to step in to develop and implement solutions for issues that arise, including via adjustments to our resourcing or operating practices.
- When adjustments do not resolve concerns raised by our customers, we will provide for an escalation process to ensure that customer concerns are heard by decision makers empowered to address them.
- We will participate in independent mediation with our customers when these steps do not resolve Transaction-related concerns.

Applicants also understand that the issue of post-transaction service is not merely a matter between CPKC and its customers. The Board will play a role as well. In that regard, a significant thrust of the service-related comments of many commenters is to urge the Board to

impose an oversight condition and require Applicants to submit reports on post-Transaction service.[194] Applicants share the interest of these commenters in a disruption-free implementation process and welcome reasonable and appropriate oversight of their implementation of the Transaction.

Specifically, Applicants accept a period of formal oversight of up to five years, coupled with appropriate reporting during this period on the fluidity of the CPKC network as it implements its integration plans. Brooks details the reporting that Applicants commit to provide during the Board's formal oversight period, and we will accept the Board embodying this reporting in a formal condition of its approval. Brooks R.V.S. at ¶¶ 36-37. Applicants anticipate that this period may be curtailed – as it was in the *CN/IC* transaction – when experience with the new CPKC shows that there are no service disruptions or other adverse impacts of the transaction warranting a prolonged oversight period. Board precedent and experience under the pre-2001 merger rules shows that thorough, fair, and fully-informed oversight of the Transaction's implementation is the appropriate means of identifying and addressing any (unlikely and speculative) service issues that might arise from the Transaction's implementation.[195]

---

[194] *See, e.g.*, Opening Comments of Evergy Metro, Inc. (filed Feb. 28, 2022) at 17-18 ("Evergy Comments"); NGFA-1 at 11; BNSF-9 at 73 (arguing the Board should "[r]equire Applicants to regularly report to the public and the Board on the status of the Transaction during an oversight period of at least five years, including in such reports information and data sufficient to enable the public and the Board to evaluate CP-KCS's compliance with the conditions imposed by the Board on its approval of the Transaction" and "require Applicants during the Board's oversight period to regularly report service metrics relating to traffic through Laredo and congestion metrics at locations potentially affected by traffic increases brought about by the Transaction."); CN-13 at 76-77 (stating the Board should impose an oversight period of "at least five years" which would include "required reporting on whether merger benefits have been achieved, compliance with conditions, and any merger-related harms").

[195] *See, e.g.*, *CN/IC*, 4 S.T.B. at 122 (up to five years of oversight imposed, only oversight of two years); CSX/NS/Conrail, Finance Docket No. 33388 (Sub-No. 91) (Decision No. 17 served Oct. 20, 2004) (general oversight terminated after five years); *UP/SP*, Finance Docket No. 32760 (Sub-No. 2) (Decision No. 21 served Dec. 20, 2001) (general oversight ended after five years).

C. Additional Service-Related Conditions Would Unduly Burden CPKC's Competition for No Valid Purpose

Some commenters seek conditions going well beyond the oversight and reporting obligations that Applicants are prepared to embrace. The Board should reject such conditions as inconsistent with the rules governing this Transaction, unjustified in the factual context of this Transaction, and likely to handicap the new competition that will be the hallmark of this Transaction's public benefits.

First, several commenters have suggested that Applicants should be required to prepare a formal "Service Assurance Plan" ("SAP") or its equivalent, and follow the plan for at least five years.[196] As a threshold matter, such a requirement would both impose the rigors of the Board's 2001 Major Merger Rules on a Transaction that the Board has explicitly said will not be reviewed under those rules,[197] and would interpose significant delay in the implementation of the Transaction (which no doubt is CN's motivation for making this proposal).

More fundamentally, a formal SAP is not necessary here because Applicants have already, on their own, been undertaking the kind of advance planning called for by a formal service assurance plan. Applicants have already made clear the steps they are taking to prepare for the integration of the CP and KCS networks, and Applicants have already detailed the kind of proactive monitoring and reporting they will undertake, all under Board oversight. CPKC has

---

196 *See* CN-13 at 76; USDA Comments at 2.

197 *Major Rail Consolidation Procedures*, Ex Parte No. 582 (served June 11, 2001) ("EP 582 Final Rules") at 41. The genesis of the formal SAP was the Board's recognition of "the importance of service to shippers" and "that implementation of any merger plan necessarily has an element of uncertainty." Given these uncertainties, the Board determined that the formal plan "should provide certain essential information, such as their plans to deal with any potential adverse service effects during implementation and to accommodate such less-than-optimum operations ... Moreover, the plan should identify and discuss potential areas of temporary or longer-term service degradation, and appropriate mitigation [and] provide for the establishment of problem resolution teams and describe the specific procedures to be utilized for problem resolution."

identified metrics it will proactively monitor and report to ensure that there is no service degradation due to the Transaction. Brooks R.V.S. at ¶¶ 36-37. Additionally, as discussed above, Applicants' internal preparations and service protection measures will include proactive planning so that resources can be allocated to "less-than-optimum operations" and "potential areas of temporary or longer-term service degradation."[198] It is particularly telling that none of the advocates of a formal SAP point to anything in particular that Applicants have not already addressed in one form or another.

Applicants understand the Board's goals in instituting the formal SAP requirement and are confident that given the nature of this Transaction, their careful planning and past implementation experience will ensure that they avoid service disruptions during the integration process. Preparation and implementation of a formal service assurance plan that is otherwise unnecessary would accomplish nothing other than the further delay CN has consistently desired and sought.[199]

Second, in a quest for guarantees that nothing will change, some shipper groups have proposed – perhaps inadvertently – conditions that would inject operational rigidity and thereby undermine CPKC's ability to compete effectively. ACC/TFI/NITL seeks a condition requiring that CPKC provide shippers with at least 30 days prior written notice of any planned service changes at shipper facilities.[200] Such a condition would be both unprecedented and misguided. It would deprive CPKC of the flexibility it may need – and that all of its competitors would have

198 EP 582 Final Rules at 41.

199 *See, e.g.*, CN's Nov. 10, 2021 Letter to the Honorable Cynthia T. Brown (CN-5) (filed Nov. 10, 2021); CN's Nov. 22, 2021 Letter to the Honorable Cynthia T. Brown (CN-7) (filed Nov. 22, 2021); CN's Feb. 23, 2022 Letter to the Honorable Cynthia T. Brown (filed Feb. 23, 2022); CN's May 20, 2022 Letter to the Honorable Cynthia T. Brown (CN-16) (filed Mar. 20, 2022).

200 ACC-6/TFI-5/NITl-3 (filed Feb. 28, 2022) at 23.

–to respond to evolving traffic patterns and other external events. As much as CPKC will seek to provide service that meets the needs of every one of its customers, operating a rail network that serves hundreds or thousands of customers would be untenable were each and every customer be given a 30-day hold on any change in network operations that may affect that one customer, even if it clearly improved network operations for customers as a whole.

The Transaction will not alter the fundamental interdependence of the service levels provided to different shippers on a rail network. For example, every manifest train serves on average more than 40 different customers, meaning that an adjustment (say, a schedule change) that improves service overall may well have implications that are not uniformly desirable for every single customer whose freight rides that train. Elphick R.V.S. at ¶ 93. Similarly, switching crews and locomotives might be more effectively deployed to a shipper with surging volumes (delivering an extra switch to avoid congestion) than to maintain switch cadence for one with declining volumes. A condition that intervened in this fluid process of network optimization and adjustment would prevent CPKC from honing its operations to provide more effective competition, and likely would contribute to causing rather than avoiding service disruption.

Third, some shipper groups have proposed a regime of monetary penalties for post-Transaction service issues. Specifically, ACC/TFI/NITL asks the Board to implement a sliding scale of charges based on CP's post-transaction performance,[201] and the National Grain and Feed Association requests that the Board impose financial penalties for service failures.[202] These conditions would be similarly unprecedented and counterproductive. Indeed, a system of

---

201 *Id.*

202 NGFA-1 at 10.

monetary penalties for service failures "would put the proponent of a condition in a better position than before the merger," which is disqualifying under the Board's precedents.[203] Such a regime does not exist for any shipper in the pre-Transaction world, and none has ever been imposed in any merger, even in the aftermath of the UP/SP and CSX/NS/Conrail service disruptions.[204] In fact, a service guarantee penalty regime would be counterproductive and distort CPKC's service offerings, handicap CPKC from competing against other Class 1s not subject to this strict regime, and inject unhelpful adversity and rigidity into a set of customer relationships. *See* Brooks R.V.S. at ¶¶ 44-45. The Board should not impose such an extraordinary condition here, especially given Applicants have already committed to establishing collaborative processes for customer involvement, input, and proactive remediation of any escalation any Transaction-related service concerns. Brooks R.V.S. at § III.

VI. THE "CAPACITY CONCERNS" ADVANCED BY UP, BNSF, AND CN HAVE NO MERIT

As set forth in the Application and in the Reply Verified Statement of Elphick and Orr, Applicants have carefully assessed the degree to which the traffic gains they anticipate from the Transaction will require additional capacity on CPKC's rail network, using the same tools they would deploy in the ordinary course to assure that their operations would not overtax capacity available from infrastructure and other resources. Claims to the contrary, primarily by other Class 1 railroads, are incorrect. Applicants recognize that evolving traffic levels and operations of all carriers using elements of the rail network will call for careful and ongoing review of how these operations are impacting available rail capacity. Applicants' self-interest in serving its customers will demand no less. Where CPKC will share trackage with UP, BNSF, or others, it

---

203 *UP/SP*, Finance Docket No. 32760 (Decision No. 103, served May 1, 2008) at 6.

204 *See CN/IC*, 4 S.T.B. at 122.

will be dedicated to working collaboratively to ensure operations are coordinated fully and effectively, and that capacity is added as necessary to accommodate the needs of all users.

UP and BNSF, two of the Class 1 railroads most threatened by the new competition they will face from CPKC's new single-line service, manufacture concerns about the capacity available to support this new competition as a basis for demanding that the Board impose unprecedented conditions that would effectively give UP and BNSF the right to pre-approve CPKC's competitive initiatives. These requests are blatantly anticompetitive and should be denied.

As we demonstrate in this Section, CPKC's proposed operations and anticipated traffic growth will not exceed available rail capacity or disrupt the operations of UP, BNSF, or any other carrier. In Section VI.A., we explain that the basic features of the Transaction ensure that new CPKC traffic will not overwhelm existing rail capacity. In Section VI.B., we address the concerns that UP and BNSF raise about the lines in Texas they will share with CPKC. And in Section VI.C., we address the remaining concerns raised about capacity on other parts of the future CPKC network by UP, BNSF, and CN. We address Metra's specific contentions in Section VII below.

A. Basic Features of the Transaction Will Prevent CPKC Traffic Growth From Overwhelming Rail Capacity

The same key features of the CP/KCS Transaction that will help assure that there are no service disruption concerns will also help assure that CPKC's traffic growth does not exceed available rail capacity.

First, Applicants have carefully planned ahead and assessed the capacity needs of the CPKC network. Applicants have proposed extensive new capacity infrastructure – on top of

work that CP and KCS are undertaking independently on their own networks.[205] These infrastructure improvements will be more than sufficient to ensure that the capacity needs of the CPKC network are met.

Second, there will be no all-at-once flip of a switch that sends new rail traffic pouring onto existing infrastructure. CPKC's trains on Day 1, and perhaps on Day 180, will be the same as they are today. Unlike in the merger transactions with which UP and BNSF are most familiar, CP/KCS will not unilaterally reroute a single train. Rather, CPKC will gradually add new trains over time if (and only if) CPKC is successful in attracting shippers to its new single-line network.

Third, because the only new traffic that shows up on the CPKC network will be traffic that shippers choose to put on CPKC's network – by shifting it away from existing routes – the limitations imposed by capacity constraints (were such constraints really to exist) would be self-regulating. CPKC's anticipated growth will depend on its ability to provide service that meets customer needs, and does so materially *better than their existing options*. Shippers will not choose CPKC if capacity constraints on the CPKC network lead to gridlock or extensive service deterioration. Applicants' careful analysis has confirmed service will not deteriorate because there is ample capacity throughout the network, and CPKC will be motivated to ensure that this remains the case.

---

[205] UP and BNSF's claims that Applicants have proposed no new investments are just wrong, *See* BNSF-9 at 58 ("Applicants have proposed no new capacity improvements in order to handle the projected CP-KCS traffic volumes."); UP-10 at 10 ("Applicants failed entirely to address the impact of their transaction on infrastructure that they use but that is owned by other railroads."); Comments of Norfolk Southern Railway Company and Request for Conditions (filed Feb. 28, 2022) ("NS-9") at 69 (Applicants "make no commitment to invest in capacity or ability to handle the projected growth."). We have done so wherever warranted, but only where such investments are necessary to accommodate Transaction-related growth. CPKC will of course continue to make improvements to its own network – and support improvement in other lines it uses to support growth that occurs independent of the Transaction. Elphick/Orr R.V.S. at ¶ 30.

Fourth, for the same fundamental reason, if experience shows that infrastructure improvements would achieve desirable improvements in service or reliability, or if they proved necessary to accommodate greater-than-expected growth, CPKC will be *more motivated than anyone else* to identify and implement such capacity improvements. CPKC will not be reluctant to invest in capacity, as CP and KCS's recent track record and Applicants' plans ought to demonstrate. *See* Reply Verified Statement of Keith Creel ("Creel R.V.S.") at ¶3, 25.

B. The Transaction Will Not Cause Disruption on the Lines KCS Shares with UP and BNSF in Texas

UP and BNSF focus most of their attention on the UP lines in Texas over which CPKC must operate in order to compete with UP and BNSF. These railroads are quite transparent about their view that nearly every new carload, or intermodal container, that CPKC would haul across the UP trackage rights and through Houston would be traffic that is taken away from their own "superior routes." In their zeal to protect themselves and their supposed traffic "entitlements," UP and BNSF demand that the Board set aside the binding trackage rights agreements that govern KCS's (and following the Transaction, CPKC's) operations over UP trackage and grant them a unilateral veto on the new competition CPKC would generate:

- UP insists that CPKC *not move a single carload of new traffic* until UP gives the green light. UP requests that the Board require Applicants to "commit *not to increase CPKC operations* on affected lines above pre-merger CP or KCS levels *until the owners and users of the lines agree* sufficient capacity has been added to accommodate the traffic growth."[206]

---

206 UP-10 at 76.

- BNSF's boldly asks that the Board impose a condition that would both require CPKC to "fully fund" all capital improvements on UP lines in Texas that BNSF also uses and "to not increase existing KCS traffic levels on those lines if such increases would displace existing traffic or compromise fluidity on those lines . . . *until necessary capital improvements are identified, fully funded by Applicants, and implemented*."[207]

Applicants are not in the slightest dismissive of the need to evaluate capacity needs and work with other users of shared infrastructure to ensure that the operations of all users can be accommodated effectively and efficiently. They have already conducted extensive analysis, and they are committed to doing more in collaboration with UP and BNSF as to these lines as the traffic and operations of all users evolve. But the capacity concerns raised by these other Class 1s are vastly overblown. With appropriate attention to operational discipline, there is more than enough capacity to accommodate CPKC's relatively modest train count increases that are anticipated over the course of the three-year implementation period. Even if the traffic growth on these lines does end up requiring additional infrastructure, CPKC will be the first to suggest that those investments are made. The governing trackage rights agreements already provide the processes and mechanisms for adding and funding any such new infrastructure. Giving UP and BNSF a unilateral (or coordinated) veto over CPKC's new competition is not only unnecessary, but it would be affirmatively contrary to the public's interest in letting CPKC compete.

---

[207] BNSF-9 at 73 (emphasis added) ("In the absence of a plan by Applicants to address how increased CP-KCS traffic will be handled on shared lines in Texas – and until necessary capital improvements are identified, fully funded by Applicants, and implemented – require Applicants to not increase existing KCS traffic levels on those lines if such increases would displace existing traffic or compromise fluidity on those lines.").

1. UP and BNSF Proceed from the False Premise that CPKC Needs Their Permission to Use Shared Trackage to Compete Against Them

The principal thrust of the conditions requested by UP and BNSF, ironically, relates to trackage rights the Board required UP to grant to The Texas Mexican Railway Company ("Tex Mex") in *UP/SP* in order to "ensure the continuation of an effective competitive alternative to UP's routing into the border crossing at Laredo."[208] UP and BNSF each overtly seek to impose a unilateral veto right that entitles them to hold up any new operation over their trackage until massive amounts of new capacity are added. And worse, UP and BNSF seek the Board's imprimatur to hold the Transaction hostage to whatever ransom demands UP and BNSF choose to make (measured in the currency of CPKC dollars spent on UP trackage), since any competitive traffic gains would turn on UP's and BNSF's agreement to let the cars pass.[209]

These demands are fundamentally at odds with KCS's existing rights to the use these lines in common with UP and BNSF, which will give KCS – and CPKC as KCS's successor – *equal rights* to the lines shared with UP and BNSF, including the contractual rights to increase traffic on those lines in competition with UP and BNSF. When granting those rights, the Board flatly rejected efforts by UP and BNSF – echoed in their current arguments – to prevent KCS from competing against UP. The Board made very clear that UP's desire to keep new Tex Mex traffic off of its lines did not justify limitations on Tex Mex's rights: "UP/SP is contending, in essence, that the SP route is already congested and that it would prefer to keep that route for itself alone. Neither contention provides any justification for keeping Tex Mex's trains off the

---

208 *UP/SP*, 1 S.T.B. at 424.

209 BNSF-9 at 73 ("Require Applicants to fully fund any capital improvements that would not be required but for increased CP-KCS traffic on lines owned by BNSF or other railroads.").

SP route."[210] Similarly, the Board rejected BNSF's effort to veto Tex Mex's (now KCS's) rights by stepping in to replace Tex Mex's role in serving Mexican cross-border traffic, noting that Tex Mex "rights are not contingent upon BNSF's approval."[211] The Board should continue to reject UP's and BNSF's efforts to obtain a veto over KCS's newly invigorated competition.

KCS's existing rights unequivocally granted KCS – and will give CPKC – full and equal access to UP trackage. Specifically, the trackage rights terms imposed by the Board in 1996 granting Tex Mex (now KCS) access to UP trackage rights between Robstown and Beaumont, TX make clear that KCS has "access to and joint use of the Joint Trackage . . . *equal to that of [UP]*."[212] The same right of "equal access" is set forth in the terms covering other UP-owned trackage between Rosenberg and Beaumont, including the Houston lines of Houston Belt & Terminal Railway Company ("HB&T"), which are owned in equal shares by UP and BNSF, and UP's former-SP line between Houston and Beaumont, over which UP instituted directional running with which KCS complies.[213] The governing trackage rights terms likewise provide for

---

210 *Id.* at 607.

211 *Id.* at 595.

212 Terms for Texas Mexican Railway Company Trackage Rights between Missouri Pacific Railway Company and Southern Pacific Transportation Company, on the one hand, and The Texas Mexican Railway Company, on the other hand (Dec. 12, 1996) ("KCS-UP Robstown-Beaumont Trackage Rights Terms"), Exhibit B (General Terms), § 2.4 (Simmons R.V.S. Exh. 2) (emphasis added).

213 *See* Houston to Beaumont, TX Trackage Rights Agreement between Southern Pacific Transportation Company and The Texas Mexican Railway Company (June 16, 1997) ("UP-KCS Houston-Beaumont Agreement"), § 1 & Exhibit B (General Terms), § 2.2 (covering rights over former-SP line between Houston and Beaumont to facilitate UP's directional running plan) (Simmons R.V.S., Exh. 4); Terms for Texas Mexican Railway Company Trackage Rights between Houston Belt & Terminal Railway Company and The Texas Mexican Railway Company (Jan. 28, 1997) ("HB&T-KCS Terms") § 1 & Exhibit B (General Conditions) § 2.2 (covering trackage in Houston owned by HB&T (in turn owned 50% by each of UP and BNSF) (Simmons R.V.S., Exh. 3)).

the equal treatment of KCS in all matters concerning "the management, operation (including dispatching) and maintenance of the Joint Trackage."[214]

In addition to having equal rights, these agreements place no restriction whatsoever on the *volume* of traffic that KCS is entitled to handle using these rights. Indeed any such limitation would be contrary to the Board's intention that the rights be used to compete against UP for Laredo gateway traffic, and the Board's specific determination that Tex Mex be able to "gain additional traffic" using those rights.[215] The Board should reject any suggestion that CPKC requires UP or BNSF permission to compete against them and thereby potentially increase the volume of traffic moving in CPKC trains over these trackage rights segments.

2. The Facts Show that CPKC's Potential New Trains Will Not Exceed Capacity on UP/BNSF Trackage Rights Segments in Texas

A careful assessment of the merits of UP's and BSNF's capacity claims shows there is no cause for concern. KCS's operations over the UP trackage rights segments have posed challenges for KCS in the past, and will continue to require close coordination among the three railroads, but with extensive recent infrastructure investments by both KCS and UP, there is now (or soon will be) infrastructure that is more than adequate to accommodate CPKC's planned operations. We review these facts below, beginning with (a) the Houston complex itself, from Rosenberg, southwest of Houston on UP's Sunset Line (where KCS's own line ends and trackage rights begins) through the Houston terminal, and we then address (b) the two

---

214 KCS-UP Robstown-Beaumont Trackage Rights Terms, Exhibit B (General Terms), § 2.4 (Simmons R.V.S., Exh. 2) (UP has "exclusive direction and control" over the movement of equipment over the trackage, "but in the management, operation (including dispatching) and maintenance of the Joint Trackage, [UP] and [KCS] shall be treated equally."); *see also* UP-KCS Houston-Beaumont Agreement, § 1 & Exhibit B (General Conditions) § 2.4 (Simmons R.V.S., Exh. 4); HB&T-KCS Terms, § 1 & Exhibit B (General Conditions) § 2.4.

215 *UP/SP*, 1 S.T.B. at 410.

directionally-operated UP lines that KCS uses between Houston and Beaumont, (c) KCS's Neches River Bridge in Beaumont, which BNSF and UP (and Amtrak) also use, and (d) the UP trackage lines in south Texas over which KCS operates between Victoria, TX and Robstown, TX (some portions of which also host BNSF operations).

a) There Will Be No Capacity Shortfall in the Houston Terminal Complex

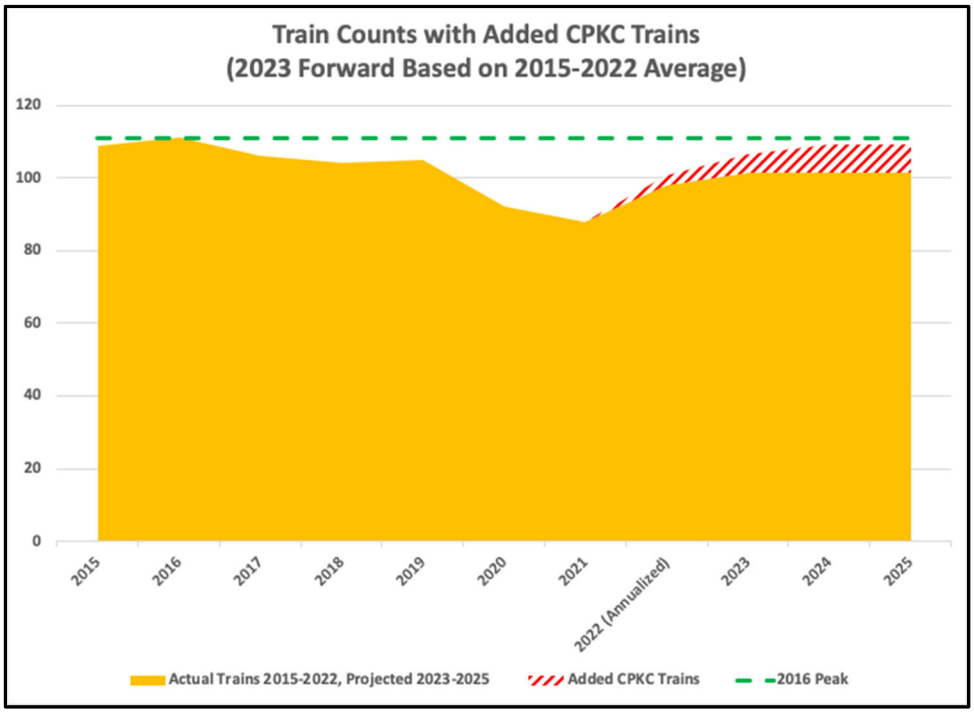
The focal point of UP's and BNSF's stated capacity concerns is the Houston Terminal, which all KCS (and future CPKC) trains must traverse in order to move between KCS lines south of Houston (including Mexico) and the remainder of the KCS network. Even though CPKC will have no interest in overburdening this infrastructure, and thereby interfering with its own efforts to attract traffic moving via other rail route today, UP and BNSF theorize that additional CPKC trains will be the straws that breaks the camel's back. This is nonsense. The Houston Terminal has extensive available capacity, provided it is managed efficiently, and extensive additional capacity is in the pipeline as a result of projects UP has underway today.

CPKC is committed to cooperating with UP and BNSF to ensure that the Terminal is operated effectively, and the capabilities of the Houston Terminal's extensive infrastructure is not sub-optimized. The Houston Terminal has accommodated many more trains than operate today, or will operate with the anticipated CPKC growth. To the extent there emerges any need – or even any benefit – to adding additional infrastructure, CPKS will not hesitate to support those initiatives.

The Houston Terminal Has Extensive Capacity. There is extensive rail capacity in and around the Houston Terminal. Massive investments in additional capacity have been made since UP and SP merged in 1996. Unlike many rail terminals, Houston is blessed with multiple alternative through routes, all with multiple (double or triple) tracks. As explained by Elphick

and Orr, and also by Wilkerson, who managed the Houston complex for UP from 2008 to 2013, the Terminal has ample capacity to handle the modest number of additional through freight trains (only about four in each direction) anticipated from the CP/KCS Transaction. Elphick/Orr R.V.S. at ¶¶ 46-54; Reply Verified Statement of Jason Wilkerson ("Wilkerson R.V.S.") at ¶¶ 7-13.

Even with the addition of CPKC's new trains, CPKC will continue to be a distinct minority user of Houston's rail infrastructure. Additionally, through train operations will impose (on a train-for-train basis) far less burden on that infrastructure than those of UP and BNSF, which change crews, enter and exit yards, and are otherwise impose considerably more complex demands on the terminal than KCS's (or CPKC's) trains – which need only move across Houston via the multiple tracks, and multiple routes available for those movements. Elphick/Orr R.V.S. at ¶ 13; Reply Verified Statement of John F. Orr ("Orr R.V.S.") at ¶ 13; Wilkerson R.V.S. at ¶ 14. UP (with the financial support of KCS and BNSF) has invested heavily in Houston rail capacity, and more work is underway, including on the routes used by KCS's trains. Elphick/Orr R.V.S. at 51-52; Orr R.V.S. at ¶ 19; Wikerson R.V.S. at ¶ 11.



Elphick and Orr review in detail the capacity available to support CPKC's modest proposed increases in trains through Houston, which will be no different in character from KCS's existing operations. Those trains will impose minimal burdens in the infrastructure and be easy to accommodate, provided UP and BNSF are operating the Houston Terminal efficiently and appropriately. Elphick/Orr R.V.S. at ¶¶ 46-54; Orr R.V.S. at ¶¶ 7-12; Wilkerson R.V.S. at ¶ 22.

Comparisons to Historic Traffic Levels Prove that Houston Has Ample Capacity for CPKC's Anticipated Growth. Even before the recent capacity investments, the Houston

Terminal routinely supported train activity levels well in excess of current levels, and more than sufficient to sustain the modest increases in CPKC volumes. As Simmons explains, even with the anticipated additional CPKC trains, the total trains per day would be less than what Houston's rail infrastructure supported four to five years ago. Simmons R.V.S. at ¶¶ 10–14; *see also* Orr R.V.S. at ¶¶ 7-12. The additional infrastructure that has been installed in that area in the last four to five years will only further support operational fluidity.

Figure 7 below, drawn from Orr's testimony, shows that the projected train counts in the Houston Complex in 2025 will not reach the peak level that was supported in 2016 even with the anticipated CPKC volume increases.

FIGURE 7[216]
ADDITION OF CPKC TRAINS WILL NOT PUSH HOUSTON TRAIN COUNTS ABOVE LEVELS ACHIEVED FLUIDLY IN RECENT YEARS

216 Orr R.V.S. at ¶¶ 9-11.

UP's and BNSF's Transient Operational Challenges Are No Excuse for Their Attempted Veto of CPKC Competition. As Orr explains, UP's and BNSF's concerns about future Houston operations appear to stem in large part from the difficulties both are currently having managing their own operations there and elsewhere. Orr R.V.S. at ¶¶ 18-19. CPKC should not be punished for UP's and BNSF's operational difficulties. UP's operational choices and its lack of adequate resources – in terms of power and train crews – have contributed to congestion and significant delays to KCS trains in and around Houston. *Id.* These kinds of failures need to be fixed, and Applicants have every confidence that UP (and BNSF) will fix them. CPKC will stand ready to help by collaborating with all of the other users of the Houston Terminal to ensure that its available capacity is not squandered by sub-optimal operating practices. But UP and BNSF should first get their own houses in order before looking to CPKC to bail them out with unnecessary investments in expensive new infrastructure. *Id.*

There Is No Possibility of a Repeat of UP's 1997-98 Service Crisis. UP and BNSF repeatedly invoke the specter of the 1997-98 UP service crisis, which originated at Englewood Yard in Houston, to stoke fear that CPKC would cause similar problems if their conditions are not granted. This comparison is far wide of the mark. Nothing about the modest increase in through trains anticipated from the CP/KCS Transaction is remotely comparable to the extensive disruption to Houston operations that arose from the perfect storm of SP's collapsing infrastructure and the wholesale changes in Houston operation from UP's integration of UP and SP facilities and the addition of entirely new BNSF trackage rights operations. As the Board found, the Houston service crisis was prompted by many factors, including the dilapidated state

of SP's infrastructure in and around Houston.[217] And as the Board also found, all of that soon changed with the advent of directional running, the implementation of the joint Spring Dispatching Center, investments in Houston infrastructure, and many other developments. As Simmons explains, Houston today bears little resemblance to its condition leading into the service crisis of the late 1990s. Simmons R.V.S. at ¶ 41.

First, massive amounts of additional capacity has been added since the service crisis. In the *UP/SP Houston/Gulf Coast Oversight* proceeding, UP committed to invest $1.4 billion to add capacity in and around Houston to support traffic growth.[218] KCS paid its share of part of those investments. {{[redacted]}} Elphick/Orr R.V.S. at ¶ 19.[219] KCS itself has spent over $100 million on capital investments in the trackage rights lines since 2014, with UP investing a quarter of a billion dollars in Englewood and Settegast Yards in the last three years. Simmons R.V.S. at ¶ 41.

Second, as the Board noted in 1998, operational changes fundamentally altered the Houston railroad landscape and the productivity of the installed base of capacity. The joint Spring Dispatching Center gave Houston dispatchers visibility into trains heading toward Houston from all points, allowing them to plan in advance how to route those trains to their

---

[217] *Western Coal Traffic League* v. *Union Pac. Ry. Co.*, Finance Docket No. 33726 (served Nov. 30, 2000) at ("[T]he expenses prompted by the service crisis here were not the result of any one event, but rather were caused by a confluence of several events and circumstances – derailments, maintenance, a major traffic embargo, severe weather, and traffic surges – not uncommon to railroading.").

[218] *See UP/SP Houston/Gulf Coast Oversight*, 3 S.T.B. 1030, 1033, Finance Docket No. 32760 (Sub-No. 26) (Decision No. 10 served Dec. 21, 1998) ("UP has promised to invest $1.4 billion in Houston area infrastructure if the Consensus Plan is not adopted.").

[219] *See also* {{[redacted]}}

destinations in Houston, of across the Houston terminal in KCS's case. Elphick/Orr R.V.S. at ¶ 61; Orr R.V.S. at ¶ 23; Simmons R.V.S. at ¶ 41. The Board's "clear route" directive, had it been fully complied with, would have further improved efficiency by ensuring that through trains (like KCS's) were not unnecessarily held up by congestion on their customary routes. Orr R.V.S. at ¶¶ 31-33. [220] In addition, as the Board touted in 1998, UP's then-recent implementation of directional running on its lines northeast and east of Houston (between Houston and St. Louis and between Houston and Beaumont) dramatically expanded capacity and helped overcome the service problems that occurred in 1998. Simmons R.V.S at 41.[221]

Third, train volumes in and around Houston are significantly lower now – and will continue to be even following the implementation of the CP/KCS Transaction – than they were in 1997/1998.[222] At that time, the Board noted that "Houston Terminal dispatchers handle roughly 150 trains per day in a complicated terminal." Today, the average is closer to 100-120 trains per day, as shown in Figure 7 above.

Finally, the impact of CPKC's operations through Houston will be nothing like that of *UP/SP* and the implementation of the sweeping UP-BNSF settlement agreement. There will be no "new" mode of operations, no terminal consolidations, and no introduction of a new trackage

---

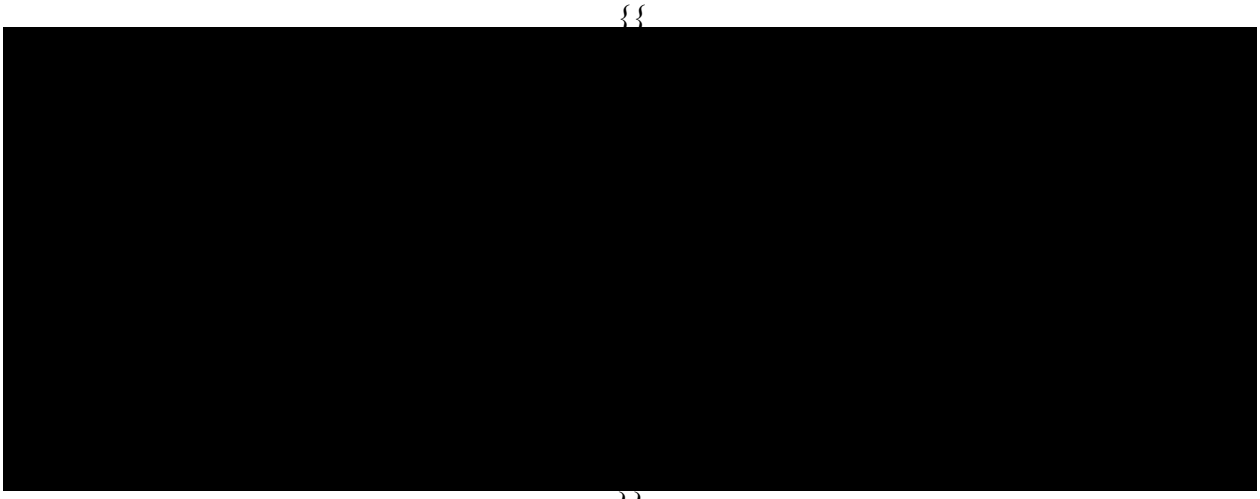
220 *See UP/SP Houston/Gulf Coast Oversight*, 3 S.T.B. at 1038 (explaining that the clear route condition is "to enhance efficiency and facilitate the smooth movement of traffic through the Houston Terminal," and noting that alternative routes should be used "when customary routings are unavailable or congested.").

221 *See UP/SP Houston/Gulf Coast Oversight*, 3 S.T.B. at 1053 ("Until UP implemented the merger, which involved designing and installing a new computerized information and management control system, designing and implementing new train operating systems, and consolidating under one set of rules the various employee functions involved in the running of the railroad, it could not put into effect the new operational changes such as 'directional running,' which played a major role in easing the service crisis.").

222 *See id.* at 1050 ("But as UP points out, Houston Terminal dispatchers handle roughly 150 trains per day in a complicated terminal area and, in carrying out their duties, must perform over 2,300 actions in a 24-hour period, roughly one every 40 seconds.").

rights tenant. CPKC will step into KCS's shoes and, to the extent its new single-line services are viewed as attractive by rail customers, it will attract additional traffic that supports additional through trains, none of which will perform work in Houston-area yards. Thus, in today's environment, adding a handful of through trains is incapable of causing the kind of disruption that occurred in 1997 and 1998.

b) There Is Adequate Capacity on the UP-Owned Lines Between Houston and Beaumont



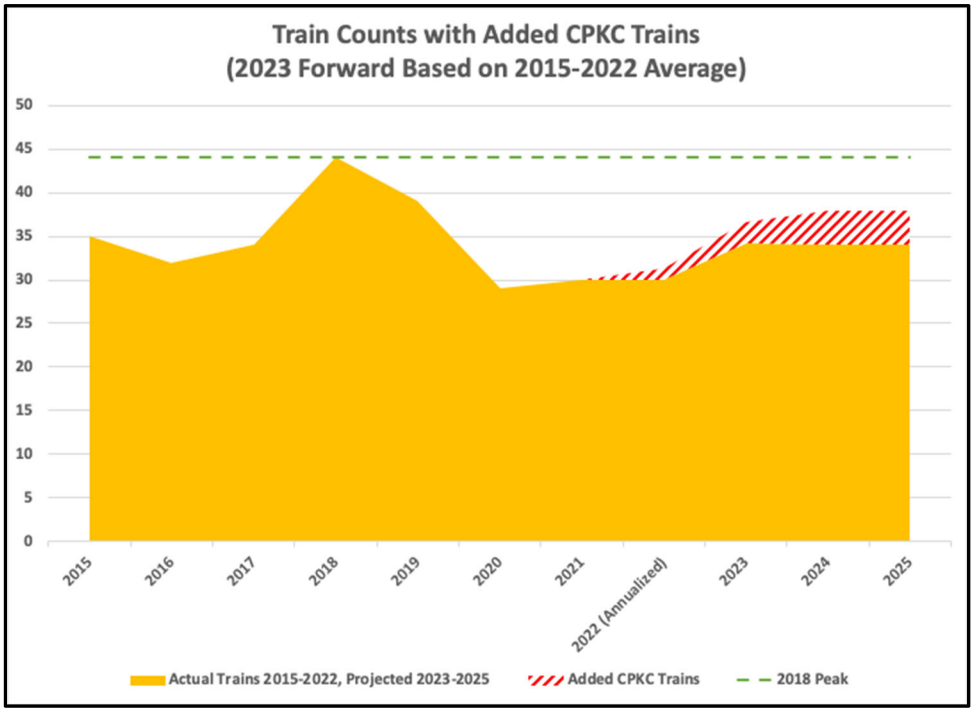
East of the Houston terminal, CPKC will operate over two separate directionally-operated UP lines between Houston and Beaumont. Eastbound trains will use UP's former-MP Beaumont Subdivision, and Westbound trains will use UP's former-SP Houston Subdivision, formerly known as the Lafayette Subdivision. UP's own assessment of capacity on these lines shows that there is ample available capacity (headroom, as measured by the difference between maximum fluid capacity and current train volumes) on these segments. That relationship is depicted in Figure 8 below.[223] Orr, who did not have the benefit of these confidential UP documents, reaches the same conclusion. Orr R.V.S. at ¶¶ 7-12.

[223] Figure 8 depicts the portion of the Lafayette (Houston) Subdivision with the greatest number of trains relative to fluid capacity; the portion east of Dayton would show {{[redacted]}}

FIGURE 8[224]

UP'S ASSESSMENT OF AVAILABLE CAPACITY ON BEAUMONT AND LAFAYETTE SUBDIVISIONS

{{



}}

This view is entirely consistent with, and corroborates, Simmons' assessment based on his comparison of current train counts with the historical volumes operated fluidly on the Lafayette Subdivision. Simmons R.V.S. at ¶ 14. Orr's Reply Verified Statement also supports this finding as reproduced in Figure 9 below. The headroom over and above the additional trains CPKC proposes is manifest. *See also* Orr R.V.S. at ¶¶ 10-14.

[224] *See* Workpaper "Workpaper Narrative Beaumont Lafayette.xlsx," Tabs "Beaumont Sub" and "Lafayette Sub."

FIGURE 9[225]

ADDITION OF CPKC TRAINS WILL NOT PUSH LAFAYETTE SUBDIVISION (HOUSTON-BEAUMONT) TRAIN COUNTS ABOVE LEVELS ACHIEVED FLUIDLY IN RECENT YEARS

c) Concerns About the Neches River Bridge at Beaumont Are Unwarranted

UP and BNSF express concern about the impact of the Transaction on operations over KCS's bridge across the Neches River at Beaumont, over which BNSF and UP operate, and over which Amtrak's Sunset Limited operates three days per week.[226] As explained by Simmons, a recent study undertaken jointly by KCS, UP, and BNSF has confirmed that the bridge has ample capacity to accommodate the incremental Transaction-related traffic. Thus, there is ample room for the 10.97 additional trains per day that CPKC anticipates by the end of the third year

---

225 Elphick/Orr R.V.S. at ¶¶ 9-11.

226 UP-10 at 59-62; BNSF-9 at 59-61.

following Transaction implementation. Simmons R.V.S. at ¶¶ 44-51; Elphick/Orr R.V.S. at ¶ 56. In the words of the joint study, {[redacted]}[227] Controlling for outliers, the project found that the {[redacted]}[228] With appropriate cooperation among the three railroads on processes to make efficient use of the bridge, there is no obstacle to adding the additional trains that Applicants anticipate.

Additionally, the joint study of bridge capacity found that readily available operational adjustments – or just more focused attention – would be sufficient to achieve the bridge's full throughput capacity. Simmons R.V.S. at ¶¶ 49-51. In light of this conclusion, it is no surprise that UP and BNSF had previously declined to support proposals by the Texas DOT to build a second bridge across the Neches River to handle UP and BNSF traffic there.[229]

In addition to the KCS-led joint study, history shows that there is capacity to accommodate the levels of traffic anticipated from the CP/KCS Transaction. Elphick/Orr R.V.S. at ¶¶ 57-62. Elphick and Orr show that past traffic levels indicate that the bridge has handled 20-25 more trains than use the bridge today, leaving more than enough room for the 10-11 trains that the Transaction will bring to this segment. *Id.* at ¶ 56.

---

227 *See* Simmons R.V.S., Exh. 9; ({[redacted]})

228 *Id.*

229 Ironically, UP once had its own bridge but abandoned it in favor of operating over KCS's bridge. In 2013 and 2016, both UP and BNSF opposed Texas DOT's ("TxDOT's") efforts to construct a new rail bridge over the Neches River. *See* Simmons R.V.S. at ¶ 44; {{[redacted]}}(Vol. 3, Exh. 47).

Finally, UP is wrong that Applicants' capacity analysis focused only on CPKC trains without considering the additional trains that UP, BNSF, and Amtrak operate over the Neches River Bridge.[230] The train counts reported in the Operating Plan Appendices focus on CPKC train operations, and in particular the effect of the Transaction on those train counts. But Applicants' analysis of available capacity considered all demands on the rail infrastructure CPKC will use, including in the case of the Neches River Bridge all of the trains UP says were not taken into account. *Id.* at ¶¶ 57-62.

d) There Is Adequate Capacity on the UP-Owned Lines Between Victoria and Robstown

There is also adequate capacity across the UP trackage between Robstown and Victoria, TX, despite the contentions of UP, BNSF, and CN.[231] This capacity can be shown through the past and ongoing capacity projects. Elphick/Orr R.V.S. at ¶¶ 36-45. For example, KCS is adding extensive capacity to allow for staging to and from the Border that will augment capacity on UP-owned lines between Robstown and Victoria. *Id.* at ¶ 39. Further, KCS is constructing a new siding at "Telferner," which is four miles north of Victoria, already has a siding and two staging tracks immediately west of Robstown, and is constructing an extension of its switching lead on the north end by 6,900 feet freeing the existing switching lead and allowing for the siding to be extended to 14,900 feet. *Id.* at ¶ 42.

---

230 UP-10 at 11.

231 UP-10 at 556-57; BNSF-9 at 228-230; CN-13, Verified Statement of Hugh Randall ("Randall V.S.") at Ex. B, ("Randall V.S.").

3. UP and BNSF Demands that CPKC Fund 100 Percent of Any New Infrastructure Is Overreaching and Inappropriate

Even if there were any merit to UP's and BNSF's contentions that additional capacity infrastructure is needed on the trackage rights lines KCS uses, it would be inappropriate for the Board to override the governing trackage rights agreements in order to impose on CPKC an obligation to fund 100 percent of any new capacity on these lines. It would be even more inappropriate to give UP and BNSF carte blanche to spend CPKC's money on whatever additional capacity they might decide would be advantageous, which would be the inevitable result of giving them the right to hold up any incremental CPKC volumes.

As discussed above, CPKC is committed to working collaboratively with UP and BNSF to ensure that operations on these shared lines work for all users. That means that if new infrastructure investments are needed, CPKC will support the work needed to identify the optimal approach to capacity expansion (including using RTC analysis if that makes sense), install that capacity, and pay for that capacity, according to the provisions and processes already established in the governing agreements.

Of course, the starting point in those trackage rights agreements (the "Terms") place responsibility squarely on UP – as trackage rights landlord – to support the growth of all users, including KCS. For example, UP is obligated to make "[a]dditions to the Joint Trackage as shall be necessary to accommodate the traffic of [UP] and [KCS] while maintaining existing service standards (including transit times) in effect on the date of the Terms."[232] "Additions" include

---

[232] KCS-UP Robstown-Beaumont Trackage Rights Terms, § 1 & Exhibit B (General Terms), § 2.2 Simmons R.V.S., Exh. 2) ("[UP] shall … be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Terms."); HB&T-KCS Terms, § 1 & Exhibit B (General Conditions) § 2.2 (Simmons R.V.S., Exh. 3).

such projects as "sidings, Centralized Traffic Control, [and] grade separations," and spell out a comprehensive framework for KCS's sharing in the costs of such Additions, with the cost of most Additions (unless made for the "sole benefit of one party") shared by KCS in proportion to its share of GTMs on the line.[233]

The funding of that infrastructure cannot be shifted by UP and BNSF to place 100 percent of infrastructure costs on KCS (in the future CPKC), contrary to BNSF's contention.[234] BNSF acknowledges that existing agreements cover capacity additions that might be required on shared lines.[235] UP and BNSF have also shown that they understand how the cost sharing provisions in the trackage rights agreements operate.[236] The parties have ample experience negotiating to allocate costs based on the anticipated benefit they will each receive as a result of the improvements and reaching mutually beneficial compromises. Simmons R.V.S. at ¶¶ 15-35.

In sum, UP's and BNSF's attempt to shift 100% of infrastructure costs to CPKC has no basis in precedent and would override the existing trackage agreement that the Board imposed to enable KCS to grow its traffic and compete against CP and BNSF. The Board should reject UP's and BNSF's attempt to hitch a free ride.

C. There Will Be Adequate Capacity for the Traffic that CPKC Hopes to Attract Elsewhere on Its Network

CN, CP, BNSF, and NS raise concerns about potential capacity shortfalls at a number of additional locations across the CPKC system. These attacks have no merit and overlook the

---

233 KCS-UP Robstown-Beaumont Trackage Rights Terms, § 5(b) (Simmons R.V.S., Exh. 2);; HB&T-KCS Terms, § 5(b) (Simmons R.V.S., Exh. 3).

234 *See* BNSF-9, Verified Statement of Sarah Bailiff at 2.

235 *Id.*

236 {[redacted]}

substantial upfront and ongoing capital investments that CPKC will make on the North-South corridors where CPKC will seek to attract traffic.

CN, based on the analysis of its witness, Randall, raises concerns about the available capacity on (i) KCSM lines in Mexico, (ii) KCS's Laredo Subdivision (between Laredo and Robstown, TX), (iii) KCS's Rosenberg Subdivision (between Victoria, TX and Rosenberg, TX), (iv) KCS mainline between Beaumont and Kansas City, (v) CP's Laredo Subdivision (between Moravia and Powersville), (vi) CP's Ottumwa Subdivision, (vii) CP's Davenport Subdivision, (viii) CP's level crossing with BNSF at Savanna, IL, (ix) CP's Chicago Subdivision, (x) CP's Elgin Subdivision and other lines in the vicinity of Chicago, and (xi) CP's Marquette Subdivision. Elphick/Orr R.V.S. at ¶¶ 21-68. However, Randall makes a slew of errors in his analysis, which lead him to overstate the capacity utilization on KCSM's lines. Among other errors, Randall (i) confuses practical capacity and maximum capacity in his calculations, leading him to conclude that certain subdivisions are at or exceed practical capacity, when in fact, they fall well below, (ii) improperly omits from his analysis existing infrastructure and recent capacity expansion projects, and (iii) overcounts the number of 10,000 foot trains that CPKC intends to run. Elphick/Orr R.V.S. at ¶¶ 29-68.

Likewise, UP's suggestion that CPKC's anticipated traffic growth on CP's paired track between Airline Junction, MO and Polo, MO would push the line over capacity is incorrect because UP's witnesses, Kenny Rocker and John Turner, incorrectly treat the line as a single track. Elphick/Orr R.V.S. at ¶ 78. UP also complains that the railroad network in St. Paul can become congested, and asserts a possible need to add trackage on its own lines to hold its own

trains while waiting for access to trackage that UP shares with BNSF and CP.[237] But CPKC will be adding only about six trains per day at this location, and will remain the distinct minority user of these lines, which will still remain below historical capacity. *Id.* at ¶¶ 79-81.

BNSF expresses vague concerns about capacity on CP's Davenport Subdivision (between Davenport and Clinton, IA), over which BNSF has trackage rights allowing it to provide local service, noting the CP segment is "unsignalized."[238] BNSF expresses concern that this CP segment is "unsignalized."[239] However, BNSF does not take into account that this year (2022) CP is installing CTC across much of the Subdivision (between Deer Creek and Davenport) as part of a project unrelated to the Transaction, and will add CTC to the remainder as part of Transaction implementation. CTC will enhance capacity on this segment. Elphick/Orr R.V.S. at ¶ 89.

Finally, Norfolk Southern expresses concern about the capacity of KCS's Wylie intermodal facility. NS-9 at 23-25.[240] That issue is fully addressed in Section VIII.B.[241]

VII. METRA'S CONCERNS ARE UNFOUNDED

Metra requests that the Board impose a long list of extraordinary conditions on the Transaction, including extensive infrastructure investments and a re-writing of the contractual terms between CP and Metra to shift dispatching control to Metra and alter the financial

---

240 CN's witness Randall asserts that Applicants have not "prove[n]" that the facility will be able to handle the anticipate increase in volume. CN-13, Randall V.S. Appendix A.

241 *See* Section VIII.B.3; Elphick/Orr R.V.S at ¶¶ 116-117.

compensation owed by CP to Metra, all supposedly to mitigate potential adverse impacts on Metra's commuter service.[242] Metra's position appears to stem from its misunderstanding of the Transaction's impacts. That misunderstanding likely flows in part from the irredeemably flawed analysis conducted by Metra's outside consultants Thomas D. Crowley and Robert D. Mulholland.[243] Metra has been led far astray by its consultants, who have based their opinion in this proceeding on an RTC simulation that is so riddled with errors that it is demonstrably incapable of modeling the status quo,[244] much less the potential impact of the Transaction.

As demonstrated below – and as confirmed by Applicants' corrections to the RTC simulations undertaken by Metra's consultants, the Transaction *will not* adversely affect Metra's passenger services anywhere. *See* Reply Verified Statement of Raymond A. Elphick ("Elphick R.V.S.") at ¶ 24, 36. Indeed, the MD-N Line from Chicago north to Fox Lake, IL will see *zero* additional trains,[245] and train counts will not increase on the portion from which runs from Chicago west to Elgin and Randall Road east of Bensenville Yard. *See* Elphick R.V.S. at ¶¶ 7, 11, 1]. The existing infrastructure on the MD-W Line west of Bensenville will easily

---

242 *See* Comments and Request for Conditions of the Commuter Rail Division of the Regional Transportation Authority ("METR-7") (filed Mar. 15, 2022) at 69-71.

243 *See, e.g.*, METR-7 at 18.

244 *See* METR-7 at 19-20; *see also* METR-7, Verified Statement of Thomas D. Crowley and Robert D. Mulholland ("Crowley/Mulholland V.S.") at 60-61 (explaining that they needed to move existing trains off the Marquette Subdivision to the Mason City Subdivision in the base case).

245 Metra implies that it views the potential addition of Amtrak trains on the MD-N line (i.e., Amtrak's expanded Hiawatha and Twin Cities services between Chicago and Milwaukee) as caused by the Transaction. *See* Metra Supplemental Comments (filed June 9, 2022) ("METR-8") at 4. That is incorrect. Amtrak has long aspired to add these services, and it has the contractual rights to force its way onto CP's (and Metra's) right of way (with Board approval, of course). CP's settlement with Amtrak did not create these services, it merely expressed CP's commitment to cooperate in their establishment.

In any event, Amtrak has committed that it will invest in new infrastructure that will add capacity on Metra's MD-N line. *See* Amtrak-Canadian Pacific Agreement (filed Feb. 2, 2022). As Applicants' corrected RTC modeling shows, with that capacity, the new Amtrak service has no adverse impact on Metra's operations. *See* Elphick R.V.S. at ¶¶ 50-51.

accommodate the modest increase of 8.0 trains on that segment without disruption to Metra's commuter service. *See* Elphick R.V.S. at ¶¶ 15-28. Properly understood, the Transaction will not harm Metra.

Metra is an important partner. Applicants are disappointed with Metra's portrayal of its working relationship with CP and CP's solid performance on the lines that it shares with Metra. As discussed below, Metra's retelling of history is belied by the record in this proceeding. CP has in fact performed quite well for Metra. Equally important whatever gripes Metra may have about the pre-Transaction world cannot form a basis for imposing conditions.[246]

Nevertheless, Applicants are committed to building upon CP's strong track record of on-time performance for Metra's service, working with Metra to improve the channels of communication between the parties and address any impacts caused by the Transaction in a manner consistent with each party's contractual rights and obligations. To that end, Applicants are making several commitments aimed at making Metra, its ridership, and the Board comfortable that none of the harms conjured by their consultants will come to pass. *See* Creel R.V.S. at ¶ 16. These commitments are the appropriate method for resolving any operating, dispatching or compensation matters that might arise between CPKC and Metra following the Transaction, as the Board has previously recognized.[247] The Board should reject Metra's invitation to impose more extreme conditions that would fundamentally change the contractual

---

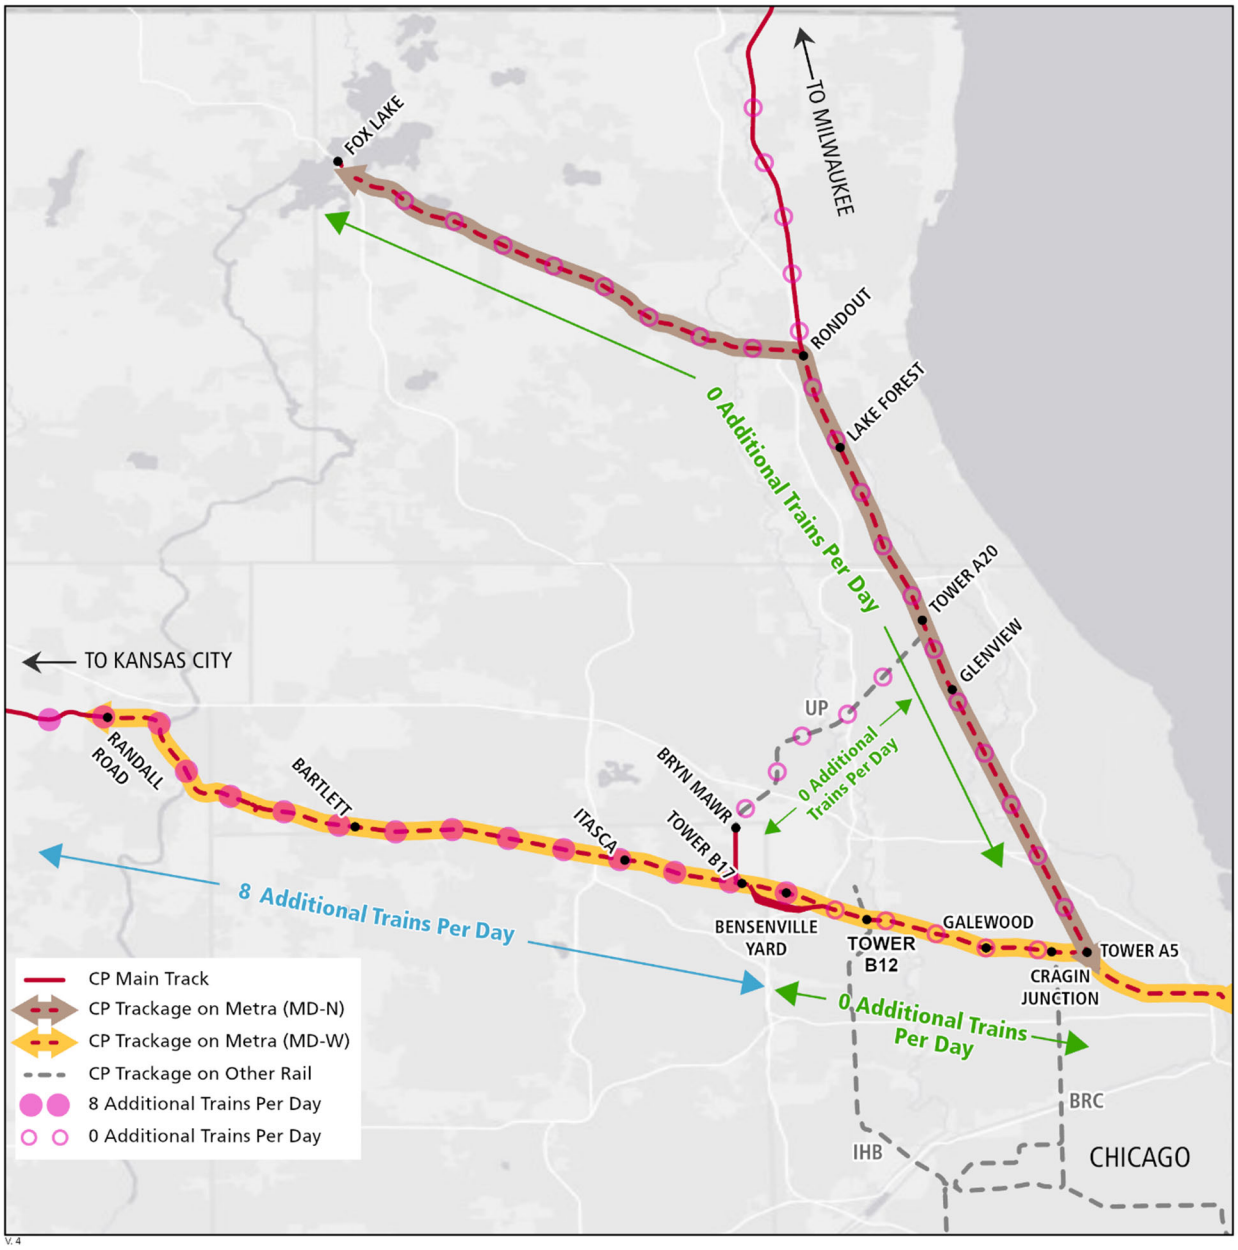
246 *See UP/SP*, 1 S.T.B. at 418.

247 *See CP/DM&E* at 15 ("Moreover, Metra seeks material changes to (or extensions of) existing agreements, or to compel new contractual commitments from CPRC to protect Metra from potential traffic increases that it might not have considered during prior contractual negotiations. We will not use our conditioning power here to compel resolution of potential differences between CPRC and Metra with respect to operating, dispatching, and compensation matters. Given the intimate details involved in coordinating freight and passenger rail operations, capital expenditures, and compensation, commercial negotiation seems to be the better avenue for resolving such issues.").

relationship between a freight railroad and a passenger railroad, just as it has done many times before.[248]

A. The Transaction Will Not Adversely Impact Metra's Commuter Services

1. The Transaction Will Not Meaningfully Increase Freight Traffic on Lines Shared with Metra.



Metra is under the misimpression that the Transaction will result in meaningful increases in the volume of freight traffic on the MD-W Line east of Bensenville Yard and on the MD-N Line.[249] Metra is mistaken. As illustrated by Figure 10 below, the Transaction will not appreciably increase the number of freight trains on these lines.

---

[248] *Major Rail Consolidation Procedures*, 5 S.T.B. at 564-65 (rejecting Metra's proposal to adopt a new rule that would allow the Board to override provisions of Metra's contracts with freight railroads); *CP/DM&E*, Finance Docket No. 35081 (Decision No. 11) at 15 (rejecting Metra's demand to condition approval on a transfer of dispatching from CP to Metra); *CSX/NS.Conrail*, Finance Docket No. 33388 (Decision No. 89, served July 20, 1998) at 297 ("[o]n review of specific requests for relief, however, it is apparent that most of the particular conditions sought by the passenger railroads are not directly related to effects of the transaction. Rather, these parties seek material changes to, or extensions of, existing contracts, or to compel new contractual commitments or property sales by NS or CSX. We are reluctant to use our conditioning power to compel resolution of differences between freight railroads and passenger agencies with respect to operating, dispatching, and compensation matters.").

[249] *See, e.g.*, METR-7, Crowley/Mulholland V.S. at 19 ("In total, CP/KCS plan to add 7.53 total freight trains per day east of Bensenville"); METR-7 at 19 ("Not only will expected freight train increases on MD-W and M-N significantly deteriorate service…").

FIGURE 10
MAP DETAILING TRAIN COUNT CHANGES ON LINES SHARED WITH METRA

As shown above, and as spelled out in the Amended Operating Plan, the only Transaction-related increase in traffic to the lines CP and Metra share will be an 8.0 trains per day increase on the MD-W Line west of CP's Bensenville Yard.[250] *See also* Elphick R.V.S. at ¶¶

[250] *See* Amended Operating Plan at 90-91.

6-14. As explained by Mr. Elphick, the MD-W Line will readily accommodate this growth without impacting Metra's train performance. *See id.* at ¶¶ 15-25. CP's already underway reconfiguration of Bensenville Yard, made possible by its recent land agreement with the Illinois Toll Authority and UP will facilitate CPKC's anticipated Transaction-related growth by expanding the yard and improving access to it by CP, intermodal and manifest trains. *See id.* at ¶ 37.[251] The Transaction will not entail any meaningful increases in traffic on any other lines, or segments of lines, currently shared by CP and Metra. *See* Elphick R.V.S. at ¶¶ 7, 8, 13.

Metra's concerns about growth elsewhere are founded on Mr. Crowley's flawed analysis. His assertion that the Transaction will add 7.53 trains per day east of Bensenville is completely inaccurate.[252] In fact, the Transaction will add *zero* trains per day east of Bensenville, including the portion of this segment between the east end of the yard and Tower B12. *See* Elphick R.V.S. at ¶ 7.[253] All other CPKC traffic east of Bensenville to or from other railroads in Chicago, or traffic to or from east of Chicago (for example, Detroit or Eastern Canada), will be handled in existing trains as Mr. Elphick explains. Elphick R.V.S. at ¶ 10.[254] Indeed, train counts east of Bensenville may actually be *reduced* relative to pre-Transaction levels because, pursuant to the reconfiguration of Bensenville Yard, some trains will no longer need to move between Bensenville and Schiller Park, since the automotive and intermodal facilities at Schiller Park will be consolidated at Bensenville. *Id.* at ¶ 11.[255]

---

251 *See also* Amended Operating Plan at 91.

252 METR-7, Crowley/Mulholland V.S. at 19.

253 *See also* Amended Operating Plan at 91-93.

254 *See also* Amended Operating Plan at 91.

255 *See also* Amended Operating Plan at n. 130.

Mr. Crowley is also incorrect that the Transaction will add 0.9 trains per day to the MD-N Line.[256] Applicants' original Operating Plan showed an average of 0.9 additional line-haul freight trains to that segment to account for organic growth on the system unrelated to the Transaction.[257] Applicants' Amended Operating Plan clarified that there is no Transaction-related train count increase for the MD-N Line. Elphick R.V.S. at ¶ 13.[258] While Applicants estimate the Transaction will lead to a small amount of additional carloads on the MD-N Line, that additional traffic will be handled in existing trains. Elphick R.V.S. at ¶ 13[259] Train counts on the MD-N Line in fact may *decline* as a result of the Transaction, as bulk trains that might have previously moved via the MD-N Line to interchange in Chicago are more likely to move via the Marquette Subdivision for movement on the former KCS portions of CPKC's system south of Kansas City.[260]

Finally, citing to Mr. Crowley's Verified Statement, Metra asserts that "Applicants' omission of passenger trains and certain classes of freight trains on Metra's lines from their assessment of the impacts of the Transaction result in undercounting trains by more than 500% while also not accounting for seasonal or daily variation in traffic that will mean that Metra's lines at times will see even higher counts."[261] This statement shows that Mr. Crowley fundamentally misunderstands Applicants' capacity analysis, which did not assume away the existence of any other traffic. Elphick R.V.S. at ¶ 27.

257 *See* App. Vol. 2, Operating Plan, Appendix A at 365 (showing 0.9 trains per day change for the C&M subdivision, which Metra refers to as the MD-N Line).

258 *See also* Amended Operating Plan, Appendix A, at 3. The MD-N Line is referred to in Appendix A as the "C&M West" and "C&M" subdivisions.

259 *See* Amended Operating Plan at 93.

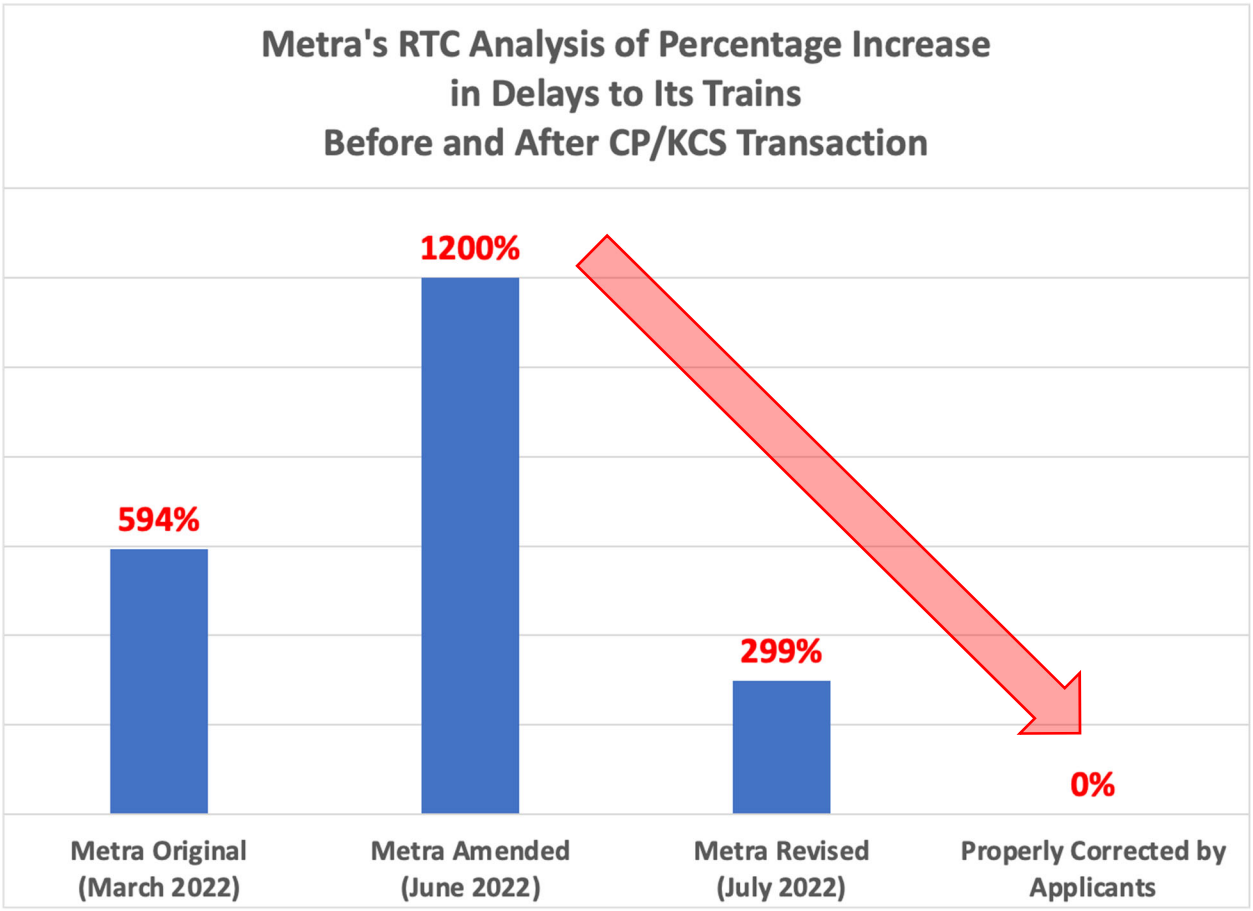
260 *See* Amended Operating Plan at 93.

261 METR-7 at 57-58.

2. Metra Further Misunderstands the Transaction's Impacts Because Its Expert's RTC Model Is Fundamentally Flawed

Metra concluded that Applicants' Operating Plan is "unworkable" because its expert, Mr. Crowley, conducted an RTC model that purported to show that the Transaction will "break the rail system," and force CP to re-route trains off of CP's Marquette Subdivision (along the Mississippi River) and onto Metra's lines in numbers that "cannot be accommodated on Metra's lines without causing significant additional interference with Metra's service."[262] That would be cause for concern were it not completely wrong. In fact, Mr. Crowley's RTC simulation is so grievously flawed that it is entitled to no weight in this proceeding.

One reflection of the errors laced throughout Mr. Crowley's analysis is the fact Metra has now corrected its RTC simulation not once but twice, the second time being provided to Applicants and the Board just days before replies to comments and request for conditions were due.[263] As illustrated below in Figure 11, the results of Metra's continually-revised submissions swing greatly, indicating their unreliability. Metra's initial submission concluded delays to Metra trains would increase 594% as a result of the Transaction, its next submission showed delays would increase approximately 1,200%, and its third submission found delays to increase around 299%.[264]



---

[262] METR-7 at 18.

[263] An initial review of this second submission did not appear to change our analysis of Metra's RTC simulation in any material manner because our corrected RTC simulation had already corrected the errors Metra identified in this supplemental submission. *See* Elphick R.V.S. at n.42. However, because we were not afforded adequate time to do a full review, we reserve the right to supplement or amend our analysis should a more fulsome review warrant any such changes.

[264] *See* METR-7 at 21; METR-8 at 3; Metra Correction and Supplemental Statement (filed July 8, 2022) ("METR-9"), Attachment B.

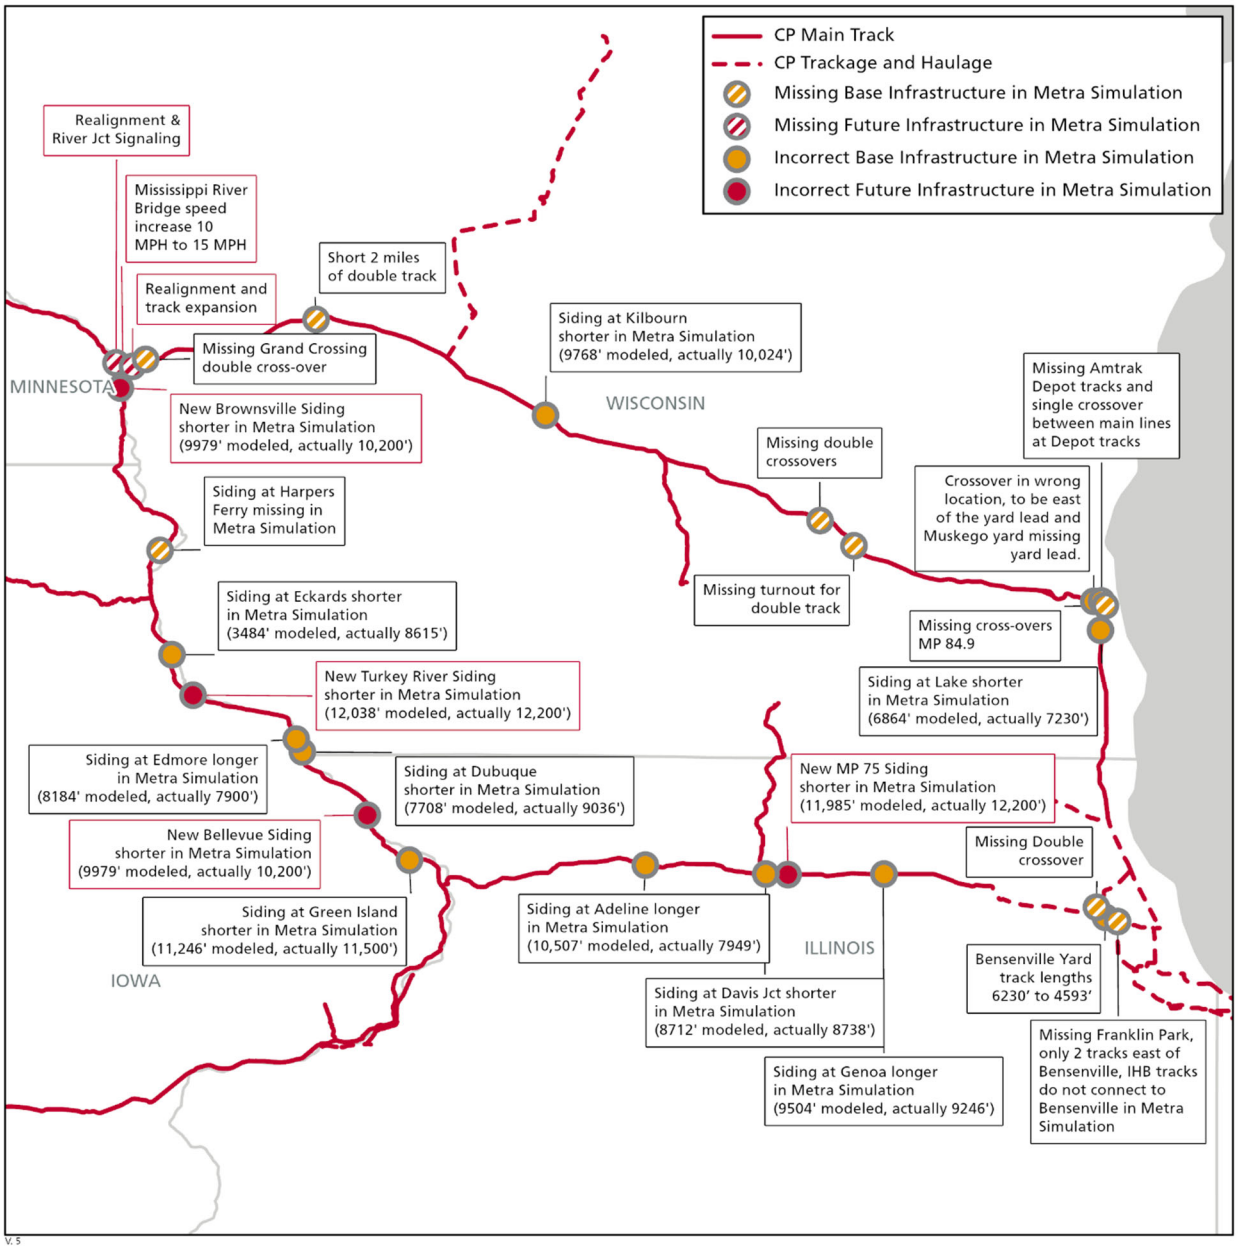
FIGURE 11
METRA'S CHANGING RTC ANALYSES

In fact, Metra's RTC simulation always was and remains fatally flowed. Were those errors corrected, the result is that CP's modest increase in trains west of Bensenville Yard will cause no increase in delays to Metra trains. To start, there is perhaps no better evidence that Mr. Crowley's model is useless in predicting the impact of the Transaction than the fact that it is incapable of accurately simulating existing, real-world operations.[265] When Mr. Crowley attempted to simulate the operation of current-day CP freight trains across CP's current-day

[265] *See* METR-7 at 19-20; *see also* METR-7, Crowley/Mulholland V.S. at 60-61 (explaining that they needed to move existing trains off the Marquette Subdivision to the Mason City Subdivision in the base case).

Marquette Subdivision, he falsely concluded, based on his flawed RTC simulation, that the Marquette Subdivision is *already* at capacity and would require CP to move trains off the Marquette Subdivision and on to the Mason City Subdivision.[266] Reality is quite different. CP has no trouble operating current train volumes without operational disruption and without using the Mason City Subdivision. Elphick R.V.S. at ¶ 40. This fact alone ought to have informed Mr. Crowley that there was something fundamentally wrong with his simulation.

Even had Mr. Crowley not overlooked his model's failure to simulate real-world conditions, he would have recognized the fundamental flaws of his model had he followed the standard RTC practice of conducting a validation of his base model, which he apparently did not do. *Id.* at ¶ 48. The quality of results produced by RTC analysis is entirely dependent on user-generated inputs. *Id.* at ¶ 46. If any input is not accurate, the simulation can produce results that diverge wildly from what would take place in the real world, rendering any conclusion derived from those results meaningless. *Id.* This is proven here by re-running Mr. Crowley's simulations without any CP freight trains at all. Even with zero CP freight operations on Metra's MD-W and MD-N Lines, Crowley's simulation shows 2.4 hours of delay to Metra trains per week, when it should have operated with 100% on-time performance since Metra's time-tested pre-COVID schedules should not cause passenger trains to interfere with one another. *See* Elphick R.V.S. at ¶ 50. The obvious conclusion: something is very wrong with Crowley's model.



---

[266] Crowley explains that he was "forced to move trains off the Marquette Subdivision onto the Mason City Subdivision (at Marquette) to accommodate train meet/pass events in the RTC model." METR-7, Crowley/Mulholland V.S. at 60-61; CN also inaccurately raises concerns regarding the sufficiency of the capacity on the Marquette Subdivision. *See* CN-13, Randall V.S. Appendix B, Exh. B-1.

Upon examination of the inputs to Mr. Crowley's model, it is not surprising that it returns unreliable results, stemming from Mr. Crowley's fundamental misunderstanding of CP infrastructure and operations before the Transaction, as well as CPKC's plans post-Transaction. The complete list of those errors is addressed in detail in Mr. Elphick's reply testimony and the report prepared by CP and its consultants who have extensive experience conducting simulations using the RTC tool. *See* Elphick R.V.S. at ¶¶ 43-53. We highlight a few of the most egregious errors here.

First, Mr. Crowley's simulation omitted infrastructure causing results to deviate wildly from what would occur in the real world. *See id.* at ¶¶ 46, 50. Figure 12 below catalogs the most significant omissions. On the Marquette subdivision, along the Mississippi river, Mr. Crowley omitted key sidings that made it impossible for CP trains to operate in the way they do in the real world. This resulted directly in Mr. Crowley's incorrect conclusion regarding how CP would have to route its trains.

FIGURE 13
INFRASTRUCTURE OMITTED FROM METRA RTC MODELING

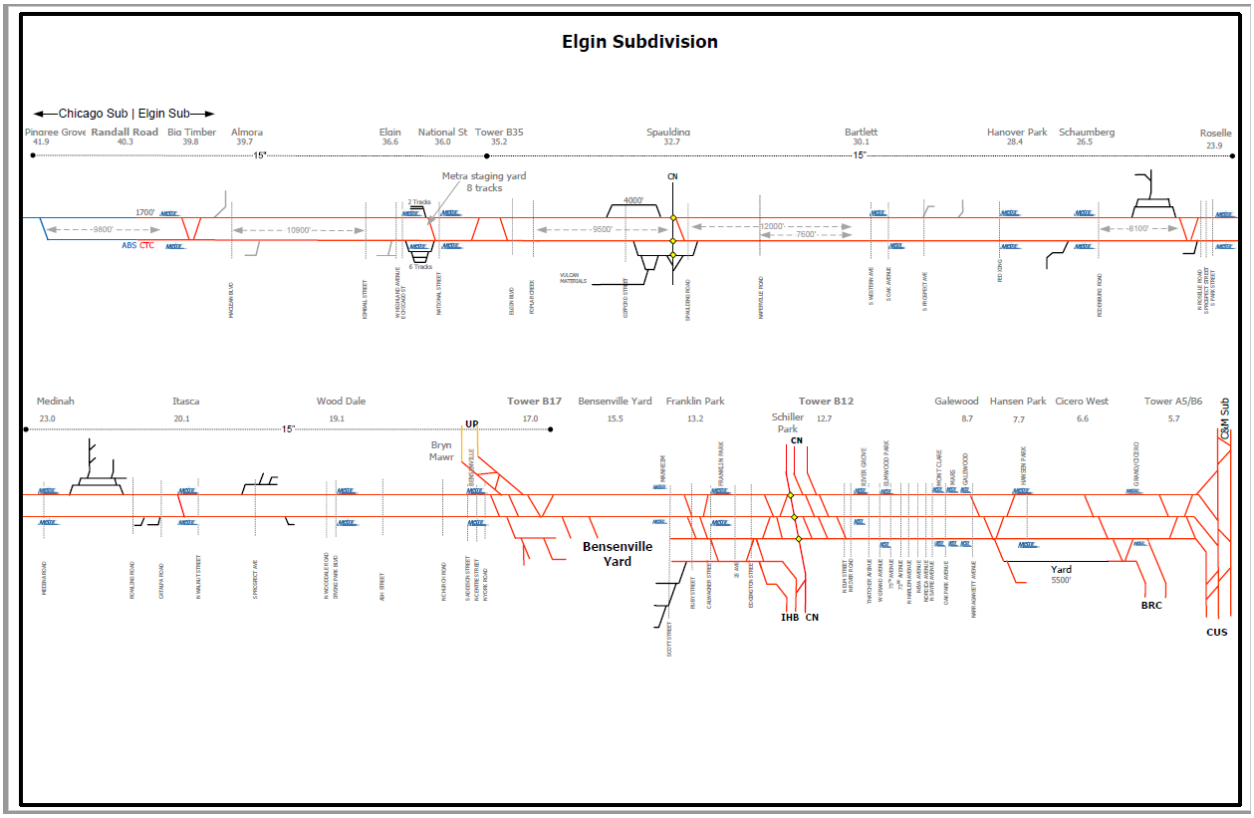
Second, Mr. Crowley's RTC Simulation incorrectly modeled CP freight trains by hard-coding actual departure times from the week of April 13, 2021, rather than using scheduled departure times, and allowing RTC's logic to dispatch trains, seriously contradicting real-world practices and eliminating the randomness of real-world operating events. Elphick R.V.S. at ¶ 50. *Third*, Metra's RTC model was forced to incur actual delay values from the April 2021 time

period, which drives the simulation to add delay over and above that incurred through its natural dispatching logic. *See id.* *Fourth*, Mr. Crowley incorrectly configured and applied dispatch settings by assigning incorrect rank and priority settings to different classes of freight trains, which led to incorrect meet/pass logic. *See id.* *Fifth*, Mr. Crowley's simulation completely omitted planned infrastructure changes to Bensenville Yard which, will contribute to smooth operations on the MD-W Line. *See id.* at ¶¶ 29-38, 50. *Sixth*, Crowley's simulation did not incorporate randomization, a key RTC attribute required by the FRA for RTC work in connection with FRA-sponsored projects, which means the simulation did not include any variation in freight train performance. *See id.* at ¶ 50. *Finally*, Mr. Crowley criticizes Applicants for using a "spreadsheet analysis" (i.e., a mathematical formula uses to estimate capacity) instead of an RTC model,[267] yet the TRB report Crowley cites acknowledges this type of analysis is entirely appropriate for use on single-track segments, like the Marquette Subdivision.[268]

CP's operating team, assisted by consulting experts with extensive expertise in RTC modeling, corrected all of these errors, and re-ran the RTC model. Elphick R.V.S. at ¶ 51. As Elphick explains, once the RTC model is corrected, the RTC model shows that there will be no issues on the Marquette Subdivision, Elgin Subdivision, or any other segment of the CPKC system that will have an effect on Metra. *See id.* at ¶ 52. Indeed, the results of CP's simulation prove both that the current infrastructure on the Marquette Subdivision supports existing freight volumes, and that the capital improvements to that subdivision that CP's plans will support continued fluidity with the addition of post-Transaction freight volumes. *See id.* The simulation

---

267 METR-7, Crowley/Mulholland V.S. at 39.



268 *Id.* at 46-47.

also shows there will be no additional delay to Metra passenger trains resulting from the modest number of additional freight trains that CP/KC will add to Metra's MD-W line. *See id.*

3. The MD-W Line West of Bensenville Yard Has Ample Capacity to Accommodate Eight Additional Daily Freight Trains

As noted, Applicants anticipate adding 8.0 trains per day to the Elgin Subdivision (or what Metra refers to as the MD-W Line) west of Bensenville but do not anticipate any other meaningful increases in traffic on the lines it shares with Metra. As Mr. Elphick explains an RTC analysis is not needed to conclude the Elgin Subdivision has ample capacity to handle eight additional daily trains. *See* Elphick R.V.S. at ¶¶ 15-25. The track schematics in Figure 14 below shows the Elgin Subdivision from Tower A-5 to Randall Road where Metra's operations stop entirely. That segment is double track with frequent crossovers and extensive capacity.

FIGURE 14
DIAGRAM OF MD-W LINE/CP ELGIN SUBDIVISION: TOWER A5 TO RANDALL ROAD

As Mr. Elphick explains in detail, this infrastructure provides exclusive ability to add additional freight trains without interfering with Metra's trains. *See* Elphick R.V.S. at ¶¶ 19-21. His analysis shows the ease with which CP's four additional trains each way could flexibly be slotted between Metra's tightly scheduled trains without touching Metra's peak operating windows. Metra witness Oppenheim confirmed in his deposition testimony that numerous such slots are available, as reflected in Mr. Walker's Reply Verified Statement.[269] Those slots occur and would support many more than the eight additional trains CP plans. Elphick R.V.S. at ¶ 19.[270]

---

269 Oppenheim Dep. Tr. at 175:4-176:20.

270 *See also* "B17 and B12 – Freight windows-A – referenced in Deposition held on 06-07-2022.xls".

It bears mentioning that Metra's MD-W Line historically hosted many more freight trains than it does currently, and more than CPKC will operate post-Transaction. During the 1980s and 1990s, Mr. Oppenheim acknowledged at his deposition that the MD-W Line hosted between 13-14 trains on the low end and 15-16 trains on the high end depending on the number of bulk trains per day.[271] Applicants project just 11 trains on the MD-W Line post-Transaction.[272] In 2019, Metra acknowledged that the line had no trouble handling 10 additional freight trains, without affecting Metra traffic when an outage CP's, Marquette Subdivision required detouring.[273]

4. Developments Independent of the Transaction Will Further Improve the Performance of Metra's Trains on Lines Shared with CP

An examination of Metra's concerns regarding pre-existing conflicts between CP's freight trains and Metra's MD-W trains reveals that a focal point of those issues involved CP trains entering and exiting Bensenville Yard, and also moving between Bensenville Yard and CP's nearby Schiller Park intermodal and automotive terminal. In particular, approximately two-thirds of the non-cascading delays discussed in the emails Metra collected from Oppenheim's inbox (and compiled as Metra Exhibit B-2) involved the tracks around the Bensenville Yard.[274]

Work being undertaken by CP independent of the Transaction will go a long way to addressing these issues, and also ensure that the new trains CPKC plans to run into and out of Bensenville Yard from/to the west will not impact Metra's operations. As Walker and Elphick

272 *See* Amended Operating Plan, Appendix A at 4 (showing 11.20 trains under the "Growth Plan Year 3 Train Count" column for Segment No. 81. For reasons explained above, only Segment No. 81 captures the projected train count increases to the mainline tracks of the MD-W Line).

273 METR-7, Verified Statement of Rich Oppenheim ("Oppenheim V.S."), Ex. B-7; *see also* "B17 and B12 – Freight windows – A – Referenced in Deposition Held on 06-07-2022.xls" (Elphick Exhibit 2); Oppenheim Dep. at 175:4-13.

274 *See* "Summary of CP Delay Event 2016-2021.pdf" (Vol. 3, Exhibit 48).

cover in more detail in their respective Reply Verified Statements, CP is embarking on a major reconfiguration of Bensenville Yard that will dramatically improve the ability of this facility to receive and depart trains efficiently. *See* Reply Verified Statement of Nick Walker ("Walker R.V.S.") at ¶¶ 54-58; *see also* Elphick R.V.S. at ¶¶ 29-38. The major reconfiguration of Bensenville Yard will eliminate or reduce the problem of trains doubling or tripling out of yard, which accounts for many of Metra's "complaints" and will improve the handling of intermodal (and automotive) traffic, allowing trains to move directly into the yard and eliminating moves to or from Schiller Park. *See* Elphick R.V.S. at ¶¶ 33-34. As such, CP expects the reconfiguration will greatly improve the performance of Metra's trains on MD-W. *See* Walker R.V.S. at ¶ [58].

To confirm this conclusion, one of Applicants' corrections to Metra witness Crowley's flawed RTC simulation was the inclusion in the model of the improved arrival and departure tracks for intermodal trains arriving and departing Bensenville. *See* Elphick R.V.S. at ¶ 51. As the simulation results confirm, those tracks will help the new CPKC trains – most of which will be intermodal – move to and from Bensenville without imposing incremental delay on Metra operations. *See id.* at ¶ 52. *Second*, as discussed below at page [ ], all of the other sources of Metra's pre-Transaction concerns about conflict between Metra trains and CP will be entirely unaffected by the Transaction.

B. CP Values Its Partnership with Metra and Regrets that Metra's Comments Have Mischaracterized Metra's Solid Performance on Lines Shared with CP

Metra's Comments attempt to give weight to its unfounded concerns about the Transaction's impact by dragging CP's pre-Transaction performance through the mud and suggesting that CP will be callously indifferent to the impacts of its new trains on Metra's operations. There is absolutely no valid foundation for this accusation. As a matter of objective fact, CP performs very well for Metra, and CP's senior leadership – from CEO Creel on down –

are committed to cooperation with Metra so that the needs of both railroads and their customers can be met on the lines the two must share.

1. Metra Has Consistently Performed Well on CP's Lines

Metra refers to on-time performance as a "keystone[]" of successful commuter service,[275] and the truth is that both MD-W and MD-N perform very well in that regard. According to Metra's own data, CP dispatching and freight operations are almost always successful in avoiding any delay to Metra trains. Walker R.V.S., at ¶¶ 32-35. Metra's allegations that CP is responsible for "continual" and "routine" delays[276] to Metra trains on the MD-W Line, and that CP's dispatching leads to "regular – weekly, and in some cases daily – interference with Metra's peak and non-peak train service,"[277] are simply not supported by Metra's own data.

Metra states that its goal is to achieve 95 percent on-time performance, reflecting its acknowledgement that perfect performance is unachievable because "there are scores of unpredictable variations from those perfect conditions that can have small but cascading impacts on Metra's schedule."[278] With over many dozens of trains running across the line Metra shares with CP every day, Metra's 95% on-time performance goal implies that one would expect a meaningful number of delays every week, month, and year.

In fact, the MD-W Line has consistently been above or close to the 95% performance goal, performing better than many of Metra's other lines, and helps Metra outperform its peer commuter railroads. *See* Walker R.V.S. ¶ 29. To illustrate, Figure 15 below, using Metra's own

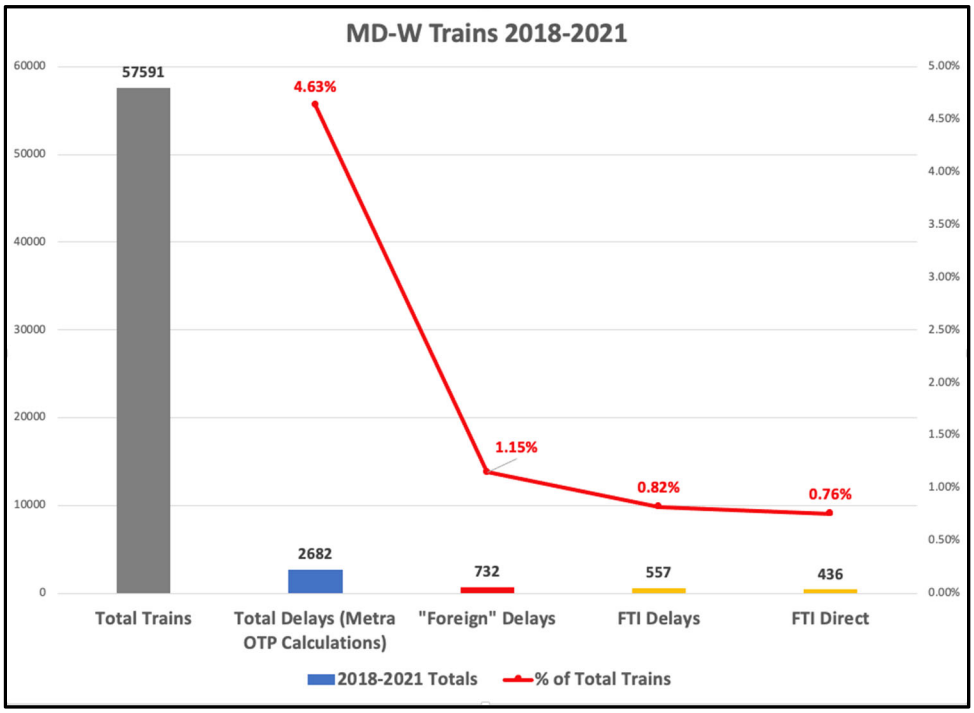
278 Metra Website, https://metra.com/time-performance-reports#Metra_and_On_Time_Performance (Vol. 3, Exhibit 49); METR-7, at 24.

data, shows that only 4.6% of the trains that operated in the MD-W Line between 2018 and 2021 experienced any delay for any reason at all.

FIGURE 16[279]
DELAYS TO METRA MD-W TRAINS 2018-2021 VS. DELAYS HAD OTP BEEN 95%



A closer look at these numbers reveals the number of delays caused by the presence of CP freight trains, as opposed to some other factor, is quite low. Metra's own data breaks down the sources of delays and which Metra trains were involved. As shown in the fourth columns of Figure 17, below, delays associated with "freight train interference" (the only delays related to CP dispatching) accounted for just 0.82% percent of all MD-W trains. Metra witness Oppenheim admitted that these data may even overstate CP's responsibility for delays, as "sometimes it's not clear what the cause was, or could be multiple causes, and somebody's got to

279 Walker RVS at n.36.

take the blame for it, essentially."[280] And even assuming the delays were due to "freight train interference," some of those delays may not have been avoidable, as David Rodriguez, Metra's Manager of Train Operations/CTCO and Greg Godfrey, Metra's Director of the Consolidated Control Center (train dispatching office) acknowledged.[281]

FIGURE 17[282]
A VERY SMALL PERCENTAGE OF METRA MD-W TRAINS ARE DELAYED

Even the 0.82% figure is an overstatement of CP-caused delays, as it includes "indirect" or "cascading delays," *i.e.*, delays that occur when a train that is directly delayed en route to destination by some event causes another train to be delayed because it uses the same

---

280 Oppenheim Dep. Tr. at 109:7-10; *see also* Deposition of David Rodriguez dated June 8, 2022 ("Rodriguez Dep. Tr.") at 90:21-25, 91:1-25, 92:1-22.

281 *See, e.g.*, Deposition of Greg Godfrey on June 9, 2022 ("Godfrey Dep. Tr.") at 48:16-24 ("[W]e would like to minimize controllable delays) (emphasis added); Rodriguez Dep. Tr. at 91:6-7 ("There might have been no way for any dispatcher to avoid the interference.").

282 *See* "Metra Data Workpaper," Tab "Fig 5."

equipment.[283] As a result, a single dispatching decision that causes delay to Metra can result in multiple reported delays.[284] "Direct" delays are the better measure of how often CP's dispatching decisions may have caused a Metra train to be delayed, as Mr. Godfrey confirmed.[285] As shown in Figure 17, above, over the four years from 2018 through 2021 just 0.76% of all Metra MD-W trains incurred direct delays from freight train interference.

Annual data shows the same pattern. As Figure 17 shows, CP dispatchers consistently support Metra operations at very high levels of on-time performance, with 98-99% of trains receiving no direct freight-train interference delays according to Metra's own records (as shown by the green line in Figure 18 below, ranging from 98.9% to 99.7%).

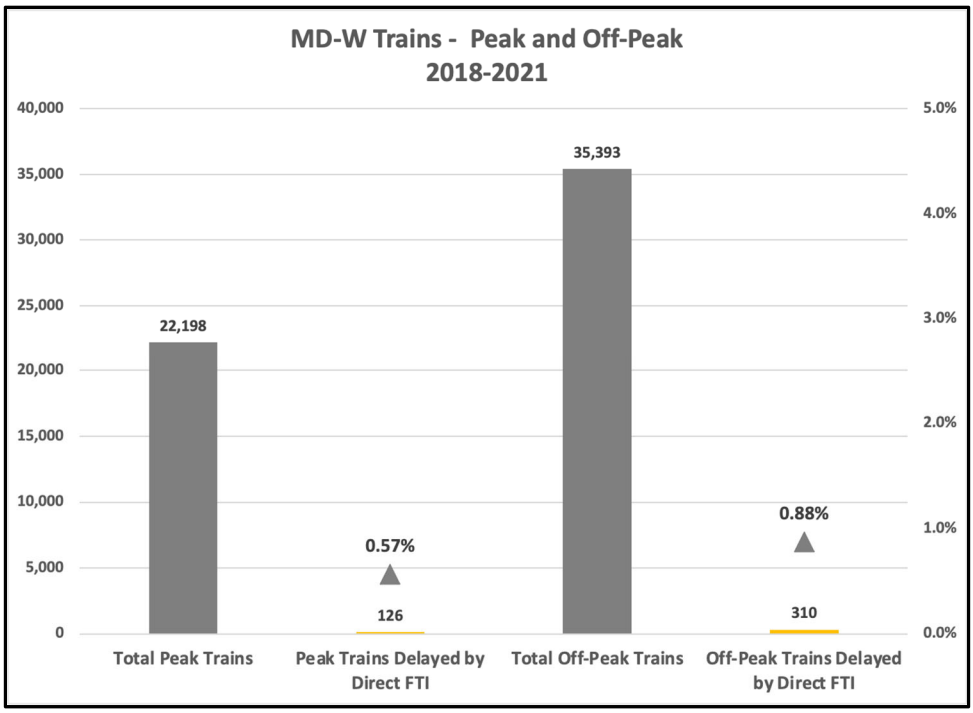
285 Godfrey Dep. Tr. at 43:12-19.

FIGURE 18[286]
METRA MD-W DELAYS AND OTP 2017-2021



Metra alleges that CP dispatchers "regularly" prioritize freight trains ahead of Metra trains during agreed "peak" periods during the morning and afternoon commuter rush hours.[287] Metra's data undermines its own argument. As Figure 18 shows, again focusing on the trains that suffer "direct" delays due to freight train interference, CP performs incredibly well in dispatching Metra's peak-period train. In fact, only 0.57 percent of peak-period trains realize direct freight train interference delays, amounting to 126 total delays over the course of four years, or about *one delay every eight business days*.

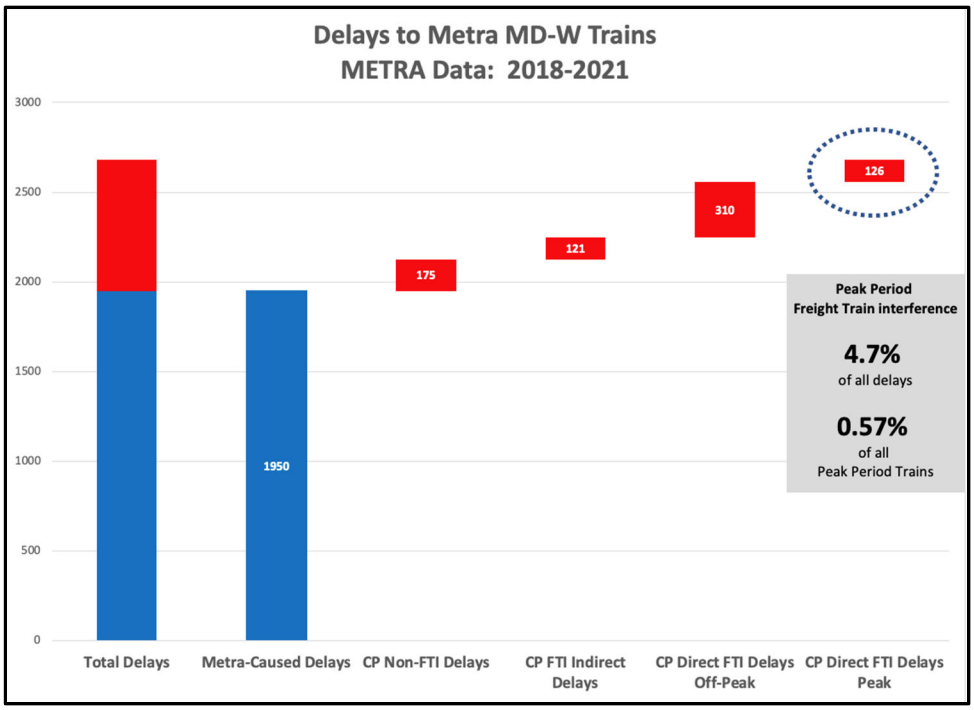
286 *See* "Metra Data Workpaper," Tab "Fig 6."

287 METR-7, Verified Statement of Greg Godfrey ("Godfrey V.S."), at ¶ 12.

FIGURE 19[288]
MD-W FREIGHT TRAIN INTERFERENCE DELAYS PEAK VS. OFF-PEAK



Another useful perspective is how the delays attributable to CP compare to the delays that Metra attributes to itself. As Figure 20 below shows, the small numbers of delays attributable to freight train interference are dwarfed by the delays caused by Metra's own actions. Metra's Comments unfairly lump all of these delays together and blame CP for all of them.[289]

288 *See* "Metra Data Workpaper" Tab "Fig 7."

289 *See, e.g.*, METR-7 at 34-35.

FIGURE 20[290]
SOURCE OF DELAYS TO METRA MD-W TRAINS 2018-2021

Other Metra data confirm that Metra performs well on the CP-dispatched MD-W Line relative to the lines used by Metra that are dispatched by other freight railroads. Only 21.3% of delays on MD-W from 2016 to 2021 were attributed to CP. This is a lower percentage of delays than on the nearby UP-West line or the BNSF line, where a greater portion of delays were caused by those other "foreign carriers."[291] Indeed, though Metra seeks to portray CP as though it were a particularly bad performer, Metra's witness Rodriguez testified that Union Pacific caused the most freight train interference with Metra's trains,[292] or as Mr. Godfrey described it: Union Pacific is "struggling tremendously right now."[293] Mr. Rodriguez was asked at what locations

290 *See* "Metra Data Workpaper," Tab "Fig 8."

291 *See* Walker R.V.S., Figure 10.

292 Rodriguez Dep. Tr.at 11:4-9.

293 Godfrey Dep. Tr. at 85:6-10.

CN causes freight interference with Metra trains, and he responded: "It's a long list."[294] NS, CSXT and BRC also cause freight trains to delay Metra trains as Metra witness Rodriguez acknowledged.[295]

By any measures then, CP's performance is strikingly good. In an attempt to sidestep the import of this data, Metra argues that its own on-time performance metric is not an accurate measure of CP's performance because it does not capture delays unless they result in a train arriving at its final destination more than five minutes and 59 seconds late.[296] Metra's argument is flawed for a number of reasons.

First, any suggestion by Metra that on-time performance data is a misleading measure of performance is belied by the fact that Metra itself reports its performance to its customers and the public in terms of on-time performance data.[297] It tells customers that on-time performance metrics provide "a truer reflection" of "how [Metra is] doing and where [it] need[s] to improve," and it asserts that the on-time performance goals it employs "have been standard in the railroad industry for longer than Metra has existed."[298] And it compares itself publically to other transit companies by touting its superior on-time performance.[299]

Second, the more comprehensive data that Metra says is a better reflection of delays caused by CP confirms that CP performs very well. Metra witnesses Godfrey and Rodriguez

298 *Id.*

299 *See* Walker R.V.S. at ¶ 30.

rely upon data compiled by Mr. Rodriguez purporting to show all delays to Metra trains on the MD-W and MD-N Lines caused by CP freight trains from February 2020 to October 2021.[300] Mr. Rodriguez's data shows that only 1.5 percent of Metra's trains experienced a delay during the period from February 2020 to October 2021. *See* Walker R.V.S. at ¶ 28.

On the MD-W Line, which is the only line CP and Metra share where train counts will increase as a result of the Transaction, Mr. Rodriguez's data identifies 273 freight-caused delays for a total of 2,394 minutes of delay.[301] Given the 19,914 total Metra trains that Metra operated on the MD-W Line during that period, this works out to just 7.2 seconds of delay per train.[302] But of those 273 freight-caused delays, 44 were "non-controllable" by CP, and had nothing to do with CP's dispatching.[303] Another 25 of these delays were attributed to cascading delays which, as discussed in this section, should be excluded when properly assessing the number of incidents where CP freight trains or dispatching decisions caused a delay.[304] Once these categories are removed, Mr. Rodriguez's data shows 204 total "controllable" delays caused by CP on the MD-W Line over the 21 month period from February 2020 to October 2021.[305] As Figure 21 below shows, this means *over 99 percent* of Metra trains operating on the MD-W Line during that period *did not* encounter a CP-caused freight interference or dispatcher-caused delay.[306]

306 Oppenheim attempted to supplement Metra's official delay data with a compendium of emails discussing delays that he attached as Exhibit B-2 to his Verified Statement. After asserting that this compendium of emails was prepared with the goal of capturing "100 percent" of the delay issues he was

FIGURE 21[307]
NEARLY ALL OF METRA'S MD-W TRAINS INCUR NO CP-CAUSED DELAY

Rodriquez's criticism of CP is further undermined by his default to blame CP. Rodriguez admitted at his deposition that some of these delays had multiple causes but were attributed to CP.[308] He further admitted that some of the delays he captured in his data could not have been

testifying about, *see* Oppenheim Dep. Tr. at 135:18-22, Oppenheim testified that a CP 473 freight train delays a Metra 2225 passenger train "twice a month," *id.* 162:8. Confronted with the fact that this specific type of incident only appeared twice in Oppenheim's entire dataset, which spans from January 2016 to March 2022, *id.* 162:8-16163:11, Oppenheim then attempted to backtrack and stated that his dataset is "a representative sampling" and cannot be relied upon to be complete, *id.* 165:15. After conceding his dataset was incomplete, he referred Applicants back to the official TOPS data. This data, as Applicants demonstrate, does not remotely support Metra's contentions about the "continuous" nature of CP-caused delays.

307 *See* "Workpaper_Walker_Godfrey_Rodriguez.xlsx," Tab "Rodriguez in Perspective."

308 *See* Rodriguez Dep Tr. at 34:17-35:15.

avoided by better dispatching decisions.[309] The more we whittle away delays that Rodriquez unfairly attributes to CP, the more Rodriguez's data paints the same picture – that CP has done a good job dispatching Metra's lines.

The delay statistics Mr. Godfrey cites paint the same picture. Mr. Godfrey reviews data from Metra's data warehouse, known as the "Train Operations and Performance System, " which is Metra's "most accurate count of reported delays, and which is the same data used to produce Metra's on-time performance statistics reviewed above.[310] He noted that this delay data can be misleading because it might attribute to CP a delay to a Metra train on the MD-W Line even if it was the responsibility of another railroad on an adjacent subdivision.[311] Nonetheless, he calculated the total number of delays to the MD-N and MD-W Lines for each year from 2000 to 2021 and found that, during that time, freight-related delays impacted 1.23 million Metra customers with delays totaling 57,048 minutes, or nearly 40 days and nights.[312] We can break that down for all Metra MD-W and MD-N trains combined like this:

TABLE 2
METRA DELAY HISTORY PUT IN PERSPECTIVE

	Over 21 Years	Per Year	Per Week	Per Day (assuming 5 days/week)	Per Train (assuming 122 weekday pre-COVID trains per weekday on MD-N and MD-W line)
Minutes	57,048	2,716	52	10.4	5.1 seconds
Passengers	1.23 million	58,571	4,880	976	8

309 *See id.* at 90:21-91:8, 91:23-92:7.

310 Godfrey V.S., at ¶ 7.

311 Godfrey Dep Tr. at 59:16-60:7.

312 Godfrey V.S., at ¶ 9.

Assuming a five weekday schedule, 57,048 minutes in delays amounts to about 10.4 minutes of delay per day total, including cascading delays, in an industry where delaying a train by fewer than six minutes is considered on-time performance. And given Metra's estimated ridership for the MD-W and MD-N Lines in January 2019, pre-pandemic, was estimated at 975,482,[313] that means the 4,880 customers impacted by delays in a month equates to just 0.5% of Metra's monthly ridership. Impacting only 0.5% of customers, including via cascading delays, in an industry where normal delays are expected, is quite remarkably good performance. Similarly, an average of *five-to-seven seconds of delay per weekday train* is a far cry from the "continual" and "routine" delays that Metra assails CP for delivering.

CP strives to minimize the delays it causes, but Metra's suggestion that any amount of delay to its trains delays proves malfeasance is simply wrong. While CP believes there is always room for improvement, and it regrets the rare occasions when its decisions have led to delay that could have been avoided, the record of Metra's performance on the lines it shares with CP – and CP dispatches – is one of which any railroad could be proud. It is certainly not a basis for fundamentally re-writing longstanding contractual rights.

2. CP Leadership Is Committed to Supporting Metra's Operations, Consistent with Its Contractual Obligations.

The track record confirmed by the hard data should leave no room for doubt about CP's commitment to supporting Metra's passenger service. Contrary to the overheated rhetoric of Metra's Comments, CP has strived to be a good partner to Metra. As CP CEO Keith Creel states

---

[313] *See* Metra, Ridership Trends, (Jan. 2019), available at https://metra.com/sites/default/files/assets/planning/ridership/jan_2019_ridership_report_standalone.pdf (Vol. 3, Exhibit 50).

unequivocally: "The Transaction will not get in the way of our intention to be a good partner to Metra on the lines we share." Creel R.V.S., at ¶ 11.

CP is offended by the suggestion that there has been a lack of leadership commitment to supporting Metra, particularly the accusations that "senior leadership has actively refused to take action that would reduce Metra delays"[314] and that CP "dispatchers have been directed by senior management to move CP trains, regardless of the impact on the network."[315] To be clear: CP takes great care to help ensure Metra's trains perform well on the MD-W and MD-N Lines.[316] As Nick Walker, CP's Vice President of Operations for the Western Region, explains in his Reply Verified Statement, CP dispatchers understand the priority to which Metra trains are entitled. CP dispatchers consider all relevant factors and circumstances when dispatching passenger and freight trains alike, and no decision to move a CP train is made "regardless of the impact on the network."[317]

The truth is that it would be counterproductive for CP to make decisions that disregarded the impact on Metra trains, since blocking Metra's trains needlessly would clog up the network, undermining the movement of all trains.[318] Metra's own chief dispatcher Mr. Godfrey agrees, acknowledging all dispatchers, no matter by whom employed, have to make decisions based on the network as a whole, not solely in the interest of moving any individual train (*i.e.* a Metra train, as Metra would prefer), particularly in the Chicagoland network, which is "so

---

314 METR-7, Oppenheim V.S., at ¶ 35

315 METR-7 at 38; *see also* METR-7, Oppenheim V.S., at ¶ 35.

316 Walker R.V.S. at ¶ 6

317 Walker R.V.S. at ¶ 10.

318 *Id.*

complicated."[319] Indeed, Mr. Godfrey has "directed [himself] and [his] staff to delay some passenger trains in order to keep other freight trains moving in order to help other passenger trains" to "keep the network healthy."[320]

The evidence that Metra has submitted to the Board in this proceeding directly contradicts Metra's condemnation of CP management. Most of the documents submitted by Metra as exhibits to the Verified Statement of Oppenheim demonstrate good faith attempts by CP employees to address operational issues that come up from time and to seek to minimize their recurrence and impact on Metra. For example, when notified of a set of issues, CP's Senior Vice President directed the team: "I also want you to ensure the 3 items below are implemented and executed!"[321] In another instance, CP reacted promptly: "I did discuss the implication with the Yardmaster/Train master after the fact."[322] Another example shows CP's responsiveness: "We are working back through the root cause and will update this morning."[323]

Other emails authored by Mr. Oppenheim himself demonstrate that, while delays do occur, CP has worked collaboratively with Metra to address them. For example, in one email recounting an unfortunate series of delays that occurred in January 2021, Oppenheim starts off: "Let me preface this by saying *how much we appreciate CP's recent willingness to discuss our respective operational concerns* and the need to work together to insure that our goals are

---

319 Godfrey Dep. at 82:9-83:6.

320 *Id.* at 136:8-17; *see also id.* at 82:15-19 ("[N]ot delaying one Metra train, let's say at 9:00 a.m., could result in delaying six Metra trains at 1:00 p.m.").

321 METR-7, Oppenheim V.S., Exhibit B-2 at 322.

322 *Id.* at 332.

323 *Id.* at 334.

met."[324] Towards the end of the email, Mr. Oppenheim reiterates that "[a]s we have said repeatedly on our calls, we truly believe that CP's intentions are sincere in trying to protect Metra's schedules."[325] Mr. Oppenheim's contemporaneous sentiments are incompatible with the idea that "senior leadership has actively refused to take action that would reduce Metra delays."[326] And notwithstanding Mr. Oppenheim's incendiary remarks in his Verified Statement, he testified at his deposition that "a big Metra supporter, very high ranking at CP for a number of years . . . went so far as to fire some of the dispatchers that were moving freight trains in front of Metra."[327]

Metra tries to make much of a March 6, 2022 email sent by Mr. Oppenheim about an instance where a dispatcher in CP's Minneapolis Operations Control ("MOC") center made a game-time decision – with which Oppenheim disagreed – based on the best information available to him on the ground that CP's management must have known that "it was not possible for a successful outcome."[328] But that example merely illustrates that freight dispatching is complicated and, at times, dispatchers are faced with difficult choices, any of which would lead to a suboptimal outcome. CP does not dispute that, especially with the benefit of hindsight, some of the decisions its dispatchers made in these situations could be open to after-the-fact criticism. But that does not mean that they are bad at their jobs, much less that they seek to delay Metra trains. In fact, Mr. Rodriguez, who serves as a liaison between Metra and the freight railroads Metra interacts with, acknowledges the plain fact that there often may not be a way for

any dispatcher to avoid freight interference.[329] In any event, Mr. Oppenheim's emails *do not* show intent or direction by CP senior management to direct dispatchers to take actions adverse to Metra trains or to "move CP trains regardless of the impact of the network." {{[redacted]}},

In order to cultivate a false impression of malice, Metra also points to Mr. Godfrey's Verified Statement in which he claimed that "[o]n a number of recent occasions my staff and I have witnessed CP dispatchers who are able to prioritize or avoid delay to Metra being directly told by senior management to move CP trains, regardless of the impact on the network."[331] At his deposition, however, Mr. Godfrey readily admitted that he did not have first-hand knowledge of these occasions, and was merely told by Mr. Oppenheim.[332] In addition, Mr. Godfrey could also only recall one or two of these incidents—far from "a number of recent occasions"—and could not recall the identity of the person he identified as "senior management" or when these incidents occurred.[333]

In sum, nothing in the record contradicts the simple truth that CP leadership has been and remains committed to supporting Metra's operations and honoring CP's obligations to dispatch Metra's trains well, with or without the Transaction. *See* Walker R.V.S. at ¶ 9.

C. None of Metra's Complaints About CP Are Related to the Transaction

As explained above, the Transaction's impact on Metra boils down to Applicants' adding 8.0 trains to the MD-W Line west of Bensenville. The existing infrastructure and available operating slots on Metra's MD-W Line will easily accommodate those trains.

Shorn of its flawed RTC simulation evidence – which when corrected actually confirms that there will be no adverse impact on Metra – the entirety of Metra's case boils down to a laundry list of pre-Transaction grievances and efforts to re-write the governing contracts and fundamentally alter the pre-Transaction relationship between CP and Metra. Even if everything Metra says were true, it would not support the conditions Metra desires to have imposed on the Transaction. But what Metra says is not true, and as set forth in the testimony of CP witnesses Walker and Elphick, CP desires to set the record straight about how it has interacted with Metra in the past, while simultaneously demonstrating that the issues Metra raises are unrelated to the Transaction and certainly not made worse by the Transaction.

1. Most of Metra's Pre-Transaction Dispatching Concerns Relate to Operations that Will Be Unaffected by the Transaction

Setting aside the irrelevance of a series of anecdotes about specific dispatching decisions against a mountain of evidence that almost every one of Metra's trains is dispatched without any delay whatsoever, the critiques that Metra lobs against CP's dispatchers are both unfair and completely irrelevant to the Transaction.

Dispatching Issues Relating to Freight Trains North and East of Bensenville Yard.

First, the focus of Metra's criticisms is on areas that will be unaffected by the Transaction, or addressed by developments unrelated to the Transaction. Metra witness Oppenheim lists seven categories of "issues" that he has had with CP's dispatching over the years.[334] Whatever the merit of his concerns about these issues, each and every one of them necessarily pre-dates the Transaction. And as Messrs. Walker and Elphick explain, none of those issues has any bearing on the Transaction's effects. The issues either involve operations associated with Bensenville Yard – which will be addressed by the reconfiguration already underway – or they involve train operations to the east or north of Bensenville that will not be impacted by the Transaction.

For example, Metra complains that a "typical example of CP-caused delays" occurs when CP makes a crew change on mainline tracks outside of Bensenville Yard.[335] As explained by Mr. Elphick., to the extent this occurs, it is usually for trains coming from Milwaukee on the MD-N Line seeking to enter Bensenville Yard at Tower B17, which cannot enter yard tracks in a fluid manner from that direction. Elphick R.V.S. at ¶ 44. None of the new CPKC trains fall into this category, and in any event CP is working to eliminate the need to make crew changes on

---

334 METR-7, at 39-40; METR-7, Oppenheim V.S., at ¶ 36. Those categories are: (1) "Operation of trains over 10 thousand feet in length between Bryn Mawr and Shermer that arrive at Tower B17 or Tower A20 without a sufficient time window to allow them to move without interfering with scheduled Metra trains, and without sidings long enough to allow faster Metra trains to pass;" (2) "Lack of planning for routes through the Bensenville Yard that cause entering CP freight trains to stop and block B17 while throwing yard switches;" (3) "CP crew changes, power, marker light changes, or pick up, or set out of cars, or other activities that should be confined to yard tracks on Metra's main tracks;" (4) "Poor operational and dispatching control of freight trains entering and exiting Bensenville that result in use or fouling of Metra mainline;" (5) "Dispatching of CP freight trains between Rondout and Tower A20 in a manner that delays scheduled Metra traffic;" (6) "Failure of CP westbound freight trains to clear tower A20 a minimum of ten minutes ahead of scheduled Metra and Amtrak trains;" and (7) "Failure of CP eastbound trains to clear Rondout a minimum of fifteen minutes ahead of scheduled Metra and Amtrak trains." METR-7, Oppenheim V.S., at ¶ 36. Each of these categories is addressed by Mr. Walker in his Reply Verified Statement. Walker R.V.S. at ¶ 61.

335 METR-7 at 40.

mainline tracks for its existing trains as well.[336] Similarly, Metra complains that CP dispatches freight trains on the MD-N Line "between Rondout and Tower A20 in a manner that delays scheduled Metra traffic."[337] But the Transaction will have no effect on freight dispatching between Rondout and Tower A20 because, as discussed above, *no new trains* will be added to the MD-N Line as a result of the Transaction.

Dispatching Freight Trains During Peak Periods. Metra makes several claims throughout its Comments that CP "regularly" dispatches freight trains during Metra's "peak periods" (during the morning and evening rush hours) despite being contractually obligated to not interfere with Metra's peak period trains.[338] The facts do not support this claim.

First, CP *does not* schedule freight trains during Metra peak periods, and the new CPKC trains that Applicants anticipate will similarly be scheduled during the extensive periods of the day when they will not get in the way of Metra's passenger trains. Walker R.V.S., at ¶ 38; Amended Operating Plan at ¶ 209; Elphick R.V.S. at ¶¶ 16, 18, 22.[339]

Second, sometimes freight train operations do not proceed exactly as planned, but CP's dispatchers nonetheless strive to avoid creating any conflicts at all with Metra during its peak periods. Walker R.V.S., at ¶ 38. The objective historical data confirm that freight interference during Metra's peak periods almost never occurs. *Id.* at ¶ 31, Figure 5.

---

336 *Id.*

337 METR-7 at 39; METR-7, Oppenheim V.S., at ¶ 36.

338 METR-7, Oppenheim V.S., at ¶ 64; *see also* METR-7, at 13

339 Importantly, CP is not prohibited outright from operating freight trains on Metra-shared lines during peak periods, a point Metra witness Oppenheim acknowledged. *See e.g.* Oppenheim Dep. Tr. at 307:13-17 (Q. "[Y]ou are not testifying today that . . . there should be no freight train operations during peak . . . periods." A. "Absolutely, I'm not saying that at all.").

Finally, CPKC's ability to avoid conflicts with Metra's operations during peak periods will be improved by the additional capacity the Transaction will bring between Davenport, and the west end of Metra's MD-W line. The additional sidings, including one being added west of Randall Road, will support the staging of CP's freights so they can be moved towards Bensenville when least likely to create a conflict during Metra's peak periods. Elphick R.V.S., at ¶¶ 22-25.

2. Dispatching Metra Trains on the "Wrong Track" Is A Pre-Transaction Concern Without Merit

Metra asserts that CP "regularly dispatches Metra trains on different mainline tracks from the ones that Metra has identified for use by its passengers heading in a specified direction."[340] According to Metra, this "regular" practice results in dangerous situations where "passengers must get to the opposite side of the tracks, often by darting across the tracks in the face of an oncoming freight train, or around a stationary one."[341] Again, this is a pre-Transaction complaint.

On the merits, however, Metra's assertions about safety are unfair and inaccurate. Metra does not to mention that most Metra stations are designed such that passengers *must* cross tracks at one end of their commute or the other (*e.g.*, between the station parking lot and the inbound or outbound platform). As Mr. Oppenheim admits, it is "designed into the system that passengers are crossing the tracks," and that "on a regular basis, passengers do cross the tracks" even when

340 METR-7, at 27.

341 *Id.* at 28.

no train is being operated on the "wrong" tracks.[342] Indeed, all four of the social media posts[343] that Metra cites as support for the claim that CP dispatches passenger trains on the "wrong" tracks depict locations that have level crossings over tracks that passengers must cross. None of the posts demonstrate that the passenger's train was on the "wrong" track. Walker R.V.S., at ¶ 42.

In addition, as Mr. Walker explains, even when Metra trains *are* operated on the opposite track from what commuters might expect, there are good reasons for it. For example, it is good dispatching to run an express Metra train around slower local trains or slower CP freight trains, allowing Metra trains to maintain their schedules while simultaneously accommodating other operations on the line. Mr. Oppenheim conceded as much as his deposition.[344] Prohibiting the use of both tracks would interfere with fluid operations and sacrifice capacity and cause unnecessary delays. Walker R.V.S., at ¶ 44. Indeed, Metra itself has advocated for adding crossovers on the MD-W line, meaning that Metra necessarily *supports* the use of both tracks, not just the "right" one.[345]

And there is nothing unsafe about this practice. Walker R.V.S., at ¶ 43. Metra's stations are equipped with loudspeakers that provide advance announcements regarding arriving trains

---

342 Oppenheim Dep. Tr. at 151:18-24. In light of this acknowledgment, CP is offended that Metra used this merger proceeding to cast it as an unsafe rail operator, even going so far as to say CP causes Metra "to fear for the safety of its passengers." METR-7, at 23.

343 These posts depict freight trains operating outside Metra's peak periods; Metra's claim to the contrary failed to adjust the timestamps of the posts to account for local Chicago time.

344 Oppenheim Dep. Tr. at 252:4-9 (Q: "[T]he right dispatching move is to cross the Metra train from track 2 to track 1 to avoid delay; isn't that right?" A: "No, if that is the only way – the only option that you have to run, yes.").

345 *Id.*

and the tracks they will be on, giving passengers ample time to get to the correct platform.[346] It is standard operating procedure for trains to enter the station at slow speeds to ensure they can stop if needed to avoid pedestrians crossing the tracks at the last minute. If Metra viewed these practices as unsafe, most Metra stations would not be set up to cause commuters to cross tracks "on a regular basis."[347]

3. Metra's Disagreement with CP About Changes to Its Off-Peak MD-N Line Schedules in 2019 Are Pre-Transaction Issues Having No Bearing on this Proceeding

Metra dredges up a past discussions from 2019, unrelated to this Transaction, in which Metra and CP did not reach agreement to add additional non-peak Metra trains.[348] In an attempt to tie these episodes to the Transaction, Metra argues that despite denying its requests "presumably because there was no capacity," CP is now proposing to add trains "on the lines."[349] Metra evidently ignores the fact that in both instances the trains it proposed to add were to the MD-N Line, not the MD-W Line, and Applicants do not propose to add any Transaction-related trains to the MD-N Line.[350]

In any event, as explained in Walker's Reply Verified Statement, CP did not deny these requests because there was insufficient capacity on the MD-N Line. Walker R.V.S., at ¶¶ 85-90. Instead, Metra's request came at a time when the demands placed on the line were in flux

---

346 *Id.* at ¶ 46; Oppenheim Dep. Tr. at 152:9-16.

347 Oppenheim Dep. Tr. at 151:18-24.

348 METR-7 at 41-43.

349 *Id.* at 41-42.

350 *See id.*; *see also* Amended Operating Plan, Appendix A, at 3. Potential additional Amtrak trains are not attributable to the transaction, and if Amtrak has committed to the addition of infrastructure on this line in connection with its new train services. *See* Amtrak-Canadian Pacific Agreement (filed Feb. 2, 2022) at §§ 1, 2.

(including the potential for Amtrak to add additional trains there), and CP was concerned that the particular changes Metra proposed would effectively expand the duration of its near-exclusive access to the line during peak periods. CP was not unwilling to consider Metra expanding its service on the MD-N line, but thought that the proposal required more thorough assessment of its consequences for CP and other users, and consideration of alternatives for Metra as well.

4. Metra's Complaints About PTC Implementation Issues Are Irrelevant and Unfair

Metra also raises grievances relating to the implementation of Positive Train Control that are unrelated to the Transaction. Metra states that "[b]oth Metra's MD-W and MD-N . . . are dispatched using Wabtec Train Management Dispatching Systems ('TMDS') computer-aided dispatch ('CAD') systems," which are "a critical component in Metra's operation," and "a requisite for implementing federally mandated Positive Train Control ('PTC') requirements."[351] Metra charges that "[i]n 2021, when upgrading new TMDS CAD software in Metra and CP systems, some Metra installations had to be delayed to accommodate interoperability with CP's other systems on non-Metra owned lines."[352] As Mr. Walker explains, this critique is "baffl[ing]" and "seems entirely contrived." Walker R.V.S., at ¶ 78. As Mr. Godfrey acknowledged, "CP and Metra spen[t] considerable time working together to provide for TMDS to function safely on CP's dispatching systems," and "CP invested significant resources in doing that."[353] Indeed, implementing PTC has been a challenge to every railroad company. Walker R.V.S., at ¶ 79. To the extent there may have been occasional delays or glitches, this is no

---

351 METR-7 at 44.

352 *Id.*

353 Godfrey Dep Tr., at 33:22-34:2; *see also* Walker R.V.S., at ¶ 79.

different from the challenges other railroads have experienced, including that Metra itself has experienced. And more to the point, those challenges are essentially over, as the work of integrating TMDS into CP's dispatching systems is already substantially complete.[354]

D. Applicants Are Committed to Reassure Metra and Its Ridership that the Transaction Will Not Impact Metra's Passenger Service

Applicants desire to foster a strong relationship with Metra. To that end, while Applicants firmly believe that the Transaction will not cause any harm to Metra's commuter service, Applicants are making a number of commitments to provide reassurance the Transaction will not adversely impact Metra's operations or its passengers. As Mr. Creel outlines, *see* Creel R.V.S., at ¶ 16, CPKC has committed that:

- Will not route CPKC's Kansas City-St. Paul freight trains via Chicago (except in emergencies);
- Will not object to Metra's return to its pre-COVID passenger schedules;
- Will commit to a collaborative assessment of proposed Metra schedule changes outside peak windows; and
- Will put in place processes designed to improve real-time communication with Metra about the dispatching of its trains, accompanied by a formal escalation process to address any recurring performance issues that arise.

---

[354] Walker R.V.S., at ¶ 80. To the extent Metra suggests that giving Metra dispatching authority could make Metra's own PTC implementation any easier, it is simply wrong. Aside from the fact that integrating TMDS with CP's dispatching systems is already substantially complete, even if Metra controlled dispatching over the MD-N and MD-W Lines, CP freight trains would still have to transition safely between CP-owned and Metra-owned trackage. The "challenges of efficient PTC implementation and maintenance would not be eliminated." *Id.*

CP (and CP/KC if the Transaction is approved) will work with Metra to reach mutually acceptable solutions to any issues that arise in their relationship, including any unforeseen issues caused as a result of the Transaction. As the Board has recognized, commercial negotiations between the parties are the best avenue to resolve any such operating, dispatching, and compensation matters, not the Board's conditioning powers.[355] That is particularly so where, as here, Metra seeks conditions to "to ameliorate longstanding problems [or issues] which were not created by the merger."[356]

E. The Relief Metra Requests Is Vastly Out of Proportion to the At-Most Minor Impacts of the Transaction

Setting aside that the Transaction will cause no adverse impacts to Metra's operations, and that no conditions whatsoever are warranted, the specific condition requests that Metra puts forward are both overreaching and likely to prove affirmatively counterproductive.

1. Metra's Requests to Force a Shift of Dispatching to Metra Would Override CP's Contractual Rights and Undermine Rather Than Improve the Handling of Metra Trains

First, Metra requests a condition requiring CPKC to transfer dispatching control of the MD-W and MD-N Lines to Metra.[357] Such a request is overreaching and would override CP's longstanding contractual rights without any foundation in harm from the Transaction. Metra's demand is ultimately founded on Metra's *pre-Transaction desire* to control dispatching on these

---

355 *BN/Santa Fe*, 360 I.C.C.2d at 769.

356 *BN/Santa Fe*, 360 I.C.C.2d at 729-30; *BN/Frisco,* 360 I.C.C. at 952.

357 METR-7 at 70.

lines, which it has twice previously brought to the Board in the merger review context, only to be rejected both times. The Board should reach the same conclusion here.[358]

a) The Trackage Agreements Allocate to CP the Right to Operate and Dispatch Traffic on the MD-W and MD-N Lines

The contractual arrangement between CP and Metra governing the MD-W and MD-N Lines originated in the Milwaukee Road's bankruptcy and preserved CP's role as the freight common carrier on these vital lines connecting CP's network with Chicago, as explained in the Reply Verified Statement of Adolph Gameiro. CP's agreements with Metra preserved the traditional control that freight railroads have over dispatching – and that Milwaukee Road had historically when it operated commuter trains. Gameiro R.V.S. at ¶¶ 6-15. To summarize the pertinent history, when Metra acquired ownership of the MD-W and MD-N Lines, it did so subject to the terms of a 1985 Trackage Agreement entered into with CP in 1985 that expressly grants CP the right to (1) direct movement of all trains on the MD-W and MD-N Lines and (2) operate freight trains on the MD-W and MD-N Lines, with the limited exception of specified peak periods when Metra's commuter service operations and schedule are to receive priority over freight trains, except in an emergency.[359] Metra itself renegotiated this agreement in 1993 and reconfirmed CP's responsibility for the lines' dispatching.

---

[358] For the same reasons, the Board should reject Metra's alternative request that the parties be required "to adopt clear, binding and enforceable dispatching standards that reflect and more clearly define CP's existing dispatching obligations." METR-7 at 80. Applicants have shown that the Transaction will not adversely impact Metra's operations. The existing contractual arrangement between Metra and CP adequately sets forth CP's dispatching obligations, including that CP not interfere with Metra's peak period trains. Thus, Metra's request for more defined and binding dispatching standards is unrelated to the Transaction but rather aimed at redressing its pre-Transaction concerns. In any event, as noted above, CPKC understands the priority to which Metra's passenger trains are entitled and is committed to working closely with Metra in the proper dispatching of all trains on the MD-W and MD-N lines, Metra's included. *See* Part VII.D above.

[359] *Id.* When Metra acquired ownership of Milwaukee's "commuter assets," it did not seek the Board's authorization, confirming that (under the State of Maine doctrine) Metra's role as owner would

The agreements give Metra important rights as well, including the creation of peak periods during which CP may not interfere with Metra's operations and when Metra is also free to add trains without limitation beyond the physical capabilities of the infrastructure (though CP is not prohibited from running freight trains).[360] Outside those peak windows, Metra is permitted to run only an agreed upon number of trains on a set schedule, and must seek CP's consent (not to be reasonably withheld) for changes to its schedule or the addition of new trains.[361]

b) Metra Has Long Sought Control of Dispatching on the MD-W and MD-N Lines

Metra's desire to use the Board to upend CP's contractual right to control dispatching on the MD-W and MD-N Lines and transfer that important right to Metra long predates this Transaction. In the Board's Major Merger Rules proceeding in 2000, Metra tried to persuade the Board to adopt a new rule that would enable the Board to override provisions of Metra's contracts with freight railroads.[362] Despite making sweeping changes to its Merger Rules (albeit ones not applicable in this proceeding), the Board nonetheless rejected Metra's proposal. The Board made clear that it did not view changes to the contractual relationship between freight and passenger railroads as warranted, even under the new rules:

> "Even though we will impose conditions where appropriate to protect passenger railroads from merger-related harm, *we will not impose remedies that are inconsistent with passenger service contracts*, and we will not require applicants to subsidize passenger service. As we have noted in prior merger decisions, most contracts with passenger authorities already include incentives and penalties for service performance. There is *no reason here to attempt to change the fundamental contractual relationship between freight and passenger carriers*. Adherence to these

---

not interfere with CP's role as freight common carrier on the lines. *See State of Maine—Acquisition & Operation Exemption—Maine Central R.R.*, 8 I.C.C.2d 835, 837 (1991); Gameiro R.V.S., at ¶ 12.

360 Gameiro R.V.S., at ¶ 12; *see e.g.* Oppenheim Dep. Tr. at 307:13-17.

361 *Id.*

362 *Major Rail Consolidation Procedures*, 5 S.T.B. at 711.

> contractual terms is, in most instances, the best way to resolve the sometimes conflicting needs of these parties."[363]

Undeterred by this defeat, Metra sought to capitalize on CP's proposed acquisition of DM&E in 2008 to re-write the same set of contracts – and in the same way – that it now seeks in this proceeding. As it does here, Metra (1) complained about CP's dispatching of the MD-W and MD-N Lines, (2) argued that a transfer of dispatching would be the only way Metra could protect its own service, and (3) asked the Board to condition its approval on a transfer of dispatching from CP to Metra.[364] The Board rejected Metra's request, for reasons that compel the rejection of Metra's identical request in this proceeding:

> "Metra seeks material changes to (or extensions of) existing agreements, or to compel new contractual commitments from CPRC to protect Metra from potential traffic increases that it might not have considered during prior contractual negotiations. *We will not use our conditioning power here to compel resolution of potential differences between CPRC and Metra with respect to operating, dispatching, and compensation matters.* Given the intricate details involved in coordinating freight and passenger rail operations, capital expenditures, and compensation, commercial negotiation seems to be the better avenue for resolving such issues. CPRC has indicated that it remains committed to working cooperatively with Metra, and the Board strongly encourages both parties to work together to achieve a mutually acceptable arrangement to govern joint operations."[365]

This same rationale applies here. Just as it did in *CP/DM&E*, the Board should allow Applicants and Metra to work together to resolve dispatching issues, especially because Applicants "ha[ve] indicated that [they] remain[] committed to working cooperatively with Metra." *CP/DM&E* at 15; *see also infra* Section VII.E.

365 *CP/DM&E*, Finance Docket No. 35081 (Decision No. 11 decided Sept. 29, 2008) at 15 (emphasis added).

c) The Board's Precedents Sharply Disfavor Forced Shifts in Dispatching

The Board's decision in *CP/DM&E* rejecting Metra's request to shift dispatching control is not an outlier. The Board has consistently rejected requests by commuter agencies and freight railroads alike to force changes in dispatching responsibility established by contractual relationships. Most recently, in the *CSX/Pan Am* proceeding, the Board rejected a request by the Boston-area commuter agencies (MBTA and MassDOT) for a condition requiring CSX to cede responsibility for dispatching lines owned by MassDOT and used by CSXT.[366] As here, however, there was no evidence demonstrating that "CSX's or B&E's ability to dispatch will be less efficient than the dispatching that occurs today"[367] as a result of that transaction. Likewise, the CP/KCS Transaction will not alter CP's dispatching of Metra's MD-W or MD-N Lines.

The Board reached a similar conclusion in the *UP/SP Houston/Gulf Coast Oversight Proceeding*, where a coalition of commenters sought to have dispatching of UP-owned lines in the Houston area shifted from UP to PTRA (a neutral Houston switching railroad).[368] The Board rejected that condition, observing that "[i]t is the nature of dispatching decision-making that some dispute and delay will occur when multiple trains are moving over track."[369] The Board concluded that a forced transfer of dispatching would be "exceedingly disproportionate" and "too unpredictable" in comparison to status quo operations that appeared to be successful.[370] The same reasons apply fully to this case as well.

d) Transferring Dispatching Control to Metra Would Create More Issues Than It Resolves

Contrary to Metra's assertions, CP dispatches Metra-shared lines well and Applicants have shown that the Transaction will not adversely impact Metra's operations. Walker R.V.S., at ¶¶ 5-24, 54-55.[371] There accordingly is no justification to even consider a transfer of dispatching control to Metra. To the contrary, transferring dispatching control to Metra would be counterproductive and create more issues than it resolves. *See* Walker R.V.S., at ¶¶ 70-82.

First, it is no coincidence that the Metra lines that see the most freight traffic are uniformly dispatched by the freight railroads operating over those lines: BNSF, UP, CN, and CP. Walker R.V.S., at ¶ 69. Metra's dispatchers, on the other hand, only have limited experience dispatching freight and passenger trains on Metra's Rock Island Line and portions of the Southwest Service Line, where freight traffic levels are very light.[372]

CP dispatchers, who are trained and experienced to operate around the clock and are familiar with the complexities associated with dispatching freight trains alongside passenger trains, by placing them with Metra dispatchers, who are primarily focused on the operation of passenger trains between the early morning hours and late evening hours, would create a host of potential issues. *See* Walker R.V.S., at Section II. Metra does not operate trains on the MD-W and MD-N Lines around the clock, but instead goes dark between the last train of the night at 12:05 am and the first train of the following morning at 4:52 am on weekdays. On weekends and

---

371 *See also supra* at Section VI.A.

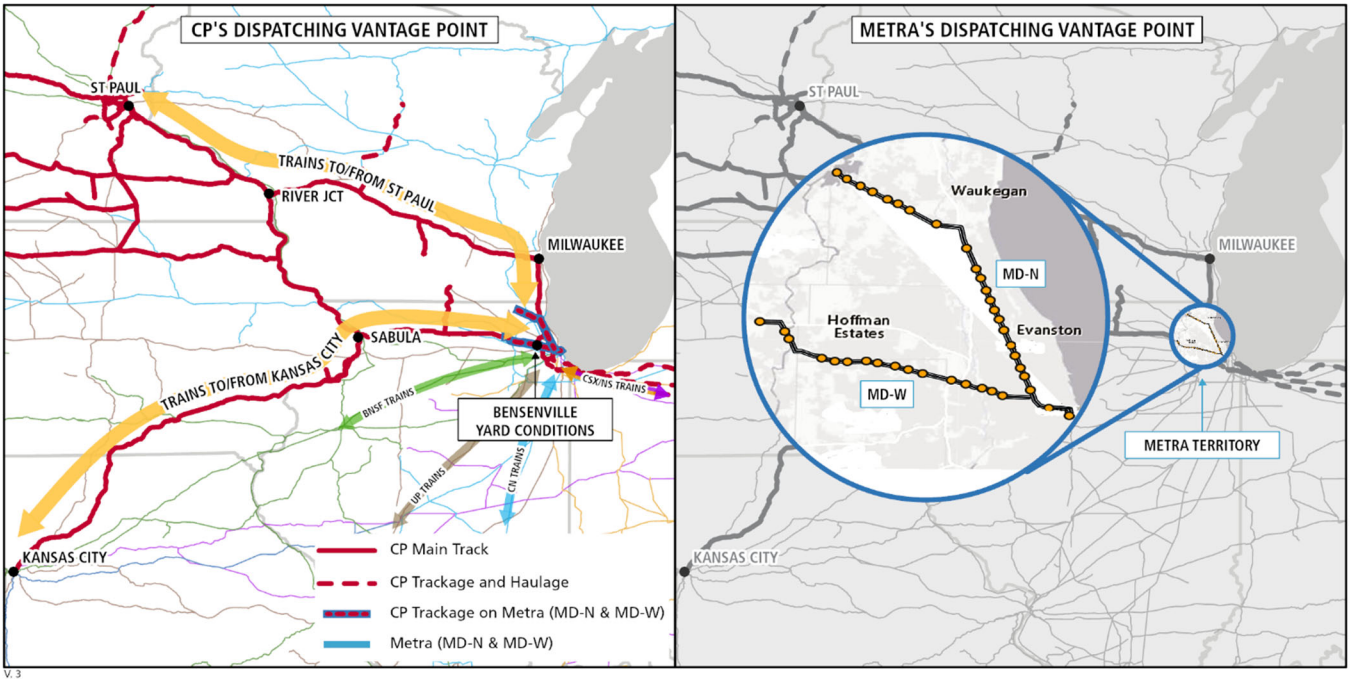
372 *See* Walker R.V.S., at ¶ 68; *see also* Metra's Objections and Responses to Applicants' First Set of Interrogatories, Requests for Production of Documents, and Requests for Admission ("Metra R&Os") (Exhibit 53), at 4 ("…Metra responds by stating that its dispatchers currently dispatch both passenger and freight trains on the Metra's Rock Island Line and portions of the Southwest Service Line.").

holidays, this dark period is even longer.[373] If Metra controlled dispatching of the MD-W and MD-N Lines, it would need to set up a dedicated staff to dispatch only CP's freight trains during the night hours. This would likely be a skeleton staff that would not have experience dispatching CP's freight trains. Walker R.V.S., at ¶ 66. Mr. Godfrey admits Metra's dispatchers lack the experience looking at the broader CP network on a day-to-day basis that is necessary to make appropriate dispatching decisions.[374]

Second, transferring dispatching control to Metra would undermine the efficient coordination of freight and passenger operations on the lines shared by CP and Metra, because it would squander the broader geographical and temporal perspective that CP's despatchers are able to bring to bear on their minute-by-minute dispatching judgments. Transferring dispatching control to Metra would effectively bifurcate responsibility for dispatching CP's lines to and from Chicago into two insular and separately-accountable groups: CP's dispatchers beyond the limits of Metra ownership and Metra dispatchers within those limits. But whereas Metra's passenger operations adhere to those boundaries, freight operations do not.

With Metra dispatchers responsible east of Randall Road (on the MD-W line) and south of Rondout (on the MD-N line), coordination between CP and Metra would be inherently less efficient and more difficult than coordination between different sets of CP dispatchers who bring a broader network perspective to their decision-making. *See, e.g.*, Walker R.V.S., at ¶ 76 (illustrating how dividing dispatching between Metra and CP would curtail efficiency). Efficiently dispatching these lines requires awareness in real time of conditions on other part of

---



373 *See* Metra R&Os (attached as Exhibit 53) at 8 ("Metra operates dozens of passenger trains on MD-W and MD-N. None of Metra's inbound trains operate scheduled service for over seven hours between 9:45 pm and 4:52 am during the week, and none of its outbound trains operate scheduled service for over six hours between 12:05 am and 6:21 am during the week."); *see also* Walker R.V.S., at ¶ 65.

374 Godfrey Dep. Tr. at 83:25-84:21; 122:2-23.

the network well beyond Metra's operational boundaries including not only CPs own lines as far away as Kansas City and St. Paul, MN, and the inner workings of CP's important Bensenville Yard, but also lines controlled by UP, IHB, BRC and others. *See* Walker R.V.S., at ¶ 72. CP dispatchers have the experience, knowledge, and situational-awareness necessary to coordinate with the rest of the CP network and to juggle these moving pieces. Metra dispatchers almost certainly would not. Walker R.V.S., at ¶¶ 73-82.

Mr. Walker's Figure 13 illustrates how the different perspectives of CP and Metra's dispatchers would handicap efficient operation of the MD-W and MD-N lines. Metra's perspective would be focused on Metra's own lines and operations, and thereby sub-optimize the movement of all trains across the network. This would yield a greater potential to disruption to freight and passenger operations in the Chicago terminal, and beyond.

FIGURE 22[375]
DIFFERENT PERSPECTIVES OF CP AND METRA DISPATCHERS

375 Walker R.V.S., at ¶ 73.

In his Reply Verified Statement, Mr. Walker walks through three examples to illustrate how Metra control of dispatching likely would undermine the goal of both CP and Metra in the efficient co-existence of freight and passenger operations on the lines we share.[376] Each example clearly shows how the complexities of dispatching freight and passenger operations on the MD-W and MD-N Lines require intense coordination between Metra's passenger operations and CP's freight operations – both beyond Metra's lines and within CP's Bensenville Yard. That degree of awareness and coordination would not be possible were operational (*i.e.*, dispatching) responsibility bifurcated in the way Metra desires. Walker R.V.S., at ¶¶ 73-82.

2. Metra's Request to Alter the Compensation Terms of the CP-Metra Agreement Are Overreaching

Metra has tried unsuccessfully before to use the Board's review of a transaction to rewrite contract provisions between it and CP. As the Board has recognized, this is improper.[377] The Board held that using its conditioning power "to compel resolution of potential differences between CP and Metra with respect to . . . compensation matters" is inappropriate and that "given the intimate details involved in . . . capital expenditures, and compensation, commercial negotiation seems to be the better avenue for resolving such issues."[378] Ignoring this precedent, Metra requests several "[f]inancial" conditions to the Transaction, including conditions requiring CP to pay for the full cost of capital projects on the MD-W and MD-N Lines "if increases in its traffic volume, weight, and frequency, as well as the length of trains, is the reason that the capital project is pursued;" a requirement to "compensate Metra for maintenance … by changing CP's

376 *Id.* ¶¶ 75-80.

377 *See CP/DM&E* (Decision No. 11) at 15.

378 *Id.*

maintenance contribution from a flat fee based on train counts and gross ton miles;" and "a change in CP's rental terms from a flat fee to a dollar per car mile."[379] Metra also requests that the Board require CP to "compensate Metra for avoidable delay/interference events" and pay Metra "performance penalties" as well as penalties for non-compliance with any conditions imposed by the Board.[380] In other words, Metra seeks more compensation for the impact of potential increases in freight traffic on these lines than its contract with CP provides.[381]

There is no reason for the Board to depart from its precedent denying Metra's similar attempts to use merger proceedings to alter pre-existing contractual relations and thereby squeeze additional compensation out of CP.[382] As explained above, this Transaction will not adversely impact Metra's operations. The additional gross ton miles that Applicants project are modest, especially given that the nature of increased traffic from the Transaction is heavily intermodal. To the extent Metra is complaining that CP's flat fee should go up as train counts rise, that is not what the contract provides and in any event there will be no increase on the MD-N line and, as already explained, during the 1980s and 1990s, as many if not more trains than the traffic they will see post-Transaction operated on the MD-W line. Gameiro R.V.S. at ¶ 27. In fact, freight trains used to account for a higher share of traffic on the MD-W Line than CP's freight trains

---

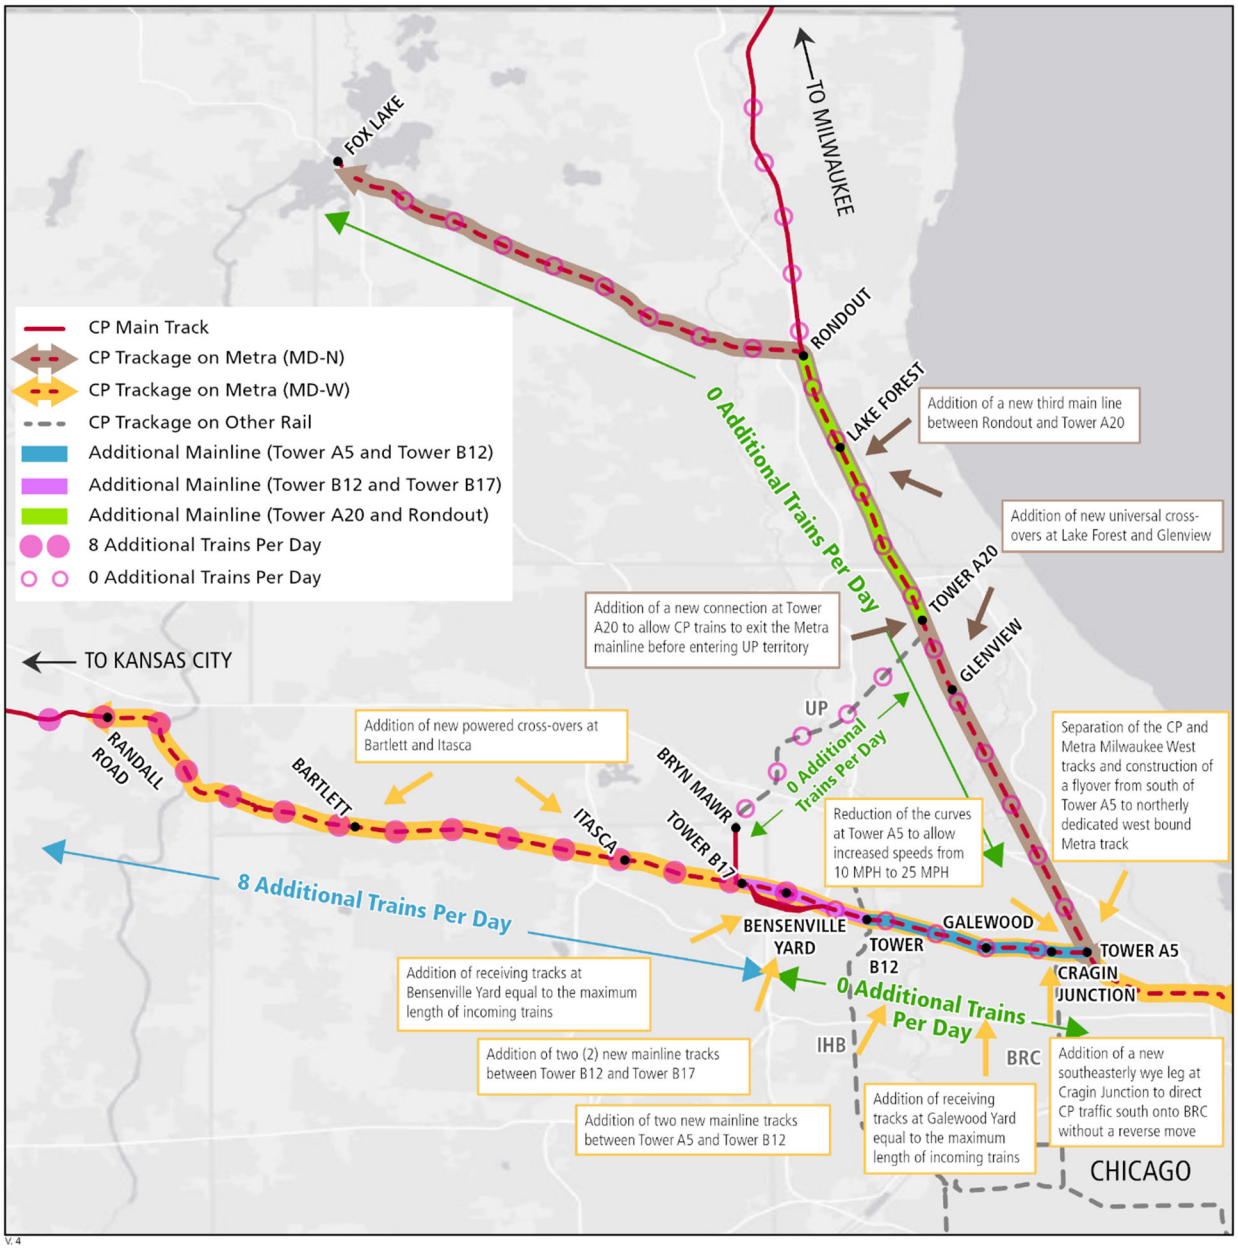
379 METR-7 at 78.

380 *Id.*

381 Metra's suggestion that that it should be excused from contractual terms it no longer likes because it did not negotiate the agreements that pre-dated its acquisition of Milwaukee Road's commuter assets is incorrect. As Gameiro explains in his Reply Verified Statement, Metra understood that it was acquiring those assets subject to the 1985 Trackage Agreement. *See* Gameiro R.V.S. at ¶¶ 12-14. And Metra itself renegotiated the compensation terms governing CP's uses of Metra-owned line in 2003. *Id.* at ¶ 15.

382 *See CP/DM&E* (Decision No. 11) at 15.

will account for post-Transaction because the number of Metra passenger trains have increased significantly as well.



Metra's other request that the Board require CP to indemnify Metra for additional charges imposed by Amtrak for delays caused by CP dispatching is without merit and unrelated to the Transaction.[383] Of the lines CP and Metra share, Amtrak trains only operate on the MD-N Line. The Transaction will have no impact on CP's operations there, nor will it increase the number beyond Amtrak's already pre-existing plans.

3. Demands for Hundreds of Millions in New Infrastructure Are Either Wildly Overreaching or Already in Progress

Metra requests that Applicants be required to make 11 separate capital improvements to the MD-W and MD-N Lines, as detailed in Figure 23 below. As Mr. Elphick explains these projects would come at the prohibitive cost of over $1 billion. *See* Elphick, App. A.

[383] METR-7 at 79.

FIGURE 23
METRA PROPOSED INFRASTRUCTURE

Nine out of the 11 would improve portions of Metra's network untouched by Transaction-related train count changes namely on Metra's MD-N line, on its MD-W line from Tower A-5 to Tower B-12 (east of Bensenville yard), or at Tower A-5 on the MD-W line. Elphick RVS, at ¶ 59. None of these projects are needed to mitigate Transaction impact.

As further explained by Mr. Elphick, at least four of Metra's requested conditions are physically feasible. *See* Elphick R.V.S. It is not possible to add a new wye leg at Cragin Junction to direct CP traffic south onto BRC without a reverse move because there are a number of warehouses and other buildings and businesses in the way. Nor is it possible to construct a new third mainline track from Rondout to Tower A-20 because this would require adding 12 miles of new track, which could not be added without rebuilding four Metra stations and four grade separations. And adding a new dedicated double track alongside Metra's existing double track is not only unnecessary – especially east of Bensenville where CREATE Project work has already invested in making this segment triple – but also simply impossible east of Tower B-17 because of the Illinois Tollway, UP trackage, and O'Hare Airport. *Id.*

Some of Metra's handful of remaining requests involve locations where Applicants are already planning infrastructure expansion. Specifically, Metra's request that CP be required to construct receiving tracks equal to the length of incoming trains or equal to the maximum length possible at Bensenville Yard[384] is already being addressed through Applicants' planned reconfiguration of Bensenville Yard. Elphick R.V.S., at ¶ 62.

4. Metra's Request For a Binding Standard and Process For Schedule Changes and New Trains Improperly Seeks to Improve Its Contractual Rights

Metra's request for a condition imposing a process and substantive standard for proposed changes or additions to Metra's passenger schedules is both inappropriate and unnecessary. First, as shown above, Metra's concerns in this area are entirely derivative of its own re-Transaction dissatisfaction with CP's response to two proposals in 2019 that involved the MD-N

[384] METR-7 at 70.

Line, where the Transaction will have no effect. As to the MD-W line, where CPKC does anticipate a handful of new freight trains, there will be no impact on Metra's ability to add trains during its peak windows without the need for CPKC consent. Nor will there be any change in CP's contractual obligation to consider in good faith any scheduling changes or additions Metra might propose outside those peak windows, and to not to withhold consent unreasonably. Metra's requests are thus The requested condition would also be thus at odds with longstanding agreements governing CP and Metra's relationships for adding new trains or changing schedules. As explained above, the contracts set capacity-allocation rules based on two windows—peak periods and non-peak periods. Gameiro R.V.S., at ¶ 21.

Second, and just as important, Metra's proposed condition is also unnecessary because Applicants are committing that to engage with Metra in a collaborative assessments of proposed operational changes during the off-peak periods when Metra requires CP consent to adjust its schedules. Creel R.V.S. at ¶ 16. Against this backdrop, a condition would be unnecessary even if it were supported by Transaction-related harm.

Third, Metra's related request that CPKC be required to adopt Metra's RTC modeling or cooperate in refining RTC modeling for Metra's lines in order to objectively gauge capacity and assess the impact of future proposals is similarly unnecessary and would be inappropriate to impose as a condition. As shown above, CP has already performed extensive work correcting the make errors in RTC modeling. If during the collaborative process of addressing potential future schedule changes CPKC and Metra were to conclude that it would be productive to revisit that RTC modeling work, or develop new RTC simulations, to address the issues at hand, CPKC would be supportive. But RTC modeling is expensive and burdensome and likely would not be

necessary in every case, such that a condition giving Metra the right to demand such modeling in all circumstances would be inappropriate.

5. Metra's Requested Oversight Conditions Are Inappropriate and Unnecessary

Finally, Metra proposes two unnecessary oversight conditions. First, Metra asks that the Board "[i]mpose a 10-year STB oversight condition of CP dispatching practices . . . , including requirement agreement between Metra and CP to binding workable dispatching standards that do not interfere with Metra's service and that prioritize Metra's peak period service."[385] Second, Metra asks that the Board "[i]mpose a 10-year STB oversight condition of any other conditions imposed with respect to Metra's service."[386]

Applicants have assented to a five-year period of formal Board oversight, which is at the outer limit of what has been required in any major merger case. That period will be ample to ensure appropriate scrutiny of the (non-existent) impacts of Transaction-related changes on Metra. Again, the Transaction will not adversely affect Metra's commuter service, and conditions to address issues unrelated to the Transaction are inappropriate. *See supra* Part VII.B. Metra and CP already have an operating agreement governing issues like supposed "interference" by CP with Metra trains, and the Board oversight process would not be a suitable forum for revising the parties' contract rights or litigating noncompliance with that agreement. *See supra* Part VII.B, D.2.

Further, such drastic relief would be an unnecessary waste of Board resources. Metra has all the information it needs about CP's operations on Metra's lines to raise any contractual issues

---

385 METR-7 at 71.

386 *Id.*

with the appropriate court. But more importantly, Applicants commit to close collaboration with Metra about evolving train service on their lines as Applicants implement the Transaction, and to work with Metra to mitigate material impacts of the Transaction on Metra's passenger service in the unlikely event any occur. *See infra* Part VII.E.; Creel R.V.S. 16.

VIII. OTHER DEMANDS BY CLASS 1 RAILROADS FOR PROTECTION AND OTHER RELIEF SHOULD BE REJECTED

A. The Board Should Reject CN's Proposed "Inconsistent" Purchase of CPKC's Springfield/East St. Louis Line

The Responsive Application filed by Canadian National ("CN") seeking an order requiring the divestiture of KCS's lines between Kansas City and Springfield, IL and East St. Louis, IL (the "Springfield/St. Louis Line"),[387] is yet another attempt by CN to disrupt and delay this Transaction and undermine CPKC's future competition against CN. After failing to generate sufficient revenue to justify continued operation, CN's predecessor sold off the Springfield/St. Louis Line years ago when it was near death.[388] KCS later acquired the line as part of the

[387] CN defines the Springfield/St. Louis Line as consisting of the following KCS lines: (1) The line from milepost ("MP") 192.4 at Cockrell (Springfield), IL through MP 482.0 at Rock Creek Jct. (Kansas City), MO (milepost equation at Murrayville, IL where MP 221.7=MP 226.7); (2) The line from MP 68.2 at Roodhouse, IL (MP 237.2 on the first segment) through MP 287.2 at Church (East St. Louis), IL, including KCS's interest in the UP/KCS Joint Facility between Godfrey, IL and Church, IL (milepost equation at Godfrey, IL where MP 28.0=MP 252.1); (3) The Jacksonville Branch from MP 226.7 at Murrayville, IL to MP 216.3 at Jacksonville, IL; (4) KCS's interest as lessor in the Fulton Branch from MP 0.0 to MP 3.0 at Mexico, MO, leased to Ozark Valley Railroad, Inc. CN-14 at 6.

[388] Illinois Central Gulf (ICG) sold the line to Chicago, Missouri & Western (CM&W), which went bankrupt within about a year. Gateway Western Railway Company (GWWR) was formed to acquire, and did acquire, from the CM&W bankruptcy trustee at the end of 1989 the line from Godfrey to Roodhouse, IL and from Cockrell, IL to Kansas City, MO, and a 50% ownership interest in a pair of largely parallel lines between Godfrey and East St. Louis. GWWR subsequently formed a subsidiary, Gateway Eastern Railway Company (GWER) that acquired from Conrail an approximately 13-mile segment of the parallel tracks that CM&W had not owned.

Gateway Western Railroad and invested heavily in it over the years, making it an integral and important part of the KCS system.[389]

In 2022, CN tried and failed to buy all the assets of KCS. Seeking another chance to acquire KCS assets, and motivated to undermine the intensified competition that CPKC will bring, CN is now pursuing this portion of KCS's system. When it withdrew its own Notice of Intent to acquire all of KCS (following KCS's decision to accept CP's bid and the Board's decision rejecting CN's proposed use of a voting trust), CN indicated that it would be an active participant in this proceeding. CN now seeks a Board order forcing KCS to sell a substantial part of its network to CN notwithstanding that it failed to persuade KCS's board of directors to enter into a transaction with CN.

CN's gambit should be rejected outright for at least five reasons:

- It is a transparent effort to delay, disrupt, or dismember the procompetitive CP/KCS Transaction;
- It is unsupported by any predicate harm to competition arising from the CP/KS Transaction;
- It would significantly harm the public interest by blocking the public benefits of the CPKCS Transaction and even depriving existing KCS shippers of single-line routes from which they have benefitted for years;
- It is unnecessary to achieve the posited "competitive enhancements" that CN suggests are its motivation for the relief it seeks; and

[389] KCS acquired control of GWWR in 1997, and GWWR was merged into KCSR in 2001, with GWER being a subsidiary of KCSR. Naatz R.V.S at ¶ 92.

- It is procedurally improper, in that divestitures are strongly-disfavored extraordinary remedies, and a divestiture specifically to CN would not be the only – or even a desirable – way of remedying the harm CN alleges *even if* CN's claimed harm (which is non-existent in fact) were accepted.

We address each of these issues in the sections that follow.

1. CN's Gambit Is Yet Another Round in CN's Effort to Disrupt or Delay the CP/KCS Transaction

CN has long sought to ensure that any transaction involving KCS would be to CN's benefit, and simultaneously to prevent its rival CP from becoming a stronger competitor. Documents produced in discovery in this case reveal that {{[redacted]}}[390] {{[redacted]}} KCS announced its agreement to be acquired by CP, CN's first step was to try to persuade the Board to impose the more-onerous 2001 merger rules to CP's proposal.[391] The Board rejected that position in Decision No. 4.

CN's next step was to put forward its own bid to acquire KCS out from under CP. Almost four months later, after the Board rejected a voting trust proposed by CN, KCS announced that its Board of Directors had unanimously determined that its acquisition by CP was a superior proposal to the proposal made by CN, and CN abandoned its effort.[392] CN's internal

---

390 {{[redacted].}}

391 Canadian National Railway Company's Objection to 49 C.F.R. 1180.0(b) Waiver (CN-1) (filed Apr. 1, 2021) at 2-3.

392 "Kansas City Southern Terminates Canadian National Railway Merger Agreement and Is Entering Into Merger Agreement with Canadian Pacific Railway," Kansas City Southern (Sept. 12, 2021), https://investors.kcsouthern.com/news-releases/2021/09-15-2021-134522975.

documents obtained in discovery show that one of CN's motivations for seeking to acquire KCS was {{ }}. A key presentation addressing {{ }}[393] In the same vein, CN's {{ }}[394]

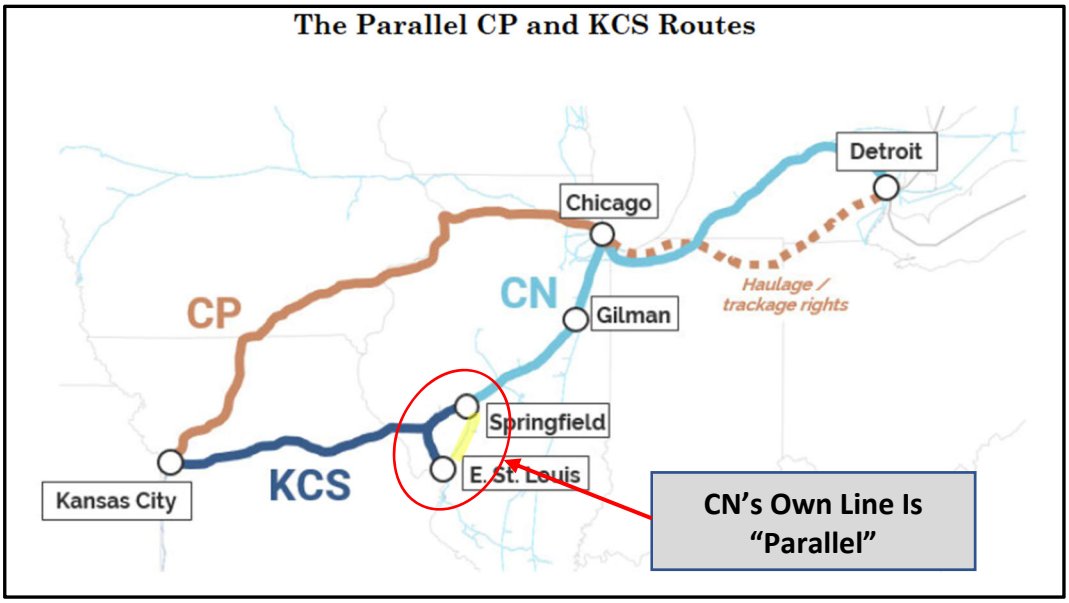
At that point, CN announced that it intended to remain an "active participant" in this proceeding,[395] and it doubled down on its efforts to delay or disrupt the completion of the CP/KCS Transaction. CN's strategy was plainly motivated by a judgement that even if it cannot own KCS and thereby keep KCS out of the hands of its arch-rival, it can at least delay and impose costs on CP's completion of the transaction.

---

[393] CN0000187, {{ }} (emphasis added). The same presentation noted that {{ }}

[394] CN0000049-HC, { }. Similarly, {{ }}

[395] *Canadian National Railway Company, Grand Trunk Corporation, and CN's Rail Operating Subsidiaries – Control – Kansas City Southern, The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company* ("*CN/KCS*"), FD 36514, CN Letter to the Honorable Cynthia T. Brown (CN-28), (filed Sept. 16, 2021) (Vol. 3, Exhibit 57) at 2 ("CN will participate actively in [the CP-KCS] proceeding…").



CN's Responsive Application is the pinnacle of this strategy, seeking an order from the Board compelling KCS to sell part of its network to CN notwithstanding the failure of CN's proposed bid to acquire all of KCS. If successful, this gambit would achieve two things for CN: it would deprive CPKC and the public of important public benefits, and diminish CPKC's ability to compete more effectively against CN, and it would give CN a windfall untethered to any Transaction-related harm. When CN evaluated its options in March 2021 in light of the CP/KCS announcement, one of the options it considered {{[redacted]}}[396] CN's goals here are not aligned with the public interest.

2. There Is No Competitive Harm to Address

The sole predicate offered by CN for its proposed relief is the thesis – based entirely on a simplistic map – that KCS's Springfield/St. Louis Line is "parallel" to CP's Kansas City-Chicago Line. This map is the centerpiece of CN's Responsive Application, and we reproduce it below.

[396] CN0000187-HC, [redacted]}}.

FIGURE 24[397]
CN'S "PARALLEL ROUTES" MAP

One take-away from this map is that, were CN correct that mere "parallelism" sufficed to warrant the extraordinary remedy of divestiture, CN's own proposal would be disqualified. As we have highlighted in yellow on CN's map, CN is proposing to acquire a KCS line (between Springfield and East St. Louis) that is *parallel to CN's own lines between those two endpoint*s.

A set of route diagrams prepared by CN for its "Connected Continent" website makes this parallelism unmistakable, as shown in Figure 25 below.[398]

---

397 CN-14 at 10.

398 Other CN internal documents {{ }} (Vol. 3, Exh. 57). The CN and KCS Springfield-St. Louis routes fit this description precisely. {{ }} CN0000137, {{ }}

FIGURE 25[399]
CN AND KCS'S PARALLELISM EXTENDS TO THE SPRINGFIELD-EAST ST. LOUIS SEGMENT

Mere parallelism is not sufficient predicate for divestiture (or any other) relief. Under the Board' precedents, the Board must first find that the Transaction would cause some substantial competitive harm that the proposed relief would narrowly remedy.[400] CN does not even try to make a serious showing of any such harm. The sum total of its argument is that:

- Shippers *at some points in time* over the past 100 years "have moved freight" between Kansas City and Chicago over the Springfield Line,[401] and
- Referring to *CN's own proposal to acquire KCS*, that "[p]rior to agreeing to a merger with CP, KCS expressed interest in, and touted the benefits of, investing to increase track speeds on this line to create a "Kansas City Speedway."[402]

CN's factual assertions are the furthest cry from a demonstration of any competitive issue warranting a remedy. CN's own candid confidential communications with shippers give away the ghost: writing to one major customer in December 2021, CN explains: {{

399 Excerpt from CN0000147-HC, at 2 (Vol. 3, Exhibit 59).

400 *See* UP/SP, 1 S.T.B. at 433-34 (refusing to "impose conditions that will restructure the competitive balance among railroads with unpredictable effects, which is what divestiture to KCS or Conrail would result in here," when "divestiture would be greatly inferior to the remedy we have chosen.").

401 CN-14 at 10-11.

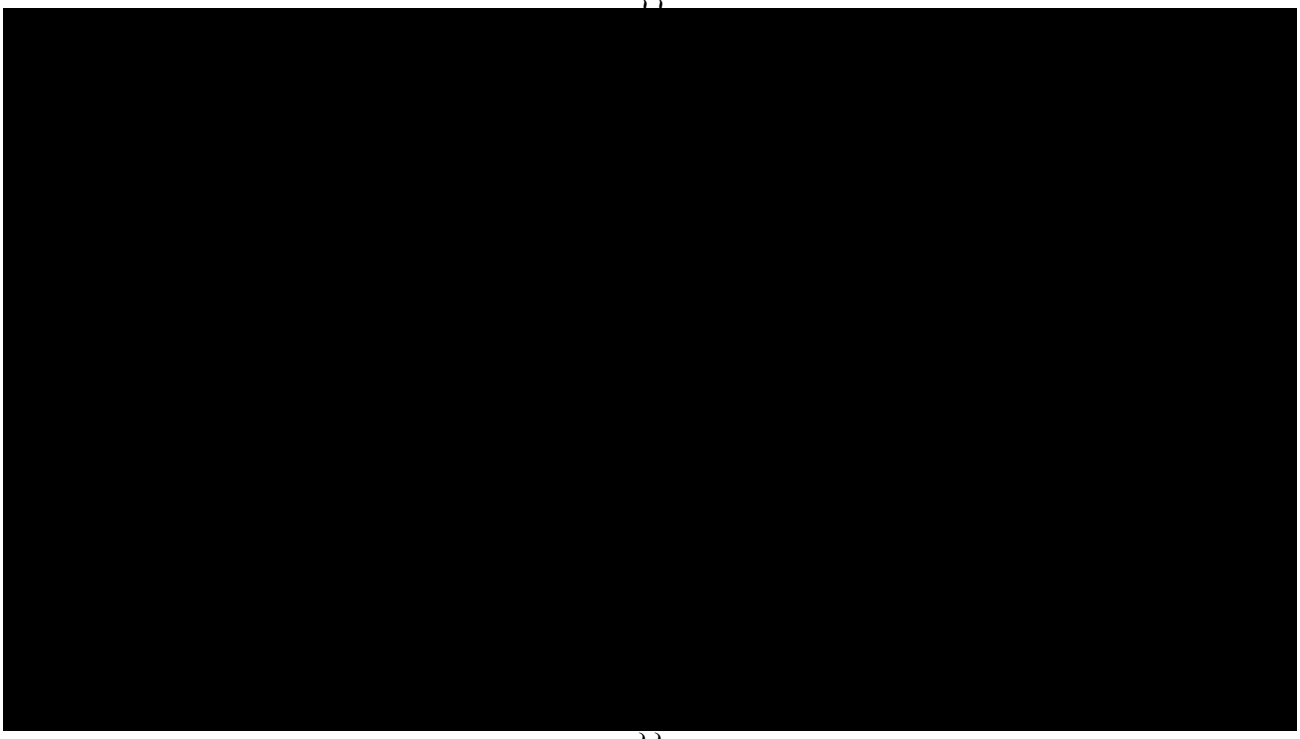
402 *Id.* at 11.

[redacted]}}[403]

Aware that the facts (which we discuss further below) conclusively disprove any contention that the KCS-CN route via Springfield plays a meaningful competitive role in the transportation marketplace, CN shifts gears and argues that there would be what CN calls a "significant competitive concern" "[e]ven if there were *no traffic being moved* between Kansas City and Chicago today over the Springfield Line." CN-18 at 12 (emphasis added). Why is this? Because, CN contends, "KCS previously touted the potential for this line to be upgraded to create a Kansas City Speedway." CN-18 at 12. The sole source of that "potential," however, was *CN's own proposal* to acquire KCS. CN's argument about competition thus boils down to a desire to bootstrap its own failed effort to buy KCS into support for a renewed effort to buy part of KCS. The Board should not condone this.

The incontrovertible facts show that the supposed "KCS-Springfield-CN" route plays no role at all – much less a meaningful one – in the transportation marketplace. As KCS's CEO and Chief Marketing Officers explain, the history of KCS-CN interline traffic via the interchange at Springfield shows that there is no realistic prospect of this route becoming the robust competitive option that CN describes for traffic moving between Kansas City and Chicago and beyond. The Line is a key part of the KCS network, servicing traffic to/from on-line shippers and the East St. Louis gateway, but is not part of a "speedway" in competition with the four other single-line routes between Kansas City and Chicago. Ottensmeyer R.V.S. at ¶ 12; Naatz R.V.S. at {[redacted] 94.

---



[403] CN0000185-HC, {{[redacted]}} (emphasis added) (Vol. 3, Exhibit 60).

First and foremost, traffic data shows that the route is not a material competitive option. Brown and Zebrowski examine traffic data in the carload waybill sample and CN's and KCS's 100% traffic tapes, which demonstrate that there has been essentially zero interchange between KCS and CN at Springfield in recent years, and even less traffic via that route in lanes that include the Kansas City-Chicago corridor. The principal corridors in which – according to CN's hypothesis – the Springfield route could conceivably be an option are shown in Figure 26 below.[404] The shares of traffic moved by various routes are represented in different colors, with traffic using the CP-Springfield-Kansas City route shown in red. As can be seen by the almost complete absence of red, that route is not a meaningful, competitive option chosen by any shippers. Brown/Zebrowski R.V.S. at ¶ 93:

[404] The major corridors include Kansas City-Chicago, Mexico/Border Crossing-Chicago, Kansas City-Detroit, Mexico/Border Crossing-Detroit, Kansas City-Toronto, Mexico/Border Crossing-Toronto. Brown/Zebrowski R.V.S. at Figure 12.

FIGURE 26[405]
2015-2019 WAYBILL DATA SHOWS DE MINIMUS CP-KCS PARTICIPATION VIA SPRINGFIELD IN KANSAS CITY-CHICAGO LANES

{{

}}

Further, as Naatz explains, even these de minimus traffic figures overstate the role of the Springfield route. Much of the traffic waybilled as moving via Springfield is in fact physically interchanged between KCS and CN at East St. Louis. Naatz R.V.S. at 91. And that traffic is not using the KCS-CN route for overhead movement between Kansas City and Chicago; this is primarily local traffic moving to and from on-line KCS and CN shippers. *Id*.

This is not to say that KCS's Springfield/St. Louis line is moribund, it is not. It is just that it primarily services local traffic and overhead traffic to/from the East St. Louis gateway, *not* traffic moving in the Kansas City-Chicago corridor via Springfield. This is shown in Figure 27 below. Brown/Zebrowski RVS at ¶ 93:

CN's own traffic analyst – Hunt – confirms the trivial importance of the Springfield interchange between KCS and CN. His analysis assigned "impedances" to various routes reflecting the degree to which a given route is viewed by shippers as a viable option. To illustrate how impedances work, he gave as an example his assessment of the CN-KCS route via Springfield. His conclusion was that this route should be assigned the highest possible impedance – with interchange being treated as the equivalent of 650 extra route miles, meaning that it was a highly disfavored route. This assessment was driven by the fact that "CN and KCS have low interchange volumes at Springfield/Cockrell," amounting to "< 2 loaded units/day." Hunt's graphic is reproduced below as Figure 28.

406 *See* Brown/Zebrowski R.V.S. at ¶ 97.

FIGURE 28[407]
CN'S ANALYSIS CONFIRMS IRRELEVANCE OF CN-KCS SPRINGFIELD ROUTE

Exhibit C-2: Defining the network-based scenarios

Post-Merger Network
Illustrative – does not show all railroads included in model

Pre and Post-Acquisition Network Scenarios

- **Pre-Acquisition**: CN and KCS have low interchange volumes at Springfield/Cockrell in the 2019 base year, therefore the impedance is set to 650 miles.
- **Post-Acquisition**: the Springfield line is considered part of CN, and there is a zero interchange impedance for CN to move traffic over this line to any location, including Kansas City and St. Louis.
- **Other Interchanges**: all other interchange locations between railroads are retained at the impedances reflecting 2019 base year interchange volumes. This has the effect of keeping the gateway open and operating as it did in 2019.
- **Example**: moving from Detroit to Kansas City on CN-KCS through Springfield has an impedance of 1404 (754 miles + 650 jct imp) pre-acquisition, and 754 (754 miles + 0 jct imp) post-acquisition

Exhibit C-3: Junction impedances are set based on historical volumes from waybill data

2019 Interchange Volume	Junction Impedance	Notes
Same Family	0	No impedance at the interchange
< 730	650	< 2 loaded units/day

The corridor CN gives the most attention to in its Comments is the route between Kansas City and Toronto, where CN claims that the Springfield Line would provide a competitive alternative to CP. Based on traffic data, however, it is clear than the Springfield Line plays *literally zero* competitive role in the lane today. CN participated in meaningful volumes of traffic in the Kansas City-Toronto corridor in 2019, *but with BNSF and UP and never with KCS,* as shown in Table 3 below.

407 CN-14, Hunt V.S. at 38.

TABLE 3[408]

KANSAS CITY AND TORONTO IN 2019 {{

}}

CN's assertions about the potential future competitive role of the Springfield line also ignore the significant disincentives KCS and CN have as separate companies in making investments in this route because there is already strong, single-line competition in the corridor. BNSF, UP, NS, and CP already have single-line routes between Kanas City and Chicago, and NS has a straight-arrow single-line route between Kansas City and Detroit, where it provides premium intermodal service today. Any effort to pull the KCS-CN route out of the weeds would have to confront this competitive environment.

A look at the ICCs decision in the *UP/MKT* case, decided under the pre-2001 merger rules, is instructive.[409] In that case, parties sought trackage rights—a far less intrusive and destructive condition than divestiture—based on an alleged reduction in competition in several corridors. The ICC rejected the relief, despite the "parallelism" of the merging parties routes. It "examine[d] carefully the competitive options that would remain in these corridors after a UP-MKT merger" and concluded that "rail competition will remain effective in the post-merger environment. Post-merger, four railroads (ATSF, BN, KCS, and SP) will continue to compete with the merged carrier. The particular array of competitors varies to a certain extent, corridor to

---

408 Brown/Zebrowski R.V.S. at Exhibit 2.

409 UP-MKT, Finance Docket 30800, 4 I.C.C. 2d 409, 437 (1998).

corridor (this is considered more fully in our examination of the several corridors), but one basic fact remains constant: in each of the corridors in which MKT operates today, there will be effective post-merger rail competition. The four competitive railroads—ATSF, BN, KCS, and SP—will be able to compete, as they do now, for commodity flows moving in the corridors in which they operate." *Id.* at 436, 449.

Even if the Board were to imagine a competitively vibrant KCS-CN Springfield route which does not currently exist (and likely will never exist), it would still have to conclude that there is no competitive harm in the Kansas City to Chicago corridor where four effective competitors are already present. The same was true in *UP-MKT* for the Dallas to Chicago corridor:

> "In the Dallas—Chicago corridor, four railroads—BN, ATSF, KCS, and SP—will compete with the merged carrier in either single-line service (BN and ATSF) or joint-line service (KCS and SP). The mileages involved, at least for three of these competitors, are similar: 988 miles for UP/MKT; 1,028 miles for BN; 1,088 miles for ATSF; and 1,026 miles for the SP-CMW interline. Here, again, although the merged carrier will have the shortest route, the mileage discrepancies are insignificant in relation to the overall mileage and would not impede BN, ATSF, and SP in their Dallas—Chicago operations."

Id. at 451. Just as the Board found adequate competition in *UP-MKT*, here it should find that the competition provided by UP, BNSF, and NS between Kansas City and Chicago is more than adequate.

Second, a compelling reflection of the unimportance of KCS-Springfield-CN interline routes is the fact that just three years ago CN sought to *shut down interchange at Springfield entirely*. In July 2019, Rhonda Anderson, CN's Director-Service Design, wrote to Michael Wilkinson, KCS's Superintendent-Service Design, asking KCS to close the Springfield gateway. CN's reasoning: "[v]olumes are small and from what I can see, neither of us is doing a bang up

job of pulling. From our perspective, East St Louis looks like the best alternative gateway."[410] This is not the proposal of a railroad that regards the Springfield gateway as offering a viable competitive alternative for Chicago-Kansas City traffic flows.

Third, other CN documents consistently confirm CN's view that KCS's Kansas City-Springfield line is not part of a competitively viable through route *to anywhere*. For example:

- In the presentation CN prepared for delivery to ratings agencies in connection with its own proposal to acquire KCS in 2021 it CN described KCS's Springfield Line as a {{[redacted]}}[411]
- The slide deck that CN has used to persuade third parties to support the divestiture to CN of KCS's Springfield Line touts (as reproduced in Figure 29 below) that the proposed Springfield route {{[redacted]}}[412]

FIGURE 29
KCS-SPRINGFIELD-CHICAGO ROUTE {{ }} {{

}

- As recently as this year, CN's internal documents relating to its proposed divestiture emphasis that there is no viable route between CN's network and Kansas City today, with one email acknowledging that {{ }}[413]
- Other CN documents recount CN's aim to {{ }} confirming that there is no viable interline route providing that access today.[414]

[413] CN0000783-HC, {{ }} (Vol. 3, Exhibit 63).

[414] CN0000708-HC, { }} (Vol. Exhibit 64).

In 1998, KCS and CN entered into a 15-year marketing alliance the goal of which was to pursue interline traffic opportunities via the gateways where CN and KCS connected, including Jackson, MS and Springfield, IL.[415] When it was announced, CN and KCS explained that "[t]he marketing alliance will offer shippers pro-competitive connections to new rail routes for their products and the ability to tap new markets through a coordinated rail network. Services will link points in Canada with the major U.S. Midwest markets of Detroit, Chicago, Kansas City and St. Louis, along with the key Southern markets of Memphis, Tenn., Dallas and Houston."[416] To implement the Alliance, KCS sought to improve its physical interchange with CN at Springfield by seeking in the *CN/IC* case terminal trackage rights over a UP line in Springfield, but that effort was denied by the Board.[417]

Despite the CN/IC/KCS Alliance's ambitious goals, it failed to generate meaningful business opportunities over the Springfield gateway. CN made no serious efforts to develop interline traffic via Springfield. Naatz R.V.S. at ¶ 99 CN tended to prefer its long-haul via the Jackson gateway, and there was no meaningful customer demand for routings via Springfield. Naatz R.V.S. at 98. The end of the marketing alliance in 2013 did not change CN's lack of interest in developing traffic over the Springfield/St. Louis Line, and in 2019, CN tried to close the interchange permanently. Naatz R.V.S. at ¶ 98-99.

---

415 *CN/IC*,4 S.T.B. at 135 n.50 ("The Alliance will use two main gateways for interchange: Springfield, IL, for traffic moving between CN territory or northern IC territory, on the one hand, and, on the other, Midwest KCS territory.").

416 "Canadian Natl, Illinois Central, KCSR In Shipping Central," Bloomberg (Apr. 16, 1998), https://www.bloomberg.com/press-releases/1998-04-16/canadian-natl-illinois-central-kcsr-in-shipping-alliance.

417 *CN/IC*, 4 S.T.B. at 175 ("Applicants have not shown, nor do they even allege, anticompetitive conduct by UP or any other carrier at the Springfield interchange. Accordingly, the application in Sub-No.1 for terminal trackage rights will be denied.").

CN's internal documents confirm the competitive futility of this interline route, in part as a result of CN's own lack of interest. For example:

- An internal CN email from 2013 provides some insight into why CN had so little interest in traffic via Springfield: {{ }}[418]
- In March 2013, CN analyzed "potential traffic via Springfield" and concluded that "we are [] left with very little traffic that could switch over CN via Springfield…[v]ery little compared to the potential that originates on CN with the other carriers, although [*sic*] was quite small from CN as well."[419]
- In the same document, CN's former CEO Ruest noted, {{ }}[420]

418 *See* CN0000415-HC (Vol. 3, Exhibit 65).

419 CN0001255-HC (Vol. 3, Exhibit 66)

420 *Id.*

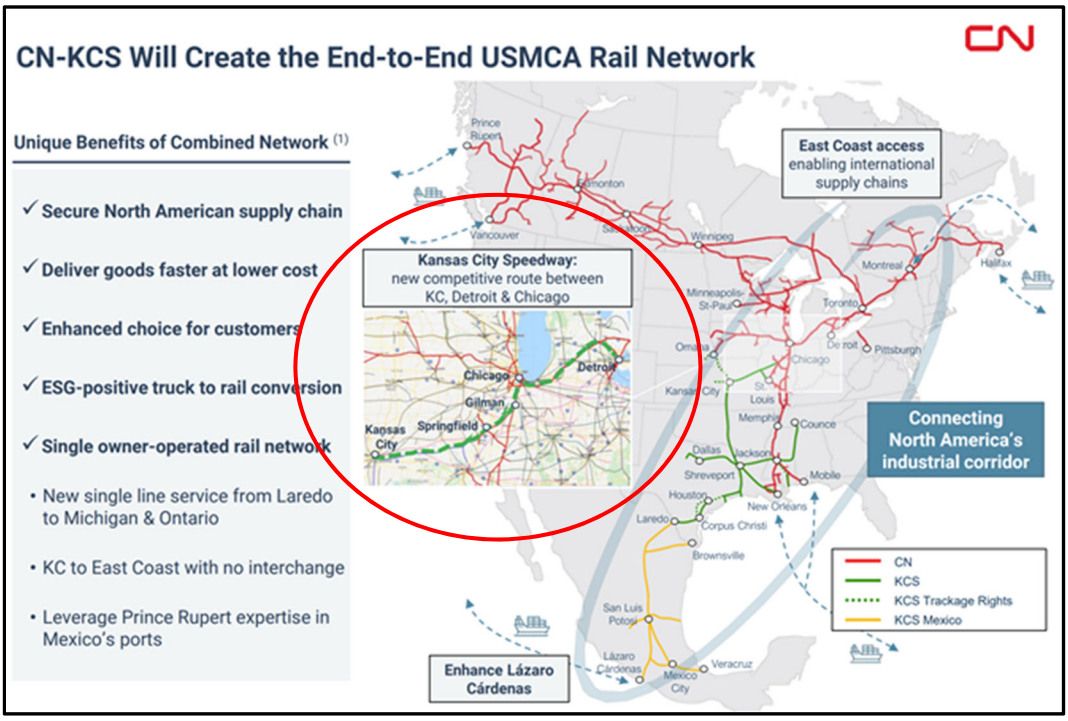
- {{[redacted]}}[421]

In light of its own decision to {{[redacted]}} it is a stunning display of hubris for CN to come before this Board to argue that allowing CP to acquire this line as part of the integrated KCS network would cause "significant competitive harm."

Fourth, CN confirmed again that KCS's Springfield line plays no viable competitive role in the pre-Transaction Kansas City-Chicago transportation marketplace when it represented to the Board (and investors) that the transformation of the line would be one of the important public benefits of CN's own proposed acquisition of KCS. CN consistently embraced the application of the 2001 merger rules to its KCS acquisition[422], and as CN knows, one of the precepts of those rules is that a benefit is not cognizable if it can be achieved without a full-blown merger.[423] By claiming that the CN/KCS transaction would create a "new" competitive option between Kansas City and Chicago, CN was thus acknowledging that no such option would emerge absent the CN acquisition.

CN made this claim consistently and repeatedly to investors and the Board, For example:

---



421 CN0000187-HC, {{[redacted]}}.

422 Finance Docket No. 36514, CN-14 KCS-1 at 2.

423 "In addition, when evaluating the public interest, the Board will consider whether the benefits claimed by applicants could be realized by means other than the proposed consolidation." 49 C.F.R. § 1180.1(C).

- In April 2021, CN touted to investors that the "Kansas City Speedway" –CN's moniker for its plan to invest in the KCS-CN route from Kansas City to Chicago via Springfield – would provide "new" competition between Kansas City, Detroit and Chicago, as shown in the slide replicated below.[424]

FIGURE 30[425]
CN INVESTOR PRESENTATION TOUTING SPRINGFIELD AS "NEW" COMPETITIVE OPTION

- In CN's application for a voting trust in Finance Docket No. 36514, CN touted the same alleged benefit. CN's then-CEO Jean-Jacques Ruest characterized the "Kansas City Speedway" as the "*new competitive route* between KC, Detroit & Chicago," and presented a map showing KCS's Kansas City-Springfield Line as

424 CN investor deck (April 2021), "CN-KCS Will Create the End-to-End USMCA Rail Network" at Slide 9 (Vol. 3, Exh. 67).

425 *Id.* (Vol. 3, Exhibit 67).

an important part of that "new competitive route."[426] Ruest went on to explain that CN would need to make "infrastructure investments in key areas across the new network, including Illinois, Missouri, Michigan, Louisiana, and Texas, [including] investments in the route between Kansas City, Missouri and Springfield, Illinois," which CN asserted were themselves merger benefits that would be unattainable otherwise.[427]

- In July 2021, CN reiterated that CN's planned "'Kansas City Speedway' … between Kansas City, Springfield, Gilman, Chicago, and Detroit" would be "*a new high-quality line* that will create faster, safer and more economical rail option. [sic]." It would "be the connection between the KCS and CN networks to offer *a new competitive alternative* to compete with trucks for traffic moving from Mexico, through the U.S. heartland to Canada."[428]
- In the same pleading, CN witness William Rennicke explained how the Kansas City Speedway would be a merger benefit: "The Meridian Speedway operated by KCS and NS provides an efficient route for traffic moving between points in Mexico and Texas served by KCS and points in the Southeast served by NS via a connection at Meridian, MS. CN and KCS have committed, as part of the proposed merger, to creating a similar 'Kansas City Speedway' linking points in Kansas, Missouri, and Illinois served by KCS with points in Indiana, Ohio, and

428 *CN/KCS,* Finance Docket No. 36514, CN-26 KCS-9, Reply Verified Statement of Jean-Jacques Ruest ("Ruest R.V.S.") at 3 (filed July 6, 2021) (emphasis added).

> Pennsylvania served by NS and CSX. This *new, more efficient route* will enhance competition in this corridor and provide better options for shippers."[429]

CN's representations to the Board about the benefits of a CN/KCS transaction – made against the backdrop of their recognition that benefits are not cognizable if achievable absent the proposed transaction – make overwhelmingly clear that CN understood that the so-called Springfield Speedway (or more prosaically the joint-line KCS-CN route via Springfield) would not be a competitively viable option without the CN/KCS transaction.

3. Any Divestiture of the Springfield/East St. Louis Line Would Harm the Public Interest, Not Enhance It

Absent any predicate harm to competition, CN is left with the argument that its proposed use of KCS's Springfield Line would provide more benefits than allowing the line to stay part of the CPKC network. In substance, CN's argument is that its proposal would "enhance competition."[430] CN is wrong on two important counts: the law and the facts.

CN is wrong on the law.

The Board's rules and precedents provide the Board with no authority to attach to proposed transactions whatever bells and whistles some party may contend would "enhance" the public interest. A transaction as proposed either is or is not in the public interest. If it would cause some public interest harms, the Board may impose conditions aimed narrowly as overcoming those harms. But it has no authority to use a proposed transaction as free pass to

---

[429] *Id.*; Reply Verified Statement of William Rennicke ("Rennicke R.V.S.") at 49 (emphasis added).

[430] CN's Responsive Application is unabashed about this: "CN is committed to making substantial investments" to "upgrade" the Springfield/St. Louis line "into a faster, more efficient route with enhanced intermodal and automotive traffic capacity." CN-14 at 3-4.

engage in whatever "industry restructuring" might be viewed as desirable. The Board's pre-2001 precedents quite definitively rule this out:

> "[W]e will not impose public interest conditions on a railroad consolidation *unless* we find that the consolidation may produce effects harmful to the public interest (such as a significant reduction of competition in an affected market), that the conditions to be imposed will ameliorate or eliminate the harmful effects, that the conditions will be operationally feasible, and that the conditions will produce public benefits (through reduction or elimination of the possible harm) outweighing any reduction to the public benefits produced by the merger. We are also disinclined to impose conditions that would *broadly restructure the competitive balance among railroads with unpredictable effects*."[431]

> "A condition must address an effect of the transaction, and will generally not be imposed 'to ameliorate longstanding problems which were not created by the merger.' Finally, a condition should also be tailored to remedy adverse effects of a transaction, and should not be designed simply to put its proponent in a better position than it occupied before the consolidation."[432]

CN plainly desires a do-over of the Board's decision that the pre-2001 rules apply to this proceeding so that it can try to foist upon Applicants CN's proposed "enhancement" to competition. But even under the 2001 rules, applicants' obligation to demonstrate that their "proposed transaction would enhance competition" applies only where "necessary to offset negative effects of the transaction, such as competitive harm."[433] No matter what rules are applicable here, absent such harm, there is no basis for CN's proposed divestiture.

Recently, the Board was asked by DOJ to consider a divestiture of Pan Am Southern lines in connection with CSX's acquisition of Pan Am Railways. The Board declined in words

---

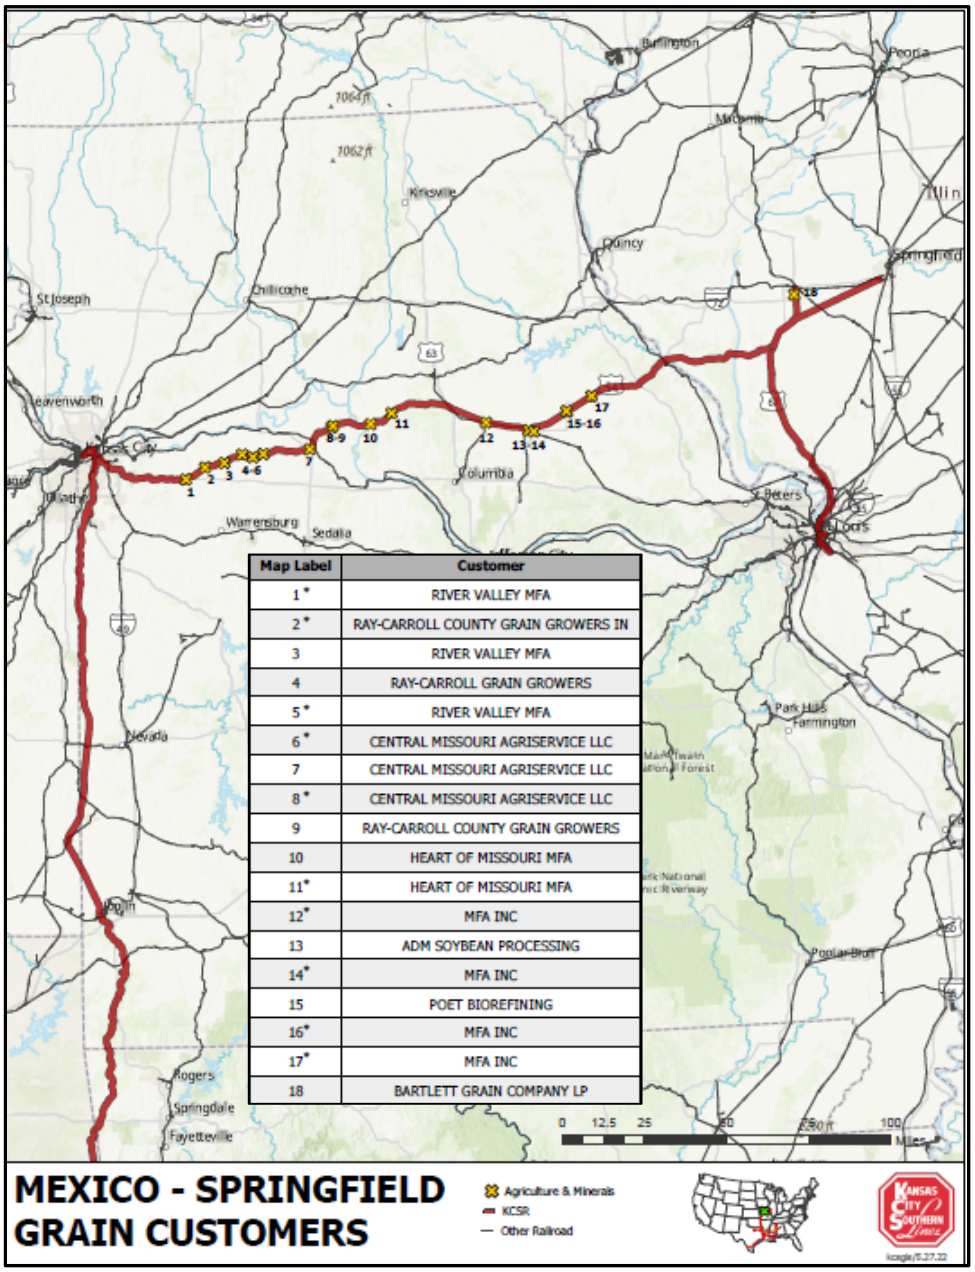
431 *Union Pacific Corp., et al. – Control – Missouri-Kansas-Texas R.R. Co., et al.*, 4 I.C.C.2d 409, 452-458 (1988) ("*UP/MKT*") (emphasis added).

432 *CN/IC*, 4 S.T.B. at 141-42.

433 *Major Rail Consolidation Procedures,* EP 582 Final Rules; *see also* Press Release dated June 11, 2001, Surface Transportation Board Issues New Rules Governing Major Railroad Mergers & Consolidations at 1, available at https://www.stb.gov/wp-content/uploads/archived-press-release/htmls/72AC2E784AE07A3485256A680050E630.html.

equally applicable here: "In rejecting divestiture here, the Board also notes that it closely scrutinizes conditions that could alter the competitive balance otherwise to be realized from a merger, including whether those conditions could have unpredictable effects. *UP/SP*, 1 S.T.B. at 418; *see also UP/MP/WP*, 366 I.C.C. at 564 (finding the agency "should not use our conditioning powers to make consolidation proceedings vehicles for rail system restructuring.") *CSX/Pan Am* at 21 n.46.

CN is wrong on the facts.



The facts demonstrate that CN's proposed divestiture would not be an "enhancement." It is a Transaction-killer – a "dagger aimed into the vital organs of the CP/KCS Transaction," as Brooks describes it. Brooks R.V.S. at 48. A forced divestiture of the Kansas City-Springfield/St. Louis Line would significantly undermine the public benefits of the proposed Transaction and also cause serious harm to existing KCS customers on the line.

A Divestiture Would Sever Existing KCS Customers From the Rest of KCS's Network. First, a divestiture of the line, even with the haulage rights that CN proposes to grant back to CPKC, would cause immediate *harm to existing KCS shippers*, which today benefit from KCS's single-line network access to markets in Mexico and elsewhere that would be severed were CN to take over the Springfield/St. Louis Line.

Numerous on-line KCS customers ship to and from parts of the KCS network that would be severed from the Springfield/St. Louis line were the Board to order a divestiture of that line. Focusing just on shippers with significant traffic to and from Mexico via KCS's existing single-line routes reveals the extensive web of existing shipping patterns that would be disrupted by CN's proposed relief. As Naatz and many of these customers explain in detail, they would be

harmed by a divestiture, deprived of the single line service that they have benefitted from and that undergirded significant investments they have made in their facilities.

434 Naatz R.V.S. at Exhibit 10.

Neither single-line access to the CN system nor the haulage rights CN proposes to grant back to CPKC would avoid this harm. CN does not reach the Mexican markets to which many of KCS's on-line customers ship, and haulage rights for CPKC would not be a substitute for the single-line services to which these shippers have been accustomed. Naatz R.V.S. at {107.

The haulage rights that CN proposes to grant would convert what are efficient single-line movements on KCS's network today into more complicated and less efficient multi-carrier shipments. CN would control all aspects of the on-the-ground service to on-line shippers, with KCS merely receiving cars and delivering cars at Kansas City via a new operational interchange there. KCS would not be able to customize service to these shippers, and would be entirely dependent on CN's performance. But with only a short haul to Kansas City, and an interest in undermining CPKC's competitiveness, CN would not be highly motivated to perform well.

KCS's experience with CN-provided haulage supports these concerns. KCS is currently dependent on haulage rights over CN to reach the port of Mobile, AL (via CN haulage between Jackson, MS and Hattiesburg MS). CN chooses, for its own operational convenience, to route Mobile-bound cars received from KCS at Jackson north to Memphis, and then back south to Mobile, taking these cars many hundreds of miles out of route and diminishing the competitiveness of KCS's service. Elphick/Orr R.V.S. at ¶ 103.

KCS's customers on this line speak very clearly to these concerns. KCS's largest single customer – Bartlett Grain – filed comments expressly opposing CN's proposed relief on this ground, explaining that "we do not want our Mexican investments stranded by a CN takeover of the KCS line that serves our Jacksonville facility, which would deprive us of the single-line service on KCS that we benefit from today."[435] Bartlett made major investments at its facility in

[435] Knief V.S. at 2.

Jacksonville, MO based on its expectation that KCS would be able to provide single-line access to Mexico, and it "does not want to jeopardize its substantial investments in delivering grain to the Mexican market."[436] Haulage rights with operations controlled by CN and a newly-created handoff to CPKC at Kansas City will not protect Bartlett's interest. Naatz R.V.S. at {107.

Other customers are similarly vocal. Central Missouri Agri-Service ("CMA"), with facilities at Marshall, Missouri expresses acute concern about a divestiture, which would undermine the "economics of our single-line hauls with KCS to serve customers to the south and west."[437] CMA explains that it is "concerned that haulage is not a real solution to allow us to continue to efficiently move our grain to our customers. Added interchanges between CN to CPKC would not be as efficient as our single-line haul on the KCS system."[438] Ray Carroll, another significant KCS grain customer, likewise explains that "[t]he markets that we serve are Mexico and other points reached via KCS's line via Kansas City to the west of our facility…If the line were divested to CN, we believe that the options for our grain would be constrained," and "Haulage, which would require CN to take our railcars towards Kansas City for interchange to CPKC, is a much less efficient process than what we have today with single-line service from KCS."[439] Another major grain shipper, Richardson International, recognizes that CN has asked the Board to "grant[] haulage operating rights back to KCS" but nonetheless "oppose[s] Canadian National's request that the Board divest the Springfield/St. Louis Line to it because it

439 Ray Carroll R.V.S. (Vol. II, Ex. Y) at 2.

would eliminate single-line service – both on routes that currently exist and routes that will become available as a result of the CP-KCS Transaction – that are important to us."[440]

CPKC Will Not Downgrade the Springfield-St. Louis Line. Second, contrary to CN's unfounded allegations,[441] the Springfield/St. Louis Line will be an integral and vital part of the CPKC network. It will not be "downgraded." Instead, it will help drive meaningful Transaction-related synergies and will continue to support organic traffic growth by on-line customers. It will also provide CPKC with access to the important East St. Louis gateways, where CPKC will be looking to grow traffic with CSX and other connections. And it will provide CPKS with access to important shortline connections capable of expanding customer routing options and extending the reach of the CPKC network.

Naatz and Brooks describe in detail the role this line will play as part of the CPKC network. Naatz R.V.S. at {¶¶92-94; Brooks R.V.S. at {¶¶ 49-54. A few highlights:

- As set forth in the Amended Operating Plan, Applicants anticipate that the line will see *increased traffic* as part of the CPKC system, some from organic growth independent of the Transaction, and some from the new traffic opportunities unlocked by the Transaction. Table 4 below shows the percentage increases in traffic for these line segments. These are relatively light-density segments and they will remain so, but Applicants anticipate continued traffic growth on them. They will not be downgraded.

---

440 Richardson International R.V.S. (Vol. II, Ex. Z at 1).

441 *See* CN-14 at 2-3 (alleging that "the CP-KCS Application makes clear that CP will favor its existing Chicago-Kansas City route over potential routings involving the parallel Springfield Line").

TABLE 4[442]
TRANSACTION-RELATED CHANGES ON KANSAS CITY-SPRINGFIELD/ST. LOUIS SEGMENTS

Segment No.	Segment	Base mGTs	Organic Growth Increase in mGTs	Transaction-Related Increase in mGTs	Overall Percentage Increase in mGTs
Kansas City-St. Louis Segments					
119	Kansas City-Slater, MO	6.17	1.26	0.80	33.2%
120	Slater, MO-Mexico, MO	4.28	0.85	0.56	32.9%
121	Mexico, MO-Roodhouse, MO	4.02	0.79	0.52	32.6%
126	Roodhouse, MO-Godfrey, IL	1.05	0.21	0.18	37.1%
127	Godfrey, IL-East St. Louis, IL	6.84	1.37	1.18	37.3%
Roodhouse-Springfield Segments					
122	Roodhouse, MO-Murrayville, IL	1.00	0.20	0.00	20.0%
123	Murrayville, IL-Springfield, IL	0.17	0.04	0.00	23.5%
125	Murrayville, IL-Jacksonville, IL	1.33	0.25	0.00	18.8%

- KCS serves dozens of important customers on the Springfield/St. Louis Line that generate significant volumes of traffic, and CPKC will be eager to retain that traffic and improve the service these shippers receive. Naatz R.V.S. at {¶ 92.
- The strategic importance of the Springfield/St. Louis line as part of the CPKC network transcends its current traffic levels. The line will provide CPKC with its only access to the St. Louis gateway and important markets in the St. Louis area. Applicants see significant potential to attract new traffic to the CPKC network by linking the CP network to St. Louis, as Brooks explains. Brooks R.V.S. at {¶ 51.
- In addition, this line will provide strategic opportunities for CPKC, working with smaller railroads, to develop new routing options for shippers, such as a potential

442 Amended Operating Plan, Appendix T, pages 7, 11.

route lining CP's network with Springfield via a "shortcut" route over IAIS and other shortlines via Davenport and Peoria. Brooks R.V.S. at {¶ 57.

A Divestiture Would Undermine Transaction Benefits. Third, as a direct corollary to the importance of this line in the future CPKC system, CN's proposed divestiture would significantly undermine the benefits generated by the proposed CP/KCS Transaction. Those impacts will have at least three key dimensions: (a) precluding CPKC from offering new single-line services connecting CP territory with both shippers on the line and the St. Louis gateway; (b) depriving CPKC of full access to KCS's important International Freight Gateway terminal near Kansas City, in which CN would acquire a half interest; and (c) targeting other CPKC traffic moving between Kansas City and Chicago, potentially depriving CPKC of the density needed to support the efficient new services that the Transaction would otherwise unlock.

A divestiture would prevent CPKC from realizing the Transaction's promise to expand shippers' access to new markets :

- It would extinguish the Transaction's new single-line routes between points on the CP network in the Upper Midwest and Canada and shippers on KCS's Springfield's Louis line. As Brooks explains, CPKC will deliver better, single-line service to shippers on the Springfield/St. Louis line, generating traffic growth across numerous commodities including grains and fertilizers.
- Numerous shippers served by this line have expressed interest and excitement in these new services, with many planning to make significant investments in order to take advantage of improved access to market that the Transaction will generate. KCS customer Ray Carroll, for example, anticipates "making new investments in this corridor in the foreseeable future" because the Transaction "will open new

business opportunities for us."[443] Other important customers in the St. Louis area see similar benefits. Richardson International, a grain shipper with facilities across Canada and the Upper Midwest, "recently acquired St. Louis-based Italgrani USA, Inc." and "[t]he transaction assets included a milling facility in St. Louis."[444] Richardson "has reviewed the CP-KCS Transaction and believes it opens new markets to our company."[445]

CN's proposed operations would not be restricted to trackage it would acquire from Applicants. CN would operate its trains into and out of CPKC's Joint Agency in Kansas City, over CPKC's mainline between Kansas City and the IFG intermodal facility 24 miles south of Kansas City, where other shippers express worries about increased train traffic interfering with their service. As Elphick and Orr explain, these operations would unnecessarily complicate rail operations in and around the Kansas City terminal, degrading the efficiency of CPKC's operations and potentially coming at a cost to the service levels that CPKC can provide to its shippers. Elphick/Orr R.V.S. at ¶¶ 104-105.

CN's demand to acquire 50% ownership of KCS's International Freight Gateway terminal near Kansas City would also interfere with the procompetitive potential of the CP/KCS Transaction.[446]

- CN half-ownership of the IFG facility would inevitably interfere with CPKC's ability to use that facility to support the new intermodal services that CPKC will

---

444 Richardson R.V.S. (Vol II, Ex. Z at 1).

445 *Id.*

446 CN-14 at 5.

be introducing in North-South lanes via Kansas City. Elphick/Orr R.V.S. at ¶¶ 104-105.

- In addition, the IFG facility offers extraordinary opportunities for CPKC to support the development of innovative new services, such as cold storage warehousing, seasonal transloading of fertilizer, and many other potential market-expanding opportunities, all of which would be jeopardized by CN's half-ownership of this facility. Brooks R.V.S. at ¶ 61.

CN's proposed divestiture of the Springfield/St. Louis Line also would threaten CPKC's planned investments in its core North-South corridor. Although CN's rhetoric implies that it would be targeting truck traffic that would stay on the highways unless CN is allowed to buy this line, in actuality CN's ambitions are far broader. CN witness Hunt makes clear that CN is not just thinking about taking truck off the highway. More than a third of the new traffic CN claims it will attract will be diverted from other railroads. CN-14, Hunt V.S. at Exhibit 3-3. The testimony of CN marketing personnel supporting the Responsive Application express exuberance about going after whatever traffic might be available, and the traffic diversion estimates of CN's witnesses are by no means limited to truck diversions. Were CN to acquire the Springfield/St. Louis Line, it would be targeting traffic opportunities between Kansas City and Chicago that CPKC will also be seeking to serve via CP's routes north of Kansas City – essentially turning KCS's own past investments in the Springfield Line against CPKC's future success. The result could well undermine CPKC's incentives and ability to build density north of Kansas City and make the investments necessary to drive the service improvements that Applicants contemplate. At the very least, a transfer of this line to CN would amount to an industry restructuring with unpredictable consequences for the future of the rail network.

4. If CN Is Right About the "Truck Diversion" Potential of Joint Investments in the Springfield Line, a Divestiture Would Not Be Necessary to Achieve It

As noted, the centerpiece of CN's case for its proposed divestiture is a claimed "enhancement" to competition that will take thousands of trucks off the highway and generate hundreds of millions of railroad revenues that would otherwise lie dormant despite there *already* being four single-line routes to Chicago from Kansas City: BNSF's, UP's, NS's, and CPKC's. A CN "Springfield Speedway" would be the fifth entry into this lane.

Applicants do not regard CN's assessment of the future potential of the so-called Springfield Speedway as credible. As Brown and Zebrowski explain, the traffic diversion analysis of CN's witnesses is riddled with errors (Brown/Zebrowski R.V.S. at {¶ 66), and as explained by Mutén, CN's estimate of truck diversions is particularly flawed. Reply Verified Statement of Bengt Mutén ("Mutén R.V.S.") at {¶¶ 8-9, 16. The lack of credibility inherent in CN's forecasts is strongly undergirded by the futile experience of KCS in seeking to develop interline traffic opportunities with CN over Springfield, as we discuss above and Naatz explains. *See* Naatz R.V.S. at {¶¶ 98-99.

There are extensive and credible reasons for the Board to doubt CN's estimates of potential truck traffic diversions, as Mutén summarizes:

- Many of CN's posited truck diversions are movements from St. Louis to points north and east, but CN already serves St. Louis (illustrating again the competitive reductions associated with a CN purchase), and CN would improve its route from St. Louis to Chicago by only about 50 miles, a trivial distance in railroad intermodal terms. Mutén R.V.S. at {¶ 17 .

- Many of CN's posited truck diversions make no sense form the standpoint of shipper economics, as they would require extensive truck drays in the opposite direction from the route of travel, sacrificing reliability for marginal-at-best improvements in cost. Mutén R.V.S. at {¶¶ 14-15.

The unreliability of CN's truck-to-rail diversion estimates is corroborated by its sloppy and unreliable analysis of the potential for other rail traffic to divert to the new CN routes via Springfield. Brown and Zebrowski examine CN's analysis of rail traffic shifts and conclude that they are badly flawed and unreliable. For example:

- Fully a third of Hunt's rail-to-rail diversions involve intermodal traffic already moving between Kansas City and Chicago or between Kansas City and Detroit via single-line rail routes. A majority of those diversions involved shifts of traffic away from NS traffic between Kansas City and Detroit to the new CN route. As Brown and Zebrowski explain these NS movements involve NS's specialized Triple Crown RoadRailer service between Kansas City, and it is simply not plausible that CN would have any chance of attracting nearly as much of this traffic as Hunt forecasts. Brown/Zebrowski R.V.S. at ¶ 72.
- Another significant portion of Hunt's forecasted new traffic involved CN achieving a marginal improvement in its route between Chicago and St. Louis by using the parallel KC route between Springfield and East St. Louis. As Brown and Zebrowski explain, however, Hunt {"does not calculate diversions associated with the effect of this route improvement, but instead calculates diversions based on the notion that the transaction would convert an *interline CN to* a single-line route via Springfield." *See* Brown/Zebrowski RVS at ¶ 74. The fact that CN

already has a single-line route to St. Louis blows these estimates out of the water. *See id.*

- For this and other traffic that Hunt forecasts for diversion to CN's supposed new route, he used random and unreliable diversion percentages. As explained by Brown and Zebrowski, Hunt "estimates on models that use coefficients that are statistically insignificant and produce diversion percentages that contradict real-world expectations (for example, by diverting more traffic as relative route length becomes longer)." Brown/Zebrowski R.V.S. at ¶ 67.

Brown and Zebrowski catalog many other errors in CN's estimates of the traffic likely to be prompted by a divestiture to CN of the KCS's Springfield/St. Louis line.

At bottom, however, the Board need not adjudicate the precise amount of traffic that a divestiture of the Springfield/St. Louis line would shift to CN. First, there is simply no basis for any relief involving that line, no matter how much potential it would have under CN ownership, because as part of the future CPKC network there will be no reduction in competition whatsoever, and no public interest harms to remedy. Instead, the Springfield/St. Louis Line will be an integral part of the procompetitive benefits generated by the CP/KCS Transaction. As such whether or not CN's acquisition of the Springfield/St. Louis line would enable new services that take trucks of the highways is irrelevant, as the line is not for sale.

Second, if it turns out that CN is right about the truck diversion potential of the Springfield/St. Louis Line, CPKC will have strong incentives to cooperate with CN to achieve that potential. As Creel explains, and as he has told CN's CEO directly, he would not hesitate to set aside any bitterness between CP and CN to {consider a joint investment with CN in the corridor were there potential to take 80,000-plus trucks off the highways and participate in nearly

a billion dollars of new rail freight revenues. A divestiture of the Springfield/St. Louis Line is not remotely necessary to unlock this potential, nor is it in any meaningful respects a real one. {Creel R.V.S. at {23. That cooperation could take many forms, including a joint venture, haulage rights for certain traffic, or trackage rights for a discrete train pair. All of those solutions can be pursued by private parties without the need for a divestiture.

5. Were the Board to Conclude that a Remedy is Required, It Should Not Order a Sale of the Line, Much Less Specify CN as the Buyer

Even were the Board to conclude that there was sufficient potential for significant competitive harm to warrant a remedy – though such a conclusion would be devoid of evidentiary support – the proper procedural path *would not* be to order a divestiture, much less one specifying CN as the only permissible purchaser.

Under Board precedent, divestiture is an extreme and disfavored remedy, especially when alternatives short of divestiture would suffice (such as limited purpose overhead trackage where some subset of traffic would lose an existing competitive option). Divestiture is fundamentally disruptive, and is "to be imposed only under extreme conditions, when no other less intrusive remedy would suffice."[447] In its decision in *UP/SP*, the Board gave detailed consideration to whether a divestiture of SP liner should be ordered and, rejected that remedy despite the need in that case for some remedy to prevent the elimination of head-to-head competition between UP and SP.[448] The Board concluded that, "while divestiture of certain of applicants' lines may have a surface appeal, it also entails its own very substantial problems[.]"[449] A divestiture would (1) "add an additional railroad, reducing volume efficiencies, despite the fact that the merger as

---

447 *UP/SP*, 1 S.T.B. at 434.

448 *Id.* at 433-435.

449 *Id.* at 433.

conditioned will not result in competitive harm," (2) "transfer large volumes of business at exclusively served points to the acquirer, without any competitive justification," and also (3)"take the railroad system backwards by destroying, rather than creating, single-line service. Many shippers who would have received new single-line service, or who would see existing single line service eliminated, would no longer share in the merger's benefits."[450] The same is true here. Furthermore, here, even if there was any justifications at all for giving railroad rights between Kansas City and Springfield – which there is not – such a remedy would not necessitate giving anyone rights between Roodhouse and St. Louis, much less severing any of these lines from the future CPKC system in a forced sale.

Finally, were the Board to conclude that divestiture was the only option – despite its adverse consequences for on-line shippers and the CP/KCS Transaction – the proper path would not be to order a sale to CN specifically, much less on the specific terms CN has put forward. Board precedent instead would entitle Applicants to take the initiative in finding a suitable acquirer – subject of course to the need for Board approval of any sale transaction (as required by the terms of the Voting Trust Agreement).[451] Indeed, there are reasons to think that CN would be a uniquely poor choice of acquirer, given that it already reaches St. Louis and would compete with CPKC for traffic between there and Canada and the Upper Midwest. A divestiture to CN would itself involve a combination of "parallel lines" in both a narrow sense (*i.e.*, CN's line between Springfield and St. Louis with KCS's "parallel" line between Springfield and St.

---

450 *Id.* at 435.

451 *See RGI/Soo,* 4 I.C.C.2d 834, 837 (1988) *("*We said in our divestiture order in Finance Docket No. 30400, *Santa Fe Southern Pacific Corp. -Control-SPT Co*., 3 I.C.C.2d 926 (1987), (SPSF II) that we would not direct a sale to any particular buyer as long as a proposal is in the public interest and constitutes a valid divestiture"); *see also Santa Fe Southern Pacific Corp. – Control – Southern Pacific Transportation Co.*, 2 I.C.C. 709, 834-35, 852 (1986).

Louis) and a broader competitive sense (restricting CPKC's future head-to-head competition with CN for East St. Louis traffic).

B. NS's Requested Relief Is Based on a Misreading of the Operating Plan and Would Inappropriately Alter Pre-Existing Contractual Rights to NS's Commercial Advantage

NS's Amended Comments and Request for Conditions ("NS-12") and its accompanying Amended Responsive Application ("NS-13") describe a purported solution in search of a problem. NS's stated problem – speculative worries about the Transaction impacting service to NS intermodal traffic moving on the KCS line between Shreveport, Louisiana and Wylie, Texas, and at KCS's Wylie Intermodal Terminal near Dallas – is nonexistent, as NS's own internal documents {{[redacted]}} concede. And NS's proffered solution – re-writing the terms of the contractual arrangements entered into between NS and KCS when the Meridian Speedway joint venture was formed – is unwarranted and overreaching.[452] The Board should deny NS's requests.[453] [454]

---

[452] Specifically, NS opportunistically asks the Board to "[g]rant NS contingent trackage rights for intermodal traffic, the rail movement of which originates or terminates at the Wylie Intermodal Terminal, over the Shreveport-Wylie Section, exercisable in the event that NS elects to purchase the Wylie Intermodal Terminal and CPKC fails to meet established service standards for haulage service for NS intermodal shippers." NS-12 at 8 (emphasis in original).

[453] One of NS's requests seeks conditions to keep Meridian and other gateways open on commercially reasonable terms. *See* NS-12 at 42-46. To the extent there is traffic today moving via interchange points between KCS and NS (or CP and NS) for which the Transaction would give CPKC a longer or single-line haul, Applicants' gateway conditions will apply and there is no need for further relief. In addition, as discussed below, NS has ample contractual protections with respect to traffic that uses the Meridian Speedway.

[454] Applicants note that, despite having served the vast majority of their discovery requests upon NS over three months ago between Feb. 28, 2022 and March 31, 2022, NS untimely produced over 15,000 pages of documents on July 5, 2022, just seven days before Applicants' response to all Comments and Responsive Applications was due. This left Applicants little to no time to review NS's production before the July 12, 2022 deadline and Applicants therefore reserve the right to supplement the record.

In short, NS seeks to use the Board to renegotiate a commercial arrangement to receive expanded rights for which it did not bargain or pay for when it entered into the Meridian Speedway deal with KCS. NS and KCS engaged in extensive negotiations and entered into voluminous, detailed documentation of their agreements regarding the Meridian Speedway and related segments (collectively, the "MSLLC Agreements"). *See* Simmons R.V.S. at ¶¶ 61, 69. NS's rights under those agreements include: a revenue split for certain traffic moving over the Meridian Speedway, trackage rights over certain segments, and haulage rights for other segments.[455] They also include the rights to certain, limited remedies in the event of service failures (as described in those agreements).[456] NS and its customers receive, and will continue to receive, the benefits of that bargain because they are unchanged by this Transaction. There is no harm to remedy: the Transaction does not change anything, much less in an anticompetitive way.

As we demonstrate in this section, (1) NS's fears of service decline due to projected traffic changes are unfounded; (2) granting NS's request would be operationally disruptive and counterproductive; and (3) NS's proposed relief would unjustifiably re-write in NS's favor the carefully-negotiated terms of the MSLLC Agreements, giving NS a windfall that it neither negotiated nor paid for when the parties forged their relationship. NS's opportunistic condition requests are particularly egregious given that NS knows full well that the Transaction will cause no cognizable harm. NS's internal documents {{[redacted]

---

455 *See, e.g.*, Limited Liability Company Agreement of Meridian Speedway LLC (Simmons Exh. 13) § 3; NS Joint Use Agreement (Simmons Exh. 10) § 2(a)(ii); Dallas Intermodal Marketing Agreement (Simmons Exh. 10) § 5(a)(i).

456 *See, e.g.*, NS Joint Use Agreement (Simmons Exh. 12), Appendix B, §§ 2, 4; Western Haulage Agreement (Simmons Exh. 11) § 2(c); NS Joint Use Agreement (Simmons Exh. 12) §§ 2(a)(ii); *see also* Simmons R.V.S. at ¶ 69.

[redacted]}}[457] Other internal NS documents {{[redacted]}}[458]

1. CPKC Will Be Highly Motivated to Continue to Reap the Rewards of the Successful MSLLC Joint Venture

NS spends considerable time extolling the success of the Meridian Speedway joint venture in generating traffic growth and attracting rail traffic from the Nation's highways. As NS acknowledges, the MSLLC Agreements governing that joint venture were designed to be "pro-growth, pro-competitive, and allowed shippers to utilize a highly efficient route service" between the growing Southeastern and Southwestern regions of the United States.[459] And there

---

[457] *See, e.g.*, HIGHLY CONFIDENTIAL NS00000001 (Vol. 3, Exh. 70) at -09 (noting that {{[redacted]}}), -10 (noting on a slide titled {[redacted]}), and -16 (noting that {{[redacted]}}).

[458] HIGHLY CONFIDENTIAL NS00000991 (Vol. 3, Exh. 71) at -996 ({{[redacted]}}) and at -1003 (noting under a section titled {{[redacted]}}). Other NS documents {{[redacted]}}. *See* HIGHLY CONFIDENTIAL NS00000018 (Vol. 3, Exh. 72) at -28 (noting that [redacted]}}); HIGHLY CONFIDENTIAL NS00000954 (Vol. 3, Exh. 73) (noting that {{[redacted]}}).

[459] NS-12 at 10; Growth is also inherent in those agreements as they anticipate capacity constraints and the future need for additional capacity. For example, Section 6(b) of the Kansas City Southern Ry. Co. – Meridian Speedway LLC – Joint Use Agreement (Simmons Exh. 16) provides: " . . .the Parties acknowledge that there may be capacity constraints from time to time for traffic covered under this agreement. Whenever capacity of the Subject Trackage is insufficient to handle the total traffic demands of KCSR and NSR, the following capacity allocation rules apply: . . ." Further, Subsection (iii) of that agreement contemplates that that growth could lead to the need for "additional incremental daily overhead train starts." Section 2(a) of The Dallas Terminal Marketing Agreement (Simmons Exh. 10) also provides: " . . . KCSR and NSR shall jointly work to market the movement of Dallas Intermodal Terminal

is no dispute that the joint venture has been successful: NS itself notes that investments to the Meridian Speedway "continue to support NS's ability to deliver the premium service intermodal customers demand and help achieve the public benefits supported by the Board."[460]

As the operator of the Meridian Speedway, KCS has delivered reliable, high-quality service that has supported this traffic growth. Ever since the Major Service Standard Failure provision of the NS Joint Use Agreement took effect, KCS has never even been close to triggering it. *See* Simmons R.V.S. at ¶ 58. And, of course, KCS shares directly in the financial rewards that flow from this success as 70% owner of the MSLLC joint venture and thus is highly incentivized to continue delivering such a high-quality service.[461] As NS notes, CP will "{{ }}" and as a result it too will have a strong incentive to support the continued success of the line from Wylie to Meridian.[462] When Applicants forecast Transaction-related increases in traffic on this route – albeit modest ones – on top of the organic growth that KCS forecasts, they reveal that supporting high-quality service on this route. Neither NS nor the Board has any reason to be concerned that CPKC will be a good steward of service on this route.

2. The Facts Contradict NS's Concerns About Service Impacts

The evidence in the record confirms NS's {{ }}[463]

Traffic on an interline basis with the intent that both Parties can receive greater benefits than handling the traffic over alternate routes. . ."

460 NS-12 at 7.

461 *See* Transaction Agreement (Vol. 3, Exh. 74) §§ 2.1(a) and 3.1(a).

462 *See* supra at n. 458.

463 *See* supra at n. 458, 459.

As a starting point, Applicants' anticipated Transaction-related operational changes on the Meridian Speedway are almost trivial. As set forth very clearly in the Amended Operating Plan, Applicants anticipate that the Transaction will result in very small percentage increases in traffic on the KCS segments between Shreveport and Meridian and *reductions* in the number of trains over the Meridian Speedway, all as reproduced in Table 5 below.[464]

TABLE 5[465]
TRANSACTION-RELATED CHANGES ON WYLIE-MERIDIAN SEGMENTS

Segment No.	Segment	Transaction-Related Train Count Increase	Transaction-Related Percentage Increase in mGTs
138	Wylie-Greenville	1.29	49.9%
139	Greenville-Shreveport	1.28	38.7%
162	Shreveport-Sibley	-1.43	14.4%
163	Sibley-Gibsland	-1.43	14.3%
164	Gibsland-Monroe	-1.43	14.0%
165	Monroe-Vicksburg	-1.43	12.4%
166	Vicksburg-Jackson	-1.43	9.8%
167	Jackson-Newton	-1.43	7.5%
168	Newton-Meridian	-1.43	15.8%

These changes will have no effect whatsoever on the service levels that CPKC will provide for NS intermodal traffic moving on this line. In an effort to concoct a basis for concern where there is none, NS focuses on three phantoms: the claim that CPKC will run too many additional trains on the Wylie-Shreveport segments; the speculation that such trains will be burdened by "[l]arge increases in bulk traffic"; and the observation that CPKC plans to operate

---

464 Applicants' Operating Plan contemplates a reduction in the number of trains over the Meridian Speedway because of operating efficiencies and new train design achieved by Applicants' Optimized Plan. *See* Amended Operating Plan, Appendix H, at 2.

465 *See* Amended Operating Plan, Appendix A at 6-8 and Appendix T, at 10-11. For the second time in this proceeding, NS mischaracterizes Applicants' Operating Plan. NS Exhibit 7 (*see* NS-12 at 22 & n.67) purports to rely on the Amended Operating Plan, Exhibit T, but the figures in NS Exhibit 7 are nowhere to be found there. The precise reason behind NS's miscalculations is unclear, but it appears to involve NS ignoring the effect of organic growth. Regardless, Applicants reiterate that the appropriate way to measure merger-related growth in mGTs is by comparing the "2027 No Merger" and "2027 With Merger" columns in Appendix T; this information is included in the "Merger-Related Growth Percentage" column of Appendix T and reproduced here in Table 5.

certain trains with "mixed" blocks of both NS intermodal traffic and manifest traffic on them.[466] None of these points provides a valid basis for concern.

One extra train per day between Wylie and Shreveport. NS asserts that Applicants anticipate Transaction-related traffic increases averaging "53%" for the Wylie-Shreveport Section.[467] First of all, as explained in the Elphick/Orr R.V.S. Elphick/Orr R.V.S. at ¶ 114. NS is incorrect. Though NS says this figure is derived from Appendix T of Applicants' Amended Operating Plan, the figures that NS quotes in NS Exhibit 7 are nowhere to be found in Appendix T. The correct figure is 44.3%.[468]

In any event, these modest traffic increases will have no impact on the operation of NS intermodal traffic between Wylie (or Shreveport) and Meridian. As NS acknowledges, the Transaction-related traffic growth will not cause a significant increase in the number of trains on the line. NS states that there will be "approximately one net train *pair* per day on the line."[469] But this is double Applicants' actual forecast – of just *one* additional daily train operating over the Wylie-Shreveport Section. Elphick/Orr R.V.S. at ¶ 107. A single additional train will not adversely affect service levels. *Id.* Even with the organic growth in existing traffic volumes that KCS forecasts on this line, the number of additional trains will be *fewer than 1.5 per day*.[470] There is nothing for NS to worry about here.

---

466 NS-12 at 23.

467 NS-12 at 22-23.

468 *See* Amended Operating Plan, Appendix T, at 11, Segments 138 and 139, "Merger Related Growth Percentage" column (showing 49.9% and 38.7% merger-related growth percentages, for an average of 44.5%).

469 NS-12 at 23 (emphasis added).

470 *See* Amended Operating Plan, Appendix T, at 10, Segments 138 and 139 (2027 With Merger compared to Base).

No transaction-related increase in bulk traffic. NS next objects that the Transaction will add bulk traffic, asserting that "[l]arge increases in bulk traffic can strain the current capacity of the Shreveport-Wylie Section and would have adverse impacts on the speed and reliability of intermodal traffic moving over the Meridian-Wylie Route."[471] But NS is incorrect. The Transaction will not increase the volume of bulk traffic on this segment. Elphick/Orr R.V.S. at ¶ 106. Any increase in bulk traffic will be from organic growth, which as NS concedes is not Transaction-related because it "would have occurred in the ordinary course of business absent the CP-KCS Transaction." *See* NS-12 at 22 n.67.

Mixed Trains. NS's expression of concern about the possibility that CPKC will operate certain trains between Wylie and Meridian with blocks of both intermodal and manifest traffic "to the detriment of current shippers" is disingenuous at best.[472] CPKC will apply this practice in order to *increase* train frequency and *improve* service, to the benefit of both NS and intermodal shippers.

Mixing intermodal and manifest traffic on the same train is a well-recognized way to improve railroad operations. Elphick/Orr R.V.S. at ¶ 108. In fact, NS uses the same approach under its recently announced NS ("TOP/SPG") operating plan, and it has previously explained the benefits of the practice, with manifest traffic having no difficulty moving at the higher speeds typical for intermodal trains.[473] *Id.* As explained the Elphick/Orr R.V.S., Applicants' Optimized

---

471 NS-12 at 23.

472 NS-12 at 23; NS's lack of a genuine concern with Applicants' plan to operate mixed trains { [redacted] }

473 *See* "New Norfolk Southern Operating Plan to Blend Traffic and Build Longer Trains," Trains (Feb. 12, 2019), available at https://www.trains.com/trn/news-reviews/news-wire/12-new-norfolk-southern-operating-plan-to-blend-traffic-and-build-longer-trains/ (Vol. 3, Exh. 76).

Plan will alter improve service on the Meridian Speedway by increasing the day-of-week frequency of intermodal service while reducing the overall number of trains by operating intermodal and manifest traffic (in separate blocks) in the same trains. *See* Elphick R.V.S. at ¶¶ 109-112. This will reduce the number of trains operating between Wylie and Meridian, benefit shippers with more frequent service and significantly less dwell, allow for higher velocity, and improve overall transit times and services for the intermodal and manifest traffic moving over that route. *See id*. NS is consequently incorrect that Applicants' plan to utilize mixed trains will increase transit times.[474] Applicants' plan will do precisely the opposite. CP has used this approach efficiently and effectively for years and there is no reason to doubt CPKC will do so effectively for trains between Wylie/Shreveport and Meridian. Elphick/Orr R.V.S. at ¶ 108.

NS expresses a different concern about the length of these mixed trains, suggesting that they will exceed the length of sidings on the Wylie-Meridian route.[475] Again, NS is incorrect, and again its error stems from a basic misunderstanding of Applicants' planned operation. As Elphick and Orr explain, CPKC will not simply tack manifest traffic on the end of existing intermodal trains. Instead it will be increasing the day-of-week frequency of trains and spreading traffic across a greater number of trains (which NS's miscalculations ignored), meaning that there no issue with excessive train length. *See* Elphick/Orr R.V.S. at ¶¶ 108-112.

3. The Wylie Intermodal Terminal Has Ample Capacity to Support Applicants' Projected Traffic Increases

NS expresses a separate concern about the impact of the Transaction on KCS's Wylie Intermodal Terminal, which supports NS intermodal traffic that KCS interchanges with NS at

---

474 NS-12 at 24.

475 NS-12 at 24-25.

Meridian.[476] NS correctly notes that Applicants anticipate increased intermodal volumes at Wylie, as CPKC develops new services between Dallas and Chicago and Lazaro Cardenas and the U.S. Midwest (supporting expanded service to Dallas). In other words, Applicants plan to put the Wylie Intermodal Terminal to more competitive use. But NS is wrong when it asserts that Applicants' planned intermodal services "threaten[]to exceed capacity at the Wylie Intermodal Terminal."[477]

NS's assertion is premised on a faulty, overly-static assessment of the Wylie Intermodal Terminal's capacity. NS claims that "[t]he Wylie Intermodal Terminal has an annual capacity of 342,000 lifts," which is exceeded by the {{ }} lifts needed to accommodate NS intermodal traffic alongside planned CPKC traffic.[478] What NS ignores is the ease with which intermodal terminal capacity can be expanded in a variety of ways short of adding trackage. The throughput of an intermodal terminal does not depend solely on its physical footprint and track length, but on the interplay of a variety of assets and operating practices that contribute to the facility's productivity. To the extent traffic volumes call for more capacity there, CPKC will have ample ability to add it as necessary.

As explained by Elphick and Orr, CPKC's options will include:[479]

- Increasing the number of working track cycles per day from 1.0 to 1.9, a change that would require no capital investment, only minor operating adjustments and increased switching resources. This step would enable the terminal to process

476 *See, e.g.*, NS-12 at 6.

477 *See* NS-12 at 25-27.

478 *See* NS-12 at 7, 26.

479 *See* Elphick/Orr R.V.S. at ¶ 116.

approximately 640,000 annual handlings. This operating adjustment, alone, is more than sufficient to accommodate the {{ }} lifts that NS cites.

- Completing track work – already in advanced planning stages – to add two new pad tracks at the south edge of the property, which would provide capacity for 320,000 additional handlings and, in addition the 640,000 additional handlings made available by increasing work track cycles as explained above, allow the terminal to process approximately 960,000 total handlings per year.
- Investing in additional cranes to increase the pace of container handling. Each additional crane would add capacity for approximately 90,000 annual handlings.
- Implementing planned paving projects, which have already been planned. CPKC could create 285 additional parking stalls (which could also be used for stacking of containers depending on the needs of the operation), supporting approximately 60,000 additional handlings. Another option, which involves creating 1,500 parking stalls in the Northeast corner of the yard, would enable 330,000 additional annual handlings.
- Shifting the destination terminal for intermodal containers moving from Mexico to Central Texas to KCS's lightly-utilized Kendleton Intermodal Facility.

In short, the Wylie Intermodal Terminal will have more than enough capacity to allow CPKC to respond flexibly and effectively to any reasonably foreseeable traffic growth.[480] NS's capacity concerns are unjustified.

---

[480] On top of all the foregoing options, CPKC will also have the ability (assuming NS does not exercise its option to acquire the Wylie Intermodal Terminal) to greatly expand the physical footprint of the Wylie Intermodal Terminal – or build an entirely new facility in the event NS exercises its contractual option to purchase the Wylie Intermodal Terminal – by developing the 220 acres of land that KCS owns

4. NS's Proposed Contingent Trackage Rights Make No Sense as a "Remedy" for Potential Service Concerns

The contingent trackage rights that NS is seeking do not make sense as a remedy for the (non-existent) service concerns that NS raises, and would in fact exacerbate any service concerns that might trigger them.

As noted above, CPKC would continue KCS's practice of handling intermodal traffic moving between Dallas and the NS interchange at Meridian in dedicated intermodal service. *See* Elphick/Orr R.V.S. at ¶ 108-112. In the event of a "Major Service Standard Failure," converting these trains to trackage rights trains will do nothing except require that NS supply its own crews and locomotives at the Wylie Intermodal Terminal. *See* Elphick/Orr R.V.S. at ¶ 118-120. The identity of the locomotive engineer's employer will not "remedy" whatever service issues might have led to a conversion to trackage rights.

Also as noted above, CPKC will also handle some intermodal traffic between Dallas and Meridian in mixed trains, carrying a block of NS intermodal traffic along with other blocks of manifest traffic. Were NS to trigger its contingent trackage rights, doing so would disrupt this operation and add more trains to a line which – in NS's hypothetical – would already be suffering service issues. *See* Elphick/Orr R.V.S. at ¶¶ 118-120. Again, giving the (figurative) keys to the train to an NS engineer instead of a KCS engineer, while forcing CPKC to add an entirely new train for the non-NS traffic, would be counterproductive at best.

Even if the Transaction were to pose a threat to service levels for NS intermodal traffic between Wylie/Shreveport and Meridian (it does not), the NS conditions would not be the proper

---

adjacent to the intermodal yard (outlined in yellow in Figure 21 of the Elphick/Orr R.V.S.). *See* Elphick/Orr R.V.S. at ¶ 117. (If NS does exercise the purchase option, NS would continue to be obligated to support CPKC intermodal services there, and CPKC could also augment its capacity by building its own facility on the adjacent land. *See* Elphick/Orr R.V.S. at ¶ 117).

remedy. Instead, NS's own submission makes clear that NS bargained for the appropriate degree of protection against such a contingency. Between Shreveport and Meridian, where NS invested in the Speedway, NS has the bargained-for protections the MSLLC Agreements. As NS witness Michael R. McClellan acknowledges, NS's pre-existing contingent trackage rights over the Meridian Speedway "protect NS's investment in the Meridian Speedway, kicking in, for example, in the event KCSR degrades service to NS's traffic over the route."[481] On the segment between Wylie and Shreveport, where NS made no such investment, NS did not obtain any similar protection, and it instead is safeguarded by KCS's – and now CPKC's own interest in avoiding any service failure. Simmons RVS at ¶¶ {60-61. All of the concerns that NS outlines in its Comments – no matter how fanciful – are ones that NS consciously contemplated in its negotiations with KCS: the risk that KCS would develop non-intermodal traffic that moves over the Wylie-Meridian route, the potential for future traffic growth on the Meridian Speedway and at KCS's Wylie Intermodal Terminal, the potential need for additional capacity, the possibility of future KCS service failures, and even the possibility of a change in control of KCS. Simmons R.V.S. at ¶ 69.[482] All of these eventualities and more were anticipated and the extensively-negotiated agreements between KCS and NS provide NS with its bargained for (and ample) protection against these risks. *Id.*[483] Given the extensive negotiations between NS and KCS that

---

[481] NS-12, Amended Verified Statement of Michael R. McClellan at 3. In its negotiations with KCS in 2006, NS obtained contingent trackage rights over the Meridian Speedway, which vest upon the occurrence of a Major Service Standard Failure, yet did not obtain a similar provision for KCS's segment from Wylie to Shreveport. *See* NS Joint Use Agreement §§ 2(a)(ii); *see also* Simmons RVS at ¶ 61.

[482] *See, e.g.*, NS Joint Use Agreement (Simmons Exh. 12), Appendix B, §§ 2, 4; Western Haulage Agreement (Simmons Exh. 12) § 2(c); NS Joint Use Agreement (Simmons Exh. 11) §§ 2(a)(ii), 6(b); Limited Liability Company Agreement of Meridian Speedway, LLC (Simmons Exh. 13) § 5.12; Dallas Terminal Marketing Agreement (Simmons Exh. 10) § 4(m).

[483] NS Joint Use Agreement (Simmons Exh. 12), Appendix B, §§ 2, 4; Western Haulage Agreement (Simmons Exh. 12) § 2(c); NS Joint Use Agreement (Simmons Exh. 11) §§ 2(a)(ii), 6(b); Limited

resulted in the MSLLC Agreements governing traffic moving over the Wylie-Meridian route, it logically follows from such recognition that NS did not deem contingent trackage rights from Wylie to Shreveport as necessary to protect its investment.[484]

5. NS's Request for Contingent Trackage Rights Would Improperly Convey to NS Commercial Rights that NS Did Not Negotiate or Pay for in 2006

Given the absence of any bona fide concerns about the Transaction's impact on intermodal service, and the ineffectiveness of NS's contingent trackage rights as a service remedy in any event, the unavoidable conclusion is that NS's true motivation in seeking these rights is to gain valuable commercial rights that it did not negotiate or pay for when it entered the MSLLC Agreements in 2006. Granting NS such rights in this proceeding would be unjustified and inappropriate. After the Transaction, NS will continue to receive the same exact benefits for which it bargained and there is no harm warranting an expansion of NS's contractual rights.

First, NS is quite up front that the new contractual rights it wants the Board to grant (for free) would expand the scope of the rights that NS obtained in 2006. NS is explicit that what it wants is to apply to the KCS-owned Wylie-Shreveport Section – in which NS made no investment whatsoever – the exact "same standard" as contained in the agreement covering only the Meridian Speedway.[485] NS effectively complains that the rights it did negotiate did not extend far enough, because (it claims) without contingent trackage rights for the Wylie-Shreveport segment similar to those it currently possess for the Meridian Speedway, it will not

Liability Company Agreement of Meridian Speedway, LLC (Simmons Exh. 12) § 5.12; Dallas Terminal Marketing Agreement (Simmons Exh. 13) § 4(m).

484 *See* Simmons RVS at ¶ 61.

485 NS-12 at 48.

be able to "effectively hold[] CPKC to a service standard" because trains would traverse the Wylie-Shreveport segment "with KCS's (or CPKC's) power, crew, and train composition."[486] Yet, that is simply the pre-Transaction state of affairs under the MSLLC Agreements to which NS agreed in 2006.

NS cannot suggest that the parties failed to address this issue in their negotiations. In 2005, {{ }}[487] In January 2005, an {{ }}[488] Documents obtained in discovery from NS and BNSF show that {{ }}[489] Moreover, documents produced in this proceeding {{ }}.[490]

---

[486] NS-12 at 49.

[487] NS00005474-82 at -5482, {{ }} (Vol. 3, Exh. 92).

[489] *See* Simmons RVS at ¶ 71.

[490] { }}

NS now attempts to obtain from the Board the "contingent trackage rights" that it declined to obtain from KCS. Just as it denied requests in the *CP/DM&E* proceeding to overwrite a contract with CP, the Board should deny NS's attempt to "compel new contractual commitments from [CPKC] to protect [NS] from potential traffic increases it might not have considered during prior contractual negotiations."[491]

Second, in addition to granting NS operating rights that it did not negotiate, the relief NS seeks would fundamentally alter the economic relationship between NS and KCS, giving NS a significant financial windfall. NS's proposal is really about changing the amount of money NS pays KCS for traffic moved between the Wylie Intermodal Terminal and Shreveport.[492] A key component of the commercial arrangement entered into between NS and KCS involved an option for NS to purchase the Wylie Intermodal Terminal, and its related option to convert interline intermodal traffic between Wylie and Shreveport from interline traffic (for which KCS is the line haul carrier) to haulage traffic. Simmons R.V.S. at ¶ 61. But the existing MSLLC Agreements are clear that the haulage fees that NS would become obligated to pay KCS upon exercising that option for movements of NS's traffic between Wylie and Shreveport must preserve "the economics" of KCS's line-haul rates. *Id.*[493]

---

491 *See CP/DM&E*, Finance Docket No. 35081 (Decision No. 11) at 15.

492 That NS's requested rights are a pure money grab is belied by NS's acknowledgement that nothing will change except the economics: "the same traffic that should have been moving in haulage service on the trains of CPKC would instead move along the exact same route via trackage rights on the trains of NS." *See* Letter To Danielle Gosselin, Director of the Office of Environmental Analysis of the Surface Transportation Board, From Brianne Kucerik, Counsel for NS (filed Mar. 8, 2022), at 3.

493 Specifically, § 5(a)(1) of the Dallas Terminal Marketing Agreement (Simmons Exh. 10) provides that "all NSR Dallas Intermodal Terminal Traffic shall move between Shreveport and the Terminal pursuant to terms and conditions substantially in conformance with that of the Western Haulage Agreement, except as to compensation (which shall be at a price that does not fundamentally alter the economics of the traffic moving pursuant to this Agreement at the time of the conversion from an interline relationship to a haulage relationship and which takes into account change in the identity of the

Under the trackage rights agreement that NS asks the Board to impose on CPKC, however, NS would not be so obligated to preserve KCS's line-haul economics. Indeed, under NS's proposed "Shreveport-Wylie Section Trackage Rights Agreement," NS would pay a trackage rights fee of {{[redacted]}}, which is a far cry from the level of KCS's existing line-haul revenues that NS's agreed-upon haulage rate would have to preserve. Simmons R.V.S. at ¶ 68.[494] As Simmons explains, NS would stand to gain {{[redacted]}} on every intermodal container moved between Wylie and Shreveport, as compared to the compensation arrangement under the parties' existing agreement. *Id.* This is a windfall to which NS is not entitled in light of the fact that, as illustrated above, the Transaction poses no threat to service for NS intermodal traffic traversing the Wylie-Shreveport Section or any portion of the Wylie-Meridian Route.

In substance, then, NS's proposed contingent trackage rights amounts to a request that the Board amend the MSLLC Agreements in NS's favor, granting NS rights it did not bargain for. Table 6 below summarizes the ways in which NS's proposal would alter the bargain struck in 2006.

party then absorbing the terminal charges and other charges associated with the movement of the traffic) and duration (which shall be until terminated by mutual agreement of the Parties)." (Emphasis added.)

494 *See also* NS-13 at 28 (Art. 4.1).

TABLE 6
NORFOLK SOUTHERN'S REQUEST FOR RIGHTS IT DID NOT NEGOTIATE

Topic	Negotiated NS Rights	NS's Request for Board Grant (if NS Acquires Wylie Terminal)
NS Operating Rights Wylie-Shreveport	No operating rights. Haulage rights only if NS acquires Wylie Intermodal Terminal[495]	Trackage rights springing from Major Service Standard Failure[496]
Concept of a "Major Service Standard Failure"	Limited to Shreveport-Meridian segment for Defined "NS Traffic" and "Dallas Intermodal Terminal Traffic"[497]	Expanded to (1) Include Wylie-Shreveport segment; and (2) Encompass *all* intermodal traffic to/from Wylie[498]
Compensation to KCS for "NS Traffic" and "Dallas Intermodal Terminal Traffic" Moving Between Wylie and Meridian (*if NS Acquires Wylie Intermodal Terminal*)	*Between Wylie and Shreveport*: Haulage Fee that does not alter economics relative to KCS's Line Haul Divisions[499] *Between Shreveport and* Meridian: Agreed Haulage Fee;[500] Agreed Trackage Rights Fee in event of Major Service Failure[501]	*Between Wylie and Shreveport*: Board-Imposed Trackage Rights Fee at {{[redacted]}}s in the event of a Major Service Failure[502] *Between Shreveport and Meridian*: Same

One important upshot of these changes – all of which would be contingent on NS's decision to exercise the option it has to purchase the Wylie Intermodal Terminal[503] – would be to create for NS a new set of incentives to exercise its option, above and beyond whatever incentives might exist in the pre-Transaction environment.[504] An NS acquisition of the Wylie Intermodal Terminal could have unpredictable effects for CPKC's use of the terminal for the

502 NS-13 at 28 (Art. 4.1).

503 *See* NS-12 at 8.

504 One might doubt whether NS would exercise that option were NS unable to connect the Wylie terminal with NS's network via NS train service.

new intermodal services that the Transaction will enable CPKC to offer. Although NS would have an obligation as owner of the terminal to handle CPKC's intermodal traffic "on a nondiscriminatory basis,"[505] NS's single-minded focus on its own traffic gives Applicants some concern that NS might interpret this obligation narrowly, potentially jeopardizing Transaction benefits. The Board should resist NS's call to expand NS's pre-Transaction rights under these circumstances. The Board has repeatedly declined invitations to "compel new contractual commitments … to protect [a party] from potential traffic increases it might not have considered during prior contractual negotiations," and it should do so again here.[506]

C. The Board Should Reject the Relief Requested by CSX

1. CSX's Arguments about the Meridian Speedway Are Unrelated to the Transaction and Should Be Ignored

CSX argues that a set of pre-existing agreements between KCS and NS regarding the Meridian Speedway (the "Meridian Speedway Agreements"), which the Board authorized KCS and NS to carry out, are anticompetitive and should be undone.[507] CSX is wrong.[508] When it exempted KCS's and NS's formation of the Meridian Speedway LLC ("MSLLC") venture in 2006, the Board was well aware of the contractual provisions affording NS exclusive commercial

---

505 Dallas Terminal Marketing Agreement (Simmons Exh. 10) § 5(a)(ii).

506 *See CP/DM&E*, Finance Docket No. 35081 (Decision No. 11) at 15. As explained above, Applicants project a reasonable and manageable level of traffic growth across the Wylie-Meridian Route and will not result in deteriorated service along the Wylie-Meridian Route. Thus, the Transaction will not result in any extraordinary risks or harms for which NS did not, nor could not, foresee at the time it entered into the contractual and operational arrangement that it agreed to with KCS.

507 CSX Transportation, Inc.'s Comments and Request for Conditions ("CSXT-8") (filed Feb. 28, 2022) at 7-21.

508 Applicants do not belabor the many reasons why CSX is also incorrect in arguing that the Meridian Speedway Agreements are anticompetitive. Applicants direct the Board's attention to the discussion in NS's amended comments of the procompetitive traffic growth generated by the joint investments in this high-service route. *See* NS-12 at 9-21.

rights with respect to certain traffic using the Meridian Speedway – tightly-defined flows of transcontinental intermodal traffic – in exchange for its considerable investment in the Speedway and ongoing obligations to share in the cost and risks associated with the venture.[509]

For purposes of the CP/KCS proceeding, however, the merits of CSX's arguments are beside the point. The contractual provisions about which CSX complains do not arise from the Transaction. Because they "[are] not a consequence of the merger and will not be exacerbated thereby … this proceeding is not the proper forum for considering the merits of [the] solution" proffered by CSX. *UP/SP*, 1 S.T.B. at 472.

CSX's suggestion that unconditioned approval of this Transaction might insulate the pre-existing terms of the Meridian Speedway Agreements from future challenge is equally wrong.[510] The Board's disposition of this proceeding will not affect any claims CSX might wish to pursue, one way or the other. The Meridian Speedway Agreements were exempted by the Board in 2006, which thereby also exempted KCS and NS – as participants "in that approved or exempted transaction" – "from the antitrust laws and from all other law, including State and municipal law, as necessary to let [them] carry out the transaction." 49 U.S.C. § 11321(a).[511]

---

509 The parties' Notice of Exemption in the Meridian Speedway transaction could not have been clearer: "NSR will be the sole provider of service for transcontinental intermodal traffic over the Line. Specifically, NSR will be the sole provider, via haulage and trackage rights over the Line, of service for transcontinental intermodal container traffic moving on the Line that does not originate or terminate on KCS's current system and that both (a) originates or terminates in the United States at or east of Meridian and enters or exits the Line at Meridian, and (b) originates or terminates in the United States west of Fort Worth, Texas, and enters or exits the Line at Shreveport." *See* Finance Docket No. 34822, Notice of Exemption (filed Jan. 17, 2006) at 6 (excerpts are Vol. 3, Exh. 79).

510 CSXT-8 at 7.

511 Courts have confirmed that Section 11321(a) immunity applies to transactions exempted under Section 10502. *See UTU* v. *Burlington Northern Santa Fe R. Co.*, 528 F.3d 674, 679-80 (9th Cir. 2008).

CSX boldly acknowledges that its goal is not to address any adverse impact of the Transaction, but to instead "*re-establish the competitive status quo before 2006*."[512] CSX's transparent efforts to improve its position relative to its pre-Transaction position – and to "ameliorate longstanding problems not caused by the merger"[513] – should be rejected.[514]

2. CPKC Will Be Eager to Maintain or Explore Efficient Interline Relationships With CSX Via All Available Gateways, and There Is No Need for Relief Protecting CSX

Apart from its misguided effort to raise antitrust concerns with the Meridian Speedway Agreements, CSX's comments seek conditions that would impose new obligations on CPKC to protect or expand interline traffic opportunities at three gateways served by KCS: East St. Louis, IL, Meridian, MS, and New Orleans. CSX needs no such protection. Applicants have every incentive to work with CSX wherever feasible and efficient to compete hard for traffic moving to and from CSX's network, including via the three gateways CSX identifies. Imposing such protections via conditions would be unjustified and counterproductive.

East St. Louis. CSX requests an order requiring CPKC to maintain commercially reasonable rates and to provide service at or above current service levels on the KCS line between Kansas City and East St. Louis, IL.[515] CSX's assertion that Applicants propose to downgrade this line – which echoes CN's false assertions – is completely unfounded for reasons we address at length in Section VIII.A above. Nor is there any risk that the Transaction would

---

512 CSXT-8 at 20.

513 *UP/SP* (Decision No. 103, STB served May 1, 2008) at 6.

514 At the same time, Applicants certainly agree with the sentiment of CSX's request that the Board reject NS's "responsive application seeking to expand its rights under the Meridian Speedway Agreements." CSXT-8 at 6. Although NS chose not to pursue all of its proposed modifications to the Meridian Speedway Agreements, the Board should reject any effort by NS to expand its rights thereunder relative to those negotiated and approved in 2006. *See* Section VIII.B above.

515 CSXT-8 at 22-23.

give CPKC incentives to shift traffic away from this gateway. To the contrary, by creating new single-line connections between CP's network and KCS's network, the Transaction will increase opportunities for interchange between CPKC and CSX at East St. Louis. Creel R.V.S. at ¶ 21; Wahba/Naatz R.V.S. at ¶ 5. Ironically, KCS's Kansas City-St. Louis line formerly hosted daily intermodal service via East St. Louis interchange with CSX, but CSX chose to discontinue that service in 2017 as part of its PSR-based network reconfigurations. Brooks R.V.S. at ¶ 50. CPKC would be eager to explore reinstituting that service if CSX were interested. *Id.* The only threat to efficient interline service between CPKC and CSX via East St. Louis is CN's request to force the removal of this line from the CPKC network. Accordingly, there is no basis whatsoever for a condition protecting CSX's rights via this gateway.

Meridian, MS. CSX requests an order requiring CPKC to "establish" an interchange at Meridian and to keep that gateway open.[516] This request is overreaching for several reasons. First, as confirmed by CSX's use of the word "establish," KCS has no interchange with CSX at Meridian. To the extent traffic flows between the two carriers via Meridian, it moves in KCS trains to Artesia, MS, and then via Watco's Alabama Southern Railroad, which leases most of KCS's Tuscaloosa Subdivision, to a connection with CSX between Tuscaloosa and Birmingham, AL. Traffic moving between KCS and CSX could also be delivered to the Meridian & Bigbee Railroad ("MNBR") at Meridian and moved via MNBR to a connection with CSX at Montgomery, AL.[517]

---

[516] CSXT-8 at 20-21.

[517] CSX previously had a haulage agreement with MNBR between Meridian and Montgomery, but CSX cancelled that agreement in 2007. {{ }} *See* Simmons R.V.S. at 87.

Second, even if Meridian was an existing gateway for KCS-CSX interline traffic, that gateway would be unaffected by the Transaction. The CP-KCS combination will not give CPKC a longer haul for any traffic moving via Meridian as compared to the pre-transaction KCS systems. Brooks R.V.S. at ¶¶ 16, 88-90. Accordingly, the Transaction will *not* incentivize CPKC to divert traffic from Meridian to other "less efficient" routes.

Were it ever to become possible and efficient to "establish" a direct interchange with CSX at Meridian, CPKC would have every incentive to do so, but a condition requiring this alteration to the pre-Transaction status quo would be overreaching.

New Orleans. Finally, CSX asks the Board to modify an existing agreement between KCSR and CSX regarding the allocation of responsibility for interchange costs at New Orleans.[518] This is yet another overreach unrelated to any Transaction-related impact.

As background, the New Orleans Public Belt ("NOPB") recently imposed a substantial increase in the fee it charged for handling interchange traffic between CSX and KCS, whose lines do not connect directly in the New Orleans terminal. Simmons R.V.S. at ¶ 84. In response, KCS and CSX discussed each being responsible for the fees associated with its own deliveries to the other carrier, but CSX balked at paying NOPB's charges and threatened to shift the interchange from New Orleans to Gulfport, MS, or Birmingham, AL (via a third carrier between there and Artesia), which would be far more costly and degrade the service levels for traffic interchanged at New Orleans. *Id.* KCS had no choice but to relent, and it agreed to absorb the NOPB's increased charge on a temporary basis. *Id*. at ¶ 86. CSX and KCS specifically agreed that either party could terminate that agreement on 30 days' notice. *Id.* & Simmons Exh. 15.

---

[518] CSXT-8 at 21-22.

CSX's demand in this proceeding to require that KCS absorb those costs permanently is an unjustified grab with no nexus to the Transaction. The Transaction will have no effect on CPKC's interest in connecting with CSX via the New Orleans gateway. Brooks R.V.S. at ¶¶ 12-13. There is no legal justification behind CSX's demand to alter mutually agreed-upon contractual terms governing the allocation of NOPB charges as these conditions are wholly unrelated to the Transaction. The fact (touted by CSX) that the NOPB charges CSX seeks to avoid sharing were occasioned by a series of transactions in 1985 and 2006 (to, among other reasons, facilitate state highway projects),[519] only underscore that CSX's effort to extract commercial advantage through conditions imposed on this Transaction are egregiously without merit.

Finally, CSX's miscellaneous requests are otherwise unrelated to the Transaction. *See* Ottensmeyer R.V.S. at ¶¶ 16-25.

D. BNSF's Veiled Threats to Demand Future Trackage Rights It Chose Not to Seek in this Proceeding Should Be Rejected with Prejudice

BNSF filed a Notice of Intent outlining three separate requests for trackage rights it anticipated seeking in this proceeding. BNSF ultimately opted not to file a Responsive Application, and it is thus disqualified from seeking that relief in connection with the Transaction, whether now or at some future time. Like CSX and UP, BNSF has waived its right to seek these rights by not presenting a Responsive Application. *See* Decision No. 12 (served

---

[519] These transactions were undertaken with Board approval. *See The Kansas City Southern Ry. – Abandonment Exemption – in Jefferson Parish, LA*, Docket No. AB-103 (Sub-No. 20X) (served June 5, 2006); *Louisiana & Arkansas Ry. – Trackage Rights Exemption –Illinois Central Gulf R.R. & New Orleans Terminal Co*., Finance Docket No. 30639 (ICC served Apr. 17, 1985).

Jan. 26, 2022) (rejecting waiver sought by CSXT, and joined in by UP, from obligation to provide notice of potential conditions requiring Board approval/exemption).[520] Any trackage rights that BNSF might seek following Applicants' consummation of the Transaction would also be precluded by Applicants' inability to decide whether to proceed with the Transaction in the face of a potential grant of such rights.[521] Applicants nonetheless address BNSF's proposals because BNSF's comments repeatedly threaten to renew those requests in the future. In its comments, BNSF slips in a general request that the Board "[r]eserve jurisdiction to impose further conditions, including trackage rights, during the oversight period."[522] And BNSF's witnesses testify about the need for trackage rights to further BNSF's business objectives in Mexico.[523] While BNSF's failure to present a Responsive Application forecloses it from pursuing such relief, BNSF's proposals also fail on the merits; accordingly, BNSF's trackage rights requests should be rejected with prejudice.

---

[520] This requirement is equally applicable to requests for "contingent" trackage rights of the sort BNSF indicated it would propose. *See Rio Grande Industries, Inc. – Purchase & Related Trackage Rights – Soo Line R.R. Line Between Kansas City, MO & Chicago, IL*, Finance Docket No. 31505, 1989 WL 246976 (ICC Decision No. 8, served Dec. 11, 1989) at *2 ("[T]he requirement for a responsive application is not only to determine the impact of proposed relief upon the transaction, but to ascertain whether the responsive applicant's proposal meets the statutory qualifications for the relief sought. KCS is seeking contingent trackage rights, should Soo discontinue operations. This requires an application.").

[521] *Guilford Transportation Industries, Inc. – Control – Boston & Maine Corp.*, 5 I.C.C.2d 202, 206 (1988) ("Even though the Commission has the power to impose trackage rights as a condition to a rail consolidation, the transaction is still dependent upon an agreement. If the carriers do not accept the conditions imposed by the Commission, they need not consummate the transaction. Now that the . . . consolidation transactions have already been consummated, the imposition of a trackage rights condition would lack the element of agreement.").

[522] BNSF-9 at 78.

[523] BNSF-9, Poltolarek V.S. at 16.

1. BNSF's Desire for Board Intervention in Support of Its Quest for a Future Mexican Concession Is Not Merger-Related and Would Improperly Involve the Board in Mexican Affairs

The Board should reject with prejudice BNSF's aborted application for Robstown-Laredo trackage rights and any other effort by BNSF to use the Transaction as a mechanism for improving BNSF's standing in connection with its revealed desire to participate in potential future Mexican rail concessions.[524] The Transaction has no impact whatsoever on BNSF's ability – or inability – to seek a Mexican rail concession at some speculative future point. If BNSF wants to pursue some future opportunity to obtain rights from the Mexican government, it will remain free to do so. CPKC may well oppose such a request, just like KCS almost certainly would have. But the Transaction does not preclude BNSF from doing whatever it might have done in the absence of the Transaction.

BNSF witness Dychter testifies that BNSF's lack of direct access to Laredo may handicap BNSF in its quest for a concession involving trackage over which KCSM operates,[525] but again this shortcoming is not the result of the Transaction. BNSF has never had direct access to Laredo. Quite simply, BNSF's lack of direct access to Laredo is a pre-existing condition unrelated to the Transaction.

Any contention that BNSF would need access to Laredo in order to participate in future Mexican rail regulatory matters also ignores the extensive *and direct* access to Mexico that BNSF already has – none of which will be affected whatsoever by the Transaction. BNSF

---

[524] BNSF asserts that it might request that the Mexican government grant it rights to operate the nationally owned trackage in 2027 "when the exclusivity provision of KCSM's concession expires." BNSF-at 54.

[525] BNSF-9, Poltolarek V.S. at BNSF-16 ("To obtain such a concession, BNSF would need to be able to demonstrate to the Mexican government that it has a credible plan for accessing Mexico, which would require direct access to Laredo.").

already has *direct* (rather than interline) access to multiple Mexican gateways, including Brownsville (via UP trackage rights), El Paso, Eagle Pass (via UP trackage rights), and San Diego.[526] At El Paso and Eagle Pass, BNSF connects with FXE; at Brownsville, BNSF connects with KCSM.[527] BNSF has no need for trackage rights to Laredo to forge a connection with the Mexican rail network.

As discussed above, moreover, BNSF handles the vast majority of its Mexican traffic through El Paso and Eagle Pass – not Laredo or Brownsville. *See* Section VIII above; Majure R.V.S. at ¶ 75. As BNSF's internal documents reveal, BNSF itself {{[redacted]}},[528] and sees those other gateways as providing BNSF with more efficient access to Mexico given its network configuration.[529]

To be sure, BNSF undoubtedly *would like to have direct rather than interline access to Laredo*, but a desire to improve its lie is not a justification for a grant of trackage rights, a

---

[526] BNSF Network Map, BNSF Railway, https://www.bnsf.com/ship-with-bnsf/maps-and-shipping-locations/mexico/network-map.html (last visited May 12, 2022) (Vol. 3, Exh. 81). BNSF's website touts that "BNSF Mexico is here to facilitate your Mexico transborder shipping with five key United States Gateways: San Diego, El Paso, Eagle Pass, Laredo and Brownsville." Gateway & Connections, BNSF Railway, https://www.bnsf.com/ship-with-bnsf/maps-and-shipping-locations/mexico/gateway-and-connections.html (last visited June 28, 2022) (Vol. 3, Exh. 82).

[527] In *UP/SP*, BNSF was granted trackage rights to provide a competitive alternative to UP in the Brownsville area and to connect with TFM (now KCSM) at the Brownsville/Matamoros gateway. UP/SP, 1 S.T.B. at 409-10, 422, 562. BNSF chose to negotiate haulage rights over these UP lines that it could convert into trackage rights, but thus far BNSF has apparently opted not to exercise its conversion rights.

[528] *See* BNSF0000932 (Vol. 3, Exh. 15).

[529] *See* BNSF0000166 (analyzing intermodal traffic between the United States and Mexico and concluding that BNSF {{[redacted]}}) (Vol. 3, Exh. 28); BNSF0000151 (concluding that {[redacted]}) (Vol. 3, Exh. 83).

principle BNSF itself persuaded the ICC to apply in its own merger case.[530] BNSF's desire for trackage rights to Laredo in fact long predates the CP/KCS Transaction. Long before KCS's acquisition of control of Tex Mex and TFM (what is now KCSM), BNSF petitioned the Board for such rights, and KCS successfully opposed BNSF's effort. In the 1998 *UP/SP Houston Gulf Coast Oversight* proceeding, BNSF sought overhead trackage rights over UP between San Antonio and Laredo to address the alleged "influence of KCS on Tex Mex's ability to work with BNSF at Laredo, and the unexpected lack of direct competition in the privatized Mexican rail system."[531] The Board rejected this request, finding that "none of the developments complained of by BNSF has caused any diminution of competition relative to the pre-merger period. Therefore, there is no basis for BNSF's request for a direct access to Laredo that SP never had."[532] That remains true today.

Finally, holding open the potential for BNSF to seek the trackage rights it claims to desire would affirmatively undermine the benefits of the Transaction and cause harm to the public interest:

- A reservation of potential future trackage rights would leave Applicants uncertain about the future commercial landscape, undermining their incentives to make investments in the future CPKC network.
- To the extent BNSF claims that trackage rights may be needed as a remedy for the failure of other conditions – or other developments arising from implementation

---

530 *BN/Santa Fe*, 10 I.C.C.2d at 777 (denying request for trackage rights where they "would undoubtedly make GNBC's operations more efficient and allow GNBC access to an expanded traffic base, but they are not necessary to ameliorate any harm caused by BN/Santa Fe common control.").

531 *UP/SP Houston/Gulf Coast Oversight*, 3 S.T.B. 622, 629 (1998).

532 *UP/SP Houston/Gulf Coast Oversight*, 3 S.T.B. 1030, 1060 (1998).

of the Transaction – the Board will have inherent authority to assess what steps, if any, would be appropriate during the oversight period. Granting BNSF the option of seeking trackage rights between Robstown and Laredo (or anywhere else) would not be a constructive path, however, because it would give BNSF a powerful incentive to invent problems (and seek trackage rights as the reward) rather than working collaboratively to resolve any operating or other challenges that might arise.

- Any grant of trackage rights would also inject new operational complexity on the lines over which BNSF would operate, consuming CPKC network and terminal capacity and potentially contributing to congestion. Elphick/Orr R.V.S. at ¶ 90.

2. BNSF's Proposed Rights Between Dallas and Shreveport Would Grant Commercial Rights BNSF Chose Not to Acquire

BNSF similarly signals that it may renew its effort to seek trackage rights between Dallas and Shreveport, LA that it opted not to seek in this proceeding. BNSF initially says that it was considering seeking these rights to "address[] the impact of likely congestion on its route to New Orleans by filing a responsive application for trackage rights on a KCS line that would have allowed BNSF to shift its interchange location with Eastern railroads further north to Shreveport, La."[533] "BNSF now believes that it would be more appropriate for the Board to reserve jurisdiction to address this issue as it may arise during the oversight period. Many of the details that the Board would need to review to evaluate a request for trackage rights necessarily will be dependent on the conditions in effect when congestion occurs."[534]

---

533 BNSF's Description of Anticipated Responsive Applications (BNSF-7) (filed Jan. 12, 2022).

534 BNSF-9 at 65 n.23

The Board should close the door that BNSF seeks to hold open. The rights BNSF desires are not tailored to address any potential impact of the Transaction, they would improve BNSF's position relative to the status quo, they would be vastly overreaching, and they would undermine the Transaction and public benefits.

BNSF's description of its request was disingenuous from the beginning. There are no eastern carriers at Shreveport. Simmons R.V.S. at ¶ 74 n.46. BNSF has limited rights to operate through Shreveport over UP trackage rights, but it does not have the right to interchange with other carriers there. *Id*. BNSF could route any traffic it wishes over the Meridian Speedway via interchange with KCS at Dallas, but BNSF has opted not to do so, preferring instead to take its transcontinental intermodal traffic to Memphis for interchange with NS and CSX there, bypassing KCS. *Id*. Similarly, if BNSF desired to bypass the lines that CPKC will use between Houston and New Orleans, it already can reach Shreveport via its trackage rights over UP. Simmons R.V.S. at ¶ 40 n.20.

What is really behind BNSF's aborted request is a desire to obtain for free valuable commercial rights that it opted not to acquire when the Meridian Speedway venture was formed. KCS (and NS) invested heavily in the Meridian Speedway east of Shreveport, and KCS invested in its own line connecting Dallas to the Speedway. As Simmons explains, and as reflected in {{ }} when KCS was negotiating with NS over joint investments in the route between Shreveport and Meridian, it was simultaneously discussing with BNSF the possibility of joint investments in KCS's route between Dallas and Shreveport, which would have resulted in BNSF obtaining certain rights over that line. BNSF never reached an agreement with KCS on such a transaction, and so KCS proceeded to make investments in the

Dallas-Shreveport line on its own. Simmons R.V.S. at ¶ 73, 77.[535] Perhaps BNSF regrets its decision now in light of the success of the Meridian Speedway, and in particular, the UP-NS transcontinental traffic that flows over that route.

In this context, a grant of trackage rights between Dallas and Shreveport would have nothing to do with service on lines BNSF shares with CPKC in Texta, and everything to do with a desire to obtain for free rights BNSF now covets. Such a grant would be utterly inappropriate.

Even holding open the potential to consider such a grant would interfere with the Transaction. As noted above, BNSF would be encouraged to invent rather than help solve potential service problems in the hopes of triggering its desired windfall. And the possibility of a future effort to obtain these rights would create uncertainty that could undermine investments by CPKC in this line, which will play a vital role in CPKC's plan to compete head-to-head with BNSF in the Dallas-Chicago intermodal lane.

3. BNSF's Proposed Rights Between Savanna, IL and Clinton, IA Would Grant Commercial Rights BNSF Has Previously Sought

BNSF's Notice of Responsive Application indicated that BNSF planned to seek rights between Savanna, IL and Clinton, IL, but BNSF chose not to file the Responsive Application that would have been necessary to enable a grant of such rights. But BNSF has tried to leave the door cracked open, asking the Board to "reserve jurisdiction to address this issue."[536] The Board should also close this door.

---

535 *See* BNSF0003259 ({{ }}) (Vol. 3, Exh. 84); BNSF0003265 ({{ }}) (Vol. 3, Exh. 78).

536 BNSF-9 at 65 n.23.

First, as discussed above, BNSF's decision not to file a Responsive Application has consequences, and it is now foreclosed from seeking to impose a condition on the Transaction relating to trackage rights it chose not to see.

Second, the rights BNSF contemplated seeking would be unwarranted because they would grant commercial rights BNSF has long sought from CP but has failed to negotiate at arm's length. As explained in the Reply Verified Statement of Adolph Gameiro, in 1995 BNSF and CP exchanged rights on opposite sides of the Mississippi River north of Davenport, IA. Gameiro R.V.S. at ¶ 28. BNSF operates over CP between Davenport and Clinton, and CP operates over BNSF on the east side of the river. *Id.* BNSF tried to persuade CP to allow it to connect its Davenport-Clinton rights to the BNSF network by operating over 19.6 additional miles of CP lines from Clinton to Savanna – the same rights BNSF said it would seek from the Board. CP declined, for reasons Gameiro explains. *Id.* at ¶¶ 29-31. BNSF should not be permitted to obtain through Board fiat rights it long coveted but never possessed.[537]

Third, though BNSF postulated that the rights it demands would serve to overcome "congestion" on the Davenport-Clinton line, they would manifestly do no such thing. They would not take away BNSF's local service between Davenport and Clinton, and would instead add new train operations – and new congestion – on the 19.6 additional miles of CP trackage north of Clinton. Elphick/Orr R.V.S. at ¶¶ 90-91.

---

[537] *See UP/SP*, Finance Docket No. 32760 (Decision No. 103, STB served May 1, 2008) at 6 ("The Board would not ordinarily impose a condition that would put the proponent of a condition in a better position than before the merger [because] [c]onditions were not imposed to ameliorate longstanding problems not caused by the merger."); *Guilford/D&H*, 366 I.C.C. at 415–16 (emphasizing the idea that the Board should not use its "merger conditioning powers" to release the parties from commercial arms-length agreements and noting that it "would be extremely reluctant to negate contracts which [the parties] apparently entered freely.").

Fourth and finally, as with other trackage rights that BNSF wants the Board to "reserve jurisdiction" to grant — holding open the option for BNSF to seek Savanna-Clinton rights in the event of operational issues would create new incentives for BNSF to invent problems rather than working collaboratively to solve them. The Board should make clear that, if BNSF ever wishes to seek these rights, it would need to do so either through negotiations with CP or under some other statutory provision entitling BNSF to relief.

E. The Board Should Not Grant UP's Demand for Conditions Granting Compulsory Access to KCS's Self-Funded New Bridge at Laredo

In addition to its sweeping demand for unneeded protection from new CPKC single-line competitive initiatives for traffic moving via the Laredo gateway, UP ask the Board to protect it from potential operational changes at the Laredo gateway as well.[538]

The conditions UP requests are not necessary, however, because CPKC will step into the shoes of KCS's previous commitments – embodied in the Board's approval of the *KCS/Tex Mex* combination – to, among other things:

- treat all carriers fairly at the Laredo Bridge;
- not change the basic structure and operations of KCSM except through negotiations;
- abide by the existing dispatching and operating practices over the Bridge and not make any unilateral changes in the way the Bridge is dispatched and operated;
- continue to be bound by the contracts and agreements that now govern operations over the Bridge;[539]

---

538 UP-10 at 15.

539 UP acknowledges that the numerous private agreements governing joint use and operations of the Laredo Bridge, including (a) the May 23, 1951 Agreement between Guy A. Thompson, Trustee, International Great Northern Railroad and The Texas Mexican Ry.; (b) a settlement agreement entered into in Feb. 1998, among UP, KCSR, Tex Mex, and Mexrail, which settled outstanding issues regarding the compensation paid by UP for the use of the Bridge and requires UP to pay $13.50 per car, subject to annual adjustments; and (c) a Memorandum of Understanding among UP, Mexrail, Tex Mex, and KCSR

- provide interline services such as pre-blocking rail cars, improving automated customs pre-clearance procedures, supplying cars for shipments, accommodating run-through train service, providing excellent service, and promptly quoting rates; and
- ensure safety remains a top priority with regard to CPKC operations at the Laredo Gateway.

Those commitments have been honored by KCS and supported efficient operations at Laredo for more than 17 years (and UP makes no contention otherwise). There is no reason why they will not suffice to address all of UP's concerns about operations at the Laredo gateway into the future. Quite simply, CPKC will have no desire, no incentive, and – in light of the commitments by which it must and will abide – no ability to undermine the operational efficiency of UP trains at Laredo. UP's trains, after all, will be carrying important freight for important CPKC customers reached by CPKC's Mexican rail network. In addition, anything that hindered efficiency at the gateway would also interfere with CPKC's own plans to move freight smoothly across the border.[540]

In one crucial respect, however, UP's demands about Laredo are overreaching and should be rejected. UP asks the Board not only to preserve the pre-Transaction status quo, but to affirmatively grant UP access to any new railroad bridge constructed in Laredo *on the same terms* as UP's access to the existing bridge.[541]

First, there is no need for his condition. To the extent that moving UP's trains across a new bridge would improve the overall efficiency of Laredo gateway operations, CPKC will have

---

entered into in 2002 that superseded the 1998 settlement agreement. UP acknowledges that these agreements require KCS to perform service "impartially" with "no preference . . . to movements of cars by one of the parties." UP-10 at 31.

[540] Indeed, any effort by CPKC to prefer its trains or to degrade UP operations at the Laredo Bridge risks tit-for-tat retaliation by UP on the trackage rights lines KCS depends on to reach Beaumont, but which UP dispatches. If any party has operational and service power over another, it is UP's over CPKC.

[541] The fact that UP desires for the terms of its access to a new bridge to be the "same as" those governing its use of the existing bridge proves that UP is amply protected by these contracts today.

compelling incentives to move UP-KCSM interchange trains via that route. As UP notes, KCS has obtained a Presidential Permit to construct a new rail bridge at Laredo, and KCS has begun the construction process. Upon completion, CPKC has every incentive to divert CPKC trains away from the existing Laredo Bridge and onto the new bridge, freeing-up capacity for UP's trains on the existing bridge. And if operating UP trains on both bridges makes more operational sense for the gateway, CPKC will have strong incentives to do that instead.

Second, UP's request is overreaching. Allowing CP access – if operationally expedient – is one thing, but the financial and other terms for that access are quite another. By asking the Board to impose access to a new bridge in which KCS is investing {[redacted]} on the "same terms" as UP's access to the existing bridge, UP is seeking to leverage this proceeding to obtain rights and privileges that should be obtained through commercial negotiations, not through government fiat. UP would be piggybacking on ancient agreements, providing for compensation reflecting conditions many decades ago, and providing for no contribution to the construction costs of building a new bridge.

Whether UP is granted formal contractual rights to use the second, privately-funded Laredo bridge should be at the discretion of CPKC, and on terms that are operationally efficient and economical to CPKC. If it is efficient and economical to provide UP with access to the second bridge, the parties will negotiate those terms. *See* Naatz R.V.S. at ¶{ 69. The combination of CP and KCS has no bearing on this issue whatsoever, much less the appropriate, arm's-length commercial negotiations between UP and KCS regarding contractual access terms.

IX. COMMENTS FROM RAIL LABOR

Applicants have read and considered the many filings by labor interests.[542] Applicants are pleased that these labor organizations recognize the job-creating features of the Transaction. Applicants have been engaged in ongoing discussions with these and other labor organizations on appropriate implementing agreements. *See* Creel R.V.S. As Applicants have previously indicated they do not object to (a) the Board's imposition of standard *New York Dock* protective conditions where applicable, and (b) being held to their representations regarding the applicability of the "Cramdown Agreement." *See also* Verified Statement of Myron Becker, (App. Vol. 2 at 240).

X. THE BOARD SHOULD NOT IMPOSE CONDITIONS TO ADDRESS COMMENTERS' ALLEGED ENVIRONMENTAL CONCERNS

Three interested parties, Itasca and the Chicago Coalition to Stop CPKC (together the "Coalition Communities"), Hennepin County, and Sierra Club, Delta Chapter (Sierra Club of Louisiana) (the "Sierra Club"), raise concerns about the potential environmental and safety impacts that increased freight traffic west of Bensenville Yard near Chicago will have on their communities.[543] As discussed below, many of their concerns are misguided, as they are based on

---

[542] *See* Comments of ARU, BLET, IAM District Lodge 19, IBEW, and SMART-TD/ATDA (filed Feb. 28, 2022).

[543] *See* Opening Comments and Request for Conditions of the Coalition to Stop CPKC ("ITAS-1") (filed Feb. 28, 2022) at 7; Comments and Request for Conditions of Hennepin County, MN, and the Hennepin County Regional Railroad Authority ("Hennepin County Comments") (filed Feb. 28, 2022) at 7, 11; Sierra Club Letter to the Board ("Sierra Club Comments") (filed Mar. 2, 2022) at 1. Applicants note that the Coalition Communities make new arguments and assertions in their Supplemental Comments, filed on June 9, 2022. Applicants object to the extent any of these arguments or assertions are unrelated to the revisions the Board ordered Applicants to make in the Amended Operating Plan and Accompanying Workpapers, given that the Coalition Communities may only revise their Comments to address these revisions. See Decision No. 17, at 6 (Apr. 27, 2022).

overstated estimates of increased traffic and fail to appreciate that the Transaction is projected to actually *reduce* greenhouse gas emissions, not increase them.

In any case, the commenters' concerns, along with Applicants' Environmental Impact Statement ("EIS") and Safety Integration Plan ("SIP"), will be fully considered as part of the Board's Office of Environmental Analysis ("OEA") process. *See* 49 C.F.R. §1180.1(f). Applicants are confident that when the Board evaluates OEA's report and recommendations and the environmental and safety impacts of the Transaction, it will conclude that none of the conditions that the Coalition Communities, Hennepin County, and the Sierra Club request are based on well-founded concerns nor warrant any condition other than those recommended by OEA.

CP has the strongest safety record of any railroad in North America and expects to continue to work effectively with the OEA to address any safety and environmental issues.[544] Applicants have also attempted, in good faith, to engage with these communities to discuss potential reasonable mitigation measures that might alleviate any minor effects that Applicants' modest traffic growth plans might have on their communities. But the "anywhere but here" mentality that pervades the comments of some localities must not be allowed to undermine the substantial public benefits of this Transaction for shippers across North America and strength and resilience of the national rail network.

---

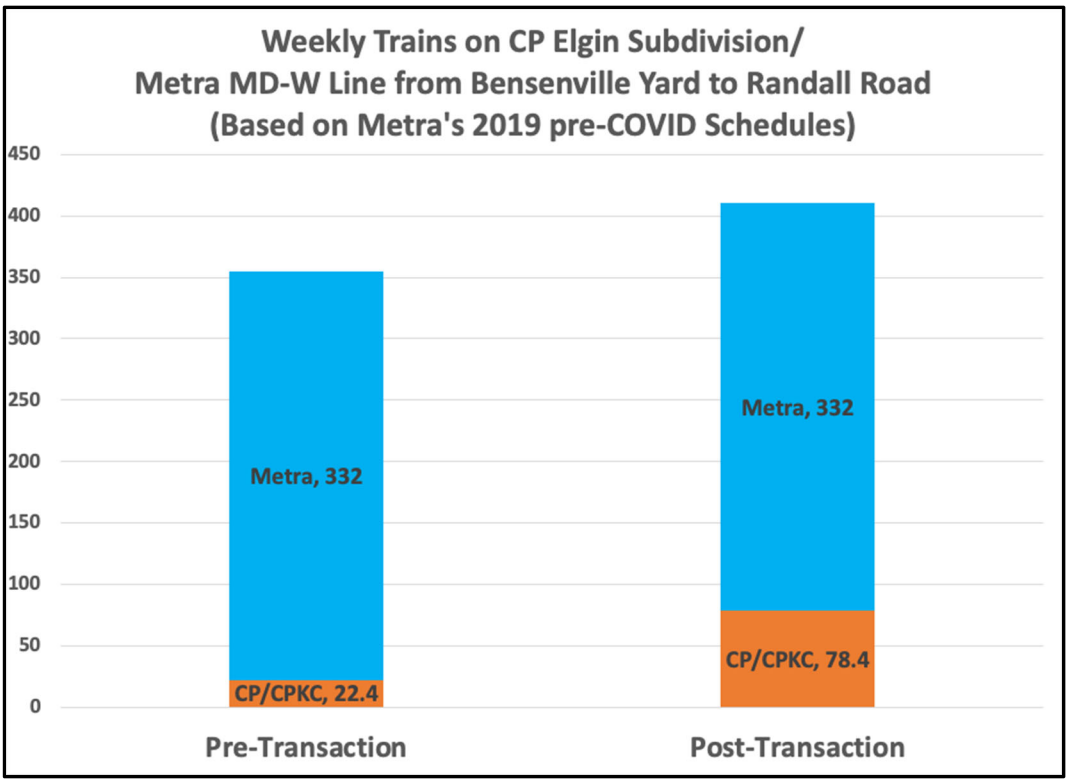
[544] *See* Safety Integration Plan, FD No. 36500, at Part III.A.1, 3 (filed Dec. 28, 2021).

A. The Coalition Communities Demand Mitigation Measures Disproportionate to the Likely Effects on the Community

The Coalition Communities assert that the Transaction will substantially increase freight traffic on the MD-W Line west of Bensenville Yard, which "would literally shut down . . . communities from functioning and cause severe safety, environmental, and other issues."[545] These concerns are drastically overblown, and the Coalition Communities' proposed mitigation efforts exceed what is necessary to remedy any concerns.

To start, the Coalition Communities overstate the impact of the Transaction on their communities. CPKC traffic accounts for only a small percentage of traffic through the Coalition Communities. The Coalition Communities see over 55 Metra trains every weekday and on average more than 20 per day on weekends, amounting to a total of 332 Metra trains every week. Elphick R.V.S. at ¶ 65.[546] By contrast, even accounting for Applicants' plan to add eight trains per day on the MD-W Line west of Bensenville following approval of the Transaction,[547] the Coalition Communities will see just 78.4 freight trains per week.[548] Thus, even after the Transaction is approved, CPKC traffic will remain a relatively small percentage of traffic through the Coalition Communities, as shown in Figure 32 below. Elphick R.V.S. at ¶ 66.

---



[545] *See* ITAS-1 at 14; Supplemental Opening Comments and Request for Conditions of the Coalition to Stop CPKC (ITAS-4)) (filed June 9, 2022) at 3.

[546] While these traffic levels are down somewhat due to the pandemic, Metra anticipates a return to pre-COVID-19 levels. METR-7 at 6.

[547] *See* Amended Operating Plan, App. A. The Coalition Communities' assertion in their Supplemental Comments that Applicants increased the number of trains from 7.1 to 8.0 in their Amended Operating Plan, *see* Coalition Communities Supplemental Comments at 7, is based on a misreading of Applicants' Original Operating Plan, which like the Amended Operating Plan, relied on a projected increase of 8.0 trains per day. *See* Amended Operating Plan, Ex. U, at 5; *see also* CP Response to Information Request No. 1, EI 31352, (Vol. 3, Exh. 84) at 2-3 (Oct. 28, 2021) (also projecting an increase of 8.0 trains per day). Accordingly, the Board should disregard the Coalition Communities' demand that Applicants be directed to explain "why the additional train was excluded from the Original Operating Plan." *See* ITAS-1 at 8.

[548] *See* Metra Data Workpaper, "All Trains" tab.

FIGURE 32[549]
TRAINS THROUGH THE COALITION COMMUNITIES

The Coalition Communities have seen similar levels of freight traffic than this in the past, and it did not "shut down" their communities.[550] For example, the Village of Bartlett – one of the Coalition Communities – noted in 2016 that it receives about 10 freight trains (in addition to 58 Metra trains) per day.[551] During the 1980s and 1990s, there were approximately 12 scheduled freight trains on the MD-W line west of Bensenville Yard daily, plus locals. Gameiro R.V.S., at ¶ 27.

---

549 *See* Metra Data Workpaper.

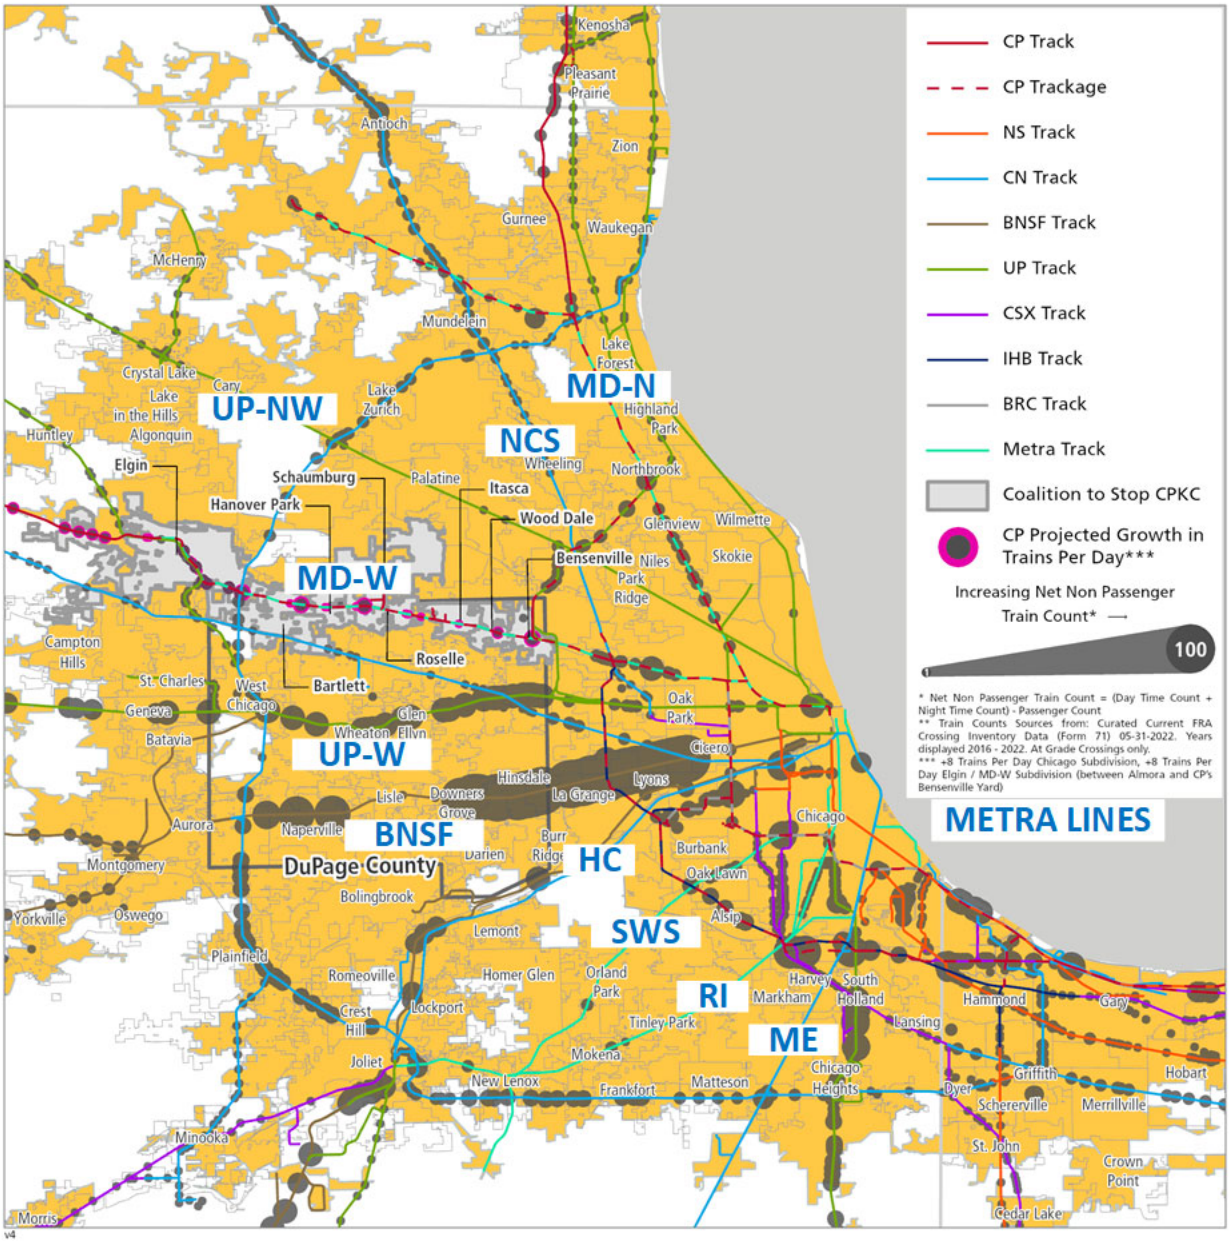
550 *See* ITAS-1 at 14;ITAS-4 at 3.

551 Village of Bartlett, Downtown TOD Plan (Oct. 18, 2016), available at https://rtams.org/sites/default/files/digital_documents/4099_Bartlett_TODPlan_2016.pdf.

Nor do the Coalition Communities provide any evidence that the Transaction will materially increase emissions locally or to some level that exceeds applicable emission standards.[552] CPKC's plan to add eight freight trains to the MD-W Line west of Bensenville CPKC will attract freight traffic that would otherwise be moved by trucks (which emit higher emissions) on highways or by other rail companies (many of which have worse environmental records)[553] through other communities. Thus, even if increases in traffic through the Coalition Communities result in higher (but still legal and safe) emissions levels in the Coalition Communities, emissions likely will decline overall. Verified Statement of Glen Wilson ("Wilson V.S.") at ¶ 22 (App. Vol. 1 at 311).

The relief the Coalition Communities seek to redress these modest traffic increases is simply untenable and disproportionate to any possible impact the Transaction will have on their communities. For instance, the Coalition Communities have asked for $5.5 to $9.5 *billion* dollars in infrastructure mitigation (more than $1 billion for each potential new freight train),[554] which is more than is spent across the CREATE Program—a public-private partnership that is investing $4.6 billion dollars in approximately 70 different vital projects across the entire Chicago railroad network.[555] As the map in Figure 33 shows, the MD-W Line on which the Coalition Communities are found will have relatively light rail traffic post Transaction when compared to many other communities in and around Chicago. Elphick R.V.S. at ¶ 70.

---



552 *See, e.g.* ITAS-1 at 14,

555 CREATE: Keeping the Go in Chicago, https://www.createprogram.org/about-create/ (last visited Apr. 26, 2022) Vol. 3, Exh. 85).

FIGURE 33
COMPARATIVE TRAIN COUNTS FOR RAIL LINES IN CHICAGO AREA

Much of the relief the Coalition Communities seeks is not only overreaching, but also infeasible. Taking just one example, their proposal to "eliminate *any* additional freight rail traffic from traversing the western end of the Elgin Subdivision post-merger and to find other

routings for such traffic,"[556] would cut the CPKC network off from the rail network at and beyond Chicago, precluding competition for traffic moving to Detroit, eastern Canada, and the eastern United States. Moreover, it would send the same traffic through more circuitous routes – spanning hundreds of unnecessary miles, traversing dozens of other communities, and resulting in a myriad of additional costs and emissions. Elphick R.V.S. at ¶¶ 73-76. This is quintessential "not in my backyard," never mind the impact on the public as a whole.

Finally, the Coalition Communities' proposed condition "that (1) holds Applicants to their statement that average train size will be reduced over the Elgin Subdivision and (2) requires that the reductions shall not be accompanied by an increase in the number of trains"[557] would be inappropriate and counterproductive to operational efficiency and flexibility. First of all, these two conditions are contradictory because Applicants' projection of a decreased average train length is directly tied to a modest increase in the number of trains. Elphick R.V.S. at ¶ 79. And as previously explained, the Coalition Communities request that there be no "increase in the number of trains" traveling through its communities is unreasonable, comes at the expense of other communities, and disserves the public interest. Elphick R.V.S. at ¶ 78. Further, it would be inappropriate to condition approval of the Transaction on any guarantee that train sizes will not increase over the Elgin Subdivision, notwithstanding Applicants' projections, because it would deprive Applicants' of the flexibility they need respond to changing circumstances and match network conditions on a day-to-day basis. Elphick R.V.S. at ¶ 79.

In prior cases where mergers brought modest increases in freight train counts, the Board has at most imposed a condition requiring the Applicants to consult with the locality. Even then,

---

556 ITAS-1 at 4 (emphasis in original).

557 ITAS-4 at 11.

it has terminated the condition when, after meeting, it was shown that "it is unlikely that additional consultation would result in mitigation that would be mutually acceptable to the parties."[558] Even that condition is not justified here, given that Applicants have indeed already consulted with the Coalition Communities, and it is clear that no reasonable, mutually acceptable mitigation is available.[559]

B. Hennepin County Concerns Fail For Similar Reasons

Hennepin County asserts that the Transaction "will bring more freight traffic to and through the County, bringing adverse impacts to the County's infrastructure" and "creat[ing] a greater risk of incidents involving hazardous materials."[560] Similar to the Coalition Communities, these concerns are overstated and do not warrant conditions.

Hennepin County notes that it is particularly concerned that "the diversion of the long-haul trucks . . . to reach CP's Minneapolis Intermodal Terminal at Shoreham Yard will aggravate existing problems and concerns."[561] But the anticipated additional daily volume of intermodal traffic to/from this facility is actually quite minimal. Applicants project that daily volume at the facility will increase by significantly less than one trainload per day. Elphick R.V.S. at ¶ 86. This increase is well within the range of seasonal traffic fluctuations at this terminal, and will return the facility to a level of volumes roughly comparable to what it saw in 2012-14. Elphick R.V.S. at ¶ 85.

---

558 *BN/Santa Fe*, Finance Docket No. 32549, (decision No. 47 served Feb. 20, 1996).

559 *See* Letter from C. Anne Ergo to A. Giordano (May 24, 2022)) (Vol. 3, Exh. 86)) (asserting that Applicants' offered ten million dollar investment was "clearly not a serious attempt to reach a mutually acceptable settlement" in light of the Coalition Communities' demand for more than $9 billion dollars of mitigation).

560 Hennepin County Comments, at 5-6.

561 *Id.* at 7-8.

Outside of this one intermodal facility, the traffic projected increases about which Hennepin County complains are not even large enough to meet the Board's established thresholds for triggering environmental review. Under those thresholds, increases in rail traffic of less than eight trains per day in attainment areas or three trains per day in nonattainment areas – or comparable changes in gross ton mileage – normally do not require environmental review. *See* 49 C.F.R. §§ 1105.6(c)(1); 1105.7(e)(5). If Hennepin County wants OEA to depart from its precedent and study traffic changes that do not exceed these thresholds, it must make that case to OEA as part of the EIS process. This is not the proper place for such an argument.

In any event, none of these other projected traffic increases are cause for concern or conditions. Hennepin County asserts that it may experience increased "blocked crossings" as result of "more trains and longer trains, if industry trends continue."[562] The concern for continuing industry trends shows that Hennepin County's concern is not related to the Transaction. Indeed, Hennepin County calls the Board's attention to 14 crossings in particular that it is most concerned will be "directly and materially impacted by merger-related traffic increases,"[563] but issues with blocked crossings at this location are unlikely to result from the Transaction. Elphick R.V.S., at ¶ 90. *Second*, Hennepin County overstates the amount of additional hazardous traffic that will pass through Hennepin County, as it is counting empty tank cars returning for another load of the same commodity in its hazardous shipment volumes. Applicants informed Hennepin County of the error in its analysis,[564] but it did not adjust its

---

563 *Id.* at 14.

564 *See* Email from D. Meyer to A. Hirschkorn (Feb. 25, 2022) (Vol. 3, Exh. 89).

figures.[565] In fact, the volume of hazardous commodities routed through Hennepin County will not be large, and will be only slightly more than the hazardous materials that traversed Hennepin County in 2018 and 2019.[566] More importantly, CP is the safest railroad in North America based on FRA reportable incidents for Class 1 railroads, and the safety concerns relating to hazardous traffic are fully addressed in Applicants' Safety Integration Plan, which will be implemented in coordination with FRA.[567]

Finally, even after the Transaction, CPKC will remain a minority participant in the Hennepin County rail network, with BNSF having considerably more traffic in this region. *See* Elphick R.V.S. at ¶ 88. Taken in context, then, any concerns by Hennepin County about projected traffic levels after the Transaction are much more tied to BNSF traffic, which Applicants have no control over, than any traffic increases resulting from the Transaction.[568]

C. The Sierra Club's Requested Conditions Have No Nexus to the Transaction, Which is Expected to Lower Greenhouse Gas Emissions

The Sierra Club requests that the Board impose two conditions, neither of which is remotely related to the Transaction. Both should be denied, as "[t]he Board does not require

---

565 *See* Hennepin Comments, Amfahr V.S., at ¶ 24.

566 *See* Elphick RVS.

567 *See* supra Part XI.A; Safety Integration Plan, FD No. 36500, at Part III.A.1 (filed Dec. 26, 2021).

568 *Canadian National Ry. & Grand Trunk Corp. – Control – EJ&E West Co.*, Finance Docket No. 35087 (Decision No. 18 served Jan. 16, 2009) ("Finally, it is worth noting that the EJ&E line is an active rail line today; thus, the current owners, as well as any carriers using that track pursuant to a trackage rights arrangement, could increase train traffic on that line at any time without Board approval and without any federal action triggering NEPA review or Board-imposed mitigation measures.").

mitigation for existing environmental conditions, such as the effects of current railroad operations."[569]

First, the Sierra Club requests that Applicants be "required to make climate commitments that meet the standards of the Intergovernmental Panel on Climate Change's recommendations and that KCS/CP and Amtrak make tangible, public-facing commitments to electrification of routes nationwide and any new routes in our state."[570] This request has no "nexus" to the Transaction, which has no impact on the feasibility of electrification.[571]

Second, the Sierra Club requests that Applicants be "required to make climate commitments that meet the standards of the Intergovernmental Panel on Climate Change's recommendations."[572] But the Sierra Club makes no attempt to demonstrate that the Transaction will raise greenhouse gases or otherwise harm to the environment in some way that justifies imposing such a commitment. In fact, Applicants project that the Transaction will *lower* greenhouse gas emissions overall. *See* Wilson V.S., Part II.A. Linking the CP and KCS networks and upgrading them through added sidings will make both portions of the network more efficient, which in addition to benefiting shippers, will also benefit the environment given that trains are more environmentally efficient when they move than when they idle, stop or switch. *Id.* at ¶ 17. This improved network will also result in the diversion of almost 64,000

---

569 *Can. Nat'l. Rwy. Co. – Control – EJ&E W. Co.*, Finance Docket No. 35087 (Decision No. 16 served Dec. 24, 2008) at 38.

570 Sierra Club's Comments, at 1.

571 Canadian National Ry. – Control – EJ&E West Co., Finance Docket No. 35087, at App. A, n.2-3 (Notice of Intent to Prepare an Environmental Impact Statement, STB served Dec. 21, 2007) ("[T]he Board's power to impose conditions is not limitless: there must be a sufficient nexus between the condition imposed and the transaction before the agency, and the condition imposed must be reasonable . . . . The Board . . . has not imposed mitigation to remedy preexisting conditions.").

572 Sierra Club's Comments, at 1.

long-haul truck shipments to rail transport, which is four times more fuel efficient and results in a 75% drop in greenhouse gas emissions. *Id.* at ¶¶ 21-22. The result of all of this will be to eliminate more than 389,000 tons of greenhouse gas emissions annually by the third year after the Transaction is approved. *Id.* at ¶ 15.

Additionally, CP intends to apply its robust climate commitments across the CPKC system.[573] CP "already outperforms industry averages for locomotive fuel efficiency—over 11% better than the North American Class I freight average." Wilson V.S., at ¶ 8 (App. Vol. 1 at 306). Its fuel efficiency has improved by more than 40% since 1990, and it is committed to continue improving fuel efficiency, including expanding use of fuel trip optimizer technology. *Id.* at ¶¶ 8-9. CP expects to align with a "well-below 2°C pathway" by 2030 in line with the recommendations of the Intergovernmental Panel on Climate Change, and to remain a leader in the industry in pushing further decarbonization after 2030.[574]

XI. OTHER ISSUES

In this section we respond to a variety of miscellaneous comments, some styled as raising competitive issues or service issues, but none legitimately related to impacts of the Transaction.

A. Concerns About CP's Tariff Provisions Applicable to Hazardous Shipments Are Not Competitive Issues or Transaction-Related and Should Be Rejected

Several commenters express concerns relating to the tariff provisions CPKC might choose to adopt governing the transportation of a subset of extraordinarily hazardous

---

573 *See id.* at ¶¶ 10-12; *see also* Canadian Pacific, CP's Commitment to Fight Climate Change, CP Sustainably Driven (2020), available at https://sustainability.cpr.ca/downloads/CP_Rail_2020_Climate_Statement.pdf (Vol. 3, Exh. 87).

574 *See also* Canadian Pacific, CP's Climate Strategy, CP Sustainably Driven (2021), available at https://sustainability.cpr.ca/downloads/CP_Rail_Climate_Strategy.pdf (Vol. 3, Exh. 88).

commodities classified as "toxic" or "poison" inhalation hazards and referred to as "TIH/PIH" commodities.[575] The concerns relate specifically to two aspects of CP's existing tariffs: Item 53, pertaining to insurance requirements, and Item 54, pertaining to the allocation between CP and the shipper of potential liability to third parties arising from a release of TIH/PIH commodities being transported by CP when CP is not at fault.[576]

Fundamentally, the requests of these commenters arise from their dissatisfaction with these two aspects of CP's existing TIH/PIH tariff provisions, which were in place long before this Transaction was contemplated. Some of these commenters are looking to avoid having CP's terms *ever applied* to the KCS network, via an inappropriate and permanent freeze of KCS's existing terms. Others go farther, asking the Board to impose conditions that would roll back CP's pre-existing tariff terms to match KCS's existing terms. No such conditions are justified, for reasons we explain below.

---

[575] Comments of Bayer CropScience LP ("Bayer-2") (filed Feb. 28, 2022) at 10; Comments of Occidental Chemical Corporation and Oxy Vinyls, LP ("OxyChem Comments") (filed Feb. 28, 2022) at 2 (joining the Joint Associations' and The Chlorine Institute's request for conditions regarding CP's TIH/PIH tariff provisions); ACC-6/TFI-5/NITl-3 at 24-25; CI-3 at 4; Letter from the U.S. Department of Agriculture to the Surface Transportation Board ("USDA Letter") (dated Apr. 22, 2022) at 2. In its Amended Comments, the National Association of Wheat Growers (the "Wheat Growers") joined these commenters. *See* Amended Comments of National Association of Wheat Growers (filed June 9, 2022) ("Wheat Growers' Amended Comments") at 1-2. The Wheat Growers' Amended Comments did not "address the new information in the amended Application and use the modeled traffic density data in the resubmitted workpapers," as required by the Board, *see* Decision No. 18 (served May 27, 2022) at 2, and instead, addressed the topic of TIH/PIH tariffs for the first time. While Applicants believe the Wheat Growers' Amended Comments were improperly submitted, its Amended Comments fail to articulate any competition concerns. Further, as we discuss below, Bayer has subsequently withdrawn its comments in light of CP's agreement to provide advance notice of certain post-Transaction tariff changes affecting TIH/PIH shipments on the pre-Transaction KCS network. *See* Joint Notice of Settlement Agreement by CP and Bayer ("CP-51/Bayer-3") (filed May 25, 2022).

[576] Canadian Pacific, Hazardous Commodities Tariff 8 at 7, *available at* https://www.cpr.ca/en/customer-resources-site/Documents/tariff-8-hazardous-commodities-apr-07-2022.pdf [cpr.ca].

Applicants understand that certain shippers and receivers of TIH/PIH commodities – like Bayer – may reasonably be concerned about the potential that they would want to adjust their shipping patterns in the event CP's terms become applicable to shipments on the pre-Transaction KCS system and would value advance notice of any such change before it becomes effective. As set forth in CP's settlement with Bayer, CP committed to providing Bayer with three-years' notice before revising the indemnity provisions applicable to TIH/PIH shipments on KCS's pre-Transaction U.S. network to conform with the provisions of CP's tariff, in exchange for the commitment of Bayer and its suppliers to use the safest-available rolling stock for shipments of these commodities. Bayer withdrew its comments on the strength of this undertaking. *See* CP-51/Bayer-3. As Brooks explains, CP is prepared to negotiate comparable arrangements with any shipper that may wish to use KCS's pre-Transaction network to ship these commodities. Brooks R.V.S. at ¶ 74. Especially in light of this reasonable accommodation, the Board should reject the conditions requested by these commenters.

Even without Applicants' accommodation, however, there is no merit to the requested conditions relating to CPKC's future TIH/PIH tariffs, for the following reasons.

To the extent the TIH/PIH commenters take issue with CP's existing tariff terms and seek conditions designed to roll them back as to movements on the pre-Transaction CP network,[577] there is no doubt that any such condition would be unjustified. The tariff terms applicable to shipments on the pre-Transaction CP network will be unaffected by the Transaction. Although CP regards its terms as entirely reasonable (as Brooks explains in his Reply Verified Statement

[577] Bayer's now-withdrawn request had sought such a condition expressly. *See* Bayer-2 at 10. The Chlorine Institute's request is ambiguous as to the scope of the prohibition of applying CP's terms. *See* CI-3 at 4. USDA likewise suggests that the Board "investigate CP's tariff language itself." USDA Letter at 2.

at ¶ 70), shippers are fully aware that they may challenge the reasonableness of those terms before the Board if they wish, and some have done so.[578] The Transaction will not affect the availability of regulatory oversight for these terms. Board precedent prohibits using this merger proceeding as a vehicle for regulating commercial activity unaffected by the Transaction.[579] Doing so would deny CPKC the right to establish reasonable terms for shipments on its network and defend those terms in appropriate regulatory fora.

All of the TIH/PIH commenters seek a condition precluding CP from applying its terms to shipments on the pre-Transaction KCS network. That request is similarly inappropriate, for the following reasons.

First, the conditions would not truly address any impact of the Transaction. The Transaction is not responsible for the possibility that KCS's tariff terms might change. In the pre-Transaction world, KCS has complete freedom – subject to the Board's regulatory backstop – to set whatever TIH/PIH tariff terms it wishes, and to change those terms in response to evolving conditions and judgments about the risks posed by those shipments. Nothing would prevent KCS from choosing to adopt terms that mirror those in CP's public tariffs.

---

[578] As Bayer's now-withdrawn comments note, Agrium (whose successor, Nutrien, is a member of TFI), challenged CP's TIH/PIH tariff provisions on non-competition grounds before the Board in 2015 in Docket No. NOR 42145, arguing that CP's Tariff 8, Item 54, unreasonably shifts defense and liability responsibilities for train accidents to Agrium even in accidents caused by third-parties. Bayer-2 at 9, n.5; *see also* Complaint, *Agrium Inc. and Agrium U.S. Inc.* v. *Canadian Pacific Railway Company*, Docket No. NOR 42145 (May 15, 2015) at 1-2. The Agrium challenge led to a confidential settlement. Brooks R.V.S. at ¶ 69. Item 54 was also challenged on non-competition grounds in Canada and it was upheld by the Federal Court of Appeal. Brooks R.V.S. at ¶ 68.

[579] *See UP/SP*, 1 S.T.B. at 418 (making clear that "[a] condition must address an effect of the transaction" and that the agency "will not impose conditions 'to ameliorate longstanding problems which were not created by the merger,' nor will we impose conditions that 'are in no way related either directly or indirectly to the involved merger.").

Some of the TIH/PIH commenters imply that a change in terms applicable to the pre-Transaction KCS network would flow from an impact of the Transaction on competition.[580] But this is just wrong. As Naatz explains, KCS's current terms are the product of KCS's own assessment of the risks, and have nothing at all to do with competition with CP. Naatz R.V.S. at ¶ 114. Indeed, the very notion that KCS's terms have anything to do with competition from CP is belied by these commenters' own commentary: in their eyes, CP's terms are distinctly inferior, and thus not a source of competitive pressure for KCS to maintain more favorable terms, much less one that would be affected by the Transaction.[581] These commenters do not like the fact that CP managers might apply a different set of judgments about the appropriate level of risk to bear in connection with TIH/PIH shipments, pure and simple. That is not a competitive issue, as Dr. Majure explains. Majure R.V.S. at ¶ 179. Nor is it an effect of the Transaction that different business people's judgments about these matters may differ.[582]

An email among certain of the TIH/PIH commenters that was produced in discovery shows that they are well aware that their request for conditions has no real nexus to the Transaction. In a November 22, 2021 email from the ACC to OxyChem (one of ACC's members), the ACC representative observed that {{[redacted]

---

580 *See* OxyChem Comments at 2; ACC-6/TFI-5/NITL-3 at 24; Wheat Growers' Amended Comments at 2.

581 The discussion of "competition" in Bayer's now-withdrawn comments underscores why there is no competitive issue here. Bayer's suppliers have already chosen not to use CP to ship TIH/PIH commodities and in the future they might choose not to ship to Bayer's facility in Kansas City via the pre-Transaction KCS portions of the CPKC system. That is not a reduction in competition, but a choice that those shippers might make to use other railroads for shipments for which they have already decided CP is not a viable option. Bayer-2 at 3-5, 9.

582 The different approaches that KCS and CP each respectively take towards TIH/PIH shipments reflect each railroad's own experiences and judgments of the risks posed by TIH/PIH shipments. Indeed, as explained in the Naatz R.V.S., KCS's TIH/PIH tariff terms reflect its assessment of the risks from TIH/PIH shipments as they relate to KCS's business. *See* Naatz R.V.S. at ¶ 114.

[redacted]}}[583]

Second, even if the Board attributed the possibility of a change in the tariff terms applicable to the pre-Transaction KCS system to the Transaction, the conditions sought by these commenters would be an egregious overreach. They would in substance freeze KCS's tariff terms permanently in their pre-Transaction state. The USDA says this expressly, asking that the Board "require KCS to *retain its tariff language*" for "traffic originating on, terminating on, or traversing the KCS network." USDA Letter at 2 (emphasis added). Such a freeze would impermissibly give these commenters rights they do not possess today, and in the process prevent CPKC from adapting to changes in conditions bearing on the risk profile of TIH/PIH shipments on the CPKC network. *See* Brooks R.V.S. at ¶ 71; Naatz R.V.S. at ¶ 115.

Third, the appropriate mechanism for shippers and receivers to voice their concerns about the future CPKC tariff terms applicable to shipments of TIH/PIH commodities on the pre-Transaction KCS network would be the opportunity to challenge the reasonableness of those terms before the Board or to negotiate these provisions with CPKC. The Transaction will have no impact on the availability of Board regulatory processes to oversee the reasonableness of whatever tariff terms CPKC might choose to adopt. By contrast, the conditions these commenters seek would inappropriately supplant those processes with a per se rule of invalidity applicable uniquely to CPKC and no other railroad. The law affords railroads the right to set

---

583 *See* JA-HC-000001 at -05-06 (emphasis added) {{([redacted])}} (Vol. III, Exh. 90) (Vol. 3, Exh. 90).

reasonable tariff terms subject to review through a reasonable practices challenge at the STB. *See* 49 U.S.C. § 11324(c). KCS is therefore free today to change the terms of its tariffs so long as they are reasonable. CPKC would also be free to set its own tariff terms, subject to reasonable practices evaluation if such a case is filed.

A rigid prescription of CPKC's future tariff terms under the guise of a merger condition would not be consistent with the Board's merger precedents. And it would also be inconsistent with the Board's other regulatory precedents. Under no circumstances would the Board prescribe a set of tariff terms that KCS or CP must maintain without regard to the circumstances in a particular case. When it has evaluated proposed tariffs governing TIH/PIH shipments, the Board has emphasized that "it is prudent to tread carefully in this area, avoiding broad pronouncements and relying instead on narrow adjudications of specific tariffs."[584] The Board should reject the proposed conditions and remind these commenters of the appropriate legal avenues for voicing their concerns about CP's tariff terms.[585]

---

[584] *Union Pacific R.R.–Petition for Declaratory Order*, Finance Docket No. 35504 (Decision served Apr. 30, 2013). In this proceeding the Board denied a petition for declaratory order sought by UP regarding the reasonableness of its tariff provisions relating to indemnification, but at the same time declined to rule that UP's tariff was unreasonable, as many shippers had requested. *Id.* at 6 n.12.

[585] Although not germane to the question whether any condition is warranted, the TIH/PIH commenters' concerns about CP's Items 53 and 54 applying to the pre-Transaction KCS portions of the CPKC network are overblown. Item 53, which requires that a shipper maintain $100 million of liability insurance, is not onerous for shippers of TIH/PIH materials, because the extreme hazards associated with these materials already requires them to maintain high insurance limits. Brooks R.V.S. at ¶ 70. Item 54, which requires that shippers indemnify and defend CP except to the extent that liabilities arise from the negligence or willful misconduct of CP, merely calls for a reasonable allocation of responsibility for liability outside of the railroad's control to the party responsible for the shipment without which there would no liability exposure. That provision is comparable to the terms established by other major railroads. Brooks R.V.S. at ¶ 67. And CP's liability terms merely differ from KCS's terms in that KCS does not explicitly require shippers to share in whatever liability might be imposed on KCS in the event of a release for which the railroad is not responsible. Naatz R.V.S at ¶ 114. KCS does not hold shippers harmless for liability that may arise from their shipments. Naatz R.V.S at ¶ 114.

B. Concerns of Certain Wheat Growers' Associations About Potential Competition from Canadian Grain Suppliers Reflect More Competition, Not Less

Three associations representing certain segments of the wheat industry in the United States (the "Wheat Growers Associations")[586] ask the Board to impose conditions on the Transaction to address vague concerns about the ability of U.S. wheat growers to compete with Canadian wheat growers currently served by CP, and the regulatory benefits that Canadian wheat growers allegedly enjoy due to pre-existing Canadian regulatory policy.[587] The Wheat Growers Associations' concerns are neither supported by evidence nor related to the Transaction. Neither CPKC nor Canadian regulatory policy will disadvantage wheat shipments from U.S. origins to Mexico and other KCS-served destinations relative to Canadian origins. Even if Canadian wheat growers did have some sort of competitive advantage over U.S. growers, that advantage would have nothing to do with the Transaction.

As a starting point, the supposed "concerns" of the Wheat Growers Associations in fact support unconditioned approval of the Transaction, because they proceed from the premise that the Transaction will provide *better, more competitive transportation options*. NDWC acknowledges this directly: "North Dakota wheat shippers and producers that are directly served by CP elevators certainly should benefit from some further destination single-haul rates and capabilities, that are being touted by the Applicants."[588] Likewise, "a more competitive CP with

---

[586] As used in this Reply, "Wheat Growers Associations" refers to US Wheat Associates ("USWA") and the North Dakota Wheat Commission ("NDWC"). The National Association of Wheat Growers ("NAWG") initially filed Comments making substantially the same arguments as the other Wheat Growers Associations, *see* NAWG Comments at 2, but subsequently decided (wisely) to abandon those arguments, perhaps realizing that the Wheat Growers Associations' concerns are without merit.

[587] *See* NDWC Request for Conditions (filed Feb. 28, 2022) at 5; USWA Comments and Request for Conditions (filed Feb. 28, 2022) at 3-4; NAWG Comments (filed Feb. 28, 2022) at 2.

[588] NDWC Comments at 5.

a longer reach should offer *more competition to the BNSF* which is the more dominant railroad operating in North Dakota."[589] The other Wheat Growers Associations are concerned that the Transaction will make other shippers more "rail-advantaged," or give them a more "direct line into Mexico," which are just other ways of saying that the Transaction will yield transportation benefits.[590] Yet the same advantages will also extend to U.S. wheat growers along with other agricultural shippers. Dozens of agricultural shippers support the Transaction precisely because of these sorts of benefits.[591]

Second, and equally fundamentally, the concern of the Wheat Growers Associations that some of their members might have to face stiffer competition as a result of improved rail transportation options is not a valid objection to a rail merger. It has long been the case that Canadian wheat competes with U.S. wheat, particularly for destinations in Mexico, and the Transaction will not change that fact. And CP (along with CN) have long served both U.S. and Canadian origins. This already-extent competition was highlighted by BNSF witness William W. Wilson: "The northern origins [of the United States] supply Hard Red Spring (HRS) wheat which ultimately competes with similar wheat grown and shipped from Canadian origins."[592] In prior merger cases the Board has underscored that the public's interest in competition is best served by expanding access to competitive transportation options, not by protecting the

---

589 *Id.* at 5.

590 USWA Comments at 4; NAWG Comments at 2.

591 *See, e.g.*, Reply Verified Statement of NEW Cooperative, Inc. ("This combination provides us the possibility to build a greenfield grain elevator to ship corn and soybeans in Northern Iowa, to capitalize on new, efficient single-line routes on CP-KC from Iowa to grain destinations on the KCS, including Mexico…We believe this investment will bring further benefits to our members and the supply chain as a whole, but is only viable in light of opportunities created by the CP-KCS combination"); Richardson International Limited Comment ("Richardson has reviewed the CP-KC Transaction and believes it opens new markets to our company. More specifically, we expect to be able to access new markets for our grain handling facilities located in North Dakota to ship grain to the Gulf area as well as Mexico.")

592 BNSF Comments, Verified Statement of William W. Wilson ("Wilson V.S.") at 8.

advantages that one group or another may have had in the past. In *CN/IC*, for example, the Board explained that greater competition from Canadian growers would be a public benefit rather than a public harm: "Even if North Dakota's competitive positions vis-a-vis Canadian producers on CN is harmed because these latter shippers will gain single-line service to the Gulf, that harm results from greater, not less, competition." *CN/IC* (Decision No. 37 served May 29, 1999) at 123.

Third, the factual premises of the Wheat Growers Associations' concerns are simply incorrect. Neither CPKC nor Canadian regulation will advantage Canadian origins over U.S. origins. For example, NDWC claims that "Canadian producers pay less to move wheat similar distances . . . by as much as 30% for similar moves." *See* NDWC Comments at 5. But the facts contradict this misperception. CP's rates for wheat shipped from Canadian origins are higher than rates from U.S. origins, proving that it does not favor Canadian origins over U.S. origins. *See* Brooks R.V.S. at ¶ 84. For destination markets in Mexico, CP's public tariffs show that Canadian shippers pay *substantially more* for rail transportation than U.S. wheat growers, not less. Table 7 illustrates this point by comparing CP's published rates for movement from U.S. and Canadian origins, both on a Rule 11 basis to the Kansas City gateway and a through rate basis to destinations in Tlalnepantla, Mexico.

TABLE 7[593]
CP WHEAT RATES TO MEXICAN DESTINATIONS FROM U.S. AND CANADIAN ORIGINS
EFFECTIVE AUGUST 1, 2022

	Rule 11 over Kansas City		Tlalnepantla, EM

The Wheat Growers Associations' are also mistaken about the advantages conferred by Canadian regulatory policy. The relevant policies have *no effect at all* on transportation rates charged by CP or anyone else in or through the United States. The Canadian maximum revenue entitlement ("MRE") policy, which is "designed to make sure railways are compensated fairly for the volume of grain they transport in a crop year [ ] and the distance they carry it," applies only to grain shipped from the Western Canadian Prairies to the Canadian export ports of Vancouver, Thunder Bay, and the Thunder Bay leg of the route to Montréal. It does not apply to wheat shipped by rail to destinations in the United States or Mexico.[594] As is evident from CP's public tariffs, shipments to U.S. and Mexico destinations fall outside the MRE.[595]

Because there is no Transaction-related harm, granting the Wheat Growers Associations' requests for conditions[596] would inappropriately burden the Transaction and affirmatively

---

[594] *See* Canadian Transportation Agency, The Maximum Revenue Entitlement: A Guide ("MRE Guide"), available at https://otc-cta.gc.ca/eng/publication/maximum-revenue-entitlement-a-guide?msclkid=ec143571c10f11ec8f99bf0aaf7bc6a4 ("The MRE applies anytime CN or CP moves western grain in certain cars by rail in Canada's Western Division.").

[595] MRE Guide ("Any part of a movement [that] is outside of Canada's Western Division" is "not covered by MRE.").

[596] USWA and NDWC request that the Board "impose [] three forms of statutory competitive access as conditions on this transaction for use by any shipper on the new CP/KCS system that is subject to market dominance or receives inadequate service," where the three competitive access remedies available to shippers and carriers are: "the prescription of through routes, terminal trackage rights, and reciprocal switching." *See* USWA Comment at 13; NDWC Comment at 16.

interfere with the new, more competitive transportation environment it will enable. Efforts to impede more competitive cross-border transportation options is inconsistent with Board precedent, contrary to the spirit of the United States-Mexico-Canada Agreement (USMCA), and harmful to the public interest.

C. Conditions Are Not Needed to Protect Evergy's Service Levels

Evergy Metro, Inc. ("Evergy") expresses no competitive concerns about the Transaction, but instead is worried about potential service issues affecting its coal-fired La Cygne Generating Station in Amsterdam, MO, about 60 miles south of Kansas City.[597] Evergy characterizes the Transaction as posing a "systemic threat…for bulk commodity shippers reliant on the KCS lines from Kansas City south" and seeks conditions relating to oversight and reporting.[598]

Applicants have addressed in Sections I and V above the appropriateness of the Board imposing conditions (a) requiring Applicants to honor their representations in this proceeding and (b) establishing a five-year period of oversight, coupled with reporting obligations relating to Applicants' post-Transaction service levels. Such conditions would fully address any legitimate concerns Evergy has about the Transaction, and no further conditions are warranted.[599]

Evergy's concerns about service levels on the KCS line south of Kansas City are wrong on the facts. First, Evergy mistakenly asserts that CPKC will increase traffic south of Kansas

---

[597] Opening Comments of Evergy Metro, Inc. ("Evergy Comments") (filed Feb. 28, 2022) at 4.

[598] Evergy Comments at 14, 17-18.

[599] Applicants note, however, that Evergy's request (Evergy Comments at 17) that Applicants honor their "representations … regarding the preservations of gateways" would not apply to Evergy's traffic, since CP cannot serve the origins of Powder River Basin coal that Evergy ships via the Kansas City gateway and the Transaction will thus not create the opportunity for a longer haul for this traffic on the CPKC network. CPKC's incentive to continue participating in this important traffic via Kansas City will be unaffected by the Transaction. *See* Section I and Brooks R.V.S. at ¶¶ 12, 13.

City without adding any "new sidings."[600] That is not accurate. KCS's trains deliver unit trains of coal to Evergy's La Cygne Generating Station at Amsterdam, MO, from interchange at Kansas City and then return the empty trains in the reverse direction. Applicants will in fact be adding capacity on this segment. As shown in the Application, and as illustrated in more detail the Elphick/Orr R.V.S, Applicants will be adding new double track near Kansas City as well as extending the siding at Blue Valley, MO.[601] As explained in the Elphick/Orr R.V.S., with these additions, there will be ample capacity on this segment to maintain Evergy's pre-Transaction cycle times. Elphick/Orr R.V.S. at ¶ 75.[602]

Second, Evergy acknowledges that KCS provides transportation services to Evergy under a transportation contract.[603] That contract {{ [redacted] }}. Naatz R.V.S. at ¶ 119. This contractual commitment would continue to bind CPKC for the duration of the contract. These protections, taken together with the service and oversight commitments Applicants have made generally, eliminate any justification for further conditions benefiting Evergy.

600 *See* Evergy Comments at 7, 9, 18.

601 *See* Amended Operating Plan (Exhibit 13) at ¶ 296.

602 Evergy's concerns about KCS's pre-Transaction service issues during 2021 (*see* Evergy Comments at 10-11) obviously do not stem from the Transaction.

603 *See* Evergy Comments at 4.

D. Texas International Terminals' Concerns Are Not Transaction-Related

Texas International Terminals Ltd. ("TxIT") seeks a condition requiring CPKC to "effectuate (as necessary) and maintain the access rights that KCS was granted in UP-MKT to Galveston" and to "actively and cooperatively work with rail shippers and TxIT to reasonably market and enable such rights to be actively utilized."[604] The haulage rights to which TxIT refers were granted to KCS more than 30 years ago but never exercised by KCS. This request is utterly unconnected to the Transaction and should be summarily denied.

TxIT operates an export terminal in Galveston, TX, to which KCS was granted haulage rights over UP in connection with UP's 1988 merger with Missouri-Kansas-Texas Railroad.[605] The rights were designed to provide destinations for grain originated using other rights granted in *UP/MKT*, the so-called "North End" rights, which gave KCS access to grain-origination points in the Omaha/Council Bluffs area.[606] Although KCS's use of the "North End" rights proved very successful (with KCS originating large volumes of grain in the Omaha/Council Bluffs area), as TxIT points out KCS "has not effectuated or sought to aggressively market those rights with respect to rail service to TxIT to date."[607] This is because KCS found those rights to be commercially disadvantageous as compared to other ways for KCS to get grain to destination markets, including other Gulf ports served directly by KCS (such as Port Arthur and New

---

604 *See* Comments and Request for Conditions of Texas International Terminals Ltd. ("TxIT Comments") (filed Feb. 28, 2022) at 8.

605 *See UP/MKT.*

606 KCS inherited MKT's North End haulage right for grain traffic originating in Omaha/Council Bluffs, and also obtained haulage rights on UP between Beaumont and Galveston KCS to deliver North End grain to Galveston. *UP/MKT*, 4 I.C.C.2d at 452-458.

607 *See* TxIT Comments at 4.

Orleans). Naatz R.V.S. at ¶ 117. KCS has not turned away any traffic. Instead, grain traffic to TxIT's Galveston facility moves by rail via UP and BNSF. *Id*.[608]

The Transaction will not affect the existence of KCS's haulage rights.[609] Nor is the Transaction to blame for KCS's long-preexisting decision not to exercise those rights. Given the history, TxIT's suggestion that the Transaction will create a new incentive for KCS to favor other Gulf ports (ones it already services directly) is obviously without merit.[610] In these circumstances, TxIT's desire to impose on CPKC a new, affirmative obligation to "actively" market service to that terminal is unwarranted. There simply is no Transaction-related harm to address.

TxIT also echoes multiple other parties in requesting that the Board require Applicants to adhere to their pledge to maintain open gateways and interchanges and to impose conditions allowing for enforcement of those commitments.[611] These requests are addressed in depth in other sections of Applicants' Reply. *See*, *e.g.*, Sections I and VIII.B. TxIT's Comments add nothing that would warrant any relief beyond the commitments that Applicants have already made to address these issues. Indeed, some of the specific conditions TxIT seeks would be particularly inappropriate, and affirmatively anticompetitive. TxIT's insistence on "non-

---

608 *See also Texas Railway Exchange LLC – Construction & Operation Exemption – Galveston County, TX*, Finance Docket No. 36186 (STB served Jan. 17, 2020) (TxIT is served by UP and BNSF).

609 Although TxIT's proposed condition is plainly inappropriate, Applicants have no plans to extinguish whatever rights CPKC would have to access Galveston via UP haulage.

610 *See* TxIT Comments at 5.

611 *Id.* at 9. Specifically, TxIT says "this would include requiring: (1) the preservation and maintenance of all existing CP gateways on traffic to TxIT in interchange with UP and BNSF; (2) the provision of competitive rates to those gateways for interline service that maintain existing, non-discriminatory competitive routing and service offerings that an independent CP and KCS are able to currently provide; and (3) quarterly reports to the Board providing information on rail traffic being diverted to CP/KCS from competing routes, including to/from Gulf Coast ports. The Board should also retain jurisdiction post-Transaction to provide adequate oversight and a method for parties to raise potential issues to ensure compliance with these conditions."

discriminatory competitive routing and service offerings," for example, would stifle CPKC's ability to compete more effectively in the transportation marketplace using its new single-line services. *See* Section VIII.B, above. Nor is there any justification for the kind of detailed reporting TxIT requests concerning competitively-sensitive details about the new traffic opportunities that CPKC attracts as a result of the Transaction. Such reporting would likewise undermine CPKC's ability to provide stronger competition against the larger Class 1 railroads. Brooks R.V.S. at ¶ 38.

E. LyondellBasell's Proposed Reciprocal Switching Conditions Should Be Rejected

LyondellBasell ("LYB") seeks conditions requiring that KCS provide UP and BNSF with new reciprocal switching access to three LYB-owned plants served by KCS: two in the Lake Charles, LA area and one in Corpus Christi, TX.[612] The relief LYB seeks is unwarranted, overreaching, and designed to address pre-existing conditions that are unrelated to the Transaction.

LYB's requests are not predicated on any purported competitive concerns about the Transaction, nor could they be. The Transaction will not have any effect whatsoever on the number of rail carriers with access to these KCS-served facilities. Instead, LYB is seeking to use the Transaction as a means to expand rail-carrier access relative to pre-Transaction conditions, which is reason enough to deny LYB's requested conditions.

LYB's own Comments explain that the UP or BNSF access it desires does not exist today. For both of LYB's Lake Charles area facilities, LYB makes no secret of the fact that –

---

612 *See* LyondellBasell Opening Comments and Requests for Conditions (LYB-3) (filed Feb. 28, 2022).

wholly apart from the Transaction – BNSF has actively been attempting to gain access to these facilities but that "KCS has resisted BNSF access."[613]

- At the Sasol plant in Westlake, LA (near Lake Charles), LYB acknowledges that prior to the Transaction, KCS has declined to grant those rights.[614]
- At LYB's plant on the Rosebluff Lead in Lake Charles, LA, LYB acknowledges that BNSF's rights are subject to separate litigation before the Board, with the compensation owed to KCS for BNSF's access to LYB's facility currently pending before the Board.[615]
- At LYB's facility at Corpus Christi – which in any event "does not actively ship by rail today" – LYB acknowledges that UP has never had access to that facility.[616]

Accordingly, LYB's requests for forced competitive access arise out of its frustration with the status quo, not out of any competitive impact of the Transaction, and they are not appropriately addressed in this proceeding. The appropriate venue for LYB's requests for BNSF and UP reciprocal switching access is either (a) a petition for reciprocal switch access under the Board's existing competitive access rules, which LYB has not brought; (b) an effort to expand

---

613 LYB-3 at 6, 10–13.

614 LYB-3 at 8.

615 LYB-3 at 9. The Board granted BNSF terminal trackage rights over the Rosebluff Lead in *BNSF Ry. – Terminal Trackage Rights – Kansas City Southern Ry.*, Finance Docket No. 32760 (Sub-No. 46) (Decision No. 3, served July 5, 2016), but it has not yet determined how much BNSF must pay KCS for that access. *BNSF Ry. – Terminal Trackage Rights – Kansas City Southern Ry.*, Finance Docket No. 32760 (Sub-No. 46) (Decision No. 8 decided Feb. 20, 2020); *BNSF Ry. – Terminal Trackage Rights – Kansas City Southern Ry.*, Finance Docket No. 32760 (Sub-No. 46) (Decision No. 10 decided Apr. 12, 2022).

616 LYB-3 at 10.

such access through Ex Parte No. 711 (where, not surprisingly, LYB has been an active participant),[617] or (c) an effort to enforce conditions imposed *on UP* in the *UP/SP* proceeding, where LYB likewise has actively been seeking BNSF access.[618] None of this has any place in this proceeding.

Lacking any competition-related justification for its proposed conditions, LYB attempts to bootstrap new competitive access by arguing that the Transaction will cause "traffic levels [to] increase substantially along the Gulf Coast . . . without commensurate investment."[619] As discussed in Section V above, there is no basis for concern about post-Transaction service levels along the lines used by KCS to access the LYB plants, but even if there were LYB's conditions would still be inappropriate and overreaching.

First, there is no basis for service-related concern on the lines serving LYB's plants in the Lake Charles area (and the Corpus Christi facility is not active in any event). The Transaction will not materially affect traffic levels on KCS's line serving Lake Charles.[620] To the extent that LYB is concerned about lines between Houston and Beaumont used by other future CPKC traffic, CPKC traffic will remain a small minority of the traffic on these UP-owned lines.[621]

---

617 Ex Parte No. 711, Comments of LyondellBasell (filed Feb. 14, 2022) (Vol. 3, Exh. 91).

618 *See Union Pacific Corp. – Control – Southern Pacific Rail Corp.*, Finance Docket No. 32760 (Sub-No. 46) (Decision No. 10, served Apr. 13, 2022).

619 LYB-3 at 3.

620 Elphick/Orr R.V.S. at 70.

621 *See* Elphick/Orr R.V.S. at 70. LYB misconstrues the Transaction's effect on these lines by focusing solely on CPKC traffic rather than the UP and BNSF traffic that also uses those lines. *See* LYB-3 at 5 nn.7, 8. As Elphick and Orr show, when UP and BNSF traffic is considered, the relevance of the incremental Transaction-related traffic is greatly reduced. *Id.*

Those lines between Houston and Beaumont are directionally operated and have ample capacity for future traffic volumes, as discussed extensively in Section V above.[622]

Second, if LYB's traffic nonetheless is affected by Transaction-related service issues, the proper mechanism for addressing those matters would be the service assurance processes and Board oversight that Applicants discuss in Section V above and the Reply Verified Statement of John Brooks.

By contrast, the competitive access conditions sought by LYB are both untethered to the service concerns LYB espouses and overreaching in their scope. They are untethered for at least two reasons: (a) the two Lake Charles area facilities are already served by a second railroad (UP), already providing the service outlet LYB claims it lacks; (b) granting BNSF (or UP at Corpus Christi) new access would not overcome any putative service issues that might emerge on the lines in question, because BNSF or UP would both need to use those same lines along with KCS (*see* Simmons R.V.S. at ¶ 92);[623] and (c) and the reciprocal switching access LYB seeks at all three locations would address pre-existing competitive conditions; giving LYB a windfall out of all proportion to any potential transitory service issues that might arise.

---

[622] In addition, contrary to LYB's assertion about investments in capacity, as discussed in Section IV above, KCS has recently made or is in the process of participating in, extensive investments in rail capacity on the UP- and KCS-owned lines over which it operates between Beaumont and Robstown, TX. *See also* Elphick/Orr R.V.S. at ¶ 43.

[623] For example, LYB's assertion (at 10) that UP routing traffic to/from Corpus Christi would involve "minimal travel on the Tex Mex line" is incorrect – that traffic would traverse the same UP lines between Robstown and Placedo and probably between Houston and Beaumont that LYB complains would be congested. Likewise, BNSF traffic to/from Lake Charles must traverse the same UP-BNSF joint line between Houston and New Orleans and the Neches River Bridge. Simmons R.V.S. at ¶ 92.

F. The Late-Submitted Concerns of Certain FMC Commissioners About Diversions to Canadian Ports Are Meritless

Finally, Applicants respond to the Comments filed recently (and out of time) by three individual commissioners of the Federal Maritime Commission. As those individuals make clear, their comments do not "do not constitute an official position of the Federal Maritime Commission." These commenters are expressing concerns that have no relationship to the Transaction being proposed.

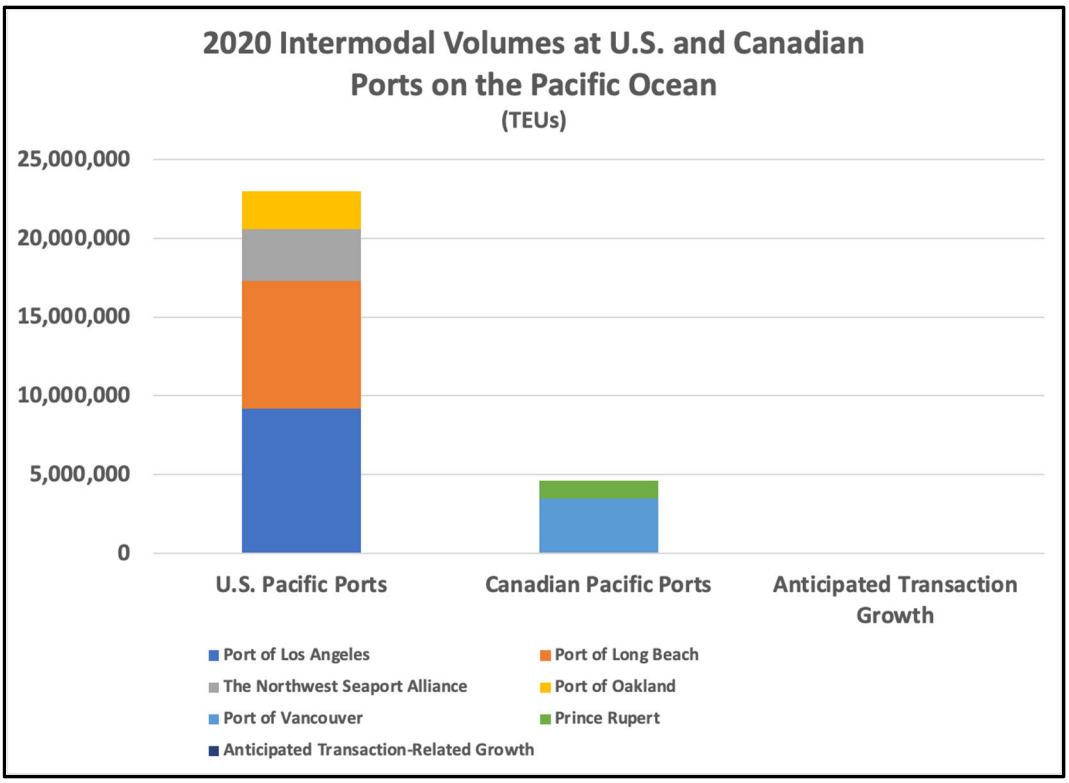
First, the CP/KCS Transaction will not have any effect on intermodal traffic volumes moving between the Port of Vancouver, the Port of St. John (or any other Canadian port) and the United States. CP's network already serves the Upper Midwest and offers highly-efficient intermodal service between Vancouver and Chicago, and independent of the Transaction CP is developing improved intermodal service between the Port of St. John and Chicago. The Transaction does not have anything to do with this service. In fact, limitations on the capacity at the Port of Vancouver itself also limit the potential for growth in this traffic.[624] The concern of these commissioners that the Transaction is "explicitly aimed at continuing to build on policies to use Canadian ports and Canadian railroads to carry U.S.-destined cargo" is thus founded on a misunderstanding.

Second, the Canadian government's policies respecting ports likewise have nothing to do with – and are obviously unaffected by – this Transaction. The concerns raised by these individuals ultimately reflect a complaint about Canadian port policy and the existence of an international transportation marketplace that has allowed ports in Canada to compete for transcontinental intermodal traffic (like CN's very successful investment in Prince Rupert). To

---

624 *See* Wahba/Naatz R.V.S. at ¶ 28.

the extent they believe Canadian or U.S. port policies render Canadian ports more efficient than U.S. ports in certain respects, as these commissioners seem to believe, the commissioners should take the matter up with the relevant maritime policy makers (over which we would presume they have some influence), but it is not a matter relevant to the public interest effects of this Transaction.



Third, even if it were the case that the Transaction did improve the transportation options available to receivers of freight in the U.S. Midwest that is shipped to North America via Pacific or Atlantic steamship routes, and then moved inland via rail, that effect would be procompetitive and plainly benefit the U.S. economy and U.S. consumers who would have more economical access to imported goods. Under the Board's public interest test, the parochial concerns of U.S. longshoreman would not be entitled to weight any more than the railroad competitors of new CPKC single-line routes.

Finally, the suggestion that that U.S. intermodal ports might somehow be materially threatened by improvement in the transportation routes from Canadian ports to the United States is belied by hard data. Figure 34 below compares the intermodal volumes handled by U.S. Pacific ports in comparison with the volumes handled by Canadian ports. Even if one imagined (counterfactually) that Canadian ports could attract *25 greater volumes*, and do so entirely by shifting those volumes away from U.S. ports, that would still not put a dent in U.S. Pacific port container volumes.[625]

---

[625] Applicants anticipated new Vancouver-U.S. intermodal volumes of approximately 5,600 TEUs would (even if diverted entirely from U.S. ports) amount to only to one-hundredths of one percent (i.e., 0.02%) of U.S. West Coast container volumes, and are invisible on Figure 34. *See* Wahba/Naatz R.V.S. at 19.

FIGURE 34
COMPARISON OF U.S. AND CANADIAN PORT INTERMODAL VOLUMES

XII. THE BOARD SHOULD APPROVE THIS APPLICATION AND RESIST ALL CALLS TO HANDICAP CPKC'S POTENTIAL NEW COMPETITION WITH BURDENSOME CONDITIONS

As Applicants reply witnesses explain again and again, there is only one threat to competition and the public interest in play in this merger proceeding, and that is the calls by Class 1 railroads and others for extensive conditions that would burden CPKCs new competitive initiatives and be destructive of the Transaction's public interest benefits. All of the requests have this core feature:

- CN's demand to dismember the KCS network;
- UP and BNSF's demand to be given a veto over CPKC's competition until CPKC has paid for everything they might desire in Texas;
- UP's and BNSF's demand for regulated revenue divisions that would subsidize their own efforts to resist CPKC's new single-lien service offerings;

- Calls by shipper organizations to impose uniquely on CPKC an asymmetrical set of "competitive access" regulatory strictures that would be applicable to no other railroad;
- Calls by self-interested communities to stop all of CPKC's trains dozens of miles west of Chicago;
- And on and on they go.

None of these conditions is justified, as we have demonstrated at length. But all of them would in fact be a dagger aimed at the heart of the Transaction's benefits, hampering CPKC's ability and flexibility to provide the very benefits that the Transaction promises. As put by Creel: "The many hundreds of shippers who have supported the Transaction recognize it for what it is – a once in a lifetime opportunity to make competition stronger without the need for new regulation. CPKC will be a catalyst for a more competitive rail industry, with more capacity to serve shipper needs, and a commitment to bring a customer-first mindset to the marketplace."

As Applicants' economic expert, drawing form his years of experience analyzing mergers across countless industries while at the DOJ Antitrust Division warns:

> "[A] a particularly end-to-end railroad merger, the CP-KCS combination presents opportunities to enhance competition with improved options to shippers and enhanced competition through new single-line service. The Comments reflect these shippers' perception that past railroad mergers have generally been associated with a trend of reduced competition and worse options for shippers, but a CP-KCS combination is the kind of merger that goes against the trend. It is, indeed, a chance to mitigate that history and enhance the competition for affected shippers. To the extent that past railroad mergers may have reduced competition and harmed shippers, *the solution is not to burden the CPKC with unwarranted conditions that would limit CPKC's ability to enhance competition. Doing so would run counter to the interest of these shippers and undermine the Board's objective of fostering rail competition*."

Majure R.V.S. at ¶¶ 185-186 (emphasis added).

Because the Transaction is demonstrably in the public interest, and will cause no public interest applicants request that the Board grant unconditioned approval and reject the Responsive Applications of CN and NS.

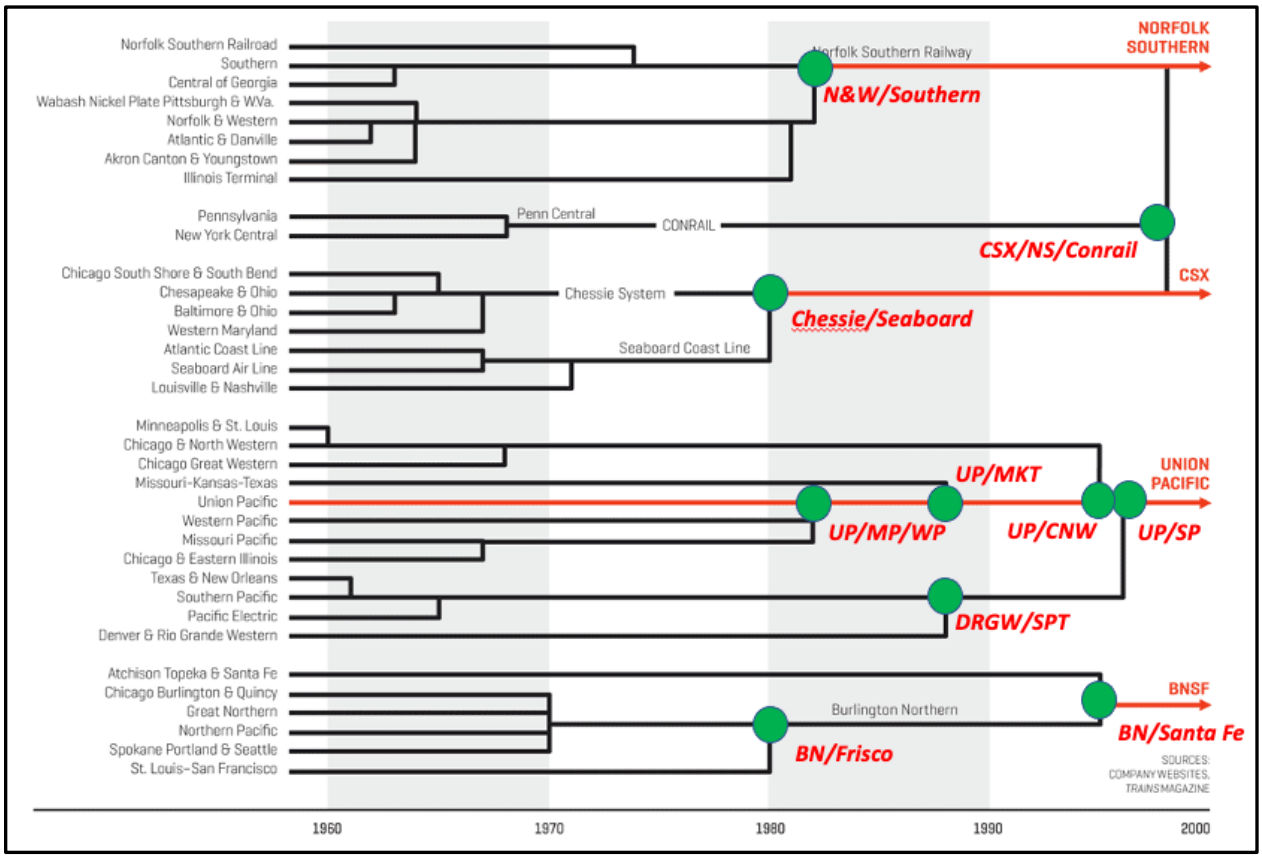
APPENDICIES

APPENDIX A

PRIOR CLASS 1 RAILROAD MERGERS OF THE PAST 40 YEARS WERE CONSISTENTLY APPROVED BASED ON THE BENEFITS OF NEW SINGLE-LINE SERVICES AND A LACK OF COMPETITIVE CONCERN ABOUT "GATEWAY FORECLOSURE"

FIGURE 1
THE MERGERS THAT BUILD BNSF, CSX, NS AND UP



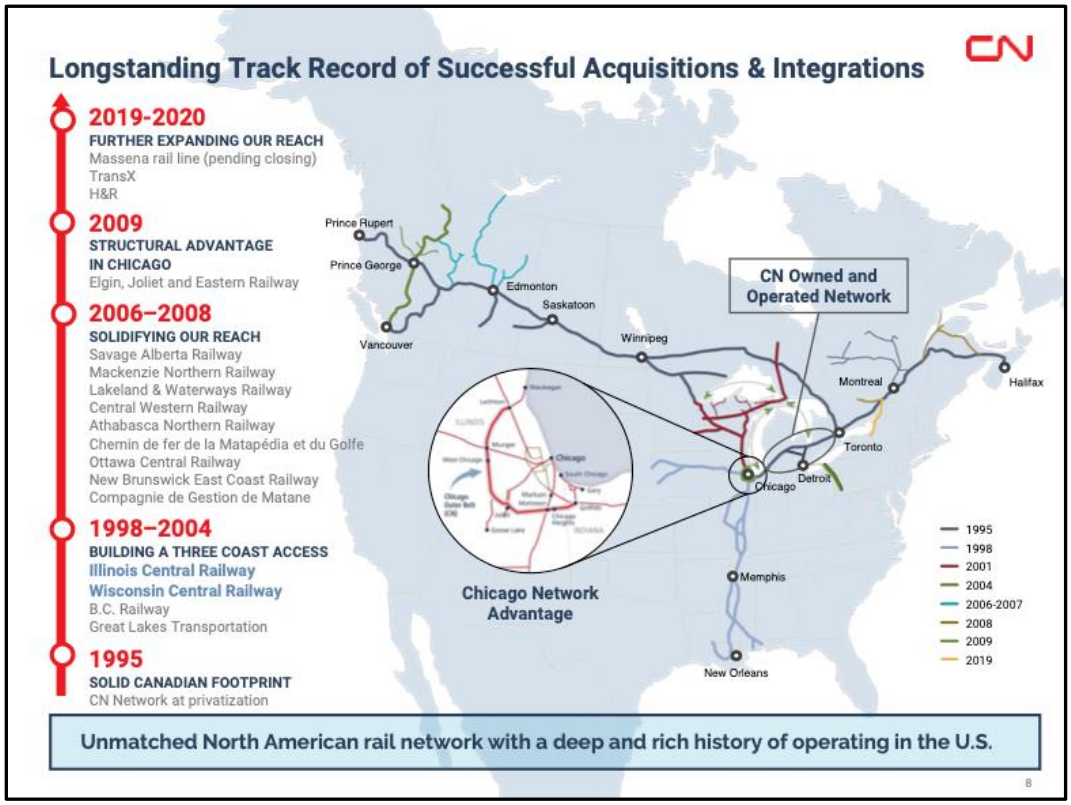


FIGURE 2[1]
THE ACQUISITIONS THAT BUILT CN

SELECTED EXCERPTS FROM ICC AND BOARD MERGER DECISIONS 1980-1999

1980

BN/FRISCO

Decision Approving Transaction: *Burlington Northern, Inc. – Control & Merger – St. Louis-San Francisco Ry.*, 360 I.C.C. 788 (1980)

- "Applicants believe that the merged company would offer substantial service improvements to both its on-line customers and to many of the customers of its connecting railroads. The merged company would provide single-line service from such major southeastern traffic generating points at Birmingham, Memphis, and Mobile to the northwestern points of Portland, Seattle, and Vancouver (British Columbia); and from the Chicago gateway to Tulsa, Oklahoma City, Dallas-Fort Worth, Houston, and Galveston. Consolidations of traffic flows would

[1] Source: CN Investor Presentation, "*Superior Proposal to Combine With Kansas City Southern*" (Apr. 2021), Slide 8 (Exhibit __ hereto), *available at* https://www.cn.ca/en/investors/events/-/media/Files/Investors/Presentations/CN-Makes-Superior-Proposal-to-Combine-With-KCS.pdf.

enable the movement of trains over longer distances with no need for interchange and with minimal en route switching." (360 I.C.C. at 812).

- "Applicants acknowledge that they will exert their best efforts toward obtaining longer hauls over the merged single-line routes where possible. Nonetheless, they expect to maintain existing gateways and joint routes with connecting carriers, and anticipate that traffic will continue to move via such gateways and routes where service considerations dictate. For example, applicants believe that certain traffic moving in connection with UP at Kansas City between the Pacific Northwest and Memphis and beyond will continue to be so routed because this route will be shorter and involve less transit time than the proposed BN-Frisco single-line route via Minot, ND. However, applicants will not guarantee premerger traffic levels." (360 I.C.C. at 812).
- *"DOJ conclusion*.—Based upon its analysis, DOJ concluded that if single-line service is implemented, the public could benefit from reduced transit times, improved freight car supply, and increased service reliability without a reduction of the number of carriers in relevant corridors." (360 I.C.C. at 919).
- "We have weighed the benefits of this merger to applicants and shippers versus the injury to other railroads and found the public interest considerations favoring the applications." (360 I.C.C. at 935).
- *"Adequacy of transportation*.—Approval of this merger, as conditioned, will have a beneficial effect on the adequacy of transportation to the public. Not only will the services of the merged company be significantly improved, but other railroads will be able to continue providing essential services. The merged company will be able to provide new single-line service, reduced transit times, more efficient and frequent service, and improved car utilization." (360 I.C.C. at 935).
- "Single-line service will be available between the gulf coast and the Midwest and Northwest. This new service will be available between Seattle, Portland, and Vancouver, on the one hand, and Birmingham, Memphis, and Mobile on the other. Another direct route is between Minneapolis-St. Paul, Duluth-Superior, and Chicago, on the one hand, and, on the other, Tulsa, Oklahoma City, Dallas-Fort Worth, and Houston. Pre-blocked trains will be able to move over long distances without interchange and with minimal switching. The elimination or reduction of switching or interchange at Kansas City and St. Louis will also save time and resources in carrying freight." (360 I.C.C. at 935).
- "Shippers support this merger because reduced transit time, ease of tracing shipments, control of loss and damage, possible expansion into new markets, and improved car utilization and availability will result from the new single-line service that will be available after the merger. When shippers who spend billions of dollars annually for transportation services state that a service created by a merger will benefit them, we must weigh such evidence heavily in our decisionmaking process. (360 I.C.C. at 935-36).
- "Railroads compete with each other for the longest haul and maximum revenue on traffic. At the same time they must cooperate when and where traffic is

interchanged. Because of this 'Balkanization' of the railroad industry, BN and Frisco independently have not taken steps to develop single-line service or innovative rates. Since railroads compete for any traffic that can be handled by more than one railroad, railroad management should not be expected to sacrifice potential revenue on which that railroad's facilities and investors could rely. Without a merger this single-line service could not be provided without bringing into question management's duty to investors and the public." (360 I.C.C. at 936).

- "A direct result of single-line service will be faster transit times (*e.g.*, transit time between Minneapolis and Memphis will be reduced by 49 percent, from 94 hours to 49 hours) due to reduced intermediate switching. With reduced switching, handling of shipments and incidental loss and damage also will be reduced." (360 I.C.C. at 936).
- "One of the major benefits from this merger will be a reduction in the number of currently interlined shipments. Interchanging traffic adds to the total cost of handling traffic, including operational cost (car-switching) and clerical cost (recordkeeping). Interchanging freight also adds significantly to delivery time, since the time a railcar spends in a yard or terminal is most of its time in transit and an inefficient use of cars. Superior service should not be penalized because weak carriers cannot meet the competition." (360 I.C.C. at 940).
- "Another benefit to shippers would be the ability to control and trace shipments through one railroad where the shipments are being handled in single-line service. Shippers are attracted to a sole source of carrier responsibility for loss and damage, along with single carrier responsibility for expediting shipments when necessary." (360 I.C.C. at 940).
- "The merger presents the opportunity for innovative ratesetting. Standing alone, a bridge carrier like Frisco has neither the financial ability nor sufficiently long hauls to take these actions on a scale equivalent to that of the merged company. However, in conjunction with BN, Frisco will create a new system with financial strength, long hauls, a great proportion of origin and destination traffic, and access to numerous gateways. A company of this size can initiate imaginative or aggressive pricing." (360 I.C.C. at 940).
- "The increased competition will result from the combination of BN and Frisco routes and existing traffic flows into a system which greatly increases the territorial penetration of both carriers. The traffic flows for BN and Frisco are complementary: each a natural extension of the other. It is not surprising that the protestants are those carriers (including those having reached stipulated agreements with applicants) which have routes paralleling routes of one or both applicants. These carriers in most instances have provided end-to-end interline service in connection with one applicant in competition with the other applicant. For example, ICG has provided interline service to and from Birmingham in connection with BN via the Centralia gateway in competition with Frisco and its connections (including BN). After merger, ICG's Centralia-Birmingham service will clearly face increased competition from single-line BN-Frisco routes to and

from several geographic markets formerly served by BN but not by Frisco. ICG will compete by connecting elsewhere with others." (360 I.C.C. at 943-44).

- **"**We conclude that applicants after merger will have the *potential* to become much stronger competitively for traffic handled by other modes. It clearly is up to the unified management to take advantage of the potential. We consistently have encouraged the rail industry to be both more cooperative (*e.g.*, handling long-haul TOFC) and competitive (*e.g.*, providing comparable service) intermodally, and approval of the proposed transaction provides a major tool to achieve these goals, to the benefit of the merged company, its shippers, and other carriers both rail and nonrail." (360 I.C.C. at 944).
- "Several railroads potentially impacted competitively by the proposed merger have entered into stipulated agreements with applicants. Details of these agreements are set forth in appendix K. Although these carriers have anticipated traffic diversion as a result of the proposed merger, they believe that they have adequately protected themselves from any increase in competition beyond that which normally can be expected in the marketplace." (360 I.C.C. at 944).
- "The railroads which have remained as active protestants in these proceedings (Soo Line, Rock Island, Milwaukee Road, ICG, and Katy) fear the increased competition resulting from the proposed merger and have pressed strongly for protection from the impacts of the new competitive strength of BN and Frisco." (360 I.C.C. at 944).
- "We will not protect impacted carriers simply because they find themselves in a situation where they must actively compete for traffic more strenuously. As stated in our policy statement, we look only to preservation of essential rail service when imposing protective conditions, not to the protection of corporate entities. We have found that no corporate entity will be so adversely affected by the merger that it will be unable to provide essential services. Affected carriers must compete more vigorously and develop new interline rates and services to meet the new competitive abilities of a merged BN-Frisco." (360 I.C.C. at 944).

CHESSIE/SEABOARD (TO FORM CSX)

Decision Approving Transaction: ***CSX Corporation – Control – Chessie System, Inc., & Seaboard Coast Line Industries, Inc.,*** **363 I.C.C. 521 (1980)**

- "CSX's largely end-to-end consolidation would create the first major railroad system extending from the northeast industrial center and many of the industrial centers of the Great Lakes region to the Southeast. The affiliation will create first-time single-system service over many major interregional corridors, such as Jacksonville-Philadelphia, Atlanta-Philadelphia, Detroit- Jacksonville, Pittsburgh-Birmingham, Toledo-Atlanta, Detroit-Savannah, and Jacksonville-Baltimore." (363 I.C.C. at 553).
- "The new single-system service will benefit the shipping public. Although single-system service will not provide all the advantages associated with single-line service (traffic must still be interchanged among the affiliated carriers),

single-system service does offer opportunities for significant improvements over present joint-line operations. Opportunities will exist for more efficient routing of traffic, simplified car tracing, improved customer information, greater car supply, improved car utilization, and improved service by virtue of systemwide run-through trains, systemwide blocking, and terminal consolidations." (363 I.C.C. at 529).

- "The consolidation of interchange partners should provide faster, more efficient service to a wider geographic area, to the public benefit. This would be to the carriers' collective self-interest if the system's profitability is increased by measures taken to cooperate, across-the-board, at all points of interchange. The trade-offs a carrier may make in one area presumably would be reciprocated by the partner in another. The CSX proposal is an example of how consolidations can enable carriers to work together with a common purpose to provide better service to more shippers." (363 I.C.C. at 552-53).
- "It is generally thought that single-line service has many advantages over joint-line service for both shippers and carriers. Interchange operations can be eliminated, reducing both operating and overhead costs and transit time; transaction costs are reduced; and incentives to provide less than efficient service (arising from per diem charges for railcars, rate divisions, or production externalities) are reduced. Thus, speed, reliability, and handling are enhanced. For these reasons, shippers tend to prefer single-line service over joint-line service." (363 I.C.C. at 553).

1982

N&W/SOUTHERN (TO FORM NORFOLK SOUTHERN)

Decision Approving Transaction: ***Norfolk Southern Corp. – Control – Norfolk & Western Ry. & Southern Ry.*****, 366 I.C.C. 173 (1982)**

- "We are granting the primary application and the directly related applications because we find the transaction to be consistent with the public interest. The consolidation will enable NS to control two railroad systems which generally meet end-to-end. The resulting operations will provide single-system rail service connecting the Southeast with the Midwest and Northeast." (366 I.C.C. at 176).
- "The new single-system service will benefit the shipping public in that it offers opportunities for significantly improved routings, more efficient operations (including run-through and interroad trains), improved car utilization and terminal consolidations. The new system will also be in a position to provide greater competition to the existing CSX Corporation (CSX) system and to provide greater intermodal competition." (366 I.C.C. at 176).
- *"Service improvement and marketing opportunities*.—One of the primary benefits of the proposed consolidation is the creation of a single railroad system positioned to meet the growing demand for interregional rail transportation service between points in the Northeast and Midwest and points in the Southeast. Production and

consumption patterns and the flow of commodities between markets in the eastern United States have changed significantly in recent decades, but the rail system has not been adequately structured to react to these changes. While the Northeast and Midwest continue to be important suppliers of industrial and consumer goods, the Southeast has emerged as a significant economic force and, as a region, is now the largest domestic supplier of such commodities as textiles, furniture, pulpboard, and paperboard. The economic growth of the Southeast has generated increased demand in the region for a number of commodities, including industrial machinery, coal, and grain products. The Southeast has also developed as an important market for consumer goods, such as automobiles, produced in the Northeast or Midwest.

"The economic interdependence of the Northeast, Midwest, and Southeast regions has created a need for improved interregional rail transportation. Until our recent approval of the CSX consolidation, north-south rail service in the East depended primarily upon interline movements. In 1979, 54 percent of Southern's total tonnage and 56 percent of NW's total tonnage was interlined.

"Shippers, however, prefer single-system service. Single-system service offers the opportunity to improve speed and reliability of service and equipment utilization and distribution. It also focuses responsibility for an entire movement on a single carrier, improving shippers' ability to control and trace individual shipments and to expedite shipments when necessary. Additionally, single-system responsibility facilitates prompt settlement of loss and damage claims.

"The NS consolidation will create a single system serving numerous points in the Midwest and Northeast, including Chicago, Cleveland, Detroit and Buffalo, and numerous points in the Southeast, including Atlanta, Birmingham, Chattanooga, and Jacksonville. The new system also will connect NW grain origins in the Midwest with grain consumers on Southern; NW coal origins with Southeastern utilities; and South Atlantic and Gulf ports with points in the Midwest and Northeast. The improved rail service which single-system operation between these points offers is clearly a public benefit of the consolidation."
(366 I.C.C. at 194-95).

- "In addition to the inherent benefit of single-system service, the NS consolidation will limit the adverse impact of the 'gateway- watershed' problem on service to shippers located near the common borders of the component Southern and NW systems. This 'gateway-watershed' problem is explained as follows. Given the loss of responsibility and control associated with interline traffic and assuming current divisions are not easily adjusted, railroads can lack sufficient incentive to undertake marketing initiatives for traffic moving beyond their lines. The most severe constraint on traffic flow is encountered where an origin or destination point of one rail carrier is located relatively close to its interchange point with another railroad. Since the carrier serving the site near the gateway receives only the short haul of what may be a movement of considerable distance, its share of a competitive rate may be insufficient to warrant its participation even though the

total revenue associated with the movement may be remunerative. Factors apart from revenues – such as varying traffic balances on the two systems, so that a given movement balances the traffic flows of one carrier but increases an imbalance for another – can also prevent otherwise competitive movements from taking place."

"The geographic juxtaposition of NW and Southern presents a good example of the watershed problem between rail systems. NW is basically an east-west railroad while Southern is oriented primarily on a north-south axis. Consequently, NW has historically been concerned with maximizing its east-west long haul and Southern its north-south long haul. There are few incentives for carriers with such diverse traffic patterns to coordinate operations in contiguous areas. The management of each railroad has generally found it more profitable to use its resources in carrying traffic over its long haul than by participating in short-haul, joint-line movements. The examples set forth in appendix F clearly illustrate the impact of the gateway- watershed problem upon present NW and Southern operations and the difficulty of solving this problem using means other than consolidation. *See CSX, supra*, at page 555." (366 I.C.C. at 195-96).

UP/MP/WP

Decision Approving Transaction: ***Union Pacific Corp., Pacific Rail System, Inc. & Union Pacific R.R. – Control – Missouri Pacific Corp. & Missouri Pacific R.R.,*** **366 I.C.C. 462 (1982).**

- "The significant service improvements resulting from the proposed consolidations are derived from the ability to provide efficient single system rail service between regions and markets which either have no such service at present or which have no competitive alternatives to the service that already exists. The consolidated system will provide new single system service between the Pacific Northwest and the Gulf, in direct competition with BN; between northern California, the Midwest and Gulf, between southern California and the Midwest and the Gulf, and between the Rockies and Plains and the Midwest and the Gulf. Interlining will be reduced in the transcontinental markets, which the consolidated system will reach via the St. Louis, Memphis and New Orleans gateways.

  "Shippers prefer single line or single system service because it improves reliability and transit times, and equipment availability. Norfolk Southern. Shippers can more efficiently use their resources by dealing with and relying on one carrier instead of several on questions of schedules, special service requirements, car tracing, and loss and damage claims. Shippers benefit from improved equipment availability which results when unified rail management implements a plan for the efficient use of its equipment, resulting in more reliable service. Shippers also benefit from improved transit times and resultant reduced equipment costs made possible when single rail systems are able to minimize interchange delays by increasing the use of preblocking and run-through trains.

"The proposed operating changes implementing single system service are discussed in the following section. As an example of the benefits expected due to the new service, applicants propose to save a day or more in transit time between Omaha/Council Bluffs and the South Central States by avoiding reclassification in Kansas City.

"The proposed consolidation will open new markets to shippers located on one of the applicants' lines by providing efficient single system access to the Pacific Northwest, northern and southern California, the Rockies and Plains States, the Midwest, South and the Gulf Ports, Mexican border crossing points, and the St. Louis and Memphis gateways to the east. In 1979, over 70 percent of both UP and MP's traffic was interlined, and those shippers after consolidation will be positioned to take advantage of efficient single system service to many new markets." (366 I.C.C. at 489-90).

1988

UP/MKT

Decision Approving Transaction: ***Union Pacific Corp., Union Pacific R.R. & Missouri Pacific R.R. – Control – Missouri-Kansas-Texas R.R.,*** **et al., 4 I.C.C.2d 409 (1988)**

- "Applicants seek to provide shippers with new single-system service be- tween points served by UP and MKT. For example, the merger would promote single-line movement of export grain from MKT points to UP- served Mexican gateways, UP-served points on the West Coast and in the Southwest, and UP-served ports." (4 I.C.C.2d at 430).
- "A significant, though less tangible, benefit also will be realized by providing single system service to shippers served by the consolidating carriers." (4 I.C.C.2d at 417).
- "[C]ompetition will increase through pitting a single-line route against a joint-line one. The OKT-SP routing will continue if it is efficient." (4 I.C.C.2d at 460).
- "Applicants estimate that the merged system would divert over $18.2 million in traffic from other carriers. … [S]ome of this diversion is tied to the 'qualitative' public benefit of new or improved single-line service sought by shippers … It is not possible from the record to extract from these diversion estimates a figure representing public benefits. Applicants themselves make no attempt to do so, and their figure of $60.9 million represents significant public benefits regardless of any public benefits resulting from diversion. Private benefits from traffic diversion are generally not of concern to us unless diversion from another carrier would threaten that carrier's ability to provide essential services. … Because more accurate diversion figures are not needed to conclude either that sufficient public benefits exist or that diversion would harm essential services, resolution of this discrepancy is unnecessary." (4 I.C.C.2d at 429 n.15).

DRGW/SPT

Decision Approving Transaction: ***Rio Grande Industries, Inc., SPTC Holding, Inc., & The Denver & Rio Grande Western R.R. – Control – Southern Pacific Transportation Co.,*** **4 I.C.C.2d 834 (1988)**

- "The public benefits of a DRGW/SPT merger are improved, more efficient single-line service for shippers in both the Central and the Southern Corridors, a strengthened competitive alternative to the UP/MP system in the Central Corridor, and the ability to alleviate congestion and over-capacity in the Southern Corridor. … Because this is substantially an end-to-end merger, adverse competitive effects are few, if any." (4 I.C.C.2d at 837).
- "The public benefits of this consolidation are attributable to service improvements, cost reductions resulting from operating efficiencies, enhanced competition, and a stronger financial position for the consolidated system. Many of these benefits stem from the operating plan. They are discussed in detail below. Other benefits-those derived from enhanced competition and a stronger financial position-are more difficult to separate and quantify, but are nevertheless real. A combined DRGW/SPT, able to provide single- line service, as compared to the present joint haulage agreement, will allow the consolidated system to compete more effectively with the single line UP/MP system over the Central Corridor. This will enure to the benefit of shippers." (4 I.C.C.2d at 876).
- "In this, as in other cases, it is evident that shippers prefer single-line, or single-system, service because it improves reliability and transit times, and equipment availability. Shippers can more efficiently use their resources by dealing with and relying on one carrier instead of two or more on questions of schedules, special service requirements, car tracing, and loss and damage claims. Shippers benefit from improved equipment availability which results when unified rail management implements a plan for the efficient use of its equipment, resulting in more reliable service. Shippers also benefit from improved transit times and resultant reduced equipment costs made possible when single rail systems are able to minimize interchange delays by increasing the use of preblocking and run-through trains. The record in this case demonstrates strong support for the DRGW/SPT combination and the anticipated single-line service benefits from the consolidated operations." (4 I.C.C.2d at 878).
- *"The Proposed DRGW/SPT Consolidation: A New Single-Line Route In the Central Corridor.* The fundamental change to be effected by the pro- posed DRGW/SPT consolidation will be the establishment of a new single-line SPT/DRGW Central Corridor route, extending from southern Oregon and northern California, on the west, through the present inter- change at Ogden, across DRGW's present route to Kansas City, and thence to St. Louis over SPT's (SSW's) Kansas City-St. Louis line." (4 I.C.C.2d at 894).
- "The Primary Applicants have built a large part of their case upon the claimed advantages of this new single-line route. While these claimed advantages cannot be quantified, they are unquestionably real. We agree with the Primary

Applicants that a single-line route generally has a natural superiority over a multi-line route, in terms of: (1) equipment use; (2) quality of service; and (3) marketing. Each of these is discussed below." (4 I.C.C.2d at 894).

- "Shippers will benefit because improved efficiency and shorter transit times will allow them to reduce their inventories and thereby lower their operating costs and increase their efficiency. Shippers will also benefit because their products will be able to reach their markets with more consistency and reliability, thereby providing a basis for improving future business prospects. The consolidated system and its shippers will benefit from improved transportation economics (i.e., lower costs), because single-line operation is more efficient than multi-line operation. The benefits to shippers and the participating railroads also affect the public generally, through increased economic activity, greater efficiency, and increased prosperity; and the increased economic strength of the consolidated company means that it will be better able to provide competition for other rail carriers, thus preserving and enhancing for the public the benefits of competition." (4 I.C.C.2d at 896).
- "Although we could condition the proposed DRGW/SPT consolidation to protect UP/MP against the loss of traffic moving consolidation to protect UP/MP against the loss of traffic moving over the Ogden inter- change, in the absence of any showing of a loss of essential services, we would not condition the proposed consolidation to protect UP/MP against the loss of single-line traffic attracted to the consolidated system by the new DRGW/SPT single-line routing across the Central Corridor. ***Such a condition would protect only the competitor, not competition. In fact, it would reduce the beneficial effects of the new, stronger competition.***" (4 I.C.C.2d at 918) (emphasis added).
- "The approval of the RGI application will enable the consolidated carrier to produce substantial public benefits. DRGW/SPT as a single entity will produce efficiencies that are not being realized by the two carriers today under their separate operations. There are also no discernible harms to competition or essential services. The effect on adequacy of transportation to the public has been analyzed, as well as the impact of including, or failing to include, other carriers. By creating a new single-line transcontinental route across the Central Corridor, a DRGW/SPT consolidation will have a positive and pro-competitive impact in the Central Corridor." (4 I.C.C.2d at 971).

1995

UP/CNW

Decision Approving Transaction: ***Union Pacific Corp., Union Pacific R.R. & Missouri Pacific R.R. – Control – Chicago & North Western Transportation Co. & Chicago & North Western Ry.,*** **Finance Docket No. 32133, 1995 WL 141757 (ICC Decision No. 25, decided Feb. 21, 1995).**

- "The primary applicants contend that, today, UP and CNW are end-to-end connections that cooperate closely in competing against the BN, Santa Fe, and SP

systems, all of which offer single-line service in both the West Coast–Chicago and Chicago–South Central markets, as well as against long-haul trucking.18 UP and CNW, the primary applicants add, also cooperate closely in competing against BN in moving coal from Wyoming's PRB. The fundamental purpose of the UP/CNW common control application, the primary applicants claim, is to permit UP and CNW to work even more closely together to compete against their major single-line rivals. The closer alignment of UP and CNW, they contend, holds the promise of significant public benefits in the form of efficiency savings and service improvements, which will be achieved through agreed-upon marketing and operating coordinations well short of full integration of UP and CNW. Additional significant public benefits, the primary applicants indicate, would depend upon full integration, which (they concede) may never occur." (1995 WL 141757 at 6).

- "Approval of the UP/CNW application, the primary applicants assert, would allow UP and CNW to achieve a number of additional marketing and operating coordinations that have not been attempted heretofore. The primary applicants maintain that, although these coordinations would not enable the two railroads to offer a full-fledged single-line service, they would enable the two railroads to offer something approaching a single-line service equivalent. These coordinations include: improvements such as closer cooperation in train and yard operations, dispatching, data systems, crew management, and locomotive management in the UP/CNW run-through train service through Fremont; further investment in such things as terminals, locomotives, and track capacity in connection with the UP/CNW PRB operations; consolidation of the information systems now operated by the two railroads, by installing UP's Transportation Control System (TCS) on CNW; simplification of the customer service function (by servicing important portions of UP/CNW joint-line business from a single point), thus offering shippers one-stop shopping; closer coordination of key personnel of the two railroads in an effort to promote joint UP/CNW traffic; optimization of use of the four intermodal terminals that the two railroads now operate in the Chicago area (CNW's Global I and Global II facilities and UP's Canal Street and Yard Center facilities); institution of a joint UP/CNW intermodal service between the Twin Cities, on the one hand, and the West Coast and the South Central region, on the other hand (for significant portions of these markets, no single-line service now exists); and elimination of some or all of the various restrictions (such as commodity limitations) that now hinder the full development of UP's haulage arrangement over CNW's east-west main line." (1995 WL 141757 at 9).
- "Existing UP/CNW east-west interline services, such as UP/CNW run-through train service via Fremont, will be upgraded and made more competitive as a result of common control. Closer coordination between UP and CNW will lead to further improvements in service quality, speed, and frequency. UP's present haulage rights over CNW's east-west mainline, by way of example, are subject to various commodity and geographic restrictions, including the exclusion of most coal traffic and traffic to and from CNW points outside of Chicago. With common control, some or all of these restrictions are likely to be eliminated, thereby

enhancing the ability of UP and CNW to offer a close equivalent to single-line service for more movements via Fremont (or via Omaha/Council Bluffs). As a result, shippers in long-haul corridors such as the Chicago–West Coast and Twin Cities–North Platte markets are likely to experience better service and lower rates. Finally, common control is likely to stimulate continued joint investment to improve UP/CNW service in transporting Powder River Basin coal. UP and CNW will be positioned to improve terminals, acquire new locomotives, and add track capacity as they intensify their head-to head competition with BN for this traffic." (1995 WL 141757 at 61).

- "First, common control will allow UP and CNW to achieve better coordination of train and yard operations. The primary applicants have identified several specific operations which will be improved. These include eliminating the current interchange of east-west trains, including blocked car segments, at Council Bluffs/Fremont; coordination of yards at Kansas City, St. Louis and Omaha; making greater use of UP's advanced computer-based dispatching system by adding CNW to the system; and using the shortest, most efficient routings of both carriers"

  "Second, common control will permit UP and CNW to manage their freight car fleets jointly. Several coordinating activities have been identified which are designed to improve equipment utilization. These include: sharing of UP's TCS; greater yard coordinations; and more run-through trains. The greatest efficiency gains, however, can be realized by taking advantage of differences in seasonal demand patterns between the two railroads. Each of these activities has the practical effect of increasing effective car supply through improved utilization. In combination, they will permit UP and CNW to realize large cost savings through reduced investment in equipment. Overall, UP and CNW expect to save 3,115 freight cars, 25 through-freight locomotives, and three road switcher and yard locomotives. Shippers will also benefit because improved utilization will reduce car shortages."

  "Third, common control will permit effective coordination of the four Chicago-area UP and CNW intermodal terminals. Coordination of these yards will result in substantial savings by reducing highway cross haulage (trailering intermodal units from one yard to another so that they can be placed on the correct train)."

  "Fourth, common control will enable the combined system to provide shippers with additional information and improved services. Current UP/CNW joint-line service is disadvantaged with respect to transit time and locational information. UP's TCS will facilitate such coordination. Although CNW has its own information system, control will permit the two carriers to merge their information systems and make uniform use of TCS. In addition, operating as a near-single-line carrier, UP and CNW will be positioned to provide price quotes more expeditiously than they can as separate entities which must first concur. Although the two carriers currently have several pre-existing haulage arrangements, there are numerous exceptions; common control would permit

unified marketing and pricing decisions on all movements. This will permit highly efficient, near-single line service wherever it is feasible." (1995 WL 141757 at 62).

- Common control of UP and CNW notwithstanding, CC & P, if it is more efficient than CNW, will not be excluded from the long-haul coal market. A commonly controlled UP/CNW, acting in its own best interests, will use the most efficient routing available. If CC & P is indeed more efficient than CNW, that will be the routing that is chosen. Vertical (end-to-end) integration of UP and CNW will not, in and of itself, result in the inefficient foreclosure of an interline carrier like CC & P, because a bottleneck carrier (CNW, if it has exclusive access to a particular utility) cannot increase its market power through such foreclosure. (1995 WL 141757 at 80).
- "We acknowledge that common control may well result in some changes in revenue divisions and/or traffic flows. Relative to independent connections such as CC & P, a commonly controlled UP/CNW will gain bargaining power due to efficiency gains. If common control alters the relative efficiencies of CNW and CC & P (by making CNW more efficient, and thereby making CC & P relatively less efficient), it is indeed possible that CC & P may be excluded from the market or may have to accept a revised joint revenue division. This, however, would not be an anticompetitive outcome of common control; rather, it would simply be a natural consequence of the efficiencies that common control may allow." (1995 WL 141757 at 80).
- "We agree that common control is likely to have a negative impact on CC & P. Common control will make UP/CNW joint-line service more efficient, which naturally means that common control will make UP/CC & P joint-line service relatively less efficient. Common control can therefore be expected to result in diversions of traffic from CC & P to CNW, assuming, of course, that other factors are held constant. The crucial issue, however, is not whether common control will have a negative impact on CC & P. The crucial issue, rather, is whether the negative impact will be so severe as to endanger such essential services as CC & P now provides. As we now show, common control of UP and CNW will not have an adverse impact on essential services." (1995 WL 141757 at 84).

1995

BN/SANTA FE

Decision Approving Transaction: ***Burlington Northern Inc. & Burlington Northern R.R. – Control & Merger – Santa Fe Pacific Corp. & The Atchison, Topeka & Santa Fe Ry.,*** **1995 WL 528184 (ICC Decision No. 38, decided Aug. 16, 1995).**

- "[A]pplicants seek to create an expanded rail system with broader geographic coverage than either of the applicant carriers' existing systems, with new single-line service between points on the BN system and points on the Santa Fe system. … These new routes would include the following: (a) between points in central and southern California (including California ports) served by Santa Fe and points

in the Midwest and Southeast served by BN; (b) between Seattle and other points in the Pacific Northwest served by BN and points in the Southwest served by Santa Fe; (c) between points in the Southwest served by Santa Fe and points in the Southeast served by BN; (d) between points in the Northern Tier states served by BN and points in the Southwest served by Santa Fe; and (e) between points in Western Canada served by BN and points in the Southwest served by Santa Fe." (10 I.C.C.2d at 670 n.15).

- "Single-line service is important to shipper logistics strategies. Interchange between railroads can be costly. A single-line railroad route is becoming more important for carriers wanting to compete for service-sensitive freight. As a result of the new single-line service capability of the combined BN/Santa Fe, shippers will likely see decreases in working capital requirements as base inventories shrink due to improved transit times, and as safety stocks of inventory are reduced because the combined system can eliminate the uncertainty of interchange." (10 I.C.C.2d at 741).
- "We agree with applicants that where, as here, two railroad networks are integrated, the possibilities for longer hauls increase. While the utilities' witnesses note that in the past the proportion of interlined BN/Santa Fe movements has been low, we expect that the merger will bring about a significant number of new single-line BN/Santa Fe movements." (10 I.C.C.2d at 742).
- "We have also dealt with end-to-end aspects of rail mergers in a series of cases involving our imposition of rate and routing conditions that were intended to require railroads to maintain open gateways post-merger with unaffiliated interline partners. In *Traffic Protective Conditions*, 366 I.C.C. 112 (1982), *aff'd in relevant part, Detroit, Toledo & Ironton R. Co. v. U.S.*, 725 F.2d 47 (6th Cir.1984), we rejected the notion that new single-line movements created through merger would lead the merged carrier to "vertically foreclose" competition over efficient routes by refusing to cooperate with unaffiliated carriers. In *Seaboard Air Line Railroad Company – Merger – Atlantic Coast Line Railroad Company (Petition to Remove Traffic Protective Conditions)*, Finance Docket No. 21215 (Sub-No. 5) (ICC served Mar. 27, 1995) (*CSX/FEC*), we recently reaffirmed that "merged railroads – regardless of whether they maintain bottleneck facilities or market dominance – have the incentive to encourage full use of the most efficient routing, even when it entails a joint-line alternative to a single system route." *CSX/FEC*, slip op. at 5." (10 I.C.C.2d at 748-49).
- "We do not think that the one lump theory requires the series of perfect conditions that the utilities claim must be present for the theory accurately to represent the coal transportation markets at issue here. Our focus here is properly on substantial harm to competition. Our experience has been that where a single rail carrier controls a destination segment, and no transportation alternatives are available, the shipper will be captive and the single rail carrier will be able to capture the preponderance of the economic profits. Conversely, when certain factors are present that limit a carrier's ability to take full advantage of a bottleneck, those factors will remain in place as effective safeguards after the

merger. We have consistently adhered to these principles in assessing harm in merger cases and in making market dominance determinations in rate cases. The fact that a bottleneck carrier might not have sufficient information to execute a perfect price squeeze or to extract the last penny of economic profits does not mean that substantial benefits to shippers will be lost when the bottleneck carrier merges with a connecting carrier." (10 I.C.C.2d at 751).

1996

UP/SP

Decision Approving Transaction: ***Union Pacific Corp., Union Pacific R.R. & Missouri Pacific R.R. – Control & Merger – Southern Pacific Rail Corp., Southern Pacific Transportation Co., St. Louis Southwestern Ry., SPSCL Corp., & The Denver & Rio Grande Western R.R.,*** **1 S.T.B. 233 (1996).**

- "As a result of this merger, every shipper served by UP, but not by SP, will gain single-line service to all SP points, and vice versa. More than 350,000 cars, trailers, and containers, carrying 26 million tons of freight, will gain single-line service each year. The BNSF agreement will add single-line service for another 120,000 cars a year. See Appendix D at 2 (Expanded Single-Line Service)." (1 S.T.B. at 381).
- "Moreover, the expanded coverage that common control promises will have numerous beneficial impacts on many markets – international, intermodal, food products, forest products, autos, chemicals, grain, coal, metal and minerals. See Appendix D at 3 (Expanded Market Coverage)." (1 S.T.B. at 381).
- "*Pacific Northwest-Texas.* BNSF now has the only direct route between the Pacific Northwest and Texas. The merged carrier will link the UP and SP route networks in Texas with SP's route from Ft. Worth to Denver and UP's routes from Denver to Utah, Idaho, Montana, Oregon and Washington. This will make UP/SP a real competitor for this traffic and provide entirely new single-line services to shippers in the Intermountain West." (1 S.T.B. at 564).
- *"Canada/Pacific Northwest-California/Mexico.* Western Canada will receive much-improved rail links with the United States and Mexico. Substantial parts of the Pacific Northwest, including Seattle/Tacoma and the Vancouver/Alberta Canadian gateways, have never been connected to California by a direct single-line rail route. The merger and BNSF agreement will create both a UP/SP through route and a BNSF through route in the I-5 Corridor, offering new rail options to shippers and a competitive alternative to water and truck transportation.

  "UP/SP will offer new single-line service between many UP points in the Northwest and many UP and SP points throughout California, Arizona, New Mexico, and West Texas (including the Mexican gateways of Calexico, Nogales, and El Paso). Eastbound traffic will also gain a shorter route, via Colorado and the Texas Panhandle, to Dallas, Houston and New Orleans. BNSF will have new single-line routes from the Vancouver and Sumas gateways to California, the

Southwest, and the San Diego and El Paso gateways to Mexico.

"Competition will also be stronger for traffic moving in interchange with CN via Duluth/Superior and CP via the Twin Cities because all SP points will now be accessible on a single-line basis from those interchanges." (1 S.T.B. at 564-65).

- "*International Markets.* The UP/SP merger transaction will foster the goal of North American economic integration embodied in the NAFTA agreement by greatly strengthening competition for traffic to and from both Canada and Mexico. The proportional rate arrangement will allow UP/SP to compete via Portland for traffic to and from BNSF's Western Canada gateways, including lumber originating on BC Rail and Alberta grain and chemicals originating on CN. There will be stronger rail competition at every UP and SP gateway to Mexico as a result of the merger and the BNSF agreement, and the Tex Mex trackage rights we have imposed. Overall, BNSF's much-expanded access to Mexico, as well as within Texas and at New Orleans, will bring greater balance to the competition for Mexican rail traffic, which at present is largely handled by SP to and from points to the west and UP to and from points to the north and east."

  "The more efficient Mexican routings for both UP/SP and BNSF will help improve the rail share of traffic to and from Mexico. Today, trucks dominate this traffic. Even at Laredo, the most efficient Mexican rail gateway, trucks handle approximately 86% of the cross-border traffic. Upgrading the Southern Corridor lines, instituting new Laredo-California intermodal service, and greatly improving the efficiency of operations in the Laredo-Memphis-St. Louis-Chicago corridor will give rail a much better ability to capture a larger share of this market." (1 S.T.B. at 565-66).

Final Oversight Decision: *UP/SP (General Oversight*), 5 S.T.B. 1159 (2001).

- "*Competition Has Been Strengthened*." The evidence submitted by UP demonstrates that the merger has resulted in strengthened competition for 2-to-1 shippers, 3-to-2 shippers, shippers of key commodities affected by the merger, and shippers in every rail corridor and region affected by the merger. The evidence submitted by UP further demonstrates: that the public benefits that the UP/SP applicants predicted have been achieved; that rail competition has been enhanced; that UP rates (adjusted for inflation) have either declined or remained unchanged in every relevant market; and that BNSF, Tex Mex, and Utah Railway Company (URC) have competed and are continuing to compete effectively against UP. And, as UP notes, no one has presented any evidence of competitive harm or any evidence that our conditions have been less than fully effective." (5 S.T.B. at 3-4).
- "UP's evidence demonstrates that the merger, with the conditions we imposed, has strengthened competition in the three major West Coast-Midwest/Northeast corridors (the corridors that run between the Pacific Northwest, Northern California, and Southern California, on the one hand, and, on the other hand, the Midwest gateways of Chicago, Kansas City, and St. Louis and the regions served via those gateways); in the Houston-Memphis-St. Louis corridor; and in the

Houston-New Orleans corridor. UP's evidence further demonstrates that the merger, with the conditions we imposed, has strengthened competition for international traffic to and from Canada and Mexico. And, as UP notes with respect to Mexico, our condition that UP afford The Texas Mexican Railway Company (Tex Mex) trackage rights between Robstown and Beaumont, TX, has resulted in the creation of a third competitive rail route to and from Eastern Mexico." (5 S.T.B. at 4 n.10).

1998

CSX/NS/CONRAIL

Decision Approving Transaction: ***CSX Corp. & CSX Transportation, Inc., Norfolk Southern Corp. & Norfolk Southern Ry. – Control & Operating Leases/Agreements – Conrail Inc. & Consolidated Rail Corp.*** **("*CSX/NS/Conrail*"), 3 S.T.B. 196 (1998)**

- "With very minor exceptions, the combination of NS and Conrail and of CSX and Conrail lines will be end-to-end and not parallel. It has been our experience that end-to-end restructurings of this kind rarely result in a diminution of competition. We have adopted a presumption, known as the one-lump theory, that vertical combinations will not result in competitive harm. We have also established a test for parties to show that the theory does not apply in a particular circumstance. Although several parties have attempted to argue that we should not apply the one-lump theory to rail mergers, repeating arguments that have been raised and rejected in previous merger proceedings, no party has rebutted the application of the theory here. Our use of the one-lump theory has been judicially approved, and we will not go back over that ploughed ground here. *See Western Resources, Inc. v. STB*, 109 F.3d 782 (D.C. Cir. 1997)" (3 S.T.B. at 248).
- "The division of Conrail's lines, roughly half to each carrier, permits both CSX and NS to offer new and efficient single-line service in competition with motor carriers and with each other to thousands of shippers that received only joint-line service before. The transaction should lead to improved service and reduced transit times for thousands of shippers throughout the Eastern United States. This will permit these two carriers to divert a significant amount of traffic from the nation's highways." (3 S.T.B. at 248).
- "[W]e have acknowledged that, as a general matter, single-line service is superior to joint-line service." (3 S.T.B. at 258).
- "Kalt has correctly explained that Kahn/Dunbar are wrong in their assertions that the one-lump theory predicts: (1) that there be equal profits to the bottleneck carrier regardless of whether a movement is single-line or joint-line; (2) that there can be no profit earned by the origin carrier in a joint line movement with a destination monopolist; and (3) that origin competition has no effect on the size of the economic profit or the rail rate, relative to other routes." (3 S.T.B. at 268 n.106).

- "Finally, Kahn/Dunbar are simply wrong in asserting that the general applicability of the one-lump theory to mergers requires a set of explicit and rather implausible assumptions, and thus "the circumstances in which the pure one-lump theory is likely to hold represent an 'extreme example."' They appear unaware that this very argument has been considered and rejected by the ICC, with the ICC's reasoning specifically affirmed by the court. We conclude that the Crowley and Kahn/Dunbar testimony falls far short of providing a basis for altering our basic economic analysis of the vertical aspects of railroad mergers." (3 S.T.B. at 269).
- "As [Martin Marietta Materials (MMM)] points out, applicants' witnesses have acknowledged that going from single-line service to joint-line service is less efficient and tends to be more costly. MMM-3 at 8-10 and 19-21 (citing to Snow Dep. Tr. at 169-170, and Gaskins Dep. Tr. at 15-16). Applicants explain that '[c]harging a single-line rate for a joint-line service, where obvious extra handling (to effect the interchange) is involved, is clearly apt to be uneconomic for the participating railroads'. CSX/NS-190 at 26." (3 S.T.B. at 311).
- "In addition, the expansion of the NS and CSX systems will enable them to provide more competitive single-line service over more direct routes, to render improved service, and to use equipment more efficiently.

  "These features of the transaction will improve operating efficiency, reduce transit times and terminal delays, and provide logistics savings associated with single-line service that will make these companies more competitive with trucking and should, within 4 years of the transaction, shift over $400 million worth of traffic each year from highways to rail lines." (3 S.T.B. at 333).
- "Unquantified Public Benefits . . . The transaction will also increase competition between railroads and other modes due to the expansion of single-line service throughout the new NS and CSX systems. CSX's traffic studies project annual truck-to-rail diversions that will eliminate 438,000 truck trips per year, and NS has predicted that its expanded operations will remove an additional 589,000 truck trips. Together, applicants estimate that they will divert sufficient truck traffic to remove a million line-haul truck trips per year from our nation's highways." (3 S.T.B. at 336).

Final Oversight Decision: *CSX/NS/Conrail General Oversight*, Finance Docket No. 33388 (Sub-No. 91) (Decision No. 17, served Oct. 20, 2004).

- "The evidence submitted in this fifth annual oversight round, like that submitted in the first four rounds of annual oversight, demonstrates that the conditions imposed are working as intended and that the transaction has not resulted in competitive or market power problems." (*CSX/NS/Conrail*, Dec. No. 17 at 10).
- "CSX states that the Conrail Transaction enabled CSX to increase the efficiency of its railroad operations. CSX explains that the new single-line service made possible by the elimination of interchanges between CSX and Conrail has resulted in reduced costs and reduced transit times, and the development of more direct routes has resulted in increased commercial opportunities for many shippers. CSX

also explains that the expansion of its network and the development of more direct routes have made CSX competitive with trucks in the intermodal, TRANSFLO, waste products, produce, and many other markets. And, CSX adds, gateway optimization projects made possible by the Conrail Transaction have enabled CSX to improve its car handlings, by reducing handlings between CSX and its western connections." (*CSX/NS/Conrail*, Dec. No. 17 at 24).

- "The Conrail Transaction, NS explains: greatly expanded the single-line reach of NS and CSX in the Eastern United States; brought new two-carrier service to the SAAs and the Monongahela coal fields; and resulted in two competitively balanced rail systems serving the Eastern United States. NS and CSX, NS reports, are now engaged in strong and vigorous competition not only with each other, but also with other modes of transportation, particularly trucks, a factor that, though important even at the outset, has become much more important due to increasing highway congestion. And, NS adds, the Conrail Transaction has led to improvements at NS in safety, service, and competition (NS cites: the Safety Integration Plans prepared by NS and CSX; the "best ever" service metrics on NS; and the vigorous new rail-to- rail competition that now exists throughout the former Conrail territory). NS advises that the expanded reach of the NS system and the new rail-to-rail competition brought about by the Conrail Transaction has allowed NS to achieve a variety of noteworthy results in addition to the overall improvement in its service metrics." (*CSX/NS/Conrail*, Dec. No. 17 at 25-26).

1999

CN/IC

Decision Approving Transaction: ***Canadian National Ry., Grand Trunk Corp., & Grand Trunk Western R.R. – Control – Illinois Central Corp., Illinois Central R.R., Chicago, Central & Pacific R.R., & Cedar River R.R.*** **("*CN/IC*"), 4 S.T.B. 122 (1999)**

- "This transaction will create a highly efficient rail transportation system spanning the central part of the United States from the Canadian border to the Gulf of Mexico. CN operates a 14,150-mile system throughout Canada, connecting with its 1,150-mile system in the United States, which operates mainly in Minnesota, Wisconsin, Michigan, and Northern Illinois and Indiana. IC operates a profitable 3,370-mile system between Chicago and the Gulf of Mexico." (4 S.T.B. at 142).
- "Qualitative public benefits include enhanced opportunities for single-line service preferred by shippers and more vigorous competition that may result from a transaction." (4 S.T.B. at 140).
- "The chief benefit of the merger is that it will make possible a new, single-line service alternative for many shippers. Applicants will thus be positioned to provide stronger competition to UP, BNSF, CSX, and NS in certain markets. In particular, the merger should significantly intensify competition for the north-south traffic that has achieved greater significance due to NAFTA. As detailed below, the transaction should also generate quantifiable public benefits of more than $100 million a year. These are made possible mainly through integration of

support functions, and more efficient use of equipment and crews." (4 S.T.B. at 142).

- "Quantifiable and Unquantifiable Public Benefits. The record indicates that this transaction should result in many qualitative benefits to the shipping public, including more single-line service, new and improved routes, more gateway choices, more reliable service, and reduced terminal delay." (4 S.T.B. at 167).
- "This transaction is entirely end-to-end, with no overlapping routes. The number of independent railroads currently serving particular shippers is not reduced at any location." (4 S.T.B. at 142).
- "It will not diminish competition among rail carriers either in the affected region or in the national rail system. Indeed, the transaction should enhance competition, especially for north-south traffic." (4 S.T.B. at 143).
- "The transaction will make possible significantly improved single-line service for many shippers, and will result in merger synergies that should allow the carriers to provide service at lower cost. A substantial portion of these savings should be passed along to shippers in terms of reduced rates or improved service. Finally, the ability of these carriers to provide quality service will not be impaired, and should be enhanced." (4 S.T.B. at 144).

Final Oversight Decision: *CN/IC, General Oversight,* Finance Docket No. 33556 (Sub-No. 4) (Decision No. 3, served Nov. 7, 2001) ("*CN/IC General Oversight*")

- "CN's progress report submitted in the second oversight year demonstrates that the CN/IC transaction has been successful to date and that the carrier has added new transportation services and improved transit times throughout its system." (*CN/IC General Oversight*, Dec. No. 3 at 3).
- "CN states that rail shippers are benefitted by its improved routing through Chicago, advanced traffic management systems, and seamless single-line service. CN states that it is a significant carrier of petroleum, chemicals, metals, minerals, forest products, automobiles, and grain, and that its intermodal business is expanding through faster transit times and the introduction of new services such as RoadRailer. According to CN, it has continued to focus on providing top quality service and avoiding any service disruptions." (*CN/IC General Oversight*, Dec. No. 3 at 5).

APPENDIX B

LOOKING BACK AT THEIR OWN MERGERS, OTHER CLASS 1 RAILROADS HAVE TOUTED THEIR SINGLE-LINE BENEFITS AND PROCOMPETITIVE EFFECTS

BNSF

Burlington Northern Inc. & Burlington Northern R.R. – Control and Merger -- Santa Fe Pacific Corporation & the Atchison, Topeka & Santa Fe Ry., ICC Finance Docket No. 32549, Applicants' Brief (BN/SF-48) (filed June 29, 1995) at 1.

- "Because this is predominantly an end-to-end combination, situations in which there might be a potential reduction in competition have been limited from the outset."

Public Views on Major Rail Consolidations, STB Ex Parte No. 582, Statement of Robert D. Krebs, Burlington Northern Santa Fe Railway Company, Before the Surface Transportation Board on March 7, 2000 at 12 (emphasis added).

- "***Our customers have benefited tremendously from the expanded network and increased options for single line service that resulted from the BNSF merger***, as demonstrated by the growth in intermodal units across selected major routes between 1995 and 1999 – up 40% between Chicago and the Pacific Northwest, up 54% between Chicago and Texas, and up 170% between Minnesota and California, Arizona, and New Mexico."

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1), Comments of the Burlington Northern and Santa Fe Railroad (filed May 16, 2000) at 27.

- "The 'one-lump' theory has been extensively litigated before the Board. The theory is based on sound economics, and there is no reason for reconsidering or revising it at this time."

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1), Reply Comments of the Burlington Northern and Santa Fe Railway Co. (filed June 5, 2000) at 34.

- "BNSF, along with other carriers, believes that meaningful service improvements can occur when railroads achieve greater concentration of traffic operating on run-through trains, through fewer – not more – interchanges."

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1) Comments of the Burlington Northern and Santa Fe Railway Co., Verified Statement of Jose A. Gomez-Ibanez and Joseph P. Kalt (filed Nov. 17, 2000), at 11-12, 15.

- "The Board's merger policy should continue to favor mergers because mergers can still produce public benefits. . . They can encourage new investment, as evidenced by the investments triggered by recent mergers in the industry, and enable enhanced services to be offered to shippers. . . By expanding the scope of networks, mergers can help railroads meet a greater range of shippers transportation needs, thereby attracting new business and improving their overall competitive position in the national transportation market."

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1), Comments of the Burlington Northern and Santa Fe Railway (filed Nov. 17, 2000).

- "…[S] ingle-line service can offer shippers more reliable service, while enabling railroads to craft new services that can attract traffic from competitors and other transportation modes. An expanded, integrated rail network can provide shippers with access to new markets. A merged railroad also can benefit from the different commodity and product expertise of the pre-merger railroad. If a merged railroad become a better competitor and shippers gain access to new markets and services, there will be beneficial effects for the railroad, shippers and the Nation." *Id.* at 25.
- "Single-line service enhances efficiency by eliminating costs and uncertainty associated with making and managing interline movements. In addition, expansion of single-line service typically represents a dramatic improvement in quality of service a railroad offers its shippers. As railroads expand their offerings of single-line service, they can increase the speed of their service, make more service more reliable, reduce damage and loss, and reduce capital requirements by making more efficient use of rail (and shipper) facilities. In the past, the Board has recognized that single-line service is a major source of public (and shipper) benefits." *Id.* at 10.
- "Single-line service is important to shipper logistics strategies. Interchange between railroads can be costly. As a result of the new single-line service capability of the combined BN-Santa Fe, shippers will likely see decreases in working capital requirements as base inventories shrink due to improved transit times, and as safety stocks of inventory are reduced because the combined system can eliminate the uncertainty of interchange. The transaction costs shippers incur in initial rate negotiations, in arranging equipment supply, tracking shipments, and in billing and payment procedures, will likely be reduced." *Id.* at 11 (citations omitted).
- "The Board's view that extension of single-line service is an important source of benefit is confirmed by experience. Evidence reviewed below indicates that railroads have been notably successful in attracting substantial volumes of traffic to expanded single-line service options following merger." *Id.* at 11.
- **"**Most recent railroad mergers involve railroads whose route networks connect end-to-end rather than running parallel to one another. Economic analysis indicates that end-to-end mergers are unlikely to cause competitive harm. Unlike parallel mergers, end-to-end mergers do not involve significant network overlaps, so that few or no shippers face a potential reduction in the number of railroads that serve them. Moreover, end-to-end mergers are the equivalent to vertically integrating the various routes served by railroads, and the overall impact of integrating and rationalizing the ownership of the rail network is pro-competitive through reduced costs and improved overall service. Indeed, the ability to reduce costs by making the most of economies of scale and scope and offering improved single-line service has motivated recent mergers." *Id.* at 15.

Competition in the Railroad Industry, STB Ex Parte No. 705, BNSF Reply Comments, Verified Statement of John P. Lanigan (filed May 27, 2011).

- "The BN/ATSF merger contributed substantially to BNSF's competitive capacity and significantly improved BNSF's ability to compete in the marketplace for transportation

services. Shippers have benefitted from the enhanced service BNSF has been able to provide, as well as the enormous investment BNSF has made improving our system." *Id.* at 2.

- "The claim of some shippers that competition was reduced as a result of certain end-to-end mergers ignores the vast diversity of market conditions and competitive options in different transportation markets. Those shippers also ignore the benefits produced by those mergers that have allowed railroads to compete more effectively for business. … ***[R]ailroads combining end-to-end, like BN and ATSF, do have the opportunity to create more efficient networks and compete more effectively for ling-haul service. And that is exactly what transpired as a result of the BN/ATSF merger. BNSF was able to improve its service and grow the combined railroads' business in every major traffic category***." *Id.* at 8 (emphasis added).

CANADIAN NATIONAL

Canadian National Ry. et al. – Control – Illinois Central Corp. et al., Finance Docket No. 33556, Application (CN/IC-6) (filed July 15, 1998) at 10.

- "Given the end-to-end nature of the Transaction, the integration of the CN and IC rail systems would cause no reduction in competition."

Canadian National Ry. et al. – Control – Illinois Central Corp. et al., Finance Docket No. 33556, Application (CN/IC-6), Verified Statement of Paul M. Tellier and John D. McPherson (filed July 15, 1998) at 1.

- "CN/IC, the end-to-end combination of two highly complementary railroads, will strengthen the U.S. and North American transportation system. It will be strategically important for shippers. It will promote the growth of north-south trade. It will help assure that our railroads can respond to market challenges through growth and increased financial strength. Yet it portends no anti-competitive effects, abandonments, service reductions or interruptions, capacity constraints, or significantly adverse labor, safety or environmental effects."

Canadian National Ry. et al. – Control – Wisconsin Central Transportation Corp. et al., STB Finance Docket No. 34000, Application, Verified Statement of Paul Tellier, Finance Docket No. 34000 (filed Apr. 9. 2001) at 3.

- "CN has shown in the recent past that it can increase efficiency and offer new and improved services through an effective merger with another railroads. The CN/IC Transaction was implemented with real gains in efficiency and, we are proud to say, without any significant service quality problems."

CSXT

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1), Comments of CSX Corporation and CSX Transportation, Inc., (filed November 17, 2000) at 8.

- "Efficiencies, such as those achieved from extended hauls, from the elimination of interchanges and from reduced costs and other service improvements, along with elimination of remaining inefficient redundancy, should be included among the procompetitive impacts of a proposed merger."

NORFOLK SOUTHERN

Major Rail Consolidation Procedures, STB Ex Parte No. 582 (Sub-No. 1), Comments of Norfolk Southern (filed May 16, 2000) at 33-34.

- "NS insists that the 'one lump' theory is correct and should be continued. NS contends: that when a shipper is exclusively served by one railroad, the shipper will not suffer a reduction in competition for its traffic if the serving railroad merges with one of several connecting railroads; that, therefore, there is no merger-related justification for granting another railroad trackage rights access to that shipper; and that, in any event (i.e., even if there were a merger-related loss of competitive options), the grant of trackage rights access would go far beyond simply restoring pre-merger competitive options."

UNION PACIFIC

Union Pacific Corp. et al. – Control & Merger -- Southern Pacific Rail Corp. et al., STB Finance Docket No. 32760, Application Vol. 1 (filed Nov. 30, 1995) at 17.

- "The UP/SP merger, together with the settlement agreement with BN/Santa Fe, will greatly intensify rail competition in the West. The merger will yield shorter routes, expanded single-line service, greater capacity, better equipment supply, faster and more reliable service, and lower costs – all of which will enhance the competitiveness of the merged system."

Union Pacific Corp. et al. – Control & Merger – Southern Pacific Rail Corp. et al., STB Finance Docket No. 32760, Verified Statement of Richard B. Peterson (filed Nov. 30, 1995) at 74.

- "For access to end markets and supply sources, shippers on shortlines depend on fast, efficient, single-line service by the Class I railroad or railroads with which those shortlines connect."

Major Rail Consolidation Procedures, Ex Parte No. 582 (Sub-No. 1), Union Pacific's Comments and Initial Proposals, (filed May 16, 2000) at 11.

- "UP does not share the view of many shippers that end-to-end mergers generally have anticompetitive vertical effects, and the Board must retain the basic economic and legal principles that guided its *Bottleneck* decisions."

Competition in the Railroad Industry, Ex Parte No. 705, Comments of Union Pacific Railroad Company (filed Apr. 12, 2011).

- "Thousands of shippers enthusiastically supported [post-Staggers Act rail] mergers, recognizing that they would enhance competition by creating more single-line service, shorter routes, shorter transit times, lower costs, and many other efficiencies. … [I]n every merger involving Union Pacific since 1980, the ICC or Board emphasized the benefits of single-line service and expected us to achieve them. … For three decades, Union Pacific has invested its capital to achieve the single-line benefits that the ICC and this Board (and a wide range of shippers) sought." *Id.* at 8-9.
- "[A] basic premise of each of the agency's consolidation decisions was that single-line service was superior to the service provided by separate carriers using interchange and would benefit shippers if expanded. UP undertook the series of consolidations that created the current UP system and invested tens of billions of dollars to improve, reconfigure, and upgrade its system to deliver the benefits of single-line service. … [T]he result of this continuing effort to expand single-line service has been to dramatically improve service to customers." *Id.*
- "Union Pacific's merger with Southern Pacific created new rail-to-rail competition in the Seattle-Los Angeles 'I-5 Corridor' through a settlement that gave BNSF Railway a single-line route that it could use to compete with the new Union Pacific." *Id.* at n.4.

Competition in the Railroad Industry, Ex Parte No. 705, UP Reply Comments (filed May 30, 2013) at 8-9.

- "[A] basic premise of each of the agency's consolidation decisions was that single-line service was superior to the service provided by separate carriers using interchange and would benefit shippers if expanded. UP undertook the series of consolidations that created the current UP system and invested tens of billions of dollars to improve, reconfigure, and upgrade its system to deliver the benefits of single-line service. … [T]he result of this continuing effort to expand single-line service has been to dramatically improve service to customers."

ALL AMERICAN CLASS 1 RAILROADS

Petition for Rulemaking to Adopt Revised Competitive Switching Rules, STB EP No. 711 Opening Comment of Association of American Railroads, Verified Statement of William Rennicke (filed Mar. 1, 2013) (joined by BNSF, CSX, KCS, Norfolk Southern, UP).

- "Simplification of operations: The reduction in the number of Class I railroads, combined with the reduction of inefficient/unnecessary routes and efforts to close redundant and little-used interchange locations, reduced the amount of traffic interchanged between railroad operators. This is illustrated in Exhibit III-3, which shows a steady decline in the average number of interchange events per railcar through the late 1990's and the maintenance of these historically low interchange event levels thereafter. 10 Between 1972 and 2011, the average number of interchange events per railcar declined from 0.86 to 0.28. This reduction greatly simplified railroad operations, making them more reliable." *Id.* at 12

- "Improved reliability: Single-line service grew as merged railroads closed less efficient parallel routes and interchange locations. These changes not only permitted the railroads to concentrate traffic on efficient high-density routes, it also allowed them to reduce the number of times a car is handled. This reduction was achieved in two ways: First, each avoided interchange event eliminated at least one car handling. Second, concentrating traffic on fewer, high-density routes permitted railroads to build more blocks that bypass intermediate classification yards. Each intermediate switch that can be avoided through bypass blocks eliminates one car handling. Eliminating car handlings is critical, because each time a car is handled at an interchange location or in an intermediate classification yard there is the possibility of a delay that would cause the car to misconnect, delaying its planned arrival time. In some cases, the arrival time is contractually guaranteed to the shipper but, even when it is not, the reliability of the car's arrival is the factor of greatest concern to shippers. Even when a railroad's reliability at each car handling event is very high – more than 90 percent – introducing additional events materially degrades the railroad's probability of meeting the service plan and delivering a car on time." *Id.* at 16.
- "There are many advantages to using single-line routes, including greater system efficiency, improved use of equipment, and faster turnaround times: 'A single-line route can make more efficient use of equipment. By improving the use of both system-owned equipment and foreign cars, a single-line system can have a more efficient fleet exhibiting faster turnaround time and improved loading ratios. These efficiencies are achieved by the elimination of interchanges, a common equipment placement program, more accurate and responsive monitoring of the fleet, and the pre-blocking of cars, as well as a quicker response to equipment supply problems that may develop.'" *Id. at* 21-22 (citing *Grande Industries, Inc. – Control – Southern Pacific Trans. Co.*, 4 I.C.C. 2d 834, 895 (I.C.C. Served Aug. 25, 1988)).

APPENDIX C

SELECTED QUOTES FROM SHIPPERS SUPPORTING TRANSACTION

Aeropres Corporation

- "One of our major challenges lies in trying to obtain raw materials from the various producers across the United States and delivering products to our customer base in the United States, Canada, and Mexico. Many times, we are unable to participate in certain markets due to challenges in moving our core products via rail at a rate that is competitive." (Letter Dated March 29, 2021, in CP-27/KCS-15, Application Volume 3 at 161).

Ag Processing

- "We ship our products on the CP throughout the U.S. and Canada, however, we are quite limited to Mexico. The prospect for our soy CP crushing facilities to move on a single line haul into Mexico with this merger should enhance our market access. Currently we have to move on 2-3 railroads to reach the same markets." (Letter Filed March 30, 2021 in CP-4/KCS-4, Applicants' Initial Submission of Statements Supporting Proposed Transaction at 76 (also included in Application Volume 3 at 162)).

Appro Development

- "As we have mentioned in our March 24th, 2021 letter, the end-to-end CP-KCS transaction will improve service options, with new single-line hauls and broader access to markets across North America. Our experience shows us that single-line rail service options are far superior to public and private fleets." (Letter Dated April 19, 2021, Appro Development Submission of Statement Supporting Proposed Transaction, at 1)

Bentonite Performance Minerals (BPM)

- "CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bentonite and barite from Wyoming to Texas/ Mexico and from Louisiana into Canada." (Letter Dated April 1, 2021 in CP-27/KCS-15, Application Volume 3 at 248).

Berkshire Home Solutions

- "A CP-KCS merger would increase access to new markets by connecting the U.S., Mexico, and Canada through a single-line route. This would help increase competition and possibly drive down transportation costs - savings that could be passed onto consumers and homeowners." (Letter Dated June 28, 2021 in CP-27/KCS-15, Application Volume 3 at 250).

BioUrja

- "Rail service is vital to our terminal's survival, and more efficient access to additional markets will likely make our facility more competitive. For example, CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane from New Town, ND to Mexico." (Letter Dated March 30, 2021 in CP-27/KCS-15, Application Volume 3 at 256).

Bison Transport

- "Bison is a North American transportation company that specializes in full truckload, intermodal, logistics & less-than-truckload. Bison moves goods between Canada, the USA, and Mexico and believes that the CP-KCS merger will create efficiencies for our transportation network. Because of that, we are writing to express our support for the merger." [Filed with this Reply].

Bulkmatic de Mexico

- "Bulkmatic de Mexico is transloading commodities that rely on the first and second CP's lines of business after lntermodal. Bulkmatic de Mexico will expect to grow when such carloads shift to the single-line haul CPKC into Mexico." (Letter Filed March 30, 2021 in Applicants' Initial Submission of Statements Supporting Proposed Transaction at 76 (also included in Application Volume 3 at 280)).

Canpotex Ltd.

- "CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of potash from mines in Saskatchewan to international customers in Brazil, Mexico, and other countries in Central and South America. The proposed CPKC network would allow us to have additional port optionality in the Gulf and potential competitive rail direct options into the Mexican market." (Letter Dated March 30, 2021 in CP-4/KCS-4, Applicants' Initial Submission of Statements Supporting Proposed Transaction at 128 (also in Application Volume 3 at 298)).

Central Missouri AgriService, LLC.

- "We support of [sic] the Canadian Pacific (CP-Kansas City Southern (KCS) Transaction and urge the Board to approve it without granting the CN responsive application." [Filed with this Reply].

Ceres

- "In addition, a single line haul provides the carrier with control of logistics from origin to destination, which would enable the carrier to provide shippers with more consistent monitoring, timing of arrival and pricing. Ceres is particularly enthusiastic about the role the new CP/KCS single-line routes will play in expanding access to U.S. ports and

Mexico. Today, farmers in the upper Midwest lack efficient access to the U.S." (Letter Dated March 29, 2021 in CP-27/KCS-15, Application Volume 3 at 323-24).

- "Gulf and Mexico, which forces them to lower the price of their products in order to compete globally. In recent years this has proven costly as cheaper logistics from other countries have made it difficult for U.S. farmers and their products to be price-competitive into the world market. A CP/KCS railroad, with its north to south connections, would open new markets for U.S. and Canadian farmers." (*Id.* at 324).

CHS Inc.

- "The increased efficiencies and market access created by the CP-KCS merger would be an impetus for rail-using companies, such as CHS, to make the most of those benefits by considering making new investments in supply chain infrastructure to be served by CPKC." [Filed with this Reply].

CIG Logistics

- "CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our customers' shipments of products" (Letter Dated March 25, 2021 in CIG Logistics Submission of Statement Supporting Proposed Transaction, at 2)
- "We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option." (*Id.* at 2).

CF Industries

- "We know from experience (both our own and our competitors) that single-line rail service options are usually more competitively priced and have faster transit times than a route utilizing two railroads." (Letter Dated April 6, 2021, CP-27/KCS-15, Application Volume 3 at 326).

Forest River Bean Co.

- "The economy in the US Upper Midwest depends on agriculture production, and 80% of agricultural products leaving the region moves by railroad. Being a CP Served shipper we have to use multiple railroads to our biggest markets in the southern United States, Ports, and Mexico. A CN acquisition of the KCS would not give us one-line shipments for all our agricultural products in the Midwest. When we must compete against BNSF shippers we are in a huge disadvantage." (Letter Dated April 23, 2021, Forest River Bean Co. Submission of Statement Supporting Proposed Transaction, at 1).

Fullerton Farmers Elevator

- "The economy in the US Upper Plains depends on grain production, and 80% of the grain leaving the region moves by railroad. At present, our CP-served grain handling facility in

this area is limited by its destination access. This puts our CP-served elevator at a disadvantage because it lacks the same market access to destinations that BNSF-served competing facilities have on a single line haul. For example, BNSF-served facilities have access to markets in Texas and the Gulf region but our CP-served facility is simply not competitive in shipping to these markets as it must interline with other railroads to reach these destinations, which increases costs and reduces efficiency. A CP-KCS combination would place us on a more even playing field and greatly expand access to growing markets across the United States, Mexico, Canada, and even internationally." (Letter Dated April 29, 2021, Fullerton Farmers Elevator Submission of Statement Supporting Proposed Transaction, at 1).

Greenlight Traffic and Distribution Inc.

- "Utilizing the service of a single rail line will open a whole new prospective and bring business opportunities that we can now orrer our current and new customers." (Letter Dated March 24, 2021 in CP-27/KCS-15, Application Volume 3 at 505).
- "For example: An existing customer of Greenlight Trattic and Distribution Inc. requested a shipment be moved from Halifax, NS to Mexico City, MX. It was a huge challenge to move this freight. After many hurdles, we were able to accomplish the task. It would be a huge advantage to have a carrier like CPKCS that is integrated and who could have accomplished this as a single move." (*Id.* at 505).

Hapag-Lloyd, LLC

- "We believe this strengthening of Lazaro Cardenas and thus of the global supply chain is a very likely outcome of the CP-KCS Transaction. For this reason, and the reasons expressed in our earlier letter, we support the CP-KCS Transaction." [Filed with this Reply].

Hardisty Energy Terminal GP Ltd.

- "The efficiencies created by the transaction, including improved cycle times and more reliable service, will enhance the DRUbit by Rail Network value proposition for our joint customers, which will allow us to commercialize the increased volumes needed to justify further capacity investment. Put simply, we believe that our goal of additive Dilbit to DRUbit shipment transition is substantially more likely to increase in a world with CPKC than in one without." [Filed with this Reply].

JEI, Inc.

- "Currently our customers ship some via truck into Mexico, now with this merger the rates should be a little better where our customer will choose rail over trucking." (Letter Dated March 28, 2021 in CP-27/KCS-15, Application Volume 3 at 570).

J.W. Scott Farm

- "Only one Class I railroad in ND has single-line access to grain markets in Texas and Gulf of Mexico, the BNSF. The other Class I, the Canadian Pacific, does not, and this

inhibits competition in our local market. Despite the current imbalance, the CP-KC merger has the possibility of bringing more competition into our local marketplaces, to the benefit of ND farmers such as myself." (Letter Dated April 30, 2021, J.W. Scott Farm Submission of Statement Supporting Proposed Transaction, at 1).

Kruger

- "Historically, CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior." (Letter Filed March 30, 2021, in CP-27/KCS-15, Application Volume 3 at 616).
- "At the same time, the entirely complementary nature of CP's and KCS' networks - connecting only at Kansas City and not overlapping anywhere - means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners." (*Id.* at 616).

Midwest Bulk Transload

- "CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by ship containers of feed to Mexico whereby this service has never been offered in the past." (Letter Dated March 29, 2021 in CP-27/KCS-15, Application Volume 3 at 686).

NEW Cooperative Inc.

- "[W]e support the CP-KCS combination. We believe that the combined CPKC network will provide substantial benefits to our 8,000 member owners. We believe that those benefits will enable us to make an investment that we otherwise could not. I write today to advise the STB of a potential investment that is contingent on the approval of the CP-KCS combination. This combination provides us the possibility to build a greenfield grain elevator to ship corn and soybeans in Northern Iowa, to capitalize on new, efficient single line routes on CP-KC from Iowa to grain destinations on the KCS, including Mexico. We estimate that this project will cost $30,000,000." [Filed with this Reply].

Ray-Carroll County Grain Growers, Inc.

- "We are pleased to support the CP-KC transaction and believe that it opens up more possibilities for us. In fact, we anticipate making new investments in this corridor in the

foreseeable future. If this transaction is approved it will open new business opportunities for us." [Filed with this Reply].

Richardson International Ltd.

- "Richardson has reviewed the CP-KC Transaction and believes it opens new markets to our company. More specifically, we expect to be able to access new markets for our grain handling facilities located in North Dakota to ship grain to the Gul area as well as Mexico." [Filed with this Reply].

Rocanda

- "CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). Rocanda has manufacturing facilities in Texas, Wyoming, and Alberta, and has suppliers based across Canada, USA, and Mexico. We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior. The greater access that we have to single-line rail options, the more likely it is that we can expand operations and work more seamlessly with our suppliers." (Letter Filed March 30, 2021, in CP-27/KCS-15, Application Volume 3 at 841).
- "In addition, we have had very negative experiences with rail lines where lots of switches occur between different rail companies. Lines that went from UP to BNSF to CP have been notorious for us in causing delays, and even lost cars. We have never experienced any of these issues on singleline routes, and intend to stick with single-lane routes whenever possible. A combined CPKC will assist in this goal." (*Id.* 3 at 841).

Simpson Seeds

- "Currently, the Mexican Market imports approximately 40-60,000 MT of lentils annually over the rail. As it stands, while CP does provide us with good service, their market reach has been limited as any service farther south than Kansas City must connect with other railroads. With this merger, we expect CP's rates to be more competitive into Mexico due to the elimination of interchange fees." (Letter Dated April 15, 2021 in CP-27/KCS-15, Application Volume 3 at 871).
- "For Simpson Seeds to access CNs' lower rates, we have to load product in trucks, ship it into North Dakota or Montana, and trans-load it onto the BNSF, resulting in more low prices paid to our farmers. Additionally, the environmental impact of running trucks three trucks on 14 hours round trip to load a single hopper car is not sustainable." (*Id.* at 871).
- "CP's ability to directly access the Mexican market would have an immediate positive impact on both our facilities and the farmers we represent. Our exports to Mexico has dropped from 12,000 he current rates. Based on today's price for lentils, the drop in exports represents millions in lost revenue by us and the farmers we represent." (*Id.* at 872).

SPARX Logistics

- "The CP-KCS Transaction promises to substantially increase the value of routings through the port Lazaro Cardenas by extending efficient, single-line intermodal service to Chicago, New York, Toronto, and other important destinations." [Filed with this Reply].

Sun Transportation Systems

- "Sun Transportation Systems ships freight of all kind (FAK) via intermodal containers between Toronto, Montreal, Calgary, Vancouver, Chicago, Los Angeles and Mexico. We currently interchange between CP, BNSF and KCS for freight to travel between Canada and Mexico. A single rail service would remove our cost of interchanging over the road between 3 different railroads. Service would be improved because containers would not need to be moved from railcar to chassis and back to railcar. A single rail service would provide much more superior rail service." (Letter Dated March 24, 2021 in CP-27/KCS-15, Application Volume 3 at 913).

Ternium Mexico S.A. de C.V.

- "[W]e expect that the CPKC Transaction will boost the existing rail network and provide new routing and interchange options for rail users, generating competition with other large rail and truck carriers." [Filed with this Reply].

TIMIRON LLC

- "Our business requires single line service and the resulting more affordable freight rates to access southern markets and Mexico." (Letter Dated April 21, 2021, TIMIRON LLC Submission of Statement Supporting Proposed Transaction, at 1).

USD Group LLC

- "We understand that CPKC will support new investment in capacity (longer sidings, etc.) on the CP-KCS North-South route connecting Canada with the Gulf Coast, enabling improved cycle times and reliability and the ability to move more product on the same number of trains, which impacts cost, efficiency, and capacity." [Filed with this Reply].

WTC Group Inc.

- "CP has provided us with excellent service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we receive from or ship to. Right now, the only way we can execute those shipments is to interchange with BNSF, UP or CSX and beyond." (Letter Dated March 29, 2021in CP-27/KCS-15, Application Volume 3 at 1079).

- D. CSX's Position in this Proceeding Lacks Merit 11

V. WE ARE COMMITTED TO BEING A GOOD NEIGHBOR TO THE COMMUNITIES WE SERVE 11

VI. WE ARE WORKING DILIGENTLY TO NEGOTIATE IMPLEMENTING AGREEMENTS WITH AFFECTED LABOR ORGANIZATIONS 12

VII. CP AND KCS WILL COME TOGETHER AS TWO WELL OPERATED AND WELL-FUNCTIONING RAILROADS, AND WE ARE EAGER TO MOVE SWIFTLY TO ACHIEVE THE PUBLIC INTEREST BENEFITS THAT THE TRANSACTION OFFERS 13

I. THE COMMENTS AND RESPONSIVE APPLICATIONS SHOW WHY CPKC IS IN THE PUBLIC'S INTEREST

1. I have read with interest the comments and responsive applications submitted regarding our "old rules" merger application, and was struck by how much they confirm and reinforce the ways in which the proposed CP/KCS Transaction would be strongly in the interest of the public and the strength of the U.S. rail network.

2. First and foremost, I was gratified that shippers see the potential for CPKC to deliver better transportation solutions and stronger competition. A handful of individual shippers have voiced specific concerns, which our reply comments address fully. And many shipper associations have used this proceeding – forgetting perhaps that this proceeding is under the old rules – as another occasion to advance their quest for industry-wide regulatory change.

3. But for an industry characterized by shippers alienated and embittered by railroad performance, the lack of any meaningful shipper opposition, to me, speaks volumes. The many hundreds of shippers who have supported the Transaction recognize it for what it is – a once in a lifetime opportunity to make competition stronger *without the need for new regulation*. CPKC will be a catalyst for a more competitive rail industry, with more capacity to serve shipper needs, and a commitment to bring a customer-first mindset to the marketplace.

4. Second, and equally compelling, is the response of the Class 1 railroads. It is as if they have never seen a railroad merger proceeding in which they could not advance their own competitive position at the expense of others. I discuss each of their positions in more detail below, but my key takeaway is this: their desire to impose roadblocks and seek concessions would seem a pretty strong indication that they feel threatened by stronger competition from CPKC. From the beginning, I have been eager to listen to concerns expressed by interested parties, and to address those concerns with reasonable measures that preserve the fundamentals

of the Transaction. But I will not countenance efforts to gut the Transaction by dismembering KCS, granting much-larger railroads rate protections that transfer dollars from CP and KCS directly into the pockets of UP or BNSF, or compelling a grant of contractual rights that these railroads did not negotiate or pay for. Any such conditions would work against the competitiveness of CPKC and harm the public interest, and I ask the Board not to grant them.

5. The bottom line, about which I have spoken often and at length, is that the CP/KCS Transaction will unlock investments in the CP and KCS North-South route network that would otherwise never be possible, strengthening the U.S. rail network from the perspective of its capacity to accommodate future transportation needs, as well as from the perspective of the competitive options available to future rail customers. All of this will provide public interest benefits that could not be achieved in any other way.

6. These benefits could not come at a more important time in the evolution of the North American economy. A combined and strengthened CPKC network will help companies across North America pursue more efficient "nearshoring" options, building a more robust supply chain and lessening their dependence on far-away sources of supply and demand that have contributed to instability we have seen in the recovery from the COVID pandemic. The flurry of other global developments – from energy shocks to the war in Ukraine – show the value of a more capable rail network better able to respond to unpredictable economic shocks. I am confident that CPKC will make an important contribution to a more integrated, de-risked supply chain connecting the United States, Mexico, and Canada, and there is no better time than now to unlock that potential.

II. APPLICANTS REMAIN COMMITTED TO RESOLVING REASONABLE CONCERNS ABOUT THE IMPACT OF THE TRANSACTION

7. CPKC will unambiguously strengthen competition and yield a U.S. rail network more capable of meeting America's transportation needs. This should be an easy case under the Board's public interest standard.

8. Because the fundamentals of the Transaction line up so nicely with the public interest, we have not been bashful about making commitments that provide comfort and assurance to interested stakeholders that we will deliver what we have promised. We do not make commitments to overcome problems that the Transaction will create, but to make clear that we will not be causing any public interest harms.

9. From the outset, I have personally committed that CPKC will be a good neighbor to the communities where we operate, and we have followed through on that promise as I discuss below.

10. From the outset, I have personally committed that CPKC will not eliminate any existing competitive options that shippers might prefer to new CPKC offerings. This means that we will be keeping affected gateways open on commercially reasonable terms, as Mr. Brooks explains in more detail. It does not, however, mean that we will be "protecting" UP, BNSF, or any other Class 1 railroad from having to compete like they never have been required to before to stay relevant in the lanes that CPKC will serve.

11. From the outset, I have voiced CP's commitment to supporting passenger rail service on the lines where we operate. We are Amtrak's consistent "A Student," and I am proud of Amtrak's support for the CP/KCS Transaction. I would be delighted if Metra (the Chicago-area commuter agency) saw things the same way. The Transaction will not get in the way of our intention to be a good partner to Metra on the lines we share.

12. Our reply comments outline a wide array of other reasonable undertakings we have made to interested stakeholders – to rail customers interested in our tariffs governing certain hazardous commodities, to smaller railroads interested in preserving interchange options, and to communities interested in help with measures to address increased freight train volumes. We have been reasonable with all comers, and we look forward to continuing the dialogue with others.

III. CP HAS SUPPORTED, AND WILL CONTINUE TO, SUPPORT METRA

13. CP prides itself on good relationships with passenger rail. Our agreement with Amtrak, which was filed at the Board in February, is indicative. It is built on the trust we have earned as Amtrak's number one host railroad.

14. CP has a long relationship with Metra, and we are disappointed that Metra's Comments reveal that we need to work harder to build a relationship of trust with that commuter agency. I am determined to do so.

15. Our relationship with Metra is founded on binding contractual rights and obligations – flowing from Metra to us and from us to Metra. Those contracts ensure that we have the freedom to operate freight trains – and to grow along with the competitive potential of our network. They also give Metra assurances that their trains will not be interfered with during peak windows and that CP's dispatching will support Metra's operations throughout the day. Those rights and obligations will not be affected by the Transaction. We believe we have honored our obligations to Metra. In particular, as Mr. Walker explains in more detail, we have always tried to discharge our responsibility for dispatching the lines we share with Metra in a responsible manner that gives Metra commuter trains the priority they deserve.

16. The impact of the Transaction is limited and will not harm Metra or its ridership base. The bottom line is that while we will increase the number of freight trains on just one portion of one of the two lines Metra shares with CP, the Transaction will not hurt Metra's operations, as Mr. Walker and Mr. Elphick explain in detail. I have personally communicated with Metra's President James Derwinsky, and CP personnel have communicated extensively with their counterparts at Metra. Because we are so sure that our Transaction will not interfere with Metra's passenger service, we are willing to provide concrete commitments that protect Metra's operations over and above what our contracts require, including:

- Not forcing CPKC freight trains operating between Kansas City and St. Paul. MN over the lines we share with Metra (except in emergency detour situations);
- Not objecting to Metra's resumption of its full pre-COVID schedules on Metra's MD-W and MD-N lines;
- Committing to work collaboratively with Metra on improved real-time communications about dispatching decisions that might have an impact on Metra's scheduled trains;
- Supporting collaborative assessments of proposed Metra operational changes outside peak windows (when Metra needs our consent to add trains); and
- Committing to an escalation process aimed at avoiding or resolving disputes when Metra perceives that we have created performance issues for their passenger operations.

17. Metra's analysis of the Transaction, unfortunately, is not grounded in reality, and the conditions it requests would fundamentally alter core provisions of the contracts between CP and Metra and threaten our ability to use Metra's MD-W line for competitive freight service. Most importantly, responsibility for dispatching needs to stay where the contracts place it – with CP. The lines we share with Metra are just a small slice of the network over which CP's freight trains operate, and balkanized dispatching would ensure that overall operational coordination was made worse, not better – to the disadvantage of CP's freight customers as well as Metra's

passengers. I have personally redoubled CP's commitment to do right by Metra when we dispatch their trains, but shifting dispatching away from CP would be overreaching and counterproductive.

IV. THE BOARD SHOULD REJECT CLASS 1'S EFFORTS TO IMPROVE THEIR PRE-TRANSACTION POSITION AT THE EXPENSE OF CPKC AND THE PUBLIC

18. Metra's comments appear to flow out of a sincere misunderstanding of the effects of the Transaction. The comments (and responsive applications) of the Class 1 railroads, on the other hand, appear to be based on very good understanding of the new competition they will face if the Transaction is approved. Applicants have been open to reasonable accommodation of the concerns the Class 1s have articulated, but each of them appears determined to extract its own pound of flesh from CPKC, or try to handicap CPKC's future competitiveness. None of these conditions should be seriously considered, much less granted.

A. CN's Proposed "Inconsistent' Purchase of CPKC's Springfield/East St. Louis Line

19. I understand why CN might be unhappy that CP prevailed in our effort to acquire KCS. CN's effort to force a "divestiture" of KCS's Kansas City-Springfield/St. Louis line strikes me as a "sour grapes" response aimed at undermining CPKC's future while simultaneously achieving a partial acquisition of KCS that CN could not accomplish in the marketplace. It would dismember KCS in a way that would not serve the public interest.

20. I understand that KCS witnesses are addressing whether the KCS-Springfield-Chicago route was ever a real alternative for rail shippers. During my time in CN's operating department, I never thought of CN's connection with KCS at Springfield as creating a through route for any traffic, much less one that was competitive with the UP and BNSF single-line routes between these cities, or with NS's single-line route between Kansas City and Detroit.

21. What I know is that the premise of CN's Responsive Application – that CPKC will downgrade this line, or stop investing in it – is just not true. We value the shippers on this line, as well as the access the line provides to the St. Louis gateway, where we hope to grow our traffic with CSX and other interline partners. In fact, the Transaction will not only preserve the single-line services that on-line shippers have today (to KCS destinations in Mexico, for example), but will create new opportunities for better single-line services connecting those shippers and receivers with CP's network north of Kansas City.

22. CN makes a big deal about the huge potential for investments in the line to support new intermodal services that would take trucks off the highways. I love the idea of converting truck traffic to rail traffic, and CPKC will enable significant progress in that regard. But I am skeptical that CN's forced sale proposal is really based on developing traffic opportunities that CPKC could not exploit. I suspect that CN is instead looking to hurt CPKC and poach some of the traffic opportunities that CPKC would otherwise pursue in the Kansas City-Chicago lane. Were CN successful, it would surely make it more difficult for CPKC to develop the traffic density necessary to support the planned investments in new capacity and the new, more-competitive intermodal and other options that CPKC plans.

23. However, if I am wrong, and a CPKC-Springfield-CN corridor would uniquely unlock the kind of potential that CN describes, I do not see a reason why the CP/KCS Transaction would get in the way of the potential to invest in this route. If CPKC-CN cooperation were necessary to unlock a billion dollars of new business, we would be there with enthusiasm. Indeed, I have spoken directly with CN's new CEO to express a willingness to consider investing along with CN in building out this corridor were it ever a reality that doing so could shift more trucks from our Nation's highways onto the rail network. A divestiture to CN

(or anyone else) is not necessary to ensure that the potential of this route – however speculative – is fully realized.

B. UP and BNSF's Coordinated Effort to Re-Write KCS Contract Rights and Have a Veto on CPKC Competition

24. The demands of UP and BNSF are also extreme. CPKC will not prevent shippers from choosing KCSM-UP or KCSM-KCS-BNSF routes via the Laredo gateway. John Brooks explains in detail how our own incentives – backed up by our commitments – will ensure that this is true. UP and BNSF go much further, however, demanding conditions that would give them rate protections that do not exist today and that would affirmatively handicap CPKC's new, stronger competition against UP and BNSF. If every aggressive single-line rate offer CPKC made to attract traffic to its new single-line routes required that we also give away revenues to UP or BNSF, that would be a strong disincentive to compete as hard as we intend to. I know shippers would not want that, and the Board should not want that outcome either.

25. Potentially even more problematic is UP's and BNSF's coordinated demand to re-write KCS's trackage rights over UP lines in Texas to give UP or BNSF the right to veto any new, competitive CPKC traffic unless and until they both are satisfied that CPKC has not only agreed to add new capacity but has installed and paid for that capacity. In a word, this is "ridiculous." We believe these lines have sufficient capacity – if operated efficiently – to support all of the trains CPKC hopes to add as we implement the Transaction over time. If capacity turns out to be required, CPKC will be supportive and pay its fair share. I understand that the trackage rights agreements giving KCS rights over these lines require that UP add sufficient infrastructure to support *all of the traffic* of *all of the carriers* that use the lines. And each of them is required to pay its appropriate share of the cost of that capacity.

26. We have no qualms about committing to abide by this process. But there is absolutely no justification for a condition that would give UP and BNSF the right to veto CPKC's new competition until CPKC paid for whatever UP and BNSF might insist upon. That kind of one-sided, blank-check condition would put the foxes in charge of the henhouse.

27. The premise of UP's and BNSF's proposal is that CPKC will force through Houston more traffic than the infrastructure will support. We think the infrastructure will be sufficient to accommodate the additional trains that we hope CPKC will attract. But the notion that we will attract traffic even if we lack the ability to support good and reliable service is not realistic. CPKC will have every incentive to ensure that we can provide reliable service through Houston, and if we cannot then we will not succeed in winning the traffic that we hope to attract,

C. NS's Proposed Re-Writing of Meridian Speedway Contracts

28. The Transaction will not harm NS. If anything, it will create new opportunities for traffic growth over the Meridian Speedway lines in which KCS and NS are joint investors. And contrary to NS's concerns, CPKC's anticipated operations will not degrade the service levels for intermodal traffic moving between Shreveport and Meridian. CPKC would shoot itself in the foot if we did anything to drive this traffic back onto the highways.

29. Given the lack of harm to NS, it should not come as a surprise that I reject NS's demands to extract financial concessions as the price of its support for the CP/KCS Transaction. NS's proposed "springing trackage rights" between Dallas and Shreveport are yet another example of overreach by the Class 1s. NS did not negotiate rights between Shreveport and Dallas, much less a "major service failure" provision that would convey such rights. If NS felt it needed trackage rights and emergency provisions covering KCS's line between Shreveport and Dallas, it should have negotiated those rights in 2006 when it entered into the MSLLC venture.

Had NS done so, of course, it would have had to pay for the rights it desires, rather than seeking them for free though a misuse of the Board's merger review process.

D. CSX's Position in this Proceeding Lacks Merit

30. The Transaction will not hurt CSX at all. In fact, CPKC is looking to cooperate more closely with CSX to reap the full potential of a CPKC network. CSX stands to benefit from CPKC's improved capabilities of a combined network and our interest in growing traffic to/from the East via gateways served by CSX, particularly East St. Louis and (to the extent consistent with our contractual obligations) Meridian, MS. In this context, CSX's requests for conditions aimed at protecting itself or improving its contractual position in New Orleans are unwarranted. And CSX's apparent desire to undo – or fundamentally rewrite – the terms of the Meridian Speedway joint venture between KCS and NS (as to which CP will merely step into the shoes of KCS) is unrelated to the CP/KCS Transaction and should be rejected.

V. WE ARE COMMITTED TO BEING A GOOD NEIGHBOR TO THE COMMUNITIES WE SERVE

31. As I said at the outset of this proceeding, CP is committed to being a good neighbor to the communities we serve. We have followed through on that promise, communicating openly with those communities and engaging in good faith negotiations to address the potential impacts of increased rail traffic.

32. That engagement has been productive, at least where the communities have been interested in addressing the issues in good faith. CP has entered into agreements addressing environmental concerns with several communities, and we remain actively engaged with other communities between Laredo and Chicago where the Transaction is anticipated to increase freight traffic above applicable environmental thresholds.

33. Unfortunately, not all of the communities on this route are interested in constructive solutions. Some would rather derail the Transaction entirely or force CPKC to send

its freight through other communities instead of their own. Applicants understand that their Transaction must serve the public interest, and it does. The communities that would seek to hold the Transaction hostage with demands for "over $9 billion" in new investments – or a reroute of traffic on to highways or over longer rail routes through other communities – do not have the public's interest at heart. They want improvements to the U.S. rail network anywhere other than their own back yard, and their tactics should not be rewarded. CPKC will continue to be a good neighbor to the citizens of those communities, as a responsible operator in their backyards. But the politicians that seek to block the Transaction should not be allowed to stand in the way of the public's interest in an improved, more competitive freight rail network.

VI. WE ARE WORKING DILIGENTLY TO NEGOTIATE IMPLEMENTING AGREEMENTS WITH AFFECTED LABOR ORGANIZATIONS

34. The employees of CP and KCS will be indispensable to the success of the Transaction and the future of CPKC. Since last fall CP and KCS have been working closely with the labor organizations representing the employees whose jobs may be affected by the Transaction, with the aim of negotiating agreements that bring together these two valued workforces. Throughout this process we have worked hard to build trust – particularly for the KCS employees who will be new to the CP family. Our goal is to build a strong foundation for CPKC's future by fostering a safe and productive workforce.

35. I am happy to report that we have made great progress already. We are actively engaged with all of the labor organizations representing the potentially affected employees of CP's Soo Line and DM&E affiliates and KCS's KCSR affiliate, with the aim of having such agreements in place so that CP and KCS can integrate their networks under common control.

36. As an indication of our progress to date, the Brotherhood of Locomotive Engineers and Trainmen ("BLET"), representing DM&E train and engine employees, has

ratified by a wide margin a new collective bargaining agreement that will assist in accommodating the consolidation with KCS. Similarly CP (through DM&E) and KCSR have been in discussions with SMART-TD, the labor organization representing KCSR conductors who may be affected by changes in operations in the "Consolidated Territory" should the STB approve CP's application to control KCS. These discussions have resulted in a new collective bargaining agreement, subject to ratification, for KCSR conductors represented by SMART-TD in the Consolidated Territory. We are optimistic this new agreement will be approved; it will further assist in satisfying all requirements of the *New York Dock* conditions to the extent they may apply the contemplated operational changes.

VII. CP AND KCS WILL COME TOGETHER AS TWO WELL OPERATED AND WELL-FUNCTIONING RAILROADS, AND WE ARE EAGER TO MOVE SWIFTLY TO ACHIEVE THE PUBLIC INTEREST BENEFITS THAT THE TRANSACTION OFFERS

37. It is impossible to ignore the challenges that have confronted the North American rail industry over the past several years, ranging from the traffic collapse early in the COVID pandemic, the dramatic changes in labor markets during and coming out of that pandemic, and the strong rebound in freight traffic volumes. The challenges and disruptions those events have brought to railroading have been much noted by the shipper community and the Board.

38. I am gratified that throughout this challenging period, both CP and KCS have fared extraordinarily well. We have done a good job retaining the human talent that is necessary to run our railroads efficiently, and we have kept pace with burgeoning demand by putting in place the resources needed to handle our customers' shipments efficiently.

39. As a result of our solid operational performance, coupled with the hard work that we have been engaged in to plan for post-control integration (which other witnesses describe in their statements), CP and KCS will come into the Transaction in terrific shape to move quickly to begin unlocking the benefits that the Transaction promises. We will move aggressively to

compete harder against our Class 1 rivals, and we redouble our efforts to bring our customers – and new customers – transportation services that better meet their needs.

40. I have already addressed some of the scare tactics of larger Class 1s that suggest that CPKC's competitive success will bring rail traffic increases to some parts of the CPKC network that will overtax available capacity. As Mr. Elphick explains in detail, these assertions are false. CP's success implementing PSR was achieved with a constant eye towards planning and up-front investment that ensures that we do not force operational change – whether longer trains, more traffic, or anything else – onto infrastructure that is not capable of handling it. Some of the stumbles of the other Class 1s show that they may not have taken these lessons to heart in their rush to implement PSR. I can assure the Board that CPKC will be laser focused on the reliable operations and supporting investments upon which our future growth and competitive success will depend. We will not allow our growth to overtake the capabilities of our network.

41. From the day in 2020 when I read about the interest of private equity investors in acquiring KCS – with such gravely uncertain consequences for CP and the U.S. rail network – to now, has been a long and tortuous road. I am proud that the whole CP team has persevered, with our eyes firmly fixed on the transformative potential of this Transaction for both CP and the industry. Now so close to the finish line, I can speak for the entire team in saying that we are eager to put our planning to work and start delivering on the promise of CPKC. I urge the Board to let us do exactly that as quickly as possible so that the public need not wait any longer than necessary to receive those benefits.

VERIFICATION

I, Keith Creel, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this ___ day of July, 2022.

REPLY VERIFIED STATEMENT OF PATRICK J. OTTENSMEYER

TABLE OF CONTENTS

I. OUR COMPETITORS SEEK CONDITIONS ON THIS TRANSACTION TO ADVANTAGE THEMSELVES AND TO DAMPEN THE COMPETITION THAT THE COMBINED CPKC WILL BRING 2

A. CANADIAN NATIONAL RAILWAY COMPANY (CN) 2

B. CSX TRANSPORTATION, INC. (CSX) 6

C. NORFOLK SOUTHERN RAILWAY COMPANY (NS) 9

D. BNSF RAILWAY COMPANY (BNSF)
UNION PACIFIC RAILROAD COMPANY (UP) 10

II. CPKC WILL BE A NEW, VIGOROUS COMPETITIVE FORCE AGAINST THE OTHER CLASS 1'S 12

1. My name is Patrick J. Ottensmeyer. I am President and Chief Executive Officer of Kansas City Southern. My statement included in the merger application (Application Volume 1, pages 187-210) contains a brief synopsis of my background.

2. The purpose of this statement is to briefly address the condition requests put forward to the Surface Transportation Board (STB or Board) in this proceeding by our various major competitors and why those are merely attempts by those carriers to advantage themselves and to hobble the competition that they know that the new CPKC will bring. I will also recap why this merger is strongly pro-competitive. While I will only touch briefly on each of these topics, statements by other KCS personnel submitted along with this one, including those by Oscar Del Cueto, Mike Naatz, John Orr and Steve Simmons, provide greater detail, and I endorse those statements as well.

I. Our Competitors Seek Conditions on This Transaction to Advantage Themselves and to Dampen the Competition That the Combined CPKC Will Bring

3. The Class I competitors of Canadian Pacific Railway Company (CP) and The Kansas City Southern Railway Company (KCSR) each seek some form of change to this merger proposal, either in the form of a responsive application or in terms of proposed conditions. These proposals are all merely opportunistic attempts by CP's and KCS's competitors to gain something for their private benefit while dampening competition that will benefit the public.

A. Canadian National Railway Company (CN)

4. CN's responsive application is physically the most far-reaching proposal by our competitors. The basic pieces of CN's application are a forced sale of KCSR's line between Cockrell, IL[1] and Kansas City, MO, including branches at Jacksonville, IL and Mexico, MO;

[1] Cockrell is southwest of Springfield, and is several miles over track of UP and NS from Springfield.

acquisition of KCSR's line from Roodhouse to Godfrey, IL, and KCSR's one-half ownership of the paired track between Godfrey and East St. Louis, IL (plus attendant yards); acquisition of KCSR's subsidiary Gateway Eastern Railway Company (GWER) and its ownership of several important tracks in the East St. Louis area; one-half interest in KCSR's International Freight Gateway yard about 20 miles south of Kansas City; an interest in the Kansas City Terminal Railway equal to those currently held by KCSR and CP; and access over various connections between these tracks.

5. CN's argument for the proposed massive forced sale is that the Kansas City-to-Cockrell line is a competing route to CP's current route from Kansas City to Chicago, and that CP should not control both of those routes. History contradicts this competing route theory.

6. As historical background, Illinois Central Gulf Railroad Company (ICG; now Illinois Central Railroad Company -- ICRR -- the CN-proposed purchaser) once owned the Cockrell-Roodhouse-Kansas City line and most of the Roodhouse-East St. Louis line[2] that CN's application seeks to acquire. In April 1987, ICG sold those lines and some others to Chicago, Missouri & Western Railway Company (CM&W).

7. Less than a year later, CM&W was in bankruptcy, and in late 1989/early 1990, CMW Acquisition Corp., later renamed Gateway Western Railway Company (GWWR), acquired the Cockrell-to-Kansas City and Roodhouse-to-Godfrey lines, along with a one-half interest in the Godfrey-to-East St. Louis line. Anecdotally, I have heard that GWWR had both

[2] The portion of the paired track owned by Gateway Eastern Railway Company (GWER) between Wann and WR Tower was owned by Conrail when ICG sold the surrounding track to CM&W. GWER subsequently acquired from Conrail the Wann-WR Tower track, along with track connecting to Conrail's (now CSX's) Rose Lake Yard in 1994 and, after protracted legal battles, built the Jug Handle track to connect the paired track to Rose Lake Yard.

operational challenges due to track conditions and financial challenges due to lack of business until it solidified its relationship with, and later was acquired by and merged into, KCSR.

8. This historical background is to say that if the Kansas City-to-Cockrell route was so competitive with CP's Kansas City-to-Chicago route as CN now claims, I doubt that ICG would have sold the line to CM&W in the first place.

9. CN's attitude over the years in response to KCSR's efforts to develop business with CN over Cockrell, also belies CN's current claim of the competitiveness of Kansas City-to-Cockrell as an alternate Chicago routing. As laid out in greater detail in Mike Naatz's individual Reply Verified Statement (RVS) in this filing, CN has consistently lacked interest in cooperating to move traffic over Cockrell. Indeed, Mike's statement includes 2019 e-mails from a CN representative proposing to close the Cockrell interchange. Again, this history does not indicate that CN sees Cockrell-to-Kansas City as part of a realistic alternative route between Kansas City and Chicago.

10. The Cockrell-to-Kansas City line would, however, be a much more lucrative opportunity now for ICRR than the line was for CM&W when ICG sold it to them years ago, but this is only because of considerable investments in the line under KCS ownership. Due to substantial work and investment by both KCSR and its customers, particularly in the past ten to fifteen years, KCSR's customers -- especially grain customers -- have grown their businesses on the Cockrell-Kansas City line tremendously. Indeed, Bartlett Grain Company, L.P. (Bartlett), KCSR's largest customer, built an entirely new elevator on KCSR at Jacksonville, IL about 10 years ago, and has been shipping huge volumes from Jacksonville to Bartlett's customers ever since. Bartlett has filed its statement in this proceeding, supporting the CP-KCS merger and strongly opposing CN's responsive application.

11. Bartlett is not alone in having prospered from working with KCSR to develop business on the Cockrell-Kansas City line. KCSR and its customers such as River Valley MFA, Ray-Carroll Grain, Central Missouri Agriservice, MFA, Ray-Carroll County Grain Growers, ADM Soybean Processing, Heart of Missouri MFA and Poet Biorefining all have benefitted from working together to grow ag business on the Cockrell-Kansas City line. There's no doubt that the Cockrell-Kansas City line is a much better opportunity now than the one that ICG sold to the ill-fated CM&W.

12. CN's application would reduce competition in the St. Louis area by eliminating KCSR direct access there while giving CN a second route to East St. Louis. CN already accesses the East St. Louis area from the south, through Belleville, and connects to KCSR. While CN proposes to provide CPKC haulage to East St. Louis if CN's responsive application is granted, I am skeptical that CN would eagerly provide CPKC quality haulage that would compete with CN's own service. This less robust service resulting from CN's responsive application would reduce competition in the East St. Louis/St. Louis market. Essentially, CN's responsive application would do to the East St. Louis/St. Louis market what CN is complaining that the CP-KCS merger would do to the Chicago-Kansas City market -- put two different routes between the same points in the hands of the same company, but in the case of a CN divestiture that loss would be real rather than imagined.

13. The history of the Cockrell-Kansas City line belies CN's now-claimed belief in the line as an alternate Kansas City-Chicago route. CN has never worked seriously with KCSR in the past to develop such a potential, so why would that supposed potential be apparent to CN only now? CN might say the potential is apparent because if CN's responsive application were granted, Chicago to Kansas City via Cockrell would be a single carrier route. But if that's the

case, what does that say about CN's offer of haulage for CPKC, a service that would involve two carriers? Clearly CN's application calls into question CN's own assertion that KCSR could maintain access to KCSR's major customers on the line that was adequate for KCSR and its customers to compete.

14. The KCS "single line" option from the Cockrell-Kansas City line to destinations in Mexico has been critical to opening Mexican markets to midwestern U.S. corn producers. That market would be jeopardized by CN's proposed forced sale, subjecting current KCS shippers to pricing of CN favoring its long-haul markets or pricing from UP and BNSF from Kansas City favoring those carriers' longer haul West Coast options. Losing quality single-line access to Mexican markets would be highly disruptive to the customers on the Cockrell-Kansas City line who depend on that market, which is why those customers, such as Bartlett, oppose CN's application.

15. The Board should deny CN's responsive application.

B. CSX Transportation, Inc. (CSX)

16. CSX's pleading contains several asks. Some, such as keeping gateways open on commercially reasonable terms, have already been dealt with in Applicants' commitments in this proceeding.

17. Another -- the request to "require CPKC to provide shippers with sufficient information about CPKC's pricing and service plans for movements to and from points in Mexico served directly or indirectly by KCSM to, from, or through the U.S." – is convoluted, unclear, and therefore difficult to respond to. Obviously it will be in CPKC's interest to make its rates and services known to potential shippers. But to the extent that CSX is asking the Board to place requirements on KCSM -- a Mexican railroad that is regulated by Mexican authorities under Mexican law – I would respectfully suggest that the Board seriously consider the Ottensmeyer R.V.S. at 6

Applicants' legal presentation about the statutory and prudential limits about reaching into another country to regulate a company there.

18. With respect to CSX's request that the Board protect CSX's ability to interchange traffic in East St. Louis destined for the Kansas City market, I would suggest that the best way for the Board to do that would be to deny CN's responsive application so CPKC retains direct access to East St. Louis.

19. Further, I would say that CSX misinterprets the Applicants' filings as indicating a downgrade in the Kansas City-East St. Louis line. Given the many valuable customers on that line as I discussed above, downgrading service is not what is anticipated. CSX's projection of CPKC downgrading service on the line that serves KCS's single largest cross-border grain origin is a completely baseless claim.

20. CSX's request that the Board lock CPKC into paying interchange costs for shipments moving both to and from CSX in New Orleans should be denied. This request is completely unrelated to any effect of the CP-KCS merger.

21. In late 2020/early 2021, the New Orleans Public Belt, CSX and KCSR renegotiated agreements covering handling of the CSX-KCSR interchange in New Orleans. The agreement between CSX and KCSR arising from those negotiations allows either party to terminate the agreement on 30-days' notice. Information available to me indicates that the parties knowingly agreed to that provision.

22. CSX offers no reason for the Board to accept CSX's bait and switch on this issue; that is, the bait and switch of CSX knowingly agreeing in 2021 to the mutual right to terminate, and then in 2022 asking the Board to cut that part out of the agreement. The agreement was the product of tough negotiation and each party entered the agreement based on the total effect of all

of its parts. CSX should not now be allowed a unilateral right to jettison one of those parts while keeping the rest.

23. My high-level understanding of the Board's decisions in the past few years about which interchanging party controls the terms of interchange is that the party receiving interchange has a greater degree of control about how interchange occurs than the party delivering the interchange. CSX's ask on this issue seems to go against those Board decisions by giving CSX a veto to any change in the interchange in either direction. The Board should deny that ask.

24. The Board should also deny CSX's asks to abrogate the MSLLC agreements or to require CPKC to interchange with CSX at Meridian, MS. First, CSX's requests seem to be much too late. The Board exempted the MSLLC transaction from the Board's application procedures in 2006. If CSX objected to the transaction, it should have made its case then and in the docket containing the full information supporting the Board's exemption decision. Now that investments have been made in reliance on the Board's exemption, it would be unjust to try to unwind the transaction somehow. CSX may have a right to try to get the STB to reconsider its 2006 exemption, but it seems that request belongs in the exemption proceeding, not here.

25. CSX's request that CPKC be required to interchange with CSX at Meridian is perplexing. CSX does not serve Meridian; indeed, it probably does not have track within 100 miles of Meridian. That makes direct interchange impossible. {{[redacted]}}

[redacted] }} Accordingly, interchange with CSX can occur, just not in the fashion CSX asks.

C. Norfolk Southern Railway Company (NS)

26. NS's ask is that the Board grant NS contingent trackage rights on KCSR's track between the end of MSLLC's ownership and KCSR's intermodal yard at Wylie, Texas. NS argues that because it has a year-long option to acquire the Wylie Intermodal Terminal beginning on the 18th anniversary of the closing under the MSLLC agreements, the Board should grant NS contingent trackage rights over about 200 miles of KCSR track like NS has over MSLLC's track.

27. For several reasons, the Board should reject NS's request. First, the MSLLC agreements are voluminous and, as stated in Steve Simmons' RVS at paragraph 69 in this filing, were negotiated over a several-month period. Given all of that, the parties' failure to provide NS contingent trackage rights on KCSR track while providing such rights on MSLLC track very likely was a considered and deliberate decision.

28. As NS says in its filing, it acquired contingent trackage rights on MSLLC to protect the investment NS made to increase the capacity of that line. By contrast, NS did not invest in, and is not offering to invest in, KCSR's Wylie-Shreveport track. This is particularly important because if a "Major Service Standard Failure"[3] occurred, triggering NS's proposed trackage rights, NS's operating its own trains, in addition to CPKC's, between Wylie and Shreveport would worsen congestion between Wylie and Shreveport, perpetuating the service

[3] As defined in Appendix B to the Norfolk Southern Railway Company – Meridian Speedway LLC Joint Use Agreement.

failure. NS should not be able to "have its cake and eat it, too" – not investing in capacity, but gaining additional rights it did not negotiate.

29. There are other problems as well with NS's proposal. As explained in Steve Simmons' accompanying RVS at paragraphs 62 - 63, NS proposes trackage rights for a wider array of intermodal traffic than KCS and NS agreed to in the Dallas Terminal Marketing Agreement and the Western Haulage Agreement.

30. Also, again as explained by Steve Simmons' RVS, at paragraphs 64 - 68, NS's proposed trackage rights fee would transfer {{[redacted]} from CPKC to NS. Again, this contradicts the carefully-constructed, NS-authored Dallas Terminal Marketing Agreement, which says that the haulage KCSR is required to provide NS {{[redacted]}}.

31. In short, NS is requesting that it be given trackage rights equivalent to those it paid for as part of its rights on MSLLC, but without paying for them. The rights requested would contradict the provisions of the Dallas Terminal Marketing Agreement. NS's request should be denied.

D. BNSF Railway Company (BNSF)Union Pacific Railroad Company (UP)

32. Finally, much of what has been said above applies to the asks by BNSF and UP. As with CSX's asks, the Board should not attempt to reach across the border to regulate a railroad in Mexico. Mexican shippers or receivers are on one end or the other of each cross-border shipment, and the Mexican government has an interest in protecting them and, as Oscar Del Cueto explains, has the regulatory tools to do so. BNSF's request for contingent trackage right is, like NS's, unrelated to any effect of this Transaction, and is unnecessary.

33. UP's and BNSF's requests that CPKC be required to fund agreed upon capacity improvements on the Robstown-Beaumont trackage rights lines as a prerequisite to competing for additional traffic over that route is an obvious attempt to stifle competition from CPKC. First, as discussed in John Orr's accompanying individual RVS at paragraphs 16 - 26, UP particularly has substantially changed its Houston operating practices in recent months, especially around Englewood Yard. Those changes went forward while work at Englewood Yard was in process. UP did not delay its own traffic changes until its infrastructure was completed. There is no reason that CPKC should do so.

34. Second, as shown by the combined testimony of Ray Elphick and John Orr (*see* Elphick-Orr RVS at 19-25), adequate infrastructure capacity exists on the trackage rights lines, but even if it did not, the trackage rights agreements themselves provide how infrastructure additions are to be funded if additional infrastructure is needed. This situation is not like the UP-SP merger where initially there were no trackage agreements like those accompanying Steve Simmons' RVS (Simmons' Exhibits 2 – 4) to set standards for how to pay for infrastructure needs. The fact that BNSF and UP agreed between themselves that UP would fund certain merger-related capital projects – such as connections between UP and SP's largely parallel lines -- was part of UP's undertaking to BNSF, through the BNSF settlement, and to the Board that UP would pay for the infrastructure improvements that UP said that it needed. That arrangement is not, as BNSF suggests, a necessary part of every merger. While CPKC will pay for capital projects that Applicants' filings show, the trackage rights agreements provide the means to fill any need that may arise on those lines in the future.

35. The mileage prorate proposal is similarly meritless. Mike Naatz's RVS does an excellent job of explaining why. Moreover, the proposal's attempt to get a U.S. federal agency to control rail rates in Mexico appears clearly improper.

II. CPKC Will Be a New, Vigorous Competitive Force Against the Other Class 1's

36. Finally, I would be remiss if I did not reiterate my strong belief that this transaction is good for competition and good for shippers. Shippers often talk to the Board about how more competition is needed. And over 450 shippers have submitted their support for this transaction, evidencing their belief in the invigorated competitive options that CPKC will be able to provide. I also agree with Keith Creel that the lack of substantial shipper opposition in the current context of industry service issues speaks volumes.

37. The merger of CP and KCS will support improved service and investment opportunities that would not be possible without bringing the two companies together. Capital investments between two separate companies are often harder to justify due to separate operating and investment priorities and different operating visions of separate companies. Bringing KCS and CP together as one company with one vision and unified priorities will eliminate these differences and create opportunities for greater coordinated actions to improve the fluidity and function of the combined CP-KCS network. This will create a stronger platform for improving customer service.

38. To say that CPKC will compete is not to say that CPKC will improperly refuse to work with other carriers, as UP, BNSF, and others allege. There will still be many large and important markets which will not be directly served by the CPKC, including the southeastern, Mid-Atlantic, and U.S. West Coast markets. CPKC, while stronger together, will still be the smallest Class 1 and will still need to work with other carriers to serve customers' complete array of needs. But the combined CPKC will be able to serve a larger portion of those needs and to

serve them better, putting pressure on our Class 1 competitors to be better themselves. CPKC will work with other carriers, including to and from Mexico, if for no other reason than that it will be in KCSM's interest to do so, to generate more traffic and more revenue for the combined company.

39. I also reject BNSF's assertion that KCS has discriminated against BNSF unfairly since acquiring control of Tex Mex. So far as I can tell, that assertion is mostly based on an increase in the KCS/Tex Mex division for grain shipments moving from BNSF over our line from Robstown to Laredo. My belief is that Tex Mex's pre-change-of-control rate division was abysmally low and needed to be raised, as addressed in Mike Naatz's individual RVS. As context, at about this same time, Tex Mex had obtained a $50 million federal loan to make essential track repairs that, Tex Mex, under its prior ownership could not afford to make. That very low rate division on BNSF grain traffic was one of the reasons for that situation, and in retrospect clearly needed to be changed. Seeking an adequate return to keep the track together is not unreasonable or discriminatory. BNSF's foreclosure argument is ill-founded, and ridiculous in the context of BNSF's access to multiple Mexico gateways, including its trackage rights to Brownsville that it doesn't exercise.

40. I strongly believe that CPKC will be a competitive force that will serve shippers and the public interest. I urge the Board to approve the Transaction without the conditions and inconsistent applications that future CPKC's competitors hope to use to protect themselves, not the public interest.

I. CPKC WILL OFFER COMPELLING VALUE TO SHIPPERS 4

II. THERE IS NO NEED FOR CONDITIONS TO PROTECT GATEWAYS BEYOND THE COMMITMENTS APPLICANTS HAVE OFFERED 6

- A. Applicants' Gateway Commitments Provide a Robust Backstop to CPKC's Strong Incentive to Support the Existing Interline Options that Shippers May Prefer 8
- B. The "Mileage Prorate" Rate-Setting Mechanism Proposed by UP and BNSF Would Be Anticompetitive and Harmful 10
- C. Open Routing and Reciprocal Switching Conditions Would Handicap CPKC's Ability to Compete 13

III. CONDITIONS RELATING TO SERVICE ASSURANCE ARE UNNECESSARY 13

- A. The CP/KCS Service Promise 14
- B. Formal Service Penalty Conditions Would be Counterproductive 19

IV. A FORCED SALE OF KCS'S SPRINGFIELD LINE WOULD REDUCE THE BENEFITS OF THE TRANSACTION AND HARM ON-LINE SHIPPERS 20

- A. KCS's Springfield/St. Louis Line Will be an Important and Integral Part of the CPKC Network 21
- B. A Forced Sale to CN Would Interfere with the Transaction's Public Interest Benefits 22
- C. Severing KCS's Springfield/St. Louis Line from the Rest of the KCS Network Will Reduce Shippers' Existing Transportation Options 24

V. CP'S TIH/PIH TARIFF PROVISIONS HAVE NOTHING TO DO WITH THIS TRANSACTION....25

VI. THE TRANSACTION WILL NOT HAVE ANY ADVERSE IMPACT ON U.S. WHEAT GROWERS....29

VII. CPKC WILL CONTINUE TO HAVE STRONG INCENTIVES TO SUPPORT TRAFFIC GROWTH AND SERVICE LEVELS ON THE MERIDIAN SPEEDWAY....33

1. I am John Brooks, Canadian Pacific's Executive Vice President and Chief Marketing Officer "(CMO"). I submitted a Verified Statement in support of the Application filed last October, and I am submitting this Reply Verified Statement to respond to certain comments and requests for conditions filed by other Class 1 railroads and certain other interested parties, as well as the request by CN for a forced divestiture of KCS's line between Kansas City and Springfield, IL and East St. Louis, IL.

2. My statement focuses on seven topics:

- I first address certain critiques put forward by a few Class 1 railroads regarding Applicants' estimates of the traffic gains anticipated from the Transaction, including complaints that we did not give our competitors a specific-enough roadmap of how CPKC plans to attract traffic away from them to new CPKC single-line routes;
- I explain why requests for "gateway protection" beyond what Applicants have already committed to is unnecessary and would undermine the pro-competitive benefits of the Transaction;
- I explain the steps Applicants are committing to take to ensure that the Transaction does not degrade the quality of service CP and KCS customers receive, and why the additional conditions relating to post-Transaction service that some have sought are not necessary and would undermine the competitive benefits of the Transaction;
- I explain the many ways in which a forced divestiture of KCS's Springfield/East St. Louis Line would undermine important benefits of the Transaction and even undercut the existing rail options that shippers on this line have today;
- I explain why requests for conditions relating to CP's TIH tariff terms relating to "toxic-by-inhalation hazard" commodities have no proper place in this proceeding;
- I explain why U.S. wheat growers need not be concerned that CPKC will favor wheat originated in Canada; and
- Finally, I explain why Norfolk Southern need not be concerned about CPKC's interest in growing traffic over the Meridian Speedway between Shreveport and Meridian, where NS interchanges traffic with KCS.

I. CPKC WILL OFFER COMPELLING VALUE TO SHIPPERS

3. Other Applicant witnesses are addressing in more detail the critiques offered by certain Class 1 railroads of the traffic growth Applicants anticipate from the Transaction. Many of those critiques come from the railroads that will have to face the new competition that CPKC will bring to the North American transportation marketplace. Those critiques primarily come in two flavors: (1) CPKC routes will not be attractive in comparison with the interline routes involving other Class 1 railroads, such that CPKC would have to resort to "foreclosure" strategies to win traffic to CPKC interline routes, and (2) Applicants have not provided detailed, opportunity-by-opportunity rate and service plans showing exactly what terms they will offer shippers to attract traffic away from other railroad (and truck) options. Neither critique is valid.

4. First, as I and other Applicant witnesses have already explained, CPKC will not have any incentive to foreclose existing interline options, and doing so would in fact be counterproductive to CPKC's growth strategy. (I address Applicants' formal commitments to preserve those options in the next section.). Instead, Applicants anticipate attracting traffic from existing transportation options because, relative to the status quo, the new CPKC services we will be offering will be considerably better than what most shippers have seen from CP and KCS in the past. The fact that some interline routes might be somewhat shorter, or under ideal conditions somewhat faster, will not impede CPKC's success in persuading shippers of the value to them of new, reliable CPKC single-line routes.

5. As other witnesses recount in more detail, every month that passes brings further confirmation of the enthusiasm that shippers have about future CPKC options. Both railroads are in constant contact with their customers, and we hear this excitement on a daily basis. We also know that dozens of shippers are considering making substantial investments of their own on the foundation of the new transportation options CPKC will bring: investments in grain

origin elevators and processing facilities in the Upper Midwest and destination terminals in the Gulf and Mexico; fertilizer sheds for expanded distribution to key growing regions; export terminals in the Gulf; transload and warehousing facilities from Chicago to Mexico, and many, many more. Shippers are eager for the CP and KCS to be able to come together and achieve the promise of the new CPKC network. Indeed, many of those shippers have already filed in support of CPKC precisely because they see the value the Transaction will unlock.

6. All of this enthusiasm confirms to Applicants that our own assessments of the likely range of new traffic opportunities CPKC will attract are reasonable and can be achieved. We know that CPKC's traffic mix three years after the Transaction is consummated will not look exactly like what we have forecasted, for myriad reasons including changing economic circumstances and the ebb and flow of competition both in the rail industry and in the countless industries CPKC will serve. But we have seen nothing that suggests that CPKC cannot succeed in attracting large volumes of traffic from existing truck and rail transportation alternatives.

7. Second, there is no valid basis for the complaints that Applicants have not been specific enough about the rates and other terms we will offer to prospective customers to entice them to use CPKC services. For starters, in many cases we have not developed the specific terms we would propose to offer to attract this new traffic (and retain existing traffic). Those offers will be driven by the competitive marketplace and the specific circumstances applicable to the customer's transportation needs – including the specifics of their existing options.

8. Even if we had developed a blueprint for the competitive terms we would offer customers to win traffic from trucks and other Class 1 railroads, it obviously would not be appropriate to share it with our competitors. I am aware that Applicants' consultants assumed that certain of the traffic CPKC would attract would come at a reasonable discount relative to

existing interline rate levels. That makes sense from my commercial perspective. But let me be clear: Applicants have set no arbitrary floor on how aggressive they will be in competing to attract traffic from other Class 1s – whether or not the traffic is affected by the Transaction. Competitive marketplaces are dynamic marketplaces, and the rates we offer will be ones that make sense for CPKC and that are designed to meet the needs of our customers and be successful in the competitive marketplace.

9. I am more than happy to put the other Class 1s on notice of what to expect from CPKC, however. CPKC will be an innovative and aggressive new competitor. CPKC will strive to develop reliable services tailored to the needs of our customers, for fair and competitive prices. And CPKC will not be intimidated by the much greater size and scope of the other Class 1s' U.S. networks. The other Class 1s should plan to up their game if they want to retain traffic that could be served by new CPKC single-line routes. We think rail customers will respond favorably to this new competition, benefitting the whole competitive process, not just CPKC.

II. THERE IS NO NEED FOR CONDITIONS TO PROTECT GATEWAYS BEYOND THE COMMITMENTS APPLICANTS HAVE OFFERED

10. A number of commenters, including other Class 1s, have expressed unfounded concerns that Applicants' commitment to keep open existing gateways and thereby preserve existing interline options potentially affected by the Transaction do not provide an adequate assurance that those existing options will be left in place. Other witnesses explain in more detail why CPKC will not have an incentive to undermine the existing options that shippers have demonstrated best meet their needs given the options they have today. I firmly believe that CPKC will not be well served if we attempt to force shippers to switch to single-line CPKC routes, and I know we have no intention of doing so.

11. Applicants in fact have been consistent and clear about our commitment not to shut off or degrade existing interline options that shippers might prefer to new CPKC single-line routes. Some of the comments suggest that dissatisfaction with these commitments may stem in part from confusion about the scope of what we are committing to do. I will try to clear up that confusion. I will also explain why the "mileage-prorate" proposal made by BNSF and UP as a way of "keeping gateways open," and echoed in some of the other comments, would in fact undermine CPKC competition and is calculated by those larger, Class I railroads to protect themselves from having to compete to retain the business they have today.

12. First, however, I'd like to say a few words about gateway concerns expressed by some Class 1 railroads and shipper organizations about interchange traffic that will not be affected at all by the Transaction. In many cases, concerns about gateways have nothing to do with the Transaction at all. For example, CSX expresses concern about the New Orleans gateway, where KCS and CSX interchange some traffic. Likewise, NS expresses concern about the Meridian, MS gateway, where KCS and NS interchange considerable intermodal and other traffic.[1]

13. In cases like these, CP's control of KCS will not change anything about the incentives to continue routing interline traffic via these gateways. Adding the CP network to KCS's network will not create any new single-line route for such traffic, nor create the potential for CPKC to carry the traffic farther by keeping it on CPKC to another gateway. These existing interline routes will be unaffected by the Transaction and thus there is absolutely no reason for any conditions aimed at preserving those options. Any such conditions would only impose new

[1] In addition, considerable volumes of NS intermodal traffic move over the joint KCS/NS Meridian Speedway via Meridian, with KCS moving that traffic in haulage service and exchanging it with NS at Meridian.

regulatory burdens on CPKC, and provide unwarranted protection for our connecting carriers, hobbling the competitive process. For clarity, the commitments Applicants have made to preserve existing gateways apply only to situations where the traffic moving via those gateways *would be affected by the Transaction* – because CPKC would either gain a new single-line route, or the Transaction creates a new potential to carry traffic farther on the CPKC system, bypassing the existing gateway. The joint comments of ACC, TFI and NITL do a good job of describing what it means for interline traffic over an existing gateway to be affected by the Transaction: they proposed "bottleneck" conditions applicable "to any bottleneck movement that originates or terminates (including via reciprocal switch or inter-switching) on Applicants or a connecting Class II or III railroad for which the merger of Applicants creates the opportunity for a longer haul on their combined network than either Applicant would have by itself." *See* ACC-6/TFI-5/NITL-3 at 9.

14. There are many other examples raised in the Comments of parties seeking protection for interline movements that will not be affected by the Transaction, such as Evergy's concerns about the Kansas City gateway, which are misguided because CP cannot serve the origins of Powder River Basin coal that Evergy ships via the Kansas City gateway and the Transaction will thus not create the opportunity for a longer haul for this traffic on the CPKC network.

A. Applicants' Gateway Commitments Provide a Robust Backstop to CPKC's Strong Incentive to Support the Existing Interline Options that Shippers May Prefer

15. The commitments Applicants made in the Application (and expressed publicly on numerous other occasions) at their core are what the Board has repeatedly accepted as the appropriate way to keep gateways open. In short, CPKC will not create new bottlenecks for

purposes of rate-setting, and CPKC will keep existing gateways open on commercially reasonable terms.

16. Some claim to be confused about what this means. It is pretty straightforward. Where the CP/KCS combination would give CPKC a new single-line route, or a longer haul than what either CP or KCS could offer today, Applicants have committed that CPKC will waive any right it would otherwise acquire under the Board's "bottleneck rate" standards to decline to quote an interline rate, and CPKC will not foreclose existing interline options over that gateway by closing the gateway operationally or economically. In other words, we will not *force* "affected traffic" over longer-haul CPKC routes.

17. To provide further clarity, I have set forth as Appendix A to this statement specific language that Applicants are prepared to accept as a condition to the Transaction that would implement our commitment to keep gateways open. This language is drawn from concrete proposals Applicants have made to shipper organizations to codify our commitments.

18. As I stated in my initial Verified Statement, Applicants are prepared to enter into formal agreements with shippers and shipper organizations providing for an efficient dispute resolution mechanism for those situations – which we would hope would never arise – where our customers had a concern that the interline rates and other terms CPKC was offering were not commercially reasonable and instead effectively foreclosed their continued use of an interline option that they preferred. As a practical matter, this situation should not arise, because – again – CPKC would be better off preserving existing interline traffic than forcing shippers onto routes that do not meet their needs. Were CPKC ever to propose interline terms that shippers thought were foreclosing their access to pre-existing options, I expect we would hear from them loud and

clear, and we would sort things out without the need for any formal litigation or dispute resolution process.

19. Together, the gateway preservation commitments we have made – and are willing to have codified into a formal condition on Board approval – are more or less exactly what NITL agreed to with the applicant carriers in the KCS/Tex Mex and CN/WC cases, and what the Board has deemed sufficient to address "foreclosure" concerns in numerous other cases, like CSX/Pan Am, CN/EJE, and CP/DME. I know that CPKC will not have an incentive to shut down options shippers prefer, and I also know that if we nonetheless tried to do that shippers would see it immediately and have no hesitation speaking up and enforcing our commitment.

B. The "Mileage Prorate" Rate-Setting Mechanism Proposed by UP and BNSF Would Be Anticompetitive and Harmful

20. The concern the Class 1s claim to have about Applicants' gateway preservation commitments is entirely self-serving. Incredibly, they want to expand it to every interline rate they have with CP and KCS – not just situations where the Transaction has a potential effect on that traffic. And they want to replace Applicants' flexible commitment to quote reasonable rates that will keep existing interline options available (consistent with standard interline rate-setting processes) with a hard-and-fast regulatory mechanism that would prescribe the maximum revenue division that CPKC could earn on an interline rate based on a "mileage pro-rate" formula keyed to the single-line rates that CPKC quotes to customers. The proposal is dramatically out of step with conditions imposed in their own mergers and with how market-based divisions work in the real world, and it would effectively transfer millions of dollars that CP or KCS earn today into the pockets of these much-larger Class 1 railroads. Far from protecting existing interline options, this demand would give UP and BNSF (and other

connecting carriers) a windfall and create a disincentive for CPKC to offer attractive rates for its new single-line routes. To my mind, that is blatantly anticompetitive.

21. First, as I have already explained, there is no basis for the Class 1s' demand to extend "rate protections" to traffic that will not be affected by the Transaction, like KCSM-UP traffic moving between Mexico and Los Angeles or Denver. The fact that these railroads want such protection should reveal that they are not being transparent about the motivation for their demands for conditions. They want a revenue windfall, not the preservation of competition.

22. Second, the notion that the Board should regulate CPKC's interline divisions based on a rigid "mileage-prorate" formula is flatly contrary to how revenue divisions are established in the real world, and these larger railroads know that. The relationship between an interline carrier's rate and the total revenue on an origin-to-destination move is determined in the marketplace by a wide array of factors, and its revenue share may differ greatly from its share of the miles. Those factors include the relative operating costs associated with the carrier's portion of the move, the costs associated with interchanging the traffic, potential equipment costs, the need for infrastructure investment (or lack thereof), the level of service (over the road and first mile/last mile), the commodity, the volume of traffic, the availability of capacity, and the carrier's role in attracting the traffic in the first place. No mathematical formula, much less one based solely on relative mileage, can capture these factors, and keying the formula for interline rates to rates for single-line movements would make the mismatch problem worse, not better.

23. I am generally familiar with CP's revenue divisions in its interline moves with UP, BNSF, and other partners. CP's existing divisions – in today's pre-Transaction marketplace – are all over the map, and often higher, relative to what would be dictated were we to share revenue on a flat mileage-prorate split. That means that imposing such a split on CP would give

our connecting carrier a windfall – allowing those carriers to maintain the same rate level while pocketing revenue that previously would have been paid to CP. Such a condition would not preserve the pre-Transaction status quo or protect competition.

24. To be sure, there are situations where interline carrier may *agree* to share revenue on a mileage prorate basis. But these are consensual situations that apply in cases where such an arrangement makes sense from the perspective of both carriers, such as where they are seeking to simplify interline pricing for some discrete set of traffic opportunities to compete more effectively against single-line alternatives.

25. Third, any mechanism that would cap CPKC's interline rates based on some percentage of its single-line rate offers would inhibit aggressive competition by CPKC designed to attract shippers to routes they have not previously had available to them. Every time that CPKC proposed to give a discount designed to pass along the efficiencies of its new single-line routes, it would effectively have to pay over to UP, BNSF, or another carrier the mileage-prorate portion of that discount as a subsidy to their continued competition via pre-existing interline routes. This kind of subsidy to UP and BNSF would be highly anticompetitive, and it would effectively be a tax that disincentivizes CPKC from competing as aggressively as it otherwise would. No doubt that is UP's and BNSF's desire – to have the Board impose a pricing regime on CPKC that mutes the competition that CPKC stands ready to provide.

26. The fact is that there is no logical connection between CPKC's single-line rates and the level of CPKC's interline factors. Single-line and interline moves have different characteristics, including different cost structures. If one line has a short haul, for example, it often does not have the ability to spread its cost over a large number of miles, meaning it often requires a higher percentage of the revenue compared with their percentage of the mileage.

C. Open Routing and Reciprocal Switching Conditions Would Handicap CPKC's Ability to Compete

27. Some commenters go even farther than the opportunistic Class 1s and seek to impose on CPKC – and only CPKC – a new regulatory regime requiring that CPKC keep open all interchange points and allow open routing regardless of whether the Transaction will affect those routes, and even grant reciprocal switching access allowing the larger Class 1s to access solely-served CPKC customers.

28. To illustrate, these commenters are demanding that, for CP traffic to destinations that KCS's network could not reach (such as traffic moving between Canada and points in the West on the UP or BNSF networks, or in the Northeast on the CSX or NS networks), CPKC nonetheless must quote Rule 11 rates over every possible interchange. And CPKC would have to do the same for KCS traffic to destinations that CP's network could not reach (such as KCS traffic moving to points in the Southeastern United States on the NS or CSX networks, or in the West on the UP and BNSF networks).

29. These kinds of condition requests are untethered to any effect of the transaction and should be rejected under the pre-2001 Merger Rule standards. More importantly, they would inject new inefficiencies into CPKC's combined network and impede efforts by CPKC to compete more effectively against other Class 1 railroads and other modes. The damage would not be limited to the new competition CPKC hopes to offer using its more efficient and more capable single-line routes, but would extend to traffic flows unaffected by the Transaction.

III. CONDITIONS RELATING TO SERVICE ASSURANCE ARE UNNECESSARY

30. Several commenters have urged the Board to require Applicants to prepare something akin to a "new Merger Rules" service assurance plan or impose conditions establishing a new regulatory regime of monetary penalties for service-related issues that arise

post-Transaction. Such conditions are unnecessary and would be counterproductive. The 100-percent complementary nature of the CP/KCS Transaction is completely unlike that of the prior rail mergers – like *UP/SP* and *CSX/NS/Conrail* – that have led to serious service problems. CP/KCS is much more like *CN/IC*, which did not cause Transaction-related service issues.

31. In any event, Applicants have been and will remain laser-focused on doing the requisite planning and making the requisite investments to ensure that CPKC's service will provide better overall experiences than what shippers experience today, and certainly not worse. The success of our Transaction depends on our implementing it in a way that attracts traffic to the new, more capable CPKC network – and we will not achieve that goal if instead we drive traffic away with poor service.

A. The CP/KCS Service Promise

32. In light of these factors – the purely end-to-end nature of our Transaction and our incentives to provide stellar service to attract traffic to CPKC – there is no legitimate basis for imposing service-related conditions. Nonetheless, given the importance of these issues to shippers and the Board, Applicants are making a robust series of commitments that we fully expect will be made a condition of the Board's approval of the Transaction. Those commitments – which I refer to as the "CP/KCS Service Promise" – are set forth on the following page and I explain a bit more about how we will implement these promises in the paragraphs that follow.

OUR CP/KCS SERVICE PROMISE

Pillar 1 – We Will Plan Thoroughly for Transaction Implementation

- Our goal is for Transaction-related changes to yield service that provides each customer with as good as or better service overall than what our customers received pre-Transaction.
- Our planning for Transaction implementation is already well underway.
- We will not implement Transaction-related changes until we are prepared to do so without causing disruption.

Pillar 2 – We Will Monitor Our Post-Transaction Performance

- We will proactively monitor our own performance so as to identify areas requiring adjustment before problems arise.

Pillar 3 – We Will Transparently Report on Our Post-Transaction Performance

- During an oversight period of up to five years, we will report regularly to the Board and the public on our service levels, with metrics tailored to lines and facilities most affected by Transaction-related traffic growth.
- We will supplement this reporting with proactive engagement with our customers (on a confidential basis) regarding CPKC services that affect their shipments.

Pillar 4 – We Will Proactively Communicate and Consult with Customers About Our Post-Transaction Performance

- We will meet regularly with our customers to discuss progress on Transaction implementation.
- We will add customers served by the KCS network to CP's Customer Advisory Council.
- We will seek regular input from our customers on ways we can improve our service to better meet their needs, or make adjustments to address issues as they arise.

Pillar 5 – We Will Resolve Concerns and Promptly Fix Any Issues that Arise

- CPKC will have a cross-functional team with authority to step in to develop and implement solutions for issues that arise, including via adjustments to our resourcing or operating practices.
- When adjustments do not resolve concerns raised by our customers, we will provide for an escalation process to ensure that customer concerns are heard by decision makers empowered to address them.
- We will participate in independent mediation with our customers when these steps do not resolve Transaction-related concerns.

33. Together, the five pillars of Applicants' Service Promise go far above and beyond what is necessary for an end-to-end transaction reviewed under the pre-2001 merger rules.

34. I expect that most of these promises are self-explanatory. Applicants' planning for the implementation of the Transaction continues, and will continue up until and beyond the date when CP is authorized to assume control of KCS.

35. To implement Pillar 2, CPKC will stand up an interdisciplinary "Service Protection Team" with responsibility for daily and proactive monitoring of Transaction implementation steps: traffic changes, key operating metrics, progress on capacity investments, and the impact of operational adjustments such as new train services and blocking patterns, and adjustments to first-mile, last-mile service to accommodate new traffic. That Team will also monitor the interface with other railroads – including Metra – with which CPKC will share trackage or interchange freight. We will supplement these internal steps with feedback from our customers (including through Pillar 5 discussed below) and quarterly or more frequent business reviews that will touch on any service affecting these customers.

36. To implement Pillar 3, we are in the process of assessing the specific metrics, but we would agree to a framework that has two components. First, CPKC will continue to report the metrics required by the Board pursuant to Ex Parte Nos. 724 and 770 during the period of the Board's oversight in this proceeding, regardless of whether the Board terminates those reporting requirements. Second, CPKC will report metrics on specific corridors that have been raised by parties to this proceeding: (a) on the corridor between Laredo, TX and St. Paul, MN and Chicago, IL, and (b) the Meridian Speedway. Third, CPKC will provide metrics that address the following yards: Shreveport, Kansas City, Bensenville (near Chicago), and St. Paul, as well as the Wylie Intermodal Terminal near Dallas.

37. We will also report specifically on performance of traffic over trackage owned by third parties, including (a) Metra, over whose lines CPKC will operate in the Chicago area and (b) UP, over which CPKC will operate to traverse the Houston terminal and elsewhere in Texas. We encourage the Board to use its inherent authority over those operations to require that UP also report detailed information regarding the operating conditions on its lines, since UP's own operations (along with those of BNSF) have always been (and will remain) the most important contributor to potential congestion.

38. The Board should resist calls by some commenters – such as Texas International Terminals – to require reporting of competitively-sensitive information about CPKC's traffic opportunities. Any obligation to report about the competitive wins and losses CPKC experiences – or any other details of what traffic CPKC is taking on in lanes where it competes with larger Class 1 railroads – would uniquely handicap CPKC's ability to compete.

39. To implement Pillar 4, CPKC will work directly with its customers to effectuate our commitment to participate in a two-way dialogue about our service and how we can work together to improve CPKC's ability to meet our customers' needs. We will provide regular (confidential) updates tailored to individual customers, and we are committed to an open line of communication about any and all of our customers' post-Transaction concerns. One vehicle for facilitating this dialogue will be CP's very successful Customer Advisory Council, which we will expand to include multiple KCS shippers so that we can better understand and address service issues relating to this part of the future CPKC network. The Council fosters constructive dialogue across a wide array of issues through one-on-one direct interaction, annual workshops, customer surveys, and customer participation in prototyping and new product testing for the suite of systems that CP has used (and CPKC will further innovate) to facilitate efficient interaction

with our customers. CPKC will also establish a dedicated customer service hotline for Transaction-related service concerns.

40. To implement Pillar 5, CPKC will put in place a SWAT-team-like approach to think ahead about potential service issues and be empowered to take whatever action may be necessary to ensure that problems are averted before they arise. CPKC's Service Protection Team will be led by a dedicated and accountable senior manager who has the delegated authority to call upon corporate resources as required to protect post-Transaction service levels. To ensure alignment and sufficiency of authority, the Team and the dedicated senior manager will report directly to a senior executive lead team which reports directly to the CEO, and encompass all the disciplines necessary to assure that our customers' service is protected: operators, marketing, customer service and resource allocation. The Team's tools will not be mere band-aids and its mandate will not be to play "Whack a Mole," beating down service brushfires as they arise. Instead, the Team will be tasked with thinking ahead with a systemic, network-wide focus on adequate resourcing, planning, and preparation for operational changes needed to address evolving (and growing) traffic patterns and other developments.

41. In addition, to the extent issues or questions do arise that cannot be resolved, we will implement an escalation process that ensures that every unresolved issue gets the prompt attention of the most appropriate CP managers empowered to address the concern. If – despite our best intentions – this mechanism does not lead to the resolution of every potential concern raised by a customer that its service was adversely affected by the Transaction, CPKC will participate in non-binding mediation with an independent dispute-resolution professional with the aim of facilitating a mutually-acceptable resolution of the issue in a fair, timely, and cost-effective manner.

B. Formal Service Penalty Conditions Would be Counterproductive

42. Some shipper groups have proposed a regime of monetary penalties relating to service issues. I think that conditions of this sort would be counterproductive.

43. First of all, for the large portion of CPKC traffic that would move under contract, the bargains we strike with shippers over service guarantees (and every other term) are and should remain the product of negotiation.

44. Secondly, a service guarantee penalty regime would create incentives that would distort our service offerings, potentially interfering with our ability to compete against larger railroads that would not be subject to such a regime. For example, like UPS, Fed Ex and countless other businesses, we offer different tiers of service assurance in exchange for different levels of economic value. One example of this is CP's intermodal service offerings, which allow customers to secure increasingly robust service commitments in exchange for higher transportation rates. This basic structure applies both to contract shipments as well as shipments moving under common carrier tariff: we provide differentiated services for different levels of consideration. Any new regulatory regime that inserted a system of financial penalties into the equation would trample these market-based interactions between CPKC and our customers. We would have to adjust our terms to reflect whatever service guarantee penalty structure was forced upon us, and so doing would make it harder to compete directly against Class 1s that would not have to consider such a regime in their competitive calculus.

45. Third, the specific proposals made by certain shipper organizations would inject unhelpful adversity and rigidity into a set of customer relationships for which an ongoing and transparent dialog would be far more constructive. Providing customers with a set of concrete regulatory entitlements could create disincentives to participate in constructive and collaborative solutions to any issues that might arise.

46. For example, ACC/TFI/NITL's proposal would establish hard-and-fast penalties tied to pre- and post-Transaction transit times that would kick in even if the shipper's overall needs (in terms of car supply, cycle times, and other factors) were being met better than before the Transaction, the shipper had directed greater volumes to CPKC's new, more-competitive offerings, or the perceived "transit time" differential could more effectively be met with service adjustments unrelated to the transit time metric. A condition privileging one aspect of service – like certain shippers' pre-merger transit times – would inhibit CPKC's ability to adapt in ways that provide the best possible service to the most customers. CPKC will work with shippers on an individual basis to design service plans that best meet their needs, not necessarily the ones that always comply with a given artificial metric. It would be unfortunate for a mandatory new penalty to get in the way of more constructive engagement by CPKC with its customers in competition with other Class 1 railroads and trucks.

47. Fourth, ACC/TFI/NITL also requests a condition that would require CPKC to provide shippers with at least 30 days' prior written notice of any planned service changes at shipper facilities. CPKC will of course strive to keep shippers informed in advance of potential service changes that affect their operations. But a rigid advance-notice mandate would be counterproductive, as myriad real-world conditions can require railroads to be nimble in adjusting their operations to optimize fluidity on the network.

IV. A FORCED SALE OF KCS'S SPRINGFIELD LINE WOULD REDUCE THE BENEFITS OF THE TRANSACTION AND HARM ON-LINE SHIPPERS

48. CN's request that the Board mandate a "divestiture" of KCS's Kansas City-Springfield/St. Louis line (which I will refer to as the "Springfield/St. Louis Line") is a dagger aimed into the vital organs of the CP/KCS Transaction. Other witnesses are addressing the lack of foundation supporting CN's request. I am writing to advise the Board of the many significant

respects in which CN's proposal would interfere with the public benefits of the CP/KCS Transaction.

A. KCS's Springfield/St. Louis Line Will be an Important and Integral Part of the CPKC Network

49. CN has clouded the record with a good deal of rhetoric suggesting that CPKC would downgrade KCS's Springfield/St. Louis Line or stop investing to maintain the line. That is a strawman that CN has attempted to create, and it is absolutely and transparently false. The Springfield/St. Louis Line will be an integral part of the CPKC system, not only providing access to on-line shippers, but also connecting those shippers (and the important East St. Louis gateway) with the broader CPKC network and also providing key connections between CPKC's system and shortlines, like the Illinois & Midland Railroad at Springfield.

50. At the important East St. Louis gateway, I foresee increased opportunities to build interchange traffic with CSX, taking advantage of the broader base of traffic that will be able to reach East St. Louis directly from the CPKC network. For example, CPKC is willing to explore the potential to reestablish intermodal service between Kansas City and terminals on the CSX network reached via St. Louis. KCS formerly operated daily service in that lane, but CSX discontinued it in 2017, as part of its reconfiguration of its intermodal network.

51. Applicants' traffic forecasts provide one reflection of the importance of this Line. Contrary to CN's assertions, the Transaction will grow (not shrink) volumes on these lines. Applicants anticipate Transaction-related growth of approximately 4 percent on the line to St. Louis. These gains, while modest, arise from the synergies achieved by the CP/KCS Transaction, more effectively connecting the CP network with the KCS network via new single-line routes. To give just a handful of examples, this line will be instrumental in supporting more competitive routes between CP-served customers and the St. Louis gateway, between CP-served

grain customers and KCS-served receivers in East St. Louis, and between KCS-served shippers of fertilizer and CP-served receivers in the grain-growing regions of the Upper Midwest and Canada.

52. Earlier I mentioned that customers have begun to express an interest in further investments because of this Transaction. Some of these customers are located on the Springfield/St. Louis Line. CPKC is eager to support these growth opportunities, which are one of the major categories of Transaction benefits. We certainly do not want to undermine them in the way that CN's manufactured claim would suggest.

53. In addition, Applicants anticipate continued growth in rail traffic from existing customers on this line independent of the Transaction. Specifically, Applicants anticipate organic growth of approximately 22 percent on the line from Kansas City through to St. Louis, and approximately 24 percent on the line between Roodhouse and Jacksonville, MO.

54. With all of these traffic opportunities, there is no doubt whatsoever that CPKC will continue to invest in this line to support current and future traffic volumes.

B. A Forced Sale to CN Would Interfere with the Transaction's Public Interest Benefits

55. The forced sale of the Springfield/St. Louis Line that CN proposes would interfere with the benefits of the CP/KCS Transaction in multiple ways.

56. First, and most obviously, it would sever the new single-line routes that would otherwise be created between on-line points (and the St. Louis gateway) and the broader CP network north of Kansas City. Numerous shippers would lose the benefits of CPKC's new, more competitive transportation offerings. KCS's largest customer, Bartlett, would lose the benefits of its existing KCS single-line routes as well as the opportunities to expand its business through the connectivity of the CPKC network. Another example is Richardson, which is looking forward to

connecting its origination facilities with its plant in East St. Louis reached via new CPKC single-line service via the Springfield/St. Louis Line. These services will go away were the line divested to CN. Indeed, such a divestiture would actually reduce Richardson's transportation options for shipments from Canadian origins to East St. Louis, since CN already reaches East St. Louis via its own network.

57. Another example of the potential future benefits of keeping the Springfield/St. Louis Line part of the CP network is the possibility – which CP has recently been exploring – of {{ }} Without ownership of the Springfield/St. Louis Line, CPKC could not even consider exploring opportunities like this.

58. CN's proposal that it grant CPKC haulage rights over the lines it would acquire would not overcome the harm done to shippers who will lose new CPKC single-line services. CPKC haulage rights would not be a substitute for CPKC control of the Springfield/St. Louis Line. CN would control all operational design, local and through-train service levels, and investments on the line, depriving CPKC of the ability to design customized service offerings for these shippers. For example, CPKC would have no ability to support the investments needed to support 8,500-foot grain trains that shippers on this Line and elsewhere are eager to invest in.

59. Further, haulage rights would inject a new layer of operational complexity at or near Kansas City, requiring that CPKC traffic to/from points on the Line be handed off to and received from CN somewhere in the Kansas City terminal, with unknown amounts of extra cost and inefficiency, and the inevitability of unnecessary interchange dwell time.

60. Second, CN's proposal to force an acquisition of one-half of KCS's International Freight Gateway facility south of Kansas City would undermine and jeopardize new CPKC intermodal and other services. In a new CPKC network, that facility will support expanded CPKC intermodal services between Mexico and the Upper Midwest and Canada. Intermodal traffic between Canada and Kansas City will use the facility (as CP lacks a Kanas City-area intermodal facility today), as will traffic to/from Mexico handled in CPKC's much-expanded north-south intermodal services. For example, traffic from Lazaro Cardenas to the central Midwest – using dedicated train services that KCS could not support on a stand-alone basis – will be offloaded at IFG.

61. In addition, on the integrated CPKC network, IFG will provide a centrally located facility for a host of new manifest traffic opportunities. CPKC anticipates using available land surrounding IFG to support warehousing facilities for shippers of produce from Mexican origins, cross-dock operations to support the transfer of ammonia during seasonal fertilizer shipments, and the foundation for aggressive expansion of CPKC traffic opportunities in response to other market developments. Forcing CN into IFG as a half-owner would extinguish CPKC's ability to rely on this facility to support new competitive initiatives.

C. Severing KCS's Springfield/St. Louis Line from the Rest of the KCS Network Will Reduce Shippers' Existing Transportation Options

62. The divestiture to CN would not only prevent the realization of CP/KCS Transaction benefits – it will affirmatively hurt existing KCS shippers that use KCS single-line

services to reach markets beyond Kansas City. Michael Naatz explains in more detail how the transportation services KCS currently provides to shippers served by this Line would be adversely impacted by an order requiring CPKC to sell the line to CN or another purchaser.

V. CP'S TIH/PIH TARIFF PROVISIONS HAVE NOTHING TO DO WITH THIS TRANSACTION

63. A small group of commenters express concern about certain of CP's existing tariff terms applicable to a subset of hazardous commodities known as toxic-by-inhalation hazard and poison-by-inhalation hazard materials (or "TIH/PIH") shipments. Some of these commenters limit their concerns to the possibility that CPKC would apply certain of CP's tariff terms (relating to insurance requirements and indemnification) to shipments on the former-KCS network. Others appear to want to use this proceeding as a mechanism to roll back CP's existing terms even on the former-CP network. The Board should not impose any conditions in this area.

64. First, *as applied to the CP system*, the CP tariff terms at issue have nothing to do with the Transaction. CP first issued/published those terms in December 2010, and they became effective January 1, 2011, following CP's very bad experience with a derailment in 2002 near Minot, ND, which resulted in a release of anhydrous ammonia, a TIH commodity.[2] As the FRA's accident report summarizes: "Five tank cars carrying anhydrous ammonia catastrophically ruptured, and a vapor plume covered the derailment site and surrounding area. One resident was fatally injured, 11 people sustained serious injuries, and 322 people, including the 2 train crewmembers, sustained minor injuries." Had this event occurred in a more urban area, or under somewhat different circumstances, the release could have killed many more and potentially bankrupted CP.

---

[2] The FRA accident report for this event is at https://www.ntsb.gov/investigations/AccidentReports/Reports/RAR0401.pdf

65. The Minot incident stimulated CP's attention to the extraordinary risks posed by shipments of TIH and PIH commodities and the importance of shippers of those commodities being incentivized by tariff terms to share in the responsibility to minimize those risks. CP did not take our tariff revisions lightly; we first explored other ways to mitigate against the potentially ruinous liability exposure that we had learned firsthand could arise from the transportation of TIH even when CP was not negligent.

66. CP's tariff revisions were designed to address these risks by requiring that TIH/PIH shippers maintain a Commercial General Liability Insurance Policy, with the current terms establishing an inclusive limit of not less than $100 million, and indemnify and defend CP against liabilities caused by or arising from certain enumerated situations, except to the extent that liabilities arise from the negligence or willful misconduct of CP. These two requirements, set forth in Items 53 and 54 of CP's Hazardous Materials Tariff 8, respectively, reflect CP's experience with TIH/PIH materials and the risks they present.

67. CP's TIH/PIH tariff Items 53 and 54 were not the product of "competition" with any other railroad, and certainly not KCS. In fact, these provisions were designed to bring CP's exposure to potential uninsured liability associated with TIH/PIH releases under control and more into line with the risk profile established by the railroad tariffs of larger U.S. Class 1s. The tariffs of several other U.S. Class 1s establish $100 million insurance requirements and similar liability allocation principles.

68. CP has on several occasions been called upon to defend the reasonableness of its TIH/PIH tariffs, and nothing about the Transaction will stand in the way of shippers pursuing such future challenges if they believe that CP's TIH/PIH tariffs are unreasonable. A number of Canadian shippers and one shipper association challenged Item 54 (the indemnity provision) at

the Canadian Transportation Agency, but CP successfully defended the reasonableness of that provision. In 2015 the Federal Court of Appeals of Canada unanimously held that "[s]imply put, Item 54 does not contain prohibited limitations of liability."[3]

69. In 2015, a U.S. shipper (Agrium) challenged the same provisions under the Board's regulatory regime, and in 2016 that matter was settled confidentially in a way that was mutually agreeable to CP and the shipper in question. *See Agrium Inc. and Agrium U.S. Inc. v. Canadian Pacific Ry.*, Docket No. NOR 42145, Joint Petition to Dismiss the Complaint without Prejudice and Discontinue this Proceeding (filed May 2, 2016).

70. In CP's view its insurance and indemnity provisions are entirely reasonable. CP's requirement that TIH shippers carry $100 million insurance policies is not an obstacle to any shipper using CP because shippers of these incredibly hazardous commodities maintain such insurance to support their own businesses. Nor is it unreasonable to require that shippers indemnify CP for the potential liabilities arising from their shipments – except where liability arises from negligence or willful misconduct of CP itself. If a catastrophic release ever occurs on CP's network – and CP sincerely hopes it never again will – it would only do so as a result of a shipper choosing to direct the shipment onto CP's network. There should be no reasonable objection to shippers internalizing the full measure of the potential costs associated with those decisions. But fundamentally these issues have no connection to this Transaction and should not be addressed here. Shippers remain free to challenge the reasonableness of these provisions or come to us to discuss whether there may be flexibility in light of their particular circumstances. The Board need not and should not override that process. And it would certainly

[3] *Canadian Pacific Ry. v. Canexus Chemicals Canada, LP, et al.*, 2015 FCA 283 (Federal Court of Appeals of Canada 2015) at 42 (¶ 128).

be inappropriate for the Board to order CP to roll back its tariff terms for shipments on the CP network.

71. *As applied to the KCS system*, the position of these commenters is equally without merit. Other witnesses explain the origin of KCS's tariff terms applicable to TIH/PIH shipments and why it would be inappropriate for the Board to freeze those terms in place just because KCS was participating in the CP/KCS combination.

72. CPKC should have complete freedom to decide what tariff terms best meet the needs of the CPKC system, including whether CP's Items 53 and 54 should apply to shipments on the former-KCS parts of our network. However, CP has considered the concerns expressed by the commenting TIH shippers and receivers and has been prepared to reach agreement to address legitimate concerns about the potential need for shippers and receivers to adjust in the event CP were to apply its terms to shipments on the KCS portion of CPKC.

73. As reflected in the settlement reached between CP and Bayer, filed with the Board on May 25, 2022, CP was willing to commit to give Bayer and the shippers that send TIH commodities to Bayer facilities three years' notice before enforcing the Item 54 indemnity requirements (to the extent those requirements exceed what is required under previously-applicable KCS tariffs), provided that Bayer and its shippers commit to using tank cars that meet the most advanced safety standards. CP believes that this compromise appropriately balances the interests of CPKC in having flexibility to adjust its tariff terms and protect the safety of the network and the communities we serve with the interests of TIH shippers in having a reasonable period of time to adjust their shipping patterns, should they wish to do so in the event KCS's tariff terms are revised to conform to CP's current terms.

74. CP is prepared to negotiate similar arrangements with any of KCS's existing TIH shippers, and especially in light of this willingness Board intervention here would be inappropriate and unwarranted.

VI. THE TRANSACTION WILL NOT HAVE ANY ADVERSE IMPACT ON U.S. WHEAT GROWERS

75. Certain organizations of wheat growers articulate concerns about the competition that U.S. wheat growers may face from Canadian wheat growers. Those concerns are misguided and in any event not at all connected to the Transaction.

76. First, a central thrust of the Transaction will be to give grain growers in parts of the Upper Midwest and Canada served by CP improved transportation options for shipments to destinations reached via KCS's network in the South Central United States and Mexico. U.S. wheat growers are no exception. Wheat grown in the United States will benefit from new single-line transportation options linking their origin elevators with Mexican milling markets via efficient shuttle trains and manifest service. This feature of the Transaction will *enhance competition to the benefit of U.S. and Canadian wheat growers alike*.

77. The commenting wheat associations appear to acknowledge these competitive benefits. For example, the U.S. Wheat Association suggests that Canadian shippers are "rail-advantaged" today. (USWA Comments at 4). They ignore the fact that the Transaction will help "rail-advantage" *more U.S. shippers* of wheat in regions served by CP's U.S. network.

78. Likewise, the National Association of Wheat Growers suggests (at 2) that the Transaction will give Canadian shippers a "direct line into Mexico" that they do not possess today. This organization ignores that the Transaction will do exactly the same for U.S. wheat growers, to the benefit of these shippers and the broader competitive process.

79. If these wheat organizations are concerned that the new transportation options created by the CP/KCS Transaction might diminish certain advantages that some U.S. growers (perhaps those that already have direct routes to the Gulf) enjoy in the pre-Transaction marketplace, then they are complaining about competition itself. Such complaints are not valid public interest concerns.

80. Second, to the extent these organizations are complaining about advantages that Canadian growers might have relative to U.S. growers as a result of the CP/KCS Transaction, they are just wrong.

81. One source of stated concern appears to be that certain Canadian regulations relating to grain shipments by rail in Western Canada favor Canadian growers. But those regulations obviously have nothing to do with the CP/KCS Transaction. Equally important, those regulations do not apply at all to shipments from Canadian origins to U.S. or Mexican destinations. Specifically, the referenced regulations – namely the "Maximum Revenue Entitlement" under Canada's Transportation Act – apply only to rail movements of grain from origins *in Western Canada* to Canadian ports for export (i.e., Vancouver, Prince Rupert, Montréal, and Thunder Bay), and in the case of Montreal the regulations only apply to the portion of the movement within Western Canada (west of Thunder Bay). As a result, any fear that the Canadian regulations would give Canadian wheat growers an advantage relative to U.S. growers for movements via CPKC to the United States or Mexico would be misplaced. Because these regulations do not apply to wheat shipped from Canada to U.S. or Mexican destinations, they could not possibly give Canadian growers a competitive advantage relative to U.S. growers.

82. Another concern appears to be that CPKC might somehow "favor" wheat grown in Canada over wheat grown in the United States. This is not the case. Like CP today, CPKC

will pursue transportation opportunities for wheat grown anywhere in its service territory and do so in response to market forces. The only change from the Transaction will be to make CPKC's transportation options more attractive, and more competitive, for U.S. and Canadian growers alike.

83. CP has a long history of serving wheat growers in both the United States and Canada. In recent years CP has worked hard to compete to move U.S.-grown wheat into additional destination markets across North America.

84. For shipments destined to destinations in the United States and Mexico, CP does not favor Canadian origins. To the contrary, CP sets prices to reflect evolving market conditions, and so will CPKC. CP's published tariffs reflect *higher pricing for* origins in Canada that are farther from the destination than U.S origins. Thus, for example, as shown in Table 1 below, CP has rates for wheat from U.S. and Canadian origins to Mexico. CP's rate from Bowbells, ND, is materially higher than that from Weyburn, Saskatchewan, 42 miles north of Bowbells across the Canadian border on CP's line via the Portal, ND gateway. This relationship holds for rates quoted on a through basis as well as Rule 11 over the Kansas City gateway.

85. Likewise, as also shown in Table 1 below, CP's rate for wheat moving from Hazel, MN, is materially lower than that from Makwa, Manitoba, 163 miles north of Hazel across the Canadian border on CP's line via the Emerson, MB/Noyes, MN gateway. This relationship similarly holds for rates quoted on a through basis as well as Rule 11 over the Kansas City gateway.

TABLE 1[4]
CP WHEAT RATES TO MEXICAN DESTINATIONS FROM U.S. AND CANADIAN ORIGINS AS OF AUGUST 1, 2022

	Rule 11 over Kansas City		Tlalnepantla, EM	
	25s/Split Train	**All-in w/fuel**	**110s**	**All-in w/fuel**
Hazel MN	$4,751	$5,455	$7,489	$9,622
Makwa MB	$5,162	$5,987	$7,723	$9,976
Difference in CP Revenue for U.S. Origins	($411)	($532)	($234)	($354)
Bowbells ND	$5,970	$6,844	$7,716	$10,018
Weyburn SK	$5,999	$6,942	$8,027	$10,399
Difference in CP Revenue for U.S. Origins	($29)	($98)	($311)	($381)

86. Nothing about the Transaction will change CP's (or CPKC's) incentives to move wheat from all origins to the array of destinations that the CPKC network will serve efficiently. It would be particularly irrational for CPKC to disfavor U.S.-sourced wheat for movements to destinations in Mexico. Wheat milling facilities in Mexico grind a variety of wheat types, including durum and hard red spring wheat from the north, hard red winter wheat from South Dakota and Kansas, as well as other wheat classes from other U.S. regions. The notion that CPKC could displace all these types of wheat even if it wanted to (which it does not) defies logic. In fact, Applicants see tremendous opportunity to increase wheat shipments from CP's origins in the United States, particularly in North Dakota.

87. Markets are dynamic and having access to additional destination diversity is important for U.S. wheat shippers, especially with global commodities like wheat. For example,

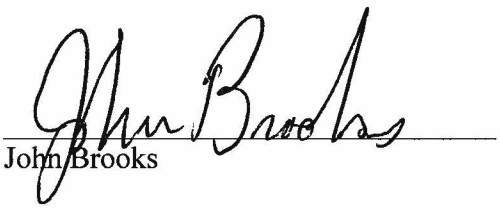
[4] *See* Brooks' Workpapers: CP Tariff 4444, Item 14105; CP Tariff 4444, Item 16007; Tariff 4444, Item 17500; Tariff 4444, Item 17505, Tariff 4445, Item 14117.

this year there is uncertainty about Ukraine's ability to export its winter wheat crop, which has driven up the price of hard red winter wheat in the United States. This in turn has made hard red spring wheat relatively cheaper and thus more economically attractive to Mexican receivers than before. CPKC's more capable single-line rail route connecting U.S. origins directly to Mexican destinations will only improve the market reach of U.S. wheat shippers in circumstances like this. Canadian-sourced wheat will of course continue to play a role in the marketplace just like it does today. But U.S. wheat shippers will unambiguously benefit as compared to the pre-Transaction world.

VII. CPKC WILL CONTINUE TO HAVE STRONG INCENTIVES TO SUPPORT TRAFFIC GROWTH AND SERVICE LEVELS ON THE MERIDIAN SPEEDWAY

88. Norfolk Southern expresses concern about the impact of the Transaction on traffic and service levels on the Meridian Speedway route between Shreveport, LA and Meridian, MS that KCS and NS jointly own. Other witnesses address NS's assertions in more detail. I would like to make very clear two things: First, NS is completely wrong to the extent it is concerned about CPKC's desires and incentives to continue to work closely with NS to grow traffic (intermodal and otherwise) via the excellent Meridian Speedway route. None of the NS haulage traffic or KCS-NS interline traffic on that route will be affected at all by the CP/KCS Transaction because CP's network does not efficiently reach the points served by NS's network via this route.

89. Second, consistent with CPKC's incentives to grow traffic via the Meridian Speedway, CPKC will have strong incentives to ensure that its operations do not degrade service on this route, much less to the extent that would drive intermodal traffic onto the highways. Witness Elphick explains why NS (or its counsel) have misunderstood Applicants' operating



plan, but at a certain level those details are beside the point. We will not operate trains on this line in a way that drives traffic away, period.

90. Finally, let me be clear that CPKC's incentives to grow traffic that moves via the Meridian Speedway will not be limited to traffic interchanged with Norfolk Southern. To the extent permitted under the Meridian Speedway agreements with NS, CPKC will be eager to explore traffic opportunities with all of the railroads connecting to the Speedway at Meridian and elsewhere.

VERIFICATION

I, John Brooks, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 11th day of July, 2022.

John Brooks

APPENDIX A
SPECIFIC GATEWAY PRESERVATION CONDITION TERMS

1. Principles

- Conditions expressed here are intended to implement CP's previously stated commitments to keep gateways open on commercially reasonable terms.
- Conditions would be contingent on approval of control and CP exercise of control.
- Conditions would not override any requirement or limitation of Mexican or Canadian regulation.

2. Scope

- CP's commitment not to create new bottlenecks and to keep gateways open on commercially reasonable terms applies to "Affected Gateways/Affected Traffic." In other words, traffic that CP or KCS interchanged with another carrier for which CPKC created a longer haul than was available on the CP or KCS system pre-Transaction.
- The commitment applies only to the specific interchanges over which the traffic (or comparable traffic flows) previously moved, not to all possible gateways.
- This scope delimits all of the obligations set forth in (3)-(4) below and for convenience the traffic to which it applies is referred to as "In-Scope Traffic."

3. No New Bottlenecks

- At the request of a rail customer CPKC shall quote Rule 11 rates to/from affected gateways for In-Scope Traffic.
- If a shipper files a complaint at the STB challenging any such rate as unreasonable, CPKC will waive its right to assert that the challenge cannot be maintained by virtue of the effect of the CP/KCS Transaction to give CPKC a single-line route between the origin and destination of the traffic.

4. Obligation to Keep Gateways Open on Commercially Reasonable Terms/Arbitration of Same.

- CPKC will keep affected gateways open on commercially reasonable terms for In-Scope Traffic.
- To implement this commitment, with respect to In-Scope Traffic to/from an affected gateway, at the qualifying request of a rail customer for CPKC will (a) quote a Rule 11 rate to for In-Scope Traffic, or (b) participate with a connecting

carrier to offer a through rate that combines CP's and the connecting carrier's rate divisions. The economic terms CPKC offers to the customer or, as applicable, the connecting carrier, will be commercially reasonable. A qualifying request shall include customary "rate request" details, including ultimate origin and ultimate destination, commodity, equipment requirements, volumes, service requirements, etc.

- With respect to rates or factors offered under this commitment, CPKC will not take the position that economic terms offered by CPKC are commercially reasonable solely because they would be found reasonable under the STB's rate reasonableness standards.

- To address certainty in the shorter term, CPKC would honor all rates and rate factors in existing agreements through the date of termination of those agreements. CPKC will not be obligated to renew such rates.

BEFORE THE
SURFACE TRANSPORTATION BOARD

FINANCE DOCKET NO. 36500

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL*. – CONTROL – KANSAS CITY SOUTHERN, *ET AL*.

REPLY VERIFIED STATEMENT OF NADEEM VELANI AND CHRIS DE BRUYN

TABLE OF CONTENTS

I. CPKC'S FINANCIAL STRENGTH IS NOT DEPENDENT ON CP/KCS TRANSACTION SYNERGIES 4

A. There Is Strong Financial Market Validation that Applicants' Anticipated Synergies Will Be Realized 4

B. CP's Transaction-Related Debt Was Obtained on Very Favorable Terms 6

C. CP Has Already Made Progress Paying Down Debt While CP and KCS Have Continued Investing in Their Separate Networks 8

D. CP's De-Leveraging Strategy Is Not Dependent on Transaction Synergies 11

1. CPKC Would Generate Significant Free Cash Flow Even Absent Transaction Synergies 13

2. If Synergies Underperformed Expectations, CPKC Could Continue to Suspend Discretionary Shareholder Returns 15

3. Regardless of the Magnitude of Transaction-Related Traffic Growth, CPKC Will Promptly Return to Its Target Net Leverage Ratios 15

II. THE CP/KCS TRANSACTION HAS FUNDAMENTALLY DIFFERENT FINANCIAL IMPLICATIONS FROM CN'S PROPOSED USE OF A VOTING TRUST TO ACQUIRE KCS 18

A. CP Issued a Lower Quantum of Absolute Debt with a Higher Stock Mix 18

B. Unlike CN, CP Has Not Locked in on Achieving any Particular ROIC Target for Its Investments 19

C. CN's Proposed Use of a Trust Bore an Inherent Risk of Being Unwound.....20

EXHIBIT 8: CN/KCS, FINANCE DOCKET NO. 36514, CP'S REPLY TO CN AND KCS JOINT MOTION FOR APPROVAL OF VOTING TRUST (CP-11), VERIFIED STATEMENT OF NADEEM VELANI (FILED JUNE 28, 2021) (EXCERPTS)

1. I am Nadeem Velani, Chief Financial Officer of Canadian Pacific Railway Limited ("CP"). I joined Canadian Pacific in March 2013 and served as Vice President – Investor Relations before becoming Chief Financial Officer in September 2016. Prior to CP, I spent 15 years at Canadian National ("CN") where I worked in a variety of positions in Strategic and Financial Planning, Investor Relations, Sales and Marketing and the Office of the President and CEO. Through the course of my 20-plus year career in the railroad industry I have developed deep familiarity with and expertise regarding the financial workings and incentives of Class I railroads. I hold a Bachelor of Economics degree from Western University and an MBA in Finance/International Business from McGill. On June 28, 2021, I submitted a Verified Statement in Finance Docket No. 36514 addressing several financial issues posed by Canadian National's proposed use of a voting trust to acquire Kansas City Southern.

2. My name is Chris De Bruyn. I am the Managing Director – Investor Relations and Treasury for Canadian Pacific ("CP"). I have been associated with CP's treasury operations since 2014. I have over ten years of experience in corporate finance. I hold a degree in Business Administration with a concentration in Finance from the State University of New York at Fredonia as well as a Master of Business Administration (MBA) with a specialization in Finance from the University of Calgary Haskayne School of Business. On October 29, 2021, I submitted a Verified Statement in this proceeding in support of the Application.

3. We are submitting this Reply Verified Statement to respond to testimony and argument by other Class 1 railroads, principally Canadian National and Union Pacific, that call into question whether the CP/KCS Transaction will achieve the revenue gains and efficiencies that Applicants anticipate, and in turn suggesting that the future CPKC would face financial pressure to engage in "foreclosure" and other strategies that we view as irrational. These

assertions are false. Other Applicant witnesses are addressing the reasonableness of the revenue and cost forecasts supporting the Application. As we explain in this statement, however, *whether or not CPKC attracts any new traffic,* CPKC will be under no financial strain. Both CP and KCS are financially healthy, and CP has already begun repaying debt with cash flow from ongoing operations. At the same time, both carriers' capital investments in their networks have continued – and will continue – unabated. CPKC will have no difficulty repaying Transaction-related debt while simultaneously increasing its network investment, even if none of the growth we forecast materializes (an outcome we regard as preposterous).

4. We also briefly address specific assertions made by CN witness Mark E. Zmijewski that the analysis that I (Mr. Velani) offered in June 2021 in Finance Docket No. 36514 of CN's proposed use of a Voting Trust has a bearing on the CP/KCS Transaction. As we demonstrate, it does not for several reasons, including that (a) CP acquired KCS shares for significantly less cash – and thus less new debt – than CN's proposal would have required; (b) unlike CN, CP has not put forward public "return-on-invested-capital" targets associated with the transaction, and thus would not be driven to irrational short-term actions designed to boost ROIC metrics; and (c), unlike CP/KCS, concerns about CN's proposed financial terms arose in a context where there appeared to be a material chance that CN would be forced to unwind its proposed trust and divest KCS.

I. CPKC'S FINANCIAL STRENGTH IS NOT DEPENDENT ON CP/KCS TRANSACTION SYNERGIES

A. There Is Strong Financial Market Validation that Applicants' Anticipated Synergies Will Be Realized

5. We begin by noting that the "skepticism" of CPKC's future Class I competitors about the CP/KCS Transaction is not shared by the investor community. The opportunities for CPKC to provide shippers with improved transportation options and thereby attract new traffic to

the North American rail network – and in the process compete better against rival railroads – is validated by the reaction of the financial community to the Transaction.

6. The major credit rating agencies have sustained CP's strong investment grade ratings even with the addition of Transaction debt incurred last year when CP acquired KCS shares and placed them into Trust.

7. When S&P Global Ratings evaluated CP's proposed acquisition of KCS in 2021, it "expect[ed] steady deleveraging over the next several years from earnings growth and free cash flow generation. In addition, the completion of the transaction should *strengthen CP's business risk profile notably from the combined larger transcontinental network, increased customer breadth, and enhanced service capability that add efficiencies.*"[1] In November when CP issued the debt to fund the cash consideration portion of the transaction, S&P noted that the "increased debt issued for the proposed KCS acquisition will lead to pro forma credit measures that are weak for the rating, but [they] expect steady improvement beyond this year."[2]

8. Moody's reached similar conclusions about the likely success of CPKC. It concluded that CP's credit profile "will benefit from a larger, more diversified business with greater exposure to higher margin merchandise business, increased customer diversity and breadth, the *potential for synergies from network and equipment efficiencies as well as greater revenue expansion*."[3] Although Moody's downgraded CP one notch to Baa2 from Baa1 in light of CP's increased leverage and uncertainties around regulatory approval, Moody's maintained a

stable outlook on the Baa2 rating. This revised rating is still well within the investment grade rating band and is a stronger credit rating than CP had as recently as 2014. In November 2021, Moody's explained: "The stable outlook reflects Moody's expectation that CP's existing rail network will continue to operate well … [and] incorporates the expectation that the company will receive shareholder approval for the KCS acquisition in mid-2021, [which occurred] and will make steady progress in reducing its initial elevated leverage as a result of the acquisition toward 3x by 2023."[4]

9. As I (Chris De Bruyn) explained in my Verified Statement supporting the Application,[5] and as CP has consistently stated publicly to investors, CP is dedicated to maintaining investment grade ratings.[6] That expectation is based on Applicants' own analysis of the growth prospects of a combined CPKC network. The views of credit rating agencies and Wall Street analysts validate our internal views that we will meet this goal.

B. CP's Transaction-Related Debt Was Obtained on Very Favorable Terms

10. Events since the filing of the Application further validate CP's expectation that its financial future will be sound. CP completed its acquisition of KCS shares on December 14,

---

4 *See* Moody's Investor's Service, "*Moody's Assigns Baa2 Rating to Canadian Pacific Railway's New Notes*" (Nov. 17, 2021) (Exhibit 4 hereto).

5 De Bruyn V.S. at ¶ 14 ("[W]e expect to retain a strong investment grade credit rating once we acquire KCS, despite the post-acquisition capital structure reflecting the revised transaction terms.").

6 *See* CP Rail's Events, "*Built to Drive Growth Investor Presentation*" (Mar. 2022) ("Committed to a strong, investment grade credit rating and target leverage") at 16 (Exhibit 5 hereto); Future for Freight's News, "*Canadian Pacific and Kansas City Southern Execute Agreement to Combine, Creating First Single-Line Rail Network Linking U.S.-Mexico-Canada*" (Sep. 15, 2021) at 4 (Exhibit 6 hereto) ("The combined company will remain committed to maintaining strong investment grade credit ratings…".); CP Rail's Events, "*Canadian Pacific Railway and Kansas City Southern to Combine*" (Mar. 21, 2021) (Exhibit 7 hereto) at 13 ("Continued commitment to maintain a strong balance sheet and investment grade rating.").

2021 and placed those shares into the Voting Trust established with the Board's approval. To finance the cash portion of the acquisition, CP incurred $8.5 billion (in U.S. dollars[7]) in new debt to finance the cash portion of the acquisition. That Transaction Debt was initially available through a committed loan provided by CP's banks.

11. In November, CP refinanced most of the Transaction Debt by issuing $8.5 billion in new bonds. The market response to this bond offering was extraordinary, and led to fixed interest rate terms that are quite favorable to CP. The extent of demand for bonds being offered is a key determining factor in setting the coupon rate (or interest rate) of the bonds, with greater demand driving lower interest rates. When there is interest in the market to purchase more in bonds than is being offered, that is known as oversubscription. The CP bond offering was extraordinarily successful, with significant oversubscription yielding highly favorable terms and thereby achieving a low cost of funding. The success of this offering validates the view that the CP/KCS transaction will be successful in attracting and supporting North American economic growth, and the belief of investors that CPKC will have no difficulty servicing the debt and returning to CP's target leverage range. It also means, as a practical matter, that CPKC will benefit from reduced borrowing costs and improved cash flow to support investments in its rail network while simultaneously repaying the Transaction debt.

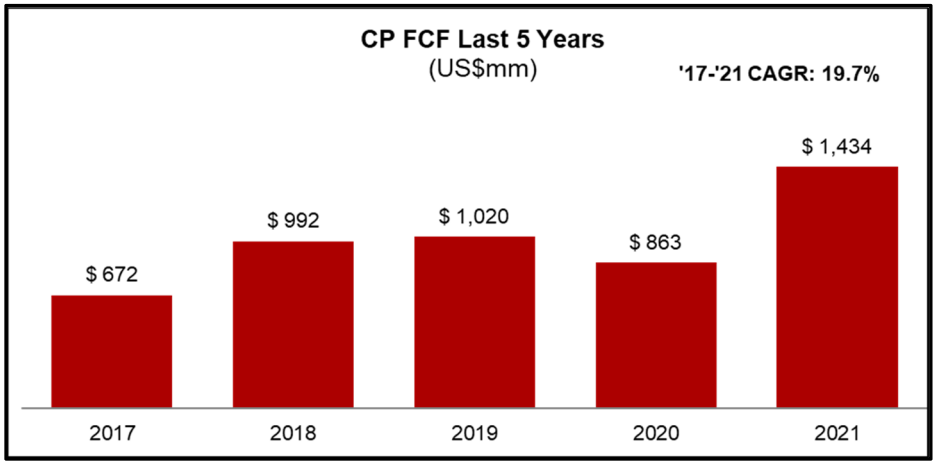
12. The exceptionally strong bond execution in both US and Canada reflects broad-based bond investor support for the transaction:

- There was extraordinary investor participation in CP's marketing of its bond offering, with more than 140 investors attending question and answer calls and more than 200 viewing the pre-recorded presentation on the CP/KCS bond issuance.

[7] All dollar amounts referenced in this statement are U.S. dollars unless otherwise specified.

- The CP/KCS bond offering attracted record levels of demand, making it the third largest M&A Industrials transaction of 2021. In both the U.S. Dollar market and the Canadian Dollar market, the offering was significantly oversubscribed, meaning demand for the bonds was substantially higher than the amount of bonds issued into the markets. Specifically, in the U.S. Dollar bond market, investors were issued $6.7 billion of CP bonds, even though offers to purchase totaled $32 billion in demand from over 1,000 unique orders across five different durations (3yr, 5yr, 10yr, 20yr, and 30yr) to maturity. In the Canadian Dollar market (where investors were issued $2.2 billion CAD in bonds), there was almost $9 billion CAD in demand from more than 90 investors across two bond tranches.

13. The result of this strong demand for CP bonds was CP's lowest-ever U.S. Dollar coupon (5yr, 20yr, 30yr) and lowest ever spread (5yr, 10yr, 20yr) across multiple tranches. Investor oversubscription levels resulted in optimal pricing outcomes. Bonds traded 5-10 bps tighter following pricing, indicative of strong follow-on investor support for the offering. The newly-issued debt lowered the weighted average interest rate ("coupon") of CP's bond portfolio. For U.S. Dollar denominated bonds, CP's weighted average coupon decreased 128 bps from 4.70% to 3.42%. CP's weighted average coupon of CAD denominated bonds decreased 153 bps from 4.45% to 2.92%. A lower coupon means that CP pays less in annual interest per dollar of debt.



C. CP Has Already Made Progress Paying Down Debt While CP and KCS Have Continued Investing in Their Separate Networks

14. CP (and KCS) are already making strong progress in paying down debt, and we expect that to continue regardless of the extent to which Transaction synergies are realized. Even prior to CP and KCS first announcing their plans to combine in March 2021, CP paused share repurchases in order to support rapid repayment of its Transaction-related debt and thereby achieve its target leverage ratio of 2.5x more rapidly. This pause, coupled with the healthy financial performance of CP and KCS has enabled both railroads to pay down debt while the CP and KCS rail networks have operated independently. CP will continue to use its free cash flow to repay debt, along with any KCS free cash flow that KCS pays to CP in the form of dividends,

to bring its leverage ratio into its target range. In the first quarter of 2022, CP repaid more than $400 million in maturing debt and equipment financing.

15. CP continues to perform well financially. Figure 1 below shows the history of CP's healthy levels of stand-alone free cash flow (net of capital expenditures) since 2017. This cash flow will be available to repay CPKC's debt obligations. Despite a challenging first quarter of 2022, which included harsh winter operating conditions and a brief labor stoppage, CP generated $334 million USD in free cash flow, an increase of 43% year over year.

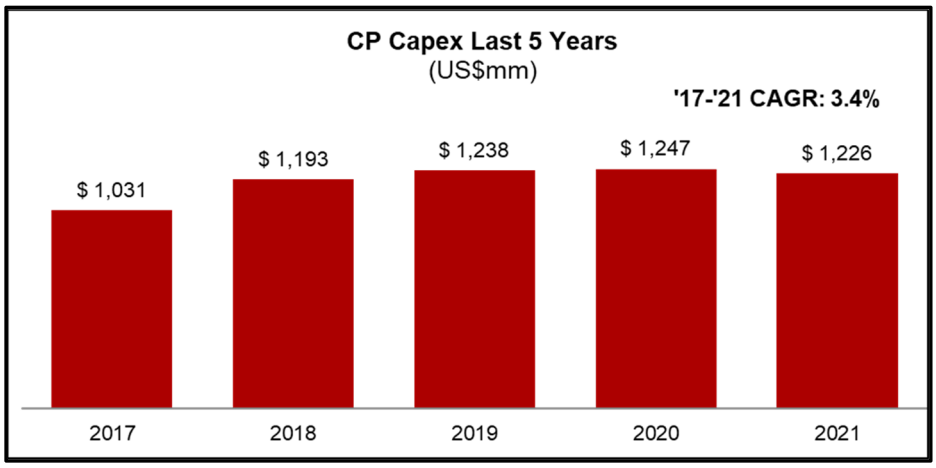


FIGURE 1[8]
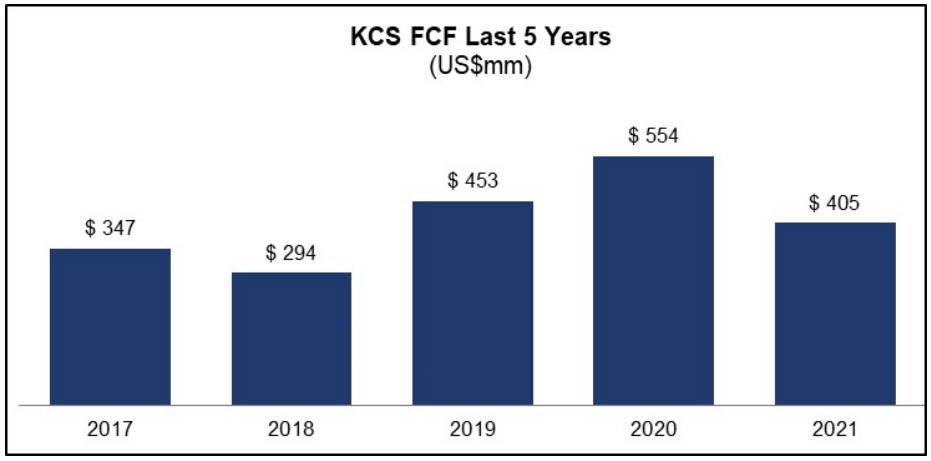
CP HISTORICAL FREE CASH FLOW

16. Meanwhile, CP (again, on a stand-alone basis) has achieved substantial free cash flow without short-changing its investment in the rail network to support asset renewal and capacity expansion, as shown in Figure 2 below.

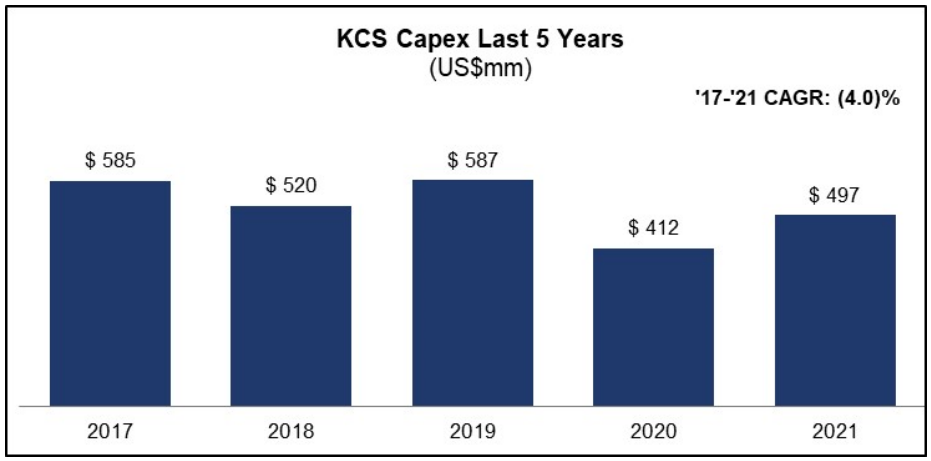


[8] CP 2021 Annual Report at 90, available at https://s21.q4cdn.com/736796105/files/doc_financials/2021/ar/CP_AnnualReport_2021.pdf. Note: Figures converted from CAD to USD using average exchange rate for year-ended as of 31-Dec for each year shown.

FIGURE 2[9]
CP HISTORICAL CAPEX

17. Likewise, KCS has been performing well. As shown in Figure 3 below, KCS generated free cash flow of $405 million in 2021. This cash flow will also be available to CPKC to repay Transaction-related debt.

FIGURE 3[10]
KCS HISTORICAL FCF



[9] *Id.* at 68. Figures converted from CAD to USD using average exchange rate for year-ended as of 31-Dec for each year shown. Free cash defined as cash provided by operating activities, less cash used in investing activities, adjusted for changes in cash and cash equivalents balances resulting from foreign exchange fluctuations, cash settlement of hedges settled upon issuance of debt and the operating cash flow impacts of acquisition-related costs associated with the KCS.

[10] KCS 2021 Form 10-K at 39, available at https://investors.kcsouthern.com/~/media/Files/K/KC-Southern-IR-V2/annual-reports/kcs-12-31-2021-10k.pdf. Free cash flow defined as cash provided by operating activities less cash used in investing activities.

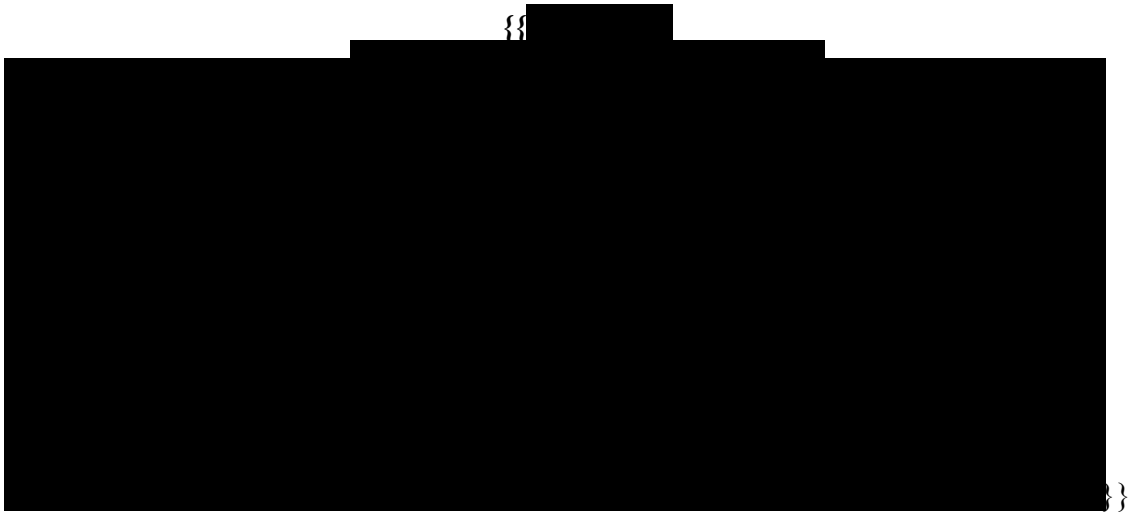
18. As shown on Figure 4, KCS has achieved this case flow while simultaneously supporting significant investment in its network. KCS spent $497 million on capital expenditures in 2021.

FIGURE 4[11]
KCS HISTORICAL CAPEX

19. This strong cash flow through the end of 2021 enabled KCS to pay a cash dividend to CP following KCS's placement into voting trust, which CP used to pay down debt. Specifically, on January 27, 2022, pursuant to the Voting Trust Agreement, KCS paid a cash dividend of $265.0 million to a wholly-owned subsidiary of CP.[12]

D. CP's De-Leveraging Strategy Is Not Dependent on Transaction Synergies

20. As expected, the addition of Transaction-related debt has temporarily increased CP's leverage ratio – i.e., the relationship between adjusted debt and adjusted EBITDA. Figure 5 below shows the impact on CP's stand-alone leverage ratio in 2021 (at 4.8x),[13] along with CP's



---

[11] KCS 2021 Form 10-K at 29.

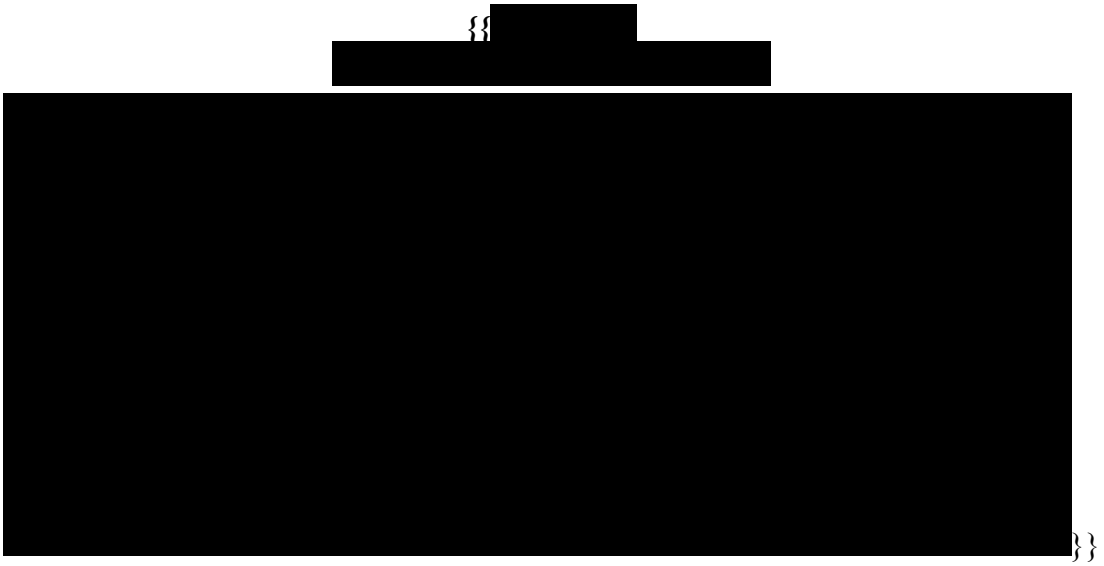
[12] *Id.* at 91. KCS has separately made an independent judgment not to pay a dividend during the second quarter of 2022.

[13] These new leverage ratios are slightly higher than the initial estimates that CP anticipated when it filed its Application last October, because CP's EBITDA was lower than expected primarily because of a smaller than originally anticipated Canadian grain crop and because of the impacts to CP volumes of the historic flooding that occurred in British Columbia in November of 2021.

current forecast of the trajectory for leverage reduction as CP rapidly repays that debt in 2022-2024, achieving its 2.5x leverage target by 2024.

21. The 4.8x ratio shown in Figure 5 is based on CP stand-alone finances (*i.e.*, without KCS) and does not take into account the contribution of KCS's financial strength. Given that CP is now the beneficial owner of KCS shares (while those shares are held in Trust), a more appropriate perspective would consider CP and KCS on a consolidated basis. That is how third-parties – including CP's lenders, the investors that participated in the debt issuance, and both of the credit rating agencies (Moody's and S&P) – are evaluating CP's leverage. As reported in CP's 10-Q for the period ended March 31, 2021, CP-KCS consolidated leverage ratio is quite a bit lower, at approximately 4.1x.

22. Although the trajectory of leverage reduction shown in Figure 5 presupposes that the combined CPKC will achieve Transaction-related synergies, CPKC's rapid deleveraging is not at all dependent on those synergies, for two principal reasons: (a) CP and KCS will each



[14] De Bruyn V.S. at ¶ 11, Figure 1 (page 5) (2011-2013 EBITDA calculated as adjusted operating income plus depreciation and amortization).

bring to the combination its own strong stand-alone cash flows, as noted above; and (b) the trajectory shown in Figure 5 presumes that CPKC would resume discretionary shareholder returns (*i.e.,* buybacks and dividend increases). Were it necessary to achieve target leverage ratios, however, CPKC could continue to continue the suspension of those returns, thereby accelerating debt repayment.

1. CPKC Would Generate Significant Free Cash Flow Even Absent Transaction Synergies

23. With approval of CP control of KCS, CP and KCS would each bring into the combined CPKC entity strong financial performance, generating cash flow available to support debt repayment and ongoing capital investments without additional borrowing.

24. CP anticipates strong cash generation over the next three years even without the addition of Transaction-related synergies, as shown in Figure 6 below.

[15] *See* Velani De Bruyn Workpaper "CP Unlevered Free Cash Flow." These forecasts of unlevered free cash flow reflect management's updated financial forecasts.

25. CP expects to generate approximately $6.8 billion of unlevered free cash flow between 2022 and 2024, independent of the Transaction,[16] and with the pause in discretionary returns to shareholders all of these funds will be available to repay debt.

26. Further to this, CP management's long-term incentive compensation program was adjusted away from ROIC to focus on rewarding free cash flow generation and returning to target leverage.

27. Likewise, KCS anticipates similarly strong performance on a stand-alone basis, as reflected in Figure 7 below.

28. Under the base case KCS management forecast, KCS expects to generate approximately $2.6 billion of unlevered free cash flow between 2022 and 2024,[18] and expects to

[16] Calculated as EBITDA less depreciation and amortization plus other income, less other expenses, tax affected, plus depreciation and amortization, adjusted for changes in net working capital, less capital expenditures and less other investing activities.

[17] *See* Velani De Bruyn Workpaper "KCS Unlevered Free Cash Flow." These forecasts of unlevered free cash flow reflect management's updated financial forecasts.

[18] Calculated as stated in footnote 17 above.

spend approximately $410[19] million on interest payments on KCS standalone debt (assuming KCS maintains its pre-acquisition leverage while in voting trust). This leaves KCS with approximately $2.2 billion in excess cash flow over the 2022-2024 period, after capital expenditures, which in turn flows to CP in the form of dividend payments that can be used to further reduce CP (and CPKC) leverage.

2. If Synergies Underperformed Expectations, CPKC Could Continue to Suspend Discretionary Shareholder Returns

29. As discussed above, CP is already paying down debt with its own free cash flow supplemented by the dividend paid to it by KCS. After the Transaction, were CPKC to realize less growth than forecast, and thus have less free cash flow than anticipated available to use to repay debt, there would be no obstacle to its deciding to continue to suspend discretionary distributions to shareholders in the form of share buybacks and increased dividends.

30. In my (Mr. De Bruyn's) October Verified Statement, I highlighted the role that a continued pause in share buybacks would play in CP's strategy of bringing net leverage in line with historical levels by the end of 2024. That would remain true if cash flow lagged our projections. Although we do not anticipate that happening, if it did, we could and would continue to pause share buybacks to bring our net leverage in line with our target of 2.5x.

3. Regardless of the Magnitude of Transaction-Related Traffic Growth, CPKC Will Promptly Return to Its Target Net Leverage Ratios

31. To illustrate that rapid debt repayment is not dependent on the magnitude of Transaction-related synergies, we present a sensitivity analyses that examine the pace of deleveraging on the assumption (again, which we view as unrealistic) that Transaction synergies

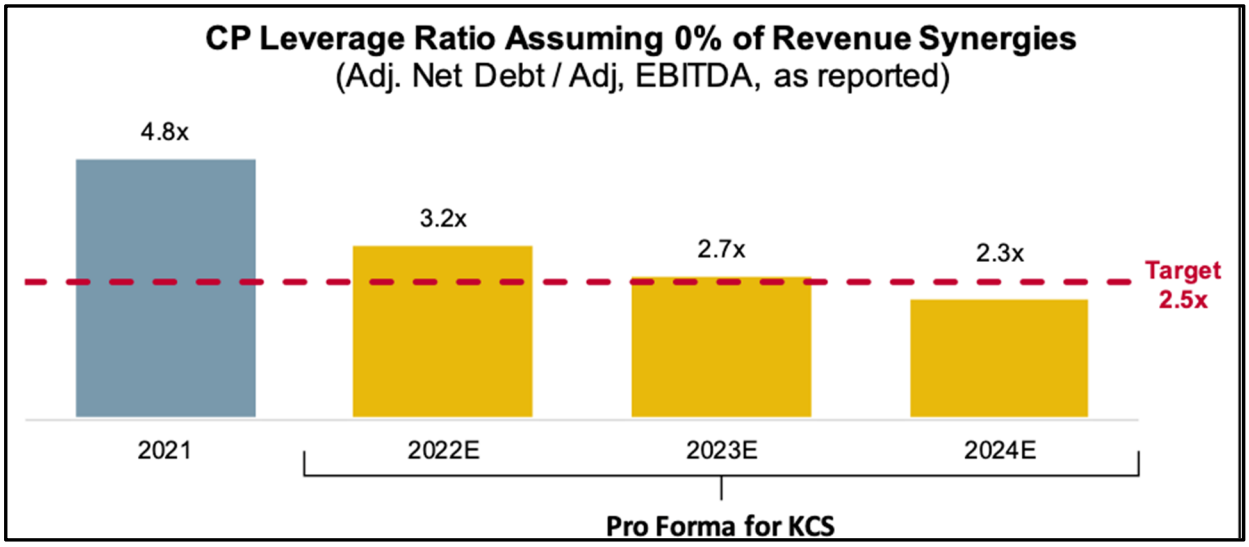
[19] The calculation of KCS stand-alone interest payments based on updated financial forecasts of CP management.

end up being significantly lower than anticipated. These sensitivity analyses *do not reflect* our planned outcomes. Instead, they show that even if our plans are not realized, CPKC will easily achieve its 2.5x target leverage ratio by the end of 2024.

32. We start with a hypothetical scenario under which CPKC would realize only half of the revenue synergies anticipated from its combination with KCS. On that assumption, anticipated levered free cash flow (before debt repayment and discretionary shareholder returns) would be reduced in 2023E and 2024E by an aggregate of $298 million. By re-allocating $934 million from share repurchases in 2024, partially offset by a $6 million increase in shareholder dividends in 2024 (due to fewer shares being repurchased), CP would still achieve its below-2.5x target leverage ratio by the end of 2024.[20] The net result would be the same 2.3x leverage ratio shown in Figure 5 above.

33. As an additional sensitivity, even if CPKC were to achieve literally zero revenue synergies from the Transaction, CPKC would still have the financial flexibility to achieve target 2.5x leverage by 2024. With zero revenue synergies, 2023 and 2024 aggregate free cash flow would be reduced by an anticipated $598 million. In this sensitivity, CP could achieve the target leverage ratio by re-allocating $1,868 million from share repurchases in 2024.[21]

34. As illustrated in Figure 8 below, the result would be a trajectory of leverage reduction similar to that set forth in Figure 5. Net leverage in 2022 is the same for both scenarios, as anticipated revenue synergies do not begin until 2023. In 2023, net leverage is



---

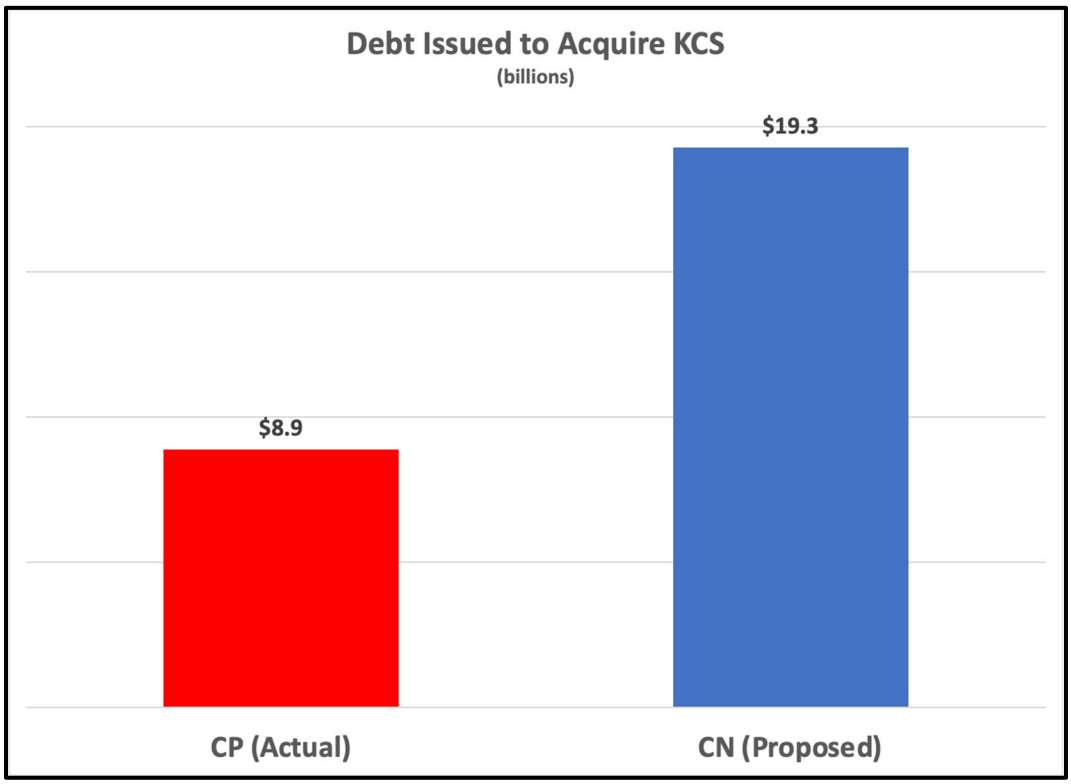
[20] The $934 million figure takes account of a {{ [redacted] }} *See* Velani De Bruyn Workpaper "50% Revenue Synergies."

[21] The $1,868 million figure takes account of a {{ [redacted] }} *See* Velani De Bruyn Workpaper "0% Revenue Synergies."

higher (2.7x) for the zero revenue synergies scenario (compared to 2.5x for the full revenue synergies scenario) because in the zero revenue synergies scenario, EBITDA is reduced by $273 million, implying that $203 million less debt has been repaid. Both scenarios achieve 2.3x leverage in 2024: the full revenue synergies scenario accomplishes this through the realization of $667 million EBITDA synergies in 2024; the zero revenue synergies scenario accomplishes this by re-allocating $1,868 million from share repurchases and repaying $1,460 million more debt.

FIGURE 8
CP LEVERAGE RATIO ASSUMING ZERO REVENUE SYNERGIES

35. Because CP's leverage objectives and financial strength are not dependent on any particular level of Transaction-related traffic growth, CPKC would have no incentive or need to engage in irrational short-term actions from a market or commercial perspective. For example, irrational strategies to "force" traffic to less efficient routes or artificially boost short term returns (such as by deferring important capital investments) would be both unnecessary and counterproductive to our long-term goals.



II. THE CP/KCS TRANSACTION HAS FUNDAMENTALLY DIFFERENT FINANCIAL IMPLICATIONS FROM CN'S PROPOSED USE OF A VOTING TRUST TO ACQUIRE KCS

36. Contrary to the assertions of CN's witness Zmijewski, Mr. Velani's 2021 analysis presented in the CN/KCS docket (Finance Docket No. 36514) of the financial risks of CN's proposed use of a voting trust has no application to the CP/KCS Transaction. This is so for several reasons, including that (a) CP acquired KCS shares for significantly less cash – and thus less new debt – than CN's proposal would have required; (b) unlike CN, CP has not publicly stated "return-on-invested-capital" targets associated with the deal, and thus would not be driven to irrational short-term designed to boost ROIC metrics; and (c) concerns about CN's proposed financial terms arose in a context where there appeared to be a material chance that CN would be forced to unwind its proposed trust and divest KCS.

A. CP Issued a Lower Quantum of Absolute Debt with a Higher Stock Mix

37. CP issued $8.5 billion of debt to fund the KCS acquisition in Q4 2021. This compares to CN, which would have issued $19.3 billion in debt (assuming a 1.27 CAD/USD exchange rate), reflecting a 2021 leverage ratio of 5.0x when accounting for CN's proposed debt. Instead, CP utilized far more stock in our transactions. Even when CP increased the price offered for KCS shares, we chose to do so by adding even more stock to the offer mix, not by increasing debt. We have issued a significantly lower quantum of debt than CN would have, and we have also achieved a lower standalone net leverage ratio than CN's failed proposal.

FIGURE 9
CP POST-ACQUISITION GROSS DEBT ISSUANCE
COMPARED TO WHAT CN PLANNED

38. As shown in Figure 9 above, CP issued $8.9 billion of debt to fund the acquisition of KCS shares in December 2021. This compares to CN, which would have issued more than twice as much debt (*$19.3 billion,* assuming a 1.27 CAD/USD exchange rate), reflecting a higher 2021 leverage ratio of 5.0x when accounting for CN's proposed debt.

B. Unlike CN, CP Has Not Locked in on Achieving any Particular ROIC Target for Its Investments

39. As Mr. Velani explained in detail in his Verified Statement in Finance Docket No. 36514 (excerpts of which are Exhibit 8 hereto), CN publicly communicated an ROIC target associated with its proposed KCS acquisition.[22] While we do not dismiss the validity of ROIC as a standalone financial metric for some purposes, it has its limitations. The ROIC target that CN

[22] *See* Velani V.S. at 12-15 & Exhs. A-D (Exhibit 8 hereto).

announced could have created pressure for CN to take harmful actions (such as price increases) in order to achieve CN's stated ROI targets.

40. By contrast, CP never put forward an ROIC target for its own KCS acquisition. CP made the conscious choice not to establish an arbitrary financial target in order to avoid creating any incentives that could distort sound business and operational decision-making during integration and beyond. From a financial perspective, the success of the CP/KCS Transaction has never been focused on deal ROIC, but rather on free cash flow generation and returning to target leverage so that CPKC can compete successfully in the future North American freight marketplace.

C. CN's Proposed Use of a Trust Bore an Inherent Risk of Being Unwound

41. Finally, Mr. Velani's analysis of the financial risks of a CN voting trust took into account that, in the unique context of CN's proposal, there would be an elevated risk that CN would not be able to acquire control of KCS because of the head-to-head competition between CN and KCS and the application of the 2001 merger rules to the Transaction. As a result, CN could have been required to divest KCS, with uncertain financial implications.

Credit Research

Bulletin:

CP Rail's Merger With Kansas City Southern Would Be A Good Fit If Approved

March 22, 2021

TORONTO (S&P Global Ratings) March 22, 2021--S&P Global Ratings today said that its rating and outlook on Canadian freight railroad services provider Canadian Pacific Railway Ltd. (CP; BBB+/Stable/--) are currently unaffected by the proposed acquisition of Kansas City Southern (KCS; BBB/Stable/A-2). CP has offered approximately US$29 billion (enterprise value) for KCS, which will include US$8.6 billion in incremental debt, and the remainder in cash on hand and CP common shares. The deal has unanimous support from the boards of both companies, and would combine the two smallest Class 1 railways in North America. CP targets the transaction to close in mid-2022, but this is dependent on regulatory approval that we believe could delay the process.

In our view, the proposed acquisition will materially increase CP's leverage in the short term and could pose a headwind to credit quality. However, we expect steady deleveraging over the next several years from earnings growth and free cash flow generation. In addition, the completion of the transaction should strengthen CP's business risk profile notably from the combined larger transcontinental network, increased customer breadth, and enhanced service capability that add efficiencies. The deal is contingent on regulatory approval, notably from the U.S. Surface Transportation Board (STB), which presents a key source of uncertainty.

We do not ascribe a probability to regulatory approval. The company attempted to merge with Norfolk Southern (unsolicited offer) in late-2015 but faced opposition to certain aspects of the transaction. The previous proposed Class 1 merger (Burlington Northern Santa Fe and Canadian National Railway Co. in 1999) was blocked with a 15-month merger moratorium, after which the STB developed more stringent conditions for approving such mergers. However, the networks of CP and KCS do not overlap; we believe the impact on public interest and competition, and the potential benefits for key constituents (such as shippers) will be key considerations for regulators. The company intends to close the acquisition before regulatory approval, with the acquired KCS shares held in an independent trust (and insulate KCS from control by CP until the STB authorizes control). In the event the STB does not approve the acquisition, we understand the company would be required to divest its KCS shares.

We estimate CP will generate steady growth in earnings and cash flow over the next few years, with discretionary cash flow applied toward meaningful debt reduction. Share repurchases have historically been a significant use of cash flow. The curtailment of the company's buyback program during the review process, in tandem with earnings growth should primarily facilitate material deleveraging. On a standalone basis, we estimate CP's adjusted debt-to-EBITDA (leverage) in the low-4x area at end-2021 (inclusive of excess cash flow from KCS), but for this ratio to improve to below 4x at end-2022. On a pro forma consolidated basis at end-2023, we

estimate this ratio approaches 2.5x and funds-from-operations to debt of approximately 30%, before potential synergies (estimated by the company at US$780 million over three years).

We believe the combination of CP and KCS would present opportunities for growth from a single-line network across Canada though the U.S. Midwest to Mexico. We would expect meaningful efficiencies beyond cost cutting, supported by an improved competitive position linked to enhanced operating breadth. CP already maintains the lowest operating ratio in the industry, but KCS is close (low-60% area versus the high-50% range at CP) and has adopted the precision scheduled railroading model in place at CP.

Canadian Pacific Railway Ltd.

Credit Highlights

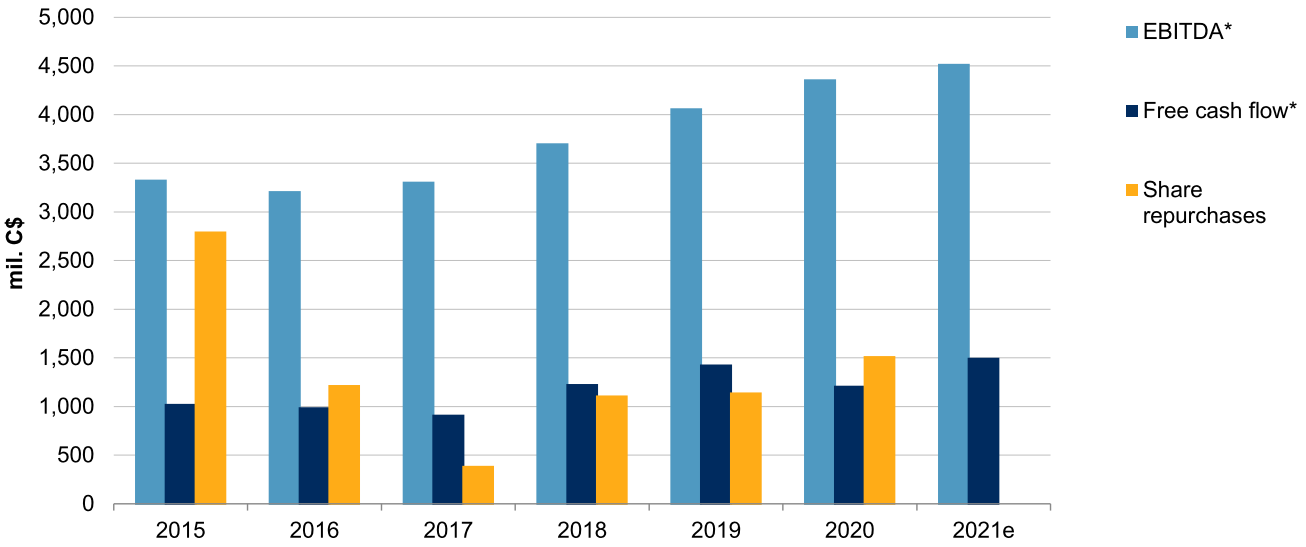
Overview

Key strengths	Key risks
Strong market position in Canada and the U.S. Northeast and Midwest, with significant barriers to entry.	Materially higher debt from its pending KCS acquisition will increase reliance on free operating cash flow [FOCF] generation to improve prospective credit ratios.
Operating efficiency among the strongest of the North American railroads.	Smaller scale of operations relative to its North American Class 1 railways competitor.
Meaningful financial flexibility from consistently strong free operating cash flow (FOCF).	Exposure to bulk commodities, some of which are more sensitive to unpredictable changes in weather compared with its merchandise business.
Relatively well-diversified rail network by customer, end market, and region, which will be enhanced on completion of its pending Kansas City South (KCS) acquisition.	Freight volumes and margins are exposed to cyclical economic fluctuations.

The increased debt issued for the proposed KCS acquisition will lead to pro forma credit measures that are weak for the rating, but we expect steady improvement beyond this year. Canadian Pacific Railway Ltd. (CP) has issued about US$8.5 billion in debt (about double its total debt from the pre-acquisition level) in addition to equity used to fund its pending acquisition of KCS (BBB/Positive/--) for a total enterprise value of approximately US$31 billion. On a pro forma basis at year-end 2021, S&P Global Ratings estimates CP's credit measures will sharply weaken from current levels, including funds from operations (FFO) to debt in the mid-teens percent area (from about 33% in 2020) and an adjusted debt-to-EBITDA ratio in the low-4.0x area (from 2.3x in 2020). We view these ratios as weak for the current rating, including FFO to debt that breaches our downside threshold for the rating (below 23%).



However, CP is committed to debt reduction and we believe it will return to credit measures that are commensurate for the rating within the next few years. The company has ceased share repurchases since late 2020 and could receive distribution from KCS while in trust, which we believe will provide significant cash available for gross debt reduction. In addition, we believe the outlook for CP's earnings and cash flow is positive, with continued growth expected to contribute to progressively stronger credit ratios. Our forecasts are underpinned by a strong macroeconomic outlook for Canada and the U.S., which should underpin growth in volumes and prices, and we expect CP's capital expenditure (capex) will remain relatively stable. We also believe FFO to debt will improve to 25%-30% by 2023 and remain near

THIS WAS PREPARED EXCLUSIVELY FOR USER EOWYN EOWYN.PAK.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

this level on a sustained basis.

Chart 1

KCS is a good fit for CP and will enhance the company's competitive position and operating efficiencies. The completion of the CP-KCS merger should strengthen CP's business risk profile notably from the combined larger transcontinental network, increased customer breadth, and enhanced service capability that add efficiencies. We believe the combination of CP and KCS would present opportunities for growth from a single-line network across Canada though the U.S. Midwest to Mexico. We would expect meaningful efficiencies beyond cost cutting, supported by an improved competitive position linked to enhanced operating breadth. CP already maintains one of the lowest operating ratios in the industry, but KCS is close (in the low-60% area versus the high-50% area at CP) and has adopted the precision scheduled railroading model in place at CP. We have also not included in our forecasts potentially material synergies from the acquisition. That said, we believe it will take several years for CP to fully realize many of the positive merits of the transaction. In addition, the transaction will not affect our view of CP's business risk profile as strong, which is consistent with that of the company's larger peers.

Closing of the KCS acquisition is contingent on regulatory approval, which is uncertain. The KCS acquisition is predicated on regulatory approval, namely from the U.S. Surface Transportation Board (STB). CP received approval for its voting trust structure, whereby KCS shares owned by CP will be held in trust and KCS will operate independently until close of the deal. We currently assume the deal will close in early 2023, but this is a key source of uncertainty particularly due to the lack of recent precedent transactions.

Outlook: Stable

The stable outlook reflects S&P Global Ratings' expectation that CP's adjusted FFO to debt will steadily improve to about 25%-30% by 2023 from low pro forma levels this year. We expect growth in earnings and solid FOCF generation that is used toward debt repayment will facilitate the improvement. Our estimates incorporate financial results from KCS in 2023, which also contribute to stronger prospective credit measures.

Downside scenario

We could downgrade CP within the next two years if we expect adjusted FFO to debt will remain below 23% on a sustained basis. In our view, this could occur if earnings are significantly weaker than we expect, potentially due to lower-than-expected volumes and prices related to weaker macroeconomic conditions or protracted operating disruptions that reduce the expected pace of deleveraging. In the event the company is not successful in acquiring KCS, and this results in sustainably higher debt levels, this could also lead to a downgrade.

Upside scenario

Although unlikely over the next two years, we could upgrade CP if stronger-than-expected earnings growth contributes to adjusted FFO to debt above 35% and adjusted FOCF to debt above 15% on a sustained basis. In this scenario, the company would generate much stronger-than-expected earnings and cash flow and adhere to financial policies that are more conservative than our current expectations.

Our Base-Case Scenario

THIS WAS PREPARED EXCLUSIVELY FOR USER EOWYN EOWYN.PAK.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

Assumptions

- Real GDP in Canada and the U.S. to increase 5.0%-6.0% in 2021, about 3.5%-4.0% in 2022, and about 2.0%-2.5% in 2023
- Canadian Consumer Price Index to increase about 3.0% this year, about 2.0%-2.5% in 2022, and about 2.0% in 2023
- An exchange rate of US$1.00 to about C$1.30
- Revenue ton miles (RTM) to increase in the low-single-digit area over the next few years
- Steady price increases above rail inflation, which is consistent with past price hikes and incorporates our view of favorable demand conditions (and temporary supply constraints)
- Average price per barrel of West Texas Intermediate crude oil of about US$55-US$60 in 2022 and US$50-US$55 in 2023
- Annual capex of C$1.5 billion-C$1.6 billion in 2021 and 2022
- No share repurchases over the next two years
- We consolidate KCS debt (about US$9.5 billion) in our 2021 pro forma ratios but KCS' earnings from 2023, when it is expected to close

Key Metrics

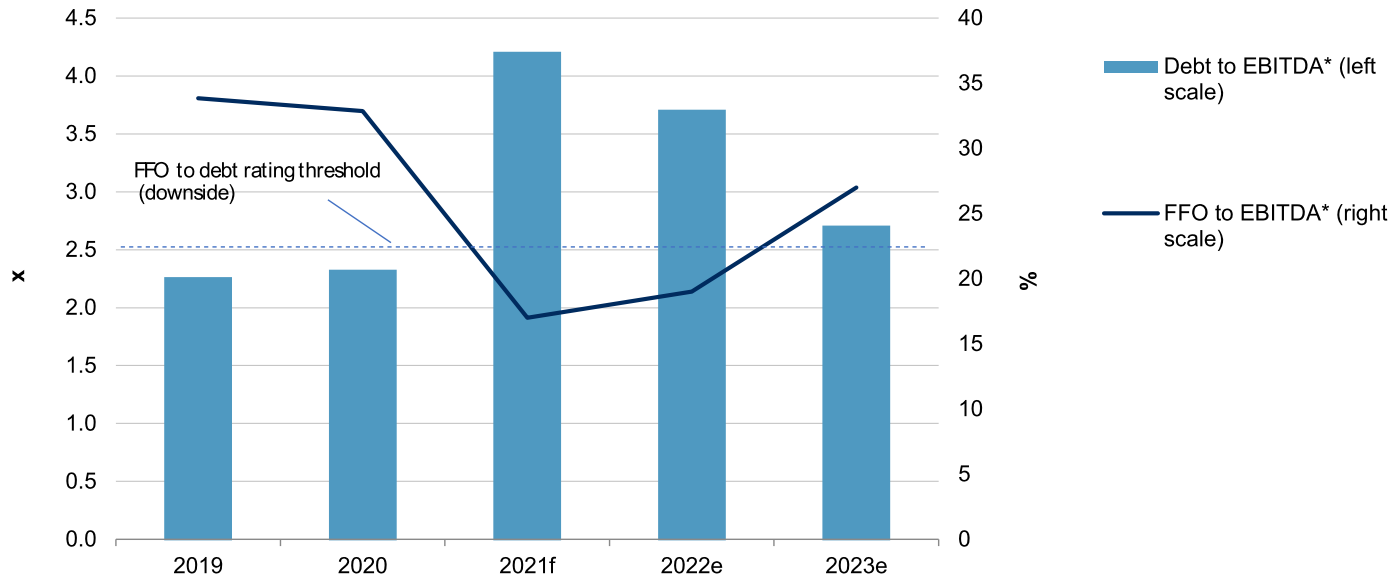
All figures adjusted by S&P Global Ratings. *Earnings from Kansas City South is consolidated. FFO--Funds from operations. FOCF--Free operating cash flow. a--Actual. e--Estimate. f--Forecast.

Our view of rail industry fundamentals in Canada and the U.S. over the next few years remains positive despite the emergence of volume and supply chain disruptions. We expect CP will generate steady growth in earnings and cash flow in 2021 and 2022, with material improvement in 2023 mainly related to the inclusion of KCS operating results. We assume steady volume and pricing growth will primarily contribute to the improvement through 2022. CP slightly tempered its volume growth guidance for this year, which incorporates lower Canadian grain volumes (thanks to a drought in Western Canada) and supply chain disruptions. However, we view this as temporary, and expect other parts of its business will mitigate the impact, led by more economically sensitive merchandise shipments. B.C. mudslides have led to operational disruptions, but they are temporary and the impact on CP's operating performance will be



THIS WAS PREPARED EXCLUSIVELY FOR USER EOWYN EOWYN.PAK.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

largely immaterial. Ongoing favorable demand should also continue to facilitate further price increases (about 25% of CP's business will re-price in fourth-quarter 2021) and, along with ongoing fuel surcharges, provide good visibility for stronger financial results next year.

Our pro forma credit measures in 2021 and 2022 include KCS debt but exclude its financial results until 2023 (though closing could potentially occur as early as late 2022). However, we assume CP will receive distribution from KCS, which are available for debt reduction. We assume CP will use its excess cash generation (after dividends to its shareholders) toward debt repayment. In tandem with stronger earnings and cash flow over the next few years, along with the inclusion of KCS in 2023, we believe CP's prospective leverage and coverage ratios will steadily improve to levels commensurate with the rating.

Company Description

CP is a Canadian Class I railway that primarily serves Canada and parts of the U.S. It operates a network of about 13,000 route miles serving the principal business centers of Canada, from Montreal to Vancouver, as well as the U.S. Midwest and Northeast. In 2020, the company generated close to C$7.7 billion of revenue, making it the second-largest railroad in Canada (about half the size of Canadian National Railway Ltd. [CN]) and the sixth largest in North America.

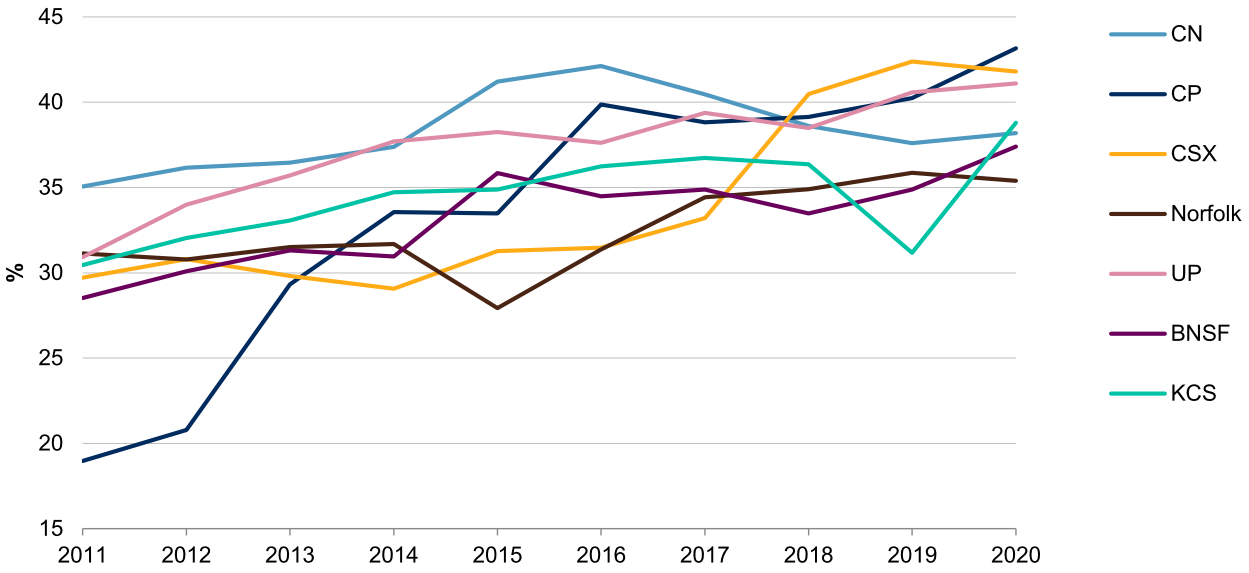
Business Risk: Strong

CP is one of two Class 1 railroads in Canada (the other being CN) with a favorable market position in Canada, as well as the U.S. Northeast and Midwest. We believe the company will continue to benefit from limited competition from alternate modes of long-haul commercial freight transport within the North American railroad industry. In our view, the significant barriers to entry to its business and moderate degree of cyclicality have contributed to steady increases in freight pricing in excess of rail inflation (including fuel costs). Trucking is a competitive alternative on short-haul routes and for time-sensitive freight, and barges and vessels offer competition on the Great Lakes-St. Lawrence Seaway. However, rail remains an attractive and cost-effective choice for bulk and long-distance commodity traffic, in our opinion.



We expect CP's operating efficiency will remain among the strongest of the North American railroads, underpinned by our forecast adjusted EBIT margins in the low-40% area, which we consider above average for Class 1 railroads. The company's profitability has steadily improved in the past several years, and CP now has the lowest operating ratio in the industry. In our view, CP should continue to generate strong profitability due in large part to its relatively well-diversified shipments and revenue by geography, customer, and product. This typically allows the company to

THIS WAS PREPARED EXCLUSIVELY FOR USER EOWYN EOWYN.PAK.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

offset periods of weaker demand in certain sectors with strong performance in others. Moreover, fuel surcharge mechanisms are included in most of the company's freight contracts--as is common in the rail industry, albeit there can sometimes be a lag before rates reset. We believe these mechanisms should mitigate CP's cost exposure to volatile fuel prices, further supporting our view of the company's earnings stability.

Peer comparison

We believe CP is less diversified than CN and some of its U.S. railroad peers due to the company's significant exposure to bulk commodities. Bulk commodities represented about 40% of CP's freight revenue compared with about 20% for CN. These include coal, grain, potash, and fertilizer products, which we believe generally exhibit greater volatility in freight volumes mainly due to higher relative exposure to unpredictable weather fluctuations and prevailing supply/demand fundamentals. CP's scale of operations is also smaller than that of CN and most of its U.S. competitors (other than KCS) on several measures. Mainly for these reasons, we view CP's business risk profile at the lower end of our strong business risk assessment. However, the disparity on several measures is moderate, particularly when considering the integration of KCS.

From a financial risk perspective, we believe CP compares favorably to most of the other Class 1 railroads. Our higher rating on CN reflects our comparatively stronger business risk profile assessment on the company (mainly owing to

THIS WAS PREPARED EXCLUSIVELY FOR USER EOWYN EOWYN.PAK.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

CN's greater operating breadth) in tandem with historically stronger credit measures.

DCF/debt (%)	(7.7)	10.2	7.2	(1.3)	(1.8)	1.7	(11.8)

Financial Risk: Intermediate

We expect CP's credit metrics to weaken in 2021, but to improve to levels commensurate with the rating by 2023. Materially higher debt associated with the company's pending acquisition of KCS is responsible for this weakening, including the US$9.5 billion in new debt funding and the consolidation of KCS debt. We estimate CP's pro forma 2021 adjusted FFO-to-debt ratio will be below 20% and adjusted debt-to-EBITDA ratio will be just over 4x, which are weak for our financial risk assessment and rating on the company. However, we assume steady growth in earnings and cash flow over the next two years, as well as solid discretionary cash flow used to reduce net debt over this period. With the consolidation of KCS' earnings and cash flow, which we assume in 2023, we expect CP's credit measures will improve to an extent that aligns with the rating. This includes FFO to debt in the 25%-30% area and adjusted debt to EBITDA of about 2.5x-2.8x in 2023.

Under our assumptions, CP should generate C$1.4 billion-C$1.7 billion of annual FOCF over the next couple of years after C$1.5 billion-C$1.6 billion of capex (equal to about 13%-17% of revenue). The company intends to continue to pay dividends to shareholders, and we expect this to increase in the next couple of years. We assume the remaining excess cash flow will be used toward debt reduction, with no share repurchases expected until 2023 at the earliest (and depending on the pace of deleveraging).

Liquidity: Strong

Our liquidity assessment incorporates our view that CP's sources of liquidity will exceed uses by more than 1.5x over the next 12 months. Our liquidity assessment is a standalone assessment of CP and excludes and proceeds or uses related to the CP-KCS merger. We also expect that the company will maintain sufficient liquidity to exceed its funding needs even in a stress scenario whereby our forecast EBITDA declines by 30%. Furthermore, we believe CP has the capacity to withstand a high-impact, low-probability event with limited need for refinancing; well-established and solid banking relationships; generally high standing in credit markets with great access to capital markets; and generally very prudent financial risk management.

We have a short-term rating of 'A-2' on Canadian Pacific Railway Co. (a subsidiary of CP), which reflects our 'BBB+' long-term issuer credit rating on the company.

Principal Liquidity Sources	Principal Liquidity Uses
• Cash and cash equivalents of C$210 million as of Sept. 30, 2021 • Full availability under CP's revolving credit facilities that include a US$1.0 billion tranche maturing Sept. 27, 2026, and a US$300 million tranche maturing Sept. 27, 2023 • Annual FFO of more than C$3.0 billion	• Annual capex of C$1.5 billion-C$1.6 billion • Annual dividend payments of about US$500 million in 2021 and US$750 million-US$800 million in 2022 • Seasonal working capital investments that typically peak in the first quarter

MOODY'S INVESTOR'S SERVICE, "MOODY'S DOWNGRADES CP RAIL TO BAA2 STABLE ON KCS ACQUISITION" (MAR. 22, 2021)

MOODY'S
INVESTORS SERVICE

Rating Action: Moody's downgrades CP Rail to Baa2 Stable on KCS acquisition

22 Mar 2021

Toronto, March 22, 2021 -- Moody's Investors Service, ("Moody's") downgraded Canadian Pacific Railway Company's ("CP") senior unsecured ratings to Baa2 from Baa1 following the announcement that its parent, Canadian Pacific Railway Limited, has agreed to acquire Kansas City Southern ("KCS") for approximately $29 billion, the funding of which includes raising approximately $8.6 billion in debt. CP's commercial paper rating has been affirmed at Prime-2 and its outlook remains stable.

Financing for the new debt has been committed. As part of the merger, CP will also assume KCS' outstanding debt of approximately $3.8 billion.

"The downgrade reflects the increase in adjusted leverage, which will exceed 3X through 2023" said Jamie Koutsoukis, Moody's analyst. "It also incorporates the regulatory and integration risks of the acquisition" she added.

The following rating actions were taken:

Affirmations:

..Issuer: Canadian Pacific Railway Company

....Senior Unsecured Commercial Paper, Affirmed P-2

Downgrades:

..Issuer: Canadian Pacific Railway Company

....Senior Unsecured Shelf, Downgraded to (P)Baa2 from (P)Baa1

....Senior Unsecured Regular Bond/Debenture, Downgraded to Baa2 from Baa1

Outlook Actions:

..Issuer: Canadian Pacific Railway Company

....Outlook, Remains Stable

RATINGS RATIONALE

CP's Baa2 credit rating benefits from 1) its well-positioned railway network, 2) a preponderance of stable commodity hauls, and 3) a track record of a very good operating margin. CP is constrained by 1) its small size versus its North American Class 1 peers, 2) uncertainties associated with regulatory approval for CP's recent announcement to acquire KCS (we expect shareholder approval will occur in mid-2021) which will result in adjusted leverage exceeding 4x in 2021, 3) its exposure to economic cyclicality, 4) adverse weather conditions and 5) increasing regulatory risks. Moody's believes the company has the ability and is committed to reducing its adjusted financial leverage towards the mid-point of its 2x to 2.5x public leverage target, however the time to achieve this will be protracted.

The acquisition of KCS will strengthen CP's rail network, creating a bigger continental network and expanding the reach of single hauls and service capabilities that can be provided to customers. In addition, its credit profile will benefit from a larger, more diversified business with a greater exposure to higher margin merchandise business, increased customer diversity and breadth and the potential for synergies from network and equipment efficiencies as well as greater revenue expansion. Offsetting these benefits however is the increase in adjusted leverage which will increase from 2.5x at year-end 2020 to 4.5x pro forma for the acquisition, and remain above 3x through 2023. There is also the economic risk to CP should they not be granted regulatory approval and be required to unwind its purchase of KCS at an unknown price.

CP has excellent liquidity. Excluding the announced acquisition, the company has CAD2.5 billion in expected sources of liquidity compared to about CAD770 million of uses over the next 12 months. Sources of liquidity include cash of CAD147 million and an undrawn US$1 billion credit facility (matures in September 2024) as of December 31, 2020. As well, we expect CP will generate about CAD1.1 billion of free cash flow in 2021. The company has C$320 million of debt due August 2021, and C$450 million due in January 2022. CP's revolving credit facility agreement has a maximum debt to EBITDA covenant and we expect they will maintain significant headroom under this covenant.

CP has secured US$8.6 billion of committed bridge financing for its announced acquisition of KCS.

The stable outlook reflects Moody's expectation CP existing rail network will continue to operate well, such that operating margins do not decrease below 37%. It also incorporates the expectation that the company will receive shareholder approval for the KCS acquisition in mid-2021 and will make steady progress in reducing its initial elevated leverage as a result of the acquisition towards 3x by 2023.

FACTORS THAT COULD LEAD TO AN UPGRADE OR DOWNGRADE OF THE RATINGS

A ratings upgrade would require clarity regarding regulatory approval for CP's acquisition of KCS. It would also require the company maintain adjusted debt/EBITDA below 2.75x and free cash flow/debt of more than 10%.

A ratings downgrade could occur if Moody's expects the company to sustain its adjusted debt/ EBITDA above 3.25x and free cash flow/debt of less than 5%.

The principal methodology used in these ratings was Surface Transportation and Logistics published in May 2019 and available at https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1113382 . Alternatively, please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

Canadian Pacific Railway Company, headquartered in Calgary, Alberta, Canada, provides rail freight transportation services over a 12,700 mile network. The railroad serves the principal business centers of Canada from Montreal to Vancouver as well as the U.S. Midwest and Northeast regions. Revenues in 2020 totaled CAD7.7 billion. KCS operates a Class I railroad in the central U.S., The Kansas City Southern Railway Company, and, through its wholly-owned subsidiary Kansas City Southern de Mexico, S.A. de C.V., owns a concession to operate Mexico's northeastern railroad. Revenues in 2020 totaled $2.6 billion.

REGULATORY DISCLOSURES

For further specification of Moody's key rating assumptions and sensitivity analysis, see the sections Methodology Assumptions and Sensitivity to Assumptions in the disclosure form. Moody's Rating Symbols and Definitions can be found at: https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_79004.

For ratings issued on a program, series, category/class of debt or security this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series, category/class of debt, security or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

The ratings have been disclosed to the rated entity or its designated agent(s) and issued with no amendment resulting from that disclosure.

These ratings are solicited. Please refer to Moody's Policy for Designating and Assigning Unsolicited Credit Ratings available on its website www.moodys.com.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Moody's general principles for assessing environmental, social and governance (ESG) risks in our credit analysis can be found at https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1243406 .

MOODY'S INVESTOR'S SERVICE, "MOODY'S ASSIGNS BAA2 RATING TO CANADIAN PACIFIC RAILWAY'S NEW NOTES" (NOV. 17, 2021)

MOODY'S
INVESTORS SERVICE

Rating Action: Moody's assigns Baa2 rating to Canadian Pacific Railway's new notes

17 Nov 2021

Toronto, November 17, 2021 -- Moody's Investors Service ("Moody's") assigned a Baa2 rating to Canadian Pacific Railway Company's ("CPR") seven new tranches of senior unsecured notes for total proceeds of approximately $8.5 billion. The tranches of notes are being issued in Canadian and US dollars and have maturities that range from 2 to 30 years. Proceeds will be used by CPR to indirectly finance the cash portion of the merger whereby Kansas City Southern ("KCS") will combine with CPR in a stock and cash transaction. CPR's existing ratings are unchanged, including the Baa2 senior unsecured notes rating, and the P-2 short-term rating. The ratings outlook remains stable.

Two tranches of the new notes due in 2031 and 2041 contain a Special Mandatory Redemption provision whereby if CPR determines in its reasonable judgment that the Surface Transportation Board ("STB") final approval for its proposed merger with KCS will not be sought, or has not or will not be received prior to March 25, 2023, then it will be required to redeem all of the $2.5 billion in outstanding under these notes at a mandatory redemption price of 101.

Assignments:

..Issuer: Canadian Pacific Railway Company

....Gtd Senior Unsecured Regular Bond/Debenture, Assigned Baa2

RATINGS RATIONALE

On September 15, 2021, CPR entered into a merger agreement, under which CPR agreed to acquire KCS in a stock and cash transaction representing an enterprise value of approximately $31 billion, which includes the assumption of $3.8 billion of outstanding KCS debt.

CPR's Baa2 credit rating benefits from 1) its well-positioned railway network, 2) a preponderance of stable commodity hauls, and 3) a track record of a very good operating margin. CPR is constrained by 1) its small size versus its North American Class 1 peers, 2) uncertainties associated with regulatory approval for CP's agreement to acquire KCS (we expect shareholder approval will occur in early December 2021) by the STB, which if not approved could require CPR to repay debt raised associated with the transaction, 3) adjusted leverage of 4.5x pro forma for the KCS acquisition in 2021, and expected to be about 4x in 2022 before falling below 3x in 2024, 4) its exposure to economic cyclicality and adverse weather conditions and 5) continued regulatory risks. Moody's believes the company has the ability and is committed to reducing its adjusted financial leverage towards the mid-point of its 2x to 2.5x public leverage target, however the time to achieve this will be protracted.

The acquisition of KCS will strengthen CPR's rail network, creating a bigger continental network and expanding the reach of single hauls and service capabilities that can be provided to customers. In addition, its credit profile will benefit from a larger, more diversified business with a greater exposure to higher margin merchandise business, increased customer diversity and breadth and the potential for synergies from network and equipment efficiencies as well as greater revenue expansion. Offsetting these benefits however is the increase in adjusted leverage which will increase from 2.5x for the twelve months ending September 2021 to 4.5x pro forma for the acquisition, and remain above 3x through 2023. There is also the economic risk to CPR should they not be granted regulatory approval and be required to unwind its purchase of KCS at an unknown price.

CPR has excellent liquidity. Excluding the announced acquisition, the company has CAD2.75 billion in expected sources of liquidity compared to about CAD450 million of uses over the next 12 months. Sources of liquidity include cash of CAD223 million and $731 (CAD 926) million available on its (unrated) credit facilities ($300 million matures in September 2023, $1 billion matures September 2026) as of September 30, 2021. As well, we expect CPR will generate about CAD1.6 billion of free cash flow over the next 12 months. The company has CAD450 million notes due in January 2022. CPR's revolving credit facility agreement has a

maximum debt to EBITDA covenant and we expect they will maintain significant headroom under this covenant.

The stable outlook reflects Moody's expectation that CPR's existing rail network will continue to operate well, such that operating margins do not decrease below 37%. It also incorporates the expectation that the company will receive shareholder and STB approval for the KCS acquisition and will make steady progress in reducing its initial elevated leverage as a result of the acquisition towards 3x by 2023.

FACTORS THAT COULD LEAD TO AN UPGRADE OR DOWNGRADE OF THE RATINGS

A ratings upgrade would require clarity regarding regulatory approval for CPR's acquisition of KCS. It would also require the company maintain adjusted debt/EBITDA below 2.75x and free cash flow/debt of more than 10%.

A ratings downgrade could occur if Moody's expects the company to sustain its adjusted debt/ EBITDA above 3.25x and free cash flow/debt of less than 5%.

The principal methodology used in these ratings was Surface Transportation and Logistics published in May 2019 and available at https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1113382 . Alternatively, please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

Canadian Pacific Railway Company, headquartered in Calgary, Alberta, Canada, provides rail freight transportation services over a 13,000 mile network. The railroad serves the principal business centers of Canada from Montreal to Vancouver as well as the U.S. Midwest and Northeast regions. Revenues in 2020 totaled CAD7.7 billion. KCS operates a Class I railroad in the central U.S., The Kansas City Southern Railway Company, and, through its wholly-owned subsidiary Kansas City Southern de Mexico, S.A. de C.V., owns a concession to operate Mexico's northeastern railroad. Revenues in 2020 totaled $2.6 billion.

REGULATORY DISCLOSURES

For further specification of Moody's key rating assumptions and sensitivity analysis, see the sections Methodology Assumptions and Sensitivity to Assumptions in the disclosure form. Moody's Rating Symbols and Definitions can be found at: https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_79004.

For ratings issued on a program, series, category/class of debt or security this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series, category/class of debt, security or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

The ratings have been disclosed to the rated entity or its designated agent(s) and issued with no amendment resulting from that disclosure.

These ratings are solicited. Please refer to Moody's Policy for Designating and Assigning Unsolicited Credit Ratings available on its website www.moodys.com.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Moody's general principles for assessing environmental, social and governance (ESG) risks in our credit analysis can be found at http://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1288235 .

The Global Scale Credit Rating on this Credit Rating Announcement was issued by one of Moody's affiliates outside the EU and is endorsed by Moody's Deutschland GmbH, An der Welle 5, Frankfurt am Main 60322, Germany, in accordance with Art.4 paragraph 3 of the Regulation (EC) No 1060/2009 on Credit Rating Agencies. Further information on the EU endorsement status and on the Moody's office that issued the credit rating is available on www.moodys.com.

The Global Scale Credit Rating on this Credit Rating Announcement was issued by one of Moody's affiliates outside the UK and is endorsed by Moody's Investors Service Limited, One Canada Square, Canary Wharf, London E14 5FA under the law applicable to credit rating agencies in the UK. Further information on the UK endorsement status and on the Moody's office that issued the credit rating is available on www.moodys.com.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

CREDIT RATINGS ISSUED BY MOODY'S CREDIT RATINGS AFFILIATES ARE THEIR CURRENT OPINIONS OF THE RELATIVE FUTURE CREDIT RISK OF ENTITIES, CREDIT COMMITMENTS, OR DEBT OR DEBT-LIKE SECURITIES, AND MATERIALS, PRODUCTS, SERVICES AND INFORMATION PUBLISHED BY MOODY'S (COLLECTIVELY, "PUBLICATIONS") MAY INCLUDE SUCH CURRENT OPINIONS. MOODY'S DEFINES CREDIT RISK AS THE RISK THAT AN ENTITY MAY NOT MEET ITS CONTRACTUAL FINANCIAL OBLIGATIONS AS THEY COME DUE AND ANY ESTIMATED FINANCIAL LOSS IN THE EVENT OF DEFAULT OR IMPAIRMENT. SEE APPLICABLE MOODY'S RATING SYMBOLS AND DEFINITIONS PUBLICATION FOR INFORMATION ON THE TYPES OF CONTRACTUAL FINANCIAL OBLIGATIONS ADDRESSED BY MOODY'S CREDIT

RATINGS. CREDIT RATINGS DO NOT ADDRESS ANY OTHER RISK, INCLUDING BUT NOT LIMITED TO: LIQUIDITY RISK, MARKET VALUE RISK, OR PRICE VOLATILITY. CREDIT RATINGS, NON-CREDIT ASSESSMENTS ("ASSESSMENTS"), AND OTHER OPINIONS INCLUDED IN MOODY'S PUBLICATIONS ARE NOT STATEMENTS OF CURRENT OR HISTORICAL FACT. MOODY'S PUBLICATIONS MAY ALSO INCLUDE QUANTITATIVE MODEL-BASED ESTIMATES OF CREDIT RISK AND RELATED OPINIONS OR COMMENTARY PUBLISHED BY MOODY'S ANALYTICS, INC. AND/OR ITS AFFILIATES. MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS DO NOT CONSTITUTE OR PROVIDE INVESTMENT OR FINANCIAL ADVICE, AND MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS ARE NOT AND DO NOT PROVIDE RECOMMENDATIONS TO PURCHASE, SELL, OR HOLD PARTICULAR SECURITIES. MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS DO NOT COMMENT ON THE SUITABILITY OF AN INVESTMENT FOR ANY PARTICULAR INVESTOR. MOODY'S ISSUES ITS CREDIT RATINGS, ASSESSMENTS AND OTHER OPINIONS AND PUBLISHES ITS PUBLICATIONS WITH THE EXPECTATION AND UNDERSTANDING THAT EACH INVESTOR WILL, WITH DUE CARE, MAKE ITS OWN STUDY AND EVALUATION OF EACH SECURITY THAT IS UNDER CONSIDERATION FOR PURCHASE, HOLDING, OR SALE.

MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS, AND PUBLICATIONS ARE NOT INTENDED FOR USE BY RETAIL INVESTORS AND IT WOULD BE RECKLESS AND INAPPROPRIATE FOR RETAIL INVESTORS TO USE MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS OR PUBLICATIONS WHEN MAKING AN INVESTMENT DECISION. IF IN DOUBT YOU SHOULD CONTACT YOUR FINANCIAL OR OTHER PROFESSIONAL ADVISER.

ALL INFORMATION CONTAINED HEREIN IS PROTECTED BY LAW, INCLUDING BUT NOT LIMITED TO, COPYRIGHT LAW, AND NONE OF SUCH INFORMATION MAY BE COPIED OR OTHERWISE REPRODUCED, REPACKAGED, FURTHER TRANSMITTED, TRANSFERRED, DISSEMINATED, REDISTRIBUTED OR RESOLD, OR STORED FOR SUBSEQUENT USE FOR ANY SUCH PURPOSE, IN WHOLE OR IN PART, IN ANY FORM OR MANNER OR BY ANY MEANS WHATSOEVER, BY ANY PERSON WITHOUT MOODY'S PRIOR WRITTEN CONSENT.

MOODY'S CREDIT RATINGS, ASSESSMENTS, OTHER OPINIONS AND PUBLICATIONS ARE NOT INTENDED FOR USE BY ANY PERSON AS A BENCHMARK AS THAT TERM IS DEFINED FOR REGULATORY PURPOSES AND MUST NOT BE USED IN ANY WAY THAT COULD RESULT IN THEM BEING CONSIDERED A BENCHMARK.

All information contained herein is obtained by MOODY'S from sources believed by it to be accurate and reliable. Because of the possibility of human or mechanical error as well as other factors, however, all information contained herein is provided "AS IS" without warranty of any kind. MOODY'S adopts all necessary measures so that the information it uses in assigning a credit rating is of sufficient quality and from sources MOODY'S considers to be reliable including, when appropriate, independent third-party sources. However, MOODY'S is not an auditor and cannot in every instance independently verify or validate information received in the rating process or in preparing its Publications.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability to any person or entity for any indirect, special, consequential, or incidental losses or damages whatsoever arising from or in connection with the information contained herein or the use of or inability to use any such information, even if MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers is advised in advance of the possibility of such losses or damages, including but not limited to: (a) any loss of present or prospective profits or (b) any loss or damage arising where the relevant financial instrument is not the subject of a particular credit rating assigned by MOODY'S.

To the extent permitted by law, MOODY'S and its directors, officers, employees, agents, representatives, licensors and suppliers disclaim liability for any direct or compensatory losses or damages caused to any person or entity, including but not limited to by any negligence (but excluding fraud, willful misconduct or any other type of liability that, for the avoidance of doubt, by law cannot be excluded) on the part of, or any contingency within or beyond the control of, MOODY'S or any of its directors, officers, employees, agents, representatives, licensors or suppliers, arising from or in connection with the information contained herein or the use of or inability to use any such information.

NO WARRANTY, EXPRESS OR IMPLIED, AS TO THE ACCURACY, TIMELINESS, COMPLETENESS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY CREDIT RATING, ASSESSMENT, OTHER OPINION OR INFORMATION IS GIVEN OR MADE BY MOODY'S IN ANY FORM OR MANNER WHATSOEVER.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from $1,000 to approximately $5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY100,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

CP INVESTOR PRESENTATION, "BUILT TO DRIVE GROWTH INVESTOR PRESENTATION" (MAR. 2022)

REDACTED PUBLIC RECORD VERSION

BUILT TO DRIVE GROWTH

Investor Presentation, March 2022

TSX/NYSE: CP

FORWARD LOOKING STATEMENTS

The following investor presentation contains certain forward-looking information within the meaning of applicable securities laws relating, but not limited, to Canadian Pacific's operations, priorities and plans, anticipated financial and operational performance, including our business prospects, market drivers and outlook, planned capital expenditures, anticipated revenues and the source thereof, programs and strategies (including financing strategies), the anticipated efficiency of the high efficiency product (HEP) train model and associated facilities, including growth in our high-capacity hopper car fleet in 2021 and beyond, shipment capacity, completion and the anticipated impacts on capacity and efficiency of the HEP qualification of CP-served train-loading facilities. This forward-looking information also includes, but is not limited to, statements concerning expectations, beliefs, plans, goals, objectives, assumptions and statements about possible future events, conditions, and results of operations or performance.

Forward-looking information may contain statements with words such as "anticipate", "believe", "expect", "plan", "financial expectations", "key assumptions", "outlook", "guidance", or similar words suggesting future outcomes. To the extent that CP has provided forecasts or targets using Non-GAAP financial measures, CP may not be able to provide a reconciliation to a GAAP measure without unreasonable efforts, due to unknown variables and uncertainty related to future results.

Undue reliance should not be placed on forward-looking information as actual results may differ materially from the forward-looking information. Forward-looking information is not a guarantee of future performance.

By its nature, CP's forward-looking information involves numerous assumptions, inherent risks and uncertainties that could cause actual results to differ materially from those expressed or implied by the forward-looking information, including but not limited to the following factors: changes in, or unanticipated outcomes of, business strategies and growth opportunities; general North American and global economic, credit and business conditions; risks associated with agricultural production such as weather conditions and insect populations; the availability and price of energy commodities; the effects of competition and pricing pressures; industry capacity; shifts in current and anticipated future market demand; changes in commodity prices; uncertainty surrounding timing and volumes of commodities being shipped via CP; inflation; geopolitical instability; changes in laws, regulations and government policies, including regulation of rates; changes in taxes and tax rates; potential increases in maintenance and operating costs; changes in fuel prices; uncertainties of investigations, proceedings or other types of claims and litigation; labour disputes; risks and liabilities arising from derailments; transportation of dangerous goods; timing, completion and impacts from capital and maintenance projects by CP and by third parties; currency and interest rate fluctuations; trade restrictions or other changes to international trade arrangements; interruptions in the availability of land and equipment; realization of certain operating and cost efficiencies; climate change; and the market and regulatory responses to climate change; ability to achieve commitments and aspirations relating to reducing greenhouse gas emissions and other climate-related objectives; various events that could disrupt operations, including severe weather, such as droughts, floods, avalanches and earthquakes, and cybersecurity attacks, as well as security threats and governmental response to them, and technological changes; the pandemic created by the outbreak of the novel strain of coronavirus (and the disease known as COVID-19) and resulting effects on economic conditions, the demand environment for logistics requirements and energy prices, restrictions imposed by public health authorities or governments, fiscal and monetary policy responses by governments and financial institutions, and disruptions to global supply chains; the timing and completion of the pending KCS transaction, including receipt of regulatory and shareholder approvals and the satisfaction of other conditions precedent; interloper risk to the pending KCS transaction; the realization of anticipated benefits and synergies of the pending KCS transaction and the timing thereof; the success of integration plans for KCS; the focus of management time and attention on the pending KCS transaction and other disruptions arising from the transaction; customer, shareholder, regulatory and other stakeholder approvals and support; regulatory and legislative decisions and actions; the adverse impact of any termination or revocation by the Mexican government of Kansas City Southern de Mexico, S.A. de C.V.'s Concession; estimated future dividends; financial strength and flexibility; debt and equity market conditions, including the ability to access capital markets on favourable terms or at all; cost of debt and equity capital; potential changes in the CP share price which may negatively impact the value of consideration offered to KCS shareholders; and the ability of management of CP, its subsidiaries and affiliates to execute key priorities, including those in connection with the pending KCS transaction.

The foregoing list of factors is not exhaustive. These and other factors are detailed from time to time in reports filed by CP with securities regulators in Canada and the United States. Reference should be made to "Management's Discussion and Analysis of Financial Condition and Results of Operations" in CP's annual and quarterly reports filed on Form 10-K and 10-Q, respectively.

Forward-looking information is based on current expectations, estimates and projections and it is possible that predictions, forecasts, projections, and other forms of forward-looking information will not be achieved by CP. Except as required by law, CP undertakes no obligation to update publicly or otherwise revise any forward-looking information, whether as a result of new information, future events or otherwise.

KEY GAAP AND NON-GAAP MEASURES

NOTE ON NON-GAAP MEASURES

Except where noted, all figures are in millions of Canadian dollars.

Financial information is prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP), unless otherwise noted.

CP presents non-GAAP earnings and liquidity information in this presentation to provide a basis for evaluating underlying earnings and liquidity trends that can be compared with the prior periods results.

It should be noted that CP's non-GAAP measures as described in this presentation, have no standardized meanings and are not defined by U.S. GAAP and, therefore, are unlikely to be comparable to similar measures presented by other companies.

$ in millions of Canadian dollars, except per share data, percentages and ratios	2017	2018	2019	2020	2021
Total revenues	$6,554	$7,316	$7,792	$7,710	$7,995
Operating income	$2,519	$2,831	$3,124	$3,311	$3,206

Cash used in investing activities	($1,295)	($1,458)	($1,803)	($2,030)	($13,730)
Cash provided by (used in) financing activities	($700)	($1,542)	($1,111)	($764)	$9,936
Free cash[1]	$874	$1,289	$1,357	$1,157	$1,793

(1) For a full description and reconciliation of Non-GAAP Measures see CP's 2020 Annual Report on Form 10-K and CP's Q4 2021 Earnings Release on investor.cpr.ca.
(2) As a result of the five-for-one share split of the Company's issued and outstanding Common Shares, which began trading on a post-split basis on May 14, 2021, per share amounts and all outstanding Common Shares for comparative periods have been retrospectively adjusted.

FOUNDED IN PRECISION, BUILT FOR GROWTH

Our precision railroading model transformed how our entire company operates and allows us to deliver industry-leading service. It's a culture of excellence that we adhere to 24/7, 365. Today, this commitment to precision has us uniquely positioned to leverage our low cost base and best-in-class service to grow with our customers. By remaining disciplined, we will drive long-term sustainable, profitable growth for our customers and shareholders, alike.

WE REBUILT THE ENGINE

STREAMLINED ASSETS

Right-sized resources to optimize our network.

IMPROVED OPERATING PERFORMANCE

Longer, faster trains and less dwell time.

INVESTED IN THE NETWORK

Upgraded to improve performance and increase capacity.

CULTURE OF ACCOUNTABILITY

Railroader attitude:
Do what you said you'll do.

PRECISION RAILROADING

Precision planning and execution to optimize service and control costs.

CONSISTENT, RELIABLE SERVICE

Leveraging our strengths to deliver superior value to our customers.

LOWERED COST BASE

Unprecedented margin improvement.

DEVELOPED THE TEAM

Handpicked team.
Best in the business.

NOW WE'RE DRIVING GROWTH

DIVERSIFIED BOOK OF BUSINESS

Balanced portfolio of industries, regions and markets.

INCREASED CAPACITY

Efficiencies and network investments mean we have the ability to do more.

RIGHT CULTURE & TEAM

Accountable, collaborative, passionate team of railroaders.

VALUE DRIVEN

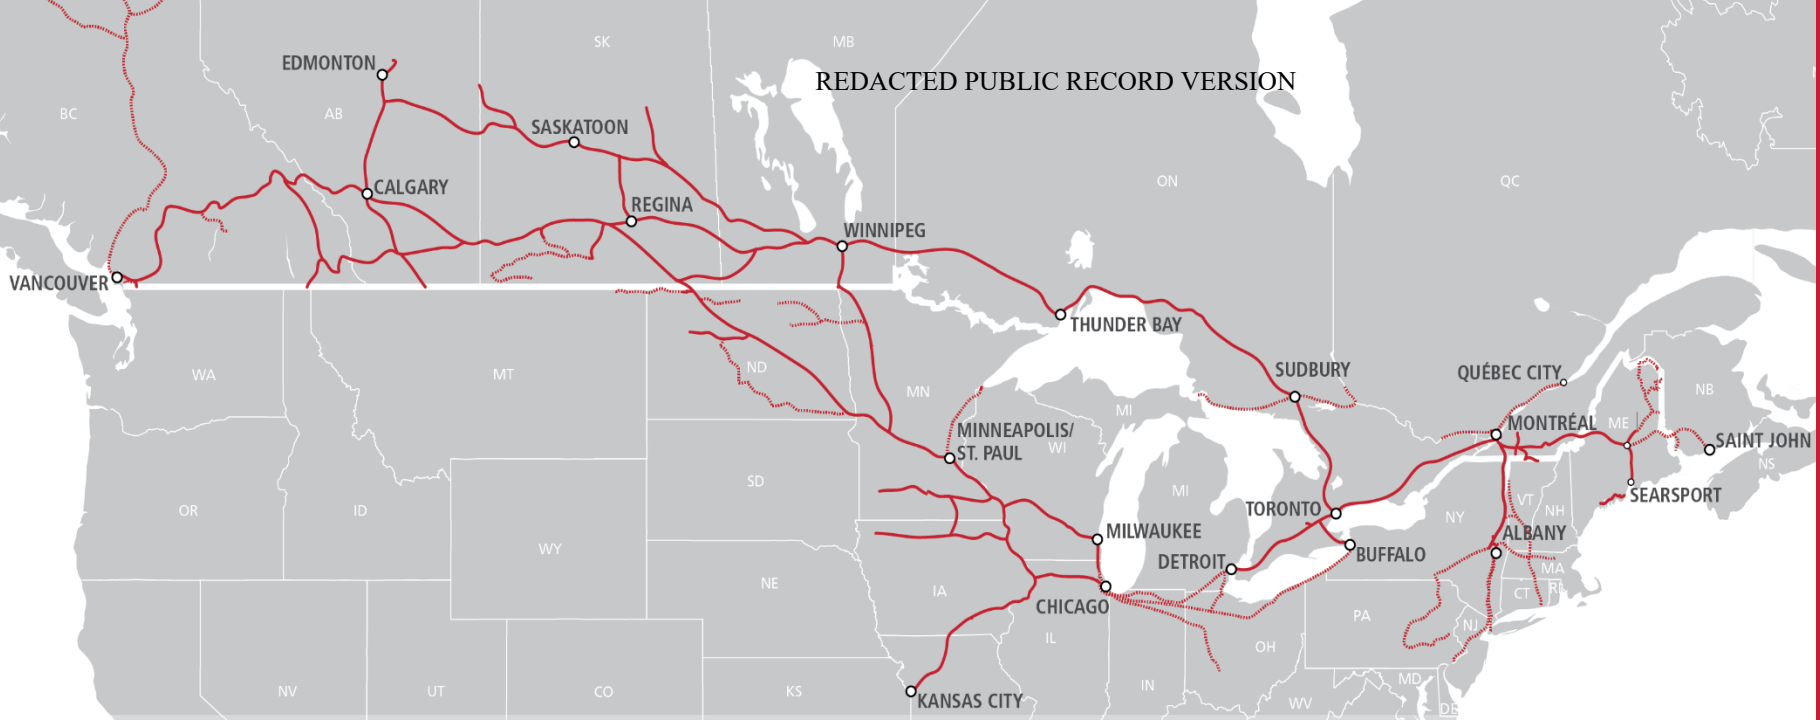
Disciplined approach to valuing service.
We won't commoditize ourselves.

POWERFUL FOOTPRINT

Strong network with shortest routes to major centers and ability to extend reach.

RESILIENT PERFORMANCE

Operating model performs in upturns and downturns.



SERVICE INNOVATION

Supply chain collaboration to enhance our service offering.

DISCIPLINED APPROACH

Pursuing the right customers in the right lanes to grow our business.

REDACTED PUBLIC RECORD VERSION

POWERFUL FOOTPRINT

NETWORK OVERVIEW

- Competitive access to key markets in Canada and the U.S.
- Access to major ports on West and East Coasts.
- Most border crossings in Western Canada; provides routing optionality.
- Connections with Class 1 railroads and short-line partnerships extend the reach of our rail service.
- Shortest routes in key lanes including Vancouver to the U.S. Midwest, Chicago and Detroit, as well as between Eastern Canada and Calgary and Vancouver.
- Access to a network of over 100 transload facilities; extends our service reach to markets not directly served by rail.

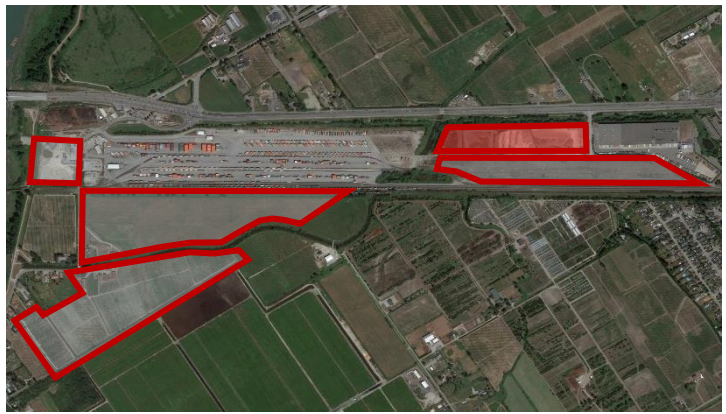
ROOM TO GROW

Locomotives available for future growth

Yard and **terminal capacity**

Network capacity through longer sidings, increased speed

Ability to further **increase train length**



Surplus land gives us optionality

ROOM TO GROW

SURPLUS LAND PROVIDES OPTIONALITY & LOW COST CAPACITY

Vancouver

- Unmatched ability to expand footprint in Canada's largest trade gateway
- Existing intermodal facility operating well below capacity
- CP owns >100 acres of vacant land adjacent to existing facility
- Provides optionality: ability to grow existing operations and provide customer solutions

Chicago

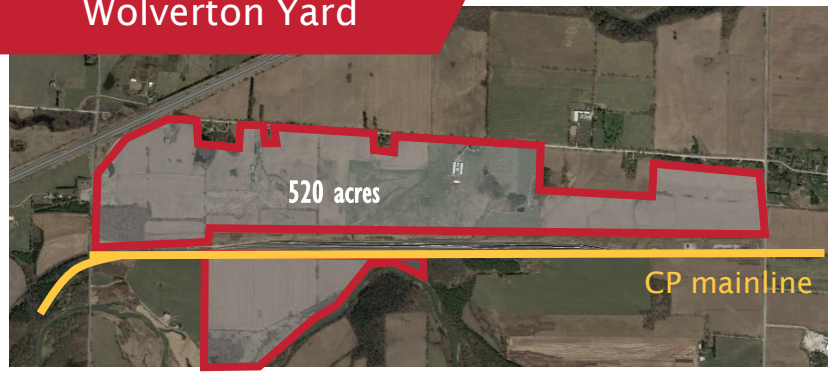
Bensenville Yard

- Room to grow within existing footprint
- Q1 2021 agreement signed to add capacity, potential to build state-of-the-art intermodal facility

Schiller Park

- 75 acre site made surplus through consolidation of intermodal operations
- Potential to repurpose for growth opportunities or divest

ROOM TO GROW



TORONTO & AREA

Vaughan Intermodal Facility

- 500 acre footprint; 150 acres vacant
- Ability to more than double operations with minimal capital
- Ability to co-locate customers

Wolverton Yard

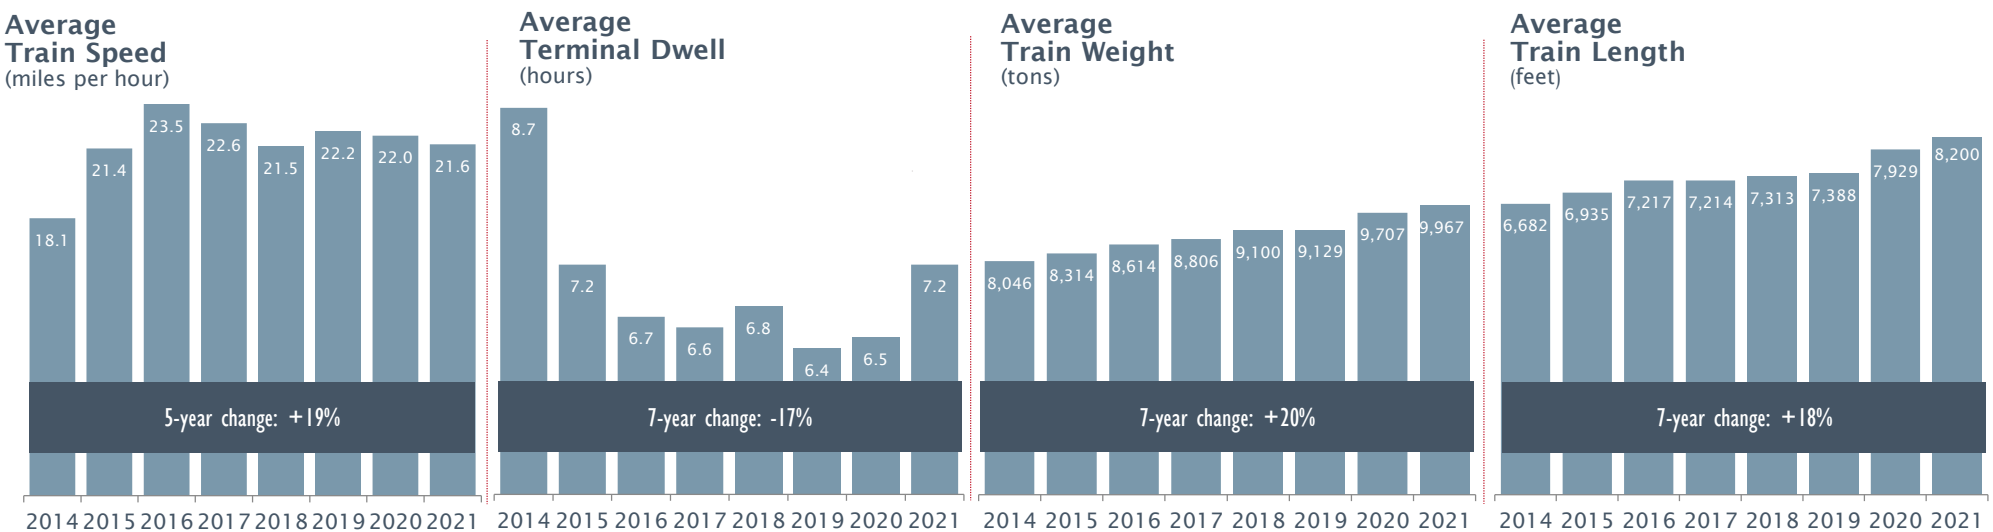
Agincourt Yard

MORE ROOM TO GROW

Calgary (Dufferin)

Edmonton (Ellerslie)

Montréal (St-Luc)

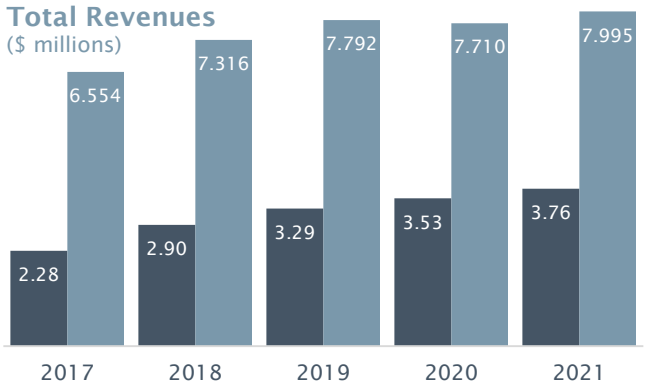


Montréal (Les Cèdres)

PRECISION PERFORMANCE

OPERATIONS

- The cornerstone of our industry leading performance is our precision railroading operating model and disciplined focus on planning and execution.
- Faster train speeds and reduced dwell means better asset utilization and reduced costs for CP and our customers.
- Longer, heavier, faster trains increase network capacity and reduce operating costs.



PRECISION PERFORMANCE

FINANCIAL

- Ability to generate earnings growth in various economic environments.
- Our focus: best-in-class service at lowest cost.
- Driving stronger margins and topline revenue growth.
- Opportunity to further improve margins. Targeting ~100 bps per year.
- Strong free cash generation and an opportunistic approach to shareholder returns.

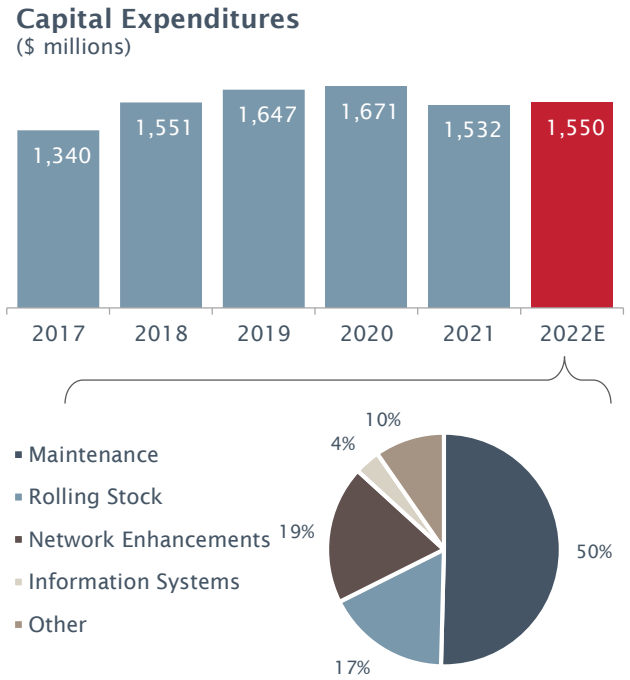
(2) As a result of the five-for-one share split of the Company's issued and outstanding Common Shares, which began trading on a post-split basis on May 14, 2021, per share amounts and all outstanding Common Shares for comparative periods have been retrospectively adjusted.



BUILDING FOR THE FUTURE

CAPITAL INVESTMENT

Our capital investments have everything to do with running the business better, including margin improvement, productivity and service reliability – all key ingredients of our precision railroad operating model.

Highlights

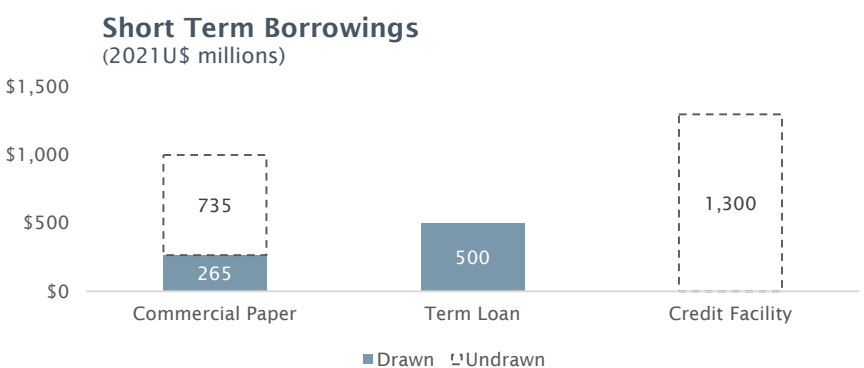
- Consistently investing ~$800M per year in maintenance capital.
- Strong pipeline of high return projects.
- Two unique rolling stock investments – locomotive modernization and hopper car acquisitions – are elevating capital spending in the near-term.

SPOTLIGHT

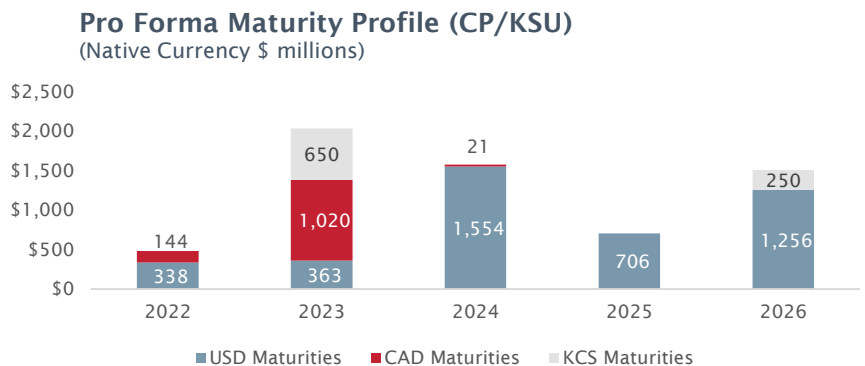
We didn't replace the locomotive, we replaced everything that slowed it down.

Locomotive modernizations upgrade aging units for better fuel efficiency, service reliability and safety – same productivity as a new locomotive but with a lower price tag. In 2021 we spent ~$80M in capital for modernizations.

Investing in the future of the grain supply chain.



Over the past several years, CP invested a total of $500M to acquire 5,900 new covered hoppers. The new, high capacity cars, combined with our 8,500-foot grain model, will enable CP to move >40% more grain per train.



FINANCIAL FLEXIBILITY

LIQUIDITY AND LEVERAGE

Committed to a strong, investment grade credit rating and target leverage

- CP completed issuance of debt to fund cash consideration of KCS transaction in November 2021
  - Debt was issued to optimize ability to de-lever while also locking in attractive long-term financing rates
- Target an Adjusted Net Debt to Adjusted EBITDA[1] [2] ratio of 2.0-2.5x
- Significant liquidity available over de-leveraging period via $1.3B undrawn committed credit facilities, $1.0B commercial paper program, excess cash flows from KCS and pausing of share repurchases

(1) For a full description and reconciliation of Non-GAAP Measures see CP's 2019 Annual Report on Form 10-K on investor.cpr.ca.

(2) Although CP has provided a target Non-GAAP measure (Adjusted Net Debt to Adjusted EBITDA), management is unable to reconcile, without unreasonable efforts, the target Adjusted Net Debt to Adjusted EBITDA to the most comparable GAAP measure (Long-term debt to Net Income ratio), due to unknown variables and uncertainty related to future results.

LEVERAGING TECHNOLOGY

INNOVATING FOR THE FUTURE

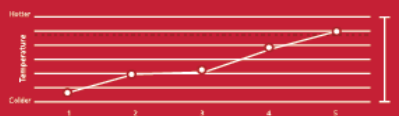
Utilizing track analytics, dashboard applications and mobile devices to create industry-leading technologies to advance customer service and operating performance.

- **In-house technologies** provide CP with hundreds of applications that track shipments, measure operational performance and provide financial information in real-time
- **Intermodal Demand Management**: through customized algorithms, we are creating capacity by smoothing demand over the week based on customer delivery requirements

- **Mobile Workforce**: using mobile devices to automate inventory reporting and provide required safety documents to train crews
- **CP FastPass**: self-serve kiosks and mobile apps for drivers coming and going from our terminals means shorter driver wait times, faster processing and lower terminal costs

- **Robotic Process Automation**: CP is using "bots" to automate high-volume manual activities to improve accuracy, reduce costs and improve customer service
- **Track Asset Management**: inspection application working off a central repository in conjunction with track inspection vehicles to create a consolidated view of track health

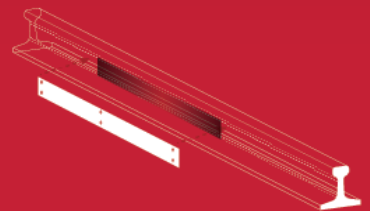
PREDICTIVE ANALYTICS



ENHANCING SAFETY AND EFFICIENCY

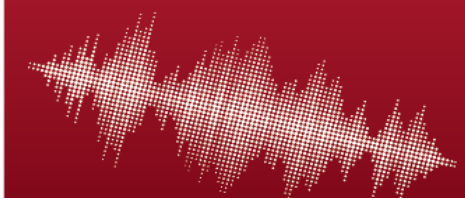
Leveraging Big Data to drive further improvements in safety and efficiency.

- Using patented technology, we accumulate valuable data on wheels, rails, cars, locomotives and trains in real-time, enabling us to anticipate issues and take preventative measures
- Predictive analytics have reduced online failures by 91% -- significantly reducing risk of derailments, rail fatigue and service interruptions
- Our patented algorithm improves safety and provides a competitive advantage: 86% of all equipment setoffs are confirmed defective versus an industry average of 65%



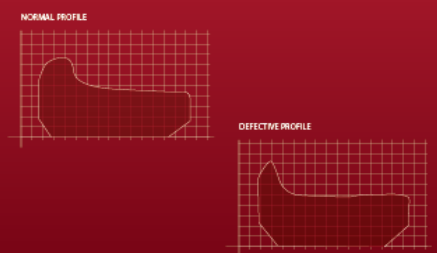
HOT BOX DETECTORS

Uses infrared technology to measure rail-car bearing and wheel temperatures to determine component failures and inoperative brakes.



WHEEL IMPACT LOAD DETECTORS

Measures force applied by wheels on the track to identify wheel defects, protect rail integrity, and uncover weight imbalances to predict wheel failures.



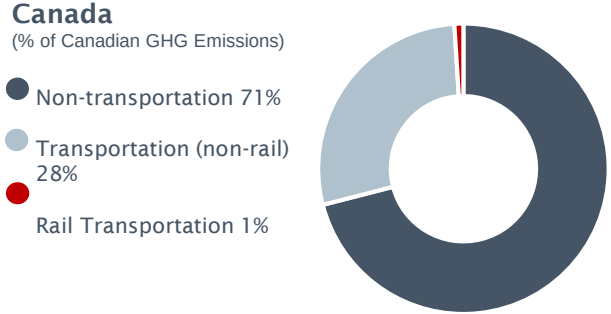
ACOUSTIC BEARING DETECTORS

Measures the sound emitted by rail-car wheels to predict internal rail-car roller bearing failures such as overheating.

WHEEL PROFILE DETECTORS

Automatically evaluates the geometry of rail-car wheel-sets for flange, tread and rim defects to identify failing wheel-sets for immediate or scheduled replacement.

OPERATING RESPONSIBLY



ENVIRONMENTAL SUSTAINABILITY

Transportation by rail is one of the most economical and environmentally responsible methods of moving freight.

- The transportation sector is responsible for 29% of Canada's annual GHG emissions, with the rail industry contributing only 1% to the country's total annual GHG emissions[1].
- Trains are 4 times more fuel efficient than trucks and produce 75% fewer GHG emissions[2].
- The transportation of freight by rail will continue to play an integral role in the low-carbon future for North America.

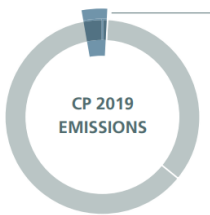
SUSTAINABILITY LEADERSHIP

DEMONSTRATED RESULTS



- Strong history of ESG disclosures and leading sustainability practices
- Issued our first TCFD Index in 2021
- Published our first Climate Strategy, including emissions reduction targets covering 100% of scope 1 & 2 emissions
- First “Say on Climate” vote at 2022 AGM

80% of CP’s TOTAL GHG EMISSIONS are addressed through our Locomotive Target, **INCLUDING 96%** of our Scope 1 emissions **PLUS 53%** of our Scope 3 emissions.

Locomotive Target

We will reduce our well-to-wheel GHG emissions intensity (grams per revenue ton-mile[10]) from locomotive operations by **38.3%** by 2030.

3.4% of CP’s TOTAL GHG EMISSIONS are captured by this target, **INCLUDING 100%** of our Scope 2 and 4% of our Scope 1 emissions.

Non-locomotive Target

We will reduce our absolute Scope 1 and 2 GHG emissions from non-locomotive operations (including emissions associated with our buildings and facilities) by **27.5%** by 2030.

SCIENCE BASED TARGETS DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

(1) Target reductions from a 2019 base year

POWERED BY THE SUN

OPTIMIZING OUR ASSETS

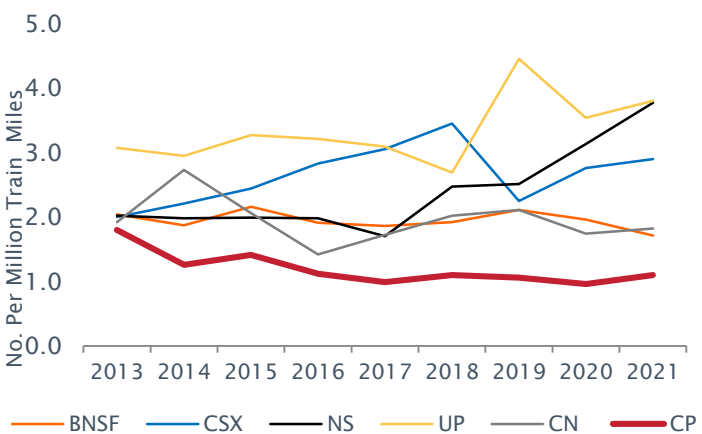
- CP's headquarters is powered by one of the largest private solar farms in Alberta
- Generates up to five megawatts of electricity while avoiding ~2,600 tonnes of carbon emissions annually
- The equivalent of taking ~570 cars off the road
- The project reduces CP's scope 2 GHG emissions

MOVING FORWARD

HYDROGEN LOCOMOTIVE PROJECT

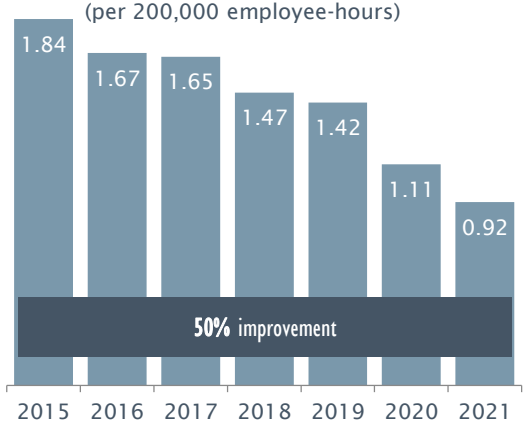
- CP has a long history of implementing programs and technologies designed to improve fuel efficiency and reduce emissions
  - Early adopter and tester of low-emitting locomotive technologies (e.g. biofuels, CNG, battery powered solutions)
  - Over the last decade, CP has improved its locomotive fuel efficiency by more than 20%
- CP's Hydrogen Locomotive Program is on track to deliver North America's first hydrogen-powered line-haul freight locomotive – first unit moved of its own power in Q4 2022
- The program involves retrofitting a line-haul locomotive with hydrogen fuel cells and battery technology to drive the locomotive's electric traction motors
- The ability to retrofit diesel locomotives with a zero-emission technology provides a practical pathway to decarbonizing the freight-rail industry
- This project is all incremental to our GHG emission reduction targets

REDACTED PUBLIC RECORD VERSION



OPERATING RESPONSIBLY

SAFETY



Safety is foundational at CP. We remain steadfast in our commitment to safety, across our entire operation.

- CP has been North America's safest railway for 16 consecutive years. Over the last decade, our train accident frequency has decreased more than 40%.
- Each year CP allocates over 50% of its capital investments toward safety and replacement initiatives to ensure our network remains safe and efficient.
- Management compensation is tied to safety performance: 20% of the short-term incentive program is weighted to safety.

OUR MARKETS

(2021 Figures)

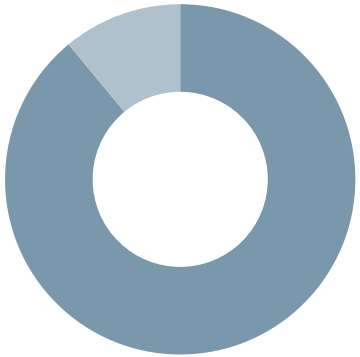
REDACTED PUBLIC RECORD VERSION

BULK

GRAIN

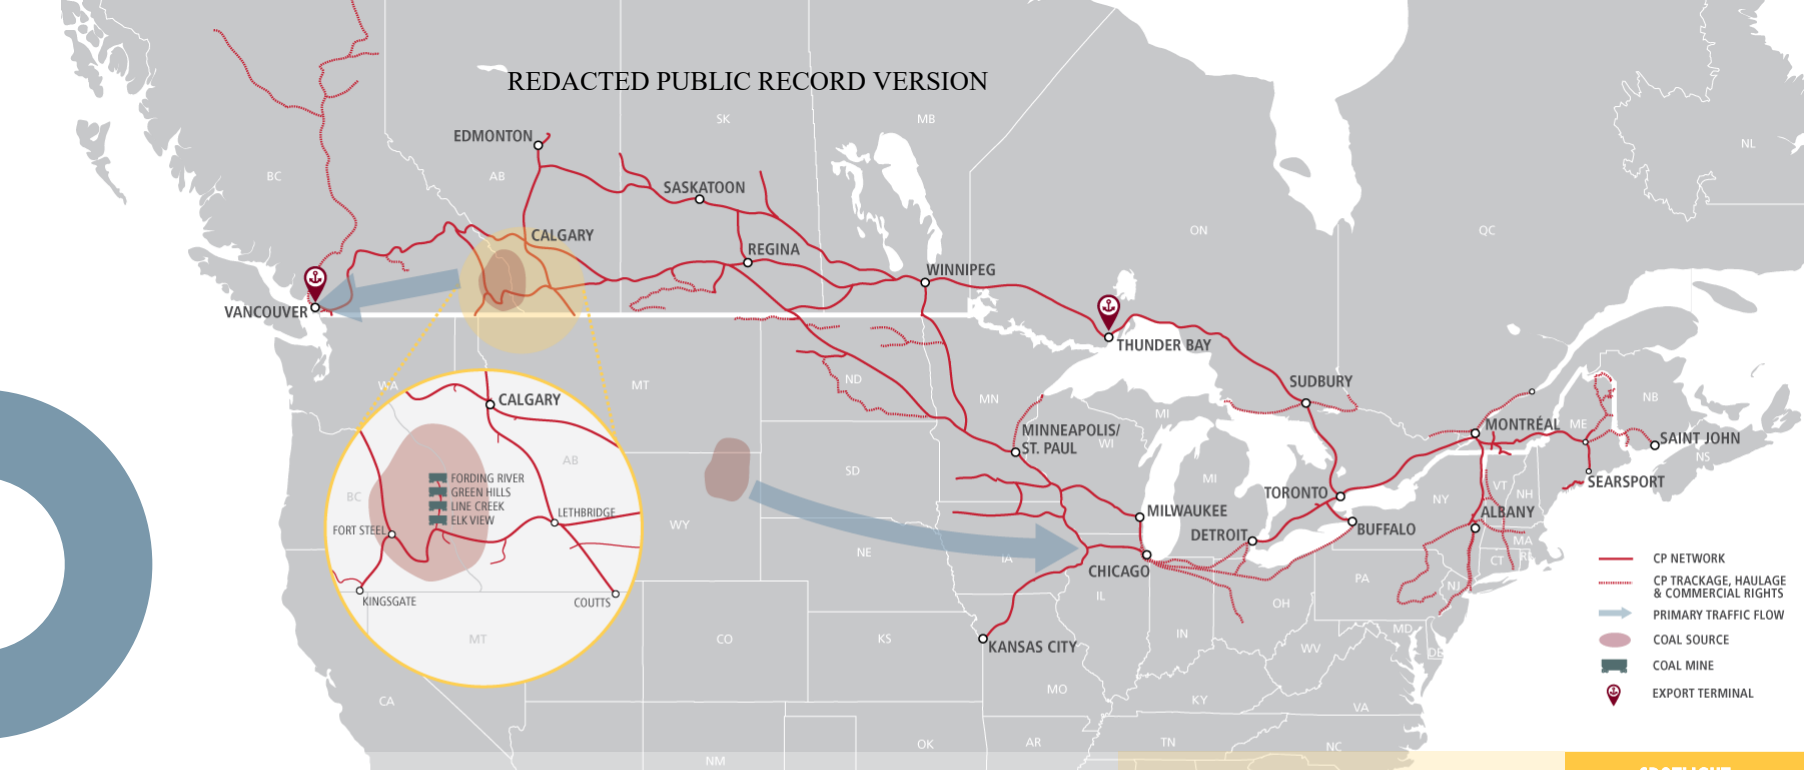
- **Canadian Grain 66%**
  Regulated 47%
  Non-regulated 19%
- **U.S. Grain 34%**
  Domestic 20%
  Export 14%

Grain is our largest market segment and we are the best at servicing it. CP is the only Class 1 railway with meaningful grain franchises in both Canada and the U.S. Our network is strategically positioned through the heart of the grain-producing regions of Western Canada and the Northern Plains of the U.S. We provide direct access from high-throughput unit train loading elevators to major export port terminals for shipments overseas.



SPOTLIGHT

THE FUTURE OF GRAIN TRANSPORTATION



15% of the high-throughput elevators we service are 8,500-foot high efficiency product capable (“HEP”). By the end of 2021, more than 40% of CP-served train-loading facilities were HEP qualified. The 8,500-foot HEP grain train, when combined with our investment in new hopper cars, will enable >40% more grain to be moved per train.

REDACTED PUBLIC RECORD VERSION

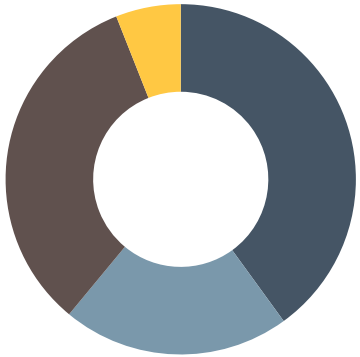
BULK
COAL

- Canadian Coal 89%
- U.S. Coal 11%

Our Canadian coal business consists primarily of metallurgical coal. Leveraging our shortest routes to Vancouver terminals, more than 97% of our Canadian coal shipments, which originate in Southeast B.C., are exported through the West Coast with the remaining 3% moving through Thunder Bay terminals or Chicago.

For U.S. coal, CP receives coal from connecting railroads that serve thermal coal mines in the Powder River Basin region of Montana and Wyoming. The coal is them delivered to power generating facilities in the Midwest states of Wisconsin and Iowa.

SPOTLIGHT



CONTINUOUS IMPROVEMENT IN THE COAL SUPPLY CHAIN

We have successfully implemented a pull-to-demand model that allows coal trains to run at evenly spaced intervals with a consistent flow to the ports. Our coal fleet cycle time has improved up to 20% since 2012.

REDACTED PUBLIC RECORD VERSION

BULK

POTASH & FERTILIZERS

- **Potash 61%**
  Export 40%
  Domestic 21%
- **Fertilizers 33%**
- **Sulphur 7%**

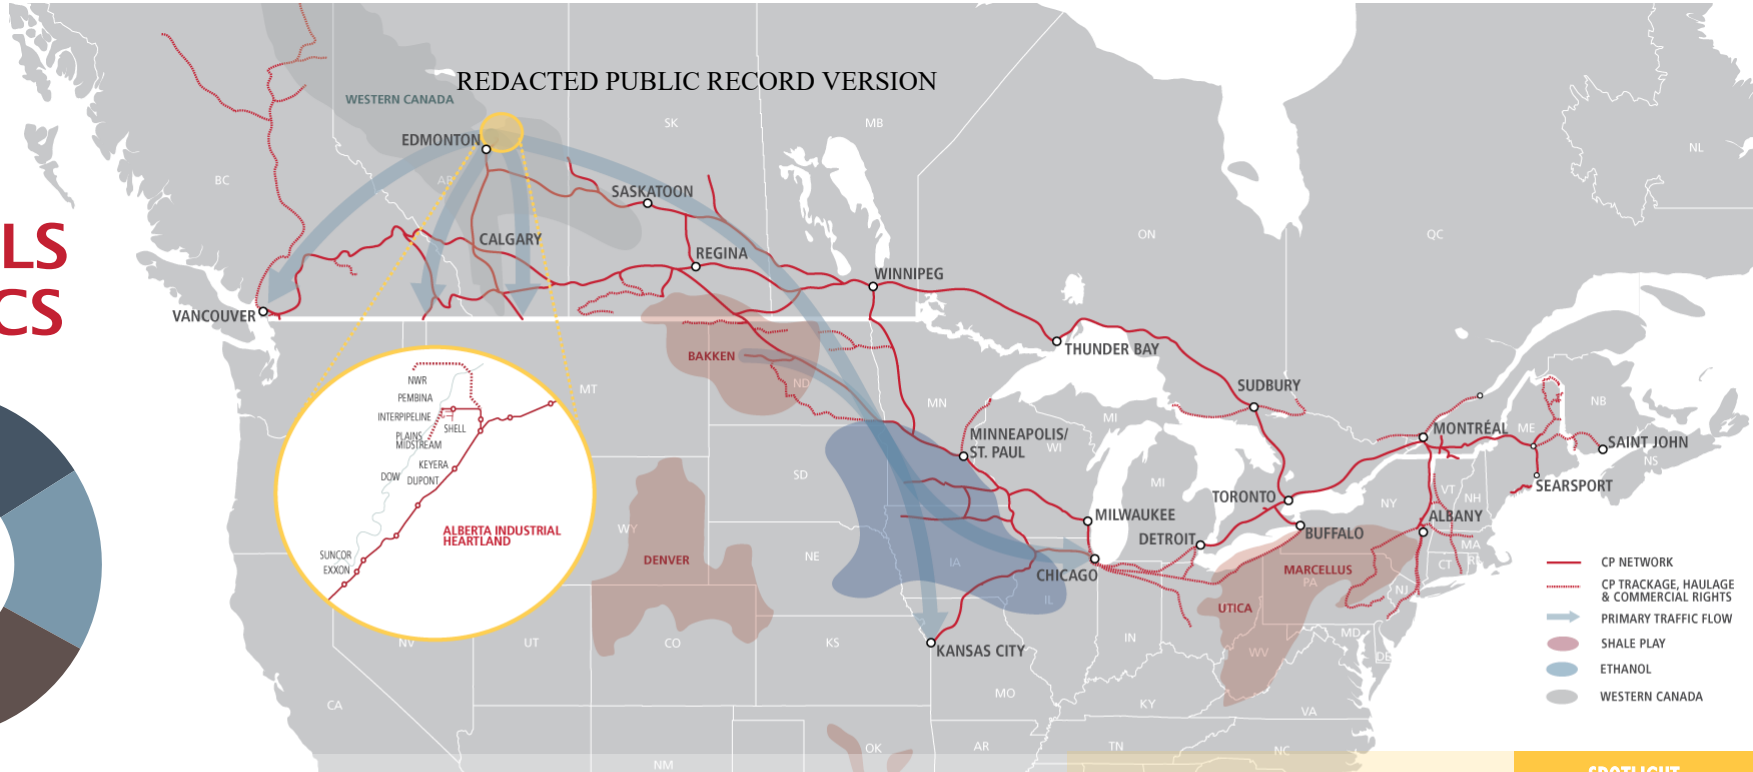
For export potash, our key competitive advantage stems from our shortest route to Vancouver and the U.S. Pacific Northwest, via connections with U.S. carriers. In our domestic market, potash moved primarily to the U.S. Midwest for local application, eventually reaching end markets in the Southeast U.S.

Our strong origin access to fertilizer producers in Western Canada and shortest routes to destinations in the U.S. Midwest support our growth in the fertilizer market.

SPOTLIGHT

THE LEADING CARRIER FOR EXPORT POTASH

CP has origin access to Canada's 11 potash mines and the shortest routes to Vancouver and Portland. We move approximately 70% of potash produced in North America.



CP is now operating trains with upwards of 200 cars to Vancouver and 185 cars to Portland creating capacity and a more efficient potash supply chain.

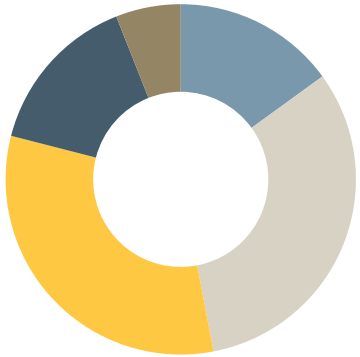
MERCHANDISE

ENERGY, CHEMICALS & PLASTICS

- Biofuels 16%
- Chemicals 17%
- Crude 18%
- Petroleum Products 39%
- Plastics 10%

Our network is ideally located to serve a wide range of commodities: biofuels originate in the U.S. Midwest; chemicals originate in Eastern Canada, Alberta, the U.S. Midwest and Gulf of Mexico; crude originates primarily in Western Canada; petroleum products originate predominantly in Alberta, Saskatchewan and North Dakota; LPG and plastics originate mostly in Alberta.

SPOTLIGHT



A DEDICATED TRAIN SERVICE

The CP Energy Train, a non-crude train, is a direct service connecting production areas in northern Alberta to Vancouver that runs faster than our competitor allowing customers to rationalize their fleets.

MERCHANDISE

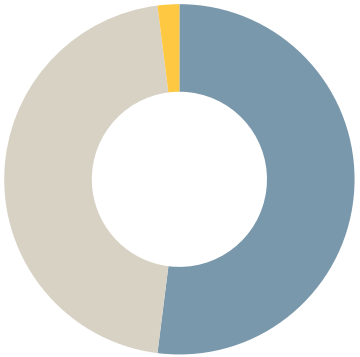
METALS, MINERALS & CONSUMER PRODUCTS

REDACTED PUBLIC RECORD VERSION

- Frac Sand 15%
- Other Aggregates 32%
- Steel 32%
- Consumer Products 15%
- Mines & Metals 6%

This portfolio includes a diverse mix of input materials such as sand, cement, clay, gravel, salt, steel and non-ferrous metals. These materials typically originate on CP's network and are shipped across North America. CP's network of transload facilities enable CP to serve customers and facilities not located directly on our network.

SPOTLIGHT

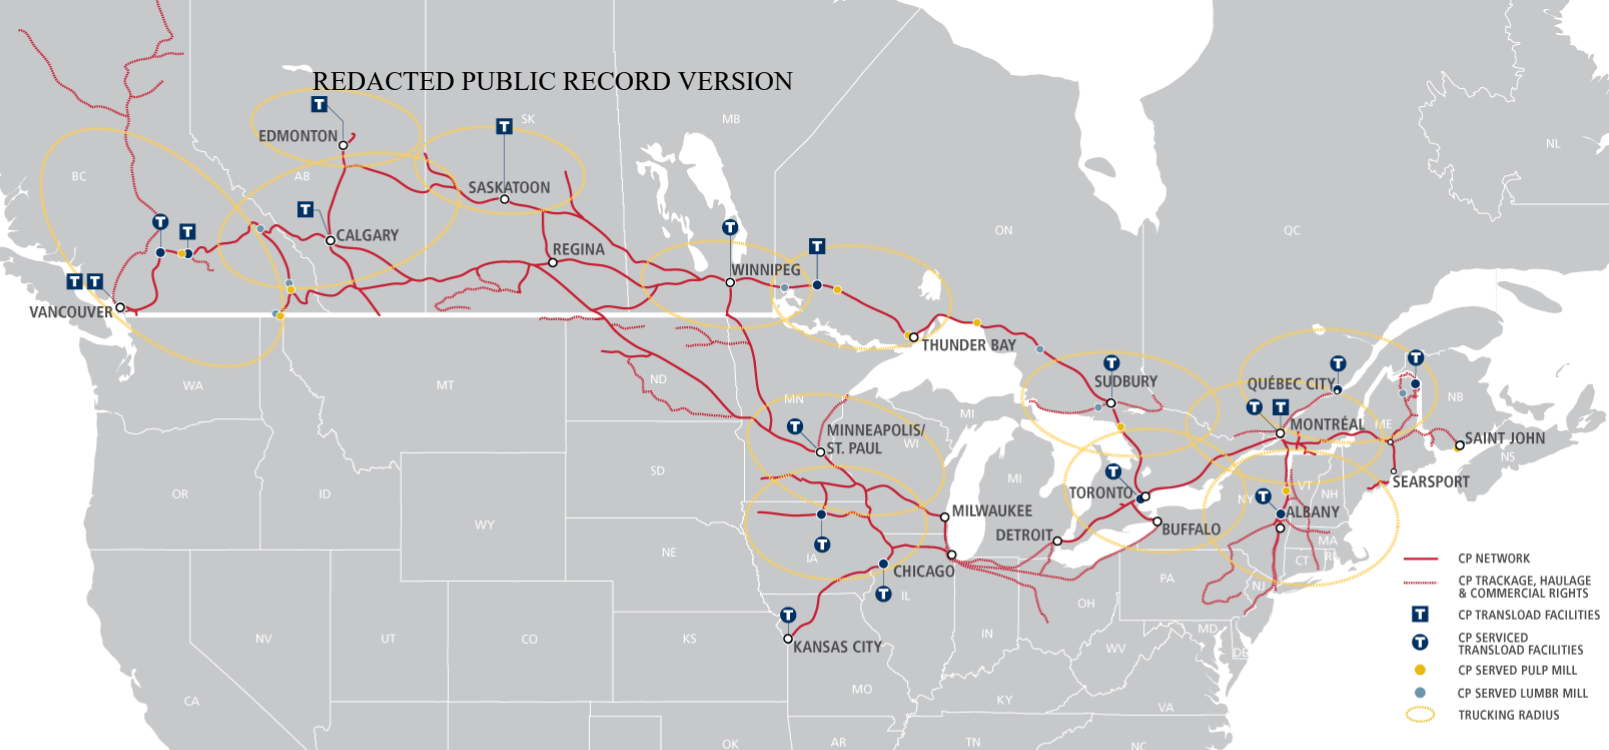


TRANSLOADS ENABLING GROWTH

Transcare Logistics, our wholly owned subsidiary, is a transload and distribution company that operates four locations in Canada: Montréal, Toronto, Mississauga and Hamilton. Our Hamilton facility is the largest and fastest rail-to-truck steel transload facility and the first automated rail-based transload operation in Canada.

REDACTED PUBLIC RECORD VERSION

MERCHANDISE



FOREST PRODUCTS

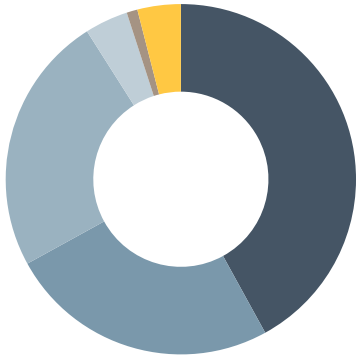
- Pulp & Paper 52%
- Lumber & Panel 46%
- Other 2%

Our network is ideally situated to connect raw materials and finished products to market. We have abundant railcar supply and network capacity to capture emerging growth opportunities in forest products.

Our portfolio includes lumber, wood pulp, paper products and panel transported from key producing areas in Western Canada, Ontario and Québec to various destinations in North America and for export overseas.

SPOTLIGHT

E-COMMERCE DRIVING ADDITIONAL GROWTH IN FOREST PRODUCTS



Our transload network extends our reach to non-rail served box and paperboard plants.

As e-commerce continues to gain in traction, CP's transload facilities and intermodal capabilities give us a competitive advantage to grow market share and benefit from increased demand for packaging materials.

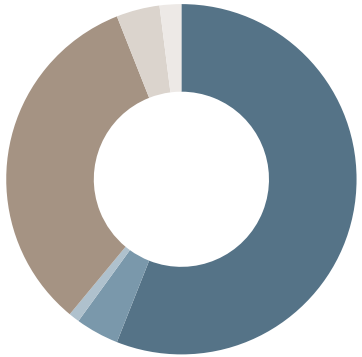
REDACTED PUBLIC RECORD VERSION

MERCHANDISE

AUTOMOTIVE

- **Finished Vehicles 95%**
  - Origin Canada 42%
  - Origin U.S. 25%
  - Imports 24%
  - Origin Mexico 4%
- **Machinery 1%**
- **Parts & Other 4%**

We ship the whole value chain: domestically produced vehicles, imports, automotive parts and machinery. Our diverse portfolio includes Canadian-produced vehicles that ship to the U.S. from Ontario production facilities; U.S.-produced vehicles that ship within the U.S. as well as cross-border into Canadian markets; import vehicles that move through Vancouver to Eastern Canadian markets; and, Mexican-produced vehicles that ship to the U.S. and Canada.

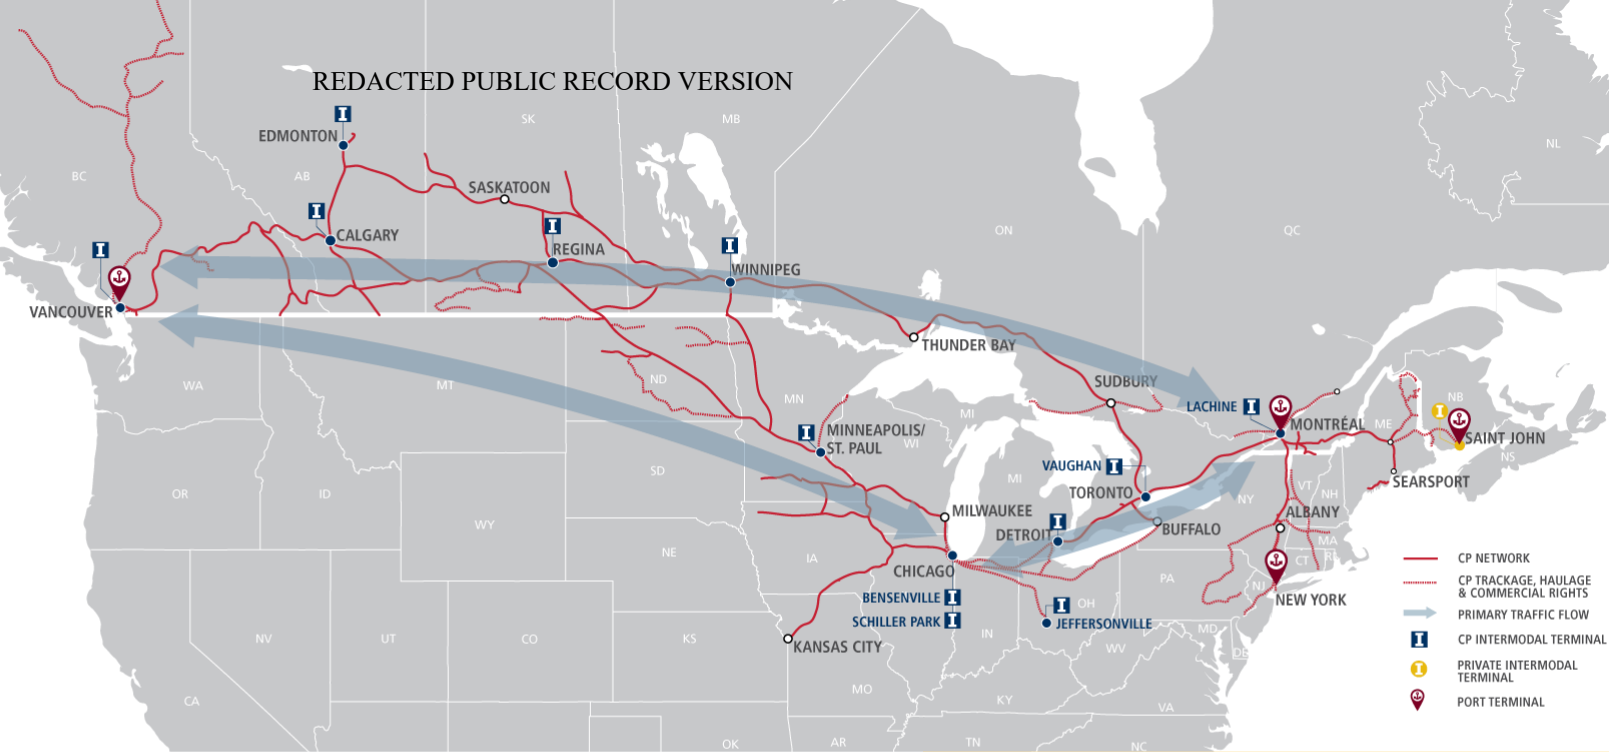


SPOTLIGHT

VANCOUVER AUTO COMPOUND

Vancouver is Canada's primary automotive gateway for Asian imports and one of the largest destination markets. Recognizing the significant opportunity for growth in this market and the ability to offer a unique solution in a deeply congested market, CP opened its Vancouver Auto Compound on 19 acres of CP-owned land.

REDACTED PUBLIC RECORD VERSION

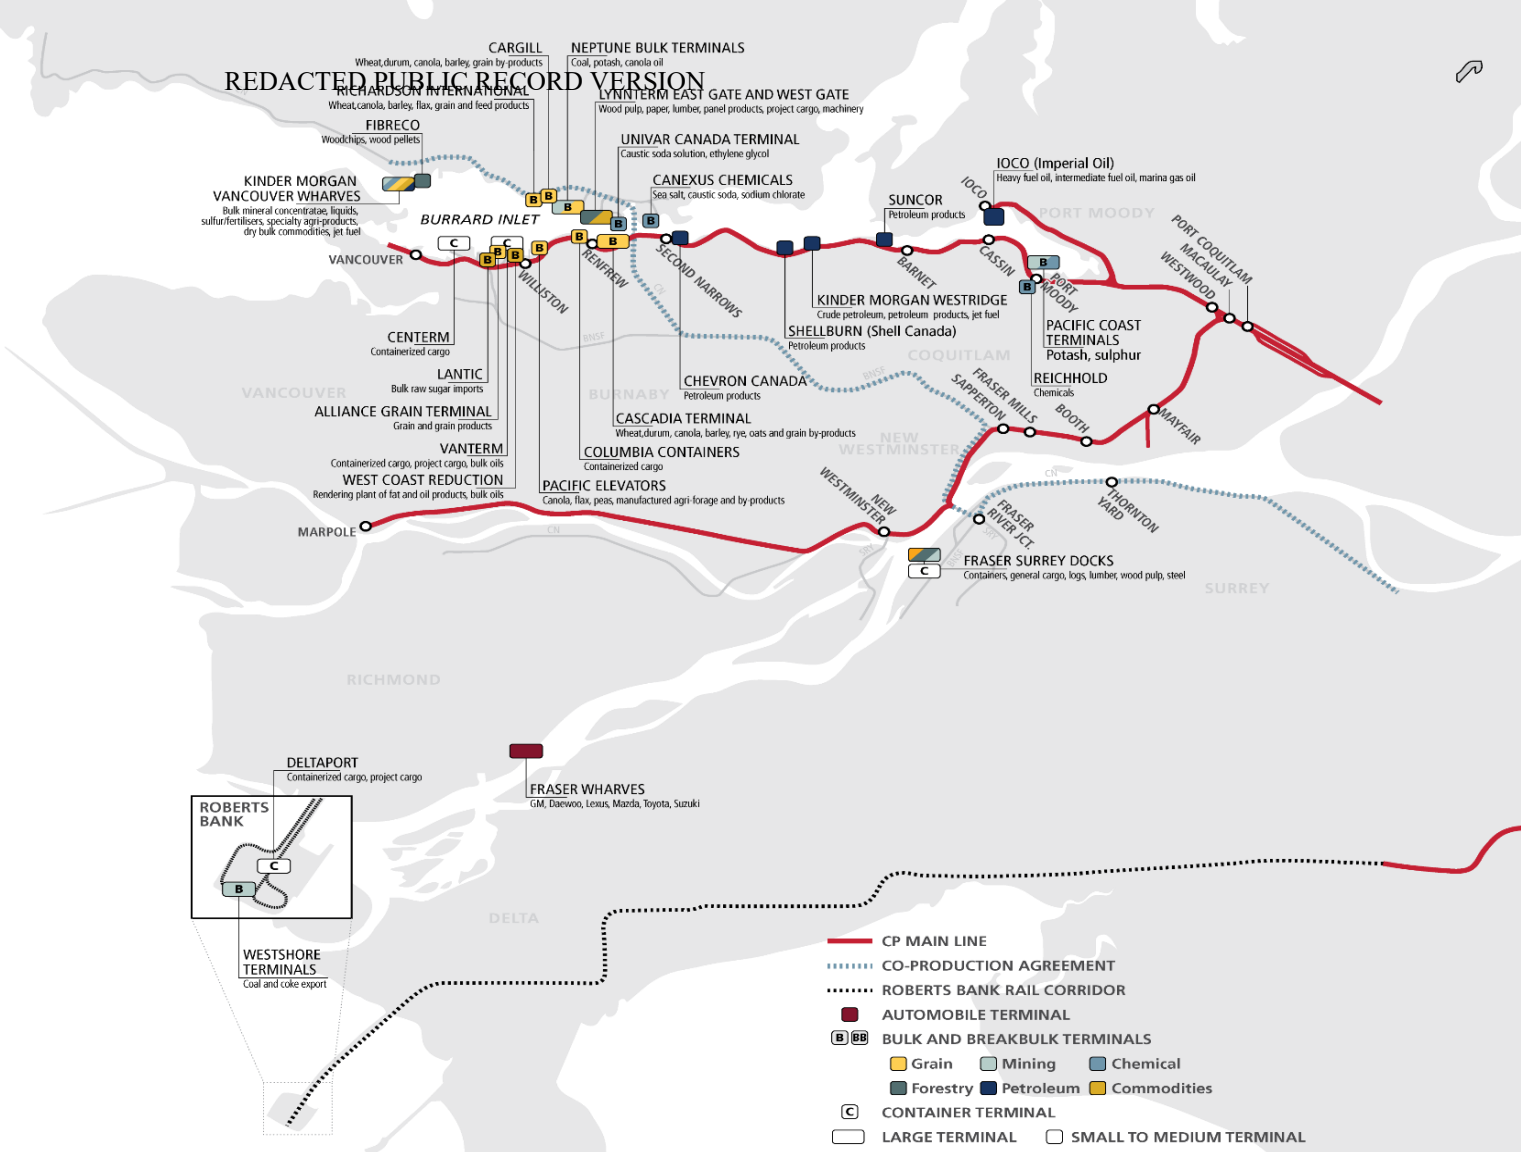


INTERMODAL

- **Domestic Intermodal 58%**
  Canada 53%
  Cross-border 4%
  U.S. 1%
- **International Intermodal 42%**
  Port of Vancouver 33%
  Port of Montréal 7%
  Other 2%

With industry-leading service performance, extended service reach, and an enhanced suite of product offerings, we're growing with existing customers and attracting new business. Our domestic intermodal provides truck-like service for transcontinental and cross-border service. International intermodal moves container volumes between the ports to inland destinations across Canada and the U.S.

CP has been leveraging our shorter route miles to provide transit time advantages to our customers in key lanes. Containerized traffic from the Port of Vancouver is primarily long-haul business destined for business centers across Canada and the U.S. Midwest.

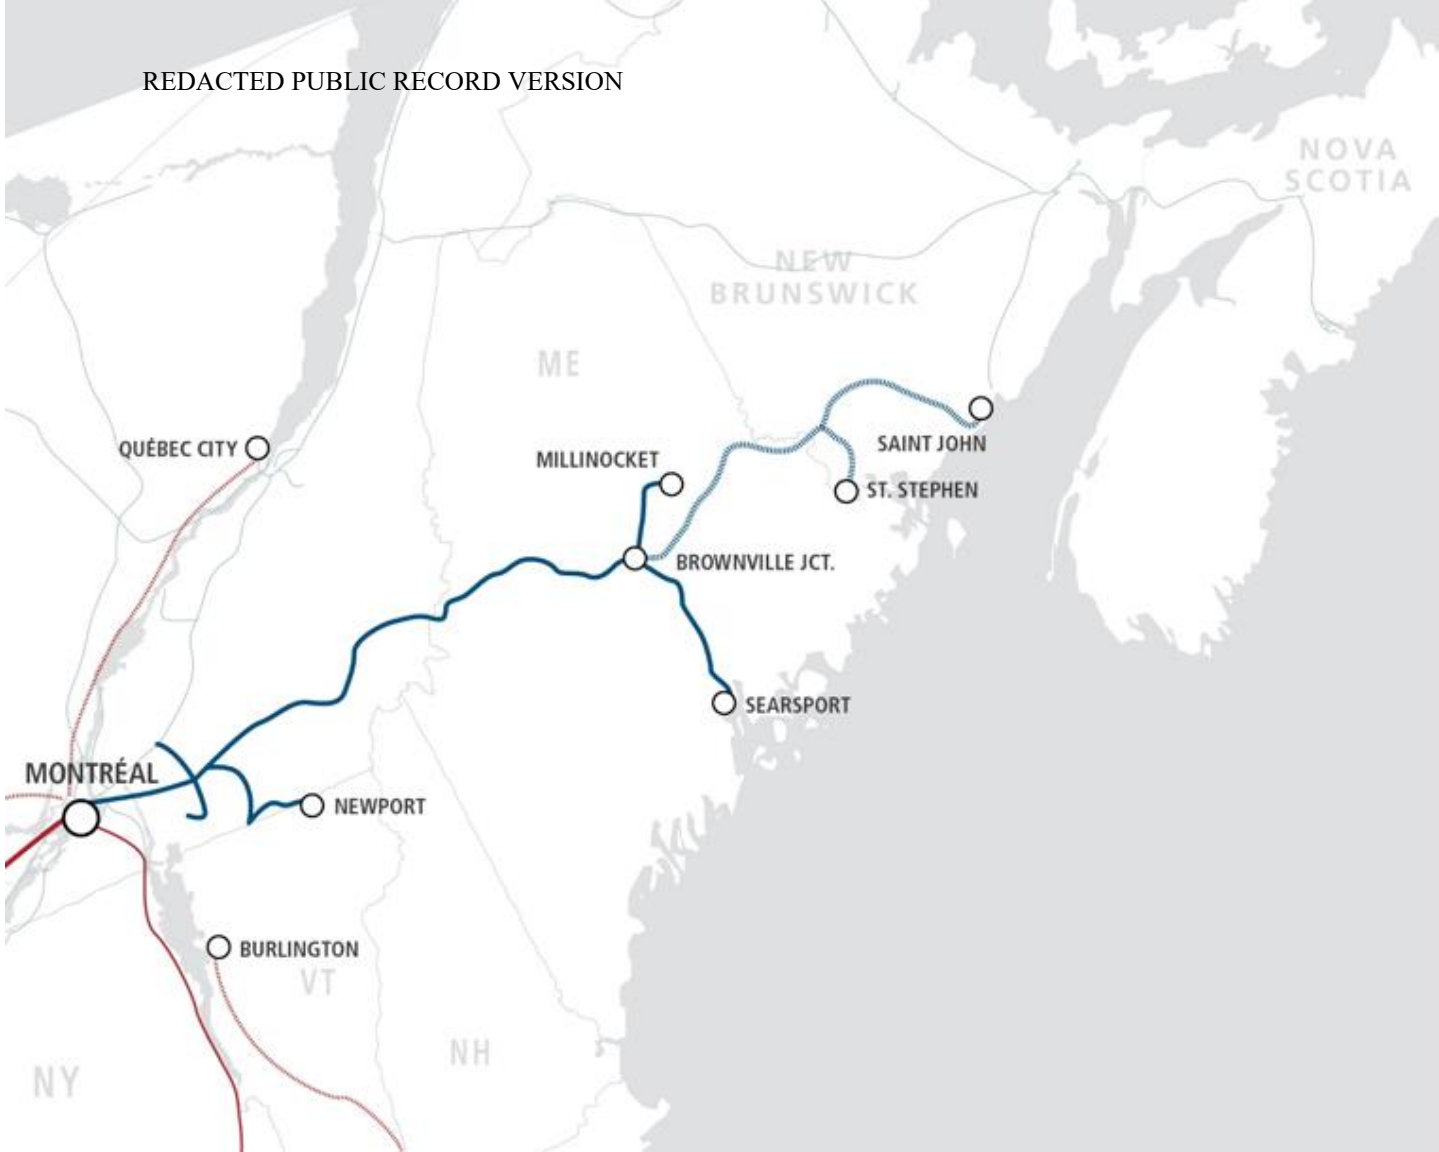


SPOTLIGHT

LEVERAGING OUR EXTENDED EAST COAST REACH

CP's recent acquisition of the Central, Maine & Québec (CMQ) presents additional growth opportunities in intermodal. CP can now offer the shortest route between Atlantic Canada and key North American markets.

PORT OF VANCOUVER



REDACTED PUBLIC RECORD VERSION

CENTRAL MAINE & QUÉBEC RAILWAY (CMQ)

STRATEGIC ACQUISITION

- **Deepwater port access** at Saint John and Searsport – provides CP with coast-to-coast access
- **Shortest routing** from the Maritimes to Montreal, Toronto, Chicago and Western Canada
- Opportunity to more than double revenues in 12-24 months
- **Investing in the CMQ network** to get it to CP safety and operational standards

CP PRESS RELEASE, "CANADIAN PACIFIC AND KANSAS CITY SOUTHERN EXECUTE AGREEMENT TO COMBINE, CREATING FIRST SINGLE-LINE RAIL NETWORK LINKING U.S.-MEXICO-CANADA" (SEPT. 15, 2021)

FOR IMMEDIATE RELEASE

Canadian Pacific and Kansas City Southern Execute Agreement to Combine, Creating First Single-Line Rail Network Linking U.S.-Mexico-Canada

Stock and Cash Transaction Represents an Enterprise Value of Approximately $31 Billion

Expected to Create Annualized Synergies of Approximately $1 Billion within Three Years

Historic Combination Enhances Competition, Creates New Options for Customers, and Supports Economic Growth in North America

Companies to Host Investor Conference Call Thursday at 8 a.m. ET

Calgary and Kansas City, Mo. – Sept. 15, 2021 – Canadian Pacific Railway Limited (TSX: CP, NYSE: CP) ("CP") and Kansas City Southern (NYSE: KSU) ("KCS") today announced they have entered into a merger agreement, under which CP has agreed to acquire KCS in a stock and cash transaction representing an enterprise value of approximately USD$31 billion[1], which includes the assumption of $3.8 billion of outstanding KCS debt. The transaction, which has the unanimous support of both boards of directors, values KCS at $300 per share, representing a 34% premium, based on the CP closing price on Aug. 9, 2021, the date prior to which CP submitted a revised offer to acquire KCS, and KCS' unaffected closing price on March 19, 2021[2].

"Our path to this historic agreement only reinforces our conviction in this once-in-a-lifetime partnership," said CP President and Chief Executive Officer Keith Creel. "We are excited to get to work bringing these two railroads together. By combining, we will unlock the full potential of our networks and our people while providing industry-best service for our customers. This perfect end-to-end combination creates the first U.S.-Mexico-Canada rail network with new single-line offerings that will deliver dramatically expanded market reach for CP and KCS customers, provide new competitive transportation options, and support North American economic growth."

"We are glad to be partnering with CP to create a railroad that is able to compete by providing the best value for the transportation dollar," said KCS President and Chief Executive Officer Patrick J. Ottensmeyer. "The CP-KCS combination will not only benefit customers, labor partners, and shareholders through new, single-line transportation services, attractive synergies and complementary routes, it will also benefit KCS and our

[1] Except where noted, all figures are in U.S. dollars.

[2] Based on KCS closing share price of $224.16 as of March 19, 2021 and CP closing share price of CAD$91.50 (at 1.2565 FX rate) as of Aug. 9, 2021.

employees by enabling us to become part of a growing and truly North American continental enterprise."

While remaining the smallest of six U.S. Class 1 railroads by revenue, the combined company would have a much larger and more competitive network, operating approximately 20,000 miles of rail, employing close to 20,000 people, and generating total revenues of approximately $8.7 billion based on 2020 actual revenues. The CP-KCS combination is expected to create jobs across the joined network. Additionally, the companies expect efficiency and service improvements to achieve meaningful environmental benefits.

Transaction to Expand Options and Efficiencies for Customers

A CP-KCS combination would provide unprecedented reach via new single-line hauls across a combined network, offering:

- New single-line competitive options for domestic intermodal shipments between Mexico, the U.S. Midwest, and Canada, providing a truck competitive product for time-sensitive shipments in the high-value parts, perishables, and expedited markets.
- New single-line hauls linking key automotive manufacturing and distribution centers in Mexico, the U.S. Midwest, and Canada, capitalizing on CP's best-in-class automotive compound network.
- New single-line routes linking energy, chemical, and merchandise shippers to more quickly and efficiently connect origin and destination facilities and reach new markets and global consumers.
- Unmatched access to Atlantic, Gulf, and Pacific ports, linking international intermodal shippers with North America's largest consumer markets providing new optionality, capacity, and resiliency.
- New single-line routes allowing the efficient flow of agricultural products from CP's origin-rich franchise to KCS' destination-rich franchise, generating new optionality for shippers and receivers.
- Extended reach for short line and regional railroads coupled with new optionality for non-rail served customers via our extensive transload network.

Importantly, customers would not experience a reduction in independent railroad choices as a result of the transaction. CP-KCS have committed to keep all existing freight rail gateways open on commercially reasonable terms, while simultaneously competing aggressively to attract traffic via new single-line north-south lanes between Canada, the Upper Midwest and the Gulf Coast, Texas, and Mexico.

A CP-KCS combination would preserve the six-railroad structure of the North American Class 1 rail network: two in the west, two in the east and two in Canada, each with access to the U.S. Gulf Coast. The two companies once combined would remain the smallest of the Class 1 carriers.

Improving Highway Traffic, Environmental Sustainability, and Safety

The new single-line routes made possible by the transaction are expected to shift trucks off crowded U.S. highways, lowering emissions and reducing the need for public investments in road and highway bridge repairs. Rail is four times more fuel efficient than trucking, and one train can keep more than 300 trucks off public roads and produce 75 percent less greenhouse gas emissions. The synergies created by this combination are expected to take tens of thousands of trucks off the highways annually.

CP is committed to sustainability and is currently developing North America's first line-haul hydrogen-powered locomotive. Additionally, the combined company would maintain both CP and KCS' pledges to improve fuel efficiency and lower emissions in-line with the Paris Agreement to support a more sustainable North American supply chain.

Creating Value for KCS and CP Shareholders

Following the closing into a voting trust, common shareholders of KCS will receive 2.884 CP shares and $90 in cash for each KCS common share held. Preferred shareholders will receive $37.50 in cash for each KCS preferred share held. The fixed exchange ratio implies a price for KCS of $300 per share, representing a 34% premium, based on the CP closing price on August 9, 2021 and KCS' unaffected closing price on March 19, 2021[3].

Immediately following the closing into trust, KCS common shareholders are expected to own 28 percent of CP's outstanding common shares, providing the ability to participate in the upside of both companies' growth opportunities. Following final regulatory approval by the U.S. Surface Transportation Board ("STB"), KCS shareholders would also reap the benefits of synergies resulting from the combination.

The combined growth strategies of the two fastest-growing Class 1s will result in new efficiencies for customers and improved on-time performance under their respective Precision Scheduled Railroading programs. The combined company is expected to create annualized synergies of approximately $1 billion over three years.

The combination is expected to be accretive to CP's adjusted diluted EPS[4] in the first full year following CP's acquisition of control of KCS, and is expected to generate double-digit accretion upon the full realization of synergies thereafter.

To fund the stock consideration of the merger, CP will issue 262 million new shares. Consistent with the previously announced transaction, the cash portion will be funded through a combination of cash-on-hand and raising approximately $8.5 billion in debt, for which financing has been committed. As part of the merger, CP will assume approximately $3.8 billion of KCS' outstanding debt. Following the closing into trust, CP expects that its outstanding debt will be approximately $20 billion.

[3] Based on KCS closing share price of $224.16 as of March 19, 2021 and CP closing share price of CAD$91.50 (at 1.2565 FX rate) as of Aug. 9, 2021.

[4] Accretion based on adjusted diluted EPS excluding one-time advisory, financing, and integration costs as well as incremental transaction-related amortization.

Pro forma for the transaction, CP estimates its leverage ratio against 2021E street consensus EBITDA to be approximately 3.9x with the assumption of KCS debt and issuance of new acquisition-related debt. In order to manage this leverage effectively, CP will continue to temporarily suspend its normal course issuer bid program, and expects to produce approximately $7 billion of levered free cash flow (after interest and taxes) over the next three years. CP estimates its long-term leverage target of approximately 2.5x to be achieved within 24 months after closing into trust. The combined company will remain committed to maintaining strong investment grade credit ratings while continuing to return capital for the benefit of shareholders.

Strong Stakeholder Support for CP-KCS

More than 1,000 stakeholders – including railroad labor unions, shippers, and community leaders – have written letters to the STB supporting CP's proposed combination with KCS. These letters emphasize the enhanced competition and unsurpassed levels of service, safety and economic efficiency that the transaction will bring for shippers and communities across the U.S., Mexico, and Canada that a CP-KCS combination offers.

Clear Path to Complete Transaction and Merger

On May 6, 2021, the STB approved the use of a voting trust for a planned CP-KCS merger, and the pertinent circumstances surrounding this new agreement between CP and KCS have not changed relative to those underlying the STB's decision approving a trust. To close into voting trust, the transaction requires approval from shareholders of both companies along with satisfaction of customary closing conditions, including Mexican regulatory approvals. CP would then acquire KCS and place the KCS shares into the voting trust, at which point KCS shareholders would receive 2.884 CP shares and $90 in cash for each KCS common share held. The companies expect the transaction to close and KCS shareholders to receive their consideration in Q1 2022.

CP's ultimate acquisition of control of KCS' U.S. railways is subject to the approval of the STB. In April, the STB decided that it would review the CP-KCS combination under the merger rules in existence prior to 2001 and the waiver granted to KCS in 2001 to exempt it from the 2001 merger rules. In August, the STB reaffirmed that the pre-2001 rules would govern its review of the CP-KCS transaction.

The STB review of CP's proposed control of KCS is expected to be completed in the second half of 2022. Upon obtaining control approval, the two companies will be integrated fully over the ensuing three years, unlocking the benefits of the combination.

Board, Management, and Headquarters

Following STB approval of the CP's control of KCS, Mr. Creel will serve as the Chief Executive Officer of the combined company. The combined entity will be named Canadian Pacific Kansas City ("CPKC").

Calgary will be the global headquarters of CPKC, and Kansas City, Missouri will be the U.S. headquarters. The Mexico headquarters will remain in Mexico City and Monterrey. CP's current U.S. headquarters in Minneapolis-St. Paul will remain an important base of operations.

Four KCS Directors will join CP's expanded Board at the appropriate time, bringing their experience and expertise in overseeing KCS' multinational operations.

Advisors

BMO Capital Markets and Goldman Sachs & Co. LLC are serving as financial advisors to Canadian Pacific. Sullivan & Cromwell LLP, Bennett Jones LLP and the Law Office of David L. Meyer are serving as legal counsel. Creel, García-Cuéllar, Aiza y Enríquez, S.C. are serving as Mexican legal counsel to Canadian Pacific. Evercore is serving as the Canadian Pacific Board's financial advisors and Blake, Cassels & Graydon LLP is serving as the Board's legal counsel.

BofA Securities and Morgan Stanley & Co. LLC are serving as financial advisors to Kansas City Southern. Wachtell, Lipton, Rosen & Katz, Baker & Miller PLLC, Davies Ward Phillips & Vineberg LLP, WilmerHale, and White & Case, S.C. are serving as legal counsel to Kansas City Southern.

Conference Call for Investment Community

CP and KCS will host a joint investor conference call Thursday, Sept. 16, at 8 a.m. ET to discuss this announcement. A live webcast of the call and the replay will be available on the CP website at https://investor.cpr.ca/events and the KCS website at https://investors.kcsouthern.com/events-calendar. Supporting materials will be posted on www.FutureForFreight.com. To listen to the live conference call, dial (877) 830-2586 in the U.S. or (785) 424-1734 internationally, passcode 74335.

A conference call replay will be available for one week following the call and can be accessed by dialing (800) 753-5212 (no passcode needed).

FORWARD LOOKING STATEMENTS AND INFORMATION

This news release includes certain forward looking statements and forward looking information (collectively, FLI) to provide CP and KCS shareholders and potential investors with information about CP, KCS and their respective subsidiaries and affiliates, including each company's management's respective assessment of CP, KCS and their respective subsidiaries' future plans and operations, which FLI may not be appropriate for other

purposes. FLI is typically identified by words such as “anticipate”, “expect”, “project”, “estimate”, “forecast”, “plan”, “intend”, “target”, “believe”, “likely” and similar words suggesting future outcomes or statements regarding an outlook. All statements other than statements of historical fact may be FLI.

Although we believe that the FLI is reasonable based on the information available today and processes used to prepare it, such statements are not guarantees of future performance and you are cautioned against placing undue reliance on FLI. By its nature, FLI involves a variety of assumptions, which are based upon factors that may be difficult to predict and that may involve known and unknown risks and uncertainties and other factors which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by these FLI, including, but not limited to, the following: the timing and completion of the transaction, including receipt of regulatory and shareholder approvals and the satisfaction of other conditions precedent; interloper risk; the realization of anticipated benefits and synergies of the transaction and the timing thereof; the success of integration plans; the focus of management time and attention on the transaction and other disruptions arising from the transaction; changes in business strategy and strategic opportunities; estimated future dividends; financial strength and flexibility; debt and equity market conditions, including the ability to access capital markets on favourable terms or at all; cost of debt and equity capital; potential changes in the CP share price which may negatively impact the value of consideration offered to KCS shareholders; the ability of management of CP, its subsidiaries and affiliates to execute key priorities, including those in connection with the transaction; general Canadian, U.S., Mexican and global social, economic, political, credit and business conditions; risks associated with agricultural production such as weather conditions and insect populations; the availability and price of energy commodities; the effects of competition and pricing pressures, including competition from other rail carriers, trucking companies and maritime shippers in Canada, the U.S. and Mexico; North American and global economic growth; industry capacity; shifts in market demand; changes in commodity prices and commodity demand; uncertainty surrounding timing and volumes of commodities being shipped; inflation; geopolitical instability; changes in laws, regulations and government policies, including regulation of rates; changes in taxes and tax rates; potential increases in maintenance and operating costs; changes in fuel prices; disruption in fuel supplies; uncertainties of investigations, proceedings or other types of claims and litigation; compliance with environmental regulations; labour disputes; changes in labour costs and labour difficulties; risks and liabilities arising from derailments; transportation of dangerous goods; timing of completion of capital and maintenance projects; sufficiency of budgeted capital expenditures in carrying out business plans; services and infrastructure; the satisfaction by third parties of their obligations; currency and interest rate fluctuations; exchange rates; effects of changes in market conditions and discount rates on the financial position of pension plans and investments; trade restrictions or other changes to international trade arrangements; the effects of current and future multinational trade agreements on the level of trade among Canada, the U.S. and Mexico; climate change and the market and regulatory responses to climate change; anticipated in-service dates; success of hedging activities; operational performance and reliability; customer, shareholder, regulatory and other stakeholder approvals and support; regulatory

and legislative decisions and actions; the adverse impact of any termination or revocation by the Mexican government of Kansas City Southern de Mexico, S.A. de C.V.'s Concession; public opinion; various events that could disrupt operations, including severe weather, such as droughts, floods, avalanches and earthquakes, and cybersecurity attacks, as well as security threats and governmental response to them, and technological changes; acts of terrorism, war or other acts of violence or crime or risk of such activities; insurance coverage limitations; material adverse changes in economic and industry conditions, including the availability of short and long-term financing; and the pandemic created by the outbreak of COVID-19 and its variants, and resulting effects on economic conditions, the demand environment for logistics requirements and energy prices, restrictions imposed by public health authorities or governments, fiscal and monetary policy responses by governments and financial institutions, and disruptions to global supply chains.

We caution that the foregoing list of factors is not exhaustive and is made as of the date hereof. Additional information about these and other assumptions, risks and uncertainties can be found in reports and filings by CP and KCS with Canadian and U.S. securities regulators, including any proxy statement, prospectus, material change report, management information circular or registration statement to be filed in connection with the transaction. Reference should be made to "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations—Forward Looking Statements" in CP's and KCS's annual and interim reports on Form 10-K and 10-Q. Due to the interdependencies and correlation of these factors, as well as other factors, the impact of any one assumption, risk or uncertainty on FLI cannot be determined with certainty.

Except to the extent required by law, we assume no obligation to publicly update or revise any FLI, whether as a result of new information, future events or otherwise. All FLI in this news release is expressly qualified in its entirety by these cautionary statements.

ABOUT CANADIAN PACIFIC

Canadian Pacific is a transcontinental railway in Canada and the United States with direct links to major ports on the west and east coasts. CP provides North American customers a competitive rail service with access to key markets in every corner of the globe. CP is growing with its customers, offering a suite of freight transportation services, logistics solutions and supply chain expertise. Visit www.cpr.ca to see the rail advantages of CP. CP-IR

ABOUT KCS

Headquartered in Kansas City, Mo., Kansas City Southern (KCS) (NYSE: KSU) is a transportation holding company that has railroad investments in the U.S., Mexico and Panama. Its primary U.S. holding is The Kansas City Southern Railway Company, serving the central and south central U.S. Its international holdings include Kansas City Southern de Mexico, S.A. de C.V., serving northeastern and central Mexico and the port cities of Lázaro Cárdenas, Tampico and Veracruz, and a 50 percent interest in Panama Canal Railway

Company, providing ocean-to-ocean freight and passenger service along the Panama Canal. KCS' North American rail holdings and strategic alliances with other North American rail partners are primary components of a unique railway system, linking the commercial and industrial centers of the U.S., Mexico and Canada. More information about KCS can be found at www.kcsouthern.com.

ADDITIONAL INFORMATION ABOUT THE TRANSACTION AND WHERE TO FIND IT

CP will file with the U.S. Securities and Exchange Commission (SEC) a registration statement on Form F-4, which will include a proxy statement of KCS that also constitutes a prospectus of CP, and any other documents in connection with the transaction. The definitive proxy statement/prospectus will be sent to the shareholders of KCS. CP will also file a management proxy circular in connection with the transaction with applicable securities regulators in Canada and the management proxy circular will be sent to CP shareholders. INVESTORS, STOCKHOLDERS AND SHAREHOLDERS OF KCS AND CP ARE URGED TO READ THE PROXY STATEMENT/PROSPECTUS AND MANAGEMENT PROXY CIRCULAR, AS APPLICABLE, AND ANY OTHER DOCUMENTS FILED OR TO BE FILED WITH THE SEC OR APPLICABLE SECURITIES REGULATORS IN CANADA IN CONNECTION WITH THE TRANSACTION WHEN THEY BECOME AVAILABLE, AS THEY WILL CONTAIN IMPORTANT INFORMATION ABOUT KCS, CP, THE TRANSACTION AND RELATED MATTERS. The registration statement and proxy statement/prospectus and other documents filed by CP and KCS with the SEC, when filed, will be available free of charge at the SEC's website at www.sec.gov. In addition, investors and shareholders will be able to obtain free copies of the registration statement, proxy statement/prospectus, management proxy circular and other documents which will be filed with the SEC and applicable securities regulators in Canada by CP online at investor.cpr.ca and www.sedar.com, upon written request delivered to CP at 7550 Ogden Dale Road S.E., Calgary, Alberta, T2C 4X9, Attention: Office of the Corporate Secretary, or by calling CP at 1-403-319-7000, and will be able to obtain free copies of the proxy statement/prospectus and other documents filed with the SEC by KCS online at www.investors.kcsouthern.com, upon written request delivered to KCS at 427 West 12th Street, Kansas City, Missouri 64105, Attention: Corporate Secretary, or by calling KCS's Corporate Secretary's Office by telephone at 1-888-800-3690 or by email at corpsec@kcsouthern.com.

You may also read and copy any reports, statements and other information filed by KCS and CP with the SEC at the SEC public reference room at 100 F Street N.E., Room 1580, Washington, D.C. 20549. Please call the SEC at 1-800-732-0330 or visit the SEC's website for further information on its public reference room. This news release shall not constitute an offer to sell or the solicitation of an offer to buy any securities, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to appropriate registration or qualification under the securities laws of such jurisdiction. No offering of securities shall be made except by means of a prospectus meeting the requirements of Section 10 of the U.S. Securities Act of 1933, as amended.

NON-GAAP MEASURES

Although this news release includes forward-looking non-GAAP measures (adjusted diluted EPS and earnings before interest, tax, depreciation and amortization (EBITDA)), it is not practicable to reconcile, without unreasonable efforts, these forward-looking measures to the most comparable GAAP measures (diluted EPS and Net income, respectively), due to unknown variables and uncertainty related to future results. Please see Note on forward-looking statements above for further discussion.

PARTICIPANTS IN THE SOLICITATION OF PROXIES

This news release is not a solicitation of proxies in connection with the transaction. However, under SEC rules, CP, KCS, and certain of their respective directors and executive officers may be deemed to be participants in the solicitation of proxies in connection with the transaction. Information about CP's directors and executive officers may be found in its 2021 Management Proxy Circular, dated March 10, 2021, as well as its 2020 Annual Report on Form 10-K filed with the SEC and applicable securities regulators in Canada on February 18, 2021, available on its website at investor.cpr.ca and at www.sedar.com and www.sec.gov. Information about KCS's directors and executive officers may be found on its website at www.kcsouthern.com and in its 2020 Annual Report on Form 10-K filed with the SEC on January 29, 2021, available at www.investors.kcsouthern.com and www.sec.gov. These documents can be obtained free of charge from the sources indicated above. Additional information regarding the interests of such potential participants in the solicitation of proxies in connection with the transaction will be included in the proxy statement/prospectus and management proxy circular and other relevant materials filed with the SEC and applicable securities regulators in Canada when they become available.

March 21, 2021

Forward Looking Statements

This news release includes certain forward looking statements and forward looking information (collectively, FLI) to provide CP and KCS shareholders and potential investors with information about CP, KCS and their respective subsidiaries and affiliates, including each company's management's respective assessment of CP, KCS and their respective subsidiaries' future plans and operations, which FLI may not be appropriate for other purposes. FLI is typically identified by words such as "anticipate", "expect", "project", "estimate", "forecast", "plan", "intend", "target", "believe", "likely" and similar words suggesting future outcomes or statements regarding an outlook. All statements other than statements of historical fact may be FLI. In particular, this news release contains FLI pertaining to, but not limited to, information with respect to the following: the transaction; the combined company's scale; financial growth; future business prospects and performance; future shareholder returns; cash flows and enhanced margins; synergies; leadership and governance structure; and office and headquarter locations.

Although we believe that the FLI is reasonable based on the information available today and processes used to prepare it, such statements are not guarantees of future performance and you are cautioned against placing undue reliance on FLI. By its nature, FLI involves a variety of assumptions, which are based upon factors that may be difficult to predict and that may involve known and unknown risks and uncertainties and other factors which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by these FLI, including, but not limited to, the following: the timing and completion of the transaction, including receipt of regulatory and shareholder approvals and the satisfaction of other conditions precedent; interloper risk; the realization of anticipated benefits and synergies of the transaction and the timing thereof; the success of integration plans; the focus of management time and attention on the transaction and other disruptions arising from the transaction; estimated future dividends; financial strength and flexibility; debt and equity market conditions, including the ability to access capital markets on favourable terms or at all; cost of debt and equity capital; the previously announced proposed share split of CP's issued and outstanding common shares and whether it will receive the requisite shareholder and regulatory approvals; potential changes in the CP share price which may negatively impact the value of consideration offered to KCS shareholders; the ability of management of CP, its subsidiaries and affiliates to execute key priorities, including those in connection with the transaction; general Canadian, U.S., Mexican and global social, economic, political, credit and business conditions; risks associated with agricultural production such as weather conditions and insect populations; the availability and price of energy commodities; the effects of competition and pricing pressures, including competition from other rail carriers, trucking companies and maritime shippers in Canada, the U.S. and México; industry capacity; shifts in market demand; changes in commodity prices; uncertainty surrounding timing and volumes of commodities being shipped; inflation; geopolitical instability; changes in laws, regulations and government policies, including regulation of rates; changes in taxes and tax rates; potential increases in maintenance and operating costs; changes in fuel prices; disruption in fuel supplies; uncertainties of investigations, proceedings or other types of claims and litigation; compliance with environmental regulations; labour disputes; changes in labour costs and labour difficulties; risks and liabilities arising from derailments; transportation of dangerous goods; timing of completion of capital and maintenance projects; currency and interest rate fluctuations; exchange rates; effects of changes in market conditions and discount rates on the financial position of pension plans and investments; trade restrictions or other changes to international trade arrangements; the effects of current and future multinational trade agreements on the level of trade among Canada, the U.S. and México; climate change and the market and regulatory responses to climate change; anticipated in-service dates; success of hedging activities; operational performance and reliability; customer, shareholder, regulatory and other stakeholder approvals and support; regulatory and legislative decisions and actions; the adverse impact of any termination or revocation by the Méxican government of Kansas City Southern de México, S.A. de C.V.'s Concession; public opinion; various events that could disrupt operations, including severe weather, such as droughts, floods, avalanches and earthquakes, and cybersecurity attacks, as well as security threats and governmental response to them, and technological changes; acts of terrorism, war or other acts of violence or crime or risk of such activities; insurance coverage limitations; material adverse changes in economic and industry conditions, including the availability of short and long-term financing; and the pandemic created by the outbreak of COVID-19 and resulting effects on economic conditions, the demand environment for logistics requirements and energy prices, restrictions imposed by public health authorities or governments, fiscal and monetary policy responses by governments and financial institutions, and disruptions to global supply chains.

We caution that the foregoing list of factors is not exhaustive and is made as of the date hereof. Additional information about these and other assumptions, risks and uncertainties can be found in reports and filings by CP and KCS with Canadian and U.S. securities regulators, including any proxy statement, prospectus, material change report, management information circular or registration statement to be filed in connection with the transaction. Due to the interdependencies and correlation of these factors, as well as other factors, the impact of any one assumption, risk or uncertainty on FLI cannot be determined with certainty.

Except to the extent required by law, we assume no obligation to publicly update or revise any FLI, whether as a result of new information, future events or otherwise. All FLI in this news release is expressly qualified in its entirety by these cautionary statements.

Additional Information

NON-GAAP MEASURES

Although this presentation includes forward-looking non-GAAP measures (adjusted diluted EPS, Free cash flow, earnings before interest, tax, depreciation and amortization (EBITDA), and a leverage ratio being adjusted net debt to adjusted EBITDA, it is not practicable to reconcile, without unreasonable efforts, these forward-looking measures to the most comparable GAAP measures (diluted EPS, Cash from operations, Net income, and long-term debt to net income ratio, respectively), due to unknown variables and uncertainty related to future results. These unknown variables may include unpredictable transactions of significant value. Please see Note on forward-looking Statements above for further discussion.

PARTICIPANTS IN THE SOLICITATION OF PROXIES

This communication is not a solicitation of proxies in connection with the transaction. However, under SEC rules, CP, KCS, and certain of their respective directors and executive officers may be deemed to be participants in the solicitation of proxies in connection with the transaction. Information about CP's directors and executive officers may be found in its 2021 Management Proxy Circular, dated March 10, 2021, as well as its 2020 Annual Report on Form 10-K filed with the SEC and applicable securities regulators in Canada on February 18, 2021, available on its website at investor.cpr.ca and at www.sedar.com and www.sec.gov. Information about KCS's directors and executive officers may be found on its website at www.kcsouthern.com and in its 2020 Annual Report on Form 10-K filed with the SEC on January 29, 2021, available at www.investors.kcsouthern.com and www.sec.gov. These documents can be obtained free of charge from the sources indicated above. Additional information regarding the interests of such potential participants in the solicitation of proxies in connection with the transaction will be included in the proxy statement/prospectus and management proxy circular and other relevant materials filed with the SEC and applicable securities regulators in Canada when they become available.

ADDITIONAL INFORMATION ABOUT THE TRANSACTION AND WHERE TO FIND IT

CP will file with the U.S. Securities and Exchange Commission (SEC) a registration statement on Form F-4, which will include a proxy statement of KCS that also constitutes a prospectus of CP, and any other documents in connection with the transaction. The definitive proxy statement/prospectus will be sent to the shareholders of KCS. CP will also file a management proxy circular in connection with the transaction with applicable securities regulators in Canada and the management proxy circular will be sent to CP shareholders. INVESTORS AND SHAREHOLDERS OF KCS AND CP ARE URGED TO READ THE PROXY STATEMENT/PROSPECTUS AND MANAGEMENT PROXY CIRCULAR, AS APPLICABLE, AND ANY OTHER DOCUMENTS FILED OR TO BE FILED WITH THE SEC OR APPLICABLE SECURITIES REGULATORS IN CANADA IN CONNECTION WITH THE TRANSACTION WHEN THEY BECOME AVAILABLE, AS THEY WILL CONTAIN IMPORTANT INFORMATION ABOUT KCS, CP, THE TRANSACTION AND RELATED MATTERS. The registration statement and proxy statement/prospectus and other documents filed by CP and KCS with the SEC, when filed, will be available free of charge at the SEC's website at www.sec.gov. In addition, investors and shareholders will be able to obtain free copies of the registration statement, proxy statement/prospectus, management proxy circular and other documents which will be filed with the SEC and applicable securities regulators in Canada by CP online at investor.cpr.ca and www.sedar.com, upon written request delivered to CP at 7550 Ogden Dale Road S.E., Calgary, Alberta, T2C 4X9, Attention: Office of the Corporate Secretary, or by calling CP at 1-403-319-7000, and will be able to obtain free copies of the proxy statement/prospectus and other documents filed with the SEC by KCS online at www.investors.kcsouthern.com, upon written request delivered to KCS at 427 West 12th Street, Kansas City, Missouri 64105, Attention: Corporate Secretary, or by calling KCS's Corporate Secretary's Office by telephone at 1-888-800-3690 or by email at corpsec@kcsouthern.com.

You may also read and copy any reports, statements and other information filed by KCS and CP with the SEC at the SEC public reference room at 100 F Street N.E., Room 1580, Washington, D.C. 20549. Please call the SEC at 1-800-732-0330 or visit the SEC's website for further information on its public reference room. This communication shall not constitute an offer to sell or the solicitation of an offer to buy any securities, nor shall there be any sale of securities in any jurisdiction in which such offer, solicitation or sale would be unlawful prior to appropriate registration or qualification under the securities laws of such jurisdiction. No offering of securities shall be made except by means of a prospectus meeting the requirements of Section 10 of the U.S. Securities Act of 1933, as amended.

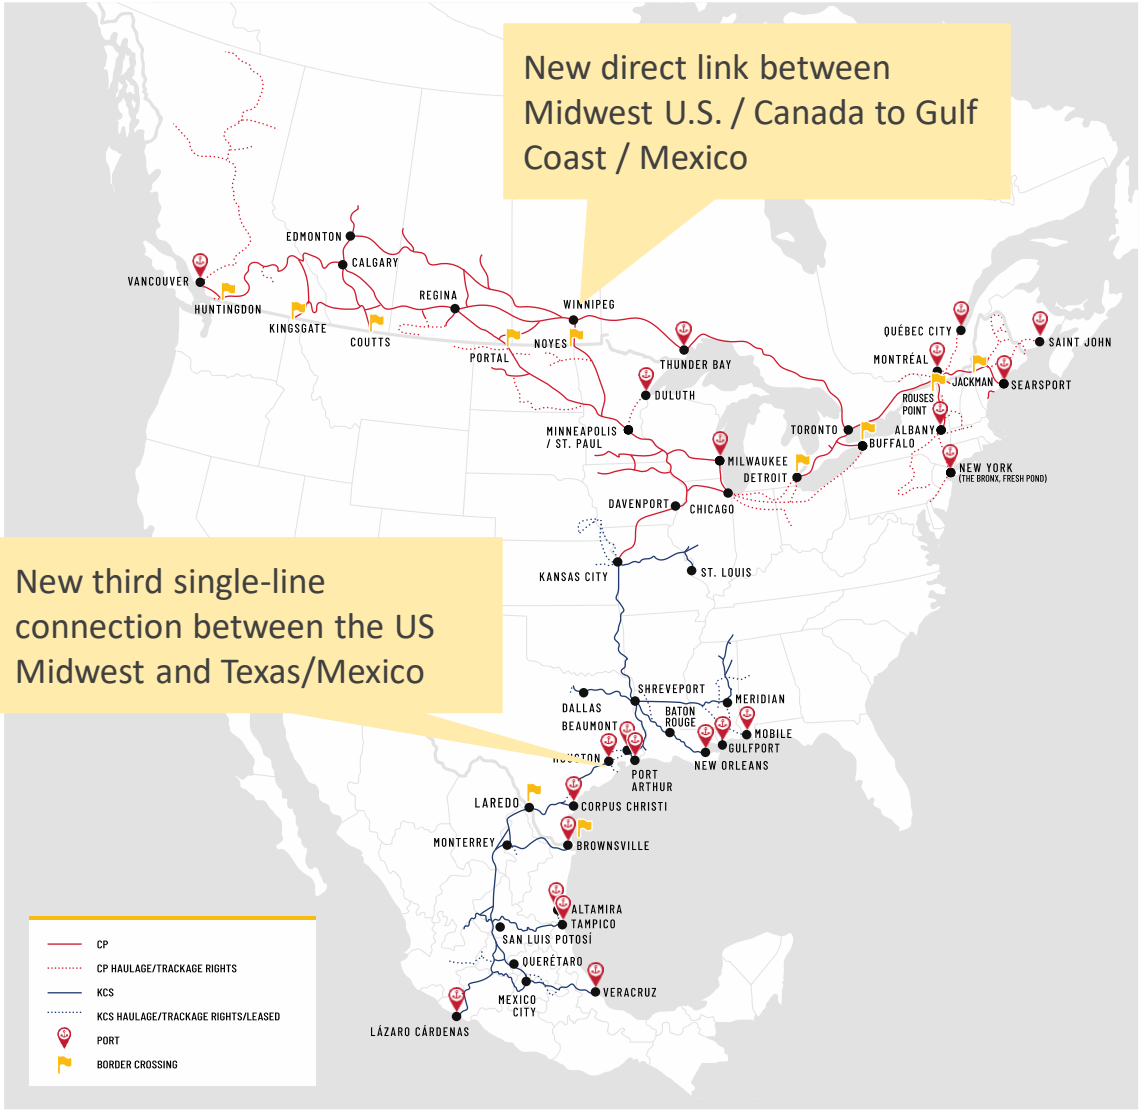
- Conclusion

Compelling Strategic Combination

~20,000 miles
Rail Network

~20,000
Employees

$8.7bn
2020A of Combined Revenues

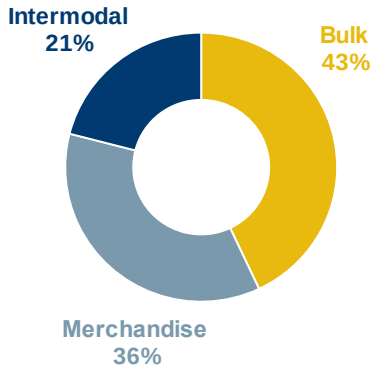


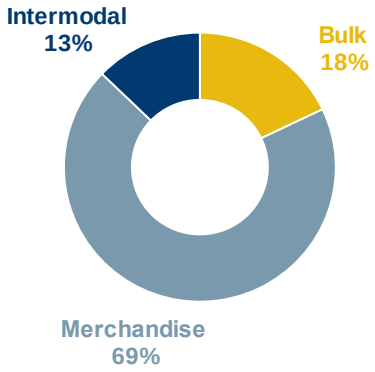
Investment Grade
Balance Sheet

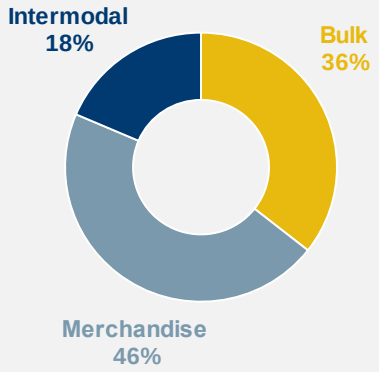
- Creates the First U.S.-Mexico-Canada Rail Network
- Expands Competitive Options for Customers and Supports Strong Growth Going Forward
- Well Positioned for Growth, Bringing Together Two Railroads with Highest 3-Year Revenue CAGR
- Annualized Synergies of $780mm Drives Accretion to CP's Adjusted Diluted EPS[1]
- Shared Dedication to Quality Service, Safety and Efficiency to be Enhanced Across CPKC
- Both Companies Champions of Environmental Sustainability

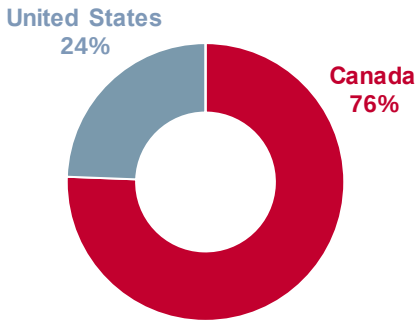
1.The combination is expected to be accretive to CP's adjusted diluted EPS in the first full year following CP's acquisition of control of KCS, and is expected to generate double-digit accretion upon the full realization of synergies thereafter.

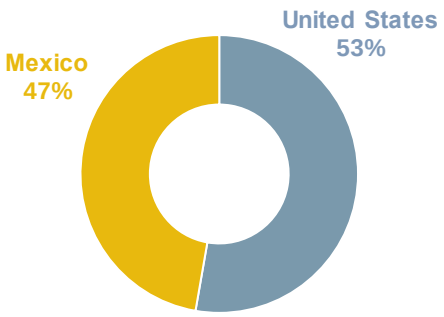
Creating the First U.S.-Mexico-Canada Rail Network

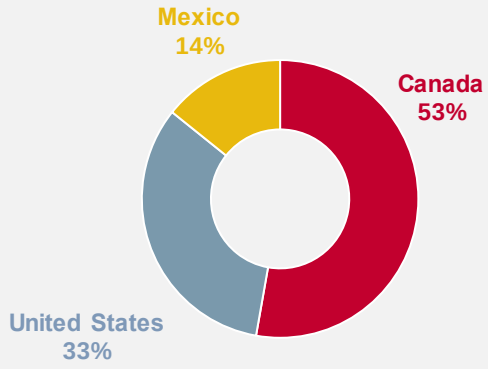












CPKC Network

- ***Enhances competition*** by creating new single-line haul routes
- Connects ***six of the seven*** largest metro regions in North America
- ***Diversifies*** current business and geographic mix with the addition of new routes
- Driving ***USMCA growth and investment opportunities***

Significantly Enhanced Scale with More Diversified Business Mix

Transaction Details

Financial Terms

- Canadian Pacific Railway ("CP") has agreed to acquire Kansas City Southern ("KCS") in a stock and cash transaction representing an enterprise value of $29 billion, which includes the assumption of $3.8 billion of KCS' outstanding debt.
- The transaction, which has the unanimous support of both boards of directors, values KCS at $275 per share, representing a 23% premium[1], based on the CP and KCS closing prices on March 19, 2021 (and $270 per share, representing a 26% premium[2], based on the respective CP and KCS 30-day volume weighted average prices ("VWAP")).
- Following the closing into a voting trust, common shareholders of KCS will receive 0.489 of a CP share and $90 in cash for each KCS common share held. Preferred shareholders will receive $37.50 in cash for each KCS preferred share held.
- To fund the stock consideration of the merger, CP will issue 44.5 million new shares, resulting in CP shareholders owning 75% of CPKC. The cash portion will be funded through a combination of cash-on-hand and raising approximately $8.6 billion in debt, for which financing has been committed.
- The transaction provides KCS shareholders the ability to participate in the upside of CPKC, and KCS shareholders are expected to own 25% of the combined company.

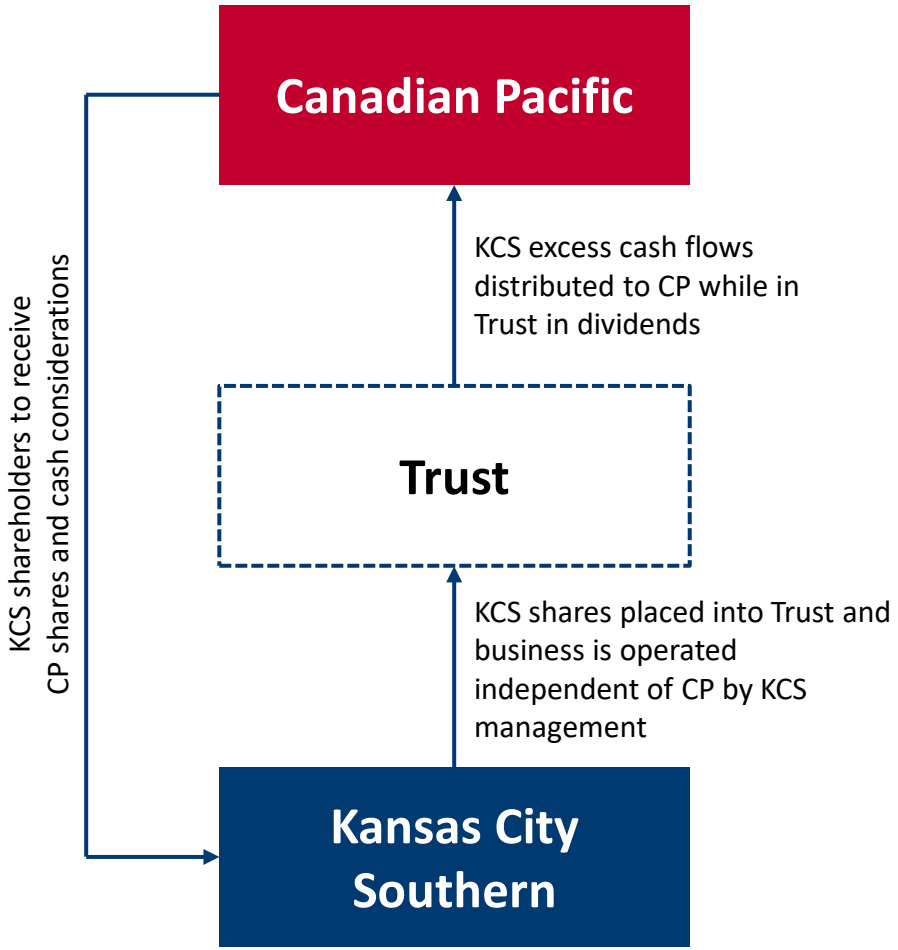
Governance

- The combined business will be named Canadian Pacific Kansas City ("CPKC").
- Calgary, Alberta will be the global headquarters of CPKC.
- Kansas City, Missouri will be designated as the U.S. headquarters.
- Mexico headquarters will remain in Mexico City and Monterrey.
- CP's current U.S. headquarters in Minneapolis-St. Paul will remain an important base of operations.
- Keith Creel to serve as Chief Executive Officer of CPKC.
- Four KCS Directors will join CP's expanded Board at the appropriate time, bringing their experience and expertise in overseeing KCS' multinational operations.
- Shareholders of CP and KCS will vote on the transaction.

1. Based on KCS and CP closing share prices of $224.16 and CAD$474.27 (at 1.2506 FX rate), respectively, as of March 19, 2021.
2. Based on KCS and CP 30-day volume weighted average prices ("VWAPs") of $213.87 and US$368.22, respectively, as of March 19, 2021.

Trust Structure Overview

Trust Mechanics: A Two Step Process



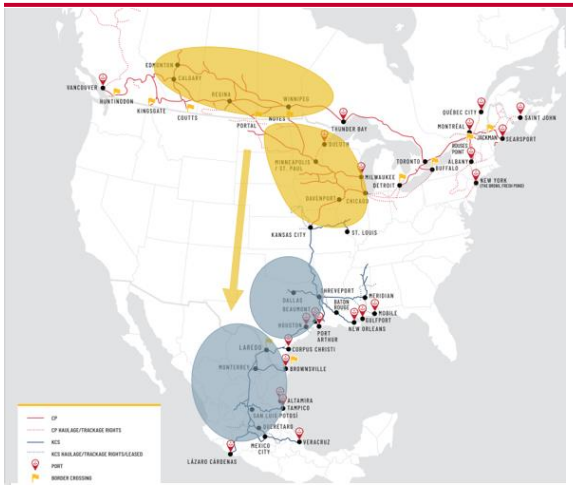
STEP 1

- First, CP will establish a ***"plain vanilla", independent voting trust*** to acquire the shares of KCS
- Upon shareholder approval of the transaction, and satisfaction of customary closing conditions, ***CP will acquire KCS' shares and place them into the voting trust***, which is expected to be completed in the second half of 2021, at which point KCS shareholders will receive their consideration
- CP's placement of KCS shares into the voting trust will ***insulate KCS from control by CP*** until the STB authorizes control
- KCS' ***management and Board of Directors will continue to steward the company*** while it is in trust, pursuing KCS' independent business plan and growth strategies
- CP will ***appoint an independent Trustee***, Dave Starling, to hold the KCS stock

STEP 2:

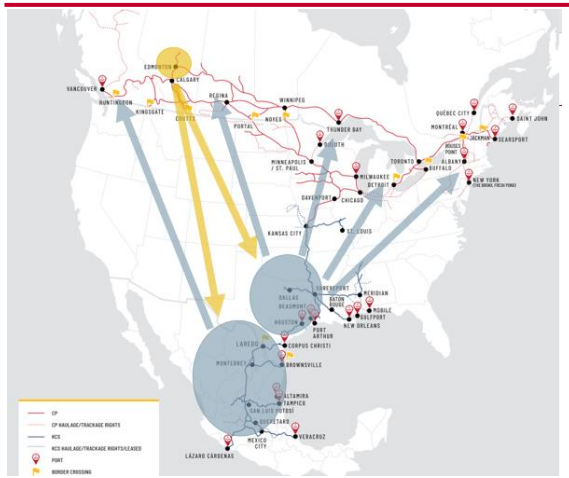
- ***Obtain control approval from the STB*** and other applicable regulatory authorities. The STB review is expected to be completed by the middle of 2022
- Upon obtaining control approval, ***the two companies will be integrated,*** unlocking the benefits of the merger

Trust Structure



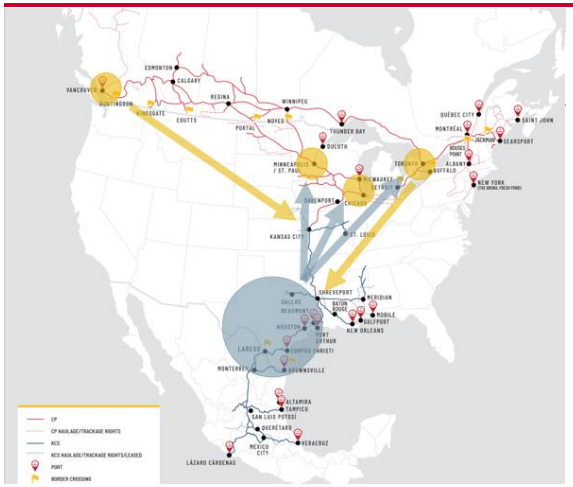
Closing KCS into a Trust prior to STB review of proposed change in control is a standard procedure, with numerous precedents[1]

1. Precedent rail transactions with voting Trust structures since 2015 include the acquisitions and/or mergers of (i) Canadian National and Illinois Central, (ii) UP and Southern Pacific, (iii) CP and Central Maine & Quebec Railway, (iv) Genesee & Wyoming and Brookfield Infrastructure Partners, and (v) Providence & Worcester Railroad and Genesee & Wyoming.



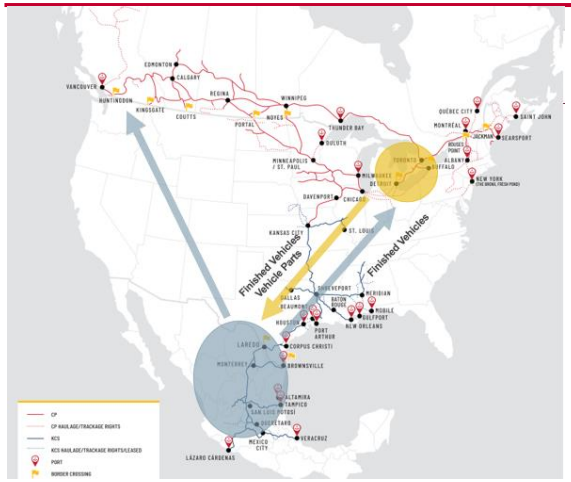
Enhances Competitive Options for Customers and Enables North American Growth

Bulk



New single-line shipments for grain from Canada and the Upper Midwest to domestic and export markets in Southern US and Mexico

ECP & Merchandise



New single-line competition for shipments of energy, chemicals & plastics and merchandise moving between Canada, the US and Mexico

Intermodal

New head-to-head single-line competition for intermodal shipments between Mexico and the Upper Midwest and Canada

Automotive

New head-to-head single-line competition for automotive shipments between Canada, US Midwest and Mexico

CPKC's network to benefit customers across all business lines

Access to Mexico's Industrial Heartland Provides Unprecedented Growth Opportunities

Mexico Highlights

- ***47%*** of KCS 2020 Total Revenues[(1)]
- ***2,650 miles*** of main and branch line
- ***50-year operating concession*** with Mexican Government (expires in 2047; renewable for 50-year term)
- ***Laredo, TX gateway handles 44%*** of US / Mexico Surface Trade[(2)]
- ***GDP from both sides*** of the border constitutes the 3rd largest economy in the world

Mexico Unique Growth Drivers

Franchise Cross-border Growth	Refined Products	Port Access	Near-shoring
13% volume CAGR since 2009, driven by US/Mexico trade	• 2020 growth at 48% • $250M annualized run rate at exit 2020	• Exclusive access to Lazaro Cardenas • Recent direct access to Veracruz	• USMCA & COVID-19 reinforce nearshoring thesis • Lower transportation, overhead & network costs

Sources: Company Filings: 1. **KCS 2020 10K** 2. BTS Data, January 2020

CPKC Unlocks $780 Million EBITDA Growth Opportunities

$600 Million
in EBITDA Growth from Market Opportunities

- Unique combination enables significant growth for our customers throughout North America
- Efficient new single-line routes and dramatically expanded market reach for customers
- Planned capital investments to support growth synergies, such as additional network sidings, siding extensions and investment in CTC

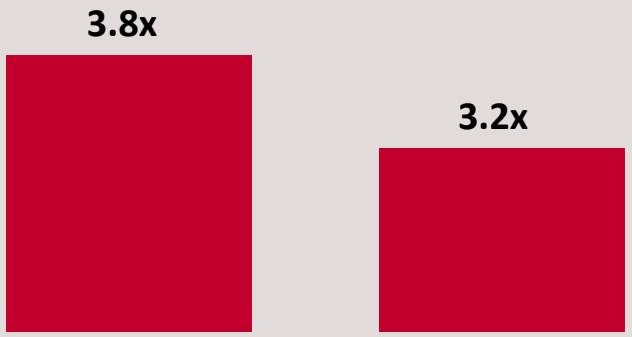
$180 Million
in Cost and Efficiency Improvements

- Driven by a combination of improved fuel efficiency, lower G&A costs, equipment rents as well as facilities, IT spend and licensing
- CPKC to utilize best practices to support increased operating efficiencies

Following regulatory approval anticipated for mid-2022, we anticipate generating $780 million of annualized synergies within three years

Robust Cash Flow Generation Drives Rapid Deleveraging

~2.5x
Long-term leverage target to be achieved within 36 months, following the close into trust



+$2 billion
Free cash flow per year expected to be generated, post synergies

Paused Share Repurchases
To resume once long-term leverage targets achieved

Maintain Dividend Policy
No changes to CP or KCS' current dividend

Projected Combined Leverage Ratio

Trust Period

- Close into Trust in mid-2021
- No synergies realized during trust
- De-leveraging not dependent on synergies
- Strong independent FCF generation

Post-Trust Period

- Trust eliminated and KCS is consolidated
- Begin realizing synergies

Continued commitment to maintain a strong balance sheet and investment grade rating

Committed to Environmental Leadership and a Safety-First Culture

Improving Highway Traffic & the Environment

Environmental Sustainability & Rail Transportation

- Rail is one of the most economical and environmentally responsible methods of moving freight
- New single-line routes will shift truck traffic off crowded U.S. highways
- Advances our shared science-based pledges to improve fuel efficiency and lower emissions in support of a more sustainable North American supply chain

Long-Term Commitment to Climate Change Action & Emissions Reduction

- Both CP and KCS have a track record of improvement:
  - Locomotive fuel efficiency by 9% and 11%, respectively, since 2014
  - Locomotive emissions intensity by 3%, from 2017 to 2019
- Developing North America's 1st line-haul hydrogen locomotive

Safety

- History of capital investment that supports safety & capacity
- CP & KCS share compatible cultures rooted in safety first
- Trip plan compliance and safety goals are key drivers of KCS and CP short-term incentives
- CP has been North America's safest railway for 15 consecutive years based on FRA-train accident frequency
- Significant combined investment in initiatives and technology underpins our commitment to safety, across our entire operation
  - Predictive analytics to reduce online failures
  - Real time data on wheels, rails, cars, locomotives and trains enable us to anticipate issues and take preventative measures
  - Investment in operators and equipment to support public safety
  - Potential investment in upgrading 'dark territory' to Centralized Train Control, which would further improve safety

4x more fuel efficient than trucks

75% less GHG emissions produced by trains than trucks

34% improvement in CP FRA Personal Injury Frequency ('16-'20)

300 trucks removed from public roads for each single unit train

Source: Corporate Disclosure

Unique and Compelling Combination

- Creates the First U.S.-Mexico-Canada Rail Network
- Expands Competitive Options for Customers and Supports Strong Growth Going Forward
- Well Positioned for Growth, Bringing Together Two Railroads with Highest 3-Year Revenue CAGR
- Annualized Synergies of $780mm Drives Accretion to CP's Adjusted Diluted EPS[1]
- Shared Dedication to Quality Service, Safety and Efficiency to be Enhanced Across CPKC
- Both Companies Champions of Environmental Sustainability

1.The combination is expected to be accretive to CP's adjusted diluted EPS in the first full year following CP's acquisition of control of KCS, and is expected to generate double-digit accretion upon the full realization of synergies thereafter.

REDACTED PUBLIC RECORD VERSION

Canadian Pacific Railway and Kansas City Southern to Combine

March 21, 2021

REDACTED PUBLIC RECORD VERSION

BEFORE THE
SURFACE TRANSPORTATION BOARD

FINANCE DOCKET NO. 36500

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL*. – CONTROL – KANSAS CITY SOUTHERN, *ET AL*.

VELANI AND DE BRUYN R.V.S. EXHIBIT 8

CN/KCS, FINANCE DOCKET NO. 36514, CP'S REPLY TO CN AND KCS JOINT MOTION FOR APPROVAL OF VOTING TRUST (CP-11), VERIFIED STATEMENT OF NADEEM VELANI (FILED JUNE 28, 2021) (EXCERPTS)

EXHIBIT 2

VERIFIED STATEMENT OF NADEEM VELANI

of CN's consideration would be paid in cash.[3] Whereas equity (stock price) valuations can fluctuate up and down without causing an immediate impact on a business's cash flows and liquidity, debt represents a fixed-value obligation that must ultimately be repaid. Mr. Houle's comment that CN is paying for the "premium" in stock rather than cash (Houle V.S. at 10) is thus misleading. Because CN is paying to acquire KCS at such an extreme valuation, it must borrow and ultimately repay $19 billion in new debt regardless of whether it attributes this debt to the "premium" or something else. Furthermore, issuing $11 billion of equity is not the antidote to an over-priced acquisition. All of that invested capital will come with CN's promise of a rate of return that does not appear to be achievable at this purchase price. That leads to the natural conclusion that either this acquisition is designed to achieve those returns in undisclosed anti-competitive ways, or material cost-cutting and capital spending reductions will be required to deliver an appropriate investment return.

II. UNLIKE THE TERMS OF CP'S PROPOSED ACQUISITION OF KCS, THE SIZE OF CN'S OFFER WAS NOT EXPLAINED BY A NEED TO BEAT A PRIVATE EQUITY BID

12. The extreme premium CN is offering to KCS shareholders is almost double the premium that CP offered KCS shareholders. CN's offer is much more heavily weighted towards cash consideration, which has important implications for the risks resulting from CN's offer. Whereas CP's offer entailed 67 percent CP stock and 33 percent cash (or $9 billion in cash), CN's offer is less than 40 percent CN stock and over 60 percent cash (or over $19 billion in cash).

13. CP's high bid was made in order to be able to succeed against a competing bid that KCS had received from non-rail private equity acquirers. CP took notice of public reports in

[3] Calculated as CN's offer of $200 in cash per KCS share out of $325 total offer.

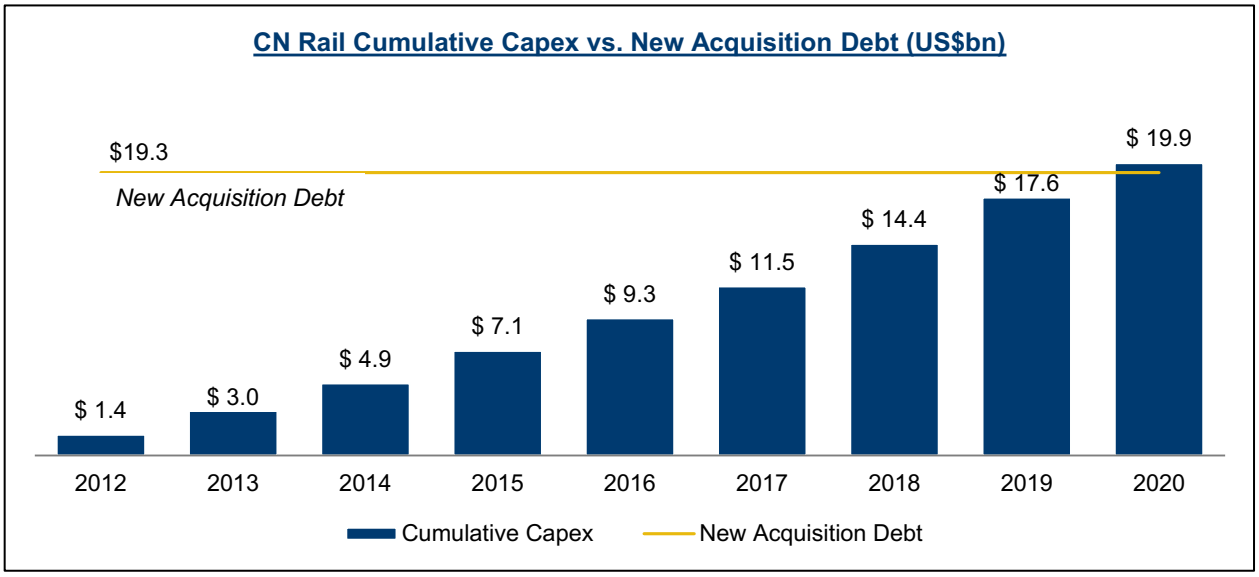
the fall of 2020 that private equity had approached KCS about an acquisition of the company and began discussions with KCS about a potential CP/KCS combination, and those discussions continued though the fall of 2020 and the early part of 2021, culminating in our merger agreement announced March 21, 2021. CP understood that for the KCS Board of Directors to approve such a combination, the financial terms of CP's bid would have to exceed those offered by the private equity buyers by a margin that overcame the perceived regulatory risks of even CP's pro-competitive rail-rail consolidation. This competitive dynamic led us to make our offer of $275 per share,[4] which KCS's Board accepted.[5] CP's offer represented a 23 percent premium, which was in the middle of the range of control premia for other large acquisitions, as shown in Figure 2 above.

14. By the time CN proposed to acquire KCS, by contrast, CP had already won out over the private equity bid for KCS, and CP and KCS were parties to a binding merger agreement. As a result, CN's bid was designed to exceed CP's bid, not a private equity bid.

III. THE LARGE CASH COMPONENT OF CN'S OFFER REQUIRES IT TO INCUR $19 BILLION OF DEBT, INCREASING ITS DEBT BURDEN BY MORE THAN 180 PERCENT AND SUBSTANTIALLY INCREASING ITS FINANCIAL RISK

A. CN Will Take on a Very High Level of Debt

15. CN's total cash outlay upon the acquisition of KCS's shares (*i.e.*, as soon as the voting trust is formed) would be $19 billion. CN is proposing to spend $11 billion more in cash than CP is offering to acquire KCS. By including $19 billion of cash consideration in its offer



---

[4] Reflects offer of 0.489x CP shares and $90 in cash for every KCS share as of March 19, 2021 (the last trading day prior to the announcement of the CP / KCS merger).

[5] CN's F-4 Registration Statement, which was filed with the SEC on June 22, 2021, provides a blow-by-blow description of the competition CP was engaged in with "Party A" (which CP understood to be a non-railroad private equity bidder). In the final round of that competition, CP's bid was within 10 percent of the all-cash offer that Party A was offering (at $250 per share), along with a promise of zero regulatory delay or risk. *See* Registration Statement at 43-48 (excerpts are Exhibit 14 to CP's Reply).

for KCS shareholders,[6] CN is significantly increasing its debt burden to fund the proposed acquisition. To put this figure in context, consider that the incremental $19 billion in CN acquisition debt is comparable to the total sum of all of CN's capital expenditures spent on its own rail network over the past nine years. Figure 3 compares CN's level of capital expenditures since 2012 to the new acquisition debt being contemplated.

FIGURE 3[7]

CN's debt for the acquisition of KCS equivalent to all capex spent by CN from 2012 to 2020

16. CN's new acquisition debt would also sharply increase CN's leverage ratio. CN's net debt balance as of the end of 2020 of $9 billion represented approximately 1.7 times CN's 2020 EBITDA of $5.5 billion.[8] For the same period, pro forma for the impact of the proposed

CANADIAN NATIONAL 2020 ANNUAL REPORT EXCERPTS

Management's Discussion and Analysis

This Management's Discussion and Analysis (MD&A) dated February 1, 2021, relates to the consolidated financial position and results of operations of Canadian National Railway Company, together with its wholly-owned subsidiaries, collectively "CN" or the "Company," and should be read in conjunction with the Company's 2020 Annual Consolidated Financial Statements and Notes thereto. All financial information reflected herein is expressed in Canadian dollars and prepared in accordance with United States generally accepted accounting principles (GAAP), unless otherwise noted.

CN's common shares are listed on the Toronto and New York stock exchanges. Additional information about CN filed with Canadian securities regulatory authorities and the United States Securities and Exchange Commission (SEC), including the Company's 2020 Annual Information Form and Form 40-F, may be found online on SEDAR at www.sedar.com, on the SEC's website at www.sec.gov through EDGAR, and on the Company's website at www.cn.ca in the Investors section. Printed copies of such documents may be obtained by contacting CN's Corporate Secretary's Office.

Business profile

CN is engaged in the rail and related transportation business. CN's network of 19,500 route miles of track spans Canada and the United States of America (U.S.); the only railroad connecting Canada's Eastern and Western coasts with the U.S. South. CN's extensive network and efficient connections to all Class I railroads provide CN customers access to Canada, the U.S. and Mexico. Essential to the economy, to the customers, and to the communities it serves, CN safely transports more than 300 million tons of cargo, serving exporters, importers, retailers, farmers and manufacturers. CN and its affiliates have been contributing to community prosperity and sustainable trade since 1919. CN is committed to programs supporting social responsibility and environmental stewardship.

CN's freight revenues are derived from seven commodity groups representing a diversified and balanced portfolio of goods transported between a wide range of origins and destinations. This product and geographic diversity better positions the Company to face economic fluctuations and enhances its potential for growth opportunities. For the year ended December 31, 2020, CN's largest commodity group accounted for 27% of total revenues. From a geographic standpoint, 16% of revenues relate to U.S. domestic traffic, 31% transborder traffic, 17% Canadian domestic traffic and 36% overseas traffic. The Company is the originating carrier for over 85%, and the originating and terminating carrier for over 65%, of traffic moving along its network, which allows it both to capitalize on service advantages and build on opportunities to efficiently use assets.

Corporate organization

The Company manages its rail operations in Canada and the U.S. as one business segment. Financial information reported at this level, such as revenues, operating income and cash flow from operations, is used by the Company's corporate management in evaluating financial and operational performance and allocating resources across CN's network. The Company's strategic initiatives are developed and managed centrally by corporate management and are communicated to its regional activity centers (the Western Region and Eastern Region), whose role is to manage the day-to-day service requirements of their respective territories, control direct costs incurred locally, and execute the strategy and operating plan established by corporate management.

See *Note 23 – Segmented information* to the Company's 2020 Annual Consolidated Financial Statements for additional information on the Company's corporate organization, as well as selected financial information by geographic area.

ROIC and adjusted ROIC

Management believes ROIC and adjusted ROIC are useful measures of the efficiency in the use of capital funds. The Company calculates ROIC as return divided by average invested capital. Return is defined as net income plus interest expense after-tax, calculated using the Company's effective tax rate. Average invested capital is defined as the sum of total shareholders' equity, long-term debt and current portion of long-term debt less cash and cash equivalents, and restricted cash and cash equivalents, averaged between the beginning and ending balance over a twelve-month period. The Company calculates adjusted ROIC as adjusted return divided by average invested capital. Adjusted return is defined as adjusted net income plus interest expense after-tax, calculated using the Company's effective tax rate, excluding the tax effect of adjustments used to determine adjusted net income. ROIC and adjusted ROIC do not have any standardized meaning prescribed by GAAP and therefore, may not be comparable to similar measures presented by other companies.

The following table provides a reconciliation of net income and adjusted net income to return and adjusted return, respectively, as well as the calculation of average invested capital, which have been used to calculate ROIC and adjusted ROIC:

In millions, except percentage	*As at and for the year ended December 31,*	**2020**	2019	2018
Net income		**$ 3,562**	$ 4,216	$ 4,328
Interest expense		**554**	538	489
Tax on interest expense [1]		**(120)**	(120)	(116)
Return		**$ 3,996**	$ 4,634	$ 4,701
Average total shareholders' equity		**$ 18,846**	$ 17,841	$ 17,149
Average long-term debt		**11,931**	11,626	10,067
Average current portion of long-term debt		**1,420**	1,557	1,632
Less: Average cash, cash equivalents, restricted cash and restricted cash equivalents		**(844)**	(674)	(656)
Average invested capital		**$ 31,353**	$ 30,350	$ 28,192
ROIC		**12.7%**	15.3%	16.7%
Adjusted net income [2]		**$ 3,784**	$ 4,189	$ 4,056
Interest expense		**554**	538	489
Adjusted tax on interest expense [3]		**(137)**	(131)	(120)
Adjusted return		**$ 4,201**	$ 4,596	$ 4,425
Average invested capital		**$ 31,353**	$ 30,350	$ 28,192
Adjusted ROIC		**13.4%**	15.1%	15.7%

(1) The effective tax rate for 2020 used to calculate the tax on interest expense was 21.6% (2019 - 22.3%; 2018 - 23.8%).

(2) See the section of this MD&A entitled Adjusted performance measures for an explanation of this non-GAAP measure.

(3) The adjusted effective tax rate for 2020 used to calculate the adjusted tax on interest expense was 24.8% (2019 - 24.4%; 2018 - 24.5%).

Q

Hey, good afternoon, everyone. Yes, thank you for taking my questions. Keith, you sounded – I should phrase it, relatively bullish about intermodal prospects we came into, I guess "peak season." Can you talk about some of the opportunities you mentioned in your prepared remarks, I think about your carriers adding back locations and that you are winning some of that incremental business?

Keith Reardon
Senior Vice-President-Consumer Product Supply Chain, Canadian National Railway Co.

A

Sure.

Jean-Jacques Ruest
President, Chief Executive Officer & Director, Canadian National Railway Co.

A

Keith? As I've said earlier, we believe in the strength of the consumer in North America and the market where that shows the most number one is intermodal, you see that a bit in lumber and automotive but where this is something to really exploit whether the product is really tailor made to drive the economy – consumer economy of intermodal. Keith?

Keith Reardon
Senior Vice-President-Consumer Product Supply Chain, Canadian National Railway Co.

A

Sure. You know, it wasn't fun going through the beginning of the second quarter and hearing about blank sailings and also the challenges that our customers were having and the fact that they thought that was kind of going into the third quarter as well. So, it's great that we've seen a lot of the blanks that they had for Q3. They've reinstituted those calls and right now on the West Coast, we have much less noise around the blank sailings than we did during Q2. In fact they're adding 11 extra loaders in Q3 on the West Coast, nine on the West Coast and two on the East Coast. Those types of things and the discussions that we have with our customers and the fact that our boots on the ground folks in Asia are telling us the strength of what's going on with orders from North America, those give us the confidence that I can sit and talk to Rob and ask him and have that discussion about being prepared. As I said, Rupert's probably going to have a record in July. And we see the same thing for August as far as the volume's solid on the West Coast.

Jean-Jacques Ruest
President, Chief Executive Officer & Director, Canadian National Railway Co.

A

Ghislain, maybe you want to add something about TransX and a year after the acquisition.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

Yeah, sure.

Jean-Jacques Ruest
President, Chief Executive Officer & Director, Canadian National Railway Co.

A

We've been able to accomplish with TransX.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

Copyright © 2001-2020 FactSet CallStreet, LLC

That's another – sure, JJ, that's another piece of business that we're quite bullish. And I'm happy to report that after a year and I think Keith and the team is doing and did an outstanding job integrating TransX with our overall CN family. As you know, Brandon, big projects or investments we typically have internal auditor going in and auditing the business case and auditing the return and reporting directly to the board, so they are not all done yet but close and I'm happy to report that the turn of the investments both in TransX and H&R will deliver higher than our typical ROI threshold that we use at CN of 12%. So this is a good accretive acquisition and we are quite pleased and as I said before, Keith and the team, is doing a hell of a job managing this and frankly, their OR as we speak is now the best-in-class for these types of companies, like if you at J.B. Hunt or some of the others that are best-in-class, TransX is right there with them.

Jean-Jacques Ruest
President, Chief Executive Officer & Director, Canadian National Railway Co.
A

Yeah. The mandate for TransX is to compete with the best of best like J.B. Hunt [ph] in the OR (00:52:01), they are not a trucking firm, they are [ph] intermodal (00:52:05) firm and they're increasing the amount of rail they do since last year.

Thank you, Brandon.

Brandon R. Oglenski
Analyst, Barclays Capital, Inc.
Q

Yeah, thank you, JJ.

Operator: Thank you. The next question is from David Vernon from Bernstein. Please go ahead.

David Vernon
Analyst, Sanford C. Bernstein & Co. LLC
Q

Hey, good afternoon, everybody. Rob, I wanted to focus in on the train length and train weight gains that you had in the second quarter, could you talk to whether some changes in mix or maybe just lower volume in the network allowed you kind of extend that. And then what the outlook should be kind of from here, should we be expecting in this 9,500 feet length range for the rest of the year even through the winter months or should we be expecting this kind of to come off as volume comes back?

Jean-Jacques Ruest
President, Chief Executive Officer & Director, Canadian National Railway Co.
A

Rob?

Rob Reilly
Executive Vice-President, Chief Operating Officer & interim Chief Information and Technology Officer, Canadian National Railway Co.
A

Yeah, winter all bets are off. We will see what winter brings and then we can have that discussion at that point. As far as the changes we've made, we do view those as structural. And mix or no mix, what we've done is really take what has been delivered to us and make the best out of it. So, we are looking at a significant volume drop that we saw this quarter and we took action, part of that was increasing train size and reducing crew starts, and a lot of things come with that when you do that. The bigger trains lead to greater train fuel efficiency, leads to better utilization of your locomotives. We saw the train velocity improved all during this period as well, 5% year-over-year. So, we plan on keeping trains big and looking for more opportunities that are out there. Thanks for the question.

MANAGEMENT DISCUSSION SECTION

Garrett Anthony Holland
Analyst, Robert W. Baird & Co., Inc.

Great. Well, we're live now, so we're going to go ahead and start Day 3 of the Transportation and Logistics Section of this 2020 Baird Industrials Conference. My name is Garrett Holland, Senior Analyst covering Transportation and Logistics at Baird. We are very pleased to have Canadian National Railway participating on our industrials conference this year.

From the company, we have Ghislain Houle, Executive Vice President and Chief Financial Officer; James Cairns, Senior Vice President, Rail Centric Supply Chain; Keith Reardon, Senior Vice President, Consumer Product Supply Chain; as well as Paul Butcher and Lauren Benoit from Investor Relations. Management is going to review some prepared remarks with slides and then I'll return for Q&A.

So now, we'll turn things over to the company for the opening presentation.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

Yeah, thanks, Garrett, and thanks for having us and thanks for people listening to us on webcast. We're very pleased to be participating in your conference. I think it's the first year that we participate, certainly probably not the last. And as you said there, Garrett, what we'll do is we'll introduce CN a little bit with my two colleagues here, take a few minutes to do that and we've prepared a very short presentation to help people follow what we're saying and then after that obviously we'll open up for questions.

So if you turn to that small presentation on page 3, as you can see at CN, we do have a very unique three-coast network with a very well-diversified portfolio supported by solid base of customers and partners. We are well-diversified from a commodity standpoint with our biggest segment being intermodal at just over 25% of our book of business year-to-date at the end of Q3. Everything else is smaller.

Copyright © 2001-2020 FactSet CallStreet, LLC

Sure. So there are expansions in the East. We are working very closely with PSA to extracting as much capacity out of the existing port there at Halterm and working with Ceres to extract as much value as we can out of that port as well. A recent proof point there is with their new crane and with the two new berths or the – in fact, we have two berths there now. We recently had a 15,000 TEU vessel come into Port of Halifax. I know it was a big deal in New York. It was fanfare and everything. But that vessel actually called on Halifax before it got to New York.

We also are working with our port operators, DP World in Saint John. They have some capacity plans. We've been servicing Saint John forever. It is one of our ports. And you look at what's going on in Quebec City, the plans that we have with Hutchison to create a terminal, over 750,000 TEUs at that, a fully automated terminal, I might add as well. But we're going through a lot of the permitting process right now.

And I would also add that we get to the US or we get to the US Midwest via those Canadian ports. But we also get into Canada via New York, New Jersey and Philly. And when the strike in Port of Montreal occurred, we actually used that gateway as a way to get into Montreal and Toronto as well. So we have the East Coast covered extremely well.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

And I would say, Garrett, on this one what's very exciting is that as much as our capacity is very precious in Western Canada, a new site on our geographic, we have Global West is 29%. Our Eastern Canadian franchise is actually underutilized. So all of the growth that Keith is talking about, we will actually be able to accommodate and support at very little, if not zero, CapEx. So that's quite exciting for us.

Garrett Anthony Holland
Analyst, Robert W. Baird & Co., Inc.

Q

Well, on that point I guess, what are your expectations and priorities for capital allocation and the implications for capital expenditures going forward?

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

Yeah. So again, our capital allocation has not changed throughout the years. I mean it's been the same. We like to be predictable and boring. So the first use of cash will always be towards the business. And we're looking for projects that will generate return on invested capital in the range of 12% to 15%.

Then the second use of cash is obviously we like to have a strong balance sheet. We saw the value of that going through the pandemic. I mean if you look – during the heart of the pandemic in Q2, we were able to continue to issue commercial paper at rates that are lower than LIBOR. We actually issued a $600 million 30-year bond, believe it or not, at a rate of 2.45%. That was actually the second lowest of any corporate in the US when we issued it. So we like to have a strong balance sheet. And then if we have strategic opportunities with a strong balance sheet then we can lock them in quickly.

Finally, we look at shareholder distribution first and foremost on dividends. I think that when we look at dividend growth, it's not the amount of growth in a given year that matters as much as the consistency of the growth. And as you know, this year we've increased our dividend by 7%. Through the pandemic, our dividend was never questioned. And so we like the consistency and we've increased our dividend since we've privatized by 16%. We're quite proud of that.

Copyright © 2001-2020 FactSet CallStreet, LLC

And then, finally, we look at share buyback. We like share buyback because it's a flexible tool. You can raise it. You can speed it up. You can slow it down. As you know, we've slowed it down now with the pandemic. We've stopped buying back shares. And really the share buyback is a tool that we use to get to a targeted leverage level; targeted leverage level meaning when the rating agencies look at this, they look at adjusted debt to adjusted EBITDA.

When you look our target has been in the range of 1.7 to 1.9 times, call it 2 times, and we're already at – we will finish the Q3 at 2.17 times, hence why we continue to not buying back shares but stay tuned for next year we'll see what we do. But that's our capital allocation. We're very comfortable with this, and investors should think that this should continue. We question it on a regular basis internally and with our board. But as I've said, we'd like to be predictable and boring.

Garrett Anthony Holland
Analyst, Robert W. Baird & Co., Inc.

Q

That was helpful. I wanted to touch on domestic intermodal. As that franchise evolves, where do you see the strategic opportunities and how do you see electric driverless cars competing with rails over time? Obviously, investors want to know how can we move more volume from the road to rail.

Keith Reardon
Senior Vice President-Consumer Product Supply Chain, Canadian National Railway Co.

A

Sure. I'll start off on the domestic intermodal and maybe, Ghis, you could weigh in a little bit too on the driverless truck as we kind of look at that.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

Yeah.

Keith Reardon
Senior Vice President-Consumer Product Supply Chain, Canadian National Railway Co.

A

So on the domestic intermodal, we're focused on several pieces there. One, we want to drive more business to our US network, as Ghislain talked about the eastern network. We can grow in the states without having a whole lot of capital applied. We have a unique model versus most of the other railroads, especially the US roads. We have a retail product. We go door to door. We sell that service to the beneficial cargo owners. We also have a refrigerated product that we run ourselves door to door. So we're looking at those two markets to help us grow.

But we also work with the IMCs and the wholesalers in the states, especially when we're looking at e-commerce. It is a place where we know that there's opportunity to grow. We have multiple sales channels to sell into that. Our Canadian wholesale partners and our US wholesale partners are a key part of that strategy, multiple sales channels going into that e-commerce business. With regard to driverless trucks, I think we're keeping an eye on it, making sure we see what's going on.

Ghislain Houle
Chief Financial Officer & Executive Vice President, Canadian National Railway Co.

A

Absolutely. And I think that when you look at our franchise, Garrett, we're blessed with a long length of haul either on the international, which is close to like 1,900 miles, close to 2,000 miles and on the domestic at 1,700 miles.

CN 2021 MANAGEMENT INFORMATION CIRCULAR EXCERPTS (APR. 27, 2021)

ESSENTIAL.

MANAGEMENT INFORMATION CIRCULAR

AND NOTICE OF ANNUAL MEETING OF SHAREHOLDERS

APRIL 27, 2021

REDACTED PUBLIC RECORD VERSION

Notice of Annual Meeting of Shareholders

Our annual meeting of holders of common shares will be conducted solely via a live webcast meeting on **Tuesday, April 27, 2021 at 10:00 a.m.** (Eastern Daylight Time) at **www.virtualshareholdermeeting.com/CNI2021.** At this website, shareholders will be able to attend the meeting live, submit questions and vote their shares while the meeting is being held.

For the purposes of:

1. receiving the consolidated financial statements for the year ended December 31, 2020, and the auditors' reports thereon;
2. electing the directors;
3. appointing the auditors;
4. considering and approving, in an advisory, non-binding capacity, a resolution (the full text of which is set out on page 9 of the accompanying management information circular) accepting the Company's approach to executive compensation as disclosed in the "Statement of Executive Compensation" section of the accompanying management information circular;
5. considering and approving, in an advisory, non-binding capacity, a resolution (the full text of which is set out on page 9 of the accompanying management information circular) accepting the Company's Climate Action Plan as disclosed in the accompanying management information circular;
6. considering two shareholder proposals described in Schedule "D"; and
7. transacting such other business as may properly be brought before the meeting or any adjournment or postponement thereof.

The Board of Directors has fixed March 5, 2021 as the Record Date for the determination of the holders of common shares entitled to receive notice of the meeting and vote at the meeting.

By order of the Board of Directors

Sean Finn

Sean Finn
Executive Vice-President
Corporate Services and Chief Legal Officer and Corporate Secretary

March 9, 2021
Montreal, Quebec

Letter to Shareholders

March 9, 2021

Dear Shareholder:

On behalf of the Board of Directors ("Board" or "Board of Directors") and management of Canadian National Railway Company (the "Company" or "CN"), we cordially invite you to attend the annual meeting of shareholders, which will be held online on April 27, 2021 at 10:00 a.m. (Eastern Daylight Time). This management information circular ("Information Circular") describes the business to be conducted at the meeting and provides information on executive compensation and CN's environmental, social and governance ("ESG") practices. In addition to these items, we will discuss highlights of our 2020 performance and our plans for the future.

CN's front line workers and their colleagues admirably stood up to 2020, despite its unique challenges, by focusing on their mission. We are extremely proud of the essential transportation service they have provided and thank them for what they have accomplished throughout this most difficult year, marked by blockades on our tracks and the pandemic. Our transformational journey started a quarter of a century ago and continued to the point of CN becoming the successful transportation and supply chain leader and trade enabler we are today.

CN's transportation services are essential to keep the economy moving, for its customers to reach their markets, for retailers to get the goods the public rely on every day and for healthcare workers battling the pandemic to get critical supplies. Our key role in the North American supply chain was clearly demonstrated in the difficult circumstances of 2020.

CN has recently undertaken major new environmental, social and governance initiatives that will reinforce its status as a leader in ESG among North American Class I railroads and across the transportation sector. Our longer-term goal is to be at the leading edge of ESG best practices across North America and globally.

These new measures include the creation of the CN Indigenous Advisory Council, an independent body comprised of Indigenous peoples from across the country, with a mandate to advise CN's Board and senior management, and a commitment to a Board of Directors that has at least 50 percent of independent directors coming from diverse groups, including gender parity. They also encompass an annual advisory vote on CN's Climate Action Plan, and a reset of governance policies reducing the age limit and tenure of directors, setting a lower maximum of public boards on which directors can serve, and reducing the size of the Board. CN continues to strive to implement governance policies that reflect best-in-class ESG practices.

We would like to welcome our new Board nominees, Denise Gray and Justin M. Howell, as well as Margaret A. McKenzie who joined the Board in late 2020. These new directors come to us with extensive business, innovation, and strategic planning experience. The Board looks forward to their contribution as CN continues to play an essential role in the North American economy.

We also want to take this opportunity, on behalf of the entire CN family, to thank our distinguished directors who are not standing for re-election at this annual meeting: Don Carty, Maureen Kempston Darkes, Gordon Giffin, Edith Holiday and Denis Losier for their outstanding contribution, lending their wisdom, expertise and careful oversight to CN's success as it has grown and prospered. The Company is deeply indebted to them.

Your participation in the affairs of the Company is important to us. To that effect, we are pleased to embrace the latest technology to provide easy access, improved communication, and cost savings for our shareholders and the Company, all through a webcast Meeting again in 2021. This set up is imperative these days as it eliminates any health risks associated with large gatherings while enabling greater participation by our shareholders from any location around the world and aligning with our sustainability vision and belief. Similar to last year, through our webcast, you will have the opportunity to interact with members of the Board and senior executive officers of the Company.

We encourage you to vote on the internet or complete the enclosed proxy or voting instruction forms and return them in the envelope provided for this purpose, so that your views can be represented. Even if you plan to attend the meeting, you may find it convenient to vote your shares in advance of the meeting over the internet or by completing and returning the enclosed proxy or voting instruction forms, as applicable. Please consult the information on page 5 of the Information Circular to find out how to attend the meeting online and vote your shares.

We are looking forward to your virtual attendance at the Meeting. Please stay safe and healthy.

Robert Pace, D.COMM., C.M.
Chair of the Board

Jean-Jacques Ruest
President and
Chief Executive Officer

The following formula illustrates how an eligible executive employee's annual base salary (as at December 31, 2020), target payout (expressed as a percentage of base salary), corporate financial, corporate safety and individual performance factors interact in the determination of the actual annual bonus payout:

Annual Bonus Payout Formula

Corporate Financial Performance

ANNUAL BASE SALARY X TARGET PAYOUT X **70%** X CORPORATE FINANCIAL PERFORMANCE FACTOR

+

Corporate Safety Performance

ANNUAL BASE SALARY X TARGET PAYOUT X **10%** X CORPORATE SAFETY PERFORMANCE FACTOR X CORPORATE FINANCIAL PERFORMANCE FACTOR WHEN BELOW 100%

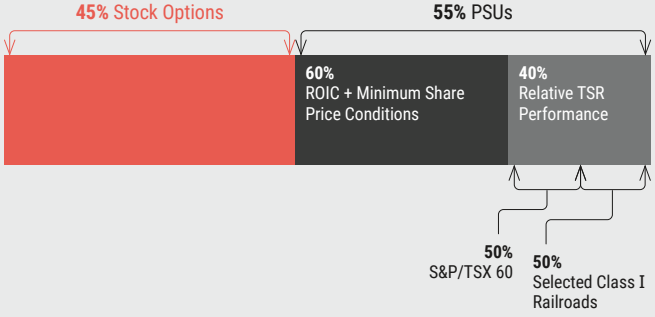
+

Individual Performance

ANNUAL BASE SALARY X TARGET PAYOUT X **20%** X INDIVIDUAL PERFORMANCE FACTOR X CORPORATE FINANCIAL PERFORMANCE FACTOR WHEN BELOW 100%

The average bonus payout for the NEOs, (consisting of the corporate financial performance factor, the corporate safety performance factor, and the individual performance factor) was 22% of target bonus in 2020. The actual payouts are reported in the Summary Compensation Table on page 65, under the column "Non-equity incentive plan compensation—Annual incentive plans".

Considering the commitment and relentless efforts of our management employees during this unprecedented year, the Board authorized an exception to the AIBP terms to not prorate the Corporate Safety and Individual payout level for management employees in 2020, excluding the NEOs who were not covered by the exception. As such, the Corporate Safety and Individual components, which have a combined weight of 30% at target in the AIBP, were paid independently of the Company's Corporate Financial component to all management employees with the exception of the NEOs.



The Board authorized this exception to support greater engagement and retention, and to recognize the outstanding contribution of all management employees in the extraordinary circumstances of the pandemic. Moreover, this decision is aligned with the changes approved by the Board to the AIBP for 2021 and beyond to remove proration on the Corporate Safety and Individual payout levels at the same rate as the Corporate Financial payout level when payout is below 100%, all with a view to support employee engagement on safety and strategic initiatives.

Long-Term Incentives

The Board considers a number of factors to assess the Company's long-term incentive strategy, including the balance between long-term value creation and shareholder wealth protection, executive stock ownership position versus stock option holdings, executive retention risk, as well as the dilution impact of different long-term incentive vehicles. Since 2005, the Board has elected to grant a combination of stock options and PSUs to NEOs, as well as to executives and senior management employees.

LTI values disclosed in the Summary Compensation Table on page 65 are calculated using the Willis Towers Watson expected life binomial methodology. The same valuation methodology is also used for benchmark and grant purposes, ensuring consistency. This valuation methodology provides for precise and comparable compensation information. The Company uses a rolling three-year valuation factor to limit year-over-year fluctuations of the valuation factor for both stock options and PSUs.

PSUs and stock options are weighted 55% and 45% of the long-term incentive award value, respectively, except for the President and CEO position. The long-term award for the President and CEO has a smaller relative weight in stock option value, due to the 20% limitation on the number of stock options that can be awarded to any one individual in a particular year, pursuant to the terms of the Management Long-Term Incentive Plan ("MLTIP") and the stock exchanges rule (please refer to page 71 for a description of the plan).

As part of the review conducted in 2019, the Committee reviewed the compensation programs and the Board approved the following changes to the LTI Plan, effective January 1, 2020, thus impacting LTI awards made in 2020 and after:

- Increase the weighting of the Relative TSR component of the PSUs (increased from 30% to 40%), providing a balanced approach and reinforcing the link to shareholder return;
- Increase the vesting period for stock options from four years to five years to enhance retention; and
- Increase the time period during which stock options may be exercised upon retirement from three to four years following the retirement date to align with the extended vesting period of the stock options through retirement.

The annual grant of PSUs and stock options to NEOs and other eligible employees is reviewed and approved at the meetings of the Committee and the Board, which occur each year in January. In order to determine each NEO's LTI award, the Committee takes into consideration individual performance, retention risk and succession plans, as well as the Company's compensation policy and the value of LTIs granted by the applicable comparator group (please refer to section "Benchmarking Using Comparator Groups" on page 51). The Committee does not consider previous executive grants when setting the individual awards, as the LTI plans are inherently performance-based. The Board may also, at its discretion, approve additional grants of PSUs and stock options to NEOs during the year.

The exercise price of the stock options granted is equal to the closing price of the Company's common shares on the TSX or the NYSE on the grant date.

A minimum active service condition exists for stock options and PSUs to support the retention of key talent approaching retirement. An employee must remain in active service until December 31 of the year of the grant for stock options and until March 31 of the year following the year of grant for PSUs. Should an executive, including NEOs, or other management employees retire prior to the end of the minimum service condition in the award agreement, PSUs and stock options awarded pursuant to that agreement would be forfeited.

Performance Share Units: 2020 Award

The objective of the PSUs is to enhance the Company's ability to attract and retain talented employees and to provide alignment of interests between such employees and the shareholders of the Company.

PSUs vest after three years and the grant date fair value of the PSUs awarded to each NEO in 2020 is included in the Summary Compensation Table on page 65, under the Share-Based Awards column. The vesting of PSUs is subject to the achievement of performance measures defined at the beginning of the cycle and the payout can range from 0% to 200%. At the end of the performance cycle, the number of PSUs will be adjusted based on the achievement of the performance conditions detailed below. PSUs will be settled in CN common shares purchased on the open market.

PSUs awarded in 2020 are subject to the following two performance measures:

1. ROIC PSUs

Sixty percent (60%) of the PSU award value is subject to the achievement of a target related to the Company's average three-year ROIC over the plan period and the payment will be conditional upon meeting a minimum average closing share price during the last three months of 2022. The ROIC for each of the applicable plan years is generally calculated as net income before interest expense, divided by the total of the Company's average net indebtedness and the average shareholders' equity, and may, in certain instances, be adjusted for certain items as determined by the Committee. ROIC measures the Company's efficiency in the use of its capital funds and is viewed as a key measure of long-term value generation to its shareholders. ROIC performance objectives are based on CN's business plan. The 2020 ROIC objective considers the increased capital investments recently deployed increasing capacity and enabling growth, such as track infrastructure expansion and investment in technology to improve safety performance, operational efficiency and customer service. The above combined with the cumulative impact of prior years earnings and the average investment base resulted in a reduction of the expected average ROIC for the three-year period ending on December 31, 2022.

ROIC PSUs granted in 2020 to NEOs and other designated employees are subject to the attainment of the performance measures presented in the table below:

ROIC PSUs performance measure

	OBJECTIVE	PERFORMANCE VESTING FACTOR[1]
PERFORMANCE OBJECTIVE: Average ROIC for the three-year period ending on December 31, 2022	Below 12.5%	0%
	12.5%	50%
	13.5%	100%
	15.0%	125%
	15.5%	150%
	16.0% and above	200%
PAYOUT CONDITION: Minimum average closing share price for the last three months of 2022	C$118.56 on the TSX or U.S.$90.06 on the NYSE	

(1) Interpolation applies between objectives.

2. Relative TSR PSUs

Forty percent (40%) of the PSU award value is subject to CN's Relative TSR measured against two equally-weighted comparator groups: i) selected Class I Railroads, and ii) S&P/TSX 60 companies. Relative TSR performance measures CN's share price appreciation, inclusive of dividends, over the three-year plan period against the companies within each comparator group.

Relative TSR PSUs awarded in 2020 to NEOs and other designated employees are subject to the attainment of the performance measures presented in the table below:

TSR relative to S&P/TSX 60

CNR	PAYOUT[1]
75th Percentile and above	200%
50th Percentile	100%
25th Percentile	50%
Less than the 25th Percentile	0%

(1) Interpolation between points.

TSR relative to Selected Class I railways

CNR	PAYOUT
1st	200%
2nd	150%
3rd	100%
4th	50%
5th	0%

The grant date fair value of the PSUs awarded to each NEO in 2020 is included in the Summary Compensation Table on page 65, under the "Share-Based Awards" column.

Performance Share Units: 2018 Award Payout

The Committee reviewed the vesting of the 2018 PSU award against the performance targets for each measure: ROIC PSUs and Relative TSR PSUs. With respect to the payment of the 2018 awards (that vested at the end of 2020), the Board applied the same principle, as described in the AIBP section above, upon calculating the financial results pertaining to the ROIC performance measure, with an associated impact of less than 1% on the ROIC result.

ROIC PSUs: The Company achieved a three-year average ROIC to December 31, 2020, of 15.15%. In accordance with the plan rules and considering the achievement of the minimum average closing share price condition, a performance vesting factor of 110.8% (compared to 109.6% had the discretionary adjustments not been made) was applied for the ROIC PSUs awarded in 2018.

Relative TSR PSUs: The Company delivered a TSR of 43.68%[1] over the period from January 1, 2018 to December 31, 2020, resulting in an overall performance vesting factor of 99%, reflecting the weighted average performance vesting factor of both measures (0% for Class I Railways and 198% for S&P/TSX 60).

PSUs were settled on February 25, 2021 in CN common shares purchased on the open market to encourage share ownership among participants, subject to compliance with the other conditions of the award agreements.

(1) TSR performance is calculated using CNR 20-day share price average immediately prior to January 1, 2018 (including dividend reinvestment) and CNR 20-day share price average ending on December 31, 2020 (including dividend reinvestment). The same calculation is used for all companies part of both comparator groups.

Performance Objectives and Results – Performance Share Units – 2018 Award

ROIC PSUs – 70% of the grant value:

	OBJECTIVE	PERFORMANCE VESTING FACTOR (1)	RESULTS
PERFORMANCE OBJECTIVE: Average ROIC for the three-year period ended on December 31, 2020	Below 13.5%	0%	15.15% (2) translating into a payout factor of 110.8%
	13.5%	50%	
	14.5%	100%	
	16.0%	125%	
	16.5%	150%	
	17.0% and above	200%	
PAYOUT CONDITION: Minimum average closing share price for the last three months of 2020	C$102.88 on the TSX or U.S.$80.71 on the NYSE		C$140.62 U.S.$108.04

(1) Interpolation applies between objectives.

(2) The calculation of the Average ROIC, as per plan, removes deferred income taxes resulting from various tax enactments and the loss on assets for sale. Similar to the AIBP, all government support related to the pandemic received by CN and items outside management's control were removed from the calculation, the material ones being the benefits related to the U.S. CARES Act, the U.S. and Canadian payroll tax payment postponements, the financial impact from the illegal rail blockades and the direct expenses related to the Company's pandemic response. Consequently, the resulting ROIC was 15.15% (compared to 15.08% had the discretionary adjustments not been made, as per plan).

Relative TSR PSUs – 30% of the grant value:

TSR relative to S&P/TSX 60 (15% of the grant value)

CNR	PAYOUT (1)	RESULTS
75th Percentile and above	200%	43.68% (2) TSR resulting in the 74.5th percentile and translating into a payout factor of 198%
50th Percentile	100%	
25th Percentile	50%	
Less than the 25th Percentile	0%	

(1) Interpolation applies between objectives.

(2) TSR performance is calculated using CNR 20-day share price average immediately prior to January 1, 2018 (including dividend reinvestment) and CNR 20-day share price average ending on December 31, 2020 (including dividend reinvestment). The same calculation is used for all companies part of both comparator groups.

TSR relative to selected Class I Railways (15% of the grant value)

CNR	PAYOUT	RESULTS
1st	200%	43.68% (1) TSR resulting in the 5th place ranking and translating into a payout factor of 0%
2nd	150%	
3rd	100%	
4th	50%	
5th	0%	

(1) TSR performance is calculated using CNR 20-day share price average immediately prior to January 1, 2018 (including dividend reinvestment) and CNR 20-day share price average ending on December 31, 2020 (including dividend reinvestment). The same calculation is used for all companies part of both comparator groups.

The value vested during the year for each NEO is included in the table "Incentive Plan Awards — Value Vested or Earned During the Year", and under the "Share-Based Awards — Value Vested During the Year" column on page 70.

Stock Options

Stock options were granted in 2020 to NEOs and other designated employees pursuant to the MLTIP. Please refer to page 71 for details of the MLTIP. The stock options granted in 2020 vest over five years at a rate of 20% at each anniversary date and have a ten-year term. Grants were made in the currency of the recipient's salary.

Stock options are granted with the objective of rewarding NEOs and other designated employees for creating sustainable, long-term shareholder value. If the share price increases between the grant date and the vesting date, stock options will have a realizable value. Gains are realized once the stock options are exercised. The gain will be equivalent to the difference between the share price on the date of exercise and the grant date share price, multiplied by the number of stock options exercised.

The grant date fair value of the stock options awarded to NEOs in 2020 is included in the Summary Compensation Table on page 65, under the "Option-Based Awards" column.

Executive Perquisites

NEOs are eligible to receive perquisites and personal benefits in accordance with the Company's policy and in line with general market practice. These typically include the use of a Company-leased vehicle, parking, financial counselling and tax services, club membership, certain healthcare benefits and life insurance, and an annual executive physical exam. Other executives and senior management employees are also eligible to receive select perquisites; the type and value of the perquisites are generally determined by the grade of the employee's position. All executives must comply with the aircraft utilization policy, which restricts the usage of the corporate aircraft to business-related purposes only, save for exceptional circumstances and provided all incremental costs are fully reimbursed.

Employee Share Investment Plan

The Employee Share Investment Plan ("ESIP"), available to all Company employees, provides the opportunity to participate in CN's ownership through the purchase of CN common shares on the open market via payroll deductions. Employees may contribute between 1% and 10% of their gross base salary to the ESIP every pay period. The Company provides a 35% match on the first 6% of employee contributions. Since January 1, 2019, Company contributions to the ESIP are subject to a one-year vesting period and are forfeited should certain participant contributions be sold or disposed of prior to vesting. Over 80% of CN's employees are shareholders of the Company through participation in the ESIP, and in 2020, all NEOs participated in the ESIP.

On May 25, 2020, the Company suspended the 35% match in an effort to curb expenses during the pandemic. The 35% match was reinstated on October 1st, 2020.

The value of the Company match received by NEOs in 2020 under the ESIP is indicated in the "Details of the All Other Compensation Amounts" table on page 68.

II. SPECIFIC CRITIQUES OF CPKC'S ABILITY TO ATTRACT ADDITIONAL TRAFFIC ARE INCORRECT 10

A. Class I Critics Are Wrong to Conclude that CPKC Will Be Unable to Attract International Intermodal Traffic from the Port of Lazaro Cardenas to the U.S. Midwest 10

B. CN's Criticisms of Other CPKC Traffic Opportunities Are Not Well Founded 14

C. The CP/KCS Transaction Will Be a Vital Catalyst for Additional Investment in Conversion of Crude-by-Rail to DRUbit 16

1. We are Jonathan Wahba, CP's Vice President, Commercial Integration, and Michael J. Naatz, KCS's Chief Marketing Officer and Executive Vice President. We jointly submitted a Verified Statement supporting the Application, and we submit this Reply Verified Statement to address criticism of Applicants' estimates of Transaction-related traffic growth and specific critiques of CPKC's ability to attract additional traffic.

2. I, Mike Naatz, am submitting a separate Reply Verified Statement to address several issues raised by the Comments and Responsive Applications that are specific to KCS.

I. CRITICISM OF APPLICANTS' ESTIMATES OF TRANSACTION-RELATED TRAFFIC GROWTH ARE MISGUIDED

3. Several Class I railroads express a variety of conflicting disagreements with the estimates that we and other Applicant witnesses presented of the traffic growth and associated revenue gains that CPKC will realize as a result of the more effective competition it will deliver to the marketplace. Some assert that we have overestimated the potential for CPKC to win new traffic, and that CPKC will have to resort to foreclosure strategies to meet our forecasts. Others suggest that we underestimated the traffic gains that CPKC will realize.

4. These criticisms are without merit. We and other Applicant witnesses brought to bear significant market knowledge and experience in assessing the likely traffic shifts that CPKC will be able to attract. We carefully assessed the benefits that CPKC will bring to shippers as compared to the transportation services that CP and KCS are separately able to provide today, and we took account of what shippers value when choosing their transportation service provider. We incorporated feedback from the many, many customers we have engaged with since announcing the CP/KCS combination.

5. We recognize that CPKC will catalyze a more competitive transportation environment, so naturally our estimates are not a perfectly precise prediction of exactly how the

chips will fall out. But we are confident that CPKC single-line services will offer exciting new transportation options and succeed in attracting significant volumes of freight from other railroads and trucks, and in many cases will prompt shippers to adjust their shipping patterns to take advantage of the new options CPKC will introduce. For example, by creating new single-line connections between CP's network and KCS's network, the Transaction will increase opportunities for interchange between CPKC and CSX at East St. Louis.

6. Our outreach to customers since last October when we filed the Application shows great enthusiasm and interest in our new offerings. The views expressed by a number of shippers' submitting reply verified statements – along with the hundreds who previously submitted statements supporting the Transaction – are illustrative of the type of response we have received from CP and KCS's customers in the months since we submitted the Application. Many of those customers are planning to put their own money behind these views, with plans to invest in new facilities to take advantage of CPKC's new competitive potential.

7. As we explain below, the Class I railroads' criticism of our traffic estimates focus on an unduly narrow set of formulaic metrics and in the process miss the forest for the trees. They provide no basis for rejecting our traffic estimates, much less concluding that CPKC would irrationally be impelled to engage in foreclosure strategies to force traffic to CPKC. CPKC will instead attract traffic on the merits, while enabling shippers to keep their existing interline options if that is what they would prefer to do.

A. CPKC Growth Will Not Be Hindered by Longer Hauls as the Threatened Class Is Allege

8. The Class I railroads that criticize our traffic analysis behave as if their service and routes cannot be beat, such that shippers would never decide to shift to a CPKC option unless forced to do so. CPKC will show them otherwise.

9. These critics present a narrow and inaccurate views of the market and overlook important attributes of the enhanced services CPKC will offer. UP witness Thomas Haley, for example, expresses skepticism about revenues that CPKC projects from the new traffic attracted to the CPKC network on the grounds that CPKC's routes will in some cases be longer than UP and BNSF routes.[1] He alleges that "CP-KCS have a fundamental routing disadvantage – that is, their routes are longer, slower, and otherwise less efficient than available alternatives" and claims that "CPKC routes would be, *on average*, 217 miles longer than the existing movement."[2]

10. BNSF's witness Benton Fisher takes a similarly narrow focus when he points to the length of CPKC's routes as a basis for challenging our testimony that "[p]erhaps most compelling is the opportunity to open an entirely new corridor for containerized cargo moving between Asia and points in the Eastern United States and Canada via the Port of Lazaro Cardenas."[3] CN's witness David Hunt makes the same assertion.[4]

11. These perspectives ignore market realities and they ignore the attributes of CPKC's future service offerings.

12. Mr. Haley presents an overly simplistic analysis of distance and idealized minimum run times. These isolated metrics are out of sync with what we are hearing from our customers and what we know about competitive dynamics of the marketplaces CPKC will serve.

---

[1] *See* UP-10, Verified Statement of Thomas Haley at 5 ("Applicants' routes between Mexico/Texas markets and Chicago/Twin Cities/Upper Midwest markets are significantly longer and less efficient than UP and BNSF alternatives.")

[2] UP-10, Verified Statement of Thomas Haley ("Haley V.S.") at 19 (emphasis in original).

[3] *See* BNSF-9, Verified Statement of Benton V. Fisher at 10 ("Such rail shipments would be among the longest on the North American continent, as Lazaro Cardenas is 900 miles south of KCS's Laredo gateway, and 2,500 miles from the Chicago gateway to connect with eastern US railroads.")

[4] *See* CN-13, Verified Statement of David T. Hunt at 6 ("For the Applicants' diversion estimates to be achievable, shippers would have to agree to use longer rail routes and pay higher rates.")

13. First, we know from experience that a shorter or *theoretically* "more efficient" route does not always mean that the route will be better at meeting shippers' service needs. UP's witness Haley claims, for example, that "a CPKC route from Chicago to Laredo would be substantially less efficient and slower than UP's existing route."[5] But this is just the output of counting of miles and measuring theoretical train performance using a train performance calculator.[6] Mr. Haley's theoretical speed estimates do not account for actual shipper experience, because real-world railroad service performance does not always track mileage or similar metrics.

14. Some (but not all) of CPKC's routes in these corridors will be somewhat longer, and perhaps *theoretically* somewhat slower, but only by a relatively small margin. And when real world experience is factored in, we expect CPKC's performance to be comparable if not better than what our rivals are able to offer. CPKC expects to offer transportation services that are not just timely and efficient, but *reliably so* (i.e., less variable), such that we consistently deliver transit times that meet our customers' needs. It would be unreasonable to expect CPKC will not succeed in attracting traffic with the improved new services we will be able to offer (and we know that "foreclosure" will never be a strategy that we would resort to, primarily because it would not work; it would instead drive traffic away from CPKC).

15. CP's experience in Canada is illustrative. CP's route from Toronto to Edmonton is longer and slower than the route of our principal rail competitor, yet we still compete quite effectively and win significant business with our intermodal and other services on this route. Similarly, CP's route from Vancouver to Detroit is shorter and slower than competitive

---

5 UP-10, Haley V.S. at 21.

6 Id.

alternatives, and we still win business there as well. As our success has shown, reliability and consistency have value all their own. On the other side of the coin, CP's route from Vancouver to Toronto is faster and shorter than CN's route, yet CN still is able to compete effectively for traffic on those lanes.

16. Second, and equally important, even if it were lanes in which CPKC could not deliver quite the same speed of transit as BNSF or UP options, speed is not remotely everything in meeting customer needs. As these railroads know as well as we do, shippers make their transportation choices based on a wide array of factors. Modest disadvantages in any one parameter – speed included – will not disqualify CPKC (or any other option) from providing shippers with a valuable and important competitive option that many will choose.

17. We know from our extensive engagement with shippers across countless transportation markets (across commodities and geographies) that shippers consider an array of factors in assessing which transportation option best meets their needs: anticipated transit time is one, as is the variability/reliability of those transit time expectations. To many shippers other factors are equally or more important, including, in no particular order: equipment supply, loaded-to-empty cycle times, customization of service design, customer service, investments in loading or unloading facilities, service frequency, pricing, and many more. Different shippers weight these factors differently, and it is utterly wrong to suggest that a mere mileage or idealize transit time disadvantage would prevent a railroad – CPKC or any other – from competing successfully. The Class I witnesses who cherry-pick isolated metrics to support the alleged superiority of their existing routes provide no basis for invalidating our estimates, which are based on market reaction to the complete package we will put forward in our service offerings.

18. This is all the more the case with respect to the CPKC services the market impact of which we have assessed. We know how effectively both CP and KCS have been able to deliver reliable services that meet customer expectations. Both railroads will bring that acumen to CPKC, with a supercharged set of capabilities to compete more effectively against the larger Class Is. We do not doubt that they will try to respond, but our estimates of CPKC's likely traffic gains factor in that kind of competitive response. CPKC gains traffic and revenue, and more importantly from the Board's perspective, shippers will gain a more competitive transportation environment.

B. Our Forecasts Are Bolstered by Shippers' Emerging Plans to Make Significant Investments, Capitalizing on the Value Unlocked by the CP/KCS Transaction

19. Many shippers we have been in touch with since last October tell us that they are already planning significant investments to exploit the improved transaction options that CPKC will offer, including new grain investments in Mexico, Iowa, and Missouri, and new fertilizer investments. Some of them have submitted reply verified statements spelling out these plans and urging the Board to approve the Transaction. *See, e.g.*, Reply Verified Statement of NEW Cooperative, Inc. ("I write today to advise the STB of a potential investment that is contingent on the approval of the CP-KCS combination. This combination provides us the possibility to build a greenfield grain elevator to ship corn and soybeans in Northern Iowa, to capitalize on new, efficient single-line routes on CP-KC from Iowa to grain destinations on the KCS, including Mexico."); Reply Verified Statement of Kevin Hall, Vice President, Supply Chain & Continuous Improvement, Agriculture for CHS Inc. ("The increased efficiencies and market access created by the CP-KCS merger would be an impetus for rail-using companies, such as CHS, to make the most of those benefits by considering making new investments in supply chain infrastructure to

be served by CPKC."); Reply Verified Statement of Ray Carroll County Grain Growers, Inc. ("We are pleased to support the CP-KC transaction and believe that it opens up more possibilities for us. In fact, we anticipating making new investments in this corridor in the foreseeable future.").

20. We have also spoken to a number of other shippers who tell us privately that they plan to make similar investments. One such shipper is planning a $40 million investment in a grain elevator in the United States and a separate $15 million investment to enable a Mexican facility they operate to accommodate 8500-foot "HEP" grain trains. Another shipper has informed us of their interest in capitalizing on CPKC's new single-line service between their Canadian sources and the Gulf by investing in an export terminal option in Port Arthur, TX. Similarly, shippers of DRUbit have told us (and in some cases the Board) that further investment in the infrastructure necessary to remove diluent from Albertan heavy crude (and thus render it safer for rail transit) is unlikely to happen without the transportation service improvements unlocked by the Transaction. We have had ongoing discussions with others in the grain space about investments. The fact that these shippers, across a range of industries, are considering or planning substantial investments contingent on our Transaction provides further support for our estimation of the potential for new CPKC service to succeed in the market.

21. In addition to the customers who plan to invest, Applicants are encouraged by the support of shippers who rely on our offerings to expand facilities and investments. However, all of these new investments and their resulting benefits for shippers and the U.S. economy are contingent on CPKC coming to fruition.

C. Ultimately, Rail Customers Will Decide How Successful CP/KCS Is in the Marketplace, and We Will Strive to Earn Their Trust and Business

22. We recognize that our forecasts of CPKC's Transaction-related traffic gains will not dictate market outcomes. Ultimately, it is rail customers who will decide how successful CPKC will be in the marketplace. CPKC will compete hard and strive to earn our rail customers' trust and business. But, contrary to the assertions of railroads like UP, BNSF and others who are seeking the help of the Board to be protected from competition, CPKC has no ability to force any traffic to the CPKC lines.

23. Other witnesses are replying in detail to the claims by UP, BNSF and others that CPKC will have incentives or the ability to "foreclose" shippers' existing interline options and thereby force traffic to shift over to CPKC routes. Mr. Brooks, for example, explains why this is just not so, and how Applicants' commitment to keep gateways open will assure that it cannot happen.

24. Mr. Brooks and other witnesses also explain how the remedies proposed by certain commenters – especially UP and BNSF – would not only be unnecessary but a supposed "cure" that would be far worse than any disease. The mileage-prorate divisions mechanisms that UP and BNSF both seek to have the Board impose would be affirmatively anticompetitive, as would anything that discouraged CPKC from competing aggressively to attract traffic to its single-line routes, including lower single-line rates. The fact that UP and BNSF may have entered into an arm's-length agreement decades ago that incorporates certain mileage-prorate mechanisms into a divisional agreement that gave UP access to certain BNSF-served territory, in exchange for UP's sale to BNSF of a line that gave BNSF new single-line routes into UP territory, is not a justification for imposing such a regime in this case.

25. From the perspective of our assessment of the likely traffic gains that CPKC will achieve in the post-Transaction marketplace, let us be very clear. Our analysis took as a given that CPKC will have no incentive to degrade any of the interline options that CP or KCS shippers have chosen in today's marketplace. CPKC will not attract traffic by shutting down those options (or "closing" gateways). Our analysis reasonably anticipates that CPKC will attract traffic by providing shippers with improved new options that neither CP nor KCS could have delivered without the Transaction. CPKC will succeed – not always, but enough – through hard competition not foreclosure. Shipper choices will be what brings new traffic to CPKC, not anything else.

II. SPECIFIC CRITIQUES OF CPKC'S ABILITY TO ATTRACT ADDITIONAL TRAFFIC ARE INCORRECT

26. In addition to their claimed skepticism about CPKC's ability to compete against the lager Class Is, the Class I witnesses offer a handful of criticism of specific aspects of our traffic analysis. None have merit.

A. Class I Critics Are Wrong to Conclude that CPKC Will Be Unable to Attract International Intermodal Traffic from the Port of Lazaro Cardenas to the U.S. Midwest

27. CN witness David Hunt asserts that we have overestimated the potential for CPKC to attract international intermodal traffic moving from the Port of Lazaro Cardenas to the U.S. Midwest. Mr. Hunt's analysis is flawed. He claims that our estimates "fail to account for the reality of global supply chains or the circuity of the longer rail and maritime routes that would make it difficult for CPKC to capture that traffic," and that our analysis ignored that this new traffic would require "shifting international container traffic … to more complex and circuitous water and rail routes via the Port of Lazaro Cardenas (on the Mexican Pacific coast)

and KCSM/KCS/CP." *See* CN Comment, Hunt V.S. at 27. He is wrong. We considered all of these factors and our assessment is both reliable and realistic, as recent experience and shipper input corroborates.

28. First, the interest of international container shippers (steamship companies and their beneficial owners) in developing alternative paths from Pacific ports to the U.S Midwest is well established, and not at all about "replacing" the dominant ports of Los Angeles and Long Beach. Mr. Hunt fails to consider the important factor of supply chain reliability. Sustained growth at LA/Long Beach has been constrained by capacity limitations involving the whole supply chain infrastructure associated with the port, as evidenced by its chronic congestion in recent years. Vessel owners and trans-Pacific intermodal shippers have long looked for complements to the LA/Long Beach port, as CN's growth at the Port of Prince Rupert (which CP does not serve) has shown. (CP already serves Vancouver, of course, and we would have exploited opportunities to tap more Asian trade were it not for limitations facing Vancouver, particularly capacity to grow to serve new markets. The CP/KCS Transaction will not have any effect on our ability to attract traffic using the Port of Vancouver.)

29. Second, the Port of Lazaro Cardenas already has the efficient intermodal facilities necessary to support its use as a viable option for trans-Pacific container shippers, but it is restricted by the lack of single-line rail access to the U.S. Midwest, which every U.S. and Canadian container port on the Pacific already possesses (*i.e.,* Prince Rupert, Vancouver, Seattle/Tacoma, San Francisco/Oakland, and LA/Long Beach). The APM terminals facility, the "first semi-automated and most technological advanced container terminal in Mexico," offers

"consistent high levels of productivity."[7] Semi-automated capabilities result in faster, safer, and more robust service than manual terminals can offer. Shippers also have the option of Hutchison's terminal in Lazaro Cardenas. Hutchison, like APM terminals, is one of the three largest international intermodal container operators in the world. Both APM and Hutchison are known globally as sophisticated, efficient, and safe operating terminals.

30. Third, contrary to Mr. Hunt's assertion, the additional rail mileage between Lazaro Cardenas and Chicago, and additional vessel mileage on some trans-Pacific sailing routes, is not a barrier to Lazaro Cardenas playing a role in delivering containerized cargo to the U.S. Midwest. From a steamship perspective, Lazaro Cardenas is not materially farther from Asia, taking into account vessel string designs. Modest increases in maritime distances are no barrier to Lazaro Cardenas' competitiveness.

31. From a rail-route perspective, as we have discussed above and in our initial Verified Statement, modest mileage disadvantages will not prevent routes via Lazaro Cardenas from being competitively viable. Indeed, given the efficiency and lack of congestion at Lazaro Cardenas, in the time it takes a container on a vessel arriving off the port of LA/Long Beach to arrive in port, get offloaded and ultimately placed on a railcar destined for Chicago, a CPKC intermodal train would already be well on its way toward the U.S./Mexico border.

32. Our analysis of the potential for CPKC to handle additional traffic from the Port of Lazaro Cardenas is not purely hypothetical. It is backed up by the assessments of many other market participants and "proof of concept" testing by CP and KCS working together on an interline basis in corporation with a number of shippers eager for alternatives to LA/Long Beach.

---

[7] *See* APM Terminals website, available at https://www.apmterminals.com/en/lazaro-cardenas/about/our-terminal.

33. First, Hapag-Lloyd, a major ocean shipper, addresses Mr. Hunts dismissive analysis head on. Uffe Ostergaard, President for Hapag-Lloyd (America) LLC explains:

> "[W]e expect the Transaction to generate efficient and effective intermodal service between the port of Lazaro Cardenas and destinations in the United States and Canada. Much ocean freight from Asia bound for the United States and Canada flows through various Canadian and United States ports, including Los Angeles and Long Beach. While it is undeniable that those ports will continue to be lynchpins in the global supply chain, it is also evidence that the volumes shipping through most ports often strain their capacity, creating delays. The port of Lazaro Cardenas could handle some of this ocean freight from Asia to the United States and Canada, reducing the strain on other key gateways."[8]

Many other shippers have also expressed to us their similar interest and enthusiasm in the potential represented by for this new CPKC intermodal route.

34. Second, we have concrete market-based evidence that shipper enthusiasm is real and not just hypothetical. In March 2022, CP and KCS cooperated on an interline basis in a demonstration of the capabilities of this new route for several intermodal shippers. CP and KCS were approached by a logistics company that had arranged for the trans-Pacific shipment of containers for Dollar General and other beneficial cargo owners on a vessel operated by Hapag-Lloyd to explore the possibility of an inland rail move from the Port of Lazaro Cardenas to Chicago, for drayage beyond to other U.S. Midwest destinations. Working closely with these parties, KCSM, KCSR, and CP demonstrated the ability to deliver a train carrying 198 individual containers for grounding at Chicago, each arriving only seven days after docking at Lazaro Cardenas. These test runs yielded significant time savings for the shippers, as shipments typically wait longer than seven days just to leave the Port of Los Angeles. As this experience shows, the distance on the water, like the rail mileage, is a far less useful metric than the overall

[8] Reply Verified Statement of Hapag Lloyd (Americas) at 1.

travel time and reliability. Although the investments necessary to make this kind of performance consistent and repeatable will have to await consummation of the CP/KCS Transaction, these test runs prove the capability of this logistical pipeline (the port, CPKC's route network, and CPKC's efficiently located intermodal terminal outside Chicago) to produce real shipper benefits for intermodal shippers.

35. Based in part on this experience, Hapag-Lloyd concludes that "[t]he key is reliability and efficiency, and the Port of Lazaro Cardenas, couple[d] with efficient CPKC single-line rail service, will offer a very attractive alternative for companies like Hapag-Lloyd and our many intermodal customers." *See* Hapag-Lloyd R.V.S. at 2. Mr. Hunt is simply uninformed when he asserts that increased CPKC intermodal traffic from Lazaro-Cardenas to the U.S. Midwest is a fantasy.

B. CN's Criticisms of Other CPKC Traffic Opportunities Are Not Well Founded

36. CN's witness David Hunt also attacks our estimates with respect to new traffic opportunities relating to LPG, grain, and perishables. *See* Hunt V.S. at 33-35. In each case, his critiques are unwarranted.

37. ***LPG.*** First, with respect to LPG, Mr. Hunt asserts that (a) we claim CPKC will attract traffic that does not currently exist; and (b) the new facilities necessary to handle this traffic are not reflected in CPKC's capital expense plans. With respect to the first point, Mr. Hunt's contention actually underscores a key benefit of the CP/KCS Transaction: by creating new, single-line routing options that do not exist today, the Transaction will expand the market reach of CPKC's shipper base and create new, more efficient linkages between market participants. As to these LPG opportunities, CPKC will better link significant origins of LPG in Alberta with significant destination markets in Mexico. The fact that there are volumes of LPG

that do not move between these points today is precisely the point: the Transaction will create opportunities for LPG shipments that do not currently exist.

38. With respect to Mr. Hunt's second point, CPKC will assess investment in new facilities across its entire network as customer response to CPKC's new initiatives develop and will assess the particulars such as potential sites, timing, and capex requirements. There are ample resources in the combined capital budgets of CP and KCS to support business development initiatives such as this one.

39. ***Grain.*** Second, with respect to grain, Mr. Hunt makes the same mistake when he complains that we provided no explanation or reconciliation for the opportunities for traffic shifts that we identified that had not been identified in the rail-to-rail traffic analysis of Messrs. Brown and Zebrowski. The key point is that we are looking at a different set of potential opportunities that are cumulative rather than mutually exclusive. As we explained, CP/KCS Transaction will expand the market reach of grain shippers served by CP and allow them to ship to different markets than they currently ship to, which they cannot do as efficiently today. For example, we identified opportunities where new CPKC routes would enable origins on CP to increase their shipping volumes by sending grain to a major receiver of grain and DDGs ({{[redacted]}}) served by KCSM in Mexico. Grain shippers are excited about these new opportunities, as we explained in our initial Verified Statement. *See* Wahba/Naatz V.S. at paragraph 25.

40. Messrs. Brown and Zebrowski, by contrast were identifying existing flows from the same or nearby origins to the same or nearby destinations, that likely would shift to new single-line CPKC transportation options. In short, the Transaction will achieve both sets of gains, and we carefully avoided double counting any of these traffic opportunities.

41. ***Perishables.*** Third, with respect to perishables shipments that we anticipate CPKC will be able to attract from trucks to CPKC intermodal service, Mr. Hunt asserts that Applicant's expert on truck-to-rail diversions, Bengt Mutén, found a smaller volume of diversions of perishables than we did. This criticism is invalid, for reasons Mr. Mutén explains in his Reply Verified Statement. Mr. Mutén's analysis was necessarily limited to examining truck movements in the specific lanes in which those shipments take place today. Our analysis of potential new CPKC marketing opportunities had a wider lens. With our knowledge of the market, we were able to identify the potential to convert two-stage truck flows – from origin in Mecxico to intemediaet destination, and then to Upper Midwest end markets – and assess the potential for direct service by CPKC to be highly competitive. The fact that Mutén did not include these diversions in his analysis is simply a matter of limitations in the data available to him, not any disagreement with our assessment.

C. The CP/KCS Transaction Will Be a Vital Catalyst for Additional Investment in Conversion of Crude-by-Rail to DRUbit

42. Finally, CN witness Hunt claims that "nearly $158.1 million (40 percent) of the revenue from additional traffic opportunities posited by witnesses Wahba and Naatz is attributable to traffic gains that are unrelated to the merger." *See* CN-—13, Hunt V.S. at 25. Mr. Hunt argues that "[t]he single largest 'opportunity' cited by witnesses Wahba and Naatz (accounting for $158.1 million in incremental revenue) is a crude oil movement from Hardisty, AB to Port Arthur, TX," and that the Gibson Energy press release indicates that this traffic opportunity "pre-dates the merger" and that "merger-related discussions could not have occurred with Gibson Energy at the time of the 2019 press release." *Id.*

43. Mr. Hunt is either confused or misinformed about the potential DRUbit traffic that we addressed in our initial Verified Statement. The press release Mr. Hunt cites related to

the first of three phases of a project undertaken by Gibson Energy and U.S Development Partners to build a diluent recovery unit (i.e., a "DRU") at Hardisty, AB, to support the rail movement of crude in non-hazardous DRUbit form to refineries in the United States. The rail traffic associated with Phase I, which is the only topic of the press release Hunt references, was *not part of our traffic forecast*.

44. The additional rail traffic that we anticipated would move via CPKC single-line routes from Hardisty is contingent on Phases II and III of the Hardisty project, which do not exist today and very well would never come to fruition absent the improvements in rail transportation economics – particularly improved equipment cycle times – that will be made possible by the CP/KCS Transaction.

45. Mr. Hunt may not understand these facts, but the shippers in question do. This is why the participants in the Hardisty DRU project have enthusiastically supported the Transaction. Josh Ruple, Executive Vice President, Chief Operating Officer of US Development Group, LLC, states that USD's "goal of additive Dilbit to DRUbit shipment transition is substantially more likely to increase in a world with CPKC than in one without."[9] This is because, as explained by Brad Sanders, Executive Vice President, Chief Commercial Officer of US Development Group ("USD Group"), "the single-line benefits and new investments made possible by the CP/KCS transaction will provide the improved rail efficiency and economics *necessary to support further investment* in our DRUbit by Rail Network."[10]

46. For DRUbit and so many other commodities, the benefits of CPKC's efficient new single-line services will change the calculus for companies evaluating their transportation

---

[9] Reply Verified Statement of USD Group (Josh Ruple) at 2.

[10] Reply Verified Statement of USD Group (Brad Sanders) at 1.

options and considering investments that depend on efficient transportation options. CPKC, its shippers, and even shippers who choose to stick with their existing transportation providers, will all benefit from the new competition that the Transaction will bring, all to the clear benefit of the U.S public interest.

III. OTHER ISSUES

Applicants are aware that several individual U.S. Federal Maritime Commission commissioners have raised questions about the CP/KCS Transaction being targeted at diverting intermodal cargo from the U.S.[11] It is not. CP already serves those Canadian ports and connects them via efficient single-line intermodal services to the U.S. Midwest. Though the Transaction will enable CPKC to expand its single-line offerings to include Kansas City (where CP has no intermodal terminal today), we do not anticipate significant new intermodal between Kansas City and Canadian ports on the Atlantic or Pacific. Our estimate of the growth potential associated with the Transaction in these lanes is quite modest: only approximately 5,600 annual TEUs from the Port of Vancouver to Kansas City and approximately 2,800 annual TEUs from the Port of Saint John to Kansas City. And, if CPKC's new services were successful in achieving some gains in traffic it would be because they offered U.S. receivers and exporters better, more competitive transportation options, and in all likelihood would expand the total pie rather than divert traffic from other ports in the United States or elsewhere.

[11] *See* Comments of Commissioners Carl W. Bentzel, Louis E. Sola and Max M. Vekich of the Federal Maritime Commission (filed June 22, 2022) (alleging that "the proposed merger will adversely impact U.S. ports and the primarily U.S.-based intermodal railway systems that serve our ports, and would disproportionately benefit Canadian ports and the primarily Canadian-based intermodal railway systems that service Canadian ports for transportation of U.S.-bound cargo").

I. INTRODUCTION

1. I am Michael J. Naatz, Executive Vice President and Chief Marketing Officer at Kansas City Southern (KCS). A substantial portion of my responsibilities involves pricing strategy, market access analysis, development of business opportunities, and competition analysis. I have served in my current role since October 2018. KCS is a non-carrier holding company that owns and controls The Kansas City Southern Railway Company (KCSR), The Texas Mexican Railway Company (Tex Mex), Gateway Eastern Railway Company, Kansas City Southern de Mexico (KCSM), S.A. de C.V., and other non-rail subsidiaries. I joined Kansas City Southern in 2012 as Senior Vice President and Chief Information officer. In 2014, I was promoted to Senior Vice President of Operations Support & Chief Information Officer. I held that position until being promoted to my current position. Before joining KCS, I was president of YRC Holland, a division of YRC Worldwide (YRC). Prior to that role, I served in a variety of executive leadership positions at YRC, including the role of YRC's chief customer officer. I hold a Master of Business Administration from Northwestern University's Kellogg School of Management and a Bachelor of Arts in economics from the University of Illinois.

2. I am submitting this Reply Verified Statement to address several issues that have been raised by the various comments filed in the proceeding. My testimony will address the following: (1) BNSF's allegations regarding KCS's acquisition and control of Tex Mex and KCSM, and whether KCS has used that control to foreclose BNSF traffic through the Laredo gateway; (2) KCS's approach to KCSM pricing and why such pricing does support efficient UP-KCSM and BNSF-KCS-KCSM interline services via the Laredo gateway; (3) why Canadian National's (CN) proposed forced sale of KCS's Springfield Line would not be in the interest of shippers; (4) why it would not be in the public interest to grant the anticompetitive "mileage

prorate" rate-setting mechanism proposed by BNSF and UP (and echoed in the comments of ACC/TFI/NITL); (5) KCS's initial synergy proposals and why those proposals underestimated the amount of synergies that are indicated in the Application; (6) the conditions requested by various shippers of toxic inhalation hazard and poisonous inhalation hazard (TIH/PIH) commodities; and (7) the non-competition related conditions requested by Texas International Terminal and Evergy Metro, Inc. Concurrent with this statement, I am submitting a separate Reply Verified Statement jointly with Jonathan Wahba, Vice-President of Commercial Integration at Canadian Pacific Railway Company (CP), to address comments made about our previous joint testimony in support of the Application.

II. KCS HAS NOT USED ITS CONTROL OF TEX MEX AND KCSM TO FORECLOSE UP OR BNSF ROUTINGS THROUGH THE LAREDO GATEWAY

3. As I understand, BNSF makes the same arguments as it did in the 2005-2006 KCSR/Tex Mex/KCSM proceeding, and now argues that CP (as opposed to KCS) will use its control of KCS to "foreclose" efficient BNSF routings into and out of Mexico via an interchange with KCS (formerly Tex Mex) at Robstown.[1] To the best of my knowledge, without any shipper support or contemporary evidence, BNSF argues that KCS's and KCSM's actions with respect to BNSF/KCS (Tex Mex)/KCSM routings through Laredo via the Robstown interchange[2] have not been "commercially reasonable" for the past fifteen years and that the KCS/Tex Mex open

---

[1] Kansas City Southern – Control – The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company, Decision No. 12, FD No. 34342 (STB Served Nov. 29, 2004) ("KCS/Tex Mex Decision"), at 30-34.

[2] Below, I set forth and explain the history of Tex Mex/KCSR's rights and interchange with BNSF at Robstown for movements through Laredo. Laredo is directly served by KCSR and UP via interchange with KCSM. BNSF has direct access to Mexico via a number of other gateways, including Brownsville and Eagle Pass, but interchanges with KCSR at Robstown to access Laredo. For purposes of this statement, I may use the "Robstown gateway" and "Laredo gateway" but both refer to this interchange connection at Robstown for BNSF traffic moving through Laredo by KCSR.

gateway condition remains ineffective.[3] According to BNSF, BNSF's ability to access Laredo was significantly diminished when KCS bought Tex Mex and the conditions imposed by the Board on KCS's acquisition of Tex Mex have not protected shippers from KCS pricing actions that have effectively frozen BNSF out of the Laredo gateway. The only "evidence" for such an argument is that BNSF's movements through the Laredo gateway declined dramatically after the KCS/Tex Mex merger and that BNSF shifted grain traffic to the Eagle Pass border crossing, where BNSF says it incurs greater costs for movements to several Mexican locations, including the areas that have the highest demand for grain.

4. To begin with, BNSF has failed to present the testimony, discovery document, letter, or any other statement from a single customer that any customer (as opposed to BNSF) believes that Tex Mex's[4] rate division between Robstown and Laredo for BNSF/KCS routings to Laredo (or any other KCSR or KCSM rate) was "commerically unreasonable." In my almost four years as KCS's Chief Marketing officer, no customer has ever once articulated to me that it believed that the KCSR Robstown to Laredo rate was "commerically unreasonable" or that the Tex Mex (KCSR) division of a rate to/from Laredo was preventing such customer from using the BNSF/Tex Mex routing.

---

[3] BNSF 9-30

[4] Prior to KCS's acquisition of control of Tex Mex and for approximately two years following KCS control, Tex Mex provided overhead and local service over the Tex Mex lines and issued its own waybills, tariffs, and rates. KCSR eventually took over all operations and today, it is KCSR that operates over the entire Tex Mex line of railroad, provides local rail services to shippers on the Tex Mex rail line, and issues rate divisions, tariffs, and waybills for movements over the Tex Mex rail line. *See STB Finance Docket No. 34848, published in Federal Register on April 17, 2006, Vol. 71, No. 73, Page 19784*. As a result, Tex Mex is no longer included in the routing or bill of lading. For ease of discussion and because many of the allegations involve movements over the Tex Mex line, I use Tex Mex to refer to the KCSR movements and rates over the Tex Mex line.

5. While I was not employed by KCS in 2005 when KCS took control of Tex Mex, I have asked the very few KCSR marketing employees (mainly in the grain department) who have been with the company since then if they had ever heard of a customer complain that the Tex Mex division between Robstown and Laredo was "commerically unreasonable." None of them have ever received such a complaint. Likewise, no shipper (to my knowledge or that of our long term employees that I have spoke with on this topic) has ever invoked the NITL arbitration agreement (entered into as part of the KCS/Tex Mex/KCSM proceeding) to claim that KCSR's rate to/from Laredo or to/from internal points in Mexico (whether in interline or single-line service) were discriminatory or commercially unreasonable.

6. The fact that no shipper has complained does not surprise me. This is because KCS has not used its control of Tex Mex and KCSM to foreclose BNSF interchanges at Robstown for joint interline movements through the Laredo gateway. KCS remains willing and able to interchange with BNSF at Robstown for movements to and through the Laredo gateway. I also believe it is BNSF that has chosen not to use the Robstown gateway for many types of shipments, mainly because of a disagreement over divisions. It appears that BNSF has used its competitive options to shift traffic away from KCSR and the Laredo gateway, not the other way around. It is BNSF that is intentionally keeping its division requirement high and has steadfastly refused to lower its division requirements to make a joint BNSF/KCSR interline movement competitive with UP or the BNSF single-line movement. As such, it has been BNSF that has used its market power to favor its own single-line routes to the Mexican gateways.

7. As acknowledged by the Board in the KCS/Tex Mex/KCSM decision, KCS has no market power to force BNSF and its customers to continue to use a BNSF/KCSR/KCSM routing or to pay KCSR a commerically unreasonable rate. This is because, as shown in the

following figure, BNSF has several routing options into and out of Mexico via several gateways, and the choice to interchange with either KCSM or FXE:

FIGURE 1[5]

BNSF MEXICO GATEWAYS

8. While BNSF and its customers have options if they do not like the rates offered by KCS, such choices and options being the definition of a competitive market, KCS has only one gateway in and out of Mexico that connects KCSM with the rest of KCSs U.S. network.

---

[5] http://www.bnsf.com/ship-with-bnsf/maps-and-shipping-locations/mexico/gateway-and-connections.html

Indeed, as BNSF's own comments and evidence show, BNSF has shifted its Mexican traffic to its other gateways – especially, El Paso and Eagle Pass. This shift did not occur because KCS is charging "commerically unreasonable" rates so as to foreclose BNSF from the Mexican marketplace – KCS having no power to do so given BNSF's competitive options – but rather because, and especially with respect to grain movements, BNSF has not lowered its own division to make the BNSF/KCSR route competitive. Instead, BNSF has apparently offered a rate that encourages shippers to use BNSF through Eagle Pass and El Paso. BNSF is thus using its market power to discourage shippers from using a BNSF/KCSR joint line route.[6] With this context, BNSF's "evidence" of foreclosure, i.e., the shift of traffic from Laredo to Eagle Pass, is revealed for what it is: BNSF's commerical decision to refuse to lower its divisions in order to protect its margins and favor its single-line service through the other gateways .

9. There is another rational commercial reason for BNSF "losing" the traffic and it has nothing to do with KCS exercising market power to force shippers to use a less efficient and more expensive KCS route (which is what foreclosure really means): KCS can provide a single-line service that shippers choose because it is both less expensive and a more efficient route. Any carrier, including BNSF, can usually offer a lower rate on single-line service versus an interchange to another carrier. So, yes, where KCS and BNSF both serve the U.S. destination or origin, the KCS/KCSM system is of course going to be able to provide an efficient single-line rate that is better than the joint-line rate with BNSF.

---

[6] All KCS grain shippers have benefitted greatly from KCS's single-line option through Laredo. This single-line option was only made possible through the KCS/Tex Mex/KCSM transaction. This proves exactly what KCS argued in the KCS/Tex Mex/KCSM proceeding – acquisition of Tex Mex/KCSM would provide shippers with a new single-line option to continued dominance by BNSF or UP.

A. Grain Movements Are Illustrative of How KCS Has Not Foreclosed BNSF From the Mexican Marketplace

10. When one examines the grain market, it represents exactly the concepts I note above. It is important to understand the historical context of the Tex Mex/BNSF relationship. Prior to the UP/SP merger in 1996, FD No. 32760, Tex Mex's primary interchange partner was Southern Pacific.[7] The SP/Tex Mex route was the only competitive route to UP's single-line route to Laredo. As a result, BNSF and KCSR had to interchange Mexican traffic with SP, which interchanged it with Tex Mex. As I understand it, Tex Mex had to rely upon SP as its lifeblood –making Tex Mex dependent upon SP feeding it traffic and at whatever division SP would dictate to Tex Mex.

11. Given that (1) UP was merging with its primary competitor (i.e., SP) for Laredo bound traffic; (2) BNSF expressed little interest in serving Mexico; (3) Tex Mex was financially unstable and likely would go bankrupt without additional connections and traffic densities; and (4) KCSR had expressed a strong interest in connecting with Tex Mex (of which, KCS owned 49 percent at the time of the UP/SP merger), the Board granted Tex Mex trackage rights to connect with KCSR at Beaumont. Tex Mex would, through the BNSF Settlement agreement, also have connections with BNSF at Robstown and Corpus Christi. The Board's grant of trackage rights provided Tex Mex with access to both BNSF and KCSR as a means by which to replace SP traffic and continue to provide a competitive route to/from Laredo.

12. The condition worked, and Tex Mex survived. The BNSF-Tex Mex interline relationship originated in this era. Even though Tex Mex had received trackage rights extending

---

[7] See Union Pacific Corp., et al. – Control and Merger – Southern Pacific Rail Corp., et al., FD No. 32760. Background regarding Tex Mex's prior competitive position and request for trackage rights is explained in the Board's August 6, 1996 Decision No. 44. 1 S.T.B. 233, 1996 STB LEXIS 220. (the "UP/SP merger decision").

its network to Beaumont, as I discuss later, it nonetheless continued to give BNSF very low rate factors for BNSF-Tex Mex interline routes via Robstown/Corpus Christi. At the time KCS took control of Tex Mex, Tex Mex was offering BNSF a rate of $260 per car if BNSF hit certain volume requirements, which I am told they always did. Given that the Tex Mex portion of the move was approximately 150 miles, as I discus below, such a low rate was barely remunerative to Tex Mex, if at all.

13. When KCS acquired KCSM and Tex Mex, I understand BNSF vigorously opposed and sought numerous conditions, as they do here.[8] The Board rightly rejected those conditions finding that competitive harm would not result from the merger because the combined KCSR/Tex Mex/TFM rail network would not gain sufficient market power (nor have the incentive) to foreclose BNSF. In making this determination, the Board noted the distinction between protecting U.S. carrier's leverage over divisions versus protecting shippers from raised rates, and that the result may be that KCS earns more revenue at the expense of BNSF and UP, but this is not a harm to competition.

14. Here, BNSF makes much of the fact that KCS raised the division requirements for the rail movement over the Tex Mex rail lines after the merger. It is true that KCS did raise Tex Mex's division requirements. KCS did so because the then rates existing prior to the merger were not remunerative and had not been raised in years.

---

[8] KCS/Tex Mex Decision Docket, at 32-33. One such condition was a five year "freeze" on Tex Mex divisions. As KCS explained in its October 15 .2004 Reply to Additional Comments filed September 30, 2004 ("2004 Reply Comments"), KCS and BNSF were in negotiations over the fact that Tex Mex's divisions were too low and Tex Mex was losing money. Id. at 17. During these negotiations, BNSF threatened to "simply shift its traffic to its other gateways" if Tex Mex's rates were too high. Supplemental Verified Statement of Gerald K. Davies, Executive Vice President and Chief Operating Officer of KCSR, at 60, attached to the 2004 Reply Comments. BNSF and Tex Mex extended the division agreement until December 31, 2004, BNSF and KCS came to a separate agreement, and BNSF did not renew its request for the freeze in supplemental comments filed in 2004.

15. BNSF points to the fact that its share of grain moves to Laredo via a BNSF/KCSR/KCSM move has consistently declined. BNSF argues that this is evidence of KCS exercising undue market power. It is not. It seems more likely than not that BNSF's market share decline via a joint BNSF/KCSR/KCSM routing through Laredo is a direct result of BNSF deciding to favor its own single-line move through Eagle Pass or El Paso.

16. This is exactly what was predicted back in the UP/SP merger. There, as explained by the Railroad Commission of Texas, and as adopted by the Board, BNSF had little incentive then (and even less of an incentive now) to route its grain traffic via Tex Mex to Laredo.

> "Were it not for the fact that Laredo currently enjoys a competitive advantage over the other gateways to Mexico because there is a larger infrastructure of customs brokers located at Laredo than at the other gateways, there would be little or no incentive for BN/SF to route traffic via TexMex. Certainly, there is no reason to assume that BN/SF would deliberately route unit trains of grain in joint-line service with TexMex via Laredo when it will have a comparatively direct shot in single-line service at Eagle Pass. Given the admitted concentration of BN/SF's traffic from the grain belt and the Pacific Northwest and the industrial Midwest, it is only logical to assume that BN/SF would favor the less circuitous, single-line routing via Eagle Pass."[9]

17. In the 26 years since those findings, there has been extensive investment by UP, BNSF, and governmental agencies in customs and other infrastructure at Eagle Pass and other Mexico gateways, making them much more comparable to Laredo. This provides BNSF with even less incentive to utilize KCS/Tex Mex. And as stated earlier, it is BNSF that is using its market power and its competitive options to not use the BNSF/KCSR/KCSM routing through Laredo.

---

[9] UP/SP Decision, 1 S.T.B. 233, *423 (citing the Railroad Commission of Texas's submission, RCT-7 at 22-23).

18. BNSF's argument is simply a fight over the division of the rate so as to favor its single-line route to Eagle Pass. To illustrate why I say this is just a fight over the division, one only needs to compare the various rates in place since KCS acquired Tex Mex and KCSM. After control was implemented, KCS did raise its rate for movements over the Tex Mex rail lines, initially to $525 and now, with adjustements, it stands at $595.[10] Even at this rate, this is not a "commercially" unreasonable rate for the 150-mile move over the Tex Mex rail line.

19. Revenue to variable cost (R/VC) ratios, while not definitive in and of themselves, are generally indicative of revenue contribution to costs and usually reflect the market conditions that affect rates. I note that the R/VC ratio for the current rates for the Tex Mex portion of the move from the two interchange locations with BNSF – Robstown and Corpus Christi – are set forth below. Clearly, the division that BNSF complains about as foreclosing BNSF's use of the Laredo gateway barely covers variable costs (based upon 2020 URCS costs). There can be no argument, nor is there any evidence (and BNSF presents none) that shows that KCSR's rate is an attempt to exercise undue market power to foreclose BNSF's use of Laredo. Again, not one shipper has, nor has BNSF, presented any evidence or argument that this division requirement is "commercially unreasonable."

[10] It was explained to me by a long time KCS employee, that BNSF complained when KCs raised the rate from $260 to $525. KCS (Mike Bilovesky) informed BNSF (Al Virgine) that if he could identify any line-haul rate in a BNSF tariff lower than $525, KCS would lower its rate to that level. BNSF did not identify any such lower rate.

TABLE 1[11]
KCS R/VC LEVELS FOR CURRENT ROBSTOWN-LAREDO RATE FACTORS

	Robstown to Laredo	Corpus to Laredo
Miles	**145.1**	**161.6**
Freight Rate	**$611**	**$613**
Line Haul	*$595*	*$595*
Fuel Surcharge	*$16*	*$18*
URCS: Var Cost	**$536**	**$570**
R/VC	**114%**	**107%**

20. Indeed, when one examines the R/VC ratios (based upon 2006 URCS) that were in existence shortly after KCS took control of Tex Mex and KCSM, and after KCSR raised the rates for movements over the Tex Mex rail lines from $260 to $525, it shows a similar point: the KCSR post-control rates, even at the higher level following KCS's decision to increase them, still barely covered costs and were nowhere near the Board's jurisdiction threshold of 180 percent to even bring a rate complaint.

TABLE 2[12]
KCS R/VC LEVELS FOR 2005 ROBSTOWN-LAREDO RATE FACTORS

2006 Basis	Robstown > Laredo	Corpus > Laredo
Miles	**145.1**	**161.6**
Freight Rate	**$541**	**$543**
Line Haul	*$525*	*$525*
Fuel Surcharge	*$16*	*$18*
URCS: Var Cost	**$445**	**$472**
R/VC	**121%**	**115%**

21. I did not have access to the 2004 URCS costs, but the 2004 costs should not be that dissimilar to the 2006 costs. Assuming such 2004 URCS costs were like those in 2006, and

---

[11] Workpaper – HC – Current Robstown-Laredo RVC Factors.

[12] Workpaper – HC – 2006 Robstown-Laredo RVC Factors.

when one considers that prior to 2005 Tex Mex was charging approximately $260 per car or less for grain, intermodal, and automotive traffic, Tex Mex *was charging hundreds of dollars less than URCS costs*.[13] This fact confirms what I have previously said – that Tex Mex was basically acting as the agent of BNSF, even charging below costs. This may explain why BNSF vigorously opposed KCS's acquisition of Tex Mex. It it also not surprising that when KCS raised Tex Mex's rates to a compensatory level, and BNSF refused to lower its division, that BNSF lost market share and shifted its traffic to the El Paso and Eagle Pass gateways.[14] But one thing is clear: the shift of BNSF traffic was not the result of KCS using its control of Tex Mex to foreclose BNSF from using the Laredo gateway. KCS would have no incentive to discourage BNSF from using the Tex Mex route and causing it to shift business to aother gateway, eliminating KCSM's role in handling traffic on the south side of the border.

22. Since the intitial rate increase to $525, which KCS imposed after taking control, KCS held Tex Mex's division level steady at that level until 2015. At that time, KCS did take a $70 increase (to $595), which has held steady for seven years. In contrast and based upon my discussions with my marketing personnel, we believe BNSF, beginning in 2005, has raised its grain rates by 1,000's of dollars. BNSF blames its inability to use the Laredo gateway on KCSR's division requirement, but as noted above, KCSR's rate continues to barely covers its variable costs for the movement of the freight over the Tex Mex rail lines. Clearly, KCS is not foreclosing BNSF from using the Laredo gateway.

---

[13] I can only speculate as to why Tex Mex's and KCSM's prior owners allowed Tex Mex to charge non-compensatory rates. I suspect that the desire was to drive as much traffic as possible to the Laredo gateway and over KCSM's predecessor, TFM. I have been told that at the time, Tex Mex's and TFM's owner, Transportacion Maritima Mexicana SA ("TMM"), was struggling financially. Perhaps the goal was to generate as much traffic as possible even if such traffic barely covered costs on a Tex Mex/TFM through basis.

[14] Of course, BNSF threatened to do just that in negotiations, supra, fn. 9.

23. We understand from customers that BNSF's single-line rates to Eagle Pass at grain origins where BNSF, KCS, and/or UP compete are lower by approximately the difference between the current KCSR rate and the original $260 Tex Mex rate. In other words, it appears that BNSF has adopted a deliberate policy of maintaining a higher division for its portion of a BNSF/KCSR through rate to Laredo in an attempt to encourage shippers to use the Eagle Pass and El Paso gateways.

24. In this sense, it is BNSF that is foreclosing KCSR and KCSM from being able to effectively compete against UP. Indeed, at grain origins that are not served by KCS but are served by UP and BNSF, when KCS has requested BNSF to take a lower division so as to make a BNSF/KCSR route competitive so as to increase both BNSF's and KCSR's share of this traffic to Laredo, BNSF has refused to do so -- favoring the BNSF single-line to Eagle Pass or El Paso. It would appear that BNSF is unwilling to lower its division requirement by $260 in order to make a BNSF/KCSR routing to Laredo competitive with UP or BNSF to Eagle Pass.

25. Yet, BNSF criticizes KCS for refusing to lower KCSR's division at those locations where BNSF and KCS compete -- KCS offering lower rates for its single-line option, but, BNSF is doing the same thing -- favoring its single-line options by refusing to lower its division. This is the nature of competition – railroads usually can provide a single-line rate at lower costs than joint line rates. This is not evidence of KCS exercising any kind of foreclosure strategy, nor could it be given that KCSR's rate to Laredo over the Tex Mex rail lines barely covers its variable costs. Rather, this is called competition. It is exactly what KCS said would occur in the KCS/Tex Mex/TFM transaction, i.e., the combined KCS entity would be in a stronger position to compete against both UP and BNSF.

26. Besides examining R/VC ratios, as further evidence that KCS is not "foreclosing" BNSF from the grain market place through rate manipulation, we can examine the extent of KCSR's and KCSM's revenue per unit ("RPU") increases with respect to grain when compared to BNSF or UP RPU increases. If BNSF or UP were right about its foreclosure theories, it would have to be the case that KCS increased its rates south of the gateways after it obtained control of Tex Mex and KCSM as a way of defeating the competitiveness of UP-KCSM or BNSF-KCS-KCSM route options. But the facts show that nothing like this occurred. KCS's consolidated rates for grain have increased at {[redacted]} percent compounded annual growth rate since 2005 as shown below. Over the same period, UP's public reports show that its growth rate for agriculture and mineral traffic has been {[redacted]} percent while BNSF's has been {[redacted]} percent. KCSM's pricing is certainly not an outlier.

FIGURE 2[15]**{**

[redacted]

[15] Workpaper – HC – Class 1 Grain RPU 2005-2019

27. The same point can be made by examining overall RPU trends from 2003 until 2021. This includes the period before KCS took control of KCSM and Tex Mex, as well as the post-transaction period. The below chart shows that KCSR's and KCSM's rates, individually and on a consolidated basis, have actually risen less than UP's and BNSF's.

FIGURE 3 [16]{

B. Intermodal And Automotive Traffic Is Also Illustrative Of How KCS Has Not Foreclosed BNSF From the Mexican Marketplace

28. An examination of the intermodal and automotive traffic since KCS's acquisition of KCSM and Tex Mex also establishes that KCS has not foreclosed BNSF from use of the Laredo gateway. If anything, it is BNSF that can exercise its market power or adopt (or fail to

[16] Workpaper – HC – Average RPU 2003-2021.

adopt) operating practices to shift traffic away from a Tex Mex interchange at Robstown or Corpus Christi. I will use some specific shipper examples to illustrate my point, but the points I make are applicable to other shippers as well.

29. The first example involves multiple customers' traffic {[redacted]} that is originated and controlled by BNSF. It is my understanding that BNSF has a long-term exclusive contract with {[redacted]} so that if BNSF provides intermodal service to a point on BNSF's network, {[redacted]} is required to use BNSF to that location.

30. Since May 19, 2017, BNSF, KCSR, and KCSM have been parties to an Intermodal Service Agreement ("ISA") effective December 1, 2016.[17] The ISA provides the rates and service parameters for intermodal traffic through the Robstown interchange and into/out of Mexico. The agreement expired on December 31, 2021. Leading up to the expiration date, KCS was willing to extend that agreement under substantially similar terms and conditions for another five years. In contrast, BNSF would agree to another five-year term, but requested significant changes to the terms and conditions including insisting on a {{[redacted]}} clause. KCS was unwilling to accept those conditions because market conditions change over time and KCS does not enter into {{[redacted]}} clauses in the intermodal world.

31. Upon refusing to agree to BNSF's demands, in conversations, BNSF stated that it may switch its routings *with all customers* (not just {[redacted]} to favor its Eagle Pass gateway given they have a contract that would force {[redacted]} to switch to Eagle Pass and an FXE

[17] The existence of the Intermodal Service Agreement belies any notion that KCS is not interested in working with BNSF to facilitate a Robstown interchange and is using its ownership of Tex Mex and KCSM to "foreclose" efficient BNSF service to Laredo.

(KCSM's competitor in Mexico) routing.[18] {[redacted]} informed KCS that they preferred Laredo and the KCSM routing, but it would have no choice given its contract with BNSF.

32. Clearly, BNSF's intent is to imply a threat to switch all traffic subject to this contract to Eagle Pass and FXE. This shows that it is BNSF that possesses the market power to foreclose KCS routings, not the other way around. Due to the potential of KCS losing all of this traffic and KCSM losing a substantial amount as well (some of this traffic would have to eventually be switched to a KCSM destination, but KCSM would have lost the long haul), KCS and BNSF, at the urging of the customer, agreed to a one-year extension of the existing agreement with no material changes.[19] This preserved the BNSF/KCSR/KCSM routing through Laredo, at least for the near-term. The same discussion is already being undertaken for 2023.

33. Since signing the one-year extension, BNSF approached KCS to request through rates to Mexico from/to St. Paul, MN origin/destination be added to the Intermodal Service Agreement. After negotiations over the rates and divisions, KCS and BNSF were able to amend the one-year Intermodal Service Agreement covering multiple customers traffic to include St. Paul. Again, if KCS were attempting to foreclose BNSF from using the Robstown/Corpus interchange, it would have been uncooperative and would have refused to add St. Paul and instead taken the long-haul to Kansas City for itself. If KCS had requested too high of a division, BNSF would not have agreed to the arrangement. It is BNSF that can move this traffic to Eagle Pass and Brownsville. Unlike BNSF and UP, KCSR/Tex Mex's U.S. network only

---

[18] BNSF made the same threat when Tex Mex attempted to raise its divisions to a compensatory level during the 2005 KCS/Tex Mex transaction, supra fn. 9.

[19] The Board predicted this outcome in the KCS/Tex Mex decision, at 17-18. ("Moreover, KCS's experts credibly explained that market conditions would prevent KCS from raising rates to shippers or foreclosing UP and BNSF from the Mexican market, because the later two carriers account for more than 90% of the rail traffic interchanged with TFM at Laredo, and it would be unprofitable for KCS to use its control of TFM to take actions that would foreclose this traffic.").

connects with the Mexican rail network via its link to KCSM at Laredo and Brownsville. As a result of BNSF's relationship with multiple customers, including {[redacted]}, and its ability to use other gateways and FXE, it is BNSF that has the market power with respect to this intermodal traffic. KCS has no ability to "foreclose" BNSF from such routings.

34. With respect to intermodal marketing companies, the evidence brought to my attention shows that any loss of Mexican cross-border business by BNSF was not due to actions undertaken by KCS, but rather changes in the types of equipment preferred by customers and by aggressive competition from UP. Prior to the KCSR/Tex Mex/KCSM transaction, BNSF/Tex Mex did have a significant amount of this business in competition with UP over the Laredo gateway. But after the KCSM/Tex Mex transaction, BNSF lost a significant amount of this business to UP. BNSF contends that this was due to the KCS post-transaction pricing policies. This is simply not true.

35. At the time, {[redacted]}, a U.S. Based intermodal shipper with offices in Mexico, used to have a long-term contract with BNSF and post-UP/SP merger would route {[redacted]} traffic via the BNSF/Tex Mex interchange and through Laredo. This service competed against UP. This BNSF/Tex Mex {[redacted]} service was part of and dependent upon the North American Container System ("NACS") box system. At the time, every Class I participated in the NACS program except UP. During this time, {[redacted]} also participated in the Equipment Management Pool ("EMP"), which was an interline pool arrangement and product started between UP and NS. EMP and NACS competed against each other. BNSF was not a part of EMP.

36. After the KCSR/Tex Mex/KCSM transaction, the NACS program was struggling and eventually, in 2006, BNSF leased almost all of its 53' NACS boxes to Swift Intermodal and a

few years later, NACS was dissolved. At this time, BNSF began to partner with asset owners (as compared to pool arrangements) like {[redacted].} In the 2009 time period {[redacted]} decided to transition all of its western carrier business to UP, including its Mexico business. I believe this was largely due to the dissolution of the NACS program. BNSF's loss of traffic was not related to KCS pricing BNSF out of the market, but due to its prior dependence upon NACS, the type and ownership of the boxes, and BNSF's shift to asset-based customers. I do not believe this was the result of KCS or KCSM pricing.

37. Contrary to the notion that KCS seeks to foreclose BNSF business, KCS works with BNSF today, as it has in the past, to provide a competitive KCS/BNSF routing to that of UP for automotive traffic. For example, currently, KCS works with {[redacted]} to provide a joint BNSF/KCSR/KCSM routing through Laredo for northbound automotive traffic out of {[redacted]'} Mexican plant. This is an example of how BNSF and KCS do continue to work together to route traffic through the Laredo gateway. KCS has no desire to "foreclose" such a routing option for {[redacted]} by charging a high KCSR division or by charging high KCSM rates. Either such action would reduce KCS's revenues – an action that would not be economical for either KCSM or KCSR. If KCS took such an action, {[redacted]} would simply shift its routings to a KCSM/FXE/BNSF routing through Eagle Pass. This is something KCS would not want to see as it would result in KCSM getting only a short-haul and an overall loss of revenue.

38. KCS's current interchange arrangements with BNSF at Robstown can only accommodate unit train traffic. KCSM gives the train to KCSR at Laredo, and KCSR in turn takes the unit train and eventually interchanges it at Robstown to BNSF via a mainline step on/step off interchange operation. There are no tracks available at Robstown to facilitate the interchange of less-than-unit-train traffic, so-called manifest traffic. Such an interchange of

manifest traffic would require yard or sidetracks necessary to store cars and build trains, which do not exist at the Robstown interchange with BNSF.

39. Recently, {[redacted]} and BNSF approached KCS about amending the existing contract to quote a rate for a Robstown interchange for {[redacted]} manifest traffic, not unit train traffic. Because adding revenue for such additional traffic is in KCS's economic interests (and incidentally also mindful of its obligations under the KCS/Tex Mex/KCSM decision to keep Robstown interchange open on commercially reasonable terms), KCS has quoted such a rate to {[redacted]} and is working with BNSF on developing an operating plan. Given there are no interchange tracks at Robstown for accommodating a manifest interchange, KCS is working with BNSF to develop a plan to bring such northbound manifest traffic to Corpus Christi.

40. The point of the above discussion is to disprove the notion that KCS has no interest in developing Laredo interchange traffic with BNSF through a Robstown interchange. Nothing could be further from the truth. Indeed, between KCSM-served terminals in Mexico and BNSF-served terminals in Texas and the West. KCS and BNSF negotiated interline rates covering joint-line KCS-BNSF intermodal services via the Laredo gateway in {[redacted]} different origin-destination lanes. KCS welcomes such traffic.[20] It is in KCS's self-interest to work with BNSF to provide a joint routing that would compete with UP. Indeed, the KCS/BNSF cross-border traffic in competition with UP has been a remarkable success, as the below chart shows. Since 2016, when the new partnership was announced, revenues have grown substantially.

[20] It is important to note that over 80% of KCS's shipments originate on the rail line of other Class I carriers.

FIGURE 4[21]

41. This self-interest will not change with the CP/KCS transaction. The only change will be that there will now be a new single-line option for shippers, especially Chicago and Detroit/Eastern Canada shippers, to move traffic to/from Mexico via Laredo. This is not foreclosing BNSF routings, but rather, the transaction will enhance competition by providing new options for shippers. To the extent a combined CP/KCS cannot provide an efficient single-line option that shippers prefer, it remains in CP/KCS's self-interest to work with BNSF to continue to provide shippers with options, especially in those origins and destinations that are served only by UP and BNSF.

[21] Workpaper – C – BNSF- KCS Cross Border Intermodal Offering.

C. Energy Is Another Commodity That Illustrates How KCS Has Not Foreclosed BNSF From the Mexican Marketplace

42. Another example of how KCS is not foreclosing BNSF is to examine the petroleum and energy products markets. BNSF's witness, Mr. Hirsch, notes that BNSF obtains business only where KCS does not serve the origin or where the movement is part of a larger contract where KCS does not serve some origins. The insinuation is of course that KCS is somehow foreclosing BNSF from opportunities. In his verified statement, Mr. Hirsch does not point to any specific customer rate quote, routing, or O/D pair establishing that it is the KCS division that is "too high" or "commercially unreasonable" that is prohibiting BNSF from competing. His argument is simply BNSF cannot compete and cannot win the traffic. Apparently, in his view, it cannot be BNSF's division that is too high, but rather, if BNSF loses the traffic, it is because KCS is "foreclosing" BNSF from competing.

43. An examination of the actual specific markets and customers for the energy market from the Gulf region to Mexico shows that KCS is winning the traffic due to its customer relationships, its service, its efficient routings, and its single-line rates. KCS is not forcing a Gulf Coast energy customer to use a KCS single-line route at a higher rate and less efficient routing because it was pricing the division over the Tex Mex rail lines at commercially unreasonable rates, but rather the customer is choosing KCS. And where KCS cannot provide a more efficient route or rate, KCS will work with BNSF to provide that customer with additional routing options.

44. One relevant example is traffic to/from Jefferson Energy Terminal, which is a public-private partnership between the Port of Beaumont Navigation District of Jefferson County, Texas and Jefferson Energy Companies located in Beaumont, Texas, which is owned by Fortress Investment Group LLC (certainly no stranger to the rail industry). In December 2017, and with logistics support from Jefferson, ExxonMobil became the first company to provide an

integrated product offering along the entire fuels value chain in Mexico. Unit trains of gasoline and diesel delivered to Central Mexican markets originated at the Jefferson Energy Terminal. The unit train loading was done under an agreement with ExxonMobil. These volumes originated at Jefferson Energy Terminal and were safely delivered through destination terminals in San Luis Potosi, Mexico and San Jose Iturbide, Mexico to retail gasoline stations in the Bajio region of Mexico. Jefferson Energy Terminal is served by UP, BNSF, and KCS. ExxonMobil received bids from all three railroads. KCS won the bid and handled the entire movement. In addition, until recently, ExxonMobil also originated traffic at loading facilities located on the Port Terminal Railroad Association (PTRA) shortline at the Port of Houston. All three carriers have had access to PTRA (in KCS's case only for traffic to/from Mexico and other points on Tex Mex's original Corpus Christi-Laredo mainline). BNSF was able to receive traffic from PTRA and move it to the border at Brownsville, to Laredo through Robstown interchange, or to Eagle Pass or El Paso, which are not KCS served.

45. The market and subsequent increase in rail traffic became possible due to changes to the Mexican Constitution that allowed for the importation of refined commodities into Mexico and commercialization of Mexico's gasoline and diesel markets. As a result of those changes, ExxonMobil tapped several of its existing relationships to develop a retail-based strategy that brought energy products to Mexico from the Gulf region. ExxonMobil's strategy focused on the eastern part of Mexico as its refinery base in Beaumont and Houston is aligned well to that geography, which corresponds with KCSM's existing rail infrastructure and KCS's connection to the Gulf region. Conversely, Valero, another large exporter of refined product to Mexico has primarily focused on markets in Western Mexico due to the locations of its refinery base, which are oriented further west. While BNSF, KCS, and UP all serve Jefferson Energy Terminal, one

of ExxonMobil's major Gulf fuel terminals, ExxonMobil, contracted with KCS to take advantage of the KCSM infrastructure and pricing offered by a single KCS/KCSM routing that matched ExxonMobil's commercial strategy.

46. ExxonMobil has made no allegations that KCS was pricing the KCSR portion of a BNSF routing at a commercially unreasonable rate or that KCS was otherwise using its control of KCSM to force a KCS routing in preference to a UP move, nor could it given that KCSM has to give the same rate for the Mexico portion of the move to UP, BNSF, and KCS. Indeed, under its contract, ExxonMobil has the option to use the UP single-line rate to Laredo and at Laredo KCSM must charge the same rate as it charges KCSR.[22] In fact, KCSM does receive both UP and KCSR ExxonMobil traffic at Laredo. The simple fact is that ExxonMobil awarded the business to KCS given the single-line nature of KCS's move, KCS's service focus, and KCS's willingness to undertake a long-term partnership with ExxonMobil. The relationship continues to this day, and to the extent ExxonMobil prefers KCS, or use KCS for related or similar moves, it is because of KCS's relationship with ExxonMobil, not because KCS is using market power to force ExxonMobil to use the KCS rail system.

47. The same is true with respect to other Gulf Coast energy customers. Where it is more efficient to move traffic over a single-line rail network, customers will do so. If the customer prefers a joint-line move, or a joint-line move is more efficient, that is the way the traffic will move. For example, the Entergy coal fired electric plant in Lake Charles, Louisiana, is served by UP, KCS, and BNSF. Both UP and BN serve the coal origins and the destination

[22] To underline the competitive nature of the marketplace, ExxonMobil recently solicited bids from UP, BNSF, and KCS for various lanes of traffic, including both FXE and KCSM routings. ExxonMobil chose a UP/FXE routing over the BNSF/FXE routing for traffic to the west and chose KCS/KCSM for traffic to the Gulf and the Southeast. There was no allegation from ExxonMobil that KCS was manipulating the rates to disfavor a BNSF/KCSM routing.

and can provide single-line service. KCS can only serve the destination. KCS must interchange coal with either UP or BNSF to complete the route. In the past, KCS was able to provide routings, service, and divisions requirements that allowed for competitive joint-line service via UP/KCS or BNSF/KCS. However, in the two most recent rounds of bidding, the customer selected a single-line service over a joint-line move, even though KCS offered the same division to both UP and BNSF for a Kansas City interchange. KCS is certainly not contending, as BNSF seems to do here, that because it lost the traffic, BNSF or UP must have "foreclosed" a KCS routing option. Rather, KCS understands that the customer chooses the routes and rates, and, generally, a single-line option can be more competitive than a joint-line option and that KCS can only price its division so low before it drops below its costs.

48. As noted above, sometimes joint-line routes and rates can win the traffic vis-à-vis a single-line rate, as KCS did for some time for the Entergy business. It just depends upon what division a connecting carrier is willing to take. In the existing situation, BNSF simply refuses to lower its division, even if doing so would win the business for the joint line move. Therefore, it is not KCS who is foreclosing BNSF's routings, but rather BNSF's refusal to lower its division to take less profit that underlies BNSF inability to complete against KCS.

49. The principle that carriers can find it in their economic interest to accept a lower division is illustrated by BNSF's and KCS's cooperation to serve the Luminant Martin Lake coal fired electric plant located in Tatum, TX. This facility can be directly served by BNSF origins in the Powder River Basin for subbituminous coal. However, despite BNSF's ability to serve the plant in single-line service from origin to destination, the most efficient route is through a BNSF/KCSR interchange at Kansas City. KCSR then moves the traffic to Shreveport, Louisiana, where it is interchanged back to BNSF for delivery at destination. The traffic has

moved this way for years. KCS is willing to offer a division that facilitates the customer's desire for the most efficient route and to avoid losing the business to a BNSF single line move.

50. KCS and BNSF will also work together to develop joint-line alternatives to UP single-line service for Gulf Coast energy moves as well, and I see no reason why that will change under a merge CP/KCS. A fact that BNSF admits with respect to intermodal and automotive traffic but is also true with respect to Gulf Coast energy products. For example, KCS has worked with BNSF to gain some liquified petroleum gas (LPG) business coming out of Mont Belvieu, Texas origins. The origin of Mont Belvieu, Texas has multiple terminals: Targa Transport and Enterprise Products. These terminals are served at origin by both UP and BNSF. Over the past year, working together, KCS and BNSF, via an interchange at Corpus Christi where BNSF gives the traffic to KCSR, were able to compete with UP direct to Laredo, Texas. The point of this is that we try to work together so that BNSF and KCS can be competitive. [23]

51. The overarching theme of the above discussion with respect to grain, intermodal, automotive, and the energy business is that at those locations where UP and BNSF compete, KCS does, and is more than willing, to work with BNSF or any other carrier to provide a competitive route and rate to Laredo, Texas. But BNSF is not always willing to work with KCS, preferring instead to favor its own single-line haul to Eagle Pass, even if that route is less efficient than the BNSF/KCS route. The same goes with those locations solely served by BNSF where the most efficient route is through Laredo, Texas via a KCSR Robstown interchange. KCS would strongly prefer to move this traffic over the Laredo Gateway and onto KCSM. It is

[23] For example, in 2021, BNSF/KCS moved 853 tank cars to the Laredo interchange, which is almost double from 2020. In fact, our records indicate that the BNSF/KCSR volumes from those origins exceeded the UP Laredo volumes by 70 percent in 2021. KCS is certainly not trying to "foreclose" BNSF business and it would not be in the economic interests of a merged CP/KCS to forego any such BNSF traffic.

in KCS's self-interest to do so. But clearly, BNSF prefers its own single line move to Eagle Pass and for interchange with FXE. Likewise, at those locations where BNSF and KCS compete, to the extent KCS does win the business, it is because the KCS single-line route and rate to Laredo, Texas is chosen by the customer.

52. To the extent BNSF claims it cannot compete because KCS is "foreclosing" a BNSF routing to Laredo, Texas that is simply not borne out by the facts. BNSF has not pointed to a single customer or single bid situation where the KCSR rate for a Robstown interchange was "commercially unreasonable" or was so high as to foreclose a more efficient BNSF routing so that the customer was forced to use a less efficient KCS routing. KCSR's division requirements for BNSF moves barely cover its URCS costs. Clearly something else is at play. That something else may be BNSF's desire to keep its division requirement to the Robstown interchange at levels that discourage use of the Laredo gateway and favor Eagle Pass, even if Laredo might be more efficient. Unfortunately, when it comes to a Robstown interchange, BNSF simply refuses to lower its division requirements so that a BNSF/KCS routing can work. Instead, choosing to maintain its rates at levels that ensure BNSF makes it contribution thresholds. In this sense, it is BNSF who is foreclosing KCS, not the other way around.

53. The Board should reject BNSF's self-serving arguments (and UP's similar arguments) that KCS is using its control of KCSM and Tex Mex to force customers to use inefficient and expensive KCS routings at the expense of more efficient BNSF and UP routings. KCS has not (as shown above), will not (CP and KCS have agreed to abide by the commitments set out in the KCS/Tex Mex/KCSM decision), and cannot (due to the lack of market power and BNSF's and UP's abilities to use other gateways) use its control of KCSM or Tex Mex, or even KCSR, to force customers to use KCS at commercially unreasonable divisions or to force less

efficient routings. There are no customers saying that we have or could do so. It is simply our competitors making these claims. As such, there is no basis to grant any of the conditions requested by BNSF or UP.

III. UP'S SIMILAR FORECLOSURE THEORY IS NOT SUPPORTED BY PAST PRACTICE AND IGNORES MARKET REALITIES

54. Like BNSF, UP argues that a combined CP/KCS will have both the incentive and ability to foreclose competition through the Laredo gateway. UP asks for conditions that require CP/KCS to provide mileage prorated rates in certain circumstances. UP also asks that CP/KCS not only be required to abide by the commitments made by KCS in the KCS/KCSM transaction, but that UP be granted access to the second Laredo, Texas international rail bridge that KCS is building solely with private KCS dollars.

55. UP's theory is premised on the notion that CP/KCS will have the ability and incentive to foreclose UP (and BNSF) through manipulation of U.S./Mexico rates as well as degradation of service and operations to force traffic from UP (and others) to CPKC. While I will leave it to the economists to debate the various economic theories, UP's comments, like those of BNSF, fundamentally misunderstand, or misrepresent, the realities of cross-border movements. Indeed, they are identical to the very same arguments that UP raised when KCS was acquiring KCSM and Tex Mex. UP argued then, as it does now (except this time it is with respect to CP rather than just KCS), that KCS (now CPKC) would use its control of Tex Mex and KCSM to raise KCSM's or Tex Mex's divisions to disadvantage UP-KCSM or BNSF-Tex Mex-KCSM routings and thus force shippers to use a less efficient CPKC routes

56. In reading the Board's decision in KCS/KCSM, I note that these issues were thoroughly reviewed and debated in the KCS/KCSM transaction and were rejected, as the Board should do again. There, the Board said:

> **"[**I]f KCS tried to raise rates on TFM movements that are not rail dependent, the traffic would shift to motor or water carriage. And on TFM movements that are rail dependent, if for some reason TFM is not presently extracting monopoly rents, then the connecting carrier within the United States could be doing so. Therefore, UP's argument seeks to protect the U.S. carrier's leverage regarding divisions of joint rates (that is, concerns over how the interline rail partners will divide the profit), not to protect shippers. KCS-22 (filed Oct. 15, 2004) at 37-38. Moreover, KCS's experts credibly explained that market conditions would prevent KCS from raising rates to shippers or foreclosing UP and BNSF from the Mexican market, because the latter two carriers account for more than 90 percent of the rail traffic interchanged with TFM at Laredo, and it would be unprofitable for KCS to use its control of TFM to take actions that would foreclose this traffic."

KCS/Tex Mex Decision at 17-18.

57. I believe the Board had it 100 percent correct. One only needs to review the automotive market as proof of the Board's findings. On the automotive side, 17 years later and notwithstanding UP's arguments that KCS was going to foreclose UP's routings, {{[redacted]}} of KCS's automotive business that originates in Mexico interchanges with UP at Laredo or BNSF at Robstown. Only {{[redacted]}} moves single line on KCS that KCS interchanges with CP or CN for Canada destinations. In the First Quarter of 2022, KCSM originated {{[redacted]}} automotive loads. {{[redacted]}} of those were interchanged to UP at Laredo, {{[redacted]}} with BNSF at Robstown, and {{[redacted]}} stayed on KCS for interchange to CP or CN. Yet, as it did before, UP and BNSF argue the same old vertical foreclosure arguments.

58. Over the past 12 months, the story is similar for intermodal traffic. Currently, there are four competing routes to/from Chicago for intermodal traffic: BNSF Chicago to/from Mexico with interchange at Robstown with KCSR; UP Chicago to/from Mexico with interchange at Laredo; KCS/CP Chicago to/from Mexico with interchange in Kansas City; and KCS/CN with interchange at Jackson. Over the past 12 months, the BNSF route totaled {{[redacted]}}. This does not count the fact that BNSF also has a routing via

El Paso and FXE. For the UP route, UP carloads totaled {{[redacted]}}. The KCS/CP route included a few test loads.

59. Clearly, what UP and BNSF are afraid of is not that CP/KCS will foreclose them, but rather that a combined CP/KCS may actually be able to provide a low-cost, efficient single-line alternative to UP's and BNSF's continued dominance for a select portion of U.S./Mexico automotive traffic. Indeed, if KCS had the ability to foreclose UP and BNSF routings, it would already be doing so. But KCS doesn't have this ability and neither will CP/KCS.

60. There are several reasons grounded in marketplace realities why KCS cannot foreclose UP and BNSF today (and could not over the past 17 years). Both UP and BNSF have the choice to use five different gateways into and out of Mexico and the choice to use FXE as an alternative to KCSM. Those gateways and the serving railroads are: Brownsville (KCSM), Laredo (KCSM), El Paso (FXE), Eagle Pass (FXE), and San Diego (FXE). CP/KCS will only have Laredo. If CP/KCS tried to undertake the foreclosure theory advanced by UP, UP and BNSF would simply shift gateways. BNSF has already used this competitive alternative, and although BNSF claims this is due to KCS foreclosure, as the above discussion on BNSF delineates, BNSF has made a deliberate choice to maintain high divisions and refuses to drop its division requirements below its targeted profit levels, while KCSR's division barely covers costs.

61. Other market factors also come into play. Shippers to and from Mexico may have multiple options. Trucks, ships, and air cargo all serve Mexico. Further, some shippers may have access to specialized transport such as the rail ferry from Mobile, Alabama to Coatzacoalcos, VL, Mexico, or short sea shipping of vehicles. Both UP and BNSF have long term relationships (many exclusive) with numerous automotive, intermodal marketing companies, trucking companies, third-party logistic providers, and large customers. KCS cannot

today, and CP/KCS will not be able to in the future, simply raise KCSM's division to force these shippers to use a CP/KCS system. Undertaking such a strategy risks losing traffic to other UP and BNSF routes, especially where such traffic is exclusive to UP and BNSF or served by both UP and BNSF, and/or to trucking.[24] It would also not be in CP/KCS's economic interests. UP and BNSF both serve origins and destinations that are not served by either CP or KCS. Why, given the alleged "aggressive synergy and growth predictions" would the combined CP/KCS risk losing the KCSM revenue? It would not. It is to CP/KCS's economic interest to feed as much traffic over KCSM as possible. Thinking that a combined CP/KCS would make up lost BNSF and UP revenues on just CP/KCS moves is not grounded in market realities.

62. UP's theory also ignores the Mexican regulations. Mexican regulations require KCSM to offer a Rule 11 rate to/from Laredo that is the same for similarly situated customers, and for each customer, KCSM cannot discriminate between a UP, BNSF, or KCS interchange at Laredo by offering different rates. The Rule 11 rates must be the same even if the customer or connecting carrier does not have visibility into the KCSM rate. KCS would be violating Mexican law if it did not issue rates in this manner. At those locations that theoretically could be served by UP, BNSF, and CP/KCS, if KCSM were to seek a commercially unreasonable division, i.e., a monopoly price, KCSM would also have to quote the same elevated KCSM rate for all the KCSM-UP traffic that CPKC had no hope of competing for. CPKC would have nothing to gain from such a strategy, and everything to lose – as that traffic could shift to another gateway, may shift to trucks, or may dry up altogether because of an above-market KCSM rate.

---

[24] In 2021, trucks carried the bulk of freight passing through Laredo followed by rail. In 2021, truck's (loaded and empty) moved 2,568,471 containers through Laredo. In the same period, rail moved 508,192 containers through Laredo. https://explore.dot.gov/views/BorderCrossingData/Annual?%3Aembed=y&%3AisGuestRedirectFromVizportal=y . Clearly trucks provide the real competitive alternative, and any market analysis should not focus on rail vs. rail but rather be inclusive of trucking.

63. If such a commercially unreasonable rate made a UP/KCSM or BNSF/KCSR/KCSM routing too expensive, the customer would simply switch to other gateways or other transportation modes. And to the extent the customer does switch, this again would cause a loss of overall revenue to KCS as customers choose other UP or BNSF routings or switch to other transportation modes. Such customers are not "captive" to CP/KCS so as to be forced to use the CP/KCS system at monopoly rates. The customer would only use the CP/KCS single-line rate, as opposed to using UP, BNSF, or another transportation mode, if doing so produced an overall lower price, including the alleged elevated KCSM division. In that case, there is actually no harm to the customer.

64. UP's and BNSF's arguments also ignore the realities of the marketplace with respect to how pricing for cross-border traffic really works. Due to Mexican regulations, whether the shipper is seeking a Rule 11 rate to/from Laredo or a U.S./Mexico through rate, KCS must provide the shipper (or interline partner in the case of through rates) with the same KCSM rate or factor regardless of the interline partner. KCS cannot also provide itself with a lower KCSM rate. Thus, when a shipper is the negotiating party, it (not KCS) seeks Rule 11 rates and deal directly with each carrier for each individual leg. These rates are confidential to the shipper giving the shipper both transparency into all competitive options and the negotiating ability to select the route and pricing that best matches its needs. The shipper is free to compare rates and negotiate with each individual for better rates, service conditions, or other benefits. The tradeoff is the time and effort required to negotiate with multiple carriers.

65. With respect to through rates, they are negotiated between the shipper and one railroad, usually the originating carrier. The shipper seeks competitive total prices for a movement. The originating carrier and interline partners will negotiate the divisions and other

conditions among partners. A shipper could request a through rate using the same originating carrier and different interline partners. If a shipper requests a price decrease or other conditions, the carriers negotiate among themselves on how to respond. That may include developing counterproposals, renegotiated divisions splits, or other cost sharing divisions. As with any price negotiations, an interline partner can refuse to lower its divisions. The risk is, of course, lost business for one or more carriers.

66. The rate process is thus an iterative process and usually includes multiple rounds of discussion with the customer, or for through rates, with the negotiating carrier. Rate quotes are multidimensional and consider a variety of factors, such as volume, margin, cost, asset utilization, growth strategy, cycle times, route length and time, power needs, peak/off-peak needs, specific service conditions, equipment needs, multi-year or multi-lane agreements.

67. The point is that KCS does not, and will not, have the power to dictate rates or to foreclose UP or BNSF options. It is ultimately the customer that selects the rate and the route. For example, recently, KCS renegotiated a major contract with a large company for all cross-border movements carried by KCSM. The same rates applied regardless of the interchange partner. This negotiation went through multiple rounds and was competitive. In response to both outside factors and aggressive pricing by FXE, KCS modified its commercial strategy, again for all KCSM movements regardless of interchange partner, to retain the business. The customer separately negotiated with KCS and UP for the U.S.-side of the movements after interchange with KCSM at Laredo. In the end, because the customer has the option of using UP, BNSF, and KCS, and the option to use other gateways, KCS cannot exercise market power. Indeed, in the above example, KCS lost some volume because the UP/FXE route better aligned with the customer's business needs. There is nothing in the merger that will change this process.

68. The final factor that prevents KCS from engaging in any foreclosure strategy and will also prevent CP/KCS from doing so, is the fact that the shippers have both a regulatory remedy at the STB and a private remedy to arbitrate any rate dispute via the NITL Agreement. In KCS/TFM, KCS offered, and the Board imposed, five commitments/pledges on KCS. One of those pledges was to keep the Laredo gateway open on commercially reasonable terms for customers that desire to use BNSF and UP routings. The NITL Agreement also contains that condition and contains an arbitration provision as well. The NITL Agreement also involves Mexico pricing issues. In the 17 years since KCS took control of Tex Mex and KCSM, not one shipper has complained that KCS was not abiding by its commitments, nor has any shipper invoked the NITL Agreement. I don't see that changing. Indeed, CP has agreed to abide by all the KCS/TFM commitments. In addition, CP has committed to additional conditions, such as bottleneck pricing and the right to challenge bottleneck rates, which such conditions further protect cross-border shippers. Shippers will thus have transparency in the rates and will know whether such a rate is "commercially unreasonable."

69. In conclusion, all of the aforementioned factors discussed above will prevent CP/KCS from exercising any form of foreclosure: UP's and BNSF's abilities to use other gateways and FXE; the strong competition provided by other modes of transportation; UP's and BNSF's relationships (many, exclusive) with customers; the scope of the Mexican anti-discriminatory pricing laws and regulations; the dynamics of cross-border pricing; and KCS's commitments made in the KCS/TFM decision, which commitments CP has agreed to comply with and actually expanded upon, will not change as a result of the CP/KCS transaction. The only difference will be that a combined CPKC will be able to provide shippers with a stronger single-line competitor. In my opinion, there is no competitive harm due to the CP/KCS

transaction. UP's and BNSF's concerns are just concerns over divisions and rate factors couched in the form of concerns over shipper rates. As the Board did before with respect to KCS/TFM, given all of the above, there is no basis for imposing either a mileage pro-rate (I discuss below the problems with a mileage pro-rate system) or for granting UP access to KCS's second Laredo Bridge span, which is being built solely with KCS funds and is not covered by the existing agreements or decisions regarding the existing Laredo Bridge. Whether UP is granted access to the second privately funded Laredo bridge should be at the discretion of CPKC on terms that are operationally efficient and economical to CPKC. If it is efficient and economical to provide UP with access to the second span, the parties will negotiate those terms. The merger of CP and KCS has no bearing on the terms of the bridge access by UP nor does the merger create any competitive problems that would justify granting UP access over the new span.

IV. THE MILEAGE PRO-RATE RATE SETTING MECHANISM PROPOSED BY UP, BNSF, AND OTHERS WOULD ADVANTAGE THE LARGER CLASS 1 CARRIERS AND HARM COMPETITION

70. The mileage pro-rate mechanism proposed by UP, BNSF and others is a rather transparent attempt to thwart effective competition from CP/KCS. Billed as a "concrete" standard to enforce open gateway commitments, the mechanism would only constrain CP/KCS's ability to price competitively. The mechanism seeks to shift money to the pockets of UP, BNSF, and others at the expense of competition in general, as well as away from CP/KCS shippers who would benefit from lower single-line rates that the price mechanism would prohibit.

71. The proposed mechanism fails to account for how prices are set and the market economics that underlie those pricing decisions. Instead, it would constrain CPKC to rigid parameters divorced from the market factors that influence rate setting. The result undermines CP/KCS's ability to price competitively, innovate, and invest while protecting UP and BNSF's ability to price freely. In a perverse outcome, the mechanism may actually incentivize CP/KCS

to raise prices in order to maintain minimum revenues, while BNSF, UP, and others, reap the windfall.

72. I understand other witnesses will address the mileage pro-rate condition from an in-depth economics and future-looking CP/KCS perspective, but I will provide some background on how the proposed mileage pro-rate mechanism fails to consider pragmatic pricing concerns using current KCS/KCSM operations and the effects of this failure on a market-based pricing approach.

A. The Mileage Pro-Rate Mechanism Does Not Reflect The Real World Or Market Economics

73. Both UP and BNSF attempt to frame the mileage pro-rate mechanism as a "concrete" method to enforce Applicants' promise to keep gateways open on "commercially reasonable" terms. Both complain that "commercially reasonable terms" lacks a defined "check the box" like standard. Both dismiss the common sense (and prior Board-accepted explanations) by Applicants, their witnesses, and their attorneys that "commercially reasonable terms" is a context-specific determination. That is because all pricing decisions are context-specific and dependent on the interplay of a variety of factors, such as market conditions, regulatory requirements, volumes, overall business strategy, cost, special requirements, resource use, and asset availability.

74. Although the promise to provide commercially reasonable terms has been approved by the Board and successfully implemented in prior transactions, including the Laredo gateway at issue here, UP and BNSF seek to advantage themselves by asking the Board to go further and to define commercial reasonableness in a way that constrains CP/KCS and favors them. Specifically, UP suggests that "when a customer asks CP/KCS to provide rates for (i) CP/KCS service on only former-CP, former-KCS, and/or former-KCSM portions of an origin-to-

destination route, and (ii) CP/KCS "single line" service on a "competitive" route, CP/KCS must provide the customer with a Rule 11 rate for the former-CP, former-KCS, or former-KCSM portions that reflects a mileage-based prorate of the rate provided for the CP/KCS single-line service."[25]

75. BNSF proposes essentially the same mechanism but calls this concept a proportional rate.[26]

> "As explained by Dr. Reishus, the basic concept of such a proportional rate is that the railroad with the long-haul, single-line route (here, CP-KCS) must charge a rate for the sole-served portion of that single-line route (here, Mexico) that is proportional to the through rate it charges for single-line service based on the length of haul of the sole-served portion of the route (here, Mexico to a CP-KCS location). (*See* V.S. Reishus 49-50). Specifically, the through revenue for actual long-haul single-line movements provided recently by the single-line carrier should be calculated on a per ton mile basis, on metrics such as commodity and car type, over the single-line route. That per-ton mile factor should then be applied to the mileage of the movement on the sole served portion of the route (here, Mexico) to create a proportional rate."[27]

76. Although those parties make a mileage pro-rate sound simple – "CP/KCS would simply calculate its mileage-based share"[28] – the mechanism does not reflect the real world or market economics of railroad pricing. One problem with this proportional rate is obvious on its face: CP/KCS is prohibited from realizing the efficiencies of single-line service. Single-line and interline moves have different characteristics, including different cost structures that result from handlings and efficiencies in single-line movement.

---

[25] Union Pacific Railroad Company's Comments and Requests for Conditions (filed Feb. 28, 2022) at 9.

[26] BNSF Comments and Requests for Conditions (filed Feb. 28, 2022) at 46.

[27] BNSF Comments and Requests for Conditions (filed Feb. 28, 2022) at n. 20.

[28] Verified Statement of Kenny Rocker and John Turner (filed Feb. 28, 2022) at 20.

77. The mechanism also disrupts normal interline division practice. Interline divisions do not adhere to a strict mileage prorate allocation of revenues between carriers. Rather, in the real world, revenue allocations between rail carriers participating in an interline movement depend on many things, including market conditions, resource availability, and relative costs. Interline partners may agree to reduce their divisions or agree on weighted cost sharing to secure a particular contract or develop business on a particular new route. Such divisions are negotiated based upon market forces and are not formulaic in nature.[29]

78. Such a mechanism inhibits CP/KCS's ability to price competitively because it ignores the numerous factors impacting interline rates. Pricing is a dynamic process based on a multitude of factors. For example, length of haul is a major consideration in pricing as the economics of how costs and revenue are weighted are different for short versus long haul. Longer hauls allow railroads to spread their costs out per mile whereas shorter hauls may have higher costs per mile and thus require more revenue per mile to make economic sense.

79. UP and BNSF both know that interline rates are not set on mileage-based proration and that rates are market dependent. The Verified Statement of Mr. Kenny Rocker does not say that UP prices this way because UP does not do so. Similarly, none of BNSF's verified statements say that BNSF prices based on mileage prorates, because it does not do so. They do not price this way because it does not make economic sense and does not reflect market conditions.

80. Further, the mileage pro-rate mechanism does not account for non-price factors that may be part of a price negotiation and ultimate differences in a single-line quote versus

[29] For example, KCS has agreed in the past to a take a shorter haul in an interchange partnership where its interline partner agreed to provide the customer locomotives and took on the higher power costs.

interline quote, such as additional service conditions, time commitments, volume commitments, switching location, equipment or assets usage, risk allocation, or added premiums. Nor does the mileage pro-rate mechanism account for the fact that the way prices are negotiated may account for differences in the ultimate contract term. Rule 11 rates are negotiated directly with the shipper and the ultimate considerations may be different (such as price per car, service conditions, cycle time) than when negotiating with an interline partner (such as revenue divisions, power and equipment, or switching location).

81. Finally, if a shipper is concerned that the interline quote is not commercially reasonable, the shipper is able to test its concerns by asking KCSM for a Rule 11 rate from the origin to the U.S. interchange point and by asking CPKC for a Rule 11 rate from the interchange point to the destination or the interchange point with the next interchange carrier, as applicable. These Rule 11 rates can be compared to the combined interline through-rate to determine whether the through-rate being quoted is commercially reasonable.

B. The Mileage Pro-Rate Mechanism Would Prevent CP/KCS from Pricing Competitively and Would Only Benefit UP And BNSF

82. The mileage prorate mechanism would be particularly distorting as applied to U.S.-Mexico traffic, because KCSM must and does abide by Mexican regulations, which prohibit price discrimination. The mileage pro-rate mechanism would prohibit KCS from passing on any cost savings from a single-line route unless it gives UP, BNSF, and others the same discount. This point bears repeating. To my knowledge, in no other situation have I heard of a pricing restriction that requires one railroad to subsidize its competition at that railroad's expense. This is a one-way street. There is no reciprocity. BNSF and UP do not have to reduce rates to shippers nor do they pass any discounts to KCS in any circumstance. If KCS cannot account for some of the competitively negotiated single-line or longer haul rates in the overall

CP/KCS/KCSM rate, then CP/KCS cannot price competitively nor pass along the benefits of single-line service to shippers.

83. Moreover, a mileage prorate mechanism would inhibit competition from new CP/KCS single-line services. With new single-line services, CP/KCS will be even more competitive with UP and BNSF in many lanes. Merger synergies will allow CP/KCS to compete hard for business, including on rates. To do that, however, CP/KCS will need flexibility in the face of market conditions, the precise opposite of the proposed conditions. A mileage prorate is intended by our future competitors to prevent us from bringing that competition to the market.

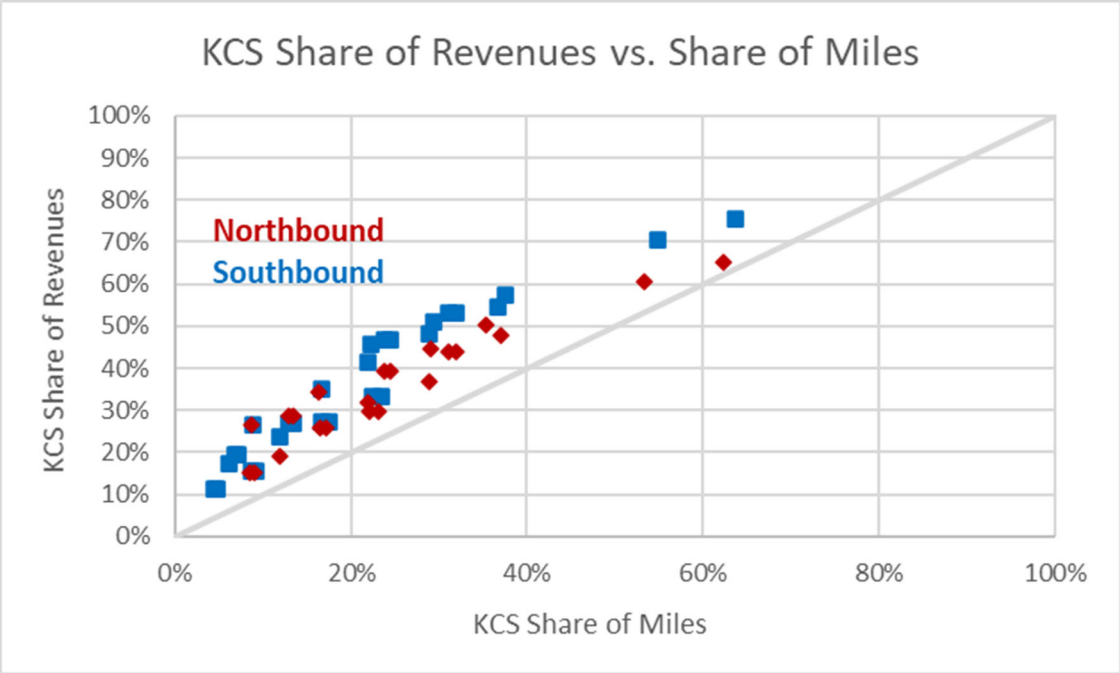
84. The condition also does not benefit shippers, but rather the interline railroads. If the condition is imposed, CPKC would have incentives to either (a) not pass on to shippers the lower rates generated by the cost efficiencies in providing a single-line rate; or (b) if CP/KCS did offer a lower single-line rate, those savings would have to be passed on to BNSF, UP, and others in the form of a mileage pro-rate that would not be passed onto shippers, but rather allow the carriers to absorb those savings while the shipper retains the higher costs associated with interline service.

85. For example, assume the KCSM-UP rate today is $3,000, with KCSM collecting $1,200 and UP collecting $1,800. KCSM's share of the miles is one-third while UP's is two-thirds, but KCSM's costs are higher for this move.[30] In the post-merger world, since CP/KCS knew $3,000 would move the traffic, CP/KCS could offer the same $3,000 as UP. But with the mileage pro-rate mechanism, KCSM's rate would be capped at $1,000 (33 percent of the miles

[30] Rail service in Mexico may require additional costs that UP does not incur in the United States, such as increased security, historically high fuel costs, and regulatory impositions such as taxes and concession fees. KCS has also had the incentive to invest in and develop Mexico-specific service options, such as proprietary seal tracking to enhance security, which it has made available to U.S. interline partners without their investment for KCS to maintain secure transport in Mexico.

times the rate of $3,000). Under Mexican law, KCSM must charge $1,000 to KCS and UP. It cannot discriminate. So, under the mileage pro-rate system, UP could charge the same $3,000 that it does today and pocket $200 more in revenue. The mileage pro-rate has not benefitted any party other than UP. The mileage pro-rate has simply shifted revenue from the pocket of KCSM to UP without any benefit to the shipper.

86. Let's say, however, that CP/KCS wants to offer a lower single-line rate than the $3,000 charged to the shipper today. CP/KCS offers a rate at a 20 percent discount -- $2,400. Under that scenario, KCSM's rate would be capped at $800 (a mileage pro-rate of 1/3 the miles times the rate of $2,400). UP can match the $2,400 CP/KCS single-line rate but still earn $1600 because CP/KCS has in effect subsidized UP. KCSM would receive $400 less than what KCSM had been receiving but UP only receives $200 less. While the shipper may benefit in that scenario in the form of an overall lower rate, that lower rate comes not at UP's expense, but rather at CP/KCS's expense. The mileage pro-rate system thus creates the perverse incentive of not encouraging CP/KCS to offer lower single-line rates. All the mileage pro-rate mechanism does is benefit one carrier at the expense of the other or act as a disincentive to offer lower-single line rates.



87. This principle is also illustrated by looking at how a mileage prorate would distort actual interline rates from BNSF and KCS if it were applied. Figure 5 below illustrates KCS's (including KCSR and KCSM) share of revenues for interline intermodal traffic it moves with BNSF via Robstown by KCS's share of miles.[31] The X axis shows KCS's share of miles for the movement. The Y axis shows KCS's share of revenue for the movement. As you can see,

[31] Workpaper – HC – BNSF KCS Intermodal Rates Compared to Mileage Prorate.

KCS's share of interline revenue is higher than its share of miles. The diagonal line represents what KCSM's rate would be if the mileage pro-rate was imposed.

88. The blue and red squares represent revenues realized in the marketplace and thus reflect what the shippers are willing to pay. A mileage prorate metric would force the KCSM portion of the rate down to the line shown on the graph. BNSF however has no incentive to reduce the overall rate to the shipper. The market already determined the competitive market rate at the original pre-prorated level. BNSF has every incentive to quote the original rate to the shipper and keep the windfall created by the artificial cap on CP/KCS's rate. UP would gain the same advantage.

FIGURE 5
BNSF-KCS INTERMODAL RATES COMPARED TO "MILEAGE PRORATE"

89. The bottom line is that a mileage pro-rate mechanism not tied to market conditions and factors is anti-competitive, not pro-competitive. The proposed mechanism fails to account for how prices are set in the marketplace and the idea that customers make value-based

decisions. Instead, mileage pro-rate pricing constrains CP/KCS to rigid parameters while providing a potential windfall to CP/KCS's connecting carriers. It is not narrowly tailored to remedy a specific competitive harm nor is it consistent with all prior precedent regarding gateway commitments. It should not be adopted.

V. CANADIAN NATIONAL'S (CN) PROPOSED FORCED SALE OF KCS'S SPRINGFIELD LINE IS NOT COMPETITIVELY JUSTIFIED AND WOULD NOT BE IN THE INTEREST OF SHIPPERS

90. As I understand it, CN requests that as a condition of the CP/KCS transaction, the Board require the divestiture of certain valuable KCS assets pertaining to KCS's rail line between Kansas City, Missouri and Springfield, Illinois, including track, terminal ownership, and related agreements and rights and have these assets (collectively I will refer to the bundle of assets CN seeks to acquire as the "Line") sold to CN. CN's justification for this drastic condition rests on the assertion that a post-merger CP/KCS will abandon the millions of dollars of investment and strong shipper relationships KCS has developed on this Line because CP is incented to promote its single-line Kansas City to Chicago service over the existing CP route and will thus ignore the somewhat parallel KCS line to Springfield, IL. CN's evidence seems to be the lack of new merger-specific investment in improving the Springfield Kansas City to Chicago route.

91. I believe the assertions on which CN relies are not accurate. First, I will provide a little background about KCS's purchase and investment in the Line and provide some details about the strong commercial relationships that have resulted from that investment and why the Line is such an important part of KCS service to Mexico that it would make no sense to walk away from those investments. Second, I will provide background into the failed efforts to develop a robust Kansas City to Chicago interline service with CN and make it clear that there is no successful CN/KCS route that would be lost in a CP/KCS transaction to justify CN's

divestiture request. This background also makes clear CN's likely purpose: it seeks divestiture to improve its position not to preserve competition. Finally, I will address how CN's request is not in the public interest and actually would harm post-merger CP/KCS service for the shippers on the Line.

A. The Line Plays An Important Role For KCS Grain Deliveries Into Mexico And It Would Not Make Economic Sense For A Merged CP/KCS To Walk Away From Years Of Investment

92. The Line today is a valuable asset because KCS invested significant amounts to make it so. KCS purchased the owner of the Line, Gateway Western Railway Company ("Gateway") in 1997 from CN's Illinois Central (the same entity that now seeks to buy it back at a significant discount and in improved condition).[32] At that time, the Line carried very little traffic because the tracks were in poor condition. Since that time, KCS has spent significant funds rehabbing this previously underutilized asset. For example, between 2012 and 2014, KCS spent over $50M on rehabbing the Line including customer specific projects, and KCS spends an average annual amount of $17.5M to maintain this track segment (based on the last 5 year history). These projects included upgrading the former Gateway track and ties in order to handle heavy grain trains, upgrading tracks connecting to shipper facilities to promote efficient connections, and upgrading sidings to handle longer trains. These investments and commitments attracted similar commitments and investments by customers. Likewise, customers invested in their facilities along the Line in order to utilize the upgraded track and improved transport options to their preferred destinations, in particular the growing grain market in Mexico. We have been advised that Bartlett Grain, Ray-Carroll County Co-op, and Central Missouri Agri

[32] Gateway was subsequently merged into KCSR on or about October 1, 2001.

Services invested over $95M in three new shuttle train loop track facilities on the Line. Bartlett built in Jacksonville, IL, Ray Carroll built in Corder, MO, and Central Missouri Agri Services built in Marshall, MO. Today, the Line serves as an important origination point for many customers shipping to/from Mexico. In 2021, grain shippers alone generated more than {{ }} in revenue for KCS with just under 90 percent originated on the Line and terminated in Mexico.

93. A prime example of how and why the Line has today become such an important part of the KCS U.S./Mexico service is seen by looking at just one customer served by the Line: Bartlett Grain ("Bartlett"). Bartlett is now KCS's largest customer on the Line,[33] but it was not always so. Bartlett's growth reflects an evolution in both KCS's business strategy, the dynamic cross-border grain market, and the symbiotic nature of KCS and Bartlett's investments. In the late 1990s, Bartlett had established a limited presence shipping grain, primarily to domestic feed mills. Over the following decade, both KCS and Bartlett invested significantly in their infrastructure and operations to grow the market independently and in response to each other's development. More broadly, in 2005, KCS purchased Tex Mex and KCSM and began developing U.S./Mexican traffic. Bartlett also developed substantial commercial opportunities in Mexico through partnerships, business agreements, and investments in facilities to open up new international markets for its grain origins. In the U.S., Bartlett invested significant sums in its grain facilities and elevators, including purchasing its Atchison facility in 2007, building the Jacksonville facility in 2013, and upgrading its facilities over time.[34] Some of these investments

[33] Bartlett is also KCS's largest grain customer across its entire network.

[34] Facilities that Bartlett upgraded include the Council Bluffs north facility in 2013, the Kansas City River Rail facility in 2014, the Council Bluffs south facility in 2016, and the Atchison, Kansas elevator in 2019.

were done in partnership and in response to investment from each other. For example, in the 2005-2006 time period, KCS adopted a shuttle train service for grain, in part because of the interest in a 75-car cross-border service by Bartlett. The introduction of shuttle service helped grow the Agriculture & Mineral business unit's revenue by 8.1 percent in 2006.[35] Additionally, much of the symbiotic investment made was directly associated with facilities and assets on the Line. While several of Bartlett's facilities were dual served, and thus Bartlett had the choices of rail routings, Bartlett and KCS nonetheless entered into a strategic alliance/contract in 2012 based on, among other things, KCS's rates, equipment, and single-line service to Mexican destinations. This long-term contract provided KCS and Bartlett with the stability and security to invest more in the upgrade of the tracks and facilities on the Line to handle the heavier and longer grain trains, which are beneficial to both parties. In 2013, Bartlett made further investments, building a major new grain facility in Jacksonville, Illinois, on the Line at a cost of over $25 million and acquiring destination facilities in Mexico.[36] As a result of this long term relationship and of KCS's single-line service, in 2021, Bartlett shipped on KCS almost 11,000 cars from its facility in Jacksonville to Mexico.[37] The value of this symbiotic investment can be seen in exponential growth of Bartlett traffic over the KCS system (the below figures represent Bartlett cars over the entire KCS system, not just on the Springfield Line):

---

[35] KCS 2006 Annual Report, p. 6.

[36] Verified Statement of Mr. Bob Knief filed June 20, 2022, at 1 and 2; Exhibit 1 HC - Bartlett Update – August 2014.

[37] Verified Statement of Mr. Bob Knief filed June 20, 2022, at 2. This facility was built to have a loop track for efficient single-line service to Mexico.

FIGURE 6[38]

94. Beyond infrastructure, KCS has also invested in equipment and has developed a dedicated fleet of cars and locomotives for these grain shipments. These investments have not only benefited Bartlett but attracted other opportunities from other grain shippers, and shippers of other commodities as well, such as steel. As a result, this Line has become an important part of the KCS system and will continue to be so in a merged CP/KCS. The notion that this Line would be degraded or somehow currently provides a parallel competitive service to a CP service so that the merger would reduce horizontal competition requiring divestiture is simply not accurate. Given the investment from both KCS and shippers on the Line, it would not make sense for a merged CP/KCS to walk away from the Line or disinvest in it in order to favor CP

[38] Workpaper – HC – Bartlett Grain Shipped.

grain origins. CPKC will be committed to the Line and to continuing to serve the shippers on the Line. Furthermore, as discussed more below, divestiture of the Line to CN would harm shippers, and in fact, is not supported by any shipper currently using the Line. Divestiture would benefit only one party: CN.

B. There Will Be No Loss of Competition in The Kansas City-Chicago Corridor

95. CN asserts that the competition between the CP move between Chicago and Kansas City and the hypothetical KCS-CN move from Kansas City through Springfield would be eliminated in a post-CP/KCS merger environment and/or that a merged CP/KCS will no longer have any incentives to continue to interchange existing KCS/CN interline traffic over the Line. The problem with CN's argument is that the Springfield Line plays no competitive role in any such marketplace. Today, there is almost no traffic that moves over the Line on an interline basis with CN. Almost all of traffic on the Line is originated on the Line and moves on KCS single-line traffic to Mexico. In other words, there is no significant CN/KCS interline service that would be eliminated or "foreclosed" if the CP/KCS transaction went forward.

96. There is a tiny amount of CN-KCS interline traffic that gets billed via the Springfield gateway. Importantly, even though this traffic is listed as interchanged at Springfield, most of it is only "paper interchanged" there. That is, while the waybill data shows the interchange at Springfield, the rail cars are physically interchanged in East St. Louis. The cars are interchanged elsewhere in part because the operations in the Springfield area are complicated by the need for KCS to move cars over a segment of track owned by UP in order to interchange cars to CN. This operational challenge would remain even if the Board entertained the unreasonable idea of divesting the Line to another party, including possibly CN. This traffic does not compete against KCS traffic to/from Mexico.

97. The traffic levels showing CN/KCS interline traffic since 2019 are shown in the Table below.[39] The table shows the physical interchange, without regard to the destination to which the traffic was billed.

TABLE 3
KCS-CN INTERLINE TRAFFIC AT SPRINGFIELD AND EAST ST. LOUIS

Linehaul Only <> CN		
	COCKRELL	EAST ST LOUIS
2019	132	361
2020	0	214
2021	0	225

98. I believe the low levels of current interline traffic between CN and KCS reflects a lack of interest from both parties. Prior to my arrival at KCS, CN and KCS in 1998 entered into a 15-year alliance agreement to move traffic over this Line.[40] The parties touted the goal in a press release issued on April 16, 1998: "The marketing alliance will offer shippers pro-competitive connections to new rail routes for their products and the ability to tap new markets through a coordinated rail network. Services will link points in Canada with the major U.S. Midwest markets of Detroit, Chicago, Kansas City, and St. Louis, along with the key Southern markets of Memphis, Tenn., Dallas, and Houston." Springfield (along with Jackson, MS) was supposed to have been one of the principal interchange gateways for Alliance traffic. However, that Alliance was unsuccessful and did not produce any real traffic gains. The deal expired with no substantial gains. I have been told it was complete failure, mainly because each party

---

[39] Workpaper – HC - CN Gateway Volumes.

[40] Exhibit 2, Press Release – Canadian National, Illinois Central, and KCSR in Shipping Alliance, Bloomberg Business, April 16, 1998_ available athttps://www.bloomberg.com/press-releases/1998-04-16/canadian-natl-illinois-central-kcsr-in-shipping-alliance

continued to favor its long haul and refused to adopt arrangements that would short haul one party in favor of a long haul on the other.

99. Beyond the Alliance, there have been no significant efforts to develop commercial opportunities between KCS and CN using the interchange at Springfield for movements to Kansas City and beyond to other destinations in the United States or Mexico. Over the years there has been minor interest floated in co-funded infrastructure projects, such as upgraded sidings, but to my knowledge none have passed the initial stages of discussion. In fact, in 2019, CN reached out to KCS to shut down the Springfield interchange entirely because of the low volumes. According to Rhonda Anderson, Director, Service Design at CN, in a May 30, 2019 email to Michael Wilkinson, KCS's Superintendent-Service Design, Ms. Anderson indicated that the desire to close Cockrell[41] (aka Springfield) came from CN's Regional VP. In a later July 2, 2019, email Ms. Anderson further explained that CN would "like to remove the service from the Cockrell interchange. Volumes are small and from what I can see, neither of us is doing a bang up job of pulling. From our perspective, East St. Louis looks like the best alternative gateway."[42] While it does not appear that the gateway was closed, I am unaware of CN proposing any new efforts to build business using this interchange.

100. Even if CN were able to theoretically establish that the KCS/CN route between Chicago and Kansas City provides a meaningful competitive alternative to CP's Kansas City-Chicago line, this would still not justify divestiture of the Line. This is because there would be no real reduction in competition for Chicago to Kansas City traffic as a result of the CP/KCS

---

[41] The interchange location between KCS and CN is sometimes referred to as the Cockrell. KCS's Line ends in Cockrell, Illinois, where it connects to UP track over which KCS has trackage rights to connect with CN's line that runs through neighboring Springfield, IL.

[42] Exhibit 3 CN-KCS May 30 Email RE_Cockrell interchange to be closed asap; Exhibit 4 CN-KC July 2 Email RE_Cockrell interchange to be closed asap.

transaction. Indeed, there are multiple viable routes for rail traffic between Chicago/Detroit and Kansas City, including UP, BNSF, and NS's single-line route that stretches beyond Chicago to Detroit. The KCS-CN route via Springfield is simply not a competitive alternative. What limited CN interchange traffic there currently is with KCS at "Springfield" (really East St. Louis), the merged CP/KCS will have every incentive to continue this limited CN interlined traffic because such traffic does not currently compete, nor will it, in the future with CP/KCS.

101. CN claims that competition in this corridor will be "lost," but the only thing that would be "lost" should the transaction be approved is CN's chance to realize its vision of a CN-controlled "Kansas City Speedway." The purpose of CN's responsive application is not to "preserve competition" (which as I have explained does not exist and thus does not need preserving) but rather, as CN itself makes clear in its comments and inconsistent application, the real purpose of its request is to "foster" and "improve competition" through an improved competitive position as owner of a new CN single-line route from Mexico to Chicago and beyond. CN's proposed divestiture is not directed at remedying an anticompetitive impact of the merger.

102. Further, I find dubious CN's claims that it can generate two trainloads per day or intermodal traffic between Kansas City and Chicago. It is unrealistic to think that any CN route to Kansas City would attract this traffic in lanes already well served by single-line rivals. CN's claim that it would raises the questions of if this traffic were ripe for the picking, why has CN not developed this with KCS before (or at least tried)? The likely answer is that this traffic could materialize only if CN cannibalized the benefits of the CP/KCS transaction, which it seems is part of CN's objective by asking for 50 percent rights to the International Freight Gateway terminal.

103. The bottom line is that there is no justification for the divestiture because there is no loss of competition. The Transaction will not result in KCS neglecting the Line, downgrading service, or foreclosing interline movements with CN. A CP/KCS/CN interline partnership would be as viable a Kansas City to Chicago option as the KCS/CN route is today, should the market develop enough to make it worthwhile. Given the importance of the Line to KCS and its shippers, there is no economic incentive to abandon, degrade, or stop upgrading the Line. KCS has fostered valuable relationships with the shippers on the Line that benefit significantly from KCS's single-line service to Mexico and both shippers and KCS foresee them continuing and growing.

C. Divestiture Of The Line Would Be Disruptive and Harmful To Existing Service On The Line

104. As stated above, KCS has invested heavily in the Line and has developed strong commercial relationships with shippers in the region, particularly those seeking access to Mexico. It cannot be understated how important the Line is to some shippers for KCS's single-line service to Mexico. Before 2002, KCS shipped approximately {[redacted]} cars of grain to Mexico. Following KCS's acquisition of Tex Mex and TFM (now KCSM), and following KCS's and the customers' investments in the Line, today, KCS ships {[redacted]} carloads of grain to Mexico. Today, KCS has more than 20 agricultural customers on the Springfield Line, including many grain elevators. These customers have the ability to ship their grain east, to the Mississippi River or west to KCS domestic feed mills and to Mexico. All of the Line's customers' locations are shown in the map attached as Exhibit 5 to this statement.

105. KCS has 20 shippers on the Line, including three large grain shippers that rely on KCS service. KCS does move freight to and from grain handling facilities in the St. Louis area, but the majority moves West mainly to Mexico. These customers depend upon KCS to serve

markets to the West and in Mexico. Some of them have made substantial investments to support that business, such as Bartlett, Ray-Carroll, and Central Missouri Agri Services, as discussed above. Others are considering new investment because of the benefits that they see would result from the CP/KCS transaction. Let me mention two of these shippers (other than Bartlett, which is discussed in detail above) and the importance to the KCS system.

- Ray Carroll serves markets in Mexico and other points reached via the Line through Kansas City to the west of its facility. In 2021, Ray Carroll shipped in excess of {[redacted]} cars, of which {[redacted]} moved West or to Mexico on KCS.
- Central Missouri AgriService shipped only {{[redacted]}} of its shipments to the East. {{[redacted]}} of its grain shipped to Mexico from the Line.

106. It is particularly noteworthy that not one shipper who originates or terminates traffic on the Line has filed in support of CN's divestiture request. Ray-Carroll, Central Missouri Agri Services, and Bartlett Grain have all filed letters opposing the divestiture of the line. Ray-Carroll and Central Missouri Agri Services were originally neutral on the proposed CP/KCS merger. When CN filed for the forced sale of KCS's Springfield Line, both shippers have come forward to testify against CN's proposal and in support of the CP/KCS merger. For example, Ray-Carroll foresees both new opportunities resulting from the CP/KCS transaction as well as new investments in the corridor in the foreseeable future, but believes these opportunities will be constrained if the Line is forced to be divested.[43] Richardson International Limited recently purchased a St. Louis grain facility and has expressed concern that divestiture would

[43] Verified Statement of Beau Hepler, filed concurrently with Applicants' Reply Comments, July 12, 2022.

eliminate single-line service on routes that currently exist and those that may become available as a result of the CP/KCS transaction.[44]

107. KCS has worked hard to develop a competitive, efficient single-line service for shippers on the Line. KCS has worked to provide seamless services from the origin to destination, including local service. Each of the customers that I mentioned above would lose single-line service toward the West and Mexico from a divestiture of the Springfield Line – even if CP/KCS were granted back haulage rights as proposed by CN. Today, KCS designs the service from the origin to destination. If there were a divestiture, years of planning, strategic partnerships, and symbiotic relationships would be significantly changed and disrupted. These customers would have to rely on CN designing service at their location, and then moving the freight to Kansas City, where it would be interchanged to CP/KCS. With truck competition on the line, the economics play a very important part of rail competitiveness. Thus, customers would lose the benefits of the single-line service that they have today, which would make the transportation a less competitive option. Any forced divestiture of the Line to CN would substantially harm the interests of these shippers and would not be in the public interest.

VI. THE "CONSERVATIVE" ESTIMATES OF SYNERGIES PRESENTED TO KCS'S BOARD ARE NOT INCONSISTENT WITH THE ESTIMATES PRESENTED IN THE APPLICATION

108. I understand that some commenters have tried highlight the fact that an early KCS analysis of synergies is lower than the synergies Applicants presented in the Application. Those commenters simply overlook the context and nature of the two estimates.

109. The KCS Board of Directors expected to review and test all of the various ranges, from low to high, in order to understand the potential impact of either a CP or CN transaction.

---

[44] Richardson International R.V.S. filed concurrently with Applicants' Reply Comments, July 12, 2022.

Based upon the information available at the time, the KCS board considered a range of synergy analysis from approximately $377 million to approximately $990 million (annualized EBITDA synergies for the combined company).[45]

110. A commonly accepted approach to valuation analysis typically presents a range of outcomes. Synergies are by design forecasts/estimates of future results based on assumptions, making it prudent to review a range of scenarios, both an upside case and a low side sensitivity case. Further, multi-year forecasts for the underlying businesses are .far more impactful to determining value in a merger decision than estimated synergies.

111. Additionally, due diligence performed by the KCS Board of Directors confirmed that the range of outcomes would likely lead to a strong financial position for a merged CP/KCS. Within the range of the business case, and accounting for the additional debt to help fund the transaction, CP/KCS is expected to earn a fair margin and produces enough free cash flow to safely fund planned investments in the network, support customer traffic, and grow the franchise.

112. The initial estimates mentioned above provided a solid range of scenarios for the KCS Board to consider and review. Six months of customer feedback from the first merger announcement with CP in March 2021 provided additional clarity on synergies that was not available at the date of the initial announcement before the proposed merger became public knowledge. This revised view was reflected in the Application and reflected work by the KCS and CP teams working together. Additionally, it also reflected a combined operating and marketing plan. This difference in purpose and difference in underlying information led to a

[45] Canadian Pacific SEC Form F-4 Registration Statement, KCS-CP PROXY STATEMENT, filed October 1, 2021.

different estimate of synergies in the Application than what was presented to the Board of Directors.

VII. NO CONDITION SHOULD BE IMPOSED THAT FREEZES KCS'S TARIFFS OR TRANSPORTATION SERVICE TERMS RELATING TO PIH/TIH TRAFFIC

113. Unlike many other carriers, KCS has not traditionally had complaints about the terms of its tariffs and rules publications specifically applicable to TIH/PIH traffic. Some of this may be limited to the relatively small amount of such traffic handled by KCS. Indeed, KCS handles very little such TIH/PIH traffic. In 2021, KCS handled {[redacted]} cars of TIH/PIH traffic, which is less than 1 percent of all traffic transported by KCS. Of this traffic, KCS originated almost {[redacted]} of these cars.

114. Some parties assert that KCS today uses its TIH/PIH to differentiate itself from the other Class I's to attract traffic and that this incentive will go away with the CP/KCS transaction. This is not an accurate assumption. In fact, the locations that receive TIH/PIH traffic on KCS are at locations that are singly-served by KCS, which means the terms of our tariffs and rules publications are not a means to differentiate our services and attract this business.[46] KCS has not had any adverse incidents that have forced us to revisit these terms or modify the terms to require explicit liability allocations (e.g., arising from insistence by our insurers). KCS's terms do not reflect an additional assumption of risk or liability by KCS as a commercial incentive. The terms of our tariffs and rules publications reflect our chosen way of dealing with a set of business risks.

---

[46] KCS also originates TIH/PIH shipments from dual-served locations, such as Chaison TX, and at joint operating facility locations, such as Lake Charles, LA. But KCS does not use the terms of its TIH/PIH tariff and rules publication as a marketing tool to differentiate itself from the other carriers also serving those locations.

115. I realize that parties have benefitted from what is seen as "customer friendly" tariffs and rules publications, but as noted, the policies are always subject to change and are certainly not actually intended to be a business or marketing tactic to encourage TIH/PIH shipments on KCS or to market KCS's TIH/PIH policies as "customer friendly." I can understand those customers who are concerned that a merged CP/KCS will cause KCS to change its policies, but those concerns do not justify the types of remedies proposed by some shippers. While there are no immediate plans to changes these tariffs and rules publications, I would note that KCS evaluates its tariffs and rules publications in the ordinary course of its business on a regular basis. KCS routinely makes changes to its tariffs and rules publications based upon market conditions. It would be overreaching to freeze KCS's tariffs and rules publications terms at their pre-Transaction state when absent the Transaction, KCS would have been free to change its terms at any time, subject to STB regulations and challenge.

VIII. OTHER ISSUES RAISED BY COMMENTERS

A. The Conditions Sought by Texas International Terminals Are Not Related to Competition or This Transaction and Instead Seek to Improve TxIT's Commercial Position.

116. I understand Texas International Terminals Ltd. ("TxIT") filed a comment and is requesting a condition requiring CPKC to "effectuate (as necessary) and maintain the access rights that KCS was granted in UP-MKT to Galveston" and to "actively and cooperatively work with rail shippers and TxIT to reasonably market and enable such right to be actively utilized."[47] TxIT complains that KCS "has not effectuated or sought to aggressively market those rights with respect to rail service to TxIT to date."

[47] Comments and Request for Conditions of Texas International Terminals Ltd. ("TxIT Comments") (filed February 28, 2022) at 8.

117. KCS was granted these rights in the UP-MKT merger, but KCS has not exercised them because it is not economically advantageous to do so. The haulage rights were granted as part of UP's 1988 merger with Missouri-Kansas-Texas Railroad and originally designed to give KCS haulage rights for grain traffic originating in the Omaha, Nebraska and Council Bluffs, Iowa region, and haulage rights over UP between Beaumont and Galveston to deliver the grain to Galveston.[48] However, KCS found alternative and more advantageous routes to get grain to destination markets, including through other Gulf ports that KCS serves directly, such as Port Arthur and New Orleans. Simply, KCS has not needed to exercise these rights because it has better economic options. But KCS has not turned away any traffic and I understand TxIT's Galveston facility is served by UP and BNSF. Moreover, there is nothing in this merger which would diminish these rights and should they become economically advantageous, CPKC may exercise them.

B. Evergy Metro, Inc.'s Request to Impose a Condition regarding Service Quality is an Attempt to Extend Board Jurisdiction to its Contractual Agreement with KCS.

118. I understand Evergy Metro, Inc. ("Evergy") filed Comments seeking a condition requiring five years of Board oversight and the formal submission of reports on a quarterly basis on, among other things, the service quality to Evergy and other bulk commodity shippers, and for the Board to retain jurisdiction to impose additional conditions to remedy any service shortfalls.[49]

---

[48] See Union Pacific Corp., et al. – Control – Missouri-Kansas-Texas R.R. Co., et al., 4 I.C.C.2d 409, 452-458 (1988) ("UP/MKT").

[49] See Evergy Metro, Inc. Comments, filed February 28, 2022, at 17-18.

119. Evergy acknowledges that KCS provides transportation services to Evergy for the movement of coal pursuant to a contractual agreement that was negotiated between the parties. This agreement includes service protections against decreases in service levels, including {{[redacted]}}

120. Specific service conditions are a term that parties negotiate for, as Evergy did. The exact nature of these terms involves give and take as part of the overall private agreement. Evergy here is seeking to insert the Board into the private agreements between shippers and KCS and to impose additional service terms for which they did not negotiate. Evergy's conditions are not merger related, but an attempt to put itself in a better commercial position than it would otherwise be in.

PRESS RELEASE – CANADIAN NATIONAL, ILLINOIS CENTRAL, AND KCSR IN SHIPPING ALLIANCE

REDACTED PUBLIC RECORD VERSION

Business

CANADIAN NATL, ILLINOIS CENTRAL, KCSR IN SHIPPING ALLIANCE

April 16, 1998 at 7:23 AM CDT

(The following is a reformatted and edited version of a press release issued by Canadian National Railway Company.)

CANADIAN NATIONAL, ILLINOIS CENTRAL AND KANSAS CITY SOUTHERN RAILWAY FORM PRO-COMPETITIVE, 15-YEAR MARKETING ALLIANCE TO LINK KEY NORTH AMERICAN MARKETS WITH NEW RAIL FREIGHT SERVICES

Railways plan coordinated marketing and operations in fast-growing NAFTA transportation corridor

WASHINGTON, D. C., April 16, 1998--Canadian National Railway Company (CN), Illinois Central Corporation (IC) and Kansas City Southern Railway Company (KCSR) announced today a 15-year marketing alliance that will offer shippers new competitive options in a rail freight transportation network linking key north-south continental freight markets.

CN and KCSR have also signed a separate access agreement regarding certain haulage and trackage rights, which is contingent upon United States Surface Transportation Board approval of CN's previously announced merger with IC. The affected tracks are owned by IC and KCSR.

Neither CN nor KCSR will acquire equity interests or other financial holdings in the other.

CN-IC-KCSR plan to launch their marketing alliance immediately; it does not require approval by the STB.

The marketing alliance will offer shippers pro-competitive connections to new rail routes for their products and the ability to tap new markets through a coordinated rail network. Services will link points in Canada with the major U.S. Midwest markets of Detroit, Chicago, Kansas City and St. Louis, along with the key Southern markets of Memphis, Tenn., Dallas and Houston. In addition, this new marketing alliance will give shippers access to Mexico's largest rail system, Transportacion Ferroviaria Mexicana, S.A. de C.V. (``Grupo TFM'').

Under terms of the marketing alliance, the companies will coordinate sales and marketing, operations, fleets, and information systems, but not for traffic movements where any two of them provide the only direct rail service.

The railways will target new markets in key north-south international and significant domestic U.S. traffic corridors. They will also seek to increase rail business in existing markets, primarily in automotive and intermodal, but also in key carload markets, including those for chemicals and forest products.

CN-IC-KCSR expect the marketing alliance to generate revenue and earnings growth and position them as the pre-eminent

REDACTED PUBLIC RECORD VERSION

north-south rail carriers in the NAFTA corridor, where north-south transborder railway traffic is growing annually at between 12 per cent and 14 per cent.

The carriers plan to utilize two main interchanges:

- Jackson, Miss., for traffic moving between southern KCSR territory or Mexico and CN or IC territory;

- Springfield, Ill., for traffic moving between CN and northern IC territory, and U.S. Midwest KCSR territory.

To improve customer service and operating efficiency at Jackson - a critical junction between IC and KCSR -- the railways have agreed to arrange for joint operation of yards, terminals, transload and intermodal facilities.

Under a separate access agreement, subject to STB approval of the CN-IC merger, CN and KCSR plan investments in automotive, intermodal and transload facilities at Memphis, Dallas, Kansas City and Chicago to capitalize on the growth potential represented by the marketing agreement. The railways' access to the proposed terminals would be assured for the 25-year life span of the facilities, regardless of any change in corporate control.

Under the terms of this access agreement, KCSR would also extend its rail system in the Gulf area. For traffic other than coal, KCSR would receive overhead trackage rights on the merged CN-IC in Mississippi between Jackson and Palmer, and overhead haulage rights between Hattiesburg and Mobile, Ala.

The merged CN-IC would reach the Port of Gulfport from Hattiesburg under overhead haulage rights in Mississippi granted by KCSR.

The access agreement would give KCSR access to three chemical plants at Geismar, La., now served by IC, with associated overhead haulage rights from Geismar to Baton Rouge and, for traffic moving to or from certain eastern centres, from Baton Rouge to Jackson. KCSR access to the three Geismar plants is expected to take effect in the fall of 2000.

CN President and Chief Executive Officer Paul M. Tellier said: ``The marketing agreement is good news for shippers. It's pro-competitive because of the new routing options and extended market reach that it offers shippers. Of significance to automotive and intermodal shippers, the agreement will permit CN to offer single-price, efficient service between points in Ontario and Michigan to Kansas City and Dallas and neighboring regions. It will give CN greater penetration of U.S. Southwest markets and the ability to develop a Canada-Mexico rail freight market. The access agreement would also pave the way for investments in important new terminal facilities and give CN broader reach in the southern U.S. States.''

KCSR President and Chief Executive Officer Michael Haverty said: ``The marketing agreement will improve service performance and reliability by providing increased routing options for shippers and reducing transit time by improving equipment and locomotive utilization. KCSR access to chemical producers at Geismar under the access agreement would certainly enhance rail competition.''

IC President and Chief Executive Officer John D. McPherson said: ``This new alliance builds on IC's history of working with other carriers. It builds on the strengths of the IC route structure and reliable service offering. Not only do we provide the link between Canada and Texas Mexico, IC will have opportunities to originate and terminate business to and from CN points and to and from KCSR points, immediately expanding the reach of shippers along our line.''

CN, IC and KCSR expect new jobs would be generated by increased revenue flowing from the extended network reach of the

REDACTED PUBLIC RECORD VERSION

carriers' automotive and intermodal customers.

The previously announced merger of CN and IC will create the fifth-largest railway in North America, serving Canada from Vancouver to Halifax, and the rapidly growing north-south trade corridor, including service between Detroit, Chicago, St. Louis, Memphis and Jackson, New Orleans and Mobile.

KCSR's parent, Kansas City Southern Industries Inc. (NYSE: KSU) is a transportation and financial asset management company with headquarters in Kansas City. KCSR's 6,000-mile rail network of companies and affiliates include the Kansas City Southern Railway Company, the Texas-Mexican Railway, Transportacion Ferroviaria Mexicana (TFM), the wholly-owned Gateway Western Railway Company (GWWR) and the Panama Canal Railway Company, a joint venture with Mi-Jack Products Inc. KCSR's rail network, and those of its affiliates, extend from Kansas City, East St. Louis, Springfield, Ill., and Meridian, Miss., to Mexico City.

CN (NYSE: CNI, TSE/ME: CNR) is Canada's largest and North America's sixth-largest freight railway. Its network serves Canada, including the key ports of Vancouver, Montreal and Halifax, and Chicago and Detroit, with connections to all points in North America.

IC (NYSE: IC) is a holding company whose principal subsidiaries are the Illinois Central Railroad, a 2,600-mile system from Chicago south to the Gulf of Mexico, and the 850-mile Chicago Central system running west of Chicago through Iowa.

REPLY VERIFIED STATEMENT OF JOHN F. ORR REGARDING HOUSTON AREA INFRASTRUCTURE CAPACITY

EXHIBITS

EXHIBIT 1: JOINT MEETING PRESENTATION, JUNE 29, 2022

EXHIBIT 2: HOUSTON TERMINAL PLAYBOOK, TERMINAL DISCIPLINE (UP)

EXHIBIT 3: PTRA HOUSTON RAILROAD MAP

EXHIBIT 4: EMAIL, TIMOTHY L. WOOLEY (UP) TO BRIAN E. GORTON (UP), APRIL 8, 2019

EXHIBIT 5: JOHN ORR LETTER TO ERIC GEHRINGER AND MATTHEW GARLAND, MAY 1, 2022

1. My name is John F. Orr. I am Kansas City Southern's Executive Vice President – Operations.

2. This statement describes why the rail lines utilized by The Kansas City Southern Railway Company ("KCS") between Beaumont and Robstown, Texas have adequate capacity for all users if properly operated and maintained.

3. My background includes nearly 40 years in all phases of railroad operations. I began my railroading career in 1984 as a conductor with Canadian National Railway ("CN"). Over the next 34 years, I progressed through many phases of CN's operating department, including service as senior vice president-operations for CN's U.S. (Southern) Region, CN's vice president-transportation for its network in Eastern Canada, and vice president-chief safety and sustainability officer for CN's entire North American network. I concluded my career with CN in 2019 as senior vice president and chief transportation officer, responsible for network assets and operations across CN's nearly 20,000-mile U.S. and Canadian network. From 2019 until early 2021 I worked as a top-level operations executive in railroading and transportation ecosystems across Europe, Asia, and North America. In February 2021 I joined KCS as a consultant, and moved to my current position in mid-April, 2021.

4. KCS operates between Beaumont and Robstown, Texas via trackage rights over track owned jointly by Union Pacific Railroad Company (UP) and BNSF Railway Company

(BNSF),[1] solely by UP, and by Houston Belt & Terminal Railway Company (HBT).[2] *See* Reply Verified Statement of Stephen D. Simmons (Simmons V.S.), paragraphs 15 - 17.

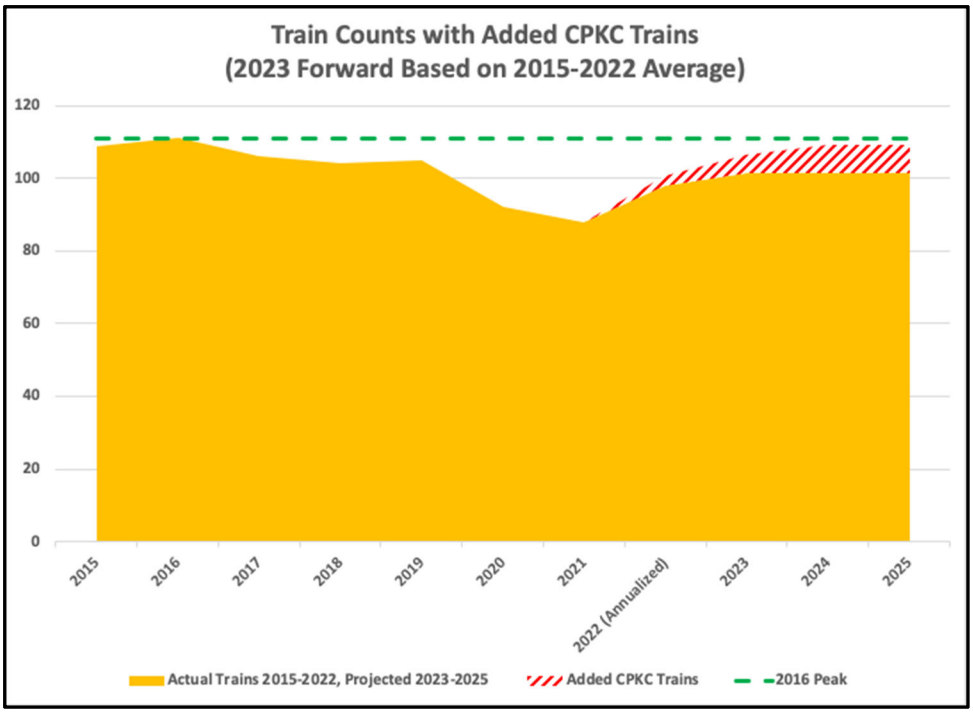
5. The trackage rights lines used by KCS, plus KCS's Laredo Subdivision and a portion of KCS's Beaumont Subdivision, are dispatched from the Spring, Texas Joint Dispatch Center (Spring Center). UP, BNSF and KCS all have dispatchers at the Spring Center. The theory behind the Spring Center is that having all 3 companies dispatching traffic over these shared lines from the same facility will improve communication, coordination and overall operating efficiency because the dispatchers can talk to each other. While that is true to some extent, each company dispatches its trains from its own system. The amount of information that KCS has about either UP or BNSF trains and operations is limited, is shared only at UP's and BNSF's convenience, and often is not shared timely enough for making or assessing decisions in near real time.

---

[1] In 1998, the STB granted UP and BNSF's petition for exemption for joint, equal ownership of the lines from Dawes, TX to Avondale, LA. *The Burlington Northern and Santa Fe Railway Company and Union Pacific Railroad Company--Acquisition Exemption—Lines Between Dawes, TX, and Avondale, LA*, STB Finance Docket No. 33630, 63 FR 51991-01 (Sept. 29, 1998). KCS operates over the Beaumont to Dawes portion of this joint line, which is part of UP's Houston Subdivision.

[2] UP and BNSF operate HBT's lines under trackage rights over all of HBT's tracks. *Southern Pacific Transportation Co.-Trackage Rights Exemption-The Houston Belt & Terminal Railway Co.*, STB Finance Docket No. 33461, *Union Pacific Railroad Co.-Trackage Rights Exemption-The Houston Belt & Terminal Railway Co.*, STB Finance Docket No. 33462, and *The Burlington Northern and Santa Fe Railway Co.-Trackage Rights Exemption-The Houston Belt & Terminal Railway Co.*, STB Finance Docket No. 33463, 62 Fed. Reg. 50049 (Sept. 24, 1997).

HBT is controlled by UP and BNSF. *See Southern Pacific Transportation Company—Trackage Rights Exemption—The Houston Belt & Terminal Railway Company*, et al., STB Finance Docket Nos. 33461, 33462 and 33463, and *The Texas Mexican Railway Company and Kansas City Southern Railway Company v. The Houston Belt & Terminal Railway Company, The Burlington Northern and Santa Fe Railway Company, Union Pacific Railroad Company, and Southern Pacific Transportation Company*, STB Finance Docket No. 33507 (served Dec. 21, 1998), slip op. at 15.

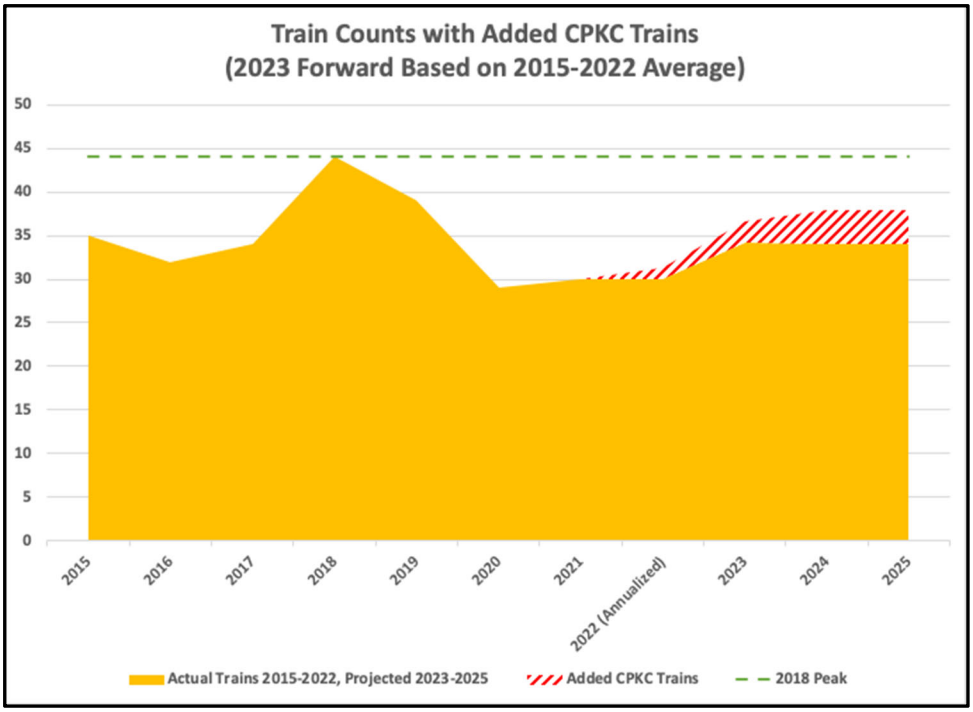


6. During my tenure with CN, I was involved with the Chicago Integrated Rail Operations Center (CIROC)**,** where all of the railroads serving Chicago—UP, BNSF, CN, Canadian Pacific, Norfolk Southern, CSX, the switching carriers IHB and BRC, and the passenger carriers Amtrak and Metra – all manage traffic in the Chicago area. CIROC provides much greater visibility than the Spring Center does for all participating carriers to understand actions affecting their traffic. I have proposed to my counterparts at UP and BNSF that we work together to move the Spring Center toward the CIROC model to improve all carriers' visibility of the operating environment from Beaumont to the border. I believe that change would allow better management of traffic on shared lines in south Texas.

7. The trackage rights lines are capable of accommodating more traffic than moves over them today. Historically, the portion of these lines in and east of Houston has accommodated more trains than are being operated today. The decline in the number of trains operated is due principally to operating practices of UP and BNSF, not to a lack of adequate infrastructure.

8. Each month UP, BNSF and KCS, along with PTRA,[3] meet to discuss operations over the jointly-used lines in and east of Houston. A copy of the report from the most recent of those meetings is attached as Exhibit 1. These reports are prepared by the Spring Center joint directors, currently Tim Wooley of UP and Robin Taylor of BNSF, to guide the meeting discussion.

[3] PTRA is the Port Terminal Railroad Association, which owns and operates lines along the Houston ship channel. UP, BNSF and KCS are members of the Association, along with the Port of Houston Authority of Harris County and Houston Belt & Terminal Railway Company (HBT). https://www.ptra.com/index.php/about-us/members-of-the-association.html .



9. As shown on the third slide in the report, train counts in the Houston complex from 2015 through 2019 were well above current levels, up to 111 trains per day on average in 2016. On peak days, train counts range as high as 127 trains.[4] A simple graph shows that the projected additional CPKC trains can fit easily within the available capacity already shown by pre-pandemic train counts in Houston shown in the June 29 presentation:

10. Similarly, slide 5 shows that yearly average train counts on the "Joint Line" – the UP-BNSF Dawes, TX to Avondale, LA line – were as much as 14 trains per day higher pre-pandemic than they are today. Again, a simple graph shows that the demonstrated capacity of UP's Houston Subdivision[5] infrastructure can accommodate projected CPKC trains:

[4] *See* Exhibit 2, Houston Terminal Playbook, Terminal Discipline (UP).

[5] UP's 2020 timetable produced in discovery shows the line between Beaumont and Houston that UP formerly designated as its Lafayette Subdivision is now designated as UP's Houston Subdivision.

11. These historical data clearly show that the Houston complex and UP's Houston Subdivision have already handled as many or more additional trains than CPKC is projecting in Year 3 post-merger.

12. But even these data do not demonstrate the full capacity of the trackage rights lines to handle added traffic. The dotted green lines on the two graphs above represent only comparisons to past traffic volumes; that is, they represent only use, not capacity. Capacity of these lines may well have exceeded these prior traffic peaks because, as I understand it, Houston operations were generally fluid when these peaks occurred. Also, substantial infrastructure has been added to the Houston-area system since those past traffic peaks in 2016 and 2018, including the quarter billion dollars of infrastructure additions in the past 3 years to Englewood and Settegast Yards referenced by UP's Executive Vice President of Operations Eric Gehringer at the

STB's Ex Parte 770 hearing in April.[6] In short, the dotted green lines are only demonstrated use; they are not the maximum capacity of these lines. But even if the dotted green lines on the graphs were the current capacity of these sections of the trackage rights lines, the trackage rights lines could accommodate projected CPKC trains.

13. Importantly, almost all KCS trains and projected CPKC trains simply transit the "Joint Line" and the "Houston Complex" without blocking, switching, serving customer locations or other activities that slow the passage of trains through this area.[7] This allows KCS and CPKC trains to fit more easily into available capacity than do UP and BNSF trains. For that reason alone, any suggestion by UP or BNSF that CPKC should bear the cost of capacity expansion in these areas is clearly misplaced. And, as explained by Steve Simmons, *see* Simmons V.S., paragraphs 26-35, the Board-approved trackage rights agreements already provide for allocation of costs of any capacity expansions that may be needed in the future. As CPKC trains will be only a small portion of the volume of trains using any expanded capacity, under the trackage rights agreements, CPKC should bear a similarly small portion of the cost.

14. Attached as Exhibit 3 is a schematic representation of the lines in the Houston area over which KCS, UP and BNSF operate.[8] The schematic shows how the Lafayette Subdivision (since renamed by UP as its Houston Subdivision) runs through Dayton Yard, the connection to UP's Baytown Subdivision, and past the connections to and from Settegast Yard at

---

[6] Testimony of Eric Gehringer, Executive Vice President, Operations, Union Pacific Railroad Company at Ex Parte No. 770, April 27, 2022 Public Hearing, Transcript STB Document ID 304765, posted June 15, 2022, page 906, line 13 through page 907, line 9.

[7] KCS does operate interchange trains to and from PTRA, currently at the rate of 4 times per week.

[8] This 2011 schematic, though slightly dated in some of its labeling (e.g., UP Houston Subdivision shows its former name, Lafayette Subdivision) remains an excellent representation of the main routes in and through Houston.

the northeast end of Englewood Yard. UP, BNSF and KCS all use these tracks to enter Houston from Beaumont and points east.

15. Slide 25 of Exhibit 2, a UP-prepared schematic, represents specifically the flow of KCS's traffic through the Houston complex. In that Exhibit, light blue arrows represent KCS's normal westbound route, while darker blue arrows represent KCS's normal eastbound route. There are numerous routes for trains through Houston and the green arrows represent the preferred alternate or clear route path for KCS.[9] Both exhibits demonstrate how operational impediments to moving trains past Englewood and Settegast Yards can impair all carriers' traffic moving from Beaumont to Houston.

16. Englewood Yard lies along UP's Houston Subdivision, the westbound trackage rights line into Houston. Settegast Yard lies about a half-mile north of Englewood Yard, between the Houston Subdivision and the Beaumont Subdivision, and connects to the Houston Subdivision at Englewood Yard. Even though Englewood and Settegast are massive yards,[10] adding a large amount of workload and additional switching, including arriving, departing and building longer trains at these two yards situated astride the entrance to and exit from Houston, has contributed to the increased challenges KCS has experienced traversing Houston.

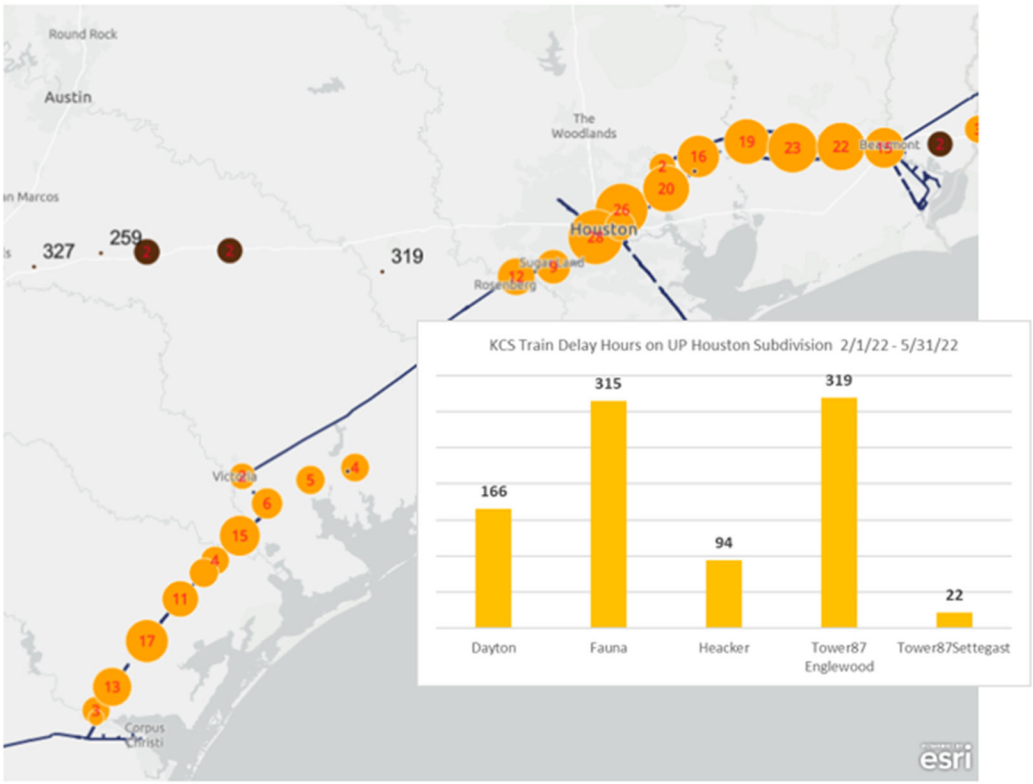
17. What has changed from the pre-pandemic period to now is how UP and BNSF operate on these lines. In significant part this is due to UP closing yards elsewhere on its system, including curtailing construction in April 2019 of its Brazos Yard in Hearne, Texas, which was

[9] Green arrows represent some of the routes that the Spring Center could use to route KCS traffic under the STB's "clear route" condition. (*See* paragraph 23 below.)

[10] {[redacted]}.

slated to be one of the largest switching yards on UP's system.[11] In January 2021 UP announced a write-off of one half of the value of the Brazos Yard investment to date despite unchanged volume outlook for their Southern Region. At the time UP indicated that their network had been redesigned and that merchandise traffic in the Gulf Coast was growing and expansion was underway at Englewood Yard in Houston to increase processing capacity.[12] These changes have pushed more car switching activities into Englewood and Settegast Yards. For over two years, UP has been in the process of converting Englewood Yard from handling roughly 2700 cars per day to the largest hump yard on UP's system, intended to handle more than 3000 cars per day.[13] This has included major track, tie and rail replacements and substantial new construction activity which have disrupted yard operations.

18. The tracks in this area - from Dayton Yard past Settegast and Englewood Yards – are points where UP's and BNSF's current operational decisions often cause disproportionate delays to movement of KCS trains vis-à-vis their own. The graphic below represents KCS train delay data from February through May of this year, and shows that Dayton, Fauna and Tower 87/Settegast-Englewood are the largest contributors to delay of KCS trains attempting to transit Houston. These 3 locations – Dayton, Fauna and Tower 87/Settegast-Englewood, approximately Mileposts 327, 348 and 356.6 on UP's Houston Subdivision - all repeatedly impede KCS's westbound moves through Houston, largely due to yard-related activity of UP and BNSF.



---

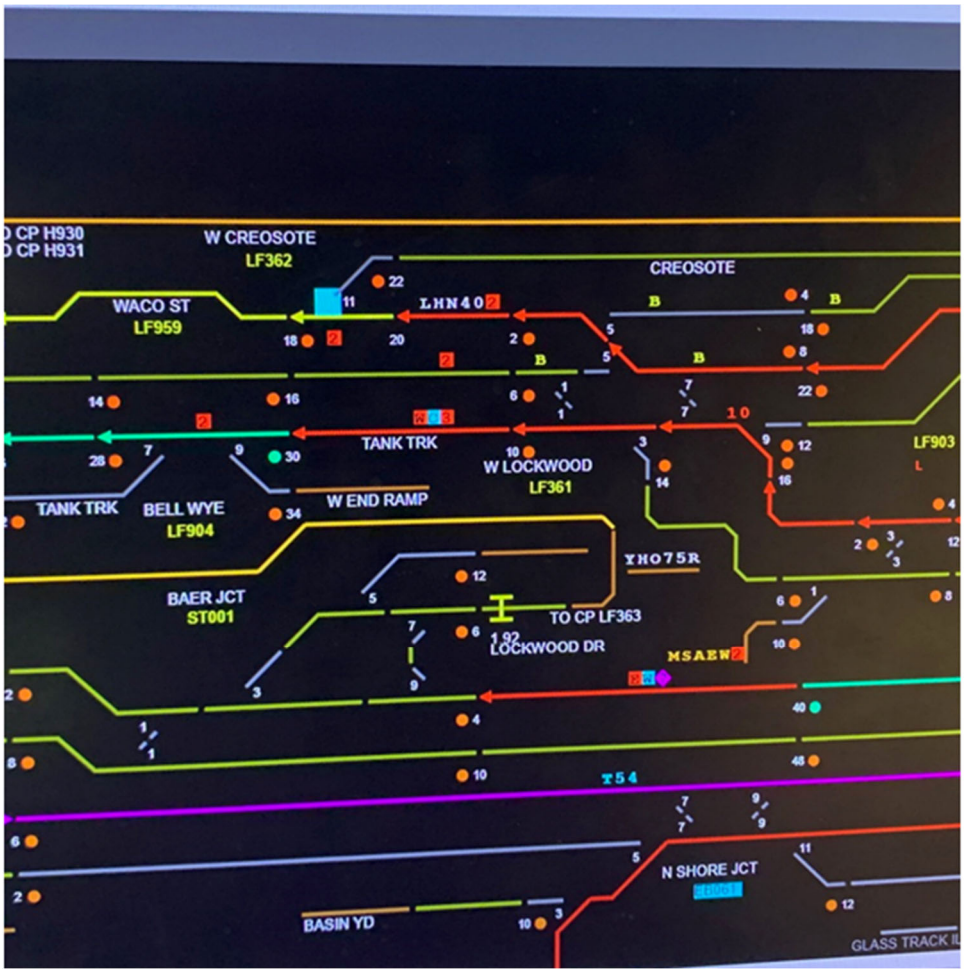
[13] *See* https://www.up.com/aboutup/community/inside_track/englewood-yard-transformation-it-220324.htm.

KCS Train Delay Frequency – UP Houston Subdivision (2/22 – 5/22)

19. This is not an infrastructure problem - it's an operations problem. Nothing makes this clearer than UP's having invested a quarter billion dollars in its main Houston yards[14] - enough money to remedy virtually any localized infrastructure problem. Despite that investment, trains are being broken up and made up on the main lines outside these yards, congesting routes for through traffic like KCS trains that simply need to pass through the area. For example, trains entering and exiting the west end of Englewood Yard often occupy both Main Tracks 1 and 2. The "Houston Terminal Playbook"[15] that was developed and is maintained



[14] Testimony of Eric Gehringer, Executive Vice President, Operations, Union Pacific Railroad Company at Ex Parte No. 770, April 27, 2022 Public Hearing, Transcript STB Document ID 304765, posted June 15, 2022, page 906, line 13 through page 907, line 9.

[15] Exhibit 2.

on an ongoing basis by UP to maintain fluidity throughout Houston, identifies Main 1 as the track that is supposed to be open for KCS westbound trains and other run through traffic to run by Englewood,[16] but it often is blocked by UP trains operating in and out of Englewood in opposition to prescribed departure and inbound routing protocol.

20. I was able to experience this first hand on June 8, 2022 while on an inspection and Town Hall meeting trip from Kansas City, MO to Laredo, TX on KCS's Southern Belle Executive Train. As seen from the dispatcher's screen below, both Mains at Englewood were occupied when the Executive Train approached Englewood. The screen shot below of the dispatcher's screen shows this situation with the train coming out of Englewood blocking both Main 1 and Main 2. Compare that to Exhibit 2, Slide 17, which is labeled "Incorrect Departure, Blocks routes, Should have used #2 main for MEWFPB."

[16] *See* Exhibit 2, Houston Terminal Playbook, slide 5.

21. The blockage of Main 1 necessitated alternate routing for the Executive Train. Because we could not bypass Englewood on Main 1, we were routed north at Tower 87 (on the northeast end of Englewood) onto the East Belt and through Pierce Yard to Belt Junction, then south to Tower 26 back onto the Houston Subdivision west of Englewood. This added about 45 minutes to our overall transit through Houston; however, it also demonstrated that there are numerous routing options through Houston that are available to each carrier.

22. At times, UP even allows yard crews to bring a train onto the main line before the over-the-road crew is available, resulting in a crew change on the main line. KCS regularly

experiences similar obstacles to eastbound trains, waiting for traffic to process in and out of the north end of UP's Settegast Yard.[17]

23. These are operational problems, not infrastructure problems. They can be remedied by using tools such as timely data, managing and maintaining the infrastructure more wisely, coordinated decision-making that includes all participating railroads, agreed standards and proper presentation of the trains operating in the complex, enabling the Spring Center to correct operating practices to conform to existing infrastructure, rather than trying to fit a square peg into a round hole. They can also be alleviated through alternate routing.

24. In addition, BNSF and UP have both been short of locomotives, so their ability to recover if a locomotive breaks down on line of road is limited. Shortages of power have led to some trains being underpowered, and if there is a problem with any of the locomotives on those trains, the train may not be able to move until new power is found and brought to the train, resulting in blocked track and delays. Both UP and BNSF told the STB at its Ex Parte 770 hearing in late April that they are bringing on locomotives.

25. BNSF and UP have also both been short of crews, and their ability to recrew trains is limited when a delay occurs. Both UP and BNSF told the STB at its Ex Parte 770 hearing in late April that they are short of crews but that, as with locomotive shortages, they are working hard to rectify their crew shortages.

[17] Another decision by UP that has exacerbated Houston area congestion has been UP's use of smaller-than-normal work gangs. These smaller work gangs do not accomplish as much work during a work curfew as a normal-sized work gang, leading to more work curfews to accomplish the same amount of work. Impactful examples of this were the recent tie program executed by UP on their Beaumont Sub from mid-March to late June where curfews ran a 5-on/5-off schedule for 5 hours a day, significantly impacting KCS eastbound flows through Houston and extending the period of time to remedy well over 100 Brownsville Sub track defects in early Spring after reports of rough track were submitted by KCS following an inspection train trip in February.

26. The shortage in timely availability of both crews and locomotives to move trains in and out of Englewood Yard has been one of the major factors that has led to the blockages that KCS has experienced entering Houston from Beaumont. UP and BNSF reports to the STB in EP 770 do confirm that UP and BNSF are adding locomotives and crews as promised.

27. To guard against potential crew needs on the trackage rights lines, KCS ramped up its hiring in 2021, so that we actually had more crews positioned to serve the trackage rights lines than we should need. That was a good decision. However, we have found that the Joint Director at the Spring Center, who is paid by UP and BNSF, will now hold our trains and direct us to recrew them while moving UP or BNSF trains because KCS has recrews available and UP and BNSF do not. This leads to higher cost for, and slower movement of, KCS trains, as compared to UP and BNSF trains.[18]

28. This certainly is not the only instance of inefficient, unequal treatment KCS has experienced on the trackage rights lines. For example, attached as Exhibit 4 is an email from Tim Wooley – the UP employee who serves as the Spring Center co-director – complaining to UP about the uneven impacts UP's unilateral decisions have on BNSF and KCS operating efficiency on the Beaumont to Dawes line:

> The BN and KCS have re-crewed their trains time over time trying to get through Beaumont - which fall short of Houston. What is the plan for the UP to reduce the work event time [at] Beaumont to provide parity to the other carriers?

[18] This certainly is not the first example of UP taking advantage of KCS forethought. I am told that before KCS rebuilt the Rosenberg-Victoria line, KCS operated over UP's entire Cuero Subdivision from Flatonia to Placedo to traverse between the Glidden and Brownsville Subs. KCS built a siding between Flatonia and Victoria on the Cuero Sub to improve fluidity by allowing trains to pass. UP refused to contribute to the cost of the siding, claiming that the siding was solely for KCS's benefit and therefore the cost was wholly attributable to KCS under the trackage rights agreements. Then, because the trackage rights agreement prohibited UP from using infrastructure it had not contributed to, UP would park KCS trains in the siding and then run multiple UP trains past the KCS train in the siding. When KCS rebuilt the Rosenberg-Victoria line, UP had to get KCS's permission to use the siding, even though KCS no longer used that route, because UP had not contributed to cost of the siding and was not entitled to use it under the trackage rights agreements.

29. This type of unequal treatment is one thing that a CIROC-type arrangement could help avoid. Based on KCS observation, there is no indication that either UP or BNSF experience recrews and train delays in the same proportion as KCS trains do. Again, the current problems in Houston do not result from infrastructure inadequacy; they result from bad, biased or inadequately-informed operating decisions.

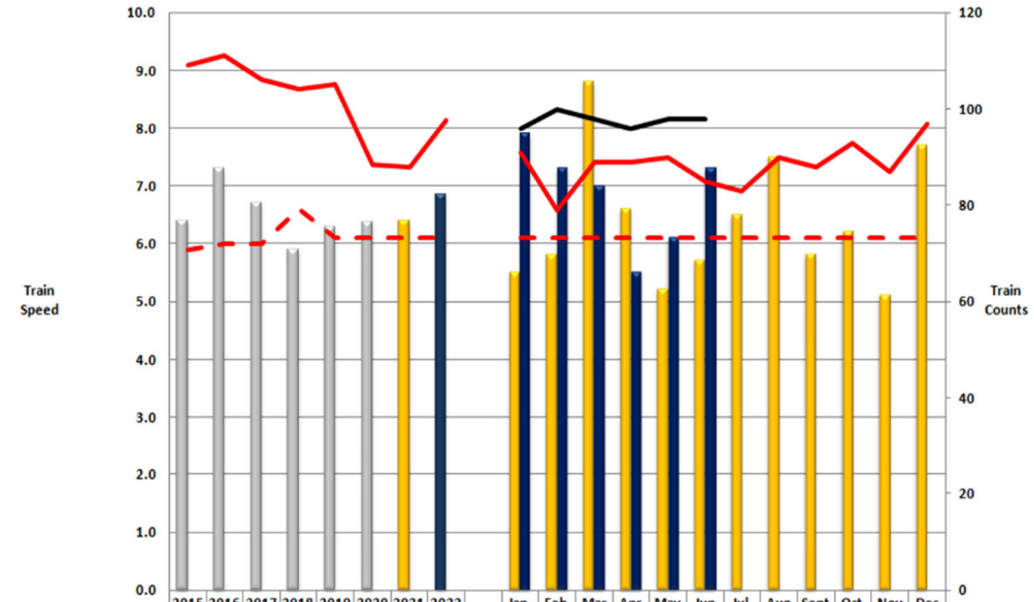
30. Another current, and longstanding, failure of the Spring Center's dispatching of Houston area lines is the failure to implement the Board-imposed clear route condition on a more consistent basis. As a result of the 1997-1998 Houston/Gulf Coast service crisis, the Board imposed what it called a "'clear route' condition":

> [W]e have decided to adopt a so-called "clear route" condition to enhance efficiency and facilitate the smooth movement of railcars through the Houston Terminal. Under the "clear route" condition, the neutral and highly efficient joint Union Pacific Railroad Company (UP)/Burlington Northern Santa Fe Railway Company (BNSF) dispatching center at Spring, TX, will have the authority through its Joint Director to route traffic through Houston over any available route, even a route over which the owner of the train does not have operating authority.
>
> . . .
>
> We will impose a "clear route through Houston" condition to enhance efficiency and facilitate the smooth movement of traffic through the Houston Terminal, … To ensure, however, that the Joint Center staff do not feel constrained from making decisions necessary to efficient operations in the Houston Terminal due to trackage rights or other operational limitations, we are imposing a condition directing the Joint Center carrier-participants to authorize the Joint Director to use the best judgment in selecting alternative routings for train operations by UP, BNSF, and Tex Mex through the terminal, particularly when customary routings are unavailable or congested.[19]

31. Despite the Board's imposition of the clear route condition, UP largely refuses to use it. At times, KCS has had to contact UP's Director of Joint Facilities to get UP's

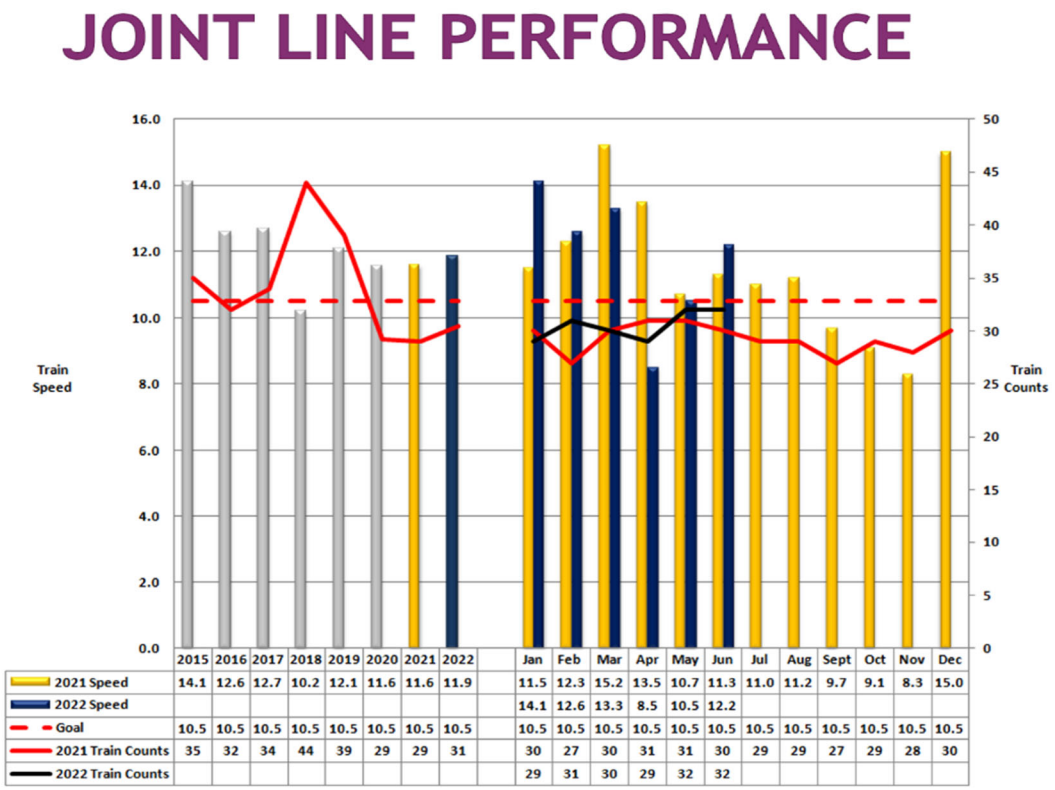
---

[19] *Union Pacific Corporation, Union Pacific Railroad Company and Missouri Pacific Railroad Company--Control and Merger--Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railway Company [Houston/Gulf Coast Oversight]*, 3 S.T.B. 1030, 1038 (1998).



authorization for the Spring Center Director to utilize this Board-imposed efficiency maximizing authority. As indicated above, I was able experience first-hand on my June 8 Executive Train trip the flexibility and intended benefits of the clear route condition imposed by the Board. This is a very viable option to assist in handling current and future train movement through Houston given the vast routing options that exist.

32. KCS is not the only one adversely impacted by UP and BNSF operating practices. At the monthly Spring Center operations meetings, PTRA has spoken of problems with its interchange with UP, of UP's failure to communicate, UP's refusal to participate in daily coordination calls, and UP's bringing unscheduled, too-long trains to Englewood that affect all other carriers' operations.[20]



33. All of this is not to say that Houston is hopelessly bollixed up as happened in 1997-1998. There are some positive signs. For example, Exhibit 1 shows average train speeds in both the Houston Complex and on the "Joint Line" are trending up and are exceeding targets set for those areas.

[20] The standard practice of the Spring Center director is to limit KCS trains through Houston to less than 10,000 feet due to restrictions on their Beaumont and Brownsville Subdivisions. Although Eric Gehringer of UP testified April 27, 2022 at the STB's Ex Parte 770 hearing that when UP "build[s] our transportation plan, we restrict train length on certain corridors. So we don't take, for example, a 12,000-foot train and put it on a corridor that only has 8800-foot sidings", Testimony of Eric Gehringer, Executive Vice President, Operations, Union Pacific Railroad Company at Ex Parte No. 770, April 27, 2022 Public Hearing, Transcript STB Document ID 304765, posted June 15, 2022, page 900, lines 6-10. UP's Houston Area Timetable effective August 31, 2020, produced in discovery (UP-C-000205 – UP-C-000289), shows that the {{[redacted]}}. Nevertheless, KCS believes that UP does not limit its own trains to the same less-than-10,000-foot standard. Through communication within the Spring Center, KCS understands that UP will allow trains up to 15,000 and 12,000 feet on its Glidden and Houston Subdivisions, respectively, with both of those subdivisions feeding and receiving trains to and from UP's Englewood and Settegast Yards.

2022 Train Counts										29	31	30	29	32	32						

34. As shown by the graph below, KCS has seen improvement in overall transit times for trains operating between Beaumont and Kendleton, TX in May and June, after transit times peaked in April 2022 following overall Houston trends.

Orr R.V.S. at 18

35. In addition, infrastructure enhancement projects are currently in progress in the Houston area, including improvements in Englewood Yard,[21] north Basin crossovers, and second main tracks from Dawes to Fauna and Crosby to Dayton, the lattermost being completed in late June. The Englewood north "Creosote" bypass track extension should be completed this Fall, and should restore KCS's ability to bypass Englewood Yard that recently had been lost due to UP's blocking both Main 1 and Main 2 going in and out of Englewood.

36. Additional capacity expansion is also occurring on UP's lines southwest of Houston. Four additional or extended sidings underway on the UP Angleton Subdivision will improve the ability to get UP and BNSF trains out of Houston and to stage UP and BNSF trains entering the Houston complex without preventing trains from leaving the complex. KCS is also

[21] *See* UP customer announcements dated July 15, 2021, December 22, 2021, January 5, 2022 and March 16, 2022. *See* https://www.up.com/customers/announcements/customernews/index.htm.

aware of future planned projects over the next several years that would help with overall Houston fluidity and train transit once completed.

37. I have reached out to my counterparts at UP and BNSF to engage in a conversation about ways to improve the current situation and future operational efficiency. My letter to Eric Gehringer at UP and Matt Garland at BNSF following the STB's Ex Parte 770 hearing and proposing ways to work together for positive solutions for the trackage rights lines is attached as Exhibit 5. Both gentlemen have indicated a willingness to discuss the issues, which is a positive sign. Senior Operating representatives from KCS and UP recently met in Houston for the first time since pre-COVID to review performance trends and discuss process, planning and other improvement opportunities to work on together for Houston, Southern Border, and Kansas City rail operations.

38. What I have advocated to my UP and BNSF counterparts is the need for structural improvements in the way the trackage rights lines are operated, to improve the use of existing capacity. All users of these lines need a shared base of information, a common platform to use that information, joint maintenance and schedule planning, and an agreed set of standards to measure use of the facilities. That will enable all users to work together to stay ahead of capacity needs, whether through operational or infrastructure changes.

39. Unfortunately, the trend over the past three years has been for UP to share less information, to cut KCS off from UP information that KCS previously received. Joint planning activities have also been reduced over this timeframe, with the most recent example being extended simultaneous curfew periods on the UP Brownsville and Beaumont Subdivisions in 2022. KCS trains currently comprise the majority of the train count on the UP Brownsville Subdivision, and this traffic was impacted heavily in the Spring, driven by major curfews daily

on both the UP Brownsville and Beaumont Subs. These curfews on both ends of the KCS Beaumont-Robstown trackage right route added 24+ hours to the transit times of all trains since we could only advance from Robstown to Kendleton overnight before encountering the next curfew. Prior to 2020, work plans like these had been discussed and reviewed in bi-annual meetings between KCS and UP to ensure we were not independently planning production on key Subdivisions through south Texas and the Gulf Coast region.

40. Appropriate and equitable use of the trackage rights lines according to the STB-approved trackage rights agreements requires sharing more information, not less. The recent trend in reduced information sharing needs to be reversed.

41. Operational improvement on the trackage rights lines is needed, but it is within the power of the parties to make the right decisions to operate the trackage rights lines effectively. Infrastructure is adequate to meet the current KCS needs and projected CPKC needs. When added infrastructure becomes necessary, as it eventually will be if all carriers grow their traffic as they would like to do, the existing agreements provide how that infrastructure is to be paid for. KCS has demonstrated a willingness to invest in efficiency and capacity projects on the trackage rights lines, and has worked with UP in the past on process improvements. CPKC remains committed to doing so in the future.

Terminal Discipline

HOUSTON TERMINAL MANAGEMENT

Senior Director: Kenny Gomez

Joint Director: Tim Wooley

Trains processed

"Corridor 38"

- Dispatchers move on average 110 trains a day with Peak days up to 127 trains with speeds ranging from 6.5 to 12 mph.

- CM manages 4 carriers, UP, BNSF, KCS and PTRA

- Complies with City of Houston Blocked Crossing and Quiet Zone initiatives.

REDACTED PUBLIC RECORD VERSION

Terminal Priority Trains

- All internal traffic must be protected to maintain Yard integrity
  - (MSRHO, MEWSR, MEWPT, MPTHO, YHO70, YHO70B, YEW64/YHO91, YH187J, YH185J, YH387, YH289)
- Run Through Traffic Must Remain on designated routes unless MOW or a Service Interruption exist
- Directional Flow is the **Standard** which maintains balance on Belts and Cross Traffic at Twr87 and Twr26
- Englewood North Side must be kept at 90 inbound spacing
- Use of the Bell Main for Inbounds to the South Side reduces conflict at the West End of Englewood
- Lufkin Sub Exit Plan must be followed to maintain fluidity on the Lufkin Sub

The BN and KCS has been getting screwed by the 10 Hrs worth of work events off main #2 at Beaumont. I agree with their complaints about throughput at Beaumont. The BN and KCS have re-crewed their trains time over time trying to get through Beaumont - which fall short of Houston. What is the plan for the UP to reduce the work event time a Beaumont to provide parity to the other carriers? About time to put the MBTLI, MBTHO, MBTEW back on - enough with the pick up of these trains! This is the 50/50 line! BN has no Trackage Rights - they own it and have a say so! Please provide explanation so I can explain to the other owner of the UP Lafayette Sub and Houston Sub what the plan is.

Tim

Re: Urgent Issues in Freight Rail Service, Houston

Dear Eric and Matt,

I am writing to follow up with you on issues raised in the Surface Transportation Board's hearing this week concerning service problems in Houston, and to offer to get together with you both at your earliest opportunities to jointly discuss short term and longer term solutions to operational problems in the Houston complex and the lines feeding into it.

As background, I have attached that portion of my letter to the STB dealing with our cross-border grain business and the headwinds it has faced in March and April, largely due to operational congestion in Houston. I am also attaching the presentations about Houston and the UP-BNSF Joint Line from the March and April Spring Center joint meetings. I would draw your attention particularly to the third and fifth pages of the April report, showing substantially-reduced train speeds in the Houston complex and on the Joint Line year to date.

I am also attaching a report that KCS presented at the April 2022 Spring Center joint meeting, showing the dramatic rise in KCS recrew rates and transit times through Houston and on the joint track since the beginning of this year. I would like to discuss in detail your evaluation of the reason for this marked deterioration of KCS train performance when you both indicated at the STB's hearing that Houston train fluidity is not a problem for either BNSF or UP. I would also like you to tell me why KCS train performance has been sacrificed in deference to UP and BNSF trains for the last two months: what has changed since March?

As stated in my letter to the STB, KCS has offered support to both UP and BNSF in terms of using KCS crews to move trains UP and BNSF could not move due to crew shortages. We have assisted a few BNSF trains in this way; while UP originally accepted this offer, it later declined, citing current work ownership rules as preventing alternate crew resourcing. I suggest that we undertake a review of train staffing with our labor stakeholders. I remain willing to discuss this and other possibilities, as Chairman Oberman suggested.

DocuSign Envelope ID: 43D53C41-0285-40F1-A3B2-29695C54A63E

Lending KCS crews to support UP and BNSF operations would be a short-term bandage to operational problems that, instead, need a long-term fix. In the near term, KCS, UP and BNSF need to figure out a way – in conjunction with PTRA and Amtrak - to improve operational coordination in Houston. Based on my experience, Chicago's CIROC model offers that capability.

As you both stated in the STB hearing, BNSF and UP work "hand-in-glove" in Houston. The same cannot be said from the KCS perspective.

CIROC has improved operations in the Chicago terminal because of a common operations platform: shared access to information and utilizing a regional overview of operations by all parties that operate in Chicago, with parties meeting as equals and operating according to a set of agreed principles and structured procedures to resolve the daily operational challenges in a major city. There are agreed measures, standards and response protocols ready to be put into action whenever conditions become problematic, and systems for advanced visibility and accountability to provide the architecture for working together to assess and solve operational constraints and impediments.

Houston already has the infrastructure for its own version – H-ROC – in the Spring Center. We also have provisions granted by the STB for routing optimization: the clear route condition that the STB imposed in 1998 to maximize terminal operating efficiency every day.

In its current use, the Spring Center falls short in terms of information sharing and full cooperation in management. For example, over the past 2 years, KCS has been cut off from the regular information about UP operations that we had for many years. We asked for that access back, and were denied, without reason and without substitution of data. Similarly, use of the clear route condition is withheld as only an emergency measure – we have had to elevate that issue to the level of calling UP's Director of Joint Facilities even when clear routing was obviously needed. The STB ordered clear route as a permanent solution in Houston – it must be integrated into dispatch planning more readily and rapidly. In the case of detour rights, they must be reasonable and available.

Eric, Matt: KCS is willing to do its part. We're willing to work with you on staffing strategies. We're willing to strategically deploy "stand-by" resources, and to make reasonable arrangements to create resilience and responsiveness where necessary. We've already made information on operations of our Rosenberg and Laredo Subs available to UP Spring dispatchers, and if we need to do more to make that useful, we will, along with information on the jointly-used portion of our Beaumont Sub. We will give you information on our operation equivalent to what we're asking from you.

We're willing to share equally with you (and PTRA and Amtrak if appropriate) in the costs of creating a CIROC-like Houston center, including the costs of Railinc involvement to set parameters on when problems loom and systems for resolving them. As a symbol of our commitment, we're willing to immediately take a one-third share of the costs of the Spring Joint Director's position, and to work out any agreements needed to do that. We want to be a partner

DocuSign Envelope ID: 43D53C41-0285-40F1-A3B2-29695C54A63E

in making everyone's operations better. We need access to information as we used to have in order to be able to participate fully with you.

I heard your testimony at the STB's hearing, Eric, that UP has poured money into its yards in Houston and does not believe that its yards are a problem. KCS knows that considerable money has been spent on Houston infrastructure – we've been billed for a share of that under the trackage rights agreements. While I'm not fully able to judge the adequacy of those expenditures from the information we've been given, we agree that this isn't an infrastructure issue. It's a matter of resolving operating challenges. KCS wants to help you fix those issues because they impact us all. If an infrastructure issue arises, the STB-approved trackage rights agreements provide the process for remedying those issues, assuming that we can return to sharing information about capacity and doing capacity planning in this area, as we used to do. But infrastructure isn't the problem, in our view.

Chairman Oberman said at Wednesday's hearing "Can we do something ….to ease the congestion in Houston at least in the immediate future as a temporary measure if not a permanent one?". I am writing you in that spirit. I offer to work with you to move quickly to keep Houston operating conditions from continuing to deteriorate as the joint meeting reports show that they have over the past 2 months, and to pull them back at least to where they were earlier in the year.

Eric, thank you for your call late last week to discuss border operations issues. I hope that we all can get together very soon to discuss Houston issues as Chairman Oberman requested that we all do.

Sincerely,

DocuSigned by:

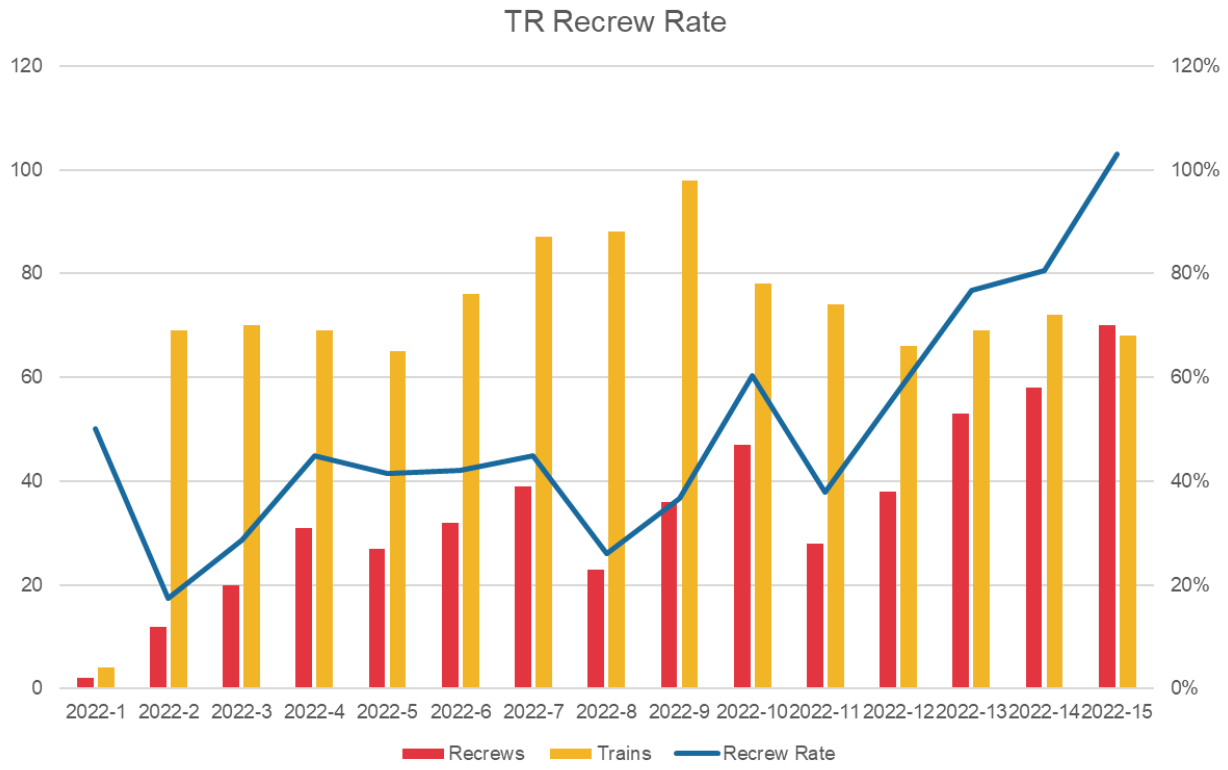
SERVICE ISSUES

Generally, although we face challenges in several areas, in those areas that we can control, I am pleased to say that KCS has managed well and has avoided many of the problems others have experienced. Nevertheless, we are being adversely impacted due to problems on other roads. KCS is highly subject to service problems on other carriers' networks because a higher percentage of KCS's traffic (over 80%) is interlined with other carriers. Also, a large segment of KCS's cross-border franchise operates over trackage rights on track owned by UP or jointly by UP and BNSF. Thus, when those carriers have problems on their tracks that we use, as in Houston as explained below, KCS suffers those problems as well.

A good indicator of our operations is our cross-border unit grain train cycle times. Our cross-border unit grain train cycle times have shown steady improvement since 2019. Beginning in September 2021, our unit grain cycle times between the U.S. and Mexico were as consistently good as they have ever been.[1] While our cross-border unit grain train cycle times historically have averaged in the 24 – 27 day range, from September through March we averaged 17.25 days per cycle. That enabled us to carry more grain for our customers, averaging well over 70 trains per month from October through March.

Unfortunately, our grain business started to hit some headwinds in early April. Our last 20 unit train cycles averaged almost 24 hours longer per cycle than in the September – March timeframe. In addition to the essential annual track maintenance cycles occurring now on KCS's Heavener Subdivision and occurring now and into early summer on the UP trackage rights lines, these grain cycle time increases are due largely to (a) delays getting through Houston, where KCS operates via trackage rights and is dependent upon the dispatching and operating choices of others; and (b) interchange delays, particularly in Kansas City.



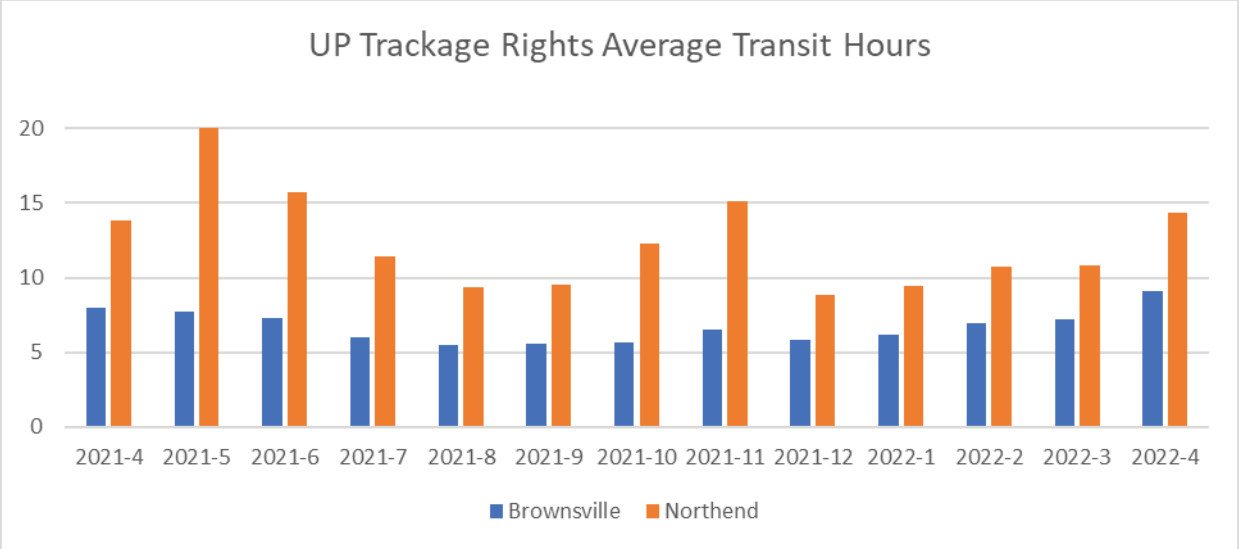
Houston Congestion

Due to the importance of its cross-border operations, it is KCS's objective to move over its trackage right lines through the Houston complex as quickly as possible. Due to congestion in Houston, however, this has become extremely difficult.

Because of congestion in Houston, KCS is currently averaging about one recrew per train moving through Houston. That means that essentially every train that should be able to move between Beaumont and Kendleton with a single crew requires a second, replacement crew to complete the trip due to exhaustion of the first crew's federally-mandated hours of service. The chart below shows our week-by-week recrew experience on trains moving over the UP Beaumont-Rosenberg and UP Victoria-Robstown trackage rights through the greater Houston area.

[1] *Kansas City Southern's Strong Operational Performance Drives Record Grain Performance*, https://www.kcsouthern.com/media/news/news-releases/kansas-city-southern-s-strong-operational-performance-drives-record-grain-performance

DocuSign Envelope ID: 43D53C41-0285-40F1-A3B2-29695C54A63E



Recrews are needed primarily because of other carriers' shortages of crews and other resources in the Houston area. Those shortages delay movement of their trains and ours.[2] In addition, other carriers have made operational changes such as operating longer trains through the Houston area and shifting work from closed yards into the main yards in Houston. These changes have caused their trains to sit on the main line instead of in sidings because they no longer fit in the siding, or to be assembled and broken up on the main line because they are too long to clear the main completely without being split to move into and out of the yard.

Similar to our recrew issue, the congestion issues in Houston are having adverse impacts on our transit times. Transit times on the Beaumont-Houston portion of the trackage rights have exceeded the 12 hours on-duty allowed to each train crew by federal law at least half of the months in the past year:

[2] Other carriers are aware of and have spoken about their service and crew issues, often coupled with reports of excessive numbers of cars on their networks. See, for example, https://www.up.com/customers/announcements/customernews/generalannouncements/CN2022-15.html , and http://www.bnsf.com/news-media/customer-notifications/notification.page?notId=intermodal-network-update-for-thursday-april-14-2022.

DocuSign Envelope ID: 43D53C41-0285-40F1-A3B2-29695C54A63E

To help resolve the Houston congestion problems, KCS has actually offered its crews on several occasions to move BNSF and UP trains that lacked crews off the main line so that KCS trains can pass. We have also moved our interchange with BNSF for some auto traffic from the Robstown/Corpus Christi area to Rosenberg, just west of Houston, so BNSF has to expend fewer crews from their over-taxed crew base.

There may be other ways to help resolve the problems in Houston. For example, in the original Houston Gulf Coast service crisis, the Board imposed a so-called "clear route" provision. [3] Unfortunately, it is not clear to KCS to what extent the UP-BNSF Spring, TX dispatching director has been utilizing the clear route condition to enhance efficiency and facilitate the smooth movement of trains through the Houston Terminal. The Board might also consider granting temporary trackage rights or other routes so that KCS and others could bypass Houston to get to the Mexican gateways.

[3] See Union Pacific Corp., et al.-Control and Merger-Southern Pacific Rail Corp., et al. [Houston/Gulf Coast Oversight], STB Finance Docket No. 32760 (Sub-No. 26), 3 S.T.B. 1030, 1998 STB LEXIS 999, served Dec. 21, 1998. ("Under the "clear route" condition, the neutral and highly efficient joint Union Pacific Railroad Company (UP)/Burlington Northern Santa Fe Railway Company (BNSF) dispatching center at Spring, TX, will have the authority through its Joint Director to route traffic through Houston over any available route, even a route over which the owner of the train does not have operating authority. Thus, as a result of the Board's decision, a BNSF train may be permitted to operate over track of UP; a UP train may be permitted to operate over track of BNSF; and a Texas Mexican Railway Company (Tex Mex) train may be permitted to operate over track of either UP or BNSF.")

C. There Will Be No Capacity Issues at KCS's Wylie Intermodal Terminal 82

D. In the Event of a "Major Service Failure," a Grant of Trackage Rights Between Wylie and Shreveport Would Be Counterproductive for Service Levels On That Segment 83

I. INTRODUCTION

1. My name is Raymond A. Elphick. I am the Assistant Vice President Service and Product Design for Canadian Pacific Railway Company ("CP").

2. My name is John F. Orr. I am the Executive Vice President – Operations of Kansas City Southern ("KCS").

3. We sponsored and verified Applicants' Operating Plan and Amended Operating Plan in this proceeding, which explained how the separate operations of CP and KCS will be integrated into a single consolidated CP/KCS network. This joint statement addresses the following topics:

- We first address certain critiques put forward by a few Class 1 railroads regarding Applicants' Operating Plan;
- We explain that adequate capacity exists to support the level of traffic growth anticipated from the Transaction;
- We address the specific critiques by certain Class 1s relating to the impacts of planned CPKC operations on capacity (and thus operations of all users of jointly used lines) over lines that are currently owned by CP or KCS;
- We explain that the Transaction will not threaten CPKC's ability to provide high quality service;
- We explain why divestiture of KCS's Kansas City-St. Louis/Springfield Line would limit CPKC's ability to operate efficiently; and
- Finally, we address Norfolk Southern's Contingent Trackage Rights Request.

II. APPLICANTS' OPERATING PLAN AND THE TRAFFIC ASSUMPTIONS UNDERLYING IT PROVIDE A PROPER AND RELIABLE BASIS FOR ASSESSING TRANSACTION-RELATED CHANGES

A. The Operating Plan Was Developed in the Same Way Applicants Would Design a Plan in the Ordinary Course to Flow Real-World Rail Traffic

4. Applicants undertook a sensible process to create the Operating Plan. The Operating Plan was built in the same way that CP would design a plan in the ordinary course to flow real-world rail traffic. The Operating Plan was also constructed in a way that would enable reliable assessments of the changes resulting from the Transaction for purposes of the Board's public interest review. Applicants built a base operating plan that—as best as possible using all available data—accurately and reliably reflects pre-Transaction conditions in a way that allows for apples-to-apples comparisons between the base and projected post-Transaction operations. As previously explained in our Amended Operating Plan, developing the Operating Plan involved tools, data, and service design processes that have been tested and proven over more than 20 years at CP, as well as the participation of top-tier service design personnel who are industry leaders and experts in railway service design.

B. The Operating Plan Was Built on Proper Traffic and Other Data

5. We have reviewed CN's Amended Comments, in which CN asserts various arguments to critique the data analysis underlying Applicants' Operating Plan. None of those critiques (many of which are trivial and/or immaterial to the analysis[1]) provide any reasonable basis to doubt the sufficiency or reliability of the Applicants' work in designing the Operating

[1] For example, Mr. Van Dyke alleges that yard activity measures are unsupported and alleges CP did not identify certain yards experiencing a 20% change. This is factually wrong. CP comprehensively identified changes in yard cars processed per day for all traffic (demand and scheduled trains) between the base and transaction-related growth scenarios, and derived from this analysis a complete list of yards which would experience increases in activity of at least 20% included in Appendix T. *See* Workpaper "Yard CPD Figures CP REPLY.xlsx."

Plan, or of the Operating Plan itself. In general, CN witness Carl Van Dyke notes that Applicants' Amended Operating Plan was prepared using CP and KCS traffic for the following time periods: (1) "CP and KCS non-unit train traffic from a single month, October 2020," (2) "CP unit train traffic from March-June 2021," (3) "KCS unit train traffic from February-May 2021," and (4) "Non-unit train service plans in effect on CP and KCS during the first quarter of 2021." CN criticizes Applicants' chosen time periods—claiming that it is "noteworthy" that "the data used by Applicants to construct a '2019 base year' does not actually include *any* data from 2019"—and criticizes Applicants' use of the data.[2]

6. CN's criticisms are based on the mistaken premise that it was realistic, or even possible, to use full year 2019 data as the basis for the Operating Plan Team's modeling of train operations and yard activity. As we will explain in the following paragraphs, there are several reasons why using full year 2019 data was not a viable option.

7. *First*, the starting point in CP's ordinary course operational planning is a base operating plan that reflects the current operational design (*i.e.*, active blocking patterns, train patterns, etc.). But as already explained in this proceeding, the KCS design for 2019 was not even available to the Operating Plan Team, because KCS/KCSM does not maintain an archive of past operating plans.[3] Needless to say, it would not have been possible for the Operating Plan Team to use a design that was not available.[4]

[2] *See* CN-17, Verified Statement of Carl Van Dyke ("Van Dyke V.S.") at 7-8.

[3] *See* Amended Operating Plan, ¶ 75.

[4] As explained earlier in this proceeding, attempting to reconstruct the KCS/KCSM blocking and train plans in place during 2019 would not have supported reliable analysis of pre-Transaction operations. *See* Amended Operating Plan, ¶ 76.

8. *Second*, even if the KCS 2019 design had been available, to develop a reliable basis for the Transaction-related changes associated with the Operating Plan, the Operating Plan Team had to use data relating to a base operational design for a period other than 2019 because the KCS design had changed since 2019.[5] Because a full-year 2019 train plan would not have been representative of current operations, it would not have made sense for the Operating Plan Team to use full year 2019 data as the basis for its forward-looking modeling exercise.

9. *Third*, with respect to the 2019 reported segment density data that was available, in addition to not disclosing the nature of the train operations (blocking patterns, train origins and destinations, etc.) that generated the density figures, the data itself was clearly not accurate, and we were unable to accurately derive train counts (much less the operating design relating to those counts) from it. For example, KCSM's 2019 reported segment density data shows 188 million daily gross ton-miles ("GTMs"), which is vastly different than KCSM's actual GTM level of 120 million daily GTMs.[6] Applicants have already explained in this proceeding how KCS's assignment of trains traveling short distances to the entire segment caused the mismatch in its calculations of segment densities.[7] We provide a separate illustrative example in the following paragraph, centered around the train L-AR101, to show why Mr. Van Dyke's critique has no merit.

---

[5] *See* Operating Plan, ¶ 75 n.4 (explaining that "[b]ecause of changes in KCS's train plan from 2019 to 2020, particularly within Mexico, we made use of KCS traffic flow data for the peak month of October 2020 to provide a better match between the train plan design and the way the traffic actually flowed over the network."). Even CN witness Dr. Malkhom acknowledges this, in his discussion of "known and measurable changes." *See* CN-17, Verified Statement of Jeff D. Makholm, Ph.D. ("Makholm V.S.") at 6.

[6] *Compare* Reply workpaper KCSM 2019 density CP REPLY.xlsx (188 million KCSM GTMs) *with* CP Amended Operating Plan workpaper "Cost Metrics Growth Model.xlsx", tab "KCS OP Metrics" at cell F39 (120 million KCSM GTMs).

[7] *See, e.g.*, Amended Operating Plan, ¶ 187.

10. KCS's reported 2019 density data for the 85-mile segment in Mississippi between Meridian and Artesia would have included all of the tonnage associated with the train L-AR101 as if it traversed all 85 miles of the segment. However, this train starts near Artesia and heads *north* towards Aberdeen, rather than south towards Meridian, such that it operates only a trivial distance on the Meridian-Artesia segment. KCS's process for segment density calculations developed GTMs as though this train travelled the full distance between Meridian and Artesia, just because the train touches a small portion of track around Artesia that is technically counted as part of the Artesia-to-Meridian segment. Applicants' process likewise identified the L-AR101 train as travelling on the Artesia-Meridian segment initially. But through the Operating Plan Team's application of the "25% rule" – under which the Operating Plan Team's methodology properly excluded trains that do not generate GTMs by excluding from the trains per day count trains that passed by less than 25% of a subdivision's segment stations (nodes) – the Operating Plan Team recognized that this was not appropriate. Thus, the Operating Plan Team included L-AR101 only on the segments where the train actually operated over significant portions of the segment (in this case, Artesia to West Point, and West Point to Aberdeen), resulting in a more accurate train count.[8]

11. Even if the Operating Plan Team had attempted to use the flawed KCS reported segment density data that was available for 2019, this data would not have allowed Applicants to map any of the trains-per-day ("TPD") or cars-per-day ("CPD") statistics they might have derived from that data or obtained from other sources to the critical, but missing, KCS transportation plan for the corresponding period. In other words, if the Operating Plan Team had used the flawed KCS reported 2019 data and then developed an Operating Plan to handle post-

[8] MREE.TRAIN_EXPANDED_ROUTE_008.xlsx, at tab "Sheet 1", at rows 176,727-35 and "TPD Base MREE.xlsx", at tab "Base Trains at segment lvl", at rows 3224-5.

Transaction traffic flows, there would have been no reliable basis for comparing the pre- and post-Transaction operations on an apples-to-apples basis. In particular there would have been no way to derive a reliable assessment of the changes between base TPD/CPD and post-Transaction TPD/CPD, which is critical to an accurate assessment of Transaction-related changes.[9] This was one of the key considerations weighed by the Operating Plan Team in concluding that it would not be appropriate to use KCS's flawed 2019 data.

12. For all these foregoing reasons, the Applicants' Operating Plan Team reasonably chose to use the most current design at the time, and applied this design to October 2020 traffic. October 2020 was selected because it was the nearest peak month to the period covered by the current design. These volume levels were representative of the typical monthly range experienced in full year 2019.[10] The operating statistics developed using this approach are the most accurate reflection of current pre-Transaction levels possible.

13. With respect to demand trains, Mr. Van Dyke criticizes Applicants' use of KCS data from February to early May 2021 for developing pre-Transaction demand train levels. The use of this period was reasonable because it is aligned with the current train design that was used

---

[9] It is important to note that density data is not used to create an operating plan itself, but rather to illustrate the level of activity on a given network. In the context of the CP/KCS Transaction, where the Operating Plan Team's goal in using density data was to isolate and forecast the changes in traffic levels *caused by the Transaction*, it was vital to avoid capturing differences that were caused by something else, such as methodological differences between CP and KCS/KCSM density figures or the inevitable differences in methodology between the Operating Plan approach to these calculations and the railroads' separate ordinary course approaches.

[10] *See* Amended Operating Plan at page 40, Table 1. Annualized October 2020 KCS GTMs of {{ }} billion are nearly identical to {{ }} billion FY 2019 GTMs for KCS, and October 2020 monthly GTMs of {{ }} GTMs are between the monthly low of {{ }} and monthly high of {{ }} in FY 2019. *See* Workpaper "Cost Metrics Growth Model.xlsx", tab "KCS OP Metrics" at cells B39 ({{ }}), B30 ({{ }}), B33 ({{ }}) B55 ({{ }}).

in our analysis, it is representative of pre-Transaction operations, and it is closely aligned with 2019 average levels. Contrary to Mr. Van Dyke's suggestion that this period may be skewed due to seasonality changes within the year or changes across years, there are no meaningful changes in bulk train-per-day levels by subdivision between the full year 2019 period and the February to April 2021 period.[11] In fact, if Applicants had measured using full-year 2019 data (which, as discussed above, would not have enabled full-year 2019 modeling because such data did not match up to KCS's current operational design) compared to February-April 2021 data, only three KCS subdivisions would have had more than one additional demand train per day. These three subdivisions are Laredo, Greenville, and Shreveport Terminal, none of which have overall train levels or capacity constraints that would be affected by such small variations. All other subdivisions would have effects of less than 1 train per day.

14. Mr. Van Dyke further asserts that "[i]f Applicants had taken the straightforward approach of using full-year 2019 traffic, including unit trains, within MREE, and producing all of their key line and yard metrics using MREE, none of the issues Applicants now confront would have arisen." CN-17, Van Dyke V.S. at 18. CN's criticisms are based on the mistaken premise that "using MREE for everything" is a singular cure-for-all. In fact, the process that the Operating Plan Team followed to develop segment volumes is equivalent to how Mr. Van Dyke uses MREE to generate segment volumes. Specifically, MREE is capable of generating output data tables that break down volumes by link and by train. Once out of the MREE environment, these links are assigned to segments, and then trains and carloads are counted across all segments. This is the same process followed in Mr. Van Dyke's calculations and in the calculations of Applicants' Operating Plan Team: the only difference is that Applicants

[11] *See* Workpaper TPD by Subdivision Period Comparison.xlsx

developed links for base demand trains outside of MREE, but incorporated the same network inputs and assigned the links to segments using equivalent processes.[12]

15. Regardless, Mr. Van Dyke's workpapers show that {{[redacted]}}[14]

16. Even assuming, for the sake of argument, (i) that CN's view that 2019 reported densities should be used as the basis *were* appropriate (to be clear, again, it is not), and (ii) that calibration and synergy factors Van Dyke criticizes should also be dismissed, this would not materially impact any metrics relevant to assessing the effects of the proposed Transaction. It is conceptually possible to start with flawed reported densities, and estimate the growth increment

[12] *Compare* HC Springfield Line – Applicants' VS ex 14 VS MultiRail.xlsx at Tab Base Multirail data table; HC-Operating Metrics Estimation of Line Density and Train Count Methodology.pdf at page 3 with CP amended operating plan workpapers "MREE.TRAIN_EXPANDED_ROUTE_008.xlsx" and "TPD MREE Base.xlsx".

[13] Workpaper HC Springfield Line - Applicant vs Ex 14 vs Multirail CP REPLY.xlsx.

[14] {{[redacted]}}

based on the difference between two modeled scenarios. This entails starting with 2019 reported densities, and running the same calculations to determine the change in GTMs as a result of Transaction-related growth traffic. {{ }} Leaving aside the question of the appropriate base, it is important to emphasize that the Transaction-related growth, which is the key driver to assessing impacts of the Transaction, would continue to be accurate under either CP's standard approach or the adjusted process described above using 2019 reported segment densities. This is independently verified by other calculations included in the Application and demonstrates the internal consistency of CP's calculations. Specifically, {{ }}[16] This {{ }} amount is closely aligned to corresponding figures of {{ }} daily GTMs developed for the system cost model and the {{ }} daily GTMs developed when computing incremental costs.[17]

C. The Before-and-After Density and Train Count Outputs from the Operating Plan Are Reliable

17. Van Dyke claims that there are "significant and varying fluctuations between the actual 2019 data that Applicants first presented in Exhibit 14 Part A and the Applicants'

[15] The Rosenberg to Kendleton segment would go from a 45% tonnage increase to 61%, and the Kendleton to Victoria segment would go from a 43% tonnage increase to 57%, but both of those segments had already triggered the OEA's assessment. *See* Workpaper "Trains Per Day and Gross Ton Miles CP REPLY.xlsx."

[16] *See* Elphick/Orr Workpaper "Trains Per Day and Gross Ton Miles CP REPLY.xlsx."

[17] Baranowski R.V.S; Amended Operating Plan Workpaper "1.Proposed Final FTI Rail to Rail Diversion Results for Merger Application 10_21_20 UPDAT_TRUCK_REV_RS.xlsx", tab "Volumes & TMs GTMs" at cells AR3+AX3+BD3.

proposed data that they now assert is a proper substitute for actual full-year 2019 densities." CN-17, Van Dyke V.S. at 55. In his Exhibit A-1, Van Dyke presents 5 sample line segments and compares "Applicants' proposed density calculations with those in the original Exhibit 14 Part A Density Data, adjusted to account for the inclusion of locomotives." CN-17, Van Dyke V.S. at 55.

18. Contrary to Van Dyke's assertions, Applicants' process is accurate, and CN zeroing in on isolated examples confirms the reliability of the overall process. The density fluctuations that Van Dyke identifies only affect a handful of the 178 segments relevant to this Transaction. Indeed, only the few examples he focuses on out of 178 segments exhibit signs of counter-intuitive variance. Of these, only the UP trackage segments from Victoria to Robstown and Beaumont to Rosenberg show a significant discrepancy, *i.e.*, more than a few percentage point changes either way which are simply reflective of underlying variance and complexity in the train operations being modelled. The reason for these isolated discrepancies is that KCS system average train weights were used because no train weight specific to this trackage segment was available. Applicants individually examined each of Mr. Van Dyke's so-called discrepancies and determined that they do not cause meaningful distortions, *i.e.*, even using the adjacent densities would not affect any of the results of analysis.[18] Review of the density maps

[18] Mr. Van Dyke apparently confronted troubles when developing densities for this segment, as his workpapers show he developed segment MGT values that differ more from KCS's 2019 reported segment densities than CP's process. *See* Elphick/Orr Workpaper "HC Springfield Line – Applicant vs Ex 14 vs Multrirail CP REPLY.xlsx" at tab "Summary", at cells H50, H55, I50, and I55. {{ [redacted]

provided by Applicants confirms that the estimated density levels are accurate and internally consistent across both the CP and KCS systems.

19. Applicants' analytical process is simple and rational. The computational effects related to hard-coding growth levels have minimal effects (overall, a 4% overstatement of synergy growth GTMS) and updating this calculation to flow through only causes increases of more than 1 MGT on 2 of 178 segments (Rosenberg to Kendleton and Kendleton to Victoria, both of which have already been identified for environmental review, and are thus not impacted by any revisions to the density calculation).[19] Contrary to Van Dyke's attempt to obfuscate with several pages of drawn out calculation tables, the fundamental calculations that Applicants use are simple and intuitive[20]:

- Base GTMs = segment miles x TPD x train weight x calibration
- Synergy GTMs = base GTMs x Synergy CPD/Base CPD x synergy factor x calibration

III. THERE IS ADEQUATE CAPACITY FOR THE ADDITIONAL TRAINS THAT WILL HANDLE APPLICANTS' ANTICIPATED TRAFFIC GROWTH

20. Traffic routinely grows and fluctuates over time and in different areas due to various factors, including as a result of changing market forces or the strategic initiatives of a particular company. When traffic grows in particular areas due to these factors, there is hardly

(although for the following segments from Clinton to Ottumwa his estimates differ significantly both from CP's modelled segment MGT and 2019 reported segment MGT, which are well aligned with each other). His other example related to the CP line from Sabula to Airline Junction serves to affirm the consistency in CP's underlying identification of train per day impacts, clearly identifying the 14.4 TPD increase due to Transaction-related growth. While certain local and yard trains appear on intermediate segments and cause some fluctuations in MGT calculations, they are immaterial to both capacity assessments (which are focused on TPD information) as well as identifying environmental review thresholds (because the 14.4 TPD increase already trigged this review).}}

[19] *See* Elphick/Orr Workpaper "Trains Per Day and Gross Ton Miles CP REPLY.xlsx", at tab "Summary."

[20] *See* Elphick/Orr Workpaper "Trains Per Day and Gross Ton Miles CP REPLY.xlsx", at tab "Summary Sheet," and columns BQ-BU.

ever cause for reflexively demanding costly capacity improvements on the rail lines that support them. To be clear, capacity should continually be assessed in response to changing market demands and traffic growth, but rail capacity is generally built with the understanding that the results of a dynamic, competitive market place may result in traffic growth. That traffic will grow in certain areas as a result of the Transaction is no different. Just as existing rail capacity is there to support changes in market forces that spur traffic growth, it too is there to support Transaction-related growth. As explained further below, to the extent such capacity may not exist to support the level of traffic growth anticipated from the Transaction, Applicants endeavored to identify those areas and propose needed infrastructure.

A. The Operating Plan Team Applied its Ordinary Course Tools for Assessing Whether New Infrastructure Would Be Needed to Support Anticipated Post-Transaction Traffic Growth

21. Applicants did not simply assume that capacity existed to support the traffic growth anticipated from the Transaction. To the contrary, Applicants' Operating Plan Team assessed all segments over which CPKC will operate. For single-track segments, the various single-line main track segments of the combined CPKC network were reviewed to determine what, if any, additional infrastructure would be required to support the merger-related growth. To do so, Applicants utilized the "grid time analysis" method to calculate capacity on each single-line main track segment and assess the capacity capital requirements related to the potential CP and KCS Transaction. Heavily utilized at CP, the Grid Time Analysis provides

strategic insights into smart capital investment over a long term horizon. CP is a leader in both service and return on capital, in part, due to the value of this approach in planning capital.[21]

22. At one level, the capacity formula is a simple one and commonly understood. NHCRP report 773 – Capacity Modeling Guidebook for Shared Use Passenger and Freight Rail Operations – paragraph 3.4.2.3 – Grid Time Analysis). CP utilizes the 65% threshold to measure and monitor capacity utilization across its corridors. Sixty-five percent provides buffer capacity for the network which, when coupled with a refined approach to planning buffers in train schedules, creates resilience for trains moving over long distances while also allowing for other railroad activities requiring track time to interlace.

23. CP runs an efficient operation with the vast majority of siding-to-siding sustainable (*i.e.* practical) capacities below 65%. Certain segments do operate efficiently above the 65% number depending on whether there is excess capacity in nearby segments.

24. Corridors, at CP, have the basic grid for expansion thought out years in advance: CP ensures the uniform distribution of sidings at varying lengths. It is critical to think through where the long sidings will lay 5, 10 or 15 years from today. Lengthening one siding in isolation of how you might lengthen or add future sidings, could ultimately lead to waste if future locations can't be built that are in-phase with the one presently being expanded.

25. The approach above along with a review of subdivision delays, locomotive downloads, train speed, train utilization, re-crew events and other measures help form the basis

[21] Per normal course of business, and to the extent data was available, the following was considered for double-track segments; time between trains, (headway) and train run times were reviewed – both optimal and recent historical; train counts, current and historical; field observations and discussions with local Operations; cross-over counts and locations to understand the resilience of the infrastructure. Grid time analysis (e.g. the Elgin sub) was developed to review slot capacities.

of multi-year planning for network capital. Of course, interviews with field operations, engineering, mechanical and dispatchers also provide input into decision making.

B. As Traffic Is Attracted to the CPKC Network Over the Three Year Implementation Period, CPKC Will Assess Operations on an Ongoing Basis and Work With Entities that Share Lines Used By CPKC

26. It is important to note that traffic growth resulting from the Transaction will not materialize overnight. Traffic growth depends first upon attracting new traffic from other railroads and from highways, which is a lengthy and gradual process. Additional capacity to support the new traffic Applicants project from the Transaction will not be required all at once but will be needed at a rate commensurate with the rate at which Applicants attract additional traffic.

27. With that understanding, Applicants will carefully monitor traffic as it gets added to the CPKC network, and will proactively adjust operations and/or infrastructure as needed to ensure that no disruptions occur to its operations, or the operations of other railroads, as a result of insufficient capacity. Indeed, Applicants are well aware that the entire Growth Plan depends upon being able to deliver a high quality product, which is impossible to deliver if lines are over capacity. If additional investments are necessary on the lines that CPKC trains will use to deliver this high quality product, CPKC will be eager to make those investments, consistent with the well-established processes and mechanisms for making such capacity improvements.

28. Further to this end, Applicants will work with other joint line users (particularly UP and BNSF in Texas, UP in Missouri, and Metra in the Chicago area) to identify and implement mutual adjustments needed to accommodate increased CPKC traffic. We address specific contractual arrangements in more detail in separate sections below.

IV. SPECIFIC CLAIMS THAT THE TRANSACTION WILL OVERTAX AVAILABLE CAPACITY ARE MISGUIDED

29. In this section, we address specific critiques by other Class 1s relating to the impacts of planned CPKC operations on capacity (and thus operations of all users of jointly used lines) over lines that are currently used by CP or KCS.[22]

30. Before analyzing each portion of the CPKC network, Applicants discuss the following generally applicable points.

a. CN witness Hugh Randall raises capacity issues in several subdivisions.[23] Below, we explain the specific flaw(s) in Mr. Randall's approach to each portion of the network, but first, Applicants discuss three general issues with Mr. Randall's analysis.

i. First, Applicants note that Mr. Randall at times neglects to clarify whether certain capacity calculations are percentages of practical, or maximum capacity.

ii. Second, in certain segments, Mr. Randall raises a deficiency in the number of 10,000-foot sidings, but has failed to recognize that not all trains on that particular segment are 10,000 feet long.

iii. Third, Mr. Randall utilizes the wrong run time within a segment, based on an average assumed speed rather than real-world run time observations.

---

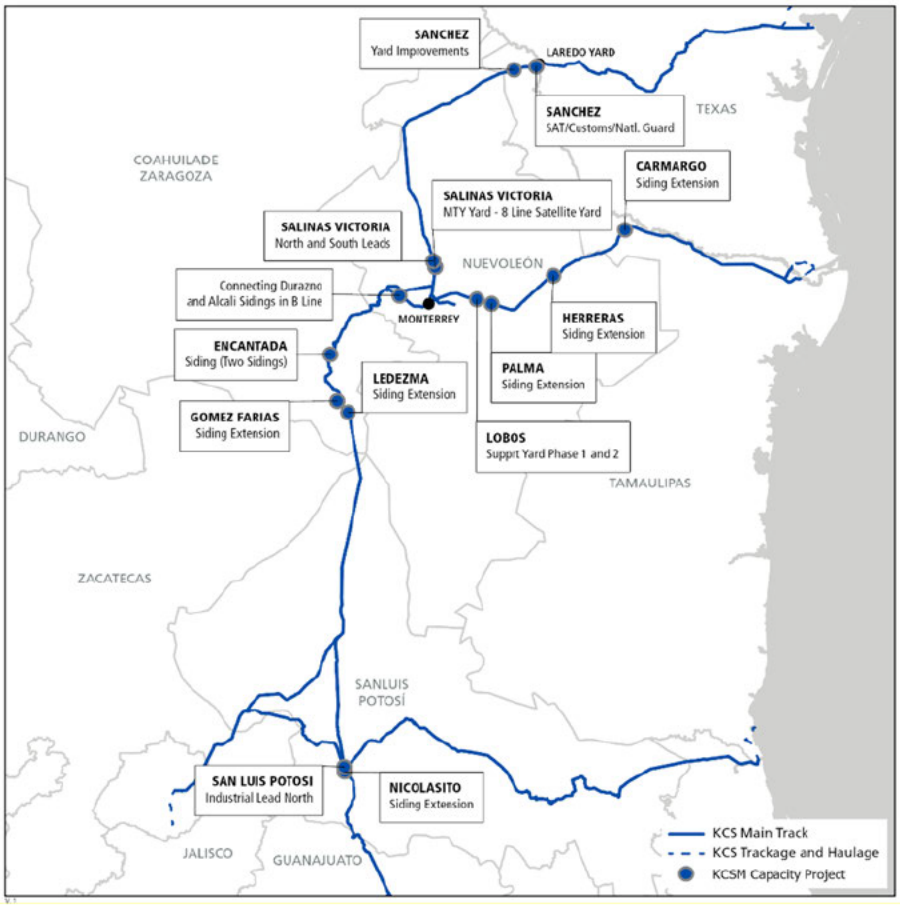
[22] In a separate Elphick Reply Verified Statement, Ray Elphick address specific arguments concerning lines that CP shares with Metra, as well as issues relating to CP's lines between Sabula and River Jct., between Savanna and Chicago, and between Chicago and River Junction. Similarly, John Orr addresses in a separate Orr Reply Verified Statement UP and BNSF's arguments related to capacity on the lines radiating from Houston, *i.e.*, where KCS operates over UP-owned lines between Rosenberg and Houston and between Houston and Beaumont, and over HB&T lines (jointly owned by UP and BNSF) in Houston.

[23] CN-13, Randall VS, Appendix B.

iv. Fourth, Mr. Randall's analysis does not take into account ordinary course capital work on the CP and KCS networks.

b. While Applicants will demonstrate that there are no concerns related to capacity, we also note that CPKC will of course continue to make improvements on its own network. Additionally, CPKC will support capacity improvements on other lines it uses to support growth that occurs independent of the Transaction.

c. In the Operating Plan, Applicants carefully analyzed the impact of the anticipated increase in traffic due to the Transaction and determined that there was sufficient capacity to accommodate the incremental traffic.



31. With those points in mind, we now proceed from south to north across the CPKC network, demonstrating that there is no basis for concerns about capacity. For ease of reference, Figure 1 below is an index map of the CPKC network, showing where in the Reply Verified Statements the capacity arguments regarding each location are addressed.

FIGURE 1
INDEX MAP OF CAPACITY ARGUMENTS

A. KCSM's Lines in Mexico Have Ample Capacity

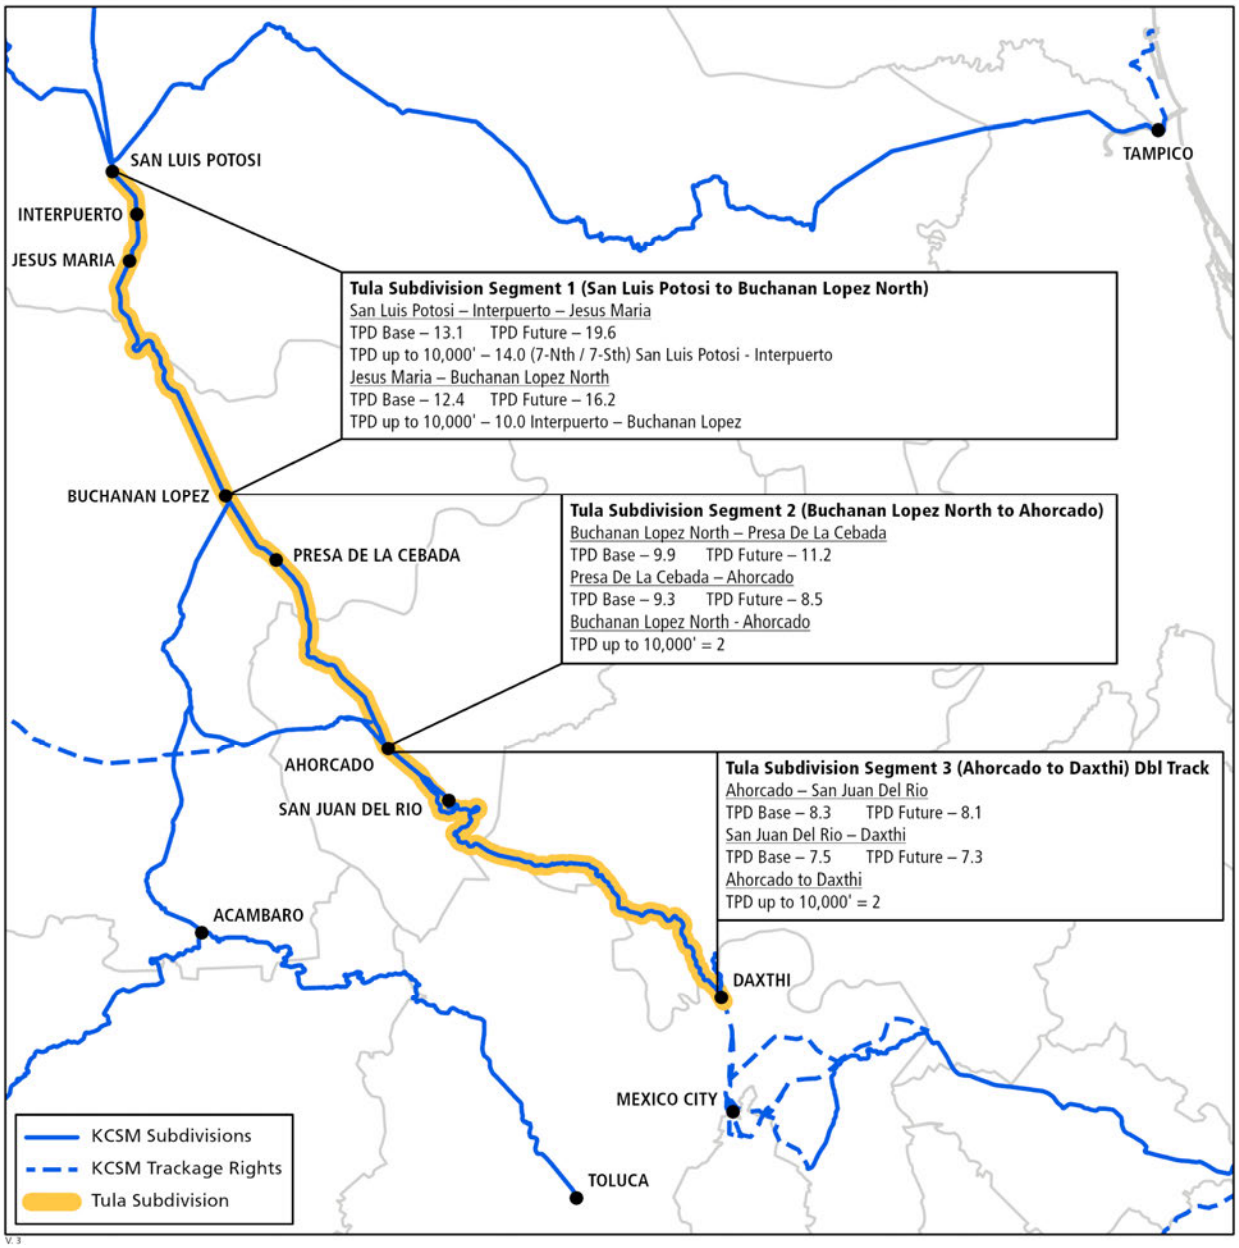
FIGURE 2
RECENTLY COMPLETED KCSM PROJECTS
MAP OF MEXICO LINES WHERE CN (OR OTHERS) ASSERT CAPACITY CONCERNS

32. Figure 2 above shows the recently complete KCSM projects on lines in Mexico. Hugh Randall's verified statement raises capacity issues at three districts: Tula, Vanegas and Saltillo.[24] Mr. Randall's verified statement states that the Tula Subdivision is "orange" for capacity while the Saltillo and Vanegas Subdivisions are "red." Mr. Randall defines red to be most severe as exceeding practical capacity and orange to be at practical capacity. For the red subdivisions, he asserts that there is a need for several 10,000-foot sidings. In other words, Mr.

[24] CN-13, Randall VS, Exhibit B-4.

Randall contends that there will be insufficient 10,000-foot sidings for the number of trains that will run up to 10,000 feet.

33. First, CN suggests that on the Tula Subdivision the segment from Ahorcado to Puerto Carrozas is 55KM between viable passing sidings and is projected to be operating at 96% of capacity post-merger. Mr. Randall also contends that an additional siding may be needed. To reiterate, that 96% is of practical capacity, not maximum capacity.[25] There is a second significant issue in Mr. Randall's analysis; the actual number of trains is 8.5, and the actual amount of practical capacity therefore is 54%.[26] The Tula Subdivision begins at San Luis Potosi and traffic splits at a key junction at Buchanan Lopez where some trains move to the Celaya Subdivision and onto destinations like Toluca, Port of Lazaro Cardenas, and Escobedo, and other trains remain on the Tula Subdivision to Mexico City.[27] The 55KM segment CN references is south of the junction at Buchanan Lopez. The following chart, Figure 3, provides both the total train counts expected by segments on that subdivision as well as the number of scheduled trains that could operate up to 10,000 feet. Note, on the Tula subdivision south of Ing Buchanan Lopez, only two of the trains will run up to 10,000 feet. Based on this, there is more than sufficient capacity to handle anticipated volumes.[28]



[25] Elphick/Orr Workpaper "KCSM Segment Capacity Calculations.xlsx."

[26] Elphick/Orr Workpaper "KCSM Segment Capacity Calculations.xlsx."

[27] *See* Amended Operating Plan, Appendices C, E, H, and I.

[28] Although additional capacity is not necessary based on estimates of Transaction-related growth, on the segment CN flags between Ahorcado and Puerto Carrozas, Applicants have the option to extend sidings, which could be executed at a relatively low cost of approximately $2.5 million per siding extension and with the capability to construct within four months.

FIGURE 3
MAP OF GROWTH ON THE TULA SUBDIVISION

34. Second, CN suggests that on the Vanegas Subdivision the current capacity for long trains is less than 12 (6 each way per day) compared to a projected total train demand of 20.8. From a review of Mr. Randall's working papers, the two segments referenced as lacking capacity are between Charcas and San Luis Potosi and between Benjamin Mendez and El Salado. In the first segment, between Charcas and San Luis Potosi, double track between Bocas

and Pinto was not considered. With the double-track factored, and now measuring between Charcas and Bocas, the practical capacity on the south-end is 15.7 trains per day and the anticipated trains running up to 10,000 feet in this segment is 16.[29] While just over 65%, applicants believe there is opportunity to monitor and schedule for more efficiency. In the second segment, between Benjamin Mendez and El Salado, Mr. Randall omits two sidings at 15,400 feet and 13,400 feet respectively. The practical capacity of trains up to 10,000 feet is 18.6 against demand of 16 trains of up to 10,000 feet as now measured between Ledezma and El Salado. This segment will again be monitored to optimize for efficiency and throughput.

35. Third, CN states that on the Saltillo Subdivision, current siding lengths limit the capacity for long trains to 16 per day. KCSM plans through normal course capital to extend Escobedo and construct a new siding near Soledad in 2023 well in advance of the uptick in volume brought on by the Transaction. The Saltillo train counts change at junction points. CPKC expects 22 trains up to 10,000 feet from Laredo to Leal.[30] From Leal to CP983, 16 trains will be up to 10,000 feet and from CP983 to Benjamin Mendez, there will be 18 trains up to 10,000 feet. With the new siding and siding extension, the practical capacity for 10,000-foot trains after the completion of projects in Escobedo and Soledad will be 18.7, and CPKC anticipates 18 trains will run up to 10,000 feet by the end of year 3.[31] While Mr. Randall notes 80% of overall capacity between Brazil & Rodriguez is utilized, in actual fact, the capacity utilization is well below that and there is sufficient capacity on the line.[32]

B. The Lines KCS Uses in Texas Have Ample Capacity

36. Here, we offer an overview of KCS's lines in Texas and describe the availability capacity on these lines. To facilitate that discussion, Figure 4 and Figure 5 below are maps of Laredo to Rosenberg lines. The first map illustrates KCS line investment ongoing in 2022. The second figure illustrates siding level detail for both KCS and UP as well as distances and run times between sidings. As we demonstrate below, KCS's network in Texas has ample capacity to handle future CPKC traffic.

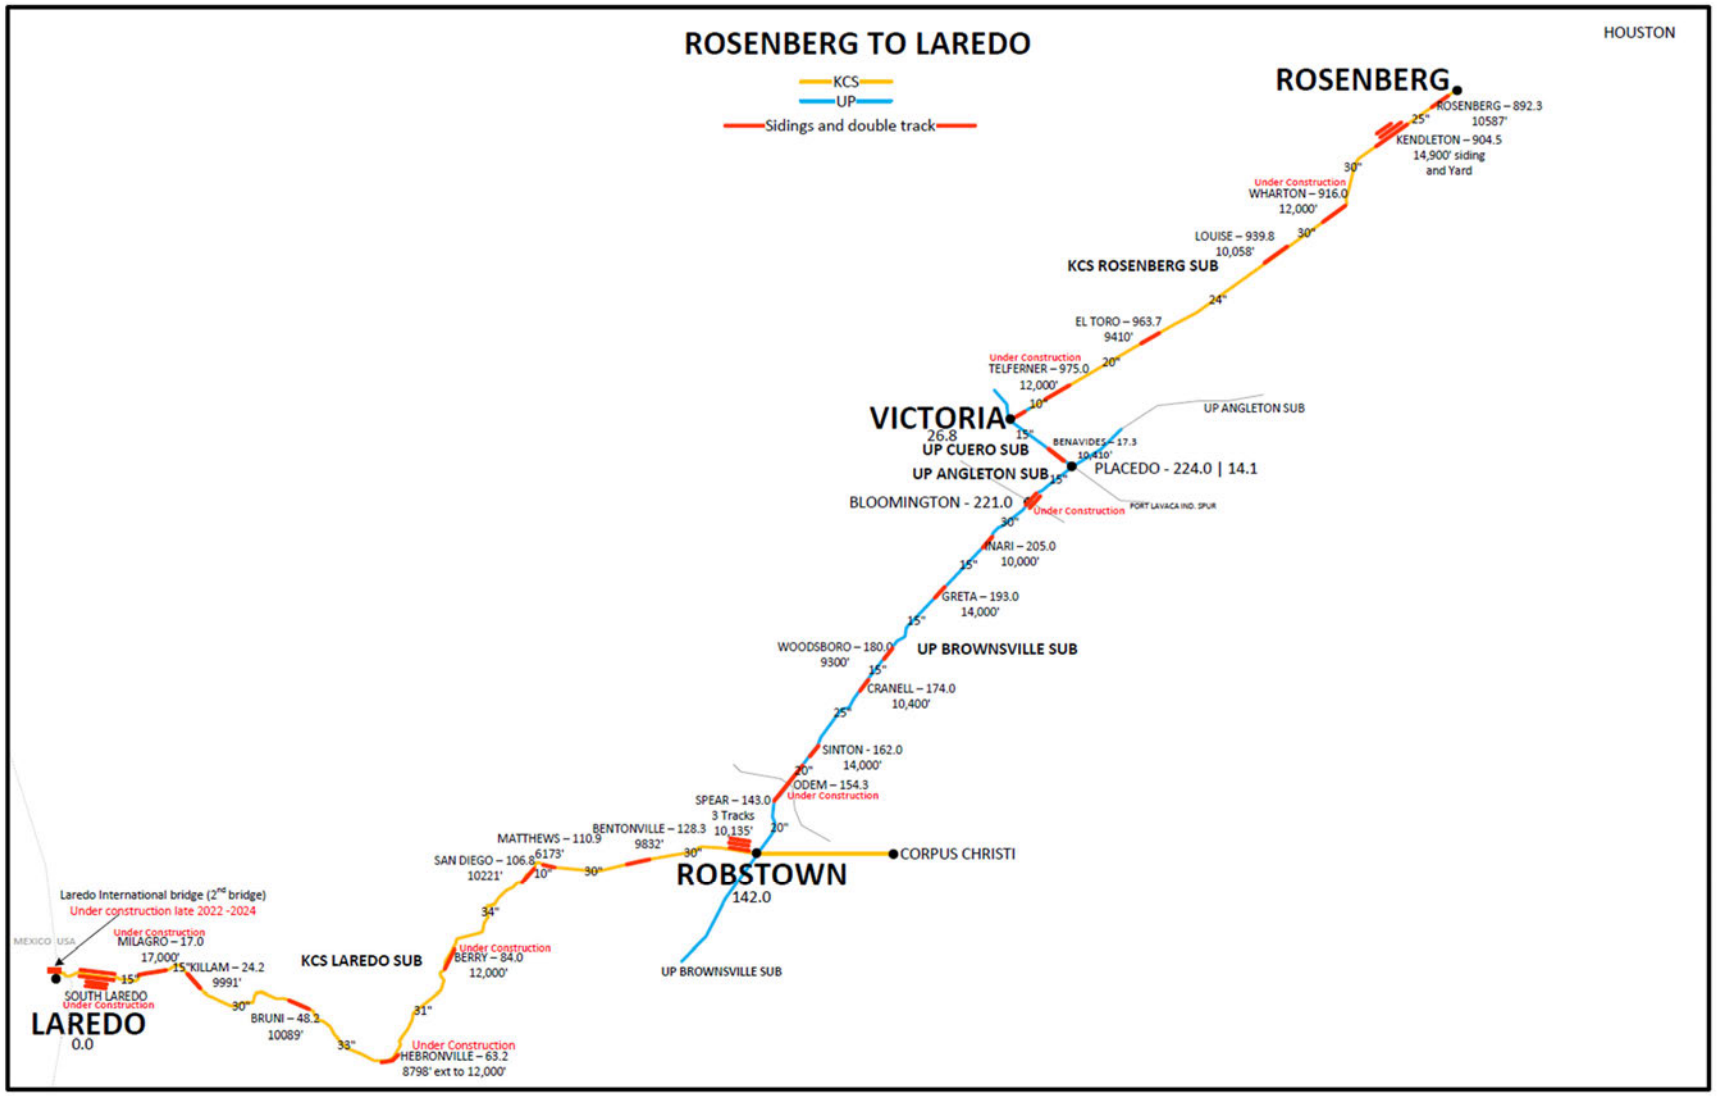

FIGURE 4
KCS CAPITAL ON KCS LINES IN 2022 VICTORIA TO ROSENBERG

37. Both of these figures also show that KCS is in the process of preparing to construct a second cross-border bridge at Laredo. KCS currently anticipates beginning construction late in 2022 and completing the construction in 2024. The addition of the new bridge will increase cross-border capacity at and traffic fluidity Laredo.

FIGURE 5

MAP OF LINES USED BY KCS BETWEEN ROSENBERG AND LAREDO WITH KNOWN CAPITAL PROJECTS

Elphick/Orr R.V.S. at 27

38. As shown through Figure 5 above, KCS routing between Laredo and Rosenberg is made up of three parts: (1) Laredo to Robstown, (2) Robstown to Victoria; and (3) Victoria to Rosenberg. All three sections are part of a corridor between Laredo and Beaumont which is dispatched centrally at the joint dispatching center in Spring, Texas. Since re-opening the Rosenberg Subdivision in 2009, KCS has invested in capacity between Laredo and Rosenberg, both on its tracks and on UP's tracks, including siding extensions, diamonds, and bypasses. Today, the entire route between Laredo and Rosenberg is CTC-controlled. KCS's investment on UP's line south of Victoria benefits other carriers operating on this portion between Victoria and Robstown. In addition, KCS's use of its Rosenberg Subdivision improves fluidity for the other carriers by removing KCS traffic from the UP line between Victoria and Flatonia and on UP's Glidden Subdivision to Rosenberg.

39. Figure 4 also demonstrates that KCS's Laredo and Rosenberg Subdivisions will be built to handle 10,000-foot trains by the end of 2022. KCS's Laredo Subdivision between Laredo and Robstown will have ample capacity to handle Transaction related trains by the end of 2022. As detailed below, KCS is adding extensive capacity to allow for staging to and from the Border that will support fluid movement on this line, and also augment capacity on UP-owned lines between Robstown and Victoria. KCS's Rosenberg Subdivision between Victoria and Rosenberg will see the benefit of two new sidings in 2022, Telferner and Wharton. A project to extend Kendleton siding to 14,900 feet and, in doing so, extend the switch lead is already under way.

40. We understand that CN suggests that the Laredo Subdivision will be above capacity. This is incorrect. First, CN's witness underestimates capacity on this segment because he fails to include KCS's 2022 capacity program. Specifically, KCS has six major projects

occurring on the Laredo Sub in 2022 including: (1) a new 12,000-foot siding, "Milagro", between MP 15.8 and 18.5, (2) extension of the Hebbronville siding to 12,000 feet from MP 64.1 to 65.15, (3) a new 12,000-foot siding, "Barry", between MP 83.5 and 85.8, (4) extension of the East switching lead at Laredo from MP 9.2 to 11.2, (5) building a double main through Laredo Yard between MP 7.4 and 9.2, and (6) extending three main tracks towards the border from Laredo Yard between MP 4.7 and 7.4. After this additional investment, the KCS Laredo Subdivision will have a practical capacity (*i.e.*, 65% of maximum capacity) of 24.0 trains per day.[33] Second, the trains that CPKC plans to run include twelve up to 10,000-foot trains per day on the Laredo Subdivision by Year 3; there are no capacity concerns with this incremental traffic.[34]

41. CN also suggests that the Rosenberg Subdivision will have a capacity limited to sixteen 10,000-foot trains per day, and that it will be above capacity even with a new 10,000-foot siding between Kendleton and Louise. However, CN's witness understates capacity on this segment again by assuming that all trains will be 10,000 feet. CPKC plans to run twelve trains of up to 10,000-foot length per day, and 18.1 trains total, on the Rosenberg Subdivision by Year 3.[35] In light of the fact that the Rosenberg Subdivision will have a practical capacity of 19.9 total trains per day, of which 12 are up to 10,000 feet, there are no capacity concerns with this incremental traffic.[36]

---

[33] *See* Elphick/Orr Workpaper "Rosenberg to Laredo Capacity end 2022.xlsx."

[34] Elphick/Orr Workpaper "Rosenberg to Laredo Capacity end 2022.xlsx;" Amended Operating Plan, Appendices, A, H, I.

[35] Elphick/Orr Workpaper "Rosenberg to Laredo Capacity end 2022.xlsx."

[36] Elphick/Orr Workpaper "Rosenberg to Laredo Capacity end 2022.xlsx"

42. CN's witness states that there are no sidings on KCS's line at either Robstown or Victoria. However, KCS is constructing a new siding at Telferner between MP 973 and MP 975.3 on the Rosenberg Sub, which is 4 miles north of Victoria. KCS also already has a siding and two staging tracks at "Spear" MP 143 on the Laredo Sub, immediately west of Robstown. Finally, KCS is constructing a new siding on the Rosenberg Sub at Wharton, MP 916.0, between Kendleton and Louise in 2022 and as previously mentioned KCS is constructing an extension of its switching lead on the North end of Kendleton Yard by 6,900 feet, freeing the existing switching lead and allowing for the siding to be extended to 14,900 feet.

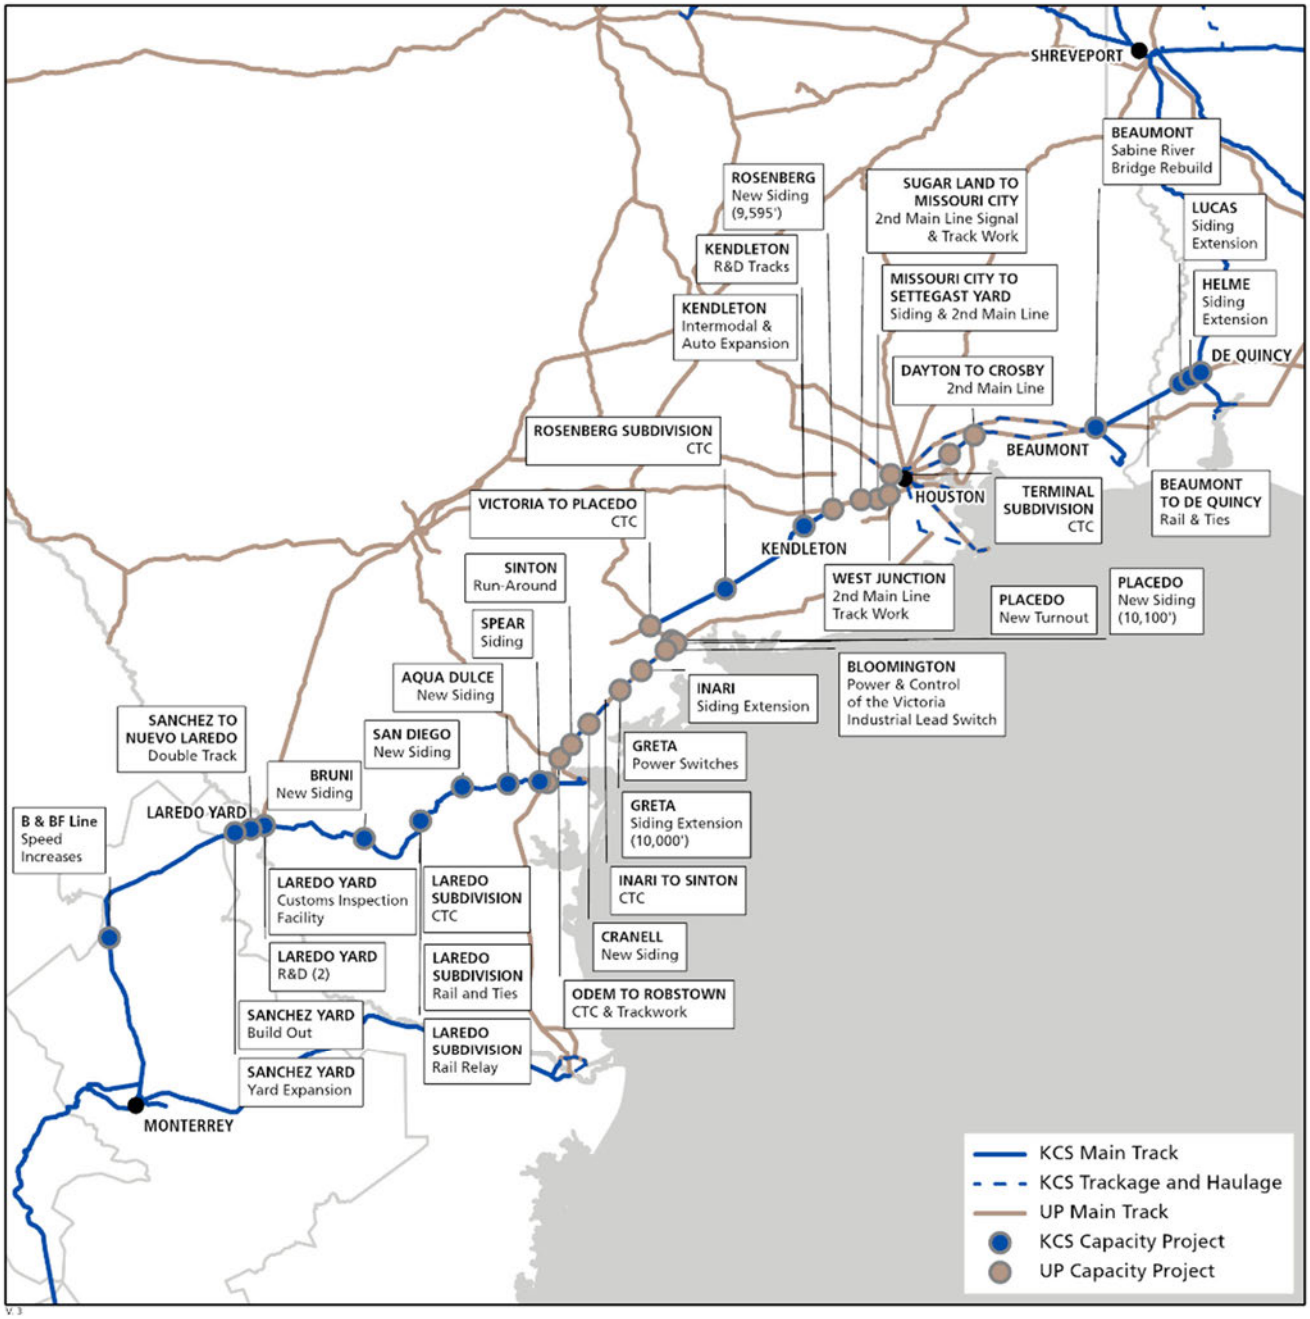
C. The UP-Owned Line Between Robstown and Victoria Has Ample Capacity

43. Here, we offer an overview of UP and KCS lines between Laredo and Rosenberg, with the UP lines between Robstown and Victoria highlighted in blue. Note UP 2022 projects are underway on the Brownsville Subdivision to create a runaround track at Bloomington and to extend the Odem siding. Table 1 below represents capacity calculations as well as available capacity remaining subsequent to the end of the 2022 construction season.[37] As Table 1 demonstrates, each of the segments are below 65% sustainable capacity.[38] As we demonstrate below, there are no capacity concerns with this line.

[37] Elphick/Orr Workpaper Rosenberg to Laredo Capacity end 2022.xlsx

[38] *Id.*

TABLE 1[39]



CAPACITY CALCULATIONS AND REMAINING CAPACITY – VICTORIA TO ROBSTOWN

Subdivision	Segment	Length	Time SB	Time NB	Capacity 100%	Capacity 65%	TPD at End of 2022 vs. 65%
UP Cuero	UP Victoria - UP Benavides	10,400	15	15	72.0	46.8	21.8
UP Angleton	UP Benavides - UP Bloomington	14,000	15	15	72.0	46.8	21.8
UP Brownsville	UP Bloomington - UP Inari	10,000	25	25	48.0	31.2	6.2

UP Brownsville	UP Woodsboro - UP Cranell	10,400	15	15	72.0	46.8	21.8
UP Brownsville	UP Cranell - UP Sinton	14,000	25	25	48.0	31.2	6.2
UP Brownsville	UP Sinton - UP Odem	14,000	20	20	57.6	37.4	12.4
UP Brownsville	UP Odem - Robstown	10,135	20	20	57.6	37.4	12.4

44. As explained in Mr. Simmons' Reply Verified Statement, the STB-approved trackage rights agreements under which KCS operates between Beaumont and Robstown, Texas provide for UP to make the capital investments needed to maintain the capacity to accommodate traffic growth of CPKC. As shown through Figure 6 below and as Mr. Simmons further explains, KCS has collaborated with UP, and KCS has funded significant capacity on these lines in the past.

[39] See Elphick/Orr Workpaper "UP Brownsville Capacity.xlsx."

FIGURE 6
MAP OF UP LINE ROBSTOWN-VICTORIA
SHOWING HISTORY OF KCS-FUNDED CAPACITY EXPANSION

45. UP's witnesses Rocker and Turner state that after the extensions/new sidings at Greta, Inari, Cranell, and Placedo, Benavides, a runaround track at Sinton and CTC between

Elphick/Orr R.V.S. at 32

Robstown and south Odem, these projects will not be enough. They advise the Board to consider that all of these projects added capacity of only 3-4 trains per day. In the Rocker/Turner VS, there are multiple references to West Junction which may suggest the 3-4 trains per day calculation covers from Robstown through to Houston.[40] When looking at this larger corridor, UP's assertion of a limited 3-4 train capacity increase could fully be a function of constrained capacity between Victoria and Flatonia, where there are limited sidings. Considering only the line of road affected by the Transaction, and factoring in the added infrastructure and the siding being built at Odem in 2022, Applicants calculate the capacity of the segment to be 31.2 trains / day for trains up to 10,000 feet (see table 1 above). This capacity is adequate to handle CPKC trains, UP trains and BNSF trains.[41] KCS's holding capacity at Spear, immediately west of Robstown, enables the capacity off and onto the UP Brownsville subdivision. Note that even without having completed the projects referenced by Rocker and Turner, or Odem, we estimate that this line would have a practical capacity of 20.8 trains per day, of which up to 7.8 trains could be 10,000 feet long.[42] There is no indication of how witnesses Rocker/Turner measured what sections of track drove their capacity calculation, or verification in any way that the CPKC Transaction cannot be accommodated. Regardless, should additional capacity be required at some point in the future, there are existing mechanisms to address any shortfall.

D. There Will Be No Capacity Shortfall in the Houston Terminal Complex

46. UP and BNSF raise a number of capacity concerns related to the Houston Terminal. Applicants respond to these concerns in detail below, but Applicants emphasize that

[40] UP Comments, Rocker/Turner V.S. at 28.

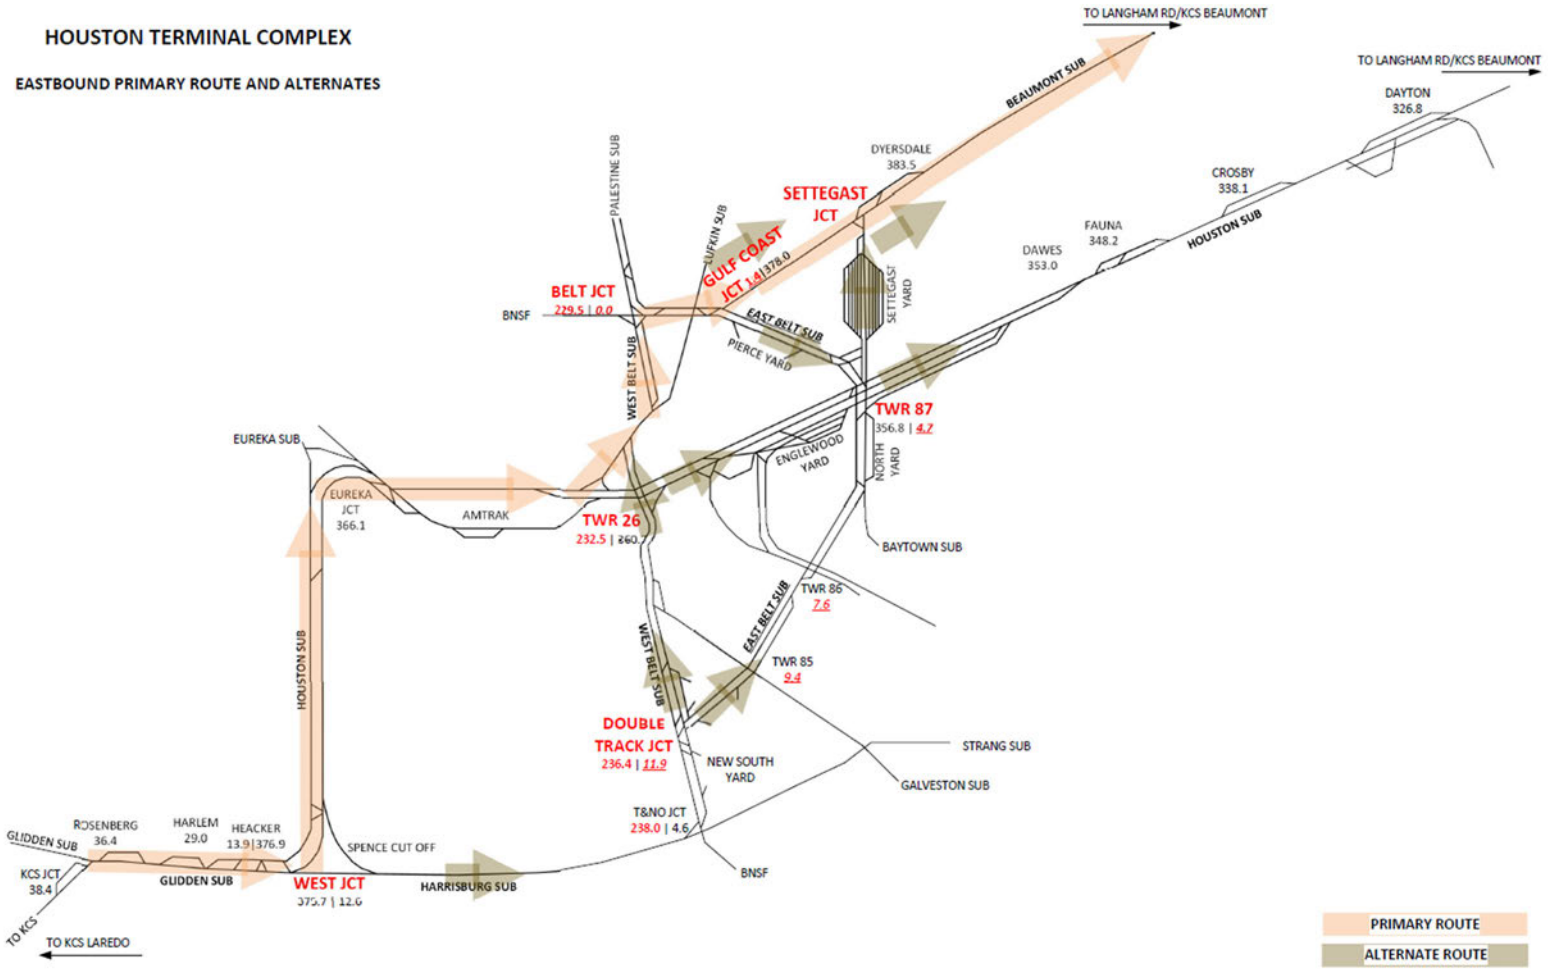
[41] *See* Elphick/Orr Workpaper "UP Brownsville Capacity.xlsx."

[42] *See* Elphick/Orr Workpaper "UP Brownsville Capacity.xlsx."

the Transaction will add just e*ight* trains per day; this is a mere drop in the bucket compared to what is run in Houston.

47. Many other witness already address the Houston Terminal. John Orr addresses a number of these arguments in his standalone Reply Verified Statement, which shows that the rail lines utilized by KCS between Beaumont and Robstown, Texas, including the Houston complex, have adequate capacity for all users. Mr. Orr also makes clear that any capacity issues with the Houston Terminal are due to operations, not infrastructure. Additionally, Jason Wilkerson, who served as UP's Director of Transportation Services for the Houston complex from 2008 to 2013, confirms in his Reply Verified Statement that the Houston Terminal has tremendous capacity when operated effectively. Mr. Wilkerson also states that KCS's through trains impose only minimal stress on Houston area capacity and there are many opportunities to improve operations through the Houston Terminal. Here, we review the capacity available to support CPKC's modest proposed increases in trains through Houston, which will be no different in character from KCS's existing operations. CPKC will continue to change crews outside of the Houston terminal on CPKC property with no intermediate work.

48. The Houston Terminal has capacity to handle the incremental Transaction-related traffic. As noted above, the Transaction contemplates just over 8 trains per day or four through freight trains in each direction. CPKC will remain a minority user of Houston's rail infrastructure even after the Transaction-related traffic growth.



49. Furthermore, on a train-for-train basis, CPKC's through train operations will impose far less burden on the Houston-area infrastructure. While other trains may need to change crews or enter and exit yards, CPKC through trains move across Houston via the multiple tracks, and multiple routes available for those movements. Figure 7 below is a map of the

Houston Terminal. This figure shows that an eastbound train arriving at West Junction normally routes via Eureka Junction and avoids passing the middle of Englewood and Settegast Yards. These trains, however, can take a number of alternative routes through West Junction, Double Track Junction, Tower 26, Belt Junction, Gulf Coast Junction, Settegast Junction and Tower 87. Importantly, it is possible and permitted to run east on the Houston Subdivision.[43] UP's double tracking from Crosby to Dayton can support local operations and trains already running onto the Houston Subdivision towards Dayton. Beyond Dayton, three long sidings exist to Langham Road, a distance of 47.7 miles in total; these sidings provide capacity for eastbound trains for utilization against a predominantly westward train flow.

[43] *See* UP Houston Terminal Playbook, Terminal Discipline, slides 24 and 25.

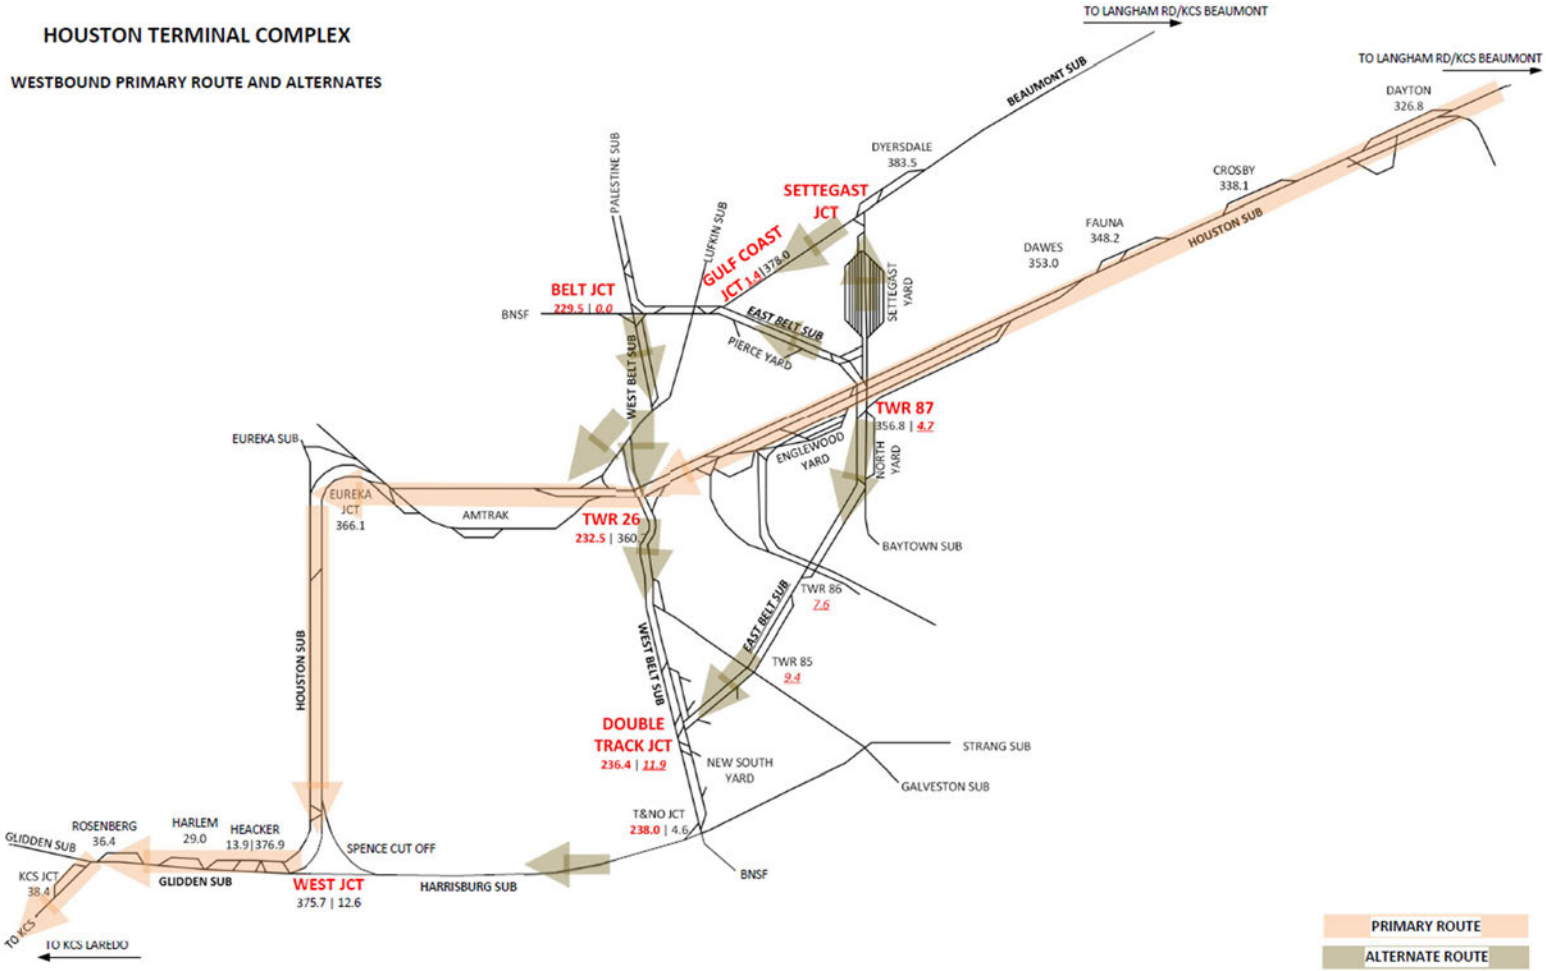


FIGURE 7

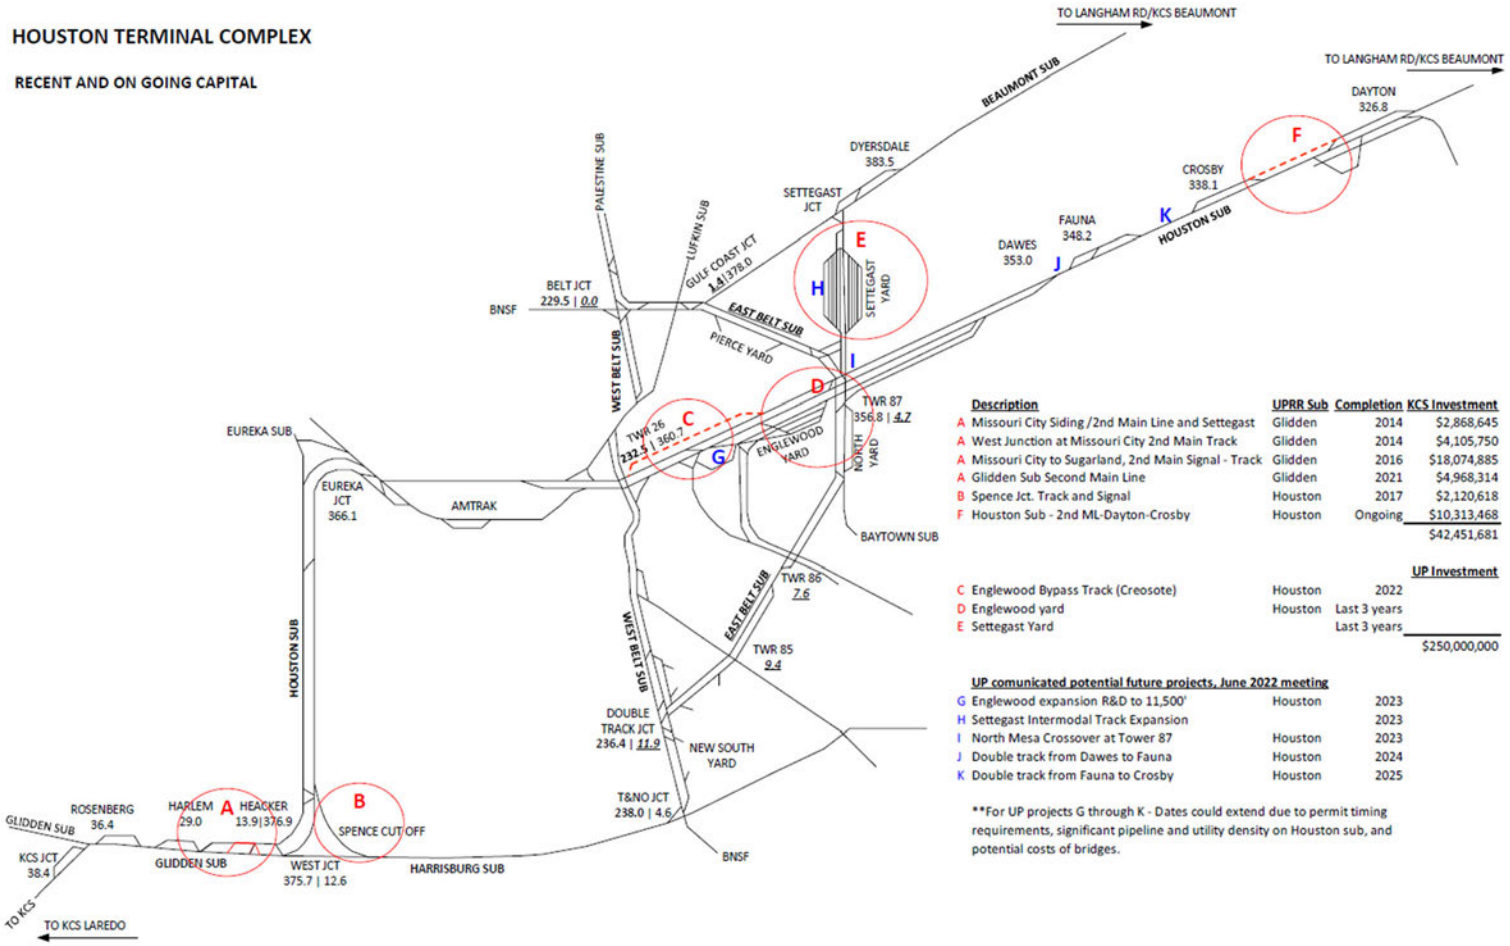
MAP OF KCS ROUTES OVER UP TRACKAGE RIGHTS THROUGH HOUSTON TERMINAL

50. A westbound train also has several routing options beyond Tower 87 and through Houston. Those options include heading towards Settegast Junction, Gulf Coast Junction, Belt Junction, Tower 26 and West Junction. Figure 8 below is a map of the Houston Terminal. This figure shows that a westbound train arriving Tower 87 has a primary and several alternate routes through Houston.

FIGURE 8
MAP OF KCS ROUTES OVER UP TRACKAGE RIGHTS THROUGH HOUSTON TERMINAL

Elphick/Orr R.V.S. at 38



51. UP, supported by KCS and BNSF financially, has heavily invested in Houston in the past and continues to do so, including on the routes used by KCS trains. UP has continued to invest in Houston-area capacity, and has recently made or announced plans of significant investments at and around Englewood Yard, among many other locations. Steve Simmons discusses the considerable capacity improvement projects that have taken place in the Houston area in his Reply Verified Statement. Figure 9 below outlines this significant capacity investment in the Houston Terminal, by showing both KCS's investment and UP's investment, in the recent past. The below figure also includes future capacity investment in the Houston Terminal.

52. To-date, UP has invested significantly to expand operations and classification at Englewood Yard but the footprint for the yard is limited and requires trains to double away on arrival or, to double up two or more tracks on departure. UP's own brand of Precision Scheduled Railroading ("PSR"), which was part of UP's Unified Plan 2020, as discussed in John Orr's individual Reply Verified Statement, has increased train lengths and pushed work into the Houston terminal with classification concentrated at Englewood Yard. With those changes in UP operating practices, Main 1 is not always available for through trains. However, UP's Englewood bypass track (Creosote track), which is scheduled to be completed in 2022, will greatly relieve capacity pressure by reducing the frequent delays KCS experiences today because of UP trains entering and departing Englewood Yard. For this reason, the Englewood bypass track may be the most important piece of infrastructure underway in support of Houston through-freight operations. UP's future plans to increase receiving and departure track lengths would also significantly improve capacity in the Englewood area. Actual timing remains uncertain due to permitting, and a need to understand scope as determined through pre-engineering.

Contending with several pipeline crossings could, for example, extend timelines. Capital projects such as these will reduce the capacity pressures in the Houston Terminal that John Orr describes in his standalone Reply Verified Statement.

FIGURE 9

**For UP projects G through K - Dates could extend due to permit timing requirements, significant pipeline and utility density on Houston sub, and potential costs of bridges.

53. Additionally, the primary routes themselves are and will be high capacity routes, irrespective of the Clear Route Protocol.[44] On the primary eastbound route that KCS trains traverse, there is 21.8 miles total, of which 14.2 miles is double track, and 6 crossovers between West Junction and Settegast Junction. On the primary westbound route there will be 18.9 miles of double track (by end of 2022) and 12 crossovers between Tower 87 and West Junction. In other words, even if UP does not adhere to the Clear Route Protocol, the primary routes themselves are high capacity routes.

54. As stated earlier, the CPKC transaction proposes just over eight trains per day to run through Houston, or four trains per day in each direction. A train with a relatively clean run eastbound on the primary route as depicted in Figure 10 below, can transit from KCS Junction to Langham Road or Beaumont in 2 hours and 48 minutes.[45] A westbound on a primary route can transit from Beaumont/Langham Road in 2 hours and 34 minutes.[46] While it is possible to transit from Beaumont to the west side of Houston, or vice versa in roughly 2.5 hours, KCS would consider a good run to be four to five hours. However, performance has been significantly worse than 5 hours year to date, primarily due to operational issues, although this number is improving. In his standalone Replied Verified Statement, John Orr discusses various ways to improve the use of existing capacity and to improve this run time. In short, it is critical to get deep into the details on transit and issues driving transit. As John explains, "[a]ll users of these lines need a shared base of information, a common platform to use that information, joint maintenance and

---

[45] *See* Elphick/Orr Workpaper "Houston-Area-Max-Speed-Table-w-TrainMix-AnalysisV2.xlsx."

[46] *See* Elphick/Orr Workpaper "Houston-Area-Max-Speed-Table-w-TrainMix-AnalysisV2.xlsx."

schedule planning, and an agreed set of standards to measure use of the facilities." Developing standards for transit in every segment is critical to both understanding performance and assessing appropriate actions. There is a need to compare a clean run to today's performance and have all teams aligned on continuously driving performance improvement. This stop-watch approach is fundamental to CPKC's brand of PSR.

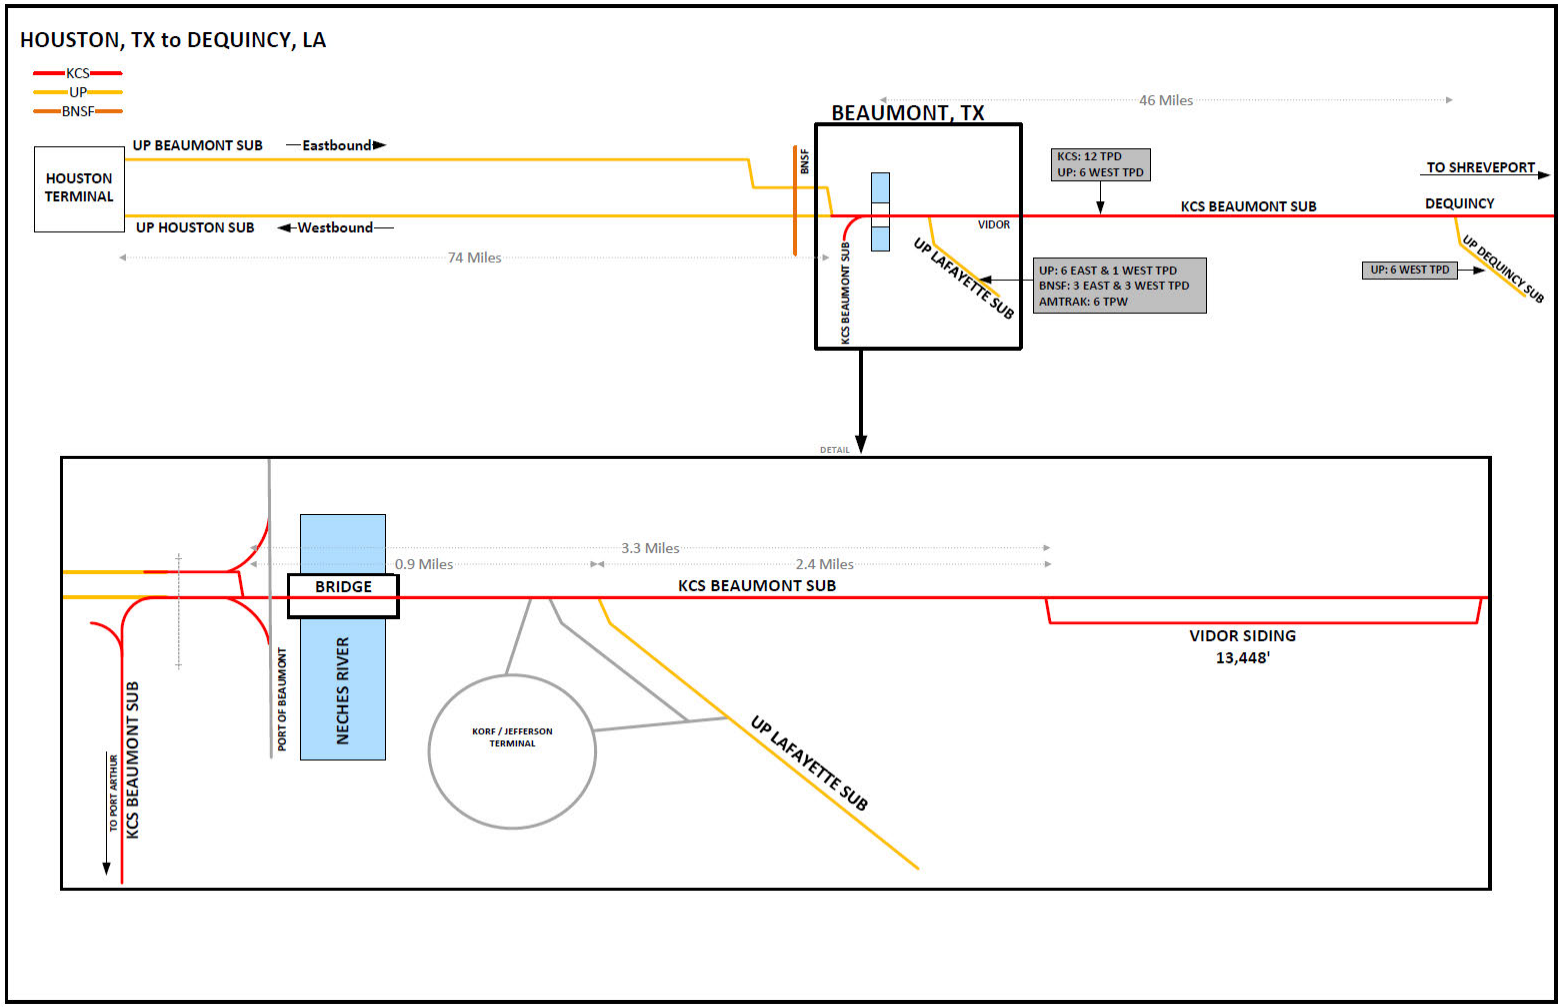
FIGURE 10

MINIMUM RUN TIMES FOR HOUSTON TRAINS ON PRIMARY ROUTE

Elphick/Orr R.V.S. at 44

55. As the Reply Verified Statements of John Orr and Jason Wilkerson show, there is adequate capacity to efficiently run today's operation as well the additional trains brought on by the Transaction. Train counts remain lower than the historic highs. UP, BNSF and KCS have significantly invested in Houston, providing greater capacity. We expect the Englewood bypass (Creosote) track to significantly help through train operations, the precise type of train CPKC will run through Houston. This investment is required to deal with UP's operational changes and particularly longer UP trains arriving and departing Englewood. A solid process to set performance standards and measure every detail, cross-functionally and transparently, is the most important requirement, going forward, to make use of the capacity that is already available.

E. The Neches River Bridge Has Ample Capacity



56. We understand that UP and BNSF raise concerns about operations over the Neches River Bridge; these concerns are unwarranted. As Mr. Simmons discusses in depth in his Reply Verified Statement, KCS recently conducted a study, in conjunction with UP and BNSF, which showed that the capacity of the bridge is fully adequate to accommodate the additional CPKC trains projected to result from the Transaction. Additionally, past traffic levels on the bridge show that adding CPKC's 10.97 daily trains (excluding organic growth) here will not overtax capacity, particularly when there is capacity for approximately 20-25 additional trains.[47] Past extensive cooperative work shows that there is enough capacity for fluid operation on the Neches River Bridge.

[47] Simmons R.V.S. Exhibit 9.

57. UP contends that Applicants' capacity modeling did not account for existing UP, BNSF, and Amtrak trains using the Neches River Bridge. We took a closer look at Neches River Bridge capacity, using recent train counts, and did another quantitative analysis, which showed that capacity at the Neches River Bridge is not an issue.[48] As shown in Figure 11 below, to understand capacity over the Neches River Bridge, one must consider run times required to clear the single main track between Beaumont and Vidor, or Beaumont and the UP's Lafayette Sub. The following analysis considers those transits and recent train counts over the bridge, and considers Transaction-related growth layered on top of current traffic levels.

[48] Elphick/Orr Workpaper "Beaumont Occupancy Data FINAL.xlsx."

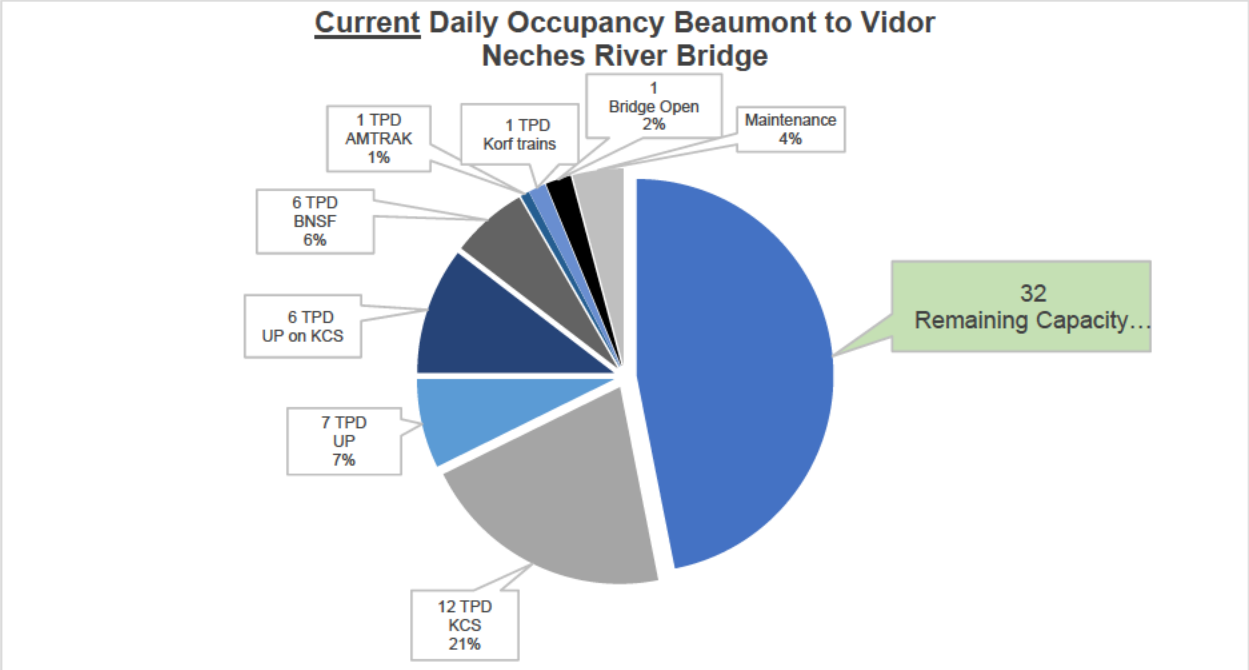


FIGURE 11
MAP OF NECHES RIVER BRIDGE

Elphick/Orr R.V.S. at 47

58. The following pie chart shows the split of train counts between KCS, UP, BNSF, and Amtrak, with the UP trains split between those taking the KCS routing to DeQuincy and those taking the UP-BNSF Lafayette Subdivision. Along with the pie chart (Figure 12), Table 2 below shows the average and total occupancy times calculated for each train category. The bridge openings and the Korf/Jefferson trains are also shown on Table 2. Note, UP trains heading from the West to Korf/Jefferson back into the Korf/Jefferson facility from the Lafayette Sub.

FIGURE 12[49]
CURRENT – DAILY OCCUPANCY BEAUMONT TO VIDOR NECHES RIVER BRIDGE

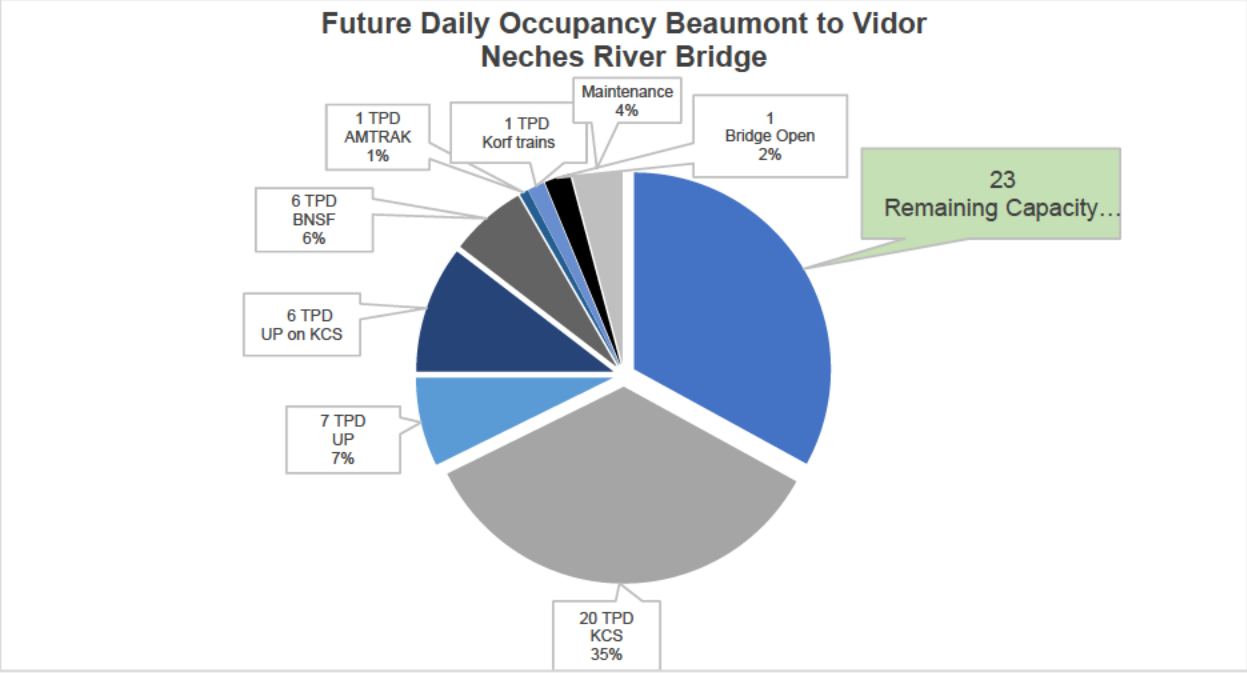
[49] Elphick/Orr Workpaper "Beaumont Pie Chart FINAL.xlsx."

TABLE 2
CURRENT OCCUPANCY OVER THE NECHES RIVER BRIDGE

Trains	KCS	UP	UP on KCS	BNSF	AMTRAK	Korf trains	Bridge Open	Main-tenance	Total Minutes per Day
Trains Per Day	12	7	6	6	1	1	1		
Average Occupancy time in minutes per	25	15	25	15	10	20	30	60	
Total daily occupancy in minutes	300	105	150	90	10	20	30	60	765

59. Union Pacific and BNSF trains, which run to and from the Lafayette Subdivision, occupy the single track between Beaumont and the junction with the Lafayette to a different extent than either the Amtrak trains on the same routing or the UP and KCS trains on the KCS Beaumont Subdivision route toward DeQuincy, as noted in Figure 11 above.

60. Table 3 and Figure 13 below show available capacity currently on the Neches River Bridge is calculated in contrast against the remaining capacity subsequent to the Transaction. It suggests that, as calculated, there is sufficient remaining capacity each day to allow for growth by any of the parties requiring utility of the Bridge.[50] The numbers presented here align with the study KCS completed in 2019, which was submitted as part of the Application process.[51]



[50] Elphick/Orr Workpaper "Beaumont Pie Chart FINAL.xlsx."

[51] Simmons R.V.S., Exhibit 9.

Trains Per Day	20	7	6	6	1	1	1		
Average Occupancy time in minutes per	25	15	25	15	10	20	30	60	
Total daily occupancy in minutes	500	105	150	90	10	20	30	60	965

FIGURE 13[52]
FUTURE – DAILY OCCUPANCY BEAUMONT TO VIDOR NECHES RIVER BRIDGE

61. With this, we reiterate the recommendation of KCS in their 2019 study on the importance of timing and coordination of all of the railroads operating over the Bridge. Additionally, our study's analysis described above, however, takes an overly conservative

[52] Elphick/Orr Workpaper "Beaumont Pie Chart FINAL.xlsx."

approach to train slotting, as it assumes that the full block must be cleared before the next train enters. Under this assumption, a KCS east-bound train must fully clear the west switch at Vidor before an eastbound UP train for the Lafayette Subdivision can occupy the Bridge. This is not how dispatching practices operate in the real world. Real world dispatching practices could allow for more throughput, as for example, cooperative dispatching out of the joint Spring Dispatching Center provides more flexibility for trains to move through the Bridge and optimizes today's capacity in the area studied. Thus, this study conservatively calculates capacity.

62. Should the capacity of the Bridge become a persistent issue due to further significant growth, above that of the CPKC Transaction, and which could be by any of the railroads, the parties will need to work together to consider appropriate solutions.[53] Next level capacity considerations for KCS would include extending Vidor to the West to further reduce run time required between Vidor and the Bridge. Actions like this could further delay well into the future a need for a second bridge.

F. LyondellBasell's Concerns Regarding Westlake and Mossville, LA, Corpus Christi are Unrelated to the Transaction

63. The conditions proposed by LyondellBasell are unrelated to the proposed CP-KCS merger. LyondellBasell seeks to force BNSF access to a recently-built facility at Mossville, Louisiana in which LyondellBasell acquired an interest in the past couple of years. That facility, and Mossville – a separate station from Lake Charles, Westlake and West Lake Charles - was not accessible by UP or SP at the time of the UP-SP merger, and the CP-KCS merger would not change the way that facility is served. LyondellBasell also provides no

[53] *See also* Simmons R.V.S. at ¶ ¶ 88-94.

evidence of the operational impact of BNSF's proposed access. LyondellBasell's request to expand the UP-SP merger conditions is not related to the CP-KCS merger.

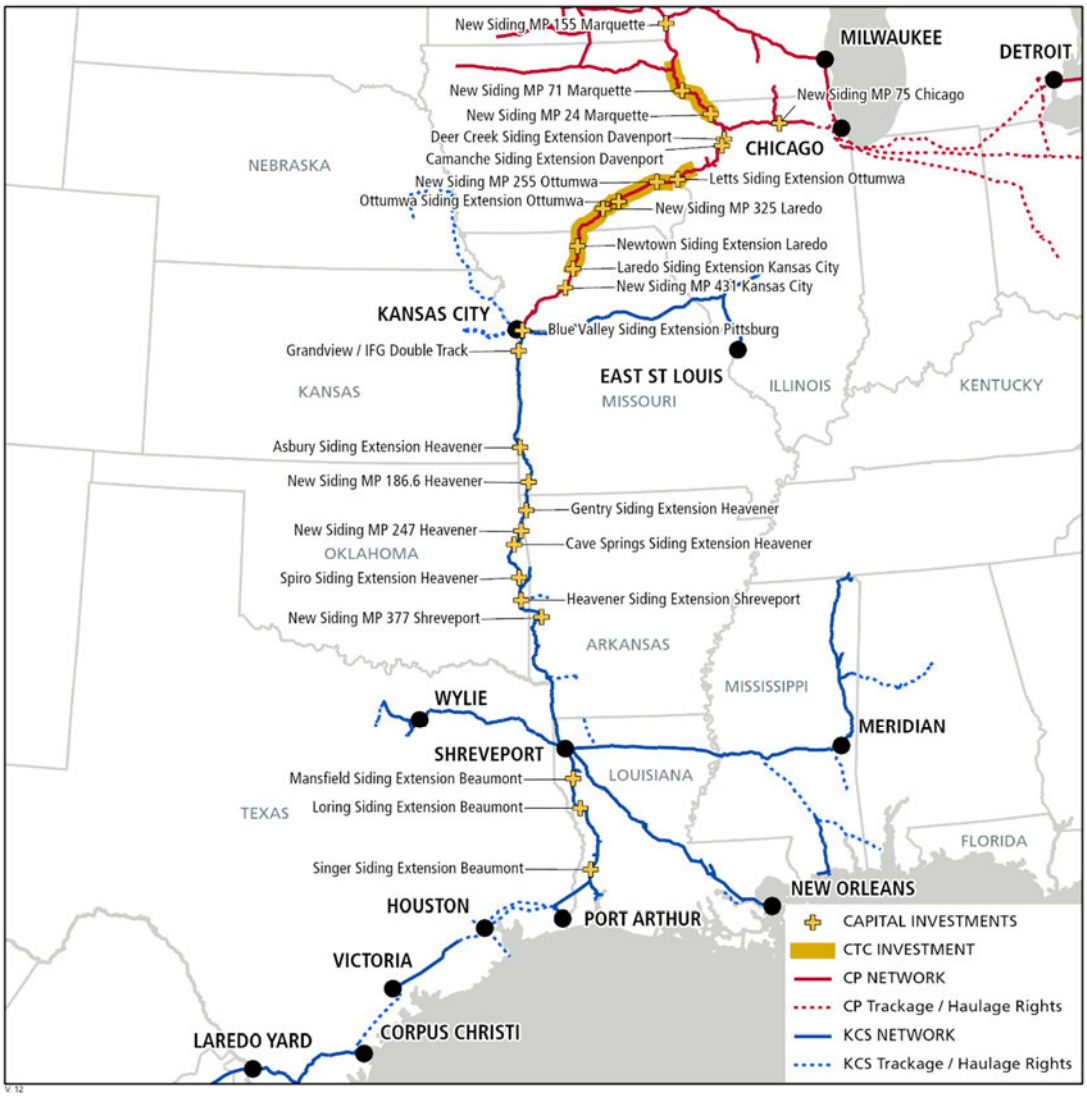
64. LyondellBasell's request that the Board set terms for access to all shippers on the Rosebluff Lead in West Lake Charles likewise is not related to the CP-KCS merger. LyondellBasell's comment cites the ongoing terminal trackage rights proceeding before the Board involving the Rosebluff Lead. The Board is resolving the access issues about the Rosebluff Lead in that terminal trackage rights proceeding, which began well before and completely separate from the CP-KCS merger. LyondellBasell's request regarding the Rosebluff Lead is unrelated to the CP-KCS merger.

65. Even if BNSF were granted the rights at West Lake Charles and Mossville that LyondellBasell requests, doing so would not reduce congestion on any line used by CPKC traffic because BNSF already has access by UP haulage, and had been awarded terminal trackage rights as well, to the Rosebluff Lead traffic, and if BNSF gained access to Mossville, BNSF would move that traffic on the 50-50 UP/BNSF Lafayette and Houston Subdivisions, as UP does now.

66. LyondellBasell's request that CPKC be required to provide reciprocal switching to UP at Robstown for LyondellBasell's Corpus Christi plant that does not ship by rail now is difficult to assess. Rather, LyondellBasell's request would likely increase congestion on UP's Brownsville Subdivision and KCS's Laredo Subdivision by forcing interchange where there are no interchange facilities available.

67. The track to LyondellBasell's plant essentially ends just inside the plant fence. Without information on when the plant would begin shipping, how much traffic the plant would ship and where the traffic would go, it is not possible to assess the specific impacts of the plant's potential future traffic.

68. At the very least, the proposed switching would cause congestion at the critical Robstown interchange of KCS's Laredo Subdivision with UP's Brownsville Subdivision. There are no facilities at Robstown for interchange of traffic from KCS to UP. The nearest facilities where interchange would be possible are the sidings at Spear, which provide essential capacity for staging KCS trains moving on and off the Brownsville Sub. UP also has no rights on KCS's line to access Spear.



69. Even if interchange were possible, UP almost certainly would have to move any traffic it received at Robstown north over its Brownsville Sub and possibly over the Cuero Sub, the same path KCS trains follow between Victoria and Robstown. Alternatively, UP might handle traffic eastbound from the Brownsville Sub over UP's Angleton Sub, toward the southwest corner of the Houston complex. All of these possibilities would add more potential for congestion, not less as LyondellBasell suggests. In any event, there is no competitive harm to LyondellBasell's Corpus Christi plant from the merger because the plant does not use rail service.

70. Finally, the Transaction will not congest the lines that will be used by CPKC to serve the Lake Charles area. There is limited Transaction-related change in traffic levels on KCS's Lake Charles Subdivision. KCS's Beaumont Subdivision (Between DeQuincy and Beaumont) has sufficient capacity to handle additional Transaction-related traffic, and CPKC will not be a majority user of the UP and UP-BNSF lines between Houston and Beaumont, which have ample capacity as shown elsewhere in this statement, particularly because they are operated directionally.

G. KCS's Lines Between Beaumont and Kansas City Will Have Ample Capacity with the Proposed Capacity Projects

71. Here, we offer an overview of KCS's Lines Between Beaumont and Kansas City and describe the availability capacity on these lines. To facilitate that discussion, Figure 14 below is a map of the KCS lines between Beaumont and Kansas City, noting the capital investments. As we demonstrate below, there are no capacity concerns with these lines.

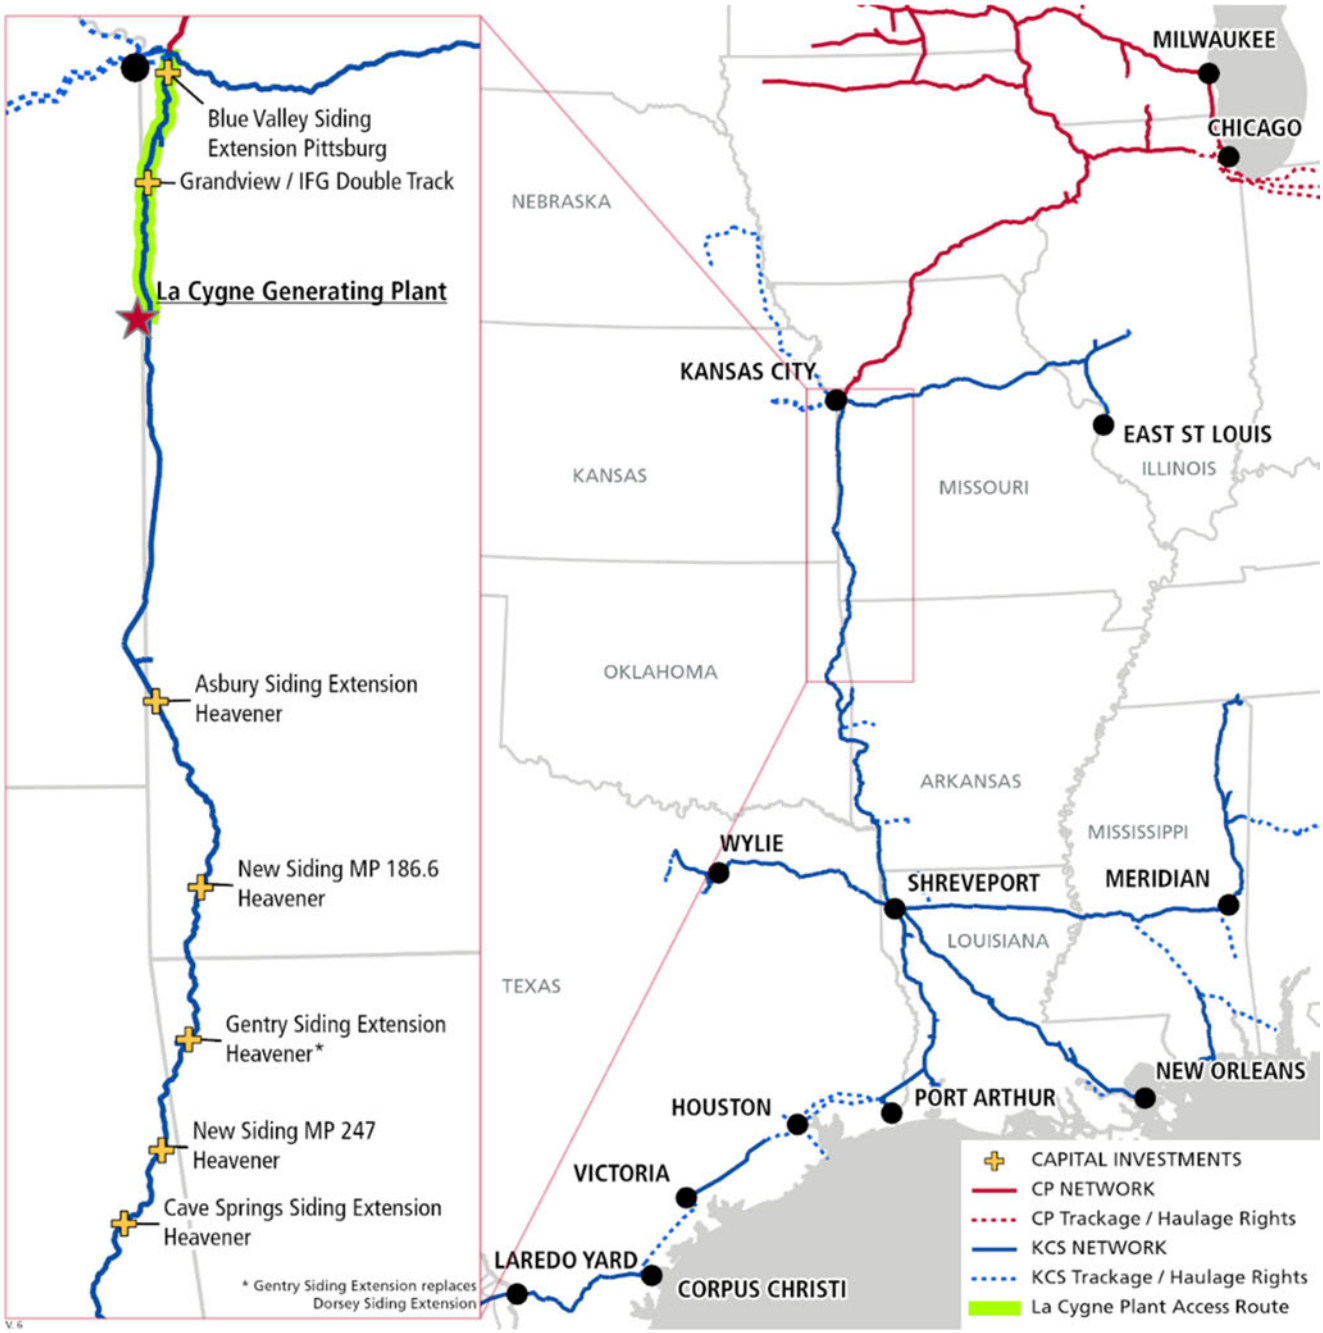
FIGURE 14
MAP OF KCS LINES BEAUMONT TO KANSAS CITY

1. CN's Assessment of Capacity on these Lines Is Flawed

72. CN witness Mr. Randall incorrectly states that KCS's Beaumont, Shreveport, Heavener, Pittsburg Subdivisions will be very close to capacity. CN's witness understates capacity on this segment by assuming that all trains on the corridor will run up to 10,000 feet long. In fact, only the scheduled services in the growth plan, including the incremental

scheduled trains from the Transaction, will be designed to run up to 10,000 feet.[54] In this corridor, therefore, Applicants assessed 12 trains to run up to 10,000 feet.[55] The remainder of the trains are assumed to be 8,500 feet or less.[56] The CPKC capital plan therefore intentionally lays out a grid separating 10,000 feet or longer sidings by a maximum of 65 minutes run time between those sidings.[57] That separation is within tolerances of practical capacity for trains of that length.[58] Further, capacity tolerances for the remainder of trains is within practical capacity.[59] Finally, CN's witness labels the Shreveport, Heavener and Pittsburg subdivisions as orange (at capacity) with the Shreveport at 87%, the Heavener at 96% and Pittsburg at 80%. However, Applicants remind the Board that these measures are a percentage of 65% (for example, Shreveport is 87% of 65%).

2. Evergy's Concerns About Fluid Operations Between Kansas City and Its La Cygne Plant Are Unwarranted



73. Evergy's concerns about service levels on the KCS lines south of Kansas City are also without merit, particularly given that CPKC plans to add capacity on the 65 miles immediately south of Kansas City.

74. Figure 15 below shows the planned capacity improvements on the lines where KCS trains service the La Cygne Generating Station in Amsterdam, MO.

---

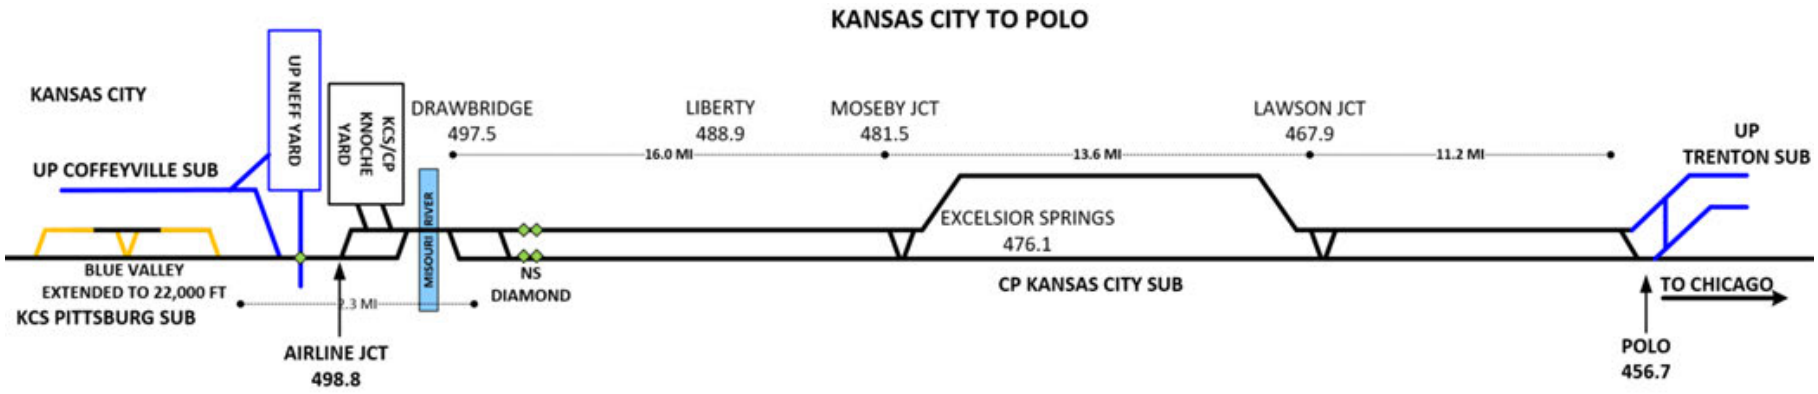
[58] Elphick/Orr Workpaper "Worksheet 4.11 in Capacity - Methodology KCS Segment Calculations.xlsx."
[59] Elphick/Orr Workpaper "Worksheet 4.11 in Capacity - Methodology KCS Segment Calculations.xlsx."

FIGURE 15
MAP SHOWING INFRASTRUCTURE SURROUNDING LA CYGNE

75. As seen above, CPKC plans major investments between where the coal trains interchange at Kansas City and where they terminate at the La Cygne Generating Plant. This includes the addition of new double tracks near Kansas City as well as the extension of the siding at Blue Valley, MO. These infrastructure improvements, together with long sidings already



present at Jaudon and Drexel to the north of the La Cygne plant, as well as investments on the Heavener in total, will create a fluid operation overall south of Kansas City.

H. The Joint UP-CP "Polo Line" Between Airline Jct. and Polo, MO Has Ample Capacity

76. UP expresses concerns about the impact of the CP/KCS Transaction on its operations on a 42.1-mile stretch of paired track that it shares with CP just north of Kansas City. That line is known as the "Polo Line" and it extends between Airline Jct. and Polo, MO. To facilitate that discussion, Figure 16 below is a diagram of the Polo Line.

77. As we demonstrate below, this line is operated as double track and has substantial capacity. There will be no adverse impact on UP's operations here.

FIGURE 16
MAP OF CP LINES KANSAS CITY-POLO

Elphick/Orr R.V.S. at 59

78. The trackage between Airline Jct. and Polo, MO (the "Polo Line") will readily accommodate the combined post-Transaction volumes of UP and CPKC. UP witnesses Kenny Rocker and John Turner state that CP currently runs 2.9 trains per day, and UP runs eight trains per day on the Polo Line.[60] UP omits the fact that all eight of UP's trains on the Polo Line operate in the southbound direction (left to right in the diagram above) and proceed progressively onto the line from UP's Trenton subdivision north of Polo. Applicants anticipate that the Transaction will add 14.4 daily trains to this segment, but only half of those trains will operate southbound. CPKC and UP's combined southbound train counts will thus be in the range of 16-17 trains, which is well within the range of fluid capacity on this double-track segment. Even if UP and CPKC were able to run only a single southbound train every hour, there would be room to accommodate the total southbound flows in addition to any required maintenance and other work on the line. In fact, however, trains routinely run much closer together than this, enabling the Line to accommodate even more than 24 trains per day.

79. Supporting this conclusion is the fact that CPKC capacity investments and anticipated operating changes will further expand capacity on this segment. First, CPKC will be investing in additional capacity south of Airline Junction of Polo that will increase chambering capacity for northbound trains changing crews, reducing any need to run northbound in a manner that conflicts with the southbound flow of trains. Second, CPKC will further improve flow through by moving crew changes on its southbound trains off the Polo line IFG.

[60] UP-10, Rocker/Turner V.S. at 34 ("Applicants plan to increase traffic on CP's Kansas City Subdivision from 2.9 trains per day to 16.9 trains per day, an increase of 14 trains per day, or near 500%.").

80. A key misconception underlies UP's contention that the Transaction may overtax the Polo Line. UP contends that the track is not operated like double-track because the two mains geographically spread apart between Moseby Jct. and Lawson Jct.[61] It is true that trains cannot cross between tracks over this 13.6 mile portion of the Line given that the tracks are so far apart (as shown in Figure 16 above), but it is also true, as shown in the diagram, that there are double cross-overs at either end of this segment.[62] In fact, this spacing of crossovers is ideal for double-track operations. Even if UP's operations required the queuing of southbound trains (e.g., awaiting clearance to run into the Kansas City terminal), CPKC's southbound trains would be able to cross over at Moseby Jct. to run around those trains, avoiding any blockage in the Line's fluidity.

81. Finally, CN takes issue with capacity on a short stretch of single-track at the south end of the Polo Line, where CP crosses over the Missouri River on the Harry S Truman bridge. Our capacity analysis shows that this short segment, which trains pass across quickly, will have ample capacity to accommodate total post-Transaction volumes.[63]

I. CP's Line Between Polo, MO and Sabula, IA/Savanna, IL Will Have Ample Capacity with the Proposed Capacity Projects

82. There are no capacity issues on CP's other lines north of Kansas City. CP's lines between Polo, MO and Sabula, IA/Savanna, IL will have ample capacity in consideration of the ongoing CP capacity work, including adding new CTC and sidings to these lines.

---

[61] UP-10, Rocker/Turner V.S. at 35. ("Although the Polo Line consists of two tracks, the tracks are not operated like double-track lines. Over a long portion of the joint facility, the two tracks are far apart, so trains cannot cross from one line to the other to maximize efficient use of both lines.").

[62] *See* Figure 16.

[63] Elphick/Orr Workpaper "Worksheet 4.11 in Capacity - Methodology KCS Segment Calculations.xlsx" tab "KCS run times All Trains."

1. Mainline Capacity Will Be Ample

83. CN witness Randall's analysis shows CP's Kansas City Subdivision (between Airline Jct MP 498.8 and Laredo MP 406.0) as green, meaning that train volumes will be within his measure of fluid capacity. This comports with Applicants' analysis, although we note that Mr. Randall's assessment of the line as having capacity of 18 trains per day is incorrect; the correct figure is 20.8 trains per day. It appears that CN erred by using a running speed of 33 miles per hour to derive a capacity of 18 trains per day, whereas Applicants based their calculation on the actual running speeds (approximately 36 miles per hour) observed in the real world – at those higher speeds, trains will clear the distance between sidings more rapidly, and thus unlock additional capacity.[64]

84. CN witness Mr. Randall suggests that CP's Laredo Subdivision (between Laredo North MP 405.1 and Ottumwa MP 302.8) will be "red" with train counts exceeding a practical capacity of 12.2 trains per day.[65] However, CN's analysis omitted the new 2022 siding at Seymour, at milepost 355. With the addition of the siding at Seymour, the Laredo Subdivision's capacity will increase to 20.8 trains per day at existing track speeds, which by itself provides adequate capacity for the Transaction.[66] In addition, Applicants plan to complete CTC installation on the Laredo Subdivision by 2025. With CTC, the timetable track speed is expected

[64] *See* Elphick/Orr Workpaper "CP Capacity Calculations Kansas City to River Jct and Chicago.xlsx" tab "CP run times All Trains."

[65] CN-13, Randall V.S. Appendix B, Exh. B-1.

[66] Elphick/Orr Workpaper "CP Capacity Calculations Kansas City to River Jct and Chicago.xlsx" tab "CP run times All Trains."

to increase from 40 to 60 miles per hour over almost half of the Laredo Subdivision, which will further improve capacity beyond that reflected in Mr. Randall's flawed calculations.[67]

2. New CPKC Trains Will Not Adversely Impact BNSF Operations at Ottumwa

85. CN witness Randall implies that there may be concerns associated with CP's need to cross BNSF's Lincoln, NE-Galesburg, IL mainline at Ottumwa, IA. He notes that there is "[a]n average of 26 BNSF trains and two Amtrak daily trains" that move over the Ottumwa crossing.[68] There is no issue here. There is more than enough operating capacity and flexibility at this location to operate BNSF and CPKC trains without interference, even with the addition of 14.4 CPKC trains here. BNSF's line is double-tracked through the diamond, with double track extending well beyond the diamond on either side. In light of that operating flexibility, CPKC's additional trains will not impinge capacity on BNSF's mainline at this location (where, in any event, BNSF controls the interlocker). Other planned changes will reinforce this conclusion. CPKC will be extending the existing siding at Ottumwa, further ensuring that its trains do not cause conflicts with BNSF trains at this location. And while CP has 5 miles of CTC today from Ottumwa to Rutledge (through the diamond), CPKC plans to add additional CTC by 2025 across the entire corridor between Laredo (MO) and Marquette, providing dispatchers with greater visibility and improving planning and coordination between CPKC and BNSF.

[67] Elphick/Orr Workpaper "CP Capacity Calculations Kansas City to River Jct and Chicago.xlsx" tab "CP run times All Trains."

[68] CN-13, Randall V.S. Appendix C.

86. Further, the Iowa State Rail Plan Final ("Iowa DOT") December 2021[69] and February 2017,[70] which is based on trains per day estimates BNSF and HDR Consulting, LLC, provided, show adequate capacity in the BNSF Ottumwa Subdivision from Galesburg to Creston, particularly between the Creston and Iowa and Illinois state line. This study shows that BNSF had previously operated 40 to 45 trains per day and that the Subdivision has a "practical capacity" of 53 to 80 trains per day.[71] The transaction will add 14.4 trains per day to the 26 trains BNSF is currently running bringing the count to the previous proven range.

87. BNSF raises a different issue about operations in Ottumwa. BNSF witnesses Gabriel and Thowe express concern that CPKC will run longer trains southbound across the diamond at Ottumwa and worry that rear end of these train would block the BNSF Ottumwa Subdivision (and perhaps State Highway 23) while the trains change crews at Ottumwa.[72] There is no reason to worry. CPKC plans to move its crew change location from CP's Ottumwa Yard Office (which is 6,500 feet from the BNSF diamond) to the west end of Ottumwa siding. As shown in Figure 17 below, there is more than 16,000 feet of clearance between this location and the BNSF crossing (as well as State Highway 23), so CPKC's southbound crew changes will cause no interference at the diamond. CPKC also plans to extend Ottumwa southbound by 2,000 feet to 12,000 feet further increasing clearance for southbound trains.

DETAILED MAP OF SIDING EXTENSION AND CREW CHANGE IN OTTUMWA

Elphick/Orr R.V.S. at 65

3. New CPKC Trains Will Not Adversely Affect Operations on the Davenport Subdivision

88. We have studied capacity in CP's Davenport Subdivision, which is between Nahant MP 195.7 and Island MP 140.9, and confirmed that there is no basis for concern. The practical capacity between Camanche and Bettendorf is 18.7.[73] Mr. Randall communicates that the practical capacity between Camanche and Bettendorf is 13.7 trains per day.[74] In reviewing Mr. Randall's segment calculator, we believe he is actually communicating the practical capacity for 10,000-foot trains between Camanche and West Davenport or Nahant.[75] If this interpretation of Mr. Randall's 13.7 rating is correct, CPKC agrees with that practical capacity for up to 10,000-foot trains and notes the anticipated number of trains up to 10,000 feet is 14.[76] However, CP is installing CTC on this segment in 2022, which will increase track speeds to between 50 and 55 miles per hour. In other words, by the end of 2022, CPKC will have the capacity it requires for year 3 volumes between South Camanche and West Davenport.

89. While BNSF states that the line is currently "unsignalized,"[77] as noted above, CP is installing CTC on this segment in 2022. Separately, but related, Camanche siding is planned to be extended to 10,000 feet, and in Deer Creek siding, north of Clinton, will be extended to 12,000 feet.

---

[73] The practical capacity between Bettendorf and Nahant is 37.4 and the practical capacity between Camanche and Nahant for trains up to 10,000 feet is 13.4. Elphick/Orr Workpaper "CP Capacity Calculations Kansas City to River Jct and Chicago.xlsx" tab "CP run times All Trains."

[77] BNSF-9 at 67.

4. New CPKC Trains Will Not Adversely Impact BNSF Operations Between Davenport and Clinton

90. We understand that in January 2022, BNSF stated that it may file responsive applications requesting that the Board grant BNSF overhead trackage rights between Savanna, Ill. and Clinton, Iowa, but never actually filed such a responsive application. Any grant of trackage rights to BNSF would inject new operational complexity rather than reduce it.[78] BNSF's other trackage rights requests, such as their request between Robstown and Laredo, would also add additional operational complexity.

91. Granting trackage rights between Savanna and Clinton would add BNSF trains to the Clinton-Savanna line without taking away any BNSF operations south of Clinton. This includes the UP crossing, which BNSF's operations do not cross. BNSF's operation with these trackage rights at Clinton would add trains where they do not operate today. In addition, it could add additional traffic over and above that which it uses its existing trackage rights to serve. For example, it could shift to the Savanna-Clinton Segment unit trains destined to the Muscatine area and Fruitland, Iowa that BNSF currently interchanges with CP at Ottumwa. BNSF does not use the UP-controlled interlocking at Clinton through either road today; BNSF serves Clinton area customers from the South. BNSF may have strategic reasons for making this trackage rights request, but granting such a request will only add unnecessary complications.

5. New CPKC Trains Will Not Adversely Affect Operations in Savanna, IL

92. There is no basis for any operational concerns at Savanna, IL, where CP's Chicago Subdivision crosses BNSF at grade. Both lines are double tracked at this location, and even with an additional eight CPKC trains, the total number of trains will not exceed capacity

[78] *See also* Gameiro R.V.S. at ¶ ¶ 28-31.

available. CPKC's new trains will only consume up to a total of 80 additional minutes, calculated as 10 minutes per train with 8 additional trains.

6. New CPKC Trains Will Not Adversely Affect Operations on the Marquette Subdivision

93. The Marquette Subdivision has adequate capacity to handle CPKC trains. CN witness Mr. Randall asserts that the 27 miles between Harpers Ferry and Eckards has a practical capacity of 13.3 trains per day.[79] CP calculates the practical capacity to be 11.7 trains per day in this segment.[80] The difference in the two calculations is a function of CP adding fifteen minutes for crew changes at Marquette. The 11.7 train per day calculation governs the practical capacity north of Marquette where CP anticipates, post transaction, 11.4 total trains.[81] Mr. Randall further assumes that all trains on the Marquette are 10,000 feet. The practical capacity for trains up to 10,000 feet north of Marquette is 8.1 and CP anticipates 4 trains will run up to 10,000 feet.[82] In summary, the Marquette subdivision will be below practical capacity. This result has been tested and verified in an RTC simulation built to address Metra's comments.[83]

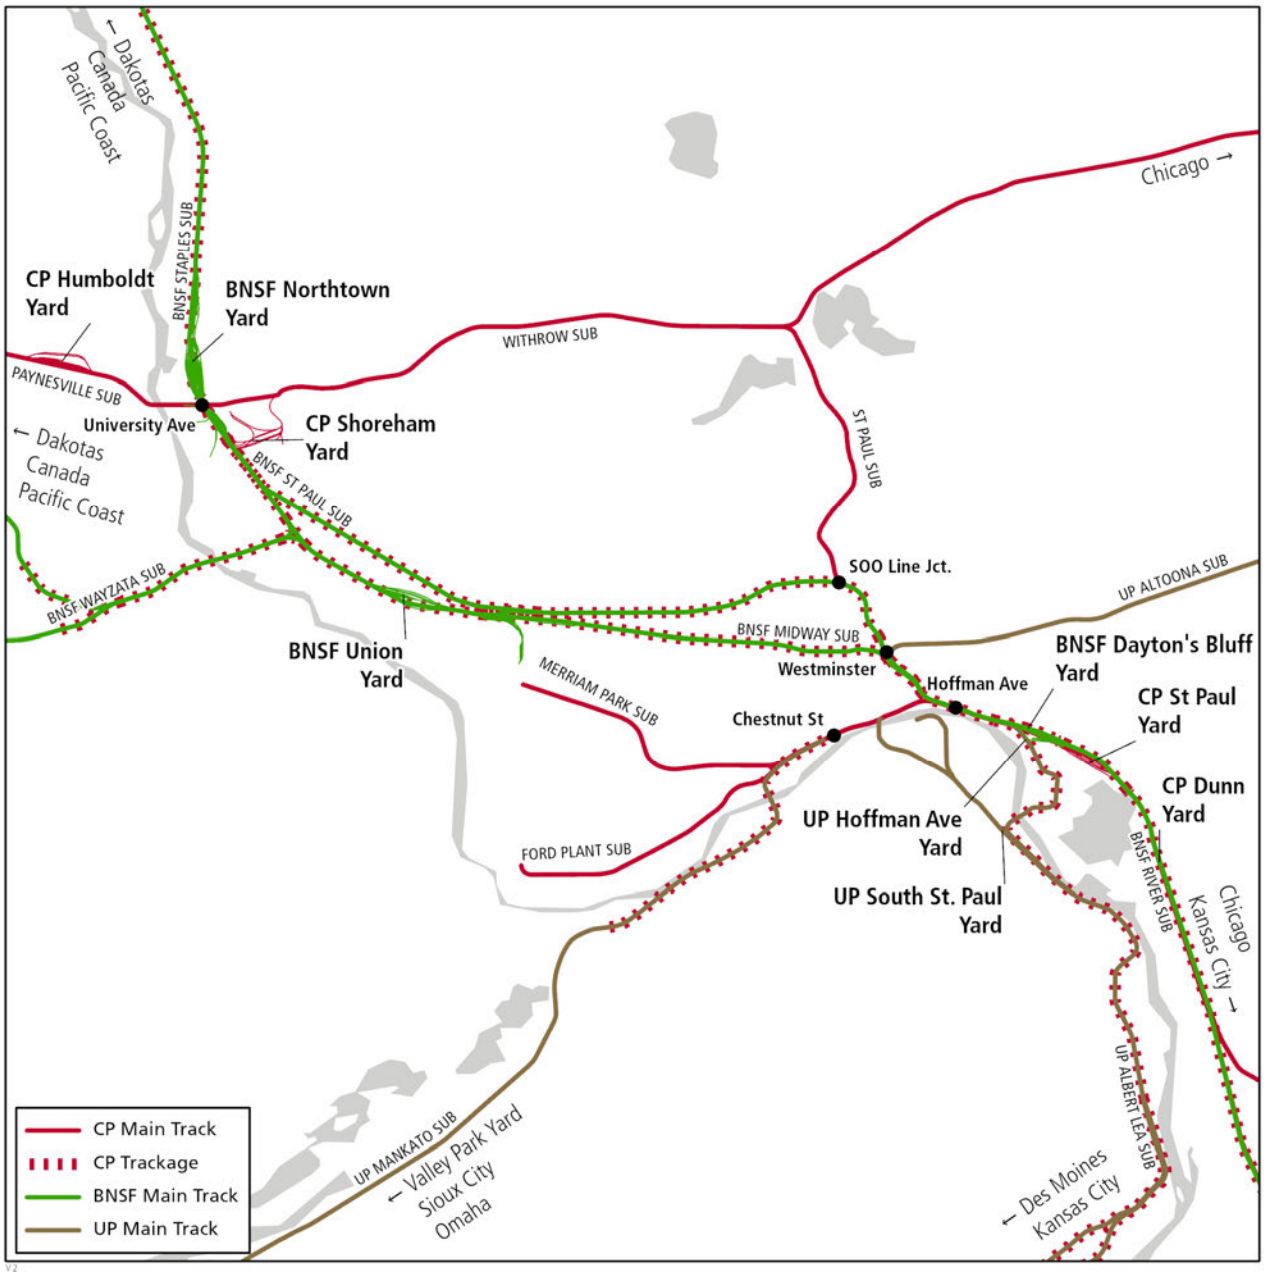
[83] Elphick R.V.S., Section I.D.

J. New CPKC Trains Will Not Adversely Impact UP or BNSF Operations at St. Paul

94. UP asserts that its concerns about increased train counts at St. Paul might lead it to build a staging track on its own line south of Hoffman Ave., as shown in UP's map reproduced as Figure 19. UP-10 at 64-66. Whether UP would gain an advantage from having such a track is not for us to judge, though it would appear to be quite beneficial for UP regardless of the Transaction. The Transaction, however, will not create the need for such a track, especially given that the additional CPKC trains will result in total trains here being below past levels. Instead, the possible staging track that UP desires is exactly the kind of infrastructure that every carrier considers in order to fine tune their operations in busy terminals like St. Paul, and we encourage UP to go ahead and make that investment (at their own expense) if it would prove beneficial in supporting UP's operations.

FIGURE 18
MAP OF ST. PAUL



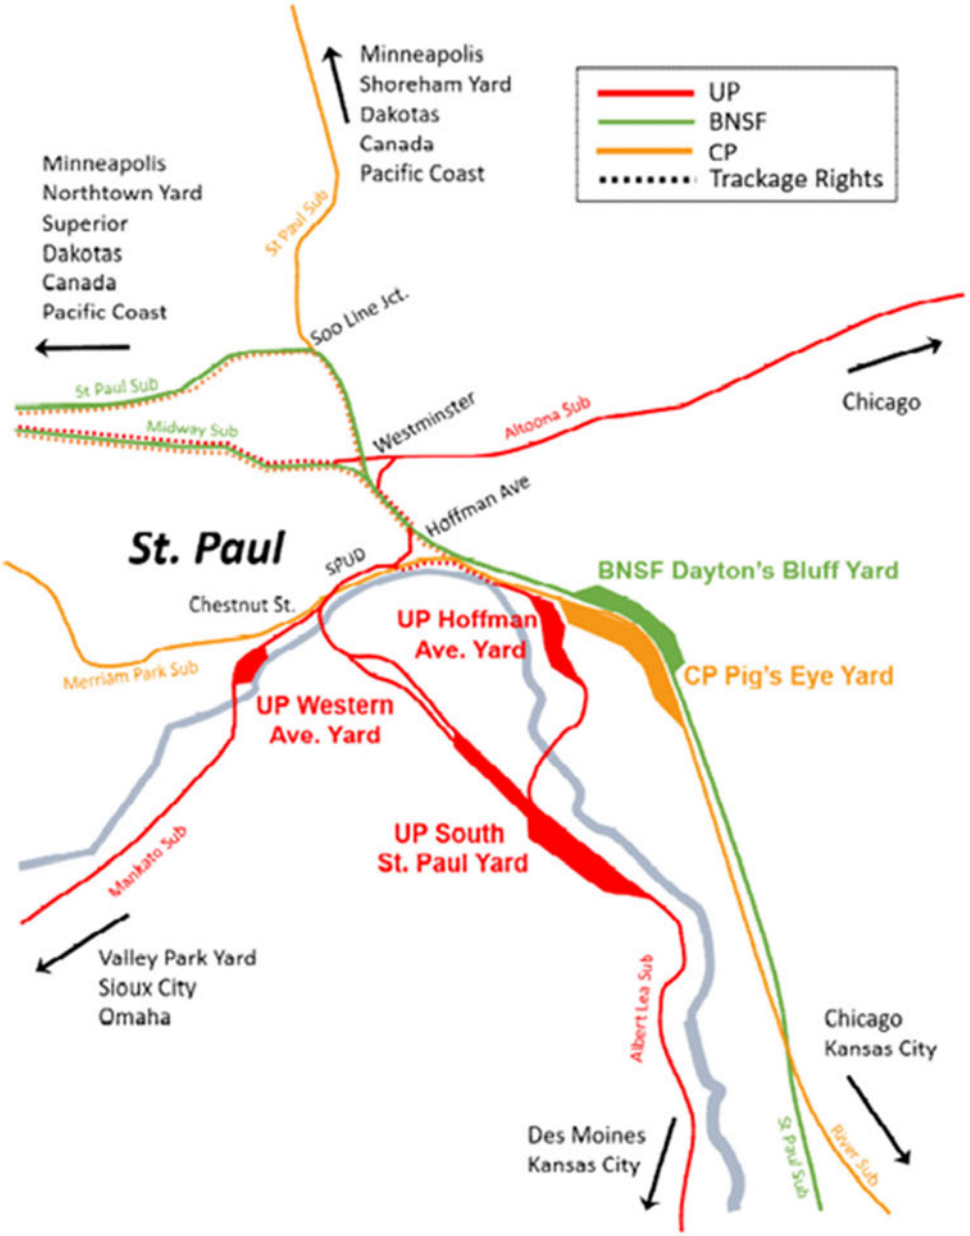


FIGURE 19
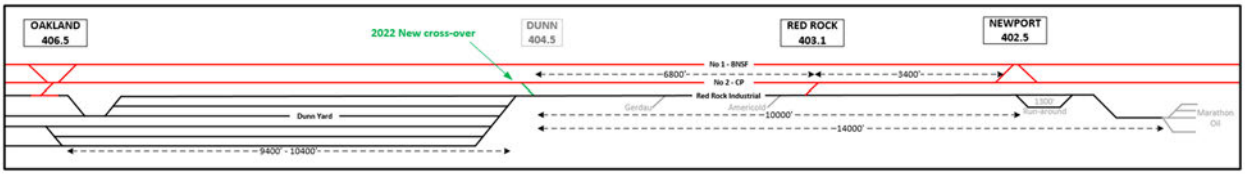
UP'S MAP OF ST. PAUL[84]

95. Additionally, with the modest six trains per day increase in this area, CPKC will still not be the majority user of St. Paul rail infrastructure where UP, BNSF, and CP operations

[84] UP-10 at 64-66.

converge north of CP's yard.[85] With a total post-Transaction related train count of 22 trains per day through Hoffman Avenue, CPKC is still below levels previously run through this location.[86]



96. Further, since the 2012 East Metro Rail study, CP has executed the following initiatives improving fluidity through the St. Paul area:

- Moved westbound CP trains off the BNSF St. Paul subdivision and onto the CP St. Paul / Withrow subdivisions between Soo Line Jct. and CP University (Shoreham Yard). This initiative has included installing signals and a power switch at Soo Line Jct. This investment pulled all westbound CP trains off of BNSF's track between Soo Line Junction and University Avenue (not shown on UP map).
- Within CP's St. Paul Yard, to avoid doubling and tripling away trains from either side of St. Paul Yard, CP extended tracks at the south end of the yard (which CP calls "Dunn Yard") to 10,000 feet (2015) and added a new cross-over (2022) for receiving trains as shown in Figure 20 below, showing Dunn Yard track capacity. The cross-over will allow for further reduced interference on the paired mains (CP No. 2 track) between Dunn and Newport as trains will not have to pull past Newport and reverse through to the Red Rock Industrial. This amounts to approximately 45 fewer minutes of main track interference per terminating east/southbound train.

[85] Elphick/Orr Workpaper "St. Paul Area Train Counts by Railroad.xlsx."

[86] Amended Operating Plan, Appendix A, Segment 40; 2012 East Metro Rail Study.

FIGURE 20
DUNN YARD TRACK CAPACITY

97. Additionally, BNSF has executed a growth project to streamline access to the BNSF Midway Subdivision off the Paynesville Subdivision for eastbound trains – this allows for progressive move onto the BNSF Midway Subdivision bypassing University Avenue.

98. In addition to the above listed major projects, CP has also made other investments to strengthen the St. Paul terminal. CP has secured dual served electrical sourcing for both the north and south sides of the St. Paul Yard – this creates redundancy in the event of power outages. CP has also added back up power generators for St. Paul Yard to protect operational fluidity in case of power outages. Further, CP has invested in upgrading its hump control software to improve speed and processing capacity in the St. Paul terminal. CP has also changed the service design and terminal clock for trains to arrive directionally in operating windows to improve the speed of connecting to outbound trains.

K. CP's Chicago Subdivision

99. CN incorrectly suggests that CP's Chicago Subdivision (between Lake, Iowa and Randall Road, Illinois) will be at 100 percent of practical capacity.[87] However, this is not true. According to CN, the segment between Kittridge, at mile post 118.5, and the new siding at Monroe, at mile post 75.0, will be 79 minutes. CPKC calculates that this segment takes only 65

[87] *See* CN-13, Randall V.S. Appendix B, Exh. B-1 (providing that "11.1 trains/day = 100% of estimated practical capacity in this Subdivision").

minutes to traverse.[88] Thus, the segment between Kittridge and the new siding at Monroe has a practical capacity of 13.4 trains per day accounting for 10,000-foot trains.[89] CPKC plans to run up to 10 total 10,000-foot trains per day in this corridor by Year 3. Thus, the Chicago Subdivision will not reach 100 percent capacity as Mr. Randall suggests – instead, it will only reach 75 percent of practical capacity or 50 percent of maximum capacity.[90]

V. DIVESTITURE OF KCS'S KANSAS CITY-ST. LOUIS/SPRINGFIELD LINE WOULD LIMIT CPKC'S ABILITY TO OPERATE EFFICIENTLY

100. CN has asked the Board to condition any approval of the proposed CPKC Transaction on divestiture of the St. Louis/Springfield Line to CN, alleging that Applicants will "favor" CP's existing Chicago-Kansas City route and downgrade the Line. This proposed divestiture would limit CPKC's ability to operate efficiently. Applicants have no intention of downgrading the St. Louis/Springfield Line—which has not carried substantial volumes historically—after the transaction. Rather, CPKC intends to maintain the line's capabilities so that it can remain an important part of the CPKC system.

101. It is my understanding that CN proposes to grant back to CPKC haulage rights that will enable CPKC to access customers on the Springfield Line. The haulage rights that CN would have the Board grant back to CPKC would make what are efficient single-line movements into more complicated and less efficient multi-carrier shipments.

---

A. CN's Operations in Kansas City and Between Kansas City and IFG Would Complicate Terminal Operations, With Hard-to-Predict Consequences

102. CN's operations in Kansas City and between Kansas City and IFG would complicate terminal operations and result in hard-to-predict consequences.

103. Currently, CN is not using the most efficient routing on their network available to them. This means that with CN's proposed divestiture, even with CPKC haulage rights for traffic on the St. Louis/Springfield Line, CPKC traffic could be subject to additional handlings, out of route miles, and delayed transit. Because the railroad that designs local service would be CN and not CPKC, CPKC would be dependent on CN for its service, and CN would be incentivized to deliver the cars together with other cars without regard to carrier. This would result in operational inefficiencies. For example, KCS currently interchanges cars headed to Mobile, AL in Jackson, MS. There is no incentive for CN to switch KCS interchange traffic in Jackson, so current KCS Mobile traffic is sent 443 miles out of route northward to Memphis for processing and furtherance back through Jackson and south to Mobile. This results in additional car miles and car days that does cause harm to current KCS customers.

B. CN's Proposed Forced Half-Ownership of IFG Facility Would Complicate Operations There and Limit the Facility's Ability to Support Innovative CPKC Offerings

104. CN proposes that the Board force CPKC to give CN a 50% interest in KCS's IFG facility. Such a proposal would complicate operations at the IFG facility and limit the facility's ability to support innovative CPKC offerings. Currently, the IFG terminal is used for loading and unloading intermodal and automotive traffic for the greater Kansas City area. In addition, IFG is also used for connecting East St. Louis and Slater, Missouri area Kansas City destined manifest from train M-VNKC to transfer into Knoche for processing and handling to final destination on KCS and other carriers. With the Growth Plan, IFG will see seven additional

CPKC trains working at IFG daily, reflecting new Kansas City area traffic opportunities extending as far as Vancouver, Saint John and Lazaro Cardenas. IFG will also serve as a key mainline location for connecting overhead traffic including Minneapolis – Wylie intermodal traffic from 160/161 to the new Bensenville - Wylie train service 162/163.[91]

105. The increased number of CN trains and half ownership that CN proposes would increase the complexity with arrival/departure windows and facilities at IFG. In addition to the operational changes described in paragraph 75, CPKC needs IFG for its own future use to develop expanded intermodal and automotive operations, and also to enable expanded through train operations at Kansas City, which will require expanded crew change activity at IFG. If CPKC were required to sell any part of IFG to CN, that would undermine its potential growth, both North-South with CPKC as outlined in the Growth Plan and on the St. Louis/Springfield Line, including interchange with CSX in East St. Louis. CPKC operations at the IFG facility would be subject to CN crew availability. With CPKC proposing seven new trains a day serving IFG and CN proposing a train pair, CN's 50% footprint demand is completely out of proportion to CPKC's IFG utilization.

VI. NORFOLK SOUTHERN'S CONTINGENT TRACKAGE RIGHTS REQUEST IS BASED ON A MISUNDERSTANDING OF CPKC OPERATIONS

A. Applicants' Projected Traffic Growth Will Not Adversely Impact Service Levels Between Wylie and Meridian

106. I understand that NS argues that service levels may be impacted by an increase in bulk traffic on KCS's line from Wylie, Texas to Shreveport, Louisiana (the "Wylie-Shreveport

[91] *See* Appendix I: Growth Plan Train Changes in the Amended Operating Plan.

Section"), which NS asserts will be handled by the addition of one net train pair per day.[92] However, there will be no Transaction-related increase in bulk traffic on the Wylie-Shreveport Section. Any increase in bulk traffic on these segments will consist of organic growth, *i.e.*, growth that would have occurred in the ordinary course even without the Transaction.

107. Moreover, NS is incorrect that the additional traffic on the Wylie-Shreveport Section will be handled by approximately one net train *pair* per day.[93] The number of trains operating per day over the Wylie-Shreveport Section will only increase by roughly one train post-Transaction. This reflects the new CPKC train pair from Bensenville, Illinois to Wylie, Texas, minus consolidations of existing trains as explained in the paragraphs below.[94] There is ample capacity on the Wylie-Shreveport Section to accommodate one additional train and adding one additional daily train to that section poses no threat to existing service levels, contrary to NS's conjecture. To be clear, we explain below how Applicants' Operating Plan will only add one additional daily train to the Wylie-Shreveport Section.

108. In line with the recently announced NS ("TOP/SPG") operating plan, the CPKC Optimized Plan strives for repeatable, daily balanced service plans where possible.[95] This includes handling intermodal and manifest traffic in blended trains rather than select day-of-week specialized services. Mixing intermodal and manifest traffic on the same train is a well-recognized way to improve railroad operations. CP has operated mixed intermodal and manifest

---

[92] *See* Amended Comments of Norfolk Southern and Request for Conditions (filed June 9, 2022) ("NS-12") at 23.

[93] *See id*.

[94] *See also* Amended Operating Plan, Appendices H and I.

[95] *See "New Norfolk Southern Operating Plan to Blend Traffic and Build Longer Trains*," Trains (Feb. 12, 2019), *available a*t https://www.trains.com/trn/news-reviews/news-wire/12-new-norfolk-southern-operating-plan-to-blend-traffic-and-build-longer-trains/.

trains efficiently and effectively for years, and there is no reason to doubt it will do so effectively on the Wylie-Shreveport Section as well as the Meridian Speedway. Applicants' Optimized Plan will alter current day operations on the Wylie-Shreveport Section from select day-of-week specialized services to daily balanced service plans, thereby reducing the number of trains operating on that section.

109. Looking first at the Wylie-Shreveport Section, under the Applicants' Base Plan, KCS runs a six day-a-week manifest train pair between Wylie and Shreveport. NS runs one intermodal train pair daily on that same segment and also runs an intermodal train five days-a-week westbound and two days-a-week eastbound. Altogether, KCS and NS run 15 scheduled eastbound trains against 18 scheduled westbound trains over the Wylie-Shreveport Section. Under Applicants' Growth and Optimized plans for scheduled trains, NS's train design will remain unchanged for the seven day-a-week balanced intermodal train pair. However, the imbalanced train pair that NS runs over that segment (*i.e.*, the intermodal train it runs five days-a-week westbound and two days-a-week eastbound) is proposed to move daily in a combined service with KCS's manifest traffic, also moving daily. This proposed change will enhance NS-KCS service because assets, including locomotives, railcars and containers, will move daily with significantly less dwell, higher velocity and improved service.

110. Expanding the discussion to the Meridian Speedway, the concept of mixing intermodal and merchandise traffic extends to Meridian and into Mexico and also produces a balanced seven day-a-week traffic flow to and from Mexico. The Applicants propose retaining current daily Meridian to Mexico service levels while increasing the reverse move from Mexico to Meridian from three days a week to daily. Consequently, instead of a complicated choreography of two trains per week out of Wylie and three trains per week out of Mexico

heading to Meridian, the Applicants' proposal is that the intermodal traffic would flow daily to and from both locations in blended service. To further illustrate, KCS currently operates less-than-daily intermodal service connecting Mexico with Meridian, handling some intermodal traffic interchanged with CN at Jackson and some interchanged with NS at Meridian. CPKC plans to take advantage of the improved traffic density of the broader CPKC system to convert these less-than-daily trains to a daily operation out of Mexico. As with the Wylie-Shreveport Section, this will increase the frequency of service and improve overall transit times for the intermodal traffic combined with manifest traffic to and from Mexico.

111. Note that, at Meridian, KCS currently operates two daily pairs of solid intermodal trains that move to and from Shreveport. The first pair extends through to Wylie and the second pair is interchanged with UP near Shreveport. UP also hands off to KCS one eastbound train daily for delivery to NS at Meridian. CPKC's operating plan does not touch any of these premium trains. They will continue to run intact, with no manifest traffic, as they do today. There will be no service degradation.

112. In short, CPKC will meld certain intermodal and manifest services to build daily trains on which traffic will flow more evenly over the week, with shippers benefitting from more frequent service. At the same time, premium services will remain intact.[96]

113. Finally, as with all locations where one railroad conveys another railroad's traffic, traffic levels will be constantly and jointly reviewed and train designs adjusted to accommodate growth, using the guiding principles of balance and seven day-a-week service.

[96] *See* Amended Operating Plan, Appendix H.

114. NS asserts that Applicants plan to increase traffic by an average of 53% Transaction-specific growth on the Wylie-Shreveport Section and seemingly assumes, without support, that this may cause service issues on that segment.[97] Not only is NS's assertion devoid of any analysis of the service benefits of Applicants consolidating trains or any explanation of how adding only one train per day over the Wylie-Shreveport Section will negatively impact service levels, each of which we address above, but is also simply incorrect. NS vaguely cites to the Amended Operating Plan without specifying which exhibit or explaining how they arrived at transaction-specific growth of 59% and 46%, respectively, for the two segments of the Wylie-Shreveport Section, resulting in an average transaction-specific growth of 53%. We can only assume NS was using Appendix T of the Amended Operating Plan. Despite Applicants clearly stating on page 11 of Appendix T that, for the two segments of the Greenville Subdivision (also known as the Wylie-Shreveport Section), the "Merger Related Growth Percentage" for each segment was 49.9% and 38.7%, respectively, NS apparently deemed its own math more accurate. NS seems to have divided the numbers listed in the "Merger Related Growth" column by numbers listed in the "Base" column to arrive at its transaction-specific growth of 59% and 46%, respectively. However, this completely ignores the effect of organic growth. The proper calculation is to divide the numbers listed in the "Merger Related Growth" column by numbers listed in the "2027 No Merger" column, the result of which is listed in the "Merger Related Growth Percentage" column. Using the correct numbers, the Wylie-Shreveport Section will see an average transaction-specific growth of 44.3%, much lower than what NS claims.

[97] *See*, *e.g.*, NS-12 at 22-23.

B. Applicants' Mixed Trains on the Wylie-Meridian Route Are Not Too Long, Contrary to NS's Assertions[98]

115. NS woefully miscalculates the lengths of the mixed trains that Applicants will operate from Wylie to Meridian.[99] NS's calculations did not take into account the select day-of-week operation in this corridor. With one train running six days-per-week (M-DASH) and the other train running two days-per-week (I-DAAT2), the total footage moved per week should be added and then divided by seven. Instead, NS took the average length of the two day-a-week train, having been divided by two, and the average of the six day-a-week train, having been divided by six, and summed those numbers.[100] In other words, NS treated the train operating six days-per-week and the train operating two days-per-week as if they each operated seven days-per-week, resulting in a significant overstatement of the total footage moved per week. Indeed, to further illustrate, NS simply took the average length of the I-DAAT2 train of 6,878 feet and added it to the average length of the M-DASH of 6,575 feet. The more accurate calculation is to sum the total footage for the trains for the week and divide by seven. Using this correct calculation shows only that the segments between Meridian and Jackson and between Jackson and Shreveport will calculate to slightly above 10,000 feet for one westbound train. However, that will not be an issue because a train service operating between Shreveport and Artesia and returning in the reverse direction will be used to alleviate the Jackson to Shreveport overage. In other words, KCS's traffic will move to the Artesia train. The Meridian to Jackson overage for one train is slight and will be addressed by having the eastbound trains and the other westbound trains fitting within siding capacities on that segment.

[100] *See id*.

C. There Will Be No Capacity Issues at KCS's Wylie Intermodal Terminal

116. NS wrongly assumes static capacity at Wylie.[101] In fact, there are several straightforward options to swiftly expand capacity at the Wylie Intermodal Terminal if needed:

- Performing already-planned track work at the south edge of the property (to add two new pad tracks) will provide capacity for 320,000 additional handlings. This work, which is currently in Phase 3, will allow the terminal to process approximately 960,000 total handlings per year (when combined with the increased working track cycles per day).
- If needed, increasing the working track cycles per day from 1.0 to 1.9—a change that would require no capital investment, only minor operating adjustments and increased switching resources—would enable the terminal to process approximately 640,000 annual handlings.
- If needed, as already stated in the Amended Operating Plan, KCS has the ability to direct traffic destined for Dallas from Mexico to the lightly utilized Kendleton Intermodal Facility.
- If needed, Applicants may invest in new cranes to increase the pace of container handling, and such investments will correspond to demand growth. Each additional crane would add capacity for approximately 90,000 annual handlings.
- If needed, CPKC will be able to expand capacity through planned paving projects. One option is for CPKC to create 285 additional parking stalls that can also be used for stacking based on the needs of the operation, which will create approximately 60,000 additional handlings. Another option, which involves creating 1,500 parking stalls in the Northeast corner of the yard, would create 330,000 additional handlings.

117. On top of all of these options, CPKC will also have the ability (assuming NS does not exercise its option to acquire the Wylie Intermodal Terminal) to greatly expand the physical footprint of the Wylie Intermodal Terminal itself by developing the 220 acres of land that KCS owns adjacent to the intermodal yard. If NS does exercise the purchase option, NS would to be obligated to support CPKC intermodal services there, and CPKC could also augment its capacity by building its own facility on the adjacent land. This 220 acres of available land is shown outlined in yellow in Figure 21 below:

[101] *See* NS-12 at 25-27.

FIGURE 21
OPPORTUNITY FOR EXPANSION OF WYLIE'S PHYSICAL FOOTPRINT

D. In the Event of a "Major Service Failure," a Grant of Trackage Rights Between Wylie and Shreveport Would Be Counterproductive for Service Levels On That Segment

118. The granting of contingent trackage rights to NS will add additional complexity to the existing operation which will inevitably negatively influence existing operations, which over time will result in an adverse impact on the service customers would otherwise benefit from as the result of the Transaction. CPKC will handle some intermodal traffic between Dallas and Meridian in mixed trains, carrying a block of NS intermodal traffic along with other blocks. Were NS to trigger its contingent trackage rights, doing so would disrupt this operation and add more trains to a line which – in NS's hypothetical – would already be suffering service issues. Giving control to an NS engineer instead of a KCS engineer, while forcing CPKC to add an entirely new train for the non-NS traffic, would be counterproductive at best.

119. Operationally, one would see additional complexity dispatching the line as what would today be a single train carrying CPKC and NS traffic in haulage under the Meridian Speedway agreement would now be two individual trains running in the same corridor. With CP

and NS having their own traffic carrying their own trains you would, at the very least, increase the number of scheduled intermodal trains operating on the corridor. With additional trains, there would be additional complexity in establishing integrated operations, including schedules that meet the operational needs of each respective railroad for crew turns, power cycles, asset turns, as well as traffic connectivity on their own networks. With this, NS would be required to establish a crew pool at Shreveport Yard and KCS operations, particularly at the Wylie Intermodal Terminal and Shreveport Yard, would be subject to NS crew availability from Wylie through to Meridian.

120. Looking specifically at traffic to or from the Wylie Intermodal Terminal, ultimately the arrival of two different companies, operating in different service, would force the facility to manage complexities associated with two different roads launching trains at the same location. This all in a corridor where the capital, terminal configurations and associated investments have been developed over time with the expectation that there would be a single company operating in the corridor. For example, Shreveport has not been built to hold NS trains for NS crews. Nor does the Wylie Intermodal Terminal contemplate building two railroad's trains at the same time.

EXHIBIT 4: VILLAGE OF BARTLETT, DOWNTOWN TOD PLAN (OCT. 18, 2016)

EXHIBIT 5: HENNEPIN COUNTY CROSSINGS

1. My name is Raymond A. Elphick. I am the Assistant Vice President Service and Product Design for Canadian Pacific Railway Company ("CP"). Together with John F. Orr, the Executive Vice President – Operations of Kansas City Southern ("KCS"), I sponsored and verified Applicants' Operating Plan and Amended Operating Plan in this proceeding.

2. This statement addresses certain assertions related to the CP network contained in (1) Metra's Comments and Request for Conditions, and its Supplemental Comments; (2) the Chicago Communities' Opening Comments and Request for Conditions, and Supplemental Opening Comments and Request for Conditions; (3) Hennepin County's Comments and Request for Conditions. As discussed below, the assertions raised by these interested parties reflect a misguided understanding of the CP/KCS Transaction (the "Transaction") and do not raise any serious concern regarding the Transaction's likely impacts. Finally, I explain that the Transaction will not threaten CP/KC's ability to provide high quality service.

I. METRA'S ANALYSIS OF THE IMPACTS OF THE CP/KCS TRANSACTION IS COMPLETELY MISTAKEN

3. I have reviewed Metra's analysis of the impact of the Transaction on the lines it currently shares with CP (referred to by Metra as the "MD-W Line" and "MD-N Line"). As I explain in this part of my testimony, Metra's analysis is fundamentally flawed. Contrary to Metra's assertions, the Transaction will not have any adverse impacts on Metra's operations on either the MD-W Line or the MD-N Line.

4. The only projected effect from the Transaction to any of Metra's lines is that eight daily freight trains will be added to the MD-W Line west of Bensenville Yard: four that travel eastbound towards Bensenville, and four that travel westbound from Bensenville. The current

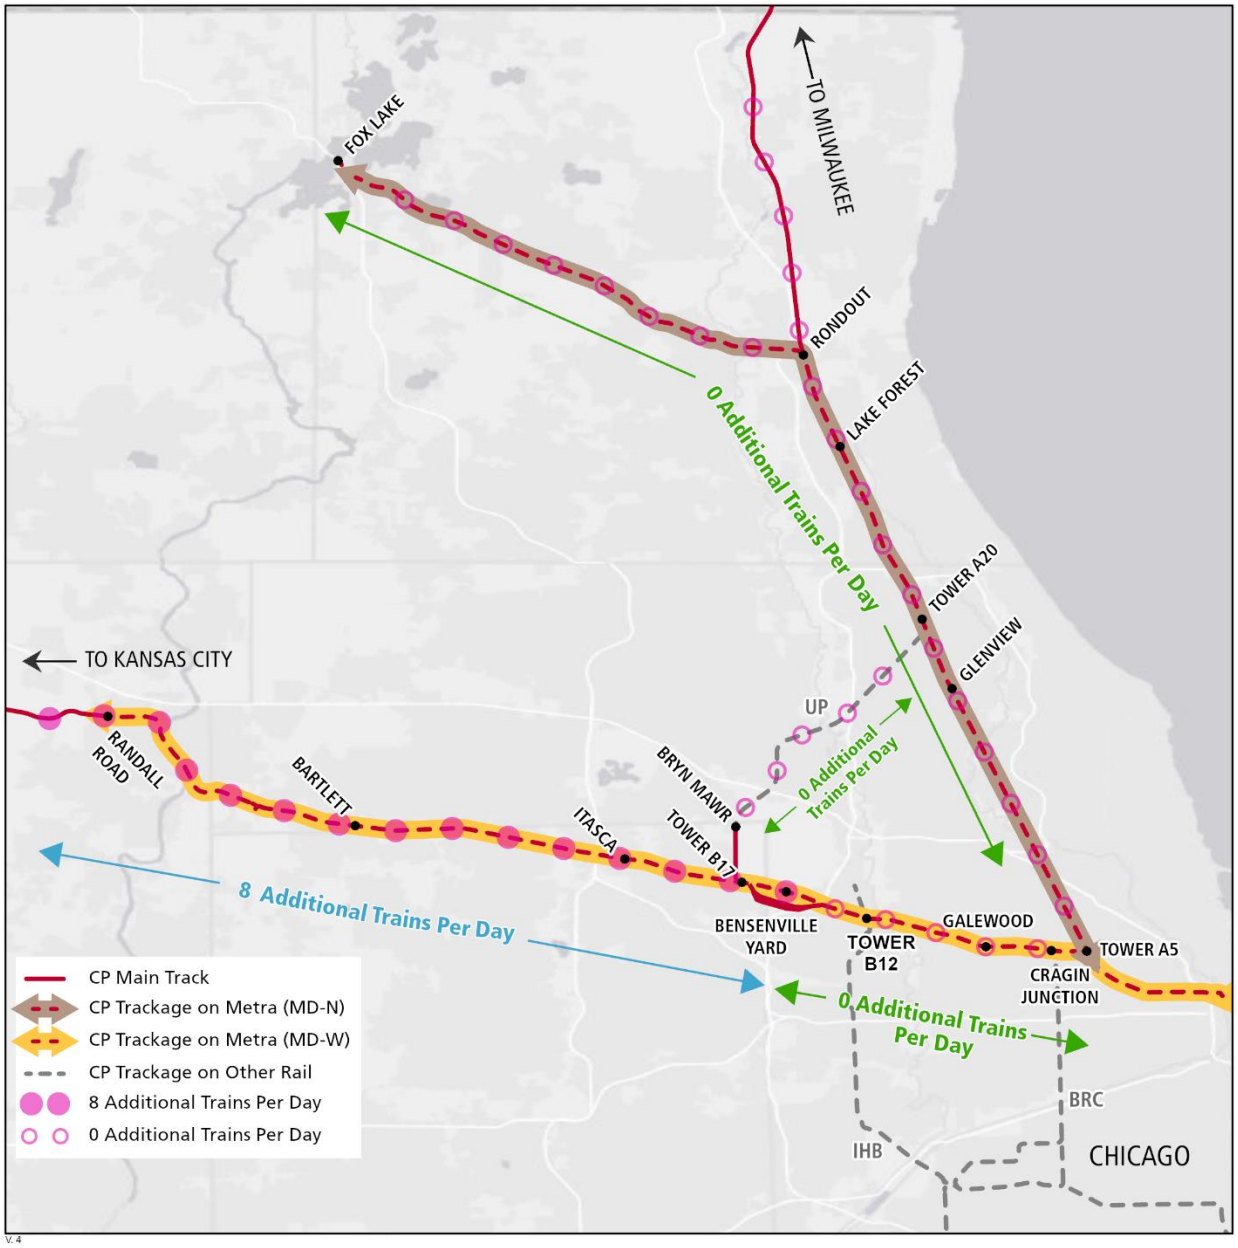
infrastructure of the MD-W Line, plus a planned reconfiguration at Bensenville Yard itself, which I discuss herein, will provide adequate capacity to handle this increased traffic.

5. Metra's worry that CP's Marquette Subdivision will be over capacity (resulting, according to Metra, in CPKC re-routing trains through Chicago over Metra's MD-W and MD-N Lines) is also inaccurate.[1] As discussed in more detail below, the Marquette Subdivision has ample capacity to handle the projected traffic that Applicants plan to run through it. Applicants corrected the RTC modeling performed by Metra, which confirmed that Metra's fears are unfounded and that there will be no adverse impact to Metra's operations as a result of the Transaction.

A. Metra Ignores the Fact that the CP/KCS Transaction Will Not Increase CPKC Trains East of Bensenville Yard on Metra's MD-W Line or on Metra's MD-N Line

6. When I reviewed Metra's comments, it was immediately clear to me that Metra simply did not understand Applicants' Operating Plan. In particular, I was struck by Metra's confusion over the number of daily freight trains that the Transaction will add to the MD-W and MD-N Lines. To set the record clear, I explain in this section where the Transaction will and will not result in additional freight trains on Metra's lines.

7. Metra asserts that the Transaction will add 7.53 trains per day to the segment of the MD-W Line east of Bensenville Yard.[2] That is plainly incorrect. The Transaction will add *zero* trains per day east of Bensenville.[3]



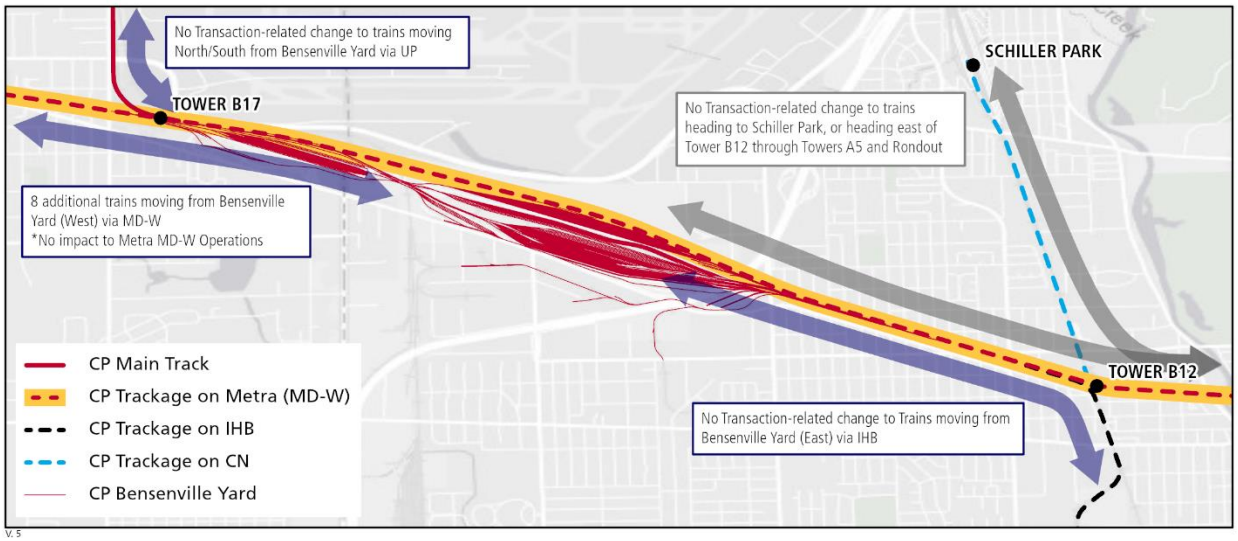
[1] *See* Metra Comments and Request for Conditions (filed March 15, 2022) ("METR-7") at 18.

[2] *See* METR-7, Verified Statement of Thomas D. Crowley and Robert D. Mulholland ("Crowley and Mulholland V.S.") at 19.

[3] *See* Amended Operating Plan, Table 8.

8. Metra's confusion may stem from the fact that Applicants' Operating Plan showed train count increases between Tower B17 and Tower B12. However, this was simply because trains were assigned to that segment if they were entering or departing Bensenville Yard to or from the west. Because Bensenville Yard is geographically situated between Tower B17 and Tower B12, trains moving *within Bensenville Yard itself* show up as moving between those towers, *even though they are not actually operating on the mainline tracks of the MD-W Line east of Tower B17*. To be abundantly clear, Applicants do not project any additional daily freight trains to travel on the mainline tracks of the MD-W Line east of Bensenville Yard. Figure 1 below illustrates this.

FIGURE 1
MAP DETAILING LOCATIONS WHERE FREIGHT TRAINS WILL *AND WILL NOT* INCREASE



9. Mr. Oppenheim argues in his Verified Statement that Applicants cannot say there is no impact on Metra's operations east of Bensenville Yard just because freight trains are

entering or departing Bensenville Yard from the west.[4] Mr. Oppenheim claims such trains must travel through Chicago.[5] Respectfully, Mr. Oppenheim is incorrect. The additional freight trains Applicants plan to operate on the MD-W Line will travel no further east than Bensenville Yard. They will not, nor must they, travel through Chicago, as Figure 2 below illustrates.

10. Moreover, transfers to or from other railroads will not increase as a result of the Transaction.[6] All other additional CPKC traffic resulting from the Transaction that must travel east of Bensenville Yard (for example, traffic to or from areas east of Chicago, like Detroit or Eastern Canada), is modest and will be handled in existing trains.[7] Because such traffic will be handled in existing trains, there will be no impact on Metra's operations whatsoever.[8]

FIGURE 2
METRA CHICAGO CLOSE-UP

4 METR-7, Verified Statement of Rich Oppenheim ("Oppenheim V.S.") at 22.

5 *Id.*

6 As illustrated above by Figure 2, transfers to or from other railroads require trains to move to or from Bensenville Yard to or from Indiana Harbor Belt's lines south of Tower B12 or east of B12 to Cragin Junction and beyond to the BRC and NS.

7 *See* Amended Operating Plan at ¶ 210.

8 I note that one of the train symbols (170/171) from the east will be re-numbered. *See* Appendices G (at 1) and I (at 3-4) of Amended Operating Plan.

11. In fact, I anticipate that train activity east of Bensenville associated with Schiller Park may be reduced pursuant to the reconfiguration of Bensenville Yard, which I discuss more fully below. Trains 142 and 143 will no longer depart from or arrive at Schiller Park, which requires occupying the diamond at Tower B12, since the automotive and intermodal facilities will be consolidated at Bensenville Yard.

12. Again, to avoid any doubt, Applicants project that the Transaction will only add eight daily freight trains to the MD-W Line, all of which will travel on the portion of that line west of Bensenville Yard, and no more. While Applicants' Amended Operating Plan shows a Transaction-related train count change of 8.00 for the Bensenville Metra, IL – Randall Road, IL segment of the Elgin Subdivision (which is what Metra refers to as the MD-W Line) and a separate transaction-related train count change of 6.43 for the Bensenville, IL – Tower B12, IL segment of the Elgin Subdivision,[9] the former is inclusive of the latter for the reason explained above in paragraph 8.

13. Metra also appears to think the Transaction will result in meaningful increases in traffic to the MD-N Line. Respectfully, Metra is incorrect. The Transaction will do nothing of the sort. We made clear in Appendix A of the Amended Operating Plan that there is no Transaction-related train count increase for the MD-N Line.[10] While the Amended Operating Plan does show small Transaction-related increases in density data for that line,[11] these increases are modest and can be handled in existing trains, with no foreseen impact on Metra operations or Metra schedules.

9 *See* Amended Operating Plan, Appendix A at 4 (MST Seg Nos. 81 and 82).

10 *See id.* at 3 (MS Seg Nos. 69-71).

11 *See* Amended Operating Plan, Appendix T at 7 (Segment Nos. 69-71).

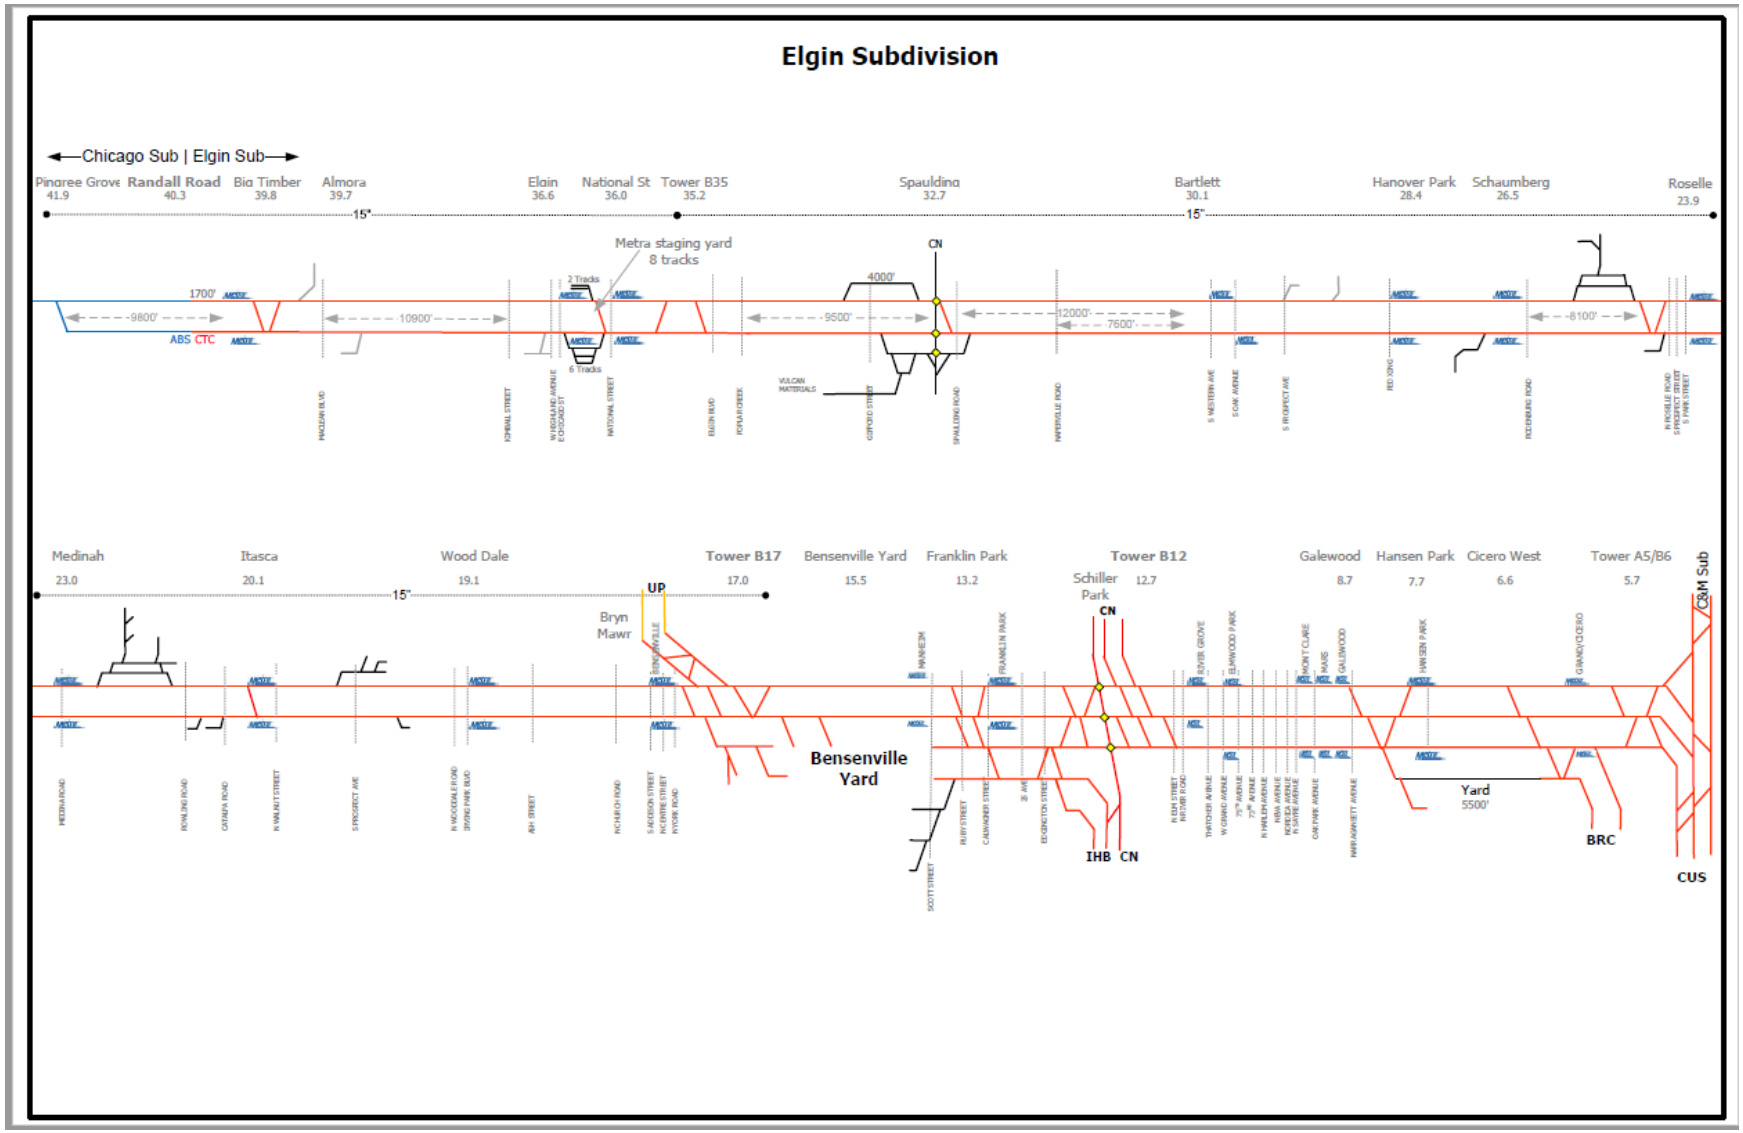
14. Metra also asserts that Applicants understated train counts between Milwaukee and Chicago by at least 6.28 trains per day.[12] Given the source they cite to, it is my understanding that Metra is referring to an additional 6.28 Amtrak trains that will travel on the MD-N Line. First, this is not Transaction-related. Applicants' settlement with Amtrak (which was publicly filed) makes clear that Amtrak was planning to add these trains regardless of the Transaction.[13] Second, the settlement agreement contains clear conditions requiring Amtrak to add capacity to allow for the additional trains to be added.[14]

B. There Is Ample Capacity for Additional CPKC Freight Trains on Metra's MD-W Line

15. Not only does Metra misunderstand the actual scope of the Transaction's impact on the lines it shares with CP, but it also incorrectly claims that the MD-W Line lacks sufficient capacity to accommodate eight additional daily freight trains without adversely impacting its operations.

16. First, I address Metra's numerous claims of errors with Applicants' capacity analysis. To satisfy itself that sufficient capacity existed on the Elgin Subdivision (of which Metra's MD-W Line is a part), CP's Operating Plan Team used its understanding of past history; its intimate knowledge of operations on its network; its understanding of the planned reconfiguration of Bensenville Yard; and ran various analyses *with an assumption that freight trains must be scheduled outside of Metra's peak periods*. CP is confident that its analyses, so informed by its expertise with its own network and wealth of experience, are reliable and accurate. In fact, CP reviewed and modified Metra's RTC simulation of operations starting at

12 *See* Metra Supplemental Comments (filed June 9, 2022) ("METR-8") at 4.



13 *See* Amtrak-Canadian Pacific Agreement (filed February 2, 2022).

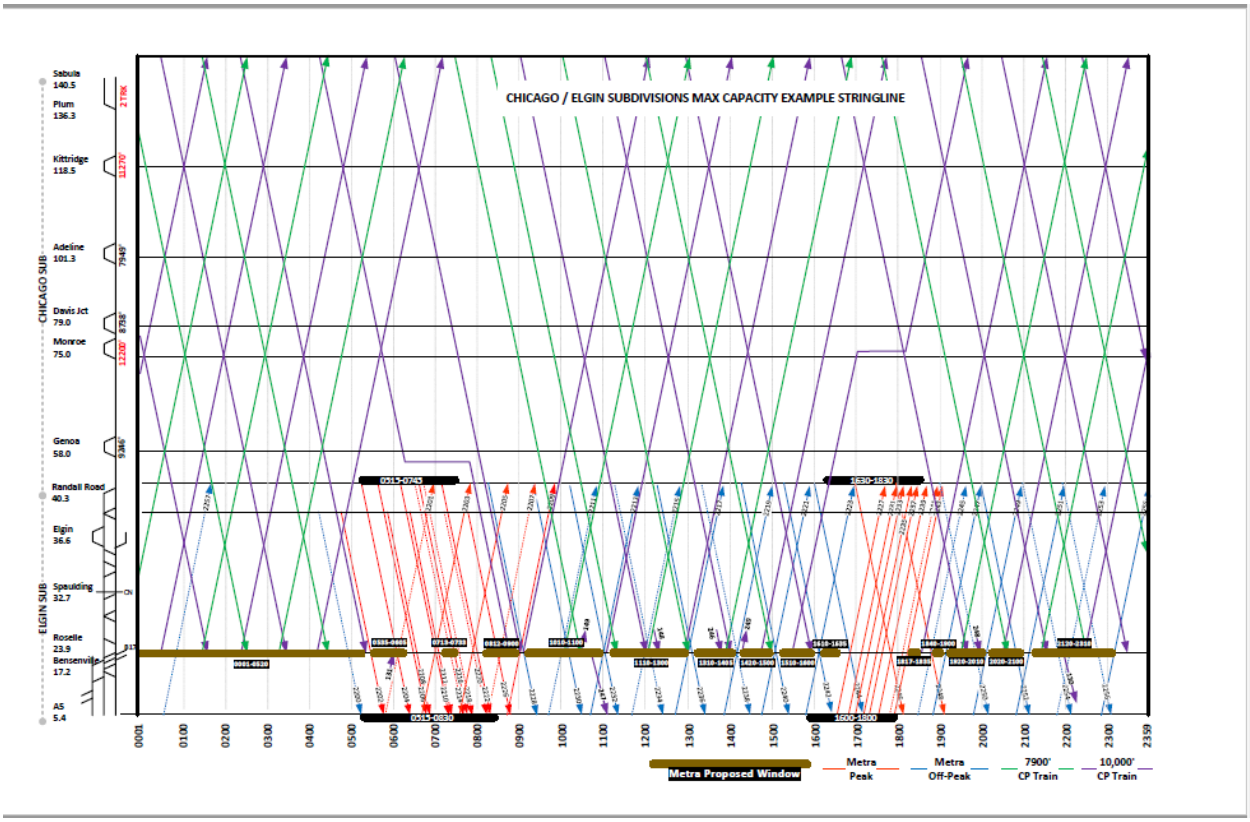
14 *See id.*

River Junction through to Chicago and Sabula Junction and, as I explain more fully below in Section E, the RTC simulation, as corrected, confirmed what CP already knew—there is sufficient capacity on CP's Elgin Subdivision and Marquette Subdivision to accommodate Applicants' projected traffic increases without adversely impacting Metra's operations.

17. Second, I illustrate here how the MD-W Line has ample capacity to handle eight additional daily freight trains without adversely impacting Metra's operations. Figure 3 below illustrates the track turnouts and location of Metra stations on CP's Elgin Subdivision.

FIGURE 3
ELGIN SUBDIVISION TRACK SCHEMATIC

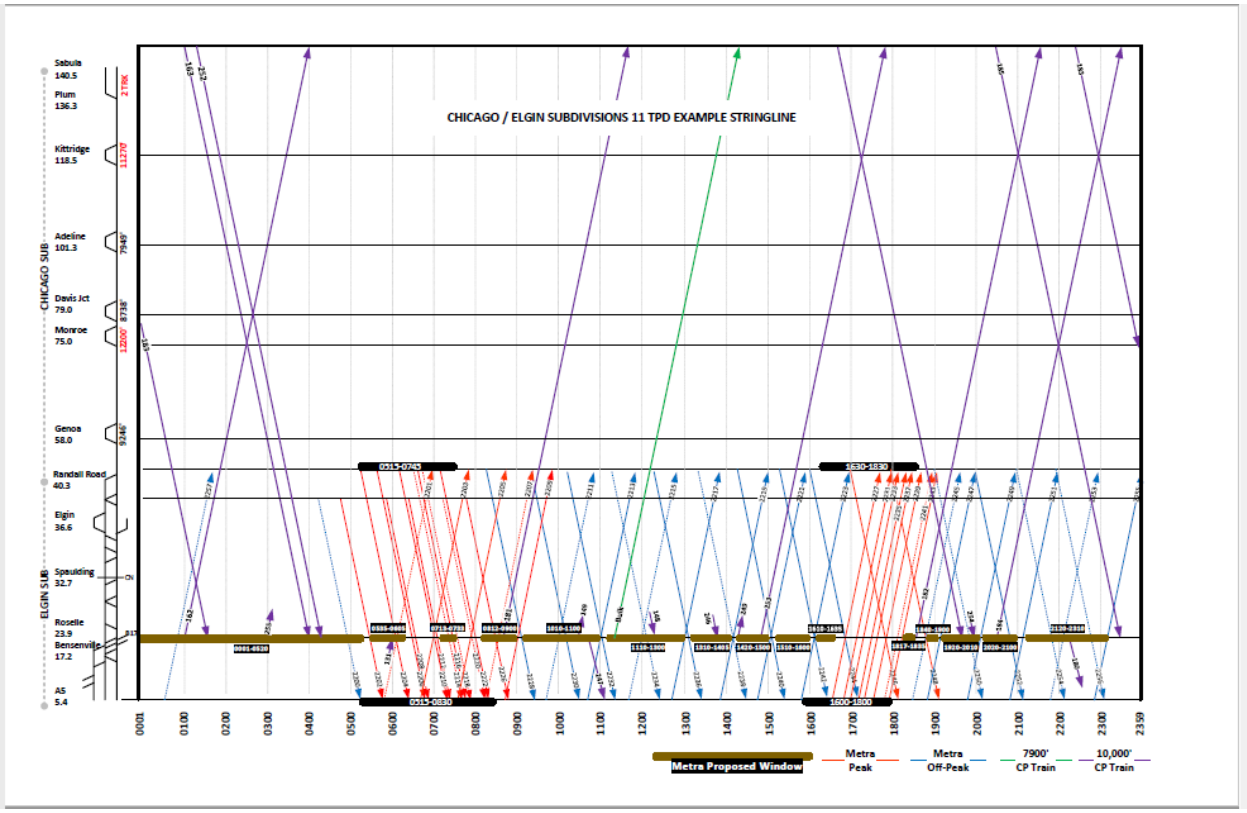
18. The Elgin Subdivision west of Bensenville, where Applicants anticipate adding eight daily freight trains, is 23 miles long west of Bensenville, double track, CTC-equipped, and features nine crossovers west of the interlocking at Tower B17. It has track speeds of 40 miles-per-hour for freight trains and 70 miles-per-hour for passenger trains. This leads to a typical run time of about 45 minutes for both freight trains and passenger trains (passenger is inclusive of stops).



19. Figures 4 and 5 below are string-line graphics intended to help illustrate the available capacity on the MD-W Line and surrounding areas, and contextualize the Transaction. Figure 4 shows the maximum number of slots that are available for freight trains to run on CP's network near the greater Chicago area, while avoiding commuter windows. (To avoid any doubt, Figure 4 is simply hypothetical and is intended to illustrate the maximum available slots as a function of the existing and planned siding (Monroe) on the Chicago Subdivision, not any actual traffic flows foreseen as a result of the Transaction.) As the string-line in Figure 4 below shows, with freight trains running with similar transit times as passenger trains (as described above in paragraph 18), there are several slots available for freight trains in the non-peak windows. In fact, Mr. Oppenheim testified that he had previously analyzed the available windows between scheduled Metra trains.[15] The spreadsheet reflecting Metra's analysis shows that there are several available windows, which Mr. Oppenheim evidently acknowledged, both during peak and non-peak periods trains, in which freight trains can be run.[16] You will note that per the spreadsheet provided by Mr. Oppenheim and shown in brown in Figure 4, the slots we

[15] Oppenheim Dep. Tr. at 175:4-176:20.

[16] *See* "B17 and B12 – Freight windows – A – Referenced in Deposition Held on 06-07-2022.xls" (Exhibit 2).



modeled here align with the available slots shown in his spreadsheet, and green lines represent slots where trains will fit in all the sidings and purple indicates slots that are designed to utilize longer sidings.

FIGURE 4
STRING-LINE OF AVAILABLE SLOTS ON CP NETWORK NEAR METRA'S LINES

20. Figure 5 below, meanwhile, is an illustrative graphic provided to demonstrate a potential grid of slots in which Applicants project they could realistically run the eight additional freight trains—again, avoiding commuter windows—by making use of siding capacity on that portion of CP's network. Even with the addition of eight additional daily freight trains owing to the Transaction, there is still capacity to accommodate reasonable requests from Metra to add trains or make schedule changes.

FIGURE 5
ILLUSTRATIVE STRING-LINE OF CP NETWORK SLOTTING EIGHT ADDITIONAL FREIGHT TRAINS

21. Further, as Adolph Gameiro more fully discusses in his Reply Verified Statement, by historic comparisons, there are currently low freight train frequencies on the MD-W Line and thus slots exist between existing peak and non-peak period operating windows in which Applicants' additional freight trains can be scheduled.[17] Our capacity analysis, described in the Application, showed that the MD-W Line has ample room for the anticipated increase in train volumes, in significant part because the additional freight trains would be scheduled to work with Metra's tightly scheduled operations.[18] And again, as discussed more fully below in

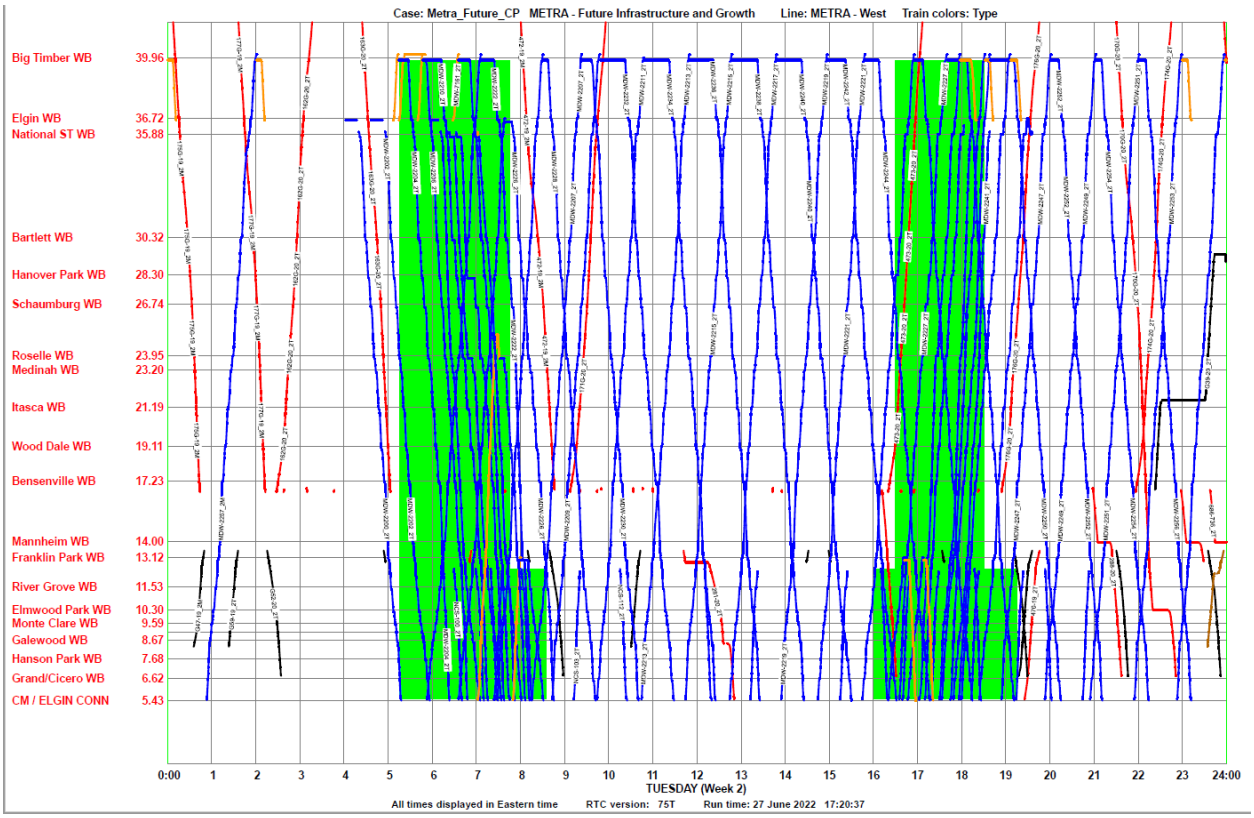
[17] *See* Reply Verified Statement of Adolph Gameiro at ¶ 27.

[18] Metra's claim that CP has been bad at complying with existing schedules is addressed by Nick Walker in his Reply Verified Statement. Walker R.V.S., at Section I.B.

Section E, CP's corrected version of Metra's RTC modeling confirmed that adequate slot capacity exists on the Elgin Subdivision without adversely impacting Metra's operations.

22. Metra also takes issue with the length and weight of the trains Applicants will run over the MD-W Line, arguing that the MD-W Line was never meant to accommodate such trains, and that there are no sidings on the MD-W Line, nor on CP's adjoining Chicago Subdivision, long enough to fit these trains. It similarly argues that CP's Chicago Subdivision (which is adjacent to Metra's MD-W Line) reduces from double track to single track two miles west of Metra's Big Timber Road stations, which causes delays toward the end of its MD-W Line.

23. However, Metra's focus is too narrow. As their witness Mr. Godfrey recognizes, it is important to assess the capability and flexibility that the broader network provides for slotting trains through Chicago.[19] Applicants plan to add a new siding at milepost 75, which is situated at Monroe, Illinois and located 33 miles west of the existing double track at Pingree Grove. With another long siding at milepost 118, CP's Chicago Subdivision will have two sidings greater than 10,000 feet and three sidings capable of handling bulk trains or scheduled trains that fit those sidings. The subdivision also has double track at either end. Coupled with investment in the Bensenville Yard reconfiguration and CP's line between River Junction and Davenport to add capacity, CP has designed a network with sufficient capacity, sidings and flexibility to allow for fluid train operations—including the flexibility to have freight trains in slots avoiding the commuter rush.



24. Further, Figure 6 below is the string-line graphic produced by CP's corrected version of Metra's RTC simulation that, as discussed in Section E, successfully dispatched the

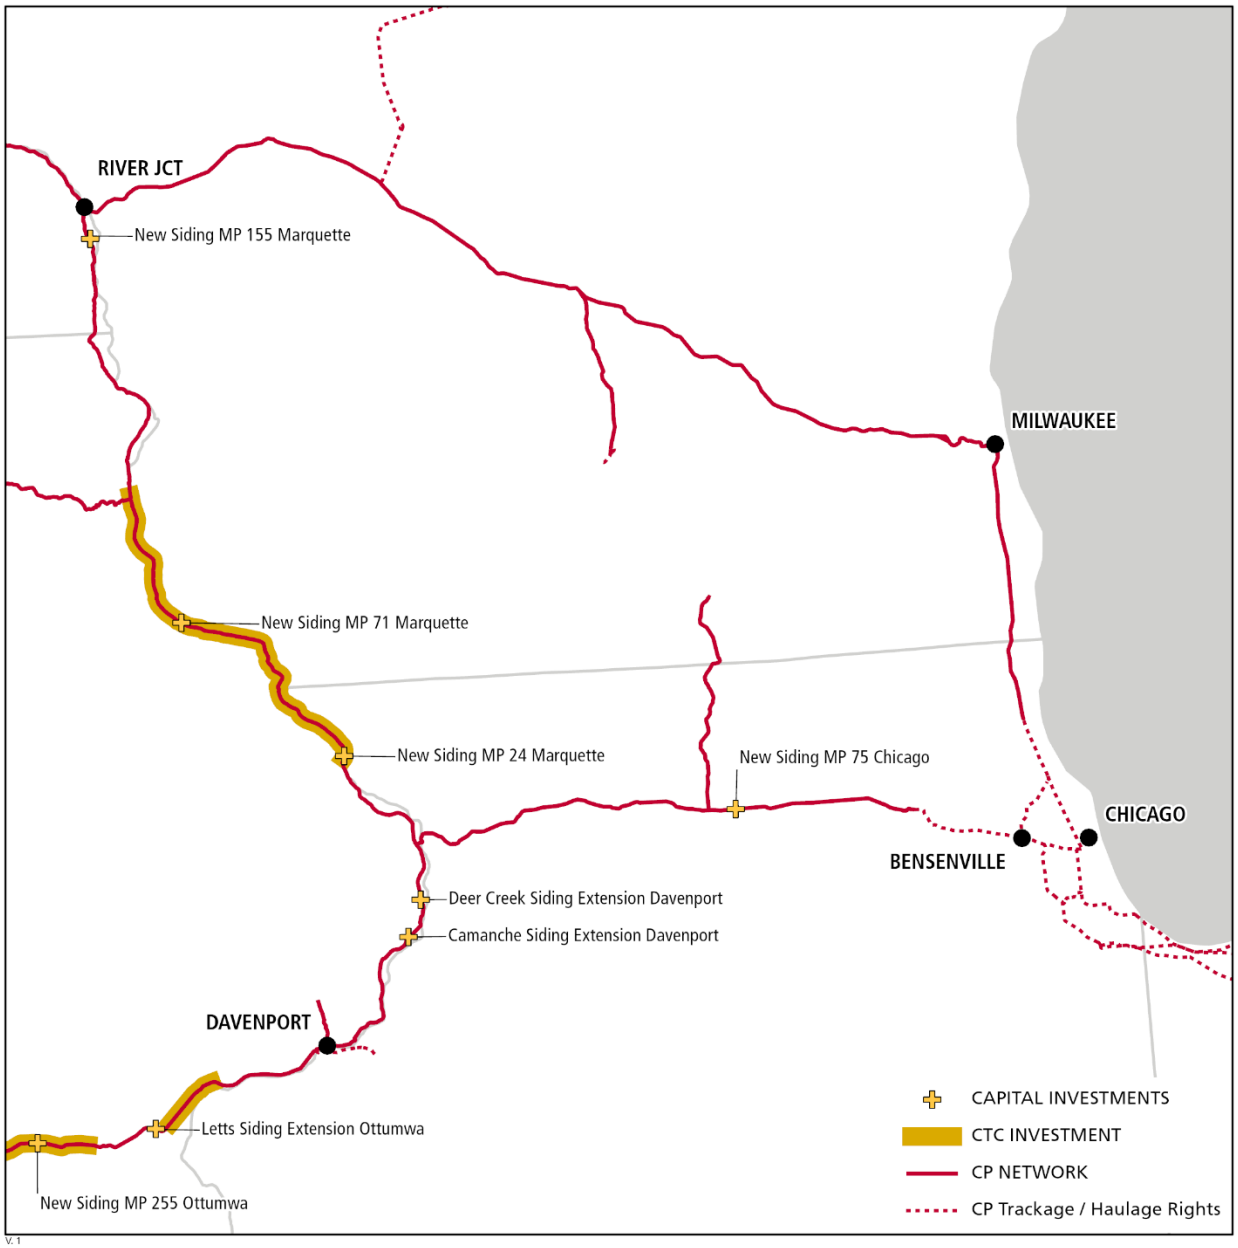
[19] *See*, e.g., Godfrey Dep Tr. at 83:25-86:10.

St. Paul through to Chicago and Sabula Junction rail segments post-Transaction, which includes the Elgin Subdivision and the proposed additional trains to be dispatched on that subdivision. In Section E, we describe how the additional eight trains on the Elgin Subdivision had no impact on Metra's performance. The string-line below demonstrates what that simulation did to slot Applicants' proposed schedules after calibrating that model to the priorities and appropriate dispatching flexibilities with which CPKC would operate in delivering the additional eight freight trains, with no additional impact to Metra's services. After configuring the RTC model with the priorities and parameters as we operate today, the corrected RTC simulation dispatched the lines as we expected those lines to be dispatched based on our experience and understanding of our network's capacity, including our interactions with Metra.[20]

[20] As noted in the report summarizing the results of CP's review and corrections to Metra' RTC simulation, attached hereto as Exhibit 1, when examining stringline plots an expert can determine whether the operation is being managed in the same manner as a real dispatcher would or whether infrastructure, operating parameters or dispatch settings in the RTC model may not be configured properly. *See* CP RTC Report (Exhibit 1 at 3).

FIGURE 6[21]
RTC SIMULATION STRING-LINE

25. I recognize that CP makes several claims throughout its comments of CP interfering with Metra's trains during so-called "peak periods." However, freight trains are generally not dispatched on the MD-W Line during peak periods, as Nick Walker more fully discusses in his Reply Verified Statement.[22] Indeed, as data shows, this hardly ever actually occurs—between 2019 and 2021, only 17% of all CP freight trains on the MD-W Line operated at any point during peak windows[23] and many of these were active for only a small portion at one end of the window. CP's preference has been, and CPKC's preference will continue to be, that freight trains be dispatched outside of Metra peak periods whenever possible, in compliance with



21 Ex. 1, at Ex. A-2.

22 *See* Reply Verified Statement of Nick Walker ("Walker R.V.S.") at ¶¶ 7-12, 38.

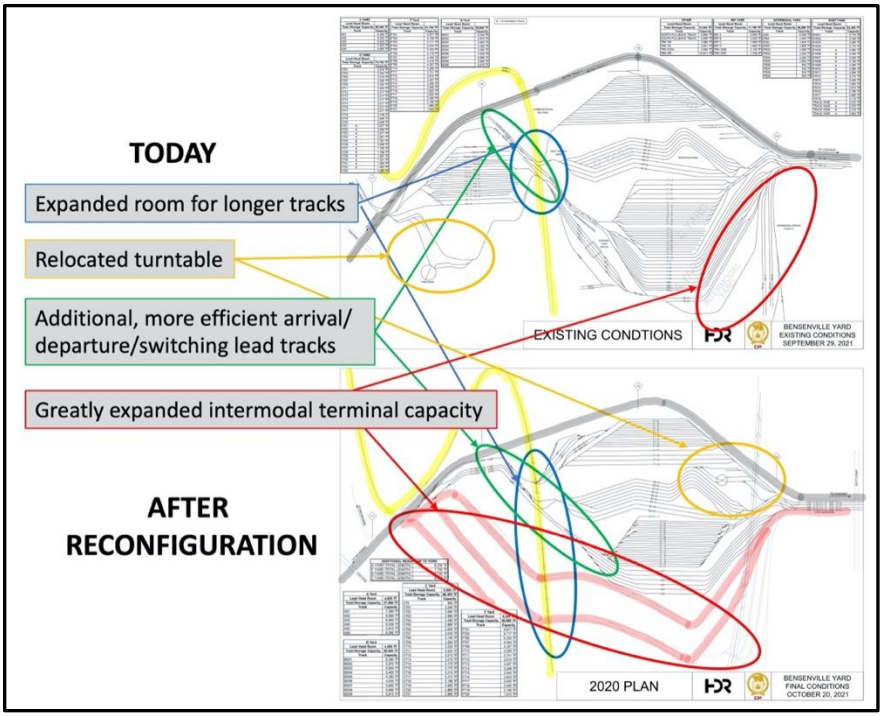
23 Workpaper "Train actuals Peak Windows.xlsx" at tab "Window Chart."

CP's contractual commitment to not interfere with Metra's peak period operations. Moreover, this is not a Transaction-related concern because new CPKC trains will be scheduled outside peak windows. Lastly, Metra ignores that Applicants plan to add capacity between Davenport and Chicago to flexibly slot trains to and from Chicago, as shown by Figure 7 below, which will allow CPKC to avoid interfering with Metra trains during these windows.

FIGURE 7
TRANSACTION-RELATED CAPITAL PROXIMAL TO CHICAGO

26. Throughout its comments, Metra incorrectly argues that Applicants understated the volume of trains moving over Metra's lines because the Application does not discuss passenger trains, other classes of freight trains, local trains, yard trains, work trains or foreign trains that traverse Metra's lines. Throughout its supplemental comments, Metra further argues that the Amended Operating Plan understates the volume of traffic because it does not consider organic growth. As I explain below, Metra is incorrect on both fronts.

27. Contrary to Metra's assertions, CP did consider the impact of other types of trains when assessing the impacts of the Transaction. In assessing whether a local train, foreign train, yard train or work train has an impact on capacity, CP anchors itself on methods and measures of capacity utilization. CP then builds on its understanding of local operations, yard and track maintenance activities, foreign train activities and how long it takes to traverse segments or diamonds. CP also enlists local experts to understand the nature and cause of operational interference as well as what can be done to remedy that interference. CP also calls upon its past experience on its own lines. Notably, in the case of the MD-W and MD-N Lines, CP considered the fact that these lines historically had heavier freight operations than there are currently.



28. Further, as shown on page six under the "Organic Growth" column of Appendix T of the Amended Operating Plan, Applicants did take into account organic growth on the Elgin and C&M Subdivisions (of which Metra's MD-W and MD-N Lines are part).

C. Metra's Analysis Does Not Take Into Account the Benefits of Ongoing Work to Expand and Reconfigure Bensenville Yard

29. Metra's analysis of the Transaction is completely devoid of any consideration of the planned reconfiguration of Bensenville Yard, which is a significant project that will smooth operations on the MD-W Line. Instead, Metra simply pleads ignorance that they do not know the details of the reconfiguration and asserts that Applicants do not adequately explain how this

project will help resolve current operating issues as well as any future issues created by the Transaction.[24] To set the record straight, I explain in this section how the Bensenville Yard reconfiguration will substantially improve operations on the MD-W Line, helping to both resolve current issues and to accommodate the increased traffic from the Transaction. Figure 8 below is a map detailing the before and after conditions at Bensenville Yard, and the accompanying benefits for Metra.

FIGURE 8
MAP SHOWING BEFORE AND AFTER CONDITIONS AT BENSENVILLE AND BENEFITS FOR METRA

30. Nick Walker's Reply Verified Statement includes more detail on the planned reconfiguration of Bensenville Yard and its many benefits on fluid operations on the MD-W and

[24] *See* METR-7 at 12.

MD-N Lines.[25] I provide here additional insight on the Bensenville Yard reconfiguration from an Operating Plan point-of-view.

31. In Bensenville's current configuration, all switching and arrival departure activity is driven through a narrow "waist" in the middle of the yard as captured inside the blue and green circles in Figure 8 above. With all of the growth traffic being processed into trains heading west or arriving from the west, any interference in the "waist" of the yard has the potential to delay trains from clearing Tower B17 efficiently. However, as more fully described in Nick Walker's Reply Verified Statement, the reconfiguration will eliminate this bottleneck issue by removing a UP embankment in favor of a series of bridges that will unlock a wider footprint supporting longer yard tracks.[26]

32. Moreover, under the reconfiguration, CP will be able to yard a 10,000 foot train without delay. The reconfiguration will create longer receiving tracks that can accommodate a 10,000 foot train. CP has designed the additional trains resulting from the Transaction to run up to 10,000 feet with two principal drivers anchoring that assumption. The first being Bensenville Yard's arrival and departure capabilities, and the second being the Mexican train length restrictions with trains held to 3,000 meters (approximately 10,000 feet). With Transaction-related growth primarily anchored by either bulk unit trains of less than 10,000 feet or intermodal spanning the three countries, the design of Bensenville Yard has been further refined to ensure efficiencies associated to the Transaction.

33. The most important refinement of the reconfiguration is the ability of Bensenville Yard to directly receive and depart trains from the new intermodal yard configuration. By

[25] *See* Walker R.V.S. at ¶¶ 54-58.

[26] *See* Walker R.V.S. at ¶ 57.

relieving the "waist" of the yard through independent leads and also by developing the intermodal yard to arrive and depart trains directly, the reconfiguration will create capacity and flexibility within the yard, which will in turn reduce interference at Tower B17, the most critical location as it pertains to Metra's operations, and relieve pressure on Metra's mainline tracks.

34. CP ultimately intends that the reconfiguration of Bensenville Yard will eliminate the need to use Schiller Park for intermodal and automotive traffic. As previously noted, this may actually reduce train activity east of Bensenville associated with Schiller Park. Trains 142 and 143 will no longer depart from or arrive at Schiller Park, which requires occupying the diamond at Tower B12.

35. The Bensenville Yard reconfiguration will also help accommodate the increased traffic from the Transaction. Metra notes that there will be an 11% increase in processing demands and 112 additional daily cars at Bensenville.[27] Importantly, the removal of the UP embankment over Bensenville Yard will allow for the creation of independent leads and thereby remove interference and switching and processing activity between F-Yard, the classification yard, and the arrival/departure yard and support longer yard tracks. With the "waist" of the yard sorted out, CP will be able to focus its different yards on specific tasks or functions. For example, F-Yard will be dedicated to processing blocks for the east while the Class-Yard will be dedicated to processing blocks for the west and the arrival/departure yards will be dedicated to arriving and departing trains. As noted in paragraph 33, the expansion of the intermodal yard will allow for the direct arrival and departure of intermodal train services, which will reduce present day interference attributed to the frequent movement of intermodal traffic between the

[27] *See* METR-7 at 13.

various yards. The processing lift resulting from what is described above will easily surpass the incremental 112 cars per day and 4 new block demand resulting from the Transaction.

36. It is important to note that of the 112 additional daily cars at Bensenville Yard as a result of the Transaction, only 32 will go to Eastern Canadian destinations. This traffic will be handled in existing services as noted in Paragraph 213 in the Amended Operating Plan.[28] As a result, there will be no material impact on transfer operations in the Chicago terminal or yard processing demands at other carriers' facilities across the terminal.

37. I further note that CP's recent land agreement with the Illinois Toll Authority and the UP opens new options for expansion of container handling capacity at Bensenville Yard. As noted in Table 13 of the Amended Operating Plan, the Bensenville Intermodal facility is expected to see an increase of 586 handlings per day, by year three of the Transaction. When combined with 2019 volumes, total intermodal volumes by the end of year three, will be approximately 1273 handles per day, or 460,000 handles annually, as also noted in Table 13 of the Amended Operating Plan.

38. Today, the combination of CP's two Intermodal Facilities in Chicago at Bensenville Yard and Schiller Park provides sustainable capacity of approximately 420,000 handles per year, which is more than sufficient for existing volumes. Bensenville's expanded footprint will support the development of significantly greater intermodal capacity, adding longer intermodal servicing tracks, and increasing ground capacity for parking and storage. This design has the potential to more than double the combined capacity of Bensenville and Schiller Park

[28] Workpapers: "Base to Growth Bensenville Block Compare Including Eastern Canada and North Volumes"; "Optimized to Growth Bensenville Block Compare Including Eastern Canada and North Volumes."

compared to today, providing ample room for further growth, well beyond the current year three projections.

D. Metra's Claim that CPKC Will Route Kansas City – St. Paul Trains Via Chicago is Wrong, and Built on Grievously Flawed Modeling

39. Metra expresses a concern throughout its comments that the Marquette Subdivision is already at capacity and will be unable to handle the additional traffic Applicants plan to send over that subdivision. Metra hypothesizes that, as a result, CPKC will re-route that traffic through Chicago via the MD-W Line and then north towards Milwaukee via the MD-N Line.[29] Metra further claims that its RTC modeling confirmed this concern.[30] For the reasons I explain in this section, Metra's fears are unfounded, and its RTC modeling is grievously flawed and should be entitled no weight in this proceeding, as further explained below in Section E.

40. Metra argues that Applicants will add 6.6 daily freight trains over the Marquette Subdivision, which doubles existing conditions.[31] Metra asserts that the Marquette Subdivision is already near or at capacity under existing conditions, so doubling existing conditions is improbable.[32] Respectfully, Metra is incorrect—the Marquette Subdivision is not already near or at capacity. Today, CP operates on the Marquette Subdivision without issue. Moreover, that subdivision is more than capable of handling an almost 100% increase in traffic because CP is installing three new sidings on the Marquette Subdivision: one at Brownsville at milepost 155 by 2025, one at Turkey River at milepost 72 by 2024, and one at Bellevue at milepost 24 by 2024. When complete, the 159-mile Marquette Subdivision will have five sidings greater than 10,000

29 METR-7 at 18.

30 *Id.*

31 METR-7 at 15.

32 METR-7 at 20.

feet and four other sidings capable of handling expected bulk lengths. CP also plans to install CTC south of Marquette and broken rail protection north of Marquette, further enhancing the efficiency and safety of this subdivision. With a total year 3 demand up to 11.4 trains north of Marquette and 15.4 trains south of Marquette, the Marquette Subdivision is designed to support transaction related growth. Also, as further discussed below in Section E, Applicants' RTC modeling confirmed that Applicants infrastructure plan for the Marquette Subdivision will fluidly accommodate the anticipated traffic growth from the Transaction.

41. Metra also argues that the Marquette Subdivision has a challenging topography, such that Applicants' planned infrastructure improvements will be difficult to actually implement. CP deals with challenging topography throughout its network and CP's investment in the Marquette Subdivision reflects the unique characteristics of the topography of the Marquette Subdivision. CP will make significant investments between $13 million and $16 million for each of the three planned sidings discussed above in paragraph 19, for a total of $42 million, and additionally $30 million for CTC.[33] CP does not anticipate any obstacles to implementing these planned infrastructure improvements.

42. Metra further claims Applicants do not explain what will happen to operations while planned capacity improvements on the Marquette Subdivision are being constructed. Metra theorizes that traffic will be re-routed via Chicago while infrastructure is developed on the Marquette Subdivision. Respectfully, Metra is incorrect again. First, CP does not anticipate that all of the growth from the Transaction will materialize in the first year after the Transaction. In fact, the construction plan and sequencing reflects the currently anticipated timing in volume

[33] *See* Amended Operating Plan at 122 (Table 11).

growth.[34] CP would accelerate construction builds should volume growth materialize sooner. CP constantly monitors the 65% of maximum capacity threshold and adapts its network towards this threshold to allow for engineering track construction and other activities. CP would not so adapt the network by re-routing trains through Chicago, which would be substantially out of route. It would require additional crews, costs, and delays. Not to mention, it would burden CP's other (and Metra's) operations through Chicago, a fact of which we are well aware. Applicants are confident enough in the Marquette Subdivision, and in the impracticability of re-routing traffic through Chicago, to make a commitment that they will not take traffic circuitously 250 miles out of route, except for outages or in emergent conditions.

43. I more fully address the numerous flaws in Metra's RTC simulation in Section E below. Like the rest of its RTC simulation, the portion relating to the Marquette Subdivision was replete with errors and should be given no weight. The inability of Metra's models to dispatch existing CP freight trains should have been a clear indication that there was something wrong with their simulation.[35] Figure 11 referenced in Paragraph 49 below shows many of the infrastructure errors made by Metra in its RTC modeling, including those on the Marquette Subdivision.

44. The most notable errors Metra made in its simulation of the Marquette Subdivision are described in the CP RTC Report attached hereto as Exhibit 1. This included missing and undersized sidings at Harpers Ferry, Eckards and Dubuque, which incorrectly resulted in creating a 149-mile segment of single track with no meet location between Green

[34] *See* Amended Operating Plan at ¶ 298; *see also* "CP-KCS Capacity Projects.xlsx," at tab "CP-KCS Construction Planning."

[35] *See, e.g.*, METR-7 at 19 ("After imposing the restrictions on CP freight trains in the commuter peak periods, the RTC simulation would not run to completion.").

Island and Bluff for trains greater than 8,400 feet.[36] Metra's updated RTC simulation provided in June 2022 added the siding at Harpers Ferry and corrected the length of the Eckards siding but Dubuque and Green Island continued to be modeled at shorter, incorrect lengths.[37]

45. Metra's RTC simulation was so flawed that we corrected many of the major inputs and settings in Metra's RTC modeling, which proved what we know to be true—that the Marquette Subdivision will be able to handle the increased traffic we will run through it. [38] Figure 9 below is a table derived from the corrected RTC simulation, illustrating that the Marquette Subdivision was successfully dispatched with the increased traffic from the Transaction and without removing trains off the subdivision as Metra had done.[39] On a per train basis, the delays per train per day (as shown in the far right hand column) indicate equivalent performance to current operations on the Marquette subdivision.

FIGURE 9[40]
TABLE SHOWING MARQUETTE SUBDIVISION WILL FUNCTION

Line	Train Types	Case Name	Average Speed (MPH)	Delay %	Runtime Train Count (7/days)	Runtime Train Count (per day)	Delay Hours (7 days)	Delay Hours (per day)	Delay Minutes (per train)
Sabula-River Jct.	Bulks	Base	24.8	14.90%	22	3.1	2.4	0.35	6.70
		Future	22.3	27.40%	57	8.1	9.5	1.35	9.96

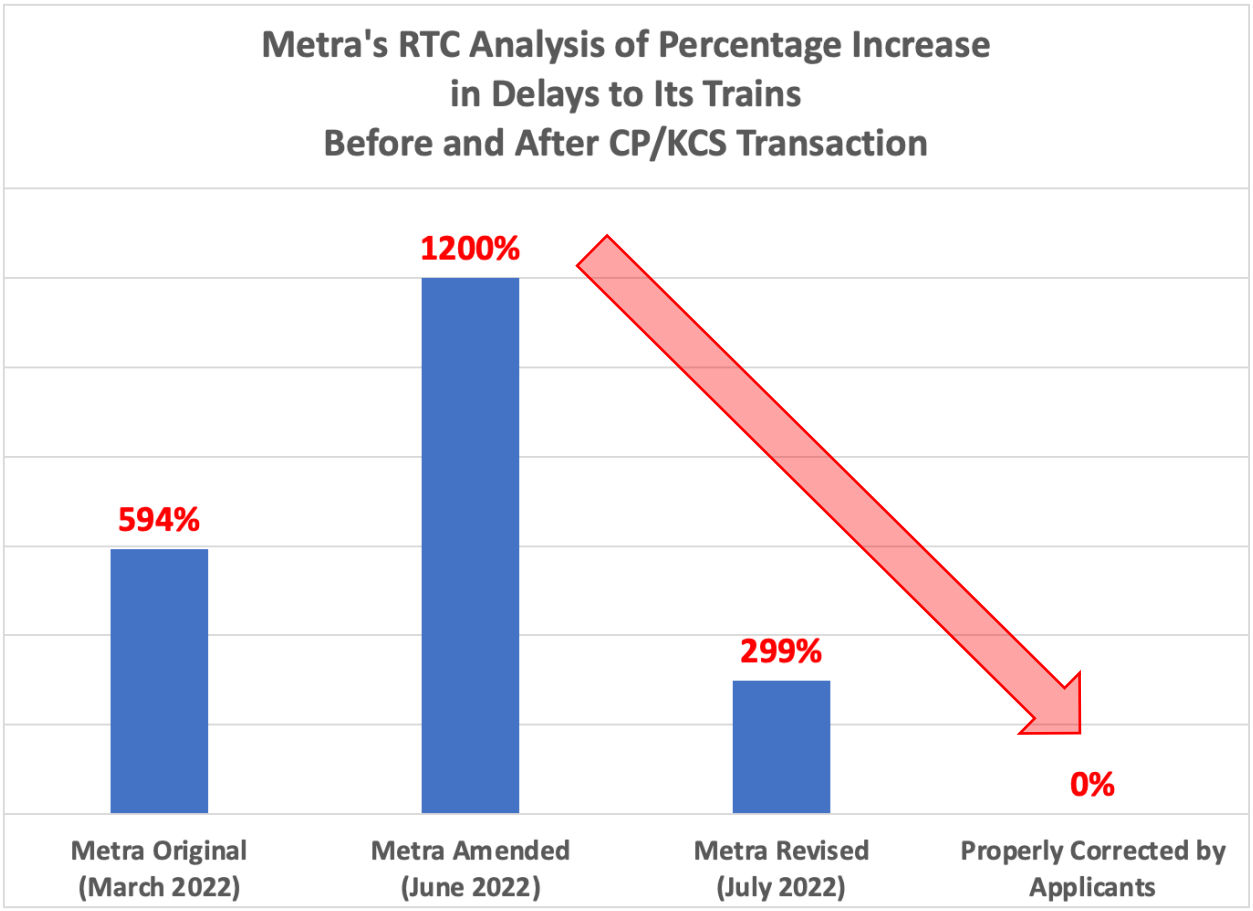
E. Metra's RTC Analysis is Fundamentally Flawed

46. It was clear from reviewing Metra's RTC simulation that it was fatally flawed with numerous errors and consequently it attempted to dispatch the operations of a rail network that does not exist in the real world. For that reason, Metra's RTC simulation should be afforded no weight in assessing the impacts of this Transaction in real world operations. RTC analysis is dependent on user-generated inputs and if even one input is not accurate, the simulation can diverge wildly from what would take place in the real world, rendering any conclusion derived from its results meaningless. CP conducted a review of Metra's RTC simulation and corrected the major errors in it. The results of that review and simulation are set forth in the CP RTC Report. I summarize those results here, noting the various and fatal flaws Metra made in its RTC simulation and illustrating that the corrected RTC simulation proves what CP knew to be true—that Applicants Operating Plan will work and not cause any adverse impacts to Metra's operations. Indeed, as described in the CP RTC Report, the simulation showed even at pre-COVID schedule levels and with the Transaction growth that the train delays to Metra's trains are not material on a train per day basis.[41]

47. I note at the outset that Metra corrected its RTC simulation not once but twice, the second time of which was filed just days before replies to comments and request for conditions were due.[42] As illustrated below in Figure 10, the results of Metra's threefold submissions swing

[41] *See* CP RTC Report (Exhibit 1) at 2 ("According to CP's corrected multiple simulation scenarios, there is no additional delay to Metra's trains between the Corrected Base and Corrected Future cases as a result of rising freight traffic levels.").



[42] An initial review of this second submission did not appear to change our analysis of Metra's RTC simulation in any material manner because, as noted in the CP RTC Report, our corrected RTC simulation had already corrected the errors Metra identified in this supplemental submission. CP RTC Report (Exhibit 1) at 1. However, because we were not afforded adequate time to do a full review, we

greatly, indicating the unreliability of their simulation. Indeed, Metra's initial submission showed delays to Metra were up approximately 594% as a result of the Transaction, while its corrected submission showed delays were up to approximately 1,200% and its third submission found delays to be around 299%.[43] This in and of itself is indicative of a faulty RTC simulation, as the corrections Metra made as outlined in their various submissions should not have caused such wild swings in results. In any event, for the reasons I explain below, there will be no additional delay to Metra's trains as a result of the Transaction.

reserve the right to supplement or amend our analysis should a more fulsome review warrant any such changes.

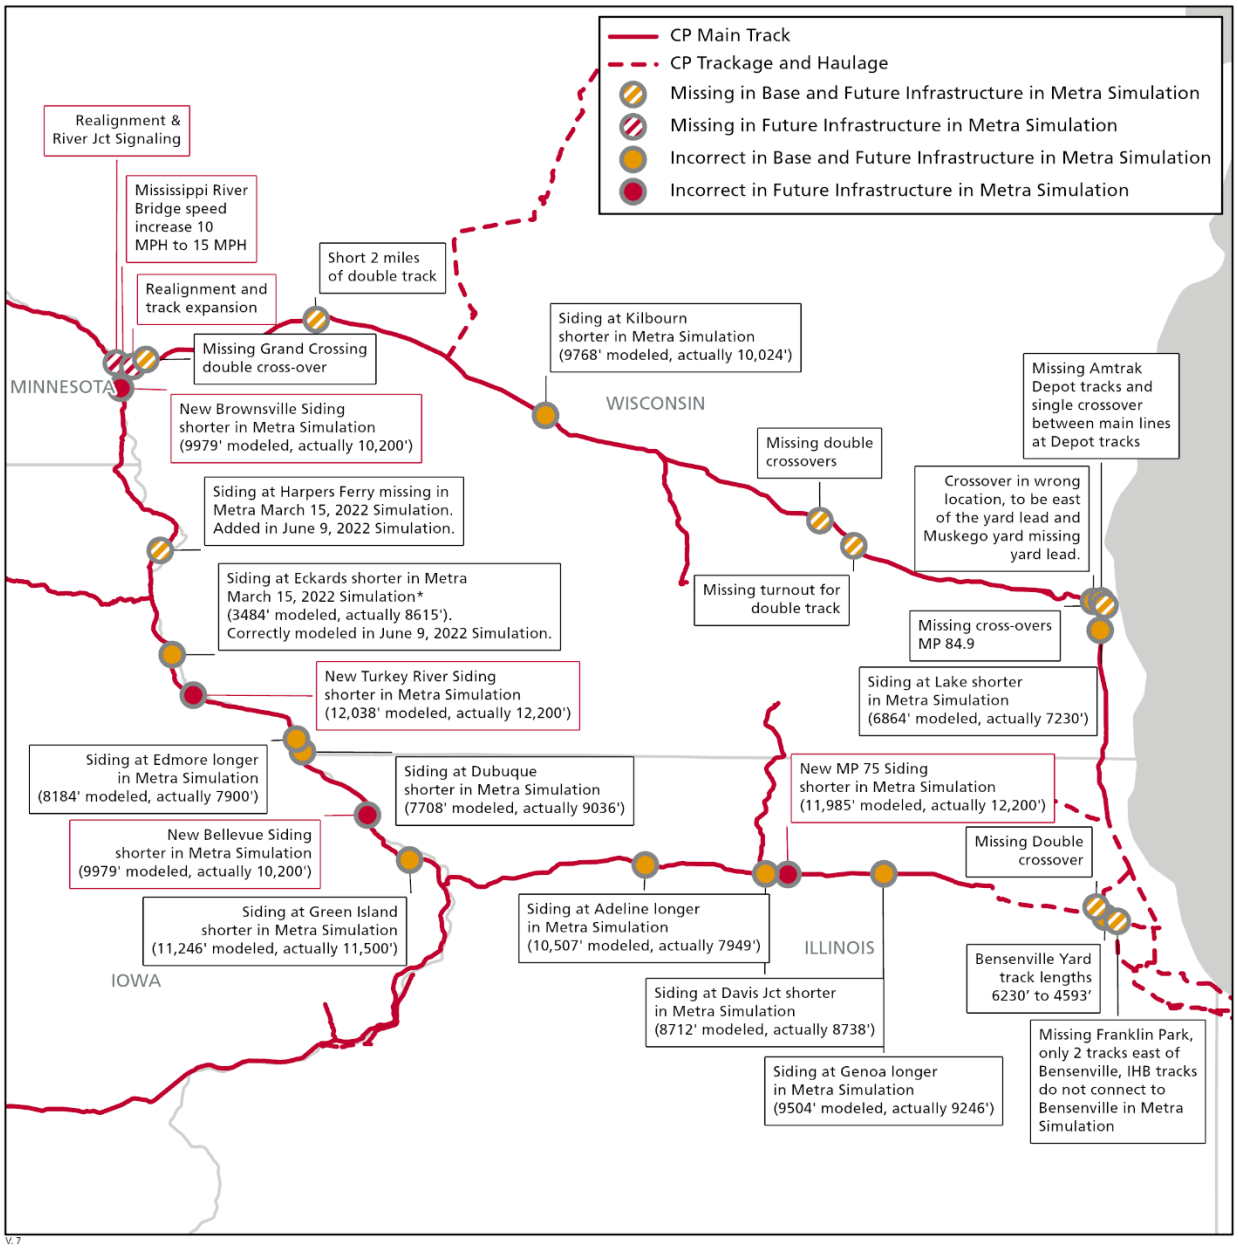
[43] *See* METR-7 at 21; METR-8 at 3; Metra Correction and Supplemental Statement (filed July 8, 2022) ("METR-9"), Attachment B.

FIGURE 10[44]
METRA'S EVOLVING RTC ANALYSES

48. First, Metra's RTC analysis was unable to even simulate actual *current-day* operations without reducing the number of trains on the Marquette Subdivision.[45] Metra even assumed the trains could make meets at Marquette, which is the junction at the Mason City Subdivision, by nosing on to the Mason City Subdivision and then backing on to the Marquette Subdivision after the meet. It should be noted there is no evidence in their simulation that any

[44] Sources: METR-7 at 21 (Metra Original, March 2022); METR-8 at 3 (Metra Amended, June 2022); Metra Correction and Supplemental Statement (filed July 8, 2022) ("METR-9"), Attachment B (Metra Revised, July 2022).

[45] Crowley and Mulholland V.S. at 60-61 (explaining that they needed to move existing trains off the Marquette Subdivision to the Mason City Subdivision in the base case).



trains met in this way. Regardless, Metra should have been concerned with the quality of its work given that Applicants were running their operation over the Marquette Subdivision in the real world without reducing train starts. For example, Metra hard coded dwell in based on its sample data. Hard coding in this way compounds dwell and forces trains to hold for long periods on the main line, increasing subdivision congestion.[46] Moreover, as explained in the CP RTC Report, there is no evidence that Metra's consultants attempted to validate their base model with Metra personnel, despite standard practice being to validate base case models against known, real-world operating metrics to establish a baseline.[47] This type of basic validation process would have made clear that the model was flawed. Nonetheless, Metra asks the Board to find from its RTC analysis that the Transaction will so significantly impact Metra's operations that Metra should be afforded a long list of conditions and contractual alterations. For reasons explained in this section, the Board should give Metra's RTC analysis no weight.

49. Figure 11 below shows many of the infrastructure errors Metra made in its simulation.

[46] *See* Elphick Workpaper "METRA Simulation Review Final.pdf," at 10.

[47] *See* CP RTC Report (Exhibit 1) at 1, 4.

FIGURE 11
INFRASTRUCTURE FLAWS IN METRA'S RTC SIMULATION

50. Metra made the infrastructure errors noted above but made numerous other modeling errors in its RTC simulation, which are also described throughout the CP RTC Report. This includes, but is not limited to, the following, which are intended to highlight the most notable of these errors:

a. Modeling many siding lengths as shorter than actual dimensions;

b. Modeling the double track on the Tomah Subdivision at Raymore as two miles shorter than actual conditions;

c. Missing three crossovers on the Watertown Subdivision, which incorrectly converted nearly 23 miles of mainline double-track to single track;

d. Missing double crossovers between Tower B17 and Bryn Mawr;

e. Missing tracks within and to the east of Bensenville Yard, as well as the Indiana Harbor Belt Railroad's connecting tracks;

f. Various other missing and improperly constructed infrastructure, set forth in Table 4.1 of the CP RTC Report;

g. Incorrectly modeling CP freight trains by using actual departure times from the week of April 13, 2021, rather than scheduled departure times, which overrides RTC's dispatch logic and eliminates the randomness of real-world operating events;

h. Forcing the model to incur actual delay values from the April 2021 time period, which forced the RTC simulation to add delay over and above that incurred through its natural dispatching logic;

i. Incorrectly modeling Metra's own commuter trains. CP tested Metra's base model with only passenger trains operating to help determine the accuracy of the passenger train inputs and passenger operations. Without freight trains in the model, Metra passenger trains still registered 2.4 hours of delay per week, when it should have operated with 100% on-time performance since it used time-tested, reliable pre-COVID Metra schedules, thereby indicating the base model was

improperly constructed and compromising all results from the base and future models;

j. Incorrectly configuring and applying dispatch settings, including assigning incorrect Rank and Priority settings to different classes of freight trains, which leads to an incorrect meet/pass logic;

k. Not using any signaling system or other attributes related to train authority, leading the RTC simulation to dispatch with fewer operating restrictions and consequently operate trains closer together than current conditions might allow due to real-world signal spacing, which can bunch trains and create ripple delays;

l. Omitting planned infrastructure changes to Bensenville Yard (despite Metra's consultants having received the conceptual design from CP); and

m. Not incorporating randomization, one of RTC's key attributes, which injects typically experienced delays into the model. Consequently, the RTC simulation did not include any variation in freight train performance.

51. Second, a collaborative team of internal and external subject matter professionals endeavored to correct the many errors with Metra's RTC simulation and construct a proper simulation. This resulted in an iterative approach. First, corrective actions were applied to Metra's Base Case Model, then to its Future Model. This involved correcting the errors noted above and all other errors described in the CP RTC Report. After that, three new models were created: a Base Case with corrections to Metra's Base Model but adding Bensenville intermodal tracks, a Future Case with those same tracks included, and a Future Case with additional Amtrak operations and associated infrastructure as planned by Amtrak and contemplated in the agreement by CP to cooperate with those plans. Each model was dispatched twice, once without

freight and once with freight. Each scenario with freight was programmed to run 15 times over the course of seven days. Passenger-only scenarios were not randomized because CP did not discuss with Metra operations personnel which events should be randomized and where the parameters should apply.

52. The results of the simulation resulted in the following key findings[48]:

a. Unlike Metra's improperly built simulation, CP's Base Model was able to successfully dispatch 15 randomized, 7-day runs. Importantly, it did so without any need to move trains off the Marquette Subdivision, in stark contrast to Metra's Base Model;

b. The planned infrastructure improvements to the Marquette Subdivision will accommodate the increased traffic Applicants project from the Transaction. Indeed, without removing any trains from the train file, the updated Future Case successfully dispatched 15 randomized, 7-day runs;

c. Not only did the simulation results show that planned capital infrastructure improvements will prevent any additional delays to Metra's operations from the Transaction, certain simulation results showed there may actually be a *slight but noticeable reduction in delays to Metra trains* compared to the Base Model;

53. Because the corrected RTC simulation showed that there will be no material impact on Metra's operations as a result of the Transaction, one could assume that additional capacity exists to add even more CP and Metra trains to the lines that they share.

54. Finally, I want to emphasize that CP is open to working cooperatively with Metra in using RTC modeling as appropriate.

[48] *See* CP RTC Report (Exhibit 1) at 16.

F. Many of Metra's Concerns are Unrelated to the Transaction

55. Metra makes many claims throughout its comments that are simply unrelated to the Transaction. Nick Walker more fully discusses Metra's numerous claims of existing issues with CP's dispatching and delays to Metra's trains in his reply verified statement.[49] I provide here a few further operational comments on a couple of these issues as well as a response to the claim Metra makes concerning CP's acquisition and subsequent operation of the DM&E lines.

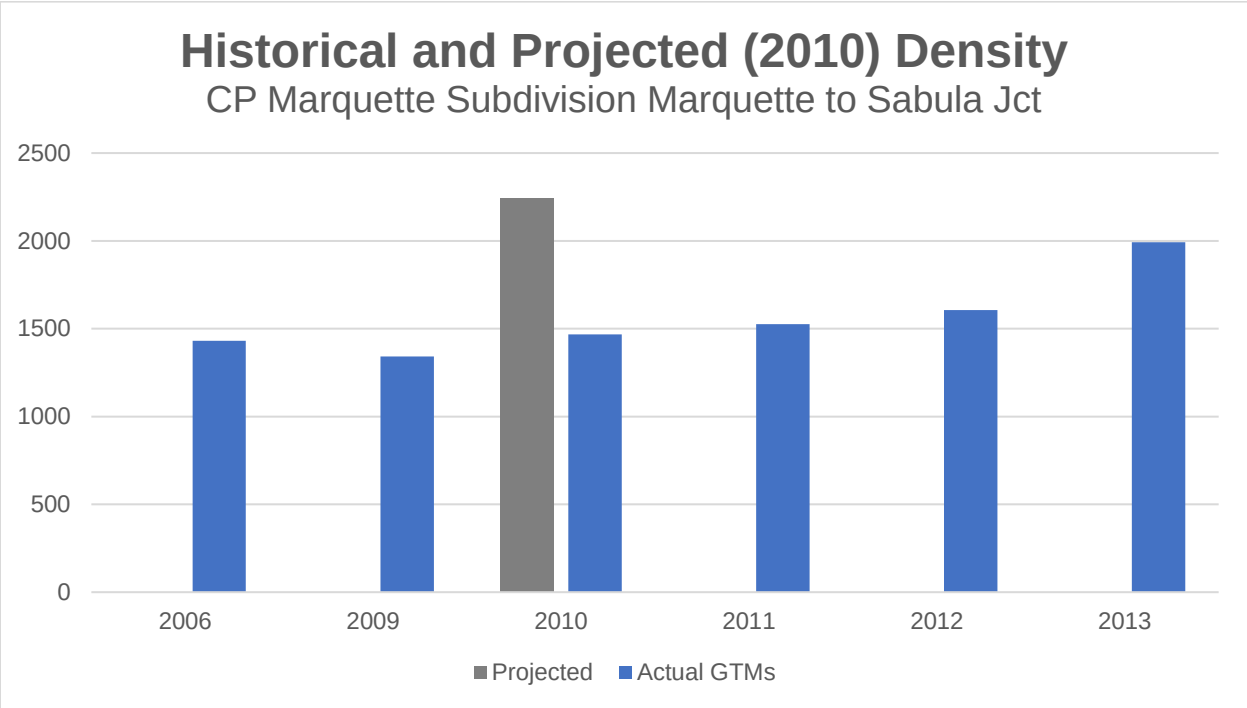
56. For instance, Metra complains that a typical example of CP-caused delays occurs when CP makes a crew change on the mainline tracks outside of Bensenville Yard.[50] This is entirely unrelated to the Transaction. Nonetheless, this occurs mainly for trains coming from Milwaukee on the MD-N Line seeking to enter Bensenville Yard at Tower B17, which cannot enter yard tracks in a fluid manner from that direction. This is partly due to the configuration of Bensenville Yard, which does not currently have an expedient path through Tower B17 into the current arrival tracks. As such, trains entering Bensenville Yard are required to stop and line switches. However, the Bensenville Yard reconfiguration includes power switches on the west-end, independent leads, and additional arrival/departure tracks supporting 10,000 foot trains, which together will allow for seamless entry into the yard for such trains and thus this will support both new and existing CPKC trains once the reconfiguration is completed.

57. Metra also complains throughout its comments that CP often dispatches Metra trains on the "wrong" side of the tracks from where Metra's passengers are normally picked up. Nick Walker more fully explains why this is occasionally necessary, that there is nothing unsafe about it and that Metra itself advocates for *more* cross-overs,[51] but I add that the Bensenville

49 *See* Walker R.V.S. at ¶¶ 6-53.

50 METR-7 at 40.

51 *See* Walker R.V.S. at ¶¶ 46-53.



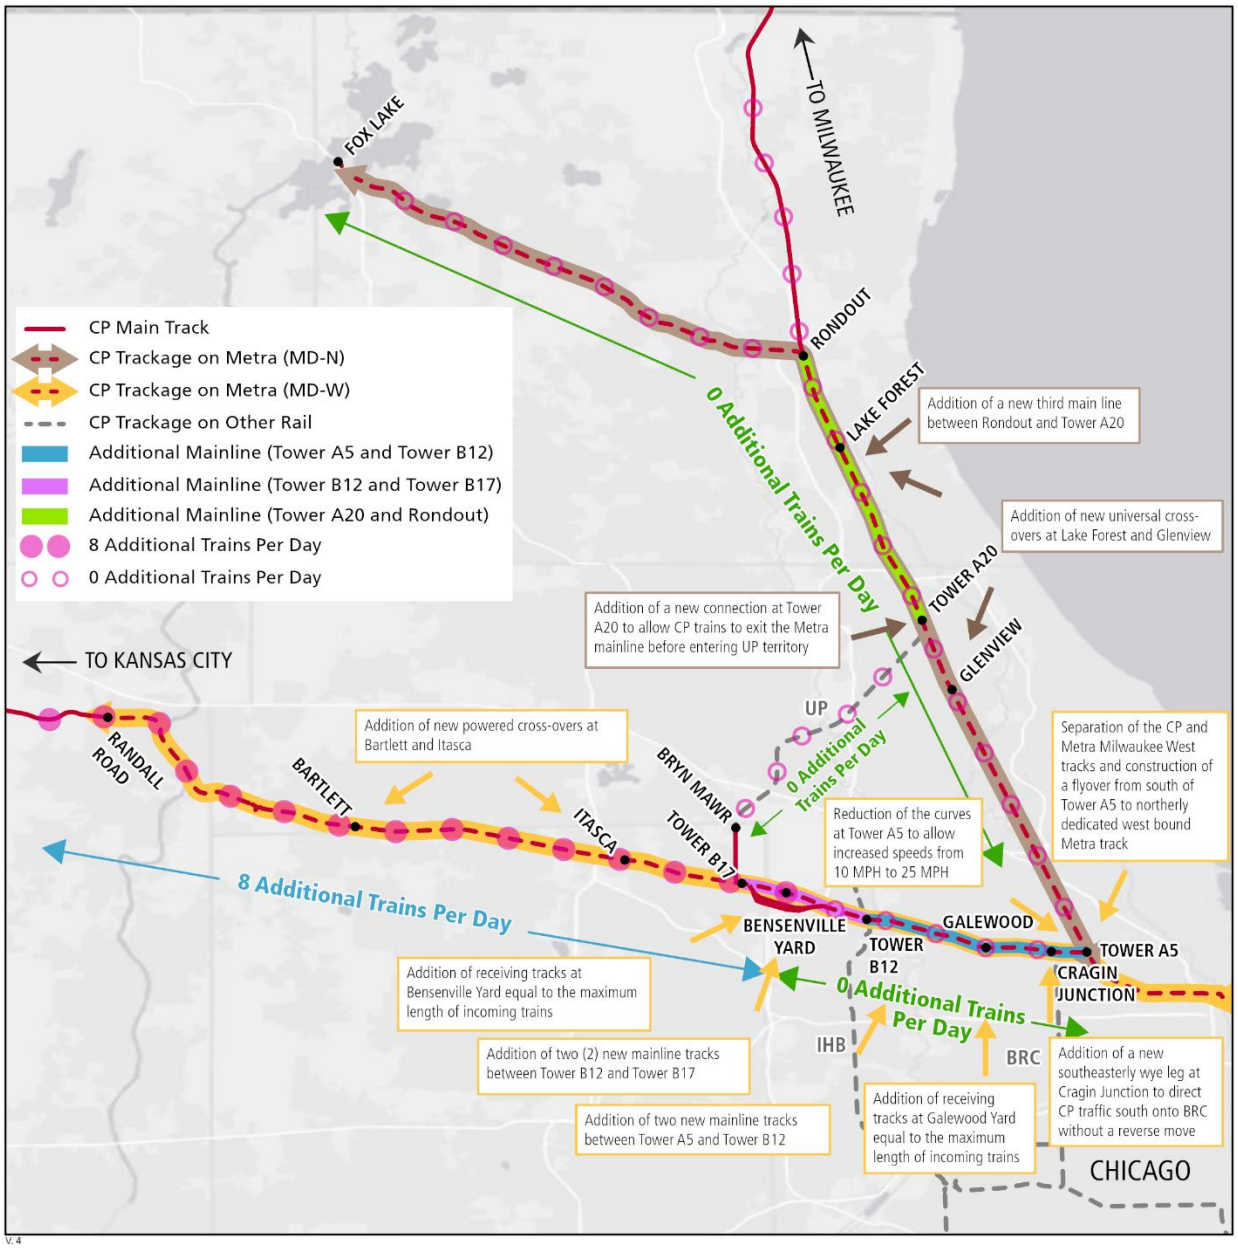
Yard reconfiguration, discussed above in Section C, combined with potential new cross-overs on the Elgin Subdivision aid in allowing for trains to either hold or revert to the normal platform side. Moreover, this issue will also not be exacerbated by the Transaction because new CPKC trains will be scheduled outside peak hours.

58. Metra also complains that CP's acquisition of the DM&E actually resulted in significant additional traffic that CP had not projected in its application at that time, seemingly with the desire that the Board will infer the same will occur with this Transaction.[52] Metra is not only incorrect on the facts of the DM&E implementation, as I explain, but its concern is entirely unrelated to this Transaction and lacks any explanation of how the DM&E implementation has any bearing on what will unfold with this Transaction. As Figure 12 below shows, traffic growth on CP's Marquette Subdivision from Marquette to Sabula Junction was actually significantly less than CP had projected in its Application at that time.[53]

[52] *See* Oppenheim V.S. at 23.

[53] Note that CP had only projected density data for 2010 in its Control Application for DM&E, which is why projections for other years are not included in Figure 12. CP takes a conservative approach when making projections due to the difficulty inherent in making projections. That CP's projection for 2010 was not met even in 2013 is a prime example

FIGURE 12[54]
ACTUAL V. PROJECTED DENSITY DATA FROM DM&E TRANSACTION



G. The Vast Majority of Metra's Infrastructure Demands Address Areas That Are Not Impacted At All By The Transaction

59. Metra requests that the Board order, as conditions to this Transaction, that CPKC pay for eleven different capacity improvements to the MD-W and MD-N Lines. For reasons I explain in this section, most of these capacity improvements are unnecessary, excessively costly, and would torpedo the Transaction.

60. *First*, most of Metra's requested capacity improvements are completely unnecessary considering that they address areas that are not impacted at all by the Transaction. Indeed, as illustrated in Figure 13 below, nine of its requested improvements are to areas of the MD-W and MD-N Lines where the Transaction will not increase train counts.

54 *See* "DME GTM Calculation.xlsx".

FIGURE 13
THE LOCATION OF METRA'S INFRASTRUCTURE DEMANDS

61. *Second*, the capital projects that Metra demands would render the Transaction uneconomical. Appendix A to this statement is a rough, tabletop cost estimate of all eleven capital improvements that Metra requests. The table below is intended to indicate that, on a conservative basis, Metra's requested infrastructure improvements could cost in the hundreds of millions of dollars in total.

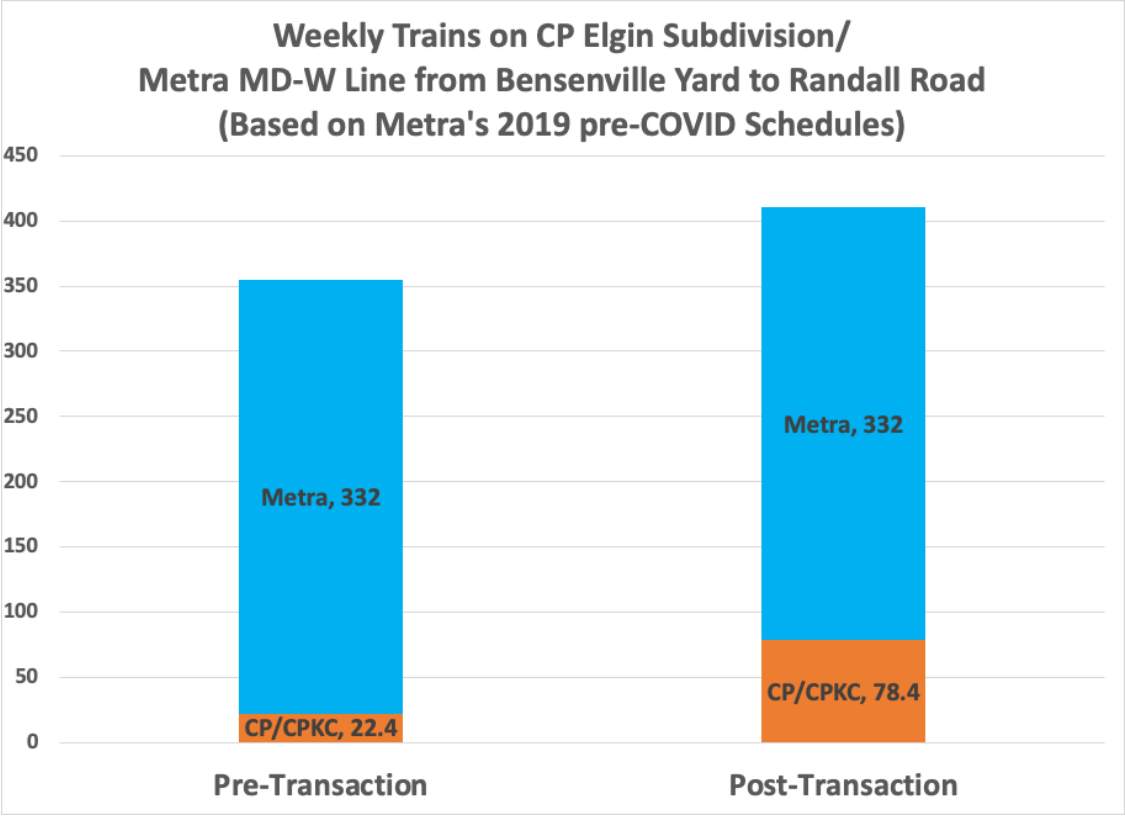
62. *Third*, even if Metra's infrastructure demands were relevant to the Transaction and economically viable (to be clear, they are not), many of Metra's proposed infrastructure projects are simply impossible to construct. Indeed, as Appendix A notes, many of these requests have feasibility issues.

63. *Fourth*, as already discussed in Section C above, the Bensenville Yard reconfiguration will address Metra's request for longer receiving tracks at Bensenville Yard.

64. Lastly, I note again that CP has always been, and will remain, committed to working cooperatively with Metra. This includes working with Metra to evaluate operations and adjustment to support the coexistence of freight and passenger train operations on the MD-W and MD-N Lines.

II. THE CHICAGO COMMUNITIES' CONCERNS ABOUT INCREASED FREIGHT TRAFFIC ON CP'S ELGIN SUBDIVISION ARE MISGUIDED, AS ARE THEIR REQUESTS FOR "RELIEF"

65. I have reviewed the Chicago Communities' Comments and Supplemental Comments in this matter. I understand that they assert that the Transaction will nearly triple freight traffic through their communities, and then in their Supplemental Comments assert that the Transaction will nearly quadruple freight traffic through their communities based on a revised analysis. I understand they conclude that this supposed increase will shut down their communities and cause other serious issues. However, the Chicago Communities' assertions are untrue, and their requests are operationally untenable.



A. The Chicago Communities Do Not Accurately Characterize the Impact of the Transaction

66. The first serious problem with the Chicago Communities' assertions is that they appear to have understated the amount of traffic that presently flows through their communities. They suggest that 38 Metra trains operate per day during the week on the MD-W line, but in fact,

Metra has tended to operate 55 trains every weekday,[55] and while these traffic levels are down somewhat due to the COVID-19 pandemic, Metra anticipates a return to pre-pandemic levels.[56]

67. The second problem is that the Chicago Communities do not accurately characterize the impact of the Transaction on their communities. As set forth in Applicants' Amended Operating Plan,[57] Applicants only project an increase of eight trains per day on the MD-W line west of Bensenville as a result of the Transaction. Given the Metra traffic through these communities, CPKC traffic will remain only a small percentage of rail traffic through the Chicago Communities even after the Transaction, as shown in Figure 14 below.

FIGURE 14[58]

55 Metra MD-W Schedule (Nov. 4, 2019) (Exhibit 3).

56 METR-7, at 6.

57 Amended Operating Plan, Appendix V.

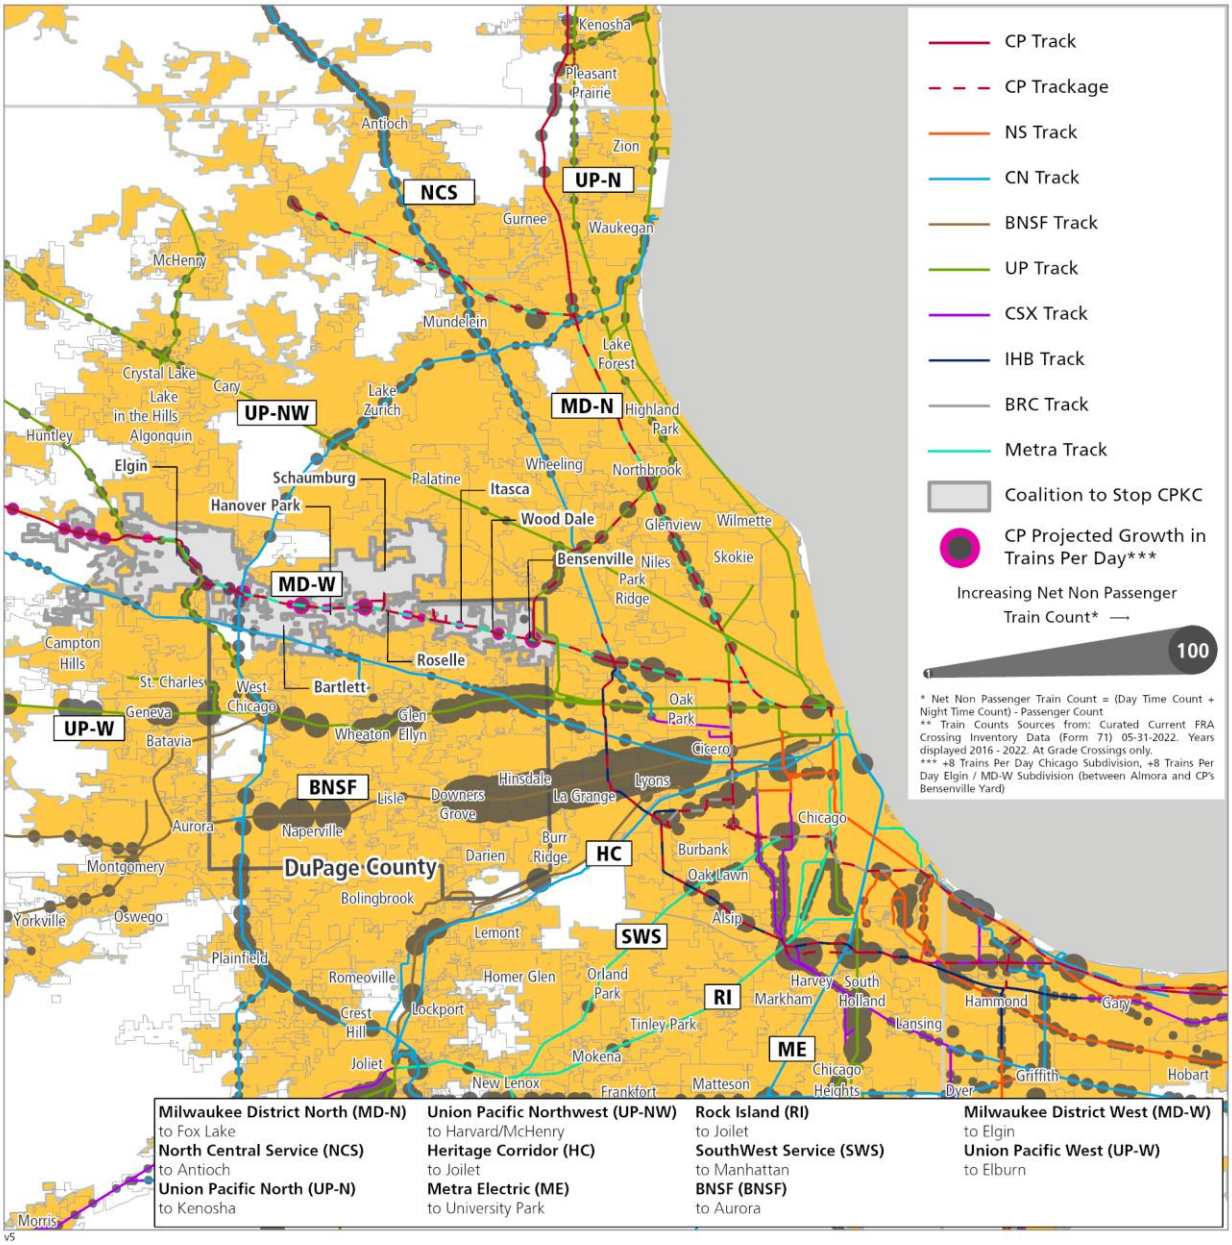
58 Metra Data Workpaper, at "All Trains."

68. Third, the Chicago Communities' assertion that this modest projected increase in freight traffic will shut their communities down is puzzling. The Chicago Communities have seen similar levels of freight traffic in the past, without issue. During the 1980s and 1990s, there were approximately 12 scheduled freight trains on the MD-W line west of Bensenville Yard daily, plus locals. Gameiro R.V.S., at ¶ 27. Further, the Village of Bartlett – one of the Chicago Communities – noted in 2016 that it receives about 10 freight trains (in addition to 58 Metra trains) per day.[59]

B. The Chicago Communities' Requests for "Relief" are Unworkable

1. The Requested Investment of $5.5 - $9.5 Billion is Wildly Out of Proportion

69. I understand that the Chicago Communities have requested $5.5 to 9.5 billion dollars in infrastructure mitigation to remediate the modest traffic increases I discussed above. Even if some amount of mitigation were justified (and I do not concede that it is), putting the request in context shows that it is wildly out of proportion for several reasons.



70. *First*, this proposed investment is more than is spent across the entire CREATE Program—a public-private partnership that is investing $4.6 billion dollars in approximately 70 different vital projects across the entire Chicago railroad network.

71. *Second*, the MD-W line, which is the line that extends through the Chicago Communities, is projected to receive relatively light traffic even after the Transaction by comparison to many nearby communities. However, other communities have not asked for or received the kinds of overreaching remedies that these particular Chicago Communities are demanding. For example, I understand that the Chicago Communities have asked for tens of

[59] Village of Bartlett, Downtown TOD Plan (Oct. 18, 2016) (Exhibit 4), available at https://rtams.org/sites/default/files/digital_documents/4099_Bartlett_TODPlan_2016.pdf.

millions of dollars to be invested in tunnel projects, but communities like Wheaton, LaGrange and Hinsdale get a lot more traffic than the Chicago Communities, and do not have such tunnels. Figure 15 below puts the Chicago Communities' arguments in context by showing comparative train frequency for key lines radiating from Chicago.

FIGURE 15
MAP SHOWING COMPARATIVE CROSSING OCCUPANCY FREQUENCY FOR KEY LINES RADIATING FROM CHICAGO

2. The Chicago Communities' "Anywhere But Here" Proposals, Which Seek to Prevent *Any* Increase in Freight Traffic Through Their Communities, are Unfair and Impractical

72. I understand that the Chicago Communities have also asked the Board to ensure that there is no increase in freight traffic through their communities. Considering this request from an operational standpoint reveals that the request is impractical and unfair.

73. As noted above, many nearby communities experience much *more* traffic than the select group of Chicago Communities that submitted filings in this proceeding. If the Board were to order that the Chicago Communities should be protected from *any* increase in freight traffic, this traffic would have to travel circuitous routes through other communities instead.

74. Further, prohibiting CPKC from sending more freight traffic through the Chicago Communities would cut the CPKC network off from the rail network at and beyond Chicago. This would preclude CPKC from competing for traffic moving to Detroit, eastern Canada and the eastern United States. It would make CPKC offerings non-competitive in the marketplace. And it would generate an increase in net emissions as the freight traffic traveled through longer, more circuitous routes instead. I address some of the Chicago Communities' specific proposals below.

75. ***Rerouting CPKC Trains Via LaCrosse and Milwaukee, WI.*** This would require the CPKC trains to traverse hundreds of unnecessary miles through dozens of other communities when a much more direct route through the Chicago Communities is available. Specifically, routing CPKC trains from Kansas City via LaCrosse to Chicago or Bensenville would add either 312 additional miles via Tower A-20 or 324 additional miles via Tower A-5 and two extra crew changes. Routing CPKC trains from St. Paul via LaCrosse and Milwaukee to Bensenville via Tower A-5 to Kansas City would add 252 additional miles and one extra crew change. These more circuitous routes would result in additional costs, crew resources, heightened emissions and

would strain infrastructure along the route. The extra freight traffic would adversely affect the MD-N lines and Amtrak. It would also have the potential to constrain Metra between Rondout, A20, A5, B12, and B17. And this less competitive offering would hurt CPKC in the marketplace and undermine the value of the Transaction.

76. ***Halting CPKC Trains West of Randall Road Through New Intermodal Facility.*** This would not allow connectivity with the rail network east of Chicago. It would require the costly construction of a new intermodal facility. Bensenville Yard is situated in the Northwest corner of Chicago, which reduces truck traffic in Chicago. This new intermodal facility would result in a huge number of additional trucks on I-20 between Chicago and there, just to get the traffic to the new facility. Finally, it is unclear how this proposed solution even alleviates the Chicago Communities' concerns because at the very least existing intermodal trains from eastern and western Canada would route via Bensenville and west. The non-intermodal portions from KCS and KCSM would also have to proceed through Chicago and beyond.

77. ***Trackage or Haulage on CN Chicago to Kansas City***. This request is simply not practical, because CP does not have rights over CN. In any event, it is illogical because it would deprive the CP network of density that supports investment and better train services. On trackage rights, this routing would not connect with Bensenville facilities without routing through the Chicago terminal to the southside or through the very Chicago Communities protesting to connect with the EJ&E. And on haulage rights, traffic would interchange to the CN at Spaulding or under the present ruling force significantly more traffic to be routed to the BRC. This routing would require a massive investment along the Springfield Line and Gilman Subdivision and likely on CN routes in between Chicago and the Springfield Line.

3. Turning Any Projection Regarding Train Lengths Into a Mandate Would Not Make Operational Sense

78. I understand that the Chicago Communities have asked the Board to freeze a projection that average train lengths will decrease on the Chicago and Elgin Subdivision into a condition of approving the Transaction. Respectfully, this would be unworkable. This would deprive CPKC of the operational efficiency and flexibility it needs to unlock public benefits from the Transaction. At present west of Bensenville, there are only two scheduled trains per day, and they do not meet between Bensenville and Savanna. Naturally, as train counts increase, CPKC's schedules, execution and train lengths would increasingly migrate to siding standard. On any given day however, conditions may be present to allow a train to move out onto the network and set off traffic downstream. For example, work activities or service interruptions may stem the flow in one direction allowing the other direction to run longer than siding standard. To restrict train length would take away the flexibility to provide service and recovery, and to match the conditions of the network.

79. Further, I understand that the Chicago Communities have also asked for a condition that the decrease in train length not be accompanied by an increase in the number of freight trains. This request is at odds with existing business/service and with our projection of a decrease in train length, as that projection is directly tied to a modest increase in the number of freight trains.

C. The Chicago Communities' Assertion that Projected Traffic Through Their Communities Changed as a Part of the Amended Operating Plan is Untrue.

80. I understand that the Chicago Communities have asserted that the projected increase of trains resulting from the Transaction west of Bensenville increased from 7.1 trains to 8.0 trains per day in our Amended Operating Plan, and that our Amended Operating Plan

attempted to conceal this fact. However, that is not true. Both the original Operating Plan and Amended Operating Plan projected an increase of 8.0 trains as a result of the Transaction.

81. The Chicago Communities appear to have zeroed in on two paragraphs in the original Operating Plan (App., Vol. II, ¶¶ 153, 185) that referred to an increase of 7.1 trains per day. However, this was a reference to a particular segment not the whole line west of Bensenville that appeared in two paragraphs of the original Operating Plan. The original Operating Plan itself, like the Amended Operating Plan, relied on projections of 8.0 additional trains on the Elgin Subdivision west of Bensenville.

82. I understand that the Chicago Communities have asked that the Board direct Applicants to provide details concerning the 8.0 trains' size and expected commodities. However, there is already substantial information on this topic available in the Application and accompanying Workpapers.[60]

III. HENNEPIN COUNTY'S CONCERNS ARE MISGUIDED

83. I have also reviewed the comments of Hennepin County ("Hennepin"), which assert various environmental and safety concerns. For the reasons described below, such concerns are misguided.

A. Hennepin's Concerns about Increase in Truck Traffic at CP's Minneapolis Intermodal Facility Are Unfounded

84. Hennepin has raised environmental concerns regarding a small projected increase in truck traffic at CP's Minneapolis Intermodal Facility at Shoreham Yard. Applicants project an increase in 53 trucks per day, and the OEA's review threshold is 50 trucks per day. Thus, this projected increase just barely triggers the OEA's review procedures. I understand that OEA is

[60] *See, e.g.*, Amended Operating Plan, ¶¶ 109-13, 159-61, Appendix I, Appendix T; Workpaper "Trains Per Day and Gross Ton Miles."

reviewing this issue and will make recommendations to the Board, meaning that Hennepin's concerns are not properly directed at this forum. Regardless, I make the following comments from an operational perspective.

85. *First*, the projected traffic increases are very modest. They amount to an increase of 86 container handlings per day – from a daily average of 373 in 2019 to a projected daily average of 459 per day.[61] This is very similar to the volume these facilities saw in 2012-14, when the facility averaged 438, 435 and 428 containers per day respectively.[62]

86. *Second*, the anticipated additional daily volume at the facility will amount to significantly less than one trainload per day (in the range of 39 containers originating and 47 containers terminating – amounting to approximately 53 additional drayage moves).[63]

87. *Third*, even after the Transaction, the majority of rail traffic through the Hennepin County rail network will not be CP traffic.

B. Hennepin's Other Concerns Are Similarly Unfounded

88. Outside of intermodal traffic increases as the Minneapolis Intermodal Facility, none of the other projected traffic increases Hennepin discusses are large enough even to trigger OEA's review. Regardless, I make the following points from an operational perspective.

89. Hennepin expresses concerns that recent "industry trends" towards increased train lengths may result in "longer delays at crossings."[64] Because this concern is based on "recent trends" that Hennepin perceives, this concern does not seem to actually be about the Transaction.

61 Amended Operating Plan, Table 13.

62 Minneapolis IMS Terminal Handlings 2002 – 2021 Workpaper.

63 Workpaper "IMS Trucks Final."

64 Hennepin Comments, at 13.

Hennepin calls the Board's attention to 14 crossings in particular that it is most concerned about being impacted by the Transaction. Hennepin also expresses concerns about impact on Humboldt Yard from the Transaction, and how this will affect crossings.[65] As I noted, projected traffic increases through Hennepin resulting from the Transaction are exceedingly modest. As illustrated in Hennepin County Crossings (attached as exhibit 5 hereto), Hennepin's concerns are unfounded.

- Two of the crossings Hennepin identifies are actually grade separated, meaning rail traffic and vehicle traffic will not intersect.

- A total of 10 crossings will only see four additional bulk trains as a result of the Transaction. However, these trains are not expected to depend on Humboldt Yard because they do not serve any of the relevant industries that use that facility.

- Further none of these 14 crossings have any notable problems with blocked crossings today. Only 2 of the 14 crossings have received complaints in the FRA Blocked Crossing Incident Reporting the past 2 years. The two crossing are Central Avenue NE and Humboldt Avenue. At Humboldt there were seven total reports in the last two years, and at Central Avenue NE there were three total reported incidents.[66] Humboldt activity will not change with the exception of the four added bulk trains. The impact of the change in containers as it pertains to Central Ave NE will be reviewed through the OEA analysis.

90. Hennepin also expresses concerns about increases in hazardous materials shipments through Hennepin County. Hennepin misunderstands the additional hazardous traffic that will pass through Hennepin County, as it is counting empty tank cars returning for another load of the same commodity in its hazardous shipment volumes. It is important to note that the volume of hazardous commodities routed through Hennepin will not be large, and is only slightly more than the hazardous materials that traversed Hennepin in 2018 and 2019.[67]

[65] Hennepin Comments, at 14-15.

[66] FRA Blocked Crossings Report, https://www.fra.dot.gov/blockedcrossings/ (last accessed July 11, 2022).

[67] *See* Workpaper "Hennepin County Hazmats – historical and projected volumes."

IV. TRANSACTION IMPLEMENTATION WILL FACILITATE, NOT THREATEN, CPKC'S ABILITY TO PROVIDE HIGH QUALITY SERVICE

91. Finally, I understand that certain commenters have raised concerns about whether Transaction implementation will have an impact on CPKC service levels. My close involvement in Applicants' Transaction implementation planning (which is already well under way) gives me confidence that CPKC will be in a position to hit the ground running and provide safe, reliable and competitive service to customers from day one and without disruption.

92. Applicants' Operating Plan was designed in the way the Operating Plan Team would design a railroad in the ordinary course of business, and Applicants' post-Transaction planning and systems development has been consistent with this approach. During the integration phase following the Transaction, CP's ordinary course operational approach and expectations will guide CPKC's commitment to its customers and its implementation of the Operating Plan outlined in the Application. CP's operating philosophy, which will guide CPKC after the Transaction, empowers on-the-ground operating team managers (at the trainmaster level) to meet customer needs. At CP, the trainmaster is expected to understand the train density and traffic patterns of every single customer not just in the local area, but over the entire run. The trainmaster is also given the responsibility to ensure that CP delivers on what it promised. CP's culture of accountability will facilitate meeting these plans.

93. The proposal of some commenters that there be rigid requirements not to make changes without advance notice, or a regime of monetary penalties, ignores the fundamentals of railroading. There will be external events that require adjustment and flexibility; railroading is an outdoor sport. Any rigid approach, or incentives to invent controversy, would be counterproductive. As just one example, every manifest train serves more than forty customers. The inability to make any quick changes in response to heavy traffic in one area could prevent

operations from being improved for thirty-five of those customers to serve the parochial interests of a small handful.

Appendix A
The Cost of Metra's Infrastructure Demands

Metra's Request	Feasibility	Number of additional merger-related trains	Potential cost in $USD (if even feasible)
Require construction of a new third mainline track from Rondout to A-20.	12 miles of new track This would impact 4 Metra stations that would need to be rebuilt. 4 grade separations that are only built for 2 tracks and would need to be rebuilt. Does not appear feasible.	0	$400,000,000
Require construction of new universal cross-overs at Lake Forest and Glenview.	Both of these locations are receiving universal cross-overs as part of the Amtrak Hiawatha agreement.	0	Part of Amtrak agreement
Require construction of new connection at A-20 to allow parallel moves to new extended connecting tracks to allow CP trains to exit Metra mainline tracks before entering UP territory.	This was looked at before as part of the Hiawatha expansion and citizens of Glenview were vocal in opposition to the construction of any additional track at this location.	0	$20,000,000
MD-W, Tower B-12 to B-17: Require construction of two new mainline tracks.	10 Miles of new track Impossible east of B-17 because of the Illinois Tollway, UP Trackage and O'Hare Airport, but also unnecessary because CREATE work has already made this triple track and train counts will not increase east of Bensenville from the Transaction	0	$50,000,000
Require construction of new powered cross-overs at Bartlett and Itasca.	Bartlett cross-overs with north platform would have to be relocated to accommodate	8	$10,000,000
At Bensenville Yard, require CP to construct receiving tracks equal to the length of incoming trains or equal to	Bensenville yard expansion in progress by CP	8	Currently under construction

Metra's Request	Feasibility	Number of additional merger-related trains	Potential cost in $USD (if even feasible)
the maximum length possible.			
MD-W Tower A-5 to B-12: Require construction of two new mainline tracks.	14 miles of new track Currently 3 mains between A5 and B12, there does not appear to be room to add any more track as there are 6 Metra stations between A5 and B12. As well as a number of road crossings and grade separations that do not appear to have room to construct any more tracks.	0	$250,000,000
Require CP to pay for new southeasterly wye leg at Cragin Junction to direct CP traffic south to BRC without a reverse move.	Does not appear feasible as there are a number of warehouses/buildings and businesses in the way	0	$100,000,000
At Galewood Yard, require CP to construct receiving tracks equal to the length of incoming trains or equal to the maximum length possible.	Potential to extend ~1500' to the west and ~500' to the east. This would appear to take out a Metra parking lot at the West end.	0	$15,000,000
MD-W, Tower A 5: Require reduction in curves to increase speeds from 10 MPH to 25 MPH for moves to the MD-W. ii. Require CP to separate CP and Metra MD-W tracks and construct fly-over from south of A-5 to MD-W dedicated Metra tracks and dedicated freight connection in NW quadrant interlocking to facilitate freight movements to and from MD-N to MD-W without a reverse move	Unable to determine if feasible	0	$250,000,000
Total			**$1,095,000,000**

VERIFICATION

I, Raymond A. Elphick, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 12 day of July, 2022.

Study Area Overview

The study area for the TOD Plan is focused on the walkable district surrounding the Metra station which includes Bartlett's core Downtown retail and residential zone, as well as schools, professional offices, major employers, and park spaces. The TOD study area covers roughly 240 acres of land, and is bounded by Western Avenue, North Avenue, South Prospect Avenue and West Devon Avenue (shown on the facing page).

The Village of Bartlett is located roughly 35 miles northwest of Downtown Chicago, and includes portions of the Lake Street / Illinois Route 20 and Illinois Route-59 corridors. The Village is split between Cook, DuPage, and Kane Counties, and shares boundaries with the neighboring communities of Elgin, South Elgin, Streamwood, Hanover Park, Carol Stream, West Chicago, and Wayne.

Bartlett's Metra station is located on the Metra Milwaukee District West Line, that provides service from downtown Chicago – Union Station to Big Timber Road in Elgin. There are approximately 68 trains per day through Downtown Bartlett, of which 58 are Metra commuter trains (weekday trains) and about 10 are freight trains.

Metra Milwaukee District West Line Context Map
Source: ESRI

Study Area Overview

Demographics

The population of Bartlett in 2015 is estimated to be 41,299. It has grown by 12.5% in the past fifteen years, with the majority of this growth seen between 2000 and 2010. Since 2010, the population has remained steady, and is only projected to increase slightly by 2020.

An estimated 76.1% of the population in Bartlett identifies as White. Asians make up the largest minority, comprising 15% of the population. The Hispanic population of Bartlett has increased significantly since 2000. It now is estimated as 11% of the population.

Age Distribution

The median age of residents in the community has increased 15.9% since the 2000 Census, from 33.4 to 38.7 years. CMAP estimates the median age in the seven-county region is 36.0. As the population continues to age, the municipality will have to plan accordingly for these growing populations.

Three segments of the population in Bartlett are increasing:

- Individuals in their young 20's
- Those aged 45 – 54, who are typically in their peak earning years
- Seniors, both 55 -74 and 75+

Historic retail buildings along Bartlett Avenue

Existing condominiums in the Town Center

Housing Characteristics

Bartlett's housing stock, which has a total of 14,187 units, is predominantly made up of owner-occupied units (a total of 88.1%). The housing vacancy rate is only 2.9%, which is considered very low and a positive indicator by most standards.

More than 90% of homes within Bartlett were constructed in the decades spanning 1970 to 2009. The 1990s were the most significant decade for housing construction within the Village, with 5,327 homes built during this ten year period (37% of the housing stock).

As measured by the issuance of residential building permits, annual new home construction volumes over the last 10 years peaked in 2005 with 511 single family and 238 multi-family permits issued – then tumbled into a deep hole as the housing and financial market crises hit and the regional and national economies fell into recession. Construction volumes within the Village have yet to recover, having hovered near zero since 2008.

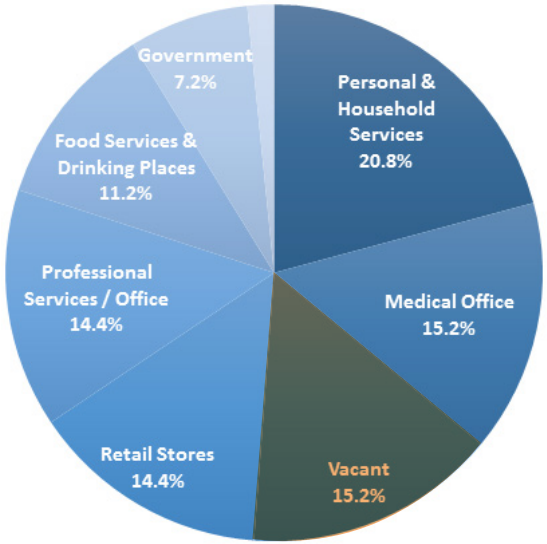
During the past few years, Bartlett has only permitted 20 single family residential units and no multifamily units. Streamwood has permitted a total of 150 single family and multifamily units during the same time frame.

Study Area Overview

The Downtown Bartlett Study Area encompasses a wide variety of housing types, including detached single family homes and multi-family rental apartments, townhomes, and condominiums.

Downtown Employment

Senior Flexonics, located on Devon Avenue, is Downtown's largest employer with 400 employees. They manufacture flexible mechanisms for exhaust, cooling, and fuel distribution systems. According to the Human Resources Manager for Senior Flexonics, most employees travel from neighboring suburbs to work at the location and the overwhelming majority commutes via personal vehicle.



Many other Downtown employees work in Village Hall, the Fire Department, or Bartlett Elementary School. Together with the manufacturing jobs at Senior Flexonics, these industries comprise nearly two-thirds of the Downtown employment. Fourteen restaurants and 18 retail stores are located Downtown, employing 150 people.

Downtown Commercial

Nineteen storefronts in Downtown Bartlett are vacant, a relatively high percentage. Retail and Restaurants comprise of 25.6% of total establishments. Professional and medical offices and other service businesses together comprise 50.4% of the total businesses in Downtown Bartlett.

Bartlett does not have as much retail as its neighboring communities as measured by annual retail sales tax. It collected just over $2 million in retail sales tax in 2014 as compared to $7.9 million in Bloomingdale.

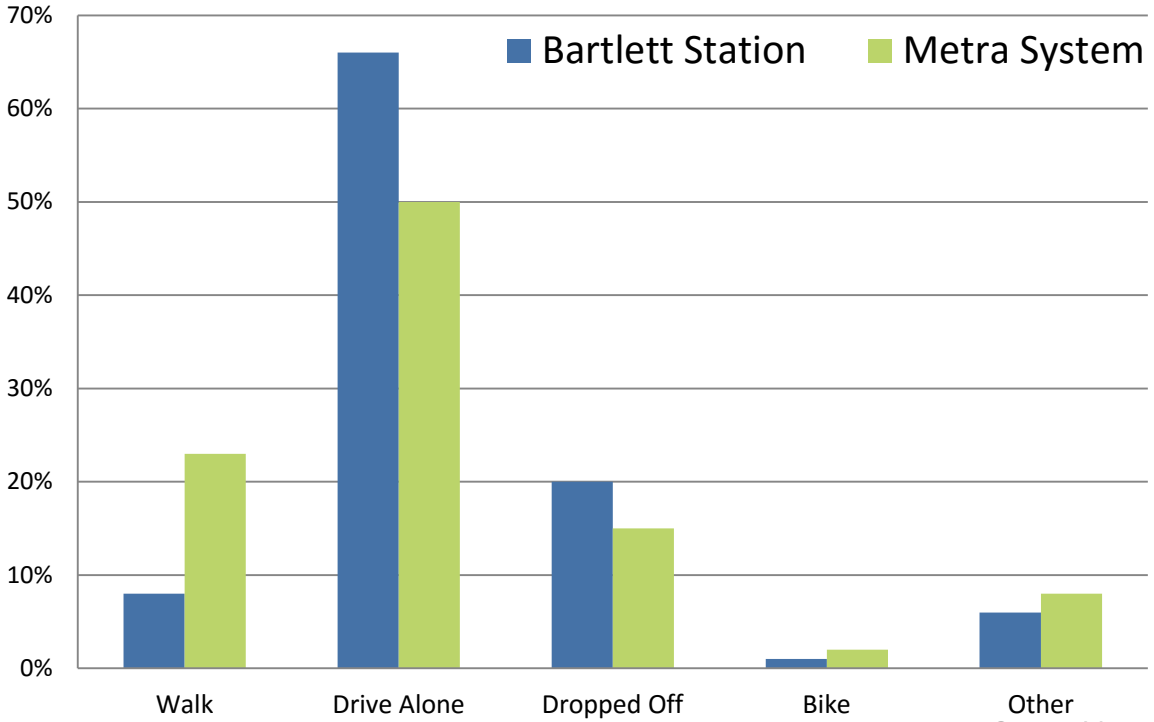
Study Area Overview

Metra Rail Ridership



Per Metra's most recent ridership surveys (2014), there are 1,081 typical weekday boardings at the Bartlett station. Ridership at this station grew considerably in the 1980s and has been relatively stable since. Bartlett is appealing to commuters because it is the last station in Metra's Zone F, which is two fare zones lower than the next closest station to the west (Elgin, National Street).

Getting to the Station

Mode of access to the station is predominantly by driving alone/parking, followed by being dropped off as shown to the right. Bartlett has a higher drive alone access to the station and a much lower number of riders who walk compared to both the MD-W line and the Metra system as a whole.

The Bartlett Metra station attracts riders from a fairly wide area, drawing as far west as South Elgin, as far north as Schaumburg, and as far south as Army Trail Road. This could be attributable to the fare zone location and availability of daily fee parking spaces. Drawing from this large of an area also contributes to the higher percentage of drive alone access to the station.

How Commuters Get to the Metra Station

Source: Metra

Key Metra Commuter Considerations

Commuter parking: Existing parking is 85% utilized. This is the level at which additional parking resources may need to be considered.

Access to Metra station: The highest percentage of commuters who access the Bartlett station drive alone and park, while the walk access is very low. Improvements to the pedestrian/bicycle network should be a focus of future work to make walking and biking to the station more attractive.

Commuter Lot 11: The Village purchased this commuter lot, located north of the tracks and east of Western Avenue, in April 2009 with interest in redeveloping the parcel. As part of the sale of this property, the Village agreed that when the parcel is redeveloped, it will

EXHIBIT 16(HC):	THE KANSAS CITY SOUTHERN RAILWAY COMPANY – MERIDIAN SPEEDWAY LLC JOINT USE AGREEMENT, MAY 1, 2006

1. My name is Steve Simmons. I have been the Director of Border and Interline Operations for The Kansas City Southern Railway Company (KCS) since 2013. Prior to that, I served as Senior Manager of Network Planning for KCS from when I joined the company in 2010 until I assumed my current position. I report to Mike Walczak, the Vice President of Network Planning, who reports to John Orr, Executive Vice President - Operations.

2. My job entails being familiar with the various interline operating agreements that are most important to KCS's daily operations. Those include the trackage rights agreements for use of track owned by Union Pacific Railroad Company (UP), by Houston Belt & Terminal Railway Company (HBT),[1] or jointly by UP and BNSF Railway Company (BNSF)[2] between Beaumont and Robstown, Texas, and the Meridian Speedway, LLC (MSLLC) agreements with Norfolk Southern Railway Company and its subsidiary The Alabama Great Southern Railroad Company (together, NS).

3. I interface daily with personnel at other carriers on interline service and operations matters. Since 2011 I have attended and taken part in meetings of the MSLLC Management Committee, the executive committee that oversees MSLLC, and the MSLLC Joint Operations Committee, which handles more routine issues for MSLLC and serves as the day-to-day interface between KCS and NS on MSLLC matters.

4. At KCS, I also lead a team that manages all aspects of import/export compliance through the Laredo/Nuevo Laredo Gateway, the largest rail crossing between the United States and Mexico.

---

[1] HBT is jointly owned by UP and BNSF, and its lines are operated by them under trackage rights.

[2] This includes the Beaumont – Houston portion of the Dawes, TX to Avondale, LA track owned jointly by UP and BNSF.

5. In addition to my work at KCS, I serve as an appointed member of the 16th Commercial Operations Advisory Committee (COAC) of U.S. Customs and Border Protection (CBP). COAC advises the Secretary of the Treasury and the Department of Homeland Security on all matters involving the commercial operations of CBP, including advising with respect to significant changes that are proposed concerning regulations, policies, or practices of CBP. I am the Co-Chair of COAC's Secure Trade Lanes Subcommittee. I co-created the Secure Corridor Initiative with CBP and Mexican customs which included implementing the first Unified Processing Center for rail.

6. Prior to joining KCS, I held various transportation supply chain and operations management positions with Consolidated Freightways, Con-Way and Yellow Roadway Corp. I also served in the U.S. Army, and am a veteran of Operations Desert Shield and Desert Storm. I hold a Bachelor of Business Administration from the University of Missouri – Kansas City and am a member of the Council of Supply Chain Management Professionals.

7. The purpose of my statement is to provide context and clarity regarding KCS's operations, specifically relating to the rights and obligations of KCS and other railroads under various agreements. This statement provides further detail and context addressing –

- Assertions by UP and BNSF concerning the adequacy of rail infrastructure owned by UP or jointly owned by UP and BNSF between Beaumont and Robstown, TX that is utilized by KCS under existing trackage rights agreements;
- Comments by UP and BNSF about the capacity and operations of the KCS-owned Neches River Bridge in Beaumont, Texas;
- NS's request for springing trackage rights over 200 miles of KCS track between Shreveport, Louisiana and Wylie, Texas, as well as BNSF's request to reserve the right to seek trackage rights over the same tracks;
- CSX's comments concerning interchange with KCS at New Orleans; and
- LyondellBasell's comments on access issues that are unrelated to the merger.

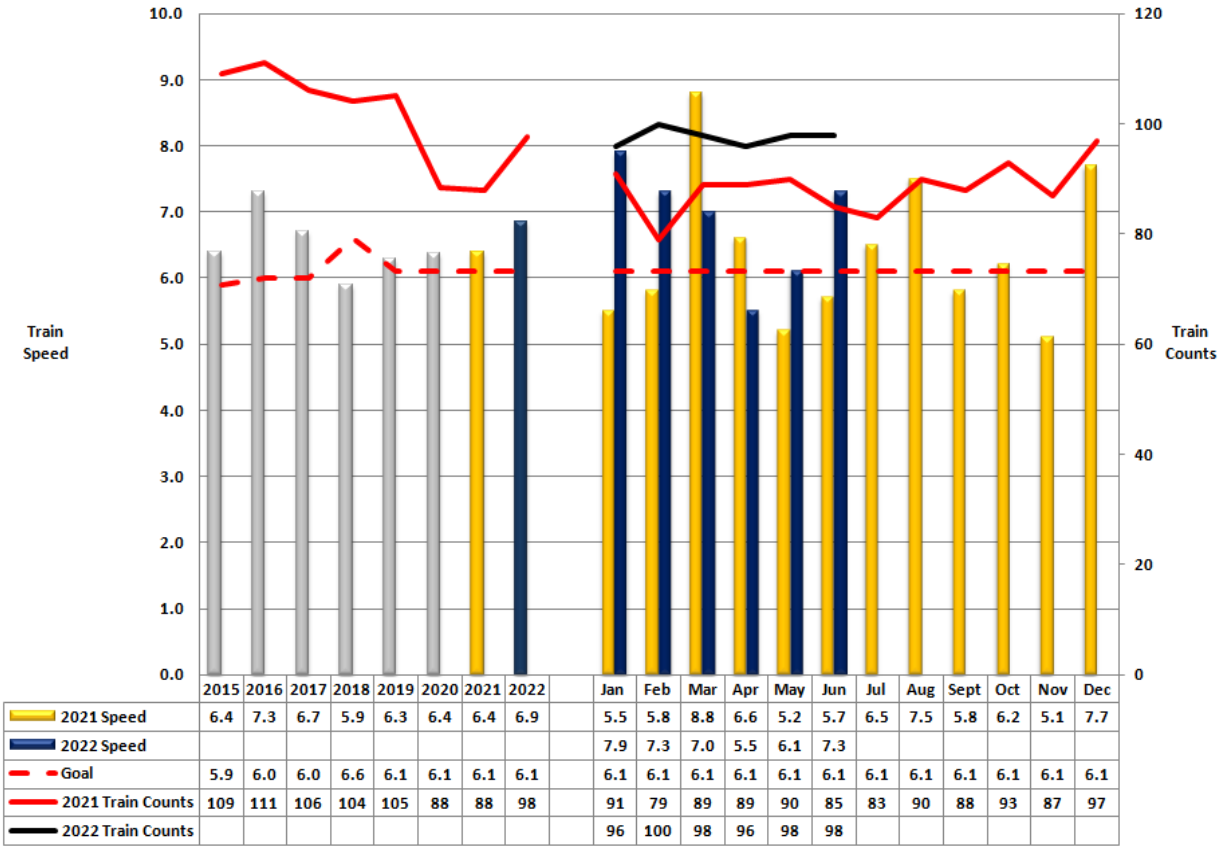
I. CAPACITY FOR CPKC TRAINS ON THE BEAUMONT-ROBSTOWN TRACKAGE RIGHTS ALREADY EXISTS, AND THERE ARE AGREEMENTS ALREADY IN PLACE FOR CREATION OF NEW CAPACITY IF NEEDED

8. Both UP and BNSF complain that there is not sufficient capacity to handle the anticipated growth of CPKC over lines between Robstown and Beaumont, Texas. Yet, neither of them provide capacity information or any detail about the affected areas by which to judge their claims.

9. Adequate capacity for CPKC trains already exists. As addressed in greater detail by John Orr in his accompanying verified statement, there is sufficient infrastructure capacity over these routes, but operational behaviors by both UP and BNSF prevent efficient and full use of that capacity. Further, if additional capacity is needed, for CPKC growth or that of UP and BNSF, there are Board-approved contractual agreements already in place on how to meet the needs of all parties.

10. ***Sufficient Capacity Already Exists.*** There is already sufficient capacity on the UP, UP-BNSF and HBT lines that KCS operates between Houston and Beaumont to support the additional eight trains per day projected in the Applicants' operating plan. History shows this.

11. Below is a graph taken from a presentation delivered by the Spring Center director at the June 29, 2022 joint meeting among UP, BNSF and KCS regarding Houston area operations.[3] The bottom line of the graph shows Houston complex average daily train counts for the first 6 months of 2022. They average 97.7 trains per day.



12. By contrast, the next to the bottom row in the left shows average daily trains in the Houston complex from 2015 through 2022. For the pre-pandemic years of 2015-2019, train counts averaged 107 per day, almost 10 more trains per day than current counts. The graph also

[3] A copy of this presentation is Exhibit 1 hereto.

shows that the train speeds during those five years were for the most part similar to what they are today. This graph, produced by the Spring Center directors, who are employees of UP and BNSF, clearly shows that Houston has previously accommodated more trains than the projected additional eight projected CPKC trains above current levels. It should also be noted that the projected CPKC trains present less burden to the Houston operation than most of the trains in the Houston complex because CPKC trains are through trains – they don't need to stop on the tracks to switch customers. So, history shows that the Houston complex has adequate capacity now to handle the projected eight additional CPKC trains.

13. As John Orr explains in his separate statement, current operating difficulties in the Houston complex now are a result of operating decisions which, when remedied, will free up the capacity to meet the CPKC trains projected for Year 3 post-merger.

HOUSTON COMPLEX PERFORMANCE
JOINT MEETING, JUNE 29, 2022

	2015	2016	2017	2018	2019	2020	2021	2022		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec
2021 Speed	6.4	7.3	6.7	5.9	6.3	6.4	6.4	6.9		5.5	5.8	8.8	6.6	5.2	5.7	6.5	7.5	5.8	6.2	5.1	7.7
2022 Speed										7.9	7.3	7.0	5.5	6.1	7.3						
Goal	5.9	6.0	6.0	6.6	6.1	6.1	6.1	6.1		6.1	6.1	6.1	6.1	6.1	6.1	6.1	6.1	6.1	6.1	6.1	6.1
2021 Train Counts	109	111	106	104	105	88	88	98		91	79	89	89	90	85	83	90	88	93	87	97
2022 Train Counts										96	100	98	96	98	98						

14. A similar conclusion can be reached for the UP-BNSF jointly-owned Lafayette Subdivision and the portion of the Houston Subdivision to Dawes. Attached below is a chart from the same June 29 presentation, showing the performance of the UP-BNSF joint line between Avondale, LA and Dawes, TX (essentially New Orleans to Houston). The most recent six months show an average train count of 30.5 trains per day. The five pre-pandemic years show an average daily train count of 36.8 trains per day, with a high annual average of 44 trains per day in 2018. While the difference between the 6-month and 5-year figures is 6.3 trains, not 8, the data is less of an apples-to-apples comparison than the Houston data above, since the UP-BNSF joint line extends all the way to New Orleans, making it unclear how many trains actually

operate on the Beaumont-Houston portion of the line. But either way, there is ample capacity for the four westbound trains a day CPKC will add to this line, which is directionally operated. (CPKC's eastbound trains will use UP's Beaumont Subdivision, not the portion of the Houston Subdivision from Beaumont to Dawes.). In any event, this data shows that there is additional capacity on the Houston Subdivision to accommodate additional CPKC trains. And, as discussed below, to the extent that additional capacity is needed, the STB-approved trackage rights agreements provide for it to be built.

15. ***Existing, STB-Approved Trackage Rights Agreements Provide for Adding Capacity.*** KCS operates between Beaumont and Robstown, TX over a combination of track owned by UP and BNSF, HBT, and KCS. As a condition of the merger of UP with Southern Pacific Transportation Company (SP) in 1996, the STB granted The Texas Mexican Railway Company (Tex Mex) trackage rights between Beaumont and Robstown over track of UP (including Missouri Pacific Railroad Company (MP)[4]), SP and HBT to connect to KCS in order to supply a competitive alternative to the merged UP-SP.[5] Initially those trackage rights were embodied in two agreements, one granting Tex Mex access over certain SP and MP lines and the other granting Tex Mex rights on specified HBT tracks.[6] As directed by the STB, Tex Mex, UP and HBT submitted the agreements to the agency to settle certain disputes over the terms. In Finance Docket No. 32760, Decision No. 47, the STB resolved the disputes and approved the agreements.

16. Generally stated, the agreements allowed Tex Mex to operate over a combination of MP and SP tracks between the Neches River Bridge and GCL Junction in Beaumont and to the connection with HBT at Quitman Street in Houston; over the HBT East Belt and a series of SP and MP tracks to West Junction in the southwest corner of the Houston area; over SP's line

[4] MP was, at the time immediately prior to the UP-SP merger, a wholly-owned subsidiary of Union Pacific Corporation.

[5] Finance Docket No. 32760, Sub Nos. 13 and 14.

[6] Terms for Texas Mexican Railway Company Trackage Rights, executed Dec. 12, 1996 (MP/SP-TM) (excerpts are Exhibit 2 hereto), and Terms for Texas Mexican Railway Company Trackage Rights, executed Jan. 28, 1997 (HBT-TM) (excerpts are Exhibit 3 hereto) ("GLC Junction" corrected to "GCL Junction" per UP System Timetable No. 2, effective 0001 Sunday October 29, 1995, page 41 (Beaumont Subdivision).

from West Junction to Flatonia, Texas and from Flatonia to Placedo, Texas via Victoria, Texas; and via MP lines from Placedo, Texas to Robstown and from Odem to Corpus Christi, Texas.[7]

17. Subsequently, UP chose to implement directional running on its two lines between Houston and Beaumont, and SP granted Tex Mex rights on what is now UP's Beaumont Subdivision.[8] Together with the MP/SP-Tex Mex agreement, this allowed Tex Mex to operate with UP's directional flow, using UP's Lafayette Subdivision for traffic westbound from Beaumont to Houston, while using the Beaumont Subdivision for traffic from Houston to Beaumont.

18. In late 1997, UP, SP, and BNSF sought exemptions from the STB to operate under trackage rights on specified portions of HBT's lines, supplanting HBT's operation of those lines. Those exemptions were affirmed by the STB a year later.

19. Also in 1997, UP operations in the Houston area were severely crippled by congestion that spread through much of the western U.S. rail network. After a series of hearings, written submissions and decisions, in December 1998 the Board, despite concluding that Houston was again "fluid," imposed a so-called "clear route" condition, saying,

[7] In November 2007, KCS and UP clarified that the Odem-Corpus Christi trackage rights allowed KCS to connect from its yard in Corpus Christi and the Port of Corpus Christi's (POCC's) Savage Lane to POCC's Joe Fulton Corridor via UP's line, following POCC's removal of the Tule Lake Lift Bridge access from Savage Lane to POCC's track.

[8] Houston to Beaumont, Texas Trackage Rights Agreement, dated June 16, 1997 (SP-TM) Exhibit 4 hereto.

> "Among other things, we have decided to adopt a so-called "clear route" condition to enhance efficiency and facilitate the smooth movement of railcars through the Houston Terminal. Under the "clear route" condition, the neutral and highly efficient joint Union Pacific Railroad Company (UP)/Burlington Northern Santa Fe Railway Company (BNSF) dispatching center at Spring, TX, will have the authority through its Joint Director to route traffic through Houston over any available route, even a route over which the owner of the train does not have operating authority. Thus, as a result of the Board's decision, a BNSF train may be permitted to operate over track of UP; a UP train may be permitted to operate over track of BNSF; and a Texas Mexican Railway Company (Tex Mex) train may be permitted to operate over track of either UP or BNSF….
>
> "We will impose a "clear route through Houston" condition to enhance efficiency and facilitate the smooth movement of traffic through the Houston Terminal, a condition that was sought by both BNSF and the Consensus Plan Parties. We believe that the Joint Dispatching Center in Spring, Texas, has the authority to exercise discretion in choosing the most efficient routing for traffic moving through the Houston Terminal. To ensure, however, that the Joint Center staff do not feel constrained from making decisions necessary to efficient operations in the Houston Terminal due to trackage rights or other operational limitations, we are imposing a condition directing the Joint Center carrier-participants to authorize the Joint Director to use the best judgment in selecting alternative routings for train operations by UP, BNSF, and Tex Mex through the terminal, particularly when customary routings are unavailable or congested.[9]

20. In 1998, the STB approved UP and BNSF joint ownership of UP's Lafayette Subdivision from Dawes, TX, on the east side of Houston, to Iowa Junction, LA, and BNSF's line from Iowa Junction to Avondale, LA. Together with UP and BNSF's access over approximately 1.8 miles of KCS track between KCS MPs 764.9 and 766.7, including the Neches River Bridge, brought the line from Houston to New Orleans under UP-BNSF joint ownership.

[9] *Union Pacific Corporation, Union Pacific Railroad Company and Missouri Pacific Railroad Company--Control and Merger--Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railway Company [Houston/Gulf Coast Oversight],* STB Finance Docket No. 32760 (Sub-No. 26), 3 S.T.B. 1030, 1038 (1998) at *1 and *6.

21. In 1999, Tex Mex reached agreement with UP to acquire 84.5 miles of the former SP Wharton Branch, along with trackage rights over the adjoining UP-owned 2.5 miles on the north end at Rosenberg and over the adjoining 3.8 miles at Victoria to connect to the lines over which Tex Mex was granted trackage rights in 1996. The STB approved the transaction in December 2000.[10]

22. In March 2001, Tex Mex and UP modified their trackage rights agreements to provide that when Tex Mex or KCS rebuilt the Rosenberg-Victoria line, traffic moving to or from shipper facilities on the line could also move over Tex Mex's trackage rights on UP. Also, the parties agreed that within three months after the Rosenberg-Victoria line was put in service, Tex Mex would stop using the 157-mile portion of UP's trackage rights from Rosenberg to Victoria via Flatonia, except on an emergency or detour basis subject to UP's approval.

23. In 2006, following KCS's acquisition of control of Tex Mex, Tex Mex assigned its trackage rights for operation between Beaumont and Robstown to KCS.[11]

24. In 2008-2009, despite the advent of the Great Recession, KCS rebuilt the Rosenberg-Victoria line at a cost of approximately $173.5 million and put it back in service. As a result, KCS shortly thereafter ceased operating between Rosenberg and Victoria via Flatonia, removing KCS traffic from UP's busy Glidden Subdivision.

25. As stated in the accompanying verified statement of John Orr, current Houston area rail infrastructure is capable of supporting not only current traffic levels but also growth in

---

[10] *Texas Mexican Railway Company – Purchase Exemption – Union Pacific Railroad Company,* STB Finance Docket No. 33914 (served Dec. 11, 2000)

[11] *Kansas City Southern, The Kansas City Southern Railway Company, and The Texas Mexican Railway Company – Exemption for Transactions Within a Corporate Family*, Finance Docket No. 34849, 71 Fed. Reg. 19784-85 (Apr. 17, 2006).

traffic, if that infrastructure is well managed. Currently, management of that infrastructure needs improvement.

26. If additional capacity were needed, however, the STB-approved trackage rights agreements covering KCS's operations on lines owned by UP and jointly by UP and BNSF assign responsibility and provide procedures for providing the capacity needed to accommodate traffic of CPKC, UP and BNSF.

27. Each of the STB-approved trackage rights agreements by which KCS operates over UP and UP-BNSF track between Beaumont and Robstown contain a rate stated in mills per gross ton-mile, known as the GTM Rate. The GTM Rate was established by the STB in its Decision No. 47 in the UP/SP merger, along with resolution of other disputed terms of the trackage rights agreements. KCS currently pays UP approximately $39 million in trackage rights fees under this GTM Rate for the Beaumont-Rosenberg and Victoria-Robstown segments each year, in addition to sharing in the cost of infrastructure projects on track where KCS operates.

28. The STB-approved trackage rights agreements setting the GTM rate that KCS pays for the trackage rights from Beaumont through Houston to Robstown call for UP to use the GTM Rate to maintain adequate capacity to handle the CPKC traffic on those lines. Both the MP/SP-TM and the HBT-TM agreement state in Section 3(a) of the Terms (that is, the portion of the agreement prior to the exhibits) that the GTM Rate "shall be deemed to include ordinary and programmed maintenance of the Joint Trackage, Changes in and/or Additions to the Joint

Trackage (to the extent required by the first sentence of Section 2.2 of the General Conditions), operating expenses, interest rental, depreciation and taxes."[12, 13] (Underlining added.)

29. The first sentence of Section 2.2 of the General Conditions, Exhibit B to the agreements, provides that "Unless otherwise mutually agreed to by the parties in writing, Owner shall … (iii) be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Terms."[14]

30. Section 1.3 of the General Conditions identifies "Changes in and/or Additions to" as being capital projects: "'Changes in and/or Additions to' shall mean work projects and retirements, the cost of which is chargeable in whole or in part to Property Accounts during the term of the Terms."[15]

31. UP's position that CPKC should enter agreements to improve UP's lines before being allowed to move new traffic is part of a pattern of resistance by UP to meeting its obligations under the provisions of the STB-approved trackage rights agreements quoted above. Historically, UP has refused to acknowledge its responsibilities under Section 3(a) of the Terms to maintain adequate capacity of the trackage rights lines to accommodate traffic of KCS. Accompanying this statement as Exhibit 6 is a letter from one of our attorneys to an attorney at

---

[12] *See* Exhibit 2, pages 5-6.

[13] Section 3(a) of the June 16, 1997, SP-TM agreement for Tex Mex use of UP's Beaumont Sub under directional running, Exhibit 4 hereto, in describing what is included in the GTM Rate, does not include the phrase "Changes in and/or Additions to the Joint Trackage (to the extent required by the first sentence of Section 2.2 of the General Conditions)", indicating that inclusion in, or exclusion of, those costs in the GTM Rate was deliberate. *See* Exhibit 4 hereto, page 3.

[14] *See* Exhibit 2, page 16.

[15] *See* Exhibit 2, page 15.

UP, replying to UP's assertion that UP is not obligated to maintain adequate capacity of the trackage rights lines to accommodate KCS traffic except at additional cost to KCS above the GTM Rate. From the letter, it appears that UP's position is that because it and BNSF agreed that capital projects were not included in the GTM rate, that interpretation also applied to the MP/SP-TM and HBT-TM agreements.

32. I am aware that BNSF has a trackage rights agreement with UP dated June 1, 1996 for access between Houston and Beaumont that provides that "Changes in and/or Additions to" are covered in the GTM rate that BNSF was to pay UP under the agreement. But there are differences between BNSF's agreement and ours. As discussed in UP-SP Decision No. 47, BNSF pays a lower GTM rate than KCS pays. Also, Section 2.2 of both Exhibit B to BNSF's agreement and our MP/SP-TM and HBT-TM agreements begin with the phrase "Unless otherwise mutually agreed to by the parties in writing, Owner shall…" be responsible for capital projects needed to maintain capacity. In Section 9(c) of their Restated and Amended Settlement Agreement, filed with the STB March 4, 2002, UP and BNSF did just that – agreed in writing that the GTM rate would not cover capital projects other than those necessary to implement the UP-SP merger:

> "(c) Capital expenditures on the Trackage Rights Lines and on lines over which BNSF is granted Overhead Trackage Rights will be handled as follows:
>
> (i) UP/SP shall bear the cost of all capacity improvements that are necessary to achieve the benefits of its merger as outlined in the application filed with the ICC for authority for UP to control SP. The operating plan filed by UP/SP in support of the application shall be given presumptive weight in determining what capacity improvements are necessary to achieve these benefits.
>
> (ii) **Any capacity improvements other than those covered by subparagraph (i) above shall be shared by the parties based upon their respective usage of the line in question, except as otherwise provided in subparagraph (iii) below.** That respective usage shall be determined by the 12 month period prior to the making of the improvement on a gross ton mile basis.
>
> (iii) For 18 months following UP's acquisition of control of SP, BNSF shall not be required to share in the cost of any capital improvements under the provision of subparagraph (ii) above.

(Emphasis added.)[16]

33. KCS does not have any such agreement with UP waiving UP's responsibility to perform capital projects needed to maintain adequate capacity on the lines covered by the MP/SP-TM and HBT-TM agreements. Accordingly, under the MP/SP-TM and HBT-TM agreements with KCS, UP is required to perform capital projects on the trackage rights lines needed to maintain capacity without added payment by KCS. If UP cannot operate the Beaumont-Robstown infrastructure properly to maintain capacity for CPKC trains, UP is required to add capacity. It is not CPKC's responsibility to add capacity for UP or BNSF, as they contend.

[16] *See* excerpts of Joint Submission of Restated and Amended BNSF Settlement Agreement, UP/SP-393; BNSF-100, filed March 4, 2001 in STB Finance Docket No. 32760, Section 9(c) (Exhibit 5, page 17).

34. KCS also has the contractual right under the trackage rights agreements to require UP to add needed infrastructure on the trackage rights lines. In addition to UP's responsibility under the MP/SP-TM and HBT-TM agreements with KCS to perform capital projects on the trackage rights lines needed to maintain capacity, the trackage rights agreements require KCS and UP to share the cost of mutually-beneficial upgrades to the UP-owned trackage rights track beyond those for which UP is responsible under paragraph 3(a) of those agreements, and require UP to add infrastructure requested by KCS at KCS's sole cost if the project is for KCS's sole benefit.[17] As an example of mutually-beneficial upgrades, KCS contributed several million dollars to the cost of UP's installation of Positive Train Control infrastructure on portions of the trackage rights lines. As an example of KCS's ability to require infrastructure upgrades deemed by the parties to be for KCS's sole benefit, KCS paid approximately $7 million to upgrade two bridges at Mileposts 184.8 and 207.0 on UP's Brownsville Sub from 263,000 pound load rating to 286,000 pound load rating so KCS could move fully-loaded grain cars, and other traffic, over those bridges. After those upgrades were completed, UP exercised the right under the agreements[18] to pay 50% of the cost of those upgrades in order to be able to move UP and BNSF cars loaded to 286,000 pounds over those bridges.

35. In summary, the STB-approved trackage rights agreements under which KCS operates between Beaumont and Robstown, Texas provide for UP to make the capital investments needed to maintain the capacity to accommodate traffic growth of CPKC. Any

[17] Section 5(b) of the MP/SP-TM and HBT-TM agreements; Section 4(a) of the SP-TM agreement. *See* Exhibit 2, page 8, Exhibit 3, page 5 and Exhibit 4, page 4. Under these provisions, use of the joint track by BNSF is attributed to UP for purposes of cost allocation.

[18] Section 5(b) of the MP/SP-TM and HBT-TM agreements; Section 4(b) of the SP-TM agreement. *See* Exhibit 2, page 8, Exhibit 3, page 5 and Exhibit 4, page 4.

shortage of infrastructure capacity now or in the future is UP's responsibility to remedy as part of what KCS has paid UP tens of millions of dollars in trackage rights fees for each year. In addition, KCS has the ability to compel UP to add infrastructure if that infrastructure is for CPKC's sole benefit.

36. Despite disagreement with UP over its responsibility to maintain sufficient capacity to keep pace with traffic growth, KCS and UP have worked together successfully to spend well over $100 million on improvements to UP lines over which KCS has trackage rights. For instance, under agreements executed in 2012 and 2015, KCS and UP agreed on funding and installation of a number of important upgrades to improve capacity and traffic fluidity, including:

- Installing Centralized Traffic Control between Inari and Sinton on UP's Brownsville Subdivision;
- Building a new 10,000 foot siding with #15 power-operated turnouts at Cranell on UP's Brownsville Subdivision;
- Upgrading to power-operated #15 turnouts on the Placedo Siding on UP's Angleton Subdivision;
- Building a new 10,100-foot siding at Placedo (Benavides) on UP's Cuero Subdivision where the Cuero Subdivision joins the Angleton Subdivision;
- Installing Centralized Traffic Control between Victoria and Placedo on UP's Cuero Subdivision;
- Powering the switch to the Victoria Industrial Lead from UP's Brownsville Subdivision at Bloomington;
- Installing a crossing diamond at the intersection of the Victoria Industrial Lead, the Cuero Subdivision and the south end of UP's Rosenberg Subdivision connection to KCS's Rosenberg Subdivision;
- Installing Centralized Traffic Control between South Odem and Robstown on UP's Brownsville Subdivision;
- Building a runaround track at Sinton on UP's Brownsville Subdivision;
- Extending the siding at Greta on UP's Brownsville Subdivision to 14,044 feet;

- Extending the siding at Inari on UP's Brownsville Subdivision to 10,000 feet; and
- Building a 10,037-foot siding near Rosenberg, TX on UP's Rosenberg Subdivision.

37. For each of these projects, KCS and UP were able to develop an approach to funding that recognized both carriers' use of the facilities. Together, these and other improvements that KCS and UP have cooperated to install have significantly improved the efficiency and capacity of operations over the portions of UP's Brownsville and Angleton Subdivisions and elsewhere southwest of Houston where KCS has trackage rights on UP lines. A map indicating these projects is attached as Exhibit 7.

38. Unfortunately, since 2018-2019, UP's willingness to cooperate with KCS's efforts to increase capacity have faded. The 2015 agreement mentioned above called for UP and KCS to consider implementation of a set of additional projects after the first set. These included additional CTC installation; powering and providing remote control for certain switches; another runaround track and realignment of a section of main line to improve operational fluidity. UP has not engaged with KCS on moving forward with these projects. Perhaps that is due to UP's general withdrawal from providing KCS information about UP's capacity plans in the Beaumont-Robstown area. Obviously KCS is not well positioned to plan for capacity modifications on UP track without UP's information and input. UP's having gone quiet on that information in the past few years has stymied further efficiency improvements on some of the trackage rights lines. Nonetheless, KCS and, I expect, the future CPKC will be willing to pursue capacity work according to these established agreements at such time that additional capacity becomes necessary.

39. As can be seen from the list above, almost all of these cooperative projects occurred on UP's Brownsville Subdivision, the south end of KCS's trackage rights. UP has

engaged in considerable capacity expansion work on its lines closer to Houston (between Rosenberg and Houston, in the Houston terminal, and east of Houston to Beaumont), but UP almost never involves KCS in planning or advises KCS significantly in advance of those capacity projects. Instead, KCS generally just gets a bill for a project and has to investigate what the bill is for. KCS has asked to be more involved and more informed, but UP chooses not to share information, particularly since beginning implementation of UP's version of Precision Scheduled Railroading, UP's Unified Plan 2020, in 2018. To the extent that UP is critical of CP and KCS not providing in the Operating Plan a specific analysis of recent infrastructure upgrades in and north of Houston, UP has itself to blame due to its refusal to share capacity planning information, despite KCS's repeated requests.

40. With respect to BNSF's implication that the addition of CPKC's projected growth would cause problems similar to the conditions that disrupted Houston in 1997-1998,[19] nothing could be further from the truth. First, neither KCS nor CPKC would have any desire or incentive to create operating problems that contributed to congestion in Houston. Unlike UP and BNSF, KCS does not have any way to get from Mexico to the rest of the KCS network unless Houston is fluid.[20]

41. Second, there are many crucial differences between now and the situation in 1997-1998, as reflected in the various STB decisions. For one thing, substantial infrastructure

[19] BNSF-9 at 51-57.

[20] BNSF, unlike KCS, has access to routes that can bypass Houston. UP's and BNSF's routes from Mexico to Chicago bypass Houston completely. And for other traffic, if BNSF were concerned about congestion on the lines that CPKC will use between Houston and Beaumont, it already has trackage rights over UP from Houston on UP's line to Fair Oaks, AR via Shreveport, LA and Pine Bluff, AR, and UP's line between Houston and Valley Junction, IL via Palestine, TX.

has been added. KCS alone has spent over $100 million on capital investments in the trackage rights lines just since 2014. UP's Executive Vice President Operations testified on April 27 at the STB's recent Ex Parte 770 that UP had invested a quarter billion dollars in Englewood and Settegast Yards during just the last 3 years.[21] So the inadequate infrastructure referenced in STB decisions of 1997-1998 is no longer the case. There also have been operational changes like the clear route protocol imposed by the STB as a permanent relief measure as a result of the 1997-1998 service crisis; the Spring Center was established and KCS, BNSF and UP all participate, providing greater opportunities for operational coordination than before the service meltdown; UP promised as the 1997-1998 service crisis abated to invest $1.4 billion in Houston area infrastructure; and directional running was implemented on UP's lines between Houston and Beaumont.[22]

42. Furthermore, current KCS trains and future CPKC trains do not provide local service on UP and UP-BNSF track in Houston – the trackage rights agreements prohibit that except for traffic destined to Mexico (and other points on Tex Mex's original Corpus Christi-Laredo line). So KCS and future CPKC trains can be added to Houston infrastructure with much less operational impact than either UP or BNSF who maintain major yards and provide local service in the Houston complex.

---

[21] Testimony of Eric Gehringer, Executive Vice President, Operations, Union Pacific Railroad Company at Ex Parte No. 770, Apr. 27, 2022 Public Hearing, Transcript STB Document ID 304765, posted June 15, 2022, page 906, line 13 through page 907, line 9.

[22] *See UP/SP [Houston/Gulf Coast Oversight]*, STB Finance Docket No. 32760 (Sub-No. 26) (served Dec. 21, 1998) (explaining why structural changes during the service crisis remedied the conditions that brought on the service problems in 1997).

43. In summary, the UP and UP-BNSF-owned lines to and through Houston have ample capacity, if operated efficiently, to handle the growth in CPKC traffic projected in the operating plan. Indeed, those lines have previously handled more additional trains per day than CPKC projects adding. But if added infrastructure is needed, the trackage rights agreements already in place enable KCS to require that capacity to be added, and KCS has been successful, despite UP's limited cooperation, in improving capacity to keep more trains running over the trackage rights.

II. THERE IS AMPLE CAPACITY FOR ADDITIONAL CPKC TRAINS ON THE NECHES RIVER BRIDGE

44. Another complaint voiced by UP and BNSF is that KCS's Neches River bridge in Beaumont has inadequate capacity to handle CPKC's projected additional trains, and that KCS needs to build a new bridge to handle the traffic. That assertion is contrary to the results of a recent and comprehensive KCS-led study conducted in conjunction with UP and BNSF. The fact that UP and BNSF did not get behind the Texas Department of Transportation's (TxDOT's) efforts in 2013 and 2016 to construct a new rail bridge over the Neches River belies their alleged concerns here.

45. Figure 3 below is a picture of the area surrounding the Neches River bridge, taken from a 2013 TxDOT final report on possible alternatives to the existing Neches River bridge.[23]

[23] Neches River Bridge Feasibility Study, Final Report – June 2013, Rail Division, Texas Department of Transportation. The study did not recommend a preferred alternative to the existing bridge. Study, page ES-1 (excerpts are Exhibit 8 hereto).

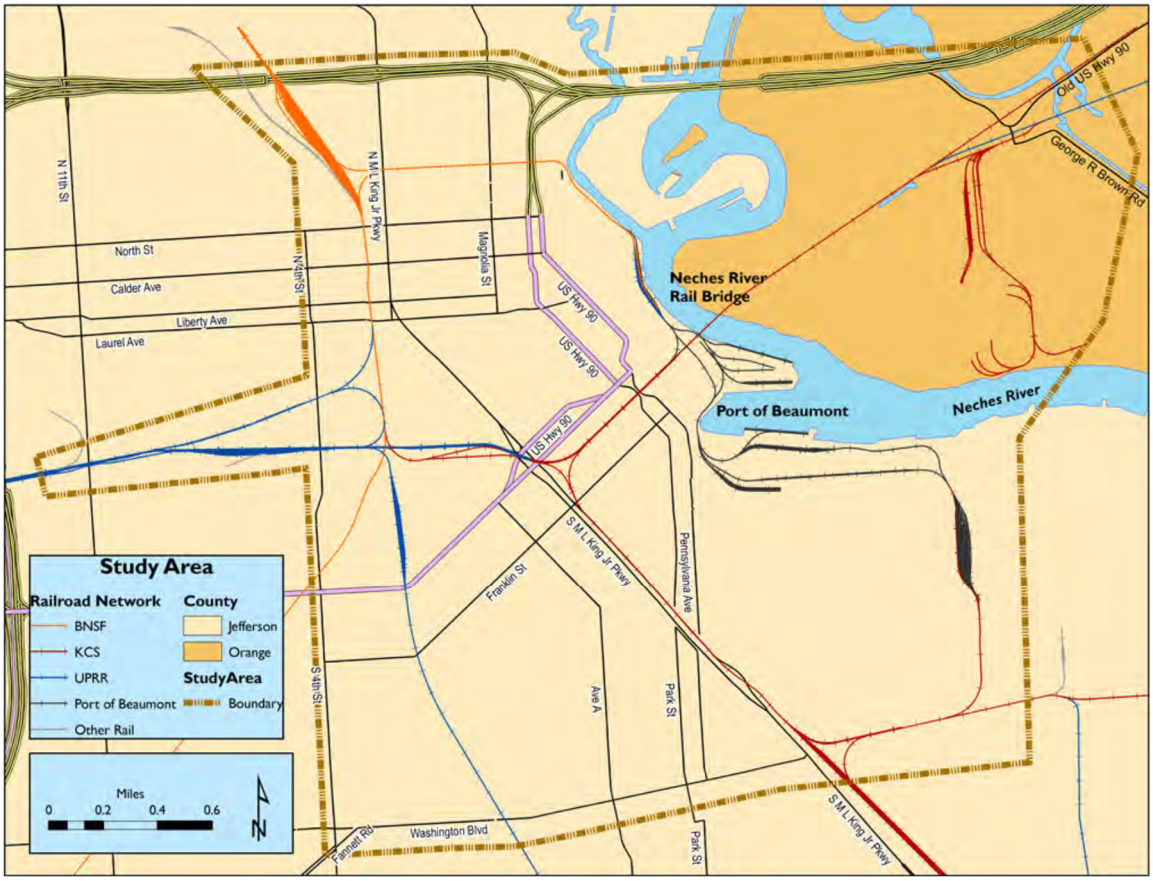

FIGURE 3
BEAUMONT, TEXAS, WITH PORT OF BEAUMONT IN FOREGROUND, KCS NECHES RIVER BRIDGE IN MID-GROUND AND INTERSTATE 10 BRIDGE IN BACKGROUND

46. In addition to the features noted in the caption, the site of the Jefferson Energy Terminal is the triangular-shaped graded area to the right of and below the Neches River bridge.

47. A second figure taken from that same TxDOT study (Figure 4 portion of the blue track west of the river and the blue track east of the river are actually the joint UP-BNSF Dawes, TX to Avondale, LA line), BNSF in orange and KCS in red:

FIGURE 4
NECHES RIVER RAIL BRIDGE FEASIBILITY STUDY AREA

48. As shown in the figure above, KCS's line ends a short distance west of the bridge where it connects to UP's line and is crossed by BNSF's line. UP and BNSF have trackage rights from that point over KCS's tracks leading to and from the bridge on both sides of the river.[24] The UP-BNSF joint line to Avondale breaks off from the KCS line immediately east the Jefferson Energy Terminal (which began operations just before the TxDOT study was completed and was not reflected on the graphic above).

[24] UP has had access over the bridge for decades, in conjunction with UP's removal of its own bridge across the Neches River. UP admitted Amtrak to use the bridge in conjunction with Amtrak's Sunset Limited operation over UP between New Orleans and Los Angeles. BNSF gained access over the bridge as part of the UP/SP merger.

49. In 2018-2019, KCS led a joint study of use of the bridge with its tenants UP and BNSF. The final report of that study is Exhibit 9(C) hereto, and includes the speaker notes associated with the presentation of the study's conclusions to UP and BNSF. (I understand that UP or BNSF produced a version of the presentation in response to Applicants' discovery requests.).

50. Among the study's findings were that:

A. The operational capacity of the bridge is 70 trains per day, while the average train count during the last 11 months of 2018 was 36 trains per day. Exhibit 9(C), Slide 10. The highest weekly average train count during 2018 was 41 trains per day, and the most trains crossed in a day was 49. Exhibit 9(C), Slide 11.

B. The study determined that the bridge itself is not the primary capacity constraint. Exhibit 9(C), Slide 11. Rather, it was the operations around the bridge that were the primary constraint.[25]

C. The study identified a need for improved communication between KCS and UP dispatchers. In response, KCS located dispatching of its Beaumont Subdivision, which includes the Neches River Bridge, to the Spring Center in Houston, where UP and BNSF dispatchers also work. Another issue identified as

[25] Bridge openings are not a primary constraint. As stated in TxDOT's 2013 feasibility study, "Data from KCS in 2012 indicates 7 lifts in a six day period which is consistent with the USCG's annual lifts. While requests for bridge openings can occur at any time, most occur during daylight hours. The bridge raising can result in some train delays. The delays are more pronounced when trains are traveling in the same direction across the bridge as adjacent trains must be separated by two signals in order to prevent a train from stopping on the bridge. Typically the bridge stays open to river traffic between 15 and 30 minutes. The daily train count across the Neches River bridge ranges between 40 to 50 trains based upon daily train movements in the FRA's crossing inventory." Study, page ES-3 (Exhibit 8).

impeding fluidity at the bridge was BNSF changing crews on the main line. BNSF has since remedied that practice.

D. While the 2018-2019 study shows that the capacity of the Neches River bridge is more than adequate to handle the projected additional CPKC trains, as in 2018 there currently are issues affecting the fluidity of operations over the bridge, including:

(1) UP and BNSF trains serving the Jefferson Energy facility adjacent to the east end of the bridge slow down as they are crossing the bridge in order to be able to stop on the UP-BNSF joint line just after leaving KCS track and to shove back into the Jefferson Energy facility. This slows crossing times for those trains.

(2) UP changes crews on its main line adjacent to its yard about 3 miles west of the bridge. That main line is the west end of the Lafayette Subdivision, operated with westbound directional running to Houston. Blocking the movement of trains on that main line backs up traffic moving west over the bridge seeking to reach Houston.

(3) BNSF accesses the Port of Beaumont south of the bridge via a crossover in the KCS main line near the bridge. Each time BNSF uses that crossover, it blocks access to and from the bridge. There is an existing connection that BNSF could use which would not block the KCS main near the bridge, but BNSF refuses to use it to avoid sharing in the cost of its construction and operation.

51. In summary, the Neches River bridge study shows that the capacity of the bridge is fully adequate to accommodate the additional CPKC trains projected to result from the merger. While expanded bridge capacity eventually may be needed,[26] new bridge capacity is not needed for the 8 trains per day that CPKC's operating plan projects in Year 3. And if more capacity is needed, operational changes such as reversing BNSF's refusal to use the new connection to the Port of Beaumont should be made to remedy it.

III. NS AND BNSF REQUESTS FOR TRACKAGE RIGHTS FROM THE DALLAS AREA TO SHREVEPORT ARE UNRELATED TO THE MERGER AND ARE INSTEAD ATTEMPTS TO GET COMMERCIAL RIGHTS FOR WHICH THEY HAVE NOT NEGOTIATED OR PAID.

52. In asking the Board to grant them contingent trackage rights over KCS's line from Dallas to Shreveport, both BNSF and NS seek a gift of rights that both chose not to acquire when Meridian Speedway, LLC (MSLLC) was created. In addition, in its settlement with UP in the UP/SP merger, BNSF deliberately gave up the right to connect at Shreveport to "eastern carriers" via the UP trackage rights over which it operates to reach Shreveport. BNSF offers no evidence supporting reversal of that STB-approved decision.

53. MSLLC is a joint venture created by KCS and Norfolk Southern in 2006 to improve the operation of the "Meridian Speedway" from Shreveport, LA to Meridian, MS. The basics of the joint venture as shown in the joint venture agreement were that KCS would contribute its Shreveport to Meridian line to MSLLC in exchange for MSLLC stock and NS would, over a period of time, contribute $300 million of capital (also in exchange for a minority

[26] The Draft Houston-Beaumont Region Freight Study dated August 2021 listed a double track rail bridge across the Neches River as having a long-range implementation timeframe for planning purposes. *See* BNSF-9, Verified Statement of Jon Gabriel and Travis Thowe, Exh. 1 at 5-67 ("The second track across the Neches River on the Beaumont Subdivision has a varied range of potential costs depending on the implementation strategy chosen. This project may be considered a long-range implementation timeframe for planning purposes.").

interest in MSLLC) to improve the infrastructure of the Meridian Speedway to bolster the line's competitive position as the most direct rail route for freight moving between western U.S. points (including West Coast ports) and Southeast points such as Atlanta. MSLLC was designed to be pro-growth and growth is inherent in those agreements.[27]

54. In exchange for its capital contribution, NS received – in addition to MSLLC stock – certain commercial rights. The principal commercial right was the exclusive right, in place of KCS, to move certain intermodal traffic from points west of Dallas/Fort Worth to points east of Meridian via the Speedway. This was called "NS Traffic." NS could receive NS Traffic at Shreveport from UP or KCS. NS Traffic would move over the Speedway in haulage operated by KCS on behalf of MSLLC for a fee set by agreement.[28]

55. For certain traffic handled by KCS from Dallas to Shreveport, NS and KCS entered into the Dallas Terminal Marketing Agreement (DTMA).[29] The DTMA provided, among other things, that the parties would {{[redacted].}}

[27] *See*, *e.g.*, Exhibit 15(HC), The Kansas City Southern Railway Company - Meridian Speedway, LLC, Joint Use Agreement (KCS Joint Use Agreement), § 6(b); Exhibit 10(HC), Dallas Terminal Marketing Agreement, as amended, § 2(a).

[28] *See* Exhibit 12(HC), Norfolk Southern Railway Company - Meridian Speedway, LLC, Joint Use Agreement (NS Joint Use Agreement).

[29] *See* Exhibit 10(HC), Dallas Terminal Marketing Agreement, as amended.

[30] The DTMA {{defines "Dallas Intermodal Terminal Traffic" as "domestic intermodal containers or trailers with an origin and destination in the United States, with a lift or drop at the Terminal [KCS's intermodal terminal in the Dallas area], that move[] over the [Meridian Speedway] and over KCSR's tracks between Shreveport and the Terminal, and that originates or terminates at or east of Meridian, and that originates or terminates at or west of the Dallas/Ft. Worth, TX. Standard Metropolitan Statistical Area (SMSA)."}} DTMA, Section 1(b) (Exhibit 10(HC), 27th page), definition of Dallas Intermodal Terminal Traffic.

56. The DTMA also provided NS an {{ }}

57. The Western Haulage Agreement[35] {{ }}

[31] DTMA, Section 3 (Exhibit 10(HC), 29th page).

[32] In 2006, {{ }}

[33] DTMA, Section 1(b) (Exhibit 10HC, 27th page), definition of Notice Trigger Period.

[34] DTMA, Section 5(a)(i) (Exhibit 10(HC), 32nd page).

[35] *See* Exhibit 11(HC), Norfolk Southern Railway Company, The Kansas City Southern Railway Company Western Haulage Agreement.

[36] Exhibit 12(HC).

[redacted]

58. Importantly, not since the Major Service Standards Failure provisions of the NS Joint Use Agreement took effect, {{[redacted]}} has KCS service quality ever come close to triggering the "Major Service Standard Failure" provision defined in that agreement.

59. Section 3(b)(ii) of the Western Haulage Agreement simply specifies that:

[redacted][37]

60. This different treatment of KCS lines west of Shreveport as compared to the Meridian Speedway lines east of Shreveport makes sense. Unlike for the Speedway, NS did not agree to provide any capital contribution to maintain and upgrade KCS's Dallas-Shreveport track as it did for Meridian Speedway. That capital contribution was fundamental to the MSLLC agreement on the Meridian Speedway, yet NS now asks for rights like its MSLLC rights without any capital contribution.

61. Providing for NS to receive, in the event of its {{[redacted]}}, and not granting NS trackage rights, obviously was a deliberate departure from the structure of the Shreveport to Meridian rights that the parties carefully crafted. Given the prolonged negotiation of the MSLLC agreements, and the specificity with which the agreements

[37] Exhibit 11(HC), 6th page.

provide for NS to obtain trackage rights east of Shreveport under certain circumstances, there is no doubt in my mind that providing {{ }} was deliberate on the part of both KCS and NS. In other words, by incorporating the provisions of the {{ .}}

62. NS's Responsive Application also expands the types of traffic that NS could handle on the Wylie-Shreveport trackage beyond what NS and KCS agreed to {{ }} Exhibit 10(HC) at 32nd page (emphasis added).

63. NS's proposed trackage rights, however, are not limited to {{ }} but rather are broader, applying to "the movement of intermodal traffic, the rail movement of which originates or terminates at the Wylie Intermodal Terminal in Wylie, Texas." *See* NS-13, Exhibit 2, Article 3, Restrictions on Use. This broader language deletes limitations in the definition of {{ }} In other words, the traffic that NS seeks

trackage rights to haul is more expansive than {{ }}, contradicting NS's claim that, "[T]he contingent trackage rights, if exercised, *would merely maintain the same traffic* moving between the same origins and destinations. The *only effect* would be to change the nature of the movement from haulage to trackage rights."[38]

64. NS's statement that, "NS does not anticipate any increase in … revenues … or net earnings as a result of the Proposed Transaction"[39] also likely is not accurate. Indeed, the trackage rights NS seeks could transfer {{ }} of dollars in revenue from KCS to NS each year. As shown below, NS's attempt to pay a trackage rights fee in lieu of haulage would thus vastly change current economics of KCS's handling of Dallas Intermodal Terminal Traffic between Wylie and Shreveport, {{ }}

65. KCS and NS have not yet determined what the haulage fees called for by {{ }}[40] would be, and cannot do so until {{ }} The

[38] Norfolk Southern Railway Company's Reply to CSX Transportation, Inc.'s Motion to Reject Responsive Application of Norfolk Southern Railway Company as Incomplete, NS-11 at 8 (emphasis added).

[39] NS-11, Norfolk Southern Railway Company's Reply to CSX Transportation, Inc.'s Motion to Reject Responsive Application of Norfolk Southern Railway Company as Incomplete, page 8.

[40] As noted above, {{ }}

best comparison currently available, therefore, is the revenue per container that KCS currently earns on the Wylie to Shreveport move compared to NS's proposed trackage rights fee of [redacted]}}.

66. NS's proposed trackage rights cover about 207 miles – approximately 9 miles on the Shreveport Terminal Subdivision from approximately Texas Avenue, near the west end of MSLLC's ownership, to Texas Junction, and about 198 miles from Texas Junction to Wylie Yard. The distance from Texas Avenue in Shreveport to Meridian on MSLLC's line is about 310.5 miles; that is, 8.2 miles on the Shreveport Terminal Subdivision, 161.7 miles on the Vicksburg Subdivision, and 140.6 miles on the Meridian Subdivision. Combined with the trackage rights that NS seeks, the overall distance from Wylie to Meridian is about 517.5 miles.

67. In 2021, KCS earned line-haul revenue of {{[redacted]}} per container that KCS moves from Wylie to Meridian for interchange with NS. That's slightly over {{[redacted]}} per container per mile or, for the approximately 207-mile portion of the route where NS seeks trackage rights, [redacted]

68. NS's proposed trackage rights agreement would transfer over {{[redacted]}} of that revenue to NS. At NS's proposed trackage rights fee of [redacted]}}, and with {{[redacted]}}, KCS revenue for the 207 miles from Wylie to Shreveport for that car would drop from {{[redacted]}} to {{[redacted]}}, for a loss

[41] Article {{[redacted]}} of NS's proposed trackage rights agreement, Exhibit 2 to NS-13. Article {{[redacted]}} of NS's proposed trackage rights agreement says that, for purposes of calculating its trackage rights fee, [redacted] } Almost all intermodal cars currently operated by KCS between Wylie and Shreveport {{[redacted]}}.

to KCS of [redacted]}}. If the traffic moved in {{[redacted]}}, the calculation might be slightly different, but for the approximately {{[redacted]}} containers that KCS moved over the Wylie-Shreveport line in 2021, that equates to a revenue loss of {{[redacted]}} per year. This calculation is not perfectly precise – for example, this is only gross revenue – but the point is clear: there would be a revenue transfer from KCS to NS of {{[redacted]}} of dollars per year if NS had trackage rights from Wylie to Shreveport for intermodal traffic as it proposes, rather than using the haulage rights NS and KCS agreed to in the Dallas Terminal Marketing Agreement. NS's statement that, "NS does not anticipate any increase in traffic, revenues, earnings available for fixed charges, or net earnings as a result of the Proposed Contingent Trackage Rights Transaction," *see* Amended Responsive Application of Norfolk Southern Railway Company, NS-13 at 12, likely is not accurate.

69. NS's request for contingent trackage rights is nothing more than an attempt to get for free rights that it chose not to bargain for or pay for in the MSLLC agreement. The STB should not order such a giveaway to NS.[42] NS had the opportunity to negotiate for more or different rights from Dallas to Shreveport and did not. The MSLLC agreements were extensively negotiated. The original Memorandum of Understanding for MSLLC is dated July

[42] NS's assertions that there is insufficient capacity on MSLLC are likewise ill-founded. Under Section 6(b)(ii) of the NS Joint Use Agreement, NS is entitled, based on the infrastructure completed in the first four years of MSLLC to 13 daily overhead trains, but NS provides only five per day. KCS's Wylie to Shreveport segment has capacity for 14 trains per day, but hosts only seven now. Thus, capacity exists to host additional NS trains, but NS has not generated that much business, a fact that hurts MSLLC's profitability. What NS is really complaining about is that it wants to move 13,000-foot intermodal trains on the Speedway, but {{[redacted]}} *See* Exhibit 14(HC), MSLLC Meeting Presentation by NS Regarding Siding Lengths Dallas to Atlanta (including MSLLC) and Desired Siding Extensions on MSLLC (with cost estimates) at pages 1 and 3.

5, 2005, indicating that negotiations for the joint venture likely began well before that date. The Transaction Agreement itself is dated December 1, 2005, indicating five months of additional negotiation *after* the MOU negotiations were completed. In a negotiation of that length, the parties undoubtedly made efforts to consider almost every possible future fact situation. Indeed, the 50+-page MSLLC Transaction Agreement alone contains provisions showing that the parties contemplated all of the aspects of the transaction that NS complains of – a change of control of KCS,[43] service failures,[44] and capacity constraints.[45] The MSLLC agreements provide ample protection against these risks, including remedies in the event of a change of control and specific provisions triggered in the event of a carefully-defined major service failure. NS does not need additional protection beyond what it extensively bargained for.

70. BNSF's request for contingent track rights from Dallas to Shreveport is even more clearly undeserved than NS's. BNSF says that it "considered … filing a responsive application for trackage rights on a KCS line that would have allowed BNSF to shift its interchange location with Eastern railroads further north to Shreveport, La. [but] BNSF now believes that it would be more appropriate for the Board to reserve jurisdiction to address this issue…"

71. The MSLLC agreements indicate that BNSF likely was negotiating with KCS in 2005-2006 (or at least had the opportunity to do so) for trackage rights from Dallas to Shreveport. The recitals of the Western Haulage Agreement include the statement that,

---

[43] Exhibit 13(HC), Limited Liability Company Agreement, Section 9; Exhibit 12(HC), Section 7(g).

[44] Exhibit 12(HC), Section 2(a).

[45] Exhibit 13(HC), Limited Liability Company Agreement, Section 5.12; Exhibit 12(HC), Section 6(b).

{{[redacted]}}. Also, Section 2(a)(ii) of the Western Haulage Agreement says:

{{[redacted]}}

72. Obviously, KCS was in commercial discussions with BNSF concurrently with negotiating the MSLLC agreements with NS. Obviously, NS knew that from this language. Just as obviously, BNSF never reached such an agreement. NS's and BNSF's awareness of the fact that rights between Dallas and Shreveport were up for negotiation in 2006 is yet another reason why the demands of both NS and BNSF for new rights west of Shreveport that they declined to negotiate and pay for is so overreaching.

73. Because the BNSF Shreveport Agreement fell through, KCS has made the investments in the Dallas-Shreveport line to support intermodal growth, including the Wylie intermodal terminal. NS benefits from these investments, which led to doubling of Dallas Intermodal Terminal Traffic since 2012.

74. BNSF does not even attempt to offer any substantial justification related to the merger for being granted trackage rights on KCS to Shreveport. Furthermore, according to the Board's website, BNSF did not submit any filings at all in the proceedings authorizing the creation of MSLLC, making no attempt to show a need to connect to "eastern carriers" at

Shreveport.[46] With BNSF having passed on entering an MSLLC-type of trackage or haulage rights with KCS in 2005-2006 and providing no justification for such a grant in the MSLLC proceeding or now, the STB should not grant BNSF any such rights, contingent or otherwise.

75. In the UP/SP merger, BNSF deliberately surrendered the right to connect to "eastern carriers" at Shreveport. On March 1, 2002, UP and BNSF filed their "Joint Submission of Restated and Amended BNSF Settlement Agreement" with the Board. Section 6.d of that agreement limited BNSF's right to connect to other carriers at Shreveport as follows:

> "BNSF shall also have the right to handle traffic of shippers open to all of UP, SP and KCS at Texarkana, TX/AR, and Shreveport, LA, to and from the Memphis BEA (BEA 73), but not including proportional, combination or Rule 11 rates via Memphis or other points in the Memphis BEA. . . . BNSF shall also have the right to interchange: with . . . KCS at Shreveport, LA and Texarkana, TX/AR, for movements of traffic originated by KCS at or delivered by KCS to shippers or receivers at Lake Charles, West Lake, or West Lake Charles, LA; with KCS (y) at Shreveport, LA for movements of loaded and empty coal trains moving to and from Texas Utilities Electric Company's Martin Lake generating station, and…"[47]

By this Board-approved settlement, BNSF surrendered any right to connect to KCS for traffic moving from Shreveport to Meridian and to "eastern carriers" beyond. Likewise, BNSF does not

[46] Despite BNSF's claimed desire to gain rights to connect to "eastern carriers" at Shreveport, there are no such carriers there. KCS, MSLLC, and UP have track in Shreveport. BNSF has limited rights to use KCS and UP track in Shreveport as a result of the UP/SP merger. Neither CSX nor NS owns track in Shreveport. NS has the right to interchange "NS Traffic" with UP in Shreveport under the MSLLC agreements. BNSF could route traffic over the Meridian Speedway via interchange with KCS at Dallas, but BNSF has opted not to do so, instead interchanging traffic with CSX at Memphis.

[47] *See* excerpts of Joint Submission of Restated and Amended BNSF Settlement Agreement, UP/SP-393; BNSF-100, filed March 4, 2001 in STB Finance Docket No. 32760, Section 6(d) (Exhibit 5, page 15). BNSF and KCS do interchange coal trains at Shreveport for the Martin Lake power plant. BNSF has not, to the best of my knowledge, ever utilized its trackage rights on UP's line through Shreveport to interchange traffic to or from Westlake or West Lake Charles, LA with KCS, likely because UP switches traffic from those locations to/from BNSF in Lake Charles.

submit any evidence in this case justifying a need to connect with "eastern carriers" at Shreveport.[48]

76. KCS currently interchanges traffic with BNSF in the Alliance Yard area north of Fort Worth. If BNSF wants to move intermodal traffic to NS, it can interchange that traffic to KCS at Alliance for movement east. In fact, however, BNSF does not do so because it interchanges its eastbound intermodal traffic to CSX in Memphis.

77. Granting BNSF trackage rights over KCS track from Dallas to Shreveport could be a large monetary gift to BNSF. Currently BNSF and KCS interchange a number of loaded coal trains each month in Kansas City, destined for Luminant's Martin Lake plant served by BNSF in Rusk County, Texas. KCS interchanges these trains back to BNSF at Shreveport for BNSF to deliver them to Martin Lake (using BNSF's trackage rights over UP). This routing saves probably hundreds of miles as opposed to an all-BNSF routing via the Houston area. BNSF interchanges the empty trains back to KCS at Texarkana, from which KCS moves them north to Kansas City for interchange back to BNSF. Allowing BNSF trackage rights on KCS between Dallas to Shreveport might allow BNSF to cut KCS out of the Martin Lake moves (by running these trains over those trackage rights over KCS between Dallas and BNSF's trackage rights lines used to reach the Martin Lake plant), diverting substantial revenue from KCS to BNSF. Not only that, but without a commitment to capital investment in the line by BNSF – a commitment BNSF avoided in 2005-2006 – addition of the Martin Lake trains to the Dallas-

[48] Even though BNSF was granted trackage rights to Brownsville, TX in the UP-SP merger to interchange with KCSM (*see* excerpts of Joint Submission of Restated and Amended BNSF Settlement Agreement, UP/SP-393; BNSF-100, filed March 4, 2001 in STB Finance Docket No. 32760, Section 4(a) (Exhibit 5, pages 9 – 11)), it has yet to use them over 25 years later.

Shreveport line would create substantial added wear to the track and add substantial congestion without funding the investments needed to compensate.

78. In making their requests, BNSF and NS seek a gift of rights that neither was willing to pay for and that both passed on in 2005. BNSF also passed on opportunities to connect to KCS at Shreveport for traffic moving to/from Meridian in the UP-SP merger and the MSLLC proceedings, and doesn't even attempt to present evidence justifying such a connection here.[49] The agency should not gift NS or BNSF such rights based on speculation unsupported by any evidence.

IV. THE NEW ORLEANS INTERCHANGE AGREEMENT WAS ALWAYS MEANT TO BE TEMPORARY AND CSX'S REQUEST TO MAKE IT PERMANENT IS AN ATTEMPT TO HAVE THE BOARD IMPOSE COMMERCIAL RIGHTS THAT CSX HAS NOT NEGOTIATED OR PAID FOR AT THE EXPENSE OF CPKC

79. CSX seeks to have the Board force KCS to incur most of the interchange costs between KCS and CSX at New Orleans in perpetuity by preventing KCS from exercising cancellation rights that KCS and CSX agreed to at the beginning of 2021.[50] There is no reason that the Board should undo CSX's recent contractual commitment to allow renegotiation of its agreement with KCS about allocation of interchange costs if either party desires a change.

80. As background for its complaint, CSX recited abandonments of small sections of KCS track in New Orleans in 1985 and 2006. I am not aware of CSX objecting in those proceedings that the abandonments would prevent continuation of competitive rail service at New Orleans, as CSX now claims. Indeed, CSX's predecessor Seaboard System Railroad, Inc., was one of several signatories to an agreement including KCS's predecessor Louisiana &

[49] Among other evidence that would be needed, BNSF's failure to present evidence of the impact of congestion its operation would cause on CPKC's service to customers is a glaring gap.

[50] *See* Exhibit 15(HC).

Arkansas Railway Company (L&A), the New Orleans Terminal Company, and others that allowed L&A trackage rights on a few hundred feet of the Back Belt to connect from CN's track back to L&A's track to reach what is now KCS's New Orleans Yard.

81. KCS and CSX do not have a direct physical connection in New Orleans for interchange of traffic, and have not since approximately 1985. It is my understanding that prior to 1985, the Louisville & Nashville Railroad (now CSX) used trackage rights over the New Orleans Terminal Railroad's (NOT's) Back Belt to reach the interchange tracks with Louisiana & Arkansas Railway Company (L&A, since merged into KCS) located around Airline Drive.

82. In the early 1980's, KCS and Illinois Central Gulf Railroad Company (ICG) and the NOT entered a series of agreements with the State of Louisiana and Jefferson Parish to facilitate elimination of highway grade crossings on L&A's line by relocating L&A's operation to ICG's line and removing a corresponding section of L&A's. The agreement called for L&A to be allowed to operate over ICG's line from Orleans Junction (later changed to Frellsen Junction) to ICG's junction with the Back Belt at East Bridge Junction. The agreement allowed L&A to traverse ICG's line and then to traverse a short section of the Back Belt back to return to the remainder of L&A's line near the L&A yard. The agreements also called for construction of a new NOT interchange track on ICG property. However, that interchange track apparently was not constructed. In any case, CSX's implication that this change was a commercial decision on KCS's part is incorrect; rather, the move to ICG's line was necessary for the State to complete its highway project for the benefit of the public.

83. Because the new NOT interchange track was not built, L&A lost the ability to interchange with NOT near East Bridge Junction. Furthermore, NS acquired NOT's Back Belt, essentially nullifying use of the Back Belt by L&N (CSX). As a consequence, L&N (CSX) and

L&A (KCS) no longer had direct interchange in New Orleans, and were forced to use the New Orleans Public Belt Railroad (NOPB) to handle their interchange.

84. During the past few years, NOPB has undergone a number of changes. One of those was a significant increase in switch costs for intermediate switches by NOPB between linehaul carriers. In response, KCS and CSX discussed each being responsible for delivering interchange from themselves to the other carrier. Having no rights on track that connected to CSX, KCS planned to have NOPB handle KCS's interchange to CSX, and have CSX be responsible for handling its interchange to KCS. However, when CSX discovered that it did not have direct access to interchange with KCS, CSX balked at paying NOPB's charges. Instead, CSX threatened to tender traffic previously interchanged to KCS at New Orleans – largely for customers on KCS's line between New Orleans and Baton Rouge – to KCS at Gulfport, MS or Birmingham, AL.

85. Neither Gulfport nor Birmingham would have been a suitable interchange. KCS receives only local traffic for interchange from CSX at Gulfport. For KCS to route traffic to a customer between Baton Rouge and New Orleans from Gulfport would have required KCS moving the traffic north to Hattiesburg, CN providing KCS haulage from Hattiesburg to Jackson, KCS moving the traffic west from Jackson to Shreveport, and then KCS moving the traffic south from Shreveport to destination. This would have added hundreds of miles to the move and been wasteful and costly. Similarly, interchange of New Orleans area traffic at Birmingham would have involved a third railroad – Watco's Alabama Southern from Tuscaloosa to Artesia, and then KCS from Artesia south to Meridian, across the Speedway from Meridian to Shreveport, and south from Shreveport to the destination. Depending on the traffic's origin on CSX, this routing also might have added hundreds of miles and been wasteful and inefficient.

86. To avoid all of these problems from CSX's refusal to be responsible for handling its interchange to KCS, KCS agreed reluctantly to {{ }}[51] It certainly is not the case that CSX unwittingly agreed to the termination provision. Now, CSX wants the STB to take away that termination right, saddling CPKC perpetually with the majority of the cost of interchanging with CSX serving New Orleans area customers. There is no justification for freezing this uneven allocation of interchange costs as CSX requests.

87. Another alternate interchange between KCS and CSX for some traffic would be via the Meridian & Bigbee Railroad, L.L.C. (MNBR), which connects to KCS in Meridian, MS and to CSX at Montgomery, AL. CSX and KCS do not have an interchange at Meridian. CSX previously had a haulage agreement with MNBR between Meridian and Montgomery, but CSX cancelled that agreement in 2007. {{ }}

V. LYONDELLBASELL'S PROPOSED RECIPROCAL SWITCHING AT LAKE CHARLES HAS NO NEXUS TO ITS STATED SERVICE CONCERNS.

88. Finally and briefly, LyondellBasell (LYB) asks the STB to grant BNSF immediate access to a facility LYB owns on the Rosebluff Lead and to a facility that LYB partly

[51] Exhibit 15(HC), page 2, paragraph 6.

owns and manages at Mossville, LA; that the Board establish conditions for BNSF access to all shippers on the Rosebluff Lead; and that the Board order KCS to provide UP reciprocal switching between LYB's plant in Corpus Christi to interchange with UP at Robstown. None of these requests are justified.

89. First, the Rosebluff Lead and Mossville facilities addressed by LYB's comments are already served by both KCS and UP.[52] Both have direct rail competition. LYB has not shown that the Transaction has any effect at all on service to these facilities.

90. Further, as to facilities on the Rosebluff Lead, the Board is well aware of its ongoing and complex proceedings involving BNSF's terminal trackage rights application for the Rosebluff Lead.[53] The extensive proceedings before the Board and the complex factual decisions the Board has made thus far show that granting LYB's sweeping request, untethered to any presentation of relevant facts, would be entirely contrary to everything the Board has done to date in its pending proceeding.

91. LYB's further request that that UP be granted access via reciprocal switching to all shippers on KCS track in Corpus Christi does not solve any supposed competitive problem arising from the merger. LYB's Corpus Christi facility is not rail-served now – the CP-KC merger does not harm competition for rail traffic there because there is no rail traffic there.

---

[52] Mossville is a separate station from Westlake and West Lake Charles, as shown by UP, BNSF and KCS all listing it in their listings in the Open and Prepay Station List. LYB says that KCS "recognizes that the [recently-built Mossville facility in which LYB even more recently purchase an interest] is open to Union Pacific. But KCS refuses to recognize BNSF's access…" LYB ignores the fact that KCS provides UP reciprocal switching to the facility under KCS Tariff 8100-E, Item 345 {{ }} and that switching to locations in Westlake and West Lake Charles to which LYB tries to compare the Mossville facility are not covered by the tariff, but by a longstanding contract with UP that does not include Mossville.

[53] Finance Docket No. 32760 (Sub-No. 46).

92. Even if LYB's requests for BNSF access in the West Lake Charles and Mossville areas, or UP's access at Corpus Christi, were granted, those railroads would be handling any traffic they garnered on the same lines that LYB raises concerns over being too congested. For example, UP routing traffic to/from Corpus Christi would traverse the same UP lines between Robstown and Placedo and probably between Houston and Beaumont, and BNSF would use the same UP-BNSF joint line between Houston and New Orleans and the Neches River bridge to handle traffic that UP currently moves. Accordingly, the reciprocal switch access would not solve but could exacerbate any congestion issues.

93. LYB's request is a purely commercial preference and an attempt to have the Board grant BNSF access where BNSF does not have the commercial rights, has made no investments, threatens to increase congestion and has been unable thus far to justify even limited rights, let alone the sweeping, factually-unsupported access that LYB requests.

TERMS FOR TEXAS MEXICAN RAILWAY COMPANY TRACKAGE RIGHTS, EXECUTED DEC. 12, 1996 (MP/SP-TM),

45

TERMS FOR TEXAS MEXICAN RAILWAY COMPANY TRACKAGE RIGHTS

The following terms (hereinafter referred to as the "Terms") shall govern rights provided by MISSOURI PACIFIC RAILROAD COMPANY, a Delaware corporation ("MP"), and SOUTHERN PACIFIC TRANSPORTATION COMPANY, a Delaware corporation ("SP"), with MP and SP jointly and severally referred to as "MP/SP" or "Owner," on the one hand, to THE TEXAS MEXICAN RAILWAY COMPANY ("Tex Mex" or "User"), on the other hand, with MP/SP and Tex Mex sometimes referred to collectively as "Parties," pursuant to the decision of the Surface Transportation Board ("STB") in Finance Docket No. 32760 served August 12, 1996 (the "Decision").

RECITALS

A. MP/SP owns lines of railroad consisting of track structure extending between Robstown, Texas and Odem, Texas, and between Corpus Christi, Texas, and Beaumont, Texas, by way of Odem, Texas, identified as follows:

> MP's line between Robstown, Texas, in the vicinity of MP Milepost 141.48 and Placedo, Texas, in the vicinity of MP Milepost 224.2;
>
> MP's line between Corpus Christi, Texas, in the vicinity of MP Milepost 145.59, and Odem, Texas, in the vicinity of MP Milepost 132.2, via Savage Lane to MP's Viola Yard;
>
> SP's line between Placedo, Texas, in the vicinity of SP Milepost 14.2, and West Junction, Texas, in the vicinity of SP Milepost 12.6, via Victoria, Texas, and Flatonia, Texas;
>
> SP's line between West Junction, Texas, in the vicinity of SP Milepost 12.6, and T&NO Junction, Texas, in the vicinity of SP Milepost 4.6;
>
> SP's line from West Junction through Bellaire Junction to Chaney Junction, in the vicinity of SP Milepost 2.8;
>
> SP's line from Chaney Junction, in the vicinity of SP Milepost 2.8, to Tower 26, in the vicinity of SP Milepost 360.7, via the Houston Passenger station;

SP's line from Chaney Junction, in the vicinity of SP Milepost 2.8, to Tower 26, in the vicinity of SP Milepost 360.7, via the Hardy Street yard;

MP's line from Settegast Junction, in the vicinity of MP Milepost 381.61, to the connection with HB&T at Interstate Junction, in the vicinity of MP Milepost 7.60;

SP's line from T&NO Junction, in the vicinity of SP Milepost 4.6, to the connection with PTRA, in the vicinity of Katy Neck (GH&H Junction), in the vicinity of SP Milepost 1.3;

SP's line from SP Milepost 360.7 near Tower 26 to the connection with HB&T at Quitman Street, in the vicinity of SP Milepost 1.45;

MP's line between Gulf Coast Junction, Texas, in the vicinity of MP Milepost 377.98, and Amelia, Texas, in the vicinity of MP Milepost 451.4;

MP's line between Amelia, Texas, in the vicinity of MP Milepost 451.4, and the connection with SP at Langham Road, Texas, in the vicinity of MP Milepost 456.7;

SP's line between Langham Road, Texas, in the vicinity of MP Milepost 456.7, and Tower 74, in the vicinity of MP Milepost 458.8;

MP's line between Tower 74, in the vicinity of MP Milepost 458.8, and (1) the connection with The Kansas City Southern Railway Company ("KCS") at GLC Jct., Texas, in the vicinity of MP Milepost 460.36 (KCS Milepost 766.7), and (2) the connection with KCS at the Neches River Draw Bridge in Beaumont, Texas, in the vicinity of KCS Milepost 766.0;

as shown by bold line on the attached prints dated September 23, 1996 (and identified as Exhibit "A") and further described in Section 1.7 of Exhibit "B," which shall be referred to herein as the "Joint Trackage."

B. The STB in Finance Docket No. 32760 approved the common control and merger of the rail carriers controlled by Union Pacific Corporation ("UPC"), including MP and Union Pacific Railroad Company ("UPRR") (UPC, UPRR and MP are referred to collectively as "UP"), and the rail carriers controlled by Southern Pacific Rail Corporation ("SPR"), including SP, conditioned on, among other things, partial grant of the Responsive Application of Tex Mex, dated March 29, 1996.

C. In order to exercise its authority to acquire control of SPR as granted by the STB in Finance Docket No. 32760, MP/SP is willing to provide Tex Mex with the rights specified in the Decision.

D. Tex Mex desires to receive said rights and desires to conduct operations over said rights. Tex Mex and MP/SP now wish to assist the STB in specifically defining the terms and conditions under which said rights shall be exercised.

E. It is the position of Tex Mex and MP/SP that these Terms do not constitute the acquiescence by either of them in the Decision and shall not preclude either of them from seeking any reopening, reconsideration or judicial review of the Decision.

TERMS

1. General Conditions:

The General Conditions set forth in Exhibit "B" attached hereto are hereby made a part of these Terms. All capitalized Terms used and not otherwise defined in these Terms shall have the meaning ascribed to them in the General Conditions. If any conflict between the General Conditions and these Terms shall arise, the provisions of these Terms shall prevail.

2. Rights of Tex Mex:

(a) Subject to the terms and conditions contained herein, MP/SP shall grant to Tex Mex the nonexclusive right to use the Joint Trackage for the limited operation of Equipment in Tex Mex's account over the Joint Trackage in common with MP/SP and such other railroad company or companies as MP/SP has heretofore admitted or may hereafter at any time in the future admit to the joint use of all or part of the Joint Trackage (provided that such future admittance shall not materially hinder or obstruct the fair and reasonable exercise of the rights granted in these Terms), such other railroad company or companies to be considered MP/SP for the purposes of these Terms, it being understood and agreed that Tex Mex shall not have the right to:

(i) Switch industries upon the Joint Trackage, except as otherwise provided in Section 2(g);

(ii) Set out, pick up or store Equipment upon the Joint Trackage, or any part thereof, except as otherwise provided in Sections 2.11, 2.12 and 2.13 of Exhibit B;

(iii) Serve any industry, team or house track, intermodal or auto facility now existing or hereafter located along the Joint Trackage, except as otherwise provided in Section 2(g);

(iv) Permit or admit any third party to the use of all or any portion of the Joint Trackage, nor, under the guise of doing its own business, contract or make any agreement to handle as its own Equipment over or upon the Joint Trackage, or any portion thereof, the Equipment of any such third party which in the normal course of business would not be considered the Equipment of Tex Mex; provided, however, that the foregoing shall not prevent Tex Mex, pursuant to a run-through agreement with any railroad, from using the locomotives and cabooses of another railroad as its own under these terms;

(v) Connect with or interchange with any other railroad, except as otherwise provided in Section 4; or

(vi) Establish any transload facilities on the Joint Trackage or build into or out from any facility from/to the Joint Trackage.

(b) The rights granted in Section 2 shall be only for rail traffic of all kinds and commodities, both carload and intermodal, in Equipment that meets all applicable specifications established by the Association of American Railroads and the Federal Railroad Administration, provided that all freight handled by Tex Mex pursuant to such rights must have a prior or subsequent movement on Tex Mex's Laredo-Robstown-Corpus Christi Line.

(c) User shall have the right to establish crew change points at points on the Joint Trackage as from time to time may be mutually agreed to in writing by Owner and User. However, User agrees that if sufficient trackage is not available at such locations(s) to facilitate crew changes of User, Owner may require User to construct additional trackage ("Crew Change Facilities") in the vicinity of such location as may be required, in the reasonable judgment of Owner, the cost and expense of which shall be borne solely by User. If User does not agree that such Crew Change Facilities are necessary, the Owner may nevertheless insist that they be constructed, with the question of their necessity, and the User's obligation to bear their cost and expense, to be determined by arbitration pursuant to Section 6 of the General Conditions. In the event such Crew Change Facilities are constructed at the cost and expense of User, and Owner shall choose to use such Crew Change Facilities, Owner shall pay User fifty percent (50%) of the cost of constructing such Crew Change Facilities. Should Owner decline to participate, Owner shall be denied access to such Crew Change Facilities. However, should Owner elect at a later date to use such Crew Change Facilities, such right shall be granted to Owner by User upon payment of fifty percent (50%) of User's initial costs plus per annum interest thereon at a rate equal to the average paid on 90-day Treasury Bills of the United States Government as of the date of completion until the date of use by User commences. Per annum interest shall be adjusted annually on the first day of the twelfth (12th) month following the date of completion and every year thereafter on such date, based on the percentage increase or decrease, in the average yield of 30-year U.S. Treasury Notes for the prior year compared to their average yield in first year of completion of the Improvements. Each annual adjustment shall be subject, however, to a "cap" (up or down) of two percentage points of the prior year's

interest rate (i.e. the adjustment may not exceed an amount equal to two percentage points of the immediately preceding year's interest rate).

In addition, Owner shall lease to User, by separate written agreement at reasonable and customary charges, existing facilities for office, locker, change and lunchroom purposes by User's personnel upon request of User to Owner, and as reasonably available, or property of Owner as reasonably available for User to establish its own facilities.

(d) User agrees that when entering or exiting the Joint Trackage or using the Joint Trackage to set out or pick up ("User's Operations"), it shall do so without unreasonable interference or impairment of the Joint Trackage. However, User agrees that if sufficient trackage is not available at such location(s) to facilitate User's Operations, Owner may require User to construct additional trackage in the vicinity of such location(s) as may be required, in the reasonable judgment of Owner, the cost and expense of which shall be borne solely by User. If User does not agree that such additional trackage is necessary, the Owner may nevertheless insist that it be constructed, with the question of its necessity, and the User's obligation to bear its cost and expense, to be determined by arbitration pursuant to Section 6 of the General Conditions. In the event such trackage is constructed at the cost and expense of User, and Owner shall choose to use such trackage, Owner shall pay User fifty percent (50%) of the cost of constructing such trackage plus interest as calculated pursuant to Section 2(c) above.

(e) User shall have the right to such use of SP's Glidden Yard at Glidden, Texas, as is reasonably necessary to effectuate the rights granted by these Terms and on such terms and conditions (including reasonable compensation terms) as may be agreed to in writing by the parties or determined by arbitration pursuant to Section 6 of the General Conditions if the parties fail to agree; provided, however, that such use by User shall not unreasonably interfere with Owner's operations. Any dispute between User and Owner regarding the reasonableness of User's use of Glidden Yard shall be submitted to arbitration pursuant to Section 6 of the General Conditions.

(f) If Owner implements a directional flow of operations between Houston, Texas, and Beaumont, Texas, Owner will assure that User's operations are not adversely affected thereby.

(g) User shall have the right to serve all shippers that, as of September 10, 1996, were capable of receiving service from both MP and SP and no other railroad, directly or through reciprocal switching.

3. GTM Rate:

(a) In addition to other payments to be made under these Terms, User shall remit to Owner monthly for the use of the Joint Trackage in the operation of its Equipment therealong and thereover, the total amount of 3.84 mills per GTM for all Equipment, which sum per GTM ("GTM Rate") shall be deemed to include ordinary and programmed maintenance of the Joint

Trackage, Changes in and/or Additions to the Joint Trackage (to the extent required by the first sentence of Section 2.2 of the General Conditions), operating expenses, interest rental, depreciation and taxes.

(b) For the purpose of computing the GTM Rate under this Section 3, the distance between the designated points of the Joint Trackage shall be determined by reference to MPRR's EPMS Engineering Mileage Master or SP's Station Pair Master File, whichever is applicable, both of which shall be subject to verification by User.

(c) The GTM Rate set forth in Section 3(a) of these Terms shall be subject to adjustment annually, commencing as of July 1, 1997, as follows:

All trackage rights charges under this Section 3 shall be subject to adjustment annually beginning as of the effective date of these Terms to reflect seventy percent (70%) of increases or decreases in Rail Cost Adjustment Factor, not adjusted for changes in productivity ("RCAF-U") published by the ICC or successor agency or other organizations. In the event the RCAF-U is no longer maintained, the parties shall select a substantially similar index and failing to agree on such an index, the matter shall be referred to binding arbitration.

4. Interchange:

In exercising the rights granted by these Terms, Tex Mex shall have the right to interchange traffic (a) with carriers other than MP/SP at the existing interchange points with those carriers on the Joint Trackage, i.e., (i) at Houston, Texas, with the Port Terminal Railroad Association ("PTRA"), the Houston Belt Terminal Railway Company ("HBT"), The Atchison, Topeka & Santa Fe Railway Company ("ATSF") and Burlington Northern Railroad Company ("BN") (ATSF and BN are referred to collectively as "BNSF"), and (ii) at Beaumont, Texas, with BNSF and The Kansas City Southern Railway Company ("KCS"); (b) with BNSF at Robstown and Corpus Christi and at any new interchange point on the Joint Trackage that may hereafter be established between MP/SP and BNSF; and (c) with MP/SP at Houston, Beaumont and such other points as may mutually be agreed. Any interchange between Tex Mex and PTRA or between Tex Mex and HBT at Houston, Texas, shall be governed by agreements entered into between those parties or terms imposed by the STB.

5. Additions:

(a) Owner and User shall conduct a joint inspection to determine what connections ("Connections") and sidings or siding extensions associated with Connections ("Sidings") are necessary in the reasonable judgment of Owner to implement the rights granted under Section 2 of these Terms. User, at its sole cost and expense, shall pay the cost of such Connections and Sidings. If User does not agree that such Connections and Sidings (other than those described in subsections (i) and (ii), the necessity for which is not in dispute, and to which this sentence does not apply) are necessary, Owner may nevertheless insist that they be constructed, with the question of their necessity, and the User's obligation to bear their cost and expense, to be

determined by arbitration pursuant to Section 6 of the General Conditions. In the event that the User bears the sole cost and expense of any such Connections and Sidings, no other railroad shall have the right to use them except upon terms agreed to by User and such other railroad. In the event Owner shall elect to use such Connections and Sidings, Owner shall pay to User fifty percent (50%) of the cost to User of constructing the Connections and Sidings, plus interest as calculated pursuant to Section 2(c) above, and, having made such payment, Owner may also admit other railroads to the use of such Connections and Sidings. Owner shall maintain the part of any Connection or Siding on its property at its sole cost and expense, and User, at its sole cost and expense, shall maintain the part of any Connection or Siding on its property or property of others. Such necessary Connections and Sidings shall include, but are not necessarily limited to, those described in subsections (i) and (ii) below:

(i) User shall construct a connection to access MP at Robstown, Texas, to include track 8500 feet in length to permit Tex Mex trains to clear the MP main line (the "Robstown Connection"). The design for the Robstown Connection shall be submitted to Owner for its written approval within forty-five (45) days following the effective date of these Terms, which approval shall not be unreasonably withheld, and User's operation thereover shall be subject to Owner's prior written acceptance of the Robstown Connection. User agrees that the Robstown Connection shall be constructed within one hundred eighty (180) days of acquisition of the required property and approval by Owner of its design. Owner grants User the right to use, as daily dispatching conditions reasonably permit, the existing connection between Tex Mex and Owner at Robstown and 8500 feet of Owner's main line south of that connection, for a period of six (6) months following the date of Owner's approval of the design of the Robstown Connection, which connection and trackage shall be deemed part of the Joint Trackage during the period of Tex Mex's usage thereof, including any extensions of the period as provided below. Owner will extend the period of User's use of the existing connection for an additional six (6) months in the event (a) User is unable to complete the Robstown Connection within the time frame specified in the preceding sentence and User is making a bona fide effort to complete the construction of the new connection, and (b) User's continued operations over the existing connection will not, in Owner's judgment, unreasonably interfere with Owner's operations. If BNSF constructs the Robstown Connection, Tex Mex shall have the right to use the Robstown Connection on terms agreed to by Tex Mex and BNSF. If the Robstown Connection is not constructed by BNSF, Tex Mex shall construct the Robstown Connection as provided above.

(ii) User shall also construct a connection to access SP at Flatonia, Texas, to include track parallel to SP's Victoria Subdivision, Port LaVaca Branch, 8500 feet in length to permit Tex Mex trains to clear the SP main line (the "Flatonia Connection"). The design for the Flatonia Connection shall be submitted to Owner for its written approval within forty-five (45) days following the effective date of these Terms, which approval shall not be unreasonably withheld, and

User's operation thereover shall be subject to Owner's prior written acceptance of the Flatonia Connection. User agrees that the Flatonia Connection shall be constructed within one hundred eighty (180) days of acquisition of the required property and approval by Owner of its design. Owner grants User the right to use the existing connection between SP's Victoria Subdivision, Port LaVaca Branch, and SP's Glidden Subdivision at Flatonia and siding south of Owner's main line West of that connection for a period of six (6) months following the date of Owner's approval of the design of the Flatonia Connection, which existing connection and trackage shall be deemed part of the Joint Trackage during the period of Tex Mex's usage thereof.

(b) Except as provided in Section 5(a) above, expenditures for any future Changes in and/or Additions to the Joint Trackage, such as, but not limited to, sidings, Centralized Traffic Control, grade separations, and future connections, shall be handled as follows: (i) if the Change in and/or Addition to the Joint Trackage is for the sole benefit of one party, that party shall be solely responsible for the entire cost and expense thereof; (ii) all other Changes in and/or Additions to the Joint Trackage shall be shared by MP/SP and Tex Mex on the basis that the parties' respective GTM's operated over the Joint Trackage bear to total GTM's operated over the Joint Trackage for the twelve (12) month period immediately prior to the month work on the project is commenced. The use of Joint Trackage by any third party shall be attributed to MP/SP for purposes of computing respective GTM's for purposes of this Section 5(b).

(c) In the event such Changes in and/or Additions to the Joint Trackage are constructed at the sole cost and expense of one party (party of the first part), the other party (party of the second part) shall be denied access to such Change in and/or Addition to the Joint Trackage. If the party of the second part at some future date shall choose to use such Changes in and/or Additions to the Joint Trackage, such right shall be granted to party of the second part by party of the first part upon payment of fifty percent (50%) of party of the first part's initial costs plus per annum interest calculated pursuant to Section 2(c).

6. Notices:

All notices, demands, requests, submissions and other communications which are required or permitted to be given pursuant to these Terms shall be given by either party to the other in writing and shall be deemed properly served if delivered by hand, or mailed by overnight courier or by registered or certified mail, return receipt requested, with postage prepaid, to such other party at the address listed below:

If intended for MP/SP:

Executive Vice President-Operation
Room 1206
1416 Dodge Street
Omaha, Nebraska 68179

With a copy to:

Director Joint Facilities
Room 1200
1416 Dodge Street
Omaha, Nebraska 68179

If intended for Tex Mex:

The Texas Mexican Railway Company
1200 Washington Street
P.O. Box 419
Laredo, Texas 78042

Notice of address change may be given any time pursuant to the provisions of this Section 6.

7. Term:

These Terms shall be effective upon consummation of the control authority granted in the Decision for a term of ninety-nine (99) years. These Terms shall terminate, and all rights conferred pursuant thereto shall be canceled and deemed void ab initio, if, in a Final Order, the application for authority for UP to control SPC has been denied or has been approved on terms unacceptable to the applicants or has been granted on terms that do not require the rights provided herein, provided, however, that if these Terms become effective and are later terminated, any liabilities arising from the exercise of rights under Sections 1 through 5 during the period of its effectiveness shall survive such termination. For purposes of this Section 7, "Final Order" shall mean an order of the Surface Transportation Board, any successor agency, or a court with lawful jurisdiction over the matter which is no longer subject to any further direct judicial review (including a petition for writ of certiorari) and has not been stayed or enjoined.

Approved:

For MP/SP: James V Dolan

Position: Vice President - Law

Date: DEC 1 2 1996

For Tex Mex: Jerry W Fields

Position: President

EXHIBIT "B"

GENERAL CONDITIONS

Section 1. DEFINITIONS

1.1 "Annual" shall mean a calendar year.

1.2 "Car" shall mean one (1) rail car; provided, however, that each platform in an articulated rail car of two (2) or more platforms shall be counted as one (1) rail car, subject to modification by mutual agreement of the parties based upon changes in railroad technology.

1.3 "Changes in and/or Additions to" shall mean work projects and retirements, the cost of which is chargeable in whole or in part to Property Accounts during the term of the Terms.

1.4 "Equipment" shall mean trains, locomotives, rail cars (loaded or empty), intermodal units (loaded or empty), cabooses, vehicles, and machinery which are capable of being operated on railroad tracks or on right-of-way for purposes of the maintenance or repair of such railroad tracks.

1.5 "GTM" shall mean gross ton mile which is the weight in tons for Equipment and lading transported over one (1) mile of track included in the Joint Trackage.

1.6 "GTM Handled Proportion" shall mean the GTMs handled over the Joint Trackage by or for a party divided by the total number of GTMs handled by or for all parties using the Joint Trackage, during the same period. For the purpose of computing such GTM's Handled Proportion, Equipment engaged in work service pertaining to construction, maintenance or operation of the Joint Trackage or Changes in and/or Additions to the Joint Trackage shall not be counted and GTMs of third parties shall be attributed to the Owner.

1.7 "Joint Trackage" shall mean the track structure of Owner as described in the Terms including necessary right-of-way and all appurtenances, signals, communications, and facilities of Owner and all Changes in and/or Additions to said track structure now or in the future located as are required or desirable for the operation of the Equipment of the parties hereto.

1.8 "Mill" shall mean one-tenth of a cent ($0.001 US).

1.9 "Owner" shall have the meaning given to it in the Terms.

1.10 "Property Accounts" shall mean accounts so designated under the Uniform System of Accounts for Railroad Companies prescribed by the Interstate Commerce Commission, or any replacement of such system prescribed by the applicable federal regulatory agency, if any, and used by the parties hereto.

1.11 "STB" shall mean the Surface Transportation Board of the United States Department of Transportation or any successor agency.

1.12 "Terms" shall mean those certain Terms for Texas Mexican Railway Company Trackage Rights to which this Exhibit "B" is attached.

1.13 "User" shall have the meaning given to it in the Terms.

Section 2. MAINTENANCE, ADDITIONS, OPERATION, AND CONTROL

2.1 Owner shall have sole charge of the maintenance and repair of the Joint Trackage with its own supervisors, labor, materials and equipment. Owner, from time to time, may make such Changes in and/or Additions to the Joint Trackage as shall be required by any law, rule, regulation or ordinance promulgated by any government body having jurisdiction, or as Owner, in its sole discretion, shall deem necessary, subject to Section 2.2. Such Changes in and/or Additions to the Joint Trackage shall become a part of the Joint Trackage or in the case of retirements shall be excluded from the Joint Trackage.

2.2 Unless otherwise mutually agreed to by the parties in writing, Owner shall, (i) keep and maintain the Joint Trackage on a consistent basis at no less than the track standard designated in the timetable in effect on the date of the Terms, including special instructions for the Joint Trackage as of the date of the Terms, (ii) maintain at least the physical capacity of the Joint Trackage as of the date of the Terms (i.e., number of main tracks, support tracks, signal systems, rail weight, line clearances, etc.), and (iii) be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Terms. In the event that User desires that the Joint Trackage be improved to a condition in excess of the standard set forth in this Section 2.2, or desires that other Changes in and/or Additions to be made to the Joint Trackage, Owner agrees to make such Changes in and/or Additions to the Joint Trackage if funded in advance by User. Thereafter, such Changes in and/or Additions to the Joint Trackage shall become part of the Joint Trackage and shall be maintained by Owner in such improved condition.

2.3 Owner shall employ all persons necessary to construct, operate, maintain, repair and renew the Joint Trackage. Owner shall be bound to use reasonable and customary care, skill and diligence in the construction, operation, maintenance, repair and renewal of the Joint Trackage and in managing of the same. Owner shall make its best effort to ensure that User is given the same advance notice of maintenance plans and schedules as is provided to Owner's personnel.

2.4 The trackage rights granted hereunder shall give User access to and joint use of the Joint Trackage, for such use as is permitted by Section 2 of the Terms, equal to that of Owner. The management, operation (including dispatching) and maintenance of the Joint Trackage shall, at all times, be under the exclusive direction and control of Owner, the movement

of Equipment over and along the Joint Trackage shall at all times be subject to the exclusive direction and control of Owner's authorized representatives and in accordance with such reasonable operating rules as Owner shall from time to time institute, but in the management, operation (including dispatching) and maintenance of the Joint Trackage, Owner and User shall be treated equally. All operating, dispatching and maintenance decisions by Owner affecting the movement of Equipment on the Joint Trackage shall be made pursuant to the Tex Mex-UP/SP Dispatching Protocols attached hereto as Attachment 1. User shall, at User's sole cost and expense, obtain, install and maintain necessary communication equipment to allow User's Equipment to communicate with Owner's dispatching and signaling facilities the same as Owner's trains so utilize. Owner shall consult with User prior to the adoption of new communication or signaling systems to be employed on the Joint Trackage, which have not theretofore been generally adopted in the railroad industry.

2.5 A Joint Service Committee ("Committee"), comprised of the chief transportation officers of Owner and User (or their designees) shall be established, and shall be responsible for establishing rules and standards as appropriate to ensure equitable and non-discriminatory treatment, appropriate maintenance and efficient joint use of the Joint Trackage. The Committee shall meet on a regular basis, but not less often than every three (3) months during the first year of operation under the Agreement, and thereafter when any party serves upon the other party thirty (30) days' written notice of its desire to meet to review the overall performance of equipment on the Joint Trackage, conflicts, if any, experienced between Equipment of Owner and Equipment of User, grievances over the handling of particular Equipment or operational events, maintenance of the Joint Trackage, ways in which future conflicts may be minimized, ways of improving operations and maintenance of the Joint Trackage and such other relevant matters as the Committee may decide to consider. The Committee may issue standards or rules to prevent unnecessary interference or impairment of use of the Joint Trackage by either party or otherwise insure fair and equal treatment as between Owner and User. Either party may request a special meeting of the Committee on reasonable notice to the other. Informal telephonic conferences shall be held by the Committee where appropriate to address immediate concerns of either party. It is expected that the work of the Committee shall be undertaken in a spirit of mutual cooperation consistent with the principles expressed in the Terms.

2.6 If the use of the Joint Trackage shall at any time be interrupted or traffic thereon or thereover be delayed for any cause, neither party shall have or make any claim against the other for loss, damage or expense caused by or resulting solely from such interruption or delay.

2.7 Owner may from time to time provide any track or tracks on the Joint Trackage other than those delineated in Exhibit A to the Terms for use by User provided there shall at all times be afforded User a continuous route of equal utility and quality for the operations of its Equipment between the termini of the Joint Trackage. When such tracks which are not part of the Joint Trackage are used as provided herein, the Terms shall govern for purposes of direction and control and liability as if all movement had been made over the Joint Trackage.

2.8 Each party shall be responsible for furnishing, at its sole cost and expense, all labor, fuel and train and other supplies necessary for the operation of its own Equipment over the Joint Trackage. In the event a party does furnish such labor, fuel or train and other supplies to another party, the party receiving the same shall promptly, upon receipt of billing therefor, reimburse the party furnishing the same for its reasonable costs thereof, including customary additives.

2.9 User shall be responsible for the reporting and payment of any mileage, per diem, use or rental charges accruing on Equipment in User's account on the Joint Trackage. Except as may be specifically provided for in the Terms, nothing herein contained is intended to change practices with respect to interchange of traffic between the parties or with other carriers on or along the Joint Trackage.

2.10 Except as otherwise may be provided in the Terms, User shall operate its Equipment over the Joint Trackage with its own employees, but before said employees are assigned or permitted to operate Equipment over the Joint Trackage as herein provided, and from time to time thereafter as and when reasonably requested by Owner, they shall be required to pass the applicable rules examinations required by Owner of its own employees. Owner shall delegate to specified User's officers the conduct of such examinations in the event User chooses to conduct such examinations. If an Owner officer conducts such examinations of employees of User, User shall pay Owner a reasonable fee for each employee so examined, such fee to be mutually agreed upon by the parties from time to time in a separate agreement. Notwithstanding any such examination, User shall be responsible for ensuring that its employees are qualified and have taken all such rules examinations. Upon request of User, Owner shall qualify one or more of User's supervisory officers as pilots and such supervisory officer or officers so qualified shall qualify employees of User engaged in or connected with User's operations on or along the Joint Trackage. At User's request, Owner shall furnish a pilot or pilots, at the expense of User, to assist in operating trains of User over the Joint Trackage.

2.11 If any employee of User shall neglect, refuse or fail to abide by Owner's rules, instructions and restrictions governing the operation on or along the Joint Trackage, such employee shall, upon written request of Owner, be suspended by User from working on the Joint Trackage unless and until requalified to return to work and approved to do so by Owner. If either party shall deem it necessary to hold a formal investigation to establish such neglect, refusal or failure on the part of any employee of User, then upon such notice presented in writing, Owner and User shall promptly hold a joint investigation in which the parties concerned shall participate and bear the expense for their respective officers, counsel, witnesses and employees. Notice of such investigations to User's employees shall be given by User's officers, and such investigation shall be conducted in accordance with the terms and conditions of schedule agreements between User and its employees. If, in the judgment of Owner, the result of such investigation warrants, such employee shall, upon written request by Owner, be withdrawn by User from service on the Joint Trackage, and User shall release and indemnify Owner from and against any and all claims and expenses arising from such withdrawal.

If the disciplinary action is appealed by an employee of User to the National Railroad Adjustment Board or other tribunal lawfully created to adjudicate such cases; and if the decision of such board or tribunal sustains the employee's position, such employee shall not thereafter be barred from service on the Joint Trackage by reason of such disciplinary action.

2.12 If any Equipment of User is bad ordered enroute on the Joint Trackage and (i) it is necessary that it be set out, and (ii) only light repairs to the Equipment are required, such bad ordered Equipment shall be promptly repaired, and, thereafter, be promptly removed from the Joint Trackage by User. Owner may, upon request of User and at User's sole cost and expense, furnish the required labor and material and perform light repairs to make such bad ordered Equipment safe for movement. The employees and Equipment of Owner while in any manner so engaged or while enroute to or returning to Owner's terminal from such an assignment shall be considered Sole Employees (as hereinafter defined) of User and Sole Property (as hereinafter defined) of User. However, should Owner's employees after repairing such bad ordered Equipment for User move directly to perform service for Owner's benefit rather than return to Owner's terminal, then User's exclusive time and liability will end when Owner's employees depart for work to be performed for Owner's benefit. In the case of such repairs by Owner to freight cars in User's account, billing therefor shall be in accordance with the Field and Office Manuals of the Interchange Rules, adopted by the Association of American Railroads ("AAR"), hereinafter called "Interchange Rules", in effect on the date of performance of the repairs. Owner shall then prepare and submit billing directly to and collect from the car owner for car owner responsibility items as determined under said Interchange Rules, and Owner shall prepare and submit billing directly to and collect from User for handling line responsibility items as determined under said Interchange Rules. Owner also shall submit billing to and collect from User any charges for repair to freight cars that are User's car owner responsibility items as determined under said Interchange Rules, should said car owner refuse or otherwise fail to make payment therefor. Repairs to locomotives shall be billed as provided for in Section 3 of these General Conditions.

2.13 If Equipment of User shall become derailed, wrecked, or otherwise disabled while upon the Joint Trackage, it shall be rerailed or cleared by Owner, except that employees of User may rerail User's derailed Equipment on the Joint Trackage whenever use of motorized on or off track equipment is not required; however, in any such case, employees of User shall consult with and be governed by the directions of Owner. Owner reserves the right to rerail Equipment of User when, in the judgment of Owner, Owner deems it advisable to do so to minimize delays and interruptions to train movement. The reasonable costs and expenses of rerailing or clearing derailed, wrecked or disabled Equipment shall be borne by the parties in accordance with Section 5 of these General Conditions. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.14 In the event Equipment of User shall be forced to stop on the Joint Trackage, and such stoppage is due to insufficient hours of service remaining among User's employees, or due to mechanical failure of User's Equipment (other than bad ordered Equipment subject to light repairs pursuant to Section 2.12), or to any other cause not resulting from an accident or

derailment (including the failure of User to promptly repair and clear bad ordered Equipment pursuant to Section 2.12), and such Equipment is unable to proceed, or if a train of User fails to maintain the speed required by Owner on the Joint Trackage, or if, in emergencies, disabled Equipment is set out of User's trains on the Joint Trackage, Owner shall have the option to furnish motive power or such other assistance (including but not limited to the right to recrew User's train) as may be necessary to haul, help or push such Equipment, or to properly move the disabled Equipment off the Joint Trackage. The reasonable costs and expenses of rendering such assistance shall be borne by User. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.15 User shall pay to Owner reasonable expenses incurred by Owner in the issuance of timetables made necessary solely by changes in the running time of the trains of User over the Joint Trackage. If changes in running time of trains of Owner or third parties, as well as those of User, require the issuance of timetables, then User shall pay to Owner that proportion of the expenses incurred that one bears to the total number of parties changing the running time of their trains. If changes in running time of trains of Owner or third parties, but not those of User, require the issuance of timetables, then User shall not be required to pay a proportion of the expenses incurred in connection therewith.

2.16 User, at Owner's request, shall be responsible for reporting to Owner the statistical data called for in the Terms, which may include, but is not limited to, the number and type of Equipment and GTMs operated on the Joint Trackage.

Section 3. BILLING

3.1 Billing shall be accomplished on the basis of data contained in a billing form mutually agreed to between the parties. Such billing forms shall contain sufficient detail to permit computation of payments to be made hereunder. Billing shall be prepared according to the rules, additives, and equipment rental rates as published by the Owner. User shall pay to Owner at the Office of the Treasurer of Owner, or at such other location as Owner may from time to time designate in writing, all the compensation and charges of every name and nature which in and by the Terms User is required to pay in lawful money of the United States within sixty (60) days after the rendition of bills therefor. Bills shall contain a statement of the amount due on account of the expenses incurred, properties and facilities provided and services rendered during the billing period.

3.2 Errors or disputed items in any bill shall not be deemed a valid excuse for delaying payment, but shall be paid subject to subsequent adjustment; provided, no exception to any bill shall be honored, recognized or considered if filed after the expiration of three (3) years from the last day of the calendar month during which the bill is rendered and no bill shall be rendered later than three (3) years (i) after the last day of the calendar month in which the expense covered thereby is incurred, or (ii) in the case of claims disputed as to amount or liability, after the amount is settled and/or the liability is established. This provision shall not limit the retroactive

adjustment of billing made pursuant to exception taken to original accounting by or under authority of the STB or retroactive adjustment of wage rates and settlement of wage claims.

3.3 So much of the books, accounts and records of each party hereto as are related to the subject matter of the Terms shall at all reasonable times be open to inspection by the authorized representatives and agents of the parties hereto. All books, accounts, and records shall be maintained to furnish readily full information for each item in accordance with any applicable laws or regulations.

3.4 Should any payment become payable by Owner to User under the Terms, the provisions of Sections 3.1 and 3.2 of these General Conditions shall apply with User as the billing party and Owner as the paying party.

3.5 Either party hereto may assign any receivables due it under the Terms; provided, however, that such assignments shall not relieve the assignor of any rights or obligations under the Terms.

Section 4. COMPLIANCE WITH LAWS

4.1 With respect to operation of Equipment on the Joint Trackage, each party shall comply with all applicable federal, state and local laws, rules, regulations, orders, decisions and ordinances ("Standards"), and if any failure on the part of any party to so comply shall result in a fine, penalty, cost or charge being imposed or assessed on or against another party, such other party shall give prompt notice to the failing party and the failing party shall promptly reimburse and indemnify the other party for such fine, penalty, cost or charge and all expenses and reasonable attorneys' fees incurred in connection therewith, and shall upon request of the other party defend such action free of cost, charge and expense to the other party.

4.2 User agrees to comply fully with all applicable Standards concerning "hazardous waste" and "hazardous substances" ("Hazardous Materials"). Except with Owner's prior consent, User covenants that it shall not treat or dispose of Hazardous Materials on the Joint Trackage. User further agrees to furnish Owner (if requested) with proof, satisfactory to Owner, that User is in such compliance.

In the event any accident, bad ordered Equipment, derailment, vandalism or wreck (for purposes of this Section 4.2 and Section 4.3 hereinafter called collectively "Derailment") involving Equipment of or a train operated by User carrying Hazardous Materials shall occur on any segment of the Joint Trackage, any report required by federal, state or local authorities shall be the responsibility of User. User shall also advise the owner/shipper of the Hazardous Materials involved in the Derailment, and Owner, immediately.

In the event of a Derailment, Owner shall assume responsibility for cleaning up any release of Hazardous Materials from User's Equipment in accordance with all federal, state, or local regulatory requirements. User may have representatives at the scene of the Derailment to

observe and provide information and recommendations concerning the characteristics of Hazardous Materials release and the cleanup effort. Such costs shall be borne in accordance with Section 5 of these General Conditions.

If a Hazardous Materials release caused by a derailment involving Equipment of User, or on a train operated by User, results in contamination of real property or water on the Joint Trackage or on real property or water adjacent to the Joint Trackage (whether such real property or water is owned by Owner or a third party), Owner shall assume responsibility for emergency cleanup conducted to prevent further damage. User shall be responsible for performing cleanup efforts thereafter. Any costs associated with cleaning up real property or water on or adjacent to the Joint Trackage contaminated by Hazardous Materials shall be borne in accordance with Section 5 of these General Conditions.

If Hazardous Materials must be transferred to undamaged Equipment or trucks as a result of a release caused by a derailment involving Equipment of User, or on a train operated by User, User shall perform the transfer; PROVIDED, HOWEVER, that if the Hazardous Materials are in damaged Equipment that is blocking the Joint Trackage, Owner, at its option, may transfer the Hazardous Materials with any costs associated with such transfer borne in accordance with Section 5 of these General Conditions. Transfers of Hazardous Materials by User shall only be conducted after being authorized by Owner.

4.3 The total cost of clearing a Derailment, cleaning up any Hazardous Materials released during such Derailment, and/or repairing the Joint Trackage or any other property damaged thereby shall be borne by the party or parties liable therefor in accordance with Section 5 of these General Conditions.

4.4 In the event of release of Hazardous Materials caused by faulty Equipment or third parties, cleanup will be conducted as stated in Sections 4.2 and 4.3 of these General Conditions.

Section 5. LIABILITY

5.1 General. The provisions of this Section 5 shall apply only as between the parties hereto and are solely for their benefit. Nothing herein is intended to be for the benefit of any person or entity other than the parties hereto. It is the explicit intention of the parties hereto that no person or entity other than the parties hereto is or shall be entitled to bring any action to enforce any provision hereof against any of the partes hereto, and the assumptions, indemnities, covenants, undertakings and agreements set forth herein shall be solely for the benefit of, and shall be enforceable only by, the parties hereto. Notwithstanding anything contained in this Section 5, no provisions hereof shall be deemed to deprive Owner or User of the right to enforce or shall otherwise restrict any remedies to which they would otherwise be entitled under other provisions of the Terms as a result of the other party's failure to perform or observe any other obligation or duty created by the Terms. The provisions of this Section 5 shall apply as between the parties hereto irrespective of the terms of any other agreements between the parties hereto and

other railroads using the Joint Trackage, and the allocation of liabilities provided for herein shall control as between the parties hereto.

5.2 Definitions and Covenants. The parties agree that for the purposes of this Section 5:

(a) The term "Employee(s)" of a party shall mean all officers, agents, employees and contractors of that party. Such Employees shall be treated either as "Sole Employees" or "Joint Employees", as hereinafter specified;

(b) "Sole Employees" and "Sole Property" shall mean one or more Employees, Equipment, tools and other equipment and machinery while engaged in, en route to or from, or otherwise on duty incident to performing service for the exclusive benefit of one party. Pilots furnished by Owner to assist in operating Equipment of User shall be considered the Sole Employees of User while engaged in such operations. Equipment shall be deemed to be the Sole Property of the party receiving the same at such time as deemed interchanged under AAR rules or applicable interchange agreements, or when such party is responsible for the car hire or per diem for the Equipment under agreement between the parties;

(c) "Joint Employee" shall mean one or more Employees while engaged in maintaining, repairing, constructing, renewing, removing, inspecting or managing the Joint Trackage or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while preparing to engage in, en route to or from, or otherwise on duty incident to performing such service for the benefit of both parties;

(d) "Joint Property" shall mean the Joint Trackage and all appurtenances thereto, and all Equipment, tools and other equipment and machinery while engaged in maintaining, repairing, constructing, renewing, removing, inspecting, managing or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while being prepared to engage in, en route to or from, or otherwise incident to performing such service;

(e) "Loss and/or Damage" shall mean injury to or death of any person, including Employees of the parties hereto, and loss or damage to any property, including property of the partes hereto and property being transported by the parties, which arises out of an incident occurring on, the Joint Trackage and shall include liability for any and all claims, suits, demands, judgments and damages resulting from or arising out of such injury, death, loss or damage, except liability for punitive and exemplary damages. Loss and/or Damage shall include all costs and expenses incidental to any claims, suits, demands and judgments, including attorneys' fees, court costs and other costs of investigation and litigation. Loss and/or Damage shall further include the expense of clearing wrecked or derailed Equipment and the costs of environmental protection, mitigation or clean up necessitated by such wreck or derailment and shall include any liabilities for any third-party claims for personal injury or death, property damage, natural

resource damage, or any penalties, judgments or fines associated with a release of any contaminants resulting from such wreck or derailment;

(f) Operating Employees of Owner whose service may be jointly used by the parties hereto for the movement of trains over the Joint Trackage, including, but not limited to, train dispatchers, train order operators, operator clerks and watchmen shall at the time of performing their services be deemed to be Sole Employees of the party hereto for whose benefit said services may be separately rendered (during the time they are so separately rendered) and be deemed to be Joint Employees of the parties hereto at such time as their services may be rendered for the parties' joint benefit;

(g) All Employees, Equipment, tools and other equipment and machinery other than as described in (b), (c), (d) or (f) above or in Section 5.4, shall be deemed the Sole Employees of the employing party and the Sole Property of the using party;

(h) Any railroad not a party to the Terms heretofore or hereafter admitted to the use of any portion of the Joint Trackage, shall, as between the parties hereto, be regarded in the same light as a third party. Without limiting the generality of the foregoing, neither of the parties hereto assumes any responsibility to the other under the provisions of the Terms for any Loss and/or Damage occasioned by the acts or omissions of any employees of any such other railroad, or for any Loss and/or Damage which such other railroad shall be obligated to assume in whole or in part pursuant to law or any agreement relating to such other railroad's use of any portion of the Joint Trackage;

(i) For the purpose of this Section 5, Equipment of foreign lines being detoured over the Joint Trackage, and all persons other than Joint Employees engaged in moving such Equipment, shall be considered the Equipment and Employees of the party hereto under whose detour agreement or other auspices such movement is being made.

5.3 Reimbursement and Defense. The parties agree that:

(a) Each party hereto shall pay promptly Loss and/or Damage for which such party shall be liable under the provisions of this Section 5, and shall indemnify the other party against such Loss and/or Damage, including reasonable attorneys' fees and costs. If any suit or suits shall be brought against either of the parties hereto and any judgment or judgment shall be recovered which said party is compelled to pay, and the other party shall under the provisions of the Terms be solely liable therefor, then the party which is so liable shall promptly repay on demand to the other party paying the same any monies which it may have been required to pay, whether in the way of Loss and/or Damage, costs, fees or other expenses; and if the Loss and/or Damage in such case or cases is joint or allocated between the parties to the Terms, the party defendant paying the same or any costs, fees or other expenses shall be reimbursed by the other party as allocated pursuant to the Terms;

(b) Each party covenants and agrees with the other party that it will pay for all Loss and/or Damage, both as to persons and property, and related costs which it has herein assumed, or agreed to pay, the judgment of any court in a suit by third party or parties to the contrary notwithstanding, and will forever indemnify and save harmless the other party, its successors and assigns, from and against all liability and claims therefor, or by reason thereof, and will pay, satisfy and discharge all judgments that may be rendered by reason thereof, and all costs, charges and expenses incident thereto;

(c) Each party hereto shall have the sole right to settle, or cause to be settled for it, all claims for Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5, and the sole right to defend or cause to be defended all suits for the recovery of any such Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5;

(d) User shall provide written notice to Owner of any accidents or events resulting in Loss and/or Damage within seven (7) days of its discovery or receipt of notification of such occurrence;

(e) In the event both parties hereto may be liable for any Loss and/or Damage under the provisions of this Section 5 ("Co-Liable"), and the same shall be settled by a voluntary payment of money or other valuable consideration by one of the parties Co-Liable therefor, release from liability shall be taken to and in the name of all the parties so liable; however, no such settlement in excess of the sum of One Hundred Thousand Dollars ($100,000) shall be made by or for any party Co-Liable therefor without the written consent of the other parties so liable, but any settlement made by any party in consideration of One Hundred Thousand Dollars ($100,000) or a lesser sum shall be binding upon the other parties and allocated in accordance with Section 5.5; and no party shall unreasonably withhold its consent to a settlement proposed by the other party; provided, however, that failure by a party to secure consent from the other shall not release such other party to the extent the party who failed to obtain such consent demonstrates that the other party was not prejudiced by such failure.

(f) In case a claim or suit shall be commenced against any party hereto for or on account of Loss and/or Damage for which another party hereto is or may be solely liable or Co-Liable under the provisions of this Section 5, the party against whom such claim or suit is commenced shall give to such other party prompt notice in writing of the pendency of such claim or suit, and thereupon such other party shall assume or join in the defense of such claim or suit as follows: If the claim or suit involves Loss and/or Damage to the Sole Employees or Sole Property of a party or its invitee or property in its care, custody or control, that party shall assume and control the investigation and defense of such claim or suit;

if the claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage, the party whose Sole Employees or Equipment were involved in the incident shall investigate and defend such claim or suit; and if such claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage and neither or both party's Equipment and Sole Employees were involved in the incident, Owner shall investigate and defend such claim or suit; provided that the other party also may participate in the defense of any of the foregoing if it may have liability as a result of such incident;

(g) No party hereto shall be conclusively bound by any judgments against the other party, unless the former party shall have had reasonable notice requiring or permitting it to investigate and defend and reasonable opportunity to make such defense. When such notice and opportunity shall have been given, the party so notified and the other party shall be conclusively bound by the judgment as to all matters which could have been litigated in such suit, including without limitation a determination of the relative or comparative fault of each.

5.4 Wrecks and Derailment. The cost and expense of repairing bad ordered Equipment, clearing wrecks or otherwise disabled Equipment or rerailing Equipment (and the costs of repair or renewal of damaged Joint Trackage or adjacent properties) shall be borne by the party whose Equipment was wrecked, disabled, or derailed or caused such damage. All Employees or Equipment, while engaged in, en route to or from, or otherwise incident to operating wrecker or work trains clearing wrecks, disabled Equipment or Derailments or engaged in repair or renewal of the Joint Trackage subsequent to any such wreck, disability or Derailment, shall be deemed to be Sole Employees and/or Sole Property of the party whose Equipment was wrecked, disabled or derailed. However, such Employees or Equipment, while en route from performing such clearing of wrecks, disabled Equipment or Derailments or repairing or renewing the Joint Trackage to perform another type of service, shall not be deemed to be performing service incident to the instant wreck, disability or Derailment.

5.5 Allocation.

(a) Each party shall bear all costs of Loss and/or Damage to its Sole Employees or its Sole Property, or property in its care, custody or control or its invitees without regard to which party was at fault.

(b) Loss and/or Damage to third parties (i.e., any person or entity other than a party hereto, a Sole Employee of either party, a Joint Employee or an invitee of either party) or their property, to Joint Employees or their property or to Joint Property shall be borne by the parties hereto as follows:

(i) If the Loss and/or Damage is attributable to the acts or omissions of only one party hereto, that party shall bear and pay all of such Loss and/or Damage.

(ii) If such Loss and/or Damage is attributable to the acts or omissions of more than one party hereto, such Loss and/or Damage shall be borne and paid by those parties in accordance with a comparative negligence standard, whereby each such party shall bear and pay a portion of the Loss and/or Damage equal to the degree of causative fault or percentage of responsibility for the Loss and/or Damage attributable to that party without regard to laws limiting recovery if one party is more than fifty percent (50%) at fault.

(iii) Loss and/or Damage to third parties or Joint Employees occurring in such a way that it cannot be determined how such Loss and/or Damage came about shall be apportioned between Owner, User and any other party(ies) authorized to use the Joint Trackage as a trackage rights tenant, on a usage basis considering each party's gross ton miles over the Joint Trackage for the preceding twelve (12) months or, if such Loss and/or Damage occurs during the first twelve (12) months following the effective date of the Terms, the usage of each party between the occurrence of such Loss and/or Damage and the effective date of the Terms, provided that, without limitation, User shall not bear or incur any liability for claims, suits, demands, judgments, losses or damages resulting from environmental contamination of or hazardous material on or released from the Joint Trackage, except contamination or a release of hazardous materials from User's own Equipment or caused by or arising from the actions or omissions of User or User's Employees, and then only in accordance with the other provisions hereof.

(c) The parties agree that the characterization herein of certain Employees as "Sole Employees" or "Joint Employees" is only for the purpose of allocating Loss and/or Damage suffered by those Employees. Except as specified in subsection (a) of this Section 5.5. (which provides for the allocation of certain Loss and/or Damage between the parties without regard to fault), no party shall be liable for the acts or omissions (negligent or otherwise) of any other party's Employee.

5.6 OWNER AND USER EXPRESSLY INTEND THAT WHERE ONE PARTY IS TO INDEMNIFY THE OTHER PURSUANT TO THE TERMS, SUCH INDEMNITY SHALL INCLUDE (1) INDEMNITY FOR THE NEGLIGENCE OR ALLEGED NEGLIGENCE, WHETHER ACTIVE OR PASSIVE, OF THE INDEMNIFIED PARTY WHERE THAT NEGLIGENCE IS A CAUSE OF THE LOSS OR DAMAGE; (2) INDEMNITY FOR STRICT LIABILITY OF THE INDEMNIFIED PARTY RESULTING FROM A VIOLATION OR ALLEGED VIOLATION OF ANY FEDERAL, STATE OR LOCAL LAW OR REGULATION BY THE INDEMNIFIED PARTY, INCLUDING BUT NOT LIMITED TO THE FEDERAL EMPLOYERS LIABILITY ACT ("FELA"), THE SAFETY APPLIANCE ACT, THE BOILER

INSPECTION ACT, THE OCCUPATIONAL SAFETY AND HEALTH ACT ("OSHA"), THE RESOURCE CONSERVATION AND RECOVERY ACT ("RCRA"), THE COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT ("CERCLA"), THE CLEAN WATER ACT ("CWA"), THE OIL POLLUTION ACT ("OPA"), AND ANY SIMILAR STATE STATUTE IMPOSING OR IMPLEMENTING SIMILAR STANDARDS; AND (3) INDEMNITY FOR ACTS OR ALLEGED ACTS OF GROSS NEGLIGENCE OF THE INDEMNIFIED PARTY, OR OTHER CONDUCT ON THE PART OF THE INDEMNIFIED PARTY FOR WHICH PUNITIVE DAMAGES MIGHT BE SOUGHT.

Section 6. ARBITRATION

6.1 If at any time a question or controversy shall arise between the parties hereto in connection with the Terms upon which the parties cannot agree, such question or controversy shall be submitted to and settled by arbitration. Unless other procedures are agreed to by the parties, arbitration between the parties pursuant to this Section 6 shall be governed by the rules and procedures set forth in this Section 6.

6.2 If the parties to the dispute are able to agree upon a single competent and disinterested arbitrator within twenty (20) days after written notice by one party of its desire for arbitration to the other party, then the question or controversy shall be submitted to and settled by that single arbitrator. Otherwise, any party (the notifying party) may notify the other party (the noticed party) in writing of its request for arbitration and nominating one arbitrator. Within twenty (20) days after receipt of said notice, the noticed party shall appoint an arbitrator and notify the notifying party in writing of such appointment. Should the noticed party fail within twenty (20) days after receipt of such notice to name its arbitrator, said arbitrator may be appointed by the Chief Judge (or acting Chief Judge) of the United States District Court for the District of Columbia upon application by either party after ten (10) days' written notice to the other party. The two arbitrators so chosen shall select one additional arbitrator to complete the board. If the arbitrators so chosen fail to agree upon an additional arbitrator, the same shall, upon application of a party, be appointed by said judge in the manner heretofore stated.

6.3 Upon selection of the arbitrator(s), said arbitrator(s) shall, with reasonable diligence, determine the questions as disclosed in said notice of arbitration, shall give both parties reasonable notice of the time and place (of which the arbitrator(s) shall be the judge) of hearing evidence and argument, may take such evidence as the arbitrator(s) shall deem reasonable or as either party may submit with witnesses required to be sworn, and hear arguments of counsel or others. If an arbitrator declines or fails to act, the party (or parties in the case of a single arbitrator) by whom the arbitrator was chosen or said judge shall appoint another to act in the arbitrator's place.

6.4 After considering all evidence, testimony and arguments, said single arbitrator or the majority of said board of arbitrators shall promptly state such decision or award and the reasoning for such decision or award in writing which shall be final, binding, and conclusive on all parties to the arbitration when delivered to them. The award rendered by the arbitrator(s) may

be entered as a judgment in any court having jurisdiction thereof and enforced as between the parties without further evidentiary proceeding, the same as entered by the court at the conclusion of a judicial proceeding in which no appeal was taken. Until the arbitrator(s) shall issue the first decision or award upon any question submitted for arbitration, performance under the Terms shall continue in the manner and form existing prior to the rise of such question. After delivery of said first decision or award, each party shall forthwith comply with said first decision or award immediately after receiving it.

6.5 Each party to the arbitration shall pay all compensation, costs, and expenses of the arbitrator appointed in its behalf and all fees and expenses of its own witnesses, exhibits, and counsel. The compensation, cost, and expenses of the single arbitrator or the additional arbitrator in the board of arbitrators shall be paid in equal shares by all partes to the arbitration.

6.6 The parties may obtain discovery and offer evidence in accordance with the Federal Rules of Civil Procedure Rules 26 - 37, and Federal Rules of Evidence, as each may be amended from time to time.

6.7 Interest computed annually, at a rate equal to the Prime Rate plus two (2) percentage points, shall be applied to any and all arbitrator's awards requiring the payment of money and shall be calculated from thirty (30) days following the date of the applicable arbitration decision. The term "Prime Rate" shall mean the minimum commercial lending rate charged by banks to their most credit-worthy customers for short-term loans, as published daily in the Wall Street Journal.

Section 7. GOVERNMENTAL APPROVAL AND ABANDONMENT

7.1 Owner and User shall, at their respective cost and expense, initiate by appropriate application or petition and thereafter diligently prosecute proceedings for the procurement of all necessary consent, approval or authority from any governmental agency for the sanction of the Terms and the operations to be carried on or conducted by User thereunder. User and Owner agree to cooperate fully to procure all such necessary consent, approval or authority.

7.2 In the event Owner shall be involuntarily dispossessed, including by threat of condemnation by competent public authority, of the right to operate upon and maintain any portion of its Joint Trackage and Owner fails or declines to replace said Joint Trackage, Owner shall have no obligation hereunder to provide tracks in replacement of such Joint Trackage for User's use, and User shall have and shall make no claim of any kind, legal or otherwise, against Owner for failure to provide such Joint Trackage for User's use.

7.3 To the extent that Owner may lawfully do so, Owner reserves to itself the exclusive right, exercisable at any time during the life of the Terms without concurrence of User, to elect to abandon all or any part of the Joint Trackage by giving six (6) months' prior written notice to User of its intention so to do ("Notice of Abandonment").

Owner shall, concurrent with its Notice of Abandonment, if legally able to do so, give to User the option to purchase the part or parts of the Joint Trackage thereof to be abandoned at the Net Liquidation Value thereof, on the date of said notice; provided, however, it is understood that Burlington Northern Railroad Company and The Atchison, Topeka & Santa Fe Railway Company (collectively, "BNSF") shall be given an option upon the Terms set forth in this Section 7.3, prior to that given User, to purchase the Placedo, Texas to Robstown, Texas segment of the Joint Trackage, subject to User's trackage rights, if BNSF is operating over that segment at the time of its proposed abandonment. "Net Liquidation Value" shall mean fair market value of land and salvage value of track components and other facilities less estimated cost of removal. User shall have three (3) months from the date of receipt of Owner's notice to exercise its option and shall evidence the exercise of its option by giving Owner written notice thereof. Thereafter User shall immediately make appropriate application to secure all necessary governmental authority for such transaction. Within thirty (30) days following the effective date of all requisite governmental approval of the transaction, User shall pay to Owner the amount of money required to purchase said Joint Trackage to be abandoned at the aforesaid Net Liquidation Value. Upon the receipt of payment of such sum, the Terms shall terminate as to the part of the Joint Trackage so purchased by User. Contemporaneously with such payment, by instrument or instruments, Owner shall convey and assign by good and sufficient quit claim deed or deeds, bills of sale or other instruments, all of Owner's right, title, interest and equity, in and to the Joint Trackage so purchased. Owner agrees that it shall promptly take all necessary action to obtain from the trustees of its mortgages all releases or satisfactions covering the same and shall deliver to User such instruments.

If User fails to exercise the option herein granted within the time and in the manner above specified, Owner may forthwith proceed free of all obligation to User to abandon the portion of Joint Trackage or make appropriate application, if necessary, to secure all necessary governmental authority for such abandonment. User agrees that at such time it shall concurrently make application for all necessary governmental authority for abandonment of its right to operate over such Joint Trackage. The Terms shall terminate as to the section of Joint Trackage so abandoned upon the effective date of such approval by governmental authority.

7.4 Owner and User each shall be responsible for and shall bear labor claims, and employee protection payable to, its own respective employees (and employees of its respective affiliated companies) including any amounts that either Owner or User may be required to pay to its own respective employees pursuant to labor protective conditions imposed by the STB.

Section 8. CATASTROPHIC EXPENSE

Catastrophic expense to the Joint Trackage, such as, but not limited to, that arising from flood, earthquake or acts of God, etc., in excess of One Hundred Thousand Dollars ($100,000) for each occurrence shall be billed in addition to the GTM Rates and apportioned on the basis of the parties' GTMs operated over the Joint Trackage for the twelve (12) month period ending immediately prior to the first day of the month of occurrence.

Section 9. TERM

9.1 User shall have the right to terminate the Terms upon twelve (12) months' prior written notice to Owner. Liabilities created under the Terms, if it becomes effective and is later terminated, shall survive such termination.

9.2 Upon termination of the Terms, or any partial termination, as the applicable case may be, however the same may occur, User shall be released from any and all manner of obligations and shall be deemed to have forever relinquished, abandoned, surrendered and renounced any and all right possessed by User to operate over that part of the Joint Trackage to which such termination applied, and as to such part, User shall forever release and discharge Owner of and from any and all manner of obligations, claims, demands, causes of action, or suits which User might have, or which might subsequently accrue to User growing out of or in any manner connected with, directly or indirectly, the contractual obligations of Owner under the Terms, in all events provided, however, the aforesaid relinquishment, abandonment, surrender, renunciation, release and discharge by User shall not in any case affect any of the rights and obligations of either Owner or User which may have accrued, or liabilities accrued or otherwise, which may have arisen prior to such termination or partial termination. Upon any termination, Owner shall remove from Owner's right of way any connecting track, and any exclusive facility of User, at User's expense with salvage to be delivered to and retained by User. Upon any partial termination of the Terms, however the same may occur, the terms and conditions hereof shall continue and remain in full force and effect for the balance of the Joint Trackage.

Section 10. ASSIGNMENT

The Terms and any rights granted hereunder may not be assigned in whole or in part by User without the prior written consent of Owner except (i) as provided in Section 3.5, and (ii) to the purchaser of substantially all of User's rail properties. The Terms may be assigned by Owner without restriction. In the event of an authorized assignment, the Terms and the operating rights hereunder shall be binding upon the successors and assigns of the parties.

Section 11. DEFAULT

11.1 Notwithstanding the provisions of Section 3 of these General Conditions, either party hereto claiming default of any of the provisions of the Terms (including these General Conditions) shall furnish notice and written demand to the other party for performance or compliance with the covenant or condition of the Terms claimed to be in default, which notice shall specify wherein and in what respect such default is claimed to exist and shall specify the particular Section or Sections of the Terms under which such claim of default is made.

11.2 If the default shall continue for an additional period of thirty (30) days after receipt of such written notice and demand, and such default has not been remedied within said thirty (30) day period, or reasonable steps have not been nor continue to be taken to remedy a failure or default which cannot reasonably be remedied within said thirty (30) day period, and such default

relates to the provisions and terms of the Terms, either party shall resort to binding arbitration provided that the arbitrator shall not have the authority to amend, modify or terminate the Terms.

11.3 Failure of a party to claim a default shall not constitute a waiver of such default. Either party hereto entitled to claim default may waive any such default, but no action by such party in waiving such default shall extend to or be taken to affect any subsequent defaults or impair the rights of either party hereto resulting therefrom.

Section 12. OTHER CONSIDERATIONS

12.1 The Terms and each and every provision hereof is for the exclusive benefit of the parties hereto and not for the benefit of any third party. Nothing herein contained shall be taken as creating or increasing any right in any third person to recover by way of damages or otherwise against any of the parties hereto.

12.2 If any covenant or provision of the Terms not material to the right of User to use the Joint Trackage shall be adjudged void, such adjudication shall not affect the validity, obligation or performance of any other covenant or provision which is in itself valid. No controversy concerning any covenant or provision shall delay the performance of any other covenant or provision. Should any covenant or provision of the Terms be adjudged void, the parties shall make such other arrangements as will effect the purposes and intent of the Terms.

12.3 In the event there shall be any conflict between the provisions of these General Conditions and the Terms, the provisions of the Terms shall prevail, except that the definition of Joint Trackage set forth in Section 1.7 of these General Conditions shall prevail.

12.4 All section headings are inserted for convenience only and shall not affect any construction or interpretation of the Terms.

12.5 Reference to any agency or other organization shall include any successor agency or organization, and reference to any index or methodology (e.g., RCAF-U, URCS, etc.), if such index or methodology ceases to exist or is no longer available, shall include any substantially similar index or methodology selected by the parties or, if the parties fail to agree on such, one determined by binding arbitration under Section 6 of these General Conditions.

END OF EXHIBIT "B"

TEX MEX - MP/SP DISPATCHING PROTOCOLS

1. Scope: These protocols apply on all segments of the Joint Trackage.

2. Purpose: To ensure that Tex Mex and MP/SP trains operating on Joint Trackage are given equal dispatch without any discrimination in promptness, quality of service or efficiently and that the competitiveness of Tex Mex operations on the Joint Trackage is not adversely affected by the fact that MP/SP owns the track.

3. General Instructions: MP/SP will issue written instructions to all personnel (including supervisors) responsible for train dispatching on the Joint Trackage that Tex Mex trains are to be dispatched exactly as if they were trains of the same class of MP/SP and given equal treatment with trains of MP/SP. These instructions will be issued at agreed intervals or at the request of Tex Mex.

4. Monitoring Systems: MP/SP will provide Tex Mex with timely and accurate information about the status of Tex Mex trains operating over the Joint Trackage.

5. Train Information: Tex Mex will provide the MP/SP, and regularly update, information about its expected train operations and schedules (including priorities, time commitments, horsepower per trailing ton, etc.) over the Joint Trackage, preferably using electronic data interchange. Tex Mex and MP/SP will establish run time standards by train category based on expected train volumes for Tex Mex. If train volumes are different than expected then adjustments to run time standards will be made by mutual agreement. Tex Mex will provide reliable and current information about trains approaching the Joint Trackage, including train arrival time and train characteristics, preferably by providing at its expense computer terminals, facilities or capabilities showing trains approaching the Joint Trackage, sufficiently in advance to allow dispatchers to plan for them. MP/SP will provide to Tex Mex advance notice of planned maintenance-of-way projects, line closures and train or equipment restrictions. Tex Mex and MP/SP will consult in advance about maintenance-of-way windows resulting from planned maintenance projects so as to minimize disruptions to the operations of both carriers.

6. Specific Instructions: MP/SP will permit Tex Mex to transmit instructions regarding the requirements of specific trains and shipments to designated dispatching center employees responsible for handling those trains.

7. Train Priorities/Run Time Standards: MP/SP will provide to Tex Mex current procedures for assigning dispatching priorities or rankings to trains and information sufficient to show how those procedures are applied to their own trains. Tex Mex will assign priorities or rankings to its trains operating on the Joint Trackage using MP/SP's procedures, and MP/SP will dispatch Tex Mex trains in accordance with those priorities or rankings. It is understood that

technological advances in computer aided dispatching might result in changes to priority assignment methodologies. The parties agree to discuss technological changes which might affect priority assignment methodologies prior to implementation. The Joint Service Committee will be responsible for reviewing these assignments to ensure that they are applied equitably by both railroads.

8. Entry to Joint Trackage: At points where Tex Mex trains enter the Joint Trackage, entry will be provided by MP/SP on a first-come first-served basis, taking into consideration the relative priorities of affected trains and the specific needs and operating characteristics of individual trains of both railroads. If operating circumstances make strict application of this principle difficult or uncertain, Tex Mex and MP/SP may jointly establish standards for determining sequence of entry to Joint Trackage. The parties will communicate daily on any conflicts concerning entry to the Joint Trackage to gain resolution.

9. Communication: MP/SP will provide to Tex Mex, and keep current, lists of dispatching personnel responsible for dispatching the Joint Trackage and contact numbers. Tex Mex and MP/SP will designate more supervisory employees to serve as the day-to-day contacts for communications about operating changes, service requests and concerns. Where feasible and economical, dedicated phone lines or computer links will be established for these communications.

10. Access to Dispatching Center: Appropriate officials of Tex Mex will be admitted at any time to dispatching facilities and personnel responsible for dispatching the Joint Trackage to review the handling of trains on the Joint Trackage (although both railroads will take reasonable steps to prevent disclosure of proprietary information not relevant to the review). It is understood that management and supervision of dispatching operations is the responsibility of MP/SP.

11. Performance Measurement: Tex Mex and MP/SP will cooperate to develop train performance evaluation methods under which train performance of Tex Mex trains on the Joint Trackage can be compared to train performance of MP/SP's trains on the Joint Trackage for the same train category and priority.

12. Personnel Incentives and Evaluation: In evaluating the performance of employees and supervisors responsible for dispatching the Joint Trackage, MP/SP will consider train performance of Tex Mex trains and effectiveness in cooperating with Tex Mex personnel and meeting Tex Mex service requirements in the same manner as such factors are considered with respect to MP/SP's trains, personnel and requirements. If bonuses, raises or salaries of those persons are affected by performance of MP/SP's trains, performance of Tex Mex's trains shall be considered on the same basis to the extent feasible.

13. Disagreements: The designated contact supervisors are expected to raise questions, disagreements, concerns or disputes about compliance with these protocols promptly as and when any such matters arise and to use their best efforts to resolve them. If a matter is not resolved to the satisfaction of both parties, it will be presented to the Joint Service Committee. If a satisfactory resolution cannot be achieved by the Joint Service Committee the matter will be submitted to binding summary arbitration before a neutral experienced railroad operating official within fourteen days. The parties will agree in advance on the sanctions available to the arbitrator to address failures to comply with these protocols.

14. Modifications: As the ultimate objective of these protocols is the equal, flexible and efficient handling of all trains of Tex Mex and MP/SP on the Joint Trackage, these protocols may be modified at any time by mutual agreement, consistent with that objective.

REDACTED PUBLIC RECORD VERSION

BEFORE THE
SURFACE TRANSPORTATION BOARD

FINANCE DOCKET NO. 36500

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL*. – CONTROL – KANSAS CITY SOUTHERN, *ET AL*.

SIMMONS R.V.S. EXHIBIT 3

TERMS FOR TEXAS MEXICAN RAILWAY COMPANY TRACKAGE RIGHTS, EXECUTED JAN. 28, 1997 (HBT-TM)

TERMS FOR TEXAS MEXICAN RAILWAY COMPANY TRACKAGE RIGHTS

The following terms (hereinafter referred to as the "Terms") shall govern rights provided by HOUSTON BELT & TERMINAL RAILWAY COMPANY, a Texas corporation, referred to as "HB&T" or "Owner," on the one hand, to THE TEXAS MEXICAN RAILWAY COMPANY ("Tex Mex" or "User"), on the other hand, with HB&T and Tex Mex sometimes referred to collectively as "Parties," pursuant to the decisions of the Surface Transportation Board ("STB") in Finance Docket No. 32760 (Sub-No. 14) served August 12, 1996 ("Decision No. 44") and September 10, 1996 ("Decision No. 47").

RECITALS

A. HB&T owns lines of railroad consisting of track structure extending in and through Houston, Texas, identified as follows:

> HB&T line from Quitman Street in the vicinity of HB&T Milepost 4.7 (West Belt Subdivision) to the HB&T's connection with UP at Gulf Coast Junction in the vicinity of HB&T Milepost 4.6 (East Belt Subdivision), a distance of 3.6 miles;
>
> HB&T line from its connection with the SP line at T. & N.O. Junction, TX (Tower 81) in the vicinity of HB&T Milepost 11.0 (West Belt Subdivision) to HB&T's connection with UP at Interstate Junction in the vicinity of HB&T Milepost 7.5 (East Belt Subdivision), a distance of 8.2 miles;

as shown by bold line on the attached print dated September 11, 1996 (and identified as Exhibit "A") and further described in Section 1.7 of Exhibit "B," which shall be referred to herein as the "Joint Trackage."

B. The STB in Finance Docket No. 32760 (Sub-No. 14) approved the common control and merger of the rail carriers controlled by Union Pacific Corporation ("UPC"), including Missouri Pacific Railroad Company ("MP") and Union Pacific Railroad Company ("UPRR") (UPC, UPRR and MP are referred to collectively as "UP"), and the rail carriers controlled by Southern Pacific Rail Corporation ("SPR"), including Southern Pacific Transportation Company ("SP"), conditioned on, among other things, partial grant of the Tex Mex's Terminal Trackage Rights Application, dated March 29, 1996, including trackage rights over the HB&T as specified therein.

C. Tex Mex desires to receive said trackage rights and to conduct operations pursuant thereto. Tex Mex and HB&T now wish to define the terms and conditions under which said rights shall be exercised.

D. It is the position of Tex Mex and HB&T that these Terms do not constitute the acquiescence by either of them in the Decision and shall not preclude either of them from seeking any reopening, reconsideration or judicial review of Decision No. 44 or Decision No. 47.

TERMS

1. General Conditions:

The General Conditions set forth in Exhibit "B" attached hereto are hereby made a part of these Terms. All capitalized Terms used and not otherwise defined in these Terms shall have the meaning ascribed to them in the General Conditions. If any conflict between the General Conditions and these Terms shall arise, the provisions of these Terms shall prevail.

2. Rights of Tex Mex:

(a) Subject to the terms and conditions contained herein, HB&T shall grant to Tex Mex the nonexclusive right to use the Joint Trackage for the limited operation of Equipment in Tex Mex's account over the Joint Trackage in common with HB&T and such other railroad company or companies as HB&T has heretofore admitted or may hereafter at any time in the future admit to the joint use of all or part of the Joint Trackage (provided that such future admittance shall not materially hinder or obstruct the fair and reasonable exercise of the rights granted in these Terms), such other railroad company or companies to be considered HB&T for the purposes of these Terms, it being understood and agreed that Tex Mex shall not have the right to:

(i) Switch industries upon the Joint Trackage;

(ii) Set out, pick up or store Equipment upon the Joint Trackage, or any part thereof, except as otherwise provided in Sections 2.11, 2.12 and 2.13 of Exhibit B;

(iii) Serve any industry, team or house track, intermodal or auto facility now existing or hereafter located along the Joint Trackage;

(iv) Permit or admit any third party to the use of all or any portion of the Joint Trackage, nor, under the guise of doing its own business, contract or make any agreement to handle as its own Equipment over or upon the Joint Trackage, or any portion thereof, the Equipment of any such third party which in the normal course of business would not be considered the Equipment of Tex Mex; provided, however, that the foregoing shall not prevent Tex Mex, pursuant to a run-through agreement with any railroad, from using the locomotives and cabooses of another railroad as its own under these terms;

(v) Connect with or interchange with any other railroad, except as otherwise provided in Section 4; or

(vi) Establish any transload facilities on the Joint Trackage or build into or out from any facility from/to the Joint Trackage.

(b) The rights granted in Section 2 shall be only for rail traffic of all kinds and commodities, both carload and intermodal, in Equipment that meets all applicable specifications established by the Association of American Railroads and the Federal Railroad Administration, provided that all freight handled by Tex Mex pursuant to such rights must have a prior or subsequent movement on Tex Mex's Laredo-Robstown-Corpus Christi Line.

(c) User shall have the right to establish crew change points at points on the Joint Trackage as from time to time may be mutually agreed to in writing by Owner and User. However, User agrees that if sufficient trackage is not available at such locations(s) to facilitate crew changes of User, Owner may require User to construct additional trackage ("Crew Change Facilities") in the vicinity of such location as may be required, in the reasonable judgment of Owner, the cost and expense of which shall be borne solely by User. If User does not agree that such Crew Change Facilities are necessary, the Owner may nevertheless insist that they be constructed, with the question of their necessity, and the User's obligation to bear their cost and expense, to be determined by arbitration pursuant to Section 6 of the General Conditions. In the event such Crew Change Facilities are constructed at the cost and expense of User, and Owner shall choose to use such Crew Change Facilities, Owner shall pay User fifty percent (50%) of the cost of constructing such Crew Change Facilities. Should Owner decline to participate, Owner shall be denied access to such Crew Change Facilities. However, should Owner elect at a later date to use such Crew Change Facilities, such right shall be granted to Owner by User upon payment of fifty percent (50%) of User's initial costs plus per annum interest thereon at a rate equal to the average paid on 90-day Treasury Bills of the United States Government as of the date of completion until the date of use by User commences. Per annum interest shall be adjusted annually on the first day of the twelfth (12th) month following the date of completion and every year thereafter on such date, based on the percentage increase or decrease, in the average yield of 30-year U.S. Treasury Notes for the prior year compared to their average yield in first year of completion of the Improvements. Each annual adjustment shall be subject, however, to a "cap" (up or down) of two percentage points of the prior year's interest rate (i.e. the adjustment may not exceed an amount equal to two percentage points of the immediately preceding year's interest rate).

In addition, Owner shall lease to User, by separate written agreement at reasonable and customary charges, existing facilities for office, locker, change and lunchroom purposes by User's personnel upon request of User to Owner, and as reasonably available, or property of Owner as reasonably available for User to establish its own facilities.

(d) User agrees that when entering or exiting the Joint Trackage or using the Joint Trackage to set out or pick up ("User's Operations"), it shall do so without unreasonable interference or impairment of the Joint Trackage. However, User agrees that if sufficient trackage is not available at such location(s) to facilitate User's Operations, Owner may require User to construct additional trackage in the vicinity of such location(s) as may be required, in the reasonable judgment of Owner,

the cost and expense of which shall be borne solely by User. If User does not agree that such additional trackage is necessary, the Owner may nevertheless insist that it be constructed, with the question of its necessity, and the User's obligation to bear its cost and expense, to be determined by arbitration pursuant to Section 6 of the General Conditions. In the event such trackage is constructed at the cost and expense of User, and Owner shall choose to use such trackage, Owner shall pay User fifty percent (50%) of the cost of constructing such trackage plus interest as calculated pursuant to Section 2(c) above.

3. GTM Rate:

(a) In addition to other payments to be made under these Terms, User shall remit to Owner monthly for the use of the Joint Trackage in the operation of its Equipment therealong and thereover, the total amount of 3.84 mills per GTM for all Equipment, which sum per GTM ("GTM Rate") shall be deemed to include ordinary and programmed maintenance of the Joint Trackage, Changes in and/or Additions to the Joint Trackage (to the extent required by the first sentence of Section 2.2 of the General Conditions), operating expenses, interest rental, depreciation and taxes.

(b) For the purpose of computing the GTM Rate under this Section 3, the distance between the designated points of the Joint Trackage shall be determined by reference to HB&T's then current timetable.

(c) The GTM Rate set forth in Section 3(a) of these Terms shall be subject to adjustment annually, commencing as of July 1, 1997, as follows:

All trackage rights charges under this Section 3 shall be subject to adjustment annually beginning as of the effective date of these Terms to reflect seventy percent (70%) of increases or decreases in Rail Cost Adjustment Factor, not adjusted for changes in productivity ("RCAF-U") published by the ICC or successor agency or other organizations. In the event the RCAF-U is no longer maintained, the parties shall select a substantially similar index and failing to agree on such an index, the matter shall be referred to binding arbitration.

4. Interchange:

In exercising the rights granted by these Terms, Tex Mex shall have the right, pursuant to separate agreements entered into between the parties or terms imposed by the STB, to interchange traffic with (a) HB&T at Houston, Texas, (b) The Atchison, Topeka & Santa Fe Railway Company ("ATSF") and Burlington Northern Railroad Company ("BN") (ATSF and BN are referred to collectively as "BNSF") at New South Yard and at any new interchange point that HB&T may hereafter establish with BNSF on the Joint Trackage, and (c) PTRA at Basin Yard and at any new interchange point that HB&T may hereafter establish with PTRA on the Joint Trackage.

5. Additions:

(a) Owner and User shall conduct a joint inspection to determine what connections ("Connections") and sidings or siding extensions associated with Connections ("Sidings") are necessary in the reasonable judgment of Owner to implement the rights granted under Section 2 of these Terms. User, at its sole cost and expense, shall pay the cost of such Connections and Sidings. If User does not agree that such Connections and Sidings are necessary, Owner may nevertheless insist that they be constructed, with the question of their necessity, and the User's obligation to bear their cost and expense, to be determined by arbitration pursuant to Section 6 of the General Conditions. In that event that the User bears the sole cost and expense of any such Connections and Sidings, no other railroad shall have the right to use them except upon terms agreed to by User and such other railroad. In the event Owner shall elect to use such Connections and Sidings, Owner shall pay to User fifty percent (50%) of the cost to User of constructing the Connections and Sidings, plus interest as calculated pursuant to Section 2(c) above, and, having made such payment, Owner may also admit other railroads to the use of such Connections and Sidings. Owner shall maintain the part of any Connection or Siding on its property at its sole cost and expense, and User, at its sole cost and expense, shall maintain the part of any Connection or Siding on its property or property of others.

(b) Except as provided in Section 5(a) above, expenditures for any future Changes in and/or Additions to the Joint Trackage, such as, but not limited to, sidings, Centralized Traffic Control, grade separations, and future connections, shall be handled as follows: (i) if the Change in and/or Addition to the Joint Trackage is for the sole benefit of one party, that party shall be solely responsible for the entire cost and expense thereof; (ii) all other Changes in and/or Additions to the Joint Trackage shall be shared by HB&T and Tex Mex on the basis that the parties' respective GTM's operated over the Joint Trackage bear to total GTM's operated over the Joint Trackage for the twelve (12) month period immediately prior to the month work on the project is commenced. The use of Joint Trackage by any third party shall be attributed to HB&T for purposes of computing respective GTM's for purposes of this Section 5(b).

(c) In the event such Changes in and/or Additions to the Joint Trackage are constructed at the sole cost and expense of one party (party of the first part), the other party (party of the second part) shall be denied access to such Change in and/or Addition to the Joint Trackage. If the party of the second part at some future date shall choose to use such Changes in and/or Additions to the Joint Trackage, such right shall be granted to party of the second part by party of the first part upon payment of fifty percent (50%) of party of the first part's initial costs plus per annum interest calculated pursuant to Section 2(c).

6. Notices:

All notices, demands, requests, submissions and other communications which are required or permitted to be given pursuant to these Terms shall be given by either party to the other in writing and shall be deemed properly served if delivered by hand, or mailed by overnight courier or by

registered or certified mail, return receipt requested, with postage prepaid, to such other party at the address listed below:

If intended for HB&T:

General Manager
Houston Belt & Terminal
Railway Company
501 Crawford Street
Houston, Texas 77002

If intended for Tex Mex:

The Texas Mexican Railway Company
1200 Washington Street
P.O. Box 419
Laredo, Texas 78042

Notice of address change may be given any time pursuant to the provisions of this Section 6.

7. Term:

These Terms shall be effective upon consummation of the control authority granted in the Decision for a term of ninety-nine (99) years; provided, however, that the User shall have the right to terminate these Terms upon twelve (12) months' prior written notice to Owner. These Terms shall terminate, and all rights conferred pursuant thereto shall be canceled and deemed void ab initio, if, in a Final Order, the application for authority for UP to control SPC has been denied or has been approved on terms unacceptable to the applicants or has been granted on terms that do not require the rights provided herein, provided, however, that if these Terms become effective and are later terminated, any liabilities arising from the exercise of rights under Sections 1 through 5 during the period of its effectiveness shall survive such termination. For purposes of this Section 7, "Final Order" shall mean an order of the Surface Transportation Board, any successor agency, or a court with lawful jurisdiction over the matter which is no longer subject to any further direct judicial review (including a petition for writ of certiorari) and has not been stayed or enjoined.

EXHIBIT A

PRINT DATE 09-11-96

N021-0047

EXHIBIT "B"

GENERAL CONDITIONS

Section 1. DEFINITIONS

1.1 "Annual" shall mean a calendar year.

1.2 "Car" shall mean one (1) rail car; provided, however, that each platform in an articulated rail car of two (2) or more platforms shall be counted as one (1) rail car, subject to modification by mutual agreement of the parties based upon changes in railroad technology.

1.3 "Changes in and/or Additions to" shall mean work projects and retirements, the cost of which is chargeable in whole or in part to Property Accounts during the term of the Terms.

1.4 "Equipment" shall mean trains, locomotives, rail cars (loaded or empty), intermodal units (loaded or empty), cabooses, vehicles, and machinery which are capable of being operated on railroad tracks or on right-of-way for purposes of the maintenance or repair of such railroad tracks.

1.5 "GTM" shall mean gross ton mile which is the weight in tons for Equipment and lading transported over one (1) mile of track included in the Joint Trackage.

1.6 "GTM Handled Proportion" shall mean the GTMs handled over the Joint Trackage by or for a party divided by the total number of GTMs handled by or for all parties using the Joint Trackage, during the same period. For the purpose of computing such GTM's Handled Proportion, Equipment engaged in work service pertaining to construction, maintenance or operation of the Joint Trackage or Changes in and/or Additions to the Joint Trackage shall not be counted and GTMs of third parties shall be attributed to the Owner.

1.7 "Joint Trackage" shall mean the track structure of Owner as described in the Terms including necessary right-of-way and all appurtenances, signals, communications, and facilities of Owner and all Changes in and/or Additions to said track structure now or in the future located as are required or desirable for the operation of the Equipment of the parties hereto.

1.8 "Mill" shall mean one-tenth of a cent ($0.001 US).

1.9 "Owner" shall have the meaning given to it in the Terms.

1.10 "Property Accounts" shall mean accounts so designated under the Uniform System of Accounts for Railroad Companies prescribed by the Interstate Commerce Commission, or any replacement of such system prescribed by the applicable federal regulatory agency, if any, and used by the parties hereto.

1.11 "STB" shall mean the Surface Transportation Board of the United States Department of Transportation or any successor agency.

1.12 "Terms" shall mean those certain Terms for Texas Mexican Railway Company Trackage Rights to which this Exhibit "B" is attached.

1.13 "User" shall have the meaning given to it in the Terms.

Section 2. MAINTENANCE, ADDITIONS, OPERATION, AND CONTROL

2.1 Owner shall have sole charge of the maintenance and repair of the Joint Trackage with its own supervisors, labor, materials and equipment. Owner, from time to time, may make such Changes in and/or Additions to the Joint Trackage as shall be required by any law, rule, regulation or ordinance promulgated by any government body having jurisdiction, or as Owner, in its sole discretion, shall deem necessary, subject to Section 2.2. Such Changes in and/or Additions to the Joint Trackage shall become a part of the Joint Trackage or in the case of retirements shall be excluded from the Joint Trackage.

2.2 Unless otherwise mutually agreed to by the parties in writing, Owner shall, (i) keep and maintain the Joint Trackage on a consistent basis at no less than the track standard designated in the timetable in effect on the date of the Terms, including special instructions for the Joint Trackage as of the date of the Terms, (ii) maintain at least the physical capacity of the Joint Trackage as of the date of the Terms (i.e., number of main tracks, support tracks, signal systems, rail weight, line clearances, etc.), and (iii) be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Terms. In the event that User desires that the Joint Trackage be improved to a condition in excess of the standard set forth in this Section 2.2, or desires that other Changes in and/or Additions to be made to the Joint Trackage, Owner agrees to make such Changes in and/or Additions to the Joint Trackage if funded in advance by User. Thereafter, such Changes in and/or Additions to the Joint Trackage shall become part of the Joint Trackage and shall be maintained by Owner in such improved condition.

2.3 Owner shall employ all persons necessary to construct, operate, maintain, repair and renew the Joint Trackage. Owner shall be bound to use reasonable and customary care, skill and diligence in the construction, operation, maintenance, repair and renewal of the Joint Trackage and in managing of the same. Owner shall make its best effort to ensure that User is given the same advance notice of maintenance plans and schedules as is provided to Owner's personnel.

2.4 The trackage rights granted hereunder shall give User access to and joint use of the Joint Trackage, for such use as is permitted by Section 2 of the Terms, equal to that of Owner. The management, operation (including dispatching) and maintenance of the Joint Trackage shall, at all times, be under the exclusive direction and control of Owner, the movement of Equipment over and along the Joint Trackage shall at all times be subject to the exclusive direction and control of Owner's authorized representatives and in accordance with such reasonable operating rules as Owner shall from time to time institute, but in the management, operation (including dispatching) and maintenance of the Joint Trackage, Owner, User and any other users of the Joint Trackage shall be treated in a

non-discriminatory manner. User shall, at User's sole cost and expense, obtain, install and maintain necessary communication equipment to allow User's Equipment to communicate with Owner's dispatching and signaling facilities the same as Owner's trains so utilize. Owner shall consult with User prior to the adoption of new communication or signaling systems to be employed on the Joint Trackage, which have not theretofore been generally adopted in the railroad industry.

2.5 If the use of the Joint Trackage shall at any time be interrupted or traffic thereon or thereover be delayed for any cause, neither party shall have or make any claim against the other for loss, damage or expense caused by or resulting solely from such interruption or delay.

2.6 Owner may from time to time provide any track or tracks on the Joint Trackage other than those delineated in Exhibit A to the Terms for use by User provided there shall at all times be afforded User a continuous route of equal utility and quality for the operations of its Equipment between the termini of the Joint Trackage. When such tracks which are not part of the Joint Trackage are used as provided herein, the Terms shall govern for purposes of direction and control and liability as if all movement had been made over the Joint Trackage.

2.7 Each party shall be responsible for furnishing, at its sole cost and expense, all labor, fuel and train and other supplies necessary for the operation of its own Equipment over the Joint Trackage. In the event a party does furnish such labor, fuel or train and other supplies to another party, the party receiving the same shall promptly, upon receipt of billing therefor, reimburse the party furnishing the same for its reasonable costs thereof, including customary additives.

2.8 User shall be responsible for the reporting and payment of any mileage, per diem, use or rental charges accruing on Equipment in User's account on the Joint Trackage. Except as may be specifically provided for in the Terms, nothing herein contained is intended to change practices with respect to interchange of traffic between the parties or with other carriers on or along the Joint Trackage.

2.9 Except as otherwise may be provided in the Terms, User shall operate its Equipment over the Joint Trackage with its own employees, but before said employees are assigned or permitted to operate Equipment over the Joint Trackage as herein provided, and from time to time thereafter as and when reasonably requested by Owner, they shall be required to pass the applicable rules examinations required by Owner of its own employees. Owner shall delegate to specified User's officers the conduct of such examinations in the event User chooses to conduct such examinations. If an Owner officer conducts such examinations of employees of User, User shall pay Owner a reasonable fee for each employee so examined, such fee to be mutually agreed upon by the parties from time to time in a separate agreement. Notwithstanding any such examination, User shall be responsible for ensuring that its employees are qualified and have taken all such rules examinations. Upon request of User, Owner shall qualify one or more of User's supervisory officers as pilots and such supervisory officer or officers so qualified shall qualify employees of User engaged in or connected with User's operations on or along the Joint Trackage. At User's request, Owner shall

furnish a pilot or pilots, at the expense of User, to assist in operating trains of User over the Joint Trackage.

2.10 If any employee of User shall neglect, refuse or fail to abide by Owner's rules, instructions and restrictions governing the operation on or along the Joint Trackage, such employee shall, upon written request of Owner, be suspended by User from working on the Joint Trackage unless and until requalified to return to work and approved to do so by Owner. If either party shall deem it necessary to hold a formal investigation to establish such neglect, refusal or failure on the part of any employee of User, then upon such notice presented in writing, Owner and User shall promptly hold a joint investigation in which the parties concerned shall participate and bear the expense for their respective officers, counsel, witnesses and employees. Notice of such investigations to User's employees shall be given by User's officers, and such investigation shall be conducted in accordance with the terms and conditions of schedule agreements between User and its employees. If, in the judgment of Owner, the result of such investigation warrants, such employee shall, upon written request by Owner, be withdrawn by User from service on the Joint Trackage, and User shall release and indemnify Owner from and against any and all claims and expenses arising from such withdrawal.

If the disciplinary action is appealed by an employee of User to the National Railroad Adjustment Board or other tribunal lawfully created to adjudicate such cases, and if the decision of such board or tribunal sustains the employee's position, such employee shall not thereafter be barred from service on the Joint Trackage by reason of such disciplinary action.

2.11 If any Equipment of User is bad ordered enroute on the Joint Trackage and (i) it is necessary that it be set out, and (ii) only light repairs to the Equipment are required, such bad ordered Equipment shall be promptly repaired, and, thereafter, be promptly removed from the Joint Trackage by User. Owner may, upon request of User and at User's sole cost and expense, furnish the required labor and material and perform light repairs to make such bad ordered Equipment safe for movement. The employees and Equipment of Owner while in any manner so engaged or while enroute to or returning to Owner's terminal from such an assignment shall be considered Sole Employees (as hereinafter defined) of User and Sole Property (as hereinafter defined) of User. However, should Owner's employees after repairing such bad ordered Equipment for User move directly to perform service for Owner's benefit rather than return to Owner's terminal, then User's exclusive time and liability will end when Owner's employees depart for work to be performed for Owner's benefit. In the case of such repairs by Owner to freight cars in User's account, billing therefor shall be in accordance with the Field and Office Manuals of the Interchange Rules, adopted by the Association of American Railroads ("AAR"), hereinafter called "Interchange Rules", in effect on the date of performance of the repairs. Owner shall then prepare and submit billing directly to and collect from the car owner for car owner responsibility items as determined under said Interchange Rules, and Owner shall prepare and submit billing directly to and collect from User for handling line responsibility items as determined under said Interchange Rules. Owner also shall submit billing to and collect from User any charges for repair to freight cars that are User's car owner responsibility items as determined under said Interchange Rules, should said car owner refuse or otherwise fail to

NO21-0051

make payment therefor. Repairs to locomotives shall be billed as provided for in Section 3 of these General Conditions.

2.12 If Equipment of User shall become derailed, wrecked, or otherwise disabled while upon the Joint Trackage, it shall be rerailed or cleared by Owner, except that employees of User may rerail User's derailed Equipment on the Joint Trackage whenever use of motorized on or off track equipment is not required; however, in any such case, employees of User shall consult with and be governed by the directions of Owner. Owner reserves the right to rerail Equipment of User when, in the judgment of Owner, Owner deems it advisable to do so to minimize delays and interruptions to train movement. The reasonable costs and expenses of rerailing or clearing derailed, wrecked or disabled Equipment shall be borne by the parties in accordance with Section 5 of these General Conditions. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.13 In the event Equipment of User shall be forced to stop on the Joint Trackage, and such stoppage is due to insufficient hours of service remaining among User's employees, or due to mechanical failure of User's Equipment (other than bad ordered Equipment subject to light repairs pursuant to Section 2.11), or to any other cause not resulting from an accident or derailment (including the failure of User to promptly repair and clear bad ordered Equipment pursuant to Section 2.11), and such Equipment is unable to proceed, or if a train of User fails to maintain the speed required by Owner on the Joint Trackage, or if, in emergencies, disabled Equipment is set out of User's trains on the Joint Trackage, Owner shall have the option to furnish motive power or such other assistance (including but not limited to the right to recrew User's train) as may be necessary to haul, help or push such Equipment, or to properly move the disabled Equipment off the Joint Trackage. The reasonable costs and expenses of rendering such assistance shall be borne by User. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.14 User shall pay to Owner reasonable expenses incurred by Owner in the issuance of timetables made necessary solely by changes in the running time of the trains of User over the Joint Trackage. If changes in running time of trains of Owner or third parties, as well as those of User, require the issuance of timetables, then User shall pay to Owner that proportion of the expenses incurred that one bears to the total number of parties changing the running time of their trains. If changes in running time of trains of Owner or third parties, but not those of User, require the issuance of timetables, then User shall not be required to pay a proportion of the expenses incurred in connection therewith.

2.15 User, at Owner's request, shall be responsible for reporting to Owner the statistical data called for in the Terms, which may include, but is not limited to, the number and type of Equipment and GTMs operated on the Joint Trackage.

Section 3. BILLING

3.1 Billing shall be accomplished on the basis of data contained in a billing form mutually agreed to between the parties. Such billing forms shall contain sufficient detail to permit computation of payments to be made hereunder. Billing shall be prepared according to the rules, additives, and equipment rental rates as published by the Owner. User shall pay to Owner at the Office of the Treasurer of Owner, or at such other location as Owner may from time to time designate in writing, all the compensation and charges of every name and nature which in and by the Terms User is required to pay in lawful money of the United States within sixty (60) days after the rendition of bills therefor. Bills shall contain a statement of the amount due on account of the expenses incurred, properties and facilities provided and services rendered during the billing period.

3.2 Errors or disputed items in any bill shall not be deemed a valid excuse for delaying payment, but shall be paid subject to subsequent adjustment; provided, no exception to any bill shall be honored, recognized or considered if filed after the expiration of three (3) years from the last day of the calendar month during which the bill is rendered and no bill shall be rendered later than three (3) years (i) after the last day of the calendar month in which the expense covered thereby is incurred, or (ii) in the case of claims disputed as to amount or liability, after the amount is settled and/or the liability is established. This provision shall not limit the retroactive adjustment of billing made pursuant to exception taken to original accounting by or under authority of the STB or retroactive adjustment of wage rates and settlement of wage claims.

3.3 So much of the books, accounts and records of each party hereto as are related to the subject matter of the Terms shall at all reasonable times be open to inspection by the authorized representatives and agents of the parties hereto. All books, accounts, and records shall be maintained to furnish readily full information for each item in accordance with any applicable laws or regulations.

3.4 Should any payment become payable by Owner to User under the Terms, the provisions of Sections 3.1 and 3.2 of these General Conditions shall apply with User as the billing party and Owner as the paying party.

3.5 Either party hereto may assign any receivables due it under the Terms; provided, however, that such assignments shall not relieve the assignor of any rights or obligations under the Terms.

Section 4. COMPLIANCE WITH LAWS

4.1 With respect to operation of Equipment on the Joint Trackage, each party shall comply with all applicable federal, state and local laws, rules, regulations, orders, decisions and ordinances ("Standards"), and if any failure on the part of any party to so comply shall result in a fine, penalty, cost or charge being imposed or assessed on or against another party, such other party shall give prompt notice to the failing party and the failing party shall promptly reimburse and indemnify the other party for such fine, penalty, cost or charge and all expenses and reasonable attorneys' fees

incurred in connection therewith, and shall upon request of the other party defend such action free of cost, charge and expense to the other party.

4.2 User agrees to comply fully with all applicable Standards concerning "hazardous waste" and "hazardous substances" ("Hazardous Materials"). Except with Owner's prior consent, User covenants that it shall not treat or dispose of Hazardous Materials on the Joint Trackage. User further agrees to furnish Owner (if requested) with proof, satisfactory to Owner, that User is in such compliance.

In the event any accident, bad ordered Equipment, derailment, vandalism or wreck (for purposes of this Section 4.2 and Section 4.3 hereinafter called collectively "Derailment") involving Equipment of or a train operated by User carrying Hazardous Materials shall occur on any segment of the Joint Trackage, any report required by federal, state or local authorities shall be the responsibility of User. User shall also advise the owner/shipper of the Hazardous Materials involved in the Derailment, and Owner, immediately.

In the event of a Derailment, Owner shall assume responsibility for cleaning up any release of Hazardous Materials from User's Equipment in accordance with all federal, state, or local regulatory requirements. User may have representatives at the scene of the Derailment to observe and provide information and recommendations concerning the characteristics of Hazardous Materials release and the cleanup effort. Such costs shall be borne in accordance with Section 5 of these General Conditions.

If a Hazardous Materials release caused by a derailment involving Equipment of User, or on a train operated by User, results in contamination of real property or water on the Joint Trackage or on real property or water adjacent to the Joint Trackage (whether such real property or water is owned by Owner or a third party), Owner shall assume responsibility for emergency cleanup conducted to prevent further damage. User shall be responsible for performing cleanup efforts thereafter. Any costs associated with cleaning up real property or water on or adjacent to the Joint Trackage contaminated by Hazardous Materials shall be borne in accordance with Section 5 of these General Conditions.

If Hazardous Materials must be transferred to undamaged Equipment or trucks as a result of a release caused by a derailment involving Equipment of User, or on a train operated by User, User shall perform the transfer; PROVIDED, HOWEVER, that if the Hazardous Materials are in damaged Equipment that is blocking the Joint Trackage, Owner, at its option, may transfer the Hazardous Materials with any costs associated with such transfer borne in accordance with Section 5 of these General Conditions. Transfers of Hazardous Materials by User shall only be conducted after being authorized by Owner.

4.3 The total cost of clearing a Derailment, cleaning up any Hazardous Materials released during such Derailment, and/or repairing the Joint Trackage or any other property damaged thereby

shall be borne by the party or parties liable therefor in accordance with Section 5 of these General Conditions.

4.4 In the event of release of Hazardous Materials caused by faulty Equipment or third parties, cleanup will be conducted as stated in Sections 4.2 and 4.3 of these General Conditions.

Section 5. LIABILITY

5.1 General. The provisions of this Section 5 shall apply only as between the parties hereto and are solely for their benefit. Nothing herein is intended to be for the benefit of any person or entity other than the parties hereto. It is the explicit intention of the parties hereto that no person or entity other than the parties hereto is or shall be entitled to bring any action to enforce any provision hereof against any of the parties hereto, and the assumptions, indemnities, covenants, undertakings and agreements set forth herein shall be solely for the benefit of, and shall be enforceable only by, the parties hereto. Notwithstanding anything contained in this Section 5, no provisions hereof shall be deemed to deprive Owner or User of the right to enforce or shall otherwise restrict any remedies to which they would otherwise be entitled under other provisions of the Terms as a result of the other party's failure to perform or observe any other obligation or duty created by the Terms. The provisions of this Section 5 shall apply as between the parties hereto irrespective of the terms of any other agreements between the parties hereto and other railroads using the Joint Trackage, and the allocation of liabilities provided for herein shall control as between the parties hereto.

5.2 Definitions and Covenants. The parties agree that for the purposes of this Section 5:

(a) The term "Employee(s)" of a party shall mean all officers, agents, employees and contractors of that party. Such Employees shall be treated either as "Sole Employees" or "Joint Employees", as hereinafter specified:

(b) "Sole Employees" and "Sole Property" shall mean one or more Employees, Equipment, tools and other equipment and machinery while engaged in, en route to or from, or otherwise on duty incident to performing service for the exclusive benefit of one party. Pilots furnished by Owner to assist in operating Equipment of User shall be considered the Sole Employees of User while engaged in such operations. Equipment shall be deemed to be the Sole Property of the party receiving the same at such time as deemed interchanged under AAR rules or applicable interchange agreements, or when such party is responsible for the car hire or per diem for the Equipment under agreement between the parties;

(c) "Joint Employee" shall mean one or more Employees while engaged in maintaining, repairing, constructing, renewing, removing, inspecting or managing the Joint Trackage or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while preparing to engage in, en route to or from, or otherwise on duty incident to performing such service for the benefit of both parties;

(d) "Joint Property" shall mean the Joint Trackage and all appurtenances thereto, and all Equipment, tools and other equipment and machinery while engaged in maintaining, repairing, constructing, renewing, removing, inspecting, managing or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while being prepared to engage in, en route to or from, or otherwise incident to performing such service;

(e) "Loss and/or Damage" shall mean injury to or death of any person, including Employees of the parties hereto, and loss or damage to any property, including property of the parties hereto and property being transported by the parties, which arises out of an incident occurring on, the Joint Trackage and shall include liability for any and all claims, suits, demands, judgments and damages resulting from or arising out of such injury, death, loss or damage, except liability for punitive and exemplary damages. Loss and/or Damage shall include all costs and expenses incidental to any claims, suits, demands and judgments, including attorneys' fees, court costs and other costs of investigation and litigation. Loss and/or Damage shall further include the expense of clearing wrecked or derailed Equipment and the costs of environmental protection, mitigation or clean up necessitated by such wreck or derailment and shall include any liabilities for any third-party claims for personal injury or death, property damage, natural resource damage, or any penalties, judgments or fines associated with a release of any contaminants resulting from such wreck or derailment;

(f) Operating Employees of Owner whose service may be jointly used by the parties hereto for the movement of trains over the Joint Trackage, including, but not limited to, train dispatchers, train order operators, operator clerks and watchmen shall at the time of performing their services be deemed to be Sole Employees of the party hereto for whose benefit said services may be separately rendered (during the time they are so separately rendered) and be deemed to be Joint Employees of the parties hereto at such time as their services may be rendered for the parties' joint benefit;

(g) All Employees, Equipment, tools and other equipment and machinery other than as described in (b), (c), (d) or (f) above or in Section 5.4, shall be deemed the Sole Employees of the employing party and the Sole Property of the using party;

(h) Any railroad not a party to the Terms heretofore or hereafter admitted to the use of any portion of the Joint Trackage, shall, as between the parties hereto, be regarded in the same light as a third party. Without limiting the generality of the foregoing, neither of the parties hereto assumes any responsibility to the other under the provisions of the Terms for any Loss and/or Damage occasioned by the acts or omissions of any employees of any such other railroad, or for any Loss and/or Damage which such other railroad shall be obligated to assume in whole or in part pursuant to law or any agreement relating to such other railroad's use of any portion of the Joint Trackage;

(i) For the purpose of this Section 5, Equipment of foreign lines being detoured over the Joint Trackage, and all persons other than Joint Employees engaged in moving such Equipment, shall be considered the Equipment and Employees of the party hereto under whose detour agreement or other auspices such movement is being made.

5.3 Reimbursement and Defense. The parties agree that:

(a) Each party hereto shall pay promptly Loss and/or Damage for which such party shall be liable under the provisions of this Section 5, and shall indemnify the other party against such Loss and/or Damage, including reasonable attorneys' fees and costs. If any suit or suits shall be brought against either of the parties hereto and any judgment or judgment shall be recovered which said party is compelled to pay, and the other party shall under the provisions of the Terms be solely liable therefor, then the party which is so liable shall promptly repay on demand to the other party paying the same any monies which it may have been required to pay, whether in the way of Loss and/or Damage, costs, fees or other expenses; and if the Loss and/or Damage in such case or cases is joint or allocated between the parties to the Terms, the party defendant paying the same or any costs, fees or other expenses shall be reimbursed by the other party as allocated pursuant to the Terms;

(b) Each party covenants and agrees with the other party that it will pay for all Loss and/or Damage, both as to persons and property, and related costs which it has herein assumed, or agreed to pay, the judgment of any court in a suit by third party or parties to the contrary notwithstanding, and will forever indemnify and save harmless the other party, its successors and assigns, from and against all liability and claims therefor, or by reason thereof, and will pay, satisfy and discharge all judgments that may be rendered by reason thereof, and all costs, charges and expenses incident thereto;

(c) Each party hereto shall have the sole right to settle, or cause to be settled for it, all claims for Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5, and the sole right to defend or cause to be defended all suits for the recovery of any such Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5;

(d) User shall provide written notice to Owner of any accidents or events resulting in Loss and/or Damage within seven (7) days of its discovery or receipt of notification of such occurrence;

(e) In the event both parties hereto may be liable for any Loss and/or Damage under the provisions of this Section 5 ("Co-Liable"), and the same shall be settled by a voluntary payment of money or other valuable consideration by one of the parties Co-Liable therefor, release from liability shall be taken to and in the name

of all the parties so liable; however, no such settlement in excess of the sum of One Hundred Thousand Dollars ($100,000) shall be made by or for any party Co-Liable therefor without the written consent of the other parties so liable, but any settlement made by any party in consideration of One Hundred Thousand Dollars ($100,000) or a lesser sum shall be binding upon the other parties and allocated in accordance with Section 5.5; and no party shall unreasonably withhold its consent to a settlement proposed by the other party; provided, however, that failure by a party to secure consent from the other shall not release such other party to the extent the party who failed to obtain such consent demonstrates that the other party was not prejudiced by such failure.

(f) In case a claim or suit shall be commenced against any party hereto for or on account of Loss and/or Damage for which another party hereto is or may be solely liable or Co-Liable under the provisions of this Section 5, the party against whom such claim or suit is commenced shall give to such other party prompt notice in writing of the pendency of such claim or suit, and thereupon such other party shall assume or join in the defense of such claim or suit as follows: If the claim or suit involves Loss and/or Damage to the Sole Employees or Sole Property of a party or its invitee or property in its care, custody or control, that party shall assume and control the investigation and defense of such claim or suit; if the claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage, the party whose Sole Employees or Equipment were involved in the incident shall investigate and defend such claim or suit; and if such claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage and neither or both party's Equipment and Sole Employees were involved in the incident, Owner shall investigate and defend such claim or suit; provided that the other party also may participate in the defense of any of the foregoing if it may have liability as a result of such incident;

(g) No party hereto shall be conclusively bound by any judgments against the other party, unless the former party shall have had reasonable notice requiring or permitting it to investigate and defend and reasonable opportunity to make such defense. When such notice and opportunity shall have been given, the party so notified and the other party shall be conclusively bound by the judgment as to all matters which could have been litigated in such suit, including without limitation a determination of the relative or comparative fault of each.

5.4 Wrecks and Derailment. The cost and expense of repairing bad ordered Equipment, clearing wrecks or otherwise disabled Equipment or rerailing Equipment (and the costs of repair or renewal of damaged Joint Trackage or adjacent properties) shall be borne by the party whose Equipment was wrecked, disabled, or derailed or caused such damage. All Employees or Equipment, while engaged in, en route to or from, or otherwise incident to operating wrecker or work trains clearing wrecks, disabled Equipment or Derailments or engaged in repair or renewal of the Joint Trackage subsequent to any such wreck, disability or Derailment, shall be

deemed to be Sole Employees and/or Sole Property of the party whose Equipment was wrecked, disabled or derailed. However, such Employees or Equipment, while en route from performing such clearing of wrecks, disabled Equipment or Derailments or repairing or renewing the Joint Trackage to perform another type of service, shall not be deemed to be performing service incident to the instant wreck, disability or Derailment.

5.5 Allocation.

(a) Each party shall bear all costs of Loss and/or Damage to its Sole Employees or its Sole Property, or property in its care, custody or control or its invitees without regard to which party was at fault.

(b) Loss and/or Damage to third parties (i.e., any person or entity other than a party hereto, a Sole Employee of either party, a Joint Employee or an invitee of either party) or their property, to Joint Employees or their property or to Joint Property shall be borne by the parties hereto as follows:

(i) If the Loss and/or Damage is attributable to the acts or omissions of only one party hereto, that party shall bear and pay all of such Loss and/or Damage.

(ii) If such Loss and/or Damage is attributable to the acts or omissions of more than one party hereto, such Loss and/or Damage shall be borne and paid by those parties in accordance with a comparative negligence standard, whereby each such party shall bear and pay a portion of the Loss and/or Damage equal to the degree of causative fault or percentage of responsibility for the Loss and/or Damage attributable to that party without regard to laws limiting recovery if one party is more than fifty percent (50%) at fault.

(iii) Loss and/or Damage to third parties or Joint Employees occurring in such a way that it cannot be determined how such Loss and/or Damage came about shall be apportioned between Owner, User and any other party(ies) authorized to use the Joint Trackage as a trackage rights tenant, on a usage basis considering each party's gross ton miles over the Joint Trackage for the preceding twelve (12) months or, if such Loss and/or Damage occurs during the first twelve (12) months following the effective date of the Terms, the usage of each party between the occurrence of such Loss and/or Damage and the effective date of the Terms, provided that, without limitation, User shall not bear or incur any liability for claims, suits, demands, judgments, losses or damages resulting from environmental contamination of or hazardous material on or released from the Joint Trackage, except contamination or a release of hazardous materials from User's own

Equipment or caused by or arising from the actions or omissions of User or User's Employees, and then only in accordance with the other provisions hereof.

(c) The parties agree that the characterization herein of certain Employees as "Sole Employees" or "Joint Employees" is only for the purpose of allocating Loss and/or Damage suffered by those Employees. Except as specified in subsection (a) of this Section 5.5, (which provides for the allocation of certain Loss and/or Damage between the parties without regard to fault), no party shall be liable for the acts or omissions (negligent or otherwise) of any other party's Employee.

5.6 OWNER AND USER EXPRESSLY INTEND THAT WHERE ONE PARTY IS TO INDEMNIFY THE OTHER PURSUANT TO THE TERMS, SUCH INDEMNITY SHALL INCLUDE (1) INDEMNITY FOR THE NEGLIGENCE OR ALLEGED NEGLIGENCE, WHETHER ACTIVE OR PASSIVE, OF THE INDEMNIFIED PARTY WHERE THAT NEGLIGENCE IS A CAUSE OF THE LOSS OR DAMAGE; (2) INDEMNITY FOR STRICT LIABILITY OF THE INDEMNIFIED PARTY RESULTING FROM A VIOLATION OR ALLEGED VIOLATION OF ANY FEDERAL, STATE OR LOCAL LAW OR REGULATION BY THE INDEMNIFIED PARTY, INCLUDING BUT NOT LIMITED TO THE FEDERAL EMPLOYERS LIABILITY ACT ("FELA"), THE SAFETY APPLIANCE ACT, THE BOILER INSPECTION ACT, THE OCCUPATIONAL SAFETY AND HEALTH ACT ("OSHA"), THE RESOURCE CONSERVATION AND RECOVERY ACT ("RCRA"), THE COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT ("CERCLA"), THE CLEAN WATER ACT ("CWA"), THE OIL POLLUTION ACT ("OPA"), AND ANY SIMILAR STATE STATUTE IMPOSING OR IMPLEMENTING SIMILAR STANDARDS; AND (3) INDEMNITY FOR ACTS OR ALLEGED ACTS OF GROSS NEGLIGENCE OF THE INDEMNIFIED PARTY, OR OTHER CONDUCT ON THE PART OF THE INDEMNIFIED PARTY FOR WHICH PUNITIVE DAMAGES MIGHT BE SOUGHT.

Section 6. ARBITRATION

6.1 If at any time a question or controversy shall arise between the parties hereto in connection with the Terms upon which the parties cannot agree, such question or controversy shall be submitted to and settled by arbitration. Unless other procedures are agreed to by the parties, arbitration between the parties pursuant to this Section 6 shall be governed by the rules and procedures set forth in this Section 6.

6.2 If the parties to the dispute are able to agree upon a single competent and disinterested arbitrator within twenty (20) days after written notice by one party of its desire for arbitration to the other party, then the question or controversy shall be submitted to and settled by that single arbitrator. Otherwise, any party (the notifying party) may notify the other party (the noticed party) in writing of its request for arbitration and nominating one arbitrator. Within twenty (20) days after receipt of said notice, the noticed party shall appoint an arbitrator and notify the notifying party in

Trackage. The Terms shall terminate as to the section of Joint Trackage so abandoned upon the effective date of such approval by governmental authority.

7.4 Owner and User each shall be responsible for and shall bear labor claims, and employee protection payable to, its own respective employees (and employees of its respective affiliated companies) including any amounts that either Owner or User may be required to pay to its own respective employees pursuant to labor protective conditions imposed by the STB.

Section 8. CATASTROPHIC EXPENSE

Catastrophic expense to the Joint Trackage, such as, but not limited to, that arising from flood, earthquake or acts of God, etc., in excess of One Hundred Thousand Dollars ($100,000) for each occurrence shall be billed in addition to the GTM Rates and apportioned on the basis of the parties' GTMs operated over the Joint Trackage for the twelve (12) month period ending immediately prior to the first day of the month of occurrence.

Section 9. TERM; TERMINATION

Upon termination of the Terms, or any partial termination, as the applicable case may be, however the same may occur, User shall be released from any and all manner of obligations and shall be deemed to have forever relinquished, abandoned, surrendered and renounced any and all right possessed by User to operate over that part of the Joint Trackage to which such termination applied, and as to such part, User shall forever release and discharge Owner of and from any and all manner of obligations, claims, demands, causes of action, or suits which User might have, or which might subsequently accrue to User growing out of or in any manner connected with, directly or indirectly, the contractual obligations of Owner under the Terms, in all events provided, however, the aforesaid relinquishment, abandonment, surrender, renunciation, release and discharge by User shall not in any case affect any of the rights and obligations of either Owner or User which may have accrued, or liabilities accrued or otherwise, which may have arisen prior to such termination or partial termination. Upon any termination, Owner shall remove from Owner's right of way any connecting track, and any exclusive facility of User, at User's expense with salvage to be delivered to and retained by User. Upon any partial termination of the Terms, however the same may occur, the terms and conditions hereof shall continue and remain in full force and effect for the balance of the Joint Trackage.

Section 10. ASSIGNMENT

The Terms and any rights granted hereunder may not be assigned in whole or in part by User without the prior written consent of Owner except (i) as provided in Section 3.5, and (ii) to the purchaser of substantially all of User's rail properties. The Terms may be assigned by Owner without restriction. In the event of an authorized assignment, the Terms and the operating rights hereunder shall be binding upon the successors and assigns of the parties.

Section 11. DEFAULT

11.1 Notwithstanding the provisions of Section 3 of these General Conditions, either party hereto claiming default of any of the provisions of the Terms (including these General Conditions) shall furnish notice and written demand to the other party for performance or compliance with the covenant or condition of the Terms claimed to be in default, which notice shall specify wherein and in what respect such default is claimed to exist and shall specify the particular Section or Sections of the Terms under which such claim of default is made.

11.2 If the default shall continue for an additional period of thirty (30) days after receipt of such written notice and demand, and such default has not been remedied within said thirty (30) day period, or reasonable steps have not been nor continue to be taken to remedy a failure or default which cannot reasonably be remedied within said thirty (30) day period, and such default relates to the provisions and terms of the Terms, either party shall resort to binding arbitration provided that the arbitrator shall not have the authority to amend, modify or terminate the Terms.

11.3 Failure of a party to claim a default shall not constitute a waiver of such default. Either party hereto entitled to claim default may waive any such default, but no action by such party in waiving such default shall extend to or be taken to affect any subsequent defaults or impair the rights of either party hereto resulting therefrom.

Section 12. OTHER CONSIDERATIONS

12.1 The Terms and each and every provision hereof is for the exclusive benefit of the parties hereto and not for the benefit of any third party. Nothing herein contained shall be taken as creating or increasing any right in any third person to recover by way of damages or otherwise against any of the parties hereto.

12.2 If any covenant or provision of the Terms not material to the right of User to use the Joint Trackage shall be adjudged void, such adjudication shall not affect the validity, obligation or performance of any other covenant or provision which is in itself valid. No controversy concerning any covenant or provision shall delay the performance of any other covenant or provision. Should any covenant or provision of the Terms be adjudged void, the parties shall make such other arrangements as will effect the purposes and intent of the Terms.

12.3 In the event there shall be any conflict between the provisions of these General Conditions and the Terms, the provisions of the Terms shall prevail, except that the definition of Joint Trackage set forth in Section 1.7 of these General Conditions shall prevail.

12.4 All section headings are inserted for convenience only and shall not affect any construction or interpretation of the Terms.

12.5 Reference to any agency or other organization shall include any successor agency or organization, and reference to any index or methodology (e.g., RCAF-U, URCS, etc.), if such index or methodology ceases to exist or is no longer available, shall include any substantially similar index or methodology selected by the parties or, if the parties fail to agree on such, one determined by binding arbitration under Section 6 of these General Conditions.

SIMMONS R.V.S. EXHIBIT 4

HOUSTON TO BEAUMONT, TEXAS TRACKAGE RIGHTS AGREEMENT (SP-TM)

HOUSTON TO BEAUMONT, TEXAS
TRACKAGE RIGHTS AGREEMENT

THIS AGREEMENT made as of this 16th day of June, 1997, by and between SOUTHERN PACIFIC TRANSPORTATION COMPANY, a Delaware corporation (hereinafter referred to as "SP" or "Owner"), and THE TEXAS MEXICAN RAILWAY COMPANY (hereinafter referred to as "Tex Mex" or "User"), (SP and Tex Mex sometimes referred to collectively herein as "Parties").

RECITALS

A. SP owns a line of railroad consisting of track structure extending between Houston, Texas, in the vicinity of SP's Milepost 360.42 (Carr Street Connection) and Beaumont, Texas, in the vicinity of SP's Milepost 282.4, as shown by bold line on the attached print dated June 4, 1997 (and identified as Exhibit "A"), and further described in Section 1.7 of Exhibit "B", which shall be referred to herein as the "Joint Trackage".

B. Union Pacific Railroad Company, a Utah corporation, (hereinafter referred to as "UP"), owns a line of railroad extending between Houston and Beaumont, Texas, over which Tex Mex was granted rights for use of UP tracks along with trackage rights over portions of SP's lines between Beaumont, Texas and Robstown/Corpus Christi, Texas, pursuant to Terms For Texas Mexican Railway Company Trackage Rights effective September 11, 1996 (the "Terms"), between SP, Missouri Pacific Railroad Company, UP's predecessor in interest, and Tex Mex; and

C. SP desires to implement directional operations between Houston, Texas and Beaumont, Texas using its line for eastbound movements and the lines subject to the Terms, Agreement for westbound movements so that Tex Mex and SP may operate their through trains directionally between Houston and Beaumont, Texas, to reduce train delays caused by the meeting of trains; and

D. SP is agreeable to granting Tex Mex bridge trackage rights over the Joint Trackage only to facilitate such directional operations between Houston and Beaumont, Texas and only so long as SP operates directionally between Houston and Beaumont; and

E. SP and Tex Mex wish to more specifically define the terms and conditions under which said trackage rights shall be exercised.

NOW, THEREFORE, it is mutually agreed by and between the parties:

1. General Conditions:

The General Conditions set forth in Exhibit "B" attached hereto are hereby made a part of this Agreement. All capitalized terms used and not otherwise defined in this Agreement shall have the meaning ascribed to them in the General Conditions. If any conflict between the General Conditions and this Agreement shall arise, the provisions of this Agreement shall prevail.

2. Rights of Tex Mex:

(a) Subject to the terms and conditions contained herein, SP hereby grants to Tex Mex the nonexclusive right to use the Joint Trackage for the limited operation of eastbound movements of Equipment in Tex Mex's account over the Joint Trackage in common with SP, UP and such other railroad company or companies as SP has heretofore admitted or may hereafter at any time in the future admit to the joint use of all or part of the Joint Trackage (provided that such future admittance shall not materially hinder or obstruct the fair and reasonable exercise of the rights granted in this Agreement), such other railroad company or companies to hereinafter be considered SP for the purposes of this Agreement, it being understood and agreed that Tex Mex shall not have the right to:

(i) Switch industries upon the Joint Trackage;

(ii) Set out, pick up or store Equipment upon the Joint Trackage, or any part thereof, except as otherwise provided in this Sections 2.11, 2.12 and 2.13 of Exhibit B;

(iii) Serve any industry, team or house track, transload facilities, intermodal or auto facility now existing or hereafter located along the Joint Trackage;

(iv) Permit or admit any third party to the use of all or any portion of the Joint Trackage, nor, under the guise of doing its own business, contract or make any agreement to handle as its own Equipment over or upon the Joint Trackage, or any portion thereof, the Equipment of any such third party which in the normal course of business would not be considered the Equipment of Tex Mex; provided, however, that the foregoing shall not prevent Tex Mex, pursuant to a run-through agreement with any railroad, from using the locomotives and cabooses of another railroad as its own under this Agreement;

(v) Build into or out from any facility from/to the Joint Trackage; or

(vi) Connect with or interchange with any other railroad; provided, however that Tex Mex shall have the right to connect with Houston Belt & Terminal Railway Company's East Belt main line in the vicinity of Tower 87 via SP's East Yard solely for the purpose of ingressing and egressing the Joint Trackage.

(b) The rights granted in Section 2 (a) shall be for rail traffic of all kinds and commodities, both carload and intermodal, in Equipment that meets all applicable specifications established by the Association of American Railroads and the Federal Railroad Administration, provided that all freight handled by Tex Mex pursuant to such rights must have a prior or subsequent movement on Tex Mex's Laredo-Robstown-Corpus Christi Line.

(c) If Tex Mex uses the Joint Trackage, it shall be obligated to use the Houston - Beaumont rights granted by the September 11, 1996 Terms only for movements in the same direction as the directional current of flow on those lines, notwithstanding any additional rights set forth in the September 11, 1996 Terms.

3. GTM Rate:

(a) In addition to other payments to be made under this Agreement, Tex Mex shall remit to SP monthly for the use of the Joint Trackage in the operation of its Equipment thereabong and thereover, the total amount of 3.84 mills per GTM for all Equipment, which sum per GTM ("GTM Rate") shall be deemed to include ordinary and programmed maintenance of the Joint Trackage, operating expenses, interest rental, depreciation and taxes.

(b) For the purpose of computing the GTM Rate under this Section 3, it is mutually agreed that the distance between the designated points of the Joint Trackage shall be determined by reference to SP's Station Pair Master File, which shall be subject to verification by Tex Mex.

(c) The GTM Rate set forth in Section 3(a) of this Agreement shall be subject to adjustment annually, commencing as of July 1, 1998, as follows:

All trackage rights charges under this Section 3 shall be subject to adjustment annually beginning as of the effective date of this Agreement to reflect seventy percent (70%) of increases or decreases in Rail Cost Adjustment Factor, not adjusted for changes in productivity ("RCAF-U") published by the STB or successor agency or other organizations. In the event the RCAF-U is no longer maintained, the parties shall select a substantially similar index and failing to agree on such an index, the matter shall be referred to binding arbitration.

4 Additions:

(a) Expenditures for any future Changes in and/or Additions to the Joint Trackage, such as, but not limited to, sidings, Centralized Traffic Control, grade separations, and future connections, shall be handled as follows: (i) if the Change in and/or Addition to the Joint Trackage is for the sole benefit of one party, that party shall be solely responsible for the entire cost and expense thereof; (ii) all other Changes in and/or Additions to the Joint Trackage shall be shared by SP and Tex Mex on the basis that the parties' respective GTM's operated over the Joint Trackage bear to total GTM's operated over the Joint Trackage for the twelve (12) month period immediately prior to the month work on the project is commenced. The use of Joint Trackage by any third party shall be attributed to SP for purposes of computing respective GTM's for purposes of this Section 4.

(b) In the event such Changes in and/or Additions to the Joint Trackage are constructed at the sole cost and expense of one party (party of the first part), the other party (party of the second part) shall be denied access to such Change in and/or Addition to the Joint Trackage. If the party of the second part at some future date shall choose to use such Changes in and/or Additions to the Joint Trackage, such right shall be granted to party of the second part by party of the first part upon payment of fifty percent (50%) of party of the first part's initial costs plus per annum interest thereon at a rate equal to the average paid on 90-day Treasury Bills of the United States Government as of the date of completion until the date of use by party of the first part commences. Per annum interest shall be adjusted annually on the first day of the twelfth (12th) month following the date of completion and every year thereafter on such date, based on the percentage increase or decrease, in the average yield of 30-year U.S. Treasury Notes for the prior year compared to their average yield in the first year of completion of the trackage. Each annual adjustment shall be subject, however, to a "cap" (up or down) of two percentage points of the prior year's interest rate (i.e. the adjustment may not exceed an amount equal to two percentage points of the immediately preceding year's interest rate).

(c) In the event Tex Mex shall have been required to participate in the cost of any Changes in and/or Additions to the Joint Trackage as set forth in the preceding paragraph of this Section 4, and SP subsequently elects to cease directional operations and terminate this Agreement as provided for in Section 9.1 of the General Conditions, SP shall reimburse Tex Mex for the unamortized portion of any Change in and/or Addition based upon a straight line amortization methodology over a 25 year period. For the purpose computing the refund, the amortization will be assumed to begin on the first date such Changes in and/or Additions to the Joint Trackage are placed in service and shall end on the effective date of termination of this Agreement. In the event SP terminates this Agreement pursuant to Section 9.1 of the General Conditions within the first year after any Change or Addition is placed in service, SP will refund to Tex Mex any payments made for such Changes in and/or Additions to the Joint Trackage.

In the event Tex Mex elects to terminate this Agreement at any time as provided for in Section 9.1 of the General Conditions, Tex Mex will not be entitled to any refund.

5. Modification of Directional Flow.

SP and Tex Mex recognize that at some time in the future it may be necessary, for operational efficiencies, for SP to modify the directional flow specified in this Agreement so that the line used for eastbound through trains may be used for westbound through trains and vise versa at the discretion of SP. Such a directional modification may be instituted upon thirty (30) days notice from SP to Tex Mex.

6. Notices:

All notices, demands, requests, submissions and other communications which are required or permitted to be given pursuant to this Agreement shall be given by either party to the other in writing and shall be deemed properly served if delivered by hand, or mailed by overnight courier or by registered or certified mail, return receipt requested, with postage prepaid, to such other party at the address listed below:

If intended for SP:

Executive Vice President-Operation
Room 1206
1416 Dodge Street
Omaha, Nebraska 68179

With a copy to:

Director Joint Facilities
Room 1200
1416 Dodge Street
Omaha, Nebraska 68179

If intended for Tex Mex:

The Texas Mexican Railway Company
1200 Washington Street
P.O. Box 419
Laredo, Texas 78042

Notice of address change may be given any time pursuant to the provisions of this Section 6.

7. Term.

This Agreement shall be effective upon execution and, unless earlier terminated as provided herein below, shall terminate on the same date that the September 11, 1996 agreement between SP, UP and Tex Mex covering trackage rights between Beaumont, Texas and Robstown/Corpus Christi, Texas terminates; provided, however, that this Agreement may be terminated upon thirty (30) days prior written notice from SP

to Tex Mex that SP will cease to operate directionally between Houston and Beaumont, Texas; and provided, further, that Tex Mex shall have the right to terminate the Agreement upon twelve (12) months prior written notice to SP. Liabilities created under this Agreement, if it becomes effective and is later terminated, shall survive such termination.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the day and year first above written.

GENERAL CONDITIONS

Section 1. DEFINITIONS

1.1 "Annual" shall mean a calendar year.

1.2 "Car" shall mean one (1) rail car; provided, however, that each platform in an articulated rail car of two (2) or more platforms shall be counted as one (1) rail car, subject to modification by mutual agreement of the parties based upon changes in railroad technology.

1.3 "Changes in and/or Additions to" shall mean work projects and retirements, the cost of which is chargeable in whole or in part to Property Accounts during the term of the Agreement.

1.4 "Equipment" shall mean trains, locomotives, rail cars (loaded or empty), intermodal units (loaded or empty), cabooses, vehicles, and machinery which are capable of being operated on railroad tracks or on right-of-way for purposes of the maintenance or repair of such railroad tracks.

1.5 "GTM" shall mean gross ton mile which is the weight in tons for Equipment and lading transported over one (1) mile of track included in the Joint Trackage.

1.6 "GTM Handled Proportion" shall mean the GTMs handled over the Joint Trackage by or for a party divided by the total number of GTMs handled by or for all parties using the Joint Trackage, during the same period. For the purpose of computing such GTM's Handled Proportion, Equipment engaged in work service pertaining to construction, maintenance or operation of the Joint Trackage or Changes in and/or Additions to the Joint Trackage shall not be counted and GTMs of third parties shall be attributed to the Owner.

1.7 "Joint Trackage" shall mean the track structure of Owner as described in this Agreement including necessary right-of-way and all appurtenances, signals, communications, and facilities of Owner and all Changes in and/or Additions to said track structure now or in the future located as are required or desirable for the operation of the Equipment of the parties hereto.

1.8 "Mill" shall mean one-tenth of a cent ($0.001 US).

1.9 "Owner" shall have the meaning given to it in the Agreement.

1.10 "Property Accounts" shall mean accounts so designated under the Uniform System of Accounts for Railroad Companies prescribed by the Interstate Commerce Commission, or any replacement of such system prescribed by the applicable federal regulatory agency, if any, and used by the parties hereto.

1.11 "STB" shall mean the Surface Transportation Board of the United States Department of Transportation or any successor agency.

1.12 "Terms" shall mean those certain Terms for Texas Mexican Railway Company Trackage Rights to which this Exhibit "B" is attached.

1.13 "User" shall have the meaning given to it in the Agreement.

Section 2. MAINTENANCE, ADDITIONS, OPERATION, AND CONTROL

2.1 Owner shall have sole charge of the maintenance and repair of the Joint Trackage with its own supervisors, labor, materials and equipment. Owner, from time to time, may make such Changes in and/or Additions to the Joint Trackage as shall be required by any law, rule, regulation or ordinance promulgated by any government body having jurisdiction, or as Owner, in its sole discretion, shall deem necessary, subject to Section 2.2. Such Changes in and/or Additions to the Joint Trackage shall become a part of the Joint Trackage or in the case of retirements shall be excluded from the Joint Trackage.

2.2 Unless otherwise mutually agreed to by the parties in writing, Owner shall, (i) keep and maintain the Joint Trackage on a consistent basis at no less than the track standard designated in the timetable in effect on the date of the Agreement, including special instructions for the Joint Trackage as of the date of the Agreement, (ii) maintain at least the physical capacity of the Joint Trackage as of the date of the Agreement (i.e., number of main tracks, support tracks, signal systems, rail weight, line clearances, etc.), and (iii) be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Agreement. In the event that User desires that the Joint Trackage be improved to a condition in excess of the standard set forth in this Section 2.2, or desires that other Changes in and/or Additions to be made to the Joint Trackage, Owner agrees to make such Changes in and/or Additions to the Joint Trackage if funded in advance by User. Thereafter, such Changes in and/or Additions to the Joint Trackage shall become part of the Joint Trackage and shall be maintained by Owner in such improved condition.

2.3 Owner shall employ all persons necessary to construct, operate, maintain, repair and renew the Joint Trackage. Owner shall be bound to use reasonable and customary care, skill and diligence in the construction, operation, maintenance, repair and renewal of the Joint Trackage and in managing of the same. Owner shall make its best effort to ensure that User is given the same advance notice of maintenance plans and schedules as is provided to Owner's personnel.

2.4 The trackage rights granted hereunder shall give User access to and joint use of the Joint Trackage, for such use as is permitted by Section 2 of the Agreement, equal to that of Owner. The management, operation (including dispatching) and maintenance of the Joint Trackage shall, at all times, be under the exclusive direction and control of Owner, the movement of Equipment over

and along the Joint Trackage shall at all times be subject to the exclusive direction and control of Owner's authorized representatives and in accordance with such reasonable operating rules as Owner shall from time to time institute, but in the management, operation (including dispatching) and maintenance of the Joint Trackage, Owner and User shall be treated equally. User shall, at User's sole cost and expense, obtain, install and maintain necessary communication equipment to allow User's Equipment to communicate with Owner's dispatching and signaling facilities the same as Owner's trains so utilize. Owner shall consult with User prior to the adoption of new communication or signaling systems to be employed on the Joint Trackage, which have not theretofore been generally adopted in the railroad industry.

2.5 A Joint Service Committee ("Committee"), comprised of the chief transportation officers of Owner and User (or their designees) shall be established, and shall be responsible for establishing rules or standards as appropriate to ensure equitable and non-discriminatory treatment, appropriate maintenance and efficient joint use of the Joint Trackage. The Committee shall meet on a regular basis, but not less often than every three (3) months during the first year of operation under this Agreement, and thereafter when any party serves upon the other party thirty (30) days' written notice of its desire to meet to review the overall performance of Equipment on the Joint Trackage, conflicts, if any, experienced between Equipment of Owner and Equipment of User, grievances over the handling of particular Equipment or operational events, maintenance of the Joint Trackage, ways in which future conflicts may be minimized, ways of improving operations and maintenance of the Joint Trackage and such other relevant matters as the Committee may decide to consider. The Committee may issue standards or rules to prevent unnecessary interference or impairment of use of the Joint Trackage by either party or otherwise ensure fair and equal treatment as between Owner and User. Either party may request a special meeting of the Committee on reasonable notice to the other. Informal telephonic conferences shall be held by the Committee where appropriate to address immediate concerns of either party. It is expected that the work on the Committee shall be undertaken in a spirit of mutual cooperation consistent with the principles expressed in the Agreement.

2.6 If the use of the Joint Trackage shall at any time be interrupted or traffic thereon or thereover be delayed for any cause, neither party shall have or make any claim against the other for loss, damage or expense caused by or resulting solely from such interruption or delay.

2.7 Owner may from time to time provide any track or tracks on the Joint Trackage other than those delineated in Exhibit A to the Agreement for use by User provided there shall at all times be afforded User a continuous route of equal utility and quality for the operations of its Equipment between the termini of the Joint Trackage. When such tracks which are not part of the Joint Trackage are used as provided herein, the Agreement shall govern for purposes of direction and control and liability as if all movement had been made over the Joint Trackage.

2.8 Each party shall be responsible for furnishing, at its sole cost and expense, all labor, fuel and train and other supplies necessary for the operation of its own Equipment over the Joint Trackage. In the event a party does furnish such labor, fuel or train and other supplies to another

party, the party receiving the same shall promptly, upon receipt of billing therefor, reimburse the party furnishing the same for its reasonable costs thereof, including customary additives.

2.9 User shall be responsible for the reporting and payment of any mileage, per diem, use or rental charges accruing on Equipment in User's account on the Joint Trackage. Except as may be specifically provided for in the Agreement, nothing herein contained is intended to change practices with respect to interchange of traffic between the parties or with other carriers on or along the Joint Trackage.

2.10 Except as otherwise may be provided in the Agreement, User shall operate its Equipment over the Joint Trackage with its own employees, but before said employees are assigned or permitted to operate Equipment over the Joint Trackage as herein provided, and from time to time thereafter as and when reasonably requested by Owner, they shall be required to pass the applicable rules examinations required by Owner of its own employees. Owner shall delegate to specified User's officers the conduct of such examinations in the event User chooses to conduct such examinations. If an Owner officer conducts such examinations of employees of User, User shall pay Owner a reasonable fee for each employee so examined, such fee to be mutually agreed upon by the parties from time to time in a separate agreement. Notwithstanding any such examination, User shall be responsible for ensuring that its employees are qualified and have taken all such rules examinations. Upon request of User, Owner shall qualify one or more of User's supervisory officers as pilots and such supervisory officer or officers so qualified shall qualify employees of User engaged in or connected with User's operations on or along the Joint Trackage. At User's request, Owner shall furnish a pilot or pilots, at the expense of User, to assist in operating trains of User over the Joint Trackage.

2.11 If any employee of User shall neglect, refuse or fail to abide by Owner's rules, instructions and restrictions governing the operation on or along the Joint Trackage, such employee shall, upon written request of Owner, be suspended by User from working on the Joint Trackage unless and until requalified to return to work and approved to do so by Owner. If either party shall deem it necessary to hold a formal investigation to establish such neglect, refusal or failure on the part of any employee of User, then upon such notice presented in writing, Owner and User shall promptly hold a joint investigation in which the parties concerned shall participate and bear the expense for their respective officers, counsel, witnesses and employees. Notice of such investigations to User's employees shall be given by User's officers, and such investigation shall be conducted in accordance with the terms and conditions of schedule agreements between User and its employees. If, in the judgment of Owner, the result of such investigation warrants, such employee shall, upon written request by Owner, be withdrawn by User from service on the Joint Trackage, and User shall release and indemnify Owner from and against any and all claims and expenses arising from such withdrawal.

If the disciplinary action is appealed by an employee of User to the National Railroad Adjustment Board or other tribunal lawfully created to adjudicate such cases, and if the decision of

such board or tribunal sustains the employee's position, such employee shall not thereafter be barred from service on the Joint Trackage by reason of such disciplinary action.

2.12 If any Equipment of User is bad ordered enroute on the Joint Trackage and (i) it is necessary that it be set out, and (ii) only light repairs to the Equipment are required, such bad ordered Equipment shall be promptly repaired, and, thereafter, be promptly removed from the Joint Trackage by User. Owner may, upon request of User and at User's sole cost and expense, furnish the required labor and material and perform light repairs to make such bad ordered Equipment safe for movement. The employees and Equipment of Owner while in any manner so engaged or while enroute to or returning to Owner's terminal from such an assignment shall be considered Sole Employees (as hereinafter defined) of User and Sole Property (as hereinafter defined) of User. However, should Owner's employees after repairing such bad ordered Equipment for User move directly to perform service for Owner's benefit rather than return to Owner's terminal, then User's exclusive time and liability will end when Owner's employees depart for work to be performed for Owner's benefit. In the case of such repairs by Owner to freight cars in User's account, billing therefor shall be in accordance with the Field and Office Manuals of the Interchange Rules, adopted by the Association of American Railroads ("AAR"), hereinafter called "Interchange Rules", in effect on the date of performance of the repairs. Owner shall then prepare and submit billing directly to and collect from the car owner for car owner responsibility items as determined under said Interchange Rules, and Owner shall prepare and submit billing directly to and collect from User for handling line responsibility items as determined under said Interchange Rules. Owner also shall submit billing to and collect from User any charges for repair to freight cars that are User's car owner responsibility items as determined under said Interchange Rules, should said car owner refuse or otherwise fail to make payment therefor. Repairs to locomotives shall be billed as provided for in Section 3 of these General Conditions.

2.13 If Equipment of User shall become derailed, wrecked, or otherwise disabled while upon the Joint Trackage, it shall be rerailed or cleared by Owner, except that employees of User may rerail User's derailed Equipment on the Joint Trackage whenever use of motorized on or off track equipment is not required; however, in any such case, employees of User shall consult with and be governed by the directions of Owner. Owner reserves the right to rerail Equipment of User when, in the judgment of Owner, Owner deems it advisable to do so to minimize delays and interruptions to train movement. The reasonable costs and expenses of rerailing or clearing derailed, wrecked or disabled Equipment shall be borne by the parties in accordance with Section 5 of these General Conditions. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.14 In the event Equipment of User shall be forced to stop on the Joint Trackage, and such stoppage is due to insufficient hours of service remaining among User's employees, or due to mechanical failure of User's Equipment (other than bad ordered Equipment subject to light repairs pursuant to Section 2.11), or to any other cause not resulting from an accident or derailment (including the failure of User to promptly repair and clear bad ordered Equipment pursuant to Section 2.11), and such Equipment is unable to proceed, or if a train of User fails to maintain the

speed required by Owner on the Joint Trackage, or if, in emergencies, disabled Equipment is set out of User's trains on the Joint Trackage, Owner shall have the option to furnish motive power or such other assistance (including but not limited to the right to recrew User's train) as may be necessary to haul, help or push such Equipment, or to properly move the disabled Equipment off the Joint Trackage. The reasonable costs and expenses of rendering such assistance shall be borne by User. Services provided under this section shall be billed in accordance with Section 3 of these General Conditions.

2.15 User shall pay to Owner reasonable expenses incurred by Owner in the issuance of timetables made necessary solely by changes in the running time of the trains of User over the Joint Trackage. If changes in running time of trains of Owner or third parties, as well as those of User, require the issuance of timetables, then User shall pay to Owner that proportion of the expenses incurred that one bears to the total number of parties changing the running time of their trains. If changes in running time of trains of Owner or third parties, but not those of User, require the issuance of timetables, then User shall not be required to pay a proportion of the expenses incurred in connection therewith.

2.16 User, at Owner's request, shall be responsible for reporting to Owner the statistical data called for in the Agreement, which may include, but is not limited to, the number and type of Equipment and GTMs operated on the Joint Trackage.

Section 3. BILLING

3.1 Billing shall be accomplished on the basis of data contained in a billing form mutually agreed to between the parties. Such billing forms shall contain sufficient detail to permit computation of payments to be made hereunder. Billing shall be prepared according to the rules, additives, and equipment rental rates as published by the Owner. User shall pay to Owner at the Office of the Treasurer of Owner, or at such other location as Owner may from time to time designate in writing, all the compensation and charges of every name and nature which in and by the Agreement User is required to pay in lawful money of the United States within sixty (60) days after the rendition of bills therefor. Bills shall contain a statement of the amount due on account of the expenses incurred, properties and facilities provided and services rendered during the billing period.

3.2 Errors or disputed items in any bill shall not be deemed a valid excuse for delaying payment, but shall be paid subject to subsequent adjustment; provided, no exception to any bill shall be honored, recognized or considered if filed after the expiration of three (3) years from the last day of the calendar month during which the bill is rendered and no bill shall be rendered later than three (3) years (i) after the last day of the calendar month in which the expense covered thereby is incurred, or (ii) in the case of claims disputed as to amount or liability, after the amount is settled and/or the liability is established. This provision shall not limit the retroactive adjustment of billing made pursuant to exception taken to original accounting by or under authority of the STB or retroactive adjustment of wage rates and settlement of wage claims.

3.3 So much of the books, accounts and records of each party hereto as are related to the subject matter of the Agreement shall at all reasonable times be open to inspection by the authorized representatives and agents of the parties hereto. All books, accounts, and records shall be maintained to furnish readily full information for each item in accordance with any applicable laws or regulations.

3.4 Should any payment become payable by Owner to User under the Agreement, the provisions of Sections 3.1 and 3.2 of these General Conditions shall apply with User as the billing party and Owner as the paying party.

3.5 Either party hereto may assign any receivables due it under the Agreement; provided, however, that such assignments shall not relieve the assignor of any rights or obligations under the Agreement.

Section 4. COMPLIANCE WITH LAWS

4.1 With respect to operation of Equipment on the Joint Trackage, each party shall comply with all applicable federal, state and local laws, rules, regulations, orders, decisions and ordinances ("Standards"), and if any failure on the part of any party to so comply shall result in a fine, penalty, cost or charge being imposed or assessed on or against another party, such other party shall give prompt notice to the failing party and the failing party shall promptly reimburse and indemnify the other party for such fine, penalty, cost or charge and all expenses and reasonable attorneys' fees incurred in connection therewith, and shall upon request of the other party defend such action free of cost, charge and expense to the other party.

4.2 User agrees to comply fully with all applicable Standards concerning "hazardous waste" and "hazardous substances" ("Hazardous Materials"). Except with Owner's prior consent, User covenants that it shall not treat or dispose of Hazardous Materials on the Joint Trackage. User further agrees to furnish Owner (if requested) with proof, satisfactory to Owner, that User is in such compliance.

In the event any accident, bad ordered Equipment, derailment, vandalism or wreck (for purposes of this Section 4.2 and Section 4.3 hereinafter called collectively "Derailment") involving Equipment of or a train operated by User carrying Hazardous Materials shall occur on any segment of the Joint Trackage, any report required by federal, state or local authorities shall be the responsibility of User. User shall also advise the owner/shipper of the Hazardous Materials involved in the Derailment, and Owner, immediately.

In the event of a Derailment, Owner shall assume responsibility for cleaning up any release of Hazardous Materials from User's Equipment in accordance with all federal, state, or local regulatory requirements. User may have representatives at the scene of the Derailment to observe and provide information and recommendations concerning the characteristics of Hazardous Materials

release and the cleanup effort. Such costs shall be borne in accordance with Section 5 of these General Conditions.

If a Hazardous Materials release caused by a derailment involving Equipment of User, or on a train operated by User, results in contamination of real property or water on the Joint Trackage or on real property or water adjacent to the Joint Trackage (whether such real property or water is owned by Owner or a third party), Owner shall assume responsibility for emergency cleanup conducted to prevent further damage. User shall be responsible for performing cleanup efforts thereafter. Any costs associated with cleaning up real property or water on or adjacent to the Joint Trackage contaminated by Hazardous Materials shall be borne in accordance with Section 5 of these General Conditions.

If Hazardous Materials must be transferred to undamaged Equipment or trucks as a result of a release caused by a derailment involving Equipment of User, or on a train operated by User, User shall perform the transfer; PROVIDED, HOWEVER, that if the Hazardous Materials are in damaged Equipment that is blocking the Joint Trackage, Owner, at its option, may transfer the Hazardous Materials with any costs associated with such transfer borne in accordance with Section 5 of these General Conditions. Transfers of Hazardous Materials by User shall only be conducted after being authorized by Owner.

4.3 The total cost of clearing a Derailment, cleaning up any Hazardous Materials released during such Derailment, and/or repairing the Joint Trackage or any other property damaged thereby shall be borne by the party or parties liable therefor in accordance with Section 5 of these General Conditions.

4.4 In the event of release of Hazardous Materials caused by faulty Equipment or third parties, cleanup will be conducted as stated in Sections 4.2 and 4.3 of these General Conditions.

Section 5. LIABILITY

5.1 General. The provisions of this Section 5 shall apply only as between the parties hereto and are solely for their benefit. Nothing herein is intended to be for the benefit of any person or entity other than the parties hereto. It is the explicit intention of the parties hereto that no person or entity other than the parties hereto is or shall be entitled to bring any action to enforce any provision hereof against any of the partes hereto, and the assumptions, indemnities, covenants, undertakings and agreements set forth herein shall be solely for the benefit of, and shall be enforceable only by, the parties hereto. Notwithstanding anything contained in this Section 5, no provisions hereof shall be deemed to deprive Owner or User of the right to enforce or shall otherwise restrict any remedies to which they would otherwise be entitled under other provisions of the Agreement as a result of the other party's failure to perform or observe any other obligation or duty created by the Agreement. The provisions of this Section 5 shall apply as between the parties hereto irrespective of the terms of any other agreements between the parties hereto and other railroads using

the Joint Trackage, and the allocation of liabilities provided for herein shall control as between the parties hereto.

5.2 Definitions and Covenants. The parties agree that for the purposes of this Section 5:

(a) The term "Employee(s)" of a party shall mean all officers, agents, employees and contractors of that party. Such Employees shall be treated either as "Sole Employees" or "Joint Employees", as hereinafter specified;

(b) "Sole Employees" and "Sole Property" shall mean one or more Employees, Equipment, tools and other equipment and machinery while engaged in, en route to or from, or otherwise on duty incident to performing service for the exclusive benefit of one party. Pilots furnished by Owner to assist in operating Equipment of User shall be considered the Sole Employees of User while engaged in such operations. Equipment shall be deemed to be the Sole Property of the party receiving the same at such time as deemed interchanged under AAR rules or applicable interchange agreements, or when such party is responsible for the car hire or per diem for the Equipment under agreement between the parties;

(c) "Joint Employee" shall mean one or more Employees while engaged in maintaining, repairing, constructing, renewing, removing, inspecting or managing the Joint Trackage or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while preparing to engage in, en route to or from, or otherwise on duty incident to performing such service for the benefit of both parties;

(d) "Joint Property" shall mean the Joint Trackage and all appurtenances thereto, and all Equipment, tools and other equipment and machinery while engaged in maintaining, repairing, constructing, renewing, removing, inspecting, managing or making Changes in and/or Additions to the Joint Trackage for the benefit of both of the parties hereto, or while being prepared to engage in, en route to or from, or otherwise incident to performing such service;

(e) "Loss and/or Damage" shall mean injury to or death of any person, including Employees of the parties hereto, and loss or damage to any property, including property of the partes hereto and property being transported by the parties, which arises out of an incident occurring on, the Joint Trackage and shall include liability for any and all claims, suits, demands, judgments and damages resulting from or arising out of such injury, death, loss or damage, except liability for punitive and exemplary damages. Loss and/or Damage shall include all costs and expenses incidental to any claims, suits, demands and judgments, including attorneys' fees, court costs and other costs of investigation and litigation. Loss and/or Damage shall further include the expense of clearing wrecked or derailed Equipment and the costs of environmental protection, mitigation or clean up necessitated by such wreck or derailment and shall include any liabilities for any third-party claims for personal injury

or death, property damage, natural resource damage, or any penalties, judgments or fines associated with a release of any contaminants resulting from such wreck or derailment;

(f) Operating Employees of Owner whose service may be jointly used by the parties hereto for the movement of trains over the Joint Trackage, including, but not limited to, train dispatchers, train order operators, operator clerks and watchmen shall at the time of performing their services be deemed to be Sole Employees of the party hereto for whose benefit said services may be separately rendered (during the time they are so separately rendered) and be deemed to be Joint Employees of the parties hereto at such time as their services may be rendered for the parties' joint benefit;

(g) All Employees, Equipment, tools and other equipment and machinery other than as described in (b), (c), (d) or (f) above or in Section 5.4. shall be deemed the Sole Employees of the employing party and the Sole Property of the using party;

(h) Any railroad not a party to the Agreement heretofore or hereafter admitted to the use of any portion of the Joint Trackage, shall, as between the parties hereto, be regarded in the same light as a third party. Without limiting the generality of the foregoing, neither of the parties hereto assumes any responsibility to the other under the provisions of the Agreement for any Loss and/or Damage occasioned by the acts or omissions of any employees of any such other railroad, or for any Loss and/or Damage which such other railroad shall be obligated to assume in whole or in part pursuant to law or any agreement relating to such other railroad's use of any portion of the Joint Trackage;

(i) For the purpose of this Section 5, Equipment of foreign lines being detoured over the Joint Trackage, and all persons other than Joint Employees engaged in moving such Equipment, shall be considered the Equipment and Employees of the party hereto under whose detour agreement or other auspices such movement is being made.

5.3 Reimbursement and Defense. The parties agree that:

(a) Each party hereto shall pay promptly Loss and/or Damage for which such party shall be liable under the provisions of this Section 5, and shall indemnify the other party against such Loss and/or Damage, including reasonable attorneys' fees and costs. If any suit or suits shall be brought against either of the parties hereto and any judgment or judgment shall be recovered which said party is compelled to pay, and the other party shall under the provisions of the Agreement be solely liable therefor, then the party which is so liable shall promptly repay on demand to the other party paying the same any monies which it may have been required to pay, whether in the way of Loss and/or Damage, costs, fees or other expenses; and if the Loss and/or Damage in such case or cases is joint or allocated between the parties to the Agreement, the party defendant paying the same or any costs, fees or other

expenses shall be reimbursed by the other party as allocated pursuant to the Agreement;

(b) Each party covenants and agrees with the other party that it will pay for all Loss and/or Damage, both as to persons and property, and related costs which it has herein assumed, or agreed to pay, the judgment of any court in a suit by third party or parties to the contrary notwithstanding, and will forever indemnify and save harmless the other party, its successors and assigns, from and against all liability and claims therefor, or by reason thereof, and will pay, satisfy and discharge all judgments that may be rendered by reason thereof, and all costs, charges and expenses incident thereto;

(c) Each party hereto shall have the sole right to settle, or cause to be settled for it, all claims for Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5, and the sole right to defend or cause to be defended all suits for the recovery of any such Loss and/or Damage for which such party shall be solely liable under the provisions of this Section 5;

(d) User shall provide written notice to Owner of any accidents or events resulting in Loss and/or Damage within seven (7) days of its discovery or receipt of notification of such occurrence;

(e) In the event both parties hereto may be liable for any Loss and/or Damage under the provisions of this Section 5 ("Co-Liable"), and the same shall be settled by a voluntary payment of money or other valuable consideration by one of the parties Co-Liable therefor, release from liability shall be taken to and in the name of all the parties so liable; however, no such settlement in excess of the sum of One Hundred Thousand Dollars ($100,000) shall be made by or for any party Co-Liable therefor without the written consent of the other parties so liable, but any settlement made by any party in consideration of One Hundred Thousand Dollars ($100,000) or a lesser sum shall be binding upon the other parties and allocated in accordance with Section 5.5; and no party shall unreasonably withhold its consent to a settlement proposed by the other party; provided, however, that failure by a party to secure consent from the other shall not release such other party to the extent the party who failed to obtain such consent demonstrates that the other party was not prejudiced by such failure.

(f) In case a claim or suit shall be commenced against any party hereto for or on account of Loss and/or Damage for which another party hereto is or may be solely liable or Co-Liable under the provisions of this Section 5, the party against whom such claim or suit is commenced shall give to such other party prompt notice in writing of the pendency of such claim or suit, and thereupon such other party shall assume or join in the defense of such claim or suit as follows: If the claim or suit

involves Loss and/or Damage to the Sole Employees or Sole Property of a party or its invitee or property in its care, custody or control, that party shall assume and control the investigation and defense of such claim or suit; if the claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage, the party whose Sole Employees or Equipment were involved in the incident shall investigate and defend such claim or suit; and if such claim or suit involves Loss and/or Damage to third parties, Joint Employees or the Joint Trackage and neither or both party's Equipment and Sole Employees were involved in the incident, Owner shall investigate and defend such claim or suit; provided that the other party also may participate in the defense of any of the foregoing if it may have liability as a result of such incident;

(g) No party hereto shall be conclusively bound by any judgments against the other party, unless the former party shall have had reasonable notice requiring or permitting it to investigate and defend and reasonable opportunity to make such defense. When such notice and opportunity shall have been given, the party so notified and the other party shall be conclusively bound by the judgment as to all matters which could have been litigated in such suit, including without limitation a determination of the relative or comparative fault of each.

5.4 Wrecks and Derailment. The cost and expense of repairing bad ordered Equipment, clearing wrecks or otherwise disabled Equipment or rerailing Equipment (and the costs of repair or renewal of damaged Joint Trackage or adjacent properties) shall be borne by the party whose Equipment was wrecked, disabled, or derailed or caused such damage. All Employees or Equipment, while engaged in, en route to or from, or otherwise incident to operating wrecker or work trains clearing wrecks, disabled Equipment or Derailments or engaged in repair or renewal of the Joint Trackage subsequent to any such wreck, disability or Derailment, shall be deemed to be Sole Employees and/or Sole Property of the party whose Equipment was wrecked, disabled or derailed. However, such Employees or Equipment, while en route from performing such clearing of wrecks, disabled Equipment or Derailments or repairing or renewing the Joint Trackage to perform another type of service, shall not be deemed to be performing service incident to the instant wreck, disability or Derailment.

5.5 Allocation.

(a) Each party shall bear all costs of Loss and/or Damage to its Sole Employees or its Sole Property, or property in its care, custody or control or its invitees without regard to which party was at fault.

(b) Loss and/or Damage to third parties (i.e., any person or entity other than a party hereto, a Sole Employee of either party, a Joint Employee or an invitee of either party) or their property, to Joint Employees or their property or to Joint Property shall be borne by the parties hereto as follows:

(i) If the Loss and/or Damage is attributable to the acts or omissions of only one party hereto, that party shall bear and pay all of such Loss and/or Damage.

(ii) If such Loss and/or Damage is attributable to the acts or omissions of more than one party hereto, such Loss and/or Damage shall be borne and paid by those parties in accordance with a comparative negligence standard, whereby each such party shall bear and pay a portion of the Loss and/or Damage equal to the degree of causative fault or percentage of responsibility for the Loss and/or Damage attributable to that party without regard to laws limiting recovery if one party is more than fifty percent (50%) at fault.

(iii) Loss and/or Damage to third parties or Joint Employees occurring in such a way that it cannot be determined how such Loss and/or Damage came about shall be apportioned between Owner, User and any other party(ies) authorized to use the Joint Trackage as a trackage rights tenant, on a usage basis considering each party's gross ton miles over the Joint Trackage for the preceding twelve (12) months or, if such Loss and/or Damage occurs during the first twelve (12) months following the effective date of the Agreement, the usage of each party between the occurrence of such Loss and/or Damage and the effective date of the Agreement, provided that, without limitation, User shall not bear or incur any liability for claims, suits, demands, judgments, losses or damages resulting from environmental contamination of or hazardous material on or released from the Joint Trackage, except contamination or a release of hazardous materials from User's own Equipment or caused by or arising from the actions or omissions of User or User's Employees, and then only in accordance with the other provisions hereof.

(c) The parties agree that the characterization herein of certain Employees as "Sole Employees" or "Joint Employees" is only for the purpose of allocating Loss and/or Damage suffered by those Employees. Except as specified in subsection (a) of this Section 5.5. (which provides for the allocation of certain Loss and/or Damage between the parties without regard to fault), no party shall be liable for the acts or omissions (negligent or otherwise) of any other party's Employee.

5.6 OWNER AND USER EXPRESSLY INTEND THAT WHERE ONE PARTY IS TO INDEMNIFY THE OTHER PURSUANT TO THE TERMS, SUCH INDEMNITY SHALL INCLUDE (1) INDEMNITY FOR THE NEGLIGENCE OR ALLEGED NEGLIGENCE, WHETHER ACTIVE OR PASSIVE, OF THE INDEMNIFIED PARTY WHERE THAT NEGLIGENCE IS A CAUSE OF THE LOSS OR DAMAGE; (2) INDEMNITY FOR STRICT

LIABILITY OF THE INDEMNIFIED PARTY RESULTING FROM A VIOLATION OR ALLEGED VIOLATION OF ANY FEDERAL, STATE OR LOCAL LAW OR REGULATION BY THE INDEMNIFIED PARTY, INCLUDING BUT NOT LIMITED TO THE FEDERAL EMPLOYERS LIABILITY ACT ("FELA"), THE SAFETY APPLIANCE ACT, THE BOILER INSPECTION ACT, THE OCCUPATIONAL SAFETY AND HEALTH ACT ("OSHA"), THE RESOURCE CONSERVATION AND RECOVERY ACT ("RCRA"), THE COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT ("CERCLA"), THE CLEAN WATER ACT ("CWA"), THE OIL POLLUTION ACT ("OPA"), AND ANY SIMILAR STATE STATUTE IMPOSING OR IMPLEMENTING SIMILAR STANDARDS; AND (3) INDEMNITY FOR ACTS OR ALLEGED ACTS OF GROSS NEGLIGENCE OF THE INDEMNIFIED PARTY, OR OTHER CONDUCT ON THE PART OF THE INDEMNIFIED PARTY FOR WHICH PUNITIVE DAMAGES MIGHT BE SOUGHT.

Section 6. ARBITRATION

6.1 If at any time a question or controversy shall arise between the parties hereto in connection with the Agreement upon which the parties cannot agree, such question or controversy shall be submitted to and settled by arbitration. Unless other procedures are agreed to by the parties, arbitration between the parties pursuant to this Section 6 shall be governed by the rules and procedures set forth in this Section 6.

6.2 If the parties to the dispute are able to agree upon a single competent and disinterested arbitrator within twenty (20) days after written notice by one party of its desire for arbitration to the other party, then the question or controversy shall be submitted to and settled by that single arbitrator. Otherwise, any party (the notifying party) may notify the other party (the noticed party) in writing of its request for arbitration and nominating one arbitrator. Within twenty (20) days after receipt of said notice, the noticed party shall appoint an arbitrator and notify the notifying party in writing of such appointment. Should the noticed party fail within twenty (20) days after receipt of such notice to name its arbitrator, said arbitrator may be appointed by the Chief Judge (or acting Chief Judge) of the United States District Court for the District of Columbia upon application by either party after ten (10) days' written notice to the other party. The two arbitrators so chosen shall select one additional arbitrator to complete the board. If the arbitrators so chosen fail to agree upon an additional arbitrator, the same shall, upon application of a party, be appointed by said judge in the manner heretofore stated.

6.3 Upon selection of the arbitrator(s), said arbitrator(s) shall, with reasonable diligence, determine the questions as disclosed in said notice of arbitration, shall give both parties reasonable notice of the time and place (of which the arbitrator(s) shall be the judge) of hearing evidence and argument, may take such evidence as the arbitrator(s) shall deem reasonable or as either party may submit with witnesses required to be sworn, and hear arguments of counsel or others. If an arbitrator declines or fails to act, the party (or parties in the case of a single arbitrator) by whom the arbitrator was chosen or said judge shall appoint another to act in the arbitrator's place.

6.4 After considering all evidence, testimony and arguments, said single arbitrator or the majority of said board of arbitrators shall promptly state such decision or award and the reasoning for such decision or award in writing which shall be final, binding, and conclusive on all parties to the arbitration when delivered to them. The award rendered by the arbitrator(s) may be entered as a judgment in any court having jurisdiction thereof and enforced as between the parties without further evidentiary proceeding, the same as entered by the court at the conclusion of a judicial proceeding in which no appeal was taken. Until the arbitrator(s) shall issue the first decision or award upon any question submitted for arbitration, performance under the Agreement shall continue in the manner and form existing prior to the rise of such question. After delivery of said first decision or award, each party shall forthwith comply with said first decision or award immediately after receiving it.

6.5 Each party to the arbitration shall pay all compensation, costs, and expenses of the arbitrator appointed in its behalf and all fees and expenses of its own witnesses, exhibits, and counsel. The compensation, cost, and expenses of the single arbitrator or the additional arbitrator in the board of arbitrators shall be paid in equal shares by all partes to the arbitration.

6.6 The parties may obtain discovery and offer evidence in accordance with the Federal Rules of Civil Procedure Rules 26 - 37, and Federal Rules of Evidence, as each may be amended from time to time.

6.7 Interest computed annually, at a rate equal to the Prime Rate plus two (2) percentage points, shall be applied to any and all arbitrator's awards requiring the payment of money and shall be calculated from thirty (30) days following the date of the applicable arbitration decision. The term "Prime Rate" shall mean the minimum commercial lending rate charged by banks to their most credit-worthy customers for short-term loans, as published daily in the Wall Street Journal.

Section 7. GOVERNMENTAL APPROVAL AND ABANDONMENT

7.1 Owner and User shall, at their respective cost and expense, initiate by appropriate application or petition and thereafter diligently prosecute proceedings for the procurement of all necessary consent, approval or authority from any governmental agency for the sanction of the Agreement and the operations to be carried on or conducted by User thereunder. User and Owner agree to cooperate fully to procure all such necessary consent, approval or authority.

7.2 In the event Owner shall be involuntarily dispossessed, including by threat of condemnation by competent public authority, of the right to operate upon and maintain any portion of its Joint Trackage and Owner fails or declines to replace said Joint Trackage, Owner shall have no obligation hereunder to provide tracks in replacement of such Joint Trackage for User's use, and User shall have and shall make no claim of any kind, legal or otherwise, against Owner for failure to provide such Joint Trackage for User's use.

7.3 To the extent that Owner may lawfully do so, Owner reserves to itself the exclusive right, exercisable at any time during the life of the Agreement without concurrence of User, to elect to abandon all or any part of the Joint Trackage by giving six (6) months' prior written notice to User of its intention so to do ("Notice of Abandonment").

Owner shall, concurrent with its Notice of Abandonment, if legally able to do so, give to User the option to purchase the part or parts of the Joint Trackage thereof to be abandoned at the Net Liquidation Value thereof, on the date of said notice; provided, however, it is understood that Burlington Northern Railroad Company and The Atchison, Topeka & Santa Fe Railway Company (collectively, "BNSF") shall be given an option upon the Agreement set forth in this Section 7.3, prior to that given User, to purchase the Placedo, Texas to Robstown, Texas segment of the Joint Trackage, subject to User's trackage rights, if BNSF is operating over that segment at the time of its proposed abandonment.

7.4 Owner and User each shall be responsible for and shall bear labor claims, and employee protection payable to, its own respective employees (and employees of its respective affiliated companies) including any amounts that either Owner or User may be required to pay to its own respective employees pursuant to labor protective conditions imposed by the STB.

Section 8. CATASTROPHIC EXPENSE

Catastrophic expense to the Joint Trackage, such as, but not limited to, that arising from flood, earthquake or acts of God, etc., in excess of One Hundred Thousand Dollars ($100,000) for each occurrence shall be billed in addition to the GTM Rates and apportioned on the basis of the parties' GTMs operated over the Joint Trackage for the twelve (12) month period ending immediately prior to the first day of the month of occurrence.

Section 9. TERM

Upon termination of the Agreement, or any partial termination, as the applicable case may be, however the same may occur, User shall be released from any and all manner of obligations and shall be deemed to have forever relinquished, abandoned, surrendered and renounced any and all right possessed by User to operate over that part of the Joint Trackage to which such termination applied, and as to such part, User shall forever release and discharge Owner of and from any and all manner of obligations, claims, demands, causes of action, or suits which User might have, or which might subsequently accrue to User growing out of or in any manner connected with, directly or indirectly, the contractual obligations of Owner under the Agreement, in all events provided, however, the aforesaid relinquishment, abandonment, surrender, renunciation, release and discharge by User shall not in any case affect any of the rights and obligations of either Owner or User which may have accrued, or liabilities accrued or otherwise, which may have arisen prior to such termination or partial termination. Upon any termination, Owner shall remove from Owner's right of way any connecting track, and any exclusive facility of User, at User's expense with salvage to be delivered to and retained by User. Upon any partial termination of the Agreement, however the

same may occur, the terms and conditions hereof shall continue and remain in full force and effect for the balance of the Joint Trackage.

Section 10. ASSIGNMENT

The Agreement and any rights granted hereunder may not be assigned in whole or in part by User without the prior written consent of Owner except (i) as provided in Section 3.5, and (ii) to the purchaser of substantially all of User's rail properties. The Agreement may be assigned by Owner without restriction. In the event of an authorized assignment, the Agreement and the operating rights hereunder shall be binding upon the successors and assigns of the parties.

Section 11. DEFAULT

11.1 Notwithstanding the provisions of Section 3 of these General Conditions, either party hereto claiming default of any of the provisions of the Agreement (including these General Conditions) shall furnish notice and written demand to the other party for performance or compliance with the covenant or condition of the Agreement claimed to be in default, which notice shall specify wherein and in what respect such default is claimed to exist and shall specify the particular Section or Sections of the Agreement under which such claim of default is made.

11.2 If the default shall continue for an additional period of thirty (30) days after receipt of such written notice and demand, and such default has not been remedied within said thirty (30) day period, or reasonable steps have not been nor continue to be taken to remedy a failure or default which cannot reasonably be remedied within said thirty (30) day period, and such default relates to the provisions and terms of the Agreement, either party shall resort to binding arbitration provided that the arbitrator shall not have the authority to amend, modify or terminate the Agreement.

11.3 Failure of a party to claim a default shall not constitute a waiver of such default. Either party hereto entitled to claim default may waive any such default, but no action by such party in waiving such default shall extend to or be taken to effect any subsequent defaults or impair the rights of either party hereto resulting therefrom.

Section 12. OTHER CONSIDERATIONS

12.1 The Agreement and each and every provision hereof is for the exclusive benefit of the parties hereto and not for the benefit of any third party. Nothing herein contained shall be taken as creating or increasing any right in any third person to recover by way of damages or otherwise against any of the parties hereto.

12.2 If any covenant or provision of the Agreement not material to the right of User to use the Joint Trackage shall be adjudged void, such adjudication shall not affect the validity, obligation or performance of any other covenant or provision which is in itself valid. No controversy concerning any covenant or provision shall delay the performance of any other covenant or

provision. Should any covenant or provision of the Agreement be adjudged void, the parties shall make such other arrangements as will effect the purposes and intent of the Agreement.

12.3 In the event there shall be any conflict between the provisions of these General Conditions and the Agreement, the provisions of the Agreement shall prevail, except that the definition of Joint Trackage set forth in Section 1.7 of these General Conditions shall prevail.

12.4 All section headings are inserted for convenience only and shall not affect any construction or interpretation of the Agreement.

12.5 Reference to any agency or other organization shall include any successor agency or organization, and reference to any index or methodology (e.g., RCAF-U, URCS, etc.), if such index or methodology ceases to exist or is no longer available, shall include any substantially similar index or methodology selected by the parties or, if the parties fail to agree on such, one determined by binding arbitration under Section 6 of these General Conditions.

RESTATED AND AMENDED AGREEMENT

This Restated and Amended Agreement ("Agreement") is entered into this ___ day of March, 2002, between UNION PACIFIC RAILROAD COMPANY ("UP"), a Delaware corporation, and THE BURLINGTON NORTHERN AND SANTA FE RAILWAY COMPANY ("BNSF"), a Delaware corporation.

WITNESSETH:

WHEREAS, UP and BNSF entered into an agreement dated September 25, 1995, as amended by supplemental agreements dated November 18, 1995, and June 27, 1996 (collectively, the "1995 Agreement"), in connection with UP's acquisition of Southern Pacific Rail Corporation and its affiliates ("SP") in Finance Docket No. 32760, Union Pacific Corporation, Union Pacific Railroad Company, and Missouri Pacific Railroad Company -- Control and Merger -- Southern Pacific Rail Corporation, Southern Pacific Transportation Company, St. Louis Southwestern Railway Company, SPCSL Corp., and The Denver and Rio Grande Western Railroad Company;

WHEREAS, the Surface Transportation Board ("STB") approved the common control and merger of UP and SP in Decision No. 44 in Finance Docket No. 32760 (served August 12, 1996) and in so doing imposed certain conditions on UP and SP, including, as modified by the STB, the April 18, 1996 settlement agreement among UP, BNSF and the Chemical Manufacturers Association (the "CMA Agreement");

WHEREAS, as a part of its oversight of the UP/SP merger in Finance Docket Nos. 32760, 32760 (Sub-No. 21), and 32760 (Sub-No. 26), the STB has modified and clarified certain of the conditions it imposed in Decision No. 44;

WHEREAS, UP and BNSF entered into a Term Sheet Agreement dated February 12, 1998 (the "Term Sheet Agreement"), pursuant to which UP and BNSF agreed to the joint ownership of the line of railroad between Dawes, TX and Avondale, LA, which joint ownership was effected by separate agreement dated September 1, 2000 (the "TX-LA Line Sale Agreement");

WHEREAS, UP and BNSF have reached agreement with respect to the implementation of the conditions imposed by the STB on the UP/SP merger, as modified and clarified, and certain other matters relating to their rights and obligations under the 1995 Agreement, the CMA Agreement, the Term Sheet Agreement and the TX-LA Line Sale Agreement; and

WHEREAS, UP and BNSF now wish to amend and restate the 1995 Agreement to incorporate the conditions imposed by the STB on the UP/SP merger (including the CMA Agreement, as modified by the STB) and the agreements they have reached relating to those conditions and other related matters.

NOW, THEREFORE, the parties agree to amend and restate the 1995 Agreement as follows:

DEFINITIONS

For purposes of this Agreement, the following definitions and terms shall apply:

Shipper Facilities shall mean all existing or new shipper or receiver facilities, including transload facilities as well as rail car storage and car service and repair facilities not owned, leased or operated by UP.

"2-to-1" Points shall mean all geographic locations at which at least one "2-to-1" Shipper Facility is located. Such points include, without limitation, the points listed in Section 8(i) of and on Exhibit A to this Agreement. The boundaries for such "2-to-1" Points shall be deemed to

include all areas within the switching limits of the locations as described in Section 9(g) of this Agreement.

"2-to-1" Shipper Facilities shall mean all Shipper Facilities that were open to both UP and SP, whether via direct service or via reciprocal switching, joint facility or other arrangements, and no other railroad when the 1995 Agreement was executed, regardless of how long ago the shipper or receiver at that facility may have shipped or received, or whether the shipper or receiver at that facility ever shipped or received, any traffic via either UP or SP. The "2-to-1 Point Identification Protocol" between the parties attached hereto as Exhibit E shall govern the process for identifying "2-to-1" Shipper Facilities open to BNSF as a result of the conditions imposed on the UP/SP merger.

New Shipper Facilities shall mean: (i) existing Shipper Facilities constructing trackage for accessing rail service for the first time; and (ii) newly constructed rail-served Shipper Facilities. New Shipper Facilities shall also mean previously-served Shipper Facilities that begin to ship by rail again where (i) there has been a change of owner or lessee, and (ii) the use of the facility is actually different in nature and purpose from the facility's prior use (e.g., there has been a change in the type of products shipped from or received at the facility). New Shipper Facilities shall not include expansion of or additions to an existing rail-served Shipper Facility, but do include (1) Shipper Facilities which, on September 25, 1995, were being developed or for which land had been acquired for that purpose in contemplation of receiving rail service by both UP and SP, and (2) Transload Facilities located after September 11, 1996, including those owned or operated by BNSF.

Trackage Rights Lines shall mean the lines over which BNSF has been granted trackage rights pursuant to this Agreement, but shall not include any other lines over which UP/SP grants

BNSF trackage rights ("Overhead Trackage Rights") solely (i) to facilitate the parties' operation over Trackage Rights Lines, (ii) to permit BNSF's operation between a mutually-agreed upon BNSF junction point and points listed or described in Section 8(i) of this Agreement, or (iii) to permit BNSF's operation between a mutually-agreed upon BNSF junction point and a build-in/build-out line pursuant to Sections 4(a), 6(c) and 8(l) of this Agreement. The mutually-agreed upon junction point will be selected with the objective of minimizing the operating inconvenience to UP, consistent with ensuring that BNSF can provide competitive service. BNSF acknowledges that it shall not have the right to serve any existing or New Shipper Facility on a line over which BNSF has been granted Overhead Trackage Rights unless such right is specified in this Agreement or in any agreement implementing the Overhead Trackage Rights or unless BNSF has the right to serve a build-in/build-out line on such Overhead Trackage Rights line pursuant to the CMA Agreement or the conditions imposed on the UP/SP merger. All Overhead Trackage Rights Lines, as of the date of the execution hereof, are listed in Exhibit F to this Agreement, which exhibit may be amended and replaced from time to time by a new exhibit signed and dated by the parties. New Shipper Facilities shall be deemed to be "on" a Trackage Rights Line if the facility is either (1) adjacent to a Trackage Rights Line or (2) adjacent to a spur, an industrial track, or a yard that is itself served by such Trackage Rights Line. New Shipper Facilities are not "on" a Trackage Rights Line if they can be accessed only via a 49 U.S.C. 10901 "line of railroad" which is not a Trackage Rights Line.

Transload Facilities shall mean Shipper Facilities other than automotive or intermodal facilities or team tracks where freight is transferred from one railcar to another or from one mode to another (short term incidental storage may also occur) as defined by the STB in its decisions

lines to the Ports at BNSF's option to allow for additional operating capacity. UP/SP's commitment is subject to available capacity. Any incremental capacity related projects necessary to accommodate BNSF traffic shall be the sole responsibility of BNSF.

(h) At least forty-five (45) days before initiating service to (i) a Shipper Facility open to BNSF at a point listed or described on Exhibit A to or in Section 8(i) of this Agreement, or (ii) any New Shipper Facility on a Trackage Rights Line, BNSF shall notify UP of its election, subject to Section 3(d) above, of the manner by which it proposes such service be provided and the specifics of its operating plan over UP/SP trackage. Within thirty (30) days of its receipt of BNSF's proposed operating plan, UP shall notify BNSF of its approval or disapproval of BNSF's plan. UP's approval of such plan shall not be unreasonably withheld. In the event UP disapproves of BNSF's proposed plan, UP shall provide an explanation in writing to BNSF of its reasons for disapproval, and UP shall propose an alternative operating plan that would be acceptable to UP and also be no more onerous than the operating plan that UP would establish for service provided by UP. If UP approves BNSF's plan but establishes conditions on that approval, those conditions shall be set forth in writing and shall be no more onerous than UP would establish for service provided by UP. BNSF shall have the right, upon one hundred eighty (180) days' prior written notice to UP/SP, to change its election; PROVIDED, HOWEVER, that BNSF shall not change any such election more often than once every five (5) years. BNSF shall reimburse UP/SP for any costs incurred by UP/SP in connection with any changed election.

4. **South Texas Trackage Rights and Purchase**

(a) UP/SP shall grant to BNSF trackage rights on the following lines:

- UP's line between Ajax and San Antonio, TX;

- UP's line between Houston (Algoa) and Brownsville, TX (with parity and equal access to the Mexican border crossing at Brownsville);
- UP's line between Odem and Corpus Christi, TX;
- UP's line between Ajax and Sealy, TX;
- SP's line between San Antonio and Eagle Pass, TX (with parity and equal access to the Mexican border crossing at Eagle Pass);
- UP's line between Craig Junction and SP Junction, TX (Tower 112) via Track No. 2 through Fratt, TX;
- SP's line between SP Junction (Tower 112) and Elmendorf, TX;
- SP's line in San Antonio between SP Tower 105 and SP Junction (Tower 112);
- Overhead Trackage Rights on SP's Port Lavaca Branch, between Placedo and Port Lavaca, TX, for the purpose of reaching a point of build-in/build-out to/from Union Carbide Corporation's ("UCC") facility at North Seadrift, TX. UP/SP shall permit BN/Santa Fe or UCC to construct and connect to the Port Lavaca Branch, at their expense, a build-in/build-out line. BN/Santa Fe or UCC shall have the right to purchase for net liquidation value all or any part of the Port Lavaca Branch that UP/SP may abandon;
- UP's line between Kerr (connection to Georgetown RR) and Taylor, TX;
- Overhead Trackage Rights on UP's line between Round Rock and McNeil, TX for the purpose of interchanging with the Capital Metro Transit Authority, its successors or agent;

- UP's line between Temple and Waco, TX;
- UP's line between Temple and Taylor, TX;
- UP's line between Taylor and Smithville,TX; and
- SP's line between El Paso and Sierra Blanca, TX.

(b) The trackage rights granted under this section shall be bridge rights for the movement of overhead traffic only, except for the local access specified herein. BNSF shall receive access on such lines only to (i) "2-to-1" Shipper Facilities and Existing Transload Facilities at points listed on Exhibit A to this Agreement and City Public Service Board of San Antonio, Texas Elmendorf facilities listed on Exhibit A to this Agreement, (ii) any New Shipper Facility located subsequent to UP's acquisition of control of SP at points listed on Exhibit A to this Agreement, and (iii) any New Shipper Facility located subsequent to UP's acquisition of control of SP on the Trackage Rights Lines. BNSF shall also have the right to establish and exclusively serve intermodal and auto facilities at points listed on Exhibit A to this Agreement and at points identified or described in Section 8(i) of this Agreement. BNSF shall also have the right to interchange with: the Texas Mexican Railway Company at Corpus Christi and Robstown, TX; the Georgetown Railroad at Kerr; Transportacion Ferroviaria Mexicana ("TFM") at Brownsville (Matamoros, Mexico); Ferrocarril Mexicano ("FXE") at Eagle Pass; and the operator of SP's former line between Giddings and Llano at McNeil, TX. BNSF's access and interchange rights at Corpus Christi and Brownsville shall be at least as favorable as SP had on September 25, 1995. BNSF shall have direct access to the Port of Brownsville, the Brownsville and Rio Grande International Railroad, and the TFM. UP will designate a yard in Brownsville for sale to BNSF at such time as BNSF establishes its own trackage rights operations into Brownsville and at such time as the connection between UP and SP as a part of the Brownsville

relocation project is completed. In the event UP/SP determines to cease operations in the SP East Yard at San Antonio, TX, UP/SP will give first consideration to BNSF for taking over operation of the East Yard pursuant to a mutually-agreeable arrangement.

(c) Access to Shipper Facilities at points listed on Exhibit A to this Agreement open to BNSF shall be direct or through reciprocal switch, or, with UP/SP's prior agreement, through a third party contractor. Access to New Shipper Facilities open to BNSF on the Trackage Rights Lines shall be (i) direct; (ii) with UP/SP's prior agreement, through haulage for the shortest period of time necessary to allow BNSF to establish its own direct operating access after initiating service to a New Shipper Facility, but not to exceed the later to occur of 90 days or the date upon which UP completes the construction of and accepts for service any connections, sidings or other support facilities to be paid for by BNSF that UP is then obligated to construct pursuant to this Agreement or the trackage rights agreements executed pursuant to Section 9(f) of this Agreement; (iii) with UP/SP's prior agreement, reciprocal switching where, at the time BNSF service is to commence, UP/SP already provides reciprocal switching on the portion of the Trackage Rights Line upon which the turnout to the facility is to be located; or (iv) with UP/SP's prior agreement, the use of a third party contractor; PROVIDED, HOWEVER, that it shall be UP/SP's sole decision whether BNSF's service will be provided by either haulage or reciprocal switching; and PROVIDED, FURTHER, that in no case shall UP/SP be required to initiate any new local service or increase its level of service to accommodate the level of service proposed by BNSF. New Shipper Facilities open to BNSF under this Agreement shall be open to both UP/SP and BNSF, subject to Section 9(c)(v) of this Agreement. The geographic limits within which (x) New Shipper Facilities shall be open to BNSF service at points listed on Exhibit A to this Agreement and (y) BNSF shall have the right to establish and exclusively serve intermodal and

for service provided by UP. If UP approves BNSF's plan but establishes conditions on that approval, those conditions shall be set forth in writing and shall be no more onerous than UP would establish for service provided by UP. BNSF shall have the right, upon one hundred eighty (180) days' prior written notice to UP/SP, to change its election; PROVIDED, HOWEVER, that BNSF shall not change any such election more often than once every five (5) years. BNSF shall reimburse UP/SP for any costs incurred by UP/SP in connection with any changed election.

(e) UP/SP shall grant BNSF the right to use SP's Bridge 5A at Houston, Texas.

(f) Except as otherwise provided herein, trackage rights and access rights granted pursuant to this section shall be for rail traffic of all kinds, carload and intermodal, for all commodities.

(g) UP/SP shall sell to BNSF UP's Main Line No. 1 between MP 14.11 and 10.38, UP's Westwego intermodal terminal, SP's old Avondale Yard (together with the fueling and mechanical facilities located thereon) as shown on Exhibit C; and SP's Lafayette Yard.

6. **Houston, TX-Valley Junction, IL Trackage Rights**

(a) UP/SP shall grant to BNSF trackage rights on the following lines:

- SP's line between Houston, TX and Fair Oaks, AR via Cleveland and Pine Bluff, AR;
- UP's line between Fair Oaks and Bridge Junction, AR;
- SP's line between Brinkley and Briark, AR;
- UP's line between Pine Bluff and North Little Rock, AR
- UP's line between Houston and Valley Junction, IL via Palestine, TX;
- SP's line between Fair Oaks and Illmo, MO via Jonesboro, AR and Dexter Junction, MO; and

- UP's line between Fair Oaks and Bald Knob, AR.

(b) In lieu of conducting actual operations between Pine Bluff and North Little Rock, AR, UP/SP agrees, upon request of BNSF, to handle BNSF's business on a haulage basis for the fee called for by Section 8(m) of this Agreement.

(c) BNSF shall have the right to transport unit coal trains (i) over the Trackage Rights Lines to and from a point of build-in/build-out to and from Entergy Services, Inc.'s plant at White Bluff, AR if and when such a build-in/build-out line is constructed by an entity other than UP/SP to connect such plant with an SP line, and (ii) to and from Entergy Services, Inc.'s plant at White Bluff (1) by entering and exiting the Trackage Rights Lines at Jonesboro and Hoxie, AR, respectively, and/or (2) by utilization of BNSF's line via Memphis, TN.

(d) The trackage rights granted under this section shall be bridge rights for the movement of overhead traffic only, except for the local access specified herein. BNSF shall receive access on such lines only to (i) "2-to-1" Shipper Facilities and Existing Transload Facilities at points listed on Exhibit A to this Agreement, (ii) any New Shipper Facility located subsequent to UP's acquisition of control of SP at points listed on Exhibit A to this Agreement, and (iii) any New Shipper Facility located subsequent to UP's acquisition of control of SP on the Trackage Rights Lines. BNSF shall also have the right to establish and exclusively serve intermodal and auto facilities at points listed on Exhibit A to this Agreement and at points identified or described in Section 8(i) of this Agreement. In addition to the other restrictions and limitations set forth herein, as to UP's and SP's lines between Memphis and Valley Junction, IL: (1) BNSF shall not have the right to enter or exit at intermediate points north of Bald Knob and Fair Oaks, AR; and (2) BNSF traffic is limited to traffic that moves through, originates in, or terminates in Texas or Louisiana. These two restrictions do not apply to traffic moving to or

from Shipper Facilities in the Houston-Memphis-St. Louis Corridor to which BNSF has access pursuant to this Section 6(d) or Section 8(i) below. The two restrictions also do not apply to the traffic that BNSF is permitted to handle pursuant to the remaining provisions of this Section 6(d), which remains subject to all other conditions and restrictions. BNSF shall also have the right to handle traffic of shippers open to all of UP, SP and KCS at Texarkana, TX/AR, and Shreveport, LA, to and from the Memphis BEA (BEA 73), but not including proportional, combination or Rule 11 rates via Memphis or other points in the Memphis BEA. In the Houston-Memphis-St. Louis corridor, BNSF shall have the right to move some or all of its traffic via trackage rights over either the UP line or the SP line, at its discretion, for operating convenience. BNSF shall also have the right to interchange: with the Little Rock and Western Railway at Little Rock, AR; the Little Rock Port Authority at Little Rock, AR; KCS at Shreveport, LA and Texarkana, TX/AR, for movements of traffic originated by KCS at or delivered by KCS to shippers or receivers at Lake Charles, West Lake, or West Lake Charles, LA; with KCS (y) at Shreveport, LA for movements of loaded and empty coal trains moving to and from Texas Utilities Electric Company's Martin Lake generating station, and (z) at Texarkana, TX/AR for movements of empty coal trains returning from Texas Utilities Electric Company's Martin Lake generating station; and with the Texas Northeastern Railroad at Texarkana, TX for the sole purpose of moving BNSF traffic to and from Shipper Facilities at Defense, TX.

(e) Access to Shipper Facilities at points listed on Exhibit A to this Agreement open to BNSF shall be direct or through reciprocal switch, or, with UP/SP's prior agreement, through a third party contractor. Access to New Shipper Facilities open to BNSF on the Trackage Rights Lines shall be (i) direct; (ii) with UP/SP's prior agreement, through haulage for the shortest period of time necessary to allow BNSF to establish its own direct operating access after

imposed on the UP/SP merger and BNSF has previously entered into a contract to provide transportation services to the Existing Transload Facility, UP shall extend the lease for the remaining period of such transportation contract or for a period not to exceed 24 months, whichever period is shorter.

9. **Trackage Rights - General Provisions**

(a) The compensation for operations under this Agreement shall be set at the levels shown in the following table as subsequently indexed under the 1995 Agreement:

Table I
Trackage Rights Compensation
(mills per ton-mile)

	Keddie-Stockton/Richmond	All Other Lines
Intermodal and Carload	3.48	3.1
Bulk (67 cars or more of one commodity in one car type)	3.0	3.0

These rates shall apply to all equipment moving in a train consist including locomotives. The rates shall be escalated in accordance with the procedures described in Section 12 of this Agreement. The owning line shall be responsible for maintenance of its line in the ordinary course including rail relay and tie replacement. The compensation for such maintenance shall be included in the mills per ton mile rates received by such owning line under this Agreement.

(b) BNSF and UP/SP will conduct a joint inspection to determine necessary connections and sidings or siding extensions associated with connections, necessary to implement the trackage rights granted under this Agreement. The cost of such facilities shall be borne by the party receiving the trackage rights which such facilities are required to implement. Either party shall have the right to cause the other party to construct such facilities. If the owning carrier decides to utilize such facilities constructed by it for the other party, it shall have

the right to do so upon payment to the other party of one-half (½) the original cost of constructing such facilities.

(c) Capital expenditures on the Trackage Rights Lines and on lines over which BNSF is granted Overhead Trackage Rights will be handled as follows:

(i) UP/SP shall bear the cost of all capacity improvements that are necessary to achieve the benefits of its merger as outlined in the application filed with the ICC for authority for UP to control SP. The operating plan filed by UP/SP in support of the application shall be given presumptive weight in determining what capacity improvements are necessary to achieve these benefits.

(ii) Any capacity improvements other than those covered by subparagraph (i) above shall be shared by the parties based upon their respective usage of the line in question, except as otherwise provided in subparagraph (iii) below. That respective usage shall be determined by the 12 month period prior to the making of the improvement on a gross ton mile basis.

(iii) For 18 months following UP's acquisition of control of SP, BNSF shall not be required to share in the cost of any capital improvements under the provision of subparagraph (ii) above.

(iv) BNSF and UP/SP agree that a capital reserve fund of $25 million, funded out of the purchase price listed in Section 10 of this Agreement, shall be established. This capital reserve fund shall, with BNSF's prior consent which will not unreasonably be withheld, be drawn down to pay for capital projects on the Trackage Rights Lines that are required to

accommodate the operations of both UP/SP and BNSF on those lines, but in any event shall not be used for expenditures covered by subparagraph (i) above. Any disputes over whether a project is required to accommodate the operation of both parties shall be referred to binding arbitration under Section 15 of this Agreement.

(v) If both UP/SP and BNSF intend to serve New Shipper Facilities located subsequent to UP's acquisition of control of SP as authorized by Sections 1(b), 3(c), 4(b), 5(b), 6(d), and 8(i) of this Agreement, they shall share equally in any capital investment in such connections and sidings and siding extensions or other support facilities required by both UP and BNSF to provide rail service to such New Shipper Facility. If only one railroad initially provides such service, the other railroad may elect to provide service at a later date, but only after paying to the railroad initially providing such service 50% of any capital investment (including per annum interest thereon) made by the railroad initially providing rail service to the New Shipper Facility. Per annum interest shall be at a rate equal to the average paid on 90-day Treasury Bills of the United States Government as of the date of completion until the date of use by the other railroad commences. Per annum interest shall be adjusted annually on the first day of the twelfth (12th) month following the date of completion and every year thereafter on such date, based on the percentage increase or decrease, in the average yield of 30-year U.S. Treasury Notes for the prior year compared to their average yield in first year of completion of the

access to such industry or industries. Each annual adjustment shall be subject, however, to a "cap" (up or down) of two percentage points more or less than the prior year's interest rate.

(d) Subject to the terms of the Dispatching Protocols attached hereto as Exhibit D and incorporated herein, the management and operation of the lines over which the parties have granted trackage rights to each other pursuant to this Agreement ("Joint Trackage") shall be under the exclusive direction and control of the owning carrier, and the owning carrier shall have the otherwise unrestricted power to change the management and operations on and over Joint Trackage as in its judgment may be necessary, expedient or proper for the operations thereof intended. Trains of the parties utilizing Joint Trackage shall be given equal dispatch without any discrimination in promptness, quality of service, or efficiency in favor of comparable traffic of the owning carrier. Trains operating in the Houston terminal shall be routed over the most efficient routes as necessary to avoid delays and congestion, even routes over trackage over which the operating carrier has no operating rights.

The owning carrier shall keep and maintain the Joint Trackage at no less than the track standard designated in the current timetable for the applicable lines subject to the separate trackage rights agreement. The parties agree to establish a joint service committee to regularly review operations over the Joint Trackage lines.

In the event the owning carrier determines to sell or remove from service a Joint Trackage line and/or any associated facilities, the owning carrier shall provide the other carrier with reasonable written notice of such determination. Any such sale to a third party shall be expressly made subject to the terms and conditions of this Agreement, and the owning carrier

Re: MP/SP Trackage Rights Agreement
HBT Trackage Rights Agreement

Larry –

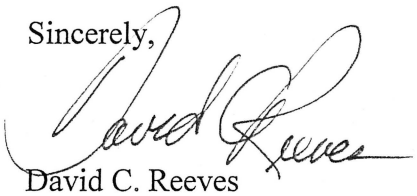
I was reminded when we met in Omaha recently that I had promised you last Fall a letter to follow up on our discussion about whether KCS continues to view the GTM rate paid under the above-referenced trackage rights agreements as covering the costs of capacity improvements on the trackage rights lines needed to keep up with traffic growth. Yes, KCS continues to hold that view.

During the discussions that you and I had last Fall with Gayla, Mike and Jim, I expressed KCS's view that the GTM rate under the referenced agreements specifically covers capital improvements required to maintain the service standards, including transit times, that were in effect when the agreements were entered. You stated several reasons why UP believes that the GTM rate does not include the cost of maintaining those standards, citing language in an STB decision in UP/SP referring to the *SSW Compensation* decisions and UP's understanding with BNSF about the meaning of a similar UP-BNSF trackage rights agreement.

KCS believes that the clear language of the referenced trackage rights agreements governs, calling for UP to maintain the capacity and transit times of the trackage rights lines despite traffic growth. The agreements specifically state, "[T]he total amount of 3.84 mills per GTM ... shall be deemed to include ordinary and programmed maintenance of the Joint Trackage, Changes in and/or Additions to the Joint Trackage (to the extent required by the first sentence of Section 2.2 of the General Conditions...)". The referenced first sentence of Section 2.2 of the General Conditions states,

> Owner shall, (i) keep and maintain the Joint Trackage on a consistent basis at no less than the track standard designated in the timetable in effect on the date of the Terms, including special instructions for the Joint Trackage as of the date of the Terms, ... and (iii) be responsible for any Changes in and/or Additions to the Joint Trackage as shall be necessary to accommodate the traffic of Owner and User while maintaining existing service standards (including transit times) in effect on the date of the Terms.

(Underlining added.)



This quoted language plainly provides that UP, as the Owner, is responsible to make capacity improvements needed to continually maintain service standards, including transit times.

Our understanding of that plain language is not altered by the other matters that you referred to in our discussions. The Board's decisions in the UP/SP case did not analyze UP's duty to maintain capacity of the trackage rights lines in relation to the *SSW Compensation* decisions. Accordingly, we do not find the Board's passing reference to those decisions controlling. Moreover, we are not convinced that even if the *SSW Compensation* decisions were relevant that they would overrule or contradict the plain language of the UP-KCS trackage rights agreements.

Likewise, the fact that BNSF and UP have settled on an interpretation of the UP-BNSF trackage rights agreement that they find mutually satisfactory does not change what the language of the UP-KCS agreements actually says. Moreover, there are several important differences between the UP-BNSF agreement and the referenced agreements, not the least of which is that BNSF pays a significantly lower trackage rights fee than does KCS. It therefore does not seem that whatever UP and BNSF may have agreed to among themselves as to the interpretation of their agreement has any relevance to what the plain language of the UP-KCS agreements means.

Again, KCS believes that the language of the trackage rights agreements is clear, and that it requires UP to make capacity improvements necessary to maintain service standards and transit times in effect when the agreements were entered, regardless of the growth of traffic on those lines, without additional compensation from KCS. As the chokepoints between Robstown and Victoria, in particular, become more limiting, the need for capacity improvements to preserve the competition that the STB sought to preserve by granting the trackage rights become more pronounced.

Sincerely,

David C. Reeves

Executive Summary

This Report and summary is organized around four sections; background and context, existing conditions, projected conditions and concludes with the evaluation of alternatives. At this time a preferred alternative has not been identified. The material presented in this report is intended to inform decision-makers regarding the basic elements of physical and financial attributes. The next step is to coordinate with the various stakeholders - including the public - to arrive at a mutual consensus involving a multitude of institutions and agencies and to identify a future development plan.

Background and Context

The City of Beaumont, Texas is on the coastal plain of Texas about 30 miles inland from the Gulf of Mexico. The City is the county seat of Jefferson County, Texas. Beaumont with the cities of Port Arthur and Orange form the Golden Triangle, a major industrial area on the Gulf Coast. There is currently only one railroad bridge with a single track crossing the Neches River in Beaumont. The bridge is owned and operated by the Kansas City Southern (KCS) Railroad which shares operating rights across the bridge with the Union Pacific Railroad (UPRR), BNSF Railway Company (BNSF) and Amtrak. The study area for this report is bordered on the north by Interstate 10, on the east by the eastern city limits (extended to intersect IH-10 in Orange County), on the south by Washington Boulevard, and on the west by primarily 4th Street. A significant portion of the study area is shown in the oblique aerial photograph in Figure 1.1. A significant element in the region's economy is the Port of Beaumont which is located in the study area at the existing river bridge crossing.

Figure ES.1 – Beaumont, Texas
with Port of Beaumont in foreground, KCS Neches River Bridge
in mid-ground and Interstate 10 bridge in background

This study evaluated the feasibility of rail corridor system improvements at or near the existing Neches River rail bridge crossing in the City of Beaumont, Texas. The Neches River is a navigable waterway and the railroad lift bridge is raised in order to allow river traffic to pass. The purpose of the study is to:

- evaluate rail movements and operations within the study area,
- identify opportunities to increase rail efficiency,
- analyze potential alternatives and improvements to the existing bridge and rail alignment, and
- determine the physical and financial viability of such potential improvements.

Within the scope of this study, the elimination of the existing structure was not considered feasible. Also while the evaluation considers the potential effects upon the environment, this report is not an environmental document. The project's no-build scenario is utilized only to define the project's purpose and serve as the baseline for the alternatives. Nonetheless as a feasibility study, the focus is upon the technical, financial and political aspects of build alternatives.

Pertinent reports reviewed as background information for this study included:

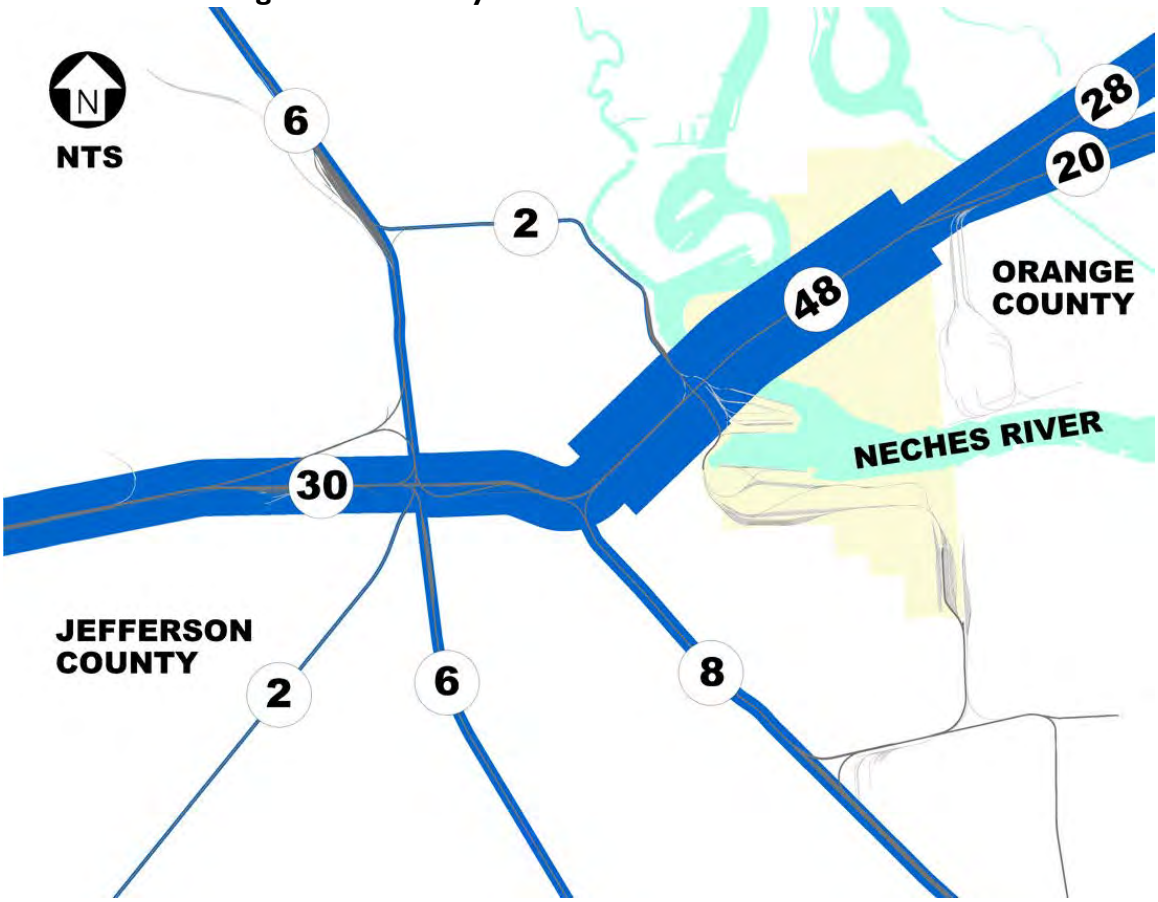
- Texas Rail Plan, November 2010
- Amtrak Gulf Coast Service Plan Report, July 16, 2009
- Rail Access to the Port of Beaumont, April 2005
- Gulf Coast High-Speed Rail Corridor Evaluation, November 2004
- Metropolitan Transportation Plan (MTP)

These reports are relevant because they address all modes of transport while focusing upon rail transportation issues both for freight and passenger rail service within the State. The reports also contain regional and local information that may affect where potential rail alignments might be located.

Existing Conditions

This section provides an overview of socioeconomics and environmental resources in the study area as well as an inventory of existing rail transportation, its operations in the Beaumont region and the development of a Rail Traffic Control model to simulate existing and projected conditions. The social and environmental resources inventoried include:

- Population and Households
- Income and Race
- Employment
- Water Resources
- Wetlands and Floodplains
- Threatened and Endangered Species
- Archeological and Historic
- Land Use Conditions



There are three Class I railroads operating in the Beaumont area; the Kansas City Southern (KCS) Railroad, the Union Pacific Railroad (UPRR) and the Burlington Northern and Santa Fe (BNSF). Each of these railroads systems are described beginning with a depiction of each freight rail carrier's national system and then moving into the regional system. Elements of the rail corridors studied are included with the identification of key at-grade crossing and service provided to local industries as well as access to the

Port of Beaumont. For this study, the rail serving the Port is focused upon the Port's Interchange Yard. The Port of Beaumont's Master Plan focuses upon the Port's Orange County facilities which could build out in excess of 450 acres. Amtrak provides intercity passenger rail service in the Beaumont Texas area via the Sunset Limited.

Rail Corridors and Operations

The primary east-west rail corridor through the Beaumont area includes the Neches River rail bridge, a vertical lift span bridge that allows river traffic to pass under the bridge. The bridge is in the rail-locked position until a navigation request is made to raise the lift bridge, generally to a requested vertical clearance. Information supplied by the United States Coast Guard (USCG) indicates approximately 400 lifts per year in 2011. Data from KCS in 2012 indicates 7 lifts in a six day period which is consistent with the USCG's annual lifts. While requests for bridge openings can occur at any time, most occur during daylight hours. The bridge raising can result in some train delays. The delays are more pronounced when trains are traveling in the same direction across the bridge as adjacent trains must be separated by two signals in order to prevent a train from stopping on the bridge. Typically the bridge stays open to river traffic between 15 and 30 minutes. The daily train count across the Neches River bridge ranges between 40 to 50 trains based upon daily train movements in the FRA's crossing inventory. Figure ES.3 represents that information as a band of varying thickness.

Figure ES.2 – Daily Train Volumes Beaumont Area

Another important issue regarding train traffic through Beaumont is that close follow-up movements are restricted by crew changes in each direction. Both the UPRR and KCS have crew changes in Beaumont which occur on the railroad's main lines. Finally, yard capacity and yard operation's efficiency have a direct impact on the rail system operations. Several yards are located in and around the Beaumont area and include:

- Port of Beaumont Interchange Yard
- KCS's Chaison Yard and Vidor Siding
- UPRR's South, East and Beaumont Yards
- BNSF's Beaumont Yard.

Projected Conditions

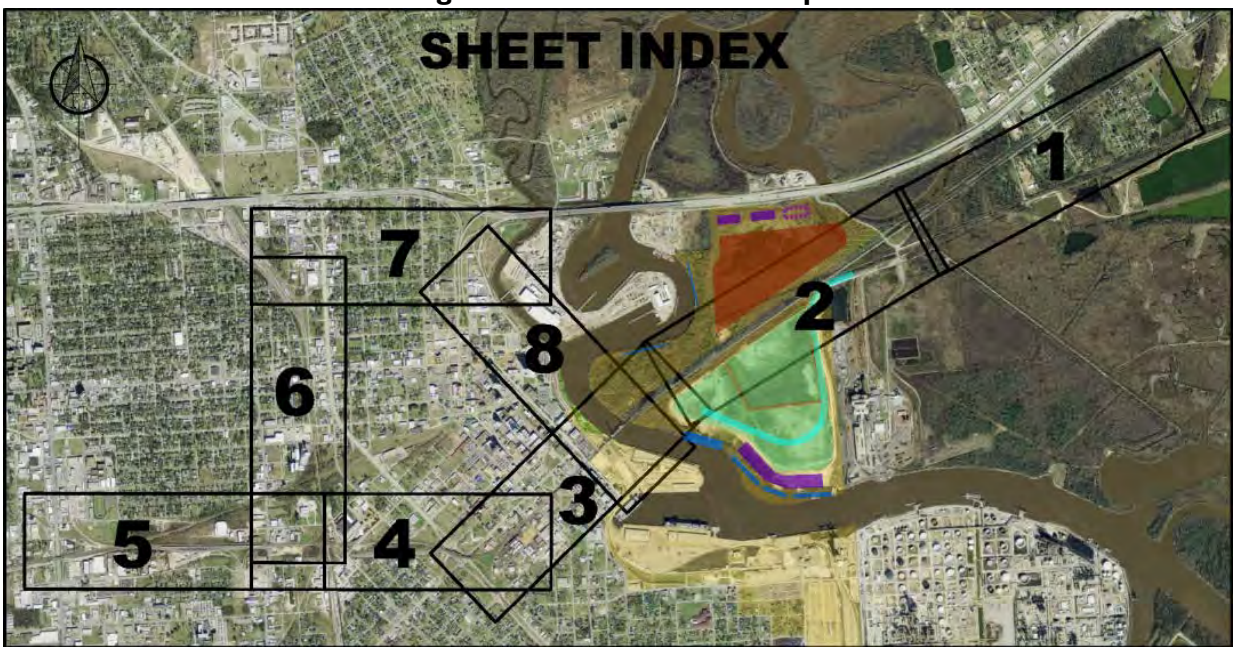
This section discusses rail forecast and operations in the forecasted year 2035 under the no-build scenario. An assessment of operations and various improvement concepts were developed and assessed. A key element with any improvement concept is the crossing of the Neches River with regards to meeting the river navigation criteria. The parameters for different bridge crossing types (lift vs. fixed) are discussed followed by reviews of some potential alignments. The 2035 rail forecast includes an overview of rail traffic at both a national level as well as specific to the region based upon the Texas Statewide Rail Plan. Potential impacts of implementation of the Gulf Coast High Speed Rail (GCHSR) passenger initiative are discussed. The no-build scenario's future rail system operations were analyzed utilizing the existing rail network and committed improvements, such as the new switch into the Port of Beaumont.

Rail Traffic Controller (RTC) is a computer program created by Berkeley Simulation Software, LLC, which simulates train operations over a railroad network. Variations can be made in network track layouts such as new rail lines, train composition and schedules, and operating rules and constraints, which allow for the testing and assessment of modifications. RTC is used by most North American Class I railroads to evaluate and plan their operations and in turn determine capital expenditures. The Base (Modified) RTC model estimates that under current conditions 287 trains operate during a typical week through the project study area. This translates to approximately 40 to 50 trains per day crossing the Neches River. Forecasted growth for the number of trains expected to be operating weekly in the Beaumont area by 2035 was determined utilizing a three percent (3%) compounded annual growth rate. The 3% growth rate is reasonable given the population growth forecasted for the State of Texas and the expected increased level of cross-border trade on a national basis. In addition, this is the rate that other recently completed freight studies used. Train traffic is projected to essentially double from the base condition to an estimate of 87 trains per day crossing the Neches River.

In the forecasted year with no improvements to the rail network, the average speed across the entire study network declines by about one-third from 15.0 mph to 10.6 mph. The forecasted train traffic results in the quadrupling of the delay ratio and the delay in minutes per 100 train miles. The forecasted delay hours increase at an even more significant rate, approaching eight times the value of delay hours under existing conditions. Essentially, the application of the forecasted train volumes to the existing rail network results in significant congestion. However, this is consistent with other studies regarding future levels of service for freight rail at the national level.

Developing Options

The development of options can be thought of in two basic parameters:



1. the development of bridge type (stationary or lift) and

2. the development of bridge crossing locations (along existing or on new alignment).

The determination of bridge type also influences the location of the bridge crossing. A stationary bridge type could consider three levels; a high level, a mid-level and a low-level. The high-level bridge would accommodate a vertical clearance at the maximum height (150 feet) which would meet the USCG's recommended navigation clearance for the Neches River. A mid-level bridge would have a vertical clearance that would accommodate the majority of river navigation. This report assumes that the mid-level bridge would have a 50 foot vertical clearance similar to the IH-10 crossing of the Neches River. A low-level crossing assumes a lift bridge with a minimum 13 foot river navigation vertical clearance in the closed position (to mimic the existing bridge vertical clearance).

A multitude of options were considered and screened. Concepts of high-level structures (with a vertical clearance of 150 feet) were considered but found to be both physically and financially impractical. Concepts for a lift bridge located south of the existing KCS bridge would have significant impacts on river navigation and the increase in the number of lifts would adversely affect rail operations. And while consideration of a former rail corridor is philosophically often a reasonable approach, the former Southern Pacific alignment through Downtown Beaumont is heavily developed with numerous street crossings. Creating an elevated rail corridor through Downtown Beaumont would have significant property and visual impacts. The corridor or alignments studied are summarized in Figure ES.3 and in the appendix.

Figure ES.3 –Sheet Index Map

Design aspects to accommodate the GCHSR were also considered and include, as part of a Phase 2 component of the GCHSR study, a proposed rail line along the existing UPRR-KCS rail corridor on the north side of the existing rail alignment. This concept is reflected by illustrating a third main west of the Gulf Coast Lines (GCL) junction, located between UPRR's East Yard and the Neches River bridge, through UPRR's east yard and continuing further westward. In Orange County, a proposed rail line is also shown in this study along the existing UPRR-KCS rail corridor on the north side of the existing rail

alignment which requires a crossing of the KCS rail. Because of the extensive existing right-of-way width on the north side between the Neches River bridge and the KCS-UPRR split at Tower 31, approximately 1 mile east of the Neches River bridge, design options were considered to accommodate a crossing with the proposed additional rail line on the north side. In order to provide a level at-grade crossing, the new rail alignment must cross at a tangent and then begin its horizontal curvature. This geometric design may necessitate minor additional right-of-way acquisition. Another option could be grade separation, though obviously this has cost implications. Considerations may even need to be given to the potential for double track alignments coming together along both the UPRR and the KCS routes at the KCS-UPRR split.

Three build alternative crossings of the Neches River were evaluated. These include an alignment along the existing river crossing corridor as well as new alignment alternatives with different types of river bridge crossings; stationary or lift span. Essentially these were determined to be the best of the options considered for alignment location and bridge type. The three alternatives are:

- Add capacity adjacent to existing KCS alignment with a new lift bridge
- Add capacity on new alignment adjacent to Interstate-10 with a stationary bridge, and
- Add capacity on new alignment along Pine Street corridor with a new lift bridge

Evaluation of Alternatives

The evaluation of transportation impacts for the alternatives included a review of river, rail, and highway operations. The rail operations are based upon the output from the RTC model while highway operations focus upon the output from GradeDec.net at the selected key at-grade rail-highway crossings. River impacts were based upon the degree of obstruction to navigation traffic. All alternatives offer the option to route trains via either the existing rail lines or the alternate route, depending upon circumstances. In effect when combined, the existing route and proposed alignments create at least two main tracks over the Neches River, and to some extent three, between the UPRR Beaumont Yard and the KCS-UPRR split. This added capacity offers more flexibility than just the existing route alone.

The rail operation measures include system route miles, total system train miles, total system weekly trains, system average velocity, total weekly system train delay, and a system delay ratio. The evaluation of an improved river crossing shows an increase in average speed over existing single track operations. However, there is no change to the delay ratio and only minor decreases in delay hours and minutes, 10% and 20% respectively. The effects of the double track are more prominent (ranging from 40% to 55% reduction in delay measures) when comparing potential projected volumes to operations on a single track.

To review potential impacts to vehicular traffic, the alternatives studied were subdivided into five rail segments for assessment via GradeDec.net. Three of the five rail segments are essentially evaluated under future conditions (increased train and vehicular volumes) while the other two rail segments have the potential to be directly affected by the alternate alignments under consideration. In summary, of the at-grade crossings evaluated for grade separation, only the crossing at Martin Luther King Parkway approaches a benefit close to the probable construction costs. This occurs only with increased and diverted train traffic associated with the new rail alignment alternative adjacent to IH-10. The existing low volume service line today would not reach a level to suggest the need for a grade separation.

Figure ES.4
Existing Alignment Evaluated

(Stationary bridge Interstate 10)

New Alignment Evaluated
(Lift bridge Pine Street)

The evaluation of sustainability impacts includes a review of potential environmental and social impacts. Elements from the transportation and implementation impacts cross over to provide additional input on such factors as property impacts and transportation delay which has an effect upon air quality and energy use.

The potential for environmental impact is associated with the implementation of an alternative's infrastructure. The key issues are potential environmental impacts as well as the complexity of permits for the alternative. Several of the attributes described under the existing conditions such as population, households, income, race and employment are represented by the surrogate of property impacts by land use categories. Residential impacts would affect population and households, while commercial and industrial impacts would affect employment and income. Impacts to water resources including wetlands and floodplains are indicated by assumed areas of potential right-of-way. Often these natural areas are habitat and thus served as a surrogate for threatened and endangered species for this study. Specific sites that could be affected are identified for archeological, historic and community facilities including public lands and parks. Impacts to these attributes are represented by four degrees of impact ranging from no impact to low impact to medium impact to high impact. Superfund is the name given to the environmental program established to address abandoned hazardous waste sites. There is one Superfund site within the Study Area named International Creosoting located at 1110 Pine Street, Beaumont, Jefferson County. The new IH-10 alignment runs through the middle of this superfund site.

The evaluation of implementation impacts includes a review of probable construction costs as part of a cost effectiveness assessment. Property impact costs, while not specifically estimated at this time, are discussed in broader terms as an influence upon project development. The construction costs for the alignment

concepts have been developed based upon major elements such as the river crossing bridge as well as the length of structural approach spans. These bridge approach spans can be very long considering the potential height of the proposed rail, topography, and local soil conditions. For alignment comparisons, the quantity and associated costs of the rail were estimated based upon new rail alignment and existing rail alignment. The cost of improving adjacent to the existing rail alignments also considered whether the proposed track was within the existing rail right-of-way or adjacent to but outside existing rail right-of-way. The costs of track was varied depending upon upgrade of existing track, new track on-grade, new track on fill (typically up to 16 feet), new track on structure, and new track on river bridge. For this study, it was assumed that only a single track would be added for those new alignments. However, the bridge costs are based on providing the ability to construct a future track. In order to be consistent with the structural availability for a second track, the earthwork for the future second track is also included in the estimate. If necessary, new rail sidings and connections are quantified. At this stage, the rail traffic control and signaling system as well as improvements to crossing devices at highways are included in the contingencies. The costs only account for construction activities in 2012 dollars. The costs do not include right-of-way acquisition, design, permitting or construction inspection costs, or any annual maintenance costs. The potential for such costs should be considered when comparing alignments, particularly on those alignments that have significant property impacts.

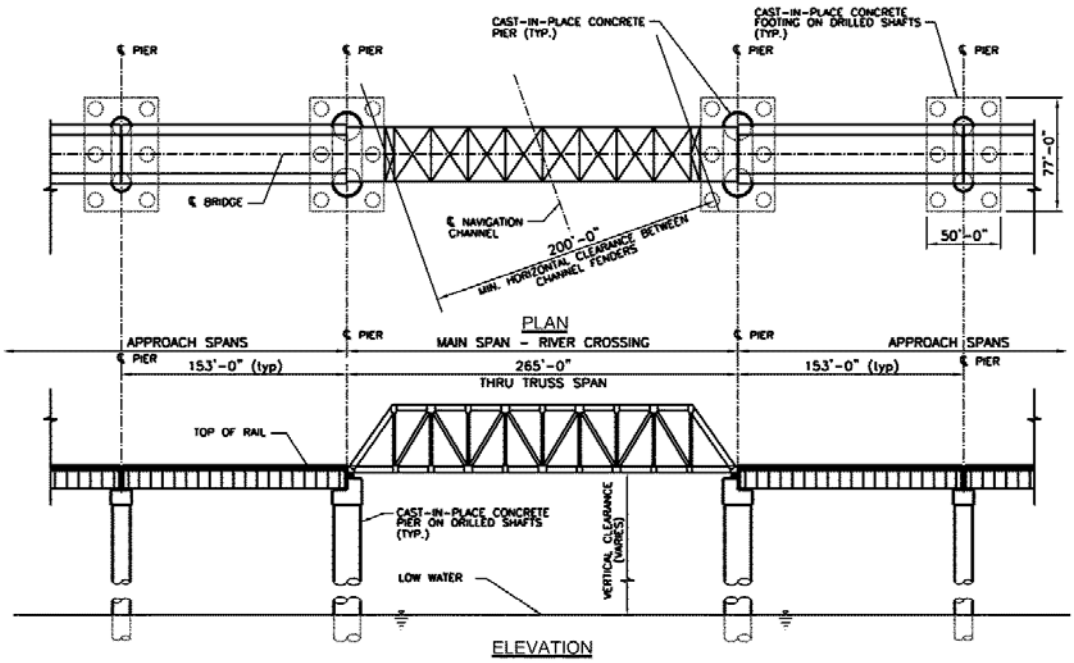
Summary of Alternatives

Four alternatives have been assessed under forecasted 2035 conditions. The projected "no-build" alternative was analyzed to establish a baseline for comparison. This alternative establishes the fact that Beaumont's rail network would benefit from having additional rail lines at the Neches River crossing. In addition to the "no-build" alternative, three "build" alternatives were evaluated that involved improving capacity by providing additional track as well as exploring operational issues associated with the lift bridge over the Neches River. The three alternatives concentrated on improving the existing rail route with 1) a new adjacent lift bridge, 2) a new rail alignment also with a lift bridge near the existing rail corridor, and 3) a new rail alignment with a fixed river bridge crossing north of the existing rail corridor. A brief summary of the pros and cons of each build alternative are provided below.

Expand existing route to double track river crossing (lift bridge)

This alternative keeps the existing bridge in place and assumes it to be operational with a projected 16 lifts per week in the future scenario. In addition, a second lift bridge is considered immediately adjacent and north of the existing structure. While this alternative's RTC model performance measures improve over the "no-build" conditions, the operations still show significant delays. Even with the double track operations, delays under the projected train volumes would be twice to four times as great as they are now. Some potential improvements to address this delay beyond the additional capacity over the Neches River could be a third main for the UPRR and is shown conceptually in the Alternatives Evaluated mapping. This alignment alternative does not intrinsically address the delays associated with the KCS-UPRR split at Tower 31. As the proposed improvements essentially remain adjacent to or within the existing rail corridors, impacts to the community are minimized. Costs for this improvement in the Beaumont area are estimated in 2012 construction dollars approach $120 million.

New Pine Street alignment (lift bridge over Neches River)



This alternative keeps the existing bridge in place and assumes it to be operational with a projected 16 lifts per week. The Pine Street alignment was initially tested through the RTC model with a potential fixed river bridge crossing. However physical limitations determined that the only practical fixed river bridge crossing lies immediately adjacent to the IH-10 corridor. Consequently it was determined that the Pine

Street alignment was the best new rail alignment with a lift bridge over the Neches River. Nonetheless, that new lift bridge location created its own set of design issues that result in additional costs compared to constructing an adjacent rail bridge to the existing rail's river crossing. The alignment's tie in on the west side is likely to create significant adverse impacts to a neighborhood with property acquisition as well as impacts to vehicular operations at critical at-grade crossings that will only add to the probable construction costs. This alignment alternative does not intrinsically address the delays associated with the KCS-UPRR split at Tower 31. Costs for this alignment are estimated in 2012 construction dollars approach $170 million.

<u>New IH-10 alignment (fixed bridge over Neches River)</u>

This alternative keeps the existing bridge in place and assumes it to be operational with a projected 16 lifts per week. The new IH-10 rail alignment has potentially significant operational benefits by addressing two key issues: 1) the delays associated with the lift operations of the river crossings, and 2) addresses the grade separation of the KCS-UPRR split on the east side of the Neches River. However, the alignment tie in on the west side is likely to create significant adverse impacts to a neighborhood with property acquisition as well as impacts to vehicular operations at critical crossings that increase the probable construction costs. This alignment is located close to an EPA Superfund site. Costs for this alignment are substantial and are estimated in 2012 construction dollars approach $240 million. While viewed from a railroad operationally viewpoint only, this new alignment is the best within this study area. The high degree of cost and probable impacts may be offset by any additional operational benefits.

Figure ES.5 – Stationary Bridge General Plan and Elevation

1.0 Background and Context

This section describes the study area and elements immediately surrounding the Neches River Bridge crossing in Beaumont, Texas. It includes a listing of the various tasks associated with the feasibility component of the study. This section concludes with a review of pertinent previous reports with a summary of their relevant aspects to this study.

Study Area

The City of Beaumont, Texas is on the coastal plain of Texas about 30 miles inland from the Gulf of Mexico. It is bordered on the east by the Neches River and on the north by Pine Island Bayou. The City is the county seat of Jefferson County, Texas. Beaumont with the cities of Port Arthur and Orange form the Golden Triangle, a major industrial area on the Gulf Coast. In 2010, Beaumont's population was 118,296.[1]

There is currently one railroad bridge crossing the Neches River in Beaumont. The bridge is owned and operated by the Kansas City Southern (KCS) Railroad that shares operating rights across the bridge with the Union Pacific Railroad (UPRR), Burlington Northern Santa Fe (BNSF) Railway and Amtrak. This bridge was constructed in 1941 and was operated on-site until 2004. In 2004, it became remotely operated from Kansas City.[2]

The study area is bordered on the north by Interstate 10 (IH-10), on the east by the eastern city limits (extended to intersect IH-10 in Orange County), on the south by Washington Boulevard, and on the west by primarily 4th Street. A significant portion of the study area is shown in the oblique aerial photograph in Figure 1.1. A map of the entire study area is shown in Figure 1.2.

A significant element in the region's economy is the Port of Beaumont which is located in the study area at the existing river bridge crossing. Due to the significant volume of maritime trade of petrochemicals, the US Customs District - that includes the Port of Beaumont - was ranked 6th in the nation in terms of total cargo volume in 2002.[3] The Port mainly handles wood products, pot ash, grain and similar bulk items as well as petroleum and chemical products. Military shipments are an important and growing source of business for the Port as well, making the Port the second largest military seaport in the world.[4]

The main vehicular entrance gate for the Port of Beaumont is located at the intersection of Main and Franklin Streets. Vessel access is provided via the Sabine-Neches Waterway, a 40-foot deep federally maintained channel. Ships and barges have free access to the Port via Sabine Pass, the Port Arthur and Sabine-Neches Canals, and the Neches River. The Port contains more than one linear mile of open wharf space, eight ship berths, 50 acres of open storage, and 600,000 square feet of transit sheds.[5]

Figure 1.1 – Beaumont, Texas

with Port of Beaumont in foreground, KCS Neches River Bridge
in mid-ground and Interstate 10 bridge in background

The Port is currently expanding its Dreyfus Yard (seen in the foreground of Figure 1.1) and constructing a new south connection to the KCS track that was planned for completion in 2011. In addition, over $20 million in capital improvement projects, including a new railcar holding yard, have been made to improve operating conditions. The Port's existing interchange yard lies north of the mainline. As a result of planned track improvements, the Port plans to lease a portion of the yard to the City of Beaumont for redevelopment. See Figure 1.3 for an image of the Port Master Plan concentrating on the Orange County facilities.

Figure 1.2 - Neches River Rail Bridge Feasibility Study Area

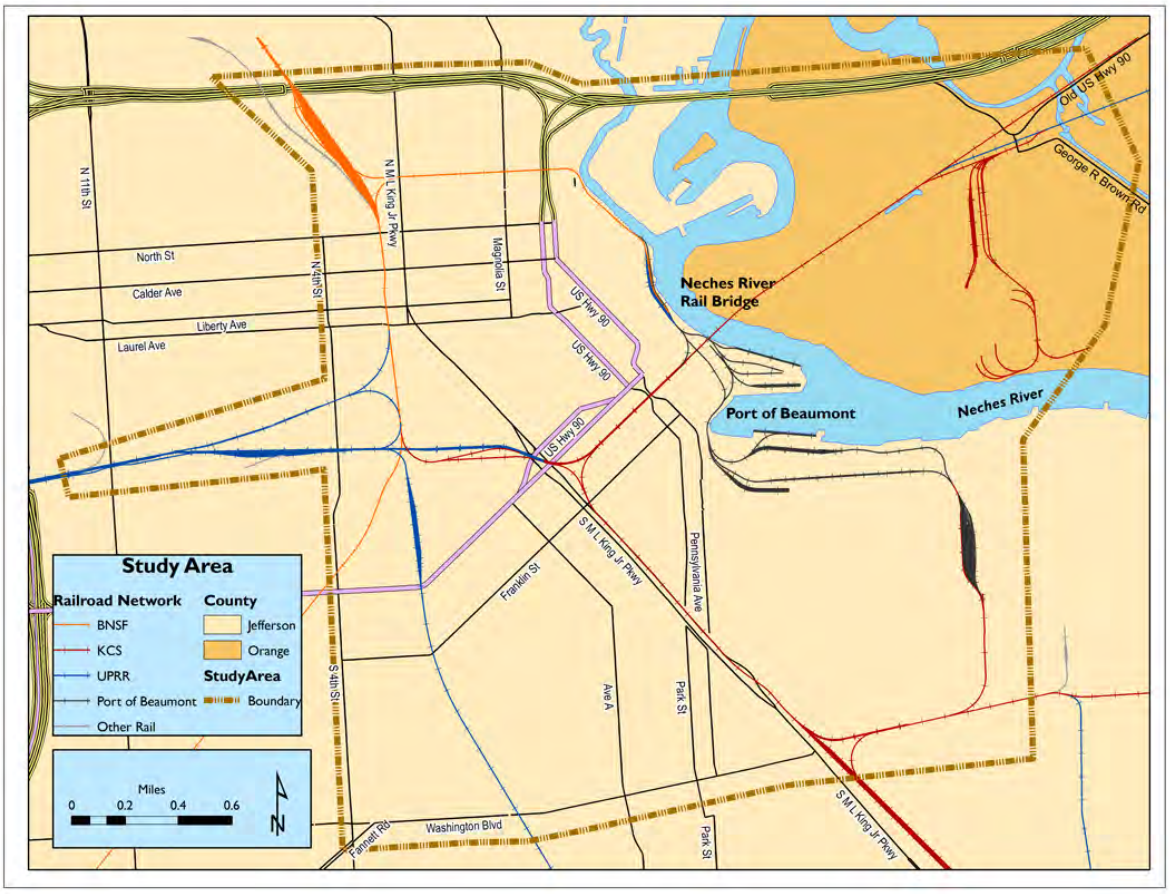


Figure 1.3 - Port of Beaumont Master Plan

Project Description

The study is to evaluate the feasibility of rail corridor system improvements at or near the existing Neches River rail bridge crossing in the City of Beaumont, Texas. This rail corridor serves a combination of Class I railroads including the Kansas City Southern (KCS) railway, the Union Pacific Railroad (UPRR), the Burlington Northern and Santa Fe (BNSF) Railway, and passenger rail operated by Amtrak. All of these railroads currently use the existing lift span bridge owned by the KCS. Approximately 40-50 trains a day cross the Neches River bridge.[6] The Neches River is a navigable waterway and the railroad lift bridge can be raised in order to allow river traffic to pass.

The purpose of the study is to:

- evaluate rail movements and operations within the study area,
- identify opportunities to increase rail efficiency;
- analyze potential alternatives and improvements to the existing bridge and rail alignment, and
- determine the physical and financial viability of such potential improvements.

This report documents the development and assessment of potential improvements and/or alternatives that could be presented to the railroads for consideration, including the evaluation of the financial, engineering, and operational viability of constructing a second river bridge crossing. These concepts were developed in coordination with the Port of Beaumont (POB) Master Plan and the Jefferson-Orange-Hardin Regional Transportation Study area Metropolitan Transportation Plan (JOHRTS MTP) and therefore should be consistent with Statewide planning practices.

The following is an outline of the study tasks. As part of the process, meetings with various stakeholders were conducted including but not limited to the City of Beaumont, the Port of Beaumont, the three major railroads operating in the region (KCS, UPRR and BNSF), as well as contacts with numerous state agencies and industries to obtain data.

Inventory Existing Rail System

- Review and summarize previous pertinent rail studies. Studies include the Texas State Rail Plan, Amtrak Gulf Coast Service Plan, TxDOT's High Speed Rail Study, Port of Beaumont as well as available studies from the Class I railroads.
- Meet with railroad representatives from BNSF, KCS, and UPRR to understand design alternatives, traffic volumes, forecasts, impacts, operating parameters and operating costs.
- Meet with the Port of Beaumont to understand their perspectives and objectives relative to the project.

Conduct Freight Rail Operational Study

- Meet with rail carriers who operate within the Beaumont area regarding existing traffic volumes and operational parameters.
- Collect available information on projected freight volumes for the study area from each railroad.

- Collect future population and employment projections from the State for the period through to the year 2035.
- Integrate data to develop a projection for future rail traffic volumes.

Identification of Freight Rail Movement Constraints

- Establish layout of track geometry that graphically represents the inventory assessed. A validated existing Rail Traffic Controller (RTC) model was used to estimate the constraints on the main line rail operations and efficiency resulting from:
  - Track, Bridge, and/or Signal deficiencies
  - Rail traffic congestion and yard utilization
  - Highway/Rail grade crossing conflicts.

Develop Alternatives and Assess Feasibility for Rail System Improvements

- Develop potential improvements at the Neches River crossing and necessary related main line track improvements, and associated track connections in the vicinity of the existing bridge. Potential track alignments to be examined include:
  - A new alignment immediately adjacent to the existing span.
  - A new approach span to new double track moveable span at the current location.
  - Up to four alternate alignments for new crossing consisting of a moveable span over the Neches River with fixed span approaches

Potential alternates for each new alignment to be examined include:

- Structure Type
  - EITHER a moveable span over the Neches River channel
  - OR a fixed span bridge that meets navigation requirements:
- Structure Typical Section
  - For alignments that connect Port of Beaumont property on both sides of the Neches River, the typical section will allow for rail double track. A 2-lane roadway section suitable for vehicles will also be examined.
  - For alignments that do not connect Port of Beaumont property on both sides of the Neches River, the typical section will only have rail double track.

Within the scope of this study, elimination of the existing structure is not considered feasible. Also while the evaluation considers the potential effects upon the environment, this report is not an environmental document. The project's no-build scenario is utilized to define the project's purpose. Nonetheless as a feasibility study, the focus is upon the technical, financial and socioeconomic aspects of build alternatives.

Utilizing the RTC Base Case model developed for the Texas Department of Transportation (TxDOT) as part of the Houston Regional study, forecasts and updated train operations for the various alternatives were prepared. A cost/benefit analysis based on order of magnitude costs for the construction of improvements, excluding right-of-way costs, was developed. Elements to be considered in the cost/benefit analysis included:

- Environmental:
  - Individual Permit or Nation Wide Permit: US Army Corps of Engineers, Galveston District.
  - Environmental Impact Statement or Categorical Exclusion
  - Potential Wetland Impacts
  - FEMA: A Conditional Letter of Map Revision (CLOMR) or Letter of Map Revision (LOMR)
  - U.S. Coast Guard and U.S. Army Corps of Engineers §10 Permits (Title 33, USC §403)
  - FAA Permit: Notice of Proposed Construction or Alteration.
  - Coastal Management Zone
  - Noise
  - Texas Land Office Permit

- Costs:
  - Probable costs including rail and structure costs as well as other associated transportation improvements to highways.
- Public Benefits:
  - Utilizing GradeDec.net, the Federal Railroad Administration's online planning tool, the public benefit for any proposed changes at key at-grade crossings was estimated.

Review of Previous Reports

Pertinent reports were reviewed as background information for the study. A brief synopsis is provided.

Texas Rail Plan, November 2010

TxDOT developed its first rail plan in 2005 and updated in 2010. The purpose of the rail plan, known as the Texas Rail Plan (TRP), is to set policy, direction, and the vision for the state in compliance with both federal and state regulations as well as how it is to be integrated into the state's multimodal transportation system. Other key components of the plan are an inventory of the freight and passenger rail infrastructure and performing a needs assessment.

The plan states that forecasted growth in population will lead to increased vehicle miles traveled (VMT) and congestion on the highways. Increased VMT and congestion will result in environmental, social, and economic impacts on Texas. Increased population also generates additional demand for consumer products and the need for an efficient freight network. Maintenance and expansion of the existing rail network will be necessary to meet that demand.

Population growth also creates additional demand on the transportation system. The TRP focuses on the ability of passenger rail to serve the demand. Three elements point to the need to integrate passenger rail as another option for intercity travelers:

1. the social and interconnectivity of many of Texas' urban areas,
2. the increasing interest in rail transportation, and
3. the accessibility rail offers to those not willing or unable to drive or fly.

The TRP provides an inventory of existing freight and passenger services provides information on safety and security, and reports on financial opportunities for rail transportation in the State.

Relevance to this Feasibility Study:

- TxDOT's proactive approach to addressing rail transportation issues within the State
- A statewide forecast of freight
- Identification of rail congestion in the Beaumont area, and
- A methodology for assessing and rating rail projects across the State.

Amtrak Gulf Coast Service Plan Report, July 16, 2009

In 1993, Amtrak's *Sunset Limited,* which had previously operated between Los Angeles, California and New Orleans, Louisiana, was extended east from New Orleans to Jacksonville, Orlando, and Miami, Florida. This created a new transcontinental Amtrak route and brought passenger rail service to the Gulf Coast Region between New Orleans and Miami. In August 2005, however, *Sunset Limited* service east of New Orleans was suspended due to massive damage to rail infrastructure caused by Hurricane Katrina. The service on this segment of the *Sunset Limited* remains suspended today due to the cost and challenges associated with restoring this service.

The report detailed the alternatives that Amtrak is considering in restoring service between New Orleans and Florida. Amtrak initially evaluated 12 alternatives. Three were selected as preferred options for evaluation based upon projected ridership, revenue, operating costs, and operating loss. After analysis, three of the options are preferred and are listed below:

1. Restore tri-weekly *Sunset Limited* service between Los Angeles, California and Orlando, Florida.
2. Extend the daily *City of New Orleans* service, which currently operates between Chicago, Illinois and New Orleans, Louisiana, east from New Orleans to Orlando, Florida.
3. Implement daily stand-alone overnight service between New Orleans, Louisiana and Orlando, Florida.

The study recommended that Congress will need to determine if passenger rail service should be restored between New Orleans and Orlando and, if so, identify its preferred option for service restoration; and provide the additional funding for capital and ongoing operating costs that will be required to implement that option. Once these steps are taken, Amtrak will move quickly to initiate the actions required for service restoration.

Relevance to this Feasibility Study:

- If Option 1 is selected, the original Sunset Limited service between Los Angeles and Orlando will be restored, increasing the ridership on this route and potentially the need for additional service, and putting additional pressure on the Neches River bridge crossing. The *Sunset Limited* has a station stop in Beaumont, Texas.

Rail Access to the Port of Beaumont, April 2005

This is a study of rail infrastructure and operations around the Port of Beaumont. It assesses several plans for relieving local rail congestion and inefficient rail service that have been proposed by the Port of Beaumont and the KCS. The Port of Beaumont's motivation to improve local rail operations centers on three objectives:

- Increase port efficiency by replacing its current interchange yard;
- Improve port security for military shipments; and
- Team with the City of Beaumont to redevelop the existing Port interchange yards and thereby increase the local tax base and provide opportunities for economic development.

Three alternatives were proposed to improve rail access to the Port. Recommendations in the report are for all parties to consider a multi-phase approach to deal with the rail congestion. The first phase would be to build a proposed turnout from the south track of the KCS Main track into the Port as well as two rail yards within the Port. These improvements have been funded and are built with the exception of the connection. The second phase would be a detailed operational and economic analysis comparing uni-directional versus bi-directional train operations at the Port. The third phase would be to address the regional rail congestion problems which would include improving the Neches River crossing and various track improvements.

Relevance to this Feasibility Study:

- The Port of Beaumont is a critical rail user in the Beaumont area
- Access to the Port of Beaumont has a strong influence on rail operations in the region, and
- Anticipated growth at the Port necessitates the identification of immediate and long-range transportation improvements.

Gulf Coast High-Speed Rail Corridor Evaluation, November 2004

The report describes an evaluation of the proposed high speed rail corridor which traverses the southeastern portion of Texas from Houston to the Louisiana/Texas State Line near Echo, Texas. This route passes through the Texas communities of Dayton, Liberty, China, Nome, Beaumont, and Orange. Station stops were assumed in Houston and Beaumont. The UPRR owns most of the route with the exception of a short segment in the City of Beaumont where the BNSF, UPRR, and KCS railroads all cross the Neches River on an existing lift span bridge owned by the KCS. The report details:

- existing conditions along the corridor;
- proposed phase improvements;
- an order of magnitude cost estimate;
- ideas for a proposed fixed span structure crossing the Neches River; and
- reviews of equipment technology options.

Phase I of the improvements deal with upgrading the corridor to increase operating speeds up to 79 miles per hour (mph). The report details the necessary horizontal and vertical alignment, number of

grade crossings, bridge and drainage structures, environmental conditions, and any grading issues. The focus of Phase II is to expand the existing route capacity to facilitate both additional freight and enhanced passenger operations. Proposed improvements include double tracking throughout most of the corridor by connecting all of the existing sidings with additional track. The primary focus of Phase III is to upgrade the track and signal infrastructure to facilitate 90 mph operations. Primary improvements recommended include grade crossing and track improvements.

Relevance to this Feasibility Study:

- Passenger rail plays an important part in the nation and in this region, and it utilizes the Neches River bridge
- Rail improvements are needed to accommodate the Gulf Coast High Speed Rail throughout Texas,
- Within Beaumont, rail improvements are desired at the existing Amtrak station.

Metropolitan Transportation Plan (MTP)

In 1974, the Governor of Texas designated the South East Texas Regional Planning Commission (SETRPC) as the Metropolitan Planning Organization (MPO) for Jefferson, Orange, and Hardin Counties as shown in Figure 1.4. As the MPO, SETRPC is responsible for conducting comprehensive, coordinated, and continuing long range transportation planning in the three-county region. The SETRPC-MPO developed a 20-year long-range Metropolitan Transportation Plan (MTP) to accommodate the future needs of the three-county region and acknowledges the vital role that transportation plays in the region's social, environmental, and economic health.

This MTP covers the Jefferson-Orange-Hardin Regional Transportation Study (JOHRTS) area. The plan details projects contained in the "financially constrained" MTP but are not in the Transportation Improvement Program (TIP) or "locked years" sections (normally years 5-20 plus) and the "unconstrained needs" project (i.e. projects that are not funded during the first 20 years). These projects were identified by the public for having merit if funding should become available. As in other Texas urban areas, the JOHRTS area has experienced significant increases in traffic volumes and traffic congestion. In large measure, increased traffic and congestion are directly correlated to the region's growth in population which by 2030 is expected to reach approximately 435,700 persons. The population of the JOHRTS region was approximately 385,090 persons in 2000, with 252,051 in Jefferson County, 84,966 in Orange County, and 48,073 in Hardin County. Geography and regional travel patterns are contributing factors to escalating traffic between the three major cities (Beaumont, Orange, and Port Arthur) and surrounding communities.[7]

The Plan contains one major transportation improvement within the City of Beaumont:

IH-10: Proposed improvements to expand IH-10 from four to six lanes between Beaumont and the eastern county line in Orange are moving forward. Engineering and design studies for each of these phased construction projects are near completion – one section has been completed and a second section is currently under construction. TxDOT is still trying to secure funding to complete all the

projects along the entire link. Long-range plans also exist to expand the capacity of IH-10 in Jefferson County from four to six or eight lanes.

The Plan also details specific objectives in improving transit and non-motorized travel in the region.

Relevance to this Feasibility Study:

- The Plan addresses all modes of transport including freight (by truck, rail, water and air)
- Air quality attainment in the region needs to be addressed and will influence future transportation improvements, and
- Roadway improvement projects in the region may affect where potential rail alignments might be located.

Figure 1.4 - South East Texas Regional Planning Commission Area

2.0 Existing Conditions

This section provides an overview of socioeconomics and environmental resources in the study area as well as an inventory of existing rail transportation, its operations in the Beaumont region and the development of a Rail Traffic Control (RTC) model to simulate existing and projected conditions.

Socioeconomic and Environmental Resources

The City of Beaumont is within Jefferson County, Texas and is part of the Metropolitan Planning Organization (MPO) known as the South East Texas Regional Planning Commission (SETRPC).

Population and Households

During the 1980's, Jefferson, Orange and Hardin counties experienced a decline in population and employment due to a downturn in the petrochemical industry. From 1980 to 1990, population in the region decreased by four percent. During the next decade (1990 to 2000), the region experienced a 6.6 percent increase in population growing to 385,090 people. Between 2000 and 2010, population growth slowed to one percent and in 2010 the three counties had a total population of 388,745. Population forecasts anticipate further growth of 11.6 percent for the SETRPC area between 2000 and 2030. Jefferson County is also forecast to grow by 11.6 percent.[8]

According to the 2010 U.S. Census, the City of Beaumont had a population of 118,296 which represents a four percent increase from 2000. This population had a median age of 32.8 years with 12 percent of the residents 65 years old or over.[9,10] Figure 2.1 displays households by block. Within the study area, the number of households tends to be low with a majority of single family households. Also note that limited residential development is located immediately adjacent to several of the railroads. Of the 43,569 occupied housing units, 56 percent are owner occupied and the remaining 44 percent are rented.[11] The median value of a house was $90,900 in 2009 within the study area.[12]

Income and Race

Economic characteristics show that in 2009 the median household income for the City of Beaumont was $39,899 and the median family income was $49,766.[13] Figure 2.2 displays the locations of families that are low to moderate income (approximately $30,000 median family income or less). Note that the entire study area includes families with low to moderate income levels. In terms of racial composition, 48 percent of the residents are black, 43 percent are white, and the balance is a mixture of other races. Figure 2.3 displays the distribution of the non-white population in the study area.[14]

Income and race statistics are important to note for environmental justice reasons. Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation of environmental laws, regulations and policies. If a project utilizes federal funds and goes through the NEPA (National Environmental Policy Act) process, there is an obligation to avoid or minimize and mitigate adverse impacts to low-income and minority populations and to assure that disproportionately high and adverse impacts on these populations are identified and addressed.

Figure 2.1 - 2010 Households by Block

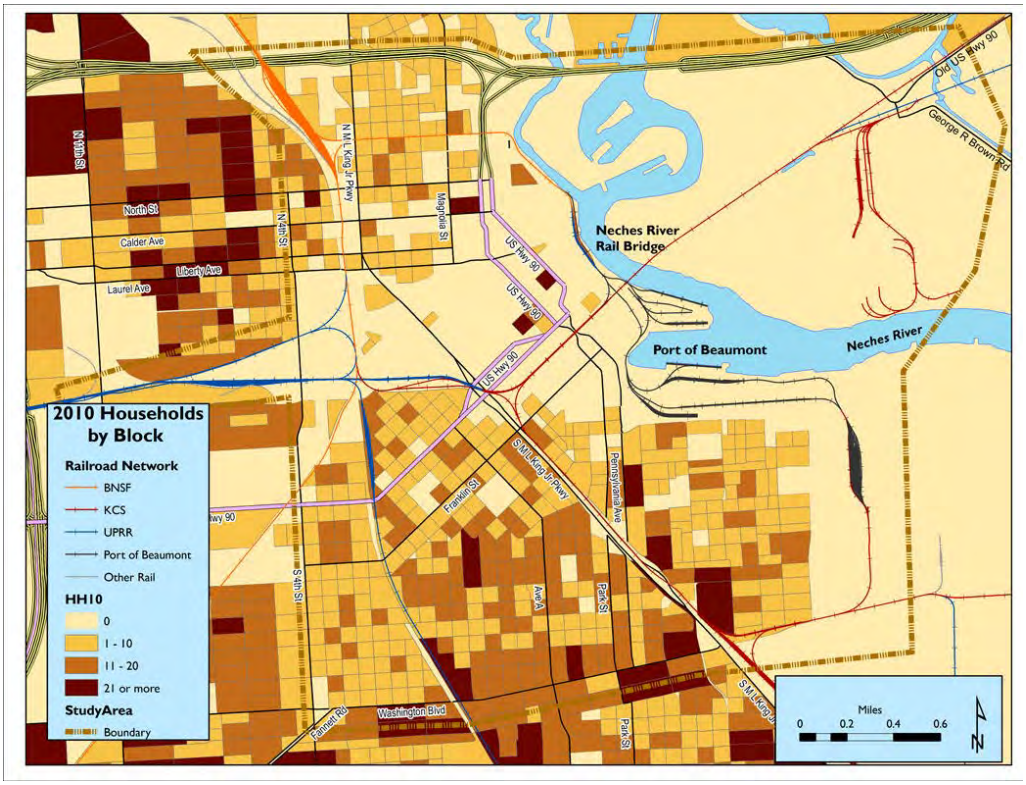

Figure 2.2 - 2010 Low-Moderate Income Population by Block Group

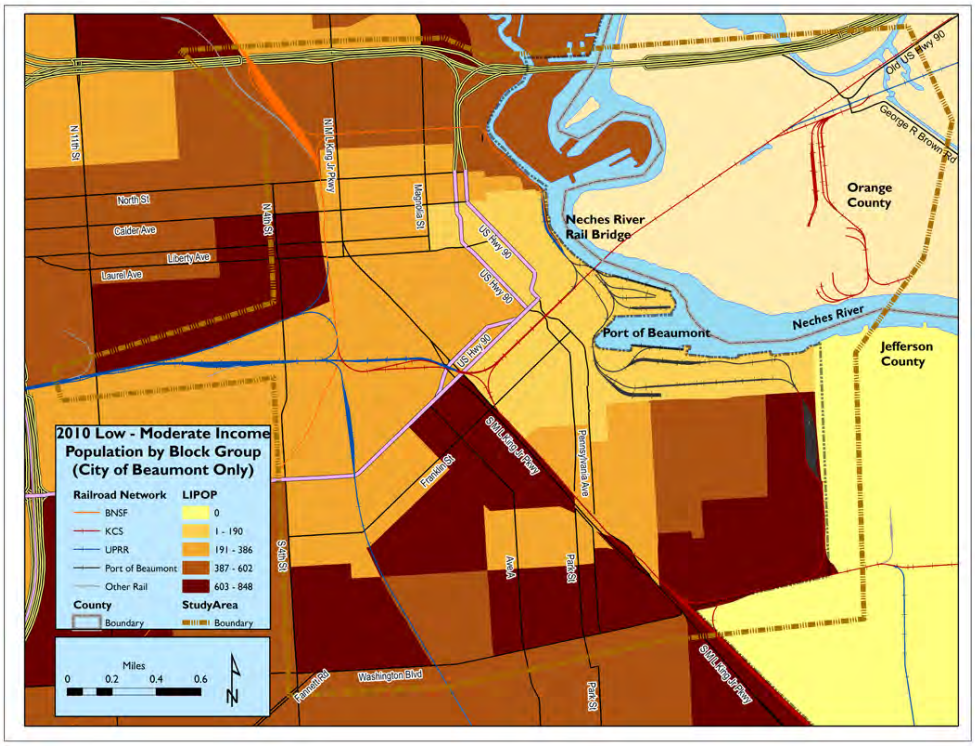

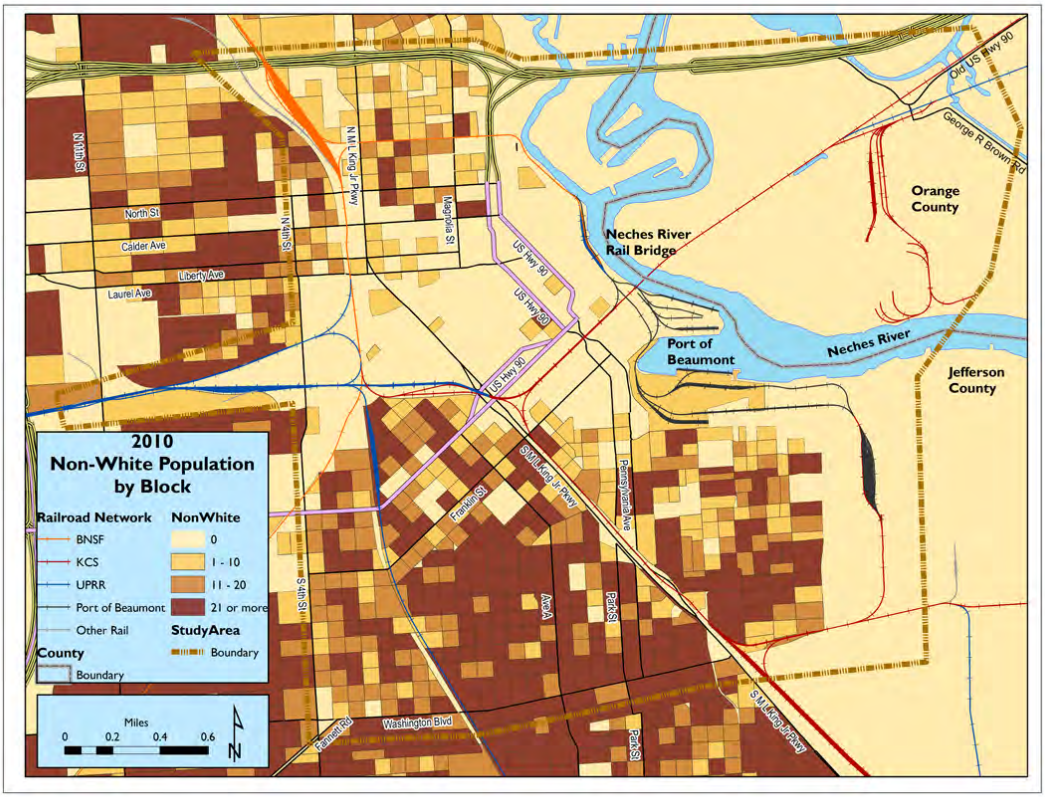

Figure 2.3 – 2010 Race: Percent Non-Caucasian By Block

Employment

Overall employment is expected to increase by 16.3 percent in the Jefferson-Orange-Hardin county region between 2002 and 2030. Since the 1970's, the regional job profile has been changing from "basic sector jobs" (i.e. mining, construction, manufacturing, transportation, communications, public utilities, and wholesale trade) to jobs classified as service (i.e. finance, insurance, real estate services, educational services, and governmental organizations) or retail. In 2002, "basic sector" employment for Jefferson, Orange, and Hardin counties accounted for 36.2 percent of employment in the region. By 2030, it is expected that these types of jobs will drop slightly to 34.1 percent of regional employment. By comparison, "service sector" employment accounted for 43.8 percent of regional employment in 2002 and is forecasted to grow slightly to 46.1 percent by 2030. Retail sector employment accounted for 19.9 percent of the overall employment in the region and is estimated to remain the same by 2030.

Major employers of over 1,000 employees within the City of Beaumont are show in Table 2.1. These employers account for 17.03 percent of all employment in Beaumont.

Table 2.1
Major Employers - City of Beaumont, Texas

Number	Employer	Number of Employees
1	Beaumont Independent School District	2,893
2	Memorial Hermann Baptist Hospital	1,621
3	Christus St. Elizabeth Hospital	1,602

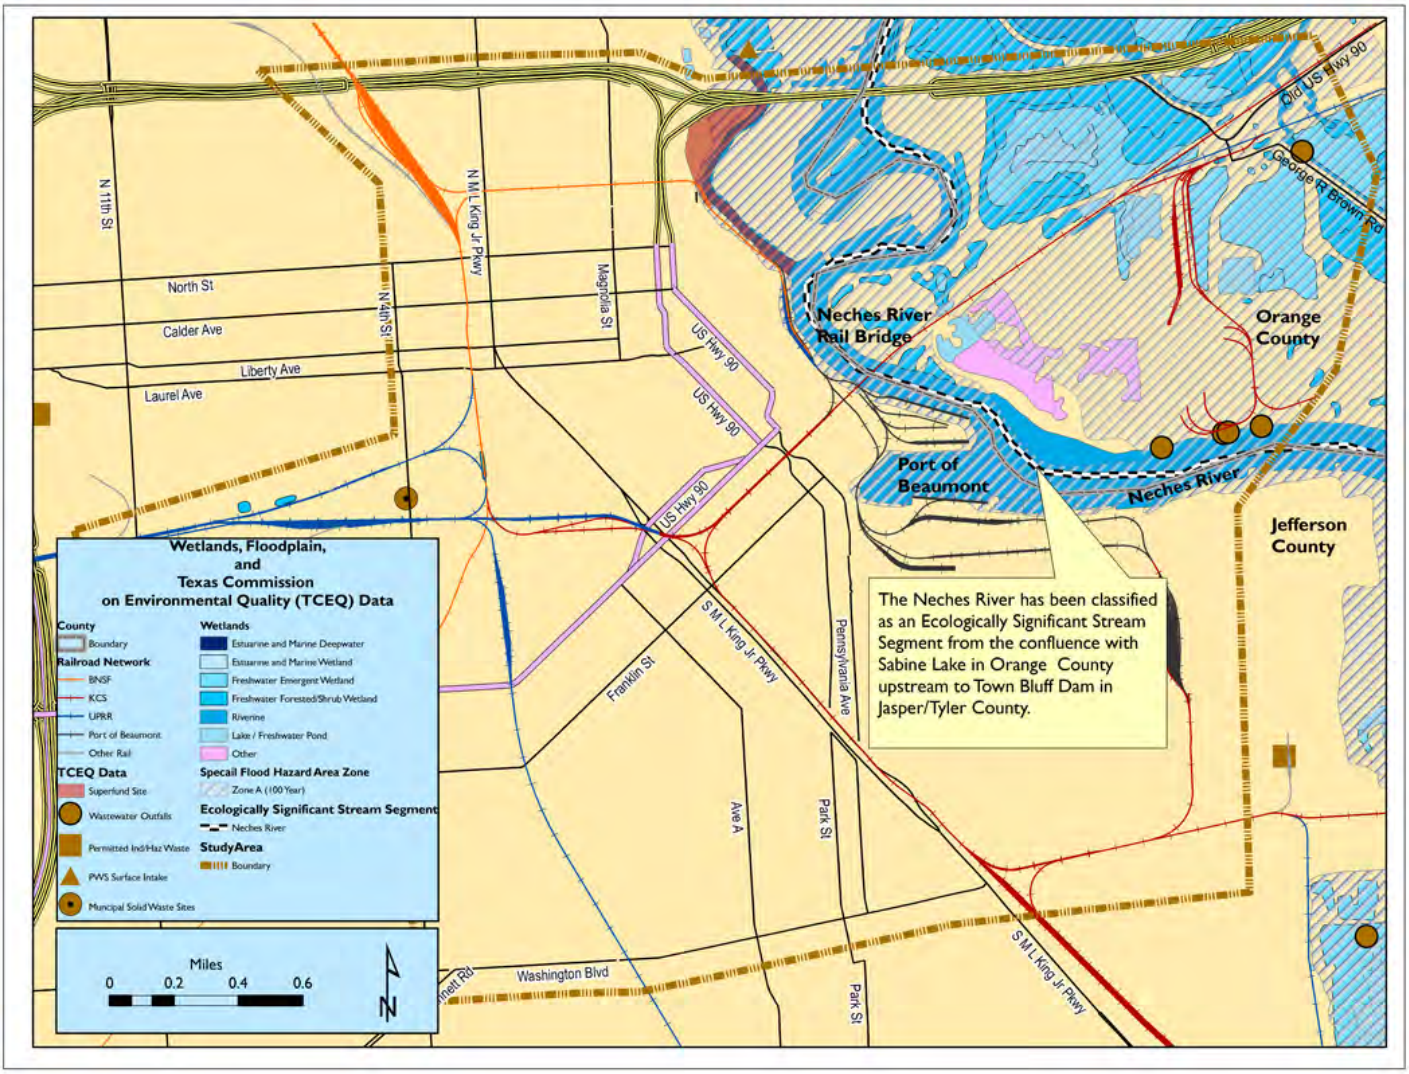
Water Resources

The Neches River flows for 416 miles through east Texas to its mouth on Sabine Lake near the Port Arthur-Orange Bridge. The Lower Neches Valley Authority is the river authority which oversees the Neches River. Except for a few miles near its head, the Neches River for its entire length serves as a boundary stream, forming the county lines between Orange and Jefferson Counties. Two major reservoirs, Lake Palestine and Lake B. A. Steinhagen are located on the Neches. Several cities are located along the Neches River, including the City of Beaumont. From Lake B.A. Steinhagen down to Beaumont, the Neches River flows through the 97,000 acres Big Thicket National Preserve. This important ecosphere preserves the area where several ecosystems converge - an event that harkens back to the last glacial period. High rainfall rates produce frequent flooding of low-lying areas, and large floods occur on the average every five years. Floods in the basin are often of long duration.



During the late nineteenth and early twentieth centuries the upper Neches River basin was the site of intensive logging. Numerous sawmills were built along the banks of the river and its tributaries during this time. After 1901, the Neches River basin became the site of large-scale oil exploration. The growth of the oil industry led to the development of the Beaumont-Port Arthur-Orange metropolitan area as a major site for oil refining, processing, and shipping. As a consequence of these developments, the waters of the Neches River became polluted. Efforts have been made to clean up the stream. An area-wide water-quality management plan was adopted for the area. But in the early 1990's the pollution problem continued, especially in the river's lower reaches.[16]

As a result of the passage of Texas Senate Bill 1 (SB1) in 1997, water planning in Texas became the domain of regional planning groups. As a part of the planning process, each regional planning group may include recommendations for the designation of ecologically unique river and stream segments in their adopted regional water plan. The Neches River from the confluence with Sabine Lake in Orange County upstream to Town Bluff Dam in Jasper/Tyler County (Texas Natural Resource Conservation Commission (TNRCC) classified stream segments 0601 and 0602) has been classified as an Ecologically Significant Stream Segment.

Wetlands and Floodplains

Figure 2.4 displays the wetlands and floodplains in the study area. The Federal Emergency Management Agency (FEMA) designated Zone A floodplain covers a significant portion of the Orange County area within the study boundary.

Figure 2.4 – Wetlands and Floodplains

Threatened and Endangered Species

The Neches River is part of the Great Texas Coastal Birding Trail. It also is considered to have a high water quality with exceptional aquatic life. Threatened or endangered (T&E) species and/or unique communities within the River include:

- Paddlefish
- Largest known population of sandbank pocketbook freshwater mussels in Texas; and

- One of the two largest populations of rare, endemic Texas heelsplitter freshwater mussels remaining.

Other T&E species within Jefferson County are listed in the Appendix. Since the study area has a large area of wetlands in Orange County, there is the potential for natural habitat for these species.

Archeological and Historic

The Neches River basin has long been the site of human habitation. Archeological excavations have discovered evidence of all stages of southeastern Indian development, beginning with the 12,000-year-old Clovis culture. Indian development reached its peak after the arrival of the Caddos about A.D. 780.

There are two recorded historic structures as designated by the Texas Historical Commission (THC) in the study area as well as several more as shown in Figure 2.5 including the Mildred Building, 1929, built by Austin Company (1400 Calder Ave.) and Idle Hours Manor, 1903, built by Frank Tipton Smith (1608 Orange). The THC offers four types of designations to recognize and protect historic and prehistoric properties: National Register of Historic Places, Recorded Texas Historic Landmark, State Archeological Landmark, and Historic Texas Cemetery.[17] The City's website identifies several other locations as "historic" within the study area as well as a Historic District in the Downtown area.[18] However, the existing rail corridors do not abut any of these sites, though the Historic District includes the former Southern Pacific Depot.

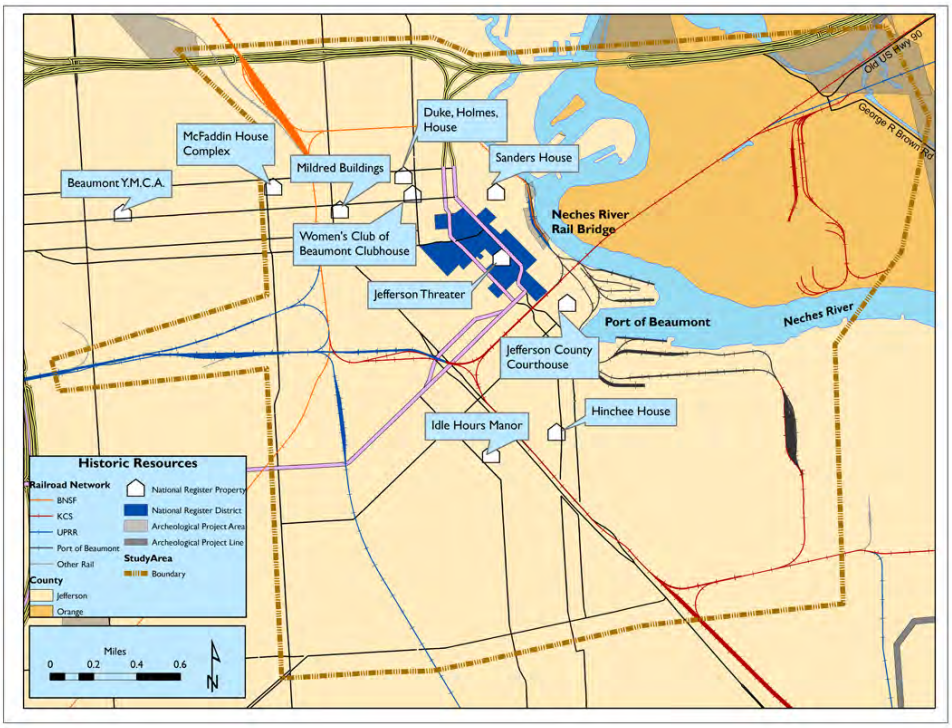
Land Use Conditions

Within Jefferson County, the major cities are Beaumont, Port Arthur, Port Neches, Nederland, and Groves. These cities generate most of the economic activity and house the majority of residents. Land uses in the central areas of these cities are predominantly industrial or commercial. Industrial activities include:

- oil refinery,
- oil and gas drilling,
- other types of petrochemical operations;
- port facilities and maritime shipping operations;
- marine construction and repair; and
- sulfur, salt, sand, and gravel mining.

Commercial land uses in the city center are mostly service oriented businesses and small retail shops. Areas on the periphery of these cities consist of residential and commercial districts as well as some agricultural areas. Residential areas are comprised of primarily low-density single-family residential units, while agricultural areas consist of cow pastures, ranches, and rice farms. Commercial districts consist of large shopping or strip malls with an assortment of stores, restaurants, and small strip malls. Institutional land uses are also prevalent. Community facilities within the study area are shown in Figure 2.6.

Figure 2.5 – Historic Resources



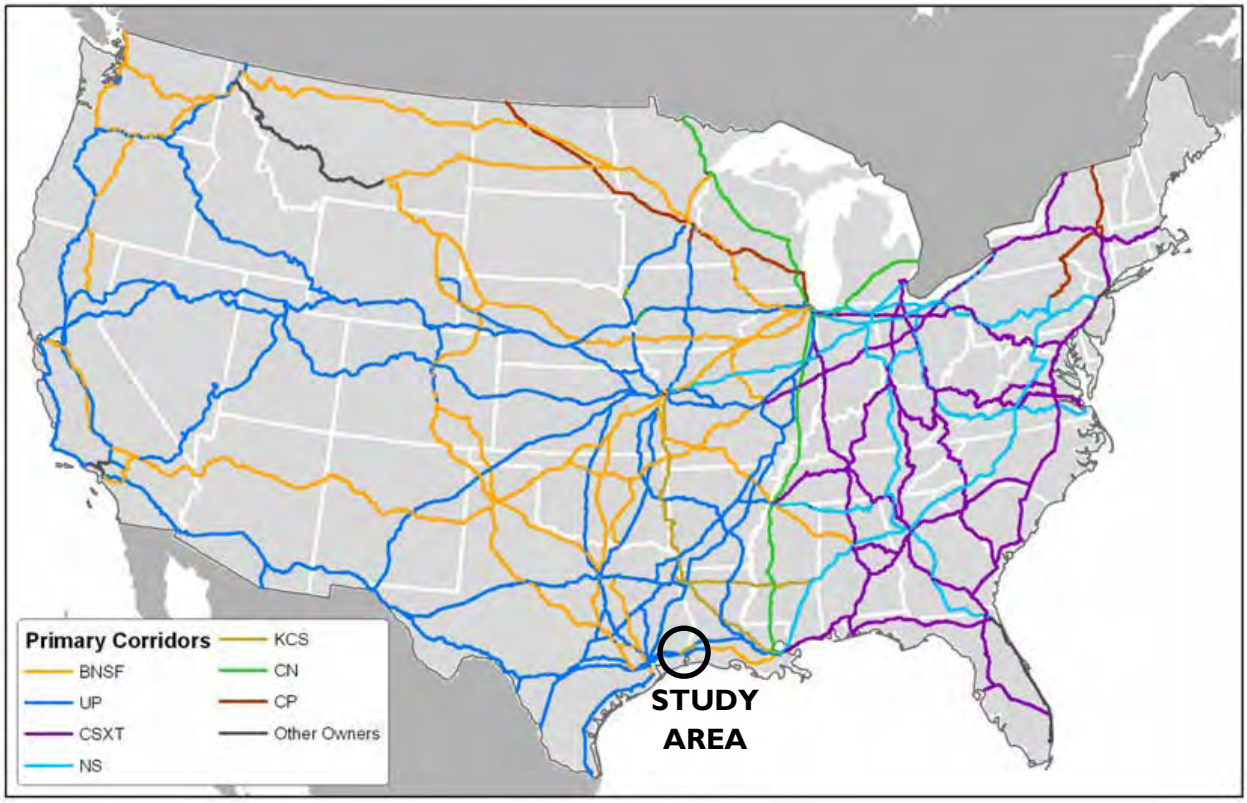


Figure 2.6 – Community Resources

Inventory of Existing Rail System

This section discusses the rail systems of the three Class I railroads operating in the Beaumont area. It begins with a depiction of the freight rail carrier's national system and then moves into the regional system. In a similar manner, the passenger rail system is discussed. Elements of rail corridors are included with the identification of key at-grade crossing and service provide to local industries. Primary rail corridors throughout the contiguous United States are shown in Figure 2.7. These primary corridors are defined by a variety of measures such as volume of traffic, weight of traffic and value of traffic moved along the corridors. The Union Pacific Railroad section east of Houston through Beaumont, with the KCS bridge over the Neches River, is identified as a primary rail corridor.

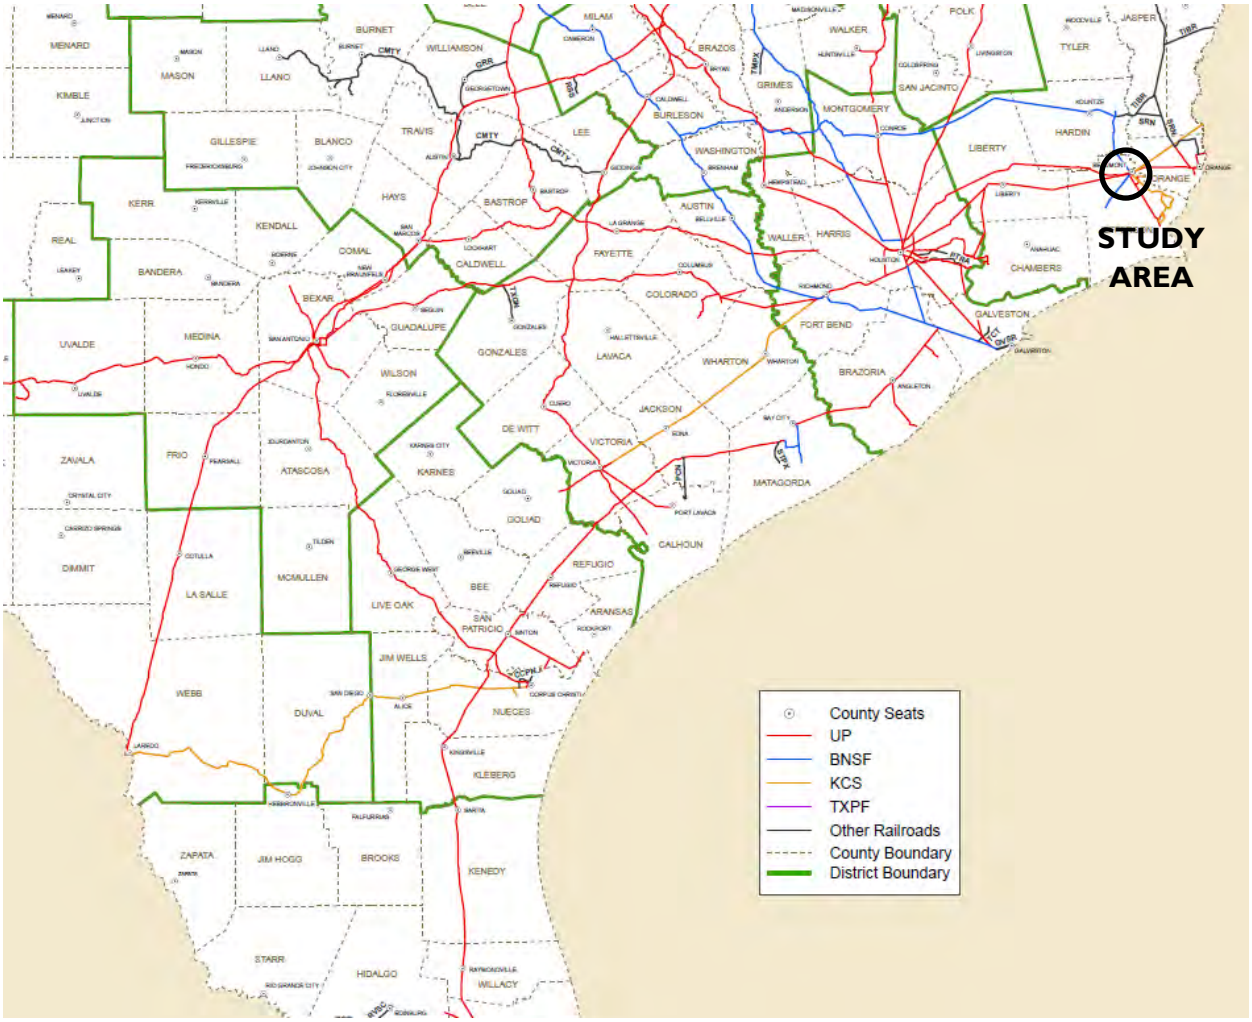

Figure 2.7 – Primary Rail Corridors – Contiguous United States

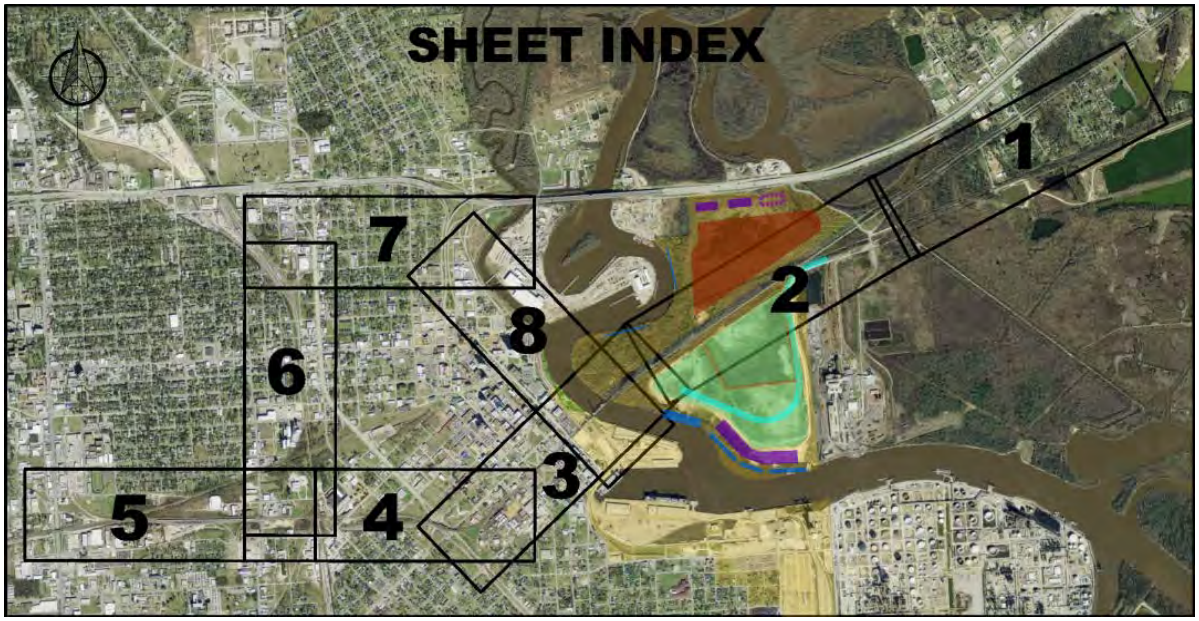
Freight Railroads



Three Class I railroads utilize the Neches River bridge in the City of Beaumont, Texas. These railroads are the KCS that owns the bridge as well as the UPRR and the BNSF Railway which operate via trackage rights and in turn pay a fee to KCS. Figure 2.8 shows an overview of these railroads and others (including shortline railroads) in the southern portion of the State of Texas along the Gulf of Mexico from the border with Louisiana to Mexico.

Figure 2.8 – Rail Map of Southern Texas

Each of the railroads is defined initially at a larger national perspective and then in a more regional perspective including the Beaumont region. Typically the descriptions follow the railroads milepost (MP) conventions which often increase when travelling westward. To assist in gaining an understanding of the location and context of the rail network, a series of maps is provided in the Appendix of existing conditions at 1" equals 200' scale with aerial photography. Figure 2.9 shows the limits of mapping and a sheet index for the study area beginning east of the KCS-UPRR split, west across the Neches River to a point on the Union Pacific line near IH-10. A loop is then made along BNSF tracks north to its Beaumont Yard and then to the Port of Beaumont at its junction with the KCS.

Figure 2.9 –Sheet Index Map of Existing Conditions in Appendix

Kansas City Southern (KCS) Railroad

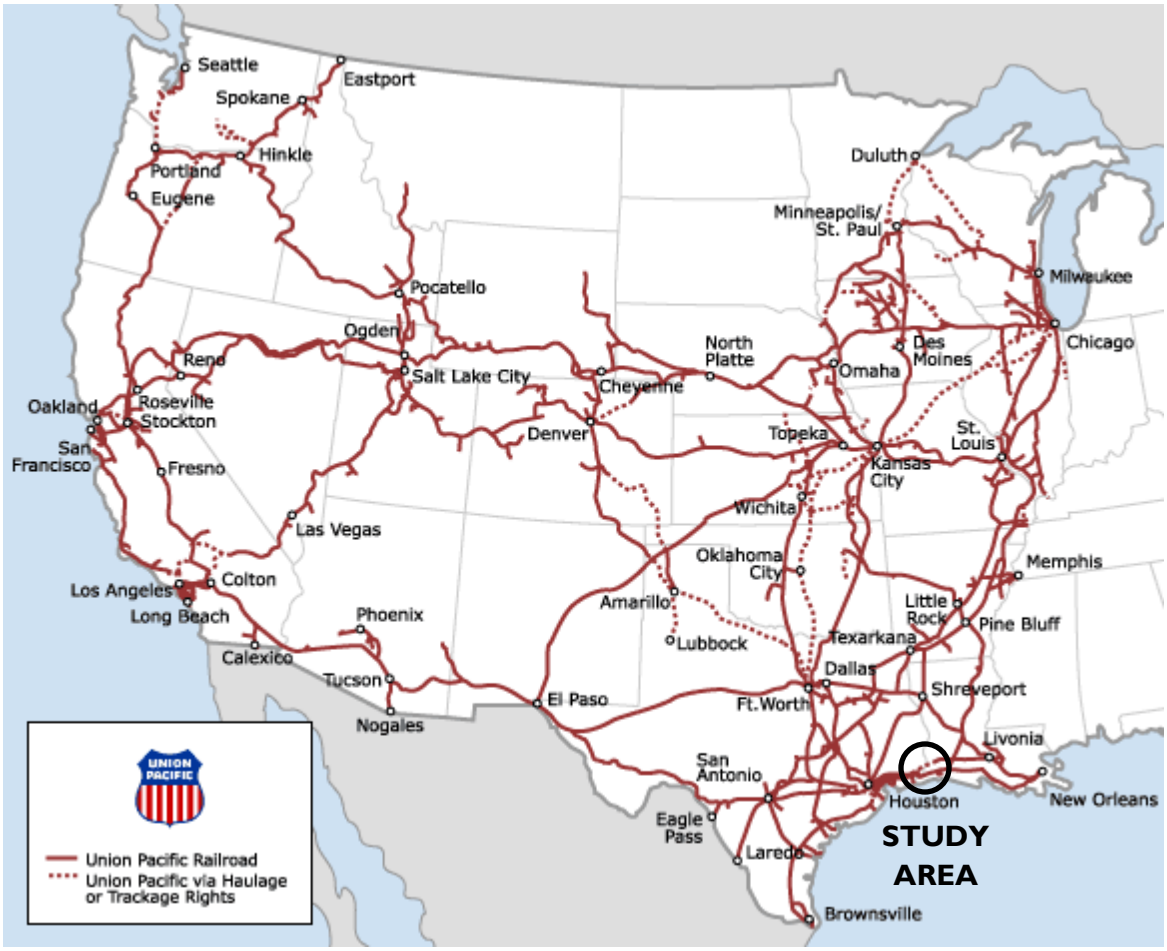
The Kansas City Southern Railroad is concentrated in the central Midwest and is an international railroad with service into Mexico as shown in Figure 2.10. Access to the Mexican market is through Houston, via DeQuincy, Louisiana and Beaumont, Texas.

For purposes of the Beaumont study area (and shown in the Appendix Exhibits 1 through 3), the KCS rail corridor begins at MP 763.4 and its stationing increases heading westward towards the Neches River. The rail corridor is a single track with varying right-of-way. There are two pertinent at-grade crossings of the KCS in Orange County; Rose City Drive (MP 763.79) and Old US 90 (MP 764.61). Near Rose City Drive, the right-of-way is 100 feet, while west of Old US 90 the right-of-way widens to 200 feet with the majority of available right-of-way on the north side of the track. At MP 764.87, there is a turn out to the UPRR track that goes to Orange, Texas and onward to Lake Charles, Louisiana.

The KCS track crosses the Neches River on a lift span bridge from Orange County to Jefferson County, Beaumont. On the west side of the bridge, the track has a diamond crossing to the Port of Beaumont before an equilateral turnout expands the line to double track to the wye approximately a mile to the west. At the wye, the KCS track turns south for more than 20 miles to reach Port Arthur. For nearly 1.25 miles, the KCS is physically separated from Martin Luther King (MLK) Parkway (TX 380) on an overpass structure. The Chaison Yard and service to numerous industries are on the line to Port Arthur. Chaison Yard has a capacity of approximately 420 railcars. The wye is commonly referred to as Gulf Coast Lines (GCL) junction or Station 13. The KCS rail corridor between Main Street and Trinity Street is identified on the track charts as having a 50 foot right-of-way on both sides of the centerline. Available property line information illustrates a total right-of-way width of 60-feet. There are three at-

grade crossings (Pearl, Neches and Trinity Streets) and a rail overpass with Park/Orleans Streets within the study area for the KCS. The crossing at Main Street is closed.

Figure 2.10 –Kansas City Southern Rail Map



KCS track also continues westward through the former Wall Street Yard to the KCS-UPRR interchange near Cedar Street. Three tracks are elevated over the junction of US-90 (the one-way couplet of College and Wall Street) and MLK Parkway (TX 380). There is one at-grade crossing with Crockett Street.

Union Pacific Railroad (UPRR)

The Union Pacific Railroad has 31,900 route miles covering 23 states across the western two-thirds of the United States and is shown in Figure 2.11. The UPRR is headquartered in Omaha, Nebraska. The UPRR has an extensive presence in Texas with its major markets including Houston as well as several border crossings into Mexico. East of Houston, through Beaumont, the UPRR connects to New Orleans and its international markets.

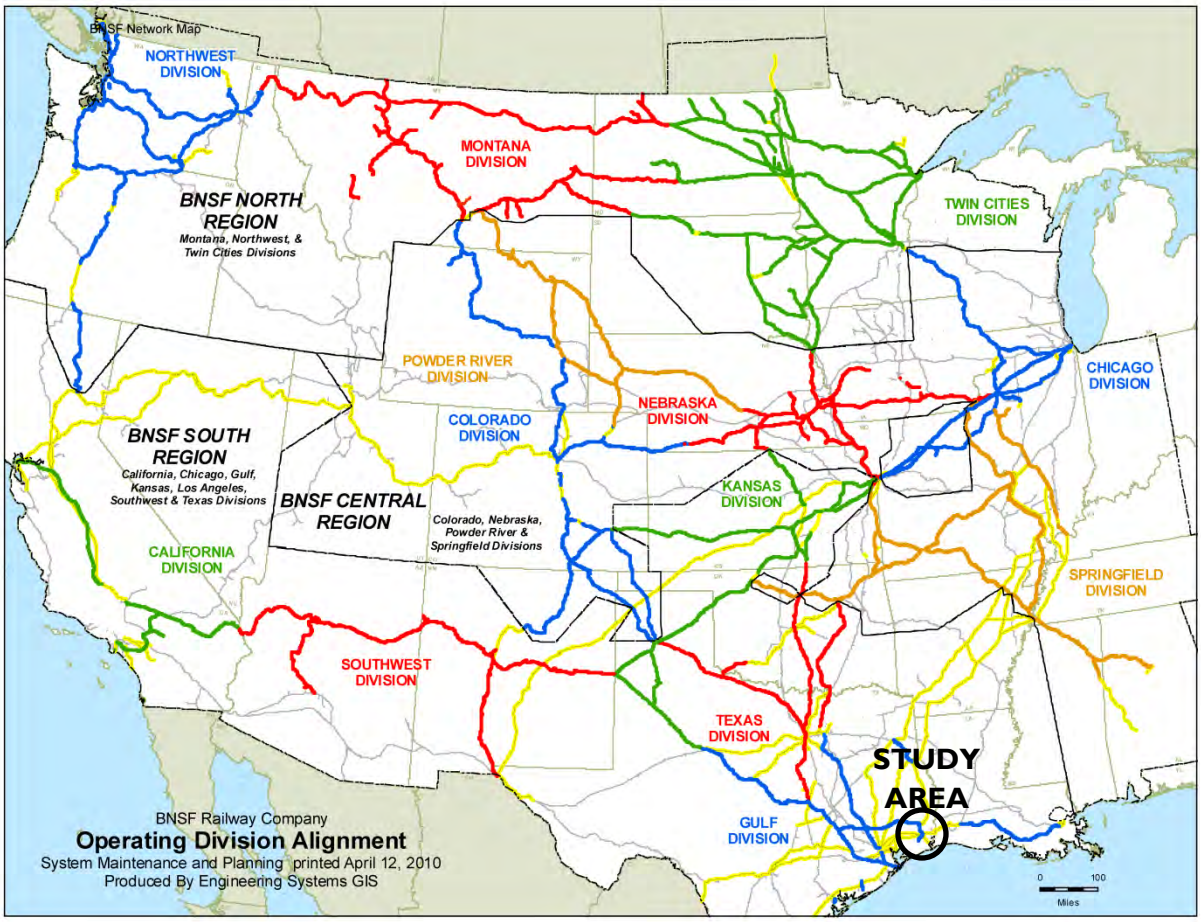
Figure 2.11 – Union Pacific Railroad National Map

For purposes of the Beaumont study area, this rail corridor begins at MP 275.5 and its stationing increases heading westward towards the GCL Junction (approximate MP 278.0 and an equivalent station of MP 461.0). East of the UPRR/KCS Junction at Tower 31, east of the Neches River, the rail corridor is a single track within a 200 foot right-of-way. There is a public at-grade crossing of George Brown Road and then an assumed private crossing of an industrial siding which serves Gerdeau Ameristeel.

The UPRR double track continues westward from the joint KCS-UPRR double track at the GCL Junction crossing Crockett Street at-grade and then the railroad is grade separated over both 4th and 11th Streets. In between 4th and 11th Streets on the south side is UPRR's East Yard. UPRR's two main tracks continue westward for five miles to MP 456.0 near Dowlen Road before splitting to directional single tracks. Directional running, which in essence provides double track capacity, west of Beaumont utilizes the former Southern Pacific (SP) railroad for westward movements and the former Missouri Pacific (MP) Line for eastward movements.

Also in between 4th and 11th Streets north of the Municipal Waste Site at a diagonal is the former Southern Pacific alignment. UPRR now owns this track and utilizes it and several turnouts. The Amtrak station is located on the north side of these tracks immediately east of 11th Street. South of the UPRR-KCS Junction, another UPRR line continues to Port Arthur. UPRR's South Yard is located on this line between Crockett and Gilbert Streets. There are ten at-grade crossings along this rail corridor within the study area before Washington Boulevard. Two tracks cross US-90 which has over 30,000 vehicles per day at this location. A little more than two miles south of Washington Boulevard is a service track to the east to Exxon-Mobil's refinery. The UPRR owns several rail yards in Beaumont with a total capacity of approximately 1,700 cars.

With 24 percent of all freight cars handled by UPRR originating or terminating in Southern California, the Sunset Route is a key corridor for North American railroads. The Sunset Route is an important transcontinental route for package express business, finished automobiles, and grain. Less than one quarter of the Sunset Route had a second double-track when UPRR acquired it in 1996 as part of the merger with Southern Pacific. Since then UPRR has built 292 miles of new main line double-track through this corridor to handle the nation's growing freight traffic.



Burlington Northern and Santa Fe (BNSF)

The BNSF Railway Company (BNSF) , headquartered in Fort Worth, Texas operates one of the largest railroad networks in North America with 32,000 route miles covering the western two-thirds of the United States. Because of its extensive network in Texas alone, Figure 2.12 focuses in on BNSF's Gulf Operating Division. As BNSF does not have a hub in Houston, its presence through Beaumont is less prevalent than the other railroad companies.

For purposes of the Beaumont study area, the BNSF rail corridor begins at MP 0.0 (equivalent Union Pacific MP 30.0) and its stationing increases heading northward towards its yard, a portion of which passes beneath Interstate 10. The yard has a capacity of approximately 600 railcars. The rail corridor is a single track within an approximate 100 foot right-of-way with 1st Street parallel on the west side and Gulf Street parallel on the east side. There are six at-grade crossings south of the BNSF Yard. Between

Broadway and Calder Avenue, the horizontal alignment of the tracks shifts approximately 60 feet to the east.

Figure 2.12 – Burlington Northern and Santa Fe (Gulf Operating Division)

East of the BNSF Yard is a wye with a service track (Track 72) that is located in the middle of the Long Avenue right-of-way. The street right-of-way is approximately 60 feet wide and the road pavement is approximately 24 feet wide. The rail passes beneath US-90 before turning south along Pine Street and the west bank of Brake's Bayou. The BNSF recently upgraded the north connection along Long Avenue to the existing Port Interchange Yard which serves as their primary entrance accommodating nearly three-fourths of BNSF traffic. To access the Port of Beaumont, BNSF trains also use the diamond crossing immediately west of the Neches River Bridge. A former (now inactive) spur line crossed Brake's Bayou to Chicago Bridge and Iron. South and west of the UPRR-KCS interchange is the single track BNSF Subdivision to Fannett. Within the study area the BNSF has six at-grade crossings along the approximately 80-foot wide right-of-way.

Port of Beaumont

The Port of Beaumont is accessible from the Gulf of Mexico and Intracoastal Waterway via the federally maintained Sabine-Neches Ship Channel, 42 miles upstream from the Gulf. It is the fourth busiest port

in the United States according to the American Association of Port Authorities. It is also the busiest military port in the U.S. and the headquarters of the U.S. Army's 842d Transportation Battalion, which specializes in port logistical activity. For purposes of the Beaumont study area, the rail serving the Port is focused upon the Port's Interchange Yard. Trains entering the Port of Beaumont are directed into the Port's Interchange Yard. The existing interchange yard for the port is located on the north side of the main line while the port is on the south side. The interchange yard, located along the Neches River, has six tracks. Five of the tracks are short storage tracks that have a total capacity of approximately 100 - 120 rail cars. The short length of these tracks requires the BNSF, UPRR, and KCS to split up inbound trains so that a single train can be made to fit. The lowline (lowest elevation track) from the interchange yard is below the high-water surface elevation and often stays wet. It has a 17'-6" clearance so it is used primarily for storage or movement of empty cars. The highline (highest elevation track) is used for loads traveling between the Interchange Yard and the Port. This track has a diamond crossing of the KCS track immediately west of the Neches River Bridge. Interchange yard tracks 3 and 4 currently prohibit the use of six-axle locomotives in favor of the four-axle locomotives used primarily for local traffic and yard work.

The Port of Beaumont's Master Plan

This text focuses upon the Port's Orange county facilities which at this time appear to have begun development yet can be considered to be in the early stages of full build out. The Port's Master Plan presents an exhibit of potential facilities as shown in Figure 2.13. Major elements have been transposed onto the study's base-map to allow for an integrated planning effort. The Orange County port facilities can be divided into two basic areas that are physically separated by the KCS tracks. Under existing conditions, a crossing of the KCS tracks is not provided. Consequently the access to the two areas (north and south of the KCS) is described separately.

The site north of the KCS tracks is approximately a 215 acre area bounded on the north by the IH-10 eastbound frontage road, Old US-90 on the east side, the KCS tracks on the south side and the Neches River on the west side. Currently a large depressed area is in the center of the parcel. This depressed area is proposed as a 60 acre dredged disposal area. Along the nearly 2,200 foot of IH-10 frontage, a series of leased warehousing is proposed. A vehicular access drive is shown from Old US 90 heading westerly south of the dredge disposal area and then turning to cross the KCS tracks into the south parcel of the Port. Along the Neches River frontage, two container-on-barge wharf facilities are proposed. Water access to and from these wharfs will require a lift at the KCS bridge. No rail service is currently provided nor is shown as proposed to this parcel north of the KCS tracks.

The site south of the KCS tracks is approximately a 250 acre area bounded on the north by the KCS tracks, the rail tracks of the Gerdeau Ameristeel facility on the east side, and the Neches River on the south and west side. Currently vehicular access is provided from George R. Brown Drive which leads into Gerdeau Ameristeel and has an at-grade crossing of the UPRR tracks. Rail service to the property is an extension of the service tracks to the steel facility. The rail service would follow the eastern property line and reach a dock on the Neches River. Other tracks would swing up into the site to access an open storage area. Several general cargo docks are shown along the Neches River that could serve up to five ships.

Figure 2.13 – Port of Beaumont Master Plan (Orange County)

Amtrak

Amtrak provides intercity passenger rail service in Texas via the Sunset Limited, Heartland Flyer, and the Texas Eagle which serve most of the State's major urban areas, as shown in Figure 2.14. The Sunset Limited as shown in Figure 2.15 provides service to the City of Beaumont. The Sunset Limited's current schedule runs three times a week in each direction. Westbound trips stop in Beaumont on Mondays, Wednesdays, and Fridays while eastbound trips stop on Tuesdays, Fridays, and Sundays. Ridership at the station in Fiscal Year (FY) 2010 was 2,135 or approximately 40 passengers per week.

The Amtrak station is located at 2555 West Cedar Street. Facilities include a small unattended parking lot and 650 foot long platform. Recent improvements were made at the station for passengers requiring wheelchairs as well as adding lighting, a small passenger shelter, and other site improvements.

Figure 2.14 – Amtrak Passenger Rail Lines National

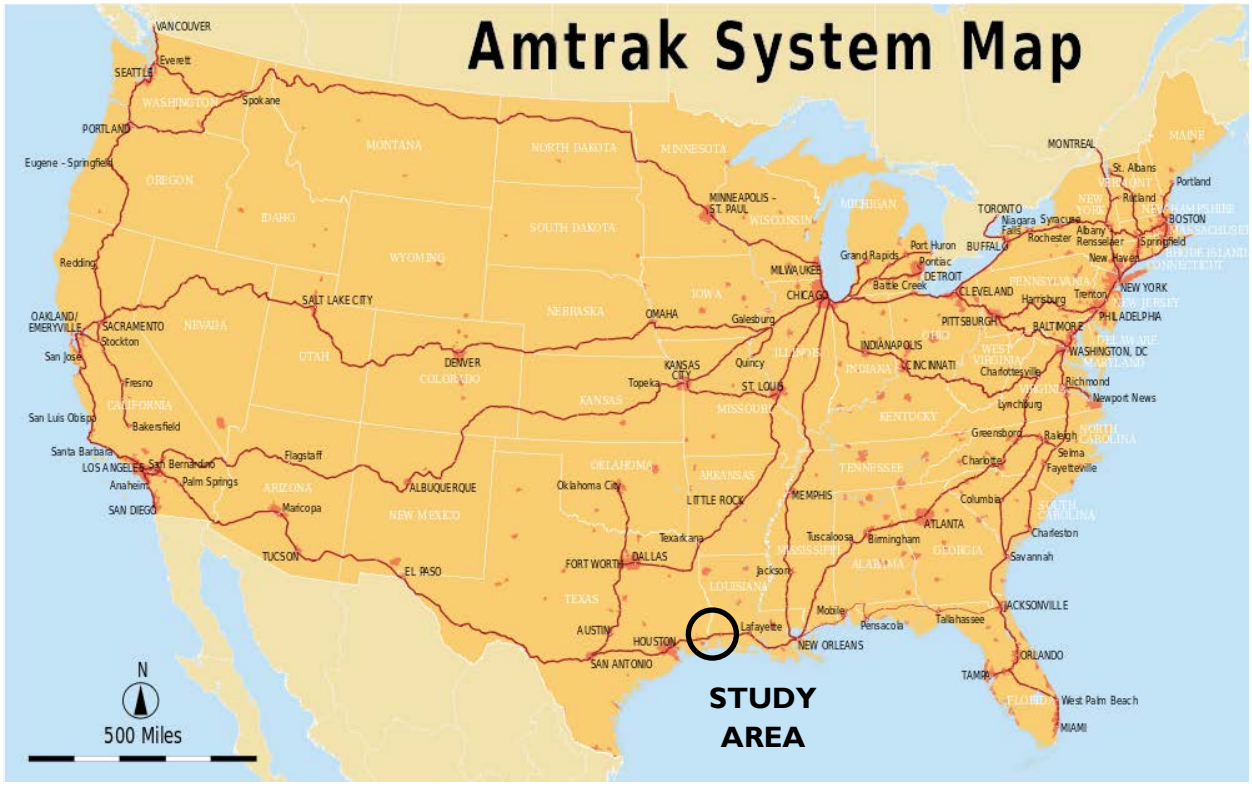


Figure 2.15 – Amtrak Sunset Limited Route

Rail Corridors

This section on rail infrastructure focuses upon the primary east-west corridors within the Study Area. Additional rail service is provided in a north-south direction via several spur lines. An understanding of train traffic volumes in the next section confirms this perspective of primary east-west movement. While many of the rail corridors are under one principal owner, trackage rights along the corridors allow other railroad carriers under an operating agreement to utilize the rail corridors.

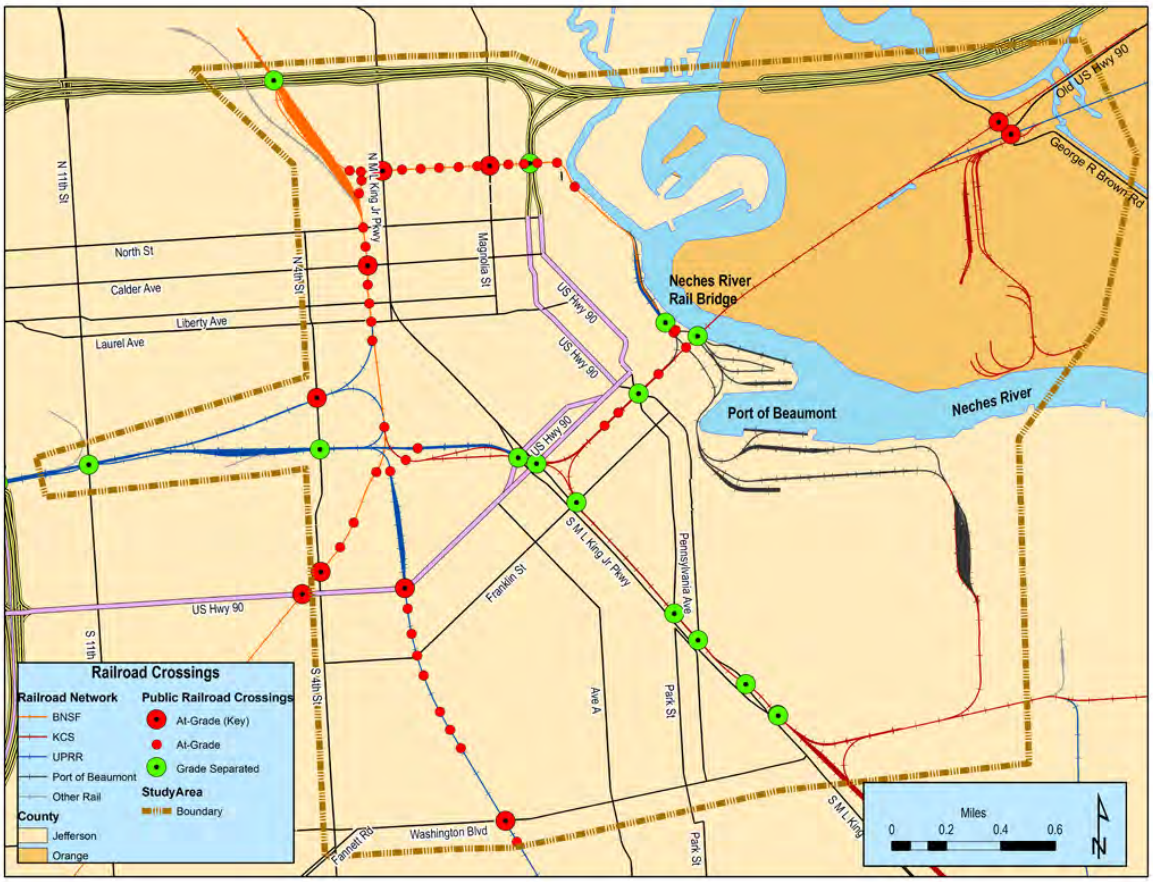
The primary east-west rail corridor through the Beaumont area is maintained by the KCS and UPRR to the appropriate Federal Railroad Administration (FRA) classification based on the posted speeds. A review of the Beaumont Time Schedule, dated September 1, 2010 indicates the following posted speeds:

- 50 mph (miles per hour) on the KCS tracks east of the KCS/UPRR split (single track),
- 50 mph on the UPRR tracks east of the KCS/UPRR split (single track),
- 40 mph on the KCS tracks east of the Neches River bridge to the KCS/UPRR split (single track),
- 20 mph from the Gulf Coast Line (GCL) wye on the KCS tracks (double track to Main Street) through the Neches River bridge (single track),

The Neches River rail bridge is a vertical lift span bridge that allows river traffic to pass under the bridge. River traffic appears equally split between industrial barges and pleasure craft. The Beaumont Yacht Club immediately north of IH-10 has four launch ramps and several covered and uncovered slips. The bridge is in the rail-locked position until a navigation request is made to raise the lift bridge, generally to a requested vertical clearance. Information supplied by the United States Coast Guard (USCG) indicates approximately 400 lifts per year.[19] The bridge is controlled from the KCS Kansas City, Missouri dispatch office. Data from KCS indicates 7 lifts in a six day period (Monday, September 12 through Saturday, September 17, 2011) which is consistent with the USCG's annual lifts.

The railroad lift bridge across the Neches River is located at navigation mile 19.5. It has a maritime horizontal clearance of 200 feet, a vertical clearance of 13 feet above mean low water in the closed position, and a vertical clearance of 150 feet above mean low water in the open position. Note that the stated vertical clearance on the National Oceanic and Aeronautical Association (NOAA) charts is 145 feet. These clearances have been adequate to date, as the USCG has not received any complaints from waterway users.[7] From a railroad perspective, the bridge's truss structure can accommodate double stack train cars. While train speeds are limited to 20 mph, this is in part associated with the track geometry immediately west of the bridge. Because of the track and bridge conditions, capital investment improvements are currently planned including the replacement of the west timber approach and cables and sheaves on the lift bridge.

In the case of westward trains, trains are held at the KCS/UPRR split at Tower 31 in order to avoid blocking road crossings. Thus the KCS dispatcher cannot send a train across the river bridge until the UPRR dispatcher releases a signal in their territory in order to prevent trains from stopping on the bridge



Key At-Grade Crossings

Nearly 100 highway/rail at-grade crossings (active, inactive and former crossings) were initially identified within the study area. After a field reconnaissance, review of roadway functional classifications and vehicular traffic volumes at the railroad crossings, the list of active key highway/rail at-grade crossings of public streets was reduced to ten (10). These ten crossings were viewed as representative of key rail corridors (for both existing conditions and potential future alternative corridors) at the crossings of important community roadways. For reference purposes, additional active at-grade crossings as well as grade separated crossings are shown with the key at-grade crossings selected in Figure 2.16. This data

establishes the existing conditions for the at-grade crossings. The key crossings were evaluated within a series of corridors using "GradeDec.net" which is a decision support tool developed by the Federal Railroad Administration (FRA) for benefit-cost analyses of investments involving highway-rail grade crossing improvements.

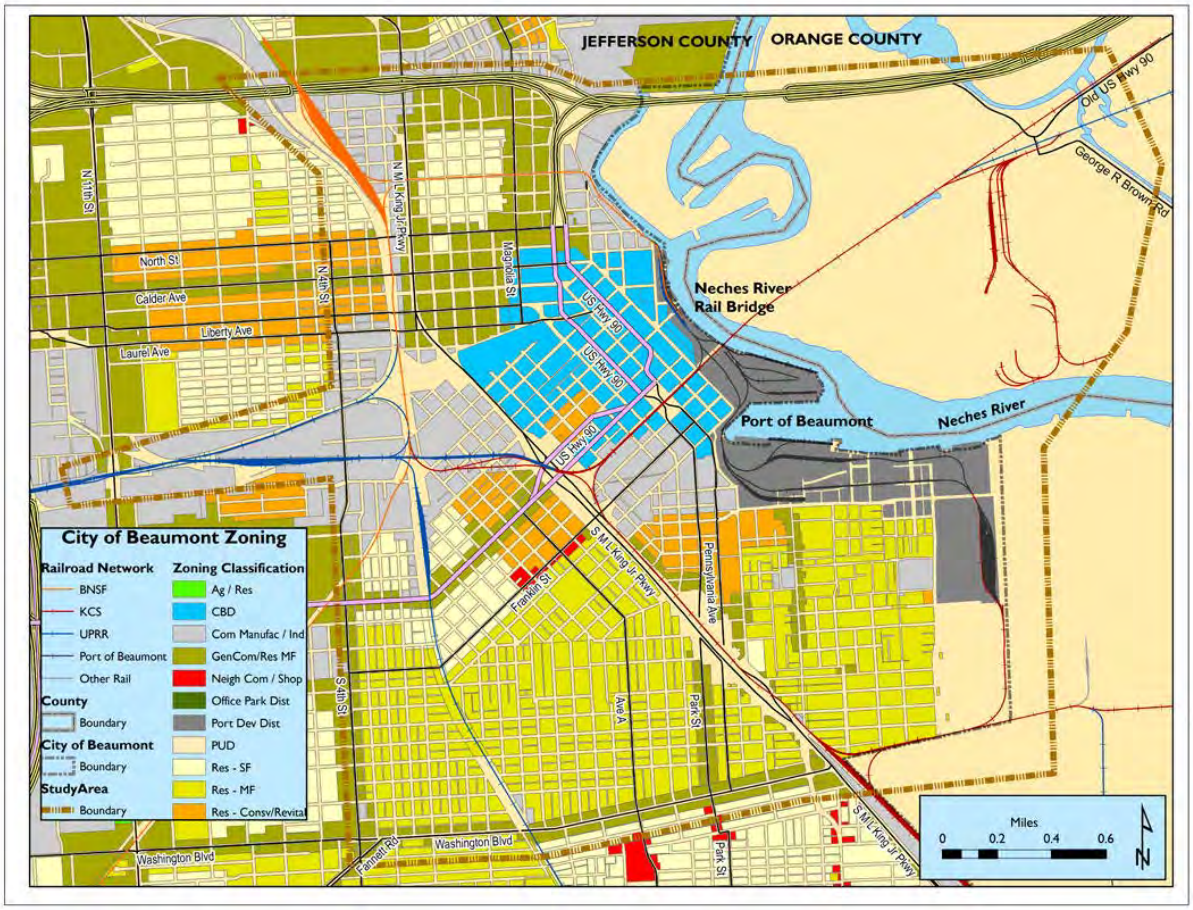
The key at-grade crossings are located at collector and arterial streets within Beaumont and at two locations in Orange County. It is anticipated that these crossings could be impacted by growth in either train or vehicular volumes or both, as well as changes to train volumes based upon potential new alignments. The highest vehicular traffic volumes are along US 90 at the BNSF Gulf Silsbee crossing and the UPRR Lafayette crossing. The BNSF Port of Beaumont line also crosses Martin Luther King (MLK) Parkway with an average daily traffic (ADT) volume of 27,000. While these crossings were identified as key locations, the majority are currently equipped with gates and flashers. The next level of improvement would be a grade separation between the rail and roadway.

Figure 2.16 – Key At-Grade Crossing Locations

Local Industries Served

Many local industrial and distribution companies are served by rail. As a city and region served by railroads for over 100 years, numerous industries have developed adjacent to the rail corridors over decades. In fact much of the local and regional industrial land uses are located near the rail corridors as shown in Figures 2.17 and 2.18. While some industry spur lines have been removed, many others remain active. The industries are located within the central downtown area of Beaumont as well as along the City's edges, including immediately west of the Beaumont Airport. The KCS recently assisted in the development of the 400-acre Triangle Marine Industrial Park. The industrial park has access to a 23-acre rail yard and includes a switching yard with a 150-car capacity, which could potentially be expanded to 300 cars. The site has 1,700 feet of frontage on the Neches River with 3 deep water docks and a 90-acre turning basin.[20]

Figure 2.17 – Land Use within Study Area



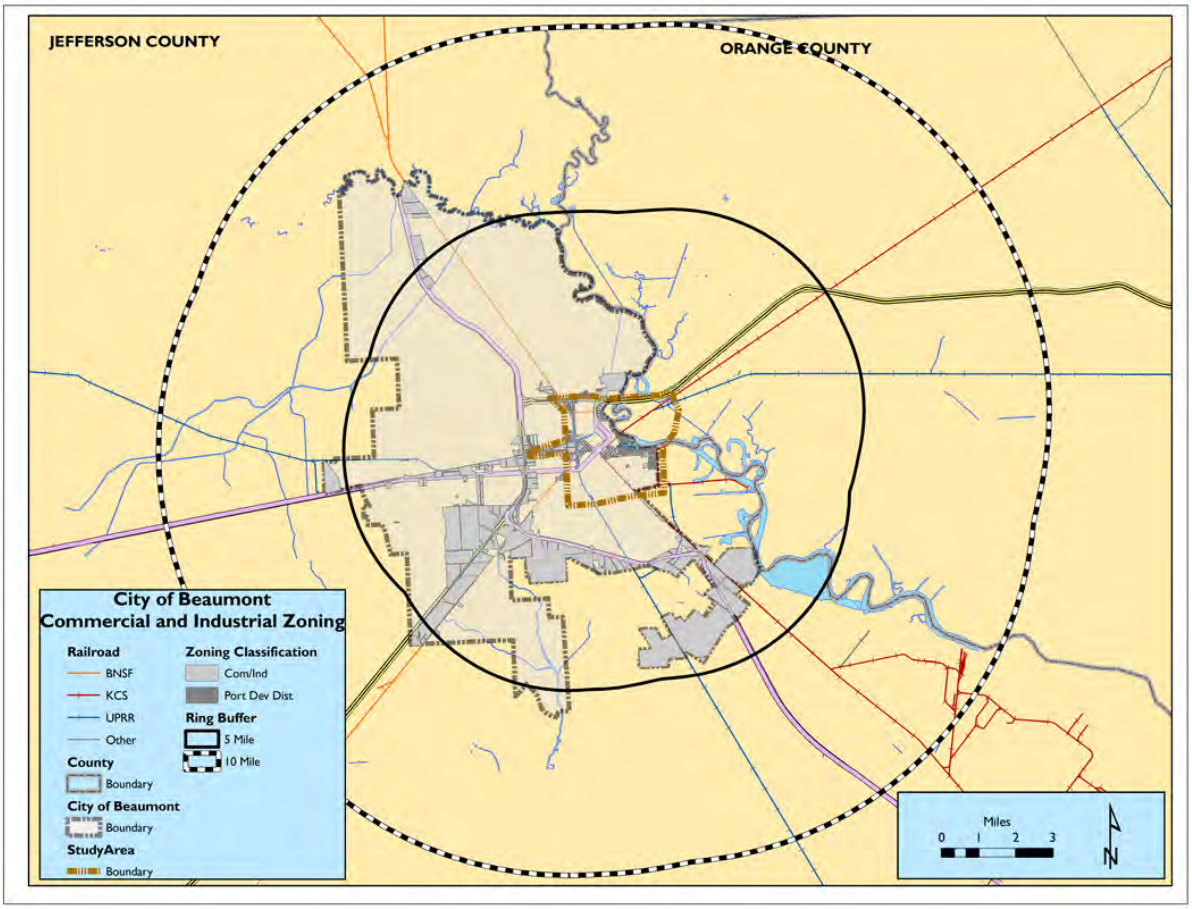


Figure 2.18 – Industrial Land Use in Beaumont Region

There is a neck of land located between Brake's Bayou and the Neches River as well as between the IH-10 and the KCS bridges that formerly had rail service. While within Jefferson County, the area is outside the City of Beaumont. Since the early 1900's, the land was used for shipbuilding. During World War II, its two side-launch ways were increased to four. In 2006, Trinity Industries sold it to Chicago Bridge & Iron (CBI) for use as a fabrication base for CBI's contracts to construct Liquefied Natural Gas (LNG) import terminals. Trinity Industries has moved some five miles to the east near Vidor with service from the UPRR line.

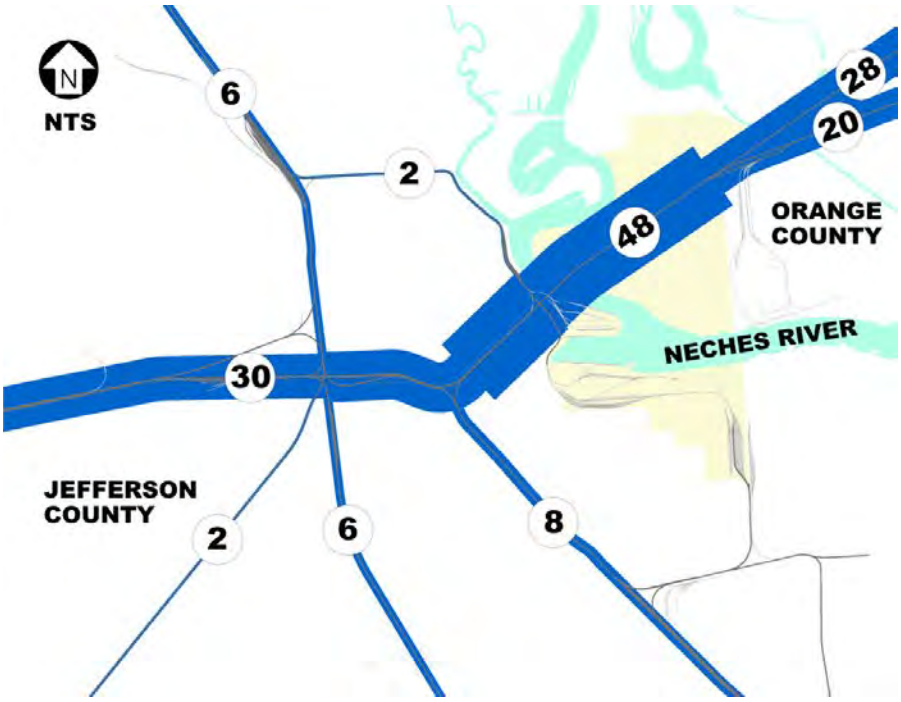
Current Railroad Operations

This section provides an overview of train operations in and around the Beaumont region that could directly affect operations within the Study Area. First existing traffic volumes are discussed then the operations at various yards. Also discussed is the topic of crew changes on the KCS and UPRR railroads.

Existing Rail Traffic Volumes

The daily train count across the Neches River bridge ranges between 40 to 50 trains based upon the most currently available information in the FRA's database of crossing. Figure 2.19 represents that information as a band of varying thickness similar to the national figure shown in Figure 2.20.

Figure 2.19 – Daily Train Volumes Beaumont Area (FRA database)



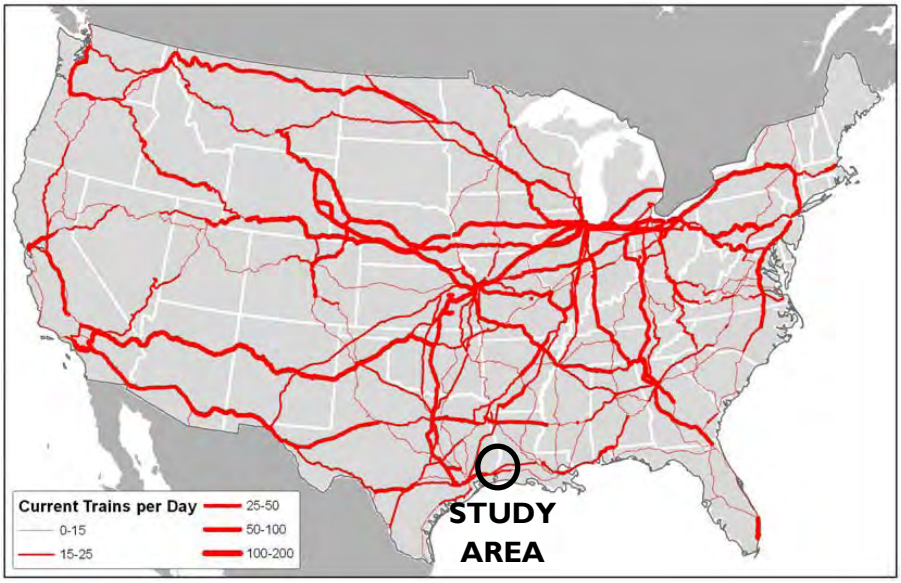


Figure 2.20 – Daily Train Volumes - National

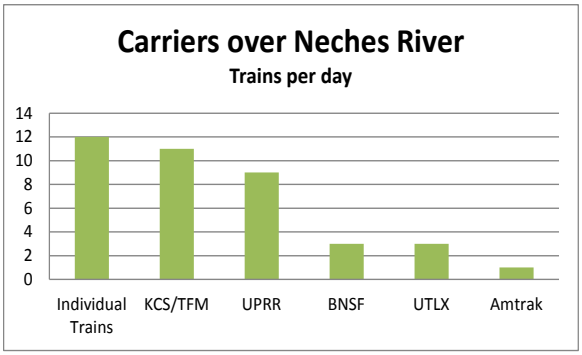
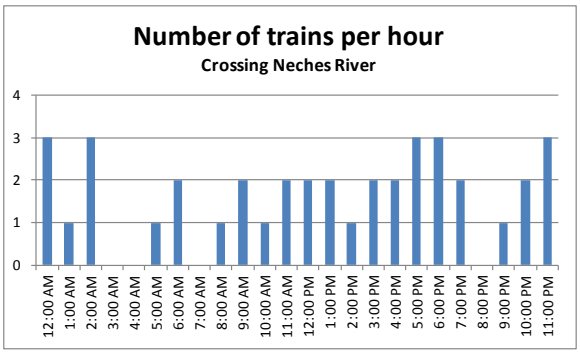




A daily breakdown of trains crossing the Neches River bridge was received from the KCS railroad. A review of this spot location shows:

- A total of 39 trains in a day cross the Neches River bridge, including one Amtrak train
- The average speed across the bridge ranged from 11 to 21 mph (average speed of 14.8 mph),
- The length of trains ranged from 7 to 118 cars, averaging over 60 cars per train, and
- The maximum number of trains that crossed in an hour was three (3), which occurred five times throughout the day.

A range of distribution by carriers occurred as shown in Figure 2.21. Individual trains include CSXT, DTTX, GMTX, IBT, MDW, NAHX, SRN, TILX, TPIX, TR, TTGX, and XOMX.

Figure 2.21 – Sample of Neches River Rail Crossings

While requests for bridge openings can occur at any time, most occur during daylight hours. Each request to raise the bridge includes a clearance (in feet) which allows the bridge to open only as high as necessary to accommodate river traffic. Data provided by KCS over a random six day period indicates:

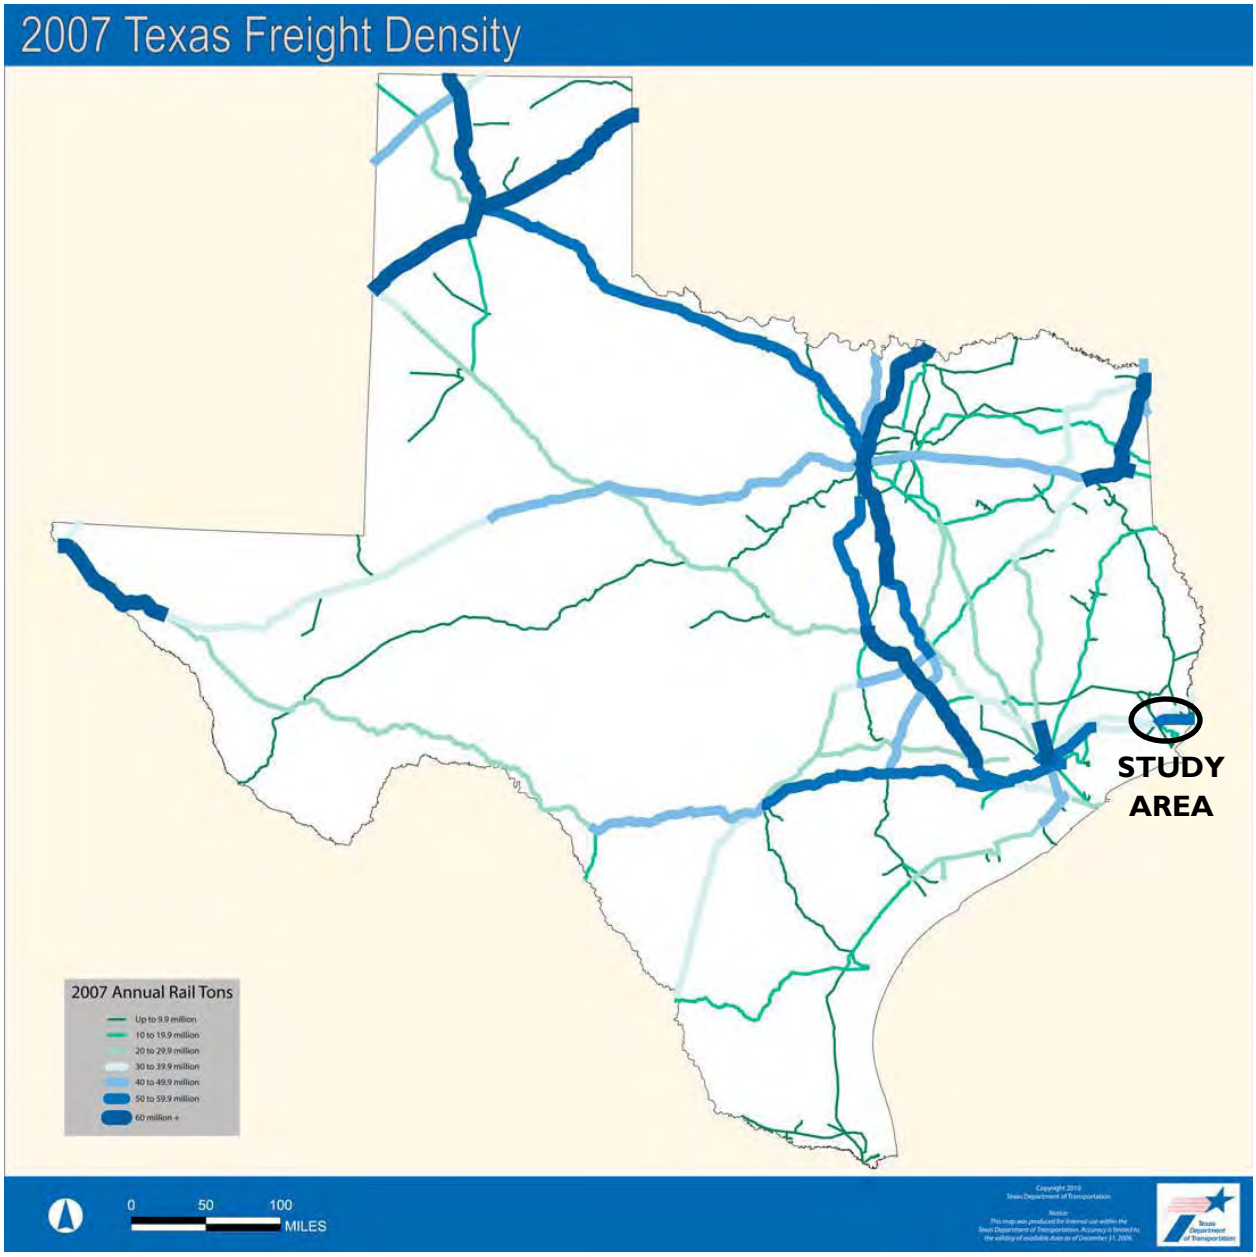
- Requests for seven (7) lifts, for four northbound and three southbound marine vessels,
- The requests occurred on Monday, Wednesday Thursday and Saturday,
- Two boats on a Saturday were identified as pleasure craft, and
- The requested clearance ranged from 30 feet to 70 feet.

The raising of the bridge can result in some train delays, especially for trains going in the same direction across the bridge as they must be separated by two signals in order to prevent a train from stopping on the bridge. Trains traveling in opposite directions do not have to be separated by two signals. Typically the bridge stays open to river traffic between 15 and 30 minutes. However it may be open longer due to river traffic not appearing at the time requested or mechanical issues with the bridge. Mechanical issues often occur with high temperatures as experienced in the summer of 2011.

Additional national, state and regional data illustrate similar patterns of usage based upon tonnage. For example Figures 22 and 23 illustrate 2007 annual rail tons across the state of Texas and in more detail the Texas East Region. Typically any rail corridor with 30 or more million gross tons (MGT) is considered a critical rail corridor because it represents a significant level of business to the rail carrier.

It is also worth noting that with UPRR's directional running of traffic west of Beaumont and with the KCS-UPRR split east of Beaumont, the tonnage through Beaumont is far in excess of 30 MGT.

Figure 2.22 – Freight Density - Annual Rail Tonnage - Texas



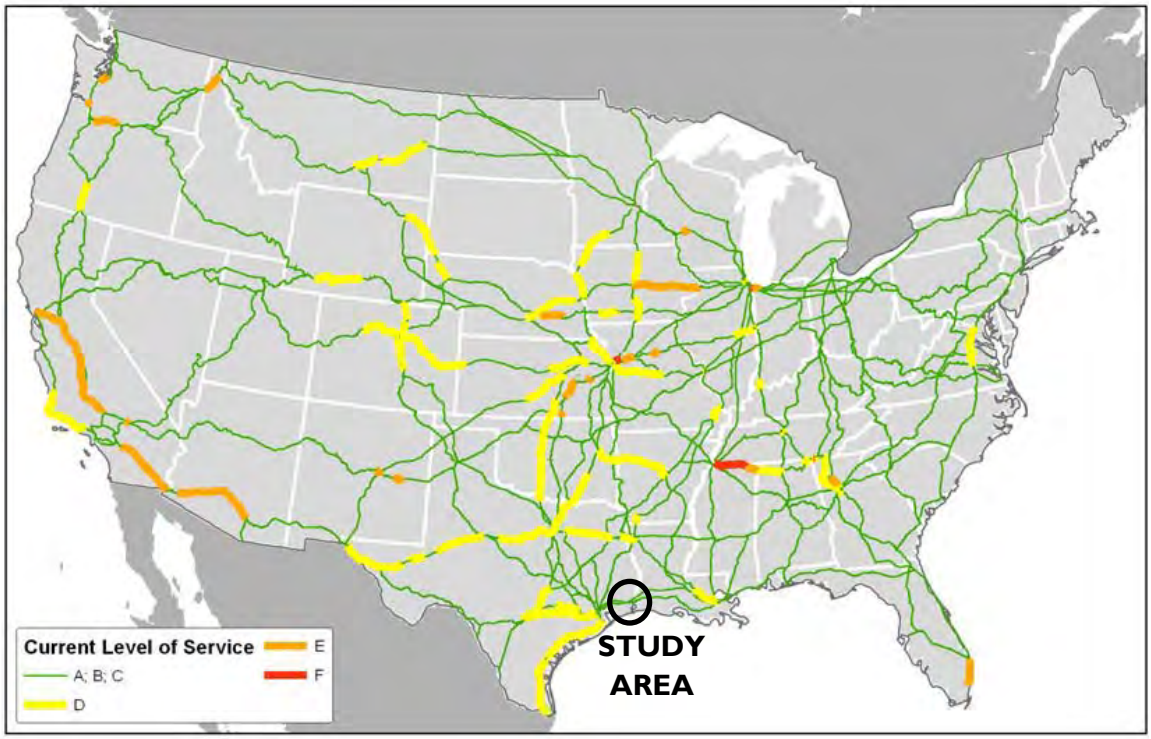


Figure 2.23 – Freight Density - Annual Rail Tonnage – Texas East Region

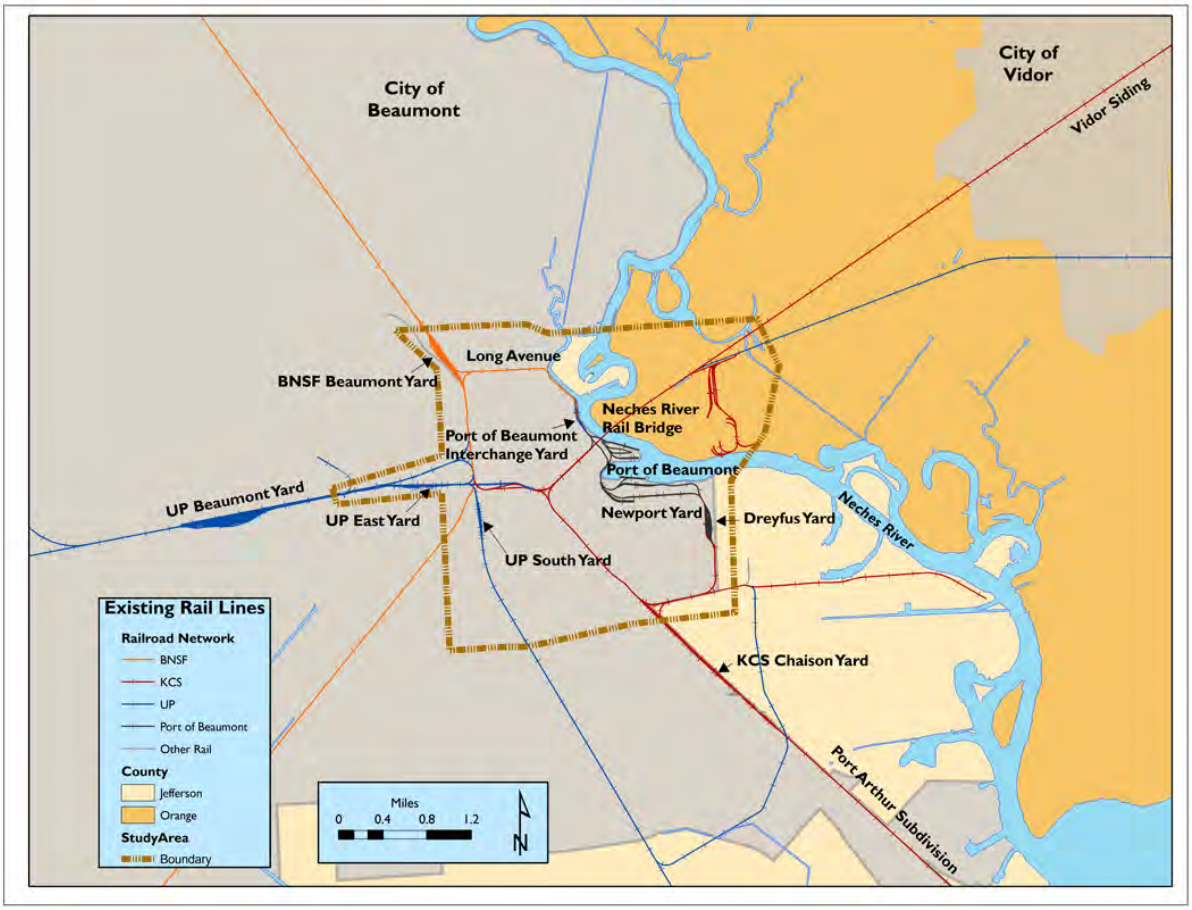
An overview of national railroad operations in terms of Level of Service is shown in Figure 2.24. The importance of this perspective will be more apparent when reviewing projected conditions in the next section of the report.

Figure 2.24 – Current Level of Service - National



Yards and Crew Changes

Yard capacity and efficiency has a direct influence on the operations of the rail system. Several yards are located in and around the Beaumont area as shown in Figure 2.25 and include:

- Port of Beaumont Interchange Yard
- KCS's Chaisson Yard and Vidor Siding
- UPRR's South, East and Beaumont Yards
- BNSF's Beaumont Yard.

Each is described in more detail along with crew changes when and if applicable. Another important issue regarding train traffic through Beaumont is that close follow-up movements are restricted by crew changes in each direction. Both the UPRR and KCS have crew changes in Beaumont which occur on the railroads main lines.

Figure 2.25 – Rail Yards in Beaumont Region

Port of Beaumont Interchange Yard

While the Port of Beaumont has several internal yards within the Port's boundaries and south of the Neches River bridge including Newport Yard and Dreyfus Yard, the Interchange Yard north of the Neches River bridge has been the subject of numerous operational issues. The Ports' yards are shown in Figures 2.26a through c. When a train is currently being delivered to the Port of Beaumont, the train operator must approach the Port turnout from the west and then "run around" the cars and then shove them into the interchange yard, which briefly blocks both main tracks at the diamond. Trains coming from the east pull past the turnout and reverse into the yard. Any train cars moved from the Interchange Yard to the Port also blocks the mainline. The low line, with its limited vertical clearance, is only used for moving train cars from the Port to the Interchange Yard. In either case; one of the two main tracks is blocked for an extended period, effectively lengthening the single-track portion of the route.[21] Rail cars are handled within the Port's perimeter by Trans-Global Solutions, Inc., a contract switching operator. Moving cargo into and out of the port is assisted by an extensive railway system that can accommodate 600 rail cars and handles 80 cars simultaneously at shipside.[22]

Figure 2.26a – Port of Beaumont Interchange Yard

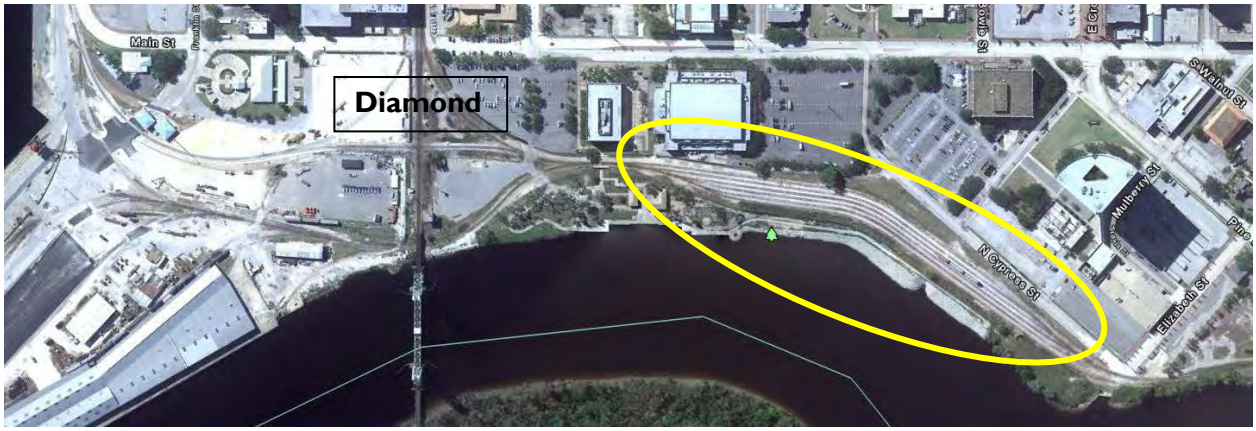


Figure 2.26b – Port of Beaumont Newport Yard

Figure 2.26c – Port of Beaumont Dreyfus Yard

BNSF utilizes the Long Avenue connection as their primary entrance to the Port. The UPRR has trackage rights along Long Avenue and occasionally utilizes it to exit the Interchange Yard after delivering rail cars. Under this scenario the UPRR will pull off the KCS main track, then take headroom toward the BNSF heading out the north end of the Interchange Yard and place their rail cars into the interchange yard without blocking the KCS mainline.

In 2003, the Port of Beaumont contacted TxDOT to discuss a proposed plan that would improve the rail infrastructure at the Port with the purpose of reducing rail traffic delays. The Port proposed construction of a new turnout from the KCS mainline, south, directly into the Port and adding capacity in the Port by extending current tracks and constructing new tracks. This would enable the railroads to perform interchange services within the Port itself, making the north yard unnecessary. TxDOT studied the proposal and found it to be both feasible and beneficial. The Beaumont MPO provided $8.5 million in Congestion Mitigation and Air Quality (CMAQ) funds for the project. It is currently under construction. The current intent, once the project is completed, is that one running track will remain through the former yard to allow BNSF access to and from the Port. All other tracks would then be removed.[23]

The Port of Beaumont handled almost 48,000 rail cars in 2003. Of these rail cars 26,398 (55 percent) were moved by the BNSF; 19,138 (40 percent) were moved by the UPRR; and 2,344 (5 percent) were moved by the KCS.[24] This amount of annual traffic is equivalent to 925 rail cars per week on average. The Port moves four main commodities: grain, potash, military equipment and wind turbine equipment. According to the American Association of Port Authorities, the Port of Beaumont ranked 54th in the world in 2009 based upon total cargo volume.[15] This ranks the Port of Beaumont 7th in the United States with 67.7 million tons. The Port of Beaumont's expansion and the new rail access route from the KCS main tracks will likely increase rail volumes in and out of the Port. The new route will enable other development on the vacated property. However, BNSF cross traffic will continue to operate through this location.[16] Expansion by the Port to property located on the east side of the Neches River with a planned rail facility may also increase rail traffic across the bridge due to internal movements within the Port. Slow moving unit trains and other rail traffic entering and exiting the Port on both sides of the Neches River may influence the need for capacity improvements as well as to allow through traffic to bypass port switching movements.

KCS's Chaison Yard and Vidor Siding

The KCS has its yard located on the line to Port Arthur, TX. In addition, the KCS utilizes the Vidor Siding as a critical operational element for staging trains as well as for conducting crew changes. Consequently, both are discussed here and are shown in Figures 2.27a and b.

Figure 2.27a – KCS Chaison Yard

Chaison Yard is located southwest of the Neches River bridge and is bordered by the Port of Beaumont to the east and MLK Parkway (TX Route 380) to the west. Six tracks are used for train makeup and arrival. Storage cars are held here for Exxon Mobil and other customers. UPRR unit trains carrying soda ash and other commodities pass through Chaison Yard enroute to Port Arthur. Local trains to the south and the east depart and arrive through Chaison Yard. The connector track (nearly two miles in length) from Chaison Yard to the UPRR is used for KCS-UPRR interchanges, KCS-BNSF interchanges, and KCS Acid Unit Trains for the Port Arthur Subdivision. The main track from GCL Junction to Chaison Yard is used by a daily local each way and a daily manifest train each way. In addition, yard jobs make transfer runs to the BNSF, UPRR, Port of Beaumont, and other area industries such as Gerdeau Ameristeel in Orange County on Tuesdays and Thursdays. This occupies the single main track (with no passing) west of the KCS-UPRR split at Tower 31 for approximately to two hours. KCS Chaison Yard to the south originates and terminates some of these trains as well. Rail traffic on the KCS Port Arthur line is also expected to grow through new contracts signed for several commodities involving unit train operations.

Figure 2.27b – KCS Vidor Siding

Vidor siding is located at KCS MP 760.4 on the Beaumont Subdivision. It is approximately five miles east of the Neches River bridge. This siding is 13,424 feet in length which enables it to serve as train storage and a staging location for KCS trains, many enroute to the U. S. – Mexican Border at Laredo, TX. Because of the length of this siding, often two trains can be stored at the same time. Vidor siding is also the designated crew change point for westbound freight trains operating between Shreveport and Houston. The siding is under Centralized Traffic Control (CTC) for the meeting and passing of trains. This is the first siding location for the KCS east of Rosenberg, TX. KCS trains are staged at Vidor siding for movement beyond Houston on the Rosenberg Subdivision as well as the UPRR Brownsville Subdivision. The KCS dispatcher cannot line westward trains by Vidor until given permission by the UPRR dispatcher for routing instructions and clearance of main tracks through UPRR's Beaumont Yard.

The KCS eastbound trains change crews at Pearl Street immediately west of the Neches River bridge, while westbound trains change crews at Vidor siding. Crew changes normally take 15 – 30 minutes. Crews are driven to either location from Chaison Yard. KCS westbound trains experience delays at Vidor siding due to operating window restrictions in place by the UPRR on the Brownsville Subdivision between Victoria and Robstown, TX (more than 250 miles west of Beaumont). The KCS is currently operating as many as seven to nine trains in each direction on the Brownsville Subdivision while the UPRR typically has five to six trains. Consequently, lesser priority trains are often held at Vidor, sometimes for eight hours or more. Occasionally trains are tied up in sidings east of Vidor at the next meeting point in Mauriceville, TX ten miles to the east.

Union Pacific Railroad's Yards

UPRR has two yards, the South and East Yards, within the study area yet its largest yard, the Beaumont Yard, is located west of Interstate 10. All of these yards are shown in Figures 2.28a through c. The East Yard is approximately 3,000 feet long and has as many as seven parallel tracks. Portions of this yard and several industry leads are elevated over 4th Street. The South Yard, along UPRR's line to Port Arthur, is approximately 2,500 feet long and has as many as five parallel tracks. The yard stretches from Crockett Street to College Street (US-90) and two tracks cross College Street at-grade.

The majority of through UPRR trains change crews on either of the two main tracks at their switching yard west of downtown Beaumont. The present practice is for these trains to stop and occupy one of the main tracks while the crew change takes place. The crew change takes a minimum of 30 minutes, but can take much longer, e.g., up to two hours, if the trains also are required to set out cars or pick up cars. When this happens, following trains are often delayed as well. UPRR trains (for both directions) change crews at their yard several miles west of the Neches River Bridge. The mainlines are not always clear for trains to enter westward due to switching operations or other trains ahead changing crews. The dispatcher cannot send a following train movement across the bridge until the signals ahead can be cleared in order that the following train will not stop on the bridge. The result of this is that the following train movements in both directions are spaced at least eight to ten minutes apart assuming the train ahead is kept moving.[17]

Figure 2.28a – UPRR South Yard

Figure 2.28b – UPRR East Yard

Figure 2.28c – UPRR Beaumont Yard

BNSF Beaumont Yard

The BNSF Beaumont Yard is located in the northwest area of the study boundary and is shown in Figure 2.29. It essentially encompasses a 3,500 foot length from North Street north to a point north of Interstate 10 just outside the study area. There are as many as fifteen parallel tracks, plus service via industry leads to the west parallel to 1st Street along the former Rock Island branch.

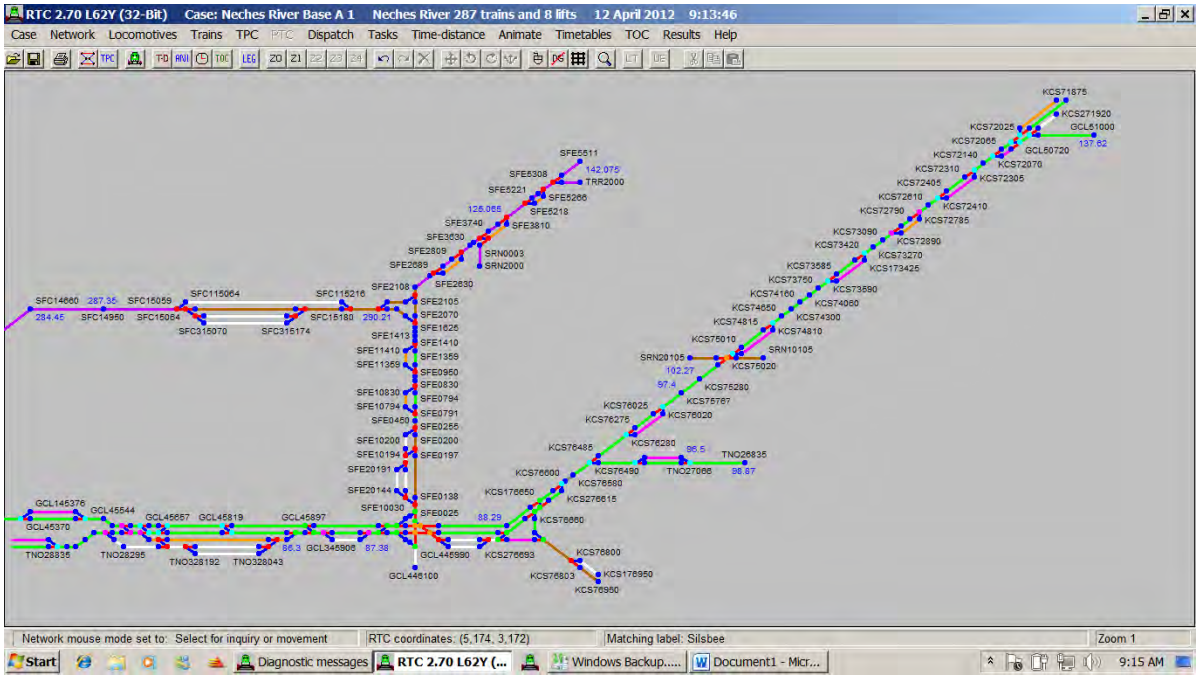
Figure 2.29 – BNSF Beaumont Yard

Observations

As a network, the rail transportation system is directly influenced by operations outside the limits of the study area. To better understand the current operating challenges being faced by the railroads along the corridor, the study team was granted access to the KCS Dispatch Center in Kansas City, Missouri. Operations were observed on two separate occasions for a total of 12-hours on September 12 and 13, 2011. These observations allow for several suggestions for potential operational improvements. In summary the field observations conclude:

- At the present time, neither bridge capacity nor the operation of the Port of Beaumont are a problem in terms of rail operations
- Currently, yard capacity and crew change locations in and around the Beaumont area present obstacles to efficient rail operations.
- Congestion at the Houston terminal also has a negative impact on rail operations in Beaumont, i.e., crew calls may not be made until trains are ready so as to not lose crews between Houston and Beaumont.
- While the operations of the Port and bridge capacity are not problems today; they may become more problematic as rail traffic increases.

Efforts have been made to improve coordination and communication between the various dispatchers to help operations; this should continue.



The Rail Traffic Control (RTC) Model

Rail Traffic Controller (RTC) is a computer program created by Berkeley Simulation Software, LLC, which simulates the operation of trains over a railroad network. Variations can be made in network track layouts, train composition and schedules, and operating rules and constraints, which allow for the testing and assessment of modifications. RTC is used by most North American Class I railroads to evaluate and plan their operations and in turn determine capital expenditures.

The "base case" model represents current conditions which are then validated by comparing results to known current system performance. The better the base case model matches current system performance, the more confidence one can have in the results for a planning scenario. The measured part of the Neches River base case network is bounded on the east by KCS MP 735.85 (the west fouls at Starks, Louisiana) and by Texas and New Orleans (T&NO) MP 268.35, east of Connell; and on the west by Gulf Coast Lines (GCL) MP 456.00 at Elizabeth, and T&NO MP 283.04, at the west end of Beaumont. A schematic of the Neches River "line" is shown in Figure 2.30. The UPRR and KCS yards at Beaumont are included in the Neches River "line", which is a subset of the entire network used to measure train performance that is directly affected by the Neches River bridge. The BNSF yard at Beaumont is not within the Neches River line. The simulation model consists primarily of two files:

- **Network files** which include track, signals, grades, curves, bridges, road crossings, and railroad junctions or interlockings and
- **Train files** which include information related to individual trains – their identity, type, weight, length, locomotives, time and day of operation, relative priority, origin and destination, route, railroad carrier, and intermediate work, if any.

Figure 2.30 Rail Traffic Control (RTC) Neches River "line" schematic

In all simulation cases, each train is treated individually. In other words, as no two days in the real world are identical, no two days in the model are identical. Some freight trains operate on completely random schedules, according to traffic demands; or according to availability of resources, such as locomotives and crews. The 2007 base case simulation network was constructed largely from railroad "track charts" supplied by the carriers. These schematic maps show the physical track in sections allowing the modeling of signals, switches, grade crossings, sidings, and yard tracks as well as distances and grades between points. These charts, along with railroad timetables, also show the speed limits for trains on the various sections of the network. The base case train files were constructed from two sources. The first is railroad records of through train movements. These records are taken from the dispatching system and include the identity of the train, its consist, its route, and the day and clock time when it passed certain key recording points. In addition, train data from earlier RTC model runs executed as part of the 2010 Texas Statewide Rail Plan was extrapolated to the Beaumont area network.

The base case includes the operations of 287 total freight trains in a week . In addition, there are six Amtrak passenger trains measured (three eastward, three westward), though these passenger trains are excluded from the freight statistics. The measured freight trains for the simulated week break down by type of train are shown in Table 2.2.

Table 2.2 – RTC Model Base Case – Type of Trains

BY TYPE	BNSF	KCS	UP	Total
Manifest	35	53	67	**155**
Priority Manifest			45	**45**
Expedited	11		19	**30**
Grain		12		**12**
Vehicles/Auto Parts			5	**5**
Coal	2			**2**
Other Unit	2	14	6	**22**
Local			16	**16**
TOTAL	**50**	**79**	**158**	**287**
	17%	28%	55%	

There are eight bridge openings during the week, ranging in length from 17 minutes to 31 minutes in length. The openings are randomly distributed during each day, although none are coded to take place in the early morning (between 1 AM and 4 AM) assuming that no water movements would occur during those hours.

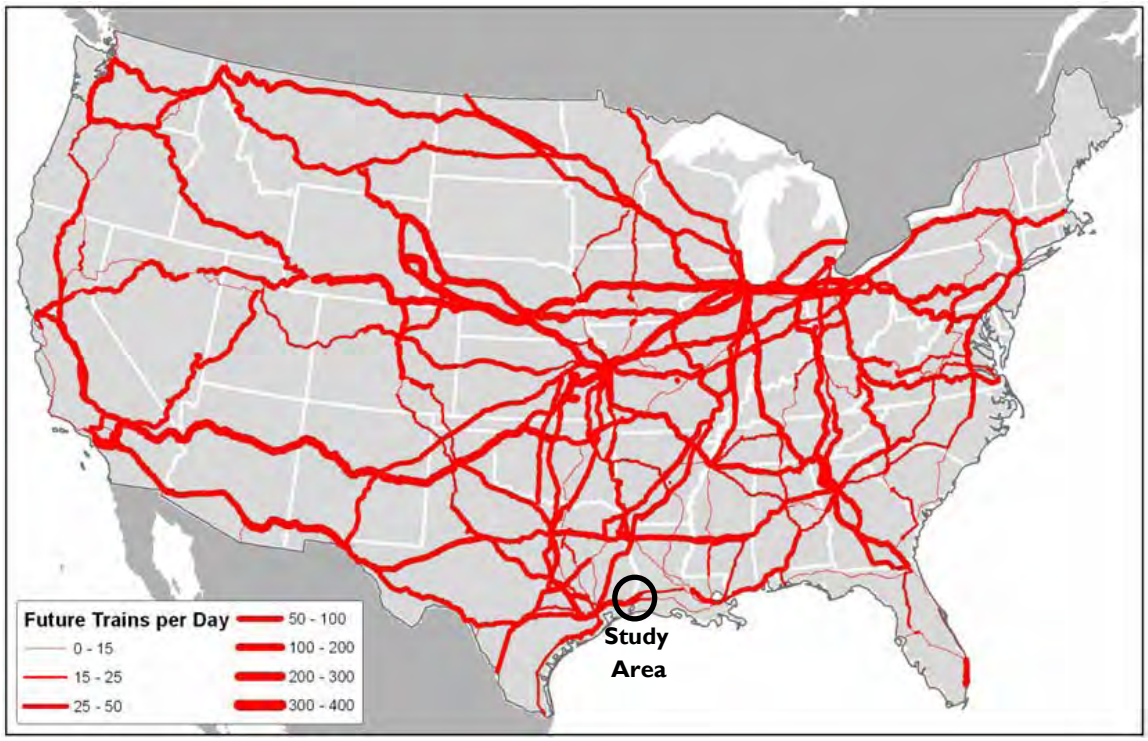
RTC is designed to measure railroad performance in time. Some measures are "absolute" numbers while others are ratios of performance. The performance measures used here include:

- **Train Count** – the number of trains over a period of time, here a week, measured in the model. This number is always less than the number of actual trains in the case. Trains that do not complete their entire run within the measured time period are excluded from the statistics.
- **Average Speed** – the average operating speed, in miles per hour, of the measured trains operating across the entire network, or across a specific part of the network.
- **Delay Ratio** – This is the ratio of congestion-related delay to an "unimpeded" running time. Unimpeded time equals the time it would take to operate all the trains, including any en-route work needed or requirements that must be met, without any congestion-related delay.
- **Delay Hours/Day** – This is the absolute number of train-hours per day lost to congestion-related delay. In general if delay hours can be reduced, costs can be reduced. However the value presented here does not differentiate say between 100 loaded cars of time-sensitive freight from a local switching 20 cars.
- **Delay Minutes/100 Train-miles** – This is an alternate, railroad industry measure of normalized delay. It functions much like the delay ratio (the numerator is actually the same, except reduced to minutes instead of hours); but the denominator is the distance trains travel over time, rather than just the time itself. These ratios can often be high in terminals.

Table 2.3 summarizes the base case train performance over the week long period for the above referenced performance measures. The Base RTC model included 44 lifts per week on the Neches River bridge crossing. Information from various other sources suggested that the number of lifts on a typical week was significantly less; say on the order of eight (8) lifts per week. Consequently the RTC model was rerun with 8 lifts per week and represents the Base (modified). Even with a significant reduction in the number of bridge lifts in the existing conditions analysis, the delay performance measures exhibit relatively minor shifts, though of course in the positive direction, speed increases while delays decrease. Overall changes in terms of speed are very minor on the order of 2%, while delays typically drop by 9%.

Table 2.3
RTC Freight Train Performance - Base Case

Case	Train Count	Average Speed (mph)	Delay Ratio	Delay Hours / Day	Delay Minutes / 100 Train-Miles	Bridge Lifts per Week
Base	287	14.7	25%	9.9	67.0	44
Base (modified)	287	15.0	23%	9.0	61.1	8



3.0 Projected Conditions

This section discusses rail forecast to the year 2035 under the no-build scenario. Then with an assessment of operations, various improvement concepts are developed and assessed. A key element with any improvement concept is the crossing of the Neches River with regards to meeting the criteria for river navigation. The parameters for different types of bridge crossings are discussed first followed by descriptions of potential alignments.

Rail Forecasts

The study area's rail forecast includes an overview of rail traffic at a national level as well as specific to the region based upon the Texas State Rail Plan. Consideration is also given to the Gulf Coast High Speed Rail passenger initiative. Operations for Beaumont area rail system were conducted for the no-build scenario which utilizes the existing rail network and committed improvements, such as the new switch into the Port of Beaumont. In general, rail traffic throughout the nation is projected to increase as shown in Figure 3.1 which includes the rail corridor through Beaumont.

Figure 3.1 – Future Daily Train Volumes - National

Projected Rail Traffic Volumes

The Base (Modified) RTC model estimates that under current conditions 287 trains operate during a typical week through the Beaumont rail network. This translates to approximately 40 to 50 trains per day crossing the Neches River. Forecasted growth for the number of trains expected to be operating

weekly in the Beaumont area by 2035 was increased from the base case utilizing a three percent (3%) compounded annual growth rate and is shown in Table 3.1. The 3% growth rate is reasonable given the population growth forecasted for the State of Texas and the expected increased level of cross-border trade on a national basis. In addition, this is the rate that other recently completed freight studies used. Train traffic is projected to essentially double during this time period with an estimate of 87 trains per day crossing the Neches River. These forecasts utilize the same distribution by rail carrier as current conditions. Similarly, the growth rate can be applied to the type of trains as previously shown in Table 2.2.

Table 3.1
Forecast of Weekly Train Traffic

Carrier	2011	2035
BNSF	50	102
KCS	79	161
UPRR	158	321
Total	287	584

Rail traffic at the Port of Beaumont is expected to grow as well. The Texas Rail Plan (TRP) reports that the number of containers handled at the Port of Beaumont is forecasted to increase 34 percent while an increase of 60 percent is forecast for tonnage.[25] Forecasts for number of rail cars and tonnage handled at the Port by carrier are shown in Table 3.2. Much of the growth at the port is likely to occur on the Orange County side of the Port, as noted in the discussion of the Port's Master Plan in earlier sections. Consequently, bridge lifts were increased in the same ratio (doubled) to account for potential expansion of the Port of Beaumont's Orange County facility to the north of the existing KCS river bridge.

Table 3.2
Port of Beaumont - Forecast of Annual Rail Cars and Tonnage Handled

	Annual Rail Cars		Annual Tonnage (millions)	
Carrier	2008	2035	2008	2035
BNSF	164	220	4.1	6.5
KCS	1,312	1,763	32.6	52.0
UPRR	1,804	2,424	44.8	71.5
Total	3,280	4,407	81.4	130.0

Gulf Coast High Speed Rail Corridor

In 1998, then U.S. Transportation Secretary Rodney Slater designated the Gulf Coast High-Speed Rail Corridor (GCHSR) which would serve the states of Texas, Louisiana, Mississippi and Alabama with "spokes" extending to Houston, TX, Mobile, AL, Birmingham, AL, and Atlanta, GA as shown in Figure 3.2. The route would connect with the proposed Southeast High Speed Rail Corridor, which extends

to Charlotte, NC, Richmond, VA, and Washington D.C. Prior to this initiative, other efforts were conducted. Aside from the States of Louisiana and Texas studying the corridor, no planning or construction has been done on the Gulf Coast corridor to date mainly due to funding constraints. In addition, the route has experienced decreases in available capacity because of increased freight traffic. The report suggests that before high speed rail can be introduced, overall capacity needs to be improved by establishing a double track mainline operation and the track will need to be upgraded to Federal Railroad Administration (FRA) Class V standards to allow for higher speeds. A three phase implementation plan is proposed on the corridor between Houston Amtrak station and the Louisiana/Texas State line near Echo, Texas. The phases are summarized:

1. Phase One – provisions for the upgrade of several segments of the existing track to facilitate 79 mph operations at an anticipated cost of $150 million.
2. Phase Two – provisions for increasing the amount of capacity by establishing a double track mainline operation throughout the length of the corridor at an anticipated additional cost of $473 million.
3. Phase Three – provisions for increasing operating speeds to 90 mph (track maintenance at FRA Track Class V standards) at an anticipated additional cost of $93 million.

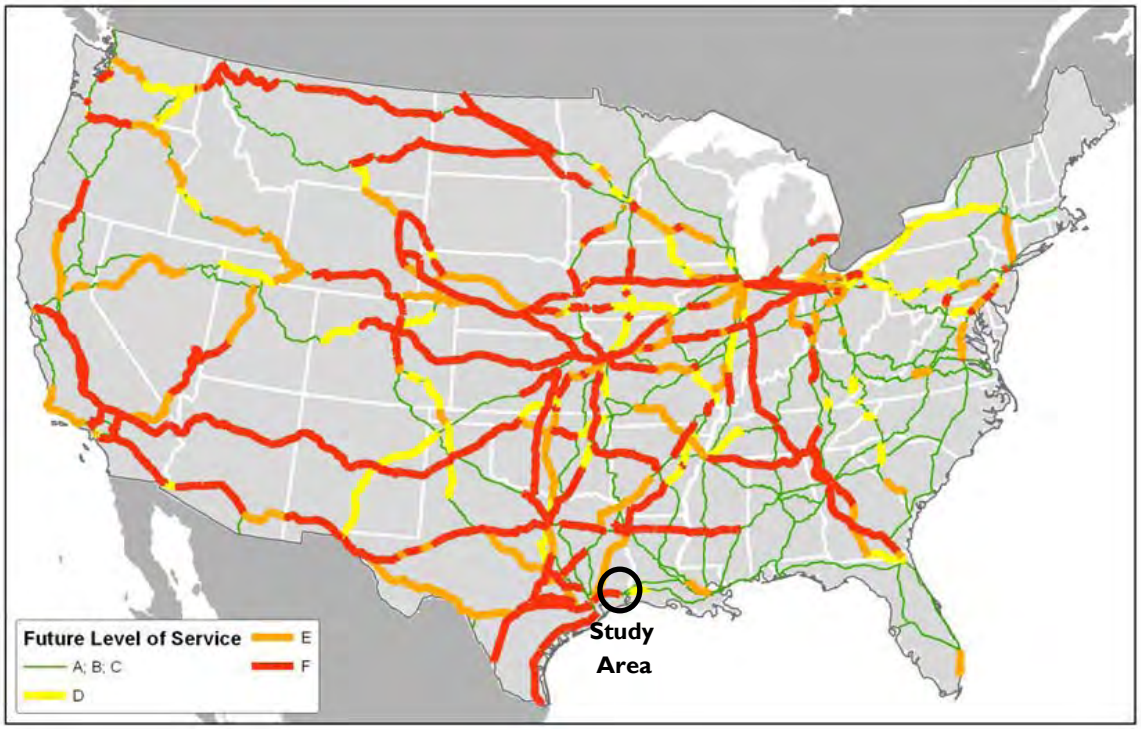
Figure 3.2 – Gulf Coast High Speed Rail

Schematic plans of the GCHSR corridor in the Beaumont area are provided in the Appendix and are reproduced at a conceptual level on the Alternatives Evaluated maps as applicable.

Recently the USDOT announced it was awarding $15 million in high speed rail funds, being redirected from Florida, to Texas. The state will use the money to conduct engineering and environmental work to develop a high-speed rail corridor linking Dallas/Fort Worth and Houston. The City of Beaumont is not within that corridor.

Operations

The forecasted train traffic results in a significant increase in the delay hours per day as well as the delay minutes per 100 train miles for the project study area. The forecasted delay hours increase by a factor



of eight while the delay minutes increase by a factor of five under the no-build conditions. Essentially, the application of the forecasted train volumes to the existing rail network results in significant congestion. However, this is consistent with other studies regarding future levels of service for freight rail at the national level. This delay noted in this report is for those trains operating or projected to operate within the limits of the Beaumont RTC model network.

Table 3.3
RTC Freight Train Performance – Projected "no-build"

Case	Train Count	Delay Hours / Day	Delay Minutes/100 Train-Miles	Bridge Lifts per Week
Base (modified)	287	9.0	61.1	8
Projected "no-build"	582	69.7	306.4	16

An assessment of operations under current rail infrastructure with future train volumes indicates a significant portion of the national rail network to approach capacity or operate at capacity as shown in Figure 3.3. Again, the rail corridor under study here is shown at capacity essentially for the segment within the study area.

Figure 3.3– Future Level of Service – National

Several physical transportation improvements are also anticipated as projected year assumptions that are included with the projected base case. These are:

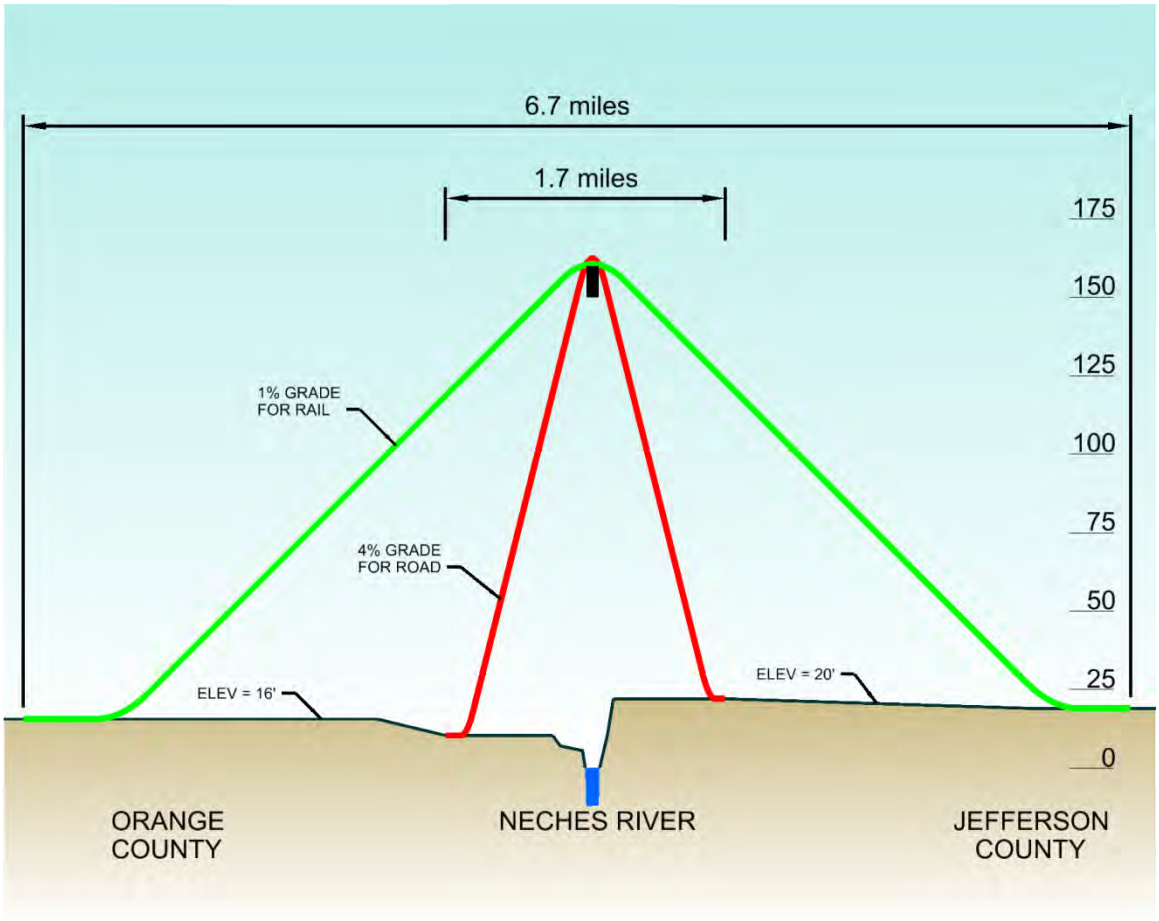
- Interstate 10 bridge over Neches River expanded to eight lanes, approximately 30 feet to the south from current conditions.
- Port of Beaumont's south switch is operational and the Interchange Yard is removed.
- The BNSF connection to the Port of Beaumont across the KCS remains.
- The Gulf Coast High Speed rail corridor is preserved, if it is not already implemented.

Developing Options

The development of options can be thought of in two basic parameters:

1. the development of bridge type (stationary or lift) and
2. the development of bridge crossing locations (along existing or on new alignment).

The determination of bridge type also influences the location of the bridge crossing. The stationary bridge type could consider three levels; a high level, a mid-level and a low-level. A high-level bridge would accommodate the vertical clearance for river navigation for a maximum height (150 feet). A mid-level bridge provides a vertical clearance to accommodate the majority of river navigation as is the case with the 50 foot vertical clearance defined by the IH-10 crossing of the Neches River. A low-level crossing assumes a lift bridge with a minimum 13 foot vertical clearance in the closed position (to mimic the existing KCS bridge vertical clearance).



A high-level crossing could essentially occur at any location, yet the practicality of this concept needs to be called into question. A quick review of the Neches River navigation system notes several "crossings" and their associated vertical clearances which are shown in Table 3.4.[26] These crossings are listed in navigation mile markers from the south to the north. Of the crossings, several are overhead power transmission cables. Only three are vehicular bridges and only one (the KCS bridge) is a rail bridge. National Oceanic and Atmospheric Administration (NOAA) lists the following vertical clearances for elements crossing the Neches River:

Table 3.4 – Vertical Clearances along Neches River

Neches River	Mile Reference	Vertical Clearance (feet)
Road bridge - TX 73 EB	0.0	172
Overhead Power Cable	0.0	164
Road bridge - TX 73 WB	0.0	143
Overhead Power Cable	1.9	183
Overhead Power Cable	10.2	172
Overhead Power Cable	16.0	172
Rail bridge - KCS	19.5	13/150
Road bridge - Interstate 10	21.4	50

Port Arthur has State Highway 73 over the Neches River with a vertical clearance as high as 172 feet. This highway structure is nearly 1.5 miles long with an approximate approach grade of four percent. Railroads require a maximum grade of one percent and thus would have a significant increase in the length of structure for such a high-level clearance. An illustration of a theoretical high-level bridge over the Neches River in Beaumont is shown in Figure 3.4. It includes for comparison purposes a schematic profile with grades at four percent (for a highway) and at one percent (for rail). The length of the rail profile and associated structure would extend for a length of approximately 6.7 miles utilizing terrain in the Beaumont area along the existing rail corridor. Of course, no other rail connections serving Beaumont could be achieved along this aerial structure and the excessive costs of such a high-level crossing make the concept impractical.

Figure 3.4 Conceptual High-Level Profile
