Transcript:

I live about 400 feet from this railroad track currently in a manufactured home and if I don't have my windows closed, I get woken up twice a night right now approximately 2 o'clock in the morning and 5 o'clock in the morning by the train that runs through there presently. My understanding is that its going to go from approximately 6 trains a day to 28 trains per day and my only comment is, I am against it and if they do this are they going to build some protection barriers and start sound proofing our homes, like they did at O'Hare Airport? Thank you
