

③ Price Collection / Land Use

This is the land across County Line Road
owned by the farmer (Dane & wife) who does my
land as well.

According to the railroad (with the twin well
I am) through has entire fields from County Line
to Route 2! The white rock in the pasture is
burnt barn (that stone way). It may look close
but it makes every 1st the present he can
cultivate his land and move very easily. If the
train comes he will be divided all the way
his land. In other words my twenty acres, he
could have to cross the tracks! He has well (ready
1-1-17 11:00 AM - 1-1-17 11:00 AM - 1-1-17 11:00 AM)

② Surface Water Disposal

There's behind the picture of runoff!
As it is obvious to see, the water is
substantiated! As nature allows it will
eventually flow away to my neighbor's
land my land and the next field going
down,

Depending on the amount of rain the
process can take one day or a few days)
before it disappears! The farmers must
wait until the land is dry in order to attend
their fields!

③ Surface Water Drainage

My neighbor & my mother (the Drainers) will have the flow of water fill their pond and then the water flows to the front of their house & the front pasture.

At times, the water creates "mats" that surround their house. The horses must walk through the water to the higher ground.

As the water continues south, it will eventually come to my land through a "natural" creek "behind" my house, where the water comes sometimes at a like a river. My land will not be secured until the water is

⑤

Surface Water Drainage

Shows the flow of water, since
"water seeks its level" (law of nature),
the least means to travel. One can see the
high ground to the east by the road,

① Surface Water Drainage

The water is draining the land & runs through a culvert made of concrete. The amount of flow, again, is determined by the amount of rain.

⑦ Surface Water Drainage

Finally, the water flows to me! Since it is heavy, it seeps more slowly, the water spreading itself over my land which will be absorbed into the soil and evaporate by the sun. When the hill (road) is enough, the farmer can see for my land.

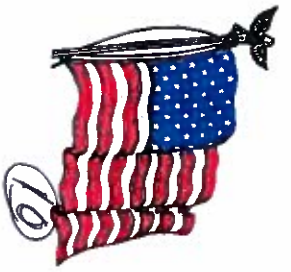

③ Surface Water Discharge

The next two photos illustrate how "natural process" of getting water into the ground water and evaporating it into the atmosphere to return as rain is done.

If that rain comes next to me in the field to the south, the process will be altered! The storm track will be a down that will stop the natural flow of surface water! Instead of a little river we will have a lake and no access to the field as the water will take longer to be absorbed as,

Surface Water Draining

This is my land. The land will
affect my way of life in multiple ways
as presented: ① Noise Pollution / Land use ② Aesthetics
and ③ Surface Water Draining.

I ask the Board to understand the
detriment to our way of life a railroad would
do. We are farmers. We love God, We love
our country the United States of America, We
love our families, We love our land!

Please deny the petition for the railroad.
Only benefit to the company - not us!
