

080204 GUTI

Yes, this is Cindy GUTI and I'm filing a recorded comment on the STB 35087 with the purchase of the J&J in the Elgon area or the EE&, I'm sorry. I am a homeowner here at 928 Riverstone Drive in Aurora. I am less than a mile and half maybe from the train tracks. I do see this as an environmental issue for many reasons. And number one, we moved in with the notion that there was probably two train blares that go on throughout the night but now that your increasing the traffic, not only does it inconvenience us from an environmental sound standpoint consistently but also the sleep and rest of us but also the values of our home. We already have some vibration to our homes currently. Typically happens one time during the evening and additional traffic would add additional vibration and I hope the liability will be taken on by the railroad company by creating additional vibration as well as the increase pollution with the pollution coming from the engines themselves, increased travel times at all times of the day, emergency response times and of course compensate for the railroad. My concern as a homeowner is many things: the value of my home, the comfort of me and my family in our home, and our ability to not have our home damaged due to the additional vibration, smoke and pollution as a result of increased traffic on these particular lines. So I hope that your board or directors will take this into consideration and review the damage that this decision can have based upon that. So thank you so much for your time and I hope you take this under serious consideration.
