UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
--PETITION FOR DECLARATORY ORDER--

UNION PACIFIC RAILROAD COMPANY'S REPLY COMMENTS TO UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGION IX PETITION FOR DECLARATORY ORDER

The Union Pacific Railroad Company ("UP") hereby submits these Reply Comments to the Petition for Declaratory Order filed on January 24, 2014 ("Petition") by Region IX of the United States Environmental Protection Agency ("Region IX") and joins in the Reply Comments of the Association of American Railroads ("AAR").

We urge the Board to find that the Local Idling Rules are preempted by the Interstate Commerce Commission Termination Act ("ICCTA") for the reasons set forth in the reply submitted by AAR, as well as AAR's and UP's prior filings. We write separately to respond to several arguments raised by the South Coast Air Quality Management District ("the District") and the California Air Resource Board ("CARB").

There are a myriad of reasons to reject the District's efforts to enforce the Local Idling Rules. But two points warrant special emphasis. First, the District's central contention that the Local Idling Rules are no different than a local rule that prohibits the sounding of a locomotive whistle is not well founded. A whistle ban has no extraterritorial effects and does not require the railroads to alter its locomotive equipment. In contrast, the practical effect of these rules is to control the design of locomotive equipment in every jurisdiction where the Railroads operate.

Even though EPA has adopted a uniform national rule governing the design of locomotive idling equipment, the more stringent requirements set forth in the District's rule will effectively supersede EPA's rule throughout the country because the Railroads cannot practicably alter the settings on the idling devices when moving from state to state. Courts have repeatedly characterized rules of this type as impermissible burdens on railroad operations.

Second, the District's claim that its rules are necessary to protect the environment because the Railroads have not lived up to their obligations under voluntary agreements with CARB is directly refuted by CARB's own findings. For example, CARB noted in 2009 that the Railroads' compliance "is an excellent 99.3%."[1] The Railroads' compliance with EPA's national locomotive idling standards and their voluntary agreements with CARB leave no room for the District's claim of necessity.

I. THE LOCAL IDLING RULES CANNOT BE HARMONIZED WITH ICCTA

The Local Idling Rules—which the District itself characterizes as railroad "operational requirements"[2]—cannot be harmonized with the goals and core purposes of ICCTA. 49 U.S.C. § 10501(b) specifically vests the Board with "exclusive" jurisdiction over rail transportation. The Board has interpreted Section 10501(b) to prohibit state and local agencies from implementing Federal environmental statutes, including the Clean Air Act, in a manner that impermissibly

[1] CARB 2009 Annual Enforcement Report at p. 44, quoted in Affidavit of Lanny Schmid, attached hereto as Exh. 1, ¶6 ("Second Schmid Affidavit").

[2] *See* Letter from Barbara Baird, District Counsel, SCAQMD to Ellen Peter, Chief Counsel, CARB at 2 (Aug. 9, 2012) (attached to EPA's Petition). *See also* District Supp. Comments, Johnson/Beall V.S. at n.1 (admitting that operational changes may be necessary to comply with Rule 3502) ("Johnson/Beall V.S."). As explained below, the rules are not merely "operational requirements." They function as equipment standards as well. But either way, they are invalid.

regulates a railroad's operations or unreasonably burdens interstate commerce.[3] Thus, even if the Local Idling Rules were adopted into California's State Implementation Plan ("SIP"), they would be preempted by ICCTA for two independent reasons: (1) they impermissibly regulate railroad operations; and (2) they impose unreasonable burdens on interstate commerce.

A. The Local Idling Rules Impermissibly Regulate Railroad Operations

As has been explained in the prior filings by the AAR and the Railroads, the rules here regulate railroad operations. Tellingly, the District fails to respond to the fact that two federal courts have determined that the Local Idling Rules seek to regulate rail operations.[4] The District instead seeks to evade that straightforward conclusion by claiming that the relevant inquiry here is "limit[ed]" to whether "Rules 3501 and 3502 intrude on matters 'that are *directly regulated* by the Board (e.g., rail carrier rates, services, construction, and abandonment).'"[5] The District is mistaken.

As *Grafton* makes clear, the "directly regulated" inquiry highlighted by the District is merely one way a state or local regulation may be preempted by Section 10501(b). The Board in *Grafton* explains that "[s]tate and local regulation, including environmental regulation, has been found to be preempted in those cases where the Board has licensing authority over rail carrier activities, *as well as cases where, as here, it does not.*"[6] For example, the Board notes that Section 10501(b) "also prevents states and localities from imposing requirements that, by their

[5] District Supp. Comments at 35 (quoting *Grafton, supra*, at 4).

[6] *Grafton, supra*, at 12 (emphasis added).

nature, could be used to deny a rail carrier's ability to conduct rail operations."[7] Similarly, the Board in *Grafton* reiterates that a state or local regulation—even if promulgated pursuant to "*federal* environmental statutes such as the Clean Air Act"—falls within the scope of Section 10501(b) preemption if it "regulate[s] rail operations or [is] being applied in a discriminatory manner against railroads."[8] In other words, "[s]tate and local regulation is appropriate [only] where it does not interfere with rail operations."[9]

The District also claims that the Local Idling Rules escape the broad preemptive sweep of Section 10501(b) because they are "'attenuated and peripheral' to the direct regulatory purposes of the ICCTA"—that is, they only "have some impact on the Railroads' locomotive idling preferences under certain circumstances."[10] That assertion is baseless. As explained by Douglas Wills,[11] Kenneth Hunt,[12] Michael Iden,[13] Lanny Schmid[14] and Keith Jensen,[15] the rules, if implemented and enforced, would fundamentally alter the Railroads' operations.

[15] *See* Affidavit of Keith B. Jensen, attached hereto as Exh. 2 ("Jensen Affidavit").

For example, as Mr. Wills and Mr. Jensen point out, Rule 3502 requires that locomotives be shut down even when their operation is necessary to maintain air brake pressure. The District's affiants dismiss this as something that would rarely occur. Mr. Reistrup argues that UP's concern about maintaining air brake pressure is a "red herring" because shutting down a locomotive "does not instantly disturb the integrity of the air brake system" and it can take "many hours" for the system to bleed off all pressure.[16] This air brake roulette is hardly reassuring, and is certainly not the way UP secures its trains.

The Rules would also inevitably affect the national rail system as a whole. As Mr. Jensen points out, simply setting hand brakes on a 7000 foot intermodal train could take a couple of hours, and trains of that length are often run in the South Coast district.[17] The District's affiants, Mssrs. Johnson and Beall, do not account for this and other effects of arbitrarily shutting down locomotives, but instead simply admit in footnotes that they are ignoring such facts.[18] In addition, as Mr. Hunt and Mr. Wills point out, shutting down locomotives as required by Rule 3502(d) will delay trains attempting to leave terminals, attempting to leave sidings, and meeting or being passed by other trains. It will even delay crews involved in the building of other outbound trains because delayed trains, which already have been fully assembled, will occupy limited yard space and would prevent arriving trains from entering the yard to be dismantled so new trains can be built. The District yet again chooses to turn a blind eye to these effects. Although its affiants reluctantly admit that "a distributed power configuration [] might be held

[16] District Initial Reply, Reistrup V.S., at 11 ("Reistrup V.S.").

[17] Jensen Affidavit, at ¶7.a.

[18] *See* Johnson/Beall V.S., at nn. 1 & 7.

unattended in a yard for more than 30 minutes," they argue that such trains are "relatively few."[19] In reality, UP alone operates *more than twenty* distributed power trains *per day* in the South Coast Basin.[20] Even if the Rules' effects were limited to only these types of trains (and they are not), the resulting localized delays would have a ripple effect throughout the rail system.[21]

These pervasive intrusions on railroad operations could hardly be chalked up to mere "peripheral" effects—they violate the heart of ICCTA and cannot be permitted.

B. The Local Idling Rules Impose Undue Burdens on Interstate Commerce

As detailed by the Railroads' prior submissions and accompanying affidavits, the Local Idling Rules are preempted by ICCTA for the additional reason that they would place undue burdens on interstate commerce. The District's attempt to minimize the burdens cannot be reconciled with facts that are not subject to genuine dispute.

1. Rule 3501

The District argues, for example, that the reporting requirements set forth in Rule 3501 do not unreasonably burden the Railroads because the Railroads could obtain the required information from the already-installed event recorders.[22] Not so. To the extent the District is asserting that the "information required to be reported already is collected and stored automatically by on-board locomotive event recorders,"[23] that is inaccurate. As explained in the Affidavit of Michael Iden, UP's General Director of Car and Locomotive Engineering, while some event recorders do track the throttle position of the locomotive, throttle position is not the

[19] District Supp. Comments at 39-40.

[20] Jensen Affidavit, at ¶7.a.

[21] Wills Dec., at ¶¶53, 54; Hunt Affidavit, at ¶¶26-29.

[22] District Supp. Comments at 43-44, 50.

[23] District Supp. Comments at 38.

same as idling.[24] Therefore, the event recorder cannot be relied upon to provide the information required by Rule 3501.[25] Instead, railroad employees would have to manually track the time on every occasion a locomotive started to idle, which happens hundreds of times per day.[26] This burden would be further exacerbated by the potential differences that could arise in record-keeping and reporting requirements across jurisdictions: differences in trigger events, idling time frames, exceptions, and reporting systems, to name a few—all being manually tracked and noted, according to each locality's specific rules, hundreds of times a day.

Alternatively, the District appears to argue that the Railroads *could* collect the necessary information electronically by reconfiguring their event recorders, even if they currently do not do so.[27] Even if compliance could be achieved that way, any such mandate (whether imposed directly or through the practical effects of the regulation) would conflict with the Federal Railroad Safety Act ("FRSA"). In response to a congressional mandate,[28] the Federal Railroad Administration ("FRA") promulgated regulations specifically addressing the use of event recorders. 49 C.F.R. 229.135 contains an exhaustive list of the types of information that an event recorder is required to collect. Idling time is not one of them. And by law, the State cannot

[24] Iden Affidavit, at ¶¶24-25.

[25] The District takes the 2006 trial testimony of Joel Ritter out of context in suggesting that he admitted that event recorders already collect the information necessary to comply with Rule 3501. Mr. Ritter was not asked about the difference between recording throttle position (which event recorders do collect) and recording idling events (which they do not).

[26] Iden Affidavit, at ¶¶23-28.

[27] District Supp. Comments at 43-44.

[28] 49 U.S.C. § 20106.

require the Railroads to deviate from the list of information markers that the FRA has specifically established.[29]

Thus, the only relevant inquiry is whether a mandate to collect the information required by Rule 3501 through a "pencil and pad" type approach is unduly burdensome. Even the District implicitly recognizes that it would be and does not seek to defend that interpretation of the Rule's effects.[30] There is accordingly no legitimate basis to adopt the District's claim that its informational rule imposes no serious burdens. The only practical ways to achieve compliance with the terms of the rule would be to try to alter the operation of the event recorders or to install anti-idling equipment programmed in accordance with the District's specifications. Yet, there can be no dispute that the FRSA and the Locomotive Inspection Act ("LIA") foreclose the District from issuing such mandates and they do not argue otherwise. Rule 3501 is accordingly a poorly disguised attempt to regulate prohibited subjects and the Board should find that it fails both as a regulation of railroads and as a rule that imposes impermissible burdens on interstate commerce under ICCTA.

---

[29] *See, e.g., United Transp. Union v. Foster*, 205 F.3d 851, 863 (5th Cir. 2000) (finding that "the Secretary has issued regulations governing the use of information on event recorders that clearly preempt Act 87").

[30] *See* District Supp. Comments at 50 (arguing that Rule 3501 does not impose "some sort of manual reporting procedure, as if crews would be required to stop work, produce pencil and pad, and make extensive notes of information that cannot easily be obtained"). The District cites the trial testimony of Mr. Wills where he agrees that revising the form that locomotive engineers use to record activities on the job would not be difficult. District Supp. Comments at 44. The District ignores the next sentence in Mr. Wills' testimony, where he says that "I don't think that that's where the issue comes in, necessarily, with gathering the data. It's once you gather the data. It's the time at back end after you've gotten off duty to enter all this information into the computer is where the time would be taken." *See* Reporter's Transcript on Appeal, *Ass'n of American Railroads v. South Coast Air Quality Management District*, No. CV 06-01416-JFW, 2007 WL 2439499 (C.D. Cal. Nov. 28-30, 2006) at 362:11-20.

2. Rule 3502

The District's attempt to defend Rule 3502 fares no better. The District never even addresses the Railroads' showing, *e.g.* UP Initial Reply at 28, that anti-idling devices cannot practicably be reprogrammed to reflect different shut down intervals when a locomotive travels from state to state. This incontrovertible fact about the design of anti-idling equipment establishes that local mandates like this one necessarily have extraterritorial effects on the Railroads' operations. And courts have invariably recognized that extraterritorial effects on railroad operations are categorically undue burdens. Indeed, not so long ago, the Ninth Circuit held that California's effort to regulate the location of locomotives in the composition of trains traversing mountain terrain in order to reduce derailment risks represented an undue burden on commerce, because "trains are not reconfigured during transit," and a train crossing between jurisdictions "would [have to] be initially configured so as to meet the most stringent standards on its trip."[31] So too here.

Because the stop times on the idling device can only be altered through changes to the software performed by specialized technicians who would have to board each locomotive where the equipment is altered, the Railroads cannot practicably change the equipment while in route.[32] Instead, just as in *Union Pacific v. Cal PUC,* the Railroads would have to reconfigure the anti-idling software "so as to meet the most stringent standards on its trip."[33] And of course, the Railroads would need to keep track of new requirements imposed by other air districts, reprogramming thousands of idle control devices each time a local agency decides to impose

[31] *Union Pac. R.R. Co. v. Cal. PUC*, 346 F.3d 851, 871-872 (9th Cir. 2003) (emphasis added).

[32] Iden Affidavit, at ¶¶10-13.

[33] *Union Pac. R.R. Co.*, 346 F.3d at 871.

requirements that differ not only from the EPA rules, but from other local rules. Thus, the Rule would inevitably "have extra-territorial effects in a number of different states."[34] As the courts have recognized, whatever interest a state or locality may have in implementing regulations like the Local Idling Rules "pales in comparison to the burden of requiring potentially conflicting state standards."[35] "Under Supreme Court precedent," moreover, "such extra-territorial burden is constitutionally infirm."[36] Creating such a patchwork of local regulation is therefore "clearly excessive in relation to the putative local benefits."[37]

The District attempts to argue that the extraterritorial character of its mandates can be disregarded because the Railroads' voluntary participation in the 2005 MOU establishes that the Railroads would not be impermissibly burdened. That argument fails for at least two reasons.

First, the District overlooks the fact that the conditions in the 2005 MOU and the requirements of the Local Idling Rules diverge in critically important ways. The 2005 MOU recognizes the practical operating and safety requirements of the Railroads by allowing exceptions from the idling prohibition when (a) the engine characteristics of a particular locomotive model will not allow a 15 minute shut-down cycle without risking excessive component failures; (b) it is essential that a locomotive be idling, such as when it is necessary to ensure an adequate supply of air for air brakes or for some other safety purpose; (c) it is necessary to ensure that locomotive cab temperatures in an occupied cab remain within federally

[37] *Id.* (citing *Pike v. Bruce Church*, 397 U.S. 137, 142 (1970)).

required guidelines; and (d) it is required in order to engage in necessary maintenance activities. None of these exceptions is allowed by the Local Idling Rules.

Second, as a matter of law, courts have recognized that "[v]oluntary programs […] are significantly different from command-and-control regulation."[38] The Railroads' voluntary participation in the MOUs and their efforts to decrease their environmental impact, therefore, could hardly be used to salvage an otherwise impermissible form of state regulation. Any contrary rule would create serious disincentives for railroads considering whether to enter into voluntary agreements and the Board should reject the District's invitation to adopt such a counter-productive rule.

Moreover, the District is wrong to claim that "the Railroads' agreement to comply with that standard is an admission that it would not interfere with interstate commerce or unduly burden railroad operations."[39] Contrary to the District's assertion, the Board did not adopt such a rule in *Twp. of Woodbridge, N.J. v. Consolidated Rail Corp., Inc.*[40] Rather, the Board merely advised that Section 10501(b) of ICCTA "should not be used to shield the carrier from its *own* commitments" under a legally binding court settlement.[41] But here, the Railroads are not looking to avoid their obligations under the MOU—they are merely challenging subsequent and *different* state-mandated rules that do impose undue burdens and that the Railroads did not consent to. In a subsequent order in *Woodbridge*, this Board clarified that "nothing in the December 2000 decision was intended to bar Conrail, in a future court proceeding, from raising the argument, as

---

[38] *Engine Mfrs. Ass'n v. S. Coast Air Quality Mgmt. Dist*., 541 U.S. 246, 258 (2004).

[39] District Supp. Comments at 43.

[40] 5 S.T.B. 336, 340 (2000).

[41] *Twp. of Woodbridge, N.J., et al. v. Consolidated Rail Corp., Inc*, STB Docket No. 42053, at 2 (served March 23, 2001) (discussing the STB's December 2000 decision).

a matter of contract interpretation that: (1) unreasonable interference with interstate commerce would result if these voluntary agreements are interpreted to cover Conrail's main line operations, and (2) in considering enforcement, the court should give due regard to the impact on interstate commerce."[42]

Finally, the District and CARB contend that the extraterritorial impact of the rules can be disregarded because there is insufficient proof that other jurisdictions will adopt standards that conflict with the rules at issue. The District, for example, claims that "[e]ven if other states were to follow the lead of California and propose the adoption of locomotive idling limits as part of their SIPs, it is likely that those rules will be similar, not 'patchwork' or 'balkanized.'"[43] As an initial matter, "similar" does not mean "same"—and unless the regulations are the same, the Railroads will be forced to comply with the most stringent requirements. In any event, this argument once again fails on the facts and the law.

As for the claim that every jurisdiction would adopt similar rules, we already know that is untrue. For starters, the EPA rule on locomotive idling standards is completely different from the District's rule. Even though the EPA established after rulemaking that a thirty-minute stop time was adequate to protect the environment, the Railroads would have to program their equipment to comply with the District's mandate for 15-minute stop times in every jurisdiction where they operate. Nor is there uniformity at the state level. Three states have thus far attempted to regulate railroad idling events: Massachusetts,[44] Rhode Island,[45] and now California.

---

[42] *Id.*

[43] District Supp. Comments at 46.

[44] Code of Massachusetts Regulations, 310 CMR 7.11—U Transportation Media. The MassDEP rules were adopted in 1972—that is, before the enactment of the Clean Air Act Amendments of 1990 (which added subsection (e) to Section 209, prohibiting States and political subdivisions from adopting emissions standards for new locomotives), the enactment of ICCTA in 1996, and

Each of the three sets of rules is different from one another, and also different from the federally enacted idling rules. Four jurisdictions, four different sets of rules. That is a paradigmatic example of patchwork regulation—and it underscores how the District's position, if adopted, would erode the uniformity that has long been the hallmark of federal railroad regulation.

And, contrary to CARB's suggestion, the fact that this type of state-generated regulation has not occurred more frequently in the past is hardly a guarantee that other states will not attempt it in the future, especially if the Local Idling Rules are approved by this Board and the EPA, and the states are given a green light for this type of regulation.[46] It is fair to presume that most states would have assumed that any attempt to regulate rail operations in this manner would have been a futile exercise, given the wall of federal laws designed to limit state authority in this special field—just as CARB concluded in 2005.[47]

Even if the potential for conflict were not already apparent as a factual matter, courts have not required proof that a conflict would in fact develop. In *Union Pacific v. California PUC*, for example, the Ninth Circuit struck down California's efforts to regulate the placement of locomotives in the train and to adopt performance standards even though other states had not

---

EPA's adoption of its rules regarding locomotive idling in 2008. *See* 37 Fed. Reg. 23085 (Oct. 28, 1972).

[45] Rhode Island Air Pollution Control Regulation No. 45 – Rhode Island Diesel Engine Anti-Idling Program (effective July 19, 2007). The Rhode Island rules were approved as a revision to the Rhode Island SIP (*see* 73 Fed. Reg. 16203 (2008)) before EPA adopted its own locomotive idling regulations.

[46] At least three additional states have also recently considered adopting their own versions of local anti-idling regulation. *See* S.P. 17, 126th Legislature, 1st Reg. Sess. (Me. 2013); H.B. 4499, 97th Legislature, Reg. Sess. (Mich. 2013); H.B. 508, 2013 Reg. Sess. (N.H. 2013). Though none of those has yet been enacted, each demonstrates the potential for even further patchwork regulation if the District's and CARB's approach to preemption were followed here.

[47] California Environmental Protection Agency Air Resources Board, June 2005 CARB/Railroad Statewide Agreement on Particulate Emissions from Rail Yards, Public Comments Raising Legal Issues and Agency Responses, October 24, 2005.

adopted similar laws.[48] As the Ninth Circuit emphasized, courts have time and again recognized that, "[w]hile the extraterritorial effects of only one state regulatory regime [may be] relatively minor, if California can require the Railroads to develop and to implement performance-based standards, so can every other state, and there is no guarantee that the standards will be similar."[49] Ultimately, "if one State or political subdivision may enact such rules, then so may any other; and the end result would undo Congress's carefully calibrated regulatory scheme."[50] "The effect of such a patchwork regulatory scheme would be immense" and must be viewed as the type of undue burden that has been categorically foreclosed by ICCTA.[51]

3. UP's Compliance with the 2005 MOU

The District suggests that any burdens imposed by the Local Idling Rules would nonetheless be justified because the Railroads have failed to substantially comply with the terms of the 2005 MOU.[52] But the District grossly misrepresents the Railroads' track record in complying with the 2005 MOU—a track record that CARB has called "excellent."[53] At the UP Colton Rail Yard, for example, the District claims that UP's noncompliance rates in 2006, 2007, and 2010 were 15.4%, 50%, and 28.6%, respectively. In reality, using numbers provided by

---

[48] *Union Pac. R.R. Co.*, 346 F.3d at 871.

[49] *Id*.

[50] *Engine Mfrs. Ass'n v. S. Coast Air Quality Mgmt. Dist*., 541 U.S. 246, 256 (2004).

[51] *Union Pac. R.R. Co.*, 346 F.3d at 871-872. *See also Union Pac. R.R.*, 109 F. Supp. 2d at 1217 (N.D. Cal. 2000) ("subjecting plaintiffs to the extensive amount of inconsistent state regulation California's rule would necessarily permit, would undermine the need for substantial uniformity in this area and interfere with interstate commerce").

[52] District Supp. Comments at 19-20 ("The realities of the Railroads' actions under the 2005 MOU, however, also confirm the need for additional action in the South Coast Region."); *id.* at 22 ("The persistence of the Railroads' failure to meet voluntary limitations is clear, however, and points up need for further action in California.").

[53] CARB 2009 Annual Enforcement Report at p. 44, quoted in Second Schmid Affidavit, at ¶6.

CARB and employing generally understood principles of mathematics to calculate a percentage,[54] UP has a 1.8%, 0%, and 0.3% noncompliance rate at the Colton Rail Yard in 2006, 2007, and 2010, respectively.[55]

Colton Rail Yard Non Compliance with 2005 MOU		
Year	District's alleged noncompliance rates	Actual noncompliance rates
2006	15.4	1.8
2007	50	0
2010	28.6	0.3

Stated differently, UP was in compliance with the 2005 MOU at a rate of 98.2%, 100%, and 99.7% at the Colton Rail Yard in those same years. Those numbers hold true across the board, not just at Colton. Using CARB's numbers, year after year, UP's compliance hovers between 97.5% and 100% at its seventeen yards subject to the 2005 MOU.[56] It is not clear how the District performed its calculations, as they have no factual (or sound mathematical) basis. It is clear, however, that UP's calculations are based on CARB data and consistent with the compliance calculations made by CARB. CARB, which has been enforcing the 2005 MOU for the last eight years, has been unequivocal in its praise of the Railroads' nearly 100% compliance rate. This straw man argument therefore lends no support to the District's attempt to justify the unreasonable burdens that the Rules would impose on interstate commerce.

In sum, the numerous and substantial burdens that the Local Idling Rules would impose on interstate commerce cannot be countenanced under ICCTA.

---

[54] Percent non-compliance = Number of locomotives not in compliance/Number of locomotives observed * 100.

[56] Second Schmid Affidavit, at ¶12.

II. THE IMPERMISSIBLE CHARACTER OF THE BURDENS IMPOSED BY THE LOCAL IDLING RULES IS CONFIRMED BY CONGRESSIONAL LIMITATIONS ON STATE AND LOCAL AUTHORITY IN THE LIA AND CAA

The Local Idling Rules' irreconcilable conflict with Congress's mandate of uniform federal railroad regulation—and the undue burdens the Rules stand to impose on interstate commerce—is confirmed by the fact that the Rules also contravene the Locomotive Inspection Act ("LIA") and the Clean Air Act ("CAA"). The chart below, which demonstrates where a single locomotive travels in a sixty-day period, graphically illustrates why Congress determined long ago that states cannot regulate the way that Railroads equip their trains.

A single locomotive travels through many states per month

(60-Day Movement of *One Class 1 Line-haul Locomotive*)

[57]

The District's rules effectively require installation of anti-idling devices on locomotives that do not currently have them or reconfiguration of the software design on the ones that do—

[57] Iden Affidavit, at ¶7.

and that equipment must be used in every jurisdiction that the locomotive travels. Congress allowed no such thing.

A. The Local Idling Rules Contravene the LIA

Congress' mandate in the LIA provides strong evidence that the Local Idling Rules, and the patchwork of anti-idling regulations they would represent, impermissibly burden interstate commerce. As UP has previously explained, the Supreme Court in *Kurns* reiterated that Congress has sought "to occupy the entire field of regulating locomotive equipment."[58] And, as particularly relevant here, that federally occupied field extends to attempts by state and local governments to "influence" the design features of locomotive equipment.[59] The Local Idling Rules plainly seek to influence the design features of locomotive equipment, and do so in a way that departs from established (and uniform) federal standards. The rules accordingly impermissibly burden interstate commerce, as confirmed by their contravention of the LIA.

The District erroneously claims that the Rules are consistent with *Kurns*. The District primarily contends that its rules do not run afoul of the LIA because they merely regulate the "use" of locomotive parts, not their design.[60] Similarly, the District also emphasizes that the rules do not "actually compel the installation of anti-idling devices on [the Railroads'] locomotives."[61] But the District's purported dichotomy, and its focus on whether anti-idling devices are "compelled," ignores what the Supreme Court actually said in *Kurns*. In fact, the Court in *Kurns* rejected a nearly identical argument. The United States had argued that the

[58] *See Kurns v. R.R. Friction Prods. Corp*., 132 S. Ct. 1261, 1266 (2012).

[59] *Kurns*, 132 S. Ct. at 1268, n.4.

[60] District Supp. Comments at 28-29 (citing *S. Pac. Transp. Co. v. Pub. Util. Comm.*, 9 F.3d 807 (9th Cir. 1993)).

[61] *Id.* at 29.

failure to warn claims at issue in *Kurns* "are unlikely to be preempted because they would not *require* manufacturers of locomotives or railroads to alter the design or construction of their locomotives."[62] The Court rejected that assertion, holding instead that a state's attempt to "*influence* a manufacturer's choice whether to use [a] particular design"—even if it did not formally require such a choice—was impermissible under the LIA.[63]

It cannot be reasonably disputed that the Local Idling Rules seek to influence—and alter—the design features of locomotive equipment. CARB has previously acknowledged as much, noting that the purpose of the rules is to "hav[e] the effect of making the railroads install idling reduction devices without actually mandating the devices."[64] And, as explained in detail in the affidavits the Railroads submitted with their supplemental comments, the Local Idling Rules are likely to achieve that goal if implemented and enforced. The rules, for example, are likely to prompt the Railroads to retrofit their entire fleet with the required anti-idling devices and reconfigure the software on the devices that are already installed.[65]

[62] Brief of United States as Amicus Curiae Supporting Petitioners at 26, *Kurns*, 132 S. Ct. 1261 (2012).

[63] *Kurns*, 132 S. Ct. at 1268, n.4.

[64] California Environmental Protection Agency Air Resources Board, June 2005 CARB/Railroad Statewide Agreement on Particulate Emissions from Rail Yards, Public Comments Raising Legal Issues and Agency Responses, October 24, 2005, at 1. Both CARB and the District try to escape the implications of these comments—though notably on very different grounds. CARB's contention (CARB Supp. Comments at 8) that the Local Idling Rules at the time were purely local in character and were not contemplated as part of the SIP proposal simply does not change the underlying motivation for their enactment. The District, on the other hand, offers the feeble explanation (District Supp. Comments at 36) that the comments were made with respect to a prior version of the Rules and therefore shed no light on the intent behind these Local Idling Rules. It stands to reason, however, that no matter how many tweaks the Rules received along the way, at their core, they remain the same blatant attempt to direct the railroads to do what CARB and the District simply lack authority to require—the installation of certain anti-idling devices.

[65] See Iden Affidavit, at ¶29.

The District also argues that *Kurns* does not apply here because the equipment standards merely represent a permissible "safe harbor." That safe harbor concept, however, cannot be squared with *Kurns*. In *Kurns*, the Court could have viewed the desired design changes as a mere "safe harbor" for a failure-to-warn claim. But the Court did no such thing. The Court determined that the failure-to-warn claim would "inevitably influence" a manufacturer's or railroad's choice of design features for its locomotive equipment.[66] Notably, the Court reached that conclusion without any record evidence that the threat of liability from a failure to warn claim would in fact lead to a change in design features. Here, by contrast, the Railroads have submitted evidence that the Local Idling Rules would inevitably influence the Railroads' decisions on how to equip its locomotives.[67]

The District similarly claims that the Local Idling Rules are permissible under *Ray v. Atlantic Richfield Co.*[68] *Ray*, however, is easily distinguishable on its facts. In *Ray*, the Supreme Court held that a tug-escort requirement as an alternative to a design requirement is merely an operational rule and not an indirect method of achieving design modifications. The Court in *Ray* reasoned that the alternative operational requirement is unlikely to induce any design changes because, "[w]hile not a negligible amount, [the cost of complying with the tug-escort requirement] is only a fraction of the estimated cost of outfitting a single tanker with the safety

---

[66] *Kurns*, 132 S. Ct. at 1268, n.4.

[67] The District's reliance on *Reasonableness of BNSF Ry. Co. Coal Dust Mitigation Tariff Provisions*, is also misplaced. That case involved none of the relevant statutes or, for that matter, any form of preemption. *See* STB No. FD 35557 (served Dec. 17, 2013). It dealt with a challenge to the reasonableness of BNSF's tariff, which included a so-called "safe harbor" provision—one that did *not* mandate any design or equipment changes, but merely offered coal shippers a choice of *five* approved coal dust suppression methods and allowed them to propose additional methods. *Id.* at 2. Thus, the facts, law, and procedural posture of that case could not be further from the inquiry at hand here.

[68] 435 U.S. 151 (1978).

features required by § 88.16.190 (2)."[69] The same is not true in this case. To the contrary, the Railroads' supplemental comments made plain that the monetary, operational, and safety costs associated with the so-called use provisions of the Local Idling Rules would have the practical effect of requiring the Railroads to retrofit the entire fleet with anti-idling devices programmed to meet the District's unique requirements—just as the District intended.

Moreover, the operational requirement at issue in *Ray*—that each tanker be escorted by a tugboat in the waters of the Puget Sound—was a purely *local* regulation that "aris[es] from the peculiarities of local waters" and has no impact on the company's operations in other jurisdictions or localities. Similarly, the Ninth Circuit's conclusion in *Southern Pacific v. Pub. Util. Comm'n of Oregon,* that a local rule could ban the sounding of whistles installed on locomotives—on which the District also places great weight[70]—is likewise inapposite, because the act of sounding a whistle is performed exclusively in the local jurisdiction with no extraterritorial effects.[71] Accordingly, the court in that case emphasized that the rules did not pose any risk that the railroads would have to alter their equipment when traveling from state to state.[72]

By contrast, the anti-idling requirements in the Local Idling Rules are not ones that the Railroads can simply stop following when crossing into another state, as that would require an

[70] District Supp. Comments at 47.

[71] 9 F.3d 807, 811 (9th Cir. 1993).

[72] *Id. See also Civil City of S. Bend v. Consolidated Rail Corp*., 880 F. Supp. 595, 602 (N.D. Ind. 1995) ("South Bend and Mishawaka make no pretense of requiring or forbidding equipment on trains; the ordinances do not require the railroads to disconnect and remove the audible warning devices with which they are equipped."); *Bickley v. Norfolk & Western Ry*., 60 F. Supp. 2d 732, 734 (N.D. Ohio 1998) (upholding regulation over the use of sounding/warning devices, because practice could easily be modified from jurisdiction to jurisdiction).

alteration of the software that cannot be performed by the engineer and cannot practicably be done.[73] The Rules thus contravene the "self-evident" "virtue of uniform national regulation […]: [that] locomotive companies need only concern themselves with one set of equipment regulations and need not be prepared to remove or add equipment as they travel from state to state."[74] And because, in practice, the Railroads simply cannot stop and change the design settings of the anti-idling equipment at every state border, the Rules would effectively require the Railroads to follow their stringent standards in *every* jurisdiction along their routes.[75]

Thus, the Rules clearly contravene Congress' express desire to leave the task of uniform railroad regulation in the hands of the federal government.

B. The Local Idling Rules are Preempted by the CAA

While the Board need not resolve legal issues under the CAA to find preemption here, it is telling that the Local Idling Rules also clash with provisions of the Clean Air Act itself and with EPA's authority to enact *uniform* idling regulations. Although the District initially contends that the CAA "is outside the scope of the Board's jurisdiction in this proceeding,"[76] both the District and CARB have nevertheless asserted that it is the Board's responsibility to "advise EPA on how best to harmonize the rules at issue here with ICCTA in order to fulfill the federal mandates of *both* that statute and the *Clean Air Act*."[77] That task, as they define it, could not be

[73] *See* Iden Affidavit, at ¶¶8-16.

[76] District Supp. Comments at 24.

[77] CARB Supp. Comments at 3 (emphasis added).

performed without taking into account the purpose of each act, the provisions of the CAA that directly relate to locomotive regulation, and the explicit Congressional mandate of uniform federal regulation in this field.

The District contends that the preemption provision of the CAA, which prohibits State and local governments from adopting "any standard or other requirement relating to the control of emissions" in new/remanufactured locomotive engines,[78] does not apply because its Local Idling Rules are neither "standards" nor "other requirements." As a matter of plain meaning, it is obvious that the rules at issue here are at the very least "requirement[s] relating to the control of emissions." That should be the end of the inquiry, as the District offers no persuasive reason to distort the meaning of the terms Congress used.

Even though the Local Idling Rules do not have to meet the definition of "standards" to fall within the scope of the preemption provision, it is apparent that they do. As the District acknowledges,[79] the Supreme Court has interpreted "standards" under Section 209 to encompass the "emissions characteristics of a vehicle or engine," including whether the vehicle or engine "must have some other design feature related to the control of emissions."[80] The District contends that a mandate to program anti-idling devices to shut down engines after 15 minutes is just a regulation of "use" and therefore cannot be a "standard." But the rule plainly seeks to regulate a "design feature related to the control of emissions"—*i.e.*, the software. Moreover, there can be no doubt that a rule that regulates the software controlling the interval for shutting

[78] Clean Air Act, §209(e) (codified as 42 U.S.C. § 7543(e)).

[79] District Supp. Comments at 26 n.40.

[80] *Engine Mfrs. Ass'n v. S. Coast Air Quality Mgt. Dist.*, 541 U.S. 246, 253 (2004).

down the engine is a "standard" because, as the District acknowledges,[81] EPA has adopted its own rule on shut down intervals pursuant to its to authority to "promulgate regulations containing *standards* applicable to emissions from new locomotives and new engines used in locomotives."[82] Since the federal rule on locomotive idling is a "standard" within the meaning of the CAA, then *a fortiori* the District's rule is a "standard" too.

In arguing that the States retain the power to regulate locomotive idling despite the CAA's broad preemption language, the District relies heavily on the D.C. Circuit's decision in *Engine Mfrs. Ass'n, ex rel. Certain of its Members v. United States EPA*, which noted with approval EPA's position at that time that States could enact "in-use regulations" governing certain non-locomotive engines at issue there.[83] The District takes this statement several steps further, arguing that any state regulation that is even ostensibly directed at the use of locomotives must be permissible and is not subject to the preemptive sweep of Section 209(e) of the CAA.[84] Neither the holding of *EMA* nor EPA's own comments, however, support the District's interpretation of the CAA.

EMA involved *Chevron* review of an EPA regulation that did not apply to locomotive engines and is thus of limited import here. EPA did not adopt rules regulating locomotive idling

[81] District Supp. Comments at 24.

[82] 42 U.S.C. § 7547(a)(5) (emphasis added).

[83] 88 F.3d 1075, 1094 (D.C. Cir. 1996).

[84] The District concedes that Congress did not authorize waivers for state standards or requirements that apply to "new locomotives" (District Supp. Comments at 27 n.42)—a term that includes remanufactured locomotives and represents nearly all of the locomotives used in the South Coast district. There is accordingly no possibility that the District could obtain a waiver for these rules, even had it sought one, because the rules govern both new and old locomotives.

until 2008, more than a decade after the decision in *EMA*.[85] The challenge in that case arose in the context of mining equipment and was directed at "EPA's determination of the scope of preemption of state regulation under § 209(e)"[86] and its definition of "new" engines and sources in EPA's final rule, "Air Pollution Control; Preemption of State Regulation for Nonroad Engine and Vehicle Standards."[87] In its comments to the final rule challenged in *EMA*, the EPA confirmed that locomotive regulation was not at issue and "recognize[d] that regulation of *locomotives* presents *unique* circumstances, including questions regarding interstate commerce, that require special attention."[88] Thus, the EPA "defer[ed] its definition of 'new locomotive' and 'new engine used in a locomotive' until a later rulemaking dealing specifically with regulation of locomotives"—one that was neither challenged nor discussed in *EMA*.[89] Indeed, shortly after the decision in *EMA*, the EPA proposed (and eventually adopted) its first set of rules regulating emissions from locomotives. In so doing, the EPA emphasized that, "because of compelling factual and policy considerations relating to regulation of locomotives as compared to regulation of motor vehicles and other nonroad vehicles and engines," the preemptive sweep of Section 209(e) "would be expected to differ to a significant degree."[90] Among other things, the EPA properly recognized that "there are compelling policy reasons that support uniform, national regulation of locomotive emissions" and that the "legislative history of section 209(e) indicates

[85] In 2008, EPA promulgated idling regulations under its section 213 authority to promulgate idling standards. If the regulation of idling constitutes a standard for the purposes of section 213, it also must constitute a standard for the purposes of section 209.

[86] *Id.* at 1078.

[87] 59 Fed Reg. 36969, 36971-73 (July 20, 1994) (codified at 40 C.F.R. § 85.1602 (1995)).

[88] 59 Fed. Reg. at 36973 (emphasis added).

[89] *Id.*

[90] Emission Standards for Locomotives and Locomotive Engines, 62 Fed. Reg. 6366, 6397 (Feb. 11, 1997); *see id.* (noting the "unique circumstances applicable to locomotives").

that Congress intended a broad preemption of any state regulation of emissions from new locomotives or new locomotive engines, in large part because of the significant interstate commerce concerns raised by state-by-state regulation of locomotives."[91]

Furthermore, in its comments to the final rule challenged in *EMA*, the EPA explained that what makes a use regulation suitable for state-level implementation is its *local* character:

> This is especially true given the *location-specific nature* of in-use regulations. In-use regulations, such as time of use or place of use restrictions (e.g. high occupancy vehicle lanes) are typically very *site specific*. An in-use regulation suitable for California, or in part of California, may have little or no relevance or practicality to the type of in-use regulation suitable for another area. Such regulations *which primarily [a]ffect local users* are more appropriately controlled and implemented by local and state governments.[92]

The impact of the Local Idling Rules here, however, is anything but local. As explained, the Railroads cannot achieve compliance with the District's emissions standards by just making some minor operational adjustments or flipping a switch when they enter the South Coast Basin. Rather, the only practical way to reduce the risk of penalties for noncompliance with the rules would be to retrofit all locomotives in their fleet—both new and "in-use" ones, and to reconfigure the design of the anti-idling software to conform to the District's equipment standards. *The terms of EPA's uniform national rule governing locomotive idling would effectively be superseded by the District's equipment standards in every jurisdiction where the locomotives operate—unless and until another State follows suit and mandates even more*

---

[91] *Id*. Likewise, the District's reference to EPA's comments on CARB's Sleeper Truck Idling Requirements (California State Motor Vehicle and Nonroad Engine Pollution Control Standards; Truck Idling Requirements, 77 Fed. Reg. 9239, 9245 (Feb. 16, 2012)) is inapposite to the preemptive scope of Section 209(e) as related to regulation of *locomotives*.

[92] 59 Fed. Reg. at 36974 (emphasis added). *See also EMA*, 88 F.3d at 1094, n.58 ("[T]he EPA maintains that because in-use restrictions are inherently *local in character*, in that their appropriateness depends on *local conditions*, it would not make sense for Congress to require all states to follow California's lead on this issue.") (emphasis added).

stringent local requirements. Congress could not possibly have intended that the general provisions of the SIP process would be used in this way.

The Supreme Court has squarely held, when addressing the subject of harmonization, that a federal enactment that deals with "a narrow, precise and specific subject" must be given priority over a statute "covering a more generalized spectrum."[93] And EPA itself has confirmed that such rules would be "adverse to the Congressional intent of section 209(e)" and would be "subject to the waiver criteria of section 209(e)(2)."[94] In summary, all federal laws that are directed to the specific subject of railroad operations and locomotive emissions unequivocally confirm that Congress sought to strip state and local governments of any power to adopt the type of regulations at issue here. The generalized provisions of the SIP process cannot be harmonized with these clear congressional mandates in this setting.

[93] *Radzanower v. Touche Ross & Co.*, 426 U.S. 148, 153 (1976) (holding that general venue provisions of Securities and Exchange Act should not be applied despite its broad terms in light of a specific federal law limiting venue for suits against national banks).

[94] 59 Fed. Reg. at 36974 ("[G]iven EPA's definition of new and the scope of the definition within this rulemaking, this issue could arise when other states plan their in-use emission strategy.").

CONCLUSION

For all of the foregoing reasons, the Board should advise EPA that the Local Idling Rules would impermissibly interfere with the uniform regulatory scheme carefully crafted by Congress, and would violate ICCTA.

BEFORE THE

SURFACE TRANSPORTATION BOARD

Finance Docket No. FD 35803

United States Environmental Agency – Petition for Declaratory Order

AFFIDAVIT OF LANNY SCHMID

IN SUPPORT OF

THE REPLY BRIEF OF THE UNION PACIFIC RAILROAD COMPANY

I, LANNY SCHMID, declare as follows:

1. I submit this affidavit in support of the Reply Brief of the Union Pacific Railroad Company ("UP") in the above-captioned matter. I have personal knowledge of the facts stated in this affidavit and if called upon to do so, I could and would competently testify thereto.

2. I am employed by UP as Director of Environmental Field Operations, with offices in Omaha, Nebraska. My duties include managing a variety of technical subject matter experts across the United States who (1) establish company policy, procedures, and processes to ensure all work units across our system comply with applicable federal, state, and local environmental air emissions regulations (predominantly mobile sources), including acting as the UP representative for/liaison between California agencies and UP management for locomotive and rail yard emissions issues; (2) develop training programs to support efforts to comply with the applicable air emissions regulations; (3) manage centrally held operating and capital budgets for air initiatives; (4) perform in cooperation with the California Air Resources Board (CARB) comprehensive annual environmental compliance inspections of locomotive idling practices at 17 designated locations within California.; (5) develop comprehensive emissions inventories from all sources at key rail yards in California as well as locomotive emissions inventories for selected geographic locations across the Union Pacific rail network; and, (6) interface routinely with various technical experts regarding the dispersion of emissions from rail activities.

3. My personal background is set forth in my affidavit submitted in Support of the Supplemental Comments of UP submitted in February 14, 2014 and is not repeated here.

4. I participated in the negotiation and drafting the 2005 "ARB/Railroad Statewide Agreement for Particulate Emissions Reduction Program at California Rail Yards," known as the 2005 MOU, and have been responsible for compliance with the 2005 MOU since it was executed.

5. I make this statement to refute the statement by the South Coast Air Quality Management District ("SCAQMD") with respect to compliance with the 2005 MOU by the UP and BNSF Railways (collectively, the "Railroads").

6. The California Air Resource Board ("CARB") has repeatedly praised the Railroads' compliance with the 2005 MOU idling requirements. For example, in its 2009 Annual Enforcement Report, CARB stated that the "the overall compliance rate is an excellent 99.3%." CARB 2009 Annual Enforcement Report at p. 44. In its 2010 Annual Enforcement Report, CARB stated "The overall compliance rate exceeds 99 percent." CARB 2010 Annual Enforcement report at p. 30.

7. In its Supplemental Comments, SCAQMD contradicts CARB's findings and states that there is "a high rate of non-compliance with the 2005 MOU on a consistent basis." SCAQMD Supplemental Comments at p. 21. This statement is incorrect and reaches a different conclusion than CARB has repeatedly published.

8. CARB conducts comprehensive inspections twice each year to determine compliance with the 2005 MOU. Local Air Districts may jointly participate in those inspections or may on occasion conduct additional inspections on their own schedule or in response to complaints regarding excessive idling events. CARB can and does conduct additional *ad hoc* observations and inspections as conditions warrant and/or in response to complaints. These inspections are tracked in their database under the heading "off-site." See Attachment A.

9. In the event non-compliance is identified, a Notice of Violation ("NOV") is issued and a fine may be imposed.

10. Each year, CARB issues a report summarizing the results of its inspection program for

the Railroads. These reports are posted on CARB's website at the link identified by SCAQMD in its brief.[1]

11. On April 3, 2014, at UP's request, CARB provided UP with a spreadsheet summarizing all of its inspections of UP operations and any resulting NOVs for the 2005 MOU idling requirements from 2006 through the end of 2013. See Attachment A.

12. The CARB data shows that for over 11,000 UP locomotives inspected during this time period, compliance ranged from a low of 97.5% at the beginning of the MOU to 100% last year. This is in stark contrast with the SCAQMD's conclusions.

13. The UP graphic below partly mirrors SCAQMD's graphic in structure in that it evaluates the same yards' non-compliance. SCAQMD Supplemental Comments at p. 22. In stark contrast with SCAQMD's statements, UP's calculations, relying on CARB's published reports show that compliance is100% or close to 100% in every year. UP's first graphic differs from SCAQMD's in that it adds information from 2011 to 2013 and calculates the non-compliance rate utilizing a logical mathematical equation set out below, where the numerator is the number of non compliant locomotives, the denominator is the number of locomotives observed multiplied by 100 to calculate a percentage:

$$\frac{\text{Number of noncompliant locomotives}}{\text{Number of locomotives observed}} * 100$$

Due to the vast difference from the SCAQMD results, UP appears to calculate the "Average" column differently than the SCAQMD. Following the same format set out above, UP: 1) added the numerators for the 2006 to 2010 years, 2) added the denominators for the 2006 to 2010 years, 3) divided the total denominator into the numerator and multiplied by 100 to calculate the "Average" column.

Railyards Non-Compliance Rate

Location	Non-Compliance Percentage Rate								
	2006	2007	2008	2009	2010	Average	2011	2012	2013
UP Railyards Outside the District									
UP Martinez	0.0%	14.3%	0.0%	0.0%	0.0%	2.9%	0.0%	0.0%	0.0%
UP Milpitas	0.0%	14.3%	0.0%	0.0%	0.0%	3.2%	0.0%	0.0%	0.0%
UP Roseville	0.5%	4.5%	1.4%	1.4%	0.3%	1.6%	0.0%	0.4%	0.0%

[1] Attachment B is a list of the web links for each report.

14. In the second UP graphic below and for a more complete picture, using the same format described above, UP also calculates the non-compliance rates for the additional thirteen UP rail yards subject to the 2005 MOU that SCAQMD omitted. UP uses the same equations described above, most of which have a 100% or near-100% compliance rate.

Railyards Non-Compliance Rate For Yards Not Noted in SCAQMD Chart

BEFORE THE

SURFACE TRANSPORTATION BOARD

Finance Docket No. FD 35803

United States Environmental Agency – Petition for Declaratory Order

AFFIDAVIT OF KEITH B. JENSEN

IN SUPPORT OF

THE REPLY BRIEF OF THE UNION PACIFIC RAILROAD COMPANY

I, KEITH B. JENSEN, declare as follows:

1. I submit this affidavit in support of the Reply Brief of the Union Pacific Railroad Company ("UP") in the above-captioned matter. I have personal knowledge of the facts stated in this affidavit and if called upon to do so, I could and would competently testify thereto.

2. I am employed UP by as Director of Train Handling Improvement-Operating Practices and Safety, with offices in Salt Lake City, Utah. My duties include: (1) developing train handling standards and improvement action plans, (2) implementing and managing engineer training and quality assurance programs, (3) overseeing and coordinating locomotive simulator deployment and usage; and (4) leading and directing the distributed power unit training and implementation on the system. I have worked in this position since May 2004. UP requires that I have "expert" knowledge of operating rules and practices, fuel conservation processes, and train handling practices.

3. My personal background and experience in railroad began in October 1988, when I hired out as a Switchman/Brakeman. I was promoted to Conductor in April 1991. In September 1993, I was promoted to Locomotive Engineer. Beginning in 1996, I served as a peer instructor for the Operations Training Department. I trained new hire Switchmen/Brakemen and Conductor classes. The three week classes included training on safety rules, the general code of operating rules, and field training. In addition to these training duties, in 1999, I began developing, coordinating and teaching UP's fuel

conservation program using a mobile simulator. On average, I teach six classes across UP's system. I became a senior instructor teaching locomotive engineer classes for new locomotive engineers in 2002 until 2004 when I began my present position as a Director of Train Handling Improvement Operating Practices and Safety. In 2006, I was part of the team that revised, updated, and communicated UP's Locomotive Shutdown Policy. .

4. I have reviewed the Verified Statement of Thomas E. Johnson and Richard C. Beall ("Johnson and Beall") included with the South Coast Air Quality Management District ("SCAQMD") Supplemental Comments.

5. Johnson and Beall review various operating scenarios and conclude that "there are no extraordinary or disruptive measures that locomotive engineers would need to take to comply with the Rule." Their conclusion is incorrect because, among other things, it is based on an analysis that they admit ignores several key operating constraints.

6. Distributed Power Trains: The first key operating constraint Johnson and Beall ignore is that distributed power trains ordinarily maintain both the lead and the rear locomotive in operation in order to maintain pressure in the air brakes. In my review of the Rule, I saw no exception for maintaining air brake pressure, which is a critical safety issue.

7. Hand Brakes: Another key operating constraint that Johnson and Beall ignore is the time that it takes to set and release hand brakes when locomotives are shut down. See footnote 7 of the Johnson and Beall Verified Statement. Setting handbrakes can be a very time-consuming activity:

    a. UP Operating Rule 32.1.1, Securement Procedures, sets forth detailed requirements for the setting of hand brakes. See Attachment 1. Hand brakes must be set by hand, with a crew member walking the train to each car whose brake must be set. Current data demonstrates that more than 20 trains or greater than 75% of the trains originating or terminating in the South Coast Air Basin are Distributed Power.

    b. The number and location of hand brakes to be applied depends on the grade, the number of loaded and empty cars, as well as car type, wind conditions and any site-specific instructions. As pointed out in Doug Wills' declaration submitted by

UP in this matter, the South Coast Air Basin is full of "heavy grade" territory, containing miles of track with grades of 1% to 2% descending into the Basin.

c. On a grade, hand brakes must be set on the low end of the train—that is, the end that is opposite the lead locomotive—when the slack is bunched. As the chart included in Rule 32.1.1 shows, a train on a 1% grade could require as many as 36 hand brakes to be set. Allowing even just a few minutes for setting the brake and a few minutes for walking from each car to the next, and then walking all the way back to the lead locomotive, setting these hand brakes could easily take up to two hours. Of course, this work must be repeated when it is time for the train to get underway, adding still more hours of delay.

8. Crew Shuttles: Johnson and Beall assume that in ending distributed power operation, the train crew will be picked up from the lead locomotive and shuttled to the distributed power locomotive. This assumption, built into three of Johnson and Beall's scenarios, is not justified. As has been thoroughly explained in the sworn statements of Ken Hunt and Doug Wills submitted by UP, and as I know from my own personal experience, unless we have a planned stop or work event, it is unusual for a driver or vehicle to be available to ferry the crew from the lead locomotive to the distributed power unit(s). Instead, the crew must walk the train, which may be over a mile in length, in order to shut down the distributed power units and secure the train. This is why we generally do not shut down distributed power locomotives.

9. Operational Modifications: Johnson and Beall also offer a number of completely unsupported—and incorrect—assumptions about how the railroads could modify their operations to make compliance with the Rule less of a burden. For example, they state that "the crew should have enough time between its briefing and its departure to allow of the relinking procedure." Johnson and Beall at p. 20. This is often not the case. The crew must be ready to move quickly to seize an available departure slot when it comes up. As pointed out by Doug Wills in his statement, the window of opportunity for a train to depart a yard and enter the main line is very real and narrow. Estimating the specific time is very difficult and departures and arrivals must be coordinated amongst a number of different work groups. See Wills Statement at paragraphs 51 to 56.

10. Reliance on Spare Crews to Perform the Work: Another completely unsupported—and incorrect—assumption is that "a yard crew can perform all of the necessary work before hand, or a yard crew can proceed to the distributed power unit while the road crew proceeds to the lead unit." Johnson and Beall at p. 20. It cannot be assumed that yard crews will be available to assist when such shutdowns or restarts occur in a yard, and they are obviously not available outside of the yards.

11. Other Incorrect Assumptions: Johnson and Beall make further completely unsupported—and incorrect—assumptions: that distributed power trains are rarely delayed by more than 30 minutes; that older locomotives that are not equipped with AESS idle control devices are not likely to be used in time-sensitive road service; that distributed power trains are not left unattended with any frequency. In my experience, none of these assumptions is correct.

12. System Delays. The various steps in the scenarios laid out in Johnson and Beall's statement are more abbreviated than the steps required in UP's Operating Rules, in particular Rule 32.2.1, which is attached at Attachment 2 to my affidavit. However, even assuming that their description of the steps involved, and the time it takes to perform each step, was accurate, the amount of time they identify—generally around 20 minutes to shut down and 20 minutes to start up a locomotive (without considering the need to set or release hand brakes and/or walk the train to address distributed power)—would result in significant disruptions to UP's operations. When one adds in the time for walking the train to shut down or restart distributed power and to set or release hand brakes, major delays can result. As was thoroughly explained by Ken Hunt and Doug Wills in their statements, such delays can cascade throughout the U.S. rail system.

13. In summary, Johnson and Beall's time estimates for shutting down and restarting locomotives make a number of false assumptions about how railroads actually operate and grossly underestimate the time required to complete these tasks by omitting:

    a. Time spent setting and releasing hand brakes, which can amount to two hours or more; and

    b. Time spent walking the train when a shuttle is not available, which can amount to an hour or more.

More important than the delays that would be caused by the Rule's requirements is the potential for unsafe conditions if crews must unnecessarily walk the train or if setting of hand brakes is rushed or if air brake pressure is not maintained. In my opinion, the Rule makes it harder for UP to achieve its most important goal—safe operation of our railroad.

I declare under the penalty of perjury under the laws of the United States that the foregoing is true and correct.

Executed on this 14 day of April 2014, at Salt Lake City, Utah.
