Please deny the Great Lakes Basin Transportation request to construct a new rail line. This line has had no public support from any other rail roads. Norfolk Southern has again reiterated they have no intention of using this line. I do not see how this line is in the public interest, if not one other rail provider plans on using it. Their lack of support indicates that the line is unneeded and unprofitable, if it was either of these the other companies would be fully supportive of GLBT. Their lack of support also means the GLBT project does not meet the public necessity criteria of being a preferred method of transport. The existing lines prefer the current system as indicated by their lack of support for GLBT, and therefore the project must be denied.
