EI-23258

As some may call it under developed farmland. Isn't this farmland one of our richest natural resources this country has? Is it not the American farmer who feeds most of the world?

By driving a train thru this farmland you will be altering the soil forever! Digging up tiles, compacting the soil, altering the natural flow of water. What will happen to our ground water, the wetlands, the wildlife, our property value, our property tax? What about the effect on our livestock, the noise?

The people of this United States of America depend on the American farmer for their food source. Most people think food comes from the grocery store, and completely forget about the farmer who nurtures the soil and takes care of livestock and plants grains for the product in the grocery store. In 20 years, 40 years and more, the population will keep growing and farmland will be taken away.

over

Borecacy just keeps striping the land
away from the farmer for urban sprawl
bigger & better roads, Towers, wind turbines
and now a 70mph Train.

Simple Fact!

They do not make more farmland!

"Why don't you put
that train along the
major highways where
they have already ruined
the land?"

Respectfully
