RE: **ORC Project Review Archives Search**
Norfolk Southern Rail Line near Troutville, Botetourt County, VA

Dear Mr. Wimbish:

Thank you for your recent request for information from our archives on previously recorded archaeological and architectural resources within the area of potential effect, as delineated on your map, for the above-referenced project. Please note that your request for information from the Department of Historic Resources (DHR) Archives concerning the location of historic resources does not relieve you or your client from possible obligations under state or federal historic preservation regulations. I strongly recommend that you contact **Roger Kirchen**, DHR's Resource Services and Review Division at (804) 482-6091, if you have any questions concerning state and federal regulatory requirements.

Enclosed are the maps showing the locations of any archaeological or architectural resources within your project area. Copies of files on resources found within your project area are also enclosed. These copies include survey and site forms, photographs, and other pertinent material.

Also included is a spreadsheet printout from our architectural database with information on properties within your project area. The printout contains the DHR file number, resource name, register status (the "V/N" column), eligibility status ("Y" for potentially eligible, "N" for not potentially eligible and blank if not previously evaluated by DHR), and date of eligibility determination.

We have also examined our records for information concerning eligibility determinations for archaeological sites within your project area. If any such determinations have been made, a spreadsheet printout from our archaeological database with information on sites within your project area has been included. The printout contains the DHR site number, resource name, register status, eligibility status ("Y" for eligible, "N" for not eligible, "potentially" if found potentially eligible and blank if not previously evaluated by DHR), and date of eligibility determination.

Finally, an invoice is enclosed for the charges incurred through your use of our archives search service.

DHR serves as the official state repository on historic resources. This information has been compiled primarily by independent cultural resource consultants. DHR makes no warranty as to the fitness of the data for any purpose. The absence of historic resources in DHR records does not necessarily mean that no historic properties are present. It is advisable to check with local government planning offices for information on any properties that may meet the age and significance tests of the National Register criteria and have not yet been recorded in the DHR archives. Also, the area in question may not have been systematically surveyed for resources, possibly necessitating a survey and submittal of that data with your Project Review application.

Sincerely,

Lauren Leake

Additional Property Information

Architecture Setting: Rural

Acreage: No Data

Site Description:

2006: This portion of the Appalachian Trail travels through an open field in Sky Meadows State Park in Clarke County. The section is maintained as a cleared right-of-way for existing gas pipelines. The elevation of this portion of the trail is high in comparison to the surrounding landscape, providing views across the area.

2006: None associated.

September 2013: The portion of the Appalachian Trail located within the Project APE travels northeast between Valley Road and Interstate 81 in Botetourt County until the two roads intersect. The Appalachian Trail then travels east along Valley Road a short distance until Valley Road curves north and the Appalachian Trail continues east-southeast through a heavily wooded area.

Surveyor Assessment:

2006: The Virginia portion of the Appalachian Trail (AT) along the Blue Ridge Mountain range in Clarke and Fauquier counties is directly associated with a significant historic event – the construction of a hiking path stretching over 2,100 miles of terrain extending from Maine to Georgia. It was first recognized as part of the National Trail Systems Act of 1968. As a result, Trail fulfills the significance and integrity requirements defined in the National Register Criteria for Evaluation (36 CFR 60 [a-d]). The Appalachian Trail is the first long distance hiking trail in the United States (Criterion A). The AT also possesses significance for its design and construction as a cultural landscape (Criterion C). It is unique in its construction as a long-distance hiking path on the East Coast, in that it is buffered primarily by public lands, it creates a natural habitat for plants and animals, and it preserves natural spaces to which people can retreat. Although the Trail is maintained by a variety of volunteer organizations, it is maintained to a common design standard as set forth by the Appalachian Trail Conference (Criterion C). Thus, under Criteria A and C, in the opinion of the surveyor, this portion of the Appalachian Trail is eligible for inclusion on the NRHP.

September 2013: The Appalachian Trail is significant as being the first long distance hiking trail in the United States, stretching 2,160 miles from Georgia to Maine. For this reason is it considered NRHP-eligible under Criterion A. The trail also possesses significance for its design and construction as a cultural landscape. It is unique in its construction as a long distance hiking path on the East Coast, in that it is buffered primarily by public lands creating a natural habitat for plants and animals and preserving natural landscapes and it considered NRHP-eligible under Criterion C. The trail is maintained to a common design standard by various volunteer organizations. Therefore the Appalachian Trail is eligible under Criterion C. The VDHR has determined that the Appalachian Trail is NRHP-eligible.

Architectural Description:

2006: The Appalachian Trail is a 2,160 mile National Scenic Trail passing primarily through unspoiled terrain from Maine through the state of Georgia. Benton MacKaye (1879-1973) first envisioned building the trail at the turn of the twentieth century. While working at the United States Forest Service (USFS) as a regional planner, MacKaye developed a growing concern that workers needed a place to get away from the pressures of working in the city (Spaur 1979: H-8). In October 1921, MacKaye wrote an article for the Journal of the American Institute of Architects titled "An Appalachian Trail: A Project in Regional Planning." In his article, MacKaye capitalized on the growing conservation movement by outlining his concept of the Appalachian Trail as a continuous linear park comprised of trails from the highest point in New England, Mount Washington, to the highest peak in the South, Mount Mitchell. In 1922, clubs affiliated with the New York-New Jersey Trail Conference created the first section of the Appalachian Trail – the Bear Mountain section in Palisades Interstate Park (Stewart 1966:2). Attempting to build additional support, MacKaye organized the first Appalachian Trail Conference in Washington in 1925. Participants formed the Appalachian Trail Conference Organization, appointing MacKaye as the field organizer and Major William Welch, manager of New York's Harriman Park, as the first Chairman. However by 1926, project efforts waned and toward the end of the 1920s retired Judge Arthur Perkins and Myron Avery took over the organization and building of the Appalachian Trail (Appalachian Trail Conservancy 2006; Stewart 1966). With the continued support of the trail by local clubs, Perkins was concerned with managing the trail for its users. In 1931, he developed the galvanized iron, diamond shaped insignia used as the official trail marker (Stewart 1966:5). Trail blazes have evolved during the course of the twentieth century, changing from the original galvanized mark to painted white markers, placed at eye level along the pathway (Stewart 1966:5; Appalachian Trail Conference 1970:15).

During the Great Depression, the Civilian Conservation Corps engaged in building the trail and the Appalachian Trail was completed in 1937. Following the completion of the trail, concerns about encroaching development from the construction of roads and resorts led one trail enthusiast, Edward Ballard, to propose establishing the "Appalachian Trailway," a buffer of land placed on either side of the trail to secure it from future development. In 1938, the National Park Service (NPS) and the USFS agreed to set aside one mile of land on either side of the trail within their jurisdictions for recreational use. In the buffers, no parallel roads or other incompatible developments were permitted (Stewart 1966:2). This was the first instance of implementing trail protection at the federal level.

The trail fell into disrepair during World War II when volunteers were unable to work on the trail. On August 5, 1948, Earl V. Shaffer became the first hiker to walk the entire trail, setting a trend for what would quickly become known as "thru-hikes." Shaffer began his hike in Mount Oglethorpe, Georgia, and ended on Mount Katahdin, Maine. He spent 123 nights on the trail, averaging approximately 17 miles a day (Brown 1949:219). The publicity galvanized enthusiasts to join the clubs, which rebuilt the trail in the early 1950s and continue to aid with its upkeep. Together these clubs form the Appalachian Trail Conference, whose purpose is to care for the Appalachian Trail (Brown 1949:236). These efforts are completely voluntary. In addition, NPS, USFS, and state park services from states that are crossed by the trail provide trail maintenance for portions located on public lands. In this portion of Virginia, the Trail runs along the Blue Ridge Mountain range in Clarke and Fauquier counties.

The Virginia portion of the Appalachian Trail along the Blue Ridge Mountain range in Clarke and Fauquier counties is directly associated with a significant historic event – the construction of a hiking path stretching over 2,100 miles of terrain extending from Maine to Georgia.

November 2006

September 2013: A small portion of the trail near Route 11 in Troutville, VA was surveyed.

Additional Property Information

Architecture Setting: Town

Acreage: No Data

Site Description:

August 2013 - The Norfolk Southern Railway Bridge is located over Lee Highway/Route 11 just north of Gibson Lane and Tinker Creek. There are several modern industrial developments in the area, including a large substation facility to the east.

Surveyor Assessment:

August 2013 - No information could be located that connects the Norfolk Southern Railway Bridge to significant events or themes in local, state, or national history. As such, this resource is recommended not eligible for NRHP listing under Criterion A. Likewise, no information is available to tie this resource to a significant individual in local, regional, or national history. Therefore, this resource is recommended not eligible for NRHP listing under Criterion B. The Norfolk Southern Railway Bridge is a common example of a steel deck plate girder railroad bridge in Botetourt County, and there are several better preserved examples throughout the region. Therefore, the resource is recommended not eligible for NRHP listing under Criterion C.

Title: Archaeological Resources

Date: 2/21/2014

DISCLAIMER: Records of the Virginia Department of Historic Resources (DHR) have been gathered over many years from a variety of sources and the representation depicted is a cumulative view of field observations over time and may not reflect current ground conditions. The map is for general information purposes and is not intended for engineering, legal or other site-specific uses. Map may contain errors and is provided "as-is". More information is available in the DHR Archives located at DHR's Richmond office.

Notice if AE sites: Locations of archaeological sites may be sensitive the National Historic Preservation Act (NHPA), and the Archaeological Resources Protection Act (ARPA) and Code of Virginia §2.2-3705.7 (10). Release of precise locations may threaten archaeological sites and historic resources.
