Re: Finance Docket No. 36500, *Canadian Pacific Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Enclosed for e-filing by Canadian Pacific Applicants[1] and Kansas City Southern Applicants[2] ("Applicants"), in the above-referenced Finance Docket, is an Application seeking authority, under 49 U.S.C. §§ 11323-11325, for the acquisition of control by Canadian Pacific of Kansas City Southern (the "Application").

The Application is being submitted in four volumes. There are two versions of volumes I (CP-25/KCS-13) and II (CP-26/KCS-14): the first version, marked as "PUBLIC," and from which sensitive financial, commercial, and operating information has been redacted, is to be filed on the public record and served on all parties of record. The second version, marked as "HIGHLY CONFIDENTIAL," is an unredacted version to be filed under seal subject to the Protective Order of April 2, 2021 ("Protective Order") and to be served on anyone who has executed the Board's undertaking for highly confidential materials, as Exhibit B to the Protective Order. Volumes III (CP-27/KCS-15) and IV (CP-28/KCS-16) are only available in a single version, which is public, unredacted and to be filed on the public record and served on all parties

---

[1] Canadian Pacific Applicants are Canadian Pacific Railway Limited, Canadian Pacific Railway Company, and their U.S. rail carrier subsidiaries Soo Line Railroad Company, Central Maine & Quebec Railway US Inc., Dakota, Minnesota & Eastern Railroad Corporation, and Delaware and Hudson Railway Company, Inc.

[2] Kansas City Southern Applicants are Kansas City Southern and its U.S. rail carrier subsidiaries The Kansas City Southern Railway Company, Gateway Eastern Railway Company, and The Texas Mexican Railway Company.

FEE RECEIVED

of record.

In connection with the Application, Applicants are also delivering to the Board, on USB flash drive, public and highly confidential workpapers, which are identified and labeled accordingly. As of November 1, 2021, the public workpapers will be made available upon request and the highly confidential workpapers, which are subject to the Protective Order, will be made available to those who have executed the Board's undertaking for highly confidential materials, as Exhibit B to the Protective Order.

A filing fee of $1,930,000 was paid via wire transfer on October 27, 2021. Please contact me with any questions.

Respectfully submitted,

David L. Meyer

Attorney for Canadian Pacific Railway Limited

RAILROAD CONTROL APPLICATION
VOLUME 1 OF 4

INTRODUCTION
[SECTION 1180.6]

Applicants seek Board approval for the proposed combination of CP and KCS, pursuant to which CP would acquire and exercise control of KCS. With Board approval, the two companies would combine to form an integrated system to be known as Canadian Pacific Kansas City, or "CPKC." The CP/KCS combination presents a once-in-a-lifetime opportunity to inject new and invigorated competition into North-South transportation corridors connecting the United States, Mexico, and Canada, supporting U.S. and North American economic growth. The Transaction is unambiguously and uniformly beneficial for competition and the public interest.

When CP and KCS jointly announced their proposed combination in March of this year, they described it as a "natural and perfect fit." That remains true, and CP intends to carry out its acquisition of KCS, with the Board approval sought in this Application.

SUMMARY OF TRANSACTION
[SECTION 1180.6(a)(1)(i)]

Applicants are seeking approval for Canadian Pacific's acquisition and exercise of control of KCS and its U.S. rail carrier subsidiaries. The salient elements of the Transaction structure are as follows:

As set forth in the September 15 Merger Agreement, CPRL, through its indirect, wholly-owned subsidiary Cygnus Merger Sub 2 Corp., would acquire KCS. Upon receipt of approval by the shareholders of CPRL and KCS and the satisfaction of other customary closing conditions, Cygnus Merger Sub 2 Corp. would merge with and into KCS (the "Merger"), with KCS surviving the Merger. Upon completion of the Merger, holders of KCS's common stock would become entitled to receive a combination of CPRL common shares and cash in exchange for their common stock, and holders of KCS's preferred stock will become entitled to receive cash in exchange for their preferred shares. Immediately following completion of the Merger, CPRL would conduct a series of internal transactions that would result in its voting interest in the successor to KCS being placed into a Voting Trust pending review and approval of the control Transaction by the Board.

As a result of the internal transactions, KCS would legally be merged with and into Cygnus Merger Sub 1 Corporation, a wholly-owned subsidiary of CP, with Cygnus Merger Sub 1 Corporation surviving. However, the successor holding company of KCS will continue to own KCS's railroad and other affiliates, and will maintain the same name, governance structure, and other corporate-level attributes of KCS. For convenience, all references to KCS following the Merger are to its successor holding company.

The internal transactions involve a series of steps designed to address matters relating to tax and corporate law, and all of those steps, including the placement of the CPRL's interest in

KCS into the Voting Trust, will be completed within moments of the completion of the Merger and for practical purposes contemporaneously. Specifically, (a) KCS would merge with and into Cygnus Merger Sub 1 Corp., a direct, wholly-owned subsidiary of CPRL, with Cygnus Merger Sub 1 Corp. surviving; (b) CPRL will contribute its shares in Cygnus Merger Sub 1 Corp. to CPRC, a direct, wholly-owned subsidiary of CPRL; (c) CPRC will contribute its shares in Cygnus Merger Sub 1 Corp. to Cygnus Holding Corp., an indirect, wholly-owned subsidiary of CPRL; and (d) CPRC will transfer its shares in Cygnus Holding Corp. to Canadian Holdco, an indirect, wholly-owned subsidiary of CPRL; and (e) Canadian Pacific will cause Cygnus Holding Corp. to contribute its entire interest in Cygnus Merger Sub 1 Corp., and thus in KCSR and its railroad affiliates, to the Voting Trust.

The Board approved Canadian Pacific's proposed use of a Voting Trust to acquire the stock of KCS in Decision No. 5, served May 6, 2021, and Decision No. 8, served September 30, 2021. Pursuant to these decisions, the Voting Trustee, David L. Starling, will not own any individual shares or other securities of Canadian Pacific or its affiliates while the Trust is in existence and will ensure that the management and operation of KCS remain independent during the pendency of the control proceeding, including through the administration of guidelines governing communications between CP and KCS during that period. The Voting Trust Agreement and the September 15 Merger Agreement are set forth in Volume 4 of this Application.

If and when the Board grants the Application, CP accepts any conditions imposed by the Board, and the Board's approval becomes administratively final, the Voting Trust will be terminated and Canadian Pacific will assume control of KCS and its U.S. railroad subsidiaries.

PROPOSED TIME SCHEDULE
[SECTION 1180.6(a)(1)(ii)]

The Board's public interest review of the Transaction would take place pursuant to a procedural schedule to be established by the Board. Applicants have proposed a schedule of ten months or less in their Petition for Procedural Schedule (CP-3/KCS-3, filed Mar. 22, 2021), which they continue to believe is appropriate and in the public interest. Shippers and the public will be best served by the prompt realization of the benefits that will flow from the Transaction, following an appropriately thorough review by the Board.

CP intends to acquire KCS's outstanding shares and place them into Voting Trust pending the Board's public interest review as promptly as possible. CP's acquisition of KCS's shares (and placement of those shares into Voting Trust) is contingent on the approval of the Transaction by the shareholders of both CP and KCS – which is expected by the end of 2021 – and the approval of COFECE (the Mexican competition authority) and IFT (the Mexican communications regulatory authority), which is expected by the end of 2021 and at the latest during the first quarter of 2022.

CP would acquire the shares of KCS from the Voting Trust and thereby exercise control over KCS and its subsidiaries only upon the effectiveness of a Board decision approving the

Transaction. CP plans to take that step – if authorized to do so – as promptly as possible so as to expedite the realization of the Transaction's benefits. Integration of CP's U.S. rail carrier subsidiaries with KCS's U.S. rail carrier subsidiaries would begin as soon as possible, contingent only on Applicants having completed the necessary planning and preparations to ensure that integration would occur without any adverse consequences for service or safety. Applicants anticipate that their planning for the mission-critical steps associated with the integration of CP and KCS into a single rail network will have been completed before the Board authorizes CP's control of KCS. Applicants expect that full integration, including the capital investments necessary to accommodate the new traffic that will be attracted to the more efficient and competitive combined CP/KCS network, would be completed within three years of the Board's decision approving the Transaction.

PURPOSE
[SECTION 1180.6(a)(1)(iii)]

The purpose of the Transaction is to combine America's two smallest but fastest-growing Class I railroads in order to build a more efficient and more competitive rail network. The combined CP/KCS network will further the Continent's need for expanded and more capable and efficient transportation infrastructure while simultaneously advancing the interests of Applicants' current and future customers in more reliable and economical rail transportation options serving important North-South trade flows.

As described in the Verified Statements of Keith Creel, CP's CEO, and Patrick J. Ottensmeyer, KCS's CEO, the Transaction will enable CPKC to provide dramatically improved rail service in important North-South corridors, transforming relatively underutilized CP-KCS routes into a more robust artery of trade both within the United States and among the United States, Mexico and Canada, promoting growing USMCA trade flows. CPKC will provide

stronger competition in all of these corridors, including for the first time injecting new single-line routes between important parts of the Upper Midwest and the South Central United States, in competition with much larger Class I railroads that dominate rail flows in these corridors.

The new single-line services made possible by the Transaction will bring significant benefits to rail shippers in these North-South corridors, as explained in detail in the Verified Statements of John Brooks, Jonathan Wahba and Michael J. Naatz (in this Volume), and W. Robert Majure (in Volume 2). The improvements in operational efficiency and safety are detailed in the Operating Plan (verified by CP's Assistant Vice President – Service and Product Design, Raymond A. Elphick, and KCS's Executive Vice President – Operations, John F. Orr), which is in Volume 2 of this Application. The Transaction will generate significant environmental benefits as well, shifting more than 60,000 trucks off the Continent's highways annually and onto new, more efficient and environmentally friendly CPKC intermodal services, as explained in the Verified Statement of Bengt Mutén (in Volume 2) and the Joint Verified Statement of Jonathan Wahba and Michael J. Naatz (in this Volume).

All of these benefits will be achieved without any adverse impacts on any stakeholders. No lines will be abandoned and no facilities will be rationalized, as the goal of the Transaction is to support growth in traffic across the entire CP/KCS network. Likewise, competition will be enhanced and nowhere diminished, as CP and KCS connect at only a single point and operate no parallel lines. And routing options will be expanded and not reduced, as CPKC will keep all existing gateways open on commercially reasonable terms and create no new bottlenecks, as explained in the Verified Statement of John Brooks and elsewhere in the Application.

NATURE AND AMOUNT OF ANY NEW SECURITIES OR OTHER FINANCIAL ARRANGEMENTS [SECTION 1180.6(a)(1)(iv)]

Financing of the Transaction. Pursuant to the Merger Agreement entered into between CP and KCS on September 15, 2021, CP will acquire all of the voting securities of KCS in a stock and cash transaction. Under the terms of the September 15 Merger Agreement, holders of KCS common stock will receive 2.884 CPRL common shares and $90.00 in cash, without interest, in exchange for each share of KCS common stock. Holders of KCS preferred stock will receive the preferred $37.50 in cash, without interest, for each preferred share. In the aggregate, approximately 70 percent of the consideration for the Transaction will be in the form of CPRL stock and 30 percent in cash.

CPRL will fund the stock portion of the consideration through the issuance of up to 264,723,997 CPRL common shares, which will represent approximately 28 percent of the issued and outstanding common shares of the combined entity.[1]

The cash portion of the consideration, together with all related fees and expenses, is expected to total $8.5 billion. CPRL will fund this amount through a combination of cash on hand and new debt. The new debt will be raised by CPRL subsidiary CPRC issuing senior unsecured notes on substantially similar terms to its outstanding unsecured notes. In the event the entire amount of debt has not been raised before the acquisition of KCS shares, CP has obtained commitments to borrow up to $8.5 billion via a senior unsecured 364-day bridge loan from Bank of Montreal and Goldman Sachs Lending Partners LLC, among other financial

[1] The actual number of CPRL common shares to be issued or reserved for issuance under the September 15 Merger Agreement will be determined immediately prior to the closing based on the exchange ratio, the number of shares of KCS common stock outstanding at such time and the number of KCS restricted share awards and KCS director deferred stock outstanding at such time.

institutions. CPRL expects to pre-fund and reduce the commitments under the bridge facility with an offering of debt securities before the closing of the Transaction into the Voting Trust.[2]

The effect of this indebtedness on CPKC's fixed charges is illustrated in the pro forma financial statements, included in this Volume as Exhibits 16, 17, and 18, and CPKC's ability to absorb the incremental fixed charges associated with the acquisition-related debt is explained in the Verified Statement of Chris De Bruyn, also included in this Volume of the Application.

Fairness Determination. The terms under which CP will acquire all of KCS's common stock are fair to the shareholders of KCS and CP, and Applicants ask the Board to so find. *See Schwabacher v. United States*, 334 U.S. 192 (1948); *Zatz v. United States*, 149 F.3d 144 (2d Cir. 1998).

The fairness of these terms to CP's shareholders is addressed in the Verified Statement of Chris De Bruyn (in this Volume of the Application). As Mr. De Bruyn explains, the CP Board of Directors approved the Transaction after reviewing and considering, among other things, the separate financial analyses of the fairness of the merger consideration presented by three financial advisors: BMO Nesbitt Burns Inc., Goldman Sachs & Co. LLC, and Evercore Group L.L.C. Each of those advisors delivered to the CP Board of Directors its opinion (dated September 15, 2021) that the merger consideration to be paid to KCS shareholders pursuant to the merger agreement was fair, from a financial point of view, to CP.[3]

---

[2] For completeness, pursuant to a credit agreement, dated as of September 15, 2021, by and among CPRL and CPRC, BMO as a lender and the administrative agent, and the other lenders and financial institutions party thereto, CPRC borrowed the aggregate amount of $500 million in unsecured term loans, which have an initial six-month maturity, for the purpose of permitting CPRL to make certain remittances in connection with the payments made by KCS in connection with the termination of its merger agreement with CN. *See* Verified Statement of Chris De Bruyn (in this Volume of the Application).

[3] Those opinions accompany the Verified Statement of Chris De Bruyn and each is separately verified by the pertinent financial advisor. The fairness opinion letters set forth the specific factors and assumptions underlying the opinions.

The fairness to KCS's shareholders of the consideration to be received in the Transaction is addressed in the Verified Statements of Steven Baronoff and Nelson Walsh (also in this Volume of the Application), which explain that the KCS Board of Directors approved the Transaction on the basis of a number of factors, including the financial presentations by KCS's financial advisors (BofA Securities Inc. and Morgan Stanley & Co. LLC) and the fairness opinion of each such financial advisor that the consideration to be received by the holders of KCS stock in the Transaction was fair, from a financial point of view, to such holders.

PUBLIC INTEREST JUSTIFICATIONS [SECTION 1180.6(a)(2)]

If approved by the Board, the Transaction will generate extraordinary public benefits across all aspects of the relevant statutory factors. It will enhance competition, improve the quality and capacity of rail transportation services, fuel economic growth, accommodate additional passenger service, improve the environment, benefit shippers, employees and other stakeholders, and do so without any adverse impacts. The Transaction is supported by more than 960 third parties, including 459 shippers, 186 smaller railroads, dozens of public officials, eight major ports, and 280 rail industry suppliers and other stakeholders.

As described in the Summary of Benefits Exhibit attached as Appendix B to this Volume, quantified public benefits would be more than $880 million annually in 2019 dollars. Unquantified benefits – including the invigoration of rail competition in North-South corridors and the economic growth that would flow from more efficient USMCA transportation arteries – will be substantial and immeasurable. These benefits are addressed in more detail in Section 1180.6(a)(2)(i), "Effects on Competition," Section 1180.6(a)(2)(iv), "Effect on Adequacy of Transportation," and Section 1180.7, "Market Impact Analyses (Exhibit 12)," below.

EFFECTS ON COMPETITION
[SECTION 1180.6(a)(2)(i)]

The Transaction will generate competitive benefits and cause no competitive harm. The CP/KCS combination is purely "end-to-end" and will strengthen competition among rail carriers and with trucks in every market served by the integrated CPKC network. Shippers will gain new single-line routing options, and benefit from new competition into North-South lanes dominated today by UP, BNSF, and CN.

Because the CP and KCS networks do not overlap anywhere, and connect only at Kansas City, no shippers will face any reduction in competition. There are no shippers, stations, or corridors that will suffer any diminished competition: whether 5-to-4, 4-to-3, 3-to-2, or 2-to-1. There likewise will be no reduction in geographic or product competition.

Nor will shippers face any reduction in routing options or confront any new "bottlenecks." CPKC will have strong incentives to maintain all of the efficient interline routes in which they participate today. CPKC will continue to support, both operationally and commercially, KCS's existing interline routes with other railroads, such as KCS-UP routes via Laredo, Kansas City, and Shreveport, LA; KCS-BNSF routes via Robstown, TX, Kansas City, and Shreveport; KCS-CN routes via Jackson, MS; KCS-NS routes via Meridian, MS; and KCS-CSX routes via New Orleans, LA. Likewise, CPKC will continue to support CP's existing interline routes, such as CP-UP routes via Chicago, St. Paul, MN, and Kansas City; and CP-BNSF routes via Chicago, Coutts, BC, and Noyes, MN. CPKC will not hesitate to compete aggressively against these interline routes where its new single-line routes offer advantages for customers in terms of better service or economic terms, or both. But CPKC will not prevail in this competition by closing off efficient interline routes that shippers may prefer in certain cases. Applicants' commitments to keep these and other affected gateways open both physically and

commercially will assure that Applicants' incentives are backed up by the potential for enforcement under the auspices of Board oversight.

These procompetitive features of the Transaction are addressed throughout the Application. In particular, the Verified Statement of W. Robert Majure (in Volume 2) provides a comprehensive analysis of the competitive effects of the Transaction, and CP's Chief Marketing Officer, John Brooks, explains Applicants' gateway preservation commitments in more detail.

FINANCIAL CONSIDERATION; OPERATING ECONOMIES; TRAFFIC, REVENUES AND EARNINGS INCREASES [SECTION 1180.6(a)(2)(ii)]

Financial Consideration. *See* Section 1180.6(a)(1)(iv), "Nature and Amount of Any New Securities or Other Financial Arrangements," above.

Increase in Traffic, Revenues and Earnings. The Summary of Benefits Exhibit attached to this Application as Appendix B shows that, when the Transaction is fully implemented, CPKC would realize annual benefits of $889 million in 2019 dollars. Of this amount, $716 million each year is attributable to net revenue gains from additional traffic expected to be handled by the combined system and $173 million per year is attributable to efficiencies and cost savings that would be achieved as a result of the Transaction.

Applicants estimate that CPKC's single-line service, cost reductions and other efficiencies will yield more than $1 billion in new annual gross revenues from new traffic attracted to the CPKC network. These estimates are based on the studies of Richard W. Brown and Nathaniel S. Zebrowski, of FTI Economic Consulting, who analyze diversions of existing rail traffic to the CP/KCS system; Bengt Múten of IHS Markit, who analyzes diversions of existing truck traffic to the CP/KCS system's new single-line intermodal offerings; and Jonathan Wahba (CP's Vice President of Commercial Integration) and Michael J. Naatz (KCS's Chief

Marketing Officer), who analyze additional new market opportunities created by the CP/KCS combination. The anticipated traffic gains and the resulting revenue growth are described in their Verified Statements.

Economies to be Effected in Operations. The Transaction will enable the CPKC system to realize substantial economic gains from efficiencies and cost reductions. As noted above, Applicants expect that these economic gains would total $173 million annually. The operating changes and cost saving initiatives associated with these benefits will yield annual operating expense savings of $116 million in 2019 dollars, as described in the Operating Plan (Exhibit 13) (in Volume 2) and in the Verified Statement of Michael R. Baranowski (in this Volume). Applicants also expect to save $57 million in the performance of administrative functions. These savings are described in the separate Verified Statements of Dean Vargas and Chad Rolstad, included in this Volume.

Applicants expect to incur additional one-time expenditures to expand the capacity of the CPKC network, to integrate their information technology systems, and for other purposes. These projected outlays are described in Exhibit 13, Operating Plan and in the Verified Statement of James Clements (in this Volume). The amount and timing of these one-time expenditures and of the benefits described above are reflected in Appendix B, Summary of Benefits Exhibit, and in the pro forma financial statements for CPKC, included in this Volume as Exhibits 16, 17, and 18.

EFFECT OF INCREASE IN TOTAL FIXED CHARGES [SECTION 1180.6(a)(2)(iii)]

Under the financial terms of the September 15 Merger Agreement, CP will incur approximately $8.5 billion in new indebtedness in connection with its acquisition of KCS's voting securities. The effect of this indebtedness on the combined company's fixed charges is illustrated in the pro forma financial statements included as Exhibits 16, 17, and 18 of the

Application (in this Volume). As demonstrated in the Verified Statement of Chris De Bruyn (also in this Volume), CPKC will have no difficulty absorbing the incremental fixed charges associated with this acquisition-related debt, while simultaneously investing in the integration of the CP and KCS rail networks and the capacity expansion that will allow it to support anticipated traffic growth and more aggressive competition.

Applicants expect to invest more than $275 million in network capital expenditures to implement the Transaction, primarily to add double track, add and extend sidings, and install CTC signaling systems on the core CPKC North-South corridor lines between Louisiana and St. Paul/Chicago. These investments will improve service levels, add capacity, and improve safety. As reflected in the pro forma financial statements (Exhibits 16, 17, and 18), increased operating income attributable to new traffic and cost savings and other merger-related efficiencies would support these incremental expenditures. CPKC will have no difficulty financing them.

EFFECT ON ADEQUACY OF TRANSPORTATION [SECTION 1180.6(a)(2)(iv)]

The Transaction will significantly improve the quality and availability of rail transportation services to the public. The CPKC network will offer more efficient and reliable single-line rail transportation connecting the North American Continent and supporting USMCA trade flows. CPKC's improved services will attract traffic to the combined network, supporting further investment in capacity, service quality, and safety on portions of the CP and KCS systems that have been underutilized. In the process, the Transaction will add to overall rail capacity in these critical transportation corridors, supporting traffic growth and more vigorous competition among the transportation providers serving these growing traffic flows. CPKC will also remove more than 64,000 trucks from the Continent's road network, improving highway transportation and the environment. The Transaction will achieve these benefits without any

adverse impacts on the transportation infrastructure. Applicants will invest for growth – adding infrastructure and capacity – and will not downgrade any part of their existing networks. Nor will the Transaction have any adverse impacts on the ability of other railroads (or other third parties) to provide transportation services, essential or otherwise.

The benefits of end-to-end railroad combinations and the new single-line services they enable are well established. As explained in detail in the Operating Plan (Exhibit 13 in Volume 2), the CP/KCS combination will achieve numerous improvements in the quality and adequacy of transportation, including:

More Efficient Single-Line Services. CP and KCS's networks connect only at Kansas City, where they share a jointly-operated rail yard (the Joint Agency, sometimes referred to as Knoche Yard). Rather than interchanging at that location, CPKC will provide single-line rail services between points throughout CP's service territory in Canada and the Upper Midwest and points throughout KCS's service territory in the South Central United States and Mexico. Avoiding an interchange at Kansas City will reduce cost, improve transit times, boost reliability and predictability, and facilitate more aggressive competition against the larger Class I railroads that serve many of these corridors today.

New and Improved Train Services. CPKC will enable a host of new through train services that span the former boundaries of the separate CP and KCS systems. Of particular note, CP today does not offer intermodal service to Kansas City. With the Transaction, CPKC will establish new intermodal services connecting Dallas, TX with Chicago and points beyond, and it will enable a host of new single-line intermodal routes connecting Mexico with the Upper Midwest and Canada. Among these new services will be the longest-distance intermodal train on the CP/KCS system, connecting the Port of Lazaro Cardenas with Chicago, Toronto,

Montreal, and Eastern Canada. CPKC will build numerous other through trains connecting Canadian and Upper Midwest points seamlessly with the U.S. Gulf Coast and Mexico.

Improved Blocking Patterns. CPKC will enable more efficient blocking patterns for manifest traffic moving between the KCS system and the CP system. From the outset, CPKC will build efficient, longer distance blocks that bypass Kansas City, connecting KCS's Shreveport yard and CP's yards in St. Paul and Chicago. Over time, with increased traffic volumes on the combined network, CPKC will implement even more efficient network blocking patterns.

Better Equipment Utilization and Availability. By operating the CP and KCS rail networks as a single, integrated system, CPKC will dramatically improve equipment utilization and allow CPKC to provide more, and more efficient, rail transportation with the same number of locomotives and railcars. Improved cycle times will directly benefit shippers who provide their own railcars, and all customers will benefit from the greater availability of railcars for their transportation needs.

Improved Reliability. The single-line rail service provided by CPKC will be considerably more reliable than the interline offerings in which CP and KCS participate today. By replacing interchanges with a single continuous network, CPKC will eliminate unpredictable delays associated with interchanging traffic. Such delays are associated with additional yard work, coordination between railways and capacity constraints at interchange locations, all of which add to overall trip time, reduce predictability, and contribute to the possibility of service disruptions. CPKC will remove these barriers to efficient service, creating opportunities for longer distance blocking, longer trains, and fewer stops.

Increased Capacity and Other Investments. The new rail traffic the CP/KCS system will attract will support investment in additional capacity, service quality, and safety on CPKC's critical North-South rail artery. CPKC anticipates spending more than $275 million on centralized traffic control in previously-dark territory and new double track, sidings, and siding extensions on CP's and KCS's single-track lines between Louisiana and the Upper Midwest, as explained in the Verified Statement of Keith Creel (in this Volume) and detailed in the Operating Plan (in Volume 2). These investments will transform this relatively underutilized route (handling fewer than ten trains per day on average) into a more efficient, higher-capacity, and safer artery of North-South trade in North America capable of supporting improved service levels. In addition, CPKC's more efficient car and locomotive utilizations, supplemented by investments in new equipment where necessary, will support growing volumes of traffic on the combined system.

Increased Safety. CPKC will bring a new standard of safety to the North American rail landscape. As the Verified Statement of Keith Creel (in this Volume) explains, CP has been the safest North American railroad for many years, and it will implement the CP/KCS combination with safety at the forefront of its goals. CP's culture of safety will mesh well with KCS's like-minded culture, allowing the combined system to operate at the apex of rail safety. The investments that CPKC plans on its North-South mainline – adding double track and siding capacity and CTC signaling – will reinforce these safety objectives.

EFFECT ON EMPLOYEES
[SECTION 1180.6(a)(2)(v)]

The Transaction will drive employment growth across the CP/KCS system. Applicants anticipate that CPKC will add over 1,000 union-represented operating positions across its North American network to accommodate the traffic growth they expect the Transaction will generate,

with more than 750 of those new jobs in the United States. The specific impacts are addressed in the Labor Impact Statement (Operating Plan Exhibit A) and the Verified Statements of Myron W. Becker (for union-represented employees) and Chad Rolstad (for non-agreement employees), which are contained in Volumes 1 and 2 of this Application.

As explained in the Becker and Rolstad Verified Statements, Applicants anticipate that the Transaction would be subject to the employee protective conditions adopted in *New York Dock – Control – Brooklyn Eastern District Terminal*, 360 I.C.C. 60 (1979). In addition, Applicants will honor the obligations established in the so-called "cramdown" agreements reached in 2000 and 2001 with certain labor organizations that represent certain classes of employees of CP and KCS.

Applicants have not yet entered into implementing agreements relating to the Transaction with unions representing CP and KCS employees. Many of the labor organizations representing CP and KCS employees have expressed support for the Transaction, and CP looks forward to working with all of the organizations that represent CP's and KCS's U.S. employees to establish a mutually agreeable framework applicable to the combined CP/KCS network.

EFFECT OF INCLUSION OF OTHER RAILROADS [SECTION 1180.6(a)(2)(vi)]

Applicants do not contemplate the inclusion of other railroads in the Transaction. The Transaction will not cause the loss of any essential rail service, and the inclusion of other rail carriers would interfere with the benefits of the Transaction, contrary to the public interest. *See* Section 1180.7 (Exhibit 12) "Market Impact Analysis," below.

OTHER SUPPORTING STATEMENTS [SECTION 1180.6(a)(3)]

The Application is supported by the statements of CP's President and CEO Keith Creel, KCS's CEO Patrick J. Ottensmeyer, CP's Chief Marketing Officer John Brooks, and the statements of several other CP and KCS officers and employees. These statements are in Volumes 1 and 2 of this Application.

The Application is also supported by expert witnesses addressing the competitive effects of the Transaction (W. Robert Majure of Cornerstone Research), the traffic diversions that the Transaction will achieve from other railroads (Richard W. Brown and Nathaniel S. Zebrowski of FTI) and trucks (Bengt Mutén of IHS/Markit), and the cost savings flowing from operating efficiencies (Michael R. Baranowski of FTI). These statements are in Volumes 1 and 2 of this Application.

In addition, more than 960 – shippers, smaller railroads, ports, public officials, and rail industry suppliers and other stakeholders – have submitted statements supporting the CP/KCS combination, many of which have previously been filed in this docket. Volume 3 contains these statements.

OPINIONS OF COUNSEL [SECTION 1180.6(a)(4)]

The opinions of Applicants' counsel that the Transaction meets the requirements of law and will be legally authorized and valid, if approved by the Board, are set forth at the end of the narrative in this Volume of the Application, after the Prayer for Relief.

LISTS OF STATES
[SECTION 1180.6(a)(5)]

Listed below are the states in which each Applicant carrier owns rail property over which it conducts rail operations.

CPRC: Michigan (property owned by subsidiary Detroit River Tunnel Company)

Soo Line: Illinois, Minnesota, North Dakota, South Dakota, and Wisconsin.

CMQ: Maine and Vermont.

DM&E: Illinois, Iowa, Minnesota, Missouri, and Wisconsin.

D&H: New York.

KCSR: Alabama, Arkansas, Illinois, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas.

GWER: Illinois.

Tex Mex: Texas.

MAP – EXHIBIT 1
[SECTION 1180.6(a)(6)]

Exhibit 1 (set forth in Appendix A in this Volume) contains three maps, the first showing the entirety of the CP system in North America, the second showing the entirety of the KCS system in North America, and the third showing KCS's system on a larger scale.

NATURE AND TERMS OF PROPOSED TRANSACTION
[SECTION 1180.6(a)(7)(i)]

The Transaction involves the acquisition by CP of control of KCS and its U.S rail carrier subsidiaries and the integration of those rail carriers into the CP/KCS rail network, which will be known as CPKC. The significant terms of CP's acquisition of KCS, and the consideration to be paid for KCS's stock, are described in Section 1180.6(a)(1)(i), "Summary of Transaction," and Section 1180.6(a)(2)(iii), "Effect of Increase in Total Fixed Charges," above.

AGREEMENTS – EXHIBIT 2
[SECTION 1180.6(a)(7)(ii)]

On September 15, 2021, CP and KCS entered into the Merger Agreement, a copy of which is provided with Exhibit 2, in Volume 4 of this Application. Exhibit 2 also contains the Voting Trust Agreement that CP would use in connection with its acquisition of KCS. *See* Section 1180.6(a)(1)(i), "Summary of Transaction."

DESCRIPTION OF RESULTING COMPANY
[SECTION 1180.6(a)(7)(iii)]

Under the Merger Agreement, Kansas City Southern would legally be merged with and into Cygnus Merger Sub 1 Corporation, a wholly-owned subsidiary of CP, with Cygnus Merger Sub 1 Corporation surviving. However, the successor holding company of Kansas City Southern will continue to own Kansas City Southern's railroad and other affiliates, and will maintain the same name, governance structure, and other corporate-level attributes of Kansas City Southern. *See* Section 1180.6(a)(1)(i), "Summary of Transaction," for a more detailed description of the Transaction.

Following the Transaction, all of CP's and KCS's U.S. railroad affiliates would be controlled by CPRL and its wholly-owned operating subsidiary CPRC. CPRL was incorporated in 2001 under the Canada Business Corporations Act, and CPRC was incorporated in 1881 by Letters Patent pursuant to an Act of Parliament of Canada. The capitalization proposed for the resulting company and the amount and character of capital stock and other securities to be issued are addressed in Section 1180.6(a)(1)(iv), "Nature and Amount of Any New Securities or Other Financial Arrangements," and Section 1180.6(a)(2)(iii), "Effect of Increase in Total Fixed Charges."

COURT ORDER – EXHIBIT 3
[SECTION 1180.6(a)(7)(iv)]

Not applicable. No Applicant is a trustee, receiver, assignee, or personal representative of a real party in interest.

PROPERTY INCLUDED IN PROPOSED TRANSACTION
[SECTION 1180.6(a)(7)(v)]

The property involved in the Transaction includes all of the property of the Applicants' U.S. rail carrier subsidiaries. Specifically, CP will acquire the common stock of KCS and exercise control over KCS and all of its controlled rail carrier affiliates and their rail property.

DESCRIPTION OF LINES
[SECTION 1180.6(a)(7)(vi)]

The principal routes and termini of CP and KCS and their U.S. rail carrier affiliates are generally described below. The maps provided in Exhibit 1 (Appendix A in this Volume) depict these routes and termini, as well as the principal points of interchange on the routes of these railroads.

The Transaction involves all of the U.S. mainline and branch line mileage of the CP and KCS rail systems. The Transaction will create no track redundancies, and no abandonments would result from the combination of the two systems.

CP Principal Routes

As described in more detail in the Operating Plan and shown on the Exhibit 1 maps, the CP rail network spans Canada from the Pacific Ocean at Vancouver to the Atlantic Ocean at Saint John, NB (reached via haulage rights from the connection between CMQ and Eastern Maine Railway ("EMRY") and New Brunswick Southern Railway ("NBSR") at Brownville Junction, Maine). CP's principal routes serving the United States extend from six

Canada/United States border crossings at North Portal, SK/Portal, ND; Emerson, MB/Noyes, MN; Windsor, ON/Detroit, Michigan; Buffalo, NY; Rouses Point, NY; and a point near Jackman, ME on the Quebec/Maine border. CP also operates a short stretch of branch line trackage between Abercorn, QC and Richford, VT

At North Portal/Portal, CP's lines serving Western Canada connect with lines operated by CP's affiliate Soo Line to the Twin Cities and beyond to Kansas City (where it connects with KCS and other Class I carriers) and Chicago (where CP connects with the Class I carriers serving the Chicago Gateway). This route provides the shortest rail route between Vancouver and Chicago.

CP also has a line between Winnipeg, MB and the Twin Cities that crosses the U.S. border at Emerson/Noyes and connects with the rest of CP's U.S. system at Glenwood, MN.

CP's system includes several secondary and branch lines in Iowa, North Dakota, and Minnesota that serve grain and other shippers, and these lines also connect with several shortlines. In addition, CP operates a mainline connecting Kansas City with Chicago via Sabula, IA.

CP's lines in Eastern Ontario with the Chicago Gateway via haulage rights over both NS (between Chicago and Detroit, where CP enters Canada via its wholly-owned Detroit River Tunnel) and CSX (between Chicago and Fort Erie, ON/Buffalo, NY).

CP's D&H affiliate operates lines that extend south into New York from Rouses Point, NY to the Albany, NY region, with connections to Pan Am Southern Railway (at Mechanicville, NY), NS (at Schenectady, NY), and CSX (at Albany). D&H provides service beyond Albany to New York City and Philadelphia (both via haulage over CSX) and Eastern Pennsylvania (via haulage over NS).

CP's CMQ affiliate operates lines that extend east from Quebec into Maine and serve the Atlantic Ocean Port of Saint John (via a connection with EMRY and NBSR). CP's network and port access offers shippers efficient intermodal routes from Europe to Montreal, Toronto, Chicago, and beyond.

In addition, CP serves important interchanges with other U.S. carriers at Kingsgate, AB/Eastport, ID, where it connects with UP's lines to the Portland and other Pacific Northwest U.S. points, at Coutts, AB/Sweet Grass, MT with BNSF, and at Buffalo with CSX and NS.

KCS Principal Routes

The KCS rail network extends in a North-South corridor from Kansas City south to the Pacific Ocean at the Port of Lazaro Cardenas.

Within Mexico, KCS's KCSM affiliate operates the Northeast Concession serving Mexico's industrial heartland, with lines radiating from Mexico City to the south as far as Lazaro Cardenas, to the east serving the Ports of Veracruz, Altamira, and Tampico on the Gulf of Mexico, and extending north to Monterrey, NL and other industrial points in the State of Nuevo Leon and beyond to the U.S. border gateways of Nuevo Laredo, NL/Laredo, TX (where KCSM connects with KCSR and UP) and Matamoros, NL/Brownsville, TX (where KCSM connects with UP).

In the United States, KCSR's network is centered on Shreveport, LA, with lines radiating in five directions. The key North-South through Shreveport extends from the Mexican border at Laredo to Kansas City. KCS's affiliate Tex Mex's mainline extends from Laredo east to Robstown and Corpus Christi in southeast Texas, reaches Victoria, TX via trackage rights over UP, proceeds northeast through Kendleton, TX (where KCS operates intermodal and automotive facilities) to Rosenberg, TX, where it rejoins UP trackage rights through Houston

and beyond to Beaumont, TX, and reaches north via KCSR's original Kansas City-Port Arthur mainline to Shreveport and ultimately Kansas City. At Kansas City, KCSR connects with CP and other Class I railroads. This mainline has branches serving Lake Charles, LA and Fort Smith, AR.

The "Meridian Speedway" line runs east-west through Shreveport between the Dallas, TX area and a connection with NS at Meridian, MS. The portion of this line from Shreveport to Meridian is owned by KCS's affiliate Meridian Speedway, LLC, in which NS has a 30 percent ownership interest, and is operated by KCSR.

In addition to these core lines, KCS operates an important secondary line that extends southeast from Shreveport to New Orleans, serving important chemical industry and other shipper facilities between Baton Rouge and New Orleans and terminating at a connection with the New Orleans Public Belt Railroad ("NOPB"), which serves the Port of New Orleans, and other Class I railroads at the New Orleans gateway.

KCSR also operates the former "Gateway Western" lines extending east from Kansas City to Springfield and East St. Louis, IL. At East St. Louis, KCSR connects with the Terminal Railroad Association of St. Louis ("TRRA") and other Class I railroads. KCSR also has limited haulage rights allowing it to quote rates for the movement of grain over UP lines between Kansas City and Council Bluffs, IA; Omaha, NE/Council Bluffs, IA; Topeka, KS; Atchison, KS, and Lincoln, NE.[4]

Finally, KCS operates several former "MidSouth" branch lines in Mississippi and Tennessee. KCSR also reaches the Port of Gulfport (where it has its own trackage) via haulage

[4] These are the former "North End" rights originally granted to MKT in the UP/MP/WP merger.

rights on CN between Jackson and Palmer, MS, and the Port of Mobile via haulage rights on CN from Jackson, MS to Mobile, AL.

GOVERNMENTAL ASSISTANCE [SECTION 1180.6(a)(7)(vii)]

Not applicable. No governmental assistance is expected in connection with the Transaction.

ENVIRONMENTAL DATA – EXHIBIT 4 [SECTION 1180.6(a)(8)]

The Board's rules address the submission of environmental information and data, prepared in consultation with the Office of Environmental Analysis ("OEA"). Applicants have been working with OEA for months to fulfill those requirements. This Exhibit 4 summarizes the results of Applicants' work, which they also have provided to OEA.

The Environmental Review Process

The Board's National Environmental Policy Act ("NEPA") regulations "encourage the use of third-party consultants." 49 C.F.R. § 1105.10(d). When OEA uses a third-party consultant "to prepare any necessary environmental documentation," the usual "environmental reporting requirements" are "waived." *Id*. Here, OEA selected and approved a third-party consultant, Vanasse Hangen Brustlin, Inc. ("VHB"), to support OEA's environmental review. As a result, Applicants need not prepare the "environmental report" referenced in Section 1180.6(a)(8).

To benefit the Board and the public, Applicants provide the following summary of the ongoing environmental review process. They note that even before September 15, when KCS rejoined CP as co-Applicant in this docket, CP was meeting regularly with OEA to address the

environmental review process for the proposed Transaction. Applicants have continued to meet regularly with OEA since September 15.

In late May 2021, OEA sent an information request letter to CP seeking a variety of information that would help OEA plan its environmental review. In preparing its response to OEA's requests, CP worked with OEA to ensure that the substance and format of its responses would meet OEA's needs. Beginning on September 15, KCS joined CP in preparing the responses to OEA's information requests. In developing their responses to OEA's requests, Applicants assessed the rail traffic the CP/KCS system would handle post-Transaction based on the Operating Plan that is being presented with the Application. Applicants responded to OEA's requests on October 28, 2021.

Applicants anticipate that OEA will begin a public participation process under NEPA with a notice of intent to prepare either an Environmental Assessment or an Environmental Impact Statement.

The Transaction's Environmental Benefits

The Verified Statement of Glen Wilson (in this Volume) and the information submitted to OEA shows that the Transaction will have many environmental benefits.

Applicants are committed to protecting the environment, including by reducing greenhouse gas emissions. They are committed to meeting the emissions targets set by the Paris Agreement and to leading the transportation sector's low-carbon transition. And both CP and KCS have also set science-based (or "SBTi") targets in recent months: CP has committed publicly to reduce greenhouse gas ("GHG") emissions by 38 percent by 2030 and KCS has targeted a 42 percent reduction by 2034.

As the Verified Statement of Glen Wilson (in this Volume) explains, CP already outperforms industry averages for locomotive fuel efficiency and continues to improve in that area, which will drive improvements at CPKC as well. These improvements translate to fewer greenhouse gas emissions from CP's locomotives.

The combined CP/KCS network in the U.S. will be even more efficient when handling freight rail traffic, with fewer interchanges, reduced intermediate railcar handlings, and longer hauls. The greater efficiency of the CPKC system will translate into reduced fuel usage, reduced GHG intensity, and thus fewer GHG emissions.

As Mr. Wilson explains, Transaction-related improvements in the efficiency of the combined network will avoid more than 377,000 tons of GHG emissions annually, avoiding more than 7.2 million tons of GHG emissions over the first 20 years of CPKC's existence.

Because the combined CP/KCS network will be more efficient and a more capable competitor with long-haul trucks. Applicants' new intermodal rail services will annually divert more than 60,000 long-haul truck shipments to rail, as explained in the Verified Statement of Bengt Mutén. Because moving freight by rail requires less fuel than moving it by truck, this diversion will further reduce greenhouse gas emissions and thereby avoid over 65,000 tons of greenhouse gas emissions annually, and more than 1.3 million tons over 20 years, as Mr. Wilson explains.

Diverting freight from trucks to the combined CP/KCS network has other environmental benefits as well. As Mr. Wilson explains, fewer trucks on U.S. highways means less congestion, less maintenance, and improved safety on those roads. Using accepted methodologies, those improvements are worth $750 million over 20 years, while reducing truck vehicle miles travelled

by over 2 billion. Fewer trucks also means less noise pollution in the places where those trucks would have driven.

Separately, the Transaction will accelerate the shift away from transporting flammable crude oil by rail toward the movement of non-hazardous "DRUbit," from which flammable diluent has been removed. *See* Wahba/Naatz V.S. This shift will improve transportation efficiency, save fuel, and reduce emissions, while also reducing risks to the environment.

Applicants recognize that the addition of freight traffic moving on the combined CP/KCS network may have localized impacts, and they will work with OEA and any affected communities to identify and mitigate those impacts as appropriate. At the same time, the combined CP/KCS network will be attracting rail traffic by providing shippers with improved freight transportation options. Increased traffic along CPKC lines will be matched by reduced traffic on highways or on the lines of other railroads. The communities where the amount of freight traffic goes down may see localized benefits from the Transaction.

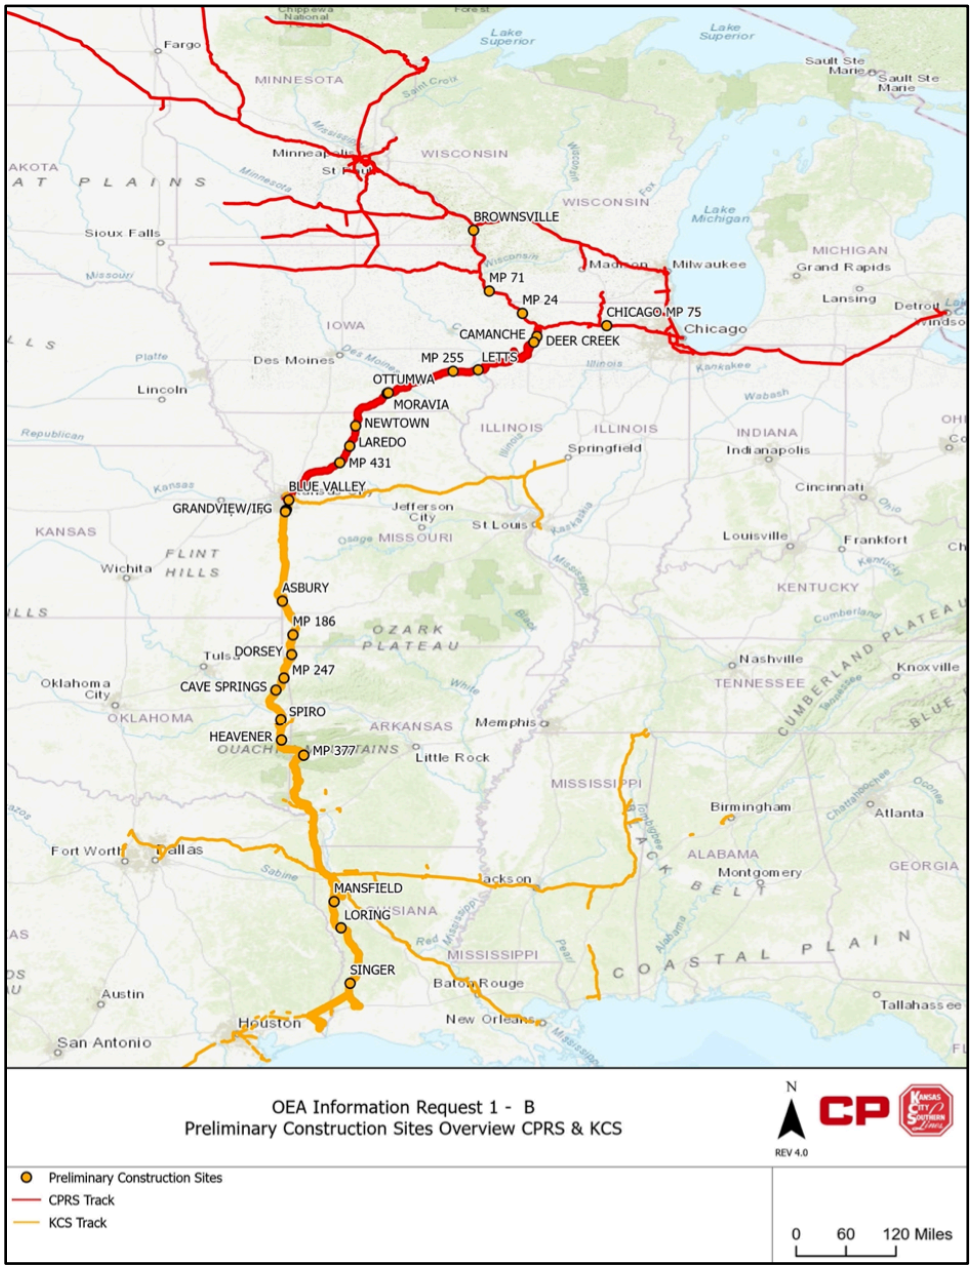
The Scope of Potential Environmental Effects

In response to OEA's information requests, Applicants identified line segments and rail yards where CP's acquisition of KCS could lead to traffic changes that exceed the Board's environmental review thresholds. *See* 49 C.F.R. § 1105.7(e)(5). A summary of the information provided to OEA is set forth below:

- Based on their post-Transaction Operating Plan, Applicants identified 22 segments on CPKC's U.S. network where the Transaction would cause increases in traffic levels that exceed OEA's thresholds for attainment areas, and 13 segments where the Transaction would cause increases in traffic that exceed

OEA's thresholds for nonattainment areas. These segments are highlighted in the overview map set forth as Figure 1 below.

FIGURE 1
OVERVIEW OF SEGMENTS EXCEEDING ENVIRONMENTAL REVIEW THRESHOLDS

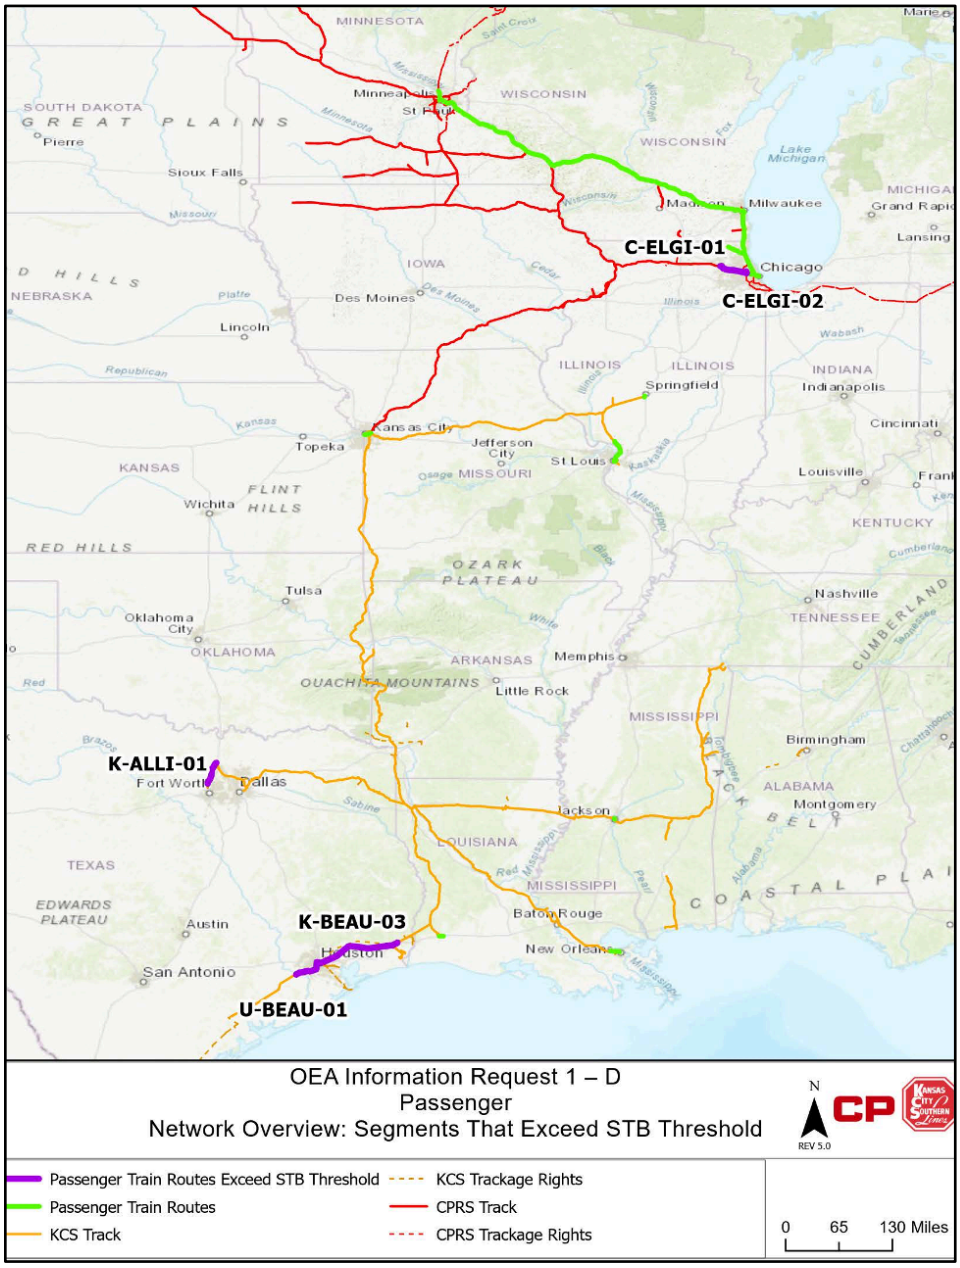


- Applicants' Operating Plan identifies that there are no U.S. rail yards where the Transaction would cause increases in traffic levels that exceed OEA's thresholds

for attainment areas, and four U.S. rail yards where the Transaction would cause modest increases in volumes that exceed OEA's thresholds for nonattainment areas.

- Applicants' analysis of the rail capacity necessary to accommodate Transaction-related traffic growth, which also considered the anticipated organic growth in both CP's and KCS's base traffic volumes, identified 26 locations in the United States where Applicants propose to add double-track or new or extended sidings to increase network capacity. In addition, Applicants have identified three areas where they plan to add Centralized Traffic Control signal systems in previously "dark" territory. This construction would occur in existing rights of way and thus would not involve Board-jurisdictional new rail line construction. The locations of the planned construction projects appear on the map set forth as Figure 2 below.

FIGURE 2
LOCATION OF PLANNED CONSTRUCTION



- Based on their traffic diversion analysis and Operating Plan, Applicants identified the portions of their U.S. networks where the Transaction would lead to increases in the number of railcars carrying hazardous materials and whether such movements would occur in unit trains or otherwise. That information shows 63

segments where annual hazardous materials traffic will increase by 1,000 cars or more.

- Applicants also identified the handful of locations on their U.S. networks where passenger trains operate and the Board's environmental review thresholds would be exceeded. As explained in the Operating Plan (Exhibit 13), Applicants anticipate no adverse impacts on passenger operations, and indeed the Transaction will facilitate the expansion of passenger service by Amtrak, as explained in the Verified Statement of Keith Creel, in this Volume. Figure 3 below depicts those locations.

FIGURE 4
OVERVIEW OF PASSENGER TRAIN OPERATIONS

Especially in light of the Transaction's environmental benefits, Applicants believe that the Transaction-related traffic changes will have relatively minor environmental impacts. Applicants will continue to work with OEA during the environmental review process to ensure that those impacts are documented under NEPA and mitigated where and as appropriate.

FORM 10-KS – EXHIBIT 6
[SECTION 1180.6(b)(1)]

Applicants' most recent Form 10-Ks and Form 40-Fs, filed with the U.S. Securities and Exchange Commission ("SEC") under 17 C.F.R. §§ 249.240f and 249.310, are submitted as Exhibit 6 in Volume 4 of the Application. Table 6.0 below summarizes the filings that are set forth in Exhibit 6. Applicants will update the Application with any Form 10-Ks or Form 40-Fs subsequently filed with the SEC over the duration of the proceeding.

TABLE 6.0

FORM S-14 – EXHIBIT 7
[SECTION 1180.6(b)(2)]

Form S-4 replaced Form S-14 in 1985.[5] Kansas City Southern's most recent Form S-4 filings with the SEC (pursuant to 17 C.F.R. § 239.25) are being submitted as part of Exhibit 7, in Volume 4 of the Application. In addition, Canadian Pacific's Form F-4 filing with the SEC, relating specifically to the Transaction, is being submitted as part of Exhibit 7. The Forms submitted as Exhibit 7 are described in Table 7.0 below. Applicants will update the Application with any Form S-4s or F-4s subsequently filed with the SEC over the duration of the proceeding.

[5] Form S-4 replaced Form S-14 in 1985. *See* Securities Act Release No. 6578 (Apr. 23, 1985); 50 Fed. Reg. 48379 n.2 (Nov. 25, 1985).

CHANGE IN CONTROL – EXHIBIT 8
[SECTION 1180.6(b)(3)]

The only Canadian Pacific Applicant that files a Form R-1 is Soo Line, and there has been no change in ownership or control since Soo Line filed its most recent Form R-1 in 2020.

The only KCS Applicant that files a Form R-1 is KCSR, and there has been no change in ownership or control of KCSR since it filed its most recent Form R-1 in 2020.

For the non-carrier CP Applicants – CPRL and CPRC – Exhibit 8, Table 8.1 (in Appendix C in this Volume) identifies the directors and principal officers. For each CP Applicant that is a U.S. rail carrier, Exhibit 8, Table 8.2 (also in Appendix C) identifies the Applicant's officers and directors and identifies the entity that controls the Applicant as well as any owner of at least 10 percent of the equity of the Applicant. Table 8.2 also identifies the directors and principal officers for each of CP's non-Applicant majority-owned U.S. rail carrier subsidiaries.

For the one non-carrier KCS Applicant – KCS – Exhibit 8, Table 8.3 (in Appendix C) identifies the directors and principal officers. For each KCS Applicant that is a U.S. rail carrier, Exhibit 8, Table 8.4 (also in Appendix C) identifies the Applicant's officers and directors and identifies the entity that controls the Applicant as well as any owner of at least 10 percent of the equity of the Applicant. Table 8.4 also identifies the Management Committee Members and principal officers for each of KCS's non-Applicant majority-owned U.S. rail carrier subsidiary Meridian Speedway, LLC.

Table 8.0 below summarizes the information that is being supplied for each Applicant and their majority-owned U.S. rail carrier subsidiaries.

TABLE 8.0

The Kansas City Southern Railway Co.	Yes	Yes	KCSR owns 100% of Applicant GWER, listed below.	Directors and officers of Applicant KCSR (Table 8.4)
Gateway Eastern Railway Co.	Yes	No (included in KCSR filing)	None	Directors and officers of Applicant GWER (Table 8.4)
The Texas Mexican Railway Co.	Yes	No (included in KCSR filing)	None	Directors and officers of Applicant Tex Mex (Table 8.4)

ANNUAL REPORTS – EXHIBIT 9
[SECTION 1180.6(b)(4)]

Applicants are submitting as Exhibit 9 the two most recent annual reports to stockholders for each of the Applicants that has public shareholders. Table 9 below describes the content of Exhibit 9. Applicants will update Exhibit 9 with any annual or quarterly report to stockholders issued over the duration of the proceeding.

TABLE 9

The Kansas City Southern Railway Company	Yes	No	N/A
Gateway Eastern Railway Company	Yes	No	N/A
The Texas Mexican Railway Company	Yes	No	N/A

RELEVANT ISSUES – EXHIBIT 10
[SECTION 1180.6(b)(5)]

The issues most relevant to the Board's evaluation of the application in this proceeding are, in Applicants' view:

(1) The lack of any adverse impact of the Transaction on competition, and the benefits to the public from the new competition that would be generated by the Transaction;

(2) The beneficial effect of the Transaction on the adequacy of rail transportation service to the public;

(3) The beneficial effect of the Transaction on the efficiency with which rail services are provided and the total resources consumed in providing those services;

(4) The benefits of the Transaction for rail carrier employees;

(5) The benefits of the Transaction for the environment, including through the reduction in emissions from more efficient rail operations and the removal of substantial long-haul truck volumes from the Nation's highways; and

(6) The benefits of the Transaction for the provision of railroad passenger service on lines of the combined rail network.

These issues are addressed throughout the Application.

CORPORATE CHARTS – EXHIBIT 11
[SECTION 1180.6(b)(6)]

Corporate Charts for CP and KCS are set forth in Appendix D, in this Volume. The charts indicate the relationships between Applicants and the other affiliates and subsidiaries of CPRL and KCS, respectively, including companies controlling applicant carriers directly, indirectly or through another entity.

STATEMENT OF COMMON OFFICERS AND DIRECTORS [SECTION 1180.6(b)(6)(i)]

Table 11.1 in Exhibit 11 (in Appendix D in this Volume) identifies the entities on the CP and KCS Corporate Charts which have officers and directors representing other rail carriers.

CARRIER STATUS LIST [SECTION 1180.6(b)(6)(ii)]

The carrier or non-carrier status of the entities reflected on the CP and KCS Corporate Charts is set forth in Table 11.2 of Exhibit 11, in Appendix D of this Volume.

INFORMATION ON NON-CARRIER APPLICANTS [SECTION 1180.6(b)(7)]

Among the Applicants, three are not U.S. rail carriers: CPRL, CPRC, and KCS.

CPRL is a holding company formed under the laws of the Canada Business Corporations Act on October 1, 2001 and headquartered in Calgary, Alberta, Canada. CPRL provides freight transportation services in Canada and the United States through its direct and indirect wholly owned subsidiaries: CPRC (which operates railway lines in Canada and is an Applicant because its owns rail property in the United States through its affiliate DRTC), Central Maine & Quebec Railway Canada Inc., which operates lines in Quebec; and CPRL's U.S. rail carriers: Soo Line, DM&E, D&H, and CMQ.

CPRC is a wholly-owned subsidiary of CPRL and a Canadian rail carrier that provides freight transportation services in Canada. CPRC was incorporated in 1881 by Letters Patent pursuant to an Act of Parliament of Canada. CPRC owns U.S. rail property through its subsidiary the Detroit River Tunnel Company, but does not operate in the United States.

KCS is a holding company incorporated under the laws of Delaware on January 29, 1962 and headquartered in Kansas City, MO. KCS provides freight transportation services in the

United States, Mexico, and Panama through various affiliates. KCS provides freight transportation services in the United States through its affiliates, specifically Applicants KCSR, GWER, and Tex Mex. KCS is also the 70 percent owner of Meridian Speedway, LLC ("MSLLC"), which is a Board-authorized U.S. rail carrier. KCSR is the designated operator of MSLLC.

STATEMENT OF DIRECT AND INDIRECT INTERCORPORATE FINANCIAL RELATIONSHIPS [SECTION 1180.6(b)(8)]

All known financial relationships between Applicant carriers, including persons affiliated with those carriers, and carriers from other corporate families, including persons affiliated with those carriers, are reported in Exhibit 11, Table 11.1.

MARKET IMPACT ANALYSES – EXHIBIT 12 [SECTION 1180.7]

Applicants are presenting several analyses of the market impact of the Transaction:

(1) Keith Creel (CP's President and CEO), Patrick J. Ottensmeyer (KCS's President and CEO), and John Brooks (CP's Chief Marketing Officer) provide an overview of competitive and marketing benefits of the CP/KCS combination. Their Verified Statements are in this Volume.

(2) Jonathan Wahba (CP's Vice President of Commercial Integration) and Michael J. Naatz (KCS's Chief Marketing Officer) provide a detailed analysis, on a commodity-by-commodity basis, of the improved transportation offerings of the combined CP/KCS network, which will attract additional truck and rail traffic and intensify competition in the corridors served by CPKC. Their Joint Verified Statement is in this Volume.

(3) W. Robert Majure, of Cornerstone Research, provides a comprehensive analysis of the effect of the Transaction on competition, concluding that the Transaction will have no anticompetitive effects but will instead intensify competition with other Class I railroads in many corridors where CPKC will provide new and improved single-line rail services. Dr. Majure's Verified Statement is in Volume 2.

(4) Richard W. Brown and Nathaniel S. Zebrowski, of FTI Consulting, present the results of their comprehensive analysis of the potential for the combined CP/KCS system to attract rail traffic from other railroads as a result of the Transaction (customarily referred to as rail-to-rail diversions). Messrs. Brown and Zebrowski demonstrate that the improved transportation offerings likely will attract substantial volumes of rail traffic from other railroads, particularly the larger Class I railroads (BNSF, UP, and CN) with which CP and KCS are relatively less effective competitors today. The Verified Statement of Messrs. Brown and Zebrowski is in Volume 2 of this Application.

(5) Bengt Múten of IHS/Markit presents the results of his comprehensive analysis of potential diversions of truck traffic to the new and improved rail intermodal offerings of the combined CP/KCS system resulting from the Transaction. The Verified Statement of Mr. Múten is in Volume 2 of this Application.

Together these analyses demonstrate that the Transaction will improve competition and allow CPKC to provide improved rail transportation offerings, benefitting shippers, the U.S. and North American economies, and the environment. See also Section 1180.6(a)(2)(i), "Effects on Competition," and Section 1180.6(a)(2)(iv), "Effect on Adequacy of Transportation."

OPERATING PLAN – EXHIBIT 13
[SECTION 1180.8(a)(1)-(4)]

The Operating Plan (Exhibit 13) is included in Volume 2 of this Application. It describes in detail how the CP and KCS systems will be integrated from an operating perspective.

The Operating Plan presents that plan in two stages. The first involves the optimization of the combined network that will proceed promptly following Board approval of control. CPKC will immediately begin to bypass interchange in Kansas City, build longer-distance, cross-system blocks, and establish more reliable and balanced operations that support improved services at reduced cost.

The second stage, referred to as the "Growth Plan," demonstrates in detail how the combined CP/KCS network, augmented by the planned investments in capacity and safety, will offer new, more competitive services and readily accommodate the growth in traffic that Applicants and their witnesses forecast.

DENSITY CHARTS – EXHIBIT 14
[SECTION 1180.8(a)(5)]

Gross-ton mile density charts for CPRL U.S. and Canadian rail network (including its U.S. rail carrier subsidiaries Soo Line, CMQ, D&H, and DM&E) and for KCS's U.S. and Mexican rail network (including both KCSM and its U.S. rail carrier subsidiaries KCSR, GWER, and Tex Mex) are presented in Exhibit 14 (in Volume 2 of this Application).

OPERATING PLAN (MINOR TRANSACTIONS) – EXHIBIT 15
[SECTION 1180.8(b)]

Not applicable. Applicants propose a Major Transaction, as defined in 49 C.F.R. § 1180.2(a).

PRO FORMA BALANCE SHEETS – EXHIBIT 16
[SECTION 1180.9(a)]

Pro-forma balance sheets (Exhibit 16) are submitted as Appendix E to this Volume. *See* Verified Statement of Dean Vargas, in this Volume.

PRO FORMA INCOME STATEMENTS – EXHIBIT 17
[SECTION 1180.9(b)]

Pro-forma income statements (Exhibit 17) are submitted as Appendix F to this Volume. *See* Verified Statement of Dean Vargas, in this Volume.

SOURCES AND APPLICATIONS OF FUNDS STATEMENTS – EXHIBIT 18
[SECTION 1180.9(c)]

Sources and applications of funds statements (Exhibit 18) are submitted as Appendix G to this Volume. *See* Verified Statement of Dean Vargas, in this Volume.

PROPERTY ENCUMBRANCES – EXHIBIT 19
[SECTION 1180.9(d)]

Not applicable. Encumbrances which exist on the properties affected by the Transaction would remain in place.

CURRENT BALANCE SHEETS AND INCOME STATEMENTS
(EXHIBITS 20 AND 21)
[SECTION 1180.9(e)]

Current balance sheets and income statements for Applicants and their controlled rail carrier subsidiaries are set forth in their R1 filings or provided elsewhere in this Application, as indicated in Table 20/21 below.

PRAYER FOR RELIEF

Wherefore, Applicants pray that the Board:

(1) Enter an order under 49 U.S.C. §§ 11323 and 11324 granting approval and authority for CP to acquire and exercise control over KCS and its rail carrier subsidiaries; and

(2) Determine that the terms of the acquisition by CP of the stock of KCS is fair and reasonable.

OPINIONS OF COUNSEL FOR APPLICANTS
[SECTION 1180.6(a)(4)]

CANADIAN PACIFIC RAILWAY LIMITED AND SUBSIDIARIES

As counsel for Applicant Canadian Pacific Railway Limited and its subsidiaries (collectively "CP"), I am generally familiar with the proposed Transaction and have reviewed the foregoing Application. It is my opinion that the Transaction, to the extent it involves CP, meets the requirements of law, is within the corporate powers of CPRL and its subsidiaries, and will be legally authorized and valid, if approved by the Surface Transportation Board and the other requirements set forth in the agreement governing the Transaction are satisfied or waived. Capitalized terms used and not otherwise defined in this opinion shall have the meanings specified in the foregoing Application.

Jeff J. Ellis
Chief Legal Officer
Canadian Pacific Railway Limited

Dated this 29 day of October, 2021, at Calgary, Alberta.

KANSAS CITY SOUTHERN AND SUBSIDIARIES

As counsel for Applicant Kansas City Southern and its subsidiaries (collectively "KCS"), I am generally familiar with the proposed Transaction and have reviewed the foregoing Application. It is my opinion that the Transaction, to the extent it involves KCS, meets the requirements of law, is within the corporate powers of KCS and its subsidiaries, and will be legally authorized and valid, if approved by the Surface Transportation Board and the other requirements set forth in the agreement governing the Transaction are satisfied or waived. Capitalized terms used and not otherwise defined in this opinion shall have the meanings specified in the foregoing Application.

Adam J. Godderz
Chief Legal Officer
Kansas City Southern

Dated this 29th day of October, 2021.

SIGNATURES, OATHS, AND CERTIFICATIONS OF APPLICANTS' EXECUTIVE OFFICERS [SECTION 1180.4 (c)(2)(i)]

CANADIAN PACIFIC RAILWAY LIMITED AND CANADIAN PACIFIC RAILWAY COMPANY

I, Keith Creel, declare under penalty of perjury that I am President and Chief Executive Officer of Canadian Pacific Railway Limited and Canadian Pacific Railway Company, Applicants herein; that I am one of the executive officers duly authorized to sign, to verify, and to file this Application on behalf of the foregoing; that I have knowledge of the matters contained in this Application to the extent they relate to the foregoing; and that the statements made in this Application are true and correct to the best of my knowledge and belief.

Keith Creel
President and Chief Executive Officer
Canadian Pacific Railway Limited and
Canadian Pacific Railway Company

Executed on this 28 day of October, 2021.

I, Jeff J. Ellis, certify that I am Secretary of Canadian Pacific Railway Limited and Canadian Pacific Railway Company, Applicants herein, and that Keith Creel, President and Chief Executive Officer of Canadian Pacific Railway Limited and Canadian Pacific Railway Company, is duly authorized to sign, to verify, and to file this Application on behalf of the foregoing.

Counsel for CP

Attorneys for Applicants

October 29, 2021

CERTIFICATE OF SERVICE

I hereby certify that I have caused the foregoing Railroad Control Application (Volumes 1-4) in Finance Docket No. 36500 to be served electronically or by first class mail, postage pre-paid, on all parties of record in this proceeding and all parties required to be served by Decision No. 3 herein and 49 C.F.R. § 1180.4(c)(5):

a. The Governor (or Executive Officer), Public Service Commission, and the Department of Transportation of each State in which any part of the properties of the applicant carriers involved in the proposed transaction is situated;

b. The Secretary of the United States Department of Transportation;

c. The Attorney General of the United States, c/o Assistant Attorney General, Antitrust Division;

d. The Federal Trade Commission;

e. Administrative Law Judge Thomas McCarthy; and

f. All other persons who requested a copy after Applicants' pre-filing notice was published in the Federal Register.

David L. Meyer

NOTES TO PRO FORMA BALANCE SHEET
CP/KCS
BASE YEAR

1. CP BASE YEAR: Represents CP's 2019 balance sheet as reported under US GAAP in its 2019 Annual Report on Form 10-K converted from $CDN to $USD. See separate CP base year pro forma balance sheet included in this section of the Application.

2. KCS BASE YEAR: Represents KCS's 2019 balance sheet as reported under US GAAP in its 2019 Annual Report on Form 10-K. See separate KCS base year pro forma balance sheet included in this section of the Application.

3. PURCHASE ACCOUNTING ADJUSTMENTS: Represents the CP acquisition of KCS and related purchase accounting adjustments:

CASH AND CASH EQUIVALENTS - Adjustments represents cash on hand used to fund the cash consideration portion of the purchase price.

OTHER LONG-TERM ASSETS - Adjustment represents remainder of the total purchase price consideration. Once detailed valuations and related calculations are completed, a material portion of this amount could be attributable to properties, goodwill and intangible assets, other assets, other long-term liabilities, and the related deferred income tax balances.

ACCOUNTS PAYABLE AND ACCRUED LIABILITIES - Adjustment represents post transaction compensation adjustments, primarily retention payments.

LONG-TERM DEBT - Represents the net issuance of long-term debt required to fund the cash consideration of the purchase price, CN agreement termination payments, CP and KCS merger transaction costs, cash settlement of outstanding KCS compensation equity awards, and fair value increase of KCS long-term debt.

DEFERRED INCOME TAXES - Adjustment relates to the fair value adjustment of long-term debt and lease obligations.

TOTAL SHAREHOLDERS' EQUITY - Represents CP common shares issued as part of the purchase price, less KCS base year total shareholders' equity, CP merger transaction costs, and accounts payable and accrued liabilities purchase accounting adjustments.

4. CP/KCS BASE YEAR: Represents the base year balance sheet for the combined CP/KCS entity.

NOTES TO PRO FORMA BALANCE SHEET
CP/KCS
YEAR 1 THROUGH NORMAL YEAR

1. CP/KCS BASE YEAR (2019) OR PRO FORMA FOR PRECEDING YEAR: For Year 1, represents the pro forma combined CP/KCS base year balance sheet. For Year 2 through Normal Year, represents the pro forma combined CP/KCS for the preceding year. See separate combined CP/KCS Year 1, Year 2, or Year 3 pro forma balance sheets included in this section of the Application.

2. YEAR 1 THROUGH NORMAL YEAR ACTIVITY: Represents the effects on the combined CP/KCS pro forma balance sheets of the operating results (earnings and cash flows) for the respective years, inclusive of adjustments to reflect implementation of the operating plan:

CASH AND CASH EQUIVALENTS - Represents the normal change in cash (resulting from the base year) as derived from the statement of sources and application of funds (statement of cash flows).

PROPERTIES, NET - Represents capital expenditures for each of the respective years, including capital expenditures necessary to combine operations of CP and KCS, less an allowance for depreciation for each year. All years reflect an increase in the normal allowance for depreciation resulting from the capital expenditures to combine operations of CP and KCS.

OTHER LONG-TERM ASSETS - Represents normal expenditures for other investing activities and normal annual other operating activities (base year).

ACCOUNTS PAYABLE AND ACCRUED LIABILITIES - Represents net cash flows from net changes in non-cash working capital balances related to operations, principally net changes in the balance of accounts payable and accrued liabilities.

LONG-TERM DEBT - Represents the net issuance or repayment of long-term debt for the respective years, as well as the amortization of the fair value increase to KCS long-term debt included in the purchase accounting adjustment. In any year where there is a net use of cash arising from the combination of CP and KCS and the implementation of the operating plan, long-term debt is assumed to be issued. In any year where there is a net source of cash arising from the combination and the operating plan, long-term debt is assumed to be repaid.

DEFERRED INCOME TAXES - Represents the net change in the deferred income tax liability resulting principally from different book and tax treatment for depreciation expense and for the depreciation or amortization of components of the excess purchase price resulting from the transaction.

OTHER LONG-TERM LIABILITIES - Represents normal proceeds from other financing activities (resulting from the base year), and effect of foreign currency fluctuations on foreign-denominated cash and cash equivalents, as derived from the statement of sources and application of funds (statement of cash flows).

RETAINED EARNINGS - Represents net earnings for the respective years, less dividends declared and paid to shareholders, and employee separation and relocation costs as a result of combining CP and KCS operations.

BASE YEAR

1. CP HISTORICAL 2019 AS REPORTED: Represents CP's 2019 income statement as reported under US GAAP in its 2019 Annual Report on Form 10-K.

2. ADJUSTMENTS: Represents adjustments made to eliminate effects on CP's income statement of the following non-recurring transactions as reported in 2019:

(1) a deferred tax expense of $24 million as a result of a provision for an uncertain tax item of a prior period;
(2) a deferred tax recovery of $88 million due to the change in the Alberta provincial corporate income tax rate;
(3) a net non-cash gain of $94 million ($86 million after $8 million deferred tax) due to foreign exchange translation of debt and lease liabilities.

3. CP BASE YEAR: Represents CP's 2019 income statement as reported in the 2019 Annual Report on Form 10-K revised to include the adjustments indicated in 2.

4. CP BASE YEAR $USD: Represents the CP Base Year stated in $CDN (3. above) converted to $USD using a conversion factor of $CDN 1 equals 0.7699, which was the exchange rate as of December 31, 2019 from the Bank of Canada.

NOTES TO PRO FORMA INCOME STATEMENT
CP/KCS
YEAR 1 THROUGH NORMAL YEAR

1. CP BASE YEAR (2019): Represents pro forma combined CP/KCS base year income statement, included separately in this section of the Application.

2. YEAR 1 THROUGH NORMAL YEAR ADUSTMENTS: Represents the effects on the combined CP/KCS pro forma base year income statement of cumulative net benefits arising from implementation of the operating plan, inclusive of one-time expenses related to combining operations, as well as interest expense on acquisition debt:

TOTAL REVENUES - Represents gross revenue gains from additional traffic.

TOTAL OPERATING EXPENSES - Represents net benefits from operating efficiencies, reduced by: (1) additional expenses incurred to handle increased traffic; and (2) increased depreciation expense arising from annual additions to properties (resulting from the base-year sources and applications of funds), and one-time capital expenditures to combine operations.

NET INTEREST EXPENSE - Represents the net increase in interest expense arising from debt incurred to finance the acquisition, net of interest expense reductions arising from debt repayment, and amortization of the fair value increase to KCS long-term debt included in the purchase accounting adjustment.

INCOME TAX EXPENSE - Represents the change in current and deferred income taxes resulting from the net adjustments to pretax earnings as outlined above.

REDACTED PUBLIC RECORD VERSION

NOTES TO PRO FORMA SOURCES AND APPLICATION OF FUNDS (STATEMENT OF CASH FLOWS)
CP-KCS
YEAR 1 THROUGH NORMAL YEAR

1. CP-KCS BASE YEAR (2019): Represents pro forma combined CP-KCS base year sources and application of funds (statement of cash flows), included separately in this section of the Application.

2. YEAR 1 THROUGH NORMAL YEAR ACTIVITY: Represents the effects on the combined CP-KCS pro forma base year sources and application of funds of: (1) cumulative benefits arising from implementation o the operating plan; (2) one-time capital expenditures related to combining operations; and (3) the issuance or repayment of debt.

NET INCOME - Represents net adjustments to net income/(loss) in the respective years, as derived from the income statement.

DEPRECIATION AND AMORTIZATION - Represents the increased depreciation or amortization expense arising from: (1) annual additions to properties (resulting from the base year); and (2) one-time capital expenditures to combine operations.

DEFERRED INCOME TAX EXPENSE - Represents the adjustment to deferred income tax expense resulting from the net adjustment to pretax earnings.

OTHER OPERATING ACTIVITES, NET - Represents annual other operating activities (base year), one-time employee separation and relocation costs as a result of combining CP and KCS operations, and non-cash amortization of the fair value increase to KCS long-term debt included in the purchase accounting adjustment.

CHANGE IN NON-CASH WORKING CAPITAL BALANCES RELATED TO OPERATIONS - Represents annual changes to working capital accounts for each of the respective years, principally changes in accounts payable and accrued liabilities.

ADDITIONS TO PROPERTIES - Represents capital expenditures for each of the respective years, including one-time expenditures required to achieve the benefits of combining operations.

DIVIDENDS PAID - Represents dividend payments for CP's existing common shares outstanding and dividend payments for incremental CP common shares issued as part of the purchase price consideration.

LONG-TERM AND SHORT-TERM DEBT ISSUED / REPAID - Represents the issuance or repayment of long-term debt for the respective years. In any year where there is a net use of cash arising from the combination of CP and KCS and the implementation of the operating plan, long-term debt is assumed to be issued. In any year where there is a net source of cash arising from the combination and the operating plan, long-term debt is assumed to be repaid.

XIII. CONCLUSION 29

VERIFIED STATEMENT OF KEITH CREEL

1. I am Keith Creel, President and Chief Executive Officer of Canadian Pacific Railway Limited ("CP"). I joined CP in 2013 as its President and Chief Operating Officer. In 2015, I joined CP's Board of Directors, and on January 31, 2017, I was named CEO.

2. I have been a railroader for 29 years. Prior to joining CP, I was Executive Vice-President and Chief Operating Officer at Canadian National Railway ("CN"). I started my railroad career in Birmingham, AL as an Intermodal Ramp Manager for BN, and later worked on the Illinois Central Railroad ("IC") as a Trainmaster and Director of Corridor Operations prior to CN's acquisition of IC. I held numerous operating positions at CN, including Senior Vice-President Eastern Region, Senior Vice-President Western Region, and Vice-President of the Prairie Division.

3. I am also a proud veteran of the U.S. Armed Services, having served as a commissioned officer in the U.S. Army, including in active duty in Saudi Arabia during the Persian Gulf War.

4. If the Board approves CP's control of KCS, I will lead the combined company – to be known as Canadian Pacific Kansas City (or "CPKC") – as its Chief Executive Officer, having recently committed to lead the company for another five years at minimum.

5. I am submitting this statement to explain why CP has pursued its acquisition of KCS so vigorously, how CPKC will approach the North American transportation marketplace, and why the Transaction is in the public interest.

I. THE LONG PATH TO THE CP/KCS COMBINATION STRENGTHENS MY CONVICTION THAT IT IS THE RIGHT PATH FOR THE NORTH AMERICAN RAIL NETWORK

6. I am very pleased to be presenting for the Board's review and approval CP's proposed control of KCS. Although the road to this point has had its twists and turns since we announced the Transaction and filed our Notice of Intent in March, the fundamentals of the Transaction remain the same. The intervening months, and our wrenching efforts in pursuit of KCS, have only increased my conviction that this Transaction – especially at this point in time in the evolution of the North American economy – will be unambiguously positive for the public interest.

7. As our Amended Notice of Intent explained, CP will be acquiring all of the stock of KCS, and we will be doing so pursuant to an executed merger agreement that is substantially identical to that entered in March. CP likewise anticipates using a voting trust to complete its acquisition of KCS shares, and that trust is substantively identical to the trust agreement that accompanied the merger agreement entered in March, including the very same trustee, David Starling.

8. This is no coincidence. CP has been mindful of the Board's appropriate and plenary role in overseeing railroad consolidations, including the terms of any voting trust arrangement – even for transactions under the "pre-2001" merger rules. As a result, although CP had no choice but to sweeten its offer to KCS shareholders, we did so by offering additional consideration solely in the form of stock. This means that CP is taking on no additional debt to finance the acquisition of KCS shares, and in light of CP's strong financial performance since March and lower interest rates CP's leverage ratio will actually be reduced relative to the deal entered in March. As Chris De Bruyn explains in his Verified Statement, CP (and ultimately

CP/KCS) will have no difficulty paying down this acquisition debt while simultaneously continuing to invest in the combined rail network.

9. As the Board by now is well aware, CP's odyssey to acquire KCS began in the fall of 2020 when we learned of the interest of private equity investors in acquiring KCS. In late 2020 and early 2021, CP negotiated with KCS against the backdrop of interest of a competing bid from private equity. CP persuaded KCS to join with us by making a superior offer, predicated on the many synergies made possible by the uniquely end-to-end nature of the combined CP/KCS system.

10. Soon after we joined with KCS to announce our historic transaction in March and began to work with KCS to prepare our merger application, we learned that CN was stepping in to thwart our transaction by acquiring KCS itself. As we wrote to the Board the day after CN announced its interest in acquiring KCS, we regarded the prospect of a CN/KCS transaction as "illusory and inferior" and believed that "the best option for Kansas City Southern and the U.S. public interest would be consummation of Canadian Pacific's proposed acquisition (following Board review), and not an acquisition of KCS by CN or private equity investors."[1]

11. We were disappointed when KCS ended up entering into an agreement to be acquired by CN. Our decision to continue pursuing KCS in the face of that development required us to re-assess the benefits that would flow from our own combination with KCS. Doing so redoubled our enthusiasm about the potential for a CP/KCS combination to transform North American railroading. Many of our customers had expressed extraordinary excitement about the opportunities the CP/KCS combination would unlock. And our own deeper analysis of the synergies – almost entirely in terms of top-line revenue growth – revealed that our initial

[1] Finance Docket No. 36500, CP-12, Letter to Board (Apr. 21, 2021) at 1, 3.

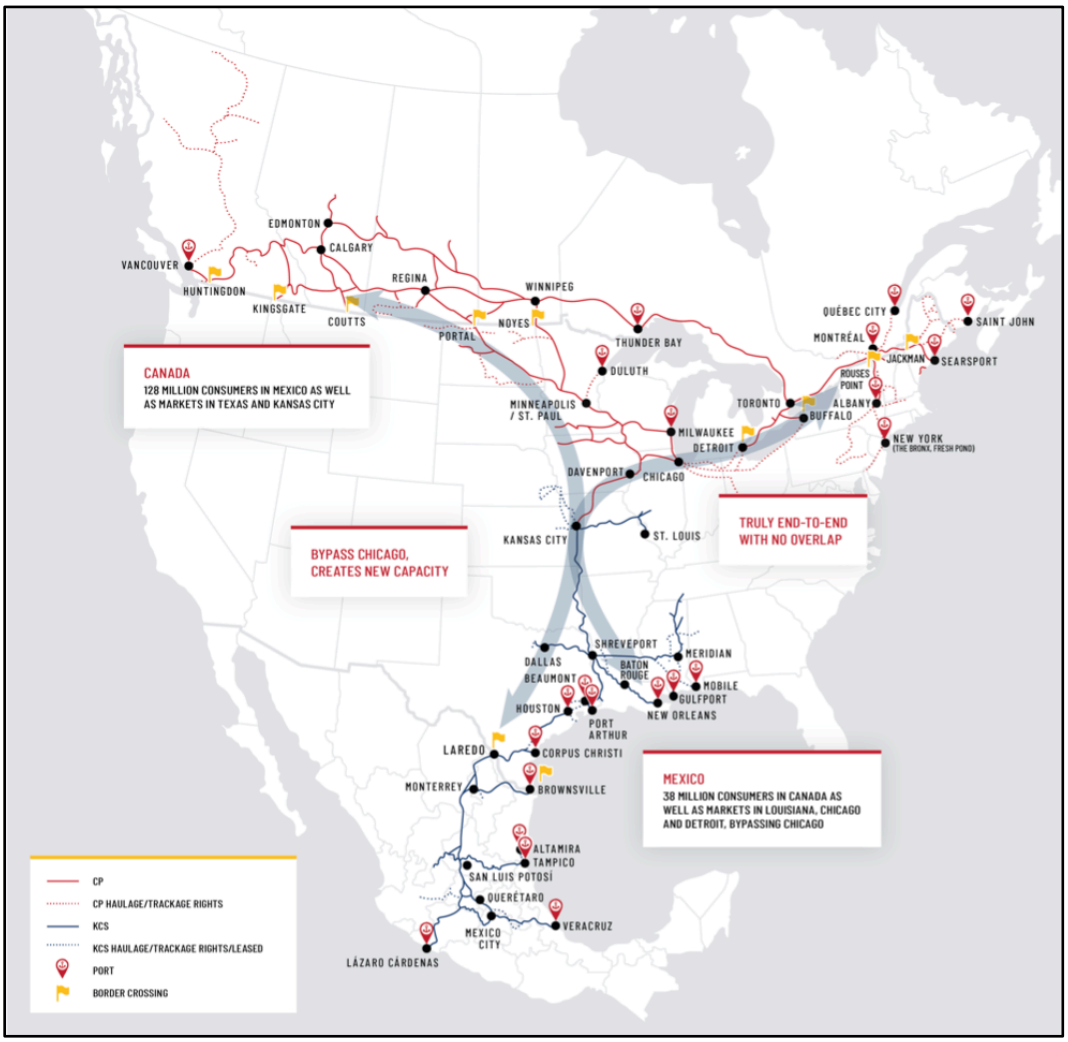
estimates were likely quite conservative. As a result, our interest in combining with KCS never wavered.

12. Though it took some time, we are gratified that the KCS board of directors now agrees that the CP proposal was and is a "superior proposal." We are joining with KCS to present the Board with a shared vision of the unambiguous public interest benefits the CP/KCS combination will achieve. I look forward to working with the Board through the entire approval process and eventually – with Board authorization – working with the many fine employees and managers at KCS to bring to fruition the unique potential of our combination.

II. CP AND KCS: A PERFECT AND NATURAL FIT

13. When CP and KCS jointly announced our agreement to join forces, we explained the truly unique character of this particular railroad combination:

> "The transaction, if approved and consummated, will generate substantial public benefits by combining the Nation's two smallest Class I railroads. It will join two railroads whose networks are a perfect and natural fit. The CP and KCS networks are entirely end-to-end, with no overlapping routes, corridors, or territories. The number of independent railroads currently serving particular shippers will not be reduced at any location. Instead, competition will be strongly enhanced, against both the larger Class I railroads whose lines surround those of Applicants, as well as trucking competitors.
>
> "The combination will create the first rail network connecting the U.S., Canada, and Mexico. Joining at Kansas City, in America's Heartland, CP and KCS together will connect customers via single-network transportation offerings between points on CP's system throughout Canada, the U.S. Midwest, and the U.S. Northeast and points on KCS's system throughout the South Central United States and Mexico. The combined network's new single-line offerings will deliver dramatically expanded market reach, provide new and better competitive options for shippers which today may be using trucks or other major railroads to move their goods, and support economic growth across the entire North American continent.
>
> "CP's track record of operational excellence as a Precision Scheduled Railroading pioneer, coupled with the hand-in-glove fit of the two networks, will ensure a smooth and efficient combination of the two



> railroads without service disruption. And CP will bring its safety-first culture – as North America's safest large railroad for 15 consecutive years – and extend it to the entire combined network."

Finance Docket No. 36500, Notice of Intent (CP-1/KCS-1) (Mar. 22, 2021) at 4-5.

14. What we said in March is just as true now. CP and KCS fit together like two perfectly interlocking pieces of a jigsaw puzzle. We are perfect complements for one another, and our combination will better serve the transportation needs of our shippers and the entire North American economy.

15. As Figure 2 shows, our combination will provide the first-ever integrated steel pathway for rail traffic serving the vital USMCA North-South trade corridors connecting the United States, Mexico and Canada. Our combination will inject new single-line competitive options for shippers in the Upper Midwest too long dependent on a limited number of larger Class I carriers. And our combination will join the growth and customer service minded philosophies of the two smallest Class I railroads, creating an energized and more capable, but still customer-focused, new railroad, drawing on the heritage of operational and safety excellence that has been CP's hallmark for many years.

FIGURE 2
THE CP/KCS NETWORK UNLOCKS NEW COMPETITION AND NEW CAPACITY

16. The benefits the CP/KCS combination will bring are cataloged in detail throughout the Application we are filing today. In the remainder of this statement, I will merely highlight some of the most important ways in which the CP/KCS combination, if approved by the Board, will deliver benefits for customers, workers, our connecting railroad partners, the North American economy, and ultimately the public interest.

III. CP/KCS WILL BRING NEW COMPETITION AND NEW TRANSPORTATION OPTIONS

17. At its core, the Transaction is a once-in-a lifetime opportunity to inject new rail competition into important North-South trade flows. CP is pursuing this combination to enable

rail transportation services that better meet our customers' needs, expanding the markets our customers can reach and improving the value our transportation services deliver. By delivering on that potential we intend to grow the traffic that the CP/KCS system handles, in the process supporting economic growth and stimulating new, more intense competition against existing rail options.

18. CP's proposed acquisition of KCS is also a perfect fit with CP's strategic goal of pursuing growth opportunities on behalf of our shippers. Over the last three years, CP and KCS have led the railroad industry in sustainable, profitable, quality growth, demonstrating our shared vision and values. As just one small example, in the year since CP completed our acquisition of Central Maine & Quebec Railway US Inc. (the "CMQ") to provide new single-line service to Maine and single-line-like service to the Port of Saint John, traffic to/from the CMQ has grown beyond our forecasts, as John Brooks, CP's Chief Marketing Officer explains in his verified statement.

19. Building on the strong foundation built by the separate CP and KCS systems, the CP/KCS combination would create the first U.S.-Mexico-Canada railroad, bringing together two railroads that are similarly focused on providing high-quality service to customers in order to unlock the full potential of their networks. The new and better rail transportation options, including new single-line services made possible by the Transaction, will transform the relatively underutilized CP and KCS North-South mainlines into a new artery for trade. These new options will inject new competition and improved service into the North American transportation marketplace with significant positive results for customers, communities, and other stakeholders.

20. ***New Options and Competition for Traffic to/from Upper Midwest.*** The CP/KCS combination is the only one capable of injecting new competition into many U.S. rail corridors –

particularly those connecting the Upper Midwest with the Gulf and Mexico. Specifically, CP/KCS will create new single-line rail options in many corridors where shippers today are dependent on our much larger Class I rivals – like UP, BNSF, and CN. That includes grain from the Dakotas, from which the only single-line option today is BNSF; grain and forest products from Canada to the Gulf, where the only single-line option is CN; and chemicals from the Gulf to Canada, where CN is the only single-line option today. There are many other examples.

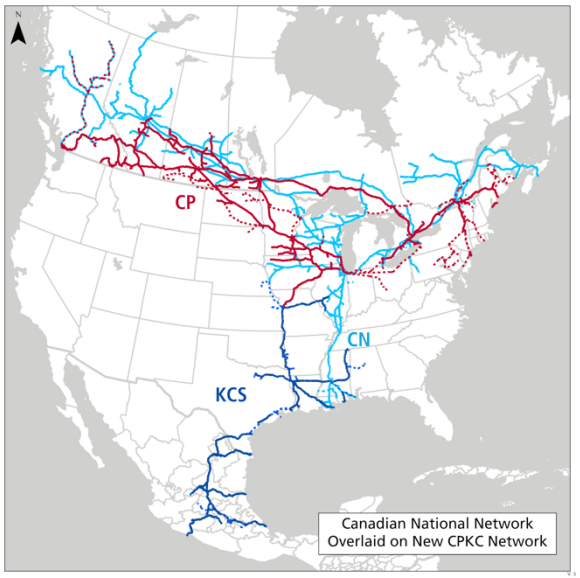
21. ***New Options and Competition for Traffic to/from Western Canada.*** CP/KCS's new single-line routes will provide the shortest and most efficient pathway for commerce moving between Mexico and the South Central United States and Western Canada. CP's network efficiently connects all of the major points in Western Canada – places like Vancouver, BC; Edmonton, AB; Calgary, AB; Winnipeg, MB; and Saskatoon, SK – with the KCS network, and it does so via CP's Marquette Subdivision that reaches Kansas City without having to traverse the congested Chicago area. These new options would compete directly and more effectively against existing options via CN in particular.

22. ***New Options and Competition for Traffic to/from Eastern Canada***. CP/KCS's new single-line routes will similarly provide reliable and competitive transportation services to markets in Ontario, Quebec, and New Brunswick in Maritime Canada, creating new head-to-head competition against CN for traffic moving between the Gulf and Eastern Canada. CP's network – and in particular our terminals in Canada – have room for growth in these important traffic lanes.

23. ***New Options and Competition for Traffic to/from South Central U.S. and Texas***. The last Class I rail merger (CN/IC) created new single-line routes between points on CN's system north of Chicago and the Gulf of Mexico. CP/KCS will achieve the same benefits

for points served by CP and KCS, unlocking new head-to-head competition for Canadian and other traffic moving to and from this region.

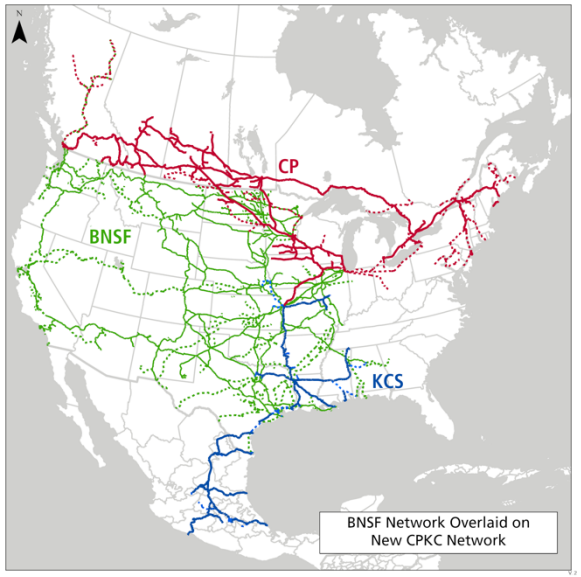
24. ***New Options and Competition for Traffic to/from Mexico.*** One of the most exciting benefits of the CP/KCS combination will be to open up new trade opportunities with Mexico, whose markets CP/KCS will reach with new single line routes spanning the Continent. Traffic from Mexico's burgeoning automotive industry will benefit from new single-line arteries deep into Canada, connecting auto plants with distribution, and auto parts manufacturers with the auto plants that consume their wares. Grain from the Upper Midwest and Canada will reach consumption markets in Mexico more efficiently, as will liquified petroleum gas (LPG) produced in Canada and consumed for heating and cooking across Mexico. The list goes on and on.



25. ***CP/KCS Will Unlock New Economic Growth Opportunities.*** CP/KCS's growth potential will not be limited to winning existing freight traffic over to CP/KCS. With fully aligned incentives and an integrated network capable of offering high-quality transportation services, CP/KCS expects to make (and attract) investments that spawn new economic activity, and new rail traffic. A good example is so-called "watershed" traffic opportunities – potential rail traffic for which one or the other of us lacks sufficient incentives for the investments needed to unlock the power of a combined network. One illustration of this opportunity is our expectation that new single-line CP/KCS offerings will support investment in efficient new rail-served grain elevators in the growing region of Southeastern Iowa, a few hundred miles north of Kansas City, where CP's line runs. A short haul on CP to Kansas City would not support all of the investments we would have to make to handle this traffic efficiently over the Kansas City gateway, but the prospect of reaching KCS-served receivers in the United States and Mexico via

new single-line routes would unlock better and more economic rail service that would support extensive new investment and tap new, more competitive origin markets.

26. ***CP/KCS will take trucks off the highways***. The expanded reach, capacity, and efficiency of the CP/KCS combination will support new intermodal and carload servicers that will attract substantial volumes of traffic now moving by trucks on the Nation's (and the Continent's) highways. Some of these shifts will be directly from truck trailers to intermodal containers, with shippers taking advantage of the new, more reliable intermodal offerings on the CP/KCS system, like our new domestic intermodal service between Dallas, TX and Chicago and the train we will run all the way from the Port of Lazaro Cardenas on the Pacific to Toronto, ON – a total of 3,190 miles – connecting markets like Monterrey, NL; Houston, TX; Kansas City, and Chicago. Our more efficient manifest train network will attract other commodities moving by truck, like steel and paper products moving to Texas from Canada and the Upper Midwest. There are many more examples.



27. ***CP/KCS will stimulate competition***. All of these benefits will force other transportation providers to work – *i.e.,* compete – harder too. From the perspective of the larger Class I railroads that surround the CP/KCS networks, the combination's impact on "competition" will be that the Transaction forces them to *face more of it*. As the maps in Figure 3 on the next page illustrate, the new CPKC network will provide a more formidable set of competitive options, particularly for North-South traffic flows in which these larger railroads already offer single-line routes. The larger Class Is will have to up their game.

FIGURE 3
LARGER CLASS I SYSTEMS WILL FACE NEW COMPETITION FROM THE COMBINED CPKC NETWORK

Canadian National

Would Face New Competition from CPKC Single-Line Routes Between Gulf/South Central States and Upper Midwest/Canada

BNSF

Would Face New Competition from CPKC Single-Line Routes Between Gulf/South Central States/Texas/Mexico and Upper Midwest/Canada

Union Pacific

Would Face New Competition from CPKC Single-Line Routes Between Gulf/South Central States/Texas/Mexico and Upper Midwest

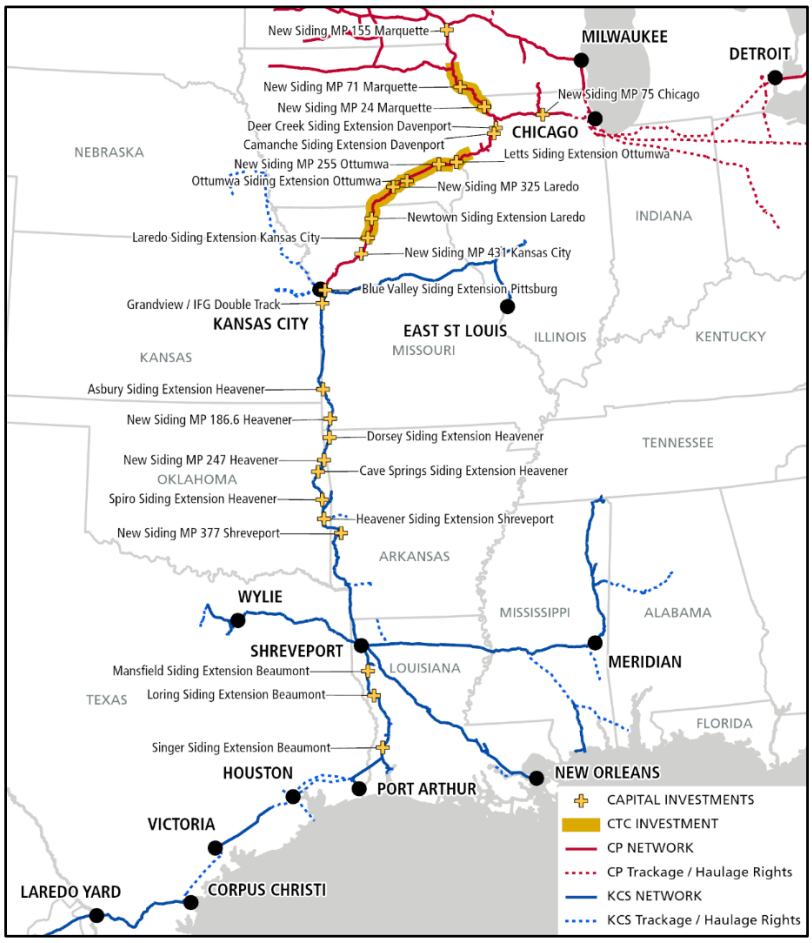
IV. CP/KCS WILL NOT REDUCE COMPETITION OR SHIPPER OPTIONS ANYWHERE

28. CP/KCS is truly and completely an end-to-end transaction. CP and KCS converge at only one location – a rail yard in Kansas City that the two separate railroads already operate jointly – and they operate no lines that parallel one another. As a purely end-to-end transaction, there are no competitive overlaps whatsoever, and thus no 3-to-2 or 2-to-1 shippers or corridors, as the network map in Figure 2 above makes clear. CP/KCS will enhance competition against the larger Class I railroads in the central United States and do so without harming competition anywhere.

29. CP/KCS will be an aggressive competitor, yearning to serve our customers better and win new traffic from existing and new customers by offering them transportation services that better meet their needs. We will pursue success in the marketplace by working hard to attract traffic with better CP/KCS single-line options, not by degrading any of the interline options that shippers choose today. In fact, as we build a more extensive web of efficient and reliable train services on our combined network, the interline options available to our customers will improve along with CP/KCS single-line services.

30. CP's growth in recent years has been built on a foundation of finding ways to meet our customers' needs better, and we recognize that means working to accommodate transportation options that work well for them. Even with the CP/KCS combination, our rail network will remain a very small fish in a very large U.S. Class I railroad pond, and we will be keenly aware that meeting our customers' transportation needs will continue to require CP/KCS to work well with all of our Class I connections. CP/KCS will thus have strong incentives to continue to support efficient and commercially viable interline offerings so that our customers

can choose when and where those options work better for our customers than potential new CP-KCS single line routings.



31. In light of these incentives, it gives me no qualms to formally commit to the Board that CP/KCS will keep open all existing gateways on commercially reasonable terms, and that we will not create any new "bottlenecks" that might constrain shippers' existing access to the Board's regulatory processes. John Brooks explains in more detail how we understand this commitment, but from my vantage it is quite simple: CP/KCS will add to shippers' options and not take any away.

V. CP/KCS WILL BRING NEW INVESTMENT IN RAIL CAPACITY

32. From the perspective of the capabilities of the U.S. rail network, CP/KCS is unambiguously positive, benefitting shippers and the public interest. CP/KCS will bring new investment and capacity, unlocking the full potential of the CP-KCS rail routes serving key North-South corridors.

33. The natural pairing of CP's and KCS's U.S. networks will create the catalyst for significant new investment in service, capacity, and safety on our main stem between Louisiana and Minnesota, lines that have room to grow but are underutilized today. We plan to spend more than $275 million to upgrade these lines, adding double track, adding and lengthening sidings, and installing centralized traffic control to enable increased capacity, service reliability, and safety. Figure 4 below shows where we will invest to build a stronger rail network. As the map vividly illustrates, one of the many advantages of this route is that it provides a North-South lane that bypasses the Chicago area entirely, helping to alleviate congestion in the Chicago gateway by allowing traffic moving between CP points north and west of Chicago (and often interchanged in Chicago today) to be shifted to the CP/KCS single-line routes through Iowa and Kansas City.

FIGURE 4
CP/KCS SPARKS INVESTMENT IN NEW NORTH-SOUTH RAIL CAPACITY

34. This transformation cannot occur without the CP/KCS transaction. CP and KCS have worked hard at developing interline traffic over the years, with some modest success. But as John Brooks, CP's Chief Marketing Officer, explains in his verified statement, obstacles have prevented CP and KCS as separate companies from achieving the potential of true single-line service that only a full alignment of interests can provide. Only our proposed combination will enable the traffic growth that will support the transformation of this route.

VI. CP/KCS WILL BRING IMPROVED RAIL SERVICE WITH NO TRANSITIONAL SERVICE DISRUPTIONS

35. The CP/KCS Transaction will improve the level of service available to customers across our combined system. Our new single-line services will shave transit time for shipments

crossing former network boundaries and improve reliability and predictability. Our investments in added capacity will protect and magnify these improvements.

36. Though some prior Class I combinations have led to transitional service disruptions, the integration of CP and KCS will not. First and foremost, attention to planning and flawless execution is among CP's core operational competencies. CP's successful experience implementing precision scheduled railroading ("PSR") has transformed our operational organization, bringing disciplined attention to the level of service literally every rail shipment received – from the very first mile (and indeed before) all the way to the last. We know our network and its capabilities, which allows us to plan every trip for every car and measure performance against that plan. We will bring this discipline both to our planning for integrating KCS and to serving our customers better as a combined system.

37. We are already well along in our detailed integration planning, and those efforts will intensify over the months preceding Board authorization to combine. When we do begin our integration, we will carefully monitor our progress and deploy the resources needed to make any necessary adjustments to assure a smooth and orderly transition to combined network operations.

38. Our efforts will be aided greatly by the straightforward, end-to-end nature of the two railroads' separate networks. The CP/KCS combination bears no similarities to the more complex network integrations that followed such transactions as the split of Conrail in 1998 (where Conrail's operations had to be disintegrated and recombined across a wide array of corridors and terminals on day one) or UP/SP (where the need to integrate major overlapping terminal operations contributed to UP's service crisis when it sought to rationalize Houston-area yard activities). CP/KCS is far more like CP's combination with DM&E in 2009, KCS's

combination with Tex Mex and TFM in 2005, or CN's acquisition of IC in 1998, none of which led to material service disruptions.

39. The track records of CP and KCS should reassure the public and the Board that we can accomplish the task of combining these railroads competently and without misstep. Again, KCS's integration with Tex Mex and TFM is a prime example, as are CP's more recent (albeit much smaller) integration of CMQ in 2020 and our earlier integration of DM&E in 2009.

40. CP/KCS will put in place safeguards to assure our customers and the Board that we will meet these goals. John Brooks, James Clements, and our Operating Plan outline the many steps we will take to ensure that no shipper's service is harmed by the Transaction, and the ways our commercial teams will interface with our customers to ensure transparency and accountability.

VII. CP/KCS WILL FACILITATE PASSENGER SERVICE ON CP AND KCS LINES

41. CP is keenly aware of the importance to U.S. transportation policy of fostering an expanded network of efficient rail passenger servicers. CP/KCS will help achieve that goal.

42. CP has been a good partner to the passenger service operators that use our lines in the United States and Canada. CP's former Milwaukee Road lines north and west of Chicago host, on average, 90 scheduled trains per day operated by Metra, the Chicago-area commuter rail agency. Since 1982 CP and its predecessors have worked cooperatively with Metra and its commuter operations over our C&M, Chicago, and Elgin Subdivisions. We have enabled Metra to achieve greater than 94 percent on-time performance on our lines, providing safe and reliable service to Metra customers in reaching their destinations.

43. We are also an excellent host of Amtrak services. Though our U.S. network is limited in scope, we are also proud of the success we have achieved supporting Amtrak trains on our lines. We host Amtrak's daily Empire Builder long-distance train between Chicago and St.

Paul, MN, as well as seven pairs of Amtrak Hiawatha Service trains between Chicago and Milwaukee, WI (six pairs on weekends). We also host two daily pairs of Amtrak trains in Upstate New York: we host the Adirondack (which operates between New York and Montreal) between Schenectady, NY and the U.S. border at Rouses Point, NY, and we host the Ethan Allen Express (which operates between New York City and Rutland, VT) between Schenectady, NY and Whitehall, NY.

44. The operating attention we give these trains has earned CP an "A" grade from Amtrak in every year since Amtrak began its Host Railroad Scorecard (as shown in Figure 5 below), and I am proud of that.

FIGURE 5[2]
CP IS A "STRAIGHT-A" AMTRAK HOST

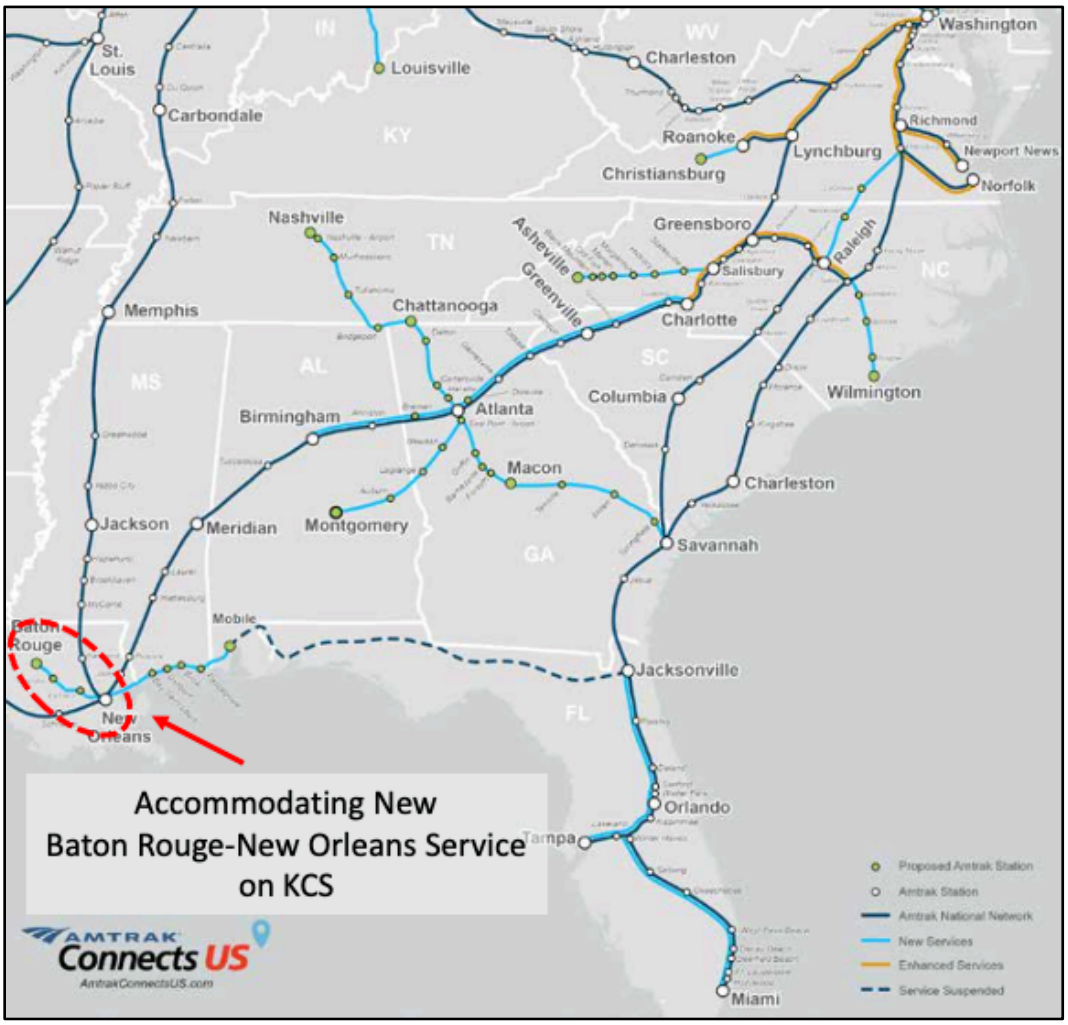
	Host Railroad	2020 Grade	4-year GPA
1	Canadian Pacific	A	4.0 (A)
2	BNSF	A	3.3 (B+)
3	Canadian National	B+	1.3 (D+)
4	CSX	B+	2.8 (B-)
5	Union Pacific	B-	2.7 (B-)
6	Norfolk Southern	C	0.5 (F)

45. The CP/KCS combination will not interfere with the continued operation of these existing passenger services. As our Operating Plan sets out, in the few places where we will see

[2] Amtrak Host Railroad Report Card 2020, https://www.amtrak.com/content/dam/projects/dotcom/english/public/documents/corporate/HostRailroadReports/Amtrak-2020-Host-Railroad-Report-Card-FAQs.pdf (last visited Oct. 15, 2021).

moderately increased freight traffic on lines used by passenger trains, we will have sufficient capacity and will take care to avoid any adverse impacts on passenger train performance.

46. Just as important, CPKC will facilitate Amtrak's planned expansion of its passenger rail network in two ways. First, the CP/KCS combination will enable CP to offer Amtrak the opportunity to increase train frequencies between Milwaukee and Chicago (Amtrak's Hiawatha Service) and on the Empire Builder between the Twin Cities and Chicago. With the new CP/KCS single line routes, some of the freight traffic CP would otherwise interchange in Chicago with UP, BNSF, and CN will bypass Chicago entirely. This will take some of the pressure off of our Chicago-LaCrosse, WI line via Milwaukee that Amtrak uses.



47. Amtrak's desire to add frequencies on this line is reflected in Amtrak's "ConnectsUS" Plan, as shown in Figure 6 below. Amtrak's new passenger trains will still require some additional infrastructure investment, but CP is committed to working with Amtrak and the appropriate funding agencies to secure the capacity improvements necessary to enable these passenger service enhancements while also meeting the current and future needs of freight shippers.

FIGURE 6
ACCOMMODATING ADDITIONAL AMTRAK SERVICES IN CHICAGO-TWIN CITIES CORRIDOR

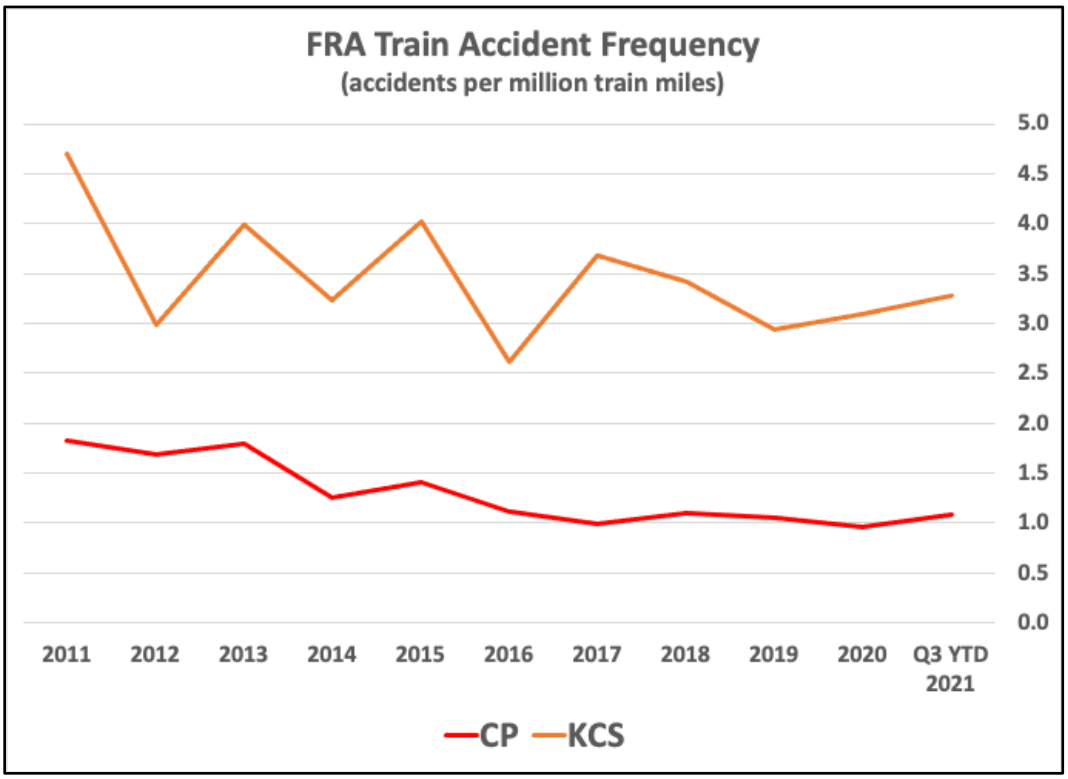
48. Second, CP also has committed to working with Amtrak to facilitate establishing Amtrak passenger service on KCS's line between Baton Rouge and New Orleans once CP acquires control of KCS. This service is also part of Amtrak's "ConnectsUS" Plan, as shown in Figure 7 below. KCS does not host any passenger trains today (though it operates in a few places where passenger trains run on other host railroads). CP will bring its strong relationship and track record with Amtrak to address in a collaborative way the issues raised by this entirely new service. Again, we anticipate working with Amtrak and the appropriate funding agencies to identify infrastructure needs and secure the funding to support adding passenger service while simultaneously supporting the future needs of freight shippers on this line.

FIGURE 7
ACCOMMODATING NEW AMTRAK SERVICES BETWEEN BATON ROUGE AND NEW ORLEANS

VIII. CP/KCS WILL BENEFIT EMPLOYEES

49. CP/KCS will be a boon for rail employment, and I am gratified that the Transaction has such broad support among the labor organizations representing CP and KCS employees. Not only will our focus on growth expand employment opportunities across the CP/KCS system, CP's approach to balanced scheduling of daily train operations will improve the quality of life for many of KCS's train crew employees.

50. As we relocate CP's U.S. headquarters from Minneapolis, MN to KCS's headquarters building in Kansas City, a modest number of our Minneapolis employees will have



to choose whether to join us in Missouri, take other positions in Minnesota, or pursue other opportunities. This move will save overhead costs and make the CP/KCS system a stronger and more competitive railroad. And it will not diminish our commitment to Minnesota one bit. In fact, we expect to see a net increase in employment in and around Minneapolis, particularly at our St. Paul Yard and Shoreham shops in Minneapolis, where the more robust traffic of the CP/KCS system will support the hiring of additional operating personnel.

IX. CP/KCS WILL IMPROVE RAIL SAFETY

51. The CP/KCS Transaction will contribute to safer railroad operations in the United States. CP is rightfully proud of our industry-leading safety culture and record of steady improvement for the benefit of our employees and the communities we serve. Our commitment to safety is ingrained in every aspect of our business and at every level of our organization. Though every employee is responsible for instilling this culture of safety, as CP's CEO – and the CEO of the new CP/KCS system – I am and will be ultimately accountable for our safety performance.

52. CP's commitment to safety is reflected in our record-setting performance against two of the Federal Railroad Administration's ("FRA's") leading safety metrics. CP has achieved the lowest FRA train accident frequency of all large railroads for 15 years straight, and in July of this year we announced that we had set a new record all-time low for any large railroad for a calendar quarter. CP's reportable accident rate has fallen 80 percent since 2013, as shown in Figure 8.

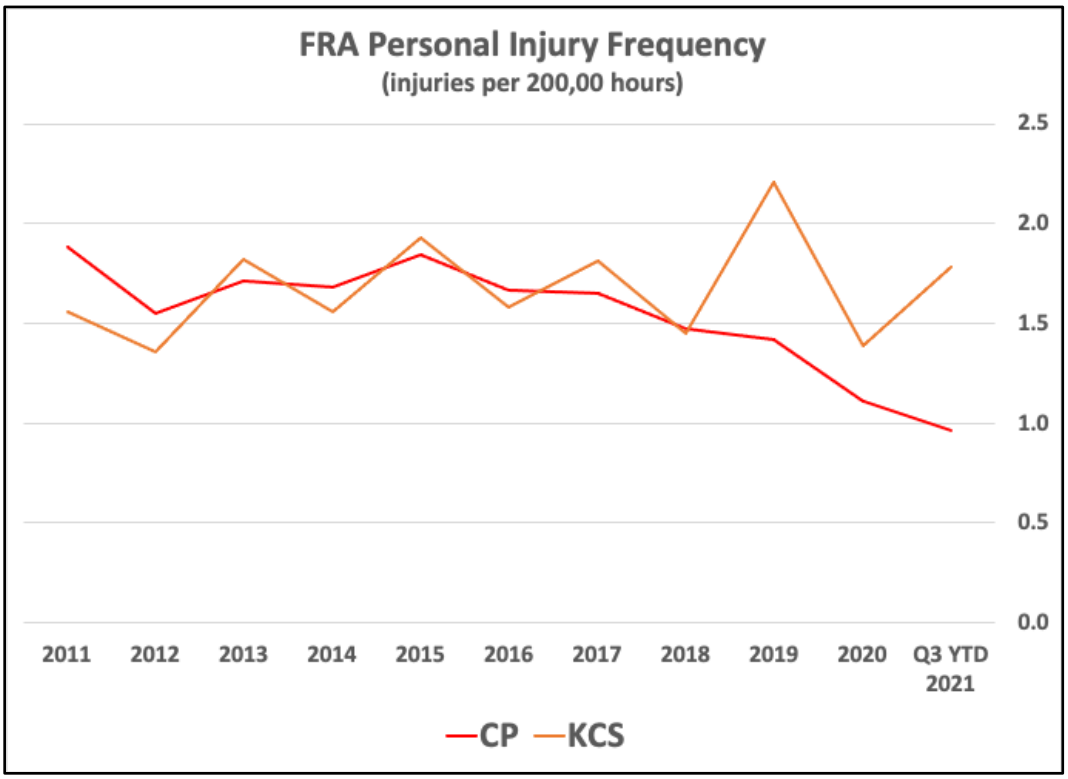


FIGURE 8[3]
CP BRINGS SUPERIOR SAFETY PERFORMANCE TO THE CP/KCS COMBINATION

53. CP also has achieved steady improvement in the key FRA personal injury frequency metric, as shown in Figure 9 below.

[3] Source: FRA and internal data.

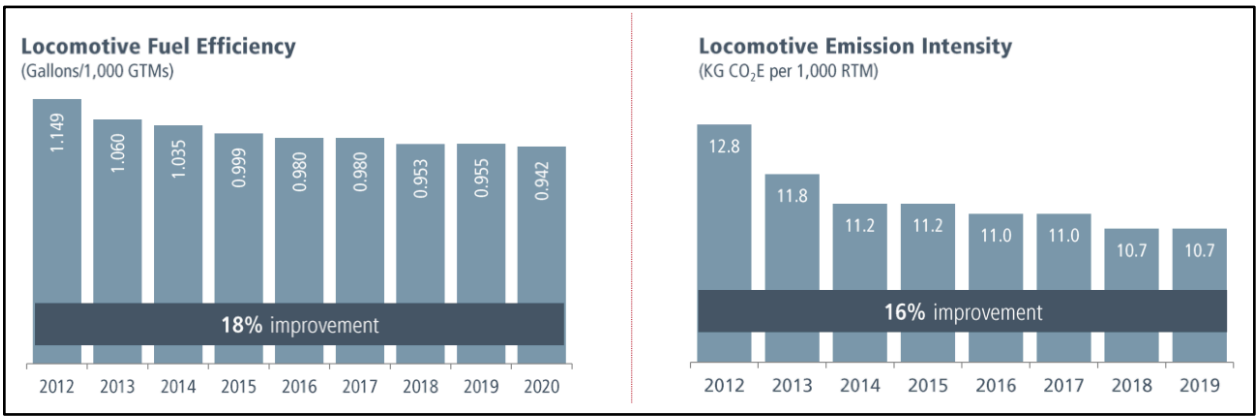
FIGURE 9[4]
CP BRINGS SUPERIOR SAFETY PERFORMANCE TO THE CP/KCS COMBINATION

54. CP has accomplished these superlative results through constant attention to safety precautions and flawless execution. It is not a coincidence that we achieved this success while simultaneously transforming our operations through the implementation of PSR, showing that the focus on planning and disciplined execution that comes with PSR has a strong link to safety as well as efficiency.

55. We look forward to bringing this culture and acumen to the combined CP/KCS network. KCS is a safe railroad with strong operating practices, but we are confident that CP/KCS can do even better.

56. CP has made numerous significant investments in technology aimed at making our train operations safer. For example, we have invested heavily in technologies that are

[4] Source: FRA and internal data.



deployed "above-the-wheel" to reduce potential accidents, such as wheel life forecasting, cracked wheel detection technology, wheel impact load detectors, and predictive bearing failure using acoustic sensors. We also have invested in numerous technologies to improve safety "below-the-wheel," such as broken rail detection in dark territory (non-signaled track), enhanced rail flaw detection, and autonomous track geometry measurement systems. We will rapidly deploy these technologies across the combined system. Our quest to improve safety on the CP/KCS network will also be supported by the infrastructure investments in signaling and line capacity we will make on the core North-South mainline of the combined system.

57. Over the coming months we will be working hard to plan for the safe integration of the two systems, giving attention to all of the modern threats to safe train operations. CP looks forward to working with the FRA to develop a comprehensive Safety Integration Plan in accord with Board regulations and the more modern imperatives of 21st century railroading.

X. CP/KCS WILL IMPROVE THE ENVIRONMENT

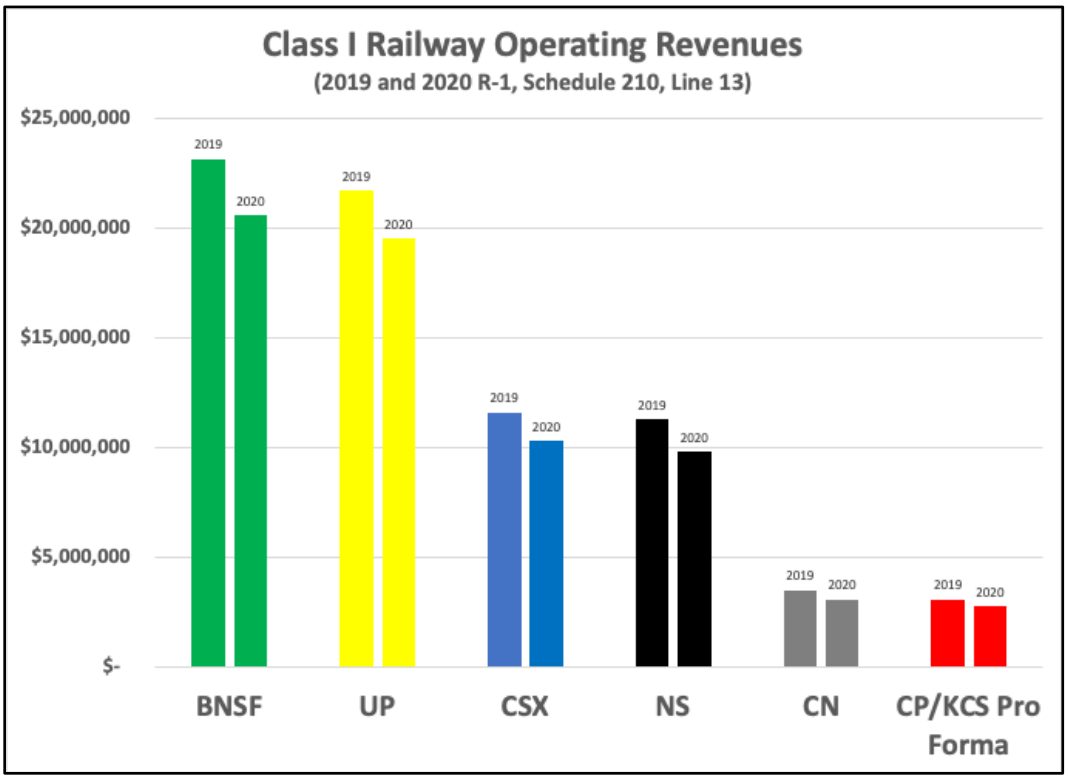
58. CP/KCS will contribute to a cleaner, greener, and more livable environment. As an enterprise, CP is deeply committed to protecting and improving the environment, and in particular reducing emissions of the greenhouse gases that contribute to climate change. CP has committed to relentless improvement. We already regularly outperform industry averages for fuel efficiency, and we are investing in innovative biofuel locomotives. Our steady improvement in fuel efficiency is shown in Figure 10 below.

FIGURE 10[5]
CP HAS STEADILY IMPROVED ITS FUEL EFFICIENCY

59. The CP/KCS Transaction will accelerate our drive toward further improvement in several ways. By shifting trucks from highways to our new single-line rail routes, we will reduce traffic, save fuel, and reduce emissions. CPKC's new single-line routes will also improve the efficiency of the country's rail network, consuming less fuel to deliver the same amount of freight. More rail traffic will bypass the Chicago area, and more will move on efficient single-line routes avoiding interchange operations that consume fuel and generate emissions. Our environmental submissions will address these benefits in more detail. These and other environmental benefits of the Transaction are discussed in more detail in the Verified Statement of Glen Wilson, CP's Vice President, Safety, Environment & Regulatory.

60. While the overall impact of the CP/KCS Transaction is unambiguously pro-environment, we recognize that we will be increasing the number of trains that operate through certain of our communities (while naturally reducing highway traffic and train traffic moving through communities on our competitors' lines). We will work hard to be a good neighbor and mitigate potential adverse community impacts, and we will work closely with the Board's Office

[5] CP Investor Presentation, "Built to Drive Growth"(Mar. 2021) at 20, *available at* https://s21.q4cdn.com/736796105/files/doc_presentations/2021/CP-Investor-Presentation-Mar2021_.pdf.



of Environmental Assessment to ensure that these issues are carefully and appropriately analyzed.

XI. CP/KCS WILL REDUCE THE LIKELIHOOD OF FURTHER CONSOLIDATION

61. Uniquely among all possible Class I combinations – and even relative to the status quo – the CP/KCS combination will complete the U.S. rail map and dampen the likelihood of further consolidation among North America's Class I railroads. The CP/KCS combination will yield a balanced and stable U.S. rail network: two in East, two in West, and two with networks spanning Canada and running North-South through America's heartland. The Transaction will remove the incentives that exist today for another Class I railroad to destabilize this map by seeking to combine with KCS, and will also satisfy CP's quest to grow its network reach beyond its limited U.S. footprint.

62. In addition, the CP/KCS Transaction carries no realistic risk that other Class I railroads will be compelled to respond with their own consolidations, none of which would be nearly as straightforward and cleanly procompetitive as the CP/KCS Transaction. Indeed, as shown in Figure 11, CP and KCS would still be the smallest Class I railroad even *after they are combined*.

FIGURE 11
COMPARISON OF CLASS I RAILROAD U.S. OPERATING REVENUES

XII. CP'S CANADIAN HEADQUARTERS POSES NO NATIONAL SECURITY CONCERNS

63. I am told that in the past some have expressed skepticism about the potential for U.S. railroads to be part of a rail system headquartered in Canada. This strikes me as a bit odd given that CP has for more than a century controlled U.S. rail carriers, Soo Line in particular. And our competitor headquartered in Montreal – CN – has controlled U.S. rail carriers for just as long, and has acquired five more in the last 22 years (starting with Illinois Central and ending with EJE).

64. As the U.S.-born CEO of a Canadian-based rail network, and a combat veteran of the U.S. Army, I can assure the Board and the public that there is nothing to be concerned about. The fact that CP is headquartered in Canada and will have a combined network that crosses international borders poses no national security concerns.

65. First, as I have noted, there is nothing new about railroads crossing international borders or U.S. railroads being controlled by Canadian parents. For more than a century, CP has controlled Soo Line and for decades CP has controlled D&H, DM&E, and more recently CMQ. Like KCS, CP is a proud part of the U.S. rail network, and has long been regulated by the Board and the ICC before it. Nothing about the combination will change that. No Canadian laws or regulations will affect the ability of CP's U.S. rail carriers to satisfy their common carrier and other U.S. regulatory obligations.

66. Second, the CP/KCS system will continue to be a reliable provider of rail transportation services to the U.S. military. Both CP and KCS are already members of STRACNET, the Department of Defense network of strategically important U.S. rail lines. And the CP/KCS combination will improve the service we are able to provide to the military installations that KCS serves directly, like Fort Polk in Louisiana, home of the U.S. Army's Joint Readiness Training Center.

XIII. CONCLUSION

67. The CP/KCS Transaction presents a unique opportunity to achieve many of the Board's public interest goals without the need for any investment in new regulation. CP/KCS will inject new competition and new capacity into the U.S. rail network, it will facilitate USMCA trade flows, it will improve safety, it will grow employment, and it will facilitate new passenger services. I urge the Board to give this transaction thorough and appropriate consideration and approve CP's control of KCS as quickly as possible so we can get to work delivering these benefits.

VERIFICATION

I, Keith Creel, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 29 day of October, 2021.

Keith Creel

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL*. – CONTROL – KANSAS CITY SOUTHERN, *ET AL*.

VERIFIED STATEMENT OF PATRICK J. OTTENSMEYER

BEFORE THE
SURFACE TRANSPORTATION BOARD

Finance Docket No. 36500

CANADIAN PACIFIC RAILWAY LIMITED; CANADIAN PACIFIC RAILWAY COMPANY; SOO LINE RAILROAD COMPANY; CENTRAL MAINE & QUEBEC RAILWAY US INC.; DAKOTA, MINNESOTA & EASTERN RAILROAD CORPORATION; AND DELAWARE AND HUDSON RAILWAY COMPANY, INC.
—CONTROL—
KANSAS CITY SOUTHERN, THE KANSAS CITY SOUTHERN RAILWAY COMPANY, GATEWAY EASTERN RAILWAY COMPANY, AND THE TEXAS MEXICAN RAILWAY COMPANY

VERIFIED STATEMENT OF PATRICK J. OTTENSMEYER

BACKGROUND

My name is Patrick J. Ottensmeyer, and I am excited to present this verified statement to the Surface Transportation Board in support of the application for approval of Canadian Pacific Railway ("CP") to combine with Kansas City Southern ("KCS"). This transaction is a unique and compelling one: It creates new single-line services and produces investment, and environmental benefits, and has no anticompetitive impacts that require conditions. No other combination with KCS can make that assertion. The CP/KCS combination will create more choices for freight customers and enhance competition both with larger railroads and with trucking providers. I respectfully urge the Surface Transportation Board to approve this transaction to unlock its substantial public benefits for customers and all stakeholders.

By way of background, I have been the President of KCS since March 1, 2015, and its Chief Executive Officer and director since July 1, 2016. KCS is a non-carrier holding company

that owns and controls The Kansas City Southern Railway ("KCSR"), The Texas Mexican Railway ("Tex Mex"), Gateway Eastern Railway, Kansas City Southern de México ("KCSM"), and other non-rail subsidiaries. From 2008 to 2015, I was Executive Vice President Sales and Marketing, and from 2006 to 2008, I was Executive Vice President and Chief Financial Officer.

Before my time at KCS, I served from 2000 to 2006 as executive vice president and chief financial officer of Intranasal Therapeutics, Inc., a specialty pharmaceutical company. From 1993 to 1999, I was vice president finance and treasurer for Santa Fe Pacific Corp. and Burlington Northern Santa Fe Corp. Earlier in my career, I held executive positions at Security Pacific National Bank and Bank of America, including the positions of senior vice president and head of the corporate banking group in New York. I hold a Bachelor of Science in Finance from Indiana University.

PURPOSE AND SUMMARY

The purpose of this Verified Statement is to provide an overview of the compelling nature of the CP/KCS transaction. First, I will discuss the very unique transaction we are placing before the Board for consideration and approval. It is a stabilizing transaction between the two smallest Class I railroads that will create a stronger, single carrier better able to compete against the larger carriers with new single line routes that open up markets to customers. It will also allow us to create costs savings and efficiencies to better compete against other modes, particularly the trucking industry that continues to have the lion's share of intermodal traffic across U.S., Canada, and Mexico.

Second, even though the railroad that will result will remain the smallest Class I railroad, its competitive nature will be fierce. No customer will lose an existing rail option as a result of the transaction. In addition, the public interest will be substantially served. The benefits of a

new, strong, competitor against other railroads and trucks that will possess new single-line services and routes will accrue to customers, employees, shareholders, and stakeholders. It will unleash new infrastructure investment that CP and KCS standing alone could not justify. It will provide a cost-effective and efficient means to help eliminate the need for the U.S. supply chain to continue to rely upon the Asian/North American trade and will provide a network for customers to ship goods between Mexico, the United States, and Canada.[1] The common control of our two companies will also yield demonstrable benefits for the environment by converting significant volumes of truck traffic onto rails and delivering better fuel efficiency at lower cost. In short, the combined entity will provide a strong platform for revenue growth, continued capital investment, and job creation.

Third, this strategic rail combination produces public benefits that a deal with an infrastructure fund, private equity fund, or private wealth fund could not. As the Board is no doubt aware, a non-rail party repeatedly placed an offer, but it would not generate the public benefits that this transaction will create and could have resulted in debt levels that could have reduced investment.

Fourth, we are confident in our ability to integrate these two railroads without the disruptions that have occurred in mergers involving other railroads. We are confident because KCS has integrated two other railroads without disruptions and CP has similar experience. Because the two railroads only connect in Kansas City, have adopted similar operating models, have similar policies on demurrage, and share a commitment to customer service, there will not be significant operational changes, labor impacts, safety impacts, or impacts to the environment.

[1] Creating a network that facilitates inshoring, as opposed to offshoring, is particularly critical at this time when the pandemic has caused supply chain disruptions and there has been a significant shift in policy and thinking to encourage inshoring, especially with the passage of the United States–Mexico–Canada Agreement ("USMCA").

KCS and CP have excellent teams to coordinate the integration safely without service disruptions.

Finally, I will conclude with an overview of our Mexico business and the basic facts about the Mexican gateways. This transaction does not change the access to any Mexican gateway for any other railroad – although other U.S. carriers serving the Mexican markets will face intense competition for transborder traffic from a combined CP/KCS.

I. THE PROPOSED TRANSACTION BETWEEN CP AND KCS IS THE "ONE UNIQUE TRANSACTION AMONG LARGE U.S. RAILROADS"

The CP/KCS transaction is a unique transaction among large U.S. railroads that is beneficial. First, it involves the two smallest, but fastest-growing, Class I railroads, who once combined will remain the smallest Class I railroad. While remaining the smallest of six U.S. Class I railroads by revenue, the combined company will create a much larger and more competitive network that connects the United States, Mexico, and Canada. Second, no customer loses access to its existing rail service provider as a result of the merger because CP and KCS connect only in Kansas City. CP and KCS do not compete in the same markets and have always offered complimentary services in different geographic markets. Third, a strong new competitor will be created to compete aggressively with the dominant carriers, UP and BNSF, and with trucks and other modes of transportation. Fourth, the CP/KCS combination is a balancing and stabilizing transaction. It will result in a stable U.S. rail network with two major railroads in the East, two major railroads in the West, and two major railroads with networks spanning Canada and running North-South through America's heartland. The transaction will remove the incentives that exist today for another Class I to destabilize this map by seeking to combine with KCS.

My view of the uniqueness of this transaction has been echoed by one of the largest skeptics of railroad mergers in the history of Congress. For thirty years, Senator Byron Dorgan expressed his skepticism of railroad mergers and introduced legislation regarding concentration in the rail industry, including The Rail Shipper Protection Act. Yet, he has made it clear that this is one transaction he can support, stating that: "the proposed CP-KCS transaction is the one unique transaction among large U.S. railroads that I believe is beneficial and that does not raise the concerns related to East-West transcontinental railroad mergers."[2]

II. THE TRANSACTION HAS SIGNIFICANT PUBLIC BENEFITS TO KCS'S CUSTOMERS, EMPLOYEES, INFRASTRUCTURE, AND THE ENVIRONMENT

The CP/KCS transaction is beneficial for many stakeholders and the public. This transaction is about growing our business by providing our customers the choice to use the combined network of CP and KCS in a single-line move or to continue with existing routes and interchanges (CP and KCS are committed to keeping existing gateways open on commercially reasonable terms). This will give customers more choices, not less. It is about creating a strong, new, competitive alternative for shippers to and from the Canadian, U.S., and Mexican markets – markets that are today dominated by UP and BNSF. It is about improving service, reducing transit times by eliminating interchange handoffs, and creating new efficient routes. It is about growing jobs through creating new routes and growing traffic. It is about maximizing the benefits of USMCA and helping to de-risk the supply chain and supporting inshoring. It is about unleashing infrastructure investments to make those opportunities possible. It is about moving freight to the most environmentally friendly mode of transportation, alleviating a component of

[2] STB Finance Docket No. 36500, Letter of Byron Dorgan (filed April 12, (2021))(hereinafter "Dorgan letter").

highway congestion, and thereby improving public safety. In short, the proposed transaction between CP and KCS is overwhelmingly in the public interest.

A. There Is No Loss of Competition

CP and KCS do not compete head-to-head in any market. They connect in one place: Kansas City. They share a single yard in Kansas City, from which CP goes north and KCS goes south. Thus, the two networks are entirely complementary. No customer will lose access to an existing rail service once the transaction is consummated. Accordingly, in Board parlance, we have not identified a single 3:2 or 2:1 customer. Likewise, no customer will lose the opportunity to continue to use their existing interline routings that involve KCS or CP and another carrier. This is because CP and KCS are committed to ensuring that any existing gateways or interchange locations remain open on commercially reasonable terms. This means CP and KCS will not foreclose a shippers' opportunity to use an existing interline move. As discussed below, this also applies to the Laredo gateway, where KCS made certain commitments to the Board in the KCS/Tex Mex proceeding[3] to keep the Laredo gateway open on commercially reasonable terms, and also agreed with the National Industrial Transportation League ("NITL") to ensure the same. Those commitments will remain and CP and KCS will abide by them post-transaction.

B. New Competition Injected into the Transportation Market

This proposed transaction will enhance competition by creating a new, fierce competitor with new, single-line hauls that is well-positioned to battle other railroads, trucks, and additional modes of transportation. At a high level, there are several ways in which the transaction injects competition in the transportation market.

[3] *Kansas City Southern – Control – The Kansas City Southern Railway Co., Gateway Eastern Railway Co., and the Texas Mexican Railway Co.*, STB Finance Docket 34342 (Decision No. 12 served Nov. 23, 2004)("KCS/Tex Mex").

First, a CP combination with KCS will create new, single-line service options that will enhance competition and facilitate growth. In most cases, single-line moves are more efficient and cost-effective. By eliminating the need for a KCS/CP interchange and by coordinating our operations, equipment, and capital investments, KCS/CP will provide a cost-efficient seamless, connected system from Mexico, through the United States, and into Canada. This will provide rail customers with unfettered access to new markets. The transaction matches rich origin points with new destinations and gateways that neither franchise over the years has been able to achieve through interline or joint marketing efforts.

Second, by coordinating operations and capital investment, the combined system will be able to add capacity and increase flexibility and fluidity in the system. As an example, CP and KCS have already determined that there are several opportunities to route freight in more efficient ways, including by routing certain freight away from Chicago. These new routings will require new infrastructure investment, investment that could not be justified if the parties were to remain separate entities. This new investment will unlock routes to be more competitive for certain freight against other transportation options, especially trucks. Indeed, capturing a larger share of the truck traffic moving cross-border from Mexico, through the U.S., and up into Canada, for example, is a primary goal of the transaction. There is a substantial amount of freight moving via trucks that should be moving on the rail network. CP/KCS will be going after that traffic vigorously.

Finally, this transaction and the resulting network create a stronger competitor to battle with UP and BNSF. Specifically, CP/KCS will create new single-line rail options in many corridors where shippers today are dependent on our much larger Class I rivals – like UP, BNSF, and CN. To the extent the combined system creates a diversion of traffic away from UP or

BNSF to the CP/KCS network, that is a positive development. Such traffic will only be routed over the CP/KCS system if CP/KCS routings are more efficient, faster, and cost-effective, which we believe CPKC will be. This competition makes CPKC stronger and is good for shippers. Rail customers on the combined CPKC, as well as customers who choose to stay on UP and BNSF, should see the benefits of that competition.

In this sense, I agree with the comments made in Keith Creel's Verified Statement. I share his belief that the transaction presents numerous opportunities for injecting new competition to existing markets dominated by other carriers. For example, we expect to be able to better compete for:

- Grain from the Dakotas, from which the only single-line option today is BNSF;
- Grain and forest products from Canada to the Gulf, where the only single-line option is CN; and
- Chemicals from the Gulf to Canada, where CN is the only single-line option today.

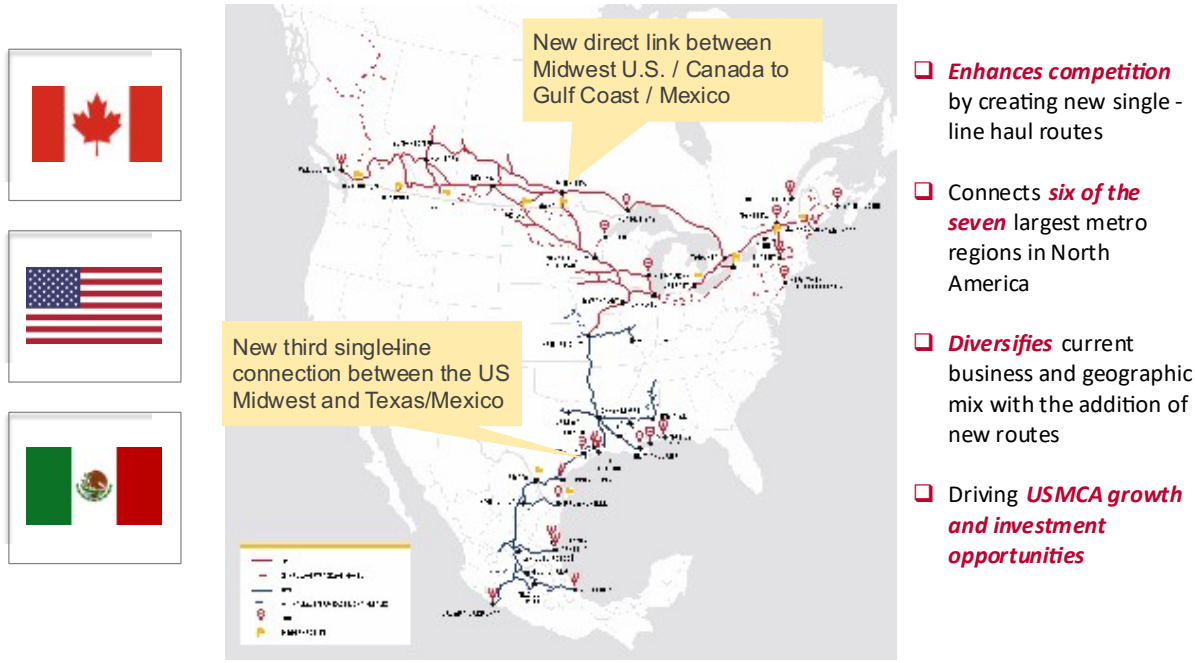
These are not the only areas, however. Rather, these are among a much wider array of new opportunities about which I am particularly enthusiastic. The combined system will provide enhanced competition in other markets as well, including the following.

- The combination of the CP and KCS networks through this transaction will connect customers with premier ports to access key overseas markets.
- The transaction will result in six of the seven largest metro regions in North America being connected with a new, single-line competitor, which is a tremendous opportunity for adding new intermodal services between Dallas, East Texas, as well as Chicago, Detroit, and other destinations, on the other.
- Corn, bean, wheat, and canola producers and shippers, as well as meals, oils, and ethanol producers and shippers will all gain additional domestic markets because they will gain routes to the Gulf of Mexico and, of course, into Mexico itself.

- On the automotive front, the KCS franchise has very rich origination and production locations in the 16 automobile plants in Mexico that are served by KCS. 80% of that volume is bound for the United States or Canada. Automotive traffic and other OEM parts manufacturers that have been historically interchanged by KCS at the Mexican border with UP and BNSF will have a new option to use the combined CP and KCS, without losing their option to use KCSM/KCSR/BNSF or KCSM/UP routings. Standing alone, KCS does not have as efficient a route from Mexico to Detroit and Chicago as UP and BNSF have because KCS lacks a direct route and must interchange that traffic. A unified CP/KCS will provide a direct and competitive route and will thereby provide customers an enhanced alternative to UP's and BNSF's dominance in this north-south trade.

- Growth opportunities for forest products, aggregates, steel, as well as energy products will be unlocked as the CP/KCS combination creates new opportunities for land capacity on the railroads.

Because of this new competition against the dominant rail carriers, the words of former Board Chairman Charles "Chip" Nottingham ring true – "any efforts by larger competitors to a CP-KCS network to use the Board's merger review process to delay and complicate the proposed CP-KCS merger should be viewed with skepticism."[4] In short, when we examine these substantial benefits in their totality, there are clear benefits to customers to be gained from this transaction.



C. Customers Benefit

All these benefits, which are shown below graphically, will flow through to customers and drive growth in the USMCA environment.

[4] CP+KCS a Unique Opportunity, *Railway Age*, Mar. 25, 2021.

Creating the First U.S. -Mexico-Canada Rail Network

CPKC Network

- ***Enhances competition*** by creating new single-line haul routes
- Connects ***six of the seven*** largest metro regions in North America
- ***Diversifies*** current business and geographic mix with the addition of new routes
- Driving ***USMCA growth and investment opportunities***

6

Customers should also benefit from improved service and improved cycle times and asset turns. This transaction creates the opportunity to have some traffic that would today be routed through Chicago bypass that gateway. Routing that traffic out of Chicago and via the CP route through Iowa is expected to improve service and increase available capacity for shippers whose traffic has no choice but to go through the Chicago gateway. Similarly, a rail customer whose traffic can stay on CP/KCS from Canada to Mexico without interchange to other carriers will benefit from a reduction in interchanges and correspondingly improved cycle times. That means improved asset turn and cycle time savings for customers. If that customer owns private cars, it will result in reduced private car expenses as well. Finally, of course, there is also the benefit to customers of eliminating the administrative headaches and expenses of having to work with two

carriers on a move, including the lack of a single source for tracking a rail car when it is a multi-carrier movement (which is a weakness of today's rail network when interline movements are involved).

The benefits of the transaction are simply compelling for rail customers. As Mr. Dennis Manns, a former high-level automotive executive, noted in his op-ed, "The CP-KCS transaction is the only transaction among large U.S. railroads that is unquestionably beneficial for automotive and other customers."[5] Senator Byron Dorgan shares this view:

> As shippers in North Dakota and elsewhere have already pointed out, the transaction promises to improve shippers' transportation service options and open new markets via new, more efficient single-line hauls. These new transportation options will provide additional opportunities for shippers, strengthen competition, and foster economic growth across the North American continent. [6]

D. Employees Benefit Through Realization of Growth

Our employees are the backbone on which KCS operates and serves our customers. They make it happen by providing quality service to our customers. Therefore, I would be remiss not to mention the benefits to KCS employees, who will benefit from being part of a truly North American continental enterprise, which will create a strong platform for revenue growth, capital investment, and future job creation. The merger synergies estimated to be produced by this historic combination are premised on commercial opportunities and growth and not on cost-cutting through job reductions, reduced maintenance, or reduced capital investment. Indeed, as discussed below, there will be an increase in capital investment as a result of this transaction. The goal shared by CP and KCS is to grow traffic volumes and grow the railroads. That is the benefit of a strategic merger rather than a private equity deal. With that traffic growth – resulting

[5] *Viewpoint: Greenlight the pro-shipper CP-KCS combination*, FREIGHT WAVES (Mar. 30, 2021), https://www.freightwaves.com/news/viewpoint-greenlight-the-pro-shipper-cp-kcs-combination.

[6] Dorgan Letter.

from new single-line routes, new commercial opportunities, and other benefits – we expect there will eventually be additional net job growth rather than job cuts. As I said in a letter to our employees, this transaction "will also benefit KCS and our employees by enabling us to become part of a growing and truly North American continental enterprise."

E. Infrastructure Investment Is Unleashed

Unfortunately, as is often the case when two railroads try to collaborate on arrangements such as joint marketing and joint operating agreements, they fail. This is because each railroad works to protect its interests or not expend its capital on a risky commercial opportunity for which there is no guarantee of adequate returns. Certainly, KCS found that to be the case with the proposed KCS/CN Alliance Agreement that arose from the CN/IC merger. While that was before my tenure at KCS, my understanding is that this venture failed because the parties could not coordinate investment and operations in a way that benefitted both railroads. Instead, the railroads did the natural thing: each sought to obtain its long-haul. This defeated the purpose of the Alliance Agreement.

This has also been the case with prior joint-marketing agreements between KCS and CP. Despite good faith efforts in the past, CP and KCS were simply unable individually to financially justify certain infrastructure investments that were needed to unlock commercial opportunities to move more freight on intermodal trains. This combination will remove that friction from the infrastructure investment process. A unified company with a unified goal will be able to make investments that the separate companies could not agree to make. Such is the case with a number of the siding extensions and other infrastructure investments detailed in Mr. Creel's Verified Statement in Figure 4.

F. Helping De-Risk the Supply-Chain

The pandemic has taught us that global supply chains involve greater risk than perhaps a lot of industrial companies are willing to tolerate. In December of 2020, the Wall Street Journal published an article that reported on several studies completed earlier that year. "In May, nearly a quarter of companies told the Institute for Supply Management that they are planning or have begun to reshore or 'nearshore' some or most of their operations. That same month, 93% of executives told McKinsey & Co. they would explore a potential overhaul of their supply chains."[7] We are seeing that story of companies searching for ways to shrink and de-risk their supply chains continue to play out in 2021. In August of 2021, Fortune magazine published an article that observed that "[o]nshoring, nearshoring, and reshoring have become imperatives for businesses . . . whose supply chains snapped in 2020."[8] The data from a recent survey are telling:

- 49% agreed or strongly agreed that the benefits of onshore production outweigh the higher labor costs;
- 52% reported that as COVID disrupted global supply chains, their company increased domestic manufacturing/sourcing of products;
- 48% agreed or strongly agreed that current domestic policies and international trade policies sufficiently encourage reshoring and investment in domestic facilities; and
- 47% said their company will strive to diversify its supply chain over the next three years to reduce dependence on a single country source or manufacturing location.[9]

---

[7] *Firms Want to Adjust Supply Chains Post-Pandemic, but Changes Take Time*, Mike Cherney, WALL ST. J. Dec. 27, 2020.

[8] *Globalization isn't dead—it's radically transformed*, Clay Chanler and Nicholas Gordon, Aug. 3, 2021.

[9] *Global Pandemic Roils 2020 Reshoring Index, Shifting Focus from Reshoring to Right-Shoring*, Kearney, available at https://www.kearney.com/operations-performance-transformation/us-reshoring-index

North America is going to continue to be a very attractive source of investment and growth – particularly in manufacturing and industrial activity. The network created by this transaction is not only going to be in a position to benefit from those trends, but it can help to drive those trends, which will result in more job creation in the United States as a result of more onshoring.

G. The Environment and Safety Benefits

CP's combination with KCS will yield demonstrable benefits for the environment and safety. As I noted above, new infrastructure investment, new routes, and growth opportunities target truck traffic, including intermodal traffic. By converting significant volumes of truck traffic from crowded highways that require public investment onto rails, we will deliver better fuel efficiency for moving that freight. It is a well-known fact that moving freight by rail is substantially more fuel-efficient than moving it by trucks. Indeed, rail is about four times more fuel-efficient than trucking. One train can keep as many as 1,000 trucks off the road.[10] So, this transaction with its growth opportunities and commercial synergies is very consistent with our commitment to climate change action and environmentally-friendly operations. Finally, both CP and KCS have committed to setting science-based targets to reduce emissions in line with the Paris Agreement,[11] and the merged entity will continue that work in support of a more sustainable North American supply chain.

The transaction should also improve safety. First, we intend to implement this transaction in a safe and methodical way and without service interruptions. Second, once implemented, the transaction, as noted and as supported elsewhere in this application, will result

[10] Michael Webber, "Freight Trains Are Our Future," POPULAR SCIENCE, May 9, 2019, available at https://www.popsci.com/power-trip-excerpt/ (hereinafter "Webber").

[11] https://investors.kcsouthern.com/news-releases/2021/05-06-2021-130144650?sc_lang=en

in a shift of truck traffic to the newly combined system. Moving freight off of highways has safety benefits for the public. "Transferring freight cargo by rail instead of by truck is also safer. Freight transportation is responsible for approximately 100,000 injuries and 4,500 fatalities each year, and trucks are responsible for 95 percent of those injuries and 88 percent of those deaths. Most of the people killed by trucks are in passenger vehicles sharing the road with 18-wheelers."[12]

III. THE PROPOSED STRATEGIC COMBINATION ADVANCES THE PUBLIC INTEREST IN A WAY THAT A PRIVATE EQUITY TRANSACTION COULD NOT

It is well known and documented that CP was not the only suitor for KCS. The Form F-4 filed with the Securities and Exchange Commission provides more complete details, but let me make a few critical points here.[13] First, KCS had a suitor from outside the rail industry referred to in the SEC filings as "Party A". Second, the KCS Board seriously considered Party A's six offers to purchase KCS, with appropriate consultations with Advisors, and compared those offers to the option of just executing our strategic plan and to other offers received.

A private equity deal would have resulted in KCS becoming a private company, like BNSF. Such a deal would have been consummated without the Board ever reviewing it. But, importantly, such a deal would not have had any public benefits related to new commercial opportunities, improved competition, improved transportation services, increased employment, or environmental gains in the United States – all of which I discussed above. It would not have connected Canada, the United States, and Mexico into a single integrated rail network, which is crucial to supporting the expected growth from USMCA and the trend to inshoring/onshoring of the logistics supply chain. Only a strategic combination – that is a combination with another

[12] Webber, available at https://www.popsci.com/power-trip-excerpt/.

[13] *See* Registration Statement at 49-63.

player in the industry – could produce similar benefits. The strategic combination with CP specifically produces such benefits in a way that does not reduce competition, require significant conditions, or risk downstream transactions by other carriers.

We never agreed to a deal with private equity because there were strategic partners available that produced significant benefits. In contrast, a deal with private equity likely would not have provided such benefits and could have actually resulted in reductions in capital investment and service. To pay a premium, the private equity purchaser would likely finance its purchase through additional debt. Because it is not a strategic transaction, private equity would simply take the place of existing KCS shareholders and there would be no revenue synergies from new routes and business opportunities. Accordingly, the resulting entity would have had to find a means by which to pay any additional debt and to do so without growth or revenue opportunities, which could financially stress the railroad to the . In such situations, it would be common to reduce service and capital investment. Such an outcome would not be in the public interest, and it could have occurred without regulatory scrutiny. In contrast, the CP/KCS transaction produces substantial benefits and without the need to cut back on service or investment.

IV. CP AND KCS ARE COMMITTED TO A SEAMLESS INTEGRATION OF THE TWO RAILROADS AND HAVE THE TRACK RECORD TO PROVE IT.

Our and CP's track records of merger integration are best-in-class. Accordingly, while there are often operational concerns about possible service integration problems or service meltdowns in a post-control environment, they should not exist for this combination.

First, KCS is committed to working with CP to ensure a smooth transition and avoiding the types of problems that have occurred in prior transactions for other railroads. That commitment is backed up by a track record of success. Both companies have a strong history of

integrating prior acquisitions. KCS has smoothly integrated its operations in connection with its prior transactions including KCS-MidSouth; KCS Gateway Eastern and Gateway Western; and most recently KCS-Tex Mex-TFM. KCS has also implemented two phases of PSR without the types of service issues or service complaints faced by others. Similarly, CP integrated Dakota Minnesota, and Eastern seamlessly, and did the same with its acquisition of the Central Maine & Quebec Railway. In this case, the two railroads connect operationally only at Kansas City, which greatly simplifies operational integration. Finally, we have a great team of experienced railroaders who will be working to ensure a smooth integration for our customers and the transportation marketplace. In sum, CP and KCS intend to continue their track record of successful rail integrations when implementing this transaction after receiving Board approval.

V. THERE WILL BE NO ADVERSE IMPACTS AT THE LAREDO GATEWAY; ONLY THE ADDITION OF MORE COMPETITION

I fully expect some of our large rail competitors may raise concerns over whether a combined CP/KCS system will impact existing interline routings over major gateways. Indeed, earlier in this proceeding some parties briefly raised this concern about the Laredo Gateway.

Nothing could be further from the truth. CP/KCS will have neither the incentive nor the ability to "force" any shipper away from an efficient interline route it uses today to a CP/KCS single-line route. These are the same issues raised in the context of the KCS/TFM/Tex Mex transaction and for which the Board rejected requests for conditions, relying instead on market forces, KCS's commitments, and the NITL Agreement as factors which would prevent such vertical foreclosure. As discussed further below, the commitments KCS made in KCS/TFM/Tex Mex will remain. In addition, CP and KCS have publicly stated that in addition to abiding by those prior commitments, the combined entity will commit to maintaining all existing interchange gateways on commercially reasonable terms, and this includes the Laredo Gateway.

CP and KCS are convinced that many shippers will choose to use the combined KCS/CP network for United States/Canada/Mexico movements because the combined system will provide new competition at cost-effective prices and service standards that will match or beat the routings offered by the other carriers.

A. The Mexican Market for KCS Is Strong and Has Further Growth Potential from this Transaction

Today, our Mexico franchise represents about half of KCS. Any way you look at us, whether you measure miles, employees, or revenues, KCS is 50% in Mexico. KCSM operates over a railroad system consisting of approximately 3,800 route miles. This includes approximately 3,300 route miles operated under its concession from the Mexican government and approximately 550 miles of trackage rights. We serve three Mexican ports on the East Coast – Veracruz, which happens to be the largest automotive port in Mexico, Tampico, and Altamira – and one on the West coast – Lázaro Cárdenas, which is a large intermodal and industrial products port. Mexico has represented a tremendous growth opportunity for rail freight because of the industrial investment and growth in that country. The auto industry, with its 16 auto plants in Mexico, is probably the best example of that investment and growth.

Let me provide some additional key facts about our Mexican business that may be helpful. We operate under a concession in Mexico. It's a 50-year concession that expires in 2047, which is renewable at the end of that term for an additional 50 years. Our network continues down through the industrial heart of Mexico, passing through Monterrey, San Luis Potosí, and into Mexico City. Suffice it to say that our network in Mexico covers some of the fastest and most exciting industrial growth markets in North America and we continue to believe Mexico represents a significant growth opportunity for the combined CP/KCS system.

The prospect of further growth because of the adoption of USMCA, along with the changing supply chain strategies, like onshoring and de-risking global supply chains, that I mentioned earlier, all bode very well for Mexico, the United States, and Canada. There will be strong momentum because of the certainty created for at least the next 15 years by the ratification of USMCA. Mexico will continue to benefit from an attractive investment climate as well as the near-shoring phenomenon, and the combined CP/KCS network is poised to play its part in ensuring that shippers benefit from these trends.

In short, we are excited about the prospects to grow traffic moving to and from Mexico. The new single-line service created by this transaction will open business opportunities for freight moving to and from Mexico, from Canada, and particularly from the Great Lakes, Chicago, and Detroit markets that do not exist today, which will further enhance the competitiveness of these products throughout North America.

B. The Dynamics of Mexican Gateways – and the Laredo Gateway in Particular – Are Unaffected By This Transaction

As the Board is fully aware, the current KCS network crosses the border at the Laredo Gateway, which is the most significant freight gateway between the U.S. and Mexico. Indeed, about 44% of all U.S.-Mexico surface trade passes through the Laredo Gateway. On one hand, growing that traffic is an important benefit of this transaction.

On the other hand, there is no harm from the CP/KCS transaction to any other railroad's current access to the Mexican border – although we intend to offer improved services that require them to compete harder. As shown in the map below taken from UP's website,[14] there are six gateways between Mexico and the United States over which freight can be transported by

[14] https://www.up.com/customers/premium/de-mex/index.htm

rail. Union Pacific boasts on its website that: "Union Pacific is the leading rail provider to and from the U.S./Mexico border and the only railroad to serve all six major gateways."[15]

On its website, BNSF touts that "BNSF Mexico is here to facilitate your Mexico transborder shipping with five key United States Gateways: San Diego, El Paso, Eagle Pass, Laredo, and Brownsville."[16]

---

[15] https://www.up.com/customers/mexico/ (emphasis added). *See also* https://www.up.com/customers/premium/resource-center/eagle-premium/index.htm

> Union Pacific, in conjunction with Ferromex, offers Eagle Premium Service that features seamless Intermodal service six days per week between Chicago, Illinois, and Monterrey, Mexico with expanded service from Monterrey to Los Angeles, Lathrop, and Seattle.
>
> The FXE Monterrey Intermodal Terminal is ideally located in the Escobedo region of Monterrey, just minutes away from major manufacturers and Mexico's second-largest consumer market. The terminal's proximity to major highways allows service to all of Northern and Central Mexico's markets with ease. Additionally, having access to the largest rail-owned container fleet (EMP & UMAX) provides the capacity to take advantage of the growing opportunities between the United States and Mexico, while simplifying border crossings.
>
> Expanding opportunities to serve more markets in the United States and Mexico, Union Pacific and Ferromex have recently introduced expanded Eagle Premium service from Silao, Mexico to Chicago and Memphis.

There will be no change in the existing dynamics at the border. UP will continue to have six border crossings; BNSF will continue to have five (again, with access via Laredo as part of CPKC-Robstown-BNSF routings). Any combined CP/KCS/KCSM routings will move traffic over the Laredo Gateway only,[17] but CP/KCS/KCSM will not be able to foreclose existing UP or BNSF interline movements for three primary reasons. First, KCS is now, and the combined entity will continue to be, subject to the conditions related to traffic moving via Laredo previously imposed by the Board in KCS/Tex Mex. These conditions require KCS to honor its commitments to: (1) continue to work with UP and BNSF on operating matters such as pre-blocking rail cars, improving automated customs pre-clearance procedures, supplying cars, accommodating run-through train service, providing excellent service, and promptly quoting rates; (2) honor the terms of all existing agreements; (3) keep the Laredo gateway open on commercially reasonable terms; (4) treat all carriers fairly at the Laredo Bridge, preserving existing dispatching and operating practices over the Bridge, and continue to be bound by agreements governing operations over the Bridge; and (5) keep safety a top priority.[18] CPKC will inherit those obligations.

Second, the merged entity will still be subject to the terms related to the Laredo Gateway contained in the evergreen agreement that KCS entered into with NITL in conjunction with that same transaction. The KCS/NITL Agreement put "teeth" on the above commitments and gave

---

[16] https://www.bnsf.com/ship-with-bnsf/maps-and-shipping-locations/mexico/gateway-and-connections.html. BNSF does not reach Laredo, but its interline freight traverses the border there as part of a BNSF-KCS-KCSM interline routes, with the interchange usually occurring at Robstown, Texas.

[17] KCSM reaches Brownsville also, but all traffic to that gateway is today – and will be after the transaction – interchanged to other carriers. Neither KCSR nor CP reaches Brownsville.

[18] The fact that Mexican law requires KCSM to give a rate to/from the Laredo gateway also restricts the combined CP/KCS network from providing only a single-line rate on international through traffic. I do not foresee that Mexican law changing either.

shippers a means to enforce them. It is worth noting both that (1) UP asked for the Board to impose many more onerous conditions on traffic moving via the Laredo Gateway in that proceeding but the Board declined, and (2) since the transaction, there has not been a single complaint from railroads or shippers that KCS and KCSM were foreclosing the Laredo Gateway in any way. If shippers believe their ability to utilize KCSM/UP or KCSM/BNSF routings is threatened in any manner by a CP/KCS combination, they will have remedies to ensure that does not happen.[19]

Finally, market forces simply will not allow a combined CP/KCS to foreclose efficient interline movements with UP or BNSF. As was discussed at length in the KCS/TFM/Tex Mex decision, and as the same applies with respect to a CP/KCS transaction, it would not be in the financial interest of the combined entity to attempt to foreclose UP and BNSF routings. Those routings represent a significant amount of revenue to KCS and will continue to do so in the future. We would only harm ourselves if we tried to foreclose these routings. Furthermore, if the combined CP/KCS tried to raise rates on KCSM movements that are not rail dependent, the traffic would shift to motor or water carriage. With respect to existing rail dependent movements, prices are already pushed to market levels. There is no additional revenue to be gained. Market conditions simply would prevent CP/KCS from raising rates to shippers or foreclosing UP and BNSF from the Mexican market.

CONCLUSION

I am pleased that this historic opportunity for CP and KCS to combine forces to be a new fierce competitor has come to fruition. The substantial public benefits from this transaction that

[19] I don't expect any such complaints because the CP/KCS transaction is about enhancing competition and providing an alternative to UP and BNSF routings. It is not about foreclosing shipper opportunities, but is instead about expanding them.

will provide new routes, markets, and opportunities for customers – in competition with other railroads, trucks, and modes of transportation – makes this transaction between CP and KCS a compelling one. The litany of other public benefits, including job growth, unleashed infrastructure investment, environmentally-friendly transportation, derisking supply chains, advancement of USMCA, and others – make this an overwhelmingly positive transaction. Therefore, I respectfully urge the Board to expeditiously approve this transaction so that we can begin to produce these substantial benefits for customers, employees, infrastructure, the environment, and our shareholders.

EXHIBIT 1: AGREEMENT BETWEEN KCS AND NITL IN FINANCE DOCKET 34342 (AUG. 1, 2003) 27

VERIFIED STATEMENT OF JOHN BROOKS

1. I am John Brooks, Canadian Pacific's Executive Vice President and Chief Marketing Officer ("CMO"). I have been CMO since 2017, for two years as Senior Vice President and since 2019 as Executive Vice-President. I have had senior marketing responsibilities for CP since 2007, when CP acquired the Dakota, Minnesota & Eastern Railroad ("DM&E"), where I served as Vice-President of Marketing. I began my railroading career with Union Pacific and later helped start I&M Rail Link, LLC ("IMRL"), which was acquired by DM&E in 2002.

2. Over the course of my railroad career, I have had senior responsibilities across all lines of business, including coal, chemicals, merchandise products, grain, and intermodal. As a lifelong resident of the Upper Midwest, and a graduate of the University of Northern Iowa, I have especially deep knowledge of the transportation needs of customers across the Midwest states served by CP – the Dakotas, Minnesota, Iowa, Illinois, and Wisconsin.

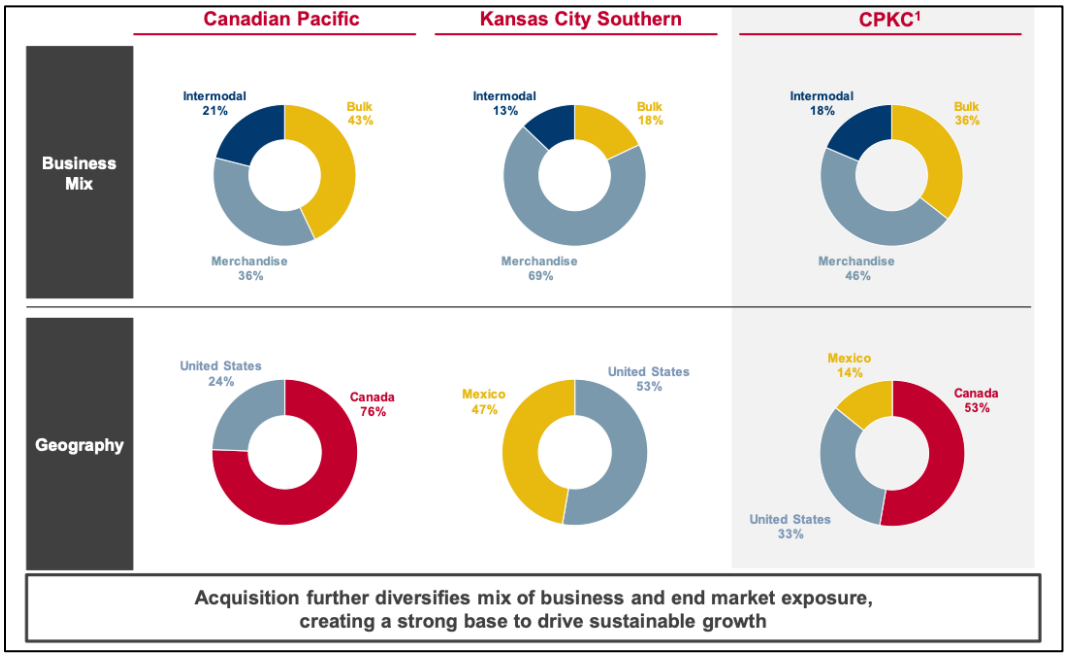
3. I am submitting this statement to provide an overview of how CP anticipates bringing to market the new capabilities unlocked by the CP/KCS combination to serve our customers better, to compete harder, and to continue the CP growth story of recent years. My years of experience working with KCS (first at IMRL, then at DM&E, and later at CP) trying to develop interline service offerings over the Kansas City Gateway teaches that short of a full combination, the benefits of a CP/KCS Transaction promises could not be achieved. I could not be more excited about all of the ways the new Canadian Pacific Kansas City ("CPKC") will uniquely be able to provide our customers with better transportation options, delivering improved service and better commercial terms and stronger competition in important North-South transportation corridors.

4. My statement also outlines the commitments CP is making to backstop our belief in the unambiguously positive character of the proposed CP/KCS Transaction, which include:

- Keeping existing gateways open on commercially reasonable terms;
- Avoiding the creation of any new "bottlenecks;" and
- Assuring our customers that our implementation of the CP/KCS combination will not cause service disruption or degradation.

I. THE CP/KCS COMBINATION BUILDS ON CP'S CUSTOMER-FOCUSED GROWTH STRATEGIES

5. As CP's Chief Marketing Officer one of my principal responsibilities is to understand the transportation needs of our customers and work with them to find ways that CP can better meet their needs. CP is proud to be the fastest-growing Class I railroad in North America, and that growth has come from a lot of hard work to hone our operating efficiency and use those tools to serve our customers better through lower costs, more efficient routes, better reliability, improved cycle times, superior car supply, and a myriad of other factors that affect the value our customers receive. Jonathan Wahba, our Vice President of Commercial Integration, provides a more detailed breakdown of how, on a commodity-by-commodity basis, CP/KCS will take its enhanced capabilities to market in the quest to grow by competing for business with services that deliver superior value to customers.



A. CP/KCS Is a Perfect and Natural Fit

6. In every respect, the CP/KCS combination really is a "perfect and natural fit." The two railroads' networks fit together seamlessly, with a single connection at Kansas City and no route overlap anywhere. The combination also meshes perfectly with CP's core values and desire to find ways to serve our customers' needs better and support their growth and ours at the same time. Further, the Transaction could not come at a better time, as there are more reasons

than ever that North America needs more efficient North-South trade arteries to support the interconnected supply chains of the United States, Mexico, and Canada and to achieve the goals of the USMCA trade agreement.

7. CP and KCS are a natural fit in other ways as well. The CP/KCS combination will yield a railroad with a more diversified traffic mix from both a geographic and commodity perspective. Figure 1 below is a slide CP and KCS used when we first announced our plan to combine in March to explain our complementary traffic bases. KCS's relative strength in manifest carload traffic will complement CP's relative strength in intermodal and bulk traffic, often moving in unit trains. Our more balanced mix will provide a hedge against volatility – supporting more aggressive competition to attract additional volumes to the railroad. And this base will establish a foundation for investments in growth spanning a wide array of commodities including grain, chemicals, forest products, automotive products, and intermodal.

FIGURE 1[1]
CP AND KCS ARE HIGHLY COMPLEMENTARY

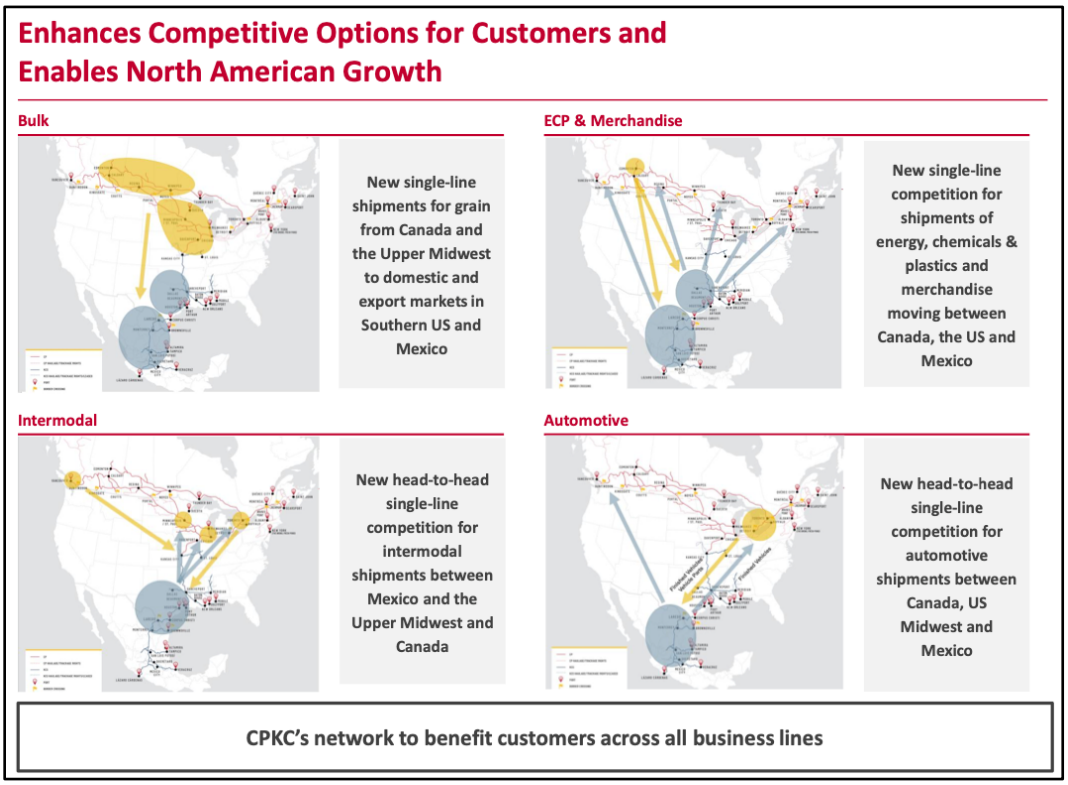
[1] CP/KCS Investor Presentation (Mar. 21, 2021).

8. The CP/KCS combination is also a perfect fit from the standpoint of the network capacity needed to support long-term growth. The core CP/KCS North-South route between the Upper Midwest and Louisiana is underutilized today, and the Transaction will support investments in CTC and additional and longer sidings that will expand that capacity still further. The CP/KCS network will funnel traffic from Mexico to the Upper Midwest and Western Canada without going near Chicago. And for traffic to/from Chicago itself (or passing through en route to Detroit and Eastern Canada), the favorable location of CP's Bensenville Yard and Schiller Park intermodal terminal will support efficient services that are not bogged down by the kinds of terminal delays for which Chicago is sometimes infamous.

9. CP's network in Canada is already well positioned to handle traffic growth generated by the CP/KCS Transaction. CP is blessed with intermodal terminals, auto ramps, transloads, and other facilities that have room to grow, along with the real estate and other resources necessary to support expansion. Likewise, CP's ongoing investment in new, higher-capacity grain hoppers will support moving more grain in every train, adding to our overall capacity to move freight. As demonstrated by Figure 2 below, CP's presentations to investors have repeatedly emphasized how "room to grow" is one of the crown jewels of CP's network. Access to available capacity has been one of the key underpinnings of CP's recent growth and it will likewise enable the combined CP/KCS system to go to market aggressively with an eye toward growth.

FIGURE 2[2]
CP'S ROOM TO GROW IS A KEY ADVANTAGE IN COMPETING EFFECTIVELY

10. Efficiencies and new investments flowing from the CP/KCS Transaction will further expand our capacity to pursue North-South traffic flows across the combined system. As our Operating Plan outlines, bypassing interchange at Kansas City (or other gateways with other carriers) will enable longer-haul blocks with fewer intermediate handlings, unlocking train and yard capacity that will allow us to grow efficiently. And that room for growth will be accelerated by the capacity investment we plan on the new CP/KCS main stem between Louisiana and Minnesota.



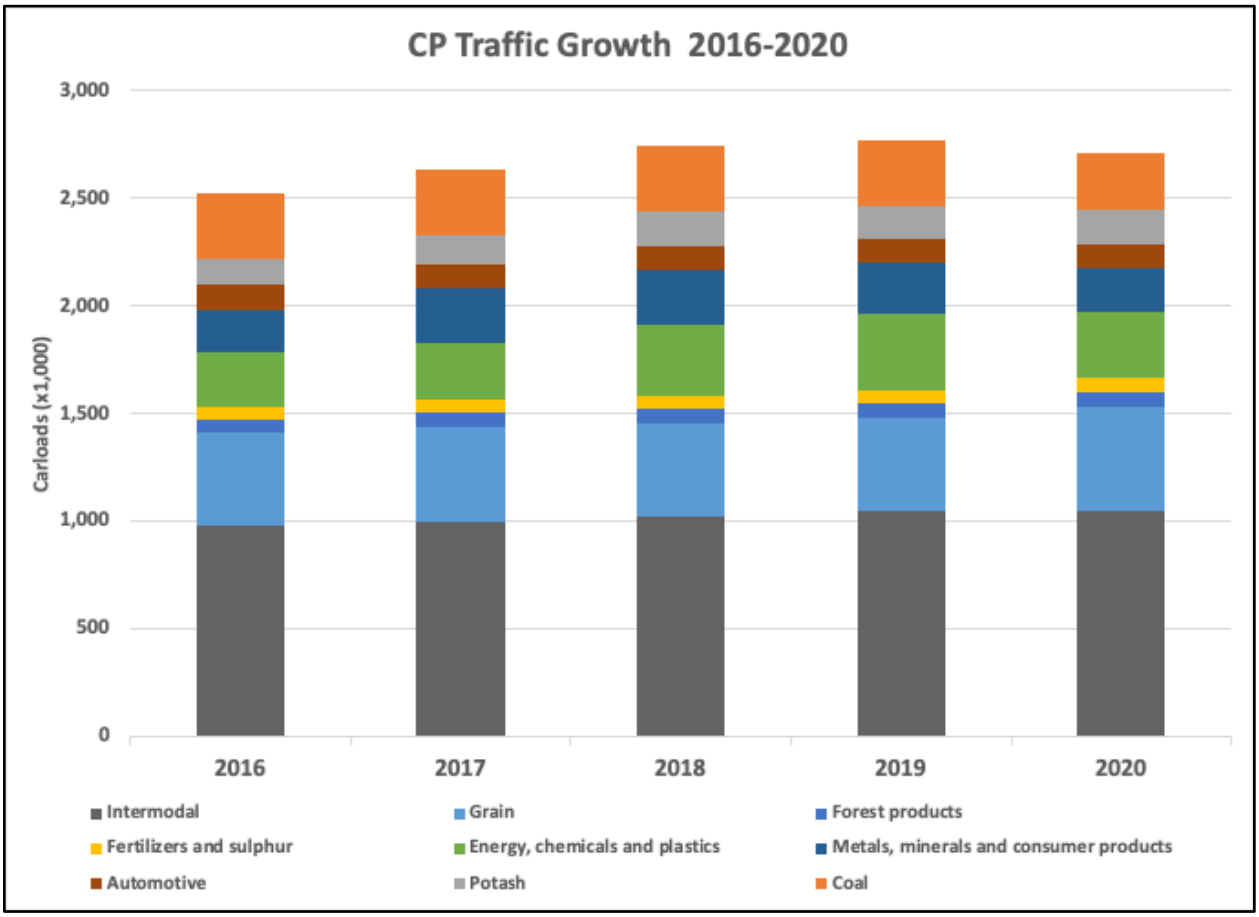
11. All of these features also make the CP and KCS networks the perfect combination for competition. Our lack of overlap means that shippers (including shippers on connecting shortlines) will lose no competitive alternatives – zero. It also highlights how our combination will strengthen (in other words, enhance) the competition we can provide against the larger Class I railroads. Our new single-line routes spanning the expanded CP/KCS network will give customers of both railroads new options for reaching a broader array of markets. We will

[2] CP Investor Presentation, "*Built to Drive Growth*"(Aug. 2021) at 33.

connect CP's rich origin network for shippers of many commodities – like grain, liquified petroleum gas ("LPG"), fertilizers, and forest products – with KCS's rich network of destinations for these commodities in the South Central United States and Mexico, expanding the market reach for CP shippers. Similarly, we will provide new single-routes connecting KCS's strong originations of automotive shipments from Mexico, forest products from Mississippi, chemicals from the Gulf, perishables from Mexico, among many others, with destinations reached by CP's network in the Upper Midwest and Canada. The combination's boost to the scope of our network and scale of our relationships with the many customers we serve will allow us to compete more aggressively and successfully against our larger rivals than either CP or KCS can do today, all to the benefit of the current and future customers of CP and KCS.

12. The competitive benefits of the CP/KCS Transaction are not just a reason why the Transaction is in the public interest. They were the central commercial rationale for the Transaction, as reflected in Figure 3 below, which is a slide from our March presentation to investors explaining the deal rationale.

FIGURE 3[3]
MORE EFFECTIVE COMPETITION IS A CORE TRANSACTION RATIONALE



B. CP's Strength Is Delivering Efficient and Reliable Service to Our Customers

13. CP will bring to the combined CP/KCS system the same core values that have enabled our industry-leading growth over the past five years: operational efficiency and reliability, with abiding attention to execution and constant improvement; a focus on meeting the needs of our customers; and offering reasonable prices reflecting the value of the services we provide.

14. CP is proud of our recent track record. As shown in Figure 4 below, since 2016 CP has grown steadily across a broad group of commodities (albeit with a decline in coal traffic and some flattening in 2020 as a result of the COVID pandemic).

[3] CP/KCS Investor Presentation (Mar. 21, 2021).

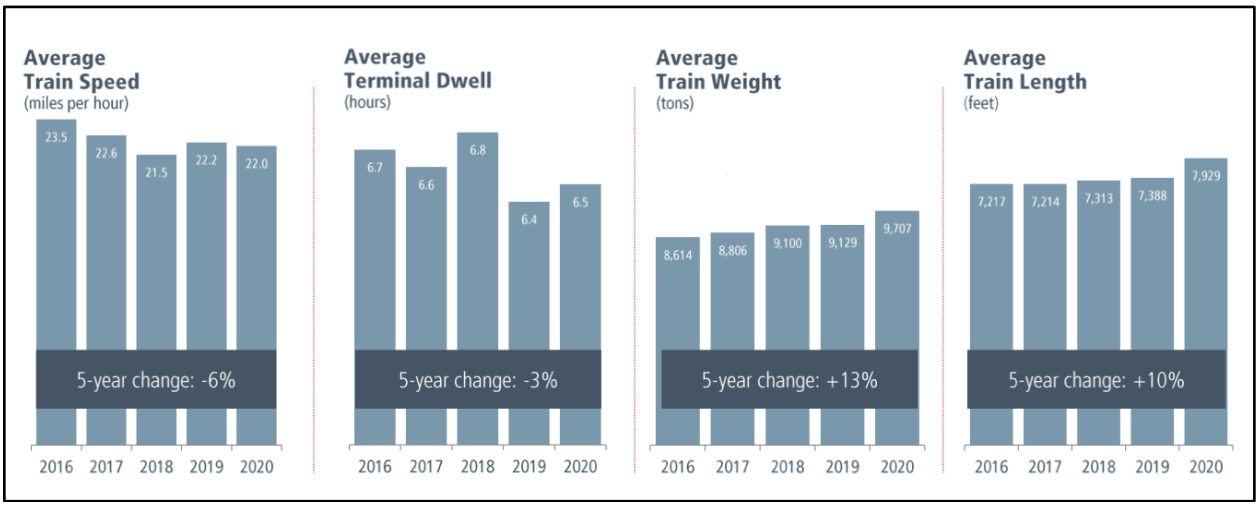
FIGURE 4

15. We accomplished this success using a very simple but perhaps underappreciated formula. We started by rebuilding the basic product we sell – our origin-to-destination rail service – and then identifying ways that our more efficient and reliable services could provide real value to potential rail customers. We built individualized strategic playbooks (by commodity, market area, lane, and customer) and then set out to win business by demonstrating how we could outperform the competition not just with our train operations, but with the overall package of transportation and logistics services we offer these customers. Our approach covers the gamut of the things customers care about, including transit time, reliability, reasonable rates and terms, customer experience, access to the right rolling stock and related equipment, availability of capacity at transloads and other facilities, and the use of technology.

16. Our focus on growth has embraced both existing and new CP shippers, both large shippers and small, and shippers accustomed to using rail transportation options as well as those moving their goods via the highways. A significant portion of our intermodal traffic growth has resulted from converting truck traffic into rail intermodal traffic. We have also significantly expanded our transload network, convincing shippers who are not directly rail served (or who are directly served only by another railroad) to shift the long-haul movement of their goods to CP's rail network.

17. Our attention to serving customers' needs has enabled us to attract traffic from large numbers of smaller rail shippers. As shown above, the segments where we have had some of our greatest success growing traffic have included those most heavily-weighted towards manifest carload service, such as CP's centerbeam service from origins across Canada to lumber consumers in the United States.

18. CP reaches out to smaller shippers in a variety of ways. We have organized a Customer Advisory Council comprised of customers of all sizes from across all business units. Working with this group – as well as individual shippers and groups of shippers across our system – helps us better understand the needs of our customers and in turn shapes the transportation services we provide and the IT systems and tools we make available. The Council also provides a sounding board that enables customers to give us constructive feedback that helps us do our job better.



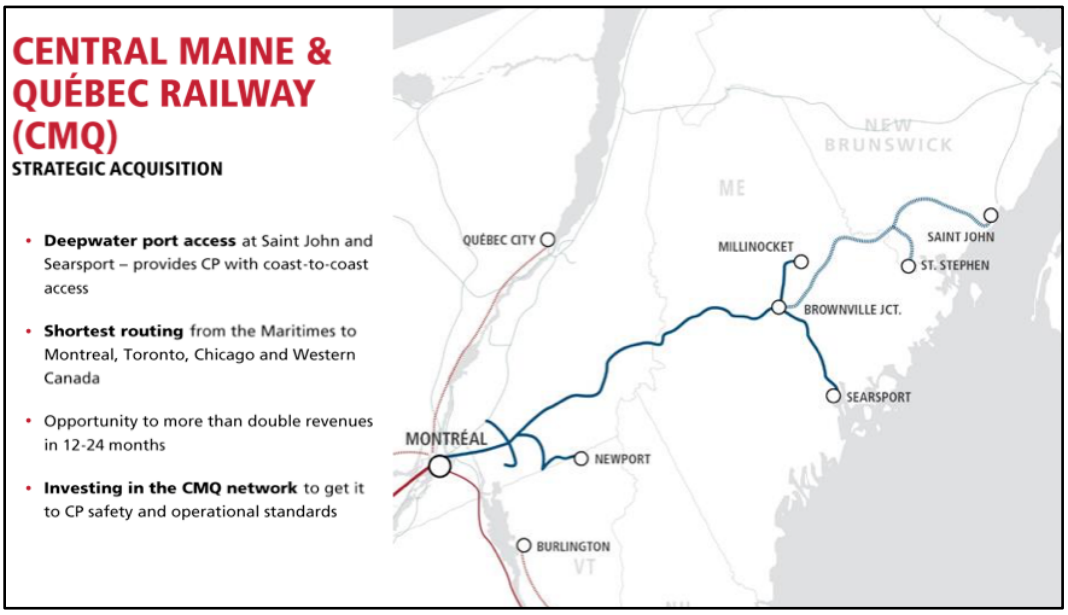
19. CP also cooperates closely with our connecting shortlines, who have "boots on the ground" where their customers do business and understand how we can work better together to satisfy those customers' needs. When I became Chief Marketing Officer in 2017, for example, CP began hosting an annual shortline conference to help build our interline

relationships with the smaller railroads that connect with CP in an effort to attract additional traffic to our networks. Our engagement with these partners helps us learn directly from these partners.

20. To illustrate the emphasis we have placed on adding traffic in one or two carload increments, over the past few years we launched two "Outreach Campaigns" to solicit business from smaller shippers. We kicked off the first of these during the COVID pandemic in 2020 when it was impossible to interface with our shippers face-to-face. We engaged with hundreds of potential customers and persuaded more than 450 of them to bring their rail traffic to CP's network, generating $75 million in revenue. We renewed this effort a few months ago – as our "Drive to Thrive" campaign – and have already attracted almost 3,000 carloads of new freight.

21. The operating efficiency and discipline of our Precision Scheduling Railroading model ("PSR"), with its focus on operations that are planned and monitored at the individual shipment level, has been instrumental in supporting all of this growth. All of the PSR innovations that allowed us to improve asset utilization, reduce costs, and increase on-time performance and service reliability have enabled us to be more aggressive in filling the railroad with new traffic, simultaneously meeting the needs of existing customers as well as the new customers we attract. Some of CP's core operating metrics since 2016 tell part of this story, as shown in Figure 5 below. These improvements are not an end in themselves: they are instead the foundation for the more competitive railroad that CP has become, and they will be the catalyst for enabling CP/KCS to serve customers better.

FIGURE 5[4]
CP'S STEADY OPERATING IMPROVEMENTS SINCE 2016



22. CP's recent experience integrating the former-MMA into our network (as the CMQ) shows the power of our core approach – though on a much smaller scale than our combination with KCS. When we announced that we had completed the CMQ acquisition in June 2020, I explained that the Transaction would "create[] opportunities to move products in literally every line of business in our portfolio," and I added that "[t]hrough the precision scheduled railroading model and the commitment of our people, we will unlock new potential for business and industry across this region and beyond."[5] Our growth-focused strategy for the CMQ acquisition was also reflected in our presentations to investors, as shown in Figure 6, below.

---

4 CP Investor Presentation, "*Built to Drive Growth*"(Oct. 2020) at 13.

5 CP Press Release, "*CP Completes Acquisition of Central Maine & Quebec Railway, Expanding Reach and Optionality*" (June 3, 2020).

FIGURE 6[6]
CP'S GROWTH-FOCUSED ACQUISITION OF CMQ

23. In carrying out the Transaction, we planned carefully and executed well, and the results have been gratifying. In just the past 15 months, traffic has increased faster and across more lines of business than we anticipated. One noteworthy success was that Hapag-Lloyd began calling regularly at the Port of Saint John starting in 2021, sending double-stack intermodal trains into the heart of North America via CP's new single-line route. Smaller rail customers across Maine and Atlantic Canada have also seen the value in the single-line services CP now can offer. The experience of these new customers in Maine and New Brunswick give them a good understanding of the tremendous benefits they will realize if CP is able to expand its network reach still further by joining forces with KCS. As the Port of St. John wrote, "CP has already proven their track record of seamless connectivity with their acquisition of CMQR that

[6] CP Investor Presentation, "*Built to Drive Growth*" (Jan. 2021) at 33.

leads to Port Saint John by investing heavily in rail safety and expediting investment to accommodate demand."[7]

C. USMCA Creates a Need for Better North-South Transportation Linkages Connecting North America

24. The transportation benefits of the CP/KCS Transaction could not come at a more important time for North American trade. The three nations of North America have recently doubled down on the importance of trade across the Continent. Effective July 1, 2020, the United States-Mexico-Canada Agreement (USMCA), entered into force, with the aim of facilitating trade among the United States, Mexico and Canada. The volumes are staggering. According to the U.S. Chamber of Commerce, trade among these nations reached $1.4 trillion in 2018, amounting to $3.8 billion daily. Trade with Canada and Mexico supports 12 million American jobs, and 49 U.S. states count Mexico or Canada as one of their top three merchandise export markets. Nearly one-third of U.S. agricultural exports go to Canada or Mexico.

25. And the role of North American trade is growing in importance. USMCA contains provisions that encourage the shift toward supply chains more centered in North America and less dependent on overseas trade. In the automotive industry, for example, certain tariff provisions are reserved for vehicles that source their steel from within North America. At the same time, the COVID pandemic and other factors have created pressure to decouple the U.S economy from dependence on trade with China, further supporting a shift toward trade among the three North American economies.

---

[7] Letter of Jim Quinn, President and CEO of The Port of Saint John Authority (Mar. 26, 2021) ; *see also* Letter of Matthew Wells Leech, CEO of DP World (Mar. 30, 2021) (CMQ acquisition allowed CP to extend its seamless service offerings to the Port of St. John) (set forth in Volume 3 of the Application). Many other shippers served by CMQ have referenced their experience with CMQ in stating their support for the CP/KCS Transaction, including GAC Chemical Corp. in Searsport, ME (Mar. 30, 2021), Maine Propane Distributors in Hernon, ME (Mar. 30, 2021), and Maine forest products shippers like Maine Woods Company, LLC and Woodland Pulp LLC (all set forth in Volume 3).

26. Efficient rail transportation options are critical to unlocking the potential for North American trade. Highway border crossings at our northern border with Canada and our southern border with Mexico are clogged with truck traffic on a daily basis, and many of the commodity flows in these lanes – like LPG, grain, finished autos, and others – are not well suited to long-distance movement by truck.

27. CP/KCS will bring to the marketplace a new and more efficient set of transportation options in the key north-south corridors that connect the entire continent – from the Port of Lazaro Cardenas in Mexico through the agricultural heartlands of the United States and Canada . It could not come at a better or more important time.

II. OUR PAST EFFORTS AT COOPERATION WITH KCS AS SEPARATE COMPANIES SHOW US THE POTENTIAL OF A FULLY INTEGRATED NETWORK

28. The natural fit between CP's U.S. network and KCS's network has been apparent for many decades. Since the 1980s, when CP's Soo Line subsidiary acquired Milwaukee Road's lines connecting Kansas City with both Chicago and the Twin Cities, CP has known that KCS was its one "friendly" connection at Kansas City. Through most of the 1990s, CP/Soo and KCS developed a healthy interline relationship via their jointly-operated yard in Kansas City (known as the "Joint Agency" or "Knoche Yard"), which dated to the 1940s when Milwaukee Road shifted its route into Kansas City to the newly-built Harry S Truman Drawbridge.

29. In 1997, CP spun off its Kansas City line to IMRL, which in turn became ICE and in 2002 combined with DM&E. From 1997 to 2007 I held various marketing and sales roles during my time at IMRL, ICE, and DM&E. I was DM&E's VP of Marketing and Sales in 2007 when CP acquired DME and regained a route to Kansas City. DM&E worked hard with KCS to develop interline traffic opportunities over the Kansas City Gateway. We achieved some success, but were hampered greatly by DM&E's lack of network reach. During this period, the

larger Class Is (especially UP and BNSF) had managed to bypass DM&E entirely, shifting interchange with CP north to Chicago and St. Paul. This was an important lesson about the power of the larger Class I's extensive network reach.

30. When CP took control of DM&E, I became CP's General Manager, US Sales. CP was eager to grow traffic on the former DM&E lines, and a key part of our strategy was to pursue closer collaboration with KCS in order to tap the potential for more CP-KCS interline traffic via the Kansas City Gateway. The opportunities were tremendous. We approached KCS and in May 2009 entered into a Memorandum of Understanding and put in place formal processes for identifying joint-line traffic opportunities, improving our interline service offerings, and attempting to build traffic over the Kansas City Gateway. Our analysis showed there was a potential to attract many tens of thousands of carloads to CP-KCS joint-line routes if we could improve our joint line offerings and create appropriate incentives for each railroad to market those offerings aggressively. We graced this initiative with the code name "Ice Pick."

31. Over the next few years, the Ice Pick initiative achieved some success by focusing attention on interline possibilities and the natural routing advantages of the two railroads' route structures. CP and KCS agreed to extend the arrangement in May 2010 for an additional two years.

32. Overall, the results of Ice Pick were disappointing. For the first few years we were able to shift some grain and chemicals traffic over to the CP-KCS route via Kansas City, but we could not come close to achieving the full potential of CP-KCS routings. We had been able to win only a small fraction (well under 20 percent) of the traffic we had identified as among the available opportunities, and by 2011 the modest growth in CP-KCS traffic via Kansas City had leveled off.

33. In 2012 we tried to refocus the Ice Pick initiative on discrete efforts to develop new business via CP-KCS interline routes (rather than trying to shift the interchange for traffic that one of the railroads already handled with other interline partners). Some of the ideas we had back then mirror the growth opportunities we know that the CP/KCS combination can achieve – like offering rail shippers expanded market access across the automotive, intermodal, grain, and energy sectors. As separate companies, however, there were too many obstacles to capitalizing on these opportunities, and the Ice Pick initiative eventually ran its course without achieving any meaningful expansion in CP-KCS interline traffic opportunities beyond the traffic that naturally flowed over our route network.

34. In my assessment, the factors that hampered the success of Ice Pick had nothing to do with any limitations on the theoretical potential for CP-KCS transportation offerings, but everything to do with the impediments inherent in two railroads coming to market with their own separate networks, separate operating priorities, separate capital investment plans, and separate financial interests. Our efforts to offer customers best-in-class transportation services were hampered by each individual railroad's desire to be "made whole;" to support its own internal rate-of-return targets; to pursue its own, often divergent, investment priorities (in rolling stock, infrastructure, management attention, and all the other resources needed to support rail operations); and to run its own network its own way.

35. This is not to say that CP has soured on the potential for interline cooperation. To the contrary, we continue to work hard with our interline partners to offer our customers efficient and competitive transportation offerings. One success story is our collaboration with UP via Kingsgate, BC/Eastport, and the ID Gateway, which we have developed into a very efficient route for potash, grain, and other commodities moving between Western Canada (and even the

U.S. Upper Midwest) and UP's network in the Pacific Northwest. These joint-line relationships enable competition against BNSF single-line routes between points in the Upper Midwest and the Pacific Northwest via CP's network in western Canada. CP also looks forward to stepping into KCS's shoes to continue cooperating with UP on interline traffic over the important Laredo Gateway.

36. The concrete lesson of Ice Pick, however, is that the full potential of single-line service can only be unlocked when two railroads are able to align their incentives and efforts fully by combining.

III. WE ARE BACKING UP OUR PRO-SERVICE, PRO-COMPETITION FUNDAMENTALS WITH ROBUST COMMITMENTS FOR THE BENEFIT OF RAIL SHIPPERS

A. CP/KCS Will Have Strong Incentives to Preserve Existing Efficient Interline Options and Commits Not to Close Gateways

37. From the outset of our proposal to acquire KCS, CP has been very clear that the rationale of the combination is to create new and better transportation options for shippers across North America, which will allow us to grow by attracting rail traffic to the exciting new services CPKC will offer. We have no interest in forcing any rail customer to choose CP/KCS options where other options work better for them, whether those options involve single-line services offered by our rivals, truck transportation, or interline services in which we participate. Coercing customers into accepting an inferior option would be contrary to our objectives and ultimately a losing proposition for us.

38. CP's relatively limited U.S. network scope has given us long experience cultivating good working relationships with the other railroads – large and small – that we connect with. All of our many interline connections with other railroads provide transportation options that shippers support because they meet their needs, in many cases better than other existing alternatives.

39. Even though the CP/KCS Transaction will improve the transportation options that CPKC can offer as an integrated system, we will have strong incentives to continue cooperating with interline partners at all of the gateways where CP and KCS do so today. Take Kansas City as an example. CP interchanges with other carriers there, just like KCS does, and we value that interline traffic. Much of it could not effectively be served on an interline basis by a combined CP/KCS system because it is coming from or going to places that our combined system (still the smallest of the Class I railroads) will not reach, so we obviously will maintain our ability to interchange efficiently with all of the other carriers at the Kansas City Gateway. One obvious example is the Powder River Basin ("PRB") coal that KCS interchanges with UP and BNSF at Kansas City; CP cannot serve PRB origins and thus cannot shift this traffic to single-line CP/KCS routes. Similarly, KCS participates with NS in substantial volumes of traffic moving between the Southwest and Southeast United States via the Meridian Speedway route; CP serves neither geography, and thus CPKC will have equally strong incentives to cooperate with NS as KCS does today.

40. Even for the traffic we interchange today with other carriers that a CP/KCS system might be able to serve better, there are reasons why some customers may prefer to continue using the interline options they use today. Again, take Kansas City as an example: UP or BNSF might offer train services to destinations also reached by KCS that better serve the needs of particular customers because of shorter routes, bundling with other geographies, better facility access, car supply, or other factors; and UP and BNSF might (conceivably) even offer customers better economic terms. Likewise, NS, BNSF, or UP might offer customers something north of Kansas City that is more attractive than what they could obtain via an integrated CP/KCS option. CPKC will compete hard for these kinds of opportunities, and our pride in what

we are capable of delivering makes us think we will often prevail. But it would be against our long-run interest to try to win any of this traffic by trying to "force" a customer to accept an inferior deal. That would be doomed to failure and would hurt us in the long run by damaging the value of our brand as a promise of customer value. As CP's statement of purpose describes: "We are an operating company with a team of dedicated, professional, community-minded railroaders, *providing superior service for our customers, by doing what we say we are going to do*."[8]

41. Though I have used Kansas City as an example, the same basic truths would be repeated for all of the other gateways where CP and KCS connect with other Class I railroads today. CPKC will continue to have strong incentives to work with our interline partners on efficient joint-line services at the gateways where CP connects today – most notably, at Kingsgate/Eastport (with UP); Coutts, AB (with BNSF); Emerson, MB/Noyes, MN (with BNSF); St. Paul (with BNSF and UP); Chicago (with BNSF, UP, and CN, as well as NS and CSX); and Kansas City (with UP and BNSF). Our incentives will be no less strong at the gateways where KCS connects with other carriers today, such as Laredo (with UP); Robstown, TX (with BNSF); New Orleans, LA (with BNSF, UP, CSX, NS, and CN); Shreveport, LA (with UP and BNSF); Jackson, MS (with CN); Meridian, MS (with NS); and Kansas City (with UP and BNSF). These aren't the only interchanges we will have an incentive to keep open in order to serve our customers well, but they account for the vast majority of all of CP and KCS's existing interline traffic to/from the United States that might conceivably be affected by the CP/KCS combination.

---

[8] CP 2019 Annual Report at 17 ("CP Family Values") (emphasis added).

42. It has become customary for railroads participating in mergers to commit to their customers (and the Board) that they will keep existing gateways open on commercially reasonable terms, and CP has no qualms about doing so here. For the reasons I have said, this concept is well aligned with the fundamental value proposition we offer and our rationale for the Transaction. In fact, CP will inherit KCS's commitment to keep the Laredo Gateway open on commercially reasonable terms, which KCS made in 2003 when it proposed to acquire Tex Mex and TFM (which is now KCSM). KCS's commitment was embodied both in a condition imposed by the Board when it approved KCS's control of Tex Mex and in an agreement that KCS entered into with The National Industrial Transportation League ("NITL") in 2003 for the benefit of KCS/Tex Mex shippers, which have been able to arbitrate any disputes under the agreement. The KCS-NITL Agreement is attached as Exhibit 1 to my statement.

43. As KCS explained in the KCS/Tex Mex proceeding, its commitments reflected KCS's continuing "incentive to ensure the fair and efficient movement of UP's trains over the Laredo Bridge"[9] and to continue supporting UP/TFM and BNSF/TFM routings. The facts on the ground since that transaction was completed – in particular, UP's continued robust presence as a KCS interchange partner at Laredo – has proved KCS right. CP will inherit and honor KCS's obligations under the KCS-NITL Agreement and the Board's approval of the KCS/Tex Mex transaction without hesitation, for the same reason that cooperating with UP at Laredo and BSNF at Robstown will be in the self-interest of the CP/KCS system.

44. Inherent in the promise to keep existing gateways open on commercially reasonable terms is the question of what it means to be "open." Obviously, when an interchange

[9] Finance Docket No. 34342, Applicants' Response to Comments, Protects and Requests for Conditions and Rebuttal in Support of the Application (KCS-18A) (Sept. 2, 2003) at 16, 129.

partner is successful in winning a significant share of the traffic over a gateway – like UP at Laredo – that question is not hard to answer: the gateway is obviously open.

45. To avoid ambiguity, however, allow me to briefly explain how we understand what it means to keep a gateway "open." From CP's perspective, keeping gateways open has two core dimensions: operational efficiency and commercial viability. CP commits to maintaining both. CP/KCS will continue to maintain efficient operations serving existing gateways wherever traffic levels warrant – in terms of both the through train services to and from the gateways as well as the operational capabilities and infrastructure necessary to carry out efficient interchange.

46. Of course, a gateway is not open just because there are tracks that allow railcars to be exchanged there; interline options via these gateways must be commercially viable as well. CP's commitment means that we will continue to offer commercially reasonable rates and terms capable of supporting the continued movement of traffic via the gateway. In these situations, when a customer requests a rate for only the former-CP or former-KCS portion of an origin-to-destination routing, we will provide the shipper with a Rule 11 rate to the gateway. This is not to say that CP/KCS's interline (or Rule 11) rates will always be ones that shippers will choose. We will compete aggressively to win traffic to our new single-line offerings, including with single-line rates that might be quite painful for our interline rivals to beat. But we will not make it impossible to construct viable interline options for shippers by refusing to quote commercially reasonable rates.

47. Finally, we will work with shippers to find ways to make these commitments more concrete and readily enforceable, including via appropriate alternative dispute resolution mechanisms.

B. CP/KCS Will Not Create New "Bottlenecks"

48. Consistent with our commitment not to shut off the interline options that customers of KCS or CP choose today, CP also commits that its control of KCS will not create any new regulatory "bottlenecks." In other words, where the CP/KCS Transaction might give CPKC a new ability to handle traffic in single-line service, and thus refuse to quote a separately-challengeable short-haul tariff rate to an existing interchange with another carrier, CPKC will waive its right to do so. With this commitment, CP and KCS shippers can rest assured that the Transaction will not take away any of the rate regulatory protections they have today. This is an easy commitment for us to make, since we at CP are proud that our interactions with customers have not led to a U.S. rate reasonableness challenge by any shipper in 25 years.

C. CPKC Is Committed to Providing Quality Service to Our Customers

49. One of the core tenets of the CP/KCS combination is that together we will be able to attract new rail traffic from our competitors and the highways by offering a better value proposition, including better and more reliable service. That philosophy applies across the traffic base of both railroads. In the course of combining and attracting new traffic, we plan to make our existing customers better off – and certainly no worse off – than they would have been had CP and KCS stayed separate.

50. To follow through on this goal, CP will plan thoroughly for the integration of the two railroads and implement that integration with care to avoid any service disruptions. Ray Elphick, our Assistant Vice President, Service & Product Design and co-sponsor of the Operating Plan, explains the scrupulous operational planning that has already taken place, which will be supplemented by in-depth engagement with KCS in the months before the first system cut-overs take place. In the meantime, of course, CP and KCS will continue to evolve their own separate operations, and our plan for the combined company will accordingly evolve as well.

James Clements, our Senior VP Strategic Planning & Technology Transformation, describes the IT-related steps that will both be a key part of the integration process as well as a core set of tools available to CP and our customers to monitor our performance against objective benchmarks. CP is accustomed to measuring our own performance against a wide array of metrics and holding managers accountable when we fall short of our goals. We will bring this philosophy to the integration of CP and KCS as well, as Messrs. Elphick and Clements explain.

51. To ensure that customers do not suffer transitional service disruptions as we integrate the two railroads, we will establish an internal "CPKC Transaction Implementation Service Assurance Team." Our Service Assurance Team will be staffed with personnel knowledgeable about the entire CP/KCS network and will have the resources and authority necessary to monitor performance, communicate with shippers about our ongoing integration efforts, and swiftly and proactively address any emerging issues and make adjustments where (or if) necessary to ensure that the Transaction does not degrade the service levels to which our customers have become accustomed. As with all of our commitments, I expect this one to be easy to live up to as the combination should enable improved service across the entire range of lanes in which we operate.

52. Not only will we monitor our own performance and make appropriate corrections where needed, we will also be transparent with our customers. CPKC will invite a cross section of KCS customers onto CP's Customer Advisory Council, so that we can integrate the two rail systems with the benefit of KCS customer perspectives. The Council will provide a forum where they can voice any concerns as our integration proceeds. In addition, as. Mr. Clements explains, CP offers numerous tools that allow customers to track CP's performance with respect to their service commitments, transit times, car availability, and many other metrics. These tools will be

adapted to cover the entire CP/KCS system as we integrate the two railroads to ensure that our customers can hold us accountable as well.

53. Backing up this commitment, CPKC would be prepared to mediate any shipper's good faith concern that the Transaction caused a disruption in the level of service it would otherwise have experienced, and to work in good faith to identify appropriate consensual remedies for any such disruptions.

54. To me the bottom line is clear: we will strive to make the CP/KCS combination the Gold Standard for offering customers with efficient rail transportation services that meet their needs and then delivering on what we promise. We intend to set the bar high and challenge our larger rivals to keep up if they can. We look forward to bringing what CPKC has to offer to rail customers across the Heartland of North America.

VERIFICATION

I, John Brooks, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

RE: Finance Docket No. 34342, *Kansas City Southern - Control - Kansas City Southern Ry. Co. et al*

Dear Mr. Williams:

Yesterday, in accordance with the schedule in Decision No. 2 in the above proceeding, we filed an original and 25 copies of the Comments and Statement in Support on behalf of The National Industrial Transportation League, identified as NITL-3. As indicated in our cover letter of yesterday, the agreement in Attachment 1 to NITL-3 was a copy of the agreement with signatures transmitted by telecopy. Because of unexpected delays in receiving the executed originals of the agreement, we were unable to attach a copy of the signed original. Enclosed for filing with the Board, as required by Decision No. 2 in the above proceeding, are 26 copies of the signed original of the agreement in Attachment 1 to NITL-3. An IBM-compatible floppy diskette with a copy of the enclosure, including the attachment, was filed yesterday.

If there are any questions regarding the enclosure, please do not hesitate to contact me by telephone or electronic mail.

Respectfully,

Frederic L. Wood

Agreement between The National Industrial Transportation League
And
Kansas City Southern

This Agreement is made this 1st day of August 2003 between The National Industrial Transportation League ("League"), and Kansas City Southern and its affiliated rail carriers ("KCS").

Whereas,

KCS and The Texas Mexican Railway Company ("Tex Mex") (together, "Rail Carriers"), have filed an Application before the Surface Transportation Board ("STB") seeking the STB's approval of the acquisition of control of Tex Mex by KCS ("Transaction");

KCS has agreed, subject to various governmental and shareholder approvals, to acquire control of TFM, S.A. de C.V. ("TFM"), a rail carrier operating entirely in Mexico, and upon such approval, KCS will change its name to NAFTA Rail;

The League and KCS desire to record the terms on which the League, having reviewed the Application, has agreed to support the Transaction; and

The League and KCS desire to record the promises given by KCS to the League for the benefit of the members of the shipping public in exchange for the League's support;

Now, therefore, in consideration of the mutual covenants contained herein, KCS and the League agree as follows:

1) **League Support**. The League agrees to support STB approval of the Transaction. Within a reasonable time after the execution of this Agreement and no later than August 4, 2003, the League will submit a statement to the STB supporting approval of the Transaction by the STB. Either the Rail Carriers or the League may request to have this Agreement made a condition of the Transaction. The League will neither support nor oppose the imposition of any other conditions.

2) **Interchange Protection**.

a) Subject to the provisions of this Section 2, at the request of a shipper or connecting railroad on behalf of a shipper, KCS and/or Tex Mex will establish and maintain commercially reasonable contract or common carrier rates and charges over any existing interchange with that railroad. Such rates and charges shall be either through rates and charges or, if requested by a shipper or connecting railroad on behalf of a shipper to support the commercial terms of trade where the title to the goods being shipped transfers at the border, rates and charges for service within the U.S. to or from the international border

between Mexico and the U.S or within Mexico to or from the international border between Mexico and the U.S.

b) Where rates or rate factors exist in agreements between KCS or Tex Mex on the one hand and other U.S. carriers on the other, those agreements will be honored to their normal expiration date, and when they expire, if requested by the involved railroad, KCS or NAFTA Rail will negotiate in good faith to establish commercially reasonable rates going forward.

c) Any dispute regarding rates and charges described in paragraph (a) or (b) will be resolved by arbitration promptly following the selection of an arbitrator under the arbitration procedure established in Section 6 of this agreement. In no event will the time for completing arbitration of any dispute under this section exceed 90 days after selection of the arbitrator. Such arbitration procedures shall only apply to disputes regarding rates and charges applicable in whole or in part within the U.S.

3) **Confidentiality of Shipper Information.** If control over TFM is achieved by KCS, NAFTA Rail will ensure that any confidential commercial information about a shipper's move, including transportation services and rates, will not be disclosed to other U.S. railroads not within the NAFTA Rail corporate family.

4) **Service Measurements.** KCS and NAFTA Rail will maintain and strive to improve the service levels between Beaumont and Laredo, TX. With the understanding that about 70% of that route involves the use of trackage rights over the Union Pacific Railroad Company ("UP"), KCS and NAFTA Rail will report, based upon agreed specific service measurements, to the Surface Transportation Board ("STB") on the service level provided for each quarter for the past two years and for each quarter for a period of three years from the effective date of the Transaction. If service falls below the levels in existence at the time of this agreement, KCS and NAFTA Rail will provide the STB with a corrective action plan which may include a request for assistance if it were determined that the UP was responsible for the service problems.

5) **Applicability of this Agreement**. This Agreement was negotiated on the expectation that KCS will consummate the acquisition of control of Tex Mex and TFM. Other than each party's obligations under Section 1 hereof, the rights and obligations set forth in this Agreement are contingent upon and will become effective only on the date of such consummation. This Agreement will have no continuing force or effect if the STB does not authorize or KCS does not consummate the Transaction. If KCS does not consummate the acquisition of TFM, then any provisions of this Agreement relating to TFM will not go into effect. However, if KCS does consummate the Transaction, then any individual Shipper that uses the Rail Carriers and/or any NAFTA Rail carrier affected by any of the provisions of this Agreement shall be a third-party beneficiary of this Agreement. No party other than such a Shipper, the League, or the Rail Carriers shall be a beneficiary of this Agreement.

6) **Dispute Resolution**. If a dispute arises under this Agreement, the exclusive means by which any party to or beneficiary of this Agreement may seek to enforce the terms of this Agreement shall be through arbitration as provided in any agreement between a Shipper and the Rail Carriers or, if no such provision has been made, under the Commercial Arbitration Rules administered by the American Arbitration Association. Any disputes arising under this Agreement with respect to matters within Mexico, including disputes involving rates or rate factors in Mexico, will be resolved in accordance with the requirements established by the Government of Mexico.

7) **Governing Law**. This agreement will be governed by the law of the District of Columbia, without regard to rules pertaining to choice of law.

Finance Docket No. 36500

CANADIAN PACIFIC RAILWAY LIMITED, *ET AL.* – CONTROL – KANSAS CITY SOUTHERN, *ET AL.*

VERIFIED STATEMENT OF JONATHAN WAHBA AND MIKE NAATZ

TABLE OF CONTENTS

I. THE CP/KCS TRANSACTION WILL BE A CATALYST FOR AN AGGRESSIVE APPROACH TO COMPETITION AND BUSINESS GROWTH 4

II. THE TRANSACTION WILL CREATE NEW SINGLE-LINE ROUTES SERVING EXISTING RAIL FLOWS OF GRAIN AND OTHER BULK COMMODITIES 8

III. THE CP/KCS COMBINATION WILL ENHANCE INTERMODAL SERVICE OPTIONS, INTENSIFYING COMPETITION AND ENCOURAGING DIVERSIONS FROM TRUCK TO RAIL 17

A. The Expanded CP/KCS Domestic Intermodal Network Will Attract Existing Rail Traffic and Divert Trucks from the Highways 17

B. The CP/KCS Network Will Unlock New International (Steamship) Intermodal Opportunities, Stimulating Port Competition 25

IV. THE TRANSACTION WILL DRIVE BENEFITS FOR AUTOMOTIVE SHIPPERS 31

V. CP/KCS'S IMPROVED OFFERINGS WILL BENEFIT ENERGY SHIPPERS 36

A. CP/KCS Will Improve Transportation Options for LPG Shippers 38

B. CP/KCS Will Encourage Investment Supporting the Conversion of Crude-by-Rail to Non-Hazardous "DRUbit™" 39

VI. BENEFITS FOR SHIPPERS OF GENERAL MERCHANDISE COMMODITIES 45

A. Forest Products 45

B. Chemicals and Plastics 49

C. Metals 52
D. Benefits for Numerous Other Commodities 53
VII. OUR REASONABLE EXPECTATION IS THAT CPKC WILL ACHIEVE THE ANTICIPATED TRANSACTION-RELATED TRAFFIC GAINS OVER THE COURSE OF THE FIRST THREE YEARS FOLLOWING BOARD APPROVAL 56

VERIFIED STATEMENT
OF
JONATHAN WAHBA AND MICHAEL J. NAATZ

1. My name is Jonathan Wahba. I am the Vice President of Commercial Integration for Canadian Pacific Railway Company ("CP"). My business address is Suite 800, 1290 Central Parkway West, Mississauga, ON, Canada L5C 4R3. I hold a Bachelor of Arts with honors degree from Queen's University, and am a graduate of the Advanced Management Program at the Harvard Business School.

2. I have been employed by CP since January of 2017. My entire career has been spent in the surface transportation industry. Starting as a sales representative for United Parcel Service in 2002, I have held a series of positions of increasing responsibility at Midland Transport, Canadian National Railway Company, Schneider National, and the Kriska Transportation Group. From 2017 to 2021, I led CP's sales, marketing, and strategy functions for its intermodal and automotive business units.

3. In 2021, I was appointed as leader of CP's commercial integration team for the Kansas City Southern ("KCS") acquisition. In this role, I have responsibility for designing the commercial strategy that will harness the benefits of the CP/KCS combination to attract new rail traffic to the combined network. Once the Board authorizes CP to control KCS, I will have overall responsibility for the commercial and "go-to-market" efforts of the new company, including integrating the two commercial teams into a single unit.

4. My name is Michael J. Naatz. I have been Executive Vice President and Chief Marketing Officer for KCS since October 2018. My business address is 427 West 12th Street, Kansas City, MO 64105. KCS is a non-carrier holding company that owns and controls The Kansas City Southern Railway ("KCSR"), The Texas Mexican Railway ("Tex Mex"), Gateway

Eastern Railway, Kansas City Southern de Mexico ("KCSM"), and other non-rail subsidiaries. I joined KCS in 2012 as Senior Vice President and Chief Information officer. In 2014, I was promoted to Senior Vice President of Operations Support & Chief Information Officer. I held that position until being promoted to my current position. Before joining KCS, I was president of YRC Holland, a division of YRC Worldwide ("YRC"). Prior to that role, I served in a variety of executive leadership positions at YRC, including the role of YRC's chief customer officer. I hold a master of business administration from Northwestern University's Kellogg School of Management and a bachelor of arts in economics from the University of Illinois.

5. John Brooks, CP's Chief Marketing Officer, describes at a high level the ways in which the CP/KCS combination will enhance the transportation services that the new Canadian Pacific Kansas City ("CPKC") can offer its customers, providing more value and intensifying competition with customers' other transportation options, whether they be rail, truck or other modes. In this statement, we drill down to describe in more detail – and on a commodity-by-commodity basis – some of the key opportunities CPKC intends to pursue to bring the benefits of the Transaction to customers across North America.

I. THE CP/KCS TRANSACTION WILL BE A CATALYST FOR AN AGGRESSIVE APPROACH TO COMPETITION AND BUSINESS GROWTH

6. Viewed from CP's perspective (Wahba), the core business rationale for CP's acquisition of KCS is the expectation that by combining, the new CP/KCS network will be better able to serve customers and compete effectively against larger railroads and other transportation providers. CP's evaluation of specific traffic growth opportunities thus began at the very outset of our pursuit of KCS in late 2020, and has continued every day since. The more we learn, the more enthusiastic we are that the new CPKC will be able to deliver customers: improved transportation services that attract new traffic through a combination of new single-line routes

that the merger will create, expanding the market reach of our existing customers; lower operating costs and shorter transit times resulting from optimizing operating and blocking plans across the combined network; more reliable and – in some cases – more frequent service; a broader menu of services than is commercially available to shippers today; and more competitive pricing.

7. CPKC's approach to the market will span a host of business lines, and most of the geographies in which the combined system will operate, with a focus on attracting additional rail traffic by creating faster, more reliable routes; converting existing truck traffic to rail; and developing new markets that will be made possible by optimizing operations and equipment utilization across a combined CP/KCS footprint. By providing fully integrated services across the combined network footprint, CPKC will be able to more effectively compete with other Class I railroads, interstate trucking and, in some cases, ocean-going shipping to create numerous benefits for shippers while reducing densities on the North-South interstate highways in the Central United States. We anticipate that this improved competitive posture will support additional investments by CPKC in rail capacity on our North-South main line, while also justifying investments by us and our prospective shippers in new facilities (like intermodal terminals, auto compounds, transloads, and others) that realize the full potential of the CP/KCS network.

8. Viewed from the KCS perspective (Naatz), we are equally excited about the potential for the CP/KCS combination to enable us to grow by better meeting the transportation needs of our shippers. KCS's limited network footprint – including our inability to reach Chicago and markets in the Upper Midwest and Canada – has always been a handicap in providing the full suite of services that our shippers desire. To connect our customers with their

markets or sources of inputs, KCS almost always must interchange with other Class I carriers – interline traffic represents approximately 80 percent of KCS's U.S. traffic.

9. The CP/KCS Transaction won't reduce the importance of these interline options among the portfolio of service we will offer our shippers, but it will unlock new single-line routes that will allow us to serve our shippers in ways we could never have achieved as separate companies.

10. In the balance of this Verified Statement, we present the commercial and competitive considerations that underlie our expectations that (a) many existing interline movements handled today by CP or KCS (but not both) will move *farther* over the combined CP/KCS system, (b) railroad traffic that is moving today entirely via *other* rail carriers will be attracted to the integrated CP/KCS system, (c) shipments currently moving via interstate trucks in numerous point-to-point lanes will be attracted to the new intermodal (and other) rail services that CPKC will offer, and (d) the CP/KCS Transaction will unlock the potential for investments that generate new economic activity and bring *entirely new* traffic onto the North American rail network.

11. Our discussion of these opportunities complements and builds upon the extensive analysis that Applicants' operating team has performed of the efficiencies and service improvements that can be generated by operating the consolidated system as a single entity. That work is presented in the Operating Plan (Exhibit 13 to the Application). Our assessment of these opportunities has benefitted from significant dialogue with our customers since CP and KCS announced our plan to combine in March of 2021. We strive to understand the business imperatives of our customers and work with them to develop solutions that meet their needs. Evaluating the potential of the CP/KCS combination is no different: in many cases, our deep

customer relationships have allowed us to "stress test" our assumptions and in many cases refine (and indeed expand) our ideas about the new opportunities that would be feasible as a result of a CP/KCS combination.

12. In addition, for many of the categories of growth opportunities we anticipate, we have asked professionals from FTI Economic Consulting and IHS-Markit to undertake independent analyses that we are submitting with the Application. Richard Brown and Nathan Zebrowski, both affiliated with FTI, analyzed opportunities for the CP/KCS combination to divert traffic from other rail carriers to the combined system (either by extending a CP or KCS haul or winning traffic that today is served entirely by other railroads). Their study relies on traffic data and analytical approaches that have been used and accepted in past merger proceedings before the Board.

13. Similarly, Bengt Mutén, from IHS-Markit, uses an industry-standard database of motor carrier movements (*i.e.*, Transearch data) to estimate the number of truckloads that a combined CP/KCS system would divert to new single-line intermodal service made possible by the Transaction. As with the FTI rail-to-rail diversion analysis, Mr. Mutén used an analytical approach that has been accepted in other merger proceedings before the Board.

14. We have reviewed the bottom-line conclusions reached by Messrs. Brown and Zebrowski and Mr. Mutén and find them reasonable in light of the commercial realities in which the CP/KCS Transaction will be implemented. Where those other statements quantify the magnitude of traffic diversions, we do not attempt to offer a quantitative perspective in this statement – again, we view their estimates as reasonable and reliable. In a number of areas outside the scope of the work done by these other witnesses, however, we estimate the range of likely new rail traffic made possible by the Transaction.

II. THE TRANSACTION WILL CREATE NEW SINGLE-LINE ROUTES SERVING EXISTING RAIL FLOWS OF GRAIN AND OTHER BULK COMMODITIES

15. Among the most exciting new opportunities created by the CP/KCS combination will be the ability to expand the market reach of grain and other bulk shippers that are, or could be, served by CP in the Upper Midwest and Canada. The new single-line routes made possible by the Transaction will give these shippers more efficient options to reach more markets, and at the same time will provide receivers served by KCS with more efficient access to more sources for the commodities they receive.

16. Further, the benefits of these new transportation arteries will flow in both directions. Shippers of fertilizers from the Gulf to the grain-growing regions will similarly benefit from the same new single-line routes, but in reverse.

17. As shown in Figure 1 below, the CP/KCS Transaction will create new, efficient single-line routes connecting grain-growing regions in the Midwest and Plains States and across the Canadian Prairies with consuming regions (and export terminals) in the South Central United States and Mexico.

FIGURE 1
CP/KCS EFFICIENTLY CONNECTS GRAIN-GROWING REGIONS WITH NEW MARKETS

18. CPKC will use its new capabilities to aggressively pursue opportunities to attract existing rail shipments from other railroads. This means offering grain growers that can reach elevators served by CP in the Upper Midwest a powerful new alternative to the BNSF and UP networks to reach markets in the South Central States, Texas, and deep into Mexico. Messrs. Brown and Zebrowski reasonably estimate that nearly 13,000 carloads will be diverted annually to CP/KCS single-line service in these lanes. CPKC will also provide more efficient transportation options for longer-haul movements of grain from Canada to the Gulf and Mexico.

19. Not surprisingly, we also expect *northbound* shippers of fertilizer from the Gulf to the Upper Midwest and even Canada to show significant interest in the improved operating efficiencies and transit times in these corridors that a CP/KCS combination will generate.

20. We discuss some of these opportunities in more detail below.

21. ***Grain Shippers in the Upper Midwest.*** Grain – including soybeans, whole grains, wheat, canola, durum, pulses, and barley – produced by farmers in the Upper Midwest is sold to large suppliers like ADM, Bartlett, Cargill and CHS, and sent to large storage facilities (called origin elevators) that load grain into railcars for shipment to grain destinations.[1] As a general proposition, the more destinations to which an origin elevator can ship grain, the better market prices farmers using that elevator are likely to receive. The CP/KCS Transaction would expand substantially the number of destinations to which origin elevators can ship grain by efficiently linking CP's access to origin elevators in the Upper Midwest with KCS's access to grain destinations in the South Central and Gulf States and Mexico. More specifically, CPKC will offer new, single-line access to feed markets in the South Central states (such as Arkansas and Mississippi), export markets reached via New Orleans and other ports in the Gulf States, and Mexican feed markets. Single-line access to these markets today is available only to customers of BNSF, UP, or CN. Without a single-haul solution, CP's Upper Midwest customers have a limited choice of markets from which to choose, or else must make do with less efficient interline transportation options to their preferred destinations.

22. CP believes our extensive experience in transporting grain, our drive for efficiency, and the ability of CPKC to connect Upper Midwest grain producers with markets in

[1] Both Bartlett and CHS explicitly support the Transaction. *See* Letter of Bob Knief, President of Bartlett (Apr. 19, 2021); Letter of John Griffith, CHS Executive Vice President, Global Grain and Processing and CHS Hedging (Apr. 13, 2021) (set forth in Volume 3 of the Application).

the Gulf States and Mexico will attract substantial volumes from the elevators we serve. Given our knowledge of the market and our customers, we expect the Transaction to lead to at least a five percent increase in the CP/KCS share of all grains exported from the United States to Mexico.

23. The long-term impacts of the CP/KCS Transaction will be even greater, as our new, more efficient single-line routes attract investment across the regions CP serves. CP has already been investing heavily in its capacity to serve grain shipments, and these investments – coupled with improved operational efficiency and reduced cycle times – have allowed us to set records in recent years in the total volume of grain handled. As one example, CP has invested in 6,000 new, higher-capacity grain cars, replacing older equipment that sometimes did not live up to our customers' expectations. These cars, combined with CP's innovative, industry-first 8500' High Efficiency Product train model, have driven substantial improvements in operational efficiency and reductions in cycle time. Relatedly, CP has supported investment in higher-capacity loading facilities, capable of loading an entire 8500' High Efficiency Product train in sixteen hours or less, to unlock the full benefits of the HEP model. By the end of 2021, CP will serve 41 of these highly efficient facilities across the United States and Canada, while simultaneously providing excellent service to each of the more than 400 grain elevators across our service territory – big and small.

24. In addition to those efforts, increasing the destinations available for grain shipped from the Upper Midwest will also encourage additional investment by CPKC and our customers to expand and improve origin grain elevator infrastructure. The limited scope of CP's network today provides a classic illustration of the age-old "watershed" problem in rail transportation. CP's lines in Iowa traverse fertile corn-growing regions, but the limited reach of CP's network

and the relatively short distances CP would move grain shipments destined for markets in the south via the Kansas City Gateway have constrained the incentives of both the shippers and CP to invest in the infrastructure necessary to serve these flows as effectively as possible. That will change with the CP/KCS Transaction and the new single-line routes to distant markets it will create.

25. CPKC's improved access to a more diverse range of grain destinations will generate incentives for us and our customers to invest in additional HEP elevators on CP's lines in Iowa. Following our announcement of the CP/KCS Transaction in March, CP heard from many grain shippers expressing interest in making these sorts of investments. Figure 2 below is an illustration of the efficient, high-capacity grain-loading facilities that CP has been supporting across our U.S. and Canadian network, and which the CP/KCS Transaction would support in parts of Iowa where the limited reach of the CP system has not previously supported such investments.

FIGURE 2
INVESTMENT IN CP-SERVED GRAIN LOADING FACILITIES

26. One specific set of opportunities illustrates this potential well. Post-control, CPKC would anticipate partnering with shippers to invest in grain-origination facilities along

CP's Kansas City mainline in far southeastern Iowa. With the terminus of CP's line only a few hundred miles away in Kansas City, CP has in the past had limited motivation to make the investments required to maximize the efficiency of grain movements from this region to the south. But with the CP/KCS combination enabling us to reach markets beyond Kansas City, CP sees tremendous potential for traffic growth, and we expect our new-found interest and the concrete transportation options we will provide would support investments in new elevators tapping grain grown in this part of Iowa. Based on our own assessment and feedback from grain customers, CP anticipates that new investments in grain-loading capacity on CP's lines in the United States could begin as soon as the first year following control approval, taking advantage of the improved market access we will offer and our improved incentives to support those investments with attractive transportation services.

27. CPKC expects to see this dynamic in other types of grain as well, and we have identified soybeans as one area of particularly exciting growth. Today, soybeans travelling to Mexico for processing into oil and meal typically travel on UP or BNSF for part of the movement, then transfer to KCS or FXE. CPKC will offer a superior, single-line shipment from the U.S. Soybean Belt to processors in Mexico. With this single-line alternative, the collective experience of CP and KCS in high-efficiency grain handling, and anticipated elevator investments in the Soybean Belt, we forecast that CPKC would move an additional 3,630 carloads of soybeans to Mexico.[2]

28. Smaller grain elevators – especially those handling specialty grains like organic grains and non-GMO grains – will also benefit from access to new markets via CPKC's new

[2] Our confidential workpapers reflect the incremental revenues we anticipate from this and other new business. We provided these estimates to other witnesses in support of the Application.

single-line service. The CP/KCS combination will open up Mexican markets for these emerging, specialty products that are out of reach for CP today.

29. Dried distillers grains ("DDGs") represent another exciting area of potential growth. As discussed below, CP originates 1.3 billion gallons of ethanol each year. DDGs are a by-product of that ethanol production. Processors can convert DDGs to protein-rich animal feed. Mexico is a major consumer of DDGs for the production of animal feed, but connecting the ethanol producers with Mexican animal feed producers is not always economical. Indeed, some DDGs end up as waste. CPKC, however, will offer a single-line option from U.S. DDG shippers directly to Mexican importers, which we expect will result in an additional 3,000 carloads of DDGs annually.

30. CP and KCS are gratified that so many shippers of grain in the Upper Midwest have recognized the benefits of the CP/KCS combination. One shipper located in North Dakota noted that it struggles to gain access to markets in "Texas, the Gulf of Mexico, and Mexico" because of CP's limited southern reach, and that new single-line CP/KCS options would enable the shipper to compete with "BNSF served competitors" in those markets.[3] The North Dakota Grain Dealers Association similarly concluded that "the [CP/KCS] transaction promises to provide improved service options and open new markets to North Dakota shippers [because] new single-line hauls and access to ports on the U.S. Gulf, Atlantic and Pacific coasts . . . should help us reach our existing markets and new markets more efficiently."[4]

---

[3] Letter of Kevin Peach, General Manager of The Farmers Elevator Company of Honeyford, ND (March 29, 2021) (set forth in Volume 3 of the Application).

[4] Letter of Stu Letcher, Executive Vice President of the North Dakota Grain Dealers Association (March 30, 2021) (set forth in Volume 3 of the Application).

31. Grain receivers on KCS tell a similar story. Ragasa, Mexico's leading brand of cooking oil and a major importer of U.S. soybeans, supports the Transaction, stating that the CP/KCS Transaction will provide access to grain elevators in the U.S. and Canada that they "have not been able to reach with the current railroad system."[5]

32. ***Potash and Phosphate Fertilizers.*** Potash and other fertilizers play a critical role in increasing crop yields, which, in turn, help feed a growing North American population. CP's network serves major potash and nitrogen facilities in Canada and can deliver these products to farmers across Western Canada and the Upper Midwest, as well as Mississippi River terminals that move fertilizers south.

33. The integrated CP/KCS network will expand the reach of these fertilizer sources, connecting CP's origins with growers in the South Central States. New CPKC single-line routes will make CPKC competitive with BNSF and UP for these shipments, generating support for the investments needed to facilitate these movements. For example, CP anticipates that demand for fertilizers from Canada moving via efficient CPKC single-line routes to growers in Southwestern Missouri could support future investment in a potash shed on KCS's lines south of Kansas City. Such an investment could enable the rail movement of potash originating on CP in Fort Saskatchewan, AB.

34. In addition, a fully integrated CP/KCS system will also efficiently connect suppliers of phosphate fertilizers in the Gulf region to farms in the Upper Midwest. Access to more efficient transportation options could support future investment in a fertilizer shed on the Gulf Coast that would enable imported phosphates received via vessel to be transloaded to rail

[5] Letter of Francisco Belden, Commodities Procurement and Sales Director of Ragasa Industrias (March 25, 2021) (set forth in Volume 3 of the Application).

for movement via new CP/KCS single-line routes to growers in the Upper Midwest. Such an investment would enable the rail movement of thousands of carloads per year of phosphates from the Gulf Coast to points across CP's system.

35. CPKC will also open opportunities for single-car receivers of fertilizers moving north via barge on the Mississippi River. Today, these shipments move from barge to transload facilities, then via truck to their destinations. KCS access to barge-to-rail facilities in East St. Louis, combined with CP's reach into key grain-growing regions, will allow these shipments that today move by truck to move via rail.

36. ***Ethanol Produced in the Upper Midwest.*** CP's lines serving the corn-growing regions of Iowa and Minnesota also serve many ethanol production facilities in the same region. In the aggregate, CP originates 1.3 billion gallons of ethanol on our network annually and delivers it to consumer markets across the United States and Canada. The CP/KCS Transaction will expand the reach of these ethanol facilities, connecting them more efficiently with high-consumption destinations in the Gulf and Mexico.

37. Canadian corn-based ethanol production is concentrated in Ontario, Quebec and Manitoba. U.S. corn-based ethanol production is concentrated in the Midwestern Corn Belt. CP serves more than 20 production facilities in these regions, including in Calgary, AB; Lloydminster, AB; Regina, SK; Winnipeg, MB; North Dakota; South Dakota; Iowa; and Minnesota.

38. Today, most of this ethanol goes to gasoline blenders in the Northeast, with smaller volumes going to Chicago and Charlotte, NC. CPKC will be able to offer these blenders access to a larger range of destinations. We will offer single-line routes to receivers in East Texas, the largest consumers of ethanol in the U.S., providing a third rail option (after BNSF and

UP) and additional network capacity. We also expect our single-line service will be competitive in markets in the Southeast, including New Orleans and Shreveport, LA. In the longer term, The CP/KCS combination will open Mexican markets to U.S. and Canadian ethanol producers. We expect these new, competitive offerings will generate future investments by receivers in new destination terminals on KCS's system to further support this growth.

III. THE CP/KCS COMBINATION WILL ENHANCE INTERMODAL SERVICE OPTIONS, INTENSIFYING COMPETITION AND ENCOURAGING DIVERSIONS FROM TRUCK TO RAIL

39. By creating an efficient, integrated network spanning Mexico, the U.S. Heartland, and Canada, the combined CP/KCS network will create more efficient and cost-effective single-line transportation solutions for intermodal shippers. The combination of CP and KCS will enable the combined entity to provide entirely new intermodal services spanning the former boundaries of the two separate networks, in the process expanding the scope, density, and quality of the services provided by both networks.

A. The Expanded CP/KCS Domestic Intermodal Network Will Attract Existing Rail Traffic and Divert Trucks from the Highways

40. Consistent with our experience, Mr. Mútenʼs verified statement explains that intermodal shippers have consistently demonstrated a *strong* preference for single-line service. We anticipate that the integrated single-line intermodal service that a combined CP/KCS system will create will compete much more effectively with interstate trucking and joint railroad routes currently available, such as KCS-UP or KCS-BNSF. The analysis presented by Mr. Mutén demonstrates that new single-line CPKC intermodal offerings will attract many tens of thousands of shipments away from trucks to railroad intermodal service – reducing congestion on America's interstate highway system and at U.S.-Mexico border crossings. This will also create a more environmentally friendly and less carbon-intensive North American transportation

network. It will also stimulate more intense competition with the existing intermodal services offered by other Class I railroads.

41. The U.S. domestic intermodal network of CP today is largely confined to serving East-West Canadian cross-border flows. As shown in Figure 3 below, CP's intermodal network in the U.S. connects Eastern and Western Canada with the Chicago Gateway (for connection to services offered by other Class I railroads in the East and West) and CP's handful of Upper Midwest terminals at Chicago, Minneapolis and Detroit (plus a terminal in Jeffersonville, OH (between Columbus and Cincinnati) reached via a through-rate agreement). CP's intermodal network does not reach Kansas City.

42. KCS's intermodal network in the United States is also quite limited in scope and scale. Its highest-density lanes connect Mexico with UP at Laredo (and BNSF at Robstown). KCS also sees east-west flows connecting UP (via Shreveport), as well as its own Wylie, TX intermodal facility near Dallas, with NS's network serving the Southeast via the Meridian Speedway. KCS also handles limited volumes of intermodal traffic between the Laredo Gateway and the Southeast (also connecting with NS at Meridian), as well as very low volumes (well below a trainload per day) through its International Freight Gateway ("IFG") intermodal terminal south of Kansas City. KCS does not interchange any intermodal traffic with CP at Kansas City.

FIGURE 3
CP'S AND KCS'S SEPARATE INTERMODAL NETWORKS DO NOT CONNECT TODAY

43. Combining CP and KCS will create a much broader and more capable intermodal network. Figure 4 below depicts the intermodal offerings of the post-Transaction CP/KCS intermodal network, which retains all of the services of the separate CP and KCS networks and supplements them with an array of attractive new domestic and international intermodal services linking terminals served by the KCS network in Mexico and Texas with terminals served by CP's transcontinental intermodal network.

FIGURE 4
CPKC'S MORE ROBUST CONTINENT-WIDE INTERMODAL NETWORK

44. ***New services connecting Mexico with the Upper Midwest and Eastern Canada***.

The CP/KCS system will offer new long-distance direct intermodal service connecting KCS terminals in Mexico with CP terminals in Eastern Canada and the Upper Midwest (especially Chicago and Minneapolis). Today, CP's express intermodal network primarily runs east to west across Canada, with a connection to the lower Great Lakes region. This network offers a courier-like shipping product designed to compete with truck options. This product offers shippers what we call "Demand Management," providing a choice of three levels of service: "premium," "standard," and "flex." This allows shippers to choose an expedited shipment for

time-sensitive loads and a less expensive option for other loads. CPKC will replicate the success of that network – complete with the "Demand Management" service-level choices – with a North-South route matrix, carrying dry and refrigerated containers through Chicago, Kansas City, Dallas, Monterrey, San Luis Potosí, and Mexico City.

45. These services would offer truck-competitive levels of reliability that would give existing rail intermodal shippers a new competitive option while attracting trucks off the highways and crowded U.S.-Mexico and U.S.-Canada border crossings.

46. For shipments moving between Mexico and points east of Chicago and into Eastern Canada, CPKC would offer a single-line rail intermodal option for the first time ever. Today, these shipments must move via interline service over Laredo, Chicago, and other gateways (often via two separate interchanges) and in many cases must be drayed over long distances to/from intermodal terminals in Chicago. Over-the-road trucking handles the lion's share of volumes, clogging our highways and border crossings. CPKC will be able to move containers seamlessly between Mexican terminals and terminals in Chicago, Toronto, and Montreal (and for limited volumes, CP's Detroit intermodal terminal), which Mr. Mutén anticipates will divert over 16,000 trucks from the highways in these lanes.

47. Automotive parts suppliers will be among the many beneficiaries of these new intermodal services. Substantial flows move between parts suppliers in the U.S. Midwest and Ontario and the cluster of auto assembly plants in central Mexico reached efficiently via KCS-served intermodal terminals, and in reverse from parts manufacturers in Mexico to assembly plants across the United States and Canada. The "domestic content" provisions of the new U.S.-Mexico-Canada Free Trade Agreement ("USMCA") will encourage increased reliance by North

American auto companies on cross-border parts, all of which qualify for "North American" content requirements.

48. Today, substantial volumes of these parts move by truck, but rail intermodal offerings attract significant volumes as well, including UP-KCSM routes via the Laredo Gateway and UP-FXE and BNSF-FXE options via the Eagle Pass Gateway. The CP/KCS combination would give these shippers another – and we think better – option. Even though the CPKC single-line route between Chicago and Laredo would be longer than UP's route, CPKC would offer seamless, origin-to-destination management of all facets of the service, likely unlocking superior economics as well. We anticipate that the existing rail alternatives will continue to compete successfully for many of these shipments, but everyone's game will be elevated by CPKC's competitive entry into these lanes.

49. New intermodal services connecting Mexico with the Upper Midwest and Eastern Canada will be attractive to shippers of many other commodities who mostly rely on truck today. For example, CP's fleet of modern 53' refrigerated containers (equipped with telematics and the latest technology to ensure "cold chain integrity") will allow CPKC to compete with over-the-road trucking to move perishable goods originating in Mexico, including hearty fruits and vegetables and processed foods.

50. Some of these commodity flows are naturally complementary. CPKC will offer meat processors in Illinois, Missouri, Kansas, Oklahoma, and Nebraska single-line service in refrigerated containers for their portion of the roughly 1.2 million tons of meat exported to Mexico from the U.S. annually. In the opposite direction, CPKC will carry produce north from Michoacán, Veracruz, and other KCS Mexican originations. Those originations today send nearly five million tons of produce to the U.S. each year, primarily by truck, to wholesaler

markets in Border States.[6] From those wholesale markets, buyers ship produce to consumer markets across the country, again typically by truck. With new CPKC single-line service, we expect to shift nearly 500,000 tons of that produce to rail service, directly from Mexican growing regions to consumer markets in the Upper Midwest and Canada.

51. ***New services connecting Texas with the Upper Midwest and Eastern Canada***. The CP/KCS system will also offer entirely new long-distance direct intermodal service connecting KCS's Dallas-area terminal (at Wylie) with CP terminals across Canada and the Upper Midwest (especially Chicago and Minneapolis). These services, like those on CP's existing intermodal network, will offer three classes of service, giving shippers both expedited choices and lower-cost choices.

52. In the Dallas-Chicago lane, this new service would compete head-to-head with BNSF's intermodal offering. Though BNSF's service would be both shorter and faster, CPKC would compete by offering very-reliable third-morning availability to/from our strategically-located Bensenville Terminal. Further, both KCS's Wylie terminal and CP's Chicago facilities have available capacity. The CP/KCS combination will increase network capacity in this congested, delay-prone truck lane. We anticipate that this service will be particularly attractive to U.S. asset-based providers and expedited carriers.

53. We would also be able to offer single-line intermodal service from Dallas to Eastern Canada for the first time ever (with the ability to move limited volumes to Detroit as well). Existing interline services require an expensive, time-consuming local connecting assignment in Chicago's crowded rail network to move from one line to another, adding up to a day of delay. CPKC's single-line option will eliminate this delay entirely. This new service will

---

[6] *See* Bureau of Transportation Statistics, "2017 Freight Analysis Framework."

offer truck-like levels of reliability and allow CPKC to compete aggressively because of its enhanced efficiency. And for Canadian destinations, this service may well be more reliable than truck service because U.S. trucking companies sometimes struggle to find drivers willing to cross the Canadian border, especially in times of high demand. CPKC, with our collective experience and expertise in handling cross-border rail traffic, will have no such worries.

54. The broader reach of the combined CP/KCS network will open up opportunities for investment in intermodal network expansion that would not have made sense for CP or KCS standing alone. One such opportunity would be a terminal serving Southeast Texas, especially Houston. KCS already operates an intermodal facility in Kendleton, TX, near Houston, but restrictions in KCS's trackage rights over UP between Beaumont and Houston (which KCS must use to reach Kendleton) prohibit intermodal traffic originating or terminating at Kendleton and moving to/from points north. (The specific issue is that movements between Kendleton and the North would not have a "prior or subsequent haul" on Tex Mex's original Laredo-Corpus Christi line, which KCS's trackage rights agreement with UP generally requires.)

55. The trackage rights restriction would not bar traffic to or from a terminal located on KCS's own network in Southeastern Texas, such as at Beaumont, Port Arthur, or other points. With the CP/KCS combination, the combined company would explore investing in a new intermodal terminal adjacent to KCS's lines in this region that could allow CPKC to offer single-line movement of intermodal containers between East Texas and the broader CP/KCS network across the Upper Midwest and Canada. (As noted below, such a facility might well be paired with a new automotive compound allowing service to the same region.) It would be premature to forecast specific volumes for these services, but this is a good example of the kind of growth opportunity that the broader CP/KCS network will enable us to explore aggressively.

56. One major Canadian intermodal shipper noted that a CP/KCS combination has "the potential [to be] a cost-effective alternative to truck to and from many more points in the United States, Canada, and Mexico."[7] Another noted that "[CP/KCS's] new single-line haul offerings for intermodal will expand market reach and offer new competitive transportation options for [their] shipments between Chicago and Dallas."[8] Yet another supports the CP/KCS combination, despite the fact that it has "not often spoken favorably about railroad consolidation," because the "combined [CP/KCS] network . . . would help [it] reach [its] existing markets and new markets more efficiently."[9]

B. The CP/KCS Network Will Unlock New International (Steamship) Intermodal Opportunities, Stimulating Port Competition

57. The combination of CP and KCS will equally transform our international intermodal networks, meaning the movement of marine containers between ports and inland points. The limited reach of the separate CP and KCS networks today constrains our ability to participate in international intermodal traffic. CP operates high-quality intermodal services connecting the Port of Vancouver with points across Canada, and in the East CP serves the container ports at Montreal and Saint John and provides high-quality intermodal serves connecting these ports with the rest of Canada and the U.S. Midwest and West via Chicago. But CP does not reach Texas, the Gulf States, or Mexico, or provide any intermodal service to Kansas City, limiting the inland reach for CP-served container ports.

---

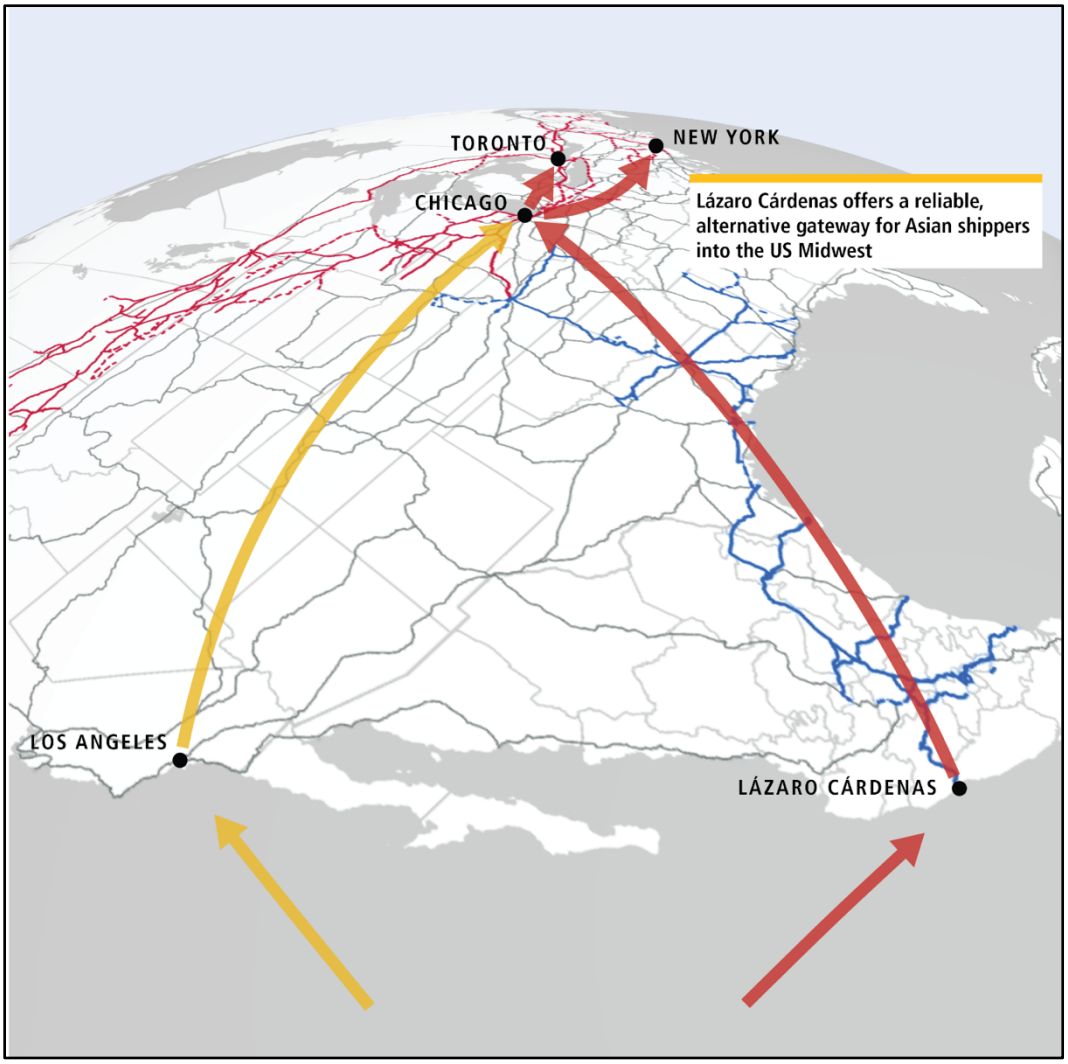
[7] Letter of Lance Norman, Executive Vice President of APPS Transport Group (March 25, 2021) (set forth in Volume 3 of the Application).

[8] Letter of Steve Castegan, Executive Vice-President and General Manager of La Milanaise Inc. (March 26, 2021) (set forth in Volume 3 of the Application).

[9] Letter of Mark D. Ascenzo, Managing Director of Express System Intermodal, Inc. (March 26, 2021) (set forth in Volume 3 of the Application).

58. KCS's international intermodal network is even less expansive. KCS serves several ports in Mexico (most importantly Lázaro Cárdenas on the Pacific and Veracruz on the Gulf of Mexico) and New Orleans and other U.S. Gulf ports, but the limited reach of KCS's rail network means that it provides relatively few international intermodal services. KCS's most significant international intermodal service connects the Port of Lázaro Cárdenas with inland Mexican points, which supports very small volumes of shipments that reach as far as Houston (Kendleton), but KCS does not operate intermodal services connecting this port with other inland U.S. points. (Shipments between Mexico and Houston are permitted under KCS's trackage rights agreement with UP.)

59. Joined together as one network, CPKC will be positioned to offer steamship lines and their intermodal shippers an array of new transportation options capable of streamlining international supply chains and improving efficiency.



60. Perhaps most compelling is the opportunity to open an entirely new corridor for containerized cargo moving between Asia and points in the Eastern United States and Canada via the Port of Lázaro Cárdenas. Lázaro Cárdenas has well developed and highly efficient, rail-served container facilities with substantial available capacity. And, as shown in Figure 5 below, unlike the overburdened ports of Los Angeles and Long Beach, Lázaro Cárdenas does not have a queue of dozens of vessels waiting offshore for unloading slots.

FIGURE 5
PORT OF LÁZARO CÁRDENAS

61. KCS's network in Mexico provides a direct route from Lázaro Cárdenas north to the United States. Indeed, the rail distance from Lázaro Cárdenas to Chicago is within 20 percent of the distance from the ports of Los Angeles/Long Beach, as shown in Figure 6 below, and avoids port congestion. CP/KCS intermodal routes connecting Lázaro Cárdenas with other major markets in the U.S. Midwest and Canada are likewise comparable to those to/from Los Angeles/Long Beach.

FIGURE 6
SINGLE-LINE INTERMODAL SERVICE FROM LÁZARO CÁRDENAS COULD COMPETE EFFECTIVELY WITH SERVICE VIA LOS ANGELES/LONG BEACH

62. CPKC will offer direct, long-distance intermodal services from the Port of Lázaro Cárdenas all the way to Toronto and Montreal (and points in between, including Texas, Kansas City, and Detroit) via CP's efficient Bensenville/Schiller Park intermodal terminals on the northwest edge of Chicago. From a supply chain perspective, this new service would provide a quite attractive – and likely more reliable – option as compared to inland rail routes to/from Los Angeles/Long Beach, which are notoriously congested (currently handling approximately

seventeen million TEUs, or twenty-foot equivalents) annually, with many dozens of vessels queued offshore for long periods awaiting unloading slots).

63. The combined CP/KCS network is well situated to connect the Port of Lázaro Cárdenas with intermodal customers in the United States and Canada. With its deep experience with border crossings, good relationships with U.S. and Canadian customs agencies, and track record of successfully operating intermodal terminals across the United States, international intermodal shipping is in the DNA of both CP and KCS. As one example, CP has a long and successful history of attracting "gateway" cargo at the Port of Vancouver – 40 percent of which goes to the U.S. – and the Port of Montreal. As another example, in 2020, CP launched service at the Port of Saint John, which at the time had limited international intermodal rail service; in 2021, ocean carrier Hapag-Lloyd began a new, weekly transatlantic service calling at the Port of Saint John. KCS has a similar heritage, with experience shipping hundreds of thousands of containers across the U.S.-Mexico border.

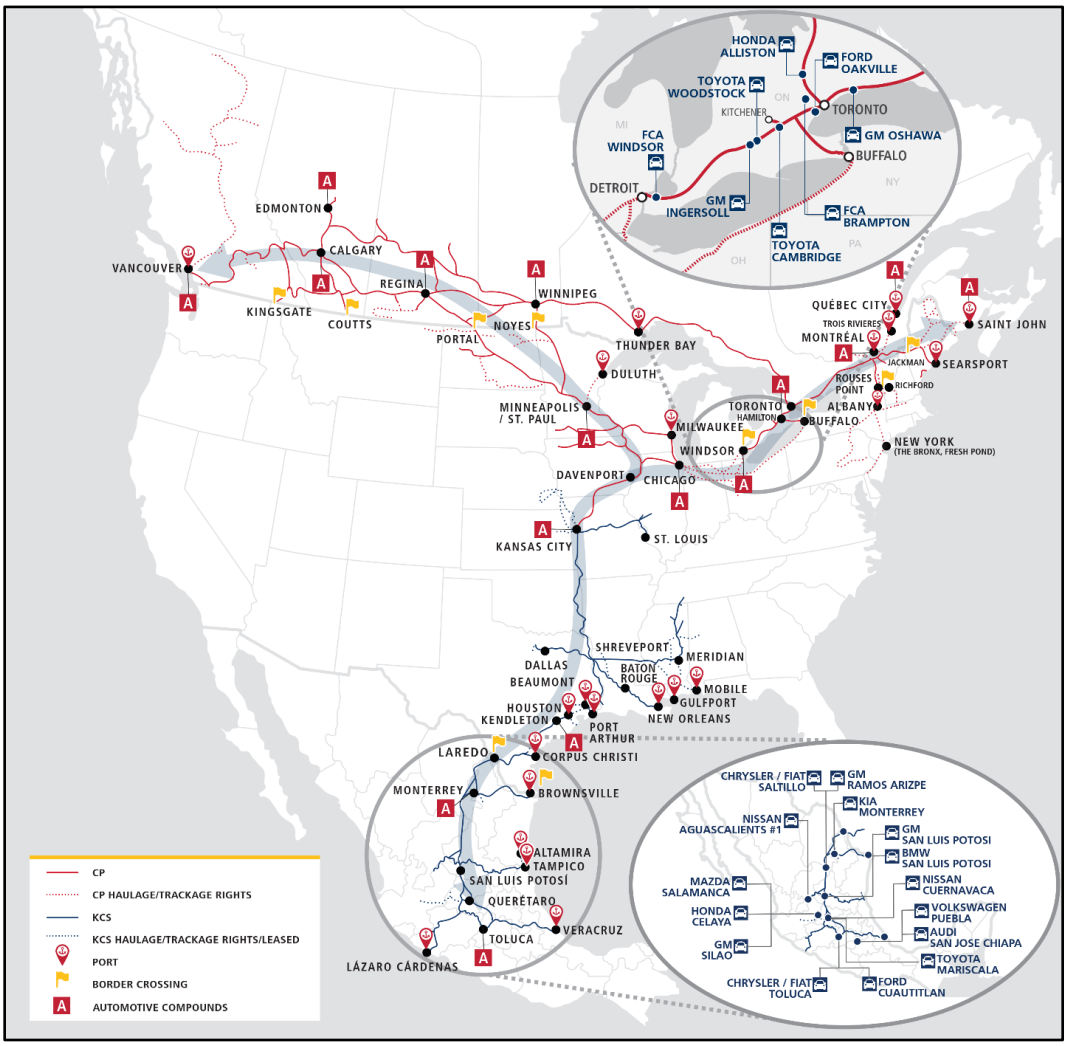
64. Neither the Lázaro Cárdenas-Chicago route nor a potential future Lázaro Cárdenas-Toronto route will supplant the role of Los Angeles/Long Beach (or of the Pacific Northwest ports, Vancouver, or Prince Rupert) for the movement of North America's containerized trade with Asia, but they will provide welcome capacity additions that supplement existing options. Working with the steamship companies and ports we serve, CP has attracted some containerized cargo to the Port of Vancouver that would otherwise have further congested the Los Angeles/Long Beach complex. Those experiences teach us that a combined CP/KCS system could attract nearly 130,000 intermodal containers moving between Lázaro Cárdenas to U.S. destinations, an opportunity that would not be possible without the CP/KCS consolidation because of KCS's limited reach in the U.S. Steamship companies like Maersk, which calls at

Lázaro Cárdenas and operates a terminal there (the one shown in the foreground in Figure 5 above, which claims to be the most efficient in Latin America), see substantial potential for CP/KCS to "open up new options for efficient intermodal rail transportation all the way into America's Heartland" via this underutilized port.[10]

65. The ability of a port like Lázaro Cárdenas to act as a "relief valve" for the crowded Los Angeles/Long Beach ports has precedent. In 2007, CN and its partner began serving the Port of Prince Rupert, providing a similar option to the Port of Vancouver, then and still the dominant Canadian intermodal port on serving Transpacific intermodal trade. Key members of the CN management team that participated in building up the Prince Rupert option are now members of the CP team eager to develop the potential of Lázaro Cárdenas, including Mr. Wahba (as CN's then-Manager of Intermodal Sales), as well as Keith Creel, as CN's then-Executive Vice President of Operations. We know from experience that rail intermodal services from the Port of Prince Rupert blossomed in the intervening years as an outlet that relieves congestion at Vancouver, but did not in any way supplant the Port of Vancouver, which continues to grow and still handles nearly four times the volume of Prince Rupert.

66. The new intermodal network of the combined CP/KCS system will also provide links between ports served by CP on the Atlantic and Pacific and KCS-served intermodal terminals. We expect CPKC to move nearly 10,000 such containers annually. One such opportunity would connect steamship lines serving the Pacific and calling at Vancouver with KCS's intermodal terminal near Kansas City. Although CP serves Kansas City, it does not have access to any intermodal terminal facilities there and provides no intermodal service to that

[10] *See* Letter of Jonathan Sinton, Regional Head of Procurement of A.P. Moller – Maersk Letter (Mar. 30. 2021) (included in Volume 3 of the Application).



important market. KCS's IFG facility south of Kansas City has available capacity, and we anticipate market demand for international intermodal services linking Vancouver and the Far East with Midwest industries via this facility. Similar potential exists for services linking the Port of Saint John with the KCS-served facilities as the steamship services and port facilities at Saint John expand.

IV. THE TRANSACTION WILL DRIVE BENEFITS FOR AUTOMOTIVE SHIPPERS

67. The CP/KCS combination joins two railroads that play complementary roles in the rail transportation of finished autos and automotive parts, and in the process will offer improved transportation options for those shippers. Auto parts generally move in intermodal service, and our discussion above shows how the CP/KCS Transaction will benefit those shippers. CPKC will bring equally powerful benefits to shippers of finished automobiles.

68. As shown in Figure 7 below, CP serves and owns automotive distribution facilities for finished autos across the Upper Midwest and Canada. CP also serves several automotive assembly plants in Southern Ontario and has efficient connections at Chicago with the eastern carriers that serve numerous auto assembly plants across the U.S. Midwest. For its part, KCS serves numerous assembly plants in Mexico, and it has auto distribution compounds near Houston and Kansas City. But KCS generally must interline traffic with other U.S. and Canadian railroads in order to connect plants in Mexico with the markets where their vehicles are distributed.

FIGURE 7
CP/KCS EFFICIENTLY SERVES AUTOMOTIVE SHIPMENTS

69. The CP/KCS combination overcomes the limitations of these two separate networks by adding new single-line routes connecting these origin and destinations areas, enabling better service and reliability.

70. The robust cluster of auto assembly plants served by KCS in Mexico is shown in more detail in Figure 8 below. The CP/KCS combination will efficiently connect these facilities with destination markets in the Upper Midwest and throughout Canada, offering these shippers an alternative to the interline services they use today.

FIGURE 8
KCS-SERVED MEXICAN AUTO-ASSEMBLY PLANTS

71. CP's network provides direct rail access to facilities located across Canada, from Vancouver to Saint John, and in the Upper Midwest. A CP/KCS combination will create the only integrated single-line network capable of connecting automobile production centers in Mexico, Ontario, and the Upper Midwest with vehicle distribution facilities across Canada and the Central United States – creating improved transportation options that simply do not exist today.

72. We expect single-line CPKC service to be particularly attractive to customers that historically have moved finished automobiles by rail from Mexico to Chicago (both for local termination and further movement to the East via Eastern railroads) and destinations in Minneapolis/St. Paul and across Canada. Those shippers will now have the choice of single-line CPKC services to all of these destinations. As Messrs. Brown and Zebrowski show, service improvements and stronger competition resulting from a CP/KCS combination would attract approximately 30,000 carloads annually from existing interline rail routes. Some of this traffic

would shift from KCS interline routes to CPKC single-line routes, while in other cases more attractive CPKC interline routes with other carriers (such as between Mexico and Eastern or Western U.S. destinations) would attract traffic that now moves from dual-served Mexican assembly plants via FXE interline routes. In all of these cases, CPKC's new services would enhance the competitive alternatives available to automotive shippers.

73. The CP/KCS network will have the flexibility to accommodate these shipments. Many of CP's auto compounds have capacity, and CP has been aggressively expanding by taking advantage of its land holdings adjacent to these facilities. For example, CP developed its Vancouver Automotive Compound in 2019 on 19 acres of CP-owned land adjacent to CP's Vancouver Intermodal Terminal, and this facility is currently receiving automobiles from Ford, Stellantis, and BMW assembly plants across North America. In a similar vein, CP created new capacity by partnering with Glovis Canada Inc. (part of the Hyundai Kia Automotive Group) to develop an auto compound on land CP owns in Southwest Ontario. The combination of CP's capacity for growth with KCS's reach presents exciting opportunities for automotive shippers. Glovis, for example, is "very excited" about CP/KCS's ability to "provide new, more efficient and reliable rail service options" and "strengthen competition against the other, larger rail carriers and trucks that serve [their] markets."[11]

74. CPKC will also be able to leverage CP's relationships with automakers in Canada to improve service to automakers in Mexico. As an example, we understand that Toyota's plant at Mariscala (just west of Queretaro) moves 70 percent of all the cars it imports into the United States via short ocean shipments from ports at Veracruz and Lázaro Cárdenas, and only 30

[11] Letter of Harrison Kim, CEO of Glovis Canada, Inc. (March 30, 2021) (set forth in Volume 3 of the Application).

percent by rail. KCS has struggled in the past to serve this customer because it did not have access to sufficient volumes of the multilevel railcars required for auto shipments. CP, however, directly serves two Toyota factories in Canada. CP will have the ability to move autos from those facilities to the Midwest and Texas, then use those empty multilevel cars to serve the Toyota facility. We expect this business to represent over 3,000 cars per year.

75. CP/KCS unlocks benefits for automakers outside Mexico as well. The second densest collection of automotive assembly plants in North America is located in Southern Ontario, where there are eight such plants located within 200 miles of one other. The CP/KCS network will efficiently connect these plants with the population centers served by KCS in the South Central United States, including Kansas City and Dallas, and eventually Houston.

76. Recognizing the efficiencies that the CP/KCS combination will generate, automotive industry shippers have voiced strong support for a CP/KCS combination. For example, the Mexican Association for the Automotive Industry ("AMIA") stated that it "supports approval of the CP/KCS combination," noting that although "AMIA has not spoken favorably about railroad consolidation . . . we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class 1 consolidation. Another automotive industry shipper has noted that "[CP/KCS's] new single-line haul offerings will expand market reach and offer new competitive transportation options for [their] shipments . . . of automotive goods from Mexico."[12] Similarly, a U.S. supplier to automotive assembly plants explained that "[t]he synergies created by the [CP/KCS] merger will not only enhance current

[12] Letter of Mike Pullam, Director of Business Development, of HCL Logistics Inc. (March 30, 2021) (set forth in Volume 3 of the Application).

supply chain transportation efficiency but will encourage much-needed growth and railroad infrastructure investment."[13]

77. As with CPKC's future intermodal network, the broader reach of the combined CP/KCS network, and in particular CP's access to substantial originations of automotive traffic, will open up opportunities for the investment in traffic growth that would not have made sense for KCS standing alone. One opportunity would be to invest in an automotive compound serving rail shipments to Eastern Texas from the north, perhaps co-terminus with a new intermodal terminal serving the same region. KCS's Kendleton intermodal facility serves finished vehicles traffic from Mexico to Eastern Texas, but cannot terminate carloads from points north because of UP trackage rights restrictions.

78. With the CP/KCS combination, the combined company would explore investing in a new auto compound adjacent to KCS's lines in the Beaumont/Port Arthur area (where UP's restrictions would not apply) that could allow CP/KCS to offer single-line movement of finished autos from assembly plants in Ontario and imported autos from the Canadian ports served by CP to all of Eastern and Central Texas. It would be premature to forecast specific volumes for these services, but this is an example of the growth opportunities that CP/KCS looks forward to exploring aggressively.

V. CP/KCS'S IMPROVED OFFERINGS WILL BENEFIT ENERGY SHIPPERS

79. The CP/KCS combination will dramatically improve transportation options for two key categories of energy-related commodities, yielding substantial public benefits. First, the new single-line routes created by CP/KCS will benefit shippers and receivers of liquefied

[13] Letter of Eric Petersen, President and COO of Northland Products Company (April 7, 2021) (set forth in Volume 3 of the Application).

petroleum gas ("LPG") by efficiently connecting CP's origin network in Alberta and Saskatchewan with consumption markets in Mexico and Texas.

80. Second, CP/KCS will link CP-served origins of crude oil in Alberta and Saskatchewan with KCS-served refineries and petrochemical plants in Louisiana and Eastern Texas via more efficient and safer single-line routes. The volume of crude oil shipments from source to refinery is determined by macroeconomic forces that will not be affected by the Transaction, so CP/KCS will not cause more crude oil to be shipped by rail. But we do anticipate that CP/KCS will allow the crude-by-rail shipments from Canada to the United States that do occur to be handled more safely and efficiently via CP/KCS's new single-line routes. By improving the transportation options for delivering crude extracted in Alberta and Saskatchewan to refineries in the Gulf States, CP/KCS will hasten the emerging shift toward moving this commodity as non-hazardous bitumen (known as "DRUbit") rather than as a volatile and flammable liquid, providing significant safety and environmental benefits.

81. These improved services for energy customers are shown in Figure 9, below.

FIGURE 9
BENEFITS FOR CRUDE AND LPG TRAFFIC

A. CP/KCS Will Improve Transportation Options for LPG Shippers

82. CP originates significant volumes of LPG in Western Canada and North Dakota, with a meaningful portion of those shipments ultimately destined for consumption markets in Mexico and the South Central United States. CP is investing in new origin facilities that will support expanded LPG shipping volumes. Most of CP's LPG shipments destined for Mexico are interchanged *twice*, first with UP in St. Paul, MN, and then *again* with KCSM or FXE for final delivery. The CP/KCS combination will create a more efficient single-line route from 20 LPG loading facilities in Western Canada and Ontario to destination markets in Mexico and Texas,

where the product is used primarily for cooking and heating. The Transaction will even benefit some destinations only served by FXE because CP/KCS will be able to move LPG to Monterrey and Saltillo, from which those locations can be served by truck. CP/KCS will provide propane customers faster speed to market, reduced cycle times, and overall fleet savings that in turn will encourage market growth through a safe and cost-efficient supply chain. We expect this traffic to amount to more than 4,000 carloads annually.

83. These improved transportation options for LPG originating in western Canada will create enhanced competition between Western Canada/Ontario propane suppliers and propane currently sourced from production facilities in other locations, such as Conway, KS and Mont Belvieu, TX for receivers served by KCS, particularly in Mexico.

B. CP/KCS Will Encourage Investment Supporting the Conversion of Crude-by-Rail to Non-Hazardous "DRUbit™"[14]

84. CP, KCS, and other U.S. Class I railroads have long participated in the long-haul movement of crude oil by rail when energy industry customers have sought out crude supplies from sources that cannot deliver via pipeline or vessel. Two such flows are between the Oil Sands of Alberta and the Bakken oilfields in North Dakota, on the one hand, and refineries in the U.S. Gulf region, which the petroleum industry refers to as "PADD III," on the other hand. PADD III is the home to a large number of refiners that are particularly well suited for the heavy crude produced in Alberta. As a result, there has long been demand to move Alberta crude to PADD III refineries, with volumes fluctuating according to commodity price variations,

[14] We understand that DRUbit™ is a trademark of DRU Assets LLC, a subsidiary of USD Group, LLC. When we refer to "DRUbit," the term should be understood to refer to the trademarked product as well as any other technology that removes diluent from dilbit to facilitate safe and efficient rail transportation.

available refining capacity, the declining availability of alternative sources of heavy crude like Venezuela, and other factors. The CP/KCS Transaction will not affect these volumes one way or the other.

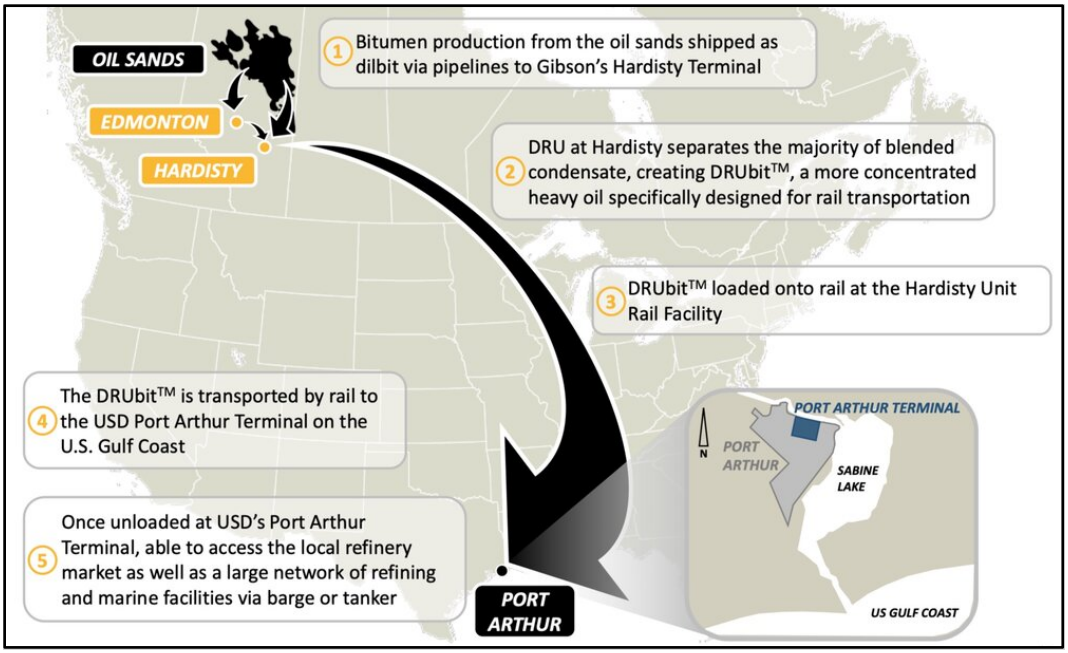
85. The Transaction nonetheless will provide significant benefits for shippers of crude oil and the broader public interest. First, CPKC will offer shippers more efficient – and economically more favorable – routes for the crude-by-rail shipments that may occur in the future. Although CP's network serves both the Alberta Industrial Heartland and the Bakken fields, CP's network does not reach the PADD III refiners. Instead, CP must interchange these movements with other railroads in order to reach major refining hubs in the Gulf Coast. CP interchanges crude-by-rail trains with KCS at Kansas City, but far more often those interchanges occur at Chicago with UP or Noyes, MN with BNSF, which then deliver the crude to refineries they serve in Louisiana and Texas or pipeline hubs that serve refineries in the Gulf region.

86. KCS, on the other hand, serves several refineries in Texas (at Port Arthur and Beaumont), Louisiana (at Baton Rouge), and Alabama (at Tuscaloosa). Like CP, however, KCS must interchange these trains with other Class I railroads.

87. The CP/KCS network will efficiently connect CP-served origins with KCS-served destinations, attracting some of the crude shipments from less efficient (and. in many cases, longer) interline routes. For example, a CP/KCS single-line route from northern Alberta to Beaumont, TX is 33 miles shorter than a CP-UP route via Chicago, and in addition avoids the delays and handling costs associated with an interchange in Chicago. Cycle times are particularly important to shippers of crude to facilitate efficient use of their private cars. As described in the Verified Statement of Messrs. Brown and Zebrowski, these single-line

efficiencies will be appealing enough to attract more than 16,000 cars of crude from other rail routes to an integrated, single-line CP/KCS service.

88. Second, the improved transportation options created by the CP/KCS Transaction for movements of Alberta crude to PADD III refining markets will support and accelerate the shift towards a safer and more environmentally friendly way to move Alberta crude by rail. Most of the crude originated in Alberta is from "oil sands," which are a mixture of water, sand, and bitumen. Bitumen is a naturally occurring oil that in its natural state is too thick to flow through pipelines to refining facilities. To facilitate transportation by pipeline, bitumen is typically mixed with a light hydrocarbon "diluent" to yield a liquid that can be pumped through pipelines. Much of Alberta's crude moves by pipeline to refineries in Canada and the U.S. Midwest in this form, which is called "dilbit" (*i.e.*, bitumen mixed with diluent). When Alberta crude has moved by rail to other refining markets (like PADD III) in the past, it has typically moved as dilbit.



89. There are two disadvantages of dilbit from a rail transportation perspective. The diluent comprises 20-30 percent of the total volume shipped, yet is of little value to destination refineries. That means that a train of 100 tank cars can only deliver the equivalent of 70-80 carloads of the bitumen that PADD III refineries demand. In addition, when mixed with diluent, crude is flammable and must be treated as a hazardous commodity.

90. CP and KCS have been at the forefront of a transition toward a safer and more efficient way to move Alberta crude by rail. Through investments at origin and destination, the hazardous dilbit can be converted to non-hazardous "DRUbit" that can be more safely moved by rail. The process starts at the railhead with a "diluent recovery unit" ("DRU"), which separates out and removes the diluent that has been added to raw bitumen in the production process,

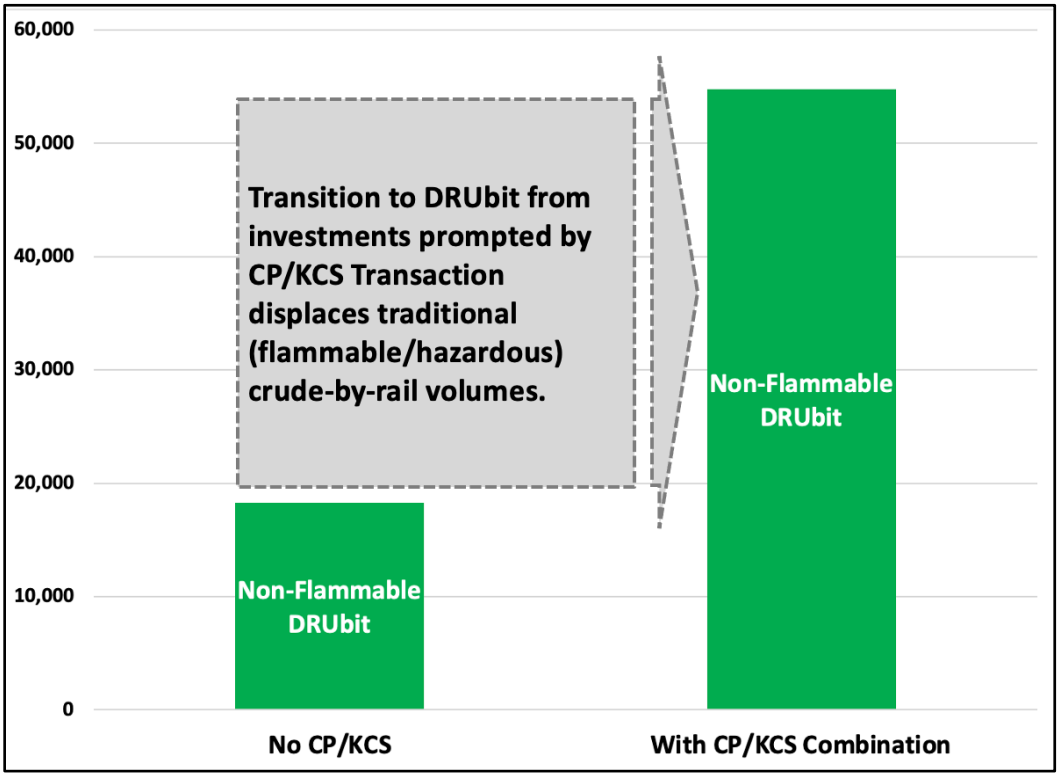
creating "DRUbit," a form of bitumen that is specifically designed for rail transportation. When trains carrying DRUbit arrive at destination, the bitumen is processed and delivered to nearby refineries.

91. CP and KCS have worked with customers to develop the potential for DRUbit shipments by rail. In Canada, CP worked with US Development Group ("USD") and Gibson Energy Inc. ("Gibson") to support investment in a DRU facility near Hardisty, AB, and ConocoPhillips Canada has contracted with CP and USD to process 50,000 barrels per day of inlet bitumen blend through this DRU facility. The DRUbit produced here is then transported by CP from Hardisty to a terminal built by USD at Port Arthur, TX and served by KCS. USD's Port Arthur terminal handles railcar unloading and tank storage and blending, and connects to ConocoPhillips's Beaumont Terminal. Figure 10 below depicts the DRUbit process from extraction in Alberta to refinery in Louisiana.

FIGURE 10[15]
CP/KCS SUPPORTS INVESTMENT IN DRUBIT FOR SAFER RAIL MOVEMENT OF ALBERTA CRUDE

92. The new single-line service unlocked by the CP/KCS Transaction will support the investments needed to accelerate the transition away from traditional crude-by-rail and towards the movement of Alberta crude in private cars in non-hazardous DRUbit form. We anticipate that CP/KCS will be the catalyst for further investments in the Hardisty DRU facility to expand its capacity[16] (and in the future possibly at other Alberta points near the oil sands) as well as in additional cars and additional capacity at destinations served by KCS in the Gulf. USD has expressed support for the CP/KCS Transaction, saying that CP/KCS "will provide benefits to . . . current and future DRUbit™ customers" and will allow them "to reach existing and new markets th[r]ough single-line service hauls." [17]

---



[15] Source: Hardisty Energy Terminal (DRU), Gibson Energy, https://www.gibsonenergy.com/our-operations/dru-at-hardisty/.

[16] Once fully phased-in, we anticipate over 50,000 additional units from Hardisty each year.

[17] Letter of Doug Atkins and Jim Albertson, Directors of Hardisty Energy Terminal LP (March 30, 2021 (set forth in Volume 3 of the Application); *see also* Letter of Brad Sanders, Executive Vice

93. Figure 11 below depicts the anticipated shift of traditional crude shipments to safer DRUbit shipments that the Transaction will facilitate.

FIGURE 11
SHIFT OF CRUDE-BY-RAIL SHIPMENTS FROM ALBERTA TO GULF TO NON-FLAMMABLE, NON-HAZARDOUS DRUBIT

94. This conversion will mean safer and more environmentally friendly transportation of this commodity, benefitting CPKC, shippers, and the public. Again, DRUbit is neither flammable nor hazardous. It is a tar-like substance that does not flow and will not harm the environment or nearby communities if inadvertently spilled in the unlikely event of a derailment or other mishap. And because there is no diluent to transport, fewer trains are needed to move the same volume of Alberta crude – seven or eight trains of DRUbit can haul as much crude as 10 trains of dilbit.

President of Port Arthur Terminal LLC (March 30, 2021); Letter of Jim Albertson, Senior Vice President of USD Group LLC (March 30, 2021) (set forth in Volume 3 of the Application).

VI. BENEFITS FOR SHIPPERS OF GENERAL MERCHANDISE COMMODITIES

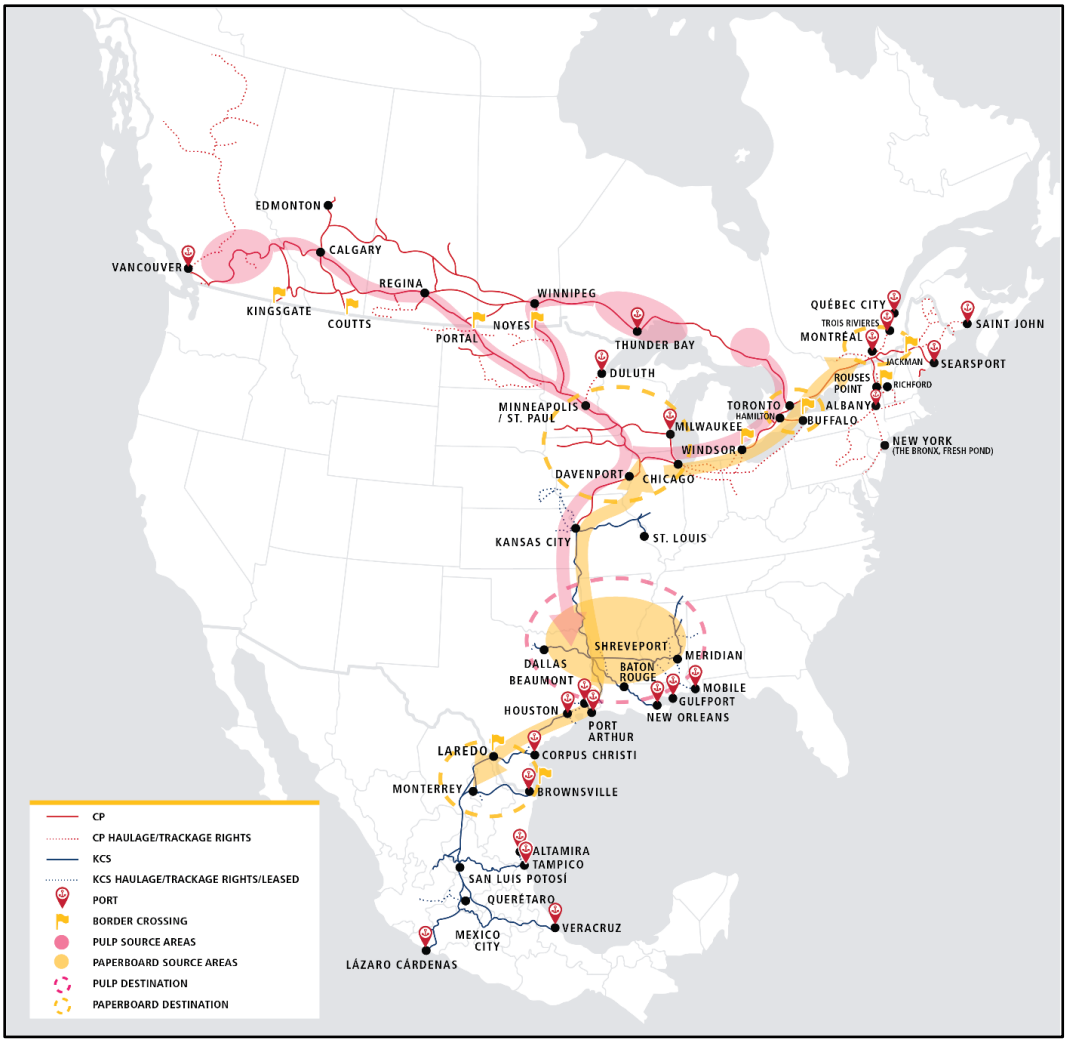
95. The new, single-line CP/KCS network will also enable more efficient and cost-effective transportation solutions for a wide array of other commodities – like forest products, chemicals and plastics, and metals – for customers large and small. We review some of the highlights below.

A. Forest Products

96. The CP/KCS combination will improve transportation options for shippers of forest products by efficiently connecting production areas by CP and KCS with consumption areas served by the other railroad. Benefits will accrue at all stages of the supply chain. New CP/KCS single-line routes will better connect CP-served lumber mills and lumber transloads in Canada and Maine with KCS-served facilities serving the home-building industry in the South Central states, will better connect CP-served pulp mills with KCS-served paper mills, and will better connect KCS-served paper mills with CP-served and switch-accessible box plants in the Upper Midwest.

97. The impact of CP/KCS on lumber originating at CP-served mills and lumber transloads in Canada and Maine provides a prime illustration of how the new single-line routes of a CP/KCS system will enhance the transportation alternatives available to shippers and receivers. As shown in Figure 12 below, CP serves numerous lumber mills and transloads in British Columbia, Alberta, Saskatchewan, Ontario, Quebec, New Brunswick, and Maine. For its part, KCS serves, or has switching access to, receivers and transloads in Texas, Louisiana, and Mississippi that support demand for lumber for the hot housing and construction markets in that region, especially the Dallas/Fort Worth metropolitan area (the largest destination market for Canadian lumber, and the second-largest lumber market overall in the United States; Texas is the largest lumber market in the U.S, accounting for 11 percent of total U.S. consumption in 2020).

FIGURE 12
CP/KCS PROVIDES BETTER TRANSPORTATION OPTIONS FOR LUMBER AND PANEL SHIPMENTS



98. This KCS network will allow CPKC to replicate in Texas CP's success delivering to the Southeast via transload facilities. As one example, CPKC will be able to offer shippers like Quebec's Resolute Forest Products, served through CP's Montreal lumber transload facility at St-Luc, QC, a direct route to construction markets in Texas. The transportation benefits of our new CP/KCS single-line routes will also extend to shipments of southern yellow pine flowing the opposite direction, from KCS-served and switch-accessible mills as well as transload facilities in the Southeast, north into the Midwest. We estimate that CPKC's new single-line services will

attract thousands of shipments annually already moving by other, less efficient interline rail routes and also shift thousands of truckload shipments to these markets off America's interstate highway system and border crossings.

99. As shown in Figure 13 below, the integrated CP/KCS network will also better connect the eight CP-served Canadian pulp mills with the 19 paper mills that are served or switch-accessible by the KCS across the South Central United States. Because pulp is a highly price-sensitive commodity, efficient CP/KCS routes may open up new sourcing opportunities for these paper mills, like International Paper's Louisiana facilities.

FIGURE 13
CP/KCS PROVIDES BETTER TRANSPORTATION OPTIONS FOR PULP AND PAPER SHIPMENTS

100. The same transit time and reliability improvements generated by the CP/KCS combination for southbound movements of lumber and pulp will benefit suppliers of paperboard from the 19 paper mills on or switch-accessible to KCS moving *northbound* to box plants served or switch-accessible to CP in the Midwest and Canada. Messrs. Brown and Zebrowski reasonably estimate that CPKC will be able to attract nearly 1,000 carloads annually that are moving via other rail routes today.

101. One shipper of forest products, noting that [s]ervice has not been great coming from the south," stated that the CP/KCS Transaction "will expand market reach and offer new competitive transportation options for [their] shipments of all Forest Products."[18] Recognizing these benefits, a number of forest products companies have similarly expressed their support for the CP/KCS Transaction, including companies involved in shipping lumber[19] and paper products.[20] One shipper of pulp and paper expects CP/KCS to "enhance our competitiveness through lower costs, better service, and improved access to the North American rail network."[21] Another paper shipper sees in CP/KCS "the potential to unlock several new routes for some of [its] Canadian products to start flowing into United States customers."[22]

B. Chemicals and Plastics

102. By creating new single-line routes between Canada and the Southwest/Gulf, the combined CP/KCS network will promote more efficient and cost-effective transportation solutions for shipments of chemicals and plastics originating in the Gulf to destination markets in Chicago, Canada, and the Midwest, and vice versa.

(March 29, 2021); Letter of Brad Eckford, Manager of Transportation, and Pino Pucci, VP of Sales, Marketing and Logistics of Tolko Industries Ltd. (March 29, 2021); Letter of Saulo Peranton, Director of Logistics at EACOM Timber Corporation (March 29, 2021) (set forth in Volume 3 of the Application).

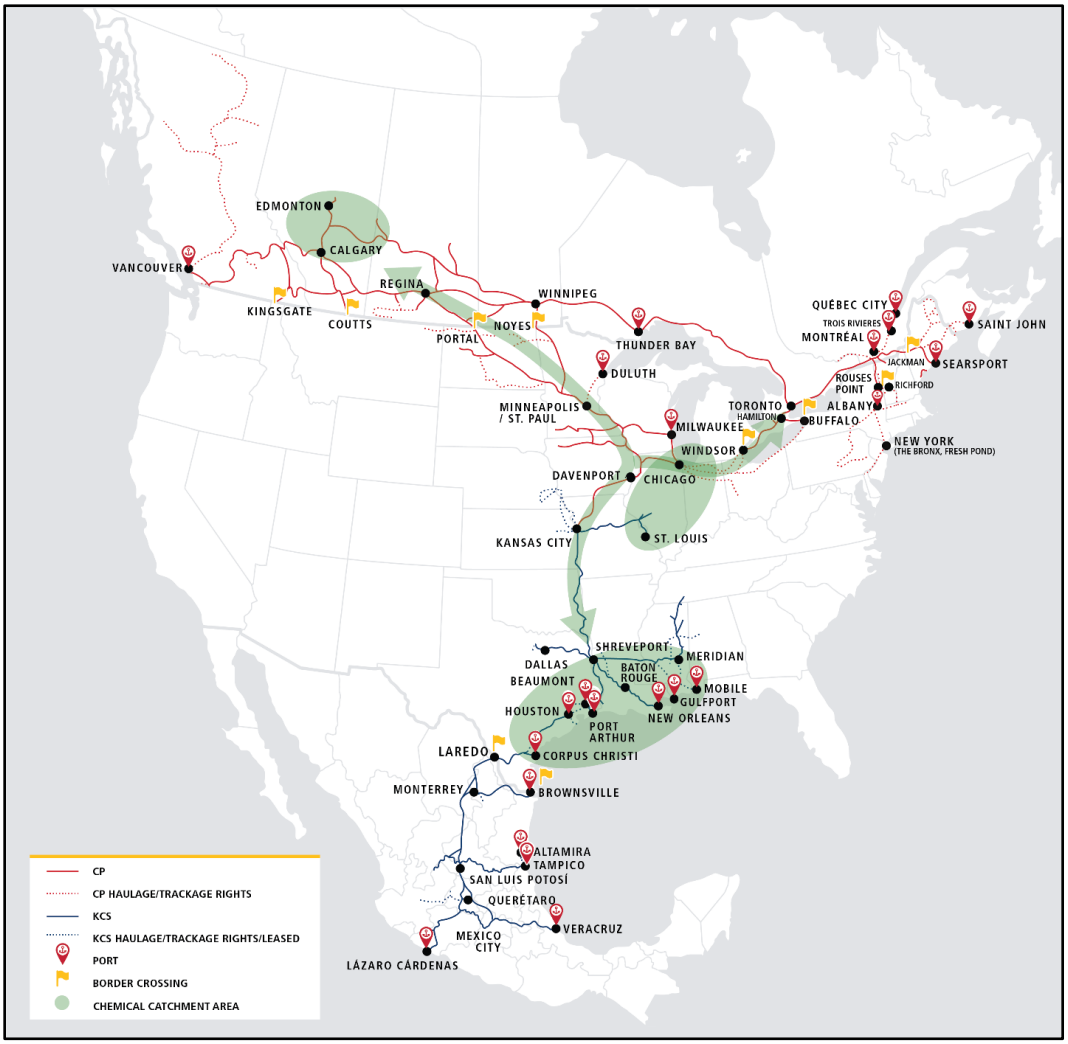
[20] *See, e.g.*, Letter of Greg Simpson, Director of Logistics and Administration, Millar Western Forest Products Ltd. (March 31, 2021); Letter of Vishnu Sharma (Global Head of Sourcing and Logistics of AV Terrace Bay Inc. (March 30, 2021); Letter of Gerardo M. Jaime, General Manager of JEI, Inc. (March 28, 2021) (set forth in Volume 3 of the Application).

[21] Letter of Mark Mosher, Vice President of the Pulp & Paper Division of J.D. Irving, Limited (March 29, 2021) (set forth in Volume 3 of the Application).

[22] Letter of Thomas S. Howard, Vice-President of Government Relations of Domtar (March 31, 2021) (set forth in Volume 3 of the Application).



103. Products that we expect to attract from competitors with new CP/KCS single-line routes include:

- butadiene from the Gulf producers to producers of synthetic rubber in Western Canada;
- glycol (used, among other things, for manufacturing and packaging products and other consumer goods and as a solvent by the paint and plastics industries) from Western Canada to Central Mexico;
- isopropanol/propyl alcohol (used in the production of, among other things, cosmetics and industrial solvents) from the Gulf to Western Canada;
- caustic soda, currently moving from Manitoba to Texas on CP interline routes; and
- shipments of chemicals northbound from smaller shippers in the Gulf to companies in Western Canada who specialize in value-added services like packaging and labeling, allowing these shippers to get their products into the hands of smaller customers.

104. Plastics will move more efficiently both northbound and southbound. CPKC will be able to offer shippers like Dow Chemical in Fort Saskatchewan, AB, which ships plastics to auto manufacturers in Mexico, an efficient single-line service that today does not exist. Similarly, plastic producers on the Gulf who ship to manufacturers in Eastern Ontario and Quebec currently have only one single-line option, via CN. CPKC will offer an alternative single-line option, creating new competition for those shipments.

105. The benefits for chemicals shippers are shown in Figure 14, below.

FIGURE 14
CP/KCS PROVIDES BETTER TRANSPORTATION OPTIONS FOR SHIPMENTS OF CHEMICALS AND PLASTICS

106. Shippers of plastics and other chemicals have expressed support for the CP/KCS Transaction. One plastics shipper noted that CP's current market reach is limited, but CP/KCS will help it "to expand the customer base without worrying about the logistics."[23] Another plastics shipper observed that CP/KCS "promises to provide improved service options" and

[23] Letter of Happy Gill, Co-Vice President of Fraser Plastics Ltd. (March 26, 2021) (set forth in Volume 3 of the Application).

"would help [it] to transport [its] raw materials more efficiently."[24] Similarly, a shipper of sulphuric acid expects CP/KCS to result in "a noticeable improvement to [its] service levels out of Louisiana by the creation of better competition."[25]

C. Metals

107. A combined CP/KCS network will enable better service and improved competitive options for metals customers.

108. The complementary network reach and car supply capabilities of the CP and KCS systems will benefit shippers of steel and many other commodities. Finished steel origins served by CP's transload network, including in the Chicago area, will be able to serve destinations in Texas, the Gulf, and Mexico more efficiently and reliably. Steel originating in Ontario (from mills not directly served by CP) and bound for auto producers in Mexico, for example, will have a direct route from CP's wholly-owned Transcare facility in Ontario to KCS's transload network. This finished steel requires specialized covered coil cars, which are not part of CP's existing fleet, but *are* part of KCS's fleet. The story is much the same for Canadian aluminum producers, like Alcoa, shipping to auto producers in Mexico. Similarly, finished steel producers in Iowa and Quebec will be more efficiently connected to destinations in Texas, Oklahoma, and Mississippi, where finished steel is needed for infrastructure projects.

109. Shippers of metals have expressed support for the CP/KCS Transaction. One recycler of scrap metal noted that CP/KCS will "expand market reach and offer new competitive transportation options . . . by providing access to additional export locations/ports in the Gulf"

---

[24] Letter of Steven Stone, Executive Vice President of Sterilite Corporation (March 29, 2021) (set forth in Volume 3 of the Application).

[25] Letter of Dennis Smerchanski, General Manager of Border Chemical Company Limited (March 30, 2021) (set forth in Volume 3 of the Application).

and will play a role in "expanding access to growing markets across the United States, Mexico, and Canada."[26] Another pointed out that CP/KCS will provide "[a] larger network, with reduced switching fees allowing expansion and growth of business to markets around North America which [it doesn't] currently have access to," including "Mexico and customers or mills in that country."[27]

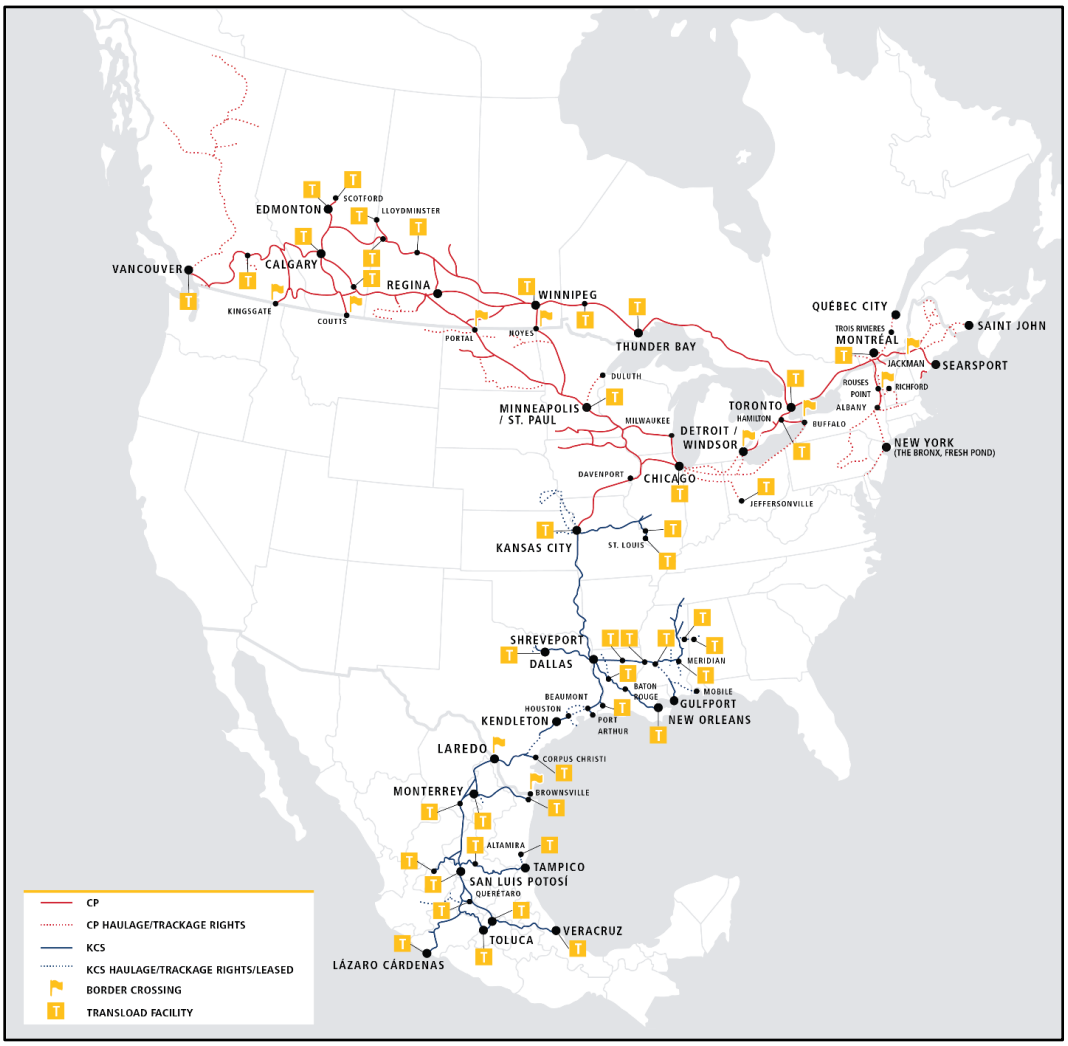
D. Benefits for Numerous Other Commodities

110. We see many other opportunities to better serve customers large and small shipping a wide array of other general merchandise commodities. The vast majority – 81 percent of CP's shippers – ship fewer than 100 carloads per year on our system, and the same is true for KCS. CPKC will be attentive to the needs of all of these shippers. While CP often publicly focuses on large shippers, the bread and butter of our business comes from small shippers. Our ability to offer reliable, dependable service to small shippers is the backbone of CP's business and will remain so for CPKC.

111. One category of merchandise traffic bears specific mention: "white goods" or appliances moving north from Mexico offer a particularly exciting illustration of the new capabilities of the CP/KCS network. CP does not handle a substantial volume of white goods today, but with the Transaction we see potential for sizable growth. A significant portion of all appliances consumed in the United States come from Mexico. Major appliance brands – including GE, LG, Whirlpool, and Samsung – produce white goods at factories in Mexico, from which they service consumer markets in the United States and Canada. KCS serves these

---

[26] Letter of Mark Hudson, Vice President of American Iron and Metal Inc. (March 29, 2021) (set forth in Volume 3 of the Application).



[27] Letter of Bryan Fitzsimmons, President of Centreville Iron and Metal (March 28, 2021) (set forth in Volume 3 of the Application).

shippers today – taking advantage of a supply of empty boxcars that arrive in Mexico with deliveries of pulp and paper from KCS-served origins in the South Central States. But KCS's network does not reach many destinations – particularly those in Chicago, other parts of the Upper Midwest, and Canada.

112. CPKC will be able to move these goods from origin to destination in a single move, minimizing cost and handling, and in effect allowing efficient roundtrip trade, with the empty boxcars being reloaded with commodities moving south. And for a subset of these appliances, CPKC will be even more efficient, because CP has co-located intermodal facilities with certain Home Depot distribution centers in Toronto and Calgary, further reducing handling.

113. In addition, as noted above, many shippers of forest products, chemicals, plastics, and metals benefit from access to CP and KCS transload facilities. CP and KCS today each have strong transload networks. CP alone owns 26 transload facilities, and partners with an additional 67 privately-owned transload facilities across Canada and the United States. These networks handle a vast array of commodities, from steel to stoves, sand to shingles, cement to canola, and coal to consumer goods. Further, they extend the reach of each railroad, allowing them to serve origins and destinations not directly on their lines. As shown in Figure 15, together, CP and KCS will operate a powerful transload network with a broad reach, able to connect shippers of all sizes, from Mexico to Canada, for a wide array of commodities.

FIGURE 15
CP/KCS COMPLEMENTARY TRANSLOAD NETWORK

114. Separately, these networks constitute an underutilized resource for shippers across Canada, the United States, and Mexico. One network acts as a watershed gathering in goods from Canada, the Upper Midwest, and the Northeast; the other does the same for goods in Eastern Mexico and the Southeast. These two watersheds, however, connect only via inefficient interline exchanges, limiting choice and value for customers. The CP/KCS Transaction – and only the CP/KCS Transaction – will bring these two networks together, unlocking choice, value, and better service for shippers

VII. OUR REASONABLE EXPECTATION IS THAT CPKC WILL ACHIEVE THE ANTICIPATED TRANSACTION-RELATED TRAFFIC GAINS OVER THE COURSE OF THE FIRST THREE YEARS FOLLOWING BOARD APPROVAL

115. To support estimates by other witnesses relating to the additional rail traffic that CPKC would attract from other railroads and transportation modes, we considered the likely period over which those traffic gains would occur, and the likely pace of those gains. Our best estimate is that the pace of CPKC's traffic gains will vary by commodity and flow, reflecting underlying market conditions and the CPKC's new capabilities, but that the reasonably anticipated rail-to-rail and truck-to-rail diversions that we and other witnesses forecast would be fully achieved within three years of control approval.

116. Table 1 below summarizes our estimate regarding the timing, with the figures reflecting the percentage of CPKC's Transaction-related traffic gains that we believe would be realized by the end of the referenced year following control approval (these are not shares of total traffic). Our estimates are based on our general knowledge of the varying commercial environments affecting each type of traffic and our experience pursuing opportunities to attract new rail traffic with new services and initiatives.

TABLE 1
PORTION OF TRANSACTION-RELATED TRAFFIC GAINS REALIZED BY END OF PERIOD

Line of Business/Commodity Group	Year 1	Year 2	Year 3
Automotives from Mexico	33%	66%	100%
Automotives from Canada	100%	100%	100%
Energy, chemicals and plastics (bitumen)	100%	100%	100%
Energy, chemicals and plastics (LPG)	0%	80%	100%
Energy, chemicals and plastics (plastics)	0%	50%	100%
Forest products (lumber)	50%	100%	100%
Forest products (other)	100%	100%	100%
Cereal Grains	33%	66%	100%
Other Grains	0%	50%	100%
Grains from Canada	50%	75%	100%
Metals, minerals, and consumer products	0%	50%	100%
Intermodal	33%	66%	100%

VERIFIED STATEMENT OF GLEN WILSON

1. My name is Glen Wilson. I am Managing Director, Environmental Risk at Canadian Pacific Railway. I have held this position since December 2014.

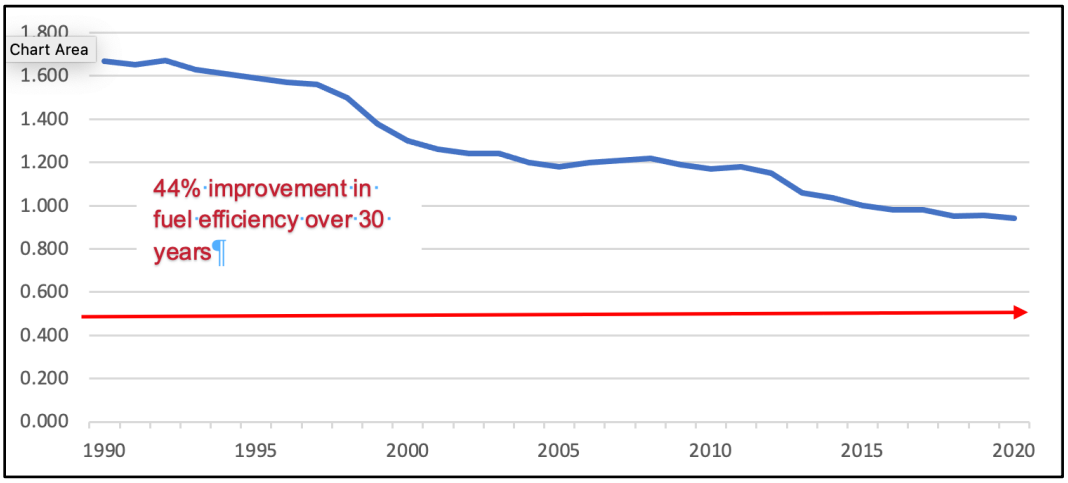
2. I have been working for Canadian Pacific for nearly 30 years. I hold a Bachelor of Arts in History and a Bachelor of Laws from the University of Manitoba.

3. Since this docket was opened, I have been coordinating CP's environmental review process with its consultants and attorneys, as well as with the Board's Office of Environmental Analysis and its third-party contractor.

4. I am making this statement to explain the environmental benefits of the proposed Transaction and to describe the process by which the project's potential environmental effects are being evaluated by CP and its consultants.

I. CP'S COMMITMENT TO THE ENVIRONMENT

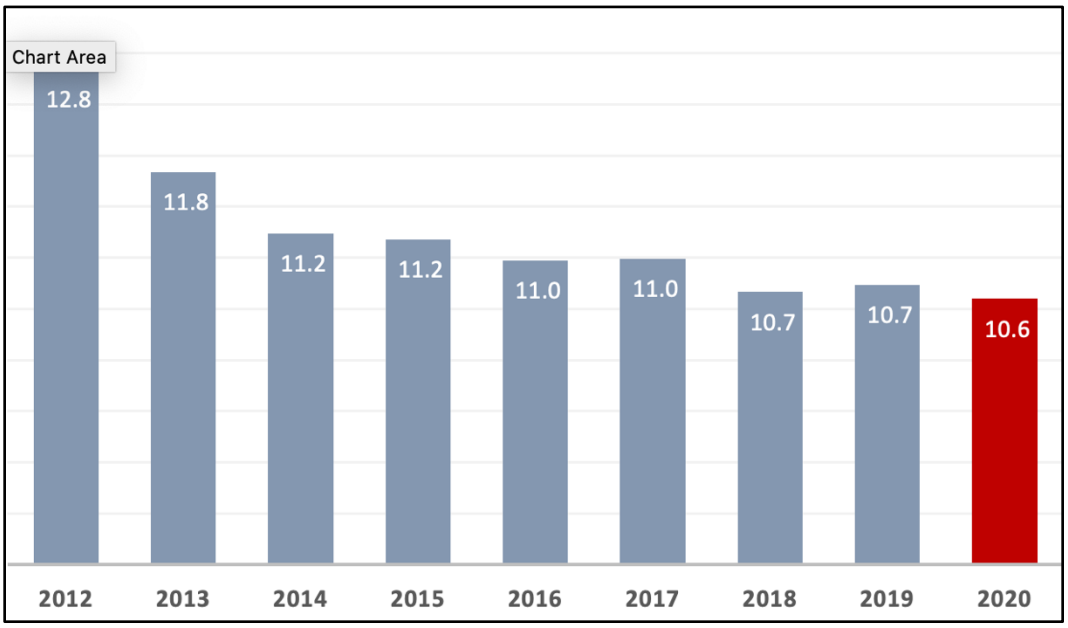
5. Before addressing the environmental benefits of the CP/KCS Transaction, I would like to highlight CP's commitment as an enterprise to environmental protection and improvement. This is and will remain one of CP's core values.



6. Our commitment to the environment spans all aspects, one focus of which is the impact of greenhouse gas emissions on climate change. CP understands that climate change is the challenge of the present generation. CP is committed to meeting the targets set by the Paris Agreement and to being a leader in the transportation sector's low-carbon transition. CP is incorporating globally leading practices into operating more sustainably, reducing its environmental footprint, and reporting its plans and progress.

7. The transportation sector makes up a significant share—about 30 percent—of greenhouse gas emissions in North America. But railroads, which make up about two percent of

transportation sector emissions, offer many advantages over other modes of transportation when it comes to protecting the environment.



8. Locomotives are responsible for the vast majority of greenhouse gas emissions by freight railroads, and constitute about 96% of CP's direct greenhouse gas emissions. CP already outperforms industry averages for locomotive fuel efficiency—over 11% better than the North American Class I freight average. And CP has improved its fuel efficiency by over 40% since 1990, as shown in Figure 1 below.

FIGURE 1
CP'S GALLONS OF LOCOMOTIVE FUEL CONSUMED/1,000 GTMS

9. CP continues to work to improve its fuel efficiency, including by expanding its use of fuel trip optimizer technology on its locomotive fleet. Figure 2 below tracks CP's improvements in locomotive greenhouse gas emissions ("GHG") intensity over the past decade.

FIGURE 2
CP'S LOCOMOTIVE GHG INTENSITY (KG CO2E/1,000 GTMS)

10. CP is also exploring other ways to reduce its GHG emissions. CP's Climate Strategy, released in July 2021, outlines how CP is taking a leadership role in the transition to a low-carbon future for North America and describes in particular CP's commitment to evaluate a wide variety of potential ways to reduce carbon, including the evaluation of renewable fuels, internal carbon pricing and more.

11. Both CP and KCS have also set science-based (SBTi) targets in recent months: CP has announced its commitment to reduce GHGs by 38 percent by 2030 and KCS has set a target of a 42 reduction percent by 2034. It is therefore expected that significantly more GHG emissions reductions will be achieved by CPKC than those provided by the efficiencies of the merger.

12. CP is establishing a Carbon Reduction Taskforce to evaluate the different potential ways of reducing carbon. This focus on decarbonization benefits both CP and its customers, who have their own carbon reduction goals for their supply chain. One of CP's most

significant efforts in this regard is to undertake retrofitting three locomotives to be powered by hybrid hydrogen fuel cells and batteries (a program that has received a $15 million grant from Emissions Reduction Alberta) to demonstrate the potential of this technology. In so doing, CP is leading a globally significant effort to develop the first zero emissions line-haul freight locomotive.

13. Figure 3 below illustrates how the first such locomotive will appear when it is launched in the coming months.

FIGURE 3
CP'S H2OEL HYDROGEN-POWERED LOCOMOTIVE

II. THE CP/KCS TRANSACTION WILL GENERATE SIGNIFICANT ENVIRONMENTAL BENEFITS

14. The combination of CP and KCS networks, and then the expansion of that combined network, will bring added efficiencies to existing rail operations and freight transportation that will have direct environmental benefits. The efficiency of that combined network and its expanded capacity and reach will also bring environmental benefits beyond that network as truck traffic is diverted off public highways.

A. Greenhouse Gas Emission Reductions

15. CP and KCS's combined U.S. rail network will significantly reduce greenhouse gas emissions and other air pollutants, removing over 389,000 tons of GHGs annually by full integration in Year 3.

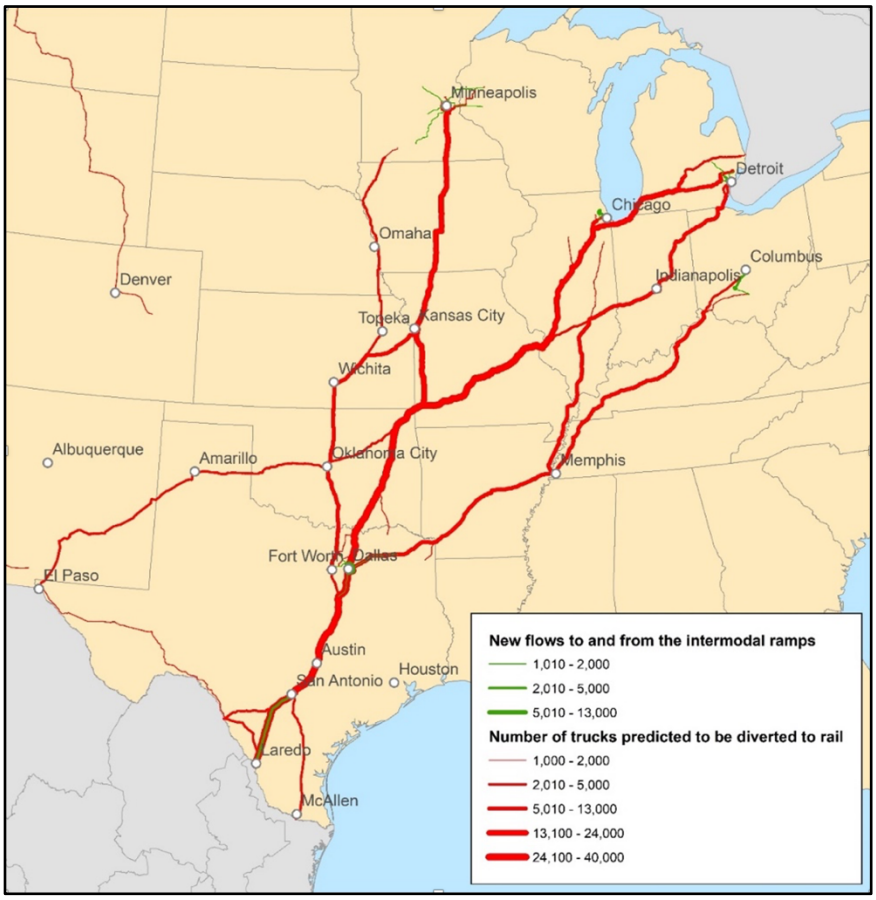
16. ***Improved GHG Intensity of Integrated CPKC Operations***. CPKC will achieve significant Transaction-related rail operational efficiencies that will improve GHG relative to how CP and KCS separately handle rail traffic today. Freight shipments that currently have to stop in rail yards to change carriers will be handled as a single, long-haul movement on the combined network.

17. Trains are more fuel efficient when they are moving. Stopping, idling, and switching are less fuel efficient. By creating more long-haul movements with fewer stops, the combined CP/KCS network will improve fuel efficiency. In addition, the combined network will have more sidings that will improve efficiency by allowing better meets, longer trains, and other improvements.

18. These improvements will have significant environmental benefits. The combined CP/KCS network will improve fuel efficiency and reduce GHG emissions. Table 1 below summarizes the various emissions factors comparing baseline intensity (2019) with the optimized combined CP/KCS network and anticipated GHG intensity through Year 5.

TABLE 1
GREENHOUSE GAS EMISSIONS REDUCTIONS FROM RAIL OPERATIONS

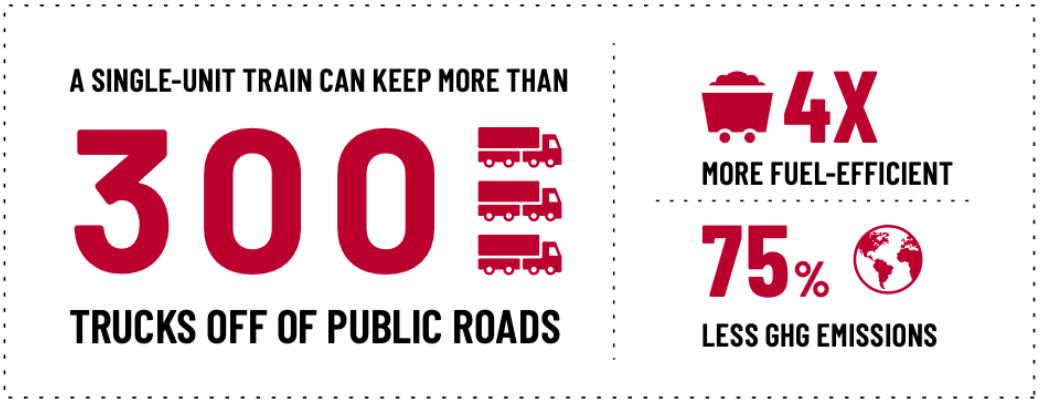
Estimated Emissions Factors	Base	Optimized Base	Year 1[(1)]	Year 2	Year 3	Year 4	Year 5
Daily GHG Emissions[(2)]	12,441	12,235	14,404	15,610	16,630	16,892	17,157
GHG Intensity[(3)]	11.8	11.6	11.2	11.2	11.2	11.2	11.1
Daily Baseline GHG Emissions[(4)]	12,441	12,441	15,140	16,429	17,517	17,852	18,192
Daily Avoided GHG Emissions[(5)]	0	206	736	819	887	960	1,034



(1) Assumed to be 2023 for the purpose of this analysis
(2) Tons of CO2e
(3) Kg CO2e/1,000 GTM
(4) Tons of CO2e if at baseline 11.8 GHG emission intensity
(5) Avoided due to fuel efficiency improvement (Tons of CO2e/Day)

19. Within five years after commencing merged operations, the improved efficiency of CPKC will avoid in excess of 377,000 tons of GHG emissions annually. Those efficiencies will cumulatively avoid more than 1.6 million tons of GHG by the end of Year 5. Over the course of the next 20 years, the Transaction would yield GHG reductions of more than 7.2 million tons by reducing the GHG intensity of CPKC's rail operations relative to the separate CP and KCS baselines, and without yet factoring in the further reductions expected as a result of pursuing the SBTi targets described in Paragraph 11 above.

20. ***Removing Trucks from Highways***. The combined CP/KCS network in the U.S. will also reduce greenhouse gases by taking trucks off the highways. CP/KCS will be more competitive with long-haul trucking. Long-haul freight movements on a single rail carrier are faster and cheaper than shipping with multiple modes and carriers.



21. As shown in Figure 4 below, the new intermodal services offered by CP/KCS will annually divert almost 64,000 long-haul truck shipments to rail. *See* Verified Statement of Bengt Mutén, Figure 2.

FIGURE 4
MAP SHOWING REDUCTION IN LONG-HAUL TRUCKING AS A RESULT OF TRANSACTION
(FROM MUTÉN V.S.)

22. Moving freight by rail is about four times more fuel efficient than moving the same freight by truck. This increased efficiency leads to 75 percent fewer greenhouse gas emissions when freight moves by rail. CP regularly uses the graphic set forth as Figure 5 below to illustrate this point:

FIGURE 5
TRAINS ARE MORE ENVIRONMENTALLY FRIENDLY THAN TRUCKS

23. Because combining CP's and KCS's networks will move freight from truck to rail, the benefits of CP's and KCS's efforts to improve fuel efficiency and otherwise reduce greenhouse gas emissions will be magnified. Rail will make up a larger share of freight transportation, and rail transportation will be even better for the environment in the future than it is now. Greenhouse gas emissions will be reduced for the transportation sector overall as a result of this Transaction.

24. Mr. Mutén's analysis shows that on average the long-distance truck movements shifted to rail intermodal service would move over 1,500 miles on the highway. CP's outside consultants calculated that by diverting these trucks to rail intermodal service, the Transaction would achieve significant reductions in GHGs and other airborne pollutants: it would reduce GHG emissions by 65,000 tons annually (more than 1.3 million tons over the next 20 years) and reduce particulate emissions of sulfur dioxide (SO_2) by more than 10.3 metric tons and fine particulate matter (PM2.5) emissions by almost two metric tons over the same period.

25. Using well-known social cost calculations, CP's consultants estimated that the 20-year economic value of these greenhouse gas reductions would be more than $79 million.

B. Other Environmental Benefits

1. Reduced Highway Costs

26. Lowering the number of trucks on U.S. highways will also reduce the amount of congestion, the number of accidents on highways, and the costs of highway pavement maintenance.

27. CP's outside consultants found that, over 20 years, truck-to-rail diversions caused by the Transaction would reduce total truck vehicle miles traveled ("VMT") by almost 2 billion miles and reduce the number of trucks on the road by almost 1.3 million.

28. CP also asked its outside consultants to calculate the economic value of these highway benefits. Those consultants applied well-known social cost calculations to the diversion data in the Operating Plan. They concluded that the diversions would save nearly $750 million over 20 years.

2. Reduced Noise Pollution

29. Reducing the number of trucks on U.S. highways also has the benefit of reducing noise pollution from those trucks. That benefit will be distributed throughout the communities where the combined CP/KCS network will take trucks off the roads.

3. Accelerated Shift Away from Traditional Crude-by-Rail to Safe DRUbit Alternative

30. As explained in the Joint Verified Statement of Jonathan Wahba and Michael J. Naatz, the proposed Transaction will also accelerate an ongoing shift away from transporting flammable crude oil toward the movement of non-hazardous "DRUbit." DRUbit is non-hazardous because flammable diluent has been removed from it.

31. This shift will improve transportation efficiency, save fuel, and reduce emissions, while reducing risks to the environment. Increased use of DRUbit will also improve public safety by reducing the risks that could accompany accidents.

III. CP/KCS ARE ALREADY PARTICIPATING COOPERATIVELY IN THE BOARD'S ENVIRONMENTAL REVIEW PROCESS

32. CP has been meeting regularly with the Office of Environmental Analysis ("OEA") since this docket was opened. Those meetings have included, at various times, OEA personnel, OEA's third-party contractor, CP personnel, CP's outside consultant, CP's outside counsel, and KCS personnel.

33. CP received an information request from OEA on May 27, 2021. That request asked CP to provide OEA with information on transaction-related rail traffic on the combined CP-KCS network. CP developed responses to OEA's request based on the operational changes reflected in the Operating Plan presented with this Application.

34. As CP was preparing its responses, it continued to meet with OEA to ensure that those responses gave OEA the information it needed. Beginning on September 15, 2021, KCS joined CP in working on the responses to OEA's information request, and CP and KCS submitted their joint response to OEA's information request on October 28, 2021.

35. CP and KCS will continue to work with OEA to answer any questions and respond to any future information requests. CP and KCS will also work with OEA during the environmental review process to ensure that OEA has everything it needs to complete the process in an accurate and timely manner.

36. The traffic increases that Applicants forecast for the CP/KCS network will happen because they are offering improved transportation options for shippers, and more intense competition against other transportation providers, which benefits the public. To the extent

CPKC will attract traffic away from trucks or other rail lines, the communities where that freight currently moves will see decreases in traffic. Those decreases may create localized benefits in those communities.

37. At the same time, CP and KCS recognize that increasing rail traffic on their combined U.S. network may have localized impacts. CP and KCS will work with OEA and any affected communities to identify and mitigate those impacts where appropriate. As Mr. Creel has committed in his Verified Statement, CP and KCS will work closely with OEA and affected communities to appropriately mitigating potential environmental impacts.

VERIFIED STATEMENT OF JAMES CLEMENTS

1. I am James Clements, Canadian Pacific's Senior Vice-President Strategic Planning and Technology Transformation, a position I have held since September 2019. I am responsible for overseeing the operation of CP's Network Service Centre and driving results through the application of technology, improving data integration, and delivering continuous process improvements.

2. Prior to my current role, I served as Vice-President Strategic Planning and Transportation Services since 2015. I have been at CP in other positions for more than 20 years, giving me an extensive understanding of CP's customers, processes and systems.

3. I am submitting this statement to explain how CP will approach the integration of CP's and KCS's rail networks from an information technology ("IT") perspective, as well as how CP's approach to operational change will assure a successful and seamless transition to an integrated CPKC network. CP's experience integrating the DM&E and CMQ, coupled with our core competencies in operational planning and execution across the U.S. and Canadian portions of the CP system, will support a smooth integration of the CP and KCS networks without disrupting services our customers receive.

I. CP/KCS'S PLAN FOR CAREFUL IT INTEGRATION

4. I begin by outlining how CP and KCS will approach the integration of their IT systems to assure that the benefits of integrated CP/KCS services are realized without disruption. With IT systems becoming a more and more important part of running any business, CP is intensely focused on taking the steps necessary to ensure that the IT systems relied upon by the CP/KCS network function effectively, can speak to one another where necessary, and support

both existing levels of service and the new CP/KCS single line services that the transaction will make possible.

A. The Guiding Principles of the CP/KCS IT Integration Plan

5. The overall goal for integrating CP's and KCS's IT systems is to assure that all of the systems required to run a railroad safely, and to deliver results for our customers, are maintained without disruption. We will accomplish this goal first by extensive planning, undertaken in close cooperation with KCS. Each IT system of both railroads is already being assessed from the perspective of its intended function, its capabilities, and issues relating to its integration with comparable systems on the other railroad, among many other factors. We will base our integration plan on a careful evaluation of the approach that will best serve the twin objectives of supporting the single-line offerings of the CP/KCS network while simultaneously minimizing any risk of IT-related disruptions to the services CP/KCS provides to our customers

6. In some cases, integration will occur very promptly to support the operations of the combined CP/KCS network. For example, we will integrate CP and KCS data into a new integrated CPKC service design system, providing the ability for consolidated strategic operational planning. Network designs generated using this common system will subsequently be published to both CP and KCS critical traffic systems, so that train movements can continue to be executed by each railroad using their separate existing systems, enabling the transaction synergies and CP's mature PSR principles to start on Day 1.

7. Our plans for systems in this category will ensure that all necessary preparatory work occurs as promptly as possible following the Control Date, and that appropriate testing has been undertaken in advance to guarantee fail-safe execution when the cut-over occurs.

8. In other cases, the actual integration of particular IT systems need not occur for some time, if ever. For example, some systems may be able to operate in parallel on different

portions of the network, especially those with no customer-facing function. In those instances, we will plan to integrate only when doing so improves the efficiency of the combined network, and only in a manner that ensures no risk to network services. As one possible illustration, KCS's Mexican operations use different IT systems for certain function from those used on KCS's U.S. network, and we may decide to leave in place some of those separate systems.

9. CP is well aware that some past railroad mergers did not proceed smoothly, at times as a result of failures relating to the IT systems necessary to perform the basic functions of modern railroading, including keeping track of railcars. For some past transactions, the challenges were particularly acute because operations had to be altered in significant ways immediately. For example, in CSX/NS/Conrail, Conrail's network – and all of its rail traffic – had to be split into two parts and combined with either NS or CSX, requiring IT systems to immediately accommodate extraordinary changes.

10. The CP/KCS combination involves no such complexities. CP and KCS are end-to-end partners today, and the CP/KCS transaction will not dictate any Day One changes in operations. Over time, of course, CP/KCS will offer new single-line services and attract rail traffic from other railroads and off of the highways. While this process will begin promptly, it will continue over the three years following Board approval of CP control (the "Control Date"). With appropriate planning for integration that begin after the Control Date, there will be no disruption to how the two railroads run when CP takes the helm. As integration progresses, CP's and KCS's IT systems will be integrated where appropriate, pursuant to methodical planning that is underway now and will be complete by the Control Date. As we implement the planned changes, we will proceed cautiously, flipping no switches until we are ready to do so with confidence that no disruption will ensue.

B. Our Rigorous Planning for Successful IT Integration

11. As I noted above, CP and KCS are currently engaged in a thorough assessment of each of the IT systems used by the two railroads, with an eye toward planning whether and how to integrate those systems on the combined CP/KCS network in accord with the principles outlined above. For mission-critical systems that must be integrated on or shortly after the Control Date, our planning will entail advance testing of data in "non-production" environments (*i.e.*, in the background, without any real-world consequences) to ensure compatibility of KCS data with CP applications and business processes.

12. Our planning, preparation, and testing encompasses all aspects of the two companies' IT systems. Broadly speaking, these functional areas can be thought of as falling into six categories:

- Systems that support operating our freight transportation services;
- Systems that support the sale of our transportation services and customer service functions;
- Systems that support procurement of inputs;
- Systems that support the management of our human resources;
- Systems that support our finances; and
- Systems that support internal corporate-level services, like IT services and regulatory, safety, and other reporting and related services.

I describe below our anticipated approach in each of these areas.

1. IT Systems that Support Operating Freight Transportation

13. In general, these systems are among the most critical to our mission of seamlessly integrating CP and KCS from an operational point of view. These systems support our development of tactical transportation plans and our implementation of efficient train

dispatching, crew management, and PTC functions. They also allow us to keep track of and proactively manage our freight operations, enable us to fulfill customer orders, and support our locomotive and car mechanical services, among other functions.

14. Currently, CP and KCS each possess IT systems that are adequate to meet each railroad's freight operations. To ensure a safe and efficient transition, we plan to continue to use each railroad's existing systems for an initial period following the Control Date..

15. Over time we will migrate operations across both networks to a single set of platforms, choosing the best options based on the following factors: technological capabilities, ability to meet current and future needs of the CP/KCS network, and the ease with which a platform can accommodate a seamless transition for use by additional portions the CP/KCS network. We will not move to any new system until we are ready to do so without disruption.

16. However, to facilitate full, real-time awareness of operations across the combined system during the process of integration, we will very quickly implement systems that allow cross-railroad visibility by extracting and displaying data but doing it in a way that does not disrupt the functioning of the underlying systems. We would use this visibility to manage the network consistent with our PSR principles. We would then systematically complete the move to one system for the whole network underneath this visibility layer.

17. Our integration of IT systems will begin, on the Control Date, with the integration of KCS information into a CPKC Service Design system, providing the ability for consolidated strategic operational planning as outlined in the Operating Plan. Subsequently, the network design will be published to both CP and KCS critical traffic systems, so that train movements can continue to be executed by CP and KCS using their existing systems.

18. Following the Control Date, as CPKC completes its system integration planning and training, improved data exchange across the combined system will enable more efficient handling of formerly-interlined traffic. Concurrently, CP and KCS will complete detailed plans for implementing the best practices of the two roads on a system-wide basis. During the second and third years following approval of the transaction shipment functions will be moved in to centralized CPKC systems.

2. IT Systems that Support Marketing, Sales, and Customer Service

19. CP and KCS both have IT systems that support customer relationship management. We have underway a business capability assessment that will, when implemented following the Control Date, align both companies to a single platform for this function. Our goal is that the common platform, by drawing from the best capabilities of each railroad's current systems, will allow us to (a) improve customer experiences and interactions with marketing and sales and customer service, and (b) support key functions like contract management, and improved customer visibility and engagement.

3. IT Systems that Support Our Procurement of Goods and Services

20. CP and KCS each possess systems supporting supply and asset management that are adequate to their respective needs. All of our systems in this area will continue to be managed using CP and KCS existing systems for an initial period following approval of the transaction, after which they will migrate to a single system that offers optimal functionality and long-term benefits. Simplifying the process, by the anticipated Control Date both railroads will use the same procurement system (Ariba), which will allow for a seamless transition without significant change.

4. IT Systems that Support Our Management of Human Resources

21. Currently, CP and KC each possess administrative systems that are adequate to their respective HR-related needs. Human resources, benefits, talent management, and payroll functions will continue to be managed using CP and KCS existing systems for an initial period following approval of the transaction, after which they will migrate to a single system that offers optimal functionality and long-term benefits.

5. IT Systems that Support Our Financial Operations

22. CP and KCS each possess systems supporting financial operations. As CPKC will quickly need to report consolidated financial results at the end of the first quarter after the Control Date, we plan to install a system to retrieve and consolidate needed financial information shortly after the Control Date and then undertake a planned and systematic migration over the next two to three years to one financial reporting system.

23. During the IT planning process, CP and KCS will work together to identify the optimal single solution for post-Control Date corporate financial reporting as a prelude to consolidating financial reporting and systems. Once a solution direction has been determined, CP and KCS will evaluate the master data required for corporate reporting, merge the data within a non-production test landscape, and validate the consolidated information meets the post-Control Date reporting needs of CPKC.

6. IT Systems that Support Internal Corporate-Level Services

24. CP and KCS each possess a variety of systems to support corporate-level services, such as real estate and facilities, police and security services, legal functions, environmental functions, training, and corporate communications. These systems need not be integrated on Day 1. We are working to identify the best solutions for the combined company and will implement those solutions when appropriate.

25. In addition, both organizations have cyber security frameworks that will be maintained post-Control Date and then systematically transitioned to a common cyber-security framework that delivers optimal protection. Systems supporting Sarbanes-Oxley ("SOX") compliance and internal controls will also be reviewed to ensure compliance.

C. Integration of CP and KCS IT Systems Will Save Capital

26. To implement the integration of CP and KCS IT systems and invest in the common systems and supporting hardware needed to support the seamless integration of the two rail systems, we anticipate that CPKC will spend approximately $138.6 million in IT-related capital over the three-year integration period.

27. At the same time, however, the CP/KCS combination will enable reductions in total capital spending. As we integrate our technology capital and create single system solutions, we will be able to reduce duplication in discretionary capital spend over the integration period and beyond. In addition, although the combined organization will continue to spend capital on basic replacement requirements – such as ongoing replacements of laptops and cellphones, as one of many examples, we also anticipate savings in this area as well though the combination of the two organizations. In the aggregate, we anticipate saving approximately $11.5 million annually in discretionary IT capital (roughly 27 percent of the pre-Transaction total across both organizations) and approximately $10 million annually in basic IT replacement capital spending (roughly 18.5 percent of combined pre-Transaction spending). Overall, we estimate that our consolidation of IT systems across the CPKC network will unlock capital savings of approximately $21.6 million annually.

28. During the integration period, the bulk of our discretionary spending in IT will be directed toward the integration of the two railroads' IT systems, allowing us to invest $138.6

million in IT integration with the expenditure of only about $11.5 million in incremental capital dollars.

29. Table 1 below summarizes the anticipated IT integration investments by year and the capital savings we anticipate over the same period.

TABLE 1
CAPITAL EXPENDITURES TO SUPPORT IT INTEGRATION
(USD MILLIONS)

Period	Capital to Support CPKC IT Integration	Capital Savings Enabled by Transaction	Discretionary IT Capital Directed to Integration	Net Incremental Capital Expenditures
Year 1	$50.0	$18.5	$23.9	$7.7
Year 2	$46.2	$21.6	$20.8	$3.8
Year 3	$42.3	$21.6	$20.8	$0.0
Total Years 1-3	$138.6	$61.6	$65.4	$11.5
Post-Integration Annual Savings	$0.0	$21.6	$0.0	-$21.6

II. OUR DEEP EXPERIENCE AND CAREFUL PLANNING WILL ENSURE SEAMLESS OPERATIONAL INTEGRATION WITHOUT DISRUPTION

A. CP's Successful Emphasis on Operational Planning and Execution

30. Although the integration of CP's and KCS's IT systems will be an important part of the success of CPKC, effectively transitioning the separate CP and KCS networks will ultimately be the product of a well-planned and cross-disciplinary effort of two companies equally motivated to elevate their operational excellence and customer service via a combined CP/KCS system.

31. From CP's perspective, our heritage as a PSR "early-adopter" provides a well-spring of experience with successful operational change. Over the past nine years we have adopted PSR principles, applied and honed them successfully across a wide range of operating conditions, and then pivoted to a focus on traffic growth. We have done this by paying attention

to the things that matter: planning and execution all geared to providing customers with the service quality and reliability that meets their needs. We are not always perfect, but the focus and discipline we impose internally on these fundamental attributes of the service we provide have served us well, driving industry-leading traffic growth over the past five years, as John Brooks explains in his verified statement.

32. The trip plan we generate for every single shipment is at the heart of implementation of CP's PSR-based operating plans. When a customer submits a waybill we push the waybill through our Trip Plan engine ("TPE"). The TPE generates for each carload shipment a plan for handling and train service to get the car from origin to destination. This information is visible to the operating team so they can execute the plan. The TPE is also linked to our service design operating model and generates a plan for which specific train will pick up the railcar from the customer at the "first mile," which specific trains the railcar will be moved in over the road, and which specific local train will deliver the car over the "last mile." This trip planning function generates a baseline ETA (estimated time of arrival) for customers and ETI (estimated time of interchange) for our rail carrier interline partners. We assess the plan against the needs of our customers and measure our actual performance to ensure we are executing on the commitments we make to the customer.

33. CP's track record in planning and executing operational change is second to none, and supports a high degree of confidence that our plans to integrate the CP and KCS networks will proceed smoothly. Our PSR focus allows us to plan operational change in detail, just as we have already begun to do for CP/KCS as part of the preparation of our Operating Plan. We execute daily on planned network operational adjustments, some big and some small, but all

predicated on the core philosophy that both CP and our customers benefit when operations are predictable.

34. We will bring this philosophy to the integration of KCS just as we do on a day-to-day basis, and just as we did when we integrated the CMQ in 2020. Though CMQ's operations were smaller and simpler than KCS's, our approach to operational planning and execution successfully integrated CMQ's operations into the CP system and optimized those operations to achieve improved train scheduling and run times, reduced terminal dwell, improved long-distance blocking to reduce inefficient re-processing at intermediate points, and reduced mainline work events, all without service disruption.

35. Similarly, when we integrated DM&E and IC&E into the CP system in 2009, we re-routed mainline trains, reduced mainline work events in order to improve transit times and service reliability, and re-focused the railroad's operations on providing scheduled and reliable train service rather than the relatively ad hoc, as-needed operations. We also transitioned away from reliance on unit train services for customers that did not have unit train facilities, moving those customers' shipments in more regularly scheduled manifest trains rather than requiring them to accumulate volumes over several days to support unit train operations. All of this improved the services we were able to provide our customers, unlocked traffic growth, and was implemented without operational disruption.

36. These are among the kinds of changes that we anticipate as we optimize the combined CP/KCS network, and we will approach that task will the same attention to detail and flawless execution as we do every operational change we make on the CP system.

B. CP's IT Tools Will Facilitate Smooth Operational Integration

37. A key aspect of CP's operational success has been our focus on measuring our own performance against a wide array of metrics and holding managers accountable when we fall short of our goals. We also make extensive data on our operating performance available to our customers in real-time, so that they can understand what to expect from our services and help to hold us accountable for the promises we make. We will bring this philosophy to the integration of CP and KCS as well.

1. Measuring Our Performance Against Key Metrics

38. CP deploys a wide array of tools to provide our customers and our internal support personnel with information about our own performance. PSR demands measurement and a commitment to continuous improvement. It is an operating model that embraces technology as a tool to strengthen service, safety and performance. Data and connectivity are as powerful as a locomotive. Our information technology team has built a new integrated platform that has exponentially increased the volume of data available to us. We are informed in real-time and act as needed – even before issues arise.

39. Among the key tools that we will deploy to ensure that operations on the combined CP/KCS system are carried out efficiently and without service disruption are our terminal, train performance, and overall railway performance monitoring tools.

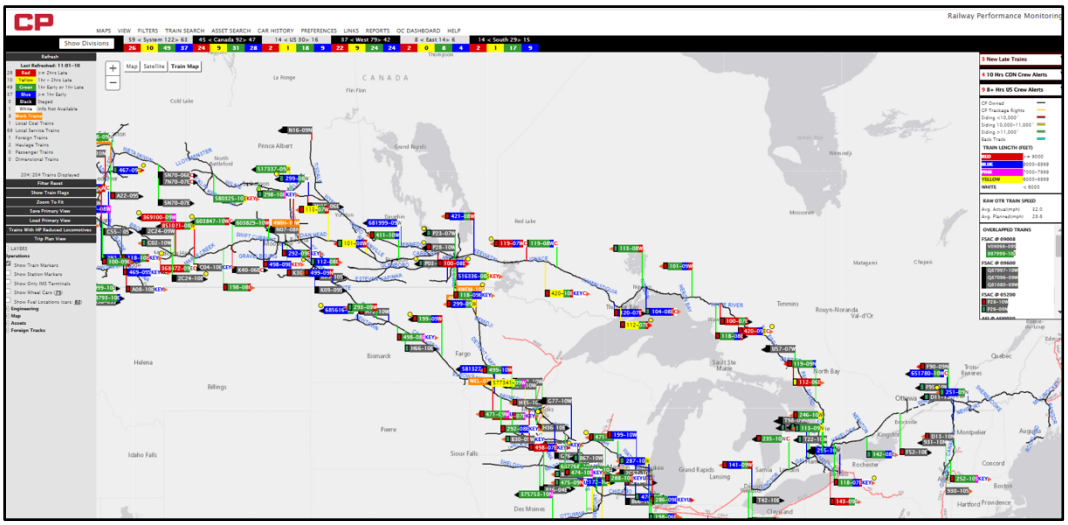
40. ***Integrated service design and implementation***. CP's sophisticated performance reporting dashboards support the mature execution of PSR principles and efficiencies. Once a consolidated strategic operational plan is published, a new integrated data lake layer will ingest and consolidate both CP and KCS traffic systems operational events in a non-intrusive read-only manner. This data lake will provide a consolidated view of train schedules, waybilling, car

scheduling and tracking, locomotives, crews, and critical PSR KPIs, and will be a vital aspect of CP/KCS's improved operating practices initiative.

41. ***Trip plan compliance monitoring***. A key service assurance indicator for CP involves monitoring of our performance against the Trip Plans that are generated for every waybilled carload. This monitoring helps us to improve our reliability and on-time performance, which also provides customers with transparency about what to expect from our operations.

42. Every time a waybill is generated a trip plan is generated for the shipment to ensure the "right car on the right train" to provide predictable and timely service to our customers. Our trip plan compliance dashboard reports all shipments planned along with actual transit time, transit variances, and trip plan accuracy. Our team of professional railroaders have the ability to drill down and view operational failures, answering where, when and why a shipment may have diverged from its original trip plan and to ensure we meet or exceed customer expectations.

43. ***Terminal performance monitoring***. Our terminal performance monitoring console allows users to monitor performance of terminals across CP's system, proactively recognize trends in performance, and develop action plans to optimize operational fluidity. The terminal scorecard reports, approximately every four hours, key metrics that relate directly to how well the railway is processing cars for the benefit of our customers. We track not only the performance of railcars moving through the terminal (*e.g.*, classification of manifest trains, block swaps, and run-though trains), but the status of cars moving to/from local industries.



44. ***Train performance monitoring.*** Our IT tools allow near-real-time monitoring of train performance over the road, allowing us to identify when trains are running behind schedule and make operational adjustments as warranted.

45. ***Railway Performance Monitoring ("RPM").*** Our proprietary RPM application was developed to provide a network view of train performance, operating plan adherence, and the overall health of the network. The application captures detailed planned and actual train information for all en-route trains with movement events. Operating data is combined with train, customer, shipment and location information to present train location and performance information in geographical and detailed views.

46. The RPM dashboard provides our operating teams with graphical representations of the entire CP Network displaying all trains running and on time performance with a "red/yellow/green" status and key performance indicators. Using this tool, employees can hover over any train for details (including train type and kind, power, current train speed, destination, last location, origin, length, weight, planned and actual horse power per ton, load/empty count, last event, crew information, marshalling, key train data, presence of PIH/TIH carloads, dangerous cars, and dimensional compliance). This state-of-the-art tool allows the user to drill down at any level (detailed train information, crew information, delays incurred, consist, Operating Plan compliance consist accuracy, locomotive and block compliance, block design, and many other operating metrics).

47. A snapshot of the RPM overview of CP's network on a recent day in 2021 is set forth in Figure 1 below.

FIGURE 1
SNAPSHOT OF NETWORK-WIDE VIEW IN CP'S RPM SYSTEM

48. The RPM application allows users to:

- Monitor train performance and network health;
- Investigate delays to make quick and better decisions to ensure our operations run according to plan;
- Track trip plan compliance and improve connections;
- Reduce yard dwell and review real time compliance reports;
- Improve train speed by reducing the impact of slow orders imposed by required maintenance; and
- Allow CP personnel to access in a single, simple tool information drawn from numerous internal systems to allow them to get answers, make decisions, and keep customers informed about what to expect.

49. Our success pairing these tools with our culture of operational excellence is exemplified by the recognition we have received from our automotive customers. Service consistency and reliability are critically important to the automotive industry, which operates lean manufacturing processes and just-in-time deliveries. With the introduction of Trip Plans, we have been able to provide our customers with precision on-time delivery performance. Our

premium service will deliver products quickly, reliably and seamlessly. CP's operational excellence in automotive compounds enables fluid and consistent loading and unloading, and our industry-leading handling means that products are delivered in showroom conditions. As a result of our premium service, CP has recently won awards from Toyota USA, Toyota Canada and American Honda. We have been recognized in the categories of logistics quality, on-time performance, damage-free service and overall customer service

2. Providing Customers with Information that Allows Them to Hold Us Accountable

50. CP/KCS will provide customers with an array of tools that enable them to monitor the planned and actual movement of their freight across the CP/KCS system and provide up-to-date information on any deviations from our plan.

51. The information available to customers begins with that provided by our customer service teams. Our Customer Station portal offers a view for our sales team of scheduled and actual switch times at each customer location to ensure we have physically switched our customers. To ensure we have spotted cars our CRM tool gives our marketing team a real-time view by customer and ship site of cars ordered vs. cars spotted. Our trip plan dashboards provide visibility for end-to-end movements of shipments and the on-time shipment status of those shipments.

52. Our customer service representatives in our Network Service Centers provide real-time customer assistance for at-risk shipments and where shipments require intervention to meet commitments on the last mile. Our teams interface daily with local operations personnel who have their finger on the pulse for customer commitments ensuring ownership and accountability of the hand-offs from yard to yard and region to region and make themselves accessible to our commercial team as situations need to be managed.

53. We provide CP customers with access to many of the same tools directly. Our carload customers are given access to our customer station product, which provides them with the same map views as our internal teams have, showing where their railcars stand in the logistics pipeline, at serving yards, or at the shipper or receiver facilities. Customers can create reports on shipment transit times and local event history for railcars in and out of any of their facilities. The tool also provides the ability to obtain rate quotes and view tariffs, to order empty equipment for loading, to order railcars for placement on arrival, to release railcars, and to update inventory in their facility.

54. Similarly, KCS offers its customers a self-service portal called "MyKCS." MyKCS offers significant functionality and information including the ability to create specific origin/destination "patterns" and related waybills, request and release empty equipment, create reports from a general inquiry, and search pricing terms. Additional MyKCS functionality includes the ability to view an intermodal service schedule, gain access to training manuals and tutorials, and car/train specific track and trace functionality. KCS is currently engaged in an initiative to upgrade the frequency and accuracy of shipment status and ETA information contained within the MyKCS portal.

55. During the integration process we will leave in place all of the functionality of the separate CP and KCS customer portals, likely with a CPKC overlay so that users understand that they are interfacing with an integrated CP/KCS system. Over time, these functions will be integrated into a common platform that offers best-of-both capabilities.

56. The bottom line is that we hold ourselves accountable for service when we show our customers their shipment ETAs and trip plans using the same data and information we use internally, and we provide transparency as to how we are performing across the entire network.

We will bring all of these approaches to the combined CP/KCS system with the objective of ensuring that every customer understands what service to expect from us and that we measure up to those expectations.

VERIFICATION

I, James Clements, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

VERIFIED STATEMENT OF DEAN VARGAS

1. My name is Dean Vargas. I am the Managing Director – Revenue Planning for Canadian Pacific Railway Limited ("CP"). I have served in this position since 2018. My duties include supervision of the following areas: preparation and monitoring of CP's revenue budgets and forecasts, revenue accounting and revenue reporting, internal costing and profitability analysis, and regulatory finance and reporting, which includes the preparation and filing of the Soo Line Railroad Company's Annual Report Financial Data (R1).

2. I have served in various roles during my 15-year tenure at CP, including in the areas of investment analysis and capital planning, resource planning, operating expense planning, and strategic long-term financial planning. My education includes a Master of Business Administration (MBA) from the University of Calgary Haskayne School of Business. I am also a CFA® Charterholder with the CFA Institute.

3. I am submitting this Verified Statement to: (a) summarize the general and administrative ("G&A") cost savings that CP/KCS expects to realize from the Transaction, and describe how these savings were developed, and (b) present the pro forma financial statements for the new Canadian Pacific Kansas City ("CPKC") on a consolidated basis following CP's acquisition of control of KCS, specifically Pro Forma Balance Sheets (Exhibit 16, Appendix D), Pro Forma Income Statements (Exhibit 17, Appendix E), and Pro Forma Sources and Application of Funds Statements (Exhibit 18, Appendix F); and (c) present the Summary of Benefits Exhibit (Appendix B) to the Application.

I. GENERAL AND ADMINISTRATIVE COST SAVINGS

4. CP/KCS expects to save $57.1 million annually in G&A expenses (in 2019 dollars) through the consolidation of CP and KCS functions across the United States and

Canada.[1] This estimate is likely conservative, as it only represents a 17 percent reduction in aggregate G&A expenses relative to the total U.S. G&A expenses reflected in Schedule 410 of the two railroads' R1 reports.[2]

5. The planned consolidation of G&A functions is built to assure that the combined company is adequately resourced to support the operational and customer needs of the combined railroad as well as the planned growth initiatives.

A. Methodology and Approach

6. My estimate of G&A savings was developed in three stages: information collection, consultation with G&A functional leaders, and quantification of savings.

1. Information Collection

7. A team of Finance, Human Resources, and Information Technology personnel from CP and KCS collected detailed information on G&A expenses and resources, both personnel and non-personnel, at a functional level for both companies. The information collected was a combination of internally available data and publicly available data such as the Annual Reports (Form 10-K and R1), and Quarterly Form A&B Wage Statistics for Soo Line and KCSR. The key functional areas reviewed were Information Technology ("IT"), Finance, Human Resources, Legal, Sales & Marketing, and General Administration.

2. Consultation with G&A Function Leaders

8. In the next stage, CP's managers responsible for each G&A functional area were consulted in order to identify opportunities for reductions and efficiencies. These consultations were done separately for personnel and non-personnel reductions.

---

[1] We do not anticipate changes in the G&A functions relating to KCSM in Mexico.

[2] KCSR 2019 Annual Report (R1), Schedule 410; Soo line 2019 Annual Report (R1), Schedule 410.

9. Regarding personnel reductions, Chad Rolstad, Vice-President Human Resources Chief Culture Officer of CP, and his team reviewed the organizations of both railroads at a functional level by location with the managers responsible for each functional area. Mr. Rolstad's Verified Statement explains the basis for the anticipated workforce reductions.

10. With respect to non-personnel reductions, my team and I reviewed the G&A related spend with key functional leaders, most notably Pam Arpin VP & Chief Information Officer of CP, to identify opportunities to reduce redundant resources and duplicative spending at the two railroads.

3. Quantifying Savings Estimate

11. Finally, once all G&A functional information was collected, consultations with senior functional areas were complete, and G&A resource reductions were identified, my team and I translated these reductions into estimated expense savings.

12. For personnel savings, unit costs per position were derived for average salaries and wages, benefits, relocation, and separation costs for CPRC, Soo Line, and KCSR. These unit costs were based on a combination of internal and publicly available data, as well as assumptions provided by CP's Compensation team. The unit costs were then applied to the expected personnel reductions.

13. For non-personnel savings, my team and I quantified these by reviewing the reductions proposed by senior functional leaders and aligning those reductions with the detailed G&A information we collected. The team also identified the expenses that are variable with changes in personnel. For these expenses, unit costs were derived for CPRC, Soo Line, and KCSR. The unit costs were then applied to the personnel reductions identified by CP's Human Resources team and senior CP functional area leaders.

14. The resulting G&A savings estimates were then further reviewed and validated by pertinent managerial personnel responsible for the areas in which the consolidations would occur.

B. Summary of G&A Savings

1. Personnel Savings

15. The G&A efficiencies and consolidations permitted by the control transaction will allow CP/KCS to realize $43.7 million annually in personnel savings. The personnel changes are reflected in the Verified Statement of Chad Rolstad and the Labor Impact Exhibit accompanying the Operating Plan. These personnel savings will largely be achieved through consolidating CP's and KCS's headquarters for United States operations in Kansas City, closing CP's U.S. operating headquarters in Minneapolis, MN, and through the course of normal attrition. The majority of the expected position reductions will come from IT, Finance, and Human Resources. There are negligible position reductions anticipated for Sales & Marketing in order to maintain strong customer service and to ensure that there are adequate resources to support traffic growth.

16. I estimate that a total of $47.4 million in one-time relocation and separation costs will be required over the three-year integration period to achieve these personnel savings. These one-time costs are primarily due to the relocation of Soo Line and DM&E positions from Minneapolis to CPKC's new U.S. operating headquarters in Kansas City, and separation costs associated with reductions in duplicative executive positions. For non-executive positions, the majority of these savings will be achieved through retirements and normal attrition with minimal separation costs.

2. Non-Personnel Savings

17. The CP/KCS Transaction will also achieve substantial reductions in non-personnel G&A expenditures. Overall, CPKC will save $13.4 million annually in non-personnel

corporate overhead expenses incurred in a normal year. $2.0 million of these savings will be the result of non-personnel expenditures that will decrease with a reduction in personnel levels, such as business travel and meals, training, and mobile communication.

18. $9.6 million of the non-personnel savings will come from efficiencies achieved in the areas of IT, utilities, and facilities. These saving will be achieved through consolidating the CP and KCS U.S. operating headquarters in Kansas City, eliminating a duplicative IT data center in Minneapolis, rationalizing IT software licensing and subscription fees, and insourcing of outsourced IT contract services.

19. The remaining $1.8 million in non-personnel savings will come from eliminating duplicative fees and expenses related to reporting as a publicly traded company, given that the two railroads will report financial results as a single consolidated company. Examples of these duplicative costs include audit and stock exchange listing fees.

C. Conclusion

20. Table 1 below summarizes total estimated G&A expense savings by year following approval of the control transaction.

TABLE 1
ANNUAL SAVINGS AND ONE-TIME COSTS FOR
GENERAL & ADMINISTRATIVE EXPENSE
($USD MILLIONS)

G&A Expenses	Year 1	Year 2	Year 3	Normal Year
Personnel	$33.4	$39.4	$43.7	$43.7
Non-Personnel (Travel, Meals, Training, Mobile Communication)	$1.3	$1.7	$2.0	$2.0
Information Technology (Licensing, Subscriptions, Contract Services)	$1.3	$8.1	$8.1	$8.1
Facilities (CP Plaza One, Data Centre)	$0.0	$0.0	$1.4	$1.4
Audit & Listing Fees	$0.0	$1.8	$1.8	$1.8
Total G&A Savings*	**$36.0**	**$51.0**	**$57.1**	**$57.1**
Employee Separation Costs	$31.7	$1.3	$0.9	N/A
Employee Relocation Costs	$6.3	$2.0	$5.2	N/A
Total One – Time Costs	**$38.0**	**$3.3**	**$6.1**	N/A

* - Numbers may not add precisely because of rounding.

21. The process by which CP/KCS estimated the likely magnitude of G&A consolidations and the resulting cost savings was careful and thorough. These planned consolidations are both reasonable and realistic, and will allow CP/KCS to maintain adequate resources to properly support the operations of the combined railroads and maintain excellent customer service. All of the planned consolidations – along with the resulting savings – will be achieved within the first three years following the Control Date. Ultimately, these savings will result in a more efficient combined rail system that will benefit customers through increased competition and optionality as well as an improved cost structure.

II. PRO FORMA FINANCIAL STATEMENTS

22. I prepared the pro forma financial statements included within the Application as Exhibits 16, 17, and 18. Consistent with Board regulations, these statements are designed to

show the financial impact of the Transaction on a forward-looking basis over the three-year period during which the Transaction will be implemented and in a normal post-implementation year. All impacts are shown relative to the base year pro forma financial statements of the combined CP/KCS for 2019.

23. The notes accompanying Exhibits 16, 17, and 18 explain in detail the assumptions underlying the statements. I explain below the process by which I prepared these statements.

A. Building Base Year Data for Pro Forma Financial Statements

24. As a starting point for my preparation of pro forma financial statements, I used CP's and KCS's 2019 financial statements. I used 2019 as the base year for purposes of the Application to be consistent with the other analyses presented in the Application, including the Operating Plan and traffic analyses, which were based on 2019 traffic data.

25. I adjusted the 2019 financial statements in order to create representative base year financial statements. My adjustments eliminated the effect of special charges and other significant non-recurring items reflected in 2019 results. Specifics of the adjustments are described in the notes to the Exhibits.

26. CP's historical 2019 consolidated financial statements as reported under U.S. GAAP in its 2019 Annual Report on Form 10-K are reported in Canadian dollars. I adjusted CP's 2019 financial statements to state amounts in U.S. dollars, and to eliminate the effects of non-recurring transactions, such as deferred tax expenses and recoveries and non-cash gains related to foreign exchange translation of debt and lease liabilities. These items are outlined in the Non-GAAP Performance Measures section of CP's 2019 Q4 Results Earnings Release, January 29, 2020, which is Exhibit 1 to this statement. CP's 2019 financial statements were also adjusted to recognize the $700 million merger termination fee paid to CP in Q2 2021.

27. I adjusted KCS's historical 2019 consolidated financial statements as reported under U.S. GAAP in its 2019 Annual Report on Form 10-K to eliminate the effects of non-recurring transactions such as restructuring charges, foreign exchange gains, and foreign exchange components of income tax. These adjustments are outlined in the Statement Regarding Non-GAAP Financial Measures section of KCS's 2019 Q4 Results Earnings News Release, January 17, 2020, which is Exhibit 2 to this statement.

B. Combined Base Year Pro Forma Financial Statements

28. I started with the separate base year financials for CP and KCS and combined those statements on a pro forma basis, reflecting the financial terms of the Transaction. The results are shown in the Base Year columns of the pro forma financial statements presented in Exhibit 16 (Balance Sheet), Exhibit 17 (Income Statement), and Exhibit 18 (Sources and Application of Funds).

29. These combined Base Year statements reflect the purchase price of the Transaction and apply purchase accounting adjustments to create pro forma base year final statements for the post-transaction CPKC. The consideration of the purchase price and any purchase accounting adjustments are consistent with the Form F-4 Registration Statement CP filed with the Securities and Exchange Commission on October 1, 2021 (set forth as Exhibit 7.1 to the Application, in Volume 4). The only differences between this Application and the Form F-4 purchase price and purchase accounting adjustments are driven by:

- This Application is presented in U.S. dollars, whereas the Form F-4 presents the purchase price and purchase accounting adjustments in Canadian dollars.
- There are minor differences between certain values given this Application uses 2019 financial statements as the starting point, whereas Form F-4 primarily uses financials statements as of June 30, 2021.

30. Details regarding the financing arranged by CP in connection with its acquisition of KCS can be found in CP's Form F-4 and is summarized in the Verified Statement of Chris De Bruyn and Section 1180.6(a)(1)(iv) of the Application ("Nature and Amount of Any New Securities or Other Financial Arrangements").

C. Forward-Looking Pro Forma Financial Statements

31. To develop the portions of the pro forma financial statements covering the period post-Control Date, I drew upon the information developed by other witnesses concerning the impact of the Transaction on revenues, costs, and capital expenditures over the period of the Transaction's full implementation. Those impacts are summarized in the Summary of Benefits Exhibit, which I discuss in more detail in the next section.

32. The implementation of the Transaction – and thus the realization of the value of the quantitative benefits associated with implementing the Transaction – is expected to be achieved over three years. In my pro forma statements, therefore, I consider Years 1-3, representing the first, second, and third year following the commencement of integration (upon Board control approval).

33. Each of the forward-looking pro forma financial statements shows the financial effects of those impacts. For example, the pro forma statements include increased revenues from traffic attracted to the more competitive services of the combined system, the operating expense savings from more efficient operations, and the consolidation of G&A functions, all net of the additional costs to handle the additional traffic and the one-time costs to achieve the various synergies (including capital expenditures to add capacity, and employee separation and relocation costs). The pro forma financial statements depict the effects of the interest payments and principal repayments on the CP acquisition debt and CP and KCS historical debt. These statements also take into account dividend payments for CP's existing common shares

outstanding and dividend payments for incremental CP common shares issued as part of the purchase price consideration.

34. In addition to showing the effects in Years 1-3, the statements depict a "normal year" in which the benefits have been fully realized with no remaining one-time costs necessary to achieve those benefits.

III. QUANTIFICATION OF BENEFITS FROM THE CP/KCS TRANSACTION

35. I have summarized in the Summary of Benefits Exhibit certain of the quantifiable benefits and synergies arising from the combination of CP and KCS. That Exhibit is set forth in Appendix B to the Application.

36. Two principal categories of benefit are summarized in the Exhibit: (a) increases in net operating revenues realized by CPKC as a result of the traffic attracted to new, more competitive offerings of the CP/KCS network and (b) the net reductions in operating and administrative expenses that will flow from the Transaction.

37. The net operating revenue increases reflect public benefits in the sense that they result from the CP/KCS combination offering transportation services that are viewed by shippers as more attractive than the options currently available to them, thereby intensifying competition in affected transportation markets. These net revenue gains are based on the analyses presented in the Verified Statement of Bengt Mutén, the Joint Verified Statement of Richard W. Brown and Nathan S. Zebrowski, and the Verified Statement of Michael Baranowski.

38. The reductions in operating expenses reflect public benefits in the sense that they will allow CPKC to compete more aggressively and offer more attractive service and economic terms in light of the combined system's lower cost base. These expense reductions, and the one-time costs required to achieve them, are based on the analyses presented in my discussion of

G&A costs set forth above, and in the Verified Statements of Michael Baranowski, Chad Rolstad, Myron Becker, and James Clements, as well as Exhibit 13 (Operating Plan).

39. The benefits summarized in the Summary of Benefits Exhibit are not exhaustive. The Exhibit does not attempt to quantify numerous other categories of benefits addressed throughout the Application, including:

- Benefits realized by existing customers of CP and KCS in terms of improved market access, improved service levels, and improved economic terms. For many customers, the Transaction will result in real and quantifiable logistics savings. The Joint Verified Statement of Jonathan Wahba and Michael J. Naatz touches on these benefits.

- Benefits realized by all current and potential consumers of rail transportation services in the markets served by the CPKC network. These consumers will benefit from more intense competition and improved transportation options, even if they do not end up choosing CPKC services. The Joint Verified Statement of Jonathan Wahba and Michael J. Naatz and the Verified Statement of W. Robert Majure touch on these benefits.

- Benefits realized by the North American economy as a whole, for which the enhanced CPKC network will provide additional transportation capacity to support trade and economic growth, as discussed in the Verified Statements of Keith Creel and Patrick J. Ottensmeyer.

- Expanded job opportunities, as explained in the Verified Statement of Myron W. Becker and the Labor Impact Exhibit.

- Environmental benefits through the more efficient rail operations of the CPKC system and the shift of freight traffic from long-distance trucking to more environmentally friendly rail transportation, as explained in the Verified Statement of Glen Wilson.

40. The benefits reflected in the Exhibit are presented in 2019 U.S. dollars. Table 2 below shows the likely magnitude of those same benefits in a "normal year" following the implementation of the Transaction in 2025 dollars (indexed from 2019 to 2025 using a factor of 1.1262). This factor is based on the Railroad Cost Adjustment Factor All-Inclusive Less Fuel with Error Adjustment (All-LF). The index factor uses actual All-LF values from 2019 to 2021 and forecasted All-LF values from 2021 to 2025 provided to me by IHS Markit.

41. As shown in Table 2, the Transaction is expected to yield quantifiable benefits of over $1 billion annually in 2025 dollars.

TABLE 2
SUMMARY OF BENEFITS INDEXED FROM 2019 DOLLARS TO 2025 DOLLARS
($USD MILLIONS)

Benefit Component	Normal Year
Operating Revenue Gains	
Revenue Increase from Traffic Gains	$1,150.8
Cost of Handling Added Traffic	$(345.0)
Net Revenue Gains	$ 805.8
Operating Cost Savings	
Engineering - Maintenance of Way	$ -
Mechanical	$22.4
Transportation	$70.4
Equipment Requirements & Utilization	$14.4
Intermodal Operations	$ -
Purchasing	$23.1
Subtotal	$130.3
Support Functions (G&A)	$64.3
Total Operating Benefits	$194.6
Employee Separation/Relocation	$ -
Total Merger Benefits	**$1,000.4**

CPRL 2019 Q4 EARNINGS RELEASE
(JAN. 29, 2020)

NEWS

www.cpr.ca (TSX:CP) (NYSE:CP)

Release: January 29, 2020 (8 a.m. ET)

CP reports record fourth-quarter and full-year results; carries momentum into 2020

Calgary - Canadian Pacific Railway Limited (TSX: CP) (NYSE: CP) today announced its fourth-quarter results, including record revenues of $2.07 billion, an operating ratio ("OR"') of 57.0 percent, improved diluted earnings per share ("EPS") of $4.82 and record adjusted diluted EPS of $4.77.

FOURTH-QUARTER 2019 HIGHLIGHTS

- Revenues increased 3 percent to $2.07 billion, from $2.01 billion in Q4 2018
- OR increased by 50 basis points (bps) to 57.0 percent
- Diluted EPS improved 26 percent to $4.82, from $3.83 in Q4 2018. Adjusted diluted EPS rose 5 percent to $4.77, from $4.55 in Q4 2018

"CP's strong operational performance and commitment to controlling costs enabled the railway to be successful despite headwinds to our bulk franchise," said Keith Creel, CP President and CEO. "We continue to take a disciplined approach to sustainable, profitable growth - a plan rooted in the foundations of precision scheduled railroading. This approach in 2019 enabled CP to once again deliver its highest-ever revenues and the lowest-ever yearly operating ratio."

FULL-YEAR 2019 HIGHLIGHTS

- Revenues increased 7 percent to a record $7.79 billion
- Diluted EPS increased 29 percent to a record $17.52 from $13.61, while adjusted diluted EPS rose 13 percent to $16.44, from $14.51
- OR improved to 59.9 percent, a 140 bps improvement year over year

"Global economic uncertainty caused by geopolitical and macroeconomic challenges slowed rail volumes across North America," said Creel. "By leveraging our unique growth opportunities and applying our precision scheduled railroading operating model, CP led the industry in volume growth for the second year in a row and, once again, delivered on its guidance."

FULL-YEAR 2020 GUIDANCE

- High single-digit to low double-digit adjusted diluted EPS growth relative to 2019's adjusted diluted EPS of $16.44
- Mid-single digit volume growth, as measured in revenue ton miles (RTMs)
- Capital expenditures of $1.6 billion

CP's guidance is based on the following key assumptions:

- Effective tax rate of 25 percent
- Other components of net periodic benefit recovery will decrease by approximately $40 million versus 2019

"Our industry-leading CP family remains focused on safely harnessing our network capacity to provide unique solutions that leverage our network strengths and our superior service," said Creel. "As we head into 2020 and beyond, I'm confident we'll continue to see wins in the marketplace enabling us to continue to outpace the economy and our peers."

CP will discuss its results with the financial community in a conference call beginning at 10 a.m. eastern time (8 a.m. mountain time) on Jan. 29, 2020.

Conference Call Access
Toronto participants dial in number: 1-647-427-7450
Operator assisted toll free dial in number: 1-888-231-8191
Callers should dial in 10 minutes prior to the call.

Webcast
We encourage you to access the webcast and presentation material in the Investors section of CP's website at investor.cpr.ca

A replay of the fourth-quarter conference call will be available by phone through to Feb. 12, 2020 at 416-849-0833 or toll free 1-855-859-2056, password 9683103.

Access to the webcast and audio file of the presentation will be made available at investor.cpr.ca

Non-GAAP Measures
Although CP has provided a forward-looking Non-GAAP measure (Adjusted diluted EPS), management is unable to reconcile, without unreasonable efforts, the forward-looking Adjusted diluted EPS to the most comparable GAAP measure, due to unknown variables and uncertainty related to future results. These unknown variables may include unpredictable transactions of significant value. In past years, CP has recognized significant asset impairment charges, management transition costs related to senior executives and discrete tax items. These or other similar, large unforeseen transactions affect diluted EPS but may be excluded from CP's Adjusted diluted EPS. Additionally, the U.S.-to-Canadian dollar exchange rate is unpredictable and can have a significant impact on CP's reported results but may be excluded from CP's Adjusted diluted EPS. In particular, CP excludes the FX impact of translating the Company's debt and lease liabilities, the impact from changes in income tax rates and a provision for uncertain tax item from Adjusted diluted EPS. Please see Note on Forward-Looking Information below for further discussion.

For information regarding non-GAAP measures, including reconciliations to the nearest GAAP measures, see the attached supplementary schedule Non-GAAP Measures.

Note on forward-looking information
This news release contains certain forward-looking information and forward-looking statements (collectively, "forward-looking information") within the meaning of applicable securities laws. Forward-looking information includes, but is not limited to, statements concerning expectations, beliefs, plans, goals, objectives, assumptions and statements about possible future events, conditions, and results of operations or performance. Forward-looking information may contain statements with words or headings such as "financial expectations", "key assumptions", "anticipate", "believe", "expect", "plan", "will", "outlook", "should" or similar words suggesting future outcomes. This news release contains forward-looking information relating, but not limited to, the success of our business, our operations, priorities and plans, anticipated financial and operational performance, business prospects and demand for our services, costs and planned capital expenditures, programs and strategies, including anticipated 2020 full-year adjusted diluted EPS growth, expected RTMs and expected capital expenditures.

The forward-looking information contained in this news release is based on current expectations, estimates, projections and assumptions, having regard to CP's experience and its perception of historical trends, and includes, but is not limited to, expectations, estimates, projections and assumptions relating to: foreign exchange rates, effective tax rates, land sales and pension income; North American and global economic growth; commodity demand growth; sustainable industrial and agricultural production; commodity prices and interest rates; performance of our assets and equipment; sufficiency of our budgeted capital expenditures in carrying out our business plan; geopolitical conditions, applicable laws, regulations and government policies; the availability and cost of labour, services and infrastructure; and the satisfaction by third parties of their obligations to CP. Although CP believes the expectations, estimates, projections and assumptions reflected in the forward-looking information presented herein are reasonable as of the date hereof, there can be no assurance that they will prove to be correct.

Undue reliance should not be placed on forward-looking information as actual results may differ materially from those expressed or implied by forward-looking information. By its nature, CP's forward-looking information involves inherent risks and uncertainties that could cause actual results to differ materially from the forward looking information, including, but not limited to, the following factors: changes in business strategies; general North

American and global economic, credit and business conditions; risks associated with agricultural production, such as weather conditions and insect populations; the availability and price of energy commodities; the effects of competition and pricing pressures; industry capacity; shifts in market demand; changes in commodity prices; uncertainty surrounding timing and volumes of commodities being shipped via CP; inflation; geopolitical instability; changes in laws, regulations and government policies, including regulation of rates; changes in taxes and tax rates; potential increases in maintenance and operating costs; changes in fuel prices; uncertainties of investigations, proceedings or other types of claims and litigation; labour disputes; risks and liabilities arising from derailments; transportation of dangerous goods; timing of completion of capital and maintenance projects; currency and interest rate fluctuations; effects of changes in market conditions and discount rates on the financial position of pension plans and investments; trade restrictions or other changes to international trade arrangements; climate change; and various events that could disrupt operations, including severe weather, such as droughts, floods, avalanches and earthquakes, and cybersecurity attacks, as well as security threats and governmental response to them, and technological changes. The foregoing list of factors is not exhaustive. These and other factors are detailed from time to time in reports filed by CP with securities regulators in Canada and the United States. Reference should be made to "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations - Forward-Looking Information" in CP's annual and interim reports on Form 10-K and 10-Q.

The forward-looking information contained in this news release is made as of the date hereof. Except as required by law, CP undertakes no obligation to update publicly or otherwise revise any forward-looking information, or the foregoing assumptions and risks affecting such forward-looking information, whether as a result of new information, future events or otherwise.

About Canadian Pacific
Canadian Pacific is a transcontinental railway in Canada and the United States with direct links to major ports on the west and east coasts. CP provides North American customers a competitive rail service with access to key markets in every corner of the globe. CP is growing with its customers, offering a suite of freight transportation services, logistics solutions and supply chain expertise. Visit cpr.ca to see the rail advantages of CP. CP-IR

NOTES TO INTERIM CONSOLIDATED FINANCIAL INFORMATION
December 31, 2019
(unaudited)

1 Basis of presentation

This unaudited interim consolidated financial information of Canadian Pacific Railway Limited (“CP”, or “the Company”), expressed in Canadian dollars, reflects management’s estimates and assumptions that are necessary for their fair presentation in conformity with generally accepted accounting principles in the United States of America (“GAAP”). It does not include all disclosures required under GAAP for annual financial statements and interim financial statements, and should be read in conjunction with the 2018 annual consolidated financial statements and notes included in CP's 2018 Annual Report on Form 10-K and 2019 interim consolidated financial statements. The accounting policies used are consistent with the accounting policies used in preparing the 2018 annual consolidated financial statements, except for the newly adopted accounting policy discussed in Note 2.

CP's operations can be affected by seasonal fluctuations such as changes in customer demand and weather-related issues. This seasonality could impact quarter-over-quarter comparisons.

In management’s opinion, the unaudited interim consolidated financial information includes all adjustments (consisting of normal and recurring adjustments) necessary to present fairly such information. Interim results are not necessarily indicative of the results expected for the fiscal year.

Implemented in 2019

Leases

On January 1, 2019, the Company adopted the new Accounting Standards Update ("ASU") 2016-02, issued by the Financial Accounting Standards Board ("FASB"), and all related amendments under FASB Accounting Standards Codification ("ASC") Topic 842, Leases. Using the cumulative-effect adjustment transition approach, the Company recognized a cumulative-effect adjustment to the opening balance of retained earnings in the period of adoption. Accordingly, comparative financial information has not been restated and continues to be reported under the accounting standards in effect for those periods.

In January 2019, the Company implemented a lease management system to assist in delivering the required accounting changes. To facilitate the transition, the Company made policy choices to utilize available practical expedients provided by the new standard, including the:

- Acceptance of the package of practical expedients, permitting the Company not to reassess lease existence, classification, and capitalization of initial direct costs previously determined for all leases under Topic 840, Leases;
- Acceptance of the previous accounting treatment for land easements where Topic 840 was not applied; and
- Use of hindsight at transition to determine lease term length.

Operating leases with fixed terms and in-substance fixed terms were transitioned by recognizing both an operating lease liability and right-of-use ("ROU") asset. Operating lease liabilities and ROU assets were calculated at the present value of remaining lease payments using the Company’s incremental borrowing interest rate as at January 1, 2019. ROU assets were further modified to include previously accrued balances for prepayments and initial direct costs, but reduced for accrued lease incentives. The Company did not recognize operating lease liabilities or ROU assets for leases requiring variable payment not dependent on an index or rate, or short term leases with a term of 12 months or less.

On adoption, the standard had a material impact on the Company's consolidated balance sheet, but did not have a significant impact on its consolidated statement of income. The most significant impact was the recognition of operating lease ROU assets and operating lease liabilities, while the Company's accounting for finance leases remained substantially unchanged.

The impact of the adoption of ASC 842 as at January 1, 2019 was as follows:

(in millions of Canadian dollars)	As reported December 31, 2018	New lease standard cumulative-effect	As restated January 1, 2019
Assets			
Properties	$ 18,418	$ (12)	$ 18,406
Other assets	71	399	470
Liabilities			
Accounts payable and accrued liabilities	$ 1,449	$ 58	$ 1,507
Other long-term liabilities	237	337	574
Deferred income taxes	3,518	(3)	3,515
Shareholders' equity			
Retained earnings	$ 6,635	$ (5)	$ 6,630

There was no significant impact to lessor accounting upon the adoption of ASC 842.

3 Other (income) expense

	For the three months ended December 31		For the year ended December 31	
(in millions of Canadian dollars)	**2019**	2018	**2019**	2018
Foreign exchange (gain) loss on debt and lease liabilities	**$ (37)**	$ 113	**$ (94)**	$ 168
Other foreign exchange losses (gains)	**—**	1	**(4)**	3
Other	**6**	4	**9**	3
Other (income) expense	**$ (31)**	$ 118	**$ (89)**	$ 174

4 Income taxes

During the fourth quarter of 2019, the Company recorded a deferred tax expense in unrecognized tax benefits of $24 million as a result of a specific uncertain tax position of a prior period (2018 - $nil).

During the fourth quarter of 2019 and 2018, there were no changes in corporate income tax rates. For the year ended December 31, 2019, revaluations of deferred tax balances totaled a net recovery of $88 million (2018 - a net recovery of $21 million) associated with a decrease in the Alberta provincial (2018 - Iowa and Missouri state) corporate income tax rate.

5 Business combination

On December 30, 2019 CP acquired Central Maine & Québec Railway Canada Inc. (“CMQ Canada”) and Central Maine & Québec Railway U.S. Inc. (“CMQ U.S.”) (together “CMQ”) for cash consideration of $174 million. CMQ owns 237 miles of rail lines in Québec and 244 miles of rail lines in Maine and Vermont.

The acquisition of CMQ Canada has been accounted for as a business combination under the acquisition method of accounting. The consideration was $47 million and acquired net assets, recorded at their estimated fair values, included intangible assets of $5 million and goodwill of $10 million. The purchase price allocation was prepared on a preliminary basis and is subject to change as additional information becomes available concerning the fair value and tax bases of the net assets acquired.

CP currently accounts for its investment in CMQ U.S., of $127 million, using the equity method of accounting as the shares of CMQ U.S. are held in an independent voting trust while the United States Surface Transportation Board (“STB”) considers the Company's control application. Subject to obtaining final approval of the transaction by the STB, the acquisition of CMQ U.S. will be accounted for as a business combination using the acquisition method of accounting.

6 Shareholders' equity

On December 17, 2019, the Company announced a new normal course issuer bid ("NCIB"), commencing December 20, 2019, to purchase up to 4.80 million Common Shares for cancellation on or before December 19, 2020. As at December 31, 2019, the Company had purchased 0.30 million Common Shares for $100 million under this NCIB program.

On October 19, 2018, the Company announced an NCIB, commencing October 24, 2018, to purchase up to 5.68 million Common Shares for cancellation on or before October 23, 2019. The Company completed this NCIB on October 23, 2019.

All purchases were made in accordance with the respective NCIB at prevalent market prices plus brokerage fees, or such other prices that were permitted by the Toronto Stock Exchange, with consideration allocated to share capital up to the average carrying amount of the shares and any excess allocated to Retained earnings.

The following table describes activities under the share repurchase program:

	For the three months ended December 31		For the year ended December 31	
	2019	2018	**2019**	2018
Number of Common Shares repurchased[1]	**610,688**	2,187,200	**3,794,149**	4,683,162
Weighted-average price per share[2]	**$ 308.74**	$ 259.74	**$ 300.65**	$ 240.68
Amount of repurchase (in millions)[2]	**$ 189**	$ 568	**$ 1,141**	$ 1,127

[1] Includes shares repurchased but not yet cancelled at quarter end.
[2] Includes brokerage fees.

(1) Certain figures have been revised to conform with current presentation or have been updated to reflect new information as certain operating statistics are estimated and can continue to be updated as actuals settle.

(2) Average train speed is defined as a measure of the line-haul movement from origin to destination including terminal dwell hours. It excludes delay time related to customers or foreign railroads, and also excludes the time and distance travelled by: i) trains used in or around CP's yards; ii) passenger trains; and iii) trains used for repairing track.

(3) Fuel efficiency is defined as U.S. gallons of locomotive fuel consumed per 1,000 GTMs.

(4) Includes gallons of fuel consumed from freight, yard and commuter service but excludes fuel used in capital projects and other non-freight activities.

(5) An employee is defined as an individual currently engaged in full-time, part-time, or seasonal employment with CP.

(6) Workforce is defined as total employees plus contractors and consultants.

Non-GAAP Measures

The Company presents Non-GAAP measures including Free cash to provide a basis for evaluating underlying earnings and liquidity trends in the Company's business that can be compared with the results of operations in prior periods. In addition, these Non-GAAP measures facilitate a multi-period assessment of long-term profitability, allowing management and other external users of the Company's consolidated financial information to compare profitability on a long-term basis, including assessing future profitability, with that of the Company's peers.

These Non-GAAP measures have no standardized meaning and are not defined by GAAP and, therefore, may not be comparable to similar measures presented by other companies. The presentation of these Non-GAAP measures is not intended to be considered in isolation from, as a substitute for, or as superior to the financial information presented in accordance with GAAP.

Non-GAAP Performance Measures

The Company uses adjusted earnings results including Adjusted income and Adjusted diluted earnings per share ("EPS") to evaluate the Company's operating performance and for planning and forecasting future business operations and future profitability. These Non-GAAP measures provide meaningful supplemental information regarding operating results because they exclude certain significant items that are not considered indicative of future financial trends either by nature or amount. As a result, these items are excluded for management assessment of operational performance, allocation of resources and preparation of annual budgets. These significant items may include, but are not limited to, restructuring and asset impairment charges, individually significant gains and losses from sales of assets, the foreign exchange ("FX") impact of translating the Company's debt and lease liabilities, discrete tax items, and certain items outside the control of management. These items may not be non-recurring. However, excluding these significant items from GAAP results allows for a consistent understanding of the Company's consolidated financial performance when performing a multi-period assessment including assessing the likelihood of future results. Accordingly, these Non-GAAP financial measures may provide insight to investors and other external users of the Company's consolidated financial information.

Significant items that impact reported earnings for 2019 and 2018 include:

2019:

- in the fourth quarter, a deferred tax expense of $24 million as a result of a provision for an uncertain tax item of a prior period that unfavourably impacted Diluted EPS by 17 cents;
- in the second quarter, a deferred tax recovery of $88 million due to the change in the Alberta provincial corporate income tax rate that favourably impacted Diluted EPS by 63 cents; and
- during the course of the year, a net non-cash gain of $94 million ($86 million after deferred tax) due to FX translation of debt and lease liabilities as follows:
  - in the fourth quarter, a $37 million gain ($32 million after deferred tax) that favourably impacted Diluted EPS by 22 cents;
  - in the third quarter, a $25 million loss ($22 million after deferred tax) that unfavourably impacted Diluted EPS by 15 cents;
  - in the second quarter, a $37 million gain ($34 million after deferred tax) that favourably impacted Diluted EPS by 24 cents; and
  - in the first quarter, a $45 million gain ($42 million after deferred tax) that favourably impacted Diluted EPS by 30 cents.

2018:

- in the second quarter, a deferred tax recovery of $21 million due to reductions in the Missouri and Iowa state tax rates that favourably impacted Diluted EPS by 15 cents; and
- during the course of the year, a net non-cash loss of $168 million ($150 million after deferred tax) due to FX translation of debt as follows:
  - in the fourth quarter, a $113 million loss ($103 million after deferred tax) that unfavourably impacted Diluted EPS by 72 cents;
  - in the third quarter, a $38 million gain ($33 million after deferred tax) that favourably impacted Diluted EPS by 23 cents;
  - in the second quarter, a $44 million loss ($38 million after deferred tax) that unfavourably impacted Diluted EPS by 27 cents; and
  - in the first quarter, a $49 million loss ($42 million after deferred tax) that unfavourably impacted Diluted EPS by 29 cents.

2020 Outlook

As a result of a 2020 plan built on sustainable, profitable, growth along with further productivity improvement, CP expects mid-single digit revenue ton-mile ("RTM") growth and high single-digit to low double-digit Adjusted diluted EPS growth. CP's expectations for Adjusted diluted EPS growth in 2020 are based on Adjusted diluted EPS of $16.44 in 2019. As CP continues to enhance the service, productivity and safety of the network, the Company plans to invest approximately a total of $1.6 billion in capital programs. CP's outlook assumes an annualized effective tax rate of approximately 25 percent. CP estimates other components of net periodic benefit recovery to decrease by approximately $40 million versus 2019. Adjusted diluted EPS is defined and discussed further below.

Although CP has provided a forward-looking Non-GAAP measure (Adjusted diluted EPS), management is unable to reconcile, without unreasonable efforts, the forward-looking Adjusted diluted EPS to the most comparable GAAP measure, due to unknown variables and uncertainty related to future results. These unknown variables may include unpredictable transactions of significant value. In past years, CP has recognized significant asset impairment charges, management transition costs related to senior executives and discrete tax items. These or other similar, large unforeseen transactions affect diluted EPS but may be excluded from CP's Adjusted diluted EPS. Additionally, the U.S.-to-Canadian dollar exchange rate is unpredictable and can have a significant impact on CP's reported results but may be excluded from CP's Adjusted diluted EPS. In particular, CP excludes the FX impact of translating the Company's debt and lease liabilities, the impact from changes in income tax rates and a provision for uncertain tax item from Adjusted diluted EPS. Please see Note on Forward-Looking Information in this Earnings Release for further discussion.

Reconciliation of GAAP Performance Measures to Non-GAAP Performance Measures

The following tables reconcile the most directly comparable measures presented in accordance with GAAP to the Non-GAAP measures:

Adjusted income is calculated as Net income reported on a GAAP basis adjusted for significant items.

	For the three months ended December 31		For the year ended December 31	
(in millions)	**2019**	2018	**2019**	2018
Net income as reported	**$ 664**	$ 545	**$ 2,440**	$ 1,951
Less significant items (pre-tax):				
Impact of FX translation gain (loss) on debt and lease liabilities	**37**	(113)	**94**	(168)
Add:				
Tax effect of adjustments[1]	**5**	(10)	**8**	(18)
Income tax rate changes	**—**	—	**(88)**	(21)
Provision for uncertain tax item	**24**	—	**24**	—
Adjusted income	**$ 656**	$ 648	**$ 2,290**	$ 2,080

[1] The tax effect of adjustments was calculated as the pre-tax effect of the adjustments multiplied by the applicable tax rate for the above items of 13.43% and 8.55% for the three months and year ended December 31, 2019, and 9.28% and 10.64% for the three months and year ended December 31, 2018, respectively. The applicable tax rates reflect the taxable jurisdictions and nature, being on account of capital or income, of the significant items.

Adjusted diluted earnings per share is calculated using Adjusted income, as defined above, divided by the weighted-average diluted number of Common Shares outstanding during the period as determined in accordance with GAAP.

	For the three months ended December 31		For the year ended December 31	
	2019	2018	**2019**	2018
Diluted earnings per share as reported	**$ 4.82**	$ 3.83	**$ 17.52**	$ 13.61
Less significant items (pre-tax):				
Impact of FX translation gain (loss) on debt and lease liabilities	**0.26**	(0.79)	**0.67**	(1.17)
Add:				
Tax effect of adjustments[1]	**0.04**	(0.07)	**0.05**	(0.12)
Income tax rate changes	**—**	—	**(0.63)**	(0.15)
Provision for uncertain tax item	**0.17**	—	**0.17**	—
Adjusted diluted earnings per share	**$ 4.77**	$ 4.55	**$ 16.44**	$ 14.51

[1] The tax effect of adjustments was calculated as the pre-tax effect of the adjustments multiplied by the applicable tax rate for the above items of 13.43% and 8.55% for the three months and year ended December 31, 2019, and 9.28% and 10.64% for the three months and year ended December 31, 2018, respectively. The applicable tax rates reflect the taxable jurisdictions and nature, being on account of capital or income, of the significant items.

ROIC and Adjusted ROIC

ROIC is calculated as Operating income less Other (income) expense and Other components of net periodic benefit recovery, tax effected at the Company's annualized effective tax rate, divided by Average invested capital. Average invested capital is defined as the sum of total Shareholders' equity, Long-term debt, Long-term debt maturing within one year and Short-term borrowing, as presented in the Company's Consolidated Financial Statements, averaged between the beginning and ending balance over a rolling twelve-month period. Adjusted ROIC excludes significant items reported in Operating income, Other (income) expense, and Other components of net periodic benefit recovery in the Company's Consolidated Financial Statements, as these significant items are not considered indicative of future financial trends either by nature or amount. Adjusted average invested capital is similarly adjusted

for the impact of these significant items, net of tax, on closing balances as part of this average. ROIC and Adjusted ROIC are performance measures that measure how productively the Company uses its long-term capital investments, representing critical indicators of good operating and investment decisions made by management, and are important performance criteria in determining certain elements of the Company's long-term incentive plan.

Calculation of ROIC and Adjusted ROIC

	For the year ended December 31	
(in millions, except for percentages)	**2019**	2018
Operating income as reported	**$ 3,124**	$ 2,831
Less:		
Other (income) expense	**(89)**	174
Other components of net periodic benefit recovery	**(381)**	(384)
Tax[1]	**806**	749
	$ 2,788	$ 2,292
Average invested capital	**$ 15,579**	$ 14,964
ROIC	**17.9%**	15.3%

[1] Tax was calculated at the annualized effective tax rate of 22.43% and 24.64% for each of the above items for the years ended December 31, 2019 and 2018, respectively.

	For the year ended December 31	
(in millions, except for percentages)	**2019**	2018
Operating income as reported	**$ 3,124**	$ 2,831
Less:		
Other (income) expense	**(89)**	174
Other components of net periodic benefit recovery	**(381)**	(384)
Significant items (pre-tax):		
Impact of FX translation gain (loss) on debt and lease liabilities	**94**	(168)
Tax[1]	**874**	788
	$ 2,626	$ 2,421
Average invested capital	**$ 15,579**	$ 14,964
Less impact of periodic significant items net of tax on the above average:		
Income tax recovery from income tax rate changes	**44**	11
Provision for uncertain tax item	**(12)**	—
Adjusted average invested capital	**$ 15,547**	$ 14,953
Adjusted ROIC	**16.9%**	16.2%

[1] Tax was calculated at the adjusted annualized effective tax rate of 24.96% and 24.55% for each of the above items for the years ended December 31, 2019 and 2018, respectively.

Free Cash

Free cash is calculated as Cash provided by operating activities, less Cash used in investing activities, adjusted for changes in cash and cash equivalents balances resulting from FX fluctuations, the cash settlement of hedges settled upon issuance of debt, and the acquisition of Central Maine and Québec Railway ("CMQ"). Free cash is a measure that management considers to be an indicator of liquidity. Free cash is useful to investors and other external users of the Company's Consolidated Financial Statements as it assists with the evaluation of the Company's ability to generate cash from its operations without incurring additional external financing. The cash settlement of forward starting swaps that occurred in the second quarter of 2018 in conjunction with the issuance of long-term debt is not an indicator of CP's ongoing cash generating ability and therefore has been excluded from Free cash. Similarly, the acquisition of CMQ that occurred in the fourth quarter of 2019 is not indicative of investment trends and has also been excluded from Free cash. Positive Free cash indicates the amount of cash available for reinvestment in the business, or cash that can be returned to investors through dividends, stock repurchase programs, debt retirements or a combination of these. Conversely, negative Free cash indicates the amount of cash that must be raised from investors through new debt or equity issues, reduction in available cash balances or a combination of these. Free cash should be considered in addition to, rather than as a substitute for, Cash provided by operating activities.

Reconciliation of Cash Provided by Operating Activities to Free Cash

(in millions)	For the three months ended December 31 2019	For the three months ended December 31 2018	For the year ended December 31 2019	For the year ended December 31 2018
Cash provided by operating activities	**$ 1,033**	$ 931	**$ 2,990**	$ 2,712
Cash used in investing activities	**(668)**	(389)	**(1,803)**	(1,458)
Effect of foreign currency fluctuations on U.S. dollar-denominated cash and cash equivalents	**(3)**	7	**(4)**	11

Settlement of forward starting swaps on debt issuance	**—**	—	**—**	(24)
Investment in Central Maine and Québec Railway	**(174)**	—	**(174)**	—
Free cash	**$ 536**	$ 549	**$ 1,357**	$ 1,289

Foreign Exchange Adjusted % Change

FX adjusted % change allows certain financial results to be viewed without the impact of fluctuations in foreign currency exchange rates, thereby facilitating period-to-period comparisons in the analysis of trends in business performance. Financial result variances at constant currency are obtained by translating the comparable period of the prior year results denominated in U.S. dollars at the foreign exchange rates of the current period.

FX adjusted % changes in revenues are further used in calculating FX adjusted % change in freight revenue per carload and RTM. FX adjusted % changes in revenues are as follows:

	For the three months ended December 31				
(in millions)	**Reported 2019**	Reported 2018	Variance due to FX	FX Adjusted 2018	FX Adjusted % Change
Freight revenues by line of business

Operating income	**$ 3,124**	$ 2,831	$ 39	$ 2,870	9

Dividend Payout Ratio and Adjusted Dividend Payout Ratio

Dividend payout ratio is calculated as dividends declared per share divided by Diluted EPS. Adjusted dividend payout ratio is calculated as dividends declared per share divided by Adjusted diluted EPS, as defined above. These ratios are measures of shareholder return and provide information on the Company's ability to declare dividends on an ongoing basis.

Calculation of Dividend Payout Ratio

(in dollars, except for percentages)	For the year ended December 31 2019	2018
Dividends declared per share	**$ 3.1400**	$ 2.5125
Diluted EPS	**17.52**	13.61
Dividend payout ratio	**17.9%**	18.5%

Calculation of Adjusted Dividend Payout Ratio

(in dollars, except for percentages)	For the year ended December 31 2019	2018
Dividends declared per share	**$ 3.1400**	$ 2.5125
Adjusted diluted EPS	**16.44**	14.51
Adjusted dividend payout ratio	**19.1%**	17.3%

Long-term Debt to Net Income and Adjusted Net Debt to Adjusted EBITDA Ratios

Long-term debt to Net income ratio is defined as Long-term debt, including Long-term debt maturing within one year, divided by Net income. Adjusted net debt to Adjusted earnings before interest, tax, depreciation and amortization ("EBITDA") ratio is calculated as Adjusted net debt divided by Adjusted EBITDA. The Adjusted net debt to Adjusted EBITDA ratio is a key credit measure used to assess the Company’s financial capacity. The ratio provides information on the Company’s ability to service its debt and other long-term obligations.

Calculation of Long-term Debt to Net Income Ratio

(in millions, except for ratios)	2019	2018
Long-term debt including long-term debt maturing within one year as at December 31	**$ 8,757**	$ 8,696
Net income for the year ended December 31	**2,440**	1,951
Long-term debt to Net income ratio	**3.6**	4.5

Reconciliation of Long-term Debt to Adjusted Net Debt

Adjusted net debt is defined as Long-term debt, Long-term debt maturing within one year and Short-term borrowing as reported on the Company's Consolidated Balance Sheets adjusted for pension plans deficit, operating lease liabilities recognized on the Company's Consolidated Balance Sheets, and Cash and cash equivalents.

(in millions)	2019	2018
Long-term debt including long-term debt maturing within one year as at December 31	**$ 8,757**	$ 8,696
Add:		
Pension plans deficit[1]	**294**	266
Operating lease liabilities[2]	**354**	387
Less:		
Cash and cash equivalents	**133**	61
Adjusted net debt as at December 31	**$ 9,272**	$ 9,288

[1] Pension plans deficit is the total funded status of the Pension plans in deficit only.
[2] Current period amount is as reported in compliance with GAAP following the adoption of Accounting Standards Update ("ASU") 2016-02 under the cumulative-effect adjustment transition approach, discussed further in Note 2 Accounting changes in CP's Interim Consolidated Financial Information for the period ended December 31, 2019. The comparative period amount was calculated as the net present value of operating leases discounted by the Company's effective interest rate for the period presented.

Reconciliation of Net Income to EBIT, Adjusted EBIT and Adjusted EBITDA

Earnings before interest and tax ("EBIT") is calculated as Net income before Net interest expense and Income tax expense. Adjusted EBIT excludes significant items reported in both Operating income and Other (income) expense. Adjusted EBITDA is calculated as Adjusted EBIT plus operating lease expense and Depreciation and amortization, less Other components of net periodic benefit recovery.

	For the year ended December 31	
(in millions)	2019	2018
Net income as reported	**$ 2,440**	$ 1,951
Add:		
Net interest expense	**448**	453
Income tax expense	**706**	637
EBIT	**3,594**	3,041
Less significant items (pre-tax):		
Impact of FX translation gain (loss) on debt and lease liabilities	**94**	(168)
Adjusted EBIT	**3,500**	3,209
Add:		
Operating lease expense	**83**	97
Depreciation and amortization	**706**	696
Less:		
Other components of net periodic benefit recovery	**381**	384
Adjusted EBITDA	**$ 3,908**	$ 3,618

Calculation of Adjusted Net Debt to Adjusted EBITDA Ratio

(in millions, except for ratios)	2019	2018
Adjusted net debt as at December 31	**$ 9,272**	$ 9,288
Adjusted EBITDA for the year ended December 31	**3,908**	3,618
Adjusted net debt to Adjusted EBITDA ratio	**2.4**	2.6

KCS 2019 Q4 RESULTS EARNINGS RELEASE
(JAN. 17, 2020)

Kansas City Southern Reports Strong Fourth Quarter and Full-Year 2019 Results

KANSAS CITY, Mo.--(BUSINESS WIRE)-- Kansas City Southern (KCS) (NYSE:KSU) reported strong fourth quarter and full year 2019 results, driven by implementation of Precision Scheduled Railroading (PSR) principles.

Fourth Quarter 2019

Fourth quarter revenues were $729.5 million, an increase of 5% primarily led by a 13% increase in Chemicals and Petroleum and an 11% increase in Industrial & Consumer Products as compared to fourth quarter 2018. Carloads were down 1%, as declines in Automotive and Intermodal offset carload growth in all other business units.

Fourth quarter operating expenses were $493.5 million, including $38.3 million of restructuring charges related to PSR initiatives. Operating income was $236.0 million and the reported operating ratio was 67.6%. Fourth quarter net income was $127.9 million, or $1.30 per diluted share. Adjusted fourth quarter operating income, operating ratio, net income and diluted earnings per share were as follows:

(in millions, except operating ratio and diluted earnings per share)	Three Months Ended December 31, 2019			
	Operating Income	Operating Ratio	Net Income	Diluted Earnings per Share
GAAP Operating Results	**$ 236.0**	**67.6%**	**$ 127.9**	**$ 1.30**
Restructuring Charges	38.3	(5.2)%	28.2	0.29
Other Adjustments, Net	—	—	23.0	0.23
Adjusted Operating Results (non-GAAP)	$ 274.3	62.4%	$ 179.1	$ 1.82

See below for reconciliations to GAAP

"Kansas City Southern's implementation of PSR principles has sustained momentum in the fourth quarter, driving strong results in the form of more consistent and reliable operations, improved customer service, improved cost structure and growth in shareholder returns," stated President and Chief Executive Officer, Patrick J. Ottensmeyer. "Thanks to the hard work and dedication of KCS's employees, we exited 2019 with network-wide velocity performing at record levels."

Full Year 2019

Full year 2019 revenues were $2.9 billion, an increase of 6% on a 1% decline in carloads. Operating income was $886.3 million and the reported operating ratio was 69.1%. Full year 2019 net income was $540.8 million, or $5.40 per diluted share.

During 2019, KCS significantly improved its operating performance, as demonstrated by an increase in gross velocity of 22%, a decline in terminal dwell of 16%, and an improvement to car miles per day of 19% as compared to 2018. PSR initiatives also contributed directly to operating expense savings of $58.0 million in 2019, and are projected to deliver incremental savings of $61.0 million in 2020.

"Year one of KCS's PSR implementation has exceeded our own expectations for service, operational and financial improvement," stated Ottensmeyer. "As we turn our focus to 2020, we look forward to growing our business while implementing our second year of PSR initiatives.

"These strong results have allowed us to improve guidance, and we now expect to deliver a 60% to 61% operating ratio in 2020, and below 60% in 2021. Additionally, we have improved our outlook for earnings per share growth to a mid-teens CAGR from 2019 through 2021. Finally, with improved asset utilization, we have reduced our outlook for capital expenditures to ~17% of revenue through 2022."

Statement Regarding Non-GAAP Financial Measures

In addition to disclosing financial results in accordance with U.S. GAAP, the accompanying fourth quarter and full year 2019 earnings release contains non-GAAP financial measures. KCS management believes that certain non-GAAP financial measures used to review and in certain cases manage the Company's business fall within the meaning of Regulation G (Disclosure of non-GAAP financial measures) and may provide its users of the financial information with additional meaningful comparison when reviewing the Company's results. KCS management uses non-GAAP information in its planning and forecasting processes and to further analyze its own financial trends and operational performance, as well as making financial comparisons to prior periods presented on a similar basis. Management believes investors and users of the Company's financial information should consider all of the above factors when evaluating KCS's results.

These non-GAAP measures should be viewed as a supplement and not considered a substitute for GAAP measures. Some of KCS's non-GAAP measures may differ from similar measures used by other companies, even if similar terms are used to identify such measures.

Reconciliation of Operating Expenses to Adjusted Operating Expenses	Three Months Ended December 31,		Years Ended December 31,	
	2019	2018	2019	2018
Operating expenses as reported	$ 493.5	$ 437.6	$1,979.7	$1,727.7
Adjustment for restructuring charges	(38.3)	—	(168.8)	—
Adjustment for gain on insurance recoveries related to hurricane damage	—	8.5	—	17.9
Adjusted operating expenses - see (b) below	$ 455.2	$ 446.1	$1,810.9	$1,745.6
Operating income as reported	$ 236.0	$ 256.4	$ 886.3	$ 986.3
Adjusted operating income - see (b) below	274.3	247.9	1,055.1	968.4
Operating ratio (c) as reported	67.6%	63.1%	69.1%	63.7%
Adjusted operating ratio - see (b) and (c) below	62.4%	64.3%	63.2%	64.3%

(a) The Company believes adjusted diluted earnings per share is meaningful as it allows investors to evaluate the Company's performance for different periods on a more comparable basis by adjusting for the impact of changes in foreign currency exchange rates, the impact of adjustments to 2017 provisional income tax benefit for the Tax Cuts and Jobs Act, and items that are not directly related to the ongoing operations of the Company. The income tax expense impacts related to these adjustments are calculated at the applicable statutory tax rate.

(b) The Company believes adjusted operating expenses, operating income and operating ratio are meaningful as they allow investors to evaluate the Company's performance for different periods on a more comparable basis by adjusting for items that are not directly related to the ongoing operations of the Company.

(c) Operating ratio is calculated by dividing operating expenses by revenues; or in the case of adjusted operating ratio, adjusted operating expenses divided by revenues.

Investor Conference Call and Webcast

KCS will also hold its fourth quarter 2019 earnings conference call on Friday, January 17, 2020 at 8:45 a.m. eastern time. Shareholders and other interested parties are invited to participate via live webcast or telephone. To participate in the live webcast and to view accompanying presentation materials, please log into investors.kcsouthern.com immediately prior to the presentation. To join the teleconference, please call (844) 308-6428 from the U.S., or (412) 317-5409 from all other countries.

A replay of the presentation will be available by calling (877) 344-7529 from the U.S., (855) 669-9658 from Canada or (412) 317-0088 from all other countries and entering conference ID 10136928. The webcast replay and presentation materials will be archived on the company’s website.

About Kansas City Southern

Headquartered in Kansas City, Mo., Kansas City Southern (KCS) (NYSE: KSU) is a transportation holding company that has railroad investments in the U.S., Mexico and Panama. Its primary U.S. holding is The Kansas City Southern Railway Company, serving the central and south central U.S. Its international holdings include Kansas City Southern de Mexico, S.A. de C.V., serving northeastern and central Mexico and the port cities of Lázaro Cárdenas, Tampico and Veracruz, and a 50 percent interest in Panama Canal Railway Company, providing ocean-to-ocean freight and passenger service along the Panama Canal. KCS' North American rail holdings and strategic alliances with other North American rail partners are primary components of a unique railway system, linking the commercial and industrial centers of the U.S., Mexico and Canada. More information about KCS can be found at www.kcsouthern.com.

Forward-Looking Information

REDACTED PUBLIC RECORD VERSION

This news release contains "forward-looking statements" within the meaning of the securities laws concerning potential future events involving KCS and its subsidiaries, which could materially differ from the events that actually occur. Words such as "projects," "estimates," "forecasts," "believes," "intends," "expects," "anticipates," and similar expressions are intended to identify many of these forward-looking statements. Such forward-looking statements are based upon information currently available to management and management's perception thereof as of the date hereof. Differences that actually occur could be caused by a number of external factors over which management has little or no control, including: competition and consolidation within the transportation industry; the business environment in industries that produce and use items shipped by rail; loss of the rail concession of KCS' subsidiary, Kansas City Southern de México, S.A. de C.V.; the termination of, or failure to renew, agreements with customers, other railroads and third parties; access to capital; disruptions to KCS' technology infrastructure, including its computer systems; natural events such as severe weather, hurricanes and floods; market and regulatory responses to climate change; legislative and regulatory developments and disputes; rail accidents or other incidents or accidents on KCS' rail network or at KCS' facilities or customer facilities involving the release of hazardous materials, including toxic inhalation hazards; fluctuation in prices or availability of key materials, in particular diesel fuel; dependency on certain key suppliers of core rail equipment; changes in securities and capital markets; unavailability of qualified personnel; labor difficulties, including strikes and work stoppages; acts of terrorism or risk of terrorist activities; war or risk of war; domestic and international economic, political and social conditions; the level of trade between the United States and Asia or Mexico; fluctuations in the peso-dollar exchange rate; increased demand and traffic congestion; the outcome of claims and litigation involving KCS or its subsidiaries; and other factors affecting the operation of the business. More detailed information about factors that could affect future events may be found in filings by KCS with the Securities and Exchange Commission, including KCS' Annual Report on Form 10-K for the year ended December 31, 2018 (File No. 1-4717) and subsequent reports. Forward-looking statements are not, and should not be relied upon as, a guarantee of future performance or results, nor will they necessarily prove to be accurate indications of the times at or by which any such performance or results will be achieved. As a result, actual outcomes and results may differ materially from those expressed in forward-looking statements. KCS is not obligated to update any forward-looking statements to reflect future events or developments.

APPENDIX A: CP EMPLOYMENT BY LOCATION –USA (NON-AGREEMENT) 11

APPENDIX B: KCS EMPLOYMENT BY LOCATION –USA (NON-AGREEMENT) 15

VERIFIED STATEMENT OF CHAD ROLSTAD

1. My name is Chad Rolstad. I am Vice-President Human Resources and Chief Culture Officer of Canadian Pacific Railway Company ("CP"). My business address is 7550 Ogden Dale Road, Calgary, AB T2C 4X9. I have been employed by CP in my current position since September 2019. I joined CP as Assistant Vice-President Strategic Procurement in April 2017 and was appointed Assistant Vice-President Human Resources in August 2018 and Vice-President Human Resources in February 2019.

2. Previously I was employed by BNSF Railway as a General Director, Marketing Business Unit Operations. I received a B.S. from Colorado School of Mines and hold an M.B.A. from Duke University.

3. I am responsible for, among other things, helping CP sustain and improve its industry-best culture, while leading the company's human resources, recruitment, total rewards, and talent management teams. My duties include overall responsibility for hiring, evaluating, and separating employees who are not represented by labor organizations.

4. I am submitting this statement to explain the steps CP anticipates taking to manage the small number of changes in the non-agreement labor force that will result from implementing the proposed combination of CP and KCS under CP control (the "Transaction")

I. OVERVIEW OF ANTICIPATED CHANGES IN CP'S AND KCS'S UNREPRESENTED WORKFORCE IN THE UNITED STATES

5. As explained in the Operating Plan and Labor Impact Exhibit, combining CP and KCS will in general result in *increased employment* overall across the combined network. To the extent there will be any Transaction-related job relocations or reductions for our non-agreement workforce, they will involve small numbers of employees performing general and administrative functions at the U.S. headquarters of CP (in Minneapolis, MN) and KCS (in Kansas City), as

well as a small number of CP headquarters positions in Canada. CP anticipates that KCS's Kansas City headquarters will become the U.S. headquarters for the combined railroad, creating net-positive impacts on employment there, and that the Minneapolis headquarters will eventually close. The consolidation of administrative functions in Kansas City will yield some reductions in the level of employment in general and administrative functions.

II. CP'S NON-AGREEMENT U.S. WORKFORCE AND THE ANTICIPATED IMPACT OF THE TRANSACTION

6. CP employs approximately 547 employees in the United States who are not represented by labor unions. Appendix A to this Verified Statement lists the locations at which these persons are employed and indicates the CP operating entity employer.[1]

7. The proposed Transaction is expected to affect only 172 of these employees at CP's U.S. headquarters in Minneapolis (shown as "CP Plaza 1" in Appendix A), seven of which are employed by DM&E and 165 of which are employed by Soo Line. CP does not anticipate that unrepresented CP employees elsewhere in the United States will be affected by the Transaction.[2]

8. As a result of the Transaction, CP will be relocating its U.S. headquarters to Kansas City, and will consolidate head office and operating center functions. CP anticipates that within the three-year period following assumption of control of KCS, it will substantially close the Minneapolis headquarters facility. CP will be continuing its planning for the new U.S. headquarters location as the Control Date approaches and during the three-year period over

---

[1] CP's U.S. operating subsidiaries are Dakota, Minnesota & Eastern Railroad Corporation ("DM&E"), Soo Line Railroad Company ("Soo Line"), Delaware and Hudson Railway Company, Inc. ("D&H"), and Central Maine & Quebec Railway US Inc. ("CMQ").

[2] D&H and CMQ are not contiguous to DM&E, Soo Line, or KCSR, and there should not be any operational changes on DM&E, Soo Line, or KCSR that would adversely affect any D&H or CMQ employees.

which full integration of the two systems will take place. CP will continue to refine its understanding of its likely needs for personnel at Kansas City. Accordingly, today's best estimates are preliminary and are subject to revision over time.

9. Table 1 below provides a count of CP non-agreement employees at the Minneapolis headquarters by classification. The "operating" classification refers to managerial personnel in the operating department, while "non-operating" refers to personnel in other departments that provide administrative support to the organization. As shown in the Table, CP currently projects that approximately 135 positions will be relocated to Kansas (63 in year 1, 20 in year 2, and 52 in year 3) and 37 positions will remain at other locations in the Minneapolis area and thus be unaffected. These changes are also reflected in the Labor Impact Exhibit, in Volume 2 of the Application.

TABLE 1
CP NON-AGREEMENT EMPLOYMENT AT MINNEAPOLIS HEADQUARTERS BY CLASSIFICATION
(AS OF SEPTEMBER 27, 2021)

CP Entity (USA CP Plaza 1)	Classification	Number of Unrepresented Employees	Jobs Relocated	No Impact	Jobs Reduced
DM&E - Non-Agreement	Non-Operating	0	0	0	0
" "	Operating	7	7 *Year 2 – 7*	0	0
Soo Line - Non-Agreement	Non-Operating	118	87 *Year 1 – 22* *Year 2 – 13* *Year 3 – 52*	31	0
" "	Operating	47	41 *Year 1 – 41*	6	0
Total		**172**	**135**	**37**	**0**

III. KCSR'S NON-AGREEMENT U.S. WORKFORCE AND THE ANTICIPATED IMPACT OF THE TRANSACTION

10. KCS's U.S. rail carrier subsidiary Kansas City Southern Railway Company employs 885 employees in the United States who are not represented by labor organizations, at

locations in Alabama, Arkansas, Illinois, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee and Texas. 370 of these non-agreement employees are operating employees, while 515 are non-operating employees. Appendix B lists the locations at which these persons are employed.

11. The proposed Transaction is expected to have potential effects only for non-operating employees at KCSR's U.S. headquarters facilities in Kansas City (shown as "Kansas City General Office" and "Wyandotte Building" in Appendix B). CP does not anticipate that the operating employees at Kansas City or unrepresented KCS employees elsewhere in the United States or in Mexico will be affected by the Transaction.

12. Table 2 below outlines CP's best estimate of the impact of the Transaction on non-agreement personnel at CPKC's new Kansas City headquarters and the planned consolidation of administrative functions there following the transfer of CP (Soo Line and DM&E) jobs from Minneapolis. CP anticipates that a total of 112 non-operating positions will be reduced at Kansas City. We do not anticipate any reductions in non-agreement *operating* positions, so as to ensure that the continued consistent operation of the combined network is fully supported. At the executive level there may be some small number of movements between Calgary and Kansas City as we assess appropriate executive team assignments at CPKC. For the Kansas City headquarters, the net result of the Transaction will be an increase in non-agreement employment levels (526 post-Transaction, up from 503 today) as a result of the transfer of CP positions from Minneapolis. These changes are also reflected in the Labor Impact Exhibit, in Volume 2 of the Application.

13. Our estimate of likely personnel reductions took into account a number of factors including, as a starting point, the elimination of duplicative executive leadership positions, an

assessment of the ability of specific functional teams to absorb the workload of the combined railroads with no impact to the service and support provided to railroad operations and customers, and ensuring there are adequate resources to support revenue growth achieved through combination of the two railroads. The majority of expected position reductions come from administrative and support functions such as Information Technology, Finance, and Human Resources. There are negligible position reductions anticipated for Sales and Marketing in order to maintain strong customer service and to ensure there are adequate resources to support growth.

14. CP anticipates that the modest impact will be achieved through executive restructuring and normal attrition at the Kansas City headquarters, and that employees who leave as a result of retirement or other voluntary departure will not be replaced. CP will supplement its estimates with additional detail as it continues to plan for the integration of the two companies' non-agreement workforces.

TABLE 2
NON-AGREEMENT EMPLOYMENT AT KANSAS CITY HEADQUARTERS BY CLASSIFICATION

Location	Classification	Number of Unrepresented KCSR Employees (Sept. 20, 2021)	KCSR Jobs Relocated	KCSR Jobs No Impact	CPKC Jobs Reduced	CPKC Jobs Transferred to Kansas City	Post-Transaction CPKC Jobs

" "	Operating	**90**	0	90	0	48 *Year 1 – 41* *Year 2 – 7*	138
Grand Total		**503**	**0**	**391**	**112**	**135**	**526**

IV. OUR INTEGRATION OF GENERAL AND ADMINISTRATIVE FUNCTIONS ACROSS THE CP/KCS SYSTEM WILL LEAD TO THE SHIFT OF SOME WORK TO KANSAS CITY FROM CANADA

15. Our planning for the consolidation of CP and KCS administrative functions anticipates a geographic allocation of CPKC's system-wide administrative support functions befitting a railroad for which U.S. operations will be a more significant part of the overall network than they have been for CP. This shift will occur as CPKC works to achieve anticipated synergies by balancing resource allocation of the executive and staff support positions through reductions across our workforces in Canada, Minneapolis (CP Plaza 1), and Kansas City through executive restructuring (providing associated severance), normal attrition, retirement, and not replacing all voluntary departures. (We do not anticipate making any changes in KCS's Mexican employee base other than the new operating positions outlined in the Labor Impact Exhibit.)

16. CP currently employs approximately 3,023 employees in Canada who are not represented by labor organizations, with 1,540 of these employees in non-operating roles. CP anticipates that a small portion of these positions (approximately 92) may be affected by the consolidation of administrative functions in the CPKC's organization. CP anticipates that this modest impact will be achieved through normal attrition, retirement or other voluntary departures.

17. Table 3 below outlines the CP Canadian non-agreement personnel who may be affected by the integration of the two systems. These changes are also reflected in the Labor Impact Exhibit, in Volume 2 of the Application.

TABLE 3

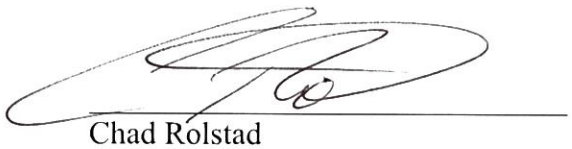
V. EMPLOYEE PROTECTIVE CONDITIONS

18. CP anticipates that, in accordance with the requirements of 49 U.S.C. § 11326(a), the Board will impose on this Transaction the employee protective conditions set forth in *New York Dock Ry. – Control – Brooklyn Eastern Dist. Terminal,* 360 I.C.C. 60*, aff'd, New York Dock Ry. v. United States,* 609 F.2d 83 (2d Cir. 1979).

19. The *New York Dock* conditions provide extensive benefits for U.S. employees who are dismissed or displaced because of the transaction and require carriers to give advance notice to employees and their representatives of operational changes that may result in the dismissal or displacement of employees, or the "rearrangement of forces," and provide an opportunity for the negotiation of implementing agreements in connection with such operational changes. Article IV of the *New York Dock* conditions provides that employees who are not represented by labor organizations shall be afforded substantially the same levels of protection as union-represented employees.



20. CP has not adopted any protective arrangements regarding its unrepresented U.S. employees that may be pertinent to this Transaction, and CP understands that KCS has not

adopted any protective arrangements with respect to its unrepresented U.S. employees (other than established severance programs for covered employees).

VERIFICATION

I, Chad Rolstad, declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this Verified Statement.

Executed this 28th day of October, 2021.

EXHIBIT 1: CURRICULUM VITAE OF MICHAEL R. BARANOWSKI 29

VERIFIED STATEMENT
OF
MICHAEL R. BARANOWSKI

1. My name is Michael R. Baranowski. I am a Senior Managing Director of FTI Consulting, Inc. and leader of the firm's Network Industries Strategies ("NIS") practice, which is located at 8251 Greensboro Drive, McLean VA 22102. Since 1980, I have been involved in projects analyzing the engineering, operational, and financial aspects of the railroad industry. I have undertaken numerous studies of railroad traffic, the costs of handling those traffic movements, and the resulting financial impacts of those movements. Because of my involvement with these studies, I have testified before the Surface Transportation Board, the Competition Bureau Canada, state and federal courts, and in arbitrations. A detailed statement of my qualifications is attached as Exhibit No. 1 to this Verified Statement.

2. I have been asked by Applicants to (a) develop the total dollar value of the operating savings resulting from the Canadian Pacific ("CP")/Kansas City Southern ("KCS") combination, as quantified in the Operating Plan (Exhibit 13 to the Application), and (b) estimate the additional costs, revenues, and net revenues that would be associated with the additional traffic the CP/KCS system would attract as a result of the merger through extended hauls, rail-to-rail diversions, and truck-to-rail diversions[1]. The results of my work were provided to Dean Vargas for incorporation into the pro forma financial statements accompanying the Application.

3. My Verified Statement describes and explains my calculations. My discussion of these issues is organized into the following sub-parts:

---

[1] The rationale for, methodology used in the estimates of, and estimates of additional traffic are described in the testimony of Richard Brown and Nathan Zebrowski, Jonathan Wahba and Mike Naatz, and Bengt Mutén.

- in Section I, I develop the total operating savings resulting from the proposed combination;
- in Section II, I develop an Uniform Rail Costing System ("URCS") application for 2019 for the consolidated CP/KCS system; and
- in Section III, I calculate the incremental revenues, costs and net revenues associated with extended hauls, rail-to-rail diversions and truck-to-rail diversions – and the effect of organic growth on these quantities.

I. QUANTIFYING THE OPERATING SAVINGS RESULTING FROM THE PROPOSED COMBINATION

4. The CP/KCS Operating Plan (Exhibit No. 13 to the Application) quantifies the resources CP's and KCS's rail operations require but will be saved as a result of the proposed consolidation *before any adjustment is made for the additional traffic that the more-efficient and capable CP/KCS system would attract.* Using this information from the Operating Plan, I was asked to quantify the dollar value of savings in expenses in various operating categories for train, switching and equipment activities.

A. Operating Metrics

5. The integrated Operating Plan reflects the operations of a consolidated CP/KCS network (spanning CP's and KCS's rail systems in the United States, Canada, and Mexico).[2] It does this in two phases: first, by identifying the operational efficiencies that arise from operating a larger, fully integrated and optimized network that adopts the best practices of both railroads,

[2] In my discussion below I refer to CP's system-wide operations as those of "CP," CP's U.S. rail operations as those of "CP-US," and CP's Canadian rail operations as those of "CP-Canada." For KCS, I refer to KCS's system-wide operations as those of "KCS," KCS's U.S. operations as those of "KCSR," and KCS's Mexican operations as those of "KCSM."

and second, by planning for and assessing the operations (including capacity additions) that would accommodate the increased traffic the combined system will attract.

6. In the first phase, the Operating Plan calculates the changes in the relevant operating statistics attributable to merger-related efficiencies. Table 1 below summarizes the merger-related savings for several key metrics as set forth in the Operating Plan, again, *before considering* the merger-related increase in traffic handled by the combined system.

TABLE 1[3]
SUMMARY OF MERGER-RELATED REDUCTIONS IN KEY OPERATING METRICS

Metric	Reduction Relative to CP and KCS Operating Separately
Train Miles	1.690M
Locomotive Unit Miles	4.779M
Switches	0.405M

7. To quantify the dollar savings attributable to the operating metric reductions in Table 1 above, I relied upon relevant unit costs from the URCS. Because the majority of the efficiencies identified in the Operating Plan reflect improved statistics on the KCS portions of the combined system, I based my unit costs on the 2019 KCSR URCS. Also, because general and administrative savings related to the merger are quantified separately in the Verified Statement of Dean Vargas, I eliminated the relevant general overhead markup from the URCS unit costs to avoid double-counting those benefits.

8. Certain of the locomotive-related costs in URCS are attributing to gross ton miles. Therefore, in order to quantify fully the benefits related to the reduction in locomotive unit miles between the base and optimized operating plan, I had to determine the gross ton miles affected by the reduction in locomotive unit miles. I calculated that the approximately 3.5 percent

[3] Source: Base to Operating Plan Savings.xlsx; Tables.

reduction in locomotive unit miles generates locomotive savings related to the equivalent of 13.3 billion gross ton miles. Table 2 below details the quantification of the dollar savings, exclusive of fuel for road operations, attributable to the operating metric reductions in Table 1, and groups those savings by major operating expense category.

TABLE 2[4]
SUMMARY OF MERGER-RELATED REDUCTIONS IN OPERATING EXPENSES

Item	Total -Year 1	Eng./MOW	Transp.	Mech.
Train Mile Savings	1.690M			
Train Mile – Other Than Crew	$0.3307			
Train Mile – Crew	$12.5847			
Total Train Mile Costs	$12.9154			
Train Mile $ Savings	$21.82M	$0.00M	$21.82M	$0.00M
Locomotive Unit Mile Savings	4.779M			
Locomotive Unit Mile Cost – Operating	$3.4060			
Locomotive Unit Mile $ Savings – Operating	$16.28M	$0.00M	$5.63M	$10.65M
Locomotive GTM Related Savings	13.306B			
Locomotive GTM Costs – Operating	$0.0010			
Locomotive GTM $ Savings – Operating	$13.52M	$0.00M	$4.59M	$8.93M
I&I Switches Saved	0.405M			
SEMs Per I&I Switch	1.4921			
Cost Per SEM – Operating	$1.6207			
SEM Savings – Operating	$0.98M	$0.00M	$0.67M	$0.31M
Total Operating Metric Savings	**$52.59M**	**$0.00M**	**$32.71M**	**$19.88M**

B. Fuel Savings

9. As explained in the Operating Plan, the combined CP/KCS network will generate significant fuel consumption benefits as a result of improved train and locomotive productivity coupled with wider application of industry-leading fuel conservation strategies. Applicants have

[4] Source: Base to Operating Plan Savings.xlsx; Tables.

determined that the fuel consumption for the combined CP/KCS system will mirror the improvement projected internally at CP based on a regression of horsepower per ton and gross ton-miles. Applicants applied the regression results to their forecast of Years 1 through 3 gross ton-miles and extrapolated the results to forecasts of KCSR and KCSM Years 1 through 3 gross ton-miles, including organic growth. Table 3 below compares the resulting CP, KCSR and KCSM fuel consumption in gallons per thousand gross ton-miles for the base year and Years 1 through 3.

TABLE 3[5]
FUEL CONSUMPTION
(GAL./MGTM)

Period	Base Year	Year 1	Year 2	Year 3
CP	0.955	0.929	0.929	0.927
KCSR	1.117	1.057	1.051	1.046
KCSM	1.576	1.435	1.428	1.421

10. To determine the fuel savings, I calculated the difference between the number of gallons that would have been consumed in Years 1 through 3 at the base year consumption rate for KCSR and KCSM, and the gallons at the revised consumption rates at each year's projected volumes. I then multiplied the KCS difference by an average price per gallon of $2.04, derived from the KCS 2019 R-1, and the KCSM difference by an average price of $3.08, provided by KCS. I summarize my calculations and results in Table 4 below.

[5] Source: Base to Optimized Fuel Savings Summary.xlsx.

TABLE 4[6]
FUEL SAVINGS SUMMARY

Description	Year 1	Year 2	Year 3
Workload			
KCSR MGTMs/Day	166.60	166.60	166.60
KCSM MGTMs/Day	120.85	120.85	120.85
Projected Fuel Consumption			
KCSR	176,028	175,156	174,289
KCSM	173,483	172,624	171,769
Fuel Consumption Base Efficiency			
KCSR	186,079	186,079	186,079
KCSM	190,461	190,461	190,461
Difference			
KCSR	10,051	10,922	11,789
KCSM	16,978	17,837	18,692
Combined Difference	27,029	28,759	30,481
Daily Value	$72.80	$77.22	$81.62
Total Annualized Fuel Savings	**$ 26.57M**	**$ 28.19M**	**$ 29.79M**

C. Locomotive Depreciation and Lease Annual Expense

11. The reduction in locomotive unit miles between the base and optimized operating plan will achieve savings for locomotive depreciation and lease costs. I calculated these savings by applying the URCS locomotive depreciation and lease costs per locomotive unit mile and per gross ton mile to the locomotive unit miles saved between the base and the optimized operating plan and the equivalent affected gross ton miles. My calculations are summarized below in Table 5.

[6] Source: Base to Optimized Fuel Savings Summary.xlsx.

TABLE 5[7]
SUMMARY OF LOCOMOTIVE DEPRECIATION AND LEASE SAVINGS

Detail of Development of Locomotive Depreciation and Lease Savings				
Item	**Year 1**	**Eng. /MOW**	**Transp.**	**Mechanical**
Locomotive Unit Mile Savings	4.779M			
Locomotive Unit Mile Cost – D&L	$1.1702			
Locomotive Unit Mile $ Savings – D&L	$5.59M	$0.00M	$0.00M	$5.59M
Locomotive GTM Related Savings	13.306B			
Locomotive GTM Cost – D&L	$0.0003			
Locomotive Unit Mile $ Savings – D&L	$4.56M	$0.00M	$0.00M	$4.56M
Total Operating Metric Savings	**$10.15M**	**$0.00M**	**$0.00M**	**$10.15M**

D. Freight Cars

12. In addition to the reductions in operating expenses I calculated in Table 2, CP personnel identified specific reductions in locomotive and freight car counts for the combined system before any extended hauls or traffic diversions. Table 6 summarizes these reductions by year.

TABLE 6[8]
SUMMARY OF MERGER-RELATED FREIGHT CAR ANNUAL SAVINGS

	Year 1	**Year 2**	**Year 3**	**Total**
Total Freight Car	**0**	**372**	**170**	**542**

13. As set forth in the Operating Plan, Applicants have determined that full service lease costs for the types of freight cars identified in Table 5 average $4,800 annually. Based on

[7] Source: Base to Operating Plan Savings.xlsx; Tables.

[8] Source: Freight Car Savings.xlsx.

this number, I calculated the cumulative cost savings attributable to freight cars by year in Table 7.

TABLE 7[9]
SUMMARY OF MERGER RELATED FREIGHT CAR SAVINGS
(USD MILLIONS)

Type	Year 1	Year 2	Year 3
Freight Car Savings	$0.00M	$1.79M	$2.60M

E. Procurement

14. CP identified the total spend by major expense category for which prices are negotiated routinely as part of the procurement process. For each category, CP reviewed the scope of the combined CP/KCS spend and identified opportunities for savings. These opportunities range from increased overall purchase volumes that allow for negotiation of lower rates to the extension of existing favorable terms or best practices to the other carrier. CP then determined the estimated percentage savings from 2019 spend levels that could be achieved in future negotiations by the combined CP/KCS. Procurement synergies are summarized in Table 8.

[9] Source: Freight Car Savings.xlsx.

TABLE 8[10]
SUMMARY OF PROCUREMENT SYNERGIES
(USD MILLIONS)

Description	Year 1	Year 2	Year 3
Fuel	$1.57M	$3.63M	$5.70M
Track Contractors/Materials			
Track Program	0.10M	0.30M	0.60M
Track Services/Other	0.55M	1.86M	3.18M
Track Materials	0.17M	0.52M	0.86M
Locomotive/Car Materials and Maintenance			
Locomotive Material	0.38M	1.15M	1.92M
Locomotive Services	0.02M	0.05M	0.08M
Railcar Material	0.68M	2.03M	3.38M
Railcar Services	0.07M	0.21M	0.35M
Information Technology consultants/services	0.24M	0.71M	1.19M
Other goods and services	0.20M	0.98M	2.16M
Rail Ties	0.02M	0.05M	0.09M
Vehicle Operations/Maintenance	0.14M	0.28M	0.41M
Intermodal Services & Support	0.06M	0.29M	0.63M
Total Annual Procurement Savings	**$4.18M**	**$12.05M**	**$20.54M**

F. Summary

15. I calculated the sum of savings from operating metrics, fuel, equipment and general and administrative in Table 9.

TABLE 9
CP/KCS CUMULATIVE OPERATING SAVINGS SUMMARY
(EXCLUDES SAVINGS RELATED TO MERGER-RELATED TRAFFIC ADDITIONS)
(USD MILLIONS)

Item	Year 1	Year 2	Year 3
Operating Metrics	$52.59M	$52.59M	$52.59M
Fuel Savings	26.57M	28.19M	29.79M
Locomotive Depreciation and Lease	10.15M	10.15M	10.15M
Freight Car	0.00M	1.79M	2.60M
Procurement	4.18M	12.05M	20.54M
Total	**$93.5M**	**$104.8M**	**$115.7M**

[10] Source: CPKCS Procurement Synergies Study.xlsx; Table**.**

II. DEVELOPMENT OF 2019 COSTING APPLICATIONS FOR THE COMBINED COMPANY

16. In order to estimate the incremental costs for the extended hauls and other traffic that the combined CP/KCS will attract, I developed a methodology to calculate how CP operations in both Canada and the U.S., and KCS operations in both the U.S. and Mexico will change as a result of full integration of the CP/KCS system.

17. U.S. operations are summarized in Schedule 410 of the R-1 reports for CP-US and KCS. For potentially affected non-U.S. traffic, I rely on CP-US URCS costs for Canadian operations, and KCSR's URCS costs for Mexican operations.

18. ***U.S. Operations.*** I employed a two-step process to assemble a consolidated R-1 Schedule 410 for U.S. operations of the combined CP/KCS system:

- Step 1: I added together data from the 2019 R-1 reports for CP-US (Soo Line) and KCSR line-by-line to create a "combined" input strip for URCS, and I ran a CP/KCS combined URCS.
- Step 2: I identified productivity improvements related to the combined CP/KCS operations by finding the difference between the Base Operating Plan operating statistics and those developed under the Optimized Operating Plan. I next made related productivity adjustments to the relevant CP/KCS 2019 URCS service unit and unit cost parameters.[11] Specific productivity related adjustments were:
    - I adjusted locomotive unit mile and train mile-related expenses to reflect 3.5 percent, 3.4 percent and 3.3 percent increases in train size for the optimized system from 2019 for Years 1, 2 and 3, respectively;
    - I reduced locomotive fuel expenses by 2.0 percent, 1.8 percent and 1.7 percent to reflect increases in locomotive fuel efficiency for the optimized system for Years 1, 2 and 3, respectively;

[11] Details of my productivity adjustment calculations are set forth in electronic work paper URCS Diversion Costing Metrics Adjustments.xlsx.

- I reduced crew-related train mile expenses by 0.7 percent to reflect a 0.7 percent increase in the train miles per crew shift for the optimized system;
- I reduced the number of locomotives per train by 4.0 percent, 3.2 percent and 2.4 percent to reflect the increase in GTMs per operating horsepower efficiencies between the base and optimized system for Years 1, 2 and 3, respectively; and
- I reduced dwell times at intermediate switching yards to reflect improved yard-switching efficiency for the combined system.

19. ***Operations Outside the United States.*** Costs for the portions of extended hauls, rail-to-rail or truck-to-rail diversions traversing segments of CP's operations in Canada or KCSM's operations in Mexico are modeled from the CP/KCS URCS costs described above with adjustments to the non-U.S. portion of the movement based on observable differences in the relative costs of CP-Canada and KCSM operations. Table 10 below summarizes the percentage of shipment miles for the diverted shipments occurring in the United States, Canada, and Mexico.

TABLE 10[12]
BREAKDOWN OF DIVERSION TRAFFIC MILEAGES BY COUNTRY

Country	Percent of Incremental Car/Unit Miles
United States	76%
Mexico	8%
Canada	16%

20. I next developed benchmarks of relevant cost relationships for CP-Canada relative to CP-US and KCSM relative to KCS to identify observable differences in costs using data provided by CP and KCS, respectively. Table 11 below compares operating expenses per ton mile and per train mile for CP-US and CP-Canada in US dollars based on a 2019 exchange rate of 0.754 U.S. Dollar to one Canadian Dollar.

[12] Source: Mileage by Country.xlsx.

TABLE 11[13]
COMPARISON OF 2019 CP-US AND CP-CANADA COSTS ($US)

Description	CP-US	CPR	% Difference
Gross Ton Miles (GTM) (000)	75,369,720	208,282,663	n/a
Train Miles (TM)	9,206,448	23,785,953	n/a
Operating Expenses ($000)	$1,075,661	$2,930,958	n/a
Operating Expense/GTM	$14.27	$14.07	-1.4%
Operating Expense (TM)	$116.84	$123.22	5.5%
Average Train Weight	7,684	8,757	14.0%
Weight Adjusted Operating Expense (TM)	$133.15	$123.22	-7.5%

21. Table 11 shows that CP-US and CP-Canada average operating expenses per ton-mile are within two percent of one another and the average operating expenses per train-mile for CP-US are approximately 8 percent higher than those for CP-Canada, once the difference in average train size is considered. Although my costing model is designed to adjust for the observed relative cost differences, based on these observations, I have assumed conservatively that CP-US URCS costs are a reasonable surrogate for CP-Canada cost for costing the diverted volumes.

22. I also assumed, based on high-level comparisons of KCS and KCSM costs per unit of output that KCS URCS costs are a reasonable surrogate for KCSM costs for the diverted volumes.

III. DEVELOPMENT OF NET REVENUES FOR MERGER-RELATED TRAFFIC ADDED TO CP/KCS SYSTEM

23. Estimates of and rationale for the additional rail traffic that would be attracted to the CP/KCS system from other railroads were developed by CP Vice President of Sales and Marketing Jonathan Wahba and KCS Chief Marketing Officer Mike Naatz in their Joint Verified Statement, and Richard Brown and Nathan Zebrowski of FTI Consulting in their Joint Verified

[13] Source: CP SOO and CPR comparison table.xlsx.

Statement. Truck-to-rail diversions were developed by Bengt Mutén of IHS Markit in his Verified Statement. For each extended haul or diversion they found, I was provided with the year the diversion is expected to occur, the amount of incremental revenue that would be earned by CP/KCS, and other information helpful in calculating the incremental cost of handling these shipments such as the beginning and ending points of the new movements, relevant waybill information (*e.g.*, cars, net tons, trailers or containers, AAR car type, etc.), routing information (for both the original movement and the CP/KCS route), and the affected number of carloads or intermodal units.

24. To estimate the costs associated with these route extensions and rail-to-rail and truck-to-rail diversions, I developed a model that replicates certain of the relevant URCS costing procedures for the cost components that are affected directly by the traffic shifts that are not accounted for in other analyses undertaken by CP. I describe my development of the additional service units associated with each category of new traffic in Subsection III.A and the development of the relevant unit costs applicable to the corresponding service units of each affected traffic movement in Subsection III.B.

A. Development of Service Units

25. Before I costed extended hauls, rail-to-rail diversions and truck-to-rail diversions, I developed the relevant service units associated with each diverted traffic movement. I derived the loaded car mile distances for the diverted shipments using P.C. Miler.

26. I describe in the following sub-sections inputs and assumptions related to how the relevant statistics were calculated. These statistics were developed for each combination of diverted shipment lane, commodity, car type and lading weight. I then developed relevant unit costs from URCS as described in Section III.B and applied them to the calculated service units for each set of diverted traffic to determine costs.

1. Gross Ton-Miles

27. To calculate gross ton-miles, I first derived mileages from P.C. Miler for diversions based on the 2019 waybill data and truck-to-rail diversions, and used mileages provided by CP for other growth-related traffic gains. I then converted loaded car-miles for non-intermodal traffic to trailing gross ton-miles using the following equation:[14]

Gross Ton-Miles = [((Tare Wt. + Net Tons) X Loaded Car-Miles) + (Tare Wt. X Empty Car-Miles)]

28. For intermodal shipments, I developed loaded intermodal flat car miles based on the CP system average of 4.7 containers per flat car[15] and converted to trailing gross tons using the following equation:

Gross Ton-Miles = [Tons lading/car + intermodal flat tare (car) x intermodal flat ERR + container tare (TCUs) x TCU ERR] x Loaded Car-Miles

29. I derived tare weights for intermodal flats and containers ("TCUs") from the CP/KCS URCS; lading weights were provided as part of the waybill data for each record for existing rail-to-rail diversions. Intermodal diversions related to commercial initiatives and truck-to-rail diversions used an assumed 13.5 lading tons per container consistent with CP's development of the operating plan.

---

[14] I obtained tare weights and empty return ratios from the combined CP/KCS URCS while net tons were provided as part of the waybill data for each diverted traffic movement.

[15] Using the CP system average of 4.7 was a conservative and reasonable estimate because CP-US averaged 5.0 and KCS averaged 4.5 as reported in schedule 755 of the R-1.

2. Locomotive Unit-Miles

30. I developed locomotive unit-miles for intermodal and carload diversions by multiplying the train-miles developed below in Section III.A.1.3 by the CP/KCS URCS average locomotive units per train, adjusted as described in Section II based on the train length and productivity reflected in the Operating Plan.

3. Train-Miles

31. To be consistent with the assumptions underlying the Operating Plan, I calculated train-miles attributable to each carload and intermodal unit by multiplying total loaded and empty miles traversed by the shipment by its proportion of URCS average train weight as adjusted as described in Section II.

4. Switching Minutes

32. I examined each new traffic movement, within a particular category, to determine the number of attributable terminal, interchange and/or I&I switches. I then multiplied the total number of switches in each category by the CP/KCS URCS minutes per terminal switch, interchange and I&I switch to generate total incremental switching minutes. I also applied the associated make-whole efficiency reductions for unit train shipments.

5. Car-Miles – Running

33. As explained above in Section III.A.i, I used P.C. Miler to calculate the mileage on the combined system associated with each extended or diverted movement derived from the 2019 waybill data and for truck-to-rail diversions. Mileages for diversions related to growth from new CPKC commercial initiatives were provided by CP.

34. For each non-intermodal shipment, I calculated the mileage between the consolidated system's origin (or on-junction) and termination (or off-junction), and multiplied by the number of cars in the movement to generate loaded car-miles. For extended hauls, I

deducted the original routes mileage from the extended haul route mileage to calculate incremental car-miles and applied the combined system's average empty return ratios.

35. For intermodal traffic, I calculated car-miles using a process similar to that described above for intermodal gross ton-miles. Specifically, I calculated route miles using P.C. Miler and developed loaded and empty intermodal flat car miles based on the URCS-reported number of containers per intermodal flat car and multiplied by the combined system average intermodal flat car empty return ratio.

6. Car Miles – Yard

36. To generate incremental yard days associated with extended hauls, rail-to-rail diversions and truck-to-rail diversions, I multiplied net changes in terminal, interchange and I&I switches by factors of 4.0, 2.75 and 1.0 miles per switch, respectively. I also applied the associated make-whole efficiency reductions for unit train shipments eliminating I&I events and combined system average empty ratios.

7. Car Days – Running

37. I developed car days-running based on the combined CP/KCS relationship of car miles to car days for each specific equipment type.

8. Car Days – Switching

38. I multiplied net changes in terminal, interchange, and I&I switches by factors of 1.0, 0.5, and 0.25 days per switch, respectively, to generate incremental yard days associated with extended hauls, rail-to-rail diversions and truck-to-rail diversions. I also applied the associated make-whole efficiency reductions for unit train and multi-car shipments and combined system average empty return ratios.

9. Intermodal Lifts

39. For trailer/container units that originate and/or terminate at a railhead, costs are incurred to lift the unit from the ground onto the rail car, or vice versa. I developed the lifts associated with new intermodal traffic as follows:

- For the truck-to-rail diversions, I took the total number of units calculated in Mutén's Verified Statement that would be diverted based on a combined and improved CP/KCS system, multiplied by 2.0 to reflect a lift at each end of the rail movement, and multiplied that figure by the combined CP/KCS URCS average empty ratio to reflect lifts associated with the movement of empties.
- For extended hauls on CP and KCS, I started with the number of additional origin/destination activities, multiplied by 1.0 (recognizing that a lift had already occurred at the other end of the move), and multiplied the result by the combined CP/KCS URCS average empty ratio to reflect lifts associated with the movement of empties.
- For rail-to-rail diversions, I started with the number of trailers/containers, multiplied by 2.0 to reflect a lift at each end, and increased that count by the combined CP/KCS URCS average empty ratio to reflect lifts associated with the movement of empties.

10. TCU Days

40. I developed the number of TCU days in line-haul service based on the combined CP/KCS relationship of TCU miles to TCU days. TCU days originating and terminating are based on the CP/KCS URCS days originating and terminating, multiplied by the CP/KCS TCU empty return ratio.

B. Selection of URCS Unit Costs Attributable to Diverted Shipments

41. To determine the incremental cost to CP/KCS of handling the diverted shipments, I modified the base URCS costing process to eliminate costs that are not directly affected by the addition of the diverted shipment or were accounted for elsewhere before calculating the additional costs associated with extended hauls, rail-to-rail diversions, and truck-to-rail diversions. To do so, I made the following modifications:

- I eliminated all general overhead expenses;
- I eliminated all overhead expenses attributed directly to the maintenance of way, mechanical and transportation departments. These departmental overhead expenses are not affected by the addition of diverted traffic;
- I eliminated all carload clerical costs because these were included in information technology costs calculated separately by Applicants;
- I eliminated all road and equipment ownership costs with the exception of a portion of depreciation and lease costs for automotive multi-levels and flats, intermodal flats, TCUs, and a small number of box cars and covered hoppers based on the number of each type of equipment specified within the Operating Plan to be acquired to accommodate the diverted traffic;[16]
- I added a portion of locomotive depreciation and lease costs consistent with the number of locomotive units identified in the Operating Plan to be acquired to accommodate the diverted traffic;[17] and
- I eliminated all relevant URCS make-whole adjustments.

---

16 *See* electronic work paper URCS Diversion Costing Metrics Adjustments.xlsx.

17 *Id.*

42. In addition, I made certain modifications to URCS unit costs to include only those line items that will be affected by the incremental diverted shipments. For example, I excluded costs associated with maintenance of way administration, but included those costs related to rail wear and tear resulting from the diverted shipments. My adjustments to each of the URCS cost components are described in detail in the following sections.

1. Gross Ton-Mile

43. Gross ton mile costs in URCS include allocations of running track costs and road operations. Running track costs include maintenance of way, maintenance of way administration, joint facility costs and other costs related to operating and maintaining the right of way. Road operations costs include items such as locomotive repair and servicing, repair and servicing facilities, locomotive administration and fuel costs. To further describe my methodology, I set forth in Table 12 the line items from the URCS gross ton mile costs that I attributed to the diverted traffic shipments.

TABLE 12
GROSS TON-MILE LINE ITEM COSTS INCLUDED

Category	Line Item
Running Track	Ties
	Rails & OTM
	Ballast
Road Operations	Diesel Road Locomotive Repairs
	Locomotive Fuel
	Locomotive Servicing

2. Locomotive Unit Mile

44. Locomotive unit mile costs in URCS include allocations of road operations costs, exactly as defined in the previous section. I describe in Table 13 the line items from the URCS gross ton mile costs that I attributed to the diverted traffic shipments.

TABLE 13
LOCOMOTIVE UNIT MILE LINE ITEM COSTS INCLUDED

Category	Line Item
Road Operations	Diesel Road Locomotive Repairs
	Locomotive Fuel
	Locomotive Servicing

3. Train Mile

45. Train mile costs in URCS also include allocations of road operations costs, but is defined to include train inspection and train crew costs. I describe in Table 14 the line items from the URCS train mile costs that I attributed to the diverted traffic shipments.

TABLE 14
TRAIN MILE LINE ITEM COSTS INCLUDED

Category	Line Item
Road Operations	Train Inspection
	Engine Crews
	Train Crews

4. Switch Engine Minute

46. Switch engine minutes in URCS include allocations of switching track costs and the switch related portion of road operations and yard operations costs. Switching track costs include maintenance, maintenance administration, and other costs related to operating and maintaining the tracks used for switching. Switch related road operations and yard operations costs include switch locomotive repair and service costs, administrative costs, fuel and switch crew costs. I describe in Table 15 the line items from the URCS switch engine minute costs I attributed to the diverted traffic shipments.

TABLE 15
SWITCH ENGINE MINUTE LINE ITEM COSTS INCLUDED

Category	Line Item
Switching Track	Ties
	Rails & OTM
	Ballast
Road Operations	Diesel Road Locomotive Repairs
	Locomotive Fuel
	Locomotive Servicing
	Train Inspection
	Engine Crews
	Train Crews
Yard Operations	Diesel Yard Locomotive Repairs
	Switch Crews
	Locomotive Fuel

5. Car Mile

47. Car mile costs in URCS include the costs of freight car repairs, freight car repair facilities and administration and shop machinery. For my analysis, I attributed only the cost of freight car repairs to the diverted traffic shipments.

48. In addition to car mile operating expenses, I included a portion of car mile-related depreciation and lease costs for boxcars, covered hoppers, multi-level autoracks and flat cars and for intermodal flat cars.

6. Car Day

49. Car day costs in URCS include the costs of freight car repairs, freight car repair facilities and administration and shop machinery. I did not make any adjustments to URCS car day-related costs applied to the diverted traffic shipments.

50. In addition to car day operating expenses, I included a portion of car day-related depreciation and lease costs for boxcars, covered hoppers, multi-level autoracks and flat cars and for intermodal flat cars.

7. Loss and Damage

51. Loss and damage costs in URCS include the costs attributable to losses and damages to freight while transiting the railroad system. I did not make any adjustments to the URCS loss and damage unit costs.

8. Intermodal Lifts

52. Intermodal lift costs in URCS include the cost of loading and unloading containers and trailers on and off freight trains as well as the cost associated with operating and maintaining intermodal facilities. Because the configuration of the intermodal facilities and associated maintenance costs are not affected by the additional diverted shipments, for my analysis, I included only the cost of loading and unloading containers and trailers on and off freight trains.

9. TCU Ownership

53. TCU depreciation and lease costs in URCS are net of any payments received by carriers for the use of containers. These payments sometimes result in negative depreciation and lease costs. I used only positive values in URCS for TCU depreciation and lease expenses to determine TCU-related ownership costs.

C. Summarizing Costs Applied to Diverted Traffic Shipments by Major Expense Category

54. I was asked by CP to summarize the costs I developed for handling the diverted shipments by major operating expense categories, which are: Engineering – Maintenance of Way, Mechanical, Transportation, Equipment, Intermodal Operations and Purchasing. I

allocated percentages to each URCS cost category based on the reported weights of the expense categories of the line items I included. My analysis resulted in the following breakdown:[18]

- GTM: 40% MOW; 10% Mechanical; 50% Transportation
- LUM: 12.5% Mechanical; 87.5% Transportation
- TM: 100% Transportation
- SEM: 20% MOW; 12.5% Mechanical; 67.5% Transportation
- CM-OPR (road and yard): 100% Mechanical
- CM-DRL (road and yard): 100% Equipment Requirements
- CD-OPR (road and yard): 100% Mechanical
- CD-DRL (road and yard): 100% Equipment Requirements
- Loss & Damage: 100% Transportation
- TCU: 100% intermodal

IV. SUMMARY OF NET MERGER-RELATED BENEFITS FROM EXTENDED HAULS, RAIL-TO-RAIL AND TRUCK-TO-RAIL DIVERSIONS

55. I describe by year my cost calculations and the resulting new merger benefits derived by deducting the costs from the diversion revenues in Table 16 below.

[18] *See* electronic work paper Incremental URCS Unit Costs.xlsx.

TABLE 16[19]
SUMMARY OF CP/KCS MERGER BENEFITS

	Year 1 (2023)	Year 2 (2024)	Year 3 (2025)
Diverted Carloads/Units	195,093	351,620	509,490
Incremental Revenues	$418.0M	$726.7M	$1021.9M
Incremental Costs by Category:			
Engineering – Maintenance of Way	$18.1M	$28.6M	$38.8M
Mechanical	$10.2M	$17.1M	$23.4M
Transportation	$91.1M	$148.6M	$204.8M
Equipment Requirements and Utilization	$1.3M	$6.5M	$13.6M
Intermodal Operations	$8.6M	$17.0M	$25.7M
Total Incremental Costs	$129.2M	$217.8M	$306.3M
Net Merger Benefits	**$288.9M**	**$508.8M**	**$715.6M**

Education

B.S. in Accounting, Fairfield University

Supplemental Finance Studies, Kean College

Mike Baranowski heads FTI's Network Industries Strategies practice and provides strategic, financial, and economic consulting services to the telecommunications and railroad and pipeline transportation industries. He has special expertise in analyzing and developing complex costing and cash flow models, conducting detailed operations analysis, and transportation engineering. Much of his work involves providing oral and written expert testimony before courts, arbitration panels and regulatory bodies.

He is a recognized expert in railroad regulatory economics and has assisted FTI's railroad clients in a broad range of litigation and regulatory engagements involving pricing of services, contract disputes, damage calculations and analyses of the specific effects of pending or proposed changes in policy or regulation.

Some of Mr. Baranowski's representative experience includes:

- Development of strategic litigation analyses for large network industry regulatory rate proceedings based on the theory of Constrained Market Pricing and the Stand-Alone cost test. Theory assumes the existence of a hypothetical, efficient competitor and involves detailed analysis of short and long run operations, expenses, capital expenditures and revenues.
- Analysis of market dynamics effecting pricing and development of a suite of modeling tools to assess the regulatory risk of tariff and contract transportation rates for a mix of commodities and services based on key cost drivers and forecasts.
- Expert testimony related to the determination of damages in a variety of commercial contract disputes in the railroad, telecommunications, pipeline and trucking industries.
- Evaluation of market effects of proposed railroad mergers and identification of merger related efficiencies and quantification of the associated savings.

- Going concern and liquidation value estimates for railroad related assets as the basis for trackage rights and competitive access compensation.
- Develop detailed cost and revenue allocation metrics to assess relative profitability of individual asset groups or segments of complex network industries.

Mr. Baranowski holds a B.S. in Accounting from Fairfield University in Fairfield, Connecticut and has pursued supplemental finance studies at Kean College in Union, New Jersey.

VERIFIED STATEMENT OF CHRIS DE BRUYN

1. My name is Chris De Bruyn. I am the Managing Director – Investor Relations and Treasury for Canadian Pacific ("CP"). I have been associated with CP's treasury operations since 2014. I have over ten years of experience in corporate finance. I hold a degree in Business Administration with a concentration in Finance from the State University of New York at Fredonia as well as a Master of Business Administration (MBA) with a specialization in Finance from the University of Calgary Haskayne School of Business.

2. I am submitting this Verified Statement to explain: (a) the financial terms of CP's proposed acquisition of control of Kansas City Southern ("KCS"); (b) CP's ability to repay transaction-related debt while simultaneously increasing its network investment; and (c) the fairness of the consideration to be paid by CP to KCS from the financial perspective of CP's shareholders.

I. THE FINANCIAL TERMS OF THE PROPOSED TRANSACTION

3. On September 15, 2021, KCS executed a definitive Agreement and Plan of Merger pursuant to which CP would acquire control of KCS (the "Merger Agreement"). Under the terms of the Merger Agreement, CP would acquire all of the voting securities of KCS in exchange for stock and cash consideration.

4. Under the Merger Agreement holders of KCS common stock will receive, for each share of KCS common stock, $90.00 in cash and 2.884 CP common shares. Holders of KCS preferred stock will receive $37.50 in cash for each share. Based on the closing price of CP shares as of August 9, the day prior to when CP made the proposal to KCS, holders of KCS common stock will receive consideration valued at $300 per share.

5. This valuation was driven by two factors. First, when CP entered an agreement to combine with KCS in March 2021, it offered $90.00 in cash and 2.445 CP shares for each share of KCS common stock (equivalent to 0.489 CP shares prior to CP's five-for-one stock split), which based on the CP share price the day prior to entering into the agreement represented a value of $275 per share. We offered that price because we understood that KCS likely had received a competing offer from private equity investors, and we believed that our offer needed to provide a premium to reflect the fact that a CP acquisition would require regulatory approval (whereas a private equity acquisition would not). We later learned that our offer beat an offer of $250 per share in cash that KCS had received from private equity investors, and thus represented only a ten percent premium over the private equity offer.[1]

6. Then, in August 2021, CP improved its offer to $300 per share in order to persuade KCS to postpone a shareholder vote on the CN proposal to acquire KCS in exchange for cash and stock. The CN offer had been valued at $325 per share at the time CN made a proposal to acquire KCS in May 2021. CP believed that a failure to improve our offer at that time could result in KCS shareholders approving the CN-KCS merger agreement, which would have precluded KCS from terminating its agreement with CN and entering into an agreement with CP until sometime in 2022 at the earliest.

7. When we decided to improve our offer, we did so by offering KCS shareholders an additional $25 per share in value, to approximately $300 per share, entirely in the form of

[1] As our securities filings now show, our assessment of private equity's bid to acquire KCS was very close to the mark. The "Transaction Background" section of our F-4 Registration Statement, which was filed with the SEC on October 1, 2021, provides a blow-by-blow description of the competition CP was engaged in with "Party A" (which CP understands to be a non-railroad private equity bidder). In the final round of that competition, CP's bid was within 10 percent of the all-cash offer that Party A was offering (at $250 per share). *See* Registration Statement at 54-55. Excerpts are attached as Exhibit 1.

increased stock consideration. In the aggregate, KCS shareholders will be receiving 70 percent of their consideration in the form of stock and 30 percent in the form of cash.

8. We consciously chose not to increase the amount of cash consideration in order to avoid the need to burden the combined company with additional debt. A mix of consideration involving more cash would not necessarily have placed the financial soundness of the combined company at risk, but we wanted to ensure that our revised offer would raise no doubts about the ability of the new Canadian Pacific Kansas City ("CPKC") to hit the ground running and compete aggressively for new rail traffic without the need to service additional debt.

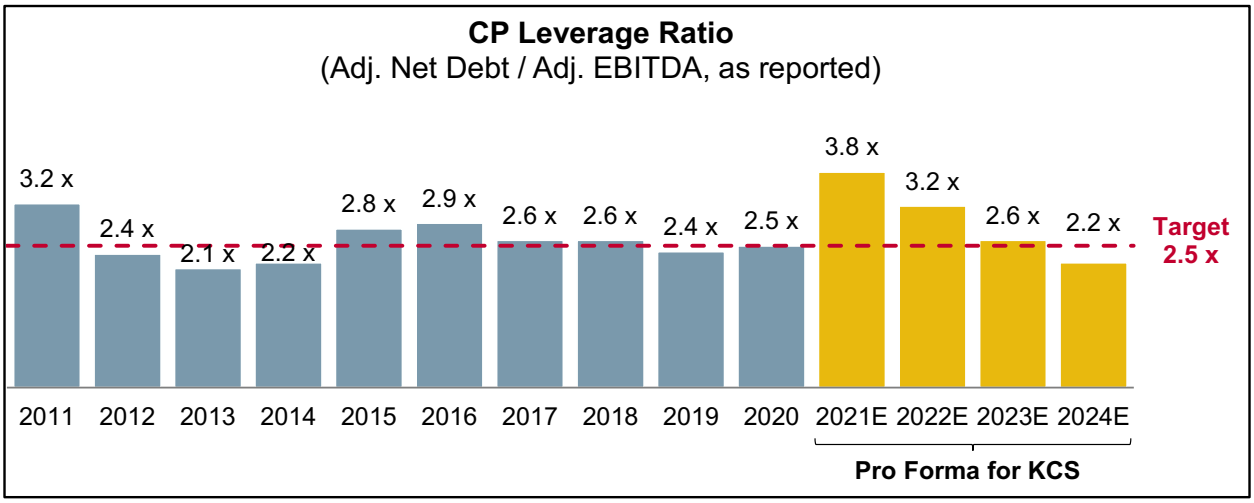
9. To fund the KCS acquisition, CP will issue approximately 262 million new CP common shares to pay the stock consideration (as well as amounts owed relating to equity awards to certain KCS employees). KCS shareholders will in the aggregate hold approximately 28% percent of CPRL shares. The cash consideration will be funded by a combination of cash on hand and up to $8.5 billion in new debt.[2] The new debt will be raised by CPRL subsidiary CPRC issuing senior unsecured notes on substantially similar terms to its outstanding unsecured notes.[3]

10. In the event the entire amount of debt has not been raised before the acquisition of KCS shares, CP has obtained commitments to borrow up to $8.5 billion via a senior unsecured 364-day bridge loan from Bank of Montreal and Goldman Sachs Lending Partners LLC, among

---

[2] Pursuant to the Merger Agreement, CP has already reimbursed KCS's payment of the $700 million "break fee" to Canadian National triggered by its termination of the CN-KCS merger agreement.

[3] For completeness, pursuant to a credit agreement, dated as of September 15, 2021, by and among CPRL and CPRC, BMO as a lender and the administrative agent, and the other lenders and financial institutions party thereto, CPRC borrowed the aggregate amount of $500 million in unsecured term loans, which have an initial six-month maturity, for the purpose of permitting CPRL to make certain remittances in connection with the payments made by KCS in connection with the termination of its merger agreement with CN.



other financial institutions. Further details on our funding of the Transaction are provided in the Sources and Application of Funds Statement (Exhibit 18) attached as Appendix H in Volume 1 of the Application.

II. CPKC WILL HAVE STRONG FINANCES CAPABLE OF SUPPORTING INCREASED INVESTMENT AND IMPROVED SERVICE WHILE SIMULTANEOUSLY PAYING OFF TRANSACTION-RELATED DEBT

A. The Transaction's Financial Terms Will Not Affect CPKC's Ability to Compete and Invest

11. CP is financially strong, as is KCS, and the new debt associated with the acquisition of KCS will neither place CP or CPKC in financial jeopardy or interfere with our plans to invest and compete to attract traffic to the combined CP/KCS system. CP operates with a target leverage ratio (adj. net debt to adj. EBITDA) of 2.5x. Since late in 2020, in anticipation of a possible acquisition of KCS, CP has paused share buybacks and dividend increases, with the result that for the past several quarters our leverage ratio has been materially below 2.5x. CP's leverage ratio over the past ten years is shown in Figure 1 below.

FIGURE 1
CP LEVERAGE RATIO SINCE 2011

Note: Projections assume transaction closes into Voting Trust Q4 2021. 2011-2013 EBITDA calculated as adjusted operating income plus depreciation & amortization.

12. With the addition of acquisition-related debt, our net leverage ratio would temporarily increase to approximately 3.8x, but the strong cash flow of both CP and KCS (and with Board approval, a combined CPKC), coupled with a continued pause in share buybacks and dividend increases, would allow us to bring our net leverage ratio back under 2.5x by the end of 2024. In addition, because our projected net leverage ratio for 2024 assumes that we would have re-commenced discretionary shareholder returns (*i.e.*, buybacks and dividend increases), we would have the flexibility to improve our leverage ratio further by continuing the pause if circumstances warranted.

13. Our anticipated financial trajectory takes into account all of the costs associated with the KCS acquisition, as well as the hundreds of millions of dollars in new capacity investment we plan to make to unlock the true competitive potential of the CP/KCS network. The detailed pro forma financial statements presented with the Application – and discussed in the Verified Statement of Dean Vargas – show in greater detail the impact of the transaction on the financial health of the combined company. These pro forma financial statements utilize 2019 standalone financial statements as a base. They do not incorporate any organic growth from CP or KCS since 2019, nor do they take into account either company's individual anticipated ongoing economic growth from now forward. As a result the figures in the Verified Statement of Dean Vargas and the 2019 pro forma financial statements will differ slightly from those in my analysis which is based on the CP and KCS as they are today and with ongoing economic growth moving forward. However, the conclusion on the financial health of CPKC remains the same. In short, CPKC will be every bit as strong financially, and every bit as capable of competing hard in the marketplace as CP and KCS were as separate companies.

14. As a further reflection of the financial soundness of CPKC, we expect to retain a strong investment grade credit rating once we acquire KCS, despite the post-acquisition capital structure reflecting the revised transaction terms. S&P Global Ratings indicated that CP's revised proposal will "not materially weaken CP Rail's credit measures relative to our previous forecasts."[4] When CP and KCS announced their first agreement in March 2021, S&P had noted that they "expect steady deleveraging over the next several years from earnings growth and free cash flow generation. In addition, the completion of the transaction should strengthen CP's business risk profile notably from the combined larger transcontinental network, increased customer breadth, and enhanced service capability that add efficiencies."[5]

15. Similarly, Moody's reported that CP's credit profile "will benefit from a larger, more diversified business with greater exposure to higher margin merchandise business, increased customer diversity and breadth, the potential for synergies from network and equipment efficiencies as well as greater revenue expansion."[6] Although Moody's downgraded CP to Baa2 from Baa1 in light of its increased leverage and uncertainties around regulatory approval, it maintained a stable outlook for CP. Moody's explained: "The stable outlook reflects Moody's expectation that CP's existing rail network will continue to operate well … [and] incorporates the expectation that the company will receive shareholder approval for the

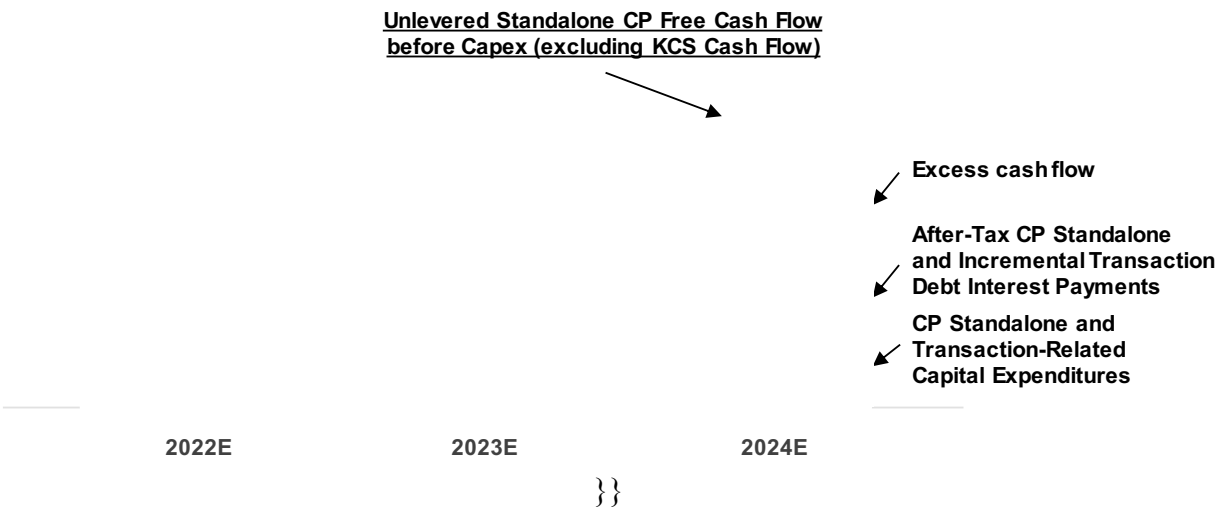
[5] See S&P Global Ratings, "*CP Rail's Merger With Kansas City Southern Would Be a Good Fit if Approved*" (Mar. 22, 2021), which is Exhibit 3 hereto.

[6] *See* Moody's Investor's Service, "*Moody's downgrades CP Rail to Baa2 Stable on KCS Acquisition*" (Mar. 22, 2021) (Exhibit 4 hereto) at 1.



KCS acquisition in mid-2021 and will make steady progress in reducing its initial elevated leverage as a result of the acquisition toward 3x by 2023."[7]

16. CP (and later CPKC) will easily be able to manage its increased debt load given its strong cash flow generation. As illustrated in Figure 3 below, CP (even without including cash flow from KCS), expects to have a meaningful cash flow buffer after accounting *for both the acquisition and its capital-investment plan*, which is in-line with historical capital expenditure rates as well as the servicing costs of both CP's standalone debt and the new Transaction-related debt. CP expects to generate an aggregate of $10.4 billion of unlevered free cash flow before capital expenditures between 2022 and 2024 (calculated as cash from operations, less cash from investing, plus capital expenditures and after-tax interest payments on CP standalone and transaction-related debt) and expects to spend an aggregate of $3.7 billion on capital expenditures, and $1.2 billion on after-tax interest payments on CP standalone and Transaction-related debt for the same time period. This leaves CP with a cushion of $5.5 billion in excess cash flow after capital expenditures and after-tax interest payments over this period.

(FIGURES IN USD BILLIONS)

{{

}}

B. Potential Downside Scenarios Will Not Jeopardize CPKC's Ability to Pay Down Debt While Competing and Investing in New Services

17. Among the reasons why CPKC will be financially strong are the significant synergies we expect will flow from the Transaction, primarily in the form of substantial additional revenue from the new traffic CPKC will attract (EBITDA of approximately $806 million annually by 2025) along with some improvement in operating efficiency (EBITDA of approximately $195 million annually by 2025). These Transaction-related synergies will occur against the backdrop of anticipated ongoing economic growth, all of which will bolster CP/KCS's ability to continue to pursue aggressive competitive initiatives from a position of financial health.

18. Although we are highly confident that the CP/KCS combination will achieve financial synergies of at least this magnitude, and that the North American freight marketplace will continue to grow, we have not blindly assumed only favorable trends. We have also considered potential downside scenarios, which contemplate both an economic downturn and

reduced synergies realized. Even in such scenarios, the Transaction-related debt will not place CPKC in financial jeopardy or undermine its incentives or ability to continue to make the investments (both in terms of capital and aggressive competitive initiatives) needed to compete successfully for additional rail traffic.

19. Under the base case CP forecasts, CP EBITDA would grow at a CAGR of seven percent from 2021 to 2025 and KCS's EBITDA would grow at a CAGR of nine percent, for a projected growth rate of eight percent for the combined CP/KCS, before taking into account incremental growth from the realization of synergies. To put this in context, over the past 20 years, CP achieved an average three-year EBITDA CAGR of 13 percent and an average five-year EBITDA CAGR of ten percent. This compares to KCS's average three-year and five-year EBITDA CAGRs, being 18 percent and 17 percent, respectively, over the past two decades. CP's projected growth is thus conservatively below the observed CP and KCS historical growth averages. Even when considering this conservative growth profile on a go-forward basis, CP will be able to comfortably de-lever its balance sheet.

20. In addition to the base case, I present below two potential downside scenarios, both of which show the financial strength and resilience of CPKC.

21. First, assuming both (a) a 2021-2025 EBITDA CAGR of just four percent, which represents *half* of our projected eight percent EBITDA CAGR for CP and KCS combined, and (b) a realization of only *half* of our anticipated synergies, all while (c) retaining the same level of capital expenditures as in our base case, CPKC would generate $1.6 billion less cash flow between 2022 and 2024, which would only slightly delay CPKC's stated leverage objectives. Under such a scenario, we would expect our leverage ratio to be 2.7x by the end of 2024 compared to 2.3x under the base case.

22. Assuming a more severe economic downturn, resulting in (a) no growth in EBITDA after 2021 for CP and KCS combined, (b) a reduction of our anticipated synergies in half, and (c) maintaining the same level of capital expenditures as in our base case, CP would generate $2.5 billion less cash flow over the same three-year period. This outcome, however, would still allow us to reduce our leverage ratio to be 3.2x by the end of 2024, which is still consistent with an investment grade credit profile.

23. As shown in Table 1 below, the impact of these economic downturn scenarios on CPKC's financial position would not be material and I expect CPKC to maintain its investment grade credit rating under both downside scenarios.

TABLE 1

	Base Case (8% 2021-2025 EBITDA CAGR with 100% merger synergies)	**Scenario 1** Economic Downturn (4% 2021-2025 EBITDA CAGR and 50% merger synergies)	**Scenario 2** Severe Economic Downturn (0% 2021-2025 EBITDA CAGR) and 50% merger synergies)
Aggregate Reduction in Cash Flow vs. Base Case (2022-2024E)	$0	$1.6 billion	$2.5 billion
2024E Leverage	2.3x	2.7x	3.2x
2023E Leverage	2.6x	3.1x	3.5x
2023E FFO / Debt	28%	23%	21%
Expected Credit Rating in 2023	Investment Grade	Investment Grade	Investment Grade

III. FAIRNESS OF FINANCIAL TERMS TO CP

24. CP's Board of Directors voted unanimously to approve entering into the Merger Agreement because the combination of CP with KCS would enhance the value of CP shares, benefitting CP shareholders. This value, in the view of the Board of Directors, stems from the

fundamentals of the transaction, which will position CPKC to pursue profitable growth opportunities by competing more effectively in the North American freight marketplace.

25. CP engaged BMO Nesbitt Burns and Goldman Sachs to act as its financial advisors in connection with the Transaction, and the CP Board of Directors engaged Evercore to act as its financial advisor in connection with the Transaction. Each of those advisors was asked to provide the Board of Directors with its opinion whether the merger consideration to be paid by CP to the stockholders of KCS pursuant to the merger agreement was fair, from a financial point of view, to CP. Each of those advisors – BMO Capital Markets, Goldman Sachs, and Evercore – has extensive experience and expertise performing financial analyses of proposed mergers and acquisitions.

26. As set forth in Appendix A, BMO Capital Markets delivered to the CP Board of Directors its written opinion, dated September 15, 2021, to the effect that, as of September 15, 2021 and based upon and subject to the factors and assumptions set forth in the written opinion, the merger consideration to be paid by CP to the stockholders of KCS pursuant to the merger agreement was fair from a financial point of view to CP.

27. As set forth in Appendix B, Goldman Sachs delivered to the CP Board of Directors its written opinion, dated September 15, 2021, to the effect that, as of September 15, 2021 and based upon and subject to the factors and assumptions set forth in the written opinion, the merger consideration to be paid by CP to the stockholders of KCS pursuant to the merger agreement was fair from a financial point of view to CP.

28. As set forth in Appendix C, Evercore delivered to the CP Board of Directors with its written opinion, dated September 15, 2021, to the effect that, as of September 15, 2021 and based upon and subject to the factors and assumptions set forth in the written opinion, the merger

consideration to be paid by CP to the stockholders of KCS pursuant to the merger agreement was fair from a financial point of view to CP.

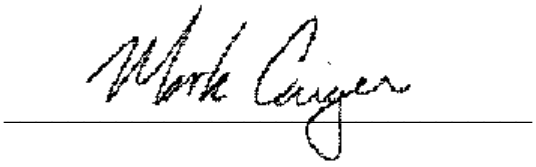
BMO CAPITAL MARKETS FAIRNESS OPINION



VERIFICATION OF BMO NESBITT BURNS INC.

On behalf of BMO Nesbitt Burns Inc. ("BMO"), this is to verify that (a) the Fairness Opinion of BMO dated September 15, 2021 ("BMO Fairness Opinion") appended hereto is a true and correct copy of the Fairness Opinion provided by BMO to the Board of Directors of Canadian Pacific Railway Limited ("CPRL") in connection with its proposed acquisition of Kansas City Southern, and (b) the summary of the BMO Fairness Opinion appended hereto is an accurate summary of the BMO Fairness Opinion.

In providing this verification, BMO does not intend that any person other than the Board of Directors of CPRL be entitled to rely on the BMO Fairness Opinion.

I, Mark Caiger, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed this 27 day of October, 2021.

FAIRNESS OPINION LETTER

BMO

BMO Capital Markets®

September 15, 2021

The Board of Directors
Canadian Pacific Railway Limited
7550 Ogden Dale Rd. S.E.
Calgary, AB T2C 4X9, Canada

To the Board of Directors:

BMO Nesbitt Burns Inc. ("BMO Capital Markets" or "we" or "us") understands that Canadian Pacific Railway Limited (the "Company"), Cygnus Merger Sub 1 Corporation, a direct wholly owned subsidiary of the Company ("Surviving Merger Sub"), Cygnus Merger Sub 2 Corporation, a direct wholly owned subsidiary of Surviving Merger Sub ("First Merger Sub", and, together with Surviving Merger Sub, "Merger Subs") and Kansas City Southern propose to enter into an Agreement and Plan of Merger to be dated as of September 15, 2021 (the "Merger Agreement"). Pursuant to the Merger Agreement, among other things, First Merger Sub shall be merged with and into Kansas City Southern (the "First Merger"), with Kansas City Southern surviving the First Merger as a direct wholly owned subsidiary of Surviving Merger Sub (the "First Surviving Corporation"). Immediately following the First Merger, the First Surviving Corporation shall be merged with and into Surviving Merger Sub (the "Second Merger" and, together with the First Merger, the "Transaction"), with Surviving Merger Sub surviving the Second Merger as a direct wholly owned subsidiary of the Company. Each issued and outstanding common share of Kansas City Southern (excepting Cancelled Shares, Excluded Shares and Dissenting Shares, each as defined in the Merger Agreement) will be converted into the right to receive 2.884 common shares of the Company and US$90 in cash (the "Merger Consideration"). The terms and conditions of the Transaction are more fully set forth in the Merger Agreement and will be summarized in the Company's management information circular (the "Circular") to be mailed to holders of the Company's common shares.

We have been retained to provide financial advice to the Company, including our opinion (the "Opinion") to the board of directors of the Company (the "Board of Directors") as to the fairness to the Company, from a financial point of view, of the Merger Consideration payable pursuant to the Merger Agreement.

ENGAGEMENT OF BMO CAPITAL MARKETS

BMO Capital Markets was formally engaged by the Company pursuant to an agreement effective December 1, 2020 (the "Engagement Agreement"). Under the terms of the Engagement Agreement, BMO Capital Markets has agreed to provide the Company and the Board of Directors with various advisory services in connection with the Transaction including, among other things, the provision of the Opinion.

BMO Capital Markets will receive certain fees for our advisory services under the Engagement Agreement, a substantial portion of which is contingent upon the successful completion of the Transaction. The Company has also agreed to reimburse us for our reasonable out-of-pocket expenses and to indemnify us against certain liabilities that might arise out of our engagement.

CREDENTIALS OF BMO CAPITAL MARKETS

BMO Capital Markets is one of North America's largest investment banking firms, with operations in all facets of corporate and government finance, mergers and acquisitions, equity and fixed income sales and trading, investment research and investment management. BMO Capital Markets has been a financial advisor in a significant number of transactions throughout North America involving public and private companies in various industry sectors and has extensive experience in preparing fairness opinions.

The Opinion represents the opinion of BMO Capital Markets, the form and content of which have been approved for release by a committee of our officers who are collectively experienced in merger and acquisition, divestiture, restructuring, valuation, fairness opinion and capital markets matters.

INDEPENDENCE OF BMO CAPITAL MARKETS

Neither BMO Capital Markets, nor any of our affiliates, is an insider, associate or affiliate (as those terms are defined in the *Securities Act* (Ontario) (the "Act") or the rules made thereunder) of the Company, Kansas City Southern, or any of their respective associates or affiliates (collectively, the "Interested Parties").

BMO Capital Markets has not been engaged to provide any financial advisory services nor has it participated in any financings involving the Interested Parties within the past two years, other than: (i) acting as financial advisor to the Company and the Board of Directors pursuant to the Engagement Agreement; (ii) providing ongoing cash management and trade finance services to the Company; (iii) providing ongoing equity and financing solutions to the Company; (iv) providing ongoing fixed income, currency and commodity services to the Company; (v) acting as joint bookrunner, joint lead arranger, and administrative agent for the US$8.5 billion bond bridge financing in connection with the Company's proposed acquisition of Kansas City Southern in March 2021; (vi) acting as joint bookrunner and joint lead arranger on the US$1.3 billion and US$600 million of credit facility backstops in connection with the Company's proposed acquisition of Kansas City Southern in March 2021; (vii) providing foreign exchange and interest rate hedging services for the US$8.5 billion bond bridge financing in connection with the Company's proposed acquisition of Kansas City Southern in March 2021; (viii) acting as joint bookrunner for the issuance by the Company of C$300 million 3.050% notes due March 9, 2050 in March 2020; (ix) acting as co-manager for the issuance by the Company of US$500 million 2.050% notes due March 5, 2030 in March 2020; (x) providing foreign exchange swaps services to the Company in 2020; (xi) acting as co-lead arranger and joint bookrunner for the Company's new revolving credit facility of US$300 million in September 2019; (xii) acting as co-lead arranger and joint bookrunner for the Company's amended and restated US$1.0 billion revolving credit facility in September 2019; and (xiii) providing deposit services to Kansas City Southern in 2019 and 2020.

Additionally, at your request, BMO Capital Markets or one or more of our affiliates has agreed to act as a joint bookrunner, joint lead arranger, and administrative agent on the US$8.5 billion bond bridge financing to be made available to the Company in connection with the consummation of the Transaction; entered into financing commitments and agreements to act as a joint bookrunner and joint lead arranger on the US$1.3 billion and US$600 million of credit facility backstops to be made available to the Company in connection with the consummation of the Transaction; and agreed to act as a joint lead bookrunner for the issuance by the Company of US$8.5 billion bonds in connection with the consummation of the Transaction. BMO Capital Markets or one or more of our affiliates may agree to provide additional financing services to the Company in connection with the Transaction, for which services BMO Capital Markets or such affiliate would receive compensation.

Other than those described above, there are no understandings, agreements or commitments between BMO Capital Markets and any of the Interested Parties with respect to future business dealings. BMO Capital Markets may, in the future, in the ordinary course of business, provide financial advisory, investment banking, or other financial services to one or more of the Interested Parties from time to time.

BMO Capital Markets and certain of our affiliates act as traders and dealers, both as principal and agent, in major financial markets and, as such, may have had and may in the future have positions in the securities of one or more of the Interested Parties and, from time to time, may have executed or may execute transactions on behalf of one or more Interested Parties for which BMO Capital Markets or such affiliates received or may receive compensation. As investment dealers, BMO Capital Markets and certain of our affiliates conduct research on securities and may, in the ordinary course of business, provide research reports and investment advice to clients on investment matters, including with respect to one or more of the Interested Parties or the Transaction. In addition, Bank of Montreal ("BMO"), of which BMO Capital Markets is a wholly-owned subsidiary, or one or more affiliates of BMO, may provide banking or other financial services to one or more of the Interested Parties in the ordinary course of business.

SCOPE OF REVIEW

In connection with rendering the Opinion, we have reviewed and relied upon, or carried out, among other things, the following:

1. a draft of the Merger Agreement dated September 10, 2021;

2. certain publicly available information relating to the business, operations, financial condition and trading history of the Company, Kansas City Southern and other selected public companies we considered relevant;

3. certain internal financial, operating, corporate and other information prepared or provided by or on behalf of the Company or Kansas City Southern relating to the business, operations and financial condition of the Company and Kansas City Southern;

4. internal management forecasts, projections, estimates and budgets prepared or provided by or on behalf of management of the Company or Kansas City Southern;

5. discussions with management of the Company relating to the Company's current business, plan, financial condition and prospects;

6. discussions with management of Kansas City Southern relating to Kansas City Southern's current business, plan, financial condition and prospects;

7. discussions with management of the Company relating to Company management's assessment of opportunities to enhance cash flows of the combined entity;

8. public information with respect to selected precedent transactions we considered relevant;

9. various reports published by equity research analysts, industry sources and credit rating agencies we considered relevant;

10. a letter of representation as to certain factual matters and the completeness and accuracy of certain information upon which the Opinion is based, addressed to us and dated as of the date hereof, provided by senior officers of the Company; and

11. such other information, investigations, analyses and discussions as we considered necessary or appropriate in the circumstances.

BMO Capital Markets has not, to the best of its knowledge, been denied access by the Company to any information under the Company's control requested by BMO Capital Markets.

ASSUMPTIONS AND LIMITATIONS

We have relied upon and assumed the completeness, accuracy and fair presentation of all financial and other information, data, advice, opinions, representations (including the letter of representation delivered as of the date hereof by the Company to BMO Capital Markets) and other material obtained by us from public sources or provided to us by or on behalf of the Company or Kansas City Southern or otherwise obtained by us in connection with our engagement (the "Information"). The Opinion is conditional upon such completeness, accuracy and fair presentation. We have not been requested to, and have not assumed any obligation to, independently verify the completeness, accuracy or fair presentation of any such Information. We have assumed that forecasts, projections, estimates (including, without limitation, estimates of revenue and cost synergies and timing for the realization thereof) and budgets provided to us and used in our analyses were reasonably prepared on bases reflecting the best currently available assumptions, estimates and judgments of management of the Company, having regard to the business, plans, financial condition and prospects of the Company or Kansas City Southern, as applicable.

In addition, we have assumed that: (i) the Information provided to BMO Capital Markets orally by, or in the presence of, an officer or employee of, the Company, or in writing by the Company or any of its subsidiaries (as defined in National Instrument 45-106 – *Prospectus Exemptions*) or any of its or their representatives in connection with our engagement was, at the date the Information was provided to BMO Capital Markets, and is, as of the date hereof, complete, true and correct in all material respects, and did not and does not contain a misrepresentation (as defined in the Act); (ii) since the dates on which the Information was provided to BMO Capital Markets, except as disclosed in writing to BMO Capital Markets, there has been no material change, financial or otherwise, in the financial condition, assets, liabilities (contingent or otherwise), business, operations or prospects of the Company or any of its subsidiaries, or Kansas City Southern or any of its subsidiaries, and no change has occurred in the Information or any part thereof which would have or which could reasonably be expected to have a material effect on the Opinion; (iii) since the dates on which the Information was provided to BMO Capital Markets, except as disclosed publicly or in writing to BMO Capital Markets, there has been no material transaction entered into by the Company, Kansas City Southern or any of their respective subsidiaries; (iv) none of the Company, Kansas City Southern or their respective subsidiaries has any material contingent liabilities and there are no actions, suits, claims, proceedings or inquiries pending or threatened in writing against or affecting the Company, Kansas City Southern or any of their respective subsidiaries, at law or in equity or before any federal, provincial, state, municipal or other governmental department, commission, bureau, board agency or instrumentality which may in any way materially adversely affect the Company and its subsidiaries, Kansas City Southern and its subsidiaries, or the Transaction; (v) all financial information about the Company or Kansas City Southern provided to BMO Capital Markets was prepared on a basis consistent in all material respects with the accounting policies applied in the Company's most recent audited consolidated financial statements or Kansas City Southern's most recent audited consolidated financial statements, as the case may be; (vi) there are no agreements, undertakings, commitments or understandings (written or oral, formal or informal) relating to the Transaction, except as have been disclosed to BMO Capital Markets; (vii) the Company's and Kansas City Southern's public disclosure documents did not, at the time they were filed with the applicable securities regulatory authorities, contain a misrepresentation (as defined under the Act) and complied in all material respects with applicable securities laws at the time they were filed; and (viii) the Company and Kansas City Southern each has filed on a timely basis with the applicable securities regulatory authorities all documents required to be filed by the Company and Kansas City Southern.

We have not been provided with, and understand that there is not, any formal valuation or appraisal of the securities or assets of the Company, Kansas City Southern or any of their respective affiliates.

In preparing the Opinion, we have assumed that the executed Merger Agreement will not differ in any material respect from the draft that we reviewed, and that the Transaction will be consummated in accordance with the terms and conditions of the Merger Agreement without waiver of, or amendment to, any term or condition that is in any way material to our analyses.

The Opinion is rendered on the basis of securities markets, economic, financial and general business conditions prevailing as of the date hereof and the condition and prospects, financial and otherwise, of the Company and Kansas City Southern as they are reflected in the Information and as they have been represented to BMO Capital Markets in discussions with management of the Company and Kansas City Southern and their respective representatives. In our analyses and in preparing the Opinion, BMO Capital Markets made numerous judgments and assumptions with respect to industry performance, general business, market and economic conditions and other matters, many of which are beyond our control or that of any party involved in the Transaction.

The Opinion is provided to the Board of Directors for its use only in considering the Transaction and may not be used or relied upon by any other person or for any other purpose without our prior written consent. The Opinion does not constitute a recommendation as to how any shareholder should vote or act on any matter relating to the Transaction. Except for the inclusion of the Opinion in its entirety and a summary thereof (in a form acceptable to us) in the Circular, the Opinion is not to be reproduced, disseminated, quoted from or referred to (in whole or in part) without our prior written consent.

We have not been asked to prepare and have not prepared a formal valuation or appraisal of the securities or assets of the Company, Kansas City Southern or any of their respective affiliates, and the Opinion should not be construed as such. The Opinion is not, and should not be construed as, advice as to the price at

which the securities of the Company or Kansas City Southern may trade at any time. BMO Capital Markets was not engaged to review any legal, tax or regulatory aspects of the Transaction and the Opinion does not address any such matters. We have relied upon, without independent verification, the assessment by the Company and its legal and tax advisors with respect to such matters. In addition, the Opinion does not address the relative merits of the Transaction as compared to any strategic alternatives that may be available to the Company.

The Opinion is rendered as of the date hereof and BMO Capital Markets disclaims any undertaking or obligation to advise any person of any change in any fact or matter affecting the Opinion which may come or be brought to the attention of BMO Capital Markets after the date hereof. Without limiting the foregoing, if we learn that any of the information we relied upon in preparing the Opinion was inaccurate, incomplete or misleading in any material respect, BMO Capital Markets reserves the right to change or withdraw the Opinion.

CONCLUSION

Based upon and subject to the foregoing, BMO Capital Markets is of the opinion that, as of the date hereof, the Merger Consideration payable pursuant to the Merger Agreement is fair from a financial point of view to the Company.

Yours truly,

BMO Nesbitt Burns Inc.

BMO Nesbitt Burns Inc.

EXCERPTS FROM CPRL CIRCULAR

BMO

BMO Capital Markets Fairness Opinion

CP retained BMO Capital Markets under an engagement agreement, as amended, effective December 1, 2020 to provide financial advisory services in connection with the Transaction. As part of its engagement, BMO Capital Markets was requested to provide the CP Board with its opinion as to the fairness to CP, from a financial point of view, of the Merger Consideration to be paid to the holders of KCS common stock in the First Merger.

The BMO Capital Markets Fairness Opinion stated that, based upon and subject to the assumptions, limitations, qualifications and other matters stated therein, BMO Capital Markets was of the opinion that, as of September 15, 2021, the Merger Consideration to be paid to the holders of KCS common stock in the First Merger was fair, from a financial point of view, to CP.

The full text of the BMO Capital Markets Fairness Opinion, setting out BMO Capital Markets' credentials, assumptions made, procedures followed, information reviewed, matters considered and limitations and qualifications on the scope of review undertaken in connection with the BMO Capital Markets Fairness Opinion, is attached as "*Appendix C – BMO Capital Markets Fairness Opinion*" to this Management Proxy Circular. This summary is qualified in its entirety by reference to the full text of the BMO Capital Markets Fairness Opinion.

Details regarding the qualifications, credentials and independence of BMO Capital Markets, and the assumptions, limitations and qualifications applicable to the BMO Capital Markets Fairness Opinion, are set forth in the BMO Capital Markets Fairness Opinion.

The BMO Capital Markets Fairness Opinion is not a recommendation as to how the CP shareholders should vote on the Share Issuance Resolution or any other matter. The BMO Capital Markets Fairness Opinion was one of a number of factors taken into consideration by the CP Board in making its unanimous determination that it is in the best interests of CP to enter into the Merger Agreement and to recommend that CP shareholders vote in favour of the Share Issuance Resolution. In evaluating the Transaction, the CP Board considered, among other things, the advice and financial analyses provided by BMO Capital Markets referred to above, in addition to the BMO Capital Markets Fairness Opinion. In assessing the BMO Capital Markets Fairness Opinion, the CP Board took into account that a substantial portion of the fees payable to BMO Capital Markets for its services are contingent upon the closing of the Transaction, subject to the obligation of CP to make an earlier payment to BMO Capital Markets in certain circumstances.

In rendering the BMO Capital Markets Fairness Opinion, BMO Capital Markets reviewed, or carried out, among other things: (i) a September 10, 2021 draft of the Merger Agreement; (ii) certain publicly available information relating to the business, operations, financial condition and trading history of CP, KCS and other selected public companies BMO Capital Markets considered relevant; (iii) certain internal financial, operating, corporate and other information prepared or provided by or on behalf of CP or KCS relating to the business, operations and financial condition of CP and KCS; (iv) internal management forecasts, projections, estimates and budgets prepared or provided by or on behalf of management of CP or KCS; (v) discussions with management of CP relating to CP's current business, plan, financial condition and prospects; (vi) discussions with management of KCS relating to KCS's current business, plan, financial condition and prospects; (vii) discussions with management of CP relating to CP's management's assessment of opportunities to enhance cash flows of the combined entity; (viii) public information with respect to selected precedent transactions BMO Capital Markets considered relevant; (ix) various reports published by equity research analysts, industry sources and credit rating agencies BMO Capital Markets considered relevant; (x) a letter of representation as to certain factual matters and the completeness and accuracy of certain information upon which the BMO Capital Markets Fairness Opinion is based, addressed to BMO Capital Markets and dated as of the date of the BMO Capital Markets Fairness Opinion, provided by senior officers of CP; and (xi) such other information, investigations, analyses and discussions as BMO Capital Markets considered necessary or appropriate in the circumstances.

BMO Capital Markets was not provided with, and understood that there was not, any formal valuation or appraisal of the securities or assets of CP, KCS or any of their respective affiliates. BMO Capital Markets was not asked to prepare and did not prepare a formal valuation or appraisal of the securities or assets of CP, KCS or any of their respective affiliates, and the BMO Capital Markets Fairness Opinion should not be construed as such.

BMO Capital Markets and certain of its affiliates act as traders and dealers, both as principal and agent, in major financial markets and, as such, may have had and may in the future have positions in the securities of one or more of CP, KCS or any of their respective associates or affiliates and, from time to time, may have executed or may execute transactions on behalf of one or more such parties for which BMO Capital Markets or such affiliates received or may receive compensation. As investment dealers, BMO Capital Markets and certain of its affiliates conduct research on securities and may, in the ordinary course of business, provide research reports and investment advice to clients on investment matters, including with respect to one or more of CP, KCS or any of their respective associates or affiliates or the Transaction. In addition, BMO, of which BMO Capital Markets is a wholly owned subsidiary, or one or more affiliates of BMO, may provide banking or other financial services to one or more of CP, KCS or any of their respective associates or affiliates in the ordinary course of business.

BMO Capital Markets has not been engaged to provide any financial advisory services nor has it participated in any financings involving the parties within the past two years, other than: (i) acting as financial advisor to CP and the CP Board under the engagement agreement, as amended; (ii) providing ongoing cash management and trade finance services to CP; (iii) providing ongoing equity and financing solutions to CP; (iv) providing ongoing fixed income, currency and commodity services to CP; (v) acting as joint bookrunner, joint lead arranger, and administrative agent for the U.S.$8.5 billion bond bridge financing in connection with CP's proposed acquisition of KCS in March 2021; (vi) acting as joint bookrunner and joint lead arranger on the U.S.$1.3 billion and U.S.$600 million of credit facility backstops in connection with CP's proposed acquisition of KCS in March 2021; (vii) providing foreign exchange and interest rate hedging services for the U.S.$8.5 billion bond bridge financing in connection with CP's proposed acquisition of KCS in March 2021; (viii) acting as joint bookrunner for the issuance by CP of $300 million 3.050% notes due March 9, 2050 in March 2020; (ix) acting as co-manager for the issuance by CP of U.S.$500 million 2.050% notes due March 5, 2030 in March 2020; (x) providing foreign exchange swaps services to CP in 2020; (xi) acting as co-lead arranger and joint bookrunner for CP's new revolving credit facility of U.S.$300 million in September 2019; (xii) acting as co-lead arranger and joint bookrunner for CP's amended and restated U.S.$1.0 billion revolving credit facility in September 2019; and (xiii) providing deposit services to KCS in 2019 and 2020.

Additionally, at CP's request, BMO Capital Markets or one or more of its affiliates has agreed to act as a joint bookrunner, joint lead arranger, and administrative agent on the U.S.$8.5 billion bond bridge financing to be made available to CP in connection with the closing of the Transaction; entered into financing commitments and agreements to act as a joint bookrunner and joint lead arranger on the U.S.$1.3 billion credit facility backstop to be made available to CP and the U.S.$600 million credit facility backstop to be made available to CP, in each case in connection with the closing of the Transaction; agreed to act as a joint lead bookrunner for the issuance by CP of U.S.$8.5 billion of bonds in connection with the closing of the Transaction; and agreed to act as administrative agent and sole bookrunner on a syndicated U.S.$500.0 million unsecured term loan made available to CP for general corporate purposes. BMO Capital Markets or one or more of its affiliates may agree to provide additional financing services to CP in connection with the Transaction, for which services BMO Capital Markets or such affiliate would receive compensation.

Under the terms of its engagement agreement, as amended, BMO Capital Markets will be paid a fee for its services in connection with the Transaction, a substantial portion of which is contingent upon the successful closing of the Transaction, subject to the obligation of CP to make an earlier payment to BMO Capital Markets in certain circumstances. CP has also agreed to reimburse BMO Capital Markets for certain out-of-pocket expenses and to indemnify BMO Capital Markets against certain liabilities that may arise in connection with its engagement.

The BMO Capital Markets Fairness Opinion was provided to the CP Board for its use only in considering the Transaction and may not be used or relied upon by any person for any other purpose without BMO Capital Markets' prior written consent and does not constitute a recommendation as to how the CP shareholders should vote on the Share Issuance Resolution or any other matter. BMO Capital Markets expresses no view as to, and the BMO Capital Markets Fairness Opinion does not address, the underlying business decision of CP to effect the Transaction or the relative merits of the Transaction as compared to any strategic alternatives that may be available to CP; nor does it address any legal, tax or regulatory matters.

The CP Board urges the CP shareholders to read the BMO Capital Markets Fairness Opinion in its entirety. Any summary of the BMO Capital Markets Fairness Opinion herein is qualified in its entirety by reference to the full text of the BMO Capital Markets Fairness Opinion as set out in "*Appendix C – BMO Capital Markets Fairness Opinion*".

APPENDIX B TO
VERIFIED STATEMENT OF CHRIS DE BRUYN

GOLDMAN SACHS FAIRNESS OPINION

VERIFICATION OF GOLDMAN SACHS & CO. LLC

On behalf of Goldman Sachs & Co. LLC ("GS"), this is to verify that (a) the Fairness Opinion of GS dated September 15, 2021 ("GS Fairness Opinion"), set forth in the attached Appendix, is a true and correct copy of the Fairness Opinion provided by GS to the Board of Directors of Canadian Pacific Railway Limited ("CPRL") in connection with its proposed acquisition of Kansas City Southern, and (b) the summary of the GS Fairness Opinion set forth in the attached Appendix is an accurate summary of the GS Fairness Opinion.

In providing this verification, GS does not intend that any person other than the Board of Directors of CPRL be entitled to rely on the GS Fairness Opinion.

I, Eduard Wittig, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 5th day of October, 2021.

E K Wittig

Goldman Sachs

PERSONAL AND CONFIDENTIAL

September 15, 2021

Board of Directors
Canadian Pacific Railway Limited
7550 Ogden Dale Rd. S.E.
Calgary, Alberta T2C 4X9
Canada

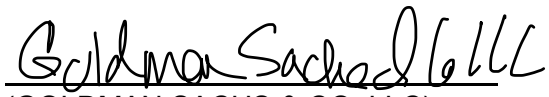
Ladies and Gentlemen:

You have requested our opinion as to the fairness from a financial point of view to Canadian Pacific Railway Limited ("CPR") of the Merger Consideration (as defined in the Agreement (as defined below)) to be paid by CPR for each outstanding share of common stock, par value $0.01 per share (the "KCS Common Stock"), of Kansas City Southern ("KCS") pursuant to the Agreement and Plan of Merger, dated as of September 15, 2021 (the "Agreement"), by and among CPR, Cygnus Merger Sub 1 Corporation, a wholly owned subsidiary of CPR ("Surviving Merger Sub"), Cygnus Merger Sub 2 Corporation, a wholly owned subsidiary of Surviving Merger Sub, and KCS.

Goldman Sachs & Co. LLC and its affiliates are engaged in advisory, underwriting and financing, principal investing, sales and trading, research, investment management and other financial and non-financial activities and services for various persons and entities. Goldman Sachs & Co. LLC and its affiliates and employees, and funds or other entities they manage or in which they invest or have other economic interests or with which they co-invest, may at any time purchase, sell, hold or vote long or short positions and investments in securities, derivatives, loans, commodities, currencies, credit default swaps and other financial instruments of CPR, KCS and any of their respective affiliates and third parties, or any currency or commodity that may be involved in the transaction contemplated by the Agreement (the "Transaction"). We have acted as financial advisor to CPR in connection with, and have participated in certain of the negotiations leading to, the Transaction. We expect to receive fees for our services in connection with the Transaction, all of which are contingent upon consummation of the Transaction, and CPR has agreed to reimburse certain of our expenses arising, and indemnify us against certain liabilities that may arise, out of our engagement. At your request, an affiliate of Goldman Sachs & Co. LLC has entered into financing commitments and agreements to provide CPR with bridge financing in connection with the consummation of the Transaction, in each case subject to the terms of such commitments and agreements and pursuant to which such affiliate expects to receive compensation. We have provided certain financial advisory and/or underwriting services to CPR and/or its affiliates from time to time for which our Investment Banking Division has received, and may receive, compensation, including having acted as financial advisor to CPR in connection with its entrance into the subsequently terminated merger agreement with KCS in March 2021. We have provided certain financial advisory and/or underwriting services to KCS and/or its affiliates from time to time for which our Investment Banking Division has received, and may receive, compensation, including having acted as senior co-manager with respect to an offering of KCS's 3.50% notes due in 2050 (aggregate principal amount $550,000,000) in April 2020. We may also

in the future provide financial advisory and/or underwriting services to CPR, KCS and their respective affiliates for which our Investment Banking Division may receive compensation.

In connection with this opinion, we have reviewed, among other things, the Agreement; annual reports to stockholders and Annual Reports on Form 10-K of CPR and KCS for the five fiscal years ended December 31, 2020; certain interim reports to stockholders and Quarterly Reports on Form 10-Q of CPR and KCS; certain other communications from CPR and KCS to their respective stockholders; certain publicly available research analyst reports for CPR and KCS; certain updated internal financial analyses and forecasts for KCS prepared by its management; and certain updated financial analyses and forecasts for KCS and certain updated internal financial analyses and forecasts for CPR, standalone and pro forma for the Transaction, in each case, as prepared by the management of CPR and approved for our use by CPR (the "Forecasts"), including certain updated operating synergies projected by the management of CPR to result from the Transaction, as approved for our use by CPR (the "Synergies"). We have also held discussions with members of the senior managements of CPR and KCS regarding their assessment of the past and current business operations, financial condition and future prospects of KCS and with the members of senior management of CPR regarding their assessment of the past and current business operations, financial condition and future prospects of CPR and the strategic rationale for, and the potential benefits of, the Transaction; reviewed the reported price and trading activity for the Parent Common Shares (as defined in the Agreement) and the shares of KCS Common Stock; compared certain financial and stock market information for CPR and KCS with similar information for certain other companies the securities of which are publicly traded; reviewed the financial terms of certain recent business combinations in the commercial railway industry and in other industries; and performed such other studies and analyses, and considered such other factors, as we deemed appropriate.



For purposes of rendering this opinion, we have, with your consent, relied upon and assumed the accuracy and completeness of all of the financial, legal, regulatory, tax, accounting and other information provided to, discussed with or reviewed by, us, without assuming any responsibility for independent verification thereof. In that regard, we have assumed with your consent that the Forecasts, including the Synergies, have been reasonably prepared on a basis reflecting the best currently available estimates and judgments of the management of CPR. We have not made an independent evaluation or appraisal of the assets and liabilities (including any contingent, derivative or other off-balance-sheet assets and liabilities) of CPR or KCS or any of their respective subsidiaries and we have not been furnished with any such evaluation or appraisal. We have assumed that all governmental, regulatory or other consents and approvals necessary for the consummation of the Transaction will be obtained without any adverse effect on CPR or KCS or on the expected benefits of the Transaction in any way meaningful to our analysis. We also have assumed that the Transaction will be consummated on the terms set forth in the Agreement, without the waiver or modification of any term or condition the effect of which would be in any way meaningful to our analysis.

Our opinion does not address the underlying business decision of CPR to engage in the Transaction, or the relative merits of the Transaction as compared to any strategic alternatives that may be available to CPR; nor does it address any legal, regulatory, tax or accounting matters. This opinion addresses only the fairness from a financial point of view to CPR, as of the date hereof, of the Merger Consideration to be paid by CPR for each share of KCS Common Stock pursuant to the Agreement. We do not express any view on, and our opinion does not address, any other term or aspect of the Agreement or Transaction or any term or aspect of any other agreement or instrument contemplated by the Agreement or entered into or amended in

connection with the Transaction, including, any obligation of CPR to undertake the Post-Closing Contributions (as defined in the Agreement), enter into the Voting Trust Agreement (as defined in the Agreement), perform the Voting Trust Transaction (as defined in the Agreement) or engage in a Post-Closing Disposition (as defined in the Agreement) pursuant to the Agreement, or the fairness of the Transaction to, or any consideration received in connection therewith by, the holders of any class of securities, creditors, or other constituencies of CPR; nor as to the fairness of the amount or nature of any compensation to be paid or payable to any of the officers, directors or employees of CPR or KCS, or any class of such persons in connection with the Transaction, whether relative to the Merger Consideration to be paid by CPR for each share of KCS Common Stock pursuant to the Agreement or otherwise. We are not expressing any opinion as to the prices at which shares of Parent Common Shares or shares of KCS Common Stock will trade at any time, as to the potential effects of volatility in the credit, financial and stock markets on CPR or KCS or the Transaction, or as to the impact of the Transaction on the solvency or viability of CPR or KCS or the ability of CPR or KCS to pay their respective obligations when they come due. Our opinion is necessarily based on economic, monetary, market and other conditions as in effect on, and the information made available to us as of, the date hereof and we assume no responsibility for updating, revising or reaffirming this opinion based on circumstances, developments or events occurring after the date hereof. Our advisory services and the opinion expressed herein are provided for the information and assistance of the Board of Directors of CPR in connection with its consideration of the Transaction and such opinion does not constitute a recommendation as to how any holder of Parent Common Shares should vote with respect to such Transaction or any other matter. This opinion has been approved by a fairness committee of Goldman Sachs & Co. LLC.

Based upon and subject to the foregoing, it is our opinion that, as of the date hereof, the Merger Consideration to be paid by CPR for each share of KCS Common Stock pursuant to the Agreement is fair from a financial point of view to CPR.

Very truly yours,

(GOLDMAN SACHS & CO. LLC)

EXCERPTS FROM CPRL CIRCULAR

GOLDMAN SACHS

Goldman Sachs Fairness Opinion

Goldman Sachs rendered its opinion to the CP Board that, as of September 15, 2021 and based upon and subject to the factors and assumptions set forth therein, the Merger Consideration to be paid for each share of KCS common stock in the First Merger was fair from a financial point of view to CP.

The full text of the Goldman Sachs Fairness Opinion which sets forth assumptions made, procedures followed, matters considered and limitations on the review undertaken in connection with the Goldman Sachs Fairness Opinion, is attached as "*Appendix D – Goldman Sachs Fairness Opinion*". Goldman Sachs provided advisory services and the Goldman Sachs Fairness Opinion for the information and assistance of the CP Board in connection with its consideration of the Transaction. The Goldman Sachs Fairness Opinion is not a recommendation as to how any CP shareholder should vote with respect to the Share Issuance Resolution, or any other matter.

In connection with rendering the Goldman Sachs Fairness Opinion and performing its related financial analyses, Goldman Sachs reviewed, among other things:

- the Merger Agreement;
- annual reports to stockholders and Annual Reports on Form 10-K of CP and KCS for the five fiscal years ended December 31, 2020;
- certain interim reports to stockholders and Quarterly Reports on Form 10-Q of CP and KCS;
- certain other communications from CP and KCS to their respective stockholders;
- certain publicly available research analyst reports for CP and KCS;
- certain updated internal financial analyses and forecasts for KCS prepared by its management; and
- certain updated financial analyses and forecasts for KCS and certain updated internal financial analyses and forecasts for CP, standalone and pro forma for the Transaction, in each case as prepared by the management of CP and approved for Goldman Sachs' use by CP (the "**Forecasts Prepared by CP for Goldman Sachs**"), including certain updated operating synergies projected by the management of CP to result from the Transaction, as approved for Goldman Sachs' use by CP (the "**Synergies Prepared by CP for Goldman Sachs**").

Goldman Sachs also held discussions with members of the senior managements of CP and KCS regarding their assessment of the past and current business operations, financial condition and future prospects of KCS and with the members of senior management of CP regarding their assessment of the past and current business operations, financial condition and future prospects of CP and the strategic rationale for, and the potential benefits of, the Transaction; reviewed the reported price and trading activity for the CP common shares and the shares of KCS common stock; compared certain financial and stock market information for CP and KCS with similar information for certain other companies the securities of which are publicly traded; reviewed the financial terms of certain recent business combinations in the commercial railway industry and in other industries; and performed such other studies and analyses, and considered such other factors, as Goldman Sachs deemed appropriate.

For purposes of rendering the Goldman Sachs Fairness Opinion, Goldman Sachs, with CP's consent, relied upon and assumed the accuracy and completeness of all of the financial, legal, regulatory, tax, accounting and other information provided to, discussed with or reviewed by, it, without assuming any responsibility for independent verification thereof. In that regard, Goldman Sachs assumed with CP's consent that the Forecasts Prepared by CP for Goldman Sachs, including the Synergies Prepared by CP for Goldman Sachs, were reasonably prepared on a basis reflecting the best currently available estimates and judgments of the management of CP. Goldman Sachs did not make an independent evaluation or appraisal of the assets and liabilities (including any contingent, derivative or other off-balance-sheet assets and liabilities) of CP or KCS or any of their respective subsidiaries and it was not furnished with

any such evaluation or appraisal. Goldman Sachs assumed that all governmental, regulatory or other consents and approvals necessary for the closing of the Transaction will be obtained without any adverse effect on CP or KCS or on the expected benefits of the Transaction in any way meaningful to its analysis. Goldman Sachs has also assumed that the Transaction will be consummated on the terms set forth in the Merger Agreement, without the waiver or modification of any term or condition the effect of which would be in any way meaningful to its analysis.

The Goldman Sachs Fairness Opinion did not address the underlying business decision of CP to engage in the Transaction or the relative merits of the Transaction as compared to any strategic alternatives that may be available to CP; nor did it address any legal, regulatory, tax or accounting matters. The Goldman Sachs Fairness Opinion addressed only the fairness from a financial point of view, as of the date of the Goldman Sachs Fairness Opinion, of the Merger Consideration to be paid for each share of KCS common stock in the First Merger. The Goldman Sachs Fairness Opinion did not express any view on, and did not address, any agreement or instrument contemplated by the Merger Agreement, or entered into or amended in connection with the Transaction, including any obligation of CP to undertake the Post-Closing Contributions, enter into the Voting Trust Agreement, perform the Voting Trust Transaction or engage in a Post-Closing Disposition under the Merger Agreement, or the fairness of the Transaction to, or any consideration received in connection therewith by, the holders of any other class of securities, creditors, or other constituencies of CP; nor as to the fairness of the amount or nature of any compensation to be paid or payable to any of the officers, directors or employees of CP or KCS, or class of such persons in connection with the Transaction, whether relative to the Merger Consideration to be paid for each share of KCS common stock in the First Merger or otherwise. The Goldman Sachs Fairness Opinion was necessarily based on economic, monetary, market and other conditions, as in effect on, and the information made available to it as of the date of the Goldman Sachs Fairness Opinion and Goldman Sachs assumed no responsibility for updating, revising or reaffirming the Goldman Sachs Fairness Opinion based on circumstances, developments or events occurring after the date of the Goldman Sachs Fairness Opinion. In addition, Goldman Sachs does not express any opinion as to the prices at which shares of KCS common stock will trade at any time, as to the potential effects of volatility in the credit, financial and stock markets on CP or KCS or the Transaction, or as to the impact of the Transaction on the solvency or viability of CP or KCS or the ability of CP or KCS to pay their respective obligations when they come due. The Goldman Sachs Fairness Opinion was approved by a fairness committee of Goldman Sachs.

The Merger Consideration was determined through arm's-length negotiations between CP and KCS and was approved by the CP Board. Goldman Sachs provided advice to CP during these negotiations. Goldman Sachs did not, however, recommend any specific amount of consideration to CP or the CP Board or that any specific amount of consideration constituted the only appropriate consideration for the Transaction.

As described above, the Goldman Sachs Fairness Opinion to the CP Board was one of many factors taken into consideration by the CP Board in making its determination to approve the Merger Agreement. In evaluating the Transaction, the CP Board considered, among other things, the advice and financial analyses provided by Goldman Sachs referred to above, in addition to the Goldman Sachs Fairness Opinion. In assessing the Goldman Sachs Fairness Opinion, the CP Board took into account that the transaction fee payable to Goldman Sachs for its services is contingent upon the closing of the Transaction. The foregoing summary is qualified in its entirety by reference to the Goldman Sachs Fairness Opinion attached as "***Appendix D –*** *Goldman Sachs Fairness Opinion*".

Goldman Sachs and its affiliates are engaged in advisory, underwriting and financing, principal investing, sales and trading, research, investment management and other financial and non-financial activities and services for various persons and entities. Goldman Sachs and its affiliates and employees, and funds or other entities they manage or in which they invest or have other economic interests or with which they co-invest, may at any time purchase, sell, hold or vote long or short positions and invest in securities, derivatives, loans, commodities, currencies, credit default swaps and other financial instruments of CP, KCS, any of their respective affiliates and third parties, or any currency or commodity that may be involved in the Transaction. Goldman Sachs acted as financial advisor to CP in connection with, and participated in certain of the negotiations leading to, the Transaction. At the request of CP, an affiliate of Goldman Sachs has entered into certain Debt Commitment Letters and agreements to provide CP with bridge financing in connection with the closing of the Transaction, in each case subject to the terms of such commitments and agreements and under which such affiliate expects to receive compensation. Goldman Sachs has provided certain financial advisory and/or underwriting services to CP and/or its affiliates from time to time for which Goldman Sachs' Investment Banking Division has received, and may receive, compensation, including having acted as financial advisor to CP in connection with its entrance into the subsequently terminated Original Merger Agreement. Goldman

Sachs has provided certain financial advisory and/or underwriting services to KCS and/or its affiliates from time to time for which the Investment Banking Division of Goldman Sachs has received, and may receive, compensation, including having acted as senior co-manager with respect to an offering of KCS's 3.50% notes due in 2050 (aggregate principal amount U.S.$550.0 million) in April 2020. Goldman Sachs may also in the future provide financial advisory and/or underwriting services to CP, KCS and their respective affiliates for which the Investment Banking Division of Goldman Sachs may receive compensation.

The CP Board selected Goldman Sachs as its financial advisor because it is an internationally recognized investment banking firm that has substantial experience in transactions similar to the Transaction. Under a letter agreement dated March 17, 2021, CP engaged Goldman Sachs to act as its financial advisor in connection with the contemplated Transaction. The engagement letter between CP and Goldman Sachs provides for a transaction fee, all of which are contingent upon the closing of the Transaction. In addition, CP has agreed to reimburse Goldman Sachs for certain of its expenses, including attorneys' fees and disbursements, and to indemnify Goldman Sachs and related persons against various liabilities.

The CP Board urges the CP shareholders to read the Goldman Sachs Fairness Opinion in its entirety. Any summary of the Goldman Sachs Fairness Opinion herein is qualified in its entirety by reference to the full text of the Goldman Sachs Fairness Opinion as set out in "*Appendix D – Goldman Sachs Fairness Opinion*".

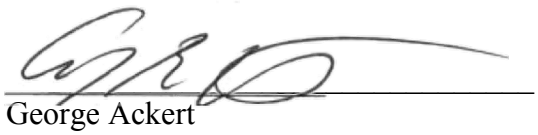
APPENDIX C TO
VERIFIED STATEMENT OF CHRIS DE BRUYN

EVERCORE FAIRNESS OPINION



VERIFICATION OF EVERCORE GROUP L.L.C.

On behalf of Evercore Group L.L.C. ("Evercore"), this is to verify that (a) the Fairness Opinion of Evercore dated September 15, 2021 ("Evercore Fairness Opinion"), set forth in the attached Appendix, is a true and correct copy of the Fairness Opinion provided by Evercore to the Board of Directors of Canadian Pacific Railway Limited ("CPRL") in connection with its proposed acquisition of Kansas City Southern, and (b) the summary of the Evercore Fairness Opinion set forth in the attached Appendix is an accurate summary of the Evercore Fairness Opinion.

In providing this verification, Evercore does not intend that any person other than the Board of Directors of CPRL be entitled to rely on the Evercore Fairness Opinion.

I, George Ackert, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 19th day of October, 2021.

George Ackert
Evercore Group L.L.C.

FAIRNESS OPINION LETTER

EVERCORE

September 15, 2021

The Board of Directors
Canadian Pacific Railway Limited
7550 Ogden Dale Road S.E.
Calgary, Alberta T2C 4X9
Canada

Members of the Board of Directors:

We understand that Canadian Pacific Railway Limited (the "Acquiror") proposes to enter into an Agreement and Plan of Merger (the "Merger Agreement"), with Cygnus Merger Sub 1 Corporation, a wholly owned subsidiary of the Acquiror (the "Surviving Merger Sub"), Cygnus Merger Sub 2 Corporation, a wholly owned subsidiary of Surviving Merger Sub ("First Merger Sub") and Kansas City Southern (the "Company"). Pursuant to the Merger Agreement, the First Merger Sub will merge with and into the Company, with the Company being the surviving corporation as a wholly owned subsidiary of the Acquiror (the "First Merger") and immediately following the First Merger, the Company shall be merged with and into Surviving Merger Sub, with the Surviving Merger Sub being the surviving corporation (the "Second Surviving Corporation") as a wholly owned subsidiary of the Acquiror (the "Second Merger" and, together with the First Merger, the "Mergers"). As a result of the First Merger, each outstanding share of common stock, par value $0.01 per share, of the Company (the "Company Common Stock"), other than Excluded Shares and Dissenting Shares (as defined in the Merger Agreement), will be converted into the right to receive (i) $90.00 per share in cash (the "Cash Consideration") and (ii) 2.884 shares (such number of shares, the "Stock Consideration" and, together with the Cash Consideration, the "Consideration") of the common stock, par value $0.01 per share, of the Acquiror (the "Acquiror Common Stock"). We also understand that pursuant to the Voting Trust Agreement (as defined in the Merger Agreement), immediately upon the completion of the Mergers and the Post-Closing Contributions (as defined in the Merger Agreement), all outstanding shares of the Second Surviving Corporation will be deposited into the Voting Trust (as defined in the Merger Agreement). The terms and conditions of the Mergers are more fully set forth in the Merger Agreement.

The Board of Directors has asked us whether, in our opinion, the Consideration to be paid to the holders of the Company Common Stock in the First Merger is fair, from a financial point of view, to the Acquiror.

In connection with rendering our opinion, we have, among other things:

(i) reviewed certain publicly available business and financial information relating to the Company and the Acquiror that we deemed to be relevant, including publicly available research analysts' estimates;

(ii) reviewed certain internal projected financial data relating to the Company prepared by the management of the Company as adjusted and furnished to us by the management of the Acquiror and certain internal projected financial data relating to the Acquiror prepared and furnished to us by

management of the Acquiror, each as approved for our use by the Acquiror (the "Forecasts"), including certain operating synergies prepared by the management of the Acquiror expected to result from the Mergers, as approved for our use by the Acquiror (the "Synergies");

(iii) discussed with managements of the Acquiror and the Company their assessment of the past and current operations of the Company, the current financial condition and prospects of the Company and the Forecasts relating to the Company, and discussed with management of the Acquiror their assessment of the past and current operations of the Acquiror, the current financial condition and prospects of the Acquiror, and the Forecasts;

(iv) reviewed the reported prices and the historical trading activity of the Company Common Stock and the Acquiror Common Stock;

(v) compared the financial performance of the Company and the Acquiror and their respective stock market trading multiples with those of certain other publicly traded companies that we deemed relevant;

(vi) compared the financial performance of the Company and the valuation multiples relating to the Mergers with the financial terms, to the extent publicly available, of certain other transactions that we deemed relevant;

(vii) reviewed the financial terms and conditions of a draft, dated September 10, 2021, of the Merger Agreement; and

(viii) performed such other analyses and examinations and considered such other factors that we deemed appropriate.

For purposes of our analysis and opinion, we have assumed and relied upon the accuracy and completeness of the financial and other information publicly available, and all of the information supplied or otherwise made available to, discussed with, or reviewed by us, without any independent verification of such information (and have not assumed responsibility or liability for any independent verification of such information), and have further relied upon the assurances of the managements of the Acquiror and the Company that they are not aware of any facts or circumstances that would make such information inaccurate or misleading. With respect to the Forecasts, including the Synergies, we have assumed with your consent that they have been reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of the Acquiror as to the future financial performance of the Acquiror and the Company and the other matters covered thereby. We have relied, at the direction of the Acquiror on the assessments of the management of the Acquiror as to the Acquiror's ability to achieve the Synergies and have been advised by the Acquiror, and have assumed with your consent that the Synergies will be realized in the amounts and at the times projected. We express no view as to the Forecasts, including the Synergies, or the assumptions on which they are based.

For purposes of our analysis and opinion, we have assumed, in all respects material to our analysis, that the final executed Merger Agreement will not differ from the draft Merger Agreement reviewed by us, that the representations and warranties of each party contained in the Merger Agreement are true and correct, that each party will perform all of the covenants and agreements required to be performed by it under the Merger Agreement and that all conditions to the consummation of the Mergers will be satisfied without waiver or modification thereof. We

have further assumed, in all respects material to our analysis, that all governmental, regulatory or other consents, approvals or releases necessary for the consummation of the Mergers will be obtained without any delay, limitation, restriction or condition that would have an adverse effect on the Company, the Acquiror or the consummation of the Mergers or reduce the contemplated benefits to the Acquiror of the Mergers. We have also assumed, with your consent, that the STB Final Approval (as defined in the Merger Agreement) will be obtained without any delay, limitation, restriction or condition that would have an adverse effect on the Second Surviving Corporation or the Acquiror or reduce the contemplated benefits to the Acquiror of the Mergers and that upon receipt of the STB Final Approval, the outstanding shares of the Second Surviving Corporation deposited into the Voting Trust will be released from the Voting Trust, and we have relied, with your consent, for purposes of our opinion on the assessment of the management of the Acquiror as to the timing for obtaining the STB Final Approval.

We have not conducted a physical inspection of the properties or facilities of the Company or the Acquiror and have not made or assumed any responsibility for making any independent valuation or appraisal of the assets or liabilities (including any contingent, derivative or other off-balance sheet assets and liabilities) of the Company or the Acquiror, nor have we been furnished with any such valuations or appraisals, nor have we evaluated the solvency or fair value of the Company or the Acquiror under any state or federal laws relating to bankruptcy, insolvency or similar matters. Our opinion is necessarily based upon information made available to us as of the date hereof and financial, economic, market and other conditions as they exist and as can be evaluated on the date hereof. It is understood that subsequent developments may affect this opinion and that we do not have any obligation to update, revise or reaffirm this opinion.

We have not been asked to pass upon, and express no opinion with respect to, any matter other than the fairness to the Acquiror, from a financial point of view, of the Consideration. We do not express any view on, and our opinion does not address, the fairness of the proposed Mergers to, or any consideration received in connection therewith by, the holders of any class of securities, creditors or other constituencies of the Company, nor as to the fairness of the amount or nature of any compensation to be paid or payable to any of the officers, directors or employees of the Acquiror or the Company, or any class of such persons, whether relative to the Consideration or otherwise. We have not been asked to, nor do we express any view on, and our opinion does not address, any other term or aspect of the Merger Agreement or the Mergers, including, without limitation, the structure or form of the Mergers, or any term or aspect of any other agreement or instrument contemplated by the Merger Agreement or entered into or amended in connection with the Merger Agreement. Our opinion does not address the relative merits of the Mergers as compared to other business or financial strategies that might be available to the Acquiror, nor does it address the underlying business decision of the Acquiror to engage in the Mergers. We do not express any view on, and our opinion does not address, what the value of the Acquiror Common Stock actually will be when issued or the prices at which the Acquiror Common Stock will trade at any time, including following announcement or consummation of the Mergers. We also do not express any view on, and our opinion does not address, the price that may be obtained in connection with any disposition of the Trust Stock in the event of an STB Denial (both as defined in the Voting Trust Agreement). Our opinion does not constitute a recommendation to the Board of Directors or to any other persons in respect of the Mergers, including as to how any holder of shares of the Acquiror Common Stock should vote or act in respect of the Mergers. We are not expressing any opinion as to the prices at which shares of Company Common Stock will trade at any time, as to the potential effects of volatility in the credit, financial and stock markets on the Company or the Mergers or as to the impact of the Mergers

on the solvency or viability of the Company or the ability of the Company to pay its obligations when they come due. We are not legal, regulatory, accounting or tax experts and have assumed the accuracy and completeness of assessments by the Acquiror and its advisors with respect to legal, regulatory, accounting and tax matters. As you are aware, the credit, financial and stock markets have been experiencing unusual volatility and we express no opinion or view as to any potential effects of such volatility on the Company or Acquiror or the Mergers.

We have acted as financial advisor to the Board of Directors of the Acquiror in connection with the Mergers and have received retainer and monthly work fees for our services and will receive additional fees for our services, all of which are payable promptly following the delivery of this opinion. The Acquiror has also agreed to reimburse our expenses and to indemnify us against certain liabilities arising out of our engagement. During the two year period prior to the date hereof, Evercore Group L.L.C. and its affiliates have not been engaged to provide financial advisory or other services to the Acquiror and we have not received any compensation from the Acquiror during such period. In addition, during the two year period prior to the date hereof, Evercore Group L.L.C. and its affiliates have not been engaged to provide financial advisory or other services to the Company and we have not received any compensation from the Company during such period. We may provide financial advisory or other services to the Acquiror and the Company in the future, and in connection with any such services we may receive compensation.

Evercore Group L.L.C. and its affiliates engage in a wide range of activities for our and their own accounts and the accounts of customers, including corporate finance, mergers and acquisitions, equity sales, trading and research, private equity, placement agent, asset management and related activities. In connection with these businesses or otherwise, Evercore Group L.L.C. and its affiliates and/or our or their respective employees, as well as investment funds in which any of them may have a financial interest, may at any time, directly or indirectly, hold long or short positions and may trade or otherwise effect transactions for their own accounts or the accounts of customers, in debt or equity securities, senior loans and/or derivative products or other financial instruments of or relating to the Acquiror, the Company, potential parties to the Mergers and/or any of their respective affiliates or persons that are competitors, customers or suppliers of the Acquiror or the Company.

Our financial advisory services and this opinion are provided for the information and benefit of the Board of Directors (in its capacity as such) in connection with its evaluation of the proposed Mergers. The issuance of this opinion has been approved by an Opinion Committee of Evercore Group L.L.C.

Based upon and subject to the foregoing, it is our opinion that, as of the date hereof, the Consideration to be paid to the holders of the Company Common Stock in the First Merger is fair, from a financial point of view, to the Acquiror.

Very truly yours,

EVERCORE GROUP L.L.C.

EXCERPTS FROM CPRL CIRCULAR

EVERCORE

Evercore Fairness Opinion

Under an engagement letter dated as of December 31, 2020, Evercore was engaged to act as financial advisor to the CP Board in connection with a possible acquisition by CP of KCS. As part of its engagement, Evercore was requested to evaluate the fairness to CP, from a financial point of view, of the Merger Consideration to be paid to the holders of KCS common stock in the First Merger.

Evercore rendered its opinion to the CP Board that, as of September 15, 2021 and based upon and subject to the assumptions, limitations, qualifications and conditions described in Evercore's written opinion, the Merger Consideration to be paid to the holders of KCS common stock in the First Merger was fair, from a financial point of view, to CP.

The full text of the Evercore Fairness Opinion, dated as of September 15, 2021, setting out, among other things, the procedures followed, assumptions made, matters considered and qualifications and limitations on the scope of review undertaken in rendering its opinion, is attached as "*Appendix E – Evercore Fairness Opinion*" to this Management Proxy Circular. This summary is qualified in its entirety by reference to the full text of the Evercore Fairness Opinion. Details regarding the qualifications, credentials and independence of Evercore, and the assumptions, limitations and qualifications applicable to the Evercore Fairness Opinion, are respectively set forth in the Evercore Fairness Opinion.

The Evercore Fairness Opinion was addressed to, and provided for the information and benefit of, the CP Board (in its capacity as such) in connection with the CP Board's evaluation of the Transaction and does not constitute a recommendation to the CP Board or to any other person in respect of the Transaction, including as to how the CP shareholders should vote or act in respect of the Transaction or any other matter. The Evercore Fairness Opinion does not address the relative merits of the Transaction as compared to other business or financial strategies that may be available to CP; nor does it address the underlying business decision of CP to engage in the Transaction. Evercore expressed no opinion as to the price at which KCS common stock will trade at any time.

The CP Board urges the CP shareholders to read the Evercore Fairness Opinion in its entirety. Any summary of the Evercore Fairness Opinion herein is qualified in its entirety by reference to the full text of the Evercore Fairness Opinion as set out in "*Appendix E – Evercore Fairness Opinion*".

In connection with rendering the Evercore Fairness Opinion, Evercore, among other things: (i) reviewed certain publicly available business and financial information relating to KCS and CP that Evercore deemed to be relevant, including publicly available research analysts' estimates; (ii) reviewed certain internal projected financial data relating to KCS prepared by the management of KCS as adjusted and furnished to Evercore by the management of CP and certain internal projected financial data relating to CP prepared and furnished to Evercore by management of CP, each as approved for Evercore's use by CP (the "**Management Forecasts**"), including certain operating synergies prepared by the management of CP expected to result from the Transaction, as approved for Evercore's use by CP (the "**Evercore Synergies**"); (iii) discussed with managements of CP and KCS their assessment of the past and current operations of KCS, the current financial condition and prospects of KCS and the Management Forecasts relating to KCS, and discussed with management of CP their assessment of the past and current operations of CP, the current financial condition and prospects of CP, and the Management Forecasts; (iv) reviewed the reported prices and the historical trading activity of the KCS common stock and the CP common shares; (v) compared the financial performance of KCS and CP and their respective stock market trading multiples with those of certain other publicly traded companies that Evercore deemed relevant; (vi) compared the financial performance of KCS and the valuation multiples relating to the Transaction with the financial terms, to the extent publicly available, of certain other transactions that Evercore deemed relevant; (vii) reviewed the financial terms and conditions of a draft, dated September 10, 2021, of the Merger Agreement; and (viii) performed such other analyses and examinations and considered such other factors that Evercore deemed appropriate.

For purposes of its analysis and opinion, Evercore assumed and relied upon the accuracy and completeness of the financial and other information publicly available, and all of the information supplied or otherwise made available to, discussed with, or reviewed by Evercore, without any independent verification of such information (and Evercore assumed no responsibility or liability for any independent verification of such information), and further relied upon

the assurances of the managements of CP and KCS that they were not aware of any facts or circumstances that would make such information inaccurate or misleading. With respect to the Management Forecasts, including the Evercore Synergies, Evercore assumed with CP's consent that they were reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of CP as to the future financial performance of CP and KCS and the other matters covered thereby. Evercore relied, at the direction of CP on the assessments of the management of CP as to CP's ability to achieve the Evercore Synergies and was advised by CP, and assumed with CP's consent that the Evercore Synergies will be realized in the amounts and at the times projected. Evercore expressed no view as to the Management Forecasts, including the Evercore Synergies, or the assumptions on which they were based.

For purposes of its analysis and opinion, Evercore assumed, in all respects material to its analysis, that the final executed Merger Agreement would not differ from the draft Merger Agreement reviewed by Evercore, that the representations and warranties of each party contained in the Merger Agreement were true and correct, that each party would perform all of the covenants and agreements required to be performed by it under the Merger Agreement and that all conditions to the closing of the Transaction would be satisfied without waiver or modification thereof. Evercore further assumed, in all respects material to its analysis, that all governmental, regulatory or other consents, approvals or releases necessary for the closing of the Transaction would be obtained without any delay, limitation, restriction or condition that would have an adverse effect on KCS, CP or the closing of the Transaction or reduce the contemplated benefits to CP of the Transaction. Evercore also assumed, with CP's consent, that STB Final Approval would be obtained without any delay, limitation, restriction or condition that would have an adverse effect on the Second Surviving Corporation or CP or reduce the contemplated benefits to CP of the Transaction and that upon receipt of STB Final Approval, the outstanding shares of capital stock of the Second Surviving Corporation deposited into the Voting Trust would be released from the Voting Trust, and Evercore relied, with CP's consent, for purposes of its opinion on the assessment of the management of CP as to the timing for obtaining STB Final Approval.

Evercore did not conduct a physical inspection of the properties or facilities of KCS or CP and did not make or assume any responsibility for making any independent valuation or appraisal of the assets or liabilities (including any contingent, derivative or other off-balance sheet assets and liabilities) of KCS or CP. Evercore was not furnished with any such valuations or appraisals, nor did Evercore evaluate the solvency or fair value of KCS or CP under any state or federal laws relating to bankruptcy, insolvency or similar matters. Evercore's opinion is necessarily based upon information made available to it as of September 15, 2021 and financial, economic, market and other conditions as they existed and as could be evaluated on such date. Subsequent developments may affect Evercore's opinion and Evercore does not have any obligation to update, revise or reaffirm its opinion.

Evercore was not asked to pass upon, and expressed no opinion with respect to, any matter other than the fairness to CP, from a financial point of view, of the Merger Consideration. Evercore did not express any view on, and its opinion did not address, the fairness of the Transaction to, or any consideration received in connection therewith by, the holders of any class of securities, creditors or other constituencies of KCS, nor as to the fairness of the amount or nature of any compensation to be paid or payable to any of the officers, directors or employees of CP or KCS, or any class of such persons, whether relative to the Merger Consideration or otherwise. Evercore was not asked to, nor did Evercore express any view on, and Evercore's opinion did not address, any other term or aspect of the Merger Agreement or the Transaction, including, without limitation, the structure or form of the Transaction, or any term or aspect of any other agreement or instrument contemplated by the Merger Agreement or entered into or amended in connection with the Merger Agreement. Evercore's opinion did not address the relative merits of the Transaction as compared to other business or financial strategies that might be available to CP, nor did it address the underlying business decision of CP to engage in the Transaction. Evercore did not express any view on, and its opinion did not address, what the value of CP common shares actually would be when issued or the prices at which the CP common shares would trade at any time, including following announcement or closing of the Transaction. Evercore also did not express any view on, and its opinion did not address, the price that might be obtained in connection with any disposition of the Trust Stock in the event of an STB Denial. Evercore's opinion did not constitute a recommendation to the CP Board or to any other persons in respect of the Transaction, including as to how any holder of CP common shares should vote or act in respect of the Transaction. Evercore expressed no opinion as to the prices at which shares of KCS common stock will trade at any time, as to the potential effects of volatility in the credit, financial and stock markets on KCS or the Transaction or as to the impact of the Transaction on the solvency or viability of KCS or the ability of KCS to pay its obligations when they come due. Evercore is not a legal, regulatory, accounting or tax expert and has assumed the accuracy and completeness of assessments by CP and its advisors with respect to legal, regulatory, accounting and tax

matters. The credit, financial and stock markets have been experiencing unusual volatility and Evercore expressed no opinion or view as to any potential effects of such volatility on KCS or CP or the Transaction.

The issuance of the fairness opinion was approved by a Fairness Opinion Committee of Evercore.

Under the terms of its engagement letter dated as of December 31, 2020, Evercore received a retainer and monthly work fees, along with an opinion fee which was payable upon rendering of an opinion, for its services. CP also agreed to reimburse Evercore's expenses and to indemnify Evercore against certain liabilities arising out of Evercore's engagement.

EXHIBIT 1 TO
VERIFIED STATEMENT OF CHRIS DE BRUYN

EXCERPTS FROM F-4
FILED WITH SEC OCTOBER 1, 2021

Background of the Transaction

The KCS board and senior management team periodically review and evaluate KCS's long-term strategy and the range of strategic opportunities that might be available to it to strengthen KCS's business and to enhance stockholder value. As part of this ongoing evaluation, management maintains a long-range plan (the "KCS long-range plan"), which is periodically updated and reviewed with the KCS board, that reflects management's financial and business outlook for KCS over a ten-year period. In addition, the KCS board and management team have, from time to time in the past, discussed and considered the possibility of entering into strategic transactions with other parties.

On July 29, 2020, Patrick Ottensmeyer, President and Chief Executive Officer of KCS, and Keith Creel, President and Chief Executive Officer of CPRL, had a lunch meeting at which they discussed a variety of industry topics. During this meeting, Mr. Creel raised whether KCS would be amenable to discussing a business combination of CPRL and KCS. No further actions were taken by the KCS management team or board at the time with respect to Mr. Creel's inquiry.

Beginning on July 31, 2020, several financial media outlets reported that an investor consortium was considering making a takeover proposal for KCS. Following these reports, the KCS board and senior management reached out to its financial advisor, Morgan Stanley, and its outside counsel, Wachtell, Lipton, Rosen & Katz ("Wachtell Lipton"), to discuss the reports and the question of how KCS should respond if a proposal were made.

On August 11, 2020, the KCS board met, together with members of senior management and representatives of Morgan Stanley and Wachtell Lipton, to discuss the financial media reports and the possibility of a proposal, including the KCS board's fiduciary duties under Delaware law and preliminary perspectives on valuation for KCS based on the KCS long-range plan and Wall Street research analyst forecasts. Thereafter, KCS reached out to BofA Securities to join Morgan Stanley as KCS's and the KCS board's financial advisor. KCS and the KCS board determined to engage both Morgan Stanley and BofA based on, among other things, each firm's overall reputation and experience as an investment banking firm, each firm's substantial experience in the transportation sector, and the belief that having the benefit of both firms' advice would be in the best interests of KCS and its stockholders.

On August 17, 2020, Robert Druten, the Chairman of the KCS board, and Mr. Ottensmeyer received an unsolicited written proposal from an investor consortium ("Party A") to acquire KCS for $195.00 per share in cash. The proposal indicated that Party A intended to finance the acquisition through a combination of equity financing and $6.5 billion in debt financing, and that Party A anticipated obtaining all regulatory approvals within four to six months of signing a definitive agreement. Messrs. Druten and Ottensmeyer notified the KCS board of the receipt of Party A's proposal and, later that day, Mr. Ottensmeyer and Michael Upchurch, the Executive Vice President and Chief Financial Officer of KCS, participated in a conversation with representatives of Party A to discuss the terms of the proposal.

A special meeting of the KCS board was convened on August 18, 2020, with members of senior management, and representatives of Morgan Stanley and Wachtell Lipton, to discuss Party A's proposal and potential next steps. Representatives of Morgan Stanley shared their perspectives on the financial terms of Party A's proposal. Members of management also reviewed the KCS long-range plan and the opportunities and risks associated with executing on KCS's long-term strategy. The KCS board discussed these considerations and perspectives and concluded that KCS should remain focused on its long-term strategic plans and should not pursue Party A's proposal. Messrs. Ottensmeyer and Upchurch subsequently conveyed the KCS board's conclusion to representatives of Party A.

On August 21, 2020, Mr. Creel called Mr. Ottensmeyer to propose that CPRL and KCS consider entering into a merger-of-equals transaction in which KCS stockholders would receive consideration consisting solely of CPRL common shares, in an at-market transaction. Mr. Creel expressed his view that, relative to the other Class I

railroad companies, a transaction involving CPRL and KCS would likely face the least amount of regulatory uncertainty given the companies' status as the two smallest Class I railroad companies in North America and their lack of geographic overlap. During the same week, a representative of Party A contacted Mr. Ottensmeyer to request a meeting to further discuss the possibility of a transaction.

During the following week, Jean-Jacques Ruest, President and Chief Executive Officer of CN, contacted Mr. Ottensmeyer telephonically to note the financial media reports regarding a possible takeover proposal. Mr. Ruest stated that, if KCS was interested in a sale, CN would be interested in discussing such a transaction. No further actions were taken by the KCS management team or board to engage with CN at the time.

On August 28, 2020, the KCS board met with members of senior management and a representative of Wachtell Lipton. The KCS board discussed Party A's request for a meeting and instructed Mr. Ottensmeyer to accept the request. Representatives of KCS management then reviewed possible exchange ratios implied by the historical trading prices of KCS common stock and CPRL common shares, as well as possible exchange ratios implied by the relative contributions of various financial metrics of KCS and CPRL. The KCS board discussed potential responses and determined not to take action with respect to CPRL's proposal at the time, pending Mr. Ottensmeyer's discussion with Party A and Party A's response. Mr. Ottensmeyer also described his conversation with Mr. Ruest of CN. In the days following the KCS board meeting, Messrs. Ottensmeyer and Upchurch had a discussion with representatives of Party A with respect to Party A's interest in a possible transaction.

On August 31, 2020, Party A submitted an updated, unsolicited written proposal to acquire KCS for $208.00 per share in cash, subject otherwise to the same terms and conditions set forth in Party A's August 17th proposal. The next day, Messrs. Ottensmeyer and Upchurch participated in a conversation with representatives of Party A to discuss the updated proposal.

A meeting of the KCS board was held on September 2, 2020, with members of senior management and representatives of Morgan Stanley, BofA Securities and Wachtell Lipton. Representatives of Morgan Stanley and BofA Securities discussed the terms of Party A's proposal and CPRL's proposal and presented preliminary perspectives on valuation for KCS based on the KCS long-range plan. After consideration of these and other factors, the KCS board again concluded that KCS should remain focused on its long-term strategic plans and determined that KCS should not pursue either Party A's proposal or CPRL's proposal. The KCS board did, however, believe that KCS should engage in discussions with CPRL about possible commercial opportunities or arrangements that could be in both companies' interests. Thereafter, Mr. Ottensmeyer communicated the KCS board's conclusions to representatives of Party A and to Mr. Creel.

From September to November 2020, the KCS board continued to discuss and review KCS's long-term strategic plan and strategic opportunities in consultation with senior management and KCS's external advisors. In addition, representatives of KCS and CPRL met on September 14 and 15, 2020 to discuss possible commercial opportunities or arrangements outside the context of a combination. The representatives of CPRL also provided their views on a potential at-market combination of KCS and CPRL.

On September 23, 2020, the KCS board met with members of management to further analyze and consider KCS's financial and business outlook and strategic options, including KCS's outlook as an independent company and an analysis of combinations with various other railroads. The KCS board also discussed the investor feedback received by KCS management following the publication of a September 9th financial media report that KCS had rejected the acquisition proposal that had reportedly been made for $208.00 per share in cash.

On October 20, 2020, the KCS board convened a meeting for informational purposes with members of management and representatives of Morgan Stanley, BofA Securities and Wachtell Lipton to discuss various strategic alternatives that might be available to the Company. This included a discussion led by representatives of Morgan Stanley and BofA Securities regarding illustrative buyout and ability-to-pay analyses with respect to Party A and various railroads who could be potential buyers.

On November 11, 2020, Mr. Ottensmeyer and Mr. Creel had a telephonic discussion on which they agreed that, given the political uncertainties following the recent U.S. election and the fact that KCS and CPRL were each focused on closing the fiscal year and preparing for the upcoming earnings season, KCS and CPRL would discontinue their discussions regarding potential commercial opportunities at such time and potentially revisit the idea of a strategic combination of the two companies in the future.

On November 17, 2020, Mr. Ottensmeyer received a call from a representative of another Class I railroad company expressing interest in a potential acquisition of a portion of KCS's assets. Mr. Ottensmeyer reported this conversation to the KCS board, but no further actions were taken by the KCS management team or KCS board to engage with such railroad company.

On November 23, 2020, representatives of Party A contacted Mr. Ottensmeyer to inform him that Party A intended to submit a revised proposal to acquire KCS for $230.00 per share in cash, which Party A submitted later that day. The revised proposal noted that Party A had high confidence that it would be able to obtain firm commitments from its equity partners and lenders once the parameters of a transaction had been agreed upon.

The KCS board met on December 2, 2020, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to discuss Party A's revised proposal and potential next steps. Mr. Upchurch discussed the KCS long-range plan and KCS's general strategic positioning. Representatives of Morgan Stanley and BofA Securities provided their preliminary perspectives on valuation for KCS based on the KCS long-range plan. The KCS board discussed the terms of Party A's proposal and the possibility of contacting CPRL, and potentially other Class I railroads, to determine their interest in submitting a proposal to acquire KCS. The KCS board reviewed potential synergy estimates and the possible merger consideration such parties could offer to KCS stockholders. The KCS board also discussed the timing and certainty of consummating a transaction with a Class I railroad company in light of the regulatory framework for such a transaction. Among other things, the KCS board and management team discussed the possibility of addressing potential uncertainties by employing a voting trust structure in which an acquiring Class I railroad would close the acquisition and immediately deposit the shares of KCS into an independent voting trust, with KCS stockholders receiving their merger consideration at that time and prior to the acquiror's receipt of final control approval from the STB.

After deliberation, the KCS board determined that Party A's proposal was not at a value that the KCS board was prepared to accept, but authorized management to begin providing Party A with due diligence materials, subject to the execution of a mutually acceptable confidentiality agreement, so that Party A could have an opportunity to submit an improved proposal. The KCS board also directed Mr. Ottensmeyer to notify Mr. Creel that KCS was now considering a potential transaction and would be willing to consider an acquisition proposal from CPRL that contemplated a significant control premium and a voting trust structure to address timing and regulatory issues. After consideration of the risks associated with a broader outreach effort, the KCS board determined not to contact other parties at the time and to revisit the question of reaching out to additional parties at a later date. After the KCS board meeting, Mr. Ottensmeyer reached out to Party A and to Mr. Creel with the messages determined by the KCS board.

On December 4, 2020, KCS entered into a confidentiality agreement with Party A, which contained customary standstill restrictions on Party A (which restrictions would terminate in the event any person acquired or became the owner of, or entered into a definitive agreement to acquire or become the owner of, more than 50% of the outstanding voting securities of KCS or assets of KCS representing more than 50% of its consolidated earning power).

On December 8, 2020, KCS entered into formal engagement letters with Morgan Stanley and with BofA Securities to provide advice to KCS and the KCS board with respect to KCS's strategic alternatives.

On December 9, 2020, CPRL submitted a written proposal to acquire KCS for 0.469 of a CPRL common share (equivalent to 2.345 shares after giving effect to the share split) and $77.00 in cash per share of KCS common stock (equal to approximately $235.00 per share of KCS common stock based on the market price of CPRL

common shares at the time). The proposal also contemplated that a transaction would be effectuated using a voting trust structure, which CPRL anticipated consummating within four months of signing a definitive agreement, with CPRL taking control of KCS following STB final approval within eight to twelve months thereafter. Mr. Ottensmeyer and other members of management subsequently participated in a call with Mr. Creel and other members of CPRL management to discuss the terms of CPRL's proposal. On December 9, 2020, KCS entered into a mutual confidentiality agreement with CPRL, which contained customary standstill restrictions on CPRL (which restrictions would terminate in the event any person acquired or became the owner of, or entered into a definitive agreement to acquire or become the owner of, more than 50% of the outstanding voting securities of KCS or assets of KCS representing more than 50% of its consolidated earning power).

On December 10, 2020, senior executives of each of CPRL and KCS (including Mr. Creel and Mr. Ottensmeyer) met, and CPRL presented the terms of its December 9 proposal.

The KCS board held a meeting on December 14, 2020 at which it discussed CPRL's proposal and the substance of the management team's conversation with CPRL. The KCS board then determined that CPRL's proposal was not at a value that the KCS board was prepared to accept, but authorized management to begin providing CPRL with due diligence materials under the mutual confidentiality agreement, so that CPRL could have an opportunity to submit an improved proposal.

Through December 2020, KCS provided Party A and CPRL with access to a virtual data room and various business and legal due diligence materials, including a copy of the KCS long-range plan and hosted management presentations and diligence sessions for the benefit of Party A and CPRL. CPRL also provided KCS with access to a virtual data room and various reverse diligence materials.

On December 22, 2020, the KCS board held a special meeting, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors. Mr. Upchurch presented an update to the KCS long-range plan, which had been adjusted upwards to reflect management's more optimistic financial and operational outlook for KCS as a result of the expected recovery from the COVID-19 pandemic and a lower cost structure resulting from an acceleration of Precision Scheduled Railroading initiatives. Members of management then provided an update regarding the status of Party A's and CPRL's ongoing diligence efforts, as well as internal discussions regarding the regulatory process and potential issues associated with a strategic transaction. Representatives of Morgan Stanley and BofA Securities also shared their perspectives on the financial terms of Party A's and CPRL's latest proposals and refreshed their perspectives on valuation for KCS to reflect the new financial terms of those proposals and the updated KCS long-range plan.

On December 28, 2020, Party A sent an updated written proposal to Messrs. Ottensmeyer and Upchurch to acquire KCS for $235.00 per share in cash. The proposal noted that, pursuant to the restrictions in its confidentiality agreement with KCS, Party A had not informed its equity partners or lenders of its recent conversations with KCS, but that Party A remained highly confident of the availability of financing for a transaction.

On December 30, 2020, Mr. Ottensmeyer reached out to Mr. Creel to alert him that KCS would need CPRL to promptly provide a revised offer if CPRL was still interested in pursuing a potential transaction, so that KCS could determine whether it would be willing to move towards a deal with CPRL or with a competing bidder.

On December 31, 2020, CPRL submitted an updated written proposal to acquire KCS for 0.489 of a CPRL common share (equivalent to 2.445 CPRL common shares after giving effect to the share split) and $78.00 in cash per share of KCS common stock (equal to approximately $248.00 per share of KCS common stock based on the market price of CPRL common shares at the time).

The KCS board met on January 7, 2021, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors. Mr. Ottensmeyer provided an update on the status of KCS's discussions with Party A and with CPRL and outlined potential next steps. Mr. Ottensmeyer offered his

perspective that a potential combination with CPRL would be attractive for KCS and its stockholders and his expectation that CPRL could further increase its purchase price given potential synergies. Members of the KCS board and management also entered into a discussion regarding the updated KCS long-range plan and a range of potential synergies for a combination with CPRL. Representatives of Morgan Stanley and BofA Securities provided their perspectives on the latest proposals received from Party A and from CPRL. The Company's Chief Legal Officer then described the expected regulatory approval process and potential timeline in the event KCS pursued a transaction with a Class I railroad company. After discussion, the KCS board determined not to accept either of the proposals that had been most recently submitted by Party A and by CPRL. The KCS board directed Mr. Ottensmeyer to communicate to representatives of each party that the KCS board was not prepared to proceed with a transaction at its proposed purchase price, but that the KCS board was willing to allow each party to complete its confirmatory due diligence (and, in the case of Party A, to reengage with its financing partners) with the expectation that the parties would complete diligence efforts by early-to-mid February and revert with their best and final offers. In addition, the KCS board again discussed the possibility of reaching out to other parties to ascertain their potential interest in a transaction, but, for the same reasons considered at its previous meeting on December 2, 2020, determined not to do so at the time and to revisit the question again in the future.

In the days following the meeting, Mr. Ottensmeyer communicated the KCS board's decisions to representatives of Party A and CPRL. Through the course of January and February 2021, members of KCS management, together with representatives of KCS's legal and financial advisors, continued to engage with and to address due diligence requests from Party A and from CPRL. Members of the KCS board also periodically met and consulted with members of management regarding the status of the process and to discuss transaction-related issues. On January 22 and 23, 2021, representatives of KCS, including Messrs. Druten and Ottensmeyer, met with representatives of CPRL to discuss CPRL's views on regulatory considerations and other issues relating to a potential combination with CPRL.

Following a meeting of the CPRL board on January 25, 2021, Mr. Creel contacted Mr. Ottensmeyer to discuss the potential transaction and the timeline to announcing a transaction. Mr. Ottensmeyer informed Mr. Creel that KCS expected to receive a revised offer from a competing bidder by mid-February and noted that the competing bidder's offer would not have the regulatory complexity and need for a voting trust structure that would exist in a transaction with CPRL. Mr. Ottensmeyer explained that KCS remained committed to evaluating offers from both CPRL and the competing bidder and continuing to hold working sessions with CPRL and its representatives to determine whether there was a path to a potential transaction with CPRL. Mr. Creel conveyed to Mr. Ottensmeyer that CPRL would be committed to engaging with KCS to complete its diligence and finalize the transaction structure and the terms of the merger agreement over the coming weeks, and that CPRL would be prepared to provide its final offer on value and price by mid-February, such that CPRL and KCS would be in a position to announce a transaction by the end of February 2021 should KCS choose to move forward with CPRL.

On January 26, 2021, the KCS board held a meeting with members of management and its legal advisors to specifically discuss potential regulatory considerations and issues relating to a strategic combination, including an assessment of the process for a voting trust transaction and obtaining final regulatory approval for the potential merger. The KCS board also convened meetings on February 4, 2021 and February 15, 2021, at which the KCS board reviewed the status of KCS's discussions with Party A and CPRL and discussed potential next steps.

On February 16, 2021, Mr. Creel called Mr. Ottensmeyer to inform him that CPRL would not be submitting a revised proposal until KCS confirmed that it had also received a revised competing proposal from the competing bidder. Mr. Ottensmeyer subsequently had separate discussions with both Mr. Creel and representatives of Party A regarding the status and timing with respect to the submission of revised bids.

On March 3, 2021, KCS received updated acquisition proposals from Party A and from CPRL. Party A's proposal contemplated an all-cash purchase price of $245.00 per share. The proposal indicated that Party A had re-engaged with its equity partners and that it was highly confident that the equity partners would be able to

secure final internal approvals upon confirmation of the key transaction terms over a two- to three-week period. The proposal also noted that Party A believed the credit committee approvals that its lenders had received in August 2020 remained valid, although it had not engaged in any recent discussions with its lenders in light of the restrictions in its confidentiality agreement with KCS. CPRL's proposal contemplated a purchase price of 0.489 of a CPRL common share (equivalent to 2.445 CPRL common shares after giving effect to the share split) and $81.00 in cash per share of KCS common stock (equal to approximately $260.00 per share of KCS common stock based on the market price of CPRL common shares at the time). The proposal indicated that CPRL anticipated consummating the voting trust transaction within four to six months after the signing of the merger agreement, with the acquisition of control within eight to twelve months thereafter. CPRL's proposal also contemplated a $400.0 million reverse termination fee payable to KCS in the event the merger agreement was terminated due to the inability to complete the voting trust transaction as a result of STB regulatory issues. Furthermore, CPRL's proposal contemplated the renaming of the combined company to "Canadian Pacific Kansas City", with the U.S. headquarters of the combined company to be located in Kansas City, and indicated that CPRL would be open to considering KCS director representation on its board following consummation of the voting trust transaction.

In the subsequent days, with the authorization of the KCS board, members of KCS management circulated a draft merger agreement to representatives of CPRL. The draft included, among other terms, a customary "fiduciary out" provision that would permit the KCS board to terminate its existing agreement with an acquirer in order to accept an alternative acquisition proposal from a third party under certain circumstances. In addition, the draft merger agreement provided to CPRL contemplated a reverse termination fee representing 7.0% of the transaction consideration (or approximately $1.7 billion based on CPRL's then proposed purchase price) and a one-way exchange ratio collar in which KCS stockholders would receive a fixed dollar amount of stock consideration in the event the acquirer's stock price fell below a specified threshold, up to a maximum number of shares.

On March 5, 2021, Mr. Ottensmeyer had a discussion with Mr. Creel regarding the key issues in the draft merger agreement received from KCS the prior day, including with respect to the transaction structure and regulatory termination fee size and structure as proposed in KCS's draft, as well as the one-way exchange ratio collar.

On March 6, 2021, the KCS board convened a meeting to discuss the updated proposals submitted by CPRL and Party A. Mr. Ottensmeyer reviewed the terms of each proposal and again expressed his views on the strategic options available to the Company. Representatives of Morgan Stanley and BofA Securities also shared their perspectives on the financial terms of the proposals. The directors discussed with members of management and representatives of the financial advisors the potential synergies from a transaction involving CPRL and the possible benefits and risks associated with accepting merger consideration that included an acquirer's common stock. Among other things, the KCS board discussed various mechanisms to protect against a potential decline in an acquirer's stock price, including the one-way exchange ratio collar proposed in the draft merger agreement provided to CPRL. The KCS board discussed again with the Company's legal advisors the regulatory uncertainties and timeline for a strategic combination. The KCS board then directed management and the financial advisors to ask Party A and CPRL to submit final proposals and merger agreement markups by no later than March 15, and to inform Party A that it could reach out to its lending sources to confirm financing. The KCS board also again considered whether or not to reach out to other parties. After considering, among other factors, the various risks associated with further opening up the process, and the "fiduciary out" provisions included in the proposed merger agreement, the KCS board determined to focus its efforts on negotiating a transaction with either Party A or CPRL and not to reach out to other potential counterparties at the time.

Following the KCS board meeting, representatives of KCS and their advisors sent a letter to representatives of each of Party A and CPRL outlining the process and request for final proposals. In addition, representatives of KCS sent a draft merger agreement to representatives of Party A. Similar to the draft merger agreement provided to CPRL, the draft merger agreement contemplated a customary "fiduciary out" provision that would permit the

KCS board to terminate its existing agreement with an acquirer in order to accept an alternative acquisition proposal under certain circumstances. It also included a reverse termination fee representing 7.0% of the transaction consideration (or approximately $1.6 billion based on Party A's then proposed purchase price) in the event the transaction did not close due to the failure to obtain financing.

On March 9, 2021, the finance committee of the KCS board held a meeting for the purpose of further analyzing and discussing the possible benefits and risks associated with accepting merger consideration that included an acquirer's common stock. At the meeting, representatives of Morgan Stanley and BofA Securities reviewed the mechanics of the one-way exchange ratio collar proposed in the draft merger agreement provided to CPRL and a range of other mechanisms that could be used to protect against a potential decline in an acquirer's stock price, together with a summary of the frequency with which such mechanisms had been employed or not employed in recent M&A transactions.

On March 10, 2021, KCS and CPRL executed a clean team agreement to facilitate the sharing of certain sensitive diligence materials. Also on March 10, 2021, representatives of the CPRL management team held a reverse due diligence call with representatives of KCS.

On March 11, 2021, Wachtell Lipton sent to Sullivan & Cromwell LLP, CPRL's outside counsel ("Sullivan & Cromwell"), an initial draft of the KCS disclosure schedules to the merger agreement.

On March 15, 2021, Party A and CPRL submitted revised acquisition proposals, including markups of the forms of merger agreement previously provided by KCS. Party A's proposal contemplated an all-cash purchase price of $250.00 per share, which it noted was its "final proposal." The proposal indicated that Party A's lenders had received full credit committee approvals to increase the overall debt financing to $10.3 billion and that all but one of Party A's equity partners had received the required internal approvals to fund the transaction (Party A informed KCS subsequently that this final approval had been obtained). CPRL's proposal contemplated merger consideration of 0.489 of a CPRL common share (equivalent to 2.445 CPRL common shares after giving effect to the share split), without any provision for a collar, and $86.00 in cash per share of KCS common stock (equal to approximately $268.00 per share of KCS common stock based on the market price of CPRL common shares at the time). CPRL's proposal also contemplated, among other things, an increased $800.0 million reverse termination fee and the elimination of the right of the KCS board to terminate the merger agreement in order to accept a superior proposal in certain circumstances.

On March 16, 2021, the KCS board met, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to review the proposals received from Party A and CPRL. Representatives of Morgan Stanley and BofA Securities reviewed the history of KCS's discussions with Party A and with CPRL, including the financial terms of the proposals that each party had submitted since August 2020. Representatives of Wachtell Lipton also provided an overview of the merger agreement markups delivered by Party A and CPRL. The KCS board entered into a discussion with members of management and representatives of the Company's financial advisors regarding Party A's proposed financing structure and its potential capacity to further increase its purchase price. It was the view of the KCS board based on this discussion, as well as Party A's statement that it had made its "final proposal", that Party A would have minimal room to further increase its offer. The KCS board considered these facts and perspectives, as well as the facts and perspectives previously discussed and reviewed at prior meetings, and determined to focus its efforts on negotiating a transaction with CPRL, subject to CPRL agreeing to specific improvements to the terms of its proposal. To that end, the KCS board directed Mr. Ottensmeyer to communicate to Mr. Creel that the KCS board would be willing to proceed with a transaction if CPRL were to improve its proposal by, among other things, increasing its contemplated exchange ratio from 0.489 to 0.5 of a CPRL common share, increasing the amount of the reverse termination fee from $800.0 million to $1.3 billion, and accepting the KCS board's right to terminate the merger agreement in order to accept a superior proposal in certain circumstances. A member of management and representatives of KCS's outside compensation advisor also reviewed the terms of a proposed retention

program and severance arrangements proposed to be submitted for approval by the KCS board were it to approve a transaction with CPRL. The KCS board discussed the terms of and reasons for the proposed retention program and severance arrangements.

Later that day, Mr. Ottensmeyer called Mr. Creel to communicate the KCS board's requests. Mr. Creel said that he would need to consult with members of the CPRL board. Mr. Creel subsequently responded by stating that CPRL was prepared to offer an increased merger consideration of $90 in cash and 0.489 of a CPRL common share (equivalent to 2.445 shares after giving effect to the share split) for each share of KCS common stock (equal to approximately $272 per share of KCS common stock based on the market price of CPRL common shares at the time), to increase the reverse termination fee to $1 billion, and to agree to the right of the KCS board to terminate the merger agreement to accept a superior proposal from a third party in certain circumstances. The following day, CPRL submitted a revised written proposal reflecting these terms. Mr. Ottensmeyer informed the KCS board of the terms of CPRL's proposal, and at the direction of the KCS board and management, representatives of Wachtell Lipton proceeded to negotiate final terms of the transaction documents with representatives of Sullivan & Cromwell, with the goal of announcing a signed merger agreement no later than the morning of March 21, 2021. From March 17 through March 20, 2021, representatives of Wachtell Lipton and Sullivan & Cromwell exchanged further revised drafts of the merger agreement and participated in calls to resolve the remaining open issues.

On March 20, 2021, the KCS board held a meeting, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors. A representative of Wachtell Lipton again discussed with the board its fiduciary duties under Delaware law. Thereafter, representatives of each of the financial advisors presented to the KCS board their respective financial analyses and each financial advisor rendered to the KCS board its oral opinion, which was subsequently confirmed in writing on the same date, to the effect that, as of such date and based upon and subject to the matters considered, the procedures followed, the assumptions made and various limitations of and qualifications to the review undertaken, as set forth in each financial advisor's respective written opinion, the consideration to be received in the transaction by holders of KCS common stock (other than certain excluded shares as described in the merger agreement) was fair, from a financial point of view, to such holders. The Wachtell Lipton representative then summarized the terms of the merger agreement compared to the terms previously reviewed. After further discussion and deliberation, the KCS board unanimously approved the merger agreement and resolved to recommend that the stockholders of KCS adopt the merger agreement. The KCS board also approved the proposed retention and severance arrangements previously discussed.

Following the completion of the KCS board meeting, representatives of Wachtell Lipton and Sullivan & Cromwell finalized the merger agreement, and in the early morning of March 21, 2021, KCS and CPRL executed the prior CP merger agreement. KCS and CPRL issued a joint press release announcing the transaction in the morning of March 21, 2021.

On March 22, 2021, representatives of CPRL submitted a letter to STB Staff requesting an informal opinion that CPRL's proposed voting trust agreement comported with the standards set forth in 49 C.F.R. § 1013.3(a).

On April 20, 2021, KCS received an unsolicited written proposal from CN (the "CN proposal") to acquire KCS for 1.059 common shares of CN and $200.00 in cash per share of KCS common stock (valued at $325.00 per share of KCS common stock based on the market price of CN common shares at the time). The proposal contemplated that CN and KCS would enter into a merger agreement with substantially similar terms to those of the prior CP merger agreement, including the use of a voting trust arrangement and a commitment to obtain regulatory approvals on the same terms as in the prior CP merger agreement.

The KCS board met on April 20, 2021, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, for a preliminary review of the CN proposal. Representatives of Morgan Stanley and BofA Securities reviewed and discussed their preliminary perspectives

on the financial terms of the CN proposal in comparison to the financial terms of the prior CP merger agreement. The KCS board also reviewed potential synergy estimates for a combination with CN relative to the synergies estimated for the transaction with CPRL.

On April 23, 2021, the STB announced a decision that the waiver provision under 49 C.F.R. § 1180.0(b) applied to the proposed transaction between CPRL and KCS and stated that the agency's review of the transaction would be governed by the regulations set forth at 49 C.F.R. part 1180 (2000).

On April 24, 2021, the KCS board held a meeting, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors. Representatives of Morgan Stanley and BofA Securities again shared their perspectives on the financial terms of the CN proposal in comparison to the financial terms of the prior CP merger agreement. The KCS board reviewed the potential synergies for a combination with each of CPRL and CN and discussed with the advisors the likely capacity of each party to further increase its purchase price and other enhancements that could be requested of CPRL and CN with respect to the terms of a transaction. The KCS board also discussed the regulatory considerations and issues relating to a combination with CN relative to CPRL, including an assessment of the process for approval of the proposed voting trust and for obtaining final regulatory approval for the potential combination. After consideration of these facts and perspectives, as well as the facts and perspectives previously discussed and reviewed at the KCS board's April 20th meeting, the KCS board determined that the CN proposal could reasonably be expected to lead to a "Company Superior Proposal", as defined in the prior CP merger agreement (which we refer to as a "company superior proposal"). Accordingly, the KCS board determined that KCS should provide information to CN, and engage in discussions and negotiations with CN, with respect to the CN proposal. KCS management subsequently notified representatives of CN and CPRL of the KCS board's determination, after which KCS issued a press release announcing its decision and intent to engage in discussions with CN. On the evening of April 24, 2021, representatives of Cravath, Swaine & Moore LLP (which we refer to as "Cravath"), CN's outside counsel, sent to Wachtell Lipton proposed forms of a merger agreement and a voting trust agreement reflecting the terms described in the CN proposal.

On April 26, 2021, representatives of CN submitted an application to the STB requesting approval of CN's proposed voting trust agreement, pursuant to 49 C.F.R. § 1180.4(b)(4)(iv) (and not under the waiver provision under 49 C.F.R. § 1180.0(b)). Also on April 26, 2021, KCS entered into a confidentiality agreement and clean team agreement with CN in substantially the same forms as the confidentiality agreements entered into with CPRL and Party A, other than the absence of standstill provisions and other immaterial changes. Through the subsequent weeks, KCS provided CN with access to a virtual data room and various business and legal due diligence materials, including a copy of the KCS long-range plan. Representatives of CN participated in management presentations and diligence sessions hosted by KCS. In addition, CN provided KCS with access to a virtual data room and various reverse diligence materials.

On May 6, 2021, the STB announced a decision finding that the voting trust agreement proposed by CPRL was acceptable, subject to certain modifications.

On May 8, 2021, the KCS board convened a meeting with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors to discuss KCS's ongoing engagement with CN and potential next steps. Members of management and representatives of Wachtell Lipton reviewed the terms of CN's draft merger agreement and presented a proposed list of enhancements to request from CN with respect to the CN proposal, including (1) increasing the exchange ratio from 1.059 shares so that the transaction could qualify as a "reorganization" within the meaning of Section 368(a) of the Code, (2) increasing the reverse termination fee payable to KCS in the event the merger agreement was terminated due to the inability of the parties to complete the voting trust transaction as a result of STB regulatory issues from $1.0 billion to $2.0 billion, (3) requiring CN to reimburse KCS upon payment of the $700.0 million termination fee by KCS to CPRL in the event KCS terminated the prior CP merger agreement to enter into a merger agreement with CN and (4) enhancing the flexibility of KCS to undertake certain actions following the execution of a merger agreement with CN without CN's prior written consent, including with respect to the terms of KCS's retention program and

severance arrangements. The KCS board also reviewed a proposed timeline for soliciting a revised proposal from CN. The KCS board then directed management, together with KCS's legal advisors, to seek the enhancements to the CN proposal discussed with the KCS board and to request that CN submit a revised binding proposal so that the KCS board could be in a position to make a determination as to whether such revised proposal constituted a company superior proposal at a meeting scheduled for May 13, 2021. The KCS board also directed management to notify CPRL of the KCS board's intention to make a determination with respect to the CN proposal at its next meeting and to suggest that CPRL submit any revisions with respect to the prior CP merger agreement before such time.

Following the meeting, Mr. Ottensmeyer communicated the KCS board's requests to Mr. Ruest and to Mr. Creel. Representatives of Wachtell Lipton also reached out to Cravath to review the requested enhancements with respect to the CN proposal.

On May 11, 2021, representatives of Cravath contacted Wachtell Lipton to convey CN's responses to KCS's requested enhancements. The representatives of Cravath expressed that CN was prepared to accept several of KCS's requests for enhanced flexibility during the pendency of the transaction, including with respect to the terms of KCS's retention program and severance arrangements. The representatives of Cravath also expressed that CN was prepared to accept KCS's proposal that CN (or an affiliate of CN) reimburse KCS for the $700.0 million termination fee that would be payable by KCS to CPRL in connection with the termination of the prior CP merger agreement, subject to KCS refunding such reimbursement in the event (i) KCS terminated the merger agreement with CN in order to accept a superior proposal, (ii) CN terminated the merger agreement upon a change of recommendation by the KCS board, (iii) CN terminated the merger agreement on the basis of a breach by KCS of its representations, warranties or covenants in a manner that would entitle CN not to consummate the merger or (iv) CN terminated the merger agreement on the basis of the occurrence of a material adverse effect on the business and operations of KCS. The Cravath representatives indicated that CN was unwilling to increase the exchange ratio or the reverse termination fee.

On May 12, 2021, Mr. Ottensmeyer called Mr. Ruest to request that CN increase its exchange ratio so as to restore the $325.00 per share valuation of the CN proposal based on the current market price of CN common shares. Mr. Ottensmeyer further requested that CN consider increasing the amount of the reverse termination fee payable to KCS in the event the merger agreement was terminated due to the inability of the parties to complete the voting trust transaction as a result of STB regulatory issues. Mr. Ottensmeyer also spoke with Mr. Creel and encouraged CPRL to submit any proposed revisions to the prior CP merger agreement before the KCS board's next meeting.

On the morning of May 13, 2021, representatives of Cravath sent to representatives of Wachtell Lipton a proposed form of offer letter and revised drafts of the merger agreement and other transaction documents. CN's revised proposal contemplated an increase in the exchange ratio to 1.129 shares of CN common shares while maintaining the $200.00 per share cash component of the proposed consideration (restoring the $325.00 per share valuation of the CN proposal based on the closing price of CN common shares on May 12, 2021), an obligation by an affiliate of CN to reimburse KCS for the $700.0 million termination fee payable to CPRL (subject to KCS refunding such reimbursement in the event (i) KCS terminated the merger agreement with CN in order to accept a superior proposal, (ii) CN terminated the merger agreement upon a change of recommendation by the KCS board or (iii) CN terminated the merger agreement on the basis of a breach by KCS of its representations, warranties or covenants in a manner that would entitle CN not to consummate the merger), and enhanced flexibility on the part of KCS to undertake certain actions without CN's prior written consent during the pendency of the transaction, including with respect to the terms of KCS's retention program and severance arrangements. Through the morning and early afternoon, representatives of Wachtell Lipton and Cravath discussed various minor revisions to the transaction documents. Representatives of Cravath then submitted a binding offer letter on behalf of CN, together with proposed final and binding forms of merger agreement and schedules (collectively, the "revised CN proposal"). The offer letter indicated that the revised CN proposal could be accepted by KCS at any time prior to 5:00 pm Eastern Time on May 21, 2021.

On the afternoon of May 13, 2021, the KCS board met, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to discuss the revised CN proposal. The KCS board reviewed the terms of the revised CN proposal relative to the terms of the prior CP merger agreement and discussed various regulatory considerations relating to a combination with CN and with CPRL, including the STB's decision to apply the waiver provision under 49 C.F.R. § 1180.0(b) to the potential CPRL transaction and CPRL's receipt of STB voting trust approval. The KCS board discussed potential next steps and the requirements of the prior CP merger agreement with respect to any further engagement with CN. Among other things, the KCS board considered the fact that, in the event the KCS board determined that the revised CN proposal constituted a company superior proposal, KCS would be required to provide CPRL the opportunity for at least five business days to attempt to match the terms of the revised CN proposal prior to terminating the prior CP merger agreement and entering into a definitive agreement with CN. Representatives of Morgan Stanley and BofA Securities also provided to the KCS board their respective financial analyses. The representatives stated that they had each reviewed the terms of the revised CN proposal with their respective fairness committees and that, absent any material developments following the conclusion of the meeting, the financial advisors stood ready to deliver customary fairness opinions with respect to the revised CN proposal at such time as the KCS board were to consider terminating the prior CP merger agreement and entering into a merger agreement in relation to the revised CN proposal. The KCS board determined that the revised CN proposal constituted a company superior proposal and directed management to notify CPRL of the KCS board's intention to terminate the prior CP merger agreement and to enter into a definitive agreement with respect to the revised CN proposal unless, at the end of the five business day period following the notice, the KCS board determined that the revised CN proposal no longer constituted a company superior proposal. Members of KCS management communicated the KCS board's determination to representatives of CN and CPRL after the end of the meeting, and later on the evening of May 13, 2021, KCS issued a press release announcing the KCS board's determination.

On May 17, 2021, the STB announced a decision finding that application of the waiver provision under 49 C.F.R. § 1180.0(b) to a potential transaction between CN and KCS was not warranted and stated that the agency's review of the transaction would be governed by the regulations set forth at 49 C.F.R. part 1180, as adopted in Major Rail Consolidation Procedures, 5 S.T.B. 539 (2001). The STB also denied CN's motion to approve its proposed voting trust agreement as incomplete, without prejudice to filing a new motion.

On the morning of May 20, 2021, Mr. Creel contacted Mr. Ottensmeyer to notify him that CPRL did not intend to propose revisions to the prior CP merger agreement, explaining that, in CPRL's view, it would be destructive to CPRL's and KCS's mutual interests to engage in a bidding war with CN. Shortly thereafter, Mr. Creel publicly announced CPRL's intention not to increase its offer. Later that afternoon, the KCS board convened a meeting to discuss next steps with respect to the revised CN proposal. The KCS board reviewed again with KCS's financial and legal advisors the financial terms of the revised CN proposal in comparison to the financial terms of the prior CP merger agreement. The KCS board also discussed the regulatory considerations associated with pursuing a transaction with CN and CPRL, including the STB's determinations with respect to CN's and CPRL's proposed voting trust agreements, and considered the possibility of seeking additional enhancements to CN's proposal. The KCS board then directed management to reach out to CN to request a further increase in the exchange ratio so as to restore the $325.00 per share valuation of the CN proposal based on the current market price of CN common shares and a revised "escalating" reverse termination fee that would increase by $100.0 million per month in the event CN were unable to obtain STB voting trust approval within three months of the execution of a merger agreement with KCS.

Following the meeting, Mr. Ottensmeyer contacted Mr. Ruest to convey the requests from the KCS board. Later that evening, Mr. Ruest reached out to Mr. Ottensmeyer to indicate that CN was not willing to make any further changes to the revised CN proposal.

On the morning of May 21, 2021, the KCS board met again. Mr. Ottensmeyer updated the KCS board as to his conversations with Mr. Ruest, after which a discussion followed among the directors as to potential next steps. A representative of Wachtell Lipton discussed with the board its fiduciary duties under Delaware law. Thereafter,

representatives of each of the financial advisors presented to the KCS board their respective financial analyses and each financial advisor rendered to the KCS board its oral opinion, which was subsequently confirmed in writing on the same date, to the effect that, as of such date and based upon and subject to the matters considered, the procedures followed, the assumptions made and various limitations of and qualifications to the review undertaken, as set forth in each financial advisor's respective written opinion, the consideration to be received in the transaction with CN by holders of KCS common stock (other than certain excluded shares as described in the merger agreement) was fair, from a financial point of view, to such holders. After further discussion and deliberation, the KCS board unanimously determined that the revised CN proposal continued to constitute a company superior proposal and approved the termination of the prior CP merger agreement, KCS's payment of the $700.0 million CP termination payment to CPRL pursuant to the terms of the prior CP merger agreement and KCS's entry into the merger agreement with CN. The KCS board also approved the updated retention and severance arrangements set forth in the revised CN proposal.

Following the completion of the KCS board meeting, KCS management notified CPRL of the KCS board's determination, after which KCS terminated the prior CP merger agreement and paid the $700.0 million CP termination payment to CPRL. Shortly thereafter, KCS delivered an executed signature page to the CN agreement, which had already been executed by CN, and KCS and CN issued a joint press release announcing the transaction. Following execution of the CN agreement, an affiliate of CN reimbursed KCS for the $700.0 million CP termination payment paid to CPRL.

On May 26, 2021, representatives of KCS and CN jointly filed with the STB a renewed motion for approval of CN's proposed voting trust agreement. The motion included, among other things, a commitment by CN to divest KCS's 70-mile line between New Orleans and Baton Rouge following the consummation of a transaction and STB final approval.

On June 8, 2021, the STB issued a timetable for reviewing CN's proposed voting trust agreement. The STB directed KCS and CN to file certain additional materials relating to the financial condition of CN with the STB by June 14, 2021 and requested public comments on CN's proposed voting trust on June 28, 2021 and KCS's and CN's replies on July 6, 2021.

On June 22, 2021, CN filed with the SEC a preliminary Form F-4 registration statement with respect to the CN common shares issuable in the proposed merger with KCS. The registration statement included a preliminary proxy statement of KCS relating to the KCS stockholder meeting proposed to be convened to vote on the CN merger (the "KCS-CN merger approval stockholder meeting") .

On July 2, 2021, KCS fixed and announced August 19, 2021 as the date for the KCS-CN merger approval stockholder meeting.

On July 7, 2021, CN filed with the SEC a final prospectus with respect to the CN common shares issuable in the proposed merger with KCS and KCS filed a definitive proxy statement with respect to KCS-CN merger approval stockholder meeting.

On July 29, 2021, CPRL filed with the SEC a preliminary proxy statement in connection with the solicitation of votes against the CN merger at the KCS-CN merger approval stockholder meeting. On August 9, 2021, CPRL filed with the SEC a definitive proxy statement in connection with the solicitation of votes against the CN merger at the KCS-CN merger approval stockholder meeting.

On the morning of August 10, 2021, KCS received an unsolicited written proposal from CPRL (the "revised CPRL proposal") to acquire KCS for 2.884 CPRL common shares and $90.00 in cash per share of KCS common stock (valued at $300.00 per share of KCS common stock based on the market price of CPRL common shares at the time). The revised CPRL proposal contemplated that CPRL and KCS would enter into a merger agreement with substantially similar terms to those of the CN agreement and included proposed forms of a merger agreement and a voting trust agreement. The revised CPRL proposal indicated that, in connection with KCS's termination of the CN agreement, CPRL would remit $1.4 billion to KCS to reimburse KCS for the payment of

the $700.0 million termination payment that would be due to CN and the $700.0 million refund that would be due to an affiliate of CN with respect to the CN affiliate's reimbursement of the CP termination payment previously paid by KCS to CPRL. The revised CPRL proposal contemplated that KCS would be required to refund the full amount of the reimbursement in connection with the termination of a merger agreement under specified circumstances. In the afternoon of August 10, 2021, the STB announced that it expected to issue a decision on CN's proposed voting trust no later than August 31, 2021. The KCS board convened a meeting on the same day, together with members of senior management and representatives of KCS's legal advisors for a preliminary review of the revised CPRL proposal and to discuss the STB's announcement and potential next steps. The KCS board instructed Mr. Ottensmeyer to reach out to Mr. Ruest to inquire as to whether CN would be willing to increase its purchase price or otherwise improve the terms of its proposed merger in light of the receipt of the revised CPRL proposal and the STB's recent announcement.

On August 11, 2021, Mr. Ottensmeyer contacted Mr. Ruest to communicate the KCS board's inquiry. Later that day, Mr. Ruest indicated that CN was not prepared to increase its proposed purchase price or otherwise modify the terms of the proposed transaction, but that CN would support a decision by the KCS board (if the KCS board so decided) to adjourn the KCS-CN merger approval stockholder meeting to take place after the STB's announcement of a final ruling on the CN voting trust.

On August 12, 2021, the KCS board held a meeting, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors. Representatives of Morgan Stanley and BofA Securities shared their perspectives on the financial terms of the revised CPRL proposal in comparison to the financial terms of the CN agreement. The KCS board reviewed the potential synergies for a combination with each of CN and CPRL and discussed with management and the advisors the potential capacity of each party to further enhance the terms of a transaction, including the feedback Mr. Ottensmeyer had received from Mr. Ruest regarding CN's unwillingness to improve the terms of its proposal. The KCS board also discussed the feedback received from investors and the potential paths available to KCS and reviewed again the regulatory considerations and issues relating to a combination with CPRL relative to CN. The KCS board then determined that the revised CPRL proposal did not constitute, and could not reasonably be expected to lead to, a "Company Superior Proposal", as defined in the CN agreement (which, for purposes of the remainder of this section of this proxy statement/prospectus, we refer to as a "company superior proposal"). The KCS board also determined to adjourn the KCS-CN merger approval stockholder meeting in the event the STB did not release a public decision on the CN voting trust by August 17, 2021, at 6:00 p.m., Central Time. Shortly thereafter, KCS issued a press release announcing its decision. Because the STB had not yet released its decision on the CN voting trust, on August 19, 2021, KCS convened and adjourned the KCS-CN merger approval stockholder meeting until September 3, 2021.

On August 31, 2021, the STB announced a unanimous decision rejecting the use of a voting trust agreement in connection with the proposed transaction between KCS and CN. Later that day, Mr. Creel called Mr. Ottensmeyer to renew and reaffirm the terms of the revised CPRL proposal, which Mr. Creel conveyed in writing to Mr. Ottensmeyer shortly after the conclusion of their call, together with proposed forms of a merger agreement and a voting trust agreement. The letter indicated that the revised CPRL proposal would expire at 11:59 p.m., Eastern Time, on September 12, 2021, if KCS did not deliver evidence to CPRL by that time that KCS had delivered to CN notice of its intention to terminate the CN agreement and enter into a merger agreement with CPRL. At 8:00 p.m., Eastern Time, the KCS board convened a meeting, with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to discuss the developments of the day. After deliberation, in light of these developments, the KCS board determined to further adjourn the KCS-CN merger approval stockholder meeting.

On September 3, 2021, KCS convened and adjourned the KCS-CN merger approval stockholder meeting until September 24, 2021.

On the morning of September 4, 2021, the KCS board held a meeting, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to discuss the

revised CPRL proposal and potential next steps. Representatives of Morgan Stanley and BofA Securities again provided their perspectives on the financial terms of the revised CPRL proposal in comparison to the financial terms of the CN agreement. The KCS board reviewed an illustrative expected value comparison with respect to the CN and CPRL offers weighted, respectively, by a range of probabilities of consummating a voting trust transaction in connection with each offer. Mr. Ottensmeyer also informed the KCS board that Mr. Ruest had indicated that CN would be willing to join KCS in an appeal of the STB ruling denying approval of the CN voting trust, and would be willing to explore the possibility of pursuing a combination of KCS and CN without a voting trust, but that CN would not be willing to increase the merger consideration or the reverse termination fee that would be payable to KCS if regulatory approval were not obtained.

The KCS board then discussed a proposed list of potential enhancements to request from CN and CPRL. These included, with respect to CN, requests to appeal the STB decision and increase the proposed purchase price and reverse termination fee due to KCS (notwithstanding Mr. Ruest's statements to Mr. Ottensmeyer), and with respect to CPRL, requests to increase the proposed purchase price, reduce the amount of the reimbursement that would be refundable by KCS under certain circumstances from $1.4 billion to $700.0 million, permit KCS to pay a one-time special dividend to KCS stockholders prior to closing, revise the contemplated transaction structure so that the transaction could qualify as a "reorganization" within the meaning of Section 368(a) of the Code (as was contemplated in the prior CP merger agreement) and enhance the flexibility of KCS to undertake certain actions following the execution of a merger agreement with CPRL without CPRL's prior written consent (such as with respect to the terms of KCS's retention program and severance arrangements). The KCS board also reviewed a proposed timeline for soliciting revised proposals from CN and CPRL. After consideration of these perspectives, together with analysis of the STB's ruling on the CN voting trust and the other events of the week, the KCS board determined that the revised CPRL proposal could reasonably be expected to lead to a company superior proposal. Accordingly, the KCS board determined that KCS should provide information to CPRL, and engage in discussions and negotiations with CPRL, with respect to the revised CPRL proposal. The KCS board then directed management, together with KCS's legal advisors, to seek from CN and CPRL the enhancements discussed with the KCS board. KCS management subsequently notified representatives of CN and CPRL of the KCS board's determination, after which KCS issued a press release announcing its decision and intent to engage in discussions with CPRL.

Over the following week, KCS provided CPRL with renewed access to a virtual data room and various business and legal due diligence materials, including a copy of the KCS long-range plan, and responded to diligence requests and questions from CPRL. In addition, CPRL provided KCS with renewed access to a virtual data room and various reverse diligence materials, including a copy of CPRL's internal five-year financial forecast (the "CPRL five-year plan"). Additionally, during this time, members of KCS management and representatives of KCS's legal advisors discussed with their counterparts at CN and CPRL the proposed enhancements sought by the KCS board with respect to their respective proposals. On September 5, 2021, representatives of Wachtell Lipton sent to representatives of Sullivan & Cromwell a revised draft of the merger agreement reflecting these requested enhancements.

On September 6, 2021, Mr. Creel reached out to Mr. Ottensmeyer to express that CPRL was prepared to reduce the amount of the reimbursement that would be refundable by KCS under certain circumstances from $1.4 billion to $700.0 million, revise the contemplated transaction structure so that the transaction could qualify as a "reorganization" within the meaning of Section 368(a) of the Code and accept several of KCS's requests for enhanced flexibility during the pendency of the transaction, including with respect to the terms of KCS's retention program and severance arrangements. Mr. Creel indicated that CPRL was unwilling to accept KCS's other requests, including the request for any additional merger consideration and the ability to pay a one-time special dividend to KCS stockholders. On the next day, representatives of Sullivan & Cromwell sent to representatives of Wachtell Lipton revised drafts of the transaction documents reflecting the positions communicated by Mr. Creel. Representatives of Wachtell Lipton and Sullivan & Cromwell subsequently discussed various minor revisions to the transaction documents.

On September 9, 2021, Mr. Ruest reiterated CN's position that CN would be willing to pursue an appeal of the STB ruling and to explore the possibility of pursuing a combination of KCS and CN without a voting trust, but that CN would not be willing to increase its merger consideration or reverse termination fee.

On the night of September 11, 2021, representatives of Sullivan & Cromwell sent to representatives of Wachtell Lipton a binding offer letter, dated September 12, 2021, and final forms of merger agreement and other transaction documents (collectively, the "final CPRL proposal"). The binding offer letter indicated that the final CPRL proposal could be accepted at any time prior to 5:00 p.m. Eastern Time on September 20, 2021, assuming that the KCS board determined that the final CPRL proposal constituted a company superior proposal and KCS delivered to CN, no later than 11:59 p.m. Eastern Time on September 12, 2021, notice of KCS's intention to terminate the CN agreement and enter into a merger agreement with CPRL.

On the morning of September 12, 2021, the KCS board met, together with members of senior management and representatives of Morgan Stanley, BofA Securities and KCS's legal advisors, to discuss the final CPRL proposal. The KCS board reviewed the terms of the final CPRL proposal relative to the terms of the CN agreement and discussed potential next steps and the requirements of the CN agreement with respect to any further engagement with CPRL, including the obligation of KCS to provide CN the opportunity for at least five business days to attempt to match the terms of the final CPRL proposal in the event the KCS board determined that the final CPRL proposal constituted a company superior proposal. Representatives of Morgan Stanley and BofA Securities also provided to the KCS board their respective financial analyses. The representatives stated that they had each reviewed the terms of the final CPRL proposal with their respective fairness committees and that, absent any material developments following the conclusion of the meeting, the financial advisors stood ready to deliver customary fairness opinions with respect to the final CPRL proposal at such time as the KCS board were to consider terminating the CN agreement and accept the final CPRL proposal.

Following these presentations and discussions, the KCS board determined that the final CPRL proposal constituted a company superior proposal and directed management to notify CN of the KCS board's intention to terminate the CN agreement and to enter into a definitive agreement with respect to the final CPRL proposal unless, at the end of the five business day period following the notice, the KCS board determined that the final CPRL proposal no longer constituted a company superior proposal. After the end of the meeting, members of KCS management communicated the KCS board's determination to representatives of CN and CPRL and KCS issued a press release announcing the KCS board's determination.

On September 13, 2021, members of KCS and CN management and representatives of their respective legal advisors began discussing the possibility of entering into a waiver letter agreement pursuant to which CN would agree to waive the five business day match period under the CN agreement. Representatives of CN reiterated the position that CN was unwilling to offer any additional merger consideration or increase the amount of the reverse termination fee contemplated by CN's proposed transaction with KCS. On September 14, 2021, representatives of CN communicated to KCS that CN was prepared to enter into the waiver letter agreement. Shortly thereafter, representatives of KCS notified CPRL of CN's intention to waive the five business day match period under the CN agreement and that, as such, the KCS board would convene a meeting the next morning to make a final determination as to whether or not to terminate the CN agreement and accept the final CPRL proposal.

On the morning of September 15, 2021, the KCS board held a meeting. A representative of Wachtell Lipton discussed with the board its fiduciary duties under Delaware law. Thereafter, representatives of each of the financial advisors presented to the KCS board their respective financial analyses and each financial advisor rendered to the KCS board its oral opinion, which was confirmed by delivery of its written opinion dated September 15, 2021, to the effect that, as of such date and based upon and subject to the assumptions made, procedures followed, matters considered and qualifications and limitations on the scope of the review undertaken by such financial advisor, as set forth in such financial advisor's written opinion, the consideration to be received by holders of KCS common stock (other than certain excluded shares as described in the merger agreement) in the transaction with CPRL was fair, from a financial point of view, to such holders. The full text of the written opinion of each of Morgan Stanley and BofA Securities is attached to this proxy statement as Annexes B and C, respectively, and is incorporated by reference in this proxy statement in its entirety. Bulletin:

Canadian Pacific Railway Ltd. Sweetens Its Offer For Kansas City Southern Amid Uncertainty

August 10, 2021

TORONTO (S&P Global Ratings) Aug. 10, 2021--S&P Global Ratings today said that Canadian freight railroad services provider Canadian Pacific Railway Ltd. (CP Rail; BBB+/Stable/--) announced a new offer to acquire Kansas City Southern (KCS; BBB/Stable/A-2). The sweetened offer is about US$2 billion above the company's initial proposal in March 2021 (representing a total enterprise value of KCS at about US$31 billion). The offer follows KCS' acceptance of Canadian National Railway Co.'s (CN Rail; A/Watch Neg/A-1) higher bid in May 2021, which remains subject to regulatory and shareholder approval.

Our ratings on CP Rail are unaffected by today's announcement, as the outcome of this proposal is speculative. Regulatory and shareholder approval of the CN Rail/KCS combination is pending; in our view, the approval of CN Rail's planned independent voting trust structure by the U.S. Surface Transportation Board is a critical requirement. In the event that KCS accepts CP Rail's current proposal (assuming KCS' deal with CN Rail is not consummated), we believe the incremental debt associated with the company's planned funding (about US$900 million above its previous offer) will not materially weaken CP Rail's credit measures relative to our previous forecasts.

For more details on our view of CP Rail, refer to our latest article "Credit FAQ: CP Rail's Merger With Kansas City Southern Is A Good Fit Pending Regulatory Approval," published March 30, 2021, on RatingsDirect.

TORONTO (S&P Global Ratings) March 22, 2021--S&P Global Ratings today said that its rating and outlook on Canadian freight railroad services provider Canadian Pacific Railway Ltd. (CP; BBB+/Stable/--) are currently unaffected by the proposed acquisition of Kansas City Southern (KCS; BBB/Stable/A-2). CP has offered approximately US$29 billion (enterprise value) for KCS, which will include US$8.6 billion in incremental debt, and the remainder in cash on hand and CP common shares. The deal has unanimous support from the boards of both companies, and would combine the two smallest Class 1 railways in North America. CP targets the transaction to close in mid-2022, but this is dependent on regulatory approval that we believe could delay the process.

In our view, the proposed acquisition will materially increase CP's leverage in the short term and could pose a headwind to credit quality. However, we expect steady deleveraging over the next several years from earnings growth and free cash flow generation. In addition, the completion of the transaction should strengthen CP's business risk profile notably from the combined larger transcontinental network, increased customer breadth, and enhanced service capability that add efficiencies. The deal is contingent on regulatory approval, notably from the U.S. Surface Transportation Board (STB), which presents a key source of uncertainty.

We do not ascribe a probability to regulatory approval. The company attempted to merge with Norfolk Southern (unsolicited offer) in late-2015 but faced opposition to certain aspects of the transaction. The previous proposed Class 1 merger (Burlington Northern Santa Fe and Canadian National Railway Co. in 1999) was blocked with a 15-month merger moratorium, after which the STB developed more stringent conditions for approving such mergers. However, the networks of CP and KCS do not overlap; we believe the impact on public interest and competition, and the potential benefits for key constituents (such as shippers) will be key considerations for regulators. The company intends to close the acquisition before regulatory approval, with the acquired KCS shares held in an independent trust (and insulate KCS from control by CP until the STB authorizes control). In the event the STB does not approve the acquisition, we understand the company would be required to divest its KCS shares.

We estimate CP will generate steady growth in earnings and cash flow over the next few years, with discretionary cash flow applied toward meaningful debt reduction. Share repurchases have historically been a significant use of cash flow. The curtailment of the company's buyback program during the review process, in tandem with earnings growth should primarily facilitate material deleveraging. On a standalone basis, we estimate CP's adjusted debt-to-EBITDA (leverage) in the low-4x area at end-2021 (inclusive of excess cash flow from KCS), but for this ratio to improve to below 4x at end-2022. On a pro forma consolidated basis at end-2023, we

THIS WAS PREPARED EXCLUSIVELY FOR USER MAXIM MAXIM.BOUIANOVA.
NOT FOR REDISTRIBUTION UNLESS OTHERWISE PERMITTED.

estimate this ratio approaches 2.5x and funds-from-operations to debt of approximately 30%, before potential synergies (estimated by the company at US$780 million over three years).

We believe the combination of CP and KCS would present opportunities for growth from a single-line network across Canada though the U.S. Midwest to Mexico. We would expect meaningful efficiencies beyond cost cutting, supported by an improved competitive position linked to enhanced operating breadth. CP already maintains the lowest operating ratio in the industry, but KCS is close (low-60% area versus the high-50% range at CP) and has adopted the precision scheduled railroading model in place at CP.

This report does not constitute a rating action.

MOODY'S INVESTOR'S SERVICE
"*MOODY'S DOWNGRADES CP RAIL TO BAA2 STABLE ON KCS ACQUISITION*"
(MAR. 22, 2021)

MOODY'S
INVESTORS SERVICE

Rating Action: Moody's downgrades CP Rail to Baa2 Stable on KCS acquisition

22 Mar 2021

Toronto, March 22, 2021 -- Moody's Investors Service, ("Moody's") downgraded Canadian Pacific Railway Company's ("CP") senior unsecured ratings to Baa2 from Baa1 following the announcement that its parent, Canadian Pacific Railway Limited, has agreed to acquire Kansas City Southern ("KCS") for approximately $29 billion, the funding of which includes raising approximately $8.6 billion in debt. CP's commercial paper rating has been affirmed at Prime-2 and its outlook remains stable.

Financing for the new debt has been committed. As part of the merger, CP will also assume KCS' outstanding debt of approximately $3.8 billion.

"The downgrade reflects the increase in adjusted leverage, which will exceed 3X through 2023" said Jamie Koutsoukis, Moody's analyst. "It also incorporates the regulatory and integration risks of the acquisition" she added.

The following rating actions were taken:

Affirmations:

..Issuer: Canadian Pacific Railway Company

....Senior Unsecured Commercial Paper, Affirmed P-2

Downgrades:

..Issuer: Canadian Pacific Railway Company

....Senior Unsecured Shelf, Downgraded to (P)Baa2 from (P)Baa1

....Senior Unsecured Regular Bond/Debenture, Downgraded to Baa2 from Baa1

Outlook Actions:

..Issuer: Canadian Pacific Railway Company

....Outlook, Remains Stable

RATINGS RATIONALE

CP's Baa2 credit rating benefits from 1) its well-positioned railway network, 2) a preponderance of stable commodity hauls, and 3) a track record of a very good operating margin. CP is constrained by 1) its small size versus its North American Class 1 peers, 2) uncertainties associated with regulatory approval for CP's recent announcement to acquire KCS (we expect shareholder approval will occur in mid-2021) which will result in adjusted leverage exceeding 4x in 2021, 3) its exposure to economic cyclicality, 4) adverse weather conditions and 5) increasing regulatory risks. Moody's believes the company has the ability and is committed to reducing its adjusted financial leverage towards the mid-point of its 2x to 2.5x public leverage target, however the time to achieve this will be protracted.

The acquisition of KCS will strengthen CP's rail network, creating a bigger continental network and expanding the reach of single hauls and service capabilities that can be provided to customers. In addition, its credit profile will benefit from a larger, more diversified business with a greater exposure to higher margin merchandise business, increased customer diversity and breadth and the potential for synergies from network and equipment efficiencies as well as greater revenue expansion. Offsetting these benefits however is the increase in adjusted leverage which will increase from 2.5x at year-end 2020 to 4.5x pro forma for the acquisition, and remain above 3x through 2023. There is also the economic risk to CP should they not be granted regulatory approval and be required to unwind its purchase of KCS at an unknown price.

CP has excellent liquidity. Excluding the announced acquisition, the company has CAD2.5 billion in expected sources of liquidity compared to about CAD770 million of uses over the next 12 months. Sources of liquidity include cash of CAD147 million and an undrawn US$1 billion credit facility (matures in September 2024) as of December 31, 2020. As well, we expect CP will generate about CAD1.1 billion of free cash flow in 2021. The company has C$320 million of debt due August 2021, and C$450 million due in January 2022. CP's revolving credit facility agreement has a maximum debt to EBITDA covenant and we expect they will maintain significant headroom under this covenant.

CP has secured US$8.6 billion of committed bridge financing for its announced acquisition of KCS.

The stable outlook reflects Moody's expectation CP existing rail network will continue to operate well, such that operating margins do not decrease below 37%. It also incorporates the expectation that the company will receive shareholder approval for the KCS acquisition in mid-2021 and will make steady progress in reducing its initial elevated leverage as a result of the acquisition towards 3x by 2023.

FACTORS THAT COULD LEAD TO AN UPGRADE OR DOWNGRADE OF THE RATINGS

A ratings upgrade would require clarity regarding regulatory approval for CP's acquisition of KCS. It would also require the company maintain adjusted debt/EBITDA below 2.75x and free cash flow/debt of more than 10%.

A ratings downgrade could occur if Moody's expects the company to sustain its adjusted debt/ EBITDA above 3.25x and free cash flow/debt of less than 5%.

The principal methodology used in these ratings was Surface Transportation and Logistics published in May 2019 and available at https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1113382 . Alternatively, please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

Canadian Pacific Railway Company, headquartered in Calgary, Alberta, Canada, provides rail freight transportation services over a 12,700 mile network. The railroad serves the principal business centers of Canada from Montreal to Vancouver as well as the U.S. Midwest and Northeast regions. Revenues in 2020 totaled CAD7.7 billion. KCS operates a Class I railroad in the central U.S., The Kansas City Southern Railway Company, and, through its wholly-owned subsidiary Kansas City Southern de Mexico, S.A. de C.V., owns a concession to operate Mexico's northeastern railroad. Revenues in 2020 totaled $2.6 billion.

REGULATORY DISCLOSURES

For further specification of Moody's key rating assumptions and sensitivity analysis, see the sections Methodology Assumptions and Sensitivity to Assumptions in the disclosure form. Moody's Rating Symbols and Definitions can be found at: https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_79004.

For ratings issued on a program, series, category/class of debt or security this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series, category/class of debt, security or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

The ratings have been disclosed to the rated entity or its designated agent(s) and issued with no amendment resulting from that disclosure.

These ratings are solicited. Please refer to Moody's Policy for Designating and Assigning Unsolicited Credit Ratings available on its website www.moodys.com.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Moody's general principles for assessing environmental, social and governance (ESG) risks in our credit analysis can be found at https://www.moodys.com/researchdocumentcontentpage.aspx?docid=PBC_1243406 .

The Global Scale Credit Rating on this Credit Rating Announcement was issued by one of Moody's affiliates outside the EU and is endorsed by Moody's Deutschland GmbH, An der Welle 5, Frankfurt am Main 60322, Germany, in accordance with Art.4 paragraph 3 of the Regulation (EC) No 1060/2009 on Credit Rating Agencies. Further information on the EU endorsement status and on the Moody's office that issued the credit rating is available on www.moodys.com.

The Global Scale Credit Rating on this Credit Rating Announcement was issued by one of Moody's affiliates outside the UK and is endorsed by Moody's Investors Service Limited, One Canada Square, Canary Wharf, London E14 5FA under the law applicable to credit rating agencies in the UK. Further information on the UK endorsement status and on the Moody's office that issued the credit rating is available on www.moodys.com.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

Moody's Investors Service, Inc., a wholly-owned credit rating agency subsidiary of Moody's Corporation ("MCO"), hereby discloses that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by Moody's Investors Service, Inc. have, prior to assignment of any credit rating, agreed to pay to Moody's Investors Service, Inc. for credit ratings opinions and services rendered by it fees ranging from $1,000 to approximately $5,000,000. MCO and Moody's Investors Service also maintain policies and procedures to address the independence of Moody's Investors Service credit ratings and credit rating processes. Information regarding certain affiliations that may exist between directors of MCO and rated entities, and between entities who hold credit ratings from Moody's Investors Service and have also publicly reported to the SEC an ownership interest in MCO of more than 5%, is posted annually at www.moodys.com under the heading "Investor Relations — Corporate Governance — Director and Shareholder Affiliation Policy."

Additional terms for Australia only: Any publication into Australia of this document is pursuant to the Australian Financial Services License of MOODY'S affiliate, Moody's Investors Service Pty Limited ABN 61 003 399 657AFSL 336969 and/or Moody's Analytics Australia Pty Ltd ABN 94 105 136 972 AFSL 383569 (as applicable). This document is intended to be provided only to "wholesale clients" within the meaning of section 761G of the Corporations Act 2001. By continuing to access this document from within Australia, you represent to MOODY'S that you are, or are accessing the document as a representative of, a "wholesale client" and that neither you nor the entity you represent will directly or indirectly disseminate this document or its contents to "retail clients" within the meaning of section 761G of the Corporations Act 2001. MOODY'S credit rating is an opinion as to the creditworthiness of a debt obligation of the issuer, not on the equity securities of the issuer or any form of security that is available to retail investors.

Additional terms for Japan only: Moody's Japan K.K. ("MJKK") is a wholly-owned credit rating agency subsidiary of Moody's Group Japan G.K., which is wholly-owned by Moody's Overseas Holdings Inc., a wholly-owned subsidiary of MCO. Moody's SF Japan K.K. ("MSFJ") is a wholly-owned credit rating agency subsidiary of MJKK. MSFJ is not a Nationally Recognized Statistical Rating Organization ("NRSRO"). Therefore, credit ratings assigned by MSFJ are Non-NRSRO Credit Ratings. Non-NRSRO Credit Ratings are assigned by an entity that is not a NRSRO and, consequently, the rated obligation will not qualify for certain types of treatment under U.S. laws. MJKK and MSFJ are credit rating agencies registered with the Japan Financial Services Agency and their registration numbers are FSA Commissioner (Ratings) No. 2 and 3 respectively.

MJKK or MSFJ (as applicable) hereby disclose that most issuers of debt securities (including corporate and municipal bonds, debentures, notes and commercial paper) and preferred stock rated by MJKK or MSFJ (as applicable) have, prior to assignment of any credit rating, agreed to pay to MJKK or MSFJ (as applicable) for credit ratings opinions and services rendered by it fees ranging from JPY125,000 to approximately JPY550,000,000.

MJKK and MSFJ also maintain policies and procedures to address Japanese regulatory requirements.

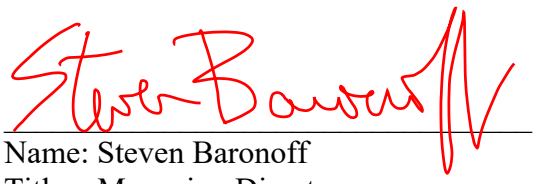
VERIFIED STATEMENT OF STEVEN BARONOFF

VERIFICATION OF BOFA SECURITIES, INC.

On behalf of BofA Securities, Inc. ("BofA Securities"), this is to verify that (a) the Fairness Opinion of BofA Securities, dated September 15, 2021 (the "BofA Securities Fairness Opinion"), to the effect that, as of such date and based upon and subject to the assumptions made, the procedures followed, matters considered and qualifications and limitations on the scope of the review undertaken BofA Securities, as set forth therein, the consideration to be received by the holders of common stock of Kansas City Southern ("KCS") (other than certain excluded shares) in the transaction was fair, from a financial point of view, to such holders, set forth in the attached Appendix A, is a true and correct copy of the BofA Securities Fairness Opinion provided by BofA Securities to the Board of Directors of KCS in connection with the proposed sale of KCS to Canadian Pacific Railway Limited, pursuant to the Agreement and Plan of Merger, dated as of September 15, 2021 (the "Merger Agreement"), and (b) the attached Appendix B sets forth a summary of the BofA Securities Fairness Opinion and the material financial analyses presented by BofA Securities to the KCS board in connection therewith, which was included in KCS's preliminary proxy statement in connection with the transaction that was filed with the Securities and Exchange Commission (the "SEC") on October 1, 2021, and which will be included in the definitive proxy statement to be filed with the SEC.



In providing this verification, BofA Securities does not intend that any person other than the Board of Directors of KCS be entitled to rely on the BofA Securities Fairness Opinion. The BofA Securities Fairness Opinion does not address any other terms or other aspects or implications of the transaction and no opinion or view was expressed as to the relative merits of the transaction in comparison to other strategies or transactions that might be available to KCS or in which KCS might engage or as to the underlying business decision of KCS to proceed with or effect the transaction. The BofA Securities Fairness Opinion and financial analyses were only

one of many factors considered by the Board of Directors of KCS in its evaluation of the transaction and should not be viewed as determinative of the views of the Board of Directors or management of KCS with respect to the transaction or the consideration to be received by the stockholders of KCS.

I, Steven Baronoff, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 27th day of October, 2021.

GLOBAL CORPORATE &
INVESTMENT BANKING

September 15, 2021

The Board of Directors
Kansas City Southern
427 West 12th Street
Kansas City, Missouri

Members of the Board of Directors:

We understand that Kansas City Southern ("KCS") proposes to enter into an Agreement and Plan of Merger (the "Merger Agreement"), among KCS, Canadian Pacific Railway Limited ("CP"), Cygnus Merger Sub 1 Corporation, a wholly owned subsidiary of CP ("Surviving Merger Sub") and Cygnus Merger Sub 2 Corporation, a wholly owned subsidiary of Surviving Merger Sub ("First Merger Sub", and together with Surviving Merger Sub, "Merger Subs"), pursuant to which, among other things, First Merger Sub will merge with and into KCS (the "First Merger"), with KCS surviving the First Merger as a wholly owned subsidiary of Surviving Merger Sub, and immediately thereafter KCS will merge with and into Surviving Merger Sub (the "Second Merger", and together with the First Merger, the "Transaction"), with Surviving Merger Sub surviving the Second Merger as a wholly owned subsidiary of CP. Pursuant to the First Merger, each outstanding share of common stock, par value $0.01 per share, of KCS (the "KCS Common Stock"), other than shares held in treasury or held by CP, Merger Subs or KCS (in each case, other than shares held on behalf of third parties) or shares with respect to which the holders thereof have not voted in favor of the adoption of the Merger Agreement or consented thereto in writing and who have properly exercised appraisal rights with respect thereto in accordance with, and who have complied with, Section 262 of the Delaware General Corporation Law (collectively, "Excluded Shares"), will be converted into the right to receive (i) $90.00 in cash (the "Cash Consideration") and (ii) 2.884 shares (the "Stock Consideration" and, together with the Cash Consideration, the "Consideration") of the common stock, without par value, of CP (the "CP Common Stock") as set forth in the Merger Agreement. The terms and conditions of the Transaction are more fully set forth in the Merger Agreement.

You have requested our opinion as to the fairness, from a financial point of view, to the holders of KCS Common Stock (other than Excluded Shares) of the Consideration to be received by such holders in the Transaction.

In connection with this opinion, we have, among other things:

(1) reviewed certain publicly available business and financial information relating to KCS and CP;

(2) reviewed certain internal financial and operating information with respect to the business, operations and prospects of KCS furnished to or discussed with us by the management of KCS, including certain financial forecasts relating to KCS prepared by the management of KCS (such forecasts, the "KCS Forecasts");

(3) reviewed certain internal financial and operating information with respect to the business, operations and prospects of CP furnished to or discussed with us by the management of KCS, including certain financial forecasts relating to CP prepared by the management of KCS (such forecasts, the "CP Forecasts");

(4) reviewed certain estimates as to the amount and timing of cost savings and revenue enhancements (collectively, the "Synergies") anticipated by the managements of KCS and CP to result from the Transaction;

(5) discussed the past and current business, operations, financial condition and prospects of KCS with members of senior managements of KCS and CP, and discussed the past and current business, operations, financial condition and prospects of CP with members of senior managements of KCS and CP;

(6) reviewed the trading histories for KCS Common Stock and CP Common Stock and a comparison of such trading histories with the trading histories of other companies we deemed relevant;

(7) compared certain financial and stock market information of KCS and CP with similar information of other companies we deemed relevant;

(8) compared certain financial terms of the Transaction to financial terms, to the extent publicly available, of other transactions we deemed relevant;

(9) reviewed a draft dated September 10, 2021 of the Merger Agreement (the "Draft Agreement"), commitment letters from certain lenders, dated as of September 12, 2021 (collectively, the "Commitment Letters"), Decision No. 5 (Docket No. FD 36500) of the Surface Transportation Board (the "STB Voting Trust Approval") and the form of Voting Trust Agreement to be entered into among CP, Cygnus Holding Corporation, a wholly owned subsidiary of CP, and the Trustee (the "Voting Trust Agreement"), and certain related documents; and

(10) performed such other analyses and studies and considered such other information and factors as we deemed appropriate.

In arriving at our opinion, we have assumed and relied upon, without independent verification, the accuracy and completeness of the financial and other information and data publicly available or provided to or otherwise reviewed by or discussed with us and have relied upon the assurances of the managements of KCS and CP that they are not aware of any facts or circumstances that would make such information or data inaccurate or misleading in any material respect. With respect to the KCS Forecasts, we have been advised by KCS, and have assumed, that they have been reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of KCS as to the future financial performance of KCS. With respect to the CP Forecasts and Synergies, we have been advised by KCS, and have assumed, with the consent of KCS, that they have been reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of KCS as to the future financial performance of CP and other matters covered thereby. We have relied, at the direction of KCS,

on the assessments of the managements of KCS and CP, respectively, as to CP's ability to achieve the Synergies and have been advised by KCS and CP, and have assumed, with the consent of KCS, that the Synergies will be realized in the amounts and at the times projected. We have not made or been provided with any independent evaluation or appraisal of the assets or liabilities (contingent or otherwise) of KCS or CP, nor have we made any physical inspection of the properties or assets of KCS or CP. We have not evaluated the solvency or fair value of KCS or CP under any state, federal or other laws relating to bankruptcy, insolvency or similar matters. We have assumed, at the direction of KCS, that the Transaction will be consummated in accordance with the terms set forth in the Merger Agreement, without waiver, modification or amendment of any material term, condition or other agreement contemplated therein or thereby and that, in the course of obtaining the necessary governmental, regulatory and other approvals, consents, releases and waivers for the Transaction, no delay, limitation, restriction or condition, including any divestiture requirements or amendments or modifications, will be imposed that would have an adverse effect on KCS, CP or the contemplated benefits of the Transaction. We have also assumed, at the direction of KCS, that (i) the Transaction will qualify for federal income tax purposes as a reorganization under the provisions of Section 368(a) of the Internal Revenue Code of 1986, as amended, (ii) CP will obtain financing in accordance with the terms set forth in the Commitment Letters, (iii) the Surface Transportation Board will permit the Transaction to close into a Voting Trust in accordance with the terms of the STB Voting Trust Approval and the Voting Trust Agreement and (iv) the final executed Merger Agreement will not differ in any material respect from the Draft Agreement reviewed by us.

We express no view or opinion as to any terms or other aspects of the Transaction (other than the Consideration to the extent expressly specified herein), including, without limitation, the form or structure of the Transaction. Our opinion is limited to the fairness, from a financial point of view, of the Consideration to be received by the holders of shares of KCS Common Stock (other than Excluded Shares) in the Transaction and no opinion or view is expressed with respect to any consideration to be received by the holders of the preferred stock, par value $25 per share, of KCS or any other class of securities, creditors or other constituencies of any party. In addition, no opinion or view is expressed with respect to the fairness (financial or otherwise) of the amount, nature or any other aspect of any compensation to any of the officers, directors or employees of any party to the Transaction, or class of such persons, relative to the Consideration. Furthermore, no opinion or view is expressed as to the relative merits of the Transaction in comparison to other strategies or transactions that might be available to KCS or in which KCS might engage or as to the underlying business decision of KCS to proceed with or effect the Transaction. We are not expressing any opinion as to what the value of CP Common Stock actually will be when issued or the prices at which KCS Common Stock or CP Common Stock will trade at any time, including following announcement or consummation of the Transaction. In addition, we express no opinion or recommendation as to how any stockholder should vote or act in connection with the Transaction or any related matter.

We have acted as financial advisor to KCS in connection with the Transaction and will receive a fee for our services, a portion of which was paid to us upon delivery of our opinion in connection with the previously proposed acquisition of KCS by CP announced in March 2021, a portion of which was paid upon delivery of our opinion in connection with the alternate proposed transaction involving Canadian National Railway Company announced in May 2021, a portion of which is payable upon the rendering of this opinion and a significant portion of which is contingent upon consummation of the Transaction. In addition, KCS has agreed to reimburse our expenses and indemnify us against certain liabilities arising out of our engagement.

We and our affiliates comprise a full service securities firm and commercial bank engaged in securities, commodities and derivatives trading, foreign exchange and other brokerage activities, and principal investing as well as providing investment, corporate and private banking, asset and investment management, financing and financial advisory services and other commercial services and products to a wide range of companies, governments and individuals. In the ordinary course of our businesses, we and our affiliates may invest on a principal basis or on behalf of customers or manage funds that invest, make or hold long or short positions, finance positions or trade or otherwise effect transactions in equity, debt or other securities or financial instruments (including derivatives, bank loans or other obligations) of KCS, CP and certain of their respective affiliates.

We and our affiliates in the past have provided, currently are providing, and in the future may provide, investment banking, commercial banking and other financial services to KCS and have received, or in the future may receive, compensation for the rendering of these services, including (i) having acted as a joint bookrunner on certain debt capital markets transactions for KCS, (ii) having acted as a dealer-manager on an accelerated share repurchase transaction for KCS and (iii) having acted or acting as administrative agent, co-lead arranger and joint bookrunner for, and as a lender (including a letter of credit lender) under, KCS's $600 million senior unsecured revolving credit facility due March 8, 2024.

In addition, we and our affiliates in the past have provided, currently are providing, and in the future may provide, investment banking, commercial banking and other financial services to CP and have received or in the future may receive compensation for the rendering of these services, including (i) having acted as a bookrunning manager and/or co-manager on certain debt capital markets transactions for CP, (ii) having acted or acting as a lender under CP's $1.3 billion revolving credit facility, which consists of a $1.0 billion tranche due September 27, 2024 and a $300 million tranche due September 27, 2021, and (iii) having provided or providing certain treasury services and products to CP.

It is understood that this letter is for the benefit and use of the Board of Directors of KCS (in its capacity as such) in connection with and for purposes of its evaluation of the Transaction.

Our opinion is necessarily based on financial, economic, monetary, market and other conditions and circumstances as in effect on, and the information made available to us as of, the date hereof. As you are aware, the credit, financial and stock markets have been experiencing unusual volatility and we express no opinion or view as to any potential effects of such volatility on KCS, CP or the Transaction. It should be understood that subsequent developments may affect this opinion, and we do not have any obligation to update, revise, or reaffirm this opinion. The issuance of this opinion was approved by a fairness opinion review committee of BofA Securities, Inc.

Based upon and subject to the foregoing, including the various assumptions and limitations set forth herein, we are of the opinion on the date hereof that the Consideration to be received in the Transaction by the holders of KCS Common Stock (other than Excluded Shares) is fair, from a financial point of view, to such holders.

Very truly yours,

BOFA SECURITIES, INC.

APPENDIX B

SUMMARY OF BOFA SECURITIES FAIRNESS OPINION

Opinion of BofA Securities

KCS retained BofA Securities to act as its financial advisor in connection with the transaction. BofA Securities is an internationally recognized investment banking firm which is regularly engaged in the valuation of businesses and securities in connection with mergers and acquisitions, negotiated underwritings, secondary distributions of listed and unlisted securities, private placements and valuations for corporate and other purposes. KCS selected BofA Securities to act as KCS's financial advisor in connection with the transaction on the basis of BofA Securities' experience in transactions similar to the transaction, its reputation in the investment community and its familiarity with KCS and its business.

On September 15, 2021, at a meeting of the KCS board held to evaluate the transaction, BofA Securities delivered to the KCS board an oral opinion, which was confirmed by delivery of a written opinion dated September 15, 2021, to the effect that, as of the date of the opinion and based on and subject to various assumptions and limitations described in BofA Securities' written opinion, the merger consideration to be received in the transaction by holders of KCS common stock (other than "excluded shares") was fair, from a financial point of view, to such holders.

The full text of BofA Securities' written opinion to the KCS board, which describes, among other things, the assumptions made, procedures followed, factors considered and limitations on the review undertaken, is attached as Annex C to this proxy statement/prospectus and is incorporated by reference herein in its entirety. The following summary of BofA Securities' opinion is qualified in its entirety by reference to the full text of BofA Securities' written opinion. BofA Securities delivered its opinion to the KCS board for the benefit and use of the KCS board (in its capacity as such) in connection with and for purposes of its evaluation of the mergers. BofA Securities' opinion does not address any other terms or other aspects or implications of the transaction and no opinion or view was expressed as to the relative merits of the transaction in comparison to other strategies or transactions that might be available to KCS or in which KCS might engage or as to the underlying business decision of KCS to proceed with or effect the transaction. BofA Securities' opinion does not address any other aspect of the transaction and does not express any opinion or recommendation as to how any stockholder should vote or act in connection with the transaction or any related matter.

In connection with rendering its opinion, BofA Securities, among other things:

(1) reviewed certain publicly available business and financial information relating to KCS and CPRL;

(2) reviewed certain internal financial and operating information with respect to the business, operations and prospects of KCS furnished to or discussed with BofA Securities by the management of KCS, including the KCS management unaudited KCS projections (as defined and described in the below section entitled "*KCS Unaudited Prospective Financial Information*") relating to KCS prepared by the management of KCS;

(3) reviewed certain internal financial and operating information with respect to the business, operations and prospects of CPRL furnished to or discussed with BofA Securities by the management of KCS, including the KCS management unaudited CPRL projections (as defined and described in the below section entitled "KCS Unaudited Prospective Financial Information,") relating to CPRL prepared by the management of KCS;

(4) reviewed the KCS management assumed synergies (as defined and described in the below section entitled "*KCS Unaudited Prospective Financial Information*") anticipated by the managements of KCS and CPRL to result from the transaction;

(5) discussed the past and current business, operations, financial condition and prospects of KCS with members of senior managements of KCS and CPRL, and discussed the past and current business, operations, financial condition and prospects of CPRL with members of senior managements of KCS and CPRL;

(6) reviewed the trading histories for KCS common stock and CPRL common shares and a comparison of such trading histories with the trading histories of other companies BofA Securities deemed relevant;

(7) compared certain financial and stock market information of KCS and CPRL with similar information of other companies BofA Securities deemed relevant;

(8) compared certain financial terms of the transaction to financial terms, to the extent publicly available, of other transactions BofA Securities deemed relevant;

(9) reviewed the draft agreement, the debt commitment letters, the STB May 6 decision, the form of the voting trust agreement, and certain related documents; and

(10) performed such other analyses and studies and considered such other information and factors as BofA Securities deemed appropriate.

In arriving at its opinion, BofA Securities assumed and relied upon, without independent verification, the accuracy and completeness of the financial and other information and data publicly available or provided to or otherwise reviewed by or discussed with BofA Securities and has relied upon the assurances of the managements of KCS and CPRL that they were not aware of any facts or circumstances that would make such information or data inaccurate or misleading in any material respect. With respect to the KCS management unaudited KCS projections, BofA Securities was advised by KCS, and assumed, that they were reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of KCS as to the future financial performance of KCS. With respect to the KCS management unaudited CPRL projections and the KCS management assumed synergies, in each case, BofA Securities was advised by KCS, and assumed, with the consent of KCS, that they were reasonably prepared on bases reflecting the best currently available estimates and good faith judgments of the management of KCS as to the future financial performance of CPRL and other matters covered thereby. BofA Securities also relied, at the direction of KCS, on the assessments of the managements of KCS and CPRL, respectively, as to CPRL's ability to achieve the KCS management assumed synergies and was advised by KCS and CPRL, and assumed, with the consent of KCS, that the KCS management assumed synergies would be realized in the amounts and at the times projected. BofA Securities did not make and was not provided with any independent evaluation or appraisal of the assets or liabilities (contingent or otherwise) of KCS or CPRL, nor did BofA Securities make any physical inspection of the properties or assets of KCS or CPRL. BofA Securities did not evaluate the solvency or fair value of KCS or CPRL under any state, federal or other laws relating to bankruptcy, insolvency or similar matters. BofA Securities assumed, at the direction of KCS, that the transaction would be consummated in accordance with the terms set forth in the merger agreement, without waiver, modification or amendment of any material term, condition or other agreement contemplated therein or thereby and that, in the course of obtaining the necessary governmental, regulatory and other approvals, consents, releases and waivers for the transaction, no delay, limitation, restriction or condition, including any divestiture requirements or amendments or modifications, would be imposed that would have an adverse effect on KCS, CPRL or the contemplated benefits of the transaction. BofA Securities also assumed, at the direction of KCS, that (i) the transaction would qualify for federal income tax purposes as a reorganization under the provisions of Section 368(a) of the Code, (ii) CPRL would obtain financing in accordance with the terms set forth in the commitment letters, (iii) the STB would permit the transaction to close into the voting trust in accordance with the terms of the STB May 6 decision and the voting trust agreement and (iv) the final executed merger agreement would not differ in any material respect from the draft agreement reviewed by BofA Securities.

BofA Securities expressed no view or opinion as to any terms or other aspects of the transaction (other than the merger consideration to the extent expressly specified in its opinion), including, without limitation, the form or structure of the transaction. BofA Securities' opinion was limited to the fairness, from a financial point of view, of the merger consideration to be received by the holders of shares of KCS common stock (other than excluded shares) in the transaction and no opinion or view was expressed with respect to any consideration to be received by the holders of KCS preferred stock or any other class of securities, creditors or other constituencies of any party. In addition, no opinion or view was expressed with respect to the fairness (financial or otherwise) of the amount, nature or any other aspect of any compensation to any of the officers, directors or employees of any party to the transaction, or class of such persons, relative to the merger consideration. Furthermore, no opinion or view was expressed as to the relative merits of the transaction in comparison to other strategies or transactions that might be available to KCS or in which KCS might engage or as to the underlying business decision of KCS to proceed with or

effect the transaction. BofA Securities did not express any opinion as to what the value of CPRL common shares actually would be when issued or the prices at which KCS common stock or CPRL common shares would trade at any time, including following the announcement or consummation of the transaction. In addition, BofA Securities expressed no opinion or recommendation as to how any stockholder should vote or act in connection with the transaction or any related matter.

BofA Securities' opinion was necessarily based on financial, economic, monetary, market and other conditions and circumstances as in effect on, and the information made available to BofA Securities as of, the date of its opinion. While the credit, financial and stock markets have been experiencing unusual volatility, BofA Securities expressed no opinion or view as to any potential effects of such volatility on KCS, CPRL or the transaction. It should be understood that subsequent developments may affect BofA Securities' opinion, and BofA Securities does not have any obligation to update, revise, or reaffirm its opinion. The issuance of BofA Securities' opinion was approved by a fairness opinion review committee of BofA Securities.

The discussion set forth below in the subsections entitled "*—Summary of Material Financial Analyses of KCS*," "*—Summary of Material Financial Analyses of CPRL,*" and "*—Summary of Material Pro Forma Financial Analysis,*" beginning on pages 87, 91, and 93, respectively, represents a brief summary of the material financial analyses presented by BofA Securities to the KCS board in connection with its opinion. **The financial analyses summarized below include information presented in tabular format. In order to fully understand the financial analyses performed by BofA Securities, the tables must be read together with the text of each summary. The tables alone do not constitute a complete description of the financial analyses performed by BofA Securities. Considering the data set forth in the tables below without considering the full narrative description of the financial analyses, including the methodologies and assumptions underlying the analyses, could create a misleading or incomplete view of the financial analyses performed by BofA Securities.**

Summary of Material Financial Analyses of KCS

Selected Publicly Traded Companies Analysis.

BofA Securities reviewed publicly available financial and stock market information of the following five selected publicly traded companies in the rail transportation industry:

- Union Pacific Corporation
- CN
- CSX Corporation
- Norfolk Southern Corporation
- CPRL

BofA Securities reviewed, among other things, the closing price per share as of September 13, 2021 for Union Pacific Corporation, CSX Corporation and Norfolk Southern, as of April 19, 2021 for CN (which was the last trading day prior to the announcement of the CN proposal) and as of March 19, 2021 for CPRL (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), as a multiple of Wall Street analyst consensus estimates of calendar year 2022 earnings per share ("EPS") for the applicable company (such multiples are referred to in this section as "2022E Price/EPS"). BofA Securities also reviewed the estimated enterprise value, calculated as the market value of equity plus short-term debt, long-term debt, preferred equity and non-controlling interest, minus cash, marketable securities and investments, as applicable ("EV") for each selected company, as a multiple of Wall Street analyst consensus estimates of calendar year 2022 EBITDA (such multiples are referred to in this section as "2022E EV/EBITDA"). Financial data of the selected companies were derived from their public filings and publicly available Wall Street research analysts' estimates published by FactSet as of September 13, 2021.

The results of BofA Securities' analysis were presented for the selected publicly traded companies, as indicated in the following table:

Company	Price/EPS 2022E	EV/EBITDA 2022E
Union Pacific Corporation	18.3x	12.8x
CN	22.6x	14.5x
CSX Corporation	18.2x	11.7x
Norfolk Southern Corporation	18.5x	12.4x
CPRL	21.2x	14.7x

The overall low to high 2022E Price/EPS multiples observed for the selected companies were 18.2x to 22.6x (with a mean of 19.8x and median of 18.5x). Based on BofA Securities' review of the 2022E Price/EPS multiples for the selected companies and on its professional judgment and experience, BofA Securities applied a 2022E Price/EPS multiple reference range of 18.5x to 22.0x to KCS management's estimated calendar year 2022 EPS as reflected in the KCS management unaudited KCS projections to calculate an implied equity value reference range per share of KCS common stock (rounded to the nearest $0.05). The selected multiple range of 18.5x to 22.0x was based on BofA Securities' professional judgment and experience as well as the observable range of the selected publicly traded companies.

The overall low to high 2022E EV/EBITDA multiples observed for the selected companies were 11.7x to 14.7x (with a mean of 13.2x and median of 12.8x). Based on BofA Securities' review of the 2022E EV/EBITDA multiples for the selected companies and on its professional judgment and experience, BofA Securities applied a 2022E EV/EBITDA multiple reference range of 12.0x to 15.0x to KCS management's estimated calendar year 2022 EBITDA as reflected in the KCS management unaudited KCS projections to calculate an implied equity value reference range per share of KCS common stock (rounded to the nearest $0.05). The selected multiple range of 12.0x to 15.0x was based on BofA Securities' professional judgment and experience as well as the observable range of the selected publicly traded companies.

This analysis indicated the following approximate implied equity value reference ranges per share of KCS common stock, as compared to the implied value of the merger consideration, calculated by adding the $90.00 in cash consideration to $198, the implied value of the 2.884 CPRL common shares included in the merger consideration based on the $68.55 closing price of CPRL common shares on September 13, 2021 ("implied consideration value"):

	Implied Equity Value Reference Range Per Share of KCS Common Stock	Implied Consideration Value
2022E Price/EPS	$ 198.90 - $236.55	
2022E EV/EBITDA	$ 198.60 – $258.40	$ 288

No selected publicly traded company used in this analysis is identical or directly comparable to KCS. Accordingly, an evaluation of the results of this analysis is not entirely mathematical. Rather, this analysis involves complex considerations and judgments concerning differences in financial and operating characteristics (reflected, among other things, in differences in historical trading levels of these companies) and other factors that could affect the public trading or other values of the companies to which KCS was compared.

Selected Precedent Transactions Analysis.

BofA Securities reviewed, to the extent publicly available, financial information relating to 21 selected transactions involving acquisitions of rail transportation companies since 1994. For each of these transactions, BofA Securities reviewed the merger values for each transaction based on the merger consideration paid to the shareholders of the target company in the selected transactions (with the full transaction value implied for transactions with less than 100% being acquired), as multiples of estimates of the target company's EBITDA, for the last twelve months for the year in which the applicable transaction was announced except with respect to the Glencore Rail/Genesee & Wyoming Australia and the Genesee & Wyoming Australia/Macquarie Infrastructure & Real Assets transactions, where, in each case, such multiple was based on the estimated EBITDA for the twelve months following the announcement made in October 2016, and based on publicly available information at that time (such multiples are referred to in this section as "TV/LTM EBITDA").

Date Announced	Target	Acquiror	TV /LTM EBITDA	Transaction Value (1)
07/19	Genesee & Wyoming Inc.	Brookfield Infrastructure Partners L.P. / GIC Pte. Ltd.	13.4x	$ 8,432
03/17	Florida East Coast Railway Holdings Corp.	GMéxico Transportes S.A. de C.V.	13.6x	2,100
10/16	Glencore Rail (NSW) Pty Limited	Genesee & Wyoming Australia Pty Ltd	11.4x	866
10/16	Genesee & Wyoming Australia Pty Ltd. (49%)	Macquarie Infrastructure and Real Assets	11.2x	1,534
03/16	Pacific National Holdings Pty Ltd.	Rail Consortium(2)	10.3x	6,594
02/15	Freightliner Group Limited (95%)	Genesee & Wyoming Inc.	9.5x	807
07/12	RailAmerica, Inc.	Genesee & Wyoming Inc.	10.3x	2,008
11/09	Burlington Northern Santa Fe Corp.	Berkshire Hathaway Inc.	8.8x	43,847
09/07	Dakota, Minnesota & Eastern Railroad Corporation	Canadian Pacific Railway Limited	15.2x	1,480
05/07	Florida East Coast Industries Inc.	Fortress Investment Group LLC	NA	3,475
11/06	RailAmerica, Inc.	Fortress Investment Group LLC	11.7x	1,055
12/05	Meridian Speedway, LLC	Kansas City Southern (70%) / Norfolk Southern Corporation (30%)	NA	1,000
08/05	Patrick Corporation	Toll Holding Ltd.	15.0x	5,284
12/04	Transportacion Ferroviaria Mexicana, S.A. de C.V. (51%)	Kansas City Southern	6.1x	1,320
11/03	BC Rail Ltd.	Canadian National Railway Company	14.4x	1,204
01/01	Wisconsin Central Ltd.	Canadian National Railway Company	9.8x	1,191
02/98	Illinois Central Corp.	Canadian National Railway Company	11.4x	2,973
04/97	Conrail Inc.	CSX Corp./Norfolk Southern Corporation	12.1x	12,329
08/95	Southern Pacific Rail Corp.	Union Pacific Corp.	12.3x	5,388
03/95	Chicago and North Western Holdings Corporation	Union Pacific Corp.	8.4x	2,614
06/94	Santa Fe Pacific Corporation	Burlington Northern Inc.	7.2x	5,087

(1) Full transaction value implied when less than 100% stake. All amounts in USD millions.
(2) CPP Investments Limited (33%), Global Infrastructure Partners Inc. (27%), China Investment Corporation (16%), GIC Pte Ltd. (12%) and British Columbia Investment Management Corporation (12%).

The overall low to high TV/LTM EBITDA multiples of the target companies in the selected transactions were 6.1x to 15.2x (with a mean of 11.2x and a median of 11.4x).

Based on BofA Securities' review of the TV/LTM EBITDA multiples for the selected transactions and on its professional judgment and experience, BofA Securities applied a TV/LTM EBITDA multiple reference range of

11.5x to 14.0x to KCS's COVID-Adjusted EBITDA for the twelve month period ended June 30, 2021 of $1,600 million as provided by KCS management, which reflects an add-back of $128 million, as provided by KCS management, for the estimated impact of COVID-19 for the third quarter through the fourth quarter of 2020, to calculate a range of implied EV for KCS. BofA Securities then calculated an implied equity value reference range per share of KCS common stock (rounded to the nearest $0.05). The selected multiple range of 11.5x to 14.0x was based on BofA Securities' professional judgment and experience as well as the observable implied transaction multiples. This analysis indicated the following approximate implied equity value reference ranges per share of KCS common stock (rounded to the nearest $0.05), as compared to the implied consideration value:

Implied Equity Value Reference Range Per Share of KCS Common Stock	Implied Consideration Value
$160.10 - $203.75	$ 288

No selected precedent transaction used in this analysis or the applicable business or target company is identical or directly comparable to KCS or the transaction. Accordingly, an evaluation of the results of this analysis is not entirely mathematical. Rather, this analysis involves complex considerations and judgments concerning differences in financial and operating characteristics, market conditions and other factors that could affect the acquisition or other values of the companies or transactions to which KCS and the transaction were compared.

Discounted Cash Flow Analysis

BofA Securities performed a discounted cash flow analysis of KCS to calculate a range of implied present values per share of KCS common stock utilizing estimates of the standalone, unlevered, after-tax free cash flows that KCS was expected to generate during the six-month period ending December 31, 2021 and for the fiscal years 2022 through 2029 based on the KCS management unaudited KCS projections. BofA Securities calculated terminal values for KCS by applying a selected range of perpetuity growth rates of 2.25% to 2.75% to KCS's normalized free cash flows in the terminal year. BofA Securities then calculated implied equity value reference ranges per share of KCS common stock (rounded to the nearest $0.05) by deducting from this range of present values KCS's net debt, preferred equity and non-controlling interest as of June 30, 2021, as reflected in KCS's public filings, at the direction of KCS management, and dividing the result by the number of fully-diluted shares of KCS common stock outstanding (calculated on a treasury stock method basis, based on information provided by the management of KCS). The cash flows were discounted to present value as of June 30, 2021, utilizing mid-year discounting convention, and using a discount rate range of 6.0% to 7.5%, which was based on an estimate of KCS's weighted average cost of capital. A growth rate range of 2.25% to 2.75% was based on BofA Securities' professional judgment and experience and represents long-term growth outlook for the business. The discount rate range reflected KCS's estimated weighted average cost of capital, which was calculated by multiplying the estimated cost of each capital source (debt and equity) by its relevant weight, and then adding the products together. The estimated cost of equity was obtained using the capital asset pricing model (which takes into account the risk-free rate, the levered beta and the applicable equity market risk premium) and the estimated cost of debt was based on KCS's estimated borrowing cost. KCS's net debt as of June 30, 2021 was based on KCS's Form 10-Q for the quarter ended June 30, 2021, which reported debt of $3,780 million and cash of $326 million. The calculation for fully diluted shares was based on approximately 91 million common shares outstanding as provided by KCS management and other dilutive shares such as options, performance shares and deferred shares. Preferred equity of $5 million and non-controlling interest of $327 million were based on the balance sheet provided in KCS's Form 10-Q for the quarter ended June 30, 2021. This analysis indicated the following approximate implied equity value reference range per share of KCS common stock (rounded to the nearest $0.05), as compared to the implied consideration value:

Implied Equity Value Reference Range Per Share of KCS Common Stock	Implied Consideration Value
$206.00 - $351.95	$ 288

Other Factors

BofA Securities also noted certain additional factors that were not considered part of BofA Securities' financial analyses with respect to its opinion but were referenced for informational purposes, including, among other things the following:

- *52-Week Trading Range.* BofA Securities reviewed the trading range of the shares of KCS common stock for the 52-week period ended March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), which was $100.54 to $224.16.
- *Wall Street Analysts Price Targets.* BofA Securities reviewed 20 publicly available equity research analyst price targets for the shares of KCS common stock available as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), and noted that the range of such price targets (discounted by one year at KCS's estimated mid-point cost of equity of 7.7% and rounded to the nearest $0.05) was $185.70 to $238.65. The 7.7% discount rate applied by BofA reflected KCS's estimated mid-point cost of equity, which was selected based on KCS's observable cost of equity.
- *Present Value of Future Stock Price.* BofA Securities calculated a range of present values of KCS future stock prices discounted back to June 30, 2021 by using KCS' estimated calendar year 2029 EPS based on the KCS management unaudited KCS projections, a range of price to next twelve months EPS multiples of 16.0x to 22.0x and KCS's estimated mid-point cost of equity of 7.7%, as well as the expected future dividend payments as provided by KCS management, which indicated a range of implied present values of future stock prices of KCS common stock of $247.85 per share to $334.55 per share, in each case rounded to the nearest $0.05 per share. Multiples used were based on BofA Securities' professional judgment and experience as well as observable historical trading data of KCS and selected publicly traded companies. The discount rate (cost of equity) used was based on KCS's observable cost of equity.

Summary of Material Financial Analyses of CPRL

Selected Publicly Traded Companies Analysis.

BofA Securities reviewed publicly available financial and stock market information of the following five selected publicly traded companies in the rail transportation industry:

- Union Pacific Corporation
- CSX Corporation
- Norfolk Southern Corporation
- CN
- KCS

BofA Securities reviewed, among other things, the closing price per share as of September 13, 2021 for Union Pacific Corporation, CSX Corporation and Norfolk Southern, as of April 19, 2021 for CN (which was the last trading day prior to the announcement of the CN proposal) and as of March 19, 2021 for KCS (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), as a multiple of Wall Street analyst consensus estimates of calendar year 2022 "EPS" for the applicable company (such multiples are referred to in this section as "2022E Price/EPS"). BofA Securities also reviewed the estimated "EV" for each selected company, as a multiple of Wall Street analyst consensus estimates of calendar year 2022 "EBITDA" (such multiples are referred to in this section as "2022E EV/EBITDA"). Financial data of the selected companies were derived from their public filings and publicly available Wall Street research analysts' estimates published by FactSet as of September 13, 2021.

The results of BofA Securities' analysis were presented for the selected publicly traded companies, as indicated in the following table:

Company	Price/EPS 2022E	EV/EBITDA 2022E

Union Pacific Corporation	18.3x	12.8x
CSX Corporation	18.2x	11.7x
Norfolk Southern Corporation	18.5x	12.4x
CN	22.6x	14.5x
KCS	21.4x	13.5x

The overall low to high 2022E Price/EPS multiples observed for the selected companies were 18.2x to 22.6x (with a mean of 19.8x and median of 18.5x). Based on BofA Securities' review of the 2022E Price/EPS multiples for the selected companies and on its professional judgment and experience, BofA Securities applied a 2022E Price/EPS multiple reference range of 18.5x to 22.0x to KCS management's estimated calendar year 2022 EPS as reflected in the KCS management unaudited CPRL projections to calculate an implied equity value reference range per share of CPRL common shares (rounded to the nearest $0.05). The selected multiple range of 18.5x to 22.0x was based on BofA Securities' professional judgment and experience as well as the observable range of the selected publicly traded companies.

The overall low to high 2022E EV/EBITDA multiples observed for the selected companies were 11.7x to 14.5x (with a mean of 13.0x and median of 12.8x). Based on BofA Securities' review of the 2022E EV/EBITDA multiples for the selected companies and on its professional judgment and experience, BofA Securities applied a 2022E EV/EBITDA multiple reference range of 12.0x to 15.0x to KCS management's estimated calendar year 2022 EBITDA as reflected in the KCS management unaudited CPRL projections to calculate an implied equity value reference range per share of CPRL common shares (rounded to the nearest $0.05). The selected multiple range of 12.0x to 15.0x was based on BofA Securities' professional judgment and experience as well as the observable range of the selected publicly traded companies.

This analysis indicated the following approximate implied equity value reference ranges per share of CPRL common shares, as compared to the closing price of the CPRL common shares on September 13, 2021 of $68.55 and the closing price of CPRL common shares on March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $75.70 (taking into account the share split):

	Implied Equity Value Reference Range Per Share of CPRL Common Stock	
2022E Price/EPS	$	67.80 - $80.65
2022E EV/EBITDA	$	60.15 –$77.30

No selected publicly traded company used in this analysis is identical or directly comparable to CPRL. Accordingly, an evaluation of the results of this analysis is not entirely mathematical. Rather, this analysis involves complex considerations and judgments concerning differences in financial and operating characteristics (reflected, among other things, in differences in historical trading levels of these companies) and other factors that could affect the public trading or other values of the companies to which CPRL was compared.

Discounted Cash Flow Analysis

BofA Securities performed a discounted cash flow analysis of CPRL to calculate a range of implied present values per share of CPRL common shares utilizing estimates of the standalone, unlevered, after-tax free cash flows that CPRL was expected to generate during the six-month period ending December 31, 2021 and for the fiscal years 2022 through 2029 based on the KCS management unaudited CPRL projections. BofA Securities calculated terminal values for CPRL by applying a selected range of perpetuity growth rates of 2.25% to 2.75% to CPRL's normalized free cash flows in the terminal year. BofA Securities then calculated implied equity value reference ranges per share of CPRL common shares (rounded to the nearest $0.05) by deducting from this range of present values CPRL's net debt as of June 30, 2021, as provided by KCS management, and adding net pension assets as of June 30, 2021, as reflected in CPRL's public filings, at the direction of KCS management, and dividing the result by the number of fully-diluted shares of CPRL common shares outstanding (calculated on a treasury stock method basis, based on information provided by the management of KCS). The cash flows were discounted to present value as of June 30, 2021, utilizing mid-year discounting convention, and using a discount rate range of 6.0% to 7.5%, which was based on an estimate of CPRL's weighted average cost of capital. A growth rate range of

2.25% to 2.75% was based on BofA Securities' professional judgment and experience and represents long-term growth outlook for the business. The discount rate range reflects CPRL's estimated weighted average cost of capital, which was calculated by multiplying the estimated cost of each capital source (debt and equity) by its relevant weight, and then adding the products together. The estimated cost of equity was obtained using the capital asset pricing model (which takes into account the risk-free rate, the levered beta and the applicable equity market risk premium) and the estimated cost of debt was based on CPRL's estimated borrowing cost. Net debt as of June 30, 2021 was based on the balance sheet provided in CPRL's Form 10-Q dated July 29, 2021, which reported debt of $6,978 million and cash of $714 million. The calculation of fully diluted shares was based on 666.8 million common shares outstanding and other dilutive shares such as options and performance shares. Net pension assets as of June 30, 2021 were based on the balance sheet provided in CPRL's Form 10-Q dated July 29, 2021, which reported $237 million.. This analysis indicated the following approximate implied equity value reference range per share of CPRL common shares (rounded to the nearest $0.05), as compared to the closing price of the CPRL common shares on September 13, 2021 of $68.55 and the closing price of the CPRL common shares on March 19, 2021(which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $75.70:

Implied Equity Value Reference Range Per Share of CPRL Common Shares (taking into account the share split)
$67.25 - $111.50

Other Factors

BofA Securities also noted certain additional factors that were not considered part of BofA Securities' financial analyses with respect to its opinion but were referenced for informational purposes, including, among other things the following:

- *52-Week Trading Range.* BofA Securities reviewed the trading range of the shares of CPRL common shares for the 52-week period ended March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), which was $36.27 to $76.75 (taking into account the share split).
- *Wall Street Analysts Price Targets.* BofA Securities reviewed 26 publicly available equity research analyst price targets for the CPRL common shares available as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement), and noted that the range of such price targets (discounted by one year at CPRL's estimated mid-point cost of equity of 7.3% and rounded to the nearest $0.05) was $63.90 to $75.50 (taking into account the share split). The 7.3% discount rate reflects CPRL's estimated mid-point cost of equity, which was selected based on CPRL's observable cost of equity.

Summary of Material Pro Forma Financial Analysis

Has/Gets Analysis

BofA Securities performed a Has/Gets Analysis to calculate the theoretical change in value for holders of KCS common stock resulting from the transaction based on a comparison of (i) the pro forma ownership by holders of KCS common stock of CPRL after giving effect to the transaction, and (ii) the 100% ownership by holders of KCS common stock of KCS common stock on a stand-alone basis. For KCS common stock on a stand-alone basis, BofA Securities used the reference range obtained in its discounted cash flow analysis described above under "*Summary of Material Financial Analyses of KCS – Discounted Cash Flow Analysis*." BofA Securities then performed the same analysis by calculating the range of implied per share equity values allocable to holders of KCS common stock on a pro forma basis, giving effect to the transaction, by assuming approximately 28% pro forma ownership, based on the number of shares of CPRL common shares estimated to be issued to holders of KCS common stock in the transaction, utilizing the results of the standalone discounted cash flow analyses for KCS and CPRL described above under "*Summary of Material Financial Analyses of KCS – Discounted Cash Flow Analysis*" and under "*Summary of Material Financial Analyses of CPRL – Discounted Cash Flow Analysis*," and taking into account the KCS management assumed synergies on the basis of (i) a projected $990 million in EBITDA synergies as provided by KCS management (referred to in this section as the "$990 million synergy case"), which also included $20 million of projected D&A and Capex synergies, for total projected gross synergies of $1,010 million, and (ii) a projected

$377 million in EBITDA synergies as provided by KCS management (referred to in this section as the "$377 million synergy case"), which also included $23 million of projected D&A and Capex synergies for total projected gross synergies of $400 million. BofA Securities calculated the present value of the synergies (including after-tax costs to achieve such synergies) as of June 30, 2021 by using a discount rate range of 6.0% to 7.5%. The discount rate range of 6.0% to 7.5% was based on BofA Securities' professional judgment and experience and obtained using the capital asset pricing model for the estimated cost of equity (which takes into account the risk-free rate, the levered beta and the applicable equity market risk premium) and the estimated cost of debt. Estimated additional net debt of $10.3 billion was based on announced transaction debt of $8.5 billion and estimated transaction fees and expenses as well as inclusion of $1.4 billion in break fees and reimbursements. BofA Securities then compared these implied per share equity value reference ranges, which were further adjusted by an estimated additional net debt from the transaction and $90.00 per share cash consideration, to the implied per share equity value reference ranges derived for KCS on a standalone basis utilizing the results of the standalone discounted cash flow analysis for KCS described above.

This analysis yielded the following implied per share equity value reference ranges for KCS common stock on a stand-alone basis and on a pro forma basis (rounded to the nearest $1.00):

Range Per Share of KCS common stock	**Implied Equity Value Reference**	
Stand-Alone	**Pro-Forma $990 Million Synergy Case**	**Pro-Forma $377 Million Synergy Case**
$206 - $352	$290 - $444	$268 - $409

Miscellaneous

As noted above, the discussion set forth above in "*Summary of Material Financial Analyses of KCS*," "*Summary of Material Financial Analyses of CPRL*" and "*Summary of Material Pro Forma Financial Analysis*" represents a brief summary of the material financial analyses presented by BofA Securities to the KCS board in connection with its opinion, and is not a comprehensive description of all analyses undertaken or factors considered by BofA Securities in connection with its opinion. The preparation of a financial opinion is a complex analytical process involving various determinations as to the most appropriate and relevant methods of financial analysis and the application of those methods to the particular circumstances and, therefore, a financial opinion is not readily susceptible to partial analysis or summary description. BofA Securities believes that its analyses summarized above must be considered as a whole. BofA Securities further believes that selecting portions of its analyses and the factors considered or focusing on information presented in tabular format, without considering all analyses and factors or the narrative description of the analyses, could create a misleading or incomplete view of the processes underlying BofA Securities' analyses and opinion. The fact that any specific analysis has been referred to in the summary above is not meant to indicate that such analysis was given greater weight than any other analysis referred to in the summary.

In performing its analyses, BofA Securities considered industry performance, general business and economic conditions and other matters, many of which are beyond the control of KCS and CPRL. The estimates of the future performance of KCS and CPRL in or underlying BofA Securities' analyses are not necessarily indicative of actual values or actual future results, which may be significantly more or less favorable than those estimates or those suggested by BofA Securities' analyses. These analyses were prepared solely as part of BofA Securities' analysis of the fairness, from a financial point of view, to the holders of KCS common stock of the merger consideration, to be received by such holders in the transaction and were provided to the KCS board in connection with the delivery of BofA Securities' opinion. The analyses do not purport to be appraisals or to reflect the prices at which a company might actually be sold or acquired or the prices at which any securities have traded or may trade at any time in the future. Accordingly, the estimates used in, and the ranges of valuations resulting from, any particular analysis described above are inherently subject to substantial uncertainty and should not be taken to be BofA Securities' view of the actual values of KCS or CPRL.

The type and amount of consideration payable in the transaction was determined through negotiations between KCS and CPRL, rather than by any financial advisor, and was approved by the KCS board. The decision to enter into the merger agreement was solely that of the KCS board. As described above, BofA Securities' opinion and analyses were only one of many factors considered by the KCS board in its evaluation of the transaction and should not be

viewed as determinative of the views of the KCS board or management or any other party with respect to the transaction or the merger consideration.

KCS has agreed to pay BofA Securities for its services in connection with the transaction an aggregate fee, which is currently estimated, based on the information available as of the date of announcement, to be approximately $63 million, $5 million of which was paid to BofA Securities upon delivery of its opinion in connection with the execution of the prior CP merger agreement announced in March 2021, $2.5 million of which was paid upon delivery of BofA Securities' opinion in connection with the alternate proposed transaction involving CN announced in May 2021, $2.5 million of which is payable upon the rendering of its opinion in connection with the transaction and the remainder of which is payable upon the closing of the transaction. KCS also has agreed to reimburse BofA Securities for its expenses incurred in connection with BofA Securities' engagement and to indemnify BofA Securities, any of its affiliates, its and their respective directors, officers, employees and agents and each other person controlling BofA Securities or any of its affiliates, against certain liabilities, including liabilities under the federal securities laws, arising out of BofA Securities' engagement.

BofA Securities and its affiliates comprise a full service securities firm and commercial bank engaged in securities, commodities and derivatives trading, foreign exchange and other brokerage activities, and principal investing as well as providing investment, corporate and private banking, asset and investment management, financing and financial advisory services and other commercial services and products to a wide range of companies, governments and individuals. In the ordinary course of BofA Securities' businesses, BofA Securities and its affiliates may invest on a principal basis or on behalf of customers or manage funds that invest, make or hold long or short positions, finance positions or trade or otherwise effect transactions in equity, debt or other securities or financial instruments (including derivatives, bank loans or other obligations) of KCS, CPRL and certain of their respective affiliates.

BofA Securities and its affiliates in the past have provided, currently are providing, and in the future may provide, investment banking, commercial banking and other financial services to KCS and its affiliates and have received, or in the future may receive, compensation for the rendering of these services, including (i) having acted as a joint bookrunner on certain debt capital markets transactions for KCS, (ii) having acted as a dealer-manager on an accelerated share repurchase transaction for KCS and (iii) having acted or acting as administrative agent, co-lead arranger and joint bookrunner for, and as a lender (including a letter of credit lender) under, KCS's $600 million senior unsecured revolving credit facility due March 8, 2024. From September 1, 2019, through August 31, 2021, BofA Securities and its affiliates derived aggregate revenues from KCS and its affiliates of approximately $10.4 million for corporate and/or investment banking services, which includes the fee received upon delivery of its opinion in connection with the CN proposal.

In addition, BofA Securities and its affiliates in the past have provided, currently are providing, and in the future may provide, investment banking, commercial banking and other financial services to CPRL and its affiliates and have received or in the future may receive compensation for the rendering of these services, including (i) having acted as a bookrunning manager and/or co-manager on certain debt capital markets transactions for CPRL, (ii) having acted or acting as a lender under CPRL's $1.3 billion revolving credit facility, which consists of a $1.0 billion tranche and a $300 million tranche, which was amended on September 24, 2021 to extend the maturity dates of such tranches to September 27, 2026 and September 27, 2023, respectively, and (iii) having provided or providing certain treasury services and products to CPRL. From September 1, 2019, through August 31, 2021, BofA Securities and its affiliates derived aggregate revenues from CPRL of approximately $6.6 million for corporate and/or investment banking services. In addition, BofA Securities received a customary fee of less than $100,000 in connection with its commitment to act as a lender under CPRL's amended revolving credit facility, which was received subsequent to such period.

VERIFIED STATEMENT OF BRIAN HEALY

VERIFICATION OF MORGAN STANLEY & CO. LLC

On behalf of Morgan Stanley & Co. LLC ("Morgan Stanley"), this is to verify that (a) the Fairness Opinion of Morgan Stanley, dated September 15, 2021 (the "Morgan Stanley Fairness Opinion"), to the effect that, as of such date and based upon and subject to the assumptions made, the procedures followed, matters considered and qualifications and limitations on the scope of the review undertaken Morgan Stanley, as set forth therein, the consideration to be received by the holders of common stock of Kansas City Southern ("KCS") (other than certain excluded shares) in the transaction was fair, from a financial point of view, to such holders, set forth in the attached Appendix A, is a true and correct copy of the Morgan Stanley Fairness Opinion provided by Morgan Stanley to the Board of Directors of KCS in connection with the proposed sale of KCS to Canadian Pacific Railway Limited, pursuant to the Agreement and Plan of Merger, dated as of September 15, 2021 (the "Merger Agreement"), and (b) the attached Appendix B sets forth a summary of the Morgan Stanley Fairness Opinion and the material financial analyses presented by Morgan Stanley to the KCS board in connection therewith, which was included in KCS's preliminary proxy statement in connection with the transaction that was filed with the Securities and Exchange Commission (the "SEC") on October 1, 2021, and which will be included in the definitive proxy statement to be filed with the SEC.

In providing this verification, Morgan Stanley does not intend that any person other than the Board of Directors of KCS be entitled to rely on the Morgan Stanley Fairness Opinion. The Morgan Stanley Fairness Opinion does not address any other terms or other aspects or implications of the transaction and no opinion or view was expressed as to the relative merits of the transaction in comparison to other strategies or transactions that might be available to KCS or in which KCS might engage or as to the underlying business decision of KCS to proceed with or

effect the transaction. The Morgan Stanley Fairness Opinion and financial analyses were only one of many factors considered by the Board of Directors of KCS in its evaluation of the transaction and should not be viewed as determinative of the views of the Board of Directors or management of KCS with respect to the transaction or the consideration to be received by the stockholders of KCS.

I, Brian Healy, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed on this 27th day of October, 2021.

Title: Managing Director

APPENDIX A

MORGAN STANLEY FAIRNESS OPINION

Morgan Stanley

September 15, 2021

Board of Directors
Kansas City Southern
427 West 12th Street
Kansas City, Missouri

Members of the Board:

We understand that Kansas City Southern ("KCS" or the "Company"), Canadian Pacific Railway Limited (the "Buyer"), Cygnus Merger Sub 1 Corporation, a wholly owned subsidiary of the Buyer ("Surviving Merger Sub"), Cygnus Merger Sub 2 Corporation, a wholly owned subsidiary of Surviving Merger Sub ("First Merger Sub", and together with Surviving Merger Sub, "Merger Subs") propose to enter into an Agreement and Plan of Merger, substantially in the form of the draft dated September 10, 2021 (the "Merger Agreement"), which provides, among other things, for the merger of First Merger Sub with and into the Company (the "First Merger"), with the Company surviving the First Merger as a wholly owned subsidiary of Surviving Merger Sub, and the subsequent merger of the Company with and into Surviving Merger Sub (the "Second Merger", and together with the First Merger, the "Transaction"), with Surviving Merger Sub surviving the Second Merger as a wholly owned subsidiary of the Buyer. Pursuant to the First Merger, each outstanding share of common stock, par value $0.01 per share, of the Company (the "Company Common Stock"), other than shares held in treasury or held by the Buyer, Merger Subs or the Company (in each case, other than shares held on behalf of third parties) or shares with respect to which the holders thereof have not voted in favor of the adoption of the Merger Agreement or consented thereto in writing and who have properly exercised appraisal rights with respect thereto in accordance with, and who have complied with, Section 262 of the Delaware General Corporation Law (collectively, "Excluded Shares"), will be converted into the right to receive (i) $90.00 per share in cash and (ii) 2.884 shares of common stock, without par value, of the Buyer (the "Buyer Common Stock") as set forth in the Merger Agreement (together, the "Consideration"). The terms and conditions of the Transaction are more fully set forth in the Merger Agreement.

You have asked for our opinion as to whether the Consideration to be received by the holders of shares of the Company Common Stock (other than Excluded Shares) pursuant to the Merger Agreement is fair from a financial point of view to such holders of shares of the Company Common Stock.

For purposes of the opinion set forth herein, we have:

1) Reviewed certain publicly available financial statements and other business and financial information of the Company and the Buyer, respectively;

2) Reviewed certain internal financial statements and other financial and operating data concerning the Company and the Buyer, respectively;

3) Reviewed certain financial projections with respect to the Company and the Buyer prepared by the management of the Company;

4) Reviewed information relating to certain strategic, financial and operational benefits anticipated from the Transaction, prepared by the managements of the Company and the Buyer, respectively;

5) Discussed the past and current operations and financial condition and the prospects of the Company, including information relating to certain strategic, financial and operational benefits anticipated from the Transaction, with senior executives of the Company;

Morgan Stanley

6) Discussed the past and current operations and financial condition and the prospects of the Buyer, including information relating to certain strategic, financial and operational benefits anticipated from the Transaction, with senior executives of the Buyer;

7) Reviewed the reported prices and trading activity for the Company Common Stock and the Buyer Common Stock;

8) Compared the financial performance of the Company and the Buyer and the prices and trading activity of the Company Common Stock and the Buyer Common Stock with that of certain other publicly-traded companies comparable with the Company and the Buyer, respectively, and their securities;

9) Reviewed the financial terms, to the extent publicly available, of certain comparable acquisition transactions;

10) Participated in certain discussions and negotiations among representatives of the Company and the Buyer and certain parties and their financial and legal advisors;

11) Reviewed the Merger Agreement, the commitment letters from certain lenders, dated as of September 12, 2021 (collectively, the "Commitment Letters"), Decision No. 5 (Docket No. FD 36500) of the Surface Transportation Board (the "STB Voting Trust Approval"), the form of Voting Trust Agreement to be entered into among the Buyer, Cygnus Holding Corporation, a wholly owned subsidiary of the Buyer, and the Trustee (the "Voting Trust Agreement"), and certain related documents; and

12) Performed such other analyses, reviewed such other information and considered such other factors as we have deemed appropriate.

We have assumed and relied upon, without independent verification, the accuracy and completeness of the information that was publicly available or supplied or otherwise made available to us by the Company and the Buyer, respectively, and formed a substantial basis for this opinion. With respect to the financial projections of the Company, including information relating to certain strategic, financial and operational benefits anticipated from the Transaction, we have assumed that they have been reasonably prepared on bases reflecting the best currently available estimates and judgments of the management of the Company of the future financial performance of the Company. With respect to the financial projections of the Buyer, including information relating to certain strategic, financial and operational benefits anticipated from the Transaction, we have assumed that they have been reasonably prepared on bases reflecting the best currently available estimates and judgments of the management of the Company of the future financial performance of the Buyer, including following consummation of the Transaction. In addition, we have assumed that the Transaction will be consummated in accordance with the terms set forth in the Merger Agreement without any waiver, amendment or delay of any terms or conditions, including, among other things, (i) that the Transaction will be treated as a tax-free reorganization pursuant to the Internal Revenue Code of 1986, as amended, (ii) that the Buyer will obtain financing in accordance with the terms set forth in the Commitment Letters, (iii) that the Surface Transportation Board will permit the Transaction to close into a Voting Trust in accordance with the terms of the STB Voting Trust Approval and the Voting Trust Agreement and (iv) that the definitive Merger Agreement will not differ in any material respect from the draft thereof furnished to us. Morgan Stanley has assumed that in connection with the receipt of all the necessary governmental, regulatory or other approvals and consents required for the proposed Transaction, no delays, limitations, conditions or restrictions will be imposed that would have a material adverse effect on the contemplated benefits expected to be derived in the proposed Transaction. We have relied upon, without independent verification, the assessment by the managements of the Company and the Buyer of: (i) the strategic, financial and other benefits expected to result from the Transaction; (ii) the timing and risks associated with the integration of the Company and the Buyer; (iii) their ability to retain key employees of the Company and the Buyer, respectively, and (iv) the validity of, and risks associated with, the Company and the Buyer's existing and future technologies, intellectual property, products, services and business models. We are not legal, tax, or regulatory advisors. We are financial advisors only and have relied upon, without independent verification, the assessment of the

Morgan Stanley

Buyer and the Company and their legal, tax or regulatory advisors with respect to legal, tax, or regulatory matters. We express no opinion with respect to the fairness of the amount or nature of the compensation to any of the Company's officers, directors or employees, or any class of such persons, relative to the Consideration to be received by the holders of shares of the Company Common Stock in the Transaction. This opinion does not address the relative merits of the transactions contemplated by the Merger Agreement as compared to other business or financial strategies that might be available to the Company, nor does it address the underlying business decision of the Company to enter into the Merger Agreement or proceed with any other transaction contemplated by the Merger Agreement. We express no opinion with respect to the treatment of the preferred stock, par value $25 per share, of the Company in the Transaction. We have not made any independent valuation or appraisal of the assets or liabilities of the Company or the Buyer, nor have we been furnished with any such valuations or appraisals. Our opinion is necessarily based on financial, economic, market and other conditions as in effect on, and the information made available to us as of, the date hereof. Events occurring after the date hereof may affect this opinion and the assumptions used in preparing it, and we do not assume any obligation to update, revise or reaffirm this opinion.

We have acted as financial advisor to the Board of Directors of the Company in connection with the Transaction and will receive a fee for our services, a portion of which was paid to us upon the execution and announcement of the previous merger agreement with the Buyer in March 2021, a portion of which was paid to us upon the rendering of a fairness opinion in connection with the alternate transaction involving Canadian National Railway Company announced in May 2021, a portion of which is contingent upon the rendering of this opinion and a significant portion of which is contingent upon the closing of the Transaction. In the two years prior to the date hereof, we have provided financial advisory and/or financing services to the Company, the Buyer and certain of their respective affiliates, and have received fees in connection with such services. In addition, Morgan Stanley or one of its affiliates is currently a lender to each of the Company and the Buyer under their respective revolving credit facilities, and is also currently engaged to provide financing services to the Buyer that are unrelated to the Transaction, for which Morgan Stanley expects to receive customary fees. Morgan Stanley may also seek to provide financial advisory and financing services to the Company, the Buyer and their respective affiliates in the future and would expect to receive fees for the rendering of these services.

Please note that Morgan Stanley is a global financial services firm engaged in the securities, investment management and individual wealth management businesses. Our securities business is engaged in securities underwriting, trading and brokerage activities, foreign exchange, commodities and derivatives trading, prime brokerage, as well as providing investment banking, financing and financial advisory services. Morgan Stanley, its affiliates, directors and officers may at any time invest on a principal basis or manage funds that invest, hold long or short positions, finance positions, and may trade or otherwise structure and effect transactions, for their own account or the accounts of its customers, in debt or equity securities or loans of the Buyer, the Company, their respective affiliates or any other company, or any currency or commodity, that may be involved in the Transaction, or any related derivative instrument.

This opinion has been approved by a committee of Morgan Stanley investment banking and other professionals in accordance with our customary practice. This opinion is for the information of the Board of Directors of the Company and may not be used for any other purpose or disclosed without our prior written consent, except that a copy of this opinion may be included in its entirety in any filing the Company is required to make with the Securities and Exchange Commission in connection with the Transaction if such inclusion is required by applicable law. In addition, this opinion does not in any manner address the prices at which the Buyer Common Stock will trade following consummation of the Transaction or at any time and Morgan Stanley expresses no opinion or recommendation as to how the shareholders of the Company or the Buyer should vote at the shareholder meetings to be held in connection with the Transaction.

Morgan Stanley

Based on and subject to the foregoing, we are of the opinion on the date hereof that the Consideration to be received by the holders of shares of the Company Common Stock (other than Excluded Shares) pursuant to the Merger Agreement is fair from a financial point of view to such holders of shares of the Company Common Stock.

Very truly yours,

MORGAN STANLEY & CO. LLC

By: 

Brian Healy
Managing Director

APPENDIX B

SUMMARY OF MORGAN STANLEY FAIRNESS OPINION

Opinion of Morgan Stanley

The KCS board retained Morgan Stanley to act as its financial advisor and to provide it with a financial opinion in connection with the transaction. KCS selected Morgan Stanley to act as its financial advisor based on Morgan Stanley's qualifications, expertise and reputation and its knowledge of the industry, business and affairs of KCS. At the meeting of the KCS board on September 15, 2021, Morgan Stanley rendered its oral opinion, which was confirmed by delivery of a written opinion dated September 15, 2021, to the KCS board to the effect that, as of such date, and based upon and subject to the assumptions made, procedures followed, matters considered and qualifications and limitations on the scope of the review undertaken by Morgan Stanley as set forth in its written opinion, the merger consideration to be received by the holders of shares of KCS common stock (other than excluded shares) pursuant to the merger agreement was fair from a financial point of view to such holders of KCS common stock.

The full text of Morgan Stanley's written opinion to the KCS board, dated September 15, 2021, which sets forth, among other things, the assumptions made, procedures followed, matters considered and qualifications and limitations on the scope of the review undertaken by Morgan Stanley in rendering its opinion, is attached to this proxy statement/prospectus as Annex B and is incorporated by reference herein in its entirety. The foregoing summary of Morgan Stanley's opinion is qualified in its entirety by reference to the full text of the opinion. You are encouraged to read Morgan Stanley's opinion and the summary of Morgan Stanley's opinion below carefully and in their entirety. Morgan Stanley's opinion was for the benefit of the KCS board, in its capacity as such, and addressed only the fairness from a financial point of view of the merger consideration to be received by the holders of shares of KCS common stock (other than excluded shares) pursuant to the merger agreement as of the date of the opinion and did not address any other aspects or implications of the transaction. Morgan Stanley's opinion was not intended to, and does not, constitute advice or a recommendation as to how the shareholders of KCS or CPRL should vote at the shareholder meetings to be held in connection with the transaction.

In connection with rendering its opinion, Morgan Stanley, among other things:

(a) reviewed certain publicly available financial statements and other business and financial information of KCS and CPRL, respectively;

(b) reviewed certain internal financial statements and other financial and operating data concerning KCS and CPRL, respectively;

(c) reviewed the KCS management unaudited KCS projections, the KCS management assumed synergies and the KCS management unaudited CPRL projections (each as defined and described in the below section entitled "KCS Unaudited Prospective Financial Information"), in each case prepared by the management of KCS;

(d) reviewed information relating to certain strategic, financial and operational benefits anticipated from the transaction, prepared by the managements of KCS and CPRL, respectively;

(e) discussed the past and current operations and financial condition and the prospects of KCS, including information relating to certain strategic, financial and operational benefits anticipated from the transaction, with senior executives of KCS;

(f) discussed the past and current operations and financial condition and the prospects of CPRL, including information relating to certain strategic, financial and operational benefits anticipated from the transaction, with senior executives of CPRL;

(g) reviewed the reported prices and trading activity for KCS common stock and CPRL common shares;

(h) compared the financial performance of KCS and CPRL and the prices and trading activity of KCS common stock and CPRL common shares with that of certain other publicly-traded companies comparable with KCS and CPRL, respectively, and their securities;

(i) reviewed the financial terms, to the extent publicly available, of certain comparable acquisition transactions;

(j) participated in certain discussions and negotiations among representatives of KCS and CPRL and certain parties and their financial and legal advisors;

(k) reviewed a draft of the merger agreement dated September 10, 2021 (the "draft agreement"), the debt commitment letters, the STB May 6 decision, the form of the voting trust agreement, and certain related documents; and

(l) performed such other analyses, reviewed such other information and considered such other factors as Morgan Stanley deemed appropriate.

In arriving at its opinion, Morgan Stanley assumed and relied upon, without independent verification, the accuracy and completeness of the information that was publicly available or supplied or otherwise made available to Morgan Stanley by KCS and CPRL, respectively, and formed a substantial basis for its opinion. With respect to the KCS management unaudited KCS projections and the KCS management assumed synergies, Morgan Stanley assumed that they were reasonably prepared on bases reflecting the best currently available estimates and judgments of the management of KCS of the future financial performance of KCS. With respect to the KCS management unaudited CPRL projections, Morgan Stanley assumed that they were reasonably prepared on bases reflecting the best currently available estimates and judgments of the management of KCS of the future financial performance of CPRL, including following consummation of the transaction. In addition, Morgan Stanley assumed that the transaction will be consummated in accordance with the terms set forth in the merger agreement without any waiver, amendment or delay of any terms or conditions, including, among other things, (i) that the transaction will be treated as a tax-free reorganization pursuant to the Code, (ii) that CPRL will obtain financing in accordance with the terms set forth in the debt commitment letters, (iii) that the STB will permit the transaction to close into the voting trust in accordance with the terms of the STB May 6 decision and the voting trust agreement and (iv) that the definitive merger agreement would not differ in any material respect from the draft agreement. Morgan Stanley assumed that in connection with the receipt of all the necessary governmental, regulatory or other approvals and consents required for the transaction, no delays, limitations, conditions or restrictions will be imposed that would have a material adverse effect on the contemplated benefits expected to be derived in the transaction. Morgan Stanley relied upon, without independent verification, the assessment by the managements of KCS and CPRL of: (i) the strategic, financial and other benefits expected to result from the transaction; (ii) the timing and risks associated with the integration of KCS and CPRL; (iii) their ability to retain key employees of KCS and CPRL, respectively, and (iv) the validity of, and risks associated with, KCS and CPRL's existing and future technologies, intellectual property, products, services and business models. Morgan Stanley is not a legal, tax or regulatory advisor. Morgan Stanley is a financial advisor only and relied upon, without independent verification, the assessment of CPRL and KCS and their legal, tax or regulatory advisors with respect to legal, tax or regulatory matters. Morgan Stanley expressed no opinion with respect to the fairness of the amount or nature of the compensation to any of KCS's officers, directors or employees, or any class of such persons, relative to the merger consideration to be received by the holders of shares of KCS common stock in the transaction. Morgan Stanley's opinion does not address the relative merits of the transactions contemplated by the merger agreement as compared to other business or financial strategies that might be available to KCS, nor does it address the underlying business decision of KCS to enter into the merger agreement or proceed with any other transaction contemplated by the merger agreement. Morgan Stanley expressed no opinion with respect to the treatment of the KCS preferred stock, in the transaction. Morgan Stanley did not make any independent valuation or appraisal of the assets or liabilities of KCS or CPRL, nor was it furnished with any such valuations or appraisals. Morgan Stanley's opinion was necessarily based on financial, economic, market and other conditions as in effect on, and the information made available to Morgan Stanley as of, the date of its opinion. Events occurring after such date may affect Morgan Stanley's opinion and the assumptions used in preparing it, and Morgan Stanley did not assume any obligation to update, revise or reaffirm its opinion.

The following is a summary of the material financial analyses performed by Morgan Stanley in connection with the preparation of its opinion to the KCS board. The following summary is not a complete description of Morgan Stanley's opinion or the financial analyses performed and factors considered by Morgan Stanley in connection with its opinion, nor does the order of analyses described represent the relative importance or weight given to those analyses. The financial analyses summarized below include information presented in tabular format. In order to fully understand the financial analyses used by Morgan Stanley, the tables must be read together with the text of each summary. The tables alone do not constitute a complete description of the financial analyses. The analyses listed in the tables and described below must be considered as a whole; considering any portion of such analyses and of the

factors considered, without considering all analyses and factors, could create a misleading or incomplete view of the process underlying Morgan Stanley's opinion. Morgan Stanley considered a number of factors in analyzing the merger consideration. The fact that points in the ranges of implied equity value per share of KCS common stock derived below were less than or greater than the merger consideration is not necessarily dispositive in connection with Morgan Stanley's analysis of the merger consideration, but is one of many factors Morgan Stanley considered. Except as otherwise noted, the following quantitative information, to the extent that it is based on market data, is based on market data as it existed on or before September 13, 2021 and is not necessarily indicative of current market conditions.

In performing the financial analyses summarized below and in arriving at its opinion, Morgan Stanley, at the direction of the KCS board, used and relied upon the KCS management unaudited KCS projections, the KCS management assumed synergies and the KCS management unaudited CPRL projections. For more information, please see the section of this proxy statement captioned "*The KCS Merger Proposal – KCS Unaudited Prospective Financial Information*" on page 96.

Analyses Related to KCS

Discounted Cash Flow Analysis

Morgan Stanley performed a discounted cash flow analysis, which is designed to provide an implied value of a company by calculating the present value of the estimated future unlevered free cash flows and terminal value of such company. Morgan Stanley calculated a range of implied equity values per share of KCS common stock as of June 30, 2021, based on estimates of future unlevered free cash flows for the six months ending December 31, 2021 and fiscal years 2022 through 2029 contained in the KCS management unaudited KCS projections, including net debt of KCS as of June 30, 2021 of $3,787 million. Morgan Stanley also calculated a range of terminal values for KCS based on next twelve months ("NTM") EBITDA exit multiple range of 10.75x to 12.25x, which was selected based on Morgan Stanley's professional judgment and experience. The estimated unlevered free cash flows and the range of terminal values were then discounted to June 30, 2021 by applying a discount rate range of 6.1% to 7.3%, which was selected based on Morgan Stanley's professional judgment and experience, to reflect KCS's estimated weighted average cost of capital. Morgan Stanley used a discount rate range of 6.1% to 7.3% to reflect KCS's estimated weighted average cost of capital, which was calculated by multiplying the cost of each capital source (debt and equity) by its relevant weight, and then adding the products together to determine the value. Cost of equity was calculated using the Capital Asset Pricing Model ("CAPM"). The CAPM takes into account market risk premium, risk-free rate and beta of the underlying stock. Morgan Stanley used an EBITDA exit multiple range of 10.75x to 12.25x based on KCS's and comparable companies' EBITDA multiples over time.

This analysis indicated a range of implied equity values per share of KCS common stock of $226.00 to $280.00, in each case rounded to the nearest $1.00.

Morgan Stanley compared the foregoing range of implied equity values per share of KCS common stock to the closing trading price of KCS common stock as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $224.16 and the implied value of the merger consideration to be received by holders of shares of KCS common stock in the transaction as of September 13, 2021 of $288.00, rounded to the nearest $1.00.

Comparable Public Company Analysis

Morgan Stanley performed a comparable public company analysis, which attempts to provide an implied value of a company by comparing it to similar companies that are publicly traded. Morgan Stanley reviewed and compared certain financial information of KCS with corresponding publicly available financial information for other Class 1 Rail companies that shared certain similar characteristics to KCS to derive an implied valuation range for KCS. The companies used in this comparison were the following:

- CPRL
- CN

- Union Pacific Corporation
- Norfolk Southern Corporation
- CSX Corporation

The above companies were chosen based on Morgan Stanley's knowledge of the industry and because they have businesses that may be considered similar to KCS's. Although none of such companies are identical or directly comparable to KCS, these companies are publicly traded companies with operations and/or other criteria, such as lines of business, markets, business risks, growth prospects, maturity of business and size and scale of business, that for purposes of its analysis Morgan Stanley considered similar to KCS.

For purposes of this analysis, Morgan Stanley analyzed the following statistics of each of these companies, based on public filings, publicly available research estimates and publicly available financial information published by Capital IQ as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) for KCS and CPRL, as of April 19, 2021 (which was the last trading day prior to the announcement of the CN proposal) for CN and as of September 13, 2021 for Union Pacific Corporation, Norfolk Southern Corporation and CSX Corporation:

- the ratio of aggregate value ("AV"), calculated as the market value of equity plus short-term debt, long-term debt, preferred equity and non-controlling interests, net of cash, cash equivalents and investments to estimated fiscal year 2022 EBITDA (which is referred to below as the "2022E AV/EBITDA Ratio"); and
- the ratio of stock price to estimated fiscal year 2022 earnings per share (which is referred to below as the "2022E P/E Ratio").

The results of Morgan Stanley's analysis were presented for the comparable companies, as indicated in the following table:

	2022E AV/EBITDA Ratio	2022E P/E Ratio
KCS	13.4x	21.4x
CPRL	14.6x	21.1x
CN	14.2x	22.5x
Union Pacific Corporation	12.9x	18.3x
Norfolk Southern Corporation	12.4x	18.4x
CSX Corporation	11.8x	18.1x
Mean	**13.2x**	**20.0x**
Median	**13.2x**	**19.8x**

Based on its analysis of the relevant metrics for each of the comparable companies and upon the application of its professional judgment and experience, Morgan Stanley selected representative ranges of 2022E AV/EBITDA Ratio and 2022E P/E Ratio and applied these ranges to KCS's estimated fiscal year 2022 EBITDA of $1,839 million based on consensus analyst estimates and of $1,827 million based on the KCS management unaudited KCS projections, and to KCS's estimated fiscal year 2021 earnings per share of $10.50 based on consensus analyst estimates and of $10.75 based on the KCS management unaudited KCS projections. For purposes of this analysis, Morgan Stanley utilized the KCS management unaudited KCS projections and consensus analyst estimates. Morgan Stanley then calculated a range of implied equity values per share of KCS common stock as follows, in each case rounded to the nearest $1.00:

	Selected Representative Range	Implied Equity Value Per Share of KCS Common Stock
2022E AV/EBITDA Ratio (KCS management unaudited KCS projections)	12.0x – 14.5x	$ 199.00-$248.00
2022E P/E Ratio (KCS management unaudited KCS projections)	18.5x – 22.5x	$ 199.00-$242.00

2022E AV/EBITDA Ratio (Consensus)	12.0x – 14.5x	$ 200.00-$250.00
2022E P/E Ratio (Consensus)	18.5x – 22.5x	$ 194.00-$236.00

Morgan Stanley compared the foregoing ranges of implied equity values per share of KCS common stock to the closing trading price of KCS common stock as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $224.16 per share and the implied value of the merger consideration to be received by holders of shares of KCS common stock in the transaction as of September 13, 2021 of $288.00 per share, rounded to the nearest $1.00.

No company included in the comparable public company analysis is identical to KCS. In evaluating comparable companies, Morgan Stanley made judgments and assumptions with regard to industry performance, general business, economic, market and financial conditions and other matters, which are beyond the control of KCS. These include, among other things, the impact of competition on the business of KCS and the industry generally, industry growth, and the absence of any adverse material change in the financial condition and prospects of KCS and the industry, and in the financial markets in general. Mathematical analysis is not in itself a meaningful method of using comparable company data.

Morgan Stanley used a 12.0x to 14.5x representative range for 2022E AV/EBITDA Ratio for both KCS and CPRL. This range was based on market data multiples for KCS, CPRL and the four other public Class I railroads (CN, Union Pacific Corporation, CSX Corporation and Norfolk Southern Corporation). The KCS and CPRL market data were as of March 19, 2021 (the unaffected date for KCS's share price), the CN market data was as of April 19, 2021 (the unaffected date for CN's share price), and the Union Pacific Corporation, CSX Corporation and Norfolk Southern Corporation market data were as of September 13, 2021.

Summary Statistics for 2022E AV / EBITDA Ratio	
Minimum	11.8x
Median	13.2x
Mean	13.2x
Maximum	14.6x

Morgan Stanley used a 18.5x to 22.5x representative range for 2022E P/E Ratio for both KCS and CPRL. This range was based on market data multiples for KCS, CPRL and the four other public Class I railroads (CN, Union Pacific Corporation, CSX Corporation and Norfolk Southern Corporation). The KCS and CPRL market data were as of March 19, 2021 (the unaffected date for KCS's share price), the CN market data was as of April 19, 2021 (the unaffected date for CN's share price), and the Union Pacific Corporation, CSX Corporation and Norfolk Southern Corporation market data were as of September 13, 2021.

Summary Statistics for 2022E P / E Ratio	
Minimum	18.1x
Median	19.8x
Mean	20.0x
Maximum	22.5x

Precedent Transactions and Premia Paid Analysis

Morgan Stanley performed a precedent transactions analysis, which attempts to imply a value of a company based on publicly available financial terms and premia of selected transactions. Morgan Stanley reviewed the publicly available financial information for certain transactions in the railroad industry since June 1994.

For purposes of this analysis, based on publicly available financial information, Morgan Stanley analyzed the ratio of the implied AV to last twelve months EBITDA, referred to as the AV/LTM EBITDA Ratio, for each of the target companies in the selected transactions. The transactions reviewed, the date that each transaction was announced and the corresponding AV/LTM EBITDA Ratios were as follows:

Date Announced	Acquiror	Target	AV/LTM EBITDA Ratio	Transaction Value (in millions)
July 2019	Brookfield Infrastructure Partners L.P. / GIC Pte. Ltd.	Genesee & Wyoming Inc.	13.4x	$8,432
March 2017	GMexico Transportes S.A. de C.V.	Florida East Coast Railway Holdings Corp.	13.6x	$2,100
October 2016	Genesee & Wyoming Australia Pty Ltd.	Glencore Rail (NSW) Pty Limited	11.4x (1)	$866
October 2016	Macquarie Infrastructure and Real Assets	Genesee & Wyoming Australia Pty Ltd. (49%)	11.2x (1)	$1,534
March 2016	Rail Consortium(2)	Pacific National Holdings Pty Ltd.	10.3x	$6,594
February 2015	Genesee & Wyoming Inc.	Freightliner Group Limited (95%)	9.5x	$807
July 2012	Genesee & Wyoming Inc.	RailAmerica, Inc.	10.3x	$2,008
November 2009	Berkshire Hathaway Inc.	Burlington Northern Santa Fe Corp.	8.8x	$43,847
September 2007	Canadian Pacific Railway Limited	Dakota, Minnesota & Eastern Railroad Corporation	15.2x	$1,480
November 2006	Fortress Investment Group LLC	RailAmerica, Inc.	11.7x	$1,055
August 2005	Toll Holding Ltd.	Patrick Corporation	15.0x	$5,284
December 2004	Kansas City Southern	Transportacion Ferroviaria Mexicana, S.A. de C.V. (51%)	6.1x	$1,320
November 2003	Canadian National Railway Company	BC Rail Ltd.	14.4x	$1,204
January 2001	Canadian National Railway Company	Wisconsin Central Ltd.	9.8x	$1,191
February 1998	Canadian National Railway Company	Illinois Central Corp.	11.4x	$2,973
April 1997	CSX Corp. / Norfolk Southern Corporation	Conrail Inc.	12.1x	$12,329
August 1995	Union Pacific Corp.	Southern Pacific Rail Corp.	12.3x	$5,388
March 1995	Union Pacific Corp.	Chicago and North Western Holdings Corporation	8.4x	$2,614
June 1994	Burlington Northern Inc.	Santa Fe Pacific Corporation	7.2x	$5,087
Median			**11.4x**	

(1) G&W Australia transaction multiple was based on NTM projections since LTM were unavailable. All other transactions reflect AV/LTM EBITDA Ratios.

(2) Rail Consortium consists of CPP Investments Limited (33%), Global Infrastructure Partners Inc. (27%), China Investment Corporation (16%), GIC Pte. Ltd. (12%), and British Columbia Investment Management Corporation (12%).

The selected precedent transactions varied significantly based upon company scale, business risks, growth prospects and geography, as well as prevailing market trends. Based on its analysis of the relevant metrics for each of the precedent transactions and upon the application of its professional judgment and experience, Morgan Stanley selected a representative range of AV/LTM EBITDA Ratio and applied this range to KCS's last 12 months ("LTM")

COVID-Adjusted EBITDA as of June 30, 2021 of $1,600 million as provided by KCS management, which reflects an add-back of $128 million, as provided by KCS management, for the estimated impact of COVID-19 for the third and the fourth quarters of 2020.

Based on this analysis, Morgan Stanley calculated a range of implied equity values per share of KCS common stock as follows, in each case rounded to the nearest $1.00:

	Selected Representative Range	Implied Equity Value Per Share of KCS Common Stock
AV/LTM EBITDA Ratio	11.0x – 15.0x	$151.00 – $221.00

Morgan Stanley also reviewed the premia paid for transactions announced between January 1, 2007 and December 31, 2020 with a publicly announced transaction value of more than $1,000 million, as published by Thomson Reuters. The premia paid were calculated based on each of (i) the target company's closing stock price and (ii) the 52-week high of the target company's stock price, in each case on the last trading day prior to the public announcement of the transactions. Based on its analysis of the relevant metrics and upon the application of its professional judgment and experience, Morgan Stanley (A) selected a representative range of premia of 15% to 35% with respect to the target companies' closing stock prices and applied this range of premia to the closing trading price of KCS common stock as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $224.16 and (B) selected a representative range of premia of (5%) to 20% with respect to the 52-week highs of such target companies' stock prices and applied this range of premia to the 52-week high price per share of KCS common stock as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $224.16.

Morgan Stanley's premia paid analysis was based on precedent transactions with transaction values greater than $1,000 million from 2007 to 2020. The multiple range of 11.0x to 15.0x for the precedent transactions analysis was selected based on Morgan Stanley's professional experience and judgment.

These analyses indicated ranges of implied equity values per share of KCS common stock of (i) $258.00 to $303.00 and (ii) $213.00 to $269.00, respectively, in each case rounded to the nearest $1.00.

Morgan Stanley compared the foregoing ranges of implied equity values per share of KCS common stock to the closing trading price of KCS common stock as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $224.16, and the implied value of the merger consideration to be received by holders of shares of KCS common stock in the transaction as of September 13, 2021 of $288.00, rounded to the nearest $1.00.

No company or transaction used in the precedent transactions or premia paid analysis is identical to KCS or the transaction. In evaluating the precedent transactions, Morgan Stanley made judgments and assumptions with regard to industry performance, general business, economic, market and financial conditions and other matters, which are beyond the control of KCS. These include, among other things, the impact of competition on the business of KCS or the industry generally, industry growth, and the absence of any adverse material change in the financial condition and prospects of KCS or the industry, and in the financial markets in general. Mathematical analysis is not in itself a meaningful method of using precedent transactions data.

Other Factors

Morgan Stanley observed certain additional factors that were not considered part of its financial analyses with respect to its opinion but were referenced for informational purposes, including, among other things, the following:

- *Historical Trading Range.* For reference only and not as a component of its fairness analysis, Morgan Stanley reviewed the low and high per share trading range of shares of KCS common stock for the 12-month period ending March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement). Morgan Stanley observed that during such period the trading range was $101.00 to $224.00 per share of KCS common stock, rounded to the nearest $1.00.

- *Equity Research Analysts' Price Targets.* For reference only and not as a component of its fairness analysis, Morgan Stanley reviewed the undiscounted price targets for shares of KCS common stock prepared and published by 20 equity research analysts as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement). These targets generally reflect each analyst's estimate of the future public market trading price of shares of KCS common stock. In order to better compare the equity analysts' stock price targets with the merger consideration, Morgan Stanley discounted each analyst's price target to present value by applying, for a one year discount period, a discount rate of 7.4%, selected by Morgan Stanley based on the application of its professional judgment and experience to reflect KCS's cost of equity. This analysis resulted in a discounted analyst price target range for shares of KCS common stock of $186.00 to $239.00 per share, rounded to the nearest $1.00. Morgan Stanley used a discount rate of 7.4% to reflect KCS's estimated cost of equity. Cost of equity was calculated using the CAPM. The CAPM takes into account market risk premium, risk-free rate and beta of the underlying stock.

- *Discounted Equity Value Analysis.* For reference only and not as a component of its fairness analysis, Morgan Stanley performed a discounted equity value analysis, which is designed to provide insight into a theoretical estimate of the future implied value of a company's common equity as a function of such company's estimated future earnings and a theoretical range of trading multiples. The resulting estimated future implied value of equity is subsequently discounted back to the present day at the company's cost of equity in order to arrive at an illustrative estimate of the present value for the company's theoretical future implied stock price. Morgan Stanley used a discount rate of 7.4% to reflect KCS's estimated cost of equity. Cost of equity was calculated using the CAPM. The CAPM takes into account market risk premium, risk-free rate and beta of the underlying stock. Morgan Stanley used a NTM P/E multiple range of 17.0x to 21.0x based on KCS's and comparable companies' NTM P/E multiples over time.

In arriving at the estimated equity values per share of KCS common stock, Morgan Stanley selected a representative range of ratio of stock price to future earnings per share ("P/E Multiple") utilizing the next 12 months ("NTM") estimated earnings per share and applied this range of multiples to an estimate of fiscal year 2029 earnings per share from the KCS management unaudited KCS projections. Morgan Stanley then discounted the resulting equity values per share to June 30, 2021 at a discount rate of 7.4%, selected by Morgan Stanley based on the application of its professional judgment and experience to reflect KCS's cost of equity. Based on this analysis, Morgan Stanley derived a range of implied equity values per share of KCS common stock as follows, each rounded to the nearest $1.00:

	Selected Representative Range	Implied Equity Value Per Share of KCS common stock
P/E Multiple	17.0x–21.0x	$ 269.00–$328.00

Analyses Related to CPRL

Discounted Cash Flow Analysis

Morgan Stanley performed a discounted cash flow analysis, which is designed to provide an implied value of a company by calculating the present value of the estimated future unlevered free cash flows and terminal value of such company. Morgan Stanley calculated a range of implied equity values per CPRL common share as of June 30, 2021, based on estimates of future unlevered free cash flows for the six months ending December 31, 2021 and fiscal years 2022 through 2029 contained in the KCS management unaudited CPRL projections, including net debt of CPRL as of June 30, 2021 of $6,027 million. Morgan Stanley also calculated a range of terminal values for CPRL based on NTM EBITDA exit multiple range of 11.75x to 13.25x, which was selected based on Morgan Stanley's professional judgment and experience. The estimated unlevered free cash flows and the range of terminal values were then discounted to June 30, 2021 by applying a discount rate range of 5.4% to 6.7%, which was selected based on Morgan Stanley's professional judgment and experience, to reflect CPRL's estimated weighted average cost of capital. Morgan Stanley used a discount rate range of 5.4% to 6.7% to reflect CPRL's estimated weighted average cost of capital, which was calculated by multiplying the cost of each capital source (debt and equity) by its relevant weight, and then adding the products together to determine the value. Cost of equity was calculated using the CAPM. The CAPM takes into account market risk premium, risk-free rate and beta of the underlying stock. Morgan Stanley used an EBITDA exit multiple range of 11.75x to 13.25x based on CPRL's and comparable companies' EBITDA multiples over time.

This analysis indicated a range of implied equity values per CPRL common share of $76.00 to $93.00, in each case rounded to the nearest $1.00.

Morgan Stanley compared the foregoing range of implied equity values per CPRL common share to the closing trading price of CPRL common shares on September 13, 2021 of $68.55 and to the closing trading price per CPRL common share on March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $75.70 (taking into account the share split).

Comparable Public Company Analysis

Morgan Stanley performed a comparable public company analysis, which attempts to provide an implied value of a company by comparing it to similar companies that are publicly traded. Morgan Stanley reviewed and compared certain financial information of CPRL with corresponding publicly available financial information for other Class 1 Rail companies that shared certain similar characteristics to CPRL to derive an implied valuation range for CPRL. The companies used in this comparison were the following:

- KCS
- CN
- Union Pacific Corporation
- Norfolk Southern Corporation
- CSX Corporation

The above companies were chosen based on Morgan Stanley's knowledge of the industry and because they have businesses that may be considered similar to CPRL's. Although none of such companies are identical or directly comparable to CPRL, these companies are publicly traded companies with operations and/or other criteria, such as lines of business, markets, business risks, growth prospects, maturity of business and size and scale of business, that for purposes of its analysis Morgan Stanley considered similar to CPRL.

For purposes of this analysis, Morgan Stanley analyzed the following statistics of each of these companies, based on public filings, publicly available research estimates and publicly available financial information published by Capital IQ as of March 19, 2021(which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) for KCS and CPRL, as of April 19, 2021 (which was the last trading day prior to the announcement of the CN proposal) for CN and as of September 13, 2021 for Union Pacific Corporation, Norfolk Southern Corporation and CSX Corporation:

- the 2022E AV/EBITDA Ratio; and
- the 2022E P/E Ratio.

The results of Morgan Stanley's analysis were presented for the comparable companies, as indicated in the following table:

	2022E AV/EBITDA Ratio	**2022 E P/E Ratio**
KCS	13.4x	21.4x
CPRL	14.6x	21.1x
CN	14.2x	22.5x
Union Pacific Corporation	12.9x	18.3x
Norfolk Southern Corporation	12.4x	18.4x
CSX Corporation	11.8x	18.1x
Mean	**13.2x**	**20.0x**
Median	**13.2x**	**19.8x**

Based on its analysis of the relevant metrics for each of the comparable companies and upon the application of its professional judgment and experience, Morgan Stanley selected representative ranges of 2022E AV/EBITDA Ratio and 2022E P/E Ratio and applied these ranges to CPRL's estimated fiscal year 2022 EBITDA of $3,900 million based on consensus analyst estimates and of $3,862 million based on the KCS management unaudited CPRL projections, and to CPRL's estimated fiscal year 2022 earnings per share of $3.63 based on consensus analyst estimates and of $3.67 based on the KCS management unaudited CPRL projections. For purposes of this analysis, Morgan Stanley utilized the KCS management unaudited CPRL projections and consensus analyst estimates.

Morgan Stanley then calculated a range of implied equity values per CPRL common share as follows, in each case rounded to the nearest $1.00:

	Selected Representative Range	**Implied Equity Value Per CPRL Common Share**
2022E AV/EBITDA Ratio (KCS management unaudited CPRL projections)	12.0x – 14.5x	$ 60.00-$74.00
2022E P/E Ratio (KCS management unaudited CPRL projections)	18.5x – 22.5x	$ 68.00-$82.00
2022E AV/EBITDA Ratio (Consensus)	12.0x – 14.5x	$ 61.00-$75.00
2022E P/E Ratio (Consensus)	18.5x – 22.5x	$ 67.00-$82.00

Morgan Stanley compared the foregoing ranges of implied equity values per CPRL common share to the closing trading price of CPRL common shares on September 13, 2021 of $68.55 and to the closing trading price on March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement) of $75.70.

No company included in the comparable public company analysis is identical to CPRL. In evaluating comparable companies, Morgan Stanley made judgments and assumptions with regard to industry performance, general business, economic, market and financial conditions and other matters, which are beyond the control of CPRL. These include, among other things, the impact of competition on the business of CPRL and the industry generally, industry growth, and the absence of any adverse material change in the financial condition and prospects of CPRL and the industry, and in the financial markets in general. Mathematical analysis is not in itself a meaningful method of using comparable company data.

Other Factors

Morgan Stanley observed certain additional factors that were not considered part of its financial analyses with respect to its opinion but were referenced for informational purposes, including, among other things, the following:

- *Historical Trading Range.* For reference only and not as a component of its fairness analysis, Morgan Stanley reviewed the low and high per share trading range of CPRL common shares for the 12-month period ending March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement). Morgan Stanley observed that during such period the trading range was $36.00 to $77.00 per CPRL common share (taking into account the share split), rounded to the nearest $1.00.

- *Equity Research Analysts' Price Targets.* For reference only and not as a component of its fairness analysis, Morgan Stanley reviewed the undiscounted price targets for CPRL common shares prepared and published by 24 equity research analysts as of March 19, 2021 (which was the last trading day prior to the announcement of the execution of the prior CP merger agreement). These targets generally reflect each analyst's estimate of the future public market trading price of CPRL common shares. In order to better compare the equity analysts' stock price targets with the trading price of CPRL common shares on September 13, 2021 of $68.55 and to the closing trading price of $75.70 on March 19, 2021 (which was the last trading day prior to the execution of the prior CP merger agreement), Morgan Stanley discounted each analyst's price target to present value by applying, for a one year discount period, a discount rate of 6.4%, selected by Morgan Stanley based on the application of its professional judgment and experience to reflect CPRL's cost of equity. This analysis resulted in a discounted analyst price target range for CPRL common shares of $64.00 to $76.00 per share, rounded to the nearest $1.00. Morgan Stanley used a discount rate of 6.4% to reflect CPRL's estimated cost of equity. Cost of equity was calculated using the CAPM. The CAPM takes into account market risk premium, risk-free rate and beta of the underlying stock.

Summary of Material Pro Forma Financial Analysis

Has/Gets Analysis

Morgan Stanley performed a Has/Gets Analysis to calculate the theoretical change in value for holders of KCS common stock resulting from the transaction based on a comparison of (i) the pro forma ownership by holders of KCS common stock of CPRL giving effect to the transaction, and (ii) the 100% ownership by holders of KCS common stock of the KCS common stock on a standalone basis. For KCS common stock on a standalone basis, Morgan Stanley used the reference range obtained in the discounted cash flow analysis described above under "*Summary of Material Financial Analyses of KCS – Discounted Cash Flow Analysis*." Morgan Stanley then performed the same analysis by calculating the range of implied per share equity values allocable to holders of KCS common stock on a pro forma basis, giving effect to the transaction, by assuming approximately 28% pro forma ownership, based on the number of CPRL common shares estimated to be issued to holders of KCS common stock in the transaction, utilizing the results of the standalone discounted cash flow analyses for KCS and CPRL described above under "*Summary of Material Financial Analyses of KCS – Discounted Cash Flow Analysis*" and under "*Summary of Material Financial Analyses of CPRL – Discounted Cash Flow Analysis*," and taking into account the KCS management assumed synergies on the basis of (1) a projected $990 million in EBITDA synergies as provided by KCS management (referred to in this section as the "$990 million synergy case"), which also included $20 million of projected D&A and Capex synergies, for total projected gross synergies of $1,010 million, and (2) a projected $377 million in EBITDA synergies as provided by KCS management (referred to in this section as the "$377 million synergy case"), which also included $23 million of projected D&A and Capex synergies for total projected gross synergies of $400 million. Morgan Stanley then compared these implied per share equity value ranges, which were further adjusted by an estimated additional net debt from the transaction and $90.00 per share cash merger consideration, to the implied per share equity value ranges derived for KCS common stock on a standalone basis utilizing the results of the standalone discounted cash flow analysis for KCS described above.

This analysis yielded the following implied per share equity value ranges for KCS common stock on a standalone and on a pro forma basis (rounded to the nearest $1.00):

Implied Equity Value Per Share of KCS common stock		
Standalone	**Pro-Forma $990 million synergy case**	**Pro-Forma $377 million synergy case**
$226.00 - $280.00	$310.00 - $365.00	$291.00 - $343.00

Other Considerations

In connection with the review of the transaction by the KCS board, Morgan Stanley performed a variety of financial and comparative analyses for purposes of rendering its opinion. The preparation of a financial opinion is a complex process and is not necessarily susceptible to a partial analysis or summary description. In arriving at its opinion, Morgan Stanley considered the results of all of its analyses as a whole and did not attribute any particular weight to

any analysis or factor it considered. Morgan Stanley believes that selecting any portion of its analyses, without considering all analyses as a whole, would create an incomplete view of the process underlying its analyses and opinion. In addition, Morgan Stanley may have given various analyses and factors more or less weight than other analyses and factors, and may have deemed various assumptions more or less probable than other assumptions. As a result, the ranges of valuations resulting from any particular analysis described above should not be taken to be Morgan Stanley's view of the actual value of KCS or CPRL.

In performing its analyses, Morgan Stanley made numerous assumptions with regard to industry performance, general business, regulatory, economic, market and financial conditions and other matters, which are beyond the control of KCS or CPRL. These include, among other things, the impact of competition on the businesses of KCS and CPRL or the industry generally, industry growth, and the absence of any adverse material change in the financial condition and prospects of KCS, CPRL or the industry, and in the financial markets in general. Any estimates contained in Morgan Stanley's analyses are not necessarily indicative of future results or actual values, which may be significantly more or less favorable than those suggested by such estimates.

Morgan Stanley conducted the analyses described above solely as part of its analysis of the fairness, from a financial point of view, of the merger consideration to be received by the holders of shares of KCS common stock (other than excluded shares) pursuant to the merger agreement, and in connection with the delivery of its opinion to the KCS board. These analyses do not purport to be appraisals or to reflect the prices at which shares of KCS common stock or CPRL common shares might actually trade.

The merger consideration to be received by the holders of shares of KCS common stock was determined through arm's-length negotiations between KCS and CPRL and was approved by the KCS board. Morgan Stanley acted as financial advisor to the KCS board during these negotiations but did not, however, recommend any specific merger consideration to KCS, nor opine that any specific merger consideration constituted the only appropriate merger consideration for the transaction. In addition, Morgan Stanley's opinion does not in any manner address the prices at which CPRL common shares will trade following consummation of the transaction or at any other time and Morgan Stanley expressed no opinion or recommendation as to how KCS's or CPRL's shareholders should vote at any shareholder meetings to be held in connection with the transaction.

Morgan Stanley's opinion and its presentation to the KCS board was one of many factors taken into consideration by the KCS board in deciding to approve the merger agreement. Consequently, the analyses as described above should not be viewed as determinative of the recommendation of the KCS board with respect to the merger consideration or of whether the KCS board would have been willing to agree to different merger consideration. Morgan Stanley's opinion was approved by a committee of Morgan Stanley investment banking and other professionals in accordance with its customary practice.

KCS has agreed to pay Morgan Stanley for its services in connection with the transaction an aggregate fee, which is currently estimated, based on the information available as of the date of announcement, to be approximately $63 million, a portion of which was paid upon the execution and announcement of the prior CP merger agreement in March 2021, a portion of which was paid to Morgan Stanley upon the rendering of a fairness opinion in connection with the CN agreement announced in May 2021, a portion of which was payable upon the rendering of its opinion in connection with the transaction and the remainder of which is payable upon the closing of the transaction. KCS has also agreed to reimburse Morgan Stanley for certain of its expenses incurred in performing its services, including fees and expenses of outside counsel to Morgan Stanley. In addition, KCS has agreed to indemnify Morgan Stanley and its affiliates, their respective directors, officers, agents and employees and each person, if any, controlling Morgan Stanley or any of its affiliates against certain liabilities and expenses, including certain liabilities under the federal securities laws, related to or arising out of Morgan Stanley's engagement.

In the two years prior to the date of its opinion, Morgan Stanley or its affiliates have provided financial advisory and financing services to KCS and its affiliates and have received aggregate fees of approximately $5 million to $15 million in connection with such services (which includes the fee received upon delivery of its opinion in connection with the prior CP merger agreement announced in March 2021 and the fee received upon delivery of its opinion in connection with the CN agreement announced in May 2021). In addition, Morgan Stanley or one of its affiliates is currently a lender to each of KCS and CPRL under their respective revolving credit facilities, and is also

currently engaged to provide financing services to CPRL that are unrelated to the transaction, for which Morgan Stanley expects to receive customary fees. Morgan Stanley may also seek to provide financial advisory and financing services to KCS, CPRL and their respective affiliates in the future and would expect to receive fees for the rendering of these services.

Morgan Stanley is a global financial services firm engaged in the securities, investment management and individual wealth management businesses. Its securities business is engaged in securities underwriting, trading and brokerage activities, foreign exchange, commodities and derivatives trading, prime brokerage, as well as providing investment banking, financing and financial advisory services. Morgan Stanley, its affiliates, directors and officers may at any time invest on a principal basis or manage funds that invest, hold long or short positions, finance positions, and may trade or otherwise structure and effect transactions, for their own account or the accounts of its customers, in debt or equity securities or loans of CPRL, KCS, their respective affiliates or any other company, or any currency or commodity, that may be involved in the transaction, or any related derivative instrument.

1. QUALIFICATIONS AND ASSIGNMENT

1.1. Qualifications

1. My name is W. Robert Majure. I am a Vice President at Cornerstone Research. Prior to joining Cornerstone Research, I worked for approximately 25 years in the Antitrust Division of the U.S. Department of Justice ("DOJ") as an economist, Assistant Section Chief, Section Chief, and ultimately as the Director of Economics.

2. I earned my Ph. D. in Economics from Massachusetts Institute of Technology in 1994 and a B.A. from the University of Virginia in 1990. My main area of expertise is the economics of industrial organization – particularly issues of competition.

3. While at the DOJ, I performed and supervised economic analyses of competition issues in various industries, including transportation, telecommunications, banking, computer software and hardware, heavy industry, mining and drilling, healthcare, entertainment, and railroads. I submitted testimony on competitive effects in the merger of the Union Pacific and Southern Pacific Railroads and on the suitability of remedy in *U.S. v. SBC Communications Inc. and AT&T Corp.* and *U.S. v. Verizon Communications Inc. and MCI, Inc.* I also served on the committee that drafted the 2010 Horizontal Merger Guidelines. I received awards for my work at the DOJ, including presidential recognition for my contributions as a senior executive of the civil service.

4. A copy of my *curriculum vitae* is attached as Appendix A.

1.2. Assignment

5. In the context of these proceedings, on April 30, 2021 and at the request of counsel for Canadian Pacific ("CP"), I submitted an expert statement ("Initial Statement") to describe my preliminary findings on the competition issues related to the proposed acquisition of Kansas City Southern ("KCS") by Canadian Pacific, and to compare them to competitive issues that would be raised in an acquisition of KCS by Canadian National ("CN").[1]

6. On June 28, 2021, at the request of counsel for CP, I submitted a second expert statement ("Voting Trust Statement"), in the context of the proceedings related to the proposed acquisition of KCS by CN.[2] In the Voting Trust Statement, I provided an economic analysis of the voting trust arrangement that had been proposed by CN for its potential acquisition of KCS, and showed that a voting trust arrangement would have given CN an immediate incentive to implement its part of the anticompetitive horizontal consequences of a CN-KCS combination. I also provided additional analysis that confirmed the proposed merger of CN and KCS should have been treated as a horizontal merger, and that CN's proposed divestiture was insufficient to resolve the horizontal competition issues that would have been created by the transaction.

---

[1] Expert Statement of W. Robert Majure, Ph.D., *Canadian Pacific Railway Limited, et al. – Control – Kansas City Southern, et al.*, Finance Docket No. 36500 and *Canadian National Railway Company, et al. – Control – Kansas City Southern, et al.*, Finance Docket No. 36514, Apr. 30, 2021 ("Initial Statement").

[2] Expert Statement of W. Robert Majure, Ph.D., *Canadian Pacific Railway Limited, et al. – Control – Kansas City Southern, et al.*, Finance Docket No. 36514, June 28, 2021 ("Voting Trust Statement").

7. I have been asked to submit a third expert statement at the request of counsel for CP evaluating whether the proposed acquisition of KCS by CP is likely to generate any procompetitive benefits or cause any competitive harms.

8. Cornerstone Research is being compensated at my standard billing rate of $875 per hour. I have been assisted by staff of Cornerstone Research, who worked under my direction. Cornerstone Research's compensation in this matter is not in any way contingent or based on the content of my opinion or the outcome of this or any other matter, nor is my compensation.

9. Appendix B contains a list of materials I have relied upon in preparing this statement. My work is ongoing, and I expect to supplement this analysis as these proceedings continue.

2. OVERVIEW AND SUMMARY OF OPINIONS

10. My economic analysis supports the following main conclusion: a CP and KCS combination is a vertical transaction of two complementary networks that would create opportunities for procompetitive benefits throughout the CP/KCS network and would not substantially lessen competition.

11. That a combination of CP and KCS would be a vertical, end-to-end combination of complementary networks that connect in only one location, Kansas City, is apparent from a map of the two railroads' route structures. The map in **Exhibit 1**, which shows the CP and KCS networks, including both owned tracks and trackage rights, make this clear.

EXHIBIT 1
A Canadian Pacific and Kansas City Southern deal is a vertical combination of complementary networks

Source: Canadian Pacific
Note: This map plots the rail networks of CP and KCS including tracks that each railroad either owns or has trackage rights over.

12. I organize the economic analysis of the potential competitive effects of a CP and KCS combination that supports my main conclusion as follows:

- In section 3, I consider the implications of an end-to-end railroad combination for competition. By combining railroads that extend rather than duplicate one another's systems, end-to-end combinations present benefits for shippers. This consistent conclusion of the Surface Transportation Board ("Board") is well grounded in economics. In the language of competition economics, these

benefits are consistent with the general expectation that a vertical merger can enable more efficient arrangements between parties and, as a result, can enhance competition. Specifically, new single line service created by a CP/KCS combination would have such benefits for shippers. End-to-end railroad combinations have also consistently been found by the Board unlikely to harm competition. I discuss the economics of vertical transactions and explain that neither CP nor KCS would have the incentive and ability as a combined firm to foreclose rivals or otherwise lessen competition as a result of vertical integration. I analyze traffic KCS brings to the Laredo gateway to illustrate how the overall effects on rivals of a combination of CP and KCS are likely to stem, not from CP/KCS foreclosing those rivals, but from enhanced competition as shippers freely choose newly-created CP/KCS single line options.

- In sections 4-6, I confirm that a combination of CP and KCS will not have any adverse horizontal competitive effects, which is consistent with its end-to-end character. In section 4, I analyze corridors of rail movements observed in the 2019 Confidential Waybill Sample for potential horizontal effects. Where both CP and KCS participate in movements of commodities in the same corridor, I examine the number of independent routes available to shippers before and after a combination of CP and KCS. This analysis confirms that a combination of CP and KCS would not reduce the number of independent options available in any corridor – i.e., that shippers would have no reduction in the number of horizontal competitors serving the rail corridor that shipper has used.
- In section 5, I analyze another aspect of horizontal competition, competition between corridors – i.e., situations where a shipper may have options to choose a different source or destination and may benefit from competition between a corridor involving CP and one involving KCS. After applying well-established screens for potential competitive effects, I examine the screened situations in more detail to determine whether CP and KCS are likely to pose an important competitive constraint on each other. I conclude that a combination of CP and KCS would not be likely to diminish between-corridor competition.
- In section 6, I consider the question of possible coordinated effects of a combination of CP and KCS. I find such effects particularly unlikely from this combination because: (i) a combined CP/KCS will still be the smallest Class I railroad with the same incentives to grow share that CP and KCS both exhibit today, (ii) effective coordination would require the participation of the same number of railroads whether or not CP and KCS combine, as CP and KCS are currently not providing significant competition to one another for any particular customers, and (iii) the incentives of a combined CP/KCS will tend to be

antagonistic to any possible coordination scheme, as the combination seeks to realize the efficiencies of new single-line service. I conclude that coordinated effects on competition stemming from the combination of CP and KCS are unlikely.

3. A CP AND KCS COMBINATION BENEFITS SHIPPERS AS AN END-TO-END RAILROAD COMBINATION

13. End-to-end railroad mergers have often been deemed beneficial to shippers. As the Board noted in its decision to allow a KCS combination with The Texas Mexican Railway Company ("Tex Mex" or "TM"): "An end -to-end consolidation of carriers, by its very nature, is not likely to generate the kinds of competitive problems that often arise in connection with a 'parallel' consolidation . . . Indeed, the evidence demonstrates that the end-to-end configuration of the KCS/TM control transaction will benefit shippers by enabling KCS to offer expanded single-line service . ."[3] Similarly, in its decision to approve the combination between Burlington Northern and Santa Fe, the ICC (predecessor to the Board) noted that: "The primarily end-to-end (vertical) integration of the rail operations conducted by BN and Santa Fe will enable the consolidation carrier to reduce the costs it incurs and to improve the services it provides. Shippers should benefit from lower rates and improved service, including new single-line service."[4]

14. These conclusions are consistent with the nature of end-to-end railroad combinations. They are a form of vertical merger, and vertical mergers have been widely recognized as presenting opportunities for enhancing competition by improving the service that merging parties are able to offer together.[5] As I discuss in section 3.1,

[4] *Burlington Northern Inc. et al. – Control and Merger – Santa Fe Pacific Corporation et al.*, Finance Docket No. 32549 (Decision No. 38 decided Aug. 16, 1995), 10 I.C.C.2d ("BN-SF Decision"), at p. 740.

[5] U.S. Department of Justice and the Federal Trade Commission, Vertical Merger Guidelines ("Vertical Merger Guidelines"), June 30, 2020, at pp. 11–12.

the new single-line service CP and KCS will be able to offer is an example of this pro-competitive effect associated with vertical mergers. In some circumstances, vertical mergers are also capable of impairing competition. However, as I explain in section 3.2, that is not likely in a combination of CP and KCS. I use traffic KCS currently brings to the Laredo gateway to illustrate the balance of vertical effects that is likely to prevail at all the gateways of a combined CP/KCS and show that the effect is beneficial to shippers. That is, a combined CP/KCS will have the incentive to compete more effectively to provide opportunities for shippers to benefit from new single-line service offered by CP/KCS while also working with other railroads at these gateways to provide interconnection service if shippers so choose.

3.1. A CP and KCS combination enhances competition through the vertical effect of allowing new single-line service

15. I begin with the opportunity to enhance competition. Vertical mergers can enable a product improvement that is difficult to achieve through contracts or other agreements among vertically-related independent entities such as CP and KCS.[6]

16. Vertical mergers involve firms that are, absent a merger, not rivals for a customer's business but instead are working together in some fashion to produce a joint product for that customer. For end-to-end railroad mergers, the joint product is an interline movement. Both railroads would like to offer shippers interline service that is just as good as single-line service. However, producing a product together can be difficult

[6] *See, e.g.*, Nicholas Economides, "Quality choice and vertical integration," *International Journal of Industrial Organization*, 17(6), 1999, at pp. 903–914.

and, as the Verified Statement of John Brooks illustrates, railroads are no exception to the difficulties of coordinating operations, investments, and pricing of such products.

17. I understand from John Brooks's Statement that CP and KCS have in the past undertaken concerted efforts to achieve improvements in interline service through interline coordination as separate carriers. The difficulties he describes with contractual arrangements include disagreements about the split of revenues, about the costs of externalities imposed on each railroad's operations as equipment is outside of their tracking and control, and about the need for investment in improving operations across the interconnection.[7] All of these difficulties suggest that the reason interline service is inferior to single-line service is that separate railroads are limited in what they can do to align their incentives with respect to joint operations – limitations that fit into the model of vertical mergers enhancing efficiency by enabling more efficient coordination.

18. By resolving these shortcomings, an end-to-end railroad merger can enhance competition. In a combination of CP with KCS, the interconnection in Kansas City would become part of a commonly managed system. The features that make single-line service preferable – features that are difficult to implement by agreement between interlining railroads – would be directly enabled by the combination of CP and KCS. As a result, the combined CP/KCS product would be expected to divert some traffic

[7] For a detailed discussion of CP's attempts to coordinate and to contract for improvements to interline service, see Verified Statement of John Brooks ("Brooks V.S."), ¶¶ 30-34.

from other railroads.[8] Those other railroads will need to improve the quality of their own service or find ways to lower their prices to retain shippers.

19. In short, a combination of CP and KCS is likely to enhance competition through an effect common to many vertical mergers: resolving inefficient production of a joint product. Specifically, the combination is likely to eliminate coordination inefficiencies so that the present ability to interconnect in Kansas City will achieve the features of single-line service, which shippers prefer. As a result, shippers will benefit and competition will be enhanced.

3.2. The "vertical effects" of a CP and KCS combination would enhance rather than diminish competition

20. In this section, I examine the competitive implications of the end-to-end features of the combination of CP and KCS. I consider whether there are any features of this Transaction that would call into question the Board's consistent conclusions in other cases that end-to-end combinations are procompetitive and are not likely to lead to competitive harm. Specifically, I consider whether the combination might lead to competitive harm arising from closing off access to gateways for rival railroads that customers would prefer to the single-line offerings of the combined CP/KCS.

[8] For detailed predictions of traffic likely to be diverted to new single-line service for a combined CP/KCS, see Verified Statement of Bengt Mutėn ("Mutėn V.S."); Verified Statement of Jonathan Wahba and Mike Naatz ("Wahba V.S."); and Verified Statement of Richard Brown and Nathaniel S. Zebrowski ("Brown V.S.").

21. In the circumstances of this case, I find that harm from so-called "vertical" effects is not likely. To the contrary, the vertical features of the Transaction will add new competitive alternatives to the marketplace, enhancing competition.

22. The Board's approach to the analysis of end-to-end railroad combinations is well grounded in competition economics reflected in the relevant enforcement guidance of the antitrust agencies. The Vertical Merger Guidelines issued in 2020 by the Antitrust Division and the Federal Trade Commission identify two elements that are necessary for these agencies to investigate to assess whether a proposed merger creates potential adverse vertical effects, neither of which are present here. First, one of the merging parties must have the *ability* to preclude or control a rival's ability to compete. Second, there must be an *incentive* for the merged entity to exercise this ability over rivals.[9] Neither of these elements is applicable to the combination of CP and KCS, consistent with the general conclusion the Board has reached in prior cases.[10]

23. To illustrate how the incentive and ability elements apply to railroads, I consider two examples that have often featured in the Board's evaluation of end-to-end

[9] *See* Vertical Merger Guidelines, at pp. 4–5. On September 15, 2021, the FTC voted to withdraw from these guidelines. The majority statement in that decision took issue with a separate section of the 2020 VMG related to efficiencies while endorsing the sections that discussed the incentive and ability elements: "The 2020 VMGs represent a substantial improvement over the 1984 guidelines that they replaced and address important principles such as raising rivals' costs, foreclosure, and misuse of competitively sensitive information." *See* Statement of Chair Lina M. Khan, Commissioner Rohit Chopra, and Commissioner Rebecca Kelly Slaughter on the Withdrawal of the Vertical Merger Guidelines, Federal Trade Commission, Commission File No. P810034, Sept. 15, 2021, at p. 2, available at https://www.ftc.gov/system/files/documents/public_statements/1596396/statement_of_chair_lina_m_khan_commissioner_rohit_chopra_and_commissioner_rebecca_kelly_slaughter_on.pdf.

[10] *See, e.g.*, the decision in NS and CSX combinations with Conrail: "It has been our experience that end-to-end restructurings of this kind rarely result in a diminution of competition. We have adopted a presumption, known as the one-lump theory, that vertical combinations will not result in competitive harm." *CSX Corp. et al. -Control and Operating Leases/Agreements - Conrail Inc. et al.*, Finance Docket No. 33388 (Decision No. 89 served Jul. 28, 1998), at p. 248.

transactions: (i) a completely captive shipper and (ii) a shipper who can readily turn to other transportation options in the face of any price increase. Assume these two hypothetical shippers are both located on parts of the KCS system.

24. First, consider the solely-served shipper who has no ready alternative to KCS for originating its movements. A combined CP/KCS would not be expected to have any *incentive* to affect the competitive terms available to this shipper, because KCS would already be collecting the full measure of returns associated with its existing market power. This lack of an incentive to change prices for such shippers (or reduce service or otherwise degrade the terms that shipper receives) is what the Board and its predecessor agency have found when evaluating other end-to-end transactions, and is sometimes labeled as "the one-lump theory."[11] The combination of CP and KCS would not change the state of affairs for a completely captive shipper, except possibly to give that shipper an option to use the KCS/CP single-line if that service is better than a KCS-Other Carrier route. To that extent, diversion to the KCS/CP route would indicate a presumptively better outcome for that shipper. Likewise, if the other carrier responds to this pressure with an offer to tighten margins and retains the shipper, the outcome reflects enhanced competition.

25. Next, consider the other hypothetical shipper, who can readily switch to another railroad or mode of transportation. Perhaps this second shipper can rely on FXE's

[11] *See* BN-SF Decision at pp. 747–748, 751: "Our experience has been that where a single rail carrier controls a destination segment, and no transportation alternatives are available, the shipper will be captive and the single rail carrier will be able to capture the preponderance of the economic profits" and "the through rate will be at the level maximizing net revenue for the traffic, subject to regulatory limits, and the destination carrier will establish favorable through service with the origin carrier willing to take the lowest division of the through rate for its segment of the movement." *See*, also, fn. 10.

network in Mexico as a suitable alternative to KCSM for originating its movements. For the shipper with ready alternatives, there would be no *ability* for a combined CP/KCS to force inferior terms on the shipper. Doing so would only lead to loss of the traffic – or failure to attract new traffic – contrary to the company's economic incentives. Again, this shipper may still see the benefit of new single-line service and choose to divert from a KCS-Other Carrier route to a KCS/CP route or the other carrier may tighten its margins to retain the shipper – in either case, enhancing, rather than diminishing, competition. The Board has summarized this lack of ability by noting that any forces constraining a rail carrier from taking "full advantage of a bottleneck" are a limit on that ability both before and after a merger.[12] Whether those limiting forces are a regulatory constraint, competitive pressure from other rail or non-rail options, or anything else, the combination of CP and KCS is not likely to create any ability for the combined firm to profit from inferior terms to any shipper.

26. These two examples illustrate the extremes of a continuum. For any actual shipper, the degree to which they can turn to competitive options is likely somewhere between being completely captive and having a perfect limiting force. That is, the shipper has a "lump" that a serving railroad can earn but less of a lump than a completely captive shipper might convey. However large the lump is, the lack of either incentive or ability ensures that the shipper is not likely to suffer any incremental adverse effects from an end-to-end rail merger.

[12] *See* BN-SF Decision at p. 751: "Conversely, when certain factors are present that limit a carrier's ability to take full advantage of a bottleneck, those factors will remain in place as effective safeguards after the merger. We have consistently adhered to these principles in assessing harm in merger cases and in making market dominance determinations in rate cases."

27. Examination of the impact of past transactions in which vertical competitive concerns were raised tends to confirm the Board's conclusion in those prior cases. Of particular interest for this Transaction are the concerns raised by Union Pacific ("UP") in 2004-2005 about the impact of KCS's acquisition of Tex Mex and TFM (the holder of the Northeast Concession and predecessor of KCSM) on competition for traffic moving via the Laredo gateway. UP's concerns 15 years ago echo the concerns UP raised when it opposed the waiver of the 2001 merger rules to this Transaction.[13]

28. In the KC-TM-TFM proceeding, UP argued that KCS would inefficiently divert TFM-UP traffic to TFM-KCS routes in order to extend KCS's haul and earn greater revenues.[14] KCS responded by arguing that it would not have any incentive or ability to foreclose efficient TFM-UP routes and the Board agreed.[15] However, the Board nonetheless held KCS to its representations that it would keep the Laredo gateway open on commercially reasonable terms.[16]

---

[13] *Canadian Pacific Railway Limited, et al. – Control – Kansas City Southern, et al.,* Union Pacific Railroad Company's Opposition to Waiver of the Regulations Contained in Current Subpart A of 49 CFR Part 1180, Finance Docket No. 36500, Apr. 1, 2021, at pp. 8–9.

[14] *See Kansas City Southern – Control – The Kansas City Southern Railway Company et al.*, Finance Docket No. 34342, Union Pacific Railroad Company's Comments, Volume 1 of 2: Narrative, Aug. 4, 2003 ("UP Comments on KCS-TM-TFM"), at pp. 45–58.

[15] "KCS's experts credibly explained that market conditions would prevent KCS from raising rates to shippers or foreclosing UP and BNSF from the Mexican market, because the latter two carriers account for more than 90% of the rail traffic interchanged with TFM at Laredo, and it would be unprofitable for KCS to use its control of TFM to take actions that would foreclose this traffic." KCS-TM-TFM Decision, at pp. 17–18.

[16] "In addition, we are requiring KCS to comply with its commitment to keep the Laredo gateway open on commercially reasonable terms. . . We will approve the KCS/TM application because the evidence demonstrates that, subject to the conditions imposed in this decision, there will not be, as a result of common control of KCS, KCSR, GWER, Mexrail, and TM, either a substantial lessening of competition, the creation of a monopoly, or a restraint of trade in freight surface transportation in any region of the United States." KCS-TM-TFM Decision, at pp. 6, 16.

29. I examine KCS's handling of traffic that moved from Mexico via KCS's Mexican affiliate in 2019 – 15 years after KCS acquired control of TFM (and renamed it KCSM) – to explore how the alleged incentive to foreclose UP at Laredo has played out. The traffic that could potentially generate the relevant foreclosure incentive is the traffic that KCSM originates in Mexico and for which KCS is UP's competitor for the delivery in the United States. Looking back at the KCS-TFM merger, UP's stated concern would suggest that post-control KCS would have found ways to close the gateway by disadvantaging UP traffic moving over the gateway because doing so would improve KCS's ability to win the delivery of this traffic.[17]

30. In **Exhibit 2**, I use KCS's traffic tape to look at the handling at Laredo of all the traffic KCS brings to Laredo from Mexico. The first row captures traffic in the category where KCS allegedly has an incentive to refuse to work with UP – i.e., traffic that KCS itself could deliver to the ultimate termination. Even within this category of traffic, KCS interchanges {{ }} percent with UP at Laredo. That sizable percentage is consistent with KCS having an incentive to provide shippers with their preferred route and carrier – interchanging as necessary to meet the shipper's preference rather than forcing shippers to use KCS alone.

[17] While UP's concern could have applied to southbound traffic as well, I test the effect on the northbound traffic as I can readily categorize movements of this traffic in terms of whether an interchange with another railroad happened as early in the movement as feasible.

EXHIBIT 2
Traffic KCSM brings to the Laredo gateway from Mexico is interchanged with UP, BNSF, and KCS

{{

}}

Source: CP-KCS Traffic Tapes, 2019; Confidential Waybill Sample, 2019; CP Intermodal Containers to Railcar Conversion Factor.xls; KCS R-1 Annual Report, 2019

Note: This analysis focuses on northbound shipments that KCS routes from Mexico through Laredo. Total carloads and shares are broken down based on whether KCS, CP, UP, or BNSF can serve the ultimate destination area. Areas served are based on BEA areas. An area is considered "served" by a carrier in this analysis if the carrier is observed terminating the final segment of a movement in the area in the 2019 CP-KCS traffic tapes or is observed terminating a shipment in the 2019 Confidential Waybill Sample. There are {{ }} carloads that KCS routes from Mexico through Laredo for which the ultimate destination is not reported in the data. These carloads are excluded from the analysis. Intermodal units are converted to carloads using 4.7 units per flat car, which corresponds to a system average for CP. Using the KCS system average, 3.9 units per flat car, does not qualitatively change the results.

31. Of course, the exchange of traffic with UP is also consistent with KCS having no ability to force shippers into using KCS. Possibly, that lack of ability follows from the commitments KCS undertook as a condition for its merger with KCSM. However, even if the incentive to refuse to work with UP might exist and might be acted upon if KCS were not subject to those commitments, a combined CP/KCS would assume the same commitments KCS has been operating under since its merger with KCSM. Moreover, I understand that CP has already extended similar commitments to other existing gateways.[18] The fact that KCS has continued to interchange {{ }} traffic with UP at the Laredo gateway, even where KCS could be the single-line carrier of that traffic, demonstrates that the elements required to constitute a vertical concern are not present in a combination of CP and KCS. That is, interchange

[18] Brooks V.S., at ¶¶ 42–47.

activity at the Laredo gateway demonstrates a combined CP/KCS would not have the ability and incentive to preclude its rivals' access to gateways.

32. In addition, comparisons of the KCS shares in Exhibit 2 are consistent with my assessment that competition will benefit from the creation of new and improved single-line offerings. Of KCS's {{ }} percent share of the Laredo crossings destined for areas where KCS could potentially deliver to the ultimate destination, KCS handles {{ }} percent of this traffic via longer-hauls on its network (row 1). That is, counting the traffic KCS takes to Robstown, TX to exchange with BNSF as effectively the same as an interchange at Laredo, KCS is chosen by shippers for service beyond Laredo on about {{ }} percent of the carloads. This rate stands in contrast to the percentages seen in the second row – representing traffic that is destined for areas where KCS could not deliver to the ultimate destination. For that traffic, shippers choose KCS for service beyond Laredo on {{ }} percent of carloads. That difference, {{ }} percent where KCS could offer a single-line service compared to {{ }} percent where they could not, suggests that shippers have a preference for single-line service.

33. A portion of the areas where KCS cannot deliver to the ultimate destination today have the potential to gain single-line service from a combination of CP and KCS. Limiting my analysis only to those areas where CP could deliver to the ultimate destination (row 3), I see that KCS is handling the traffic beyond Laredo on an even smaller share of these carloads, about {{ }} percent. Within the same group of destinations, KCS is chosen for service beyond Laredo {{

}} for locations where each of UP or BNSF would have to interconnect with other railroads north of Laredo or Robstown to complete the movement (row 4), and

KCS is chosen for service beyond Laredo {{ }} where UP or BNSF instead would be able to reach the destination via their own networks and thus would not need to interconnect north of Laredo or Robstown (row 5).[19] These comparisons suggest that the ability to offer fewer interchanges can significantly improve a railroad's ability to win the business of shippers to these areas and can make a railroad's service a more significant competitive force.

34. These figures imply significant scope for shippers to benefit from enhanced competition resulting from the CP/KCS combination. This is particularly true for the shipments covered in row 3, where KCS only wins carriage of the traffic beyond Laredo for {{ }} of carloads. These are shipments destined for locations beyond Kansas City where the combined CP/KCS will create the potential to change the present interline service option of CP and KCS into single-line service. As I just showed, comparisons to regions where KCS can currently offer single-line service suggest the combined CP/KCS will win a larger percentage of shipper business as their competitiveness is enhanced as a result of the combination extending their single-line capability to these areas. In these areas, for which KCS currently exchanges about {{ }} percent of carloads with UP at Laredo and about {{ }} percent of them with BNSF at Robstown, CP/KCS will be in a stronger position after a CP and KCS combination to compete for the movement. UP and BNSF might lose some of their share on this traffic to the improved CP/KCS product, but they would not likely be foreclosed, just as UP has not been foreclosed by KCS for movements to areas KCS

[19] For these movements, UP and BNSF tend to serve the same set of delivery locations. Of the {{ }} carloads moving to delivery locations served by UP or BNSF (row 5), {{ }} carloads are destined for locations served by both UP and BNSF, {{ }} carloads for locations served by UP and not BNSF, and {{ }} for locations served by BNSF and not UP. See my workpaper 1.

can currently serve with a single line (row 1). Rather, UP and BNSF would have to compete harder to maintain share similar to what UP wins today in competition against KCS single-line routes to the areas in row 1.

35. To the extent that these shares suggest that KCS is less likely to exchange traffic with UP and BNSF when it has a competitive incentive to deliver the traffic itself, it is important to distinguish between an incentive to compete, which is good for shippers, and an incentive to impair competitors, which is bad for shippers. I expect a combined CP/KCS will have incentives and ability to compete more effectively, rather than an incentive to impair competitors, and that this would give more opportunities for shippers to benefit from new single-line service offered by a combined CP/KCS. This conclusion is consistent with the observed shares in Exhibit 2.

36. The Board has consistently recognized that the goal of preserving competition is not the same as protecting competitors. The economic consequence of a vertical merger creating an opportunity for the combined firm to bring a higher quality product to the market is an incentive for the combined firm to compete harder. This, in turn, forces rivals to compete harder – either through offering higher quality service themselves or through reducing their rates – to maintain share. If the net effect of this economic implication is the combined firm gains some share at the expense of its rivals, this is a procompetitive outcome, not the result of any incentive to foreclose a rival. Without the risk of this outcome, the rivals would not have to improve their own offers and competition would suffer. This tension between protecting competition or protecting competitors has been recognized in the Board's past reviews. For instance, in its decision on the KCS-TF-TFM transaction, the Board noted that to the extent the

transaction "would lead KCS to favor its own routings for those few points that are served by both KCS and UP (or KCS and BNSF), KCS might earn more revenue than in the past, and UP (or BNSF) might earn less, but that is not going to result in higher costs to shippers. This could well mean some harm to a competitor (UP, BNSF), but not harm to competition."[20]

37. Similarly, a vertical transaction may have the effect of reducing the leverage of a rival carrier in negotiations with the combined carrier over the division of joint rates. However, again, this effect is a result of increased competitiveness. The combined firm's ability to offer an attractive single-line option to shippers changes the relative value of interlining services. This change in competitive position among carriers serves to promote competition, rather than creating harm to shippers. Indeed, the Board also acknowledged this aspect of the distinction between competition and competitors when dismissing vertical concerns in its decision to allow the KCS–TM–TFM transaction.[21]

38. Other gateways throughout the combined CP/KCS system would present similar circumstances. The combined CP/KCS will have an incentive to win business with enhanced single-line service where the combination extends the reach of CP or KCS. The combined CP/KCS will also have an incentive to interchange traffic destined for locations it still cannot reach. And, like at Laredo, a combined CP/KCS should be expected to interchange traffic even where it can offer an enhanced service if the

---

[20] KCS-TM-TFM Decision, at p.18.

[21] "If KCS tried to raise rates on TFM movements that are not rail dependent, the traffic would shift to motor or water carriage. And on TFM movements that are rail dependent, if for some reason TFM is not presently extracting monopoly rents, then the connecting carrier within the United States could be doing so. Therefore, UP's argument seeks to protect the U.S. carrier's leverage regarding divisions of joint rates (that is, concerns over how the interline rail partners will divide the profit), not to protect shippers." KCS-TM-TFM Decision, at p. 17.

shipper, nevertheless, prefers a different routing or wants to use a different carrier. CP's willingness to make the same sort of commitments adopted by KCS at Laredo (and which appear to have been effective) demonstrates this. Consequently, I conclude that a combined CP/KCS is likely to benefit shippers through enhanced competition and not likely to impair competition through vertical effects.

4. ANALYSIS OF INDEPENDENT ROUTE COUNTS BEFORE AND AFTER A CP AND KCS COMBINATION SHOWS THERE WOULD BE NO REDUCTION IN COMPETITION WITHIN ANY CORRIDOR

39. In sections 4 and 5, I demonstrate that a CP and KCS combination is not likely to harm horizontal competition. That result should not be surprising as this is not a horizontal combination but rather is an end-to-end combination.

40. In analyzing the prospect for a CP and KCS combination to affect horizontal competition, I start with the simplest and most direct form such competition can take – competition within a corridor. This is the competition among railroads to ship goods from a specific origin to a specific destination, i.e., in a corridor.

41. A shipper can presumably negotiate among the various railroads that offer service in a given corridor, so this analysis is predicated on identifying any corridors where a combination of CP and KCS could reduce the competitive options. With that goal in mind, in section 4.1 I consider the scope of specific locations (origin or destination) that could practically define a corridor and show that a Bureau of Economic Analysis Economic Area ("BEA area") is a reasonable way to ensure that the various recognized forms of competition have been included in the analysis.

42. To identify the options a shipper has for a given corridor, I look to the Confidential Waybill Sample ("Waybill Sample") and identify options based on actual movements of goods in that corridor in 2019. The shipments observed in the Waybill Sample, however, often involve interconnections where different railroads work together to deliver the goods from origin to destination. If the same railroad is involved in two different options seen in the data, the shipper is unlikely to generate competition among those two options by trying to get that railroad to negotiate against itself.

Consequently, the focus of this analysis will be on the number of *independent* rail options a shipper has and whether that number changes when CP and KCS are combined.

43. If the number of independent options is unchanged, a shipper is not likely to see any loss in the ability to generate competition among competing railroads. I present my analysis of corridor competition in section 4.2, and show that a combination of CP and KCS would not reduce independent rail choices for shippers, and thus would not harm competition within corridors.

4.1. The BEA area is an appropriate scope to define the origin or destination of a corridor in screening for competitive effects of a combination of CP and KCS

44. Rail corridors are defined by their endpoints. The scope of those endpoints, however, needs to reflect a reasonable area to reflect the competitive options a shipper might have. For example, one candidate for defining a corridor's endpoints might be the exact location at which a movement starts and the exact location at which it ends. Such a narrow definition would count only competition among railroads that serve these exact locations and would not allow consideration of other potential forms of competition.

45. The Board has identified a number of ways that nearby railroads can compete without having existing service at the same exact location. Specifically, the Board has asked about the possibility of "elimination of shippers' buildout, transloading, plant siting, and production shifting choices when two railroads serving overlapping areas

merge."[22] To address these possibilities, a screen of corridor competition should include railroads that operate close enough to the exact endpoints of a shipper's observed movement to capture realistic opportunities the shipper may have had to induce competition through one of these means for a specific movement.[23]

46. The Waybill Sample offers a range of practical alternatives for defining the scope of competition at an endpoint of a corridor: town (6-digit SPLC), county (4-digit SPLC), BEA area, or state.[24] Of these, only the BEA area is designed to identify a reliable commercial center for statistical purposes. The label refers to the Economic Areas defined by the Bureau of Economic Analysis based on observed commercial activity and transportation patterns rather than historic political boundaries.[25] The BEA areas, therefore, are a reasonable representation of areas in which a shipper is likely to look for "nearby" railroad competition. A shipper considering relocating a plant within an economic community or transloading their product within that community, for

---

22 *See Canadian National Railway Company, et al. – Control – Kansas City Southern, et al.,* Finance Docket No. 36514 (Decision No. 3 served May 17, 2021), at p. 4.

23 For the shippers associated with movements observed in the data, "plant siting" and "production shifting" could introduce the possibility of relocating one endpoint of an observed movement, which I discuss below as the potential for competition between corridors. To the extent a shipper might be able to rearrange its business and rely on a different movement altogether – swapping out both endpoints of an observed movement – I consider that corridor and the competition for it as a separate issue to the extent that corridor is observed in the data.

24 Railinc Business Services, "2019 Surface Transportation Board Carload Waybill Sample Reference Guide," Dec. 23, 2020, at pp. 39–41, 70 ("SPL Codes are based on a six-digit system of nesting recognized entities and numbering them in a standard geographic pattern. The nesting system is STATE - COUNTY - CITY (POINT), using two digits to identify each.")

25 Johnson, Kenneth P., and John R. Kort, "2004 Redefinition of the BEA Economic Areas," *Survey of Current Business*, Nov. 2004, at p. 68 ("BEA's economic areas define the relevant regional markets surrounding metropolitan and micropolitan statistical areas. They consist of one or more economic nodes – metropolitan or micropolitan statistical areas that serve regional centers of economic activity – and the surrounding counties that are economically related to the nodes. These economic areas represent the relevant regional markets for labor, products, and information. They are mainly determined by labor commuting patterns that delineate local labor markets and that also serve as proxies for local markets where businesses in the areas sell their products.").

example, is making a decision that largely reflects the sort of general activity defining the BEA area.

47. Theoretically, for screening purposes, one could use a larger area such as a state or even a group of states and capture more possible overlaps that are farther removed from one another. Unlike choosing too small an area, choosing a larger area does not exclude any potential for competition. However, including possible overlaps that are unlikely to reflect any realistic prospect of a competitive alternative defeats the purpose of screening for overlaps as a first step. The factors used to construct a BEA area correspond well to the kinds of economic decisions underlying local competition possibilities that have been considered by the Board, so there is no apparent gain from using any larger area for screening.

48. The Bureau of Economic Analysis does not define areas outside the United States. For Canadian origins and destinations, a similar concept is embodied in the Economic Region defined by Statistics Canada, the Canadian national statistics office, and created as a "standard geographic unit for analysis of regional activity."[26] For Mexico, I have relied on the State as the geographic area most similar to the BEA areas. U.S. BEA areas, Canadian Economic Regions, and Mexican states are roughly similar in geographic size, although Mexican states tend to be somewhat larger.[27] For ease of

[26] Statistics Canada, "Economic region (ER), Detailed definition," available at https://www150.statcan.gc.ca/n1/pub/92-195-x/2011001/geo/er-re/er-re-eng.htm.

[27] The median Mexican state is 58,400 square kilometers. The median U.S. BEA area is 29,843 square kilometers and the median Canadian Economic Region is 21,734 square kilometers. Ten percent of Mexican states are smaller than 5,617 square kilometers, ten percent of U.S. BEA areas are smaller than 10,393 square kilometers, and ten percent of Canadian Economic Regions are smaller than 7,192 square kilometers. Ten percent of Mexican states are larger than 120,361 square kilometers, ten percent of U.S. BEA areas are larger than 99,028 square kilometers, and ten percent of Canadian Economic Regions are larger than 273,312 square kilometers. See my workpaper 2.

reference in describing my analysis, I use the term "BEA area" to stand for whichever of these areas is applicable for locations in a given country.

4.2. Analysis of competition within corridors shows that a CP and KCS combination would not reduce rail options for shippers

49. Analyzing competition for shipments between specific origin and destination pairs, a corridor, is a standard part of analyzing a proposed railroad combination.[28] The analysis is comprised of two main steps.

50. In step one, I implement a screen based on movements observed in the Waybill Sample, with a focus on data from 2019. For origin and destination areas, I use the BEA area (i.e., the Bureau of Economic Analysis Economic Areas within the United States, Economic Regions within Canada, and states for Mexico).[29] For each corridor where CP and KCS participated in at least one observed movement in the Waybill Sample, I identify and count the number of independent routings observed in the data. I consider two routings independent of one another if they do not have any carriers in

[28] *See, e.g.*, Verified Statement of Curtis Grimm, *Norfolk Southern Railway Company - Acquisition and Operation – Certain Rail Lines of the Delaware and Hudson Railway*, Finance Docket No. 35873, Nov. 5, 2014 ("Grimm V.S., 2014"). This screening analysis has been relied on by the Board in its past reviews of railroad acquisitions. *See, e.g.*, *Norfolk Southern Railway Company – Acquisition and Operation – Certain Rail Lines of the Delaware and Hudson Railway Company, Inc.*, Finance Docket No. 35873 (Decision No. 6 served May 15, 2015), pp. 18, 20; *Kansas City Southern et al. – Control – Gateway Western Railway Company and Gateway Eastern Railway Company*, Finance Docket No. 33311 (Decision served May 1, 1997), at pp. 4–5.

[29] BEA Economic Areas and states for each movement are native to the Confidential Waybill Sample. Economic Regions are administrative boundaries provided by Statistics Canada and "created as a standard geographic unit for analysis of regional economic activity." *See* Statistics Canada, "Economic region (ER), Detailed definition," available at https://www150.statcan.gc.ca/n1/pub/92-195-x/2011001/geo/er-re/er-re-eng.htm.

common.[30] For example, two routes in a corridor that both involve CP for at least one segment are not treated as independent in my analysis, but a route that involves BNSF and does not involve CP would be treated as independent of all routes involving CP.[31]

51. This screen identifies corridors where the number of independent routes observed in the Waybill Sample suggests that shippers doing business in the corridor might see reduced competition. This exercise has the benefit of using data on actual movements to identify routes – including interchanges between separate railroads – that are practical for shippers.

52. By screening for reductions in the number of independent routes, the screen identifies possible reductions in choices that are most likely to affect shippers' ability to generate competitive bids. Economists model this sort of competition as a negotiation that depends on each party's next-best alternatives. From that perspective, a merger is

[30] To count the number of independent routings observed in a corridor, I begin with the observed routings for which the carriers involved have the fewest number of overlaps with other routings. I then compare these to routings with more carrier overlaps, identifying as independent any routings that do not have carriers in common with the previously identified independent routes. This progression ensures an accurate and intuitive count of independent routings. To see this, consider the following simple example: a corridor with CN-KCS, CN-BNSF, and KCS-UP routings. This corridor has two independent options – CN-BNSF and KCS-UP. A shipper could play CN and BNSF against KCS and UP to negotiate a better rate. The CN-KCS routing can be dismissed as not independent of the CN-BNSF or KCS-UP since it has a carrier in common with each. However, because it has more overlaps, if one starts with the CN-KCS routing, both the CN-BNSF and KCS-UP routings would be dismissed as not independent of the CN-KCS routing and one would wrongly conclude that this corridor is served by a single independent routing. A similar approach has been used in analysis of prior railroad mergers. For example, see Grimm V.S., 2014, at pp. 89–90.

[31] Consistent with the use of a BEA area as the appropriate scope of an origin and destination, I treat a terminating or originating railroad carrying less than 15 miles as not determinative of whether a route is independent. In other words, if the set of railroads involved in a movement would constitute an independent route, but for the presence in the movement of originating or terminating railroads that carried for less than 15 miles (as measured by straight line distances), I consider the set an independent route. For example, if CP only handles the first 10-mile straight-line segment from the origin to the first interchange of a route that involves BNSF and KCS, then CP is not a factor when determining whether the route is independent of all other carrier-based routes that are feasible in the corridor.

likely to affect competition if it is likely to reduce shippers' ability to use a specific route as a threat (i.e., what the shipper would do if a deal could not be reached).[32] However, a credible threat needs to be independent of the railroad with which a shipper is bargaining. Attempting to bargain for better rates with a threat to switch to another route is unlikely to be successful if that alternative route also depends on getting a rate from the same railroad.

53. Consistent with that focus on identifying the lost choices that are most important to shippers, a common practice in railroad merger reviews is to focus on situations where a proposed acquisition reduces the number of independent routes from 3-to-2 or from 2-to-1.[33] In the former (a 3-to-2 reduction), a shipper still has some potential for competition but significantly less than before. In the latter (a 2-to-1 reduction), the loss of competition is even worse. A shipper that previously had some potential for competition no longer has any competition – i.e., the shipper would essentially face a monopoly on rail transport post-merger.

54. This screen represents a necessary but not sufficient test – i.e., the screen is an initial step of the analysis and identifies corridors where more detailed review is warranted. Here, the screen identifies only seven corridors for further examination.

---

[32] This concept is addressed in FTC and DOJ's Horizontal Merger Guidelines, which state, "a merger between two competing sellers prevents buyers from playing those sellers off against each other in negotiations. This alone can significantly enhance the ability and incentive of the merged entity to obtain a result more favorable to it, and less favorable to the buyer, than the merging firms would have offered separately absent the merger." U.S. Department of Justice and the Federal Trade Commission, Horizontal Merger Guidelines ("Horizontal Merger Guidelines"), Aug. 19, 2010, at p. 22.

[33] *See, e.g.*, Grimm V.S., 2014, at pp. 86–92.

55. In step two, for each corridor identified for further review in the screening step, I examine additional facts to determine whether a substantial lessening of competition for shippers in that corridor is actually likely. Because the screen is based on routes chosen by shippers in 2019 (as evidenced by movements observed in the 2019 Waybill Sample), it often identifies corridors in which shippers may have viable rail options that happen not to be sampled in a given year's Waybill Sample. A route that shippers chose to use on a given corridor in prior years is likely still a viable route even if no shipper happened to have used it in 2019 – or none that ended up in the sample. The potential to use such a route is relevant to whether the corridor is likely to see a reduction in competition after a combination of CP and KCS.[34]

56. In all seven corridors flagged in the initial screen, further examination shows that shippers in these corridors would not face a meaningful reduction in the competition available within the corridor. For six of those seven corridors, I find that additional viable independent routes exist that were not captured in the 2019 Waybill Sample; the seventh has at least four independent options for shippers and KCS being independent of CP does not appear to add significantly to competition in this route.

[34] Grimm also uses arguments about other railroads that could serve the OD pairs that were identified by the screen, even if the proposed service was not observed in the data. *See* Grimm, at pp. 91–92 ("In fact, I determined that these corridors were not true 2-to-1 independent competitive alternatives in which there would be lessening of competition. This is because there exist independent alternatives to NS/DHS involving CSX although the sample used for the analysis did not include any such CSX traffic for that particular year notwithstanding the existence of CSX routings.").

4.2.1. Results of an initial screen to identify any corridors where shippers may experience a loss in rail choice from a combination of CP and KCS

57. I find that the initial screen triggers further examination for only seven corridors. I summarize these seven corridors in **Exhibit 3**. There are four screened for examination as potential 2-to-1 corridors, including {{{

}}} There are two screened for examination as potential 3-to-2 corridors: {{{

}}} One corridor, {{{

}}} is screened for further examination as a potential 5-to-4 corridor.

58. As I show in the next subsection, after further examination, none of these corridors hold up as likely to see a reduction in competition as a result of a combination of CP and KCS.

EXHIBIT 3
Corridors identified by the initial screen for further analysis of within-corridor competition for a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2019
Note: A corridor is screened as having a potential reduction in competition if the number of independent routes decrease due to a CP and KCS combination. Independent routes are those in which there is no overlap between participating railroads. For example, if there are two available routes, (a) KCS-CN and (b) KCS direct, they would not be independent because KCS is involved in both; however, if the second route instead used UP single-line service, then the two routes (KCS-CN and UP direct) would be independent. If the set of railroads involved in a movement would constitute an independent route but for the presence in the movement of originating or terminating railroads that carried for less than 15 miles long in straight-line distance, it is considered an independent route. Origin and destination areas are defined at the BEA areas level for the U.S., at the Economic Region level for Canada, and at the state level for Mexico. The table also reports the total expanded revenues observed in the 2019 Confidential Waybill Sample for each corridor. A "No Issue" note in the last column indicates that a corridor originally screened for more detailed review did not present any competitive concern after further analysis.

4.2.2. Further examination of the screened corridors shows that none would experience a meaningful reduction in competition, if any at all, following a combination of CP and KCS

59. In this section, I show that none of the seven corridors that triggered the screen would see a meaningful reduction in competition, if any at all, because of a CP and KCS combination.

60. I begin with the corridors that screen for examination as potential 2-to-1 corridors.

61. I first consider {{{

}}}. Most of the movements in 2019 in this corridor were for dried lumber.[35] However, shippers of dried lumber in this corridor have options independent from CP and KCS that were not observed in the sample for 2019. Specifically, {{{

}}} and {{{

. }}} Indeed, the 2017 Waybill Sample includes shipments of dried lumber using the {{{ }}} and the {{{ }}} routes.[36] The track map in **Exhibit 4**, illustrates these routing options that will be available for shippers in this corridor after a CP and KCS combination, including {{{

}}}.

[35] See my workpaper 3.

[36] See my workpaper 3.

EXHIBIT 4
{{{ }}} would have at least three viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks.

62. I do a similar analysis for {{{ }}}. If the {{{ }}} route interconnecting in {{{ }}} is included, this corridor would not see a reduction in the number of independent routes. It would have two before and still have two after a CP and KCS combination. This {{{ }}} route does not appear in the 2019 Waybill Sample, but it would be a viable option following a CP and KCS combination. It does appear in the 2018 Waybill Sample with shippers using it to move wood products, which are shipped in this corridor in the 2019 data.[37] The track map in **Exhibit 5** shows that shippers will have at least two independent routes available after a CP and KCS combination, {{{ }}}.

[37] The specific types of wood products differ at the level of 7-digit STCC. See my workpaper 4.

EXHIBIT 5
{{{ }}} would have at least two viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks. The dotted line is a route observed from the 2019 Waybill Sample that involves {{{ }}} After a CP and KCS combination, the CN-KCS route would no longer be independent of the CP single-line service.

63. I next evaluate {{{

}}}. Two viable routes, {{{ }}}, are not observed in the 2019 data. However, these routes were used by shippers in previous years. The 2017 Waybill Sample shows the {{{ }}} route used to ship plastic materials, and the {{{ }}} option used by shippers of vegetable oils, which represented 75 percent of the movements observed in this corridor in the 2019 data.[38] Shippers seeking competitive options in this corridor would still have three independent routes after a combination of CP and KCS, as can be seen on the track map in **Exhibit 6**.

[38] The specific types of vegetable oils differ at the level of 7-digit STCC. See my workpaper 5.

EXHIBIT 6
{{{ }}} would have at least three viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks.

64. I now evaluate {{{ }}}. Further examination of the screening results reveals that this is a case where the screen is not actually identifying a possibility of consolidation by the merging parties. Instead, the screen is identifying a situation where the set of options would appear to be reduced only because the data do not include any observations of shippers currently using CP-KCS.[39] Including the new single-line route of a combined CP/KCS, shippers in this corridor will have two independent options rather than one. To help illustrate this artifact of the Waybill Sample, I summarize in **Exhibit 7** the route options observed in the 2019 Waybill Sample for this corridor.

EXHIBIT 7
{{{ }}}

{{{

}}}

Source: Confidential Waybill Sample, 2019

65. There are three routes observed in the 2019 Waybill Sample: {{{ }}}. Among these, a shipper cannot threaten both {{{ }}} and {{{ }}} with either the {{{ }}} option or with the {{{ }}} option. However, in negotiating with {{{ }}} and {{{ }}}, a shipper could use the threat of {{{ }}} and vice versa. The screen, being limited to routes observed in

[39] See my workpaper 6.

the data, sees a potential reduction in independent options even though a combined CP/KCS would offer a new single-line service, which would be independent of the {{{ }}} option. Consequently, shippers would still have at least two independent options to generate competition in negotiations: {{{ }}} and {{{ }}}. These options are shown in the track map in **Exhibit 8**.

66. Moreover, the results for this corridor actually identify a benefit of a CP and KCS combination. Although the 2019 Waybill Sample does not include {{{ }}}, I understand that such a route would be viable given {{{ }}}.[40] The efficiency of this new single line service could enhance competition with the existing {{{ }}} route, providing procompetitive benefits to shippers in this corridor.

[40] See my workpaper 7.

EXHIBIT 8
{{{ }}} would have at least two viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks.

67. Next, I examine the corridors screened for examination as potential 3-to-2 corridors.

68. I begin with {{{ }}}. The 2019 Waybill Sample suggests {{{ }}} would have only two independent routes, down from three, following a combination of CP and KCS. However, a review of the track maps in **Exhibit 9** suggests otherwise. There are at least three viable independent routes in this corridor, with or without a combination of CP and KCS, including {{{ }}}. All three of these route options are observed in the Waybill Sample for 2018 and for 2017, moving types of industrial sand that are shipped in this corridor in 2019.[41] After the combination, the CP-KCS route will constitute a new single-line service.

[41] See my workpaper 8.

EXHIBIT 9
{{{ }}} would have at least three viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks.

69. I next evaluate {{{ }}}. This low-volume corridor is not likely to see material competitive effects. In 2019, revenues in this corridor were only {{{ }}} dollars and only {{{ }}} tons of goods were moved.[42] Moreover, 60 percent of the tonnage moved in this corridor in the 2019 data were {{{ }}}.[43] Although not observed in the Waybill Sample, the two carriers' network maps suggests this corridor can be served by {{{ }}}.[44] The track map in **Exhibit 10**, illustrates these routing options that will be available for shippers in this corridor after a combination of CP and KCS, including {{{ }}}.

[42] *See* Exhibit 3. See my workpaper 9.

[43] See my workpaper 9.

[44] Another, circuitous route involving {{{ }}}, which does not appear on the map, can be found on several shipments in the 2016 Waybill Sample. These two routes, even if circuitous, are likely to be reasonable options given that most movements in this corridor are {{{ }}}. See my workpaper 9.

EXHIBIT 10
{{{ }}} would have at least three viable, independent routes after a CP and KCS combination

{{{

}}}

Source: Confidential Waybill Sample, 2015–2019
Note: The table describes the potential independent routes before and after a CP and KCS combination. The italicized routes are those that are feasible based on Confidential Waybill Sample shipments observed in 2016, 2017, or 2018, or are routes that are feasible based on the railroads' networks. The dotted line is a route observed from the 2019 Waybill Sample that involves {{{ }}} After a CP and KCS combination, the CN-KCS route would no longer be independent of the CP single-line service.

70. Finally, I evaluate the corridor that screened for examination as a potential 5-to-4 reduction, {{{ }}}. First, as I noted above, the Board has

historically focused on 3-to-2 and 2-to-1 reductions as most relevant. That focus is consistent with the fact that economic models of competition tend to suggest the effect of losing a competitive option is most significant when the number of options is already small.[45] Even taking the screen results at face value, without any additional evaluation, there would be at least four independent options available to shippers in this corridor after a combination of CP and KCS. Second, KCS currently does not have a large presence on this corridor. Out of more than {{{ }}} movements in this corridor in 2019, only {{{ }}} have participation by KCS, which is consistent with shippers having so many choices and also with KCS not being one of the better options among those.[46] Shippers are unlikely to experience a significant competitive effect from not having an independent KCS on this corridor.

71. In summary, the analysis of all seven corridors identified in the screening step demonstrates that there would not likely be a reduction in competition within any corridor because of a combination of CP and KCS.

[45] This general principle is embodied in the Herfindahl-Hirschman Index ("HHI") thresholds used in the Horizontal Merger Guidelines, which spell out increasing significance of concern for mergers in markets that are more concentrated and where the acquired firm is a larger portion of the competition that would otherwise exist. *See* Horizontal Merger Guidelines, Section 5.3.

[46] {{{ }}}. See my workpaper 10.

5. ANALYSIS OF CROSS-CORRIDOR COMPETITION SCENARIOS SHOWS NO LIKELY REDUCTION IN COMPETITION BETWEEN CORRIDORS IN A CP AND KCS COMBINATION

72. In the previous section, I examined competition within corridors. In this section, I examine geographic competition, i.e., competition between corridors. Specifically, I consider whether a combined CP and KCS would be likely to limit (a) receivers' ability to source a given commodity from shippers at different origins ("source competition"), or (b) shippers' ability to send a given commodity to a receiver at other destinations ("destination competition"). A railroad combination that reduces source competition or destination competition can potentially harm shippers and lead to higher prices or lower quality service.

73. As I showed in section 4, competition within corridors is undiminished by the combination of CP and KCS. Any benefit shippers may see from additional competition between corridors is incremental to this within-corridor competition. Consequently, the analysis of between-corridor competition is focused on identifying situations where CP and KCS are important and therefore could constitute an outsized portion of any incremental competitive significance and potentially raise a between-corridor competitive effect. That factual premise is likely to be unique to specific commodities and to depend on where that commodity originates and where it terminates. Therefore, this analysis will examine patterns of movements for specific commodities.[47]

[47] That is, I analyze geographic competition *commodity by commodity* allowing each commodity to have specific origins and destinations that are relevant for competition for the shippers of that commodity. For example, certain raw materials may only be sourced from a handful of areas and may only be processed in other specific areas.

74. Similar to my analysis of within-corridor competition, my analysis of cross-corridor competition for a given commodity is comprised of two steps. First, I apply a screen based on the 2019 Waybill Sample to identify origin-commodity pairs or destination-commodity pairs for which additional examination is useful. Second, I further analyze each of the areas identified by the screen to determine whether a substantial lessening of competition is, in fact, likely. Applying this established analytic framework demonstrates that no form of competition between corridors is likely to be harmed by a combination of CP and KCS.

5.1. The "50/10" analysis encapsulates the various possible forms of geographic competition

75. In this subsection, I explain the framework, methodology, and economic intuition of the two steps in my analysis of geographic competition. These steps are consistent with past practice in examining geographic competition in railroad mergers.[48] I then present the results of my analysis in section 5.2. I find that a combination of CP and KCS would not substantially lessen competition between corridors.

76. Before describing the methodology, it may be useful to establish some terminology to be clear about the various forms of geographic competition the analysis is designed to explore. The focus of the analysis will be:

- *Origin-commodity* pairs for which there might be reduced *destination* competition, and

[48] Verified Statement of Christopher Vellturo, *Canadian National Railway Company et al – control – EJ&E West Company*, Finance Docket No. 35087, Oct. 29, 2007 ("Vellturo V.S., 2007"), at pp. 85–88.

- *Destination-commodity* pairs for which there might be reduced *source* competition.

77. Consider a shipper located in Kansas City who produces brackets, which they currently ship to Mexico using KCS. In addition to the competition within this corridor to Mexico, the analysis of destination competition for this shipper asks whether there is an incremental competitive benefit because shippers of brackets from Kansas City can also find another destination for their brackets served by CP, perhaps Toronto. At the same time, this shipper may rely on steel as an input for making brackets and may currently source that steel from a mill in Mexico, again using KCS. The analysis of source competition for this shipper of steel to Kansas City involves other potential sources of steel, perhaps a Midwestern mill served by CP.

78. As these examples illustrate, geographic competition opens the possibility of dispersed options and of routes that a particular shipper is not currently using. To make useful comparisons across different corridors and reflect the likelihood a shipper might switch to any particular alternative, I rely on the economic intuition that similarly situated shippers are informative about each other's likelihood of choosing among the available options. That is, I use the share of all movements by shippers of the same commodity from the same origin (or to the same destination) as an indication of preferences among all shippers for that origin-commodity pair (or, respectively, the destination-commodity pair).[49] These shares, however, are not necessarily the share of

[49] This is consistent with the standard approach of other regulatory agencies in evaluating potential competitive effects of proposed mergers. For example, FTC and DOJ's Horizontal Merger Guidelines state that, "[t]he Agencies give weight to the merging parties' market shares in a relevant market, the level of concentration, and the change in concentration caused by the merger. . . Mergers that cause a significant increase in concentration and result in highly concentrated markets are presumed to be likely to enhance market power, but this presumption can be rebutted by persuasive

all movements that constitute a relevant market. Shipments of the commodity from other origins or to other destinations may also be relevant to the ultimate question of whether a combination of CP and KCS poses a risk of competitive effects in a well-defined market involving source or destination competition. Thus, the two steps of the analysis may be thought of as first narrowing consideration to origin-commodity or destination-commodity pairs that could be a relevant group of shippers, and then asking if such effects are likely for that group.

5.1.1. The initial screen methodology identifies areas for further review based on all varieties of possible geographic competition effects

79. The initial screen identifies for further review origin-commodity pairs and destination-commodity pairs for which a CP and KCS combination could potentially reduce "destination competition" or "source competition." The initial screen examines these two types of geographic competition separately.

80. Counting the number of options relevant to between-corridor competition is more complicated than counting options within a single corridor. Some corridors may be more desirable for shippers. Economists frequently rely on measures such as share of tons or revenues to standardize across such differences, as I do here. Using shares instead of counts, however, introduces a question of whether the denominator reflects the relevant set of options for shippers. Including too many or too few options could make shares a poor representation of actual competitive conditions. The share analysis

evidence showing that the merger is unlikely to enhance market power." *See* Horizontal Merger Guidelines, at p. 3.

used in past railroad mergers allows for various possibilities of how shippers may benefit from additional railroads operating at the origin or the destination or some combination by considering three variations – shares among all participating railroads, shares among railroads that were the originating carrier, and shares among railroads that were the terminating carrier.[50] I take the same approach here.

81. For each of these definitions of shares, the screen measures that share of traffic handled by the merging railroads for each origin-commodity and destination-commodity pair. If one of the merging railroads has a low share, then the combination is unlikely to substantially reduce competition and no further review is warranted. If, however, both merging railroads have sizable shares and the merger will result in a high share controlled by the combined firm, then there is a possibility that the merged firm could gain the ability to raise prices or reduce service quality for shippers of the commodity.[51] The screen flags these pairs for further review.

82. Specifically, the screen flags for further review origin-commodity or destination-commodity pairs if CP and KCS's combined shares of traffic (measured in tons) for the

---

[50] *See, e.g.*, Vellturo V.S., 2007, at pp. 85–88; Amended and Supplemented Verified Statement of Dr. David Reishus, *CSX Corporation et al. – control – Pan Am Systems, Inc. et al.*, Finance Docket No. 36472, July 1, 2021 ("Reishus V.S., 2021"), at pp. 65–66.

[51] A shipper faced with a multi-carrier movement may negotiate separately for portions of the movement under Rule 11, generating multiple waybills for parts of a single movement. The sampling methodology used to construct the Waybill Sample does not guarantee that the corresponding waybill for the rest of that movement is in the data. Thus, the waybill data for these "Rule 11" movements may list origins or terminations that are a point of interchange and not the actual origin or termination of the full movement. Even so, the origins and terminations listed in Rule 11 observations identify movements over which a carrier may be able to exercise market power in freight revenue negotiations. I am aware that KCS/KCSM recategorizes movements as rebills in a way that may not reflect shipper choices. There is no clean way to reverse this practice in the data. I include Rule 11 movements in the 50\10 analysis, consistent with the approach taken in analysis of prior railroad mergers. *See, e.g.*, Vellturo V.S., 2007, Appendix A, at p. 141, fn. 4.

pair exceed 50 percent, *and* both CP and KCS individually each have shares of at least 10 percent.[52]

83. The three definitions of shares used as screens for each type of geographic competition overlap. That is, they measure the same movements observed in the Waybill Sample, but using different assumptions about how important a railroad may be to competition. A screen can be triggered for any of the three calculations of shares to reflect different possibilities of either source or destination competition. In Appendix 7.1.1, I use an illustrative example to describe in more detail how the three types of shares are calculated.

84. The *participating* screens – *origin BEA area ("OBEA") participating* screen and *destination BEA area ("DBEA") participating* screen – assume that a railroad is not likely to compete with itself and measures shares for each of CP and KCS based on routings that either do or do not involve that railroad at any stage of the movement.[53]

85. The two screens that focus on the competition at the specific BEA area where source or destination competition is being assessed (*OBEA-originating* screen and *DBEA-terminating* screen) may express a more natural assumption: competition between corridors could depend on the independent railroads available to a shipper.

---

[52] The choice of these thresholds is consistent with the goal of identifying special circumstances where CP and KCS may have an outsize importance consistent with the possibility of an incremental effect from lost between-corridor competition and with the thresholds used to implement similar screens in prior railroad merger reviews. *See, e.g.*, Vellturo V.S., 2007, Attachment 2, at pp. 115–116.

[53] This measure can involve some intentional "double-counting" of routes that involve both CP and KCS, ensuring this screen is over inclusive. Some extremes of over-inclusiveness are ruled out with an adjustment to the threshold used in these double-counting instances. To trigger the screen, the participating share of the combined railroad, after removing double counting, must be at least 10 percentage points higher than the higher of the merging railroads' individual shares.

For example, a shipper looking to employ different destinations might look at the railroads immediately available in a BEA area such as Kansas City, MO and try to negotiate between KCS, who can start a movement headed southward, and CP, who could start a movement headed northward.

86. The last two screens (*OBEA-terminating* screen and *DBEA-originating* screen) may seem unusual in that they focus on the "other end" of each movement. That is, for movements of a commodity from a given origin, the *OBEA-terminating* screen looks at the *terminating* end of these movements, potentially across many different possible destinations. This measure accounts for the possibility that a shipper can only choose an alternative destination if it can find a customer served by a different railroad.

87. Taken together, these various ways of measuring shares across both forms of geographic competition address every recognized way in which there might be some competition between corridors that warrants further investigation.

88. The second-stage methodology addresses each possibility from the step-one screen to assess whether competitive effects are likely.

89. There are two primary reasons why the 50/10 screens could flag a commodity-BEA area pair for further review when in fact there is no likelihood of competitive effects. First, the 2019 Waybill Sample used to calculate shares may not accurately indicate actual shares. Second, for some commodity-BEA area pairs, in response to any attempted exercise of market power, shippers could turn to other railroads serving other sources or destinations of the commodity in enough numbers to make the attempted price increase unprofitable.

90. The first issue, measurement of shares as a reliable description of choices, has been recognized in the Board's recent decision to adjust the Waybill sampling methodology to better capture smaller shipments.[54] With the thin observation of these shipments that was still used in the 2019 Waybill Sample, the initial screen can be triggered by shares based on as few as 2 observed shipments which mathematically has to give one carrier at least 50 percent even if that is not an accurate representation of competition. This issue was indirectly addressed in past implementations of this test by imposing a minimum of one carload per day on candidate BEA area-commodity pairs.[55] I will use an equivalent threshold for reliability of the screen.[56] That *de minimis* approach to the screens may be appropriate in some cases where there are not enough movements observed to know what choices shippers have. In some cases, however, we may be able to glean, even from minimal numbers of movements, the pertinent fact that shippers have exercised different choices over time and conclude the screening shares overstate any potential for competitive effects.

91. Generalizing this issue, I conclude that the shares underlying the screen itself are reliable descriptions only when they are based on a sufficient number of movements in

---

[54] *Waybill Sample Reporting*, EP 385_8 (Decision served Nov. 29, 2019) at pp. 3–4.

[55] For example, Vellturo says, "As can be seen in Attachment 3, most of the 50/10 product/DBEA pairs involve combined CN/EJ&E traffic that represents relatively limited volumes with respect to the total traffic shipped by the parties. Only ten product/DBEA pairs involve traffic where the combined volumes of the two railroads amount to more than a carload a day (and only four have more than three carloads per day). I understand that the Board has stated that it must approve a transaction of this type 'unless there will be adverse competitive impacts that are both 'likely' and 'substantial.'" *See* Vellturo V.S., 2007, at p. 88.

[56] With the 1:40 scaling of the sample for single carload waybills, this threshold indirectly implements a minimum of 10 observed shipments so that the 10 percent portion of the test is possible to obtain with one observed shipment. *See* Railinc Business Services, 2019 Surface Transportation Board Carload Waybill Sample Reference Guide, Dec. 23, 2020, at pp. 49, 57. Requiring 10 shipments or 365 carloads is functionally equivalent as a "reliability threshold" in the BEA-commodity pairs I examine.

the given year and are sustained over time. Where the shares are based on a small number of observed movements, the shares cannot be deemed to reflect accurately a shipper's choices. In addition, however many observations they are based on, shares that lack persistence over time suggest a concern is not likely. For CP and KCS to offer important incremental competition between corridors, their shares should consistently be high enough that the same screen would trigger for any recent year's data. If, instead, the BEA area-commodity pair only triggers in the 2019 data because of share fluctuations from year to year, then shippers' choices in the prior years suggest that they can and do rely on different railroads to such an extent that they would certainly be able to turn to these other options to defeat any attempted price increase.[57]

92. For the second issue, assessing whether shippers are likely to defeat any hypothetical price increase, I implement a version of the "critical loss" analysis used in past railroad mergers to examine the feasibility of anyone imposing a price increase on the shipments of a given commodity from a given source (or to a given destination).[58] This is a version of the test that is commonly used in competition analysis to ensure "market shares" are measuring concentration in a well-defined market – i.e., whether shippers have choices outside of those measured in the shares used by the screen and which the shippers would turn to in large enough numbers to make a small but significant and non-transitory increase in price (a "SSNIP") unprofitable.[59]

---

[57] Where a commodity-BEA pair does not appear in these prior years of the Waybill Sample, I cannot distinguish a commodity that did not move by rail from one that may not have moved by any means or from one that moved in such small volume as to be missed by the sampling methodology. Therefore, I make no inference about the availability of other options based on commodity-BEA pairs that do not appear in prior years.

[58] Vellturo V.S., 2007, at pp. 88–90.

[59] Horizontal Merger Guidelines, at pp. 11–12

93. In constructing the critical-loss analysis, I recognize that the demand for rail services is a product of shippers' options at both the originating and the receiving ends of a shipment. If the price of a shipment increased, shippers at the originating end may have other outlets to which they could divert some of their product or shippers at the receiving end may have other sources they could turn to for the commodity. In order for a price increase to be profitable, the profit lost on shipments that no longer happen (either because affected originating *or* receiving shippers have alternatives) needs to be less than the increased profit on shipments that do still happen. The critical loss test examines whether the alternatives at either end are so plentiful that a prediction that a price increase would be profitable is not credible.[60] In Appendix 7.1.2, I illustrate the volume available for a shipper to make such diversions at either the originating or receiving end of the shipment.

94. In practice, the fact that shippers on either end could defeat a price increase means the larger of the volumes available as (a) alternative sources for the affected destinations or (b) alternative destinations for affected sources will serve as the relevant comparison point to the affected volume in a hypothesis of CP and KCS raising price on their shipments of a screened BEA-commodity pair. Following analysis used in

[60] Note that "critical loss" is a concept that antitrust analysis usually associates with the elasticity of demand – i.e., with shipper responses to prices. The terminology Vellturo uses to describe his implementation of the test can suggest the response depends on the divertible capacity of competing railroads. Both of my implementations actually reflect that the ability of shippers to get the commodity to the affected areas on an independent routing is important and that shippers would make a choice to do so based on relative prices. *See* Vellturo V.S., 2007, Attachment 2, at p. 119 ("Accordingly, for the product/DBEA pairs identified by the screen, I evaluated the *ability (both actual and potential) of other providers of transportation services* to prevent the combined firm from raising prices (or reducing service) after the proposed combination. Other providers of transportation services provide such competitive discipline if they collectively have the ability and incentives to take sufficient volumes from the combined firm in the event of price increase so as to render such an increase unprofitable." [emphasis added]).

previous railroad mergers, I use a conservative threshold of the relative volumes to identify whether enough volume would plausibly divert to other railroads if CP and KCS were to impose a SSNIP on shipments from the OBEA. The threshold implies that a ratio of the affected volume to the available volume that is smaller than one supports a conclusion that the hypothesized price increase would not be profitable.[61]

95. In the next section, I present the results of the initial screens and then, for each BEA-commodity pair identified in those screens, I show that the fuller analysis demonstrates that shippers could readily defeat any attempted price increase on that BEA-commodity pair.

5.2. Analysis of competition between corridors shows that a CP and KCS combination would not materially reduce geographic competition for shippers

5.2.1. Results for source competition

96. In this section, I discuss the results of the 50/10 screen for source competition and the subsequent analysis that confirms that none of the destinations identified by the screen are concerning.

[61] This threshold for the ratio of available to affected volume is consistent with the threshold used by Vellturo in his critical loss analysis. He required that direct divertible capacity (available volume) be ten times greater than the critical loss volume. Under his assumption of a 50 percent profit margin, the comparison using his "conservative" ratio of 10 amounts to comparing available volume to the capacity handled by the merging parties prior to the merger (affected volume). *See* Vellturo V.S., 2007, Attachment 2, at pp. 124–126. The price increase would likely be unprofitable if affected volume is less than available volume – that is, if the ratio of affected to available volume is less than one.

97. In **Exhibit 11**, I summarize the results of the initial screen for source competition. Overall, based on movements in the 2019 Waybill Sample, twelve DBEA-commodity pairs screen for the second-stage considerations of source competition. None of these are in the category that may be most intuitive for competition – i.e., the DBEA-terminating category where CP and KCS might be seen as competing to deliver products into Kansas City does not screen as potentially problematic for any commodity. The screen does trigger further examination for seven pairs in terms of the DBEA-participating screen and five in terms of the DBEA-originating screen.

Source: Confidential Waybill Sample, 2019
Note: The exhibit reports the results from the initial stage of the of 50/10 screen for source competition. The three panels describe the DBEA-commodity pairs triggered by each of the participating, terminating, and originating screens. A DBEA-commodity pair is triggered when both KCS and CP have tonnage shares greater than 10 percent and a combined share greater than 50 percent, and, for the participating screen, the combined share must also be at least 10 percent greater than the maximum of either the CP or KCS shares. The CP, KCS, and combined shares are reported for each pair in the "Share of Tonnage" columns. The exhibit also reports the total expanded tonnage.

98. For each of these DBEA-commodity pairs, I look at additional information to determine whether the results of the screen reflect the kind of competitive significance of CP and KCS in movements of the commodity into the BEA area that would be

needed to create a between-corridor competitive effect. As explained above, there are two prominent considerations in my assessment: first, the reliability of the share measure as a description of shipper choices; second, whether the measured shares reflect sustainable market power or whether shippers have ready alternatives involving other railroads that they could turn to in the face of higher prices.

99. In **Exhibit 12**, I summarize the results of this assessment for each of the DBEA-commodity pairs that screen for examination of source competition. For each DBEA and commodity, the third column identifies whether the pattern of shares over time indicates that shippers' choices in prior years demonstrate an ability to circumvent any attempted price increase. The fourth column identifies whether the number of movements underlying the shares used in the screen satisfies the *de minimis* threshold and, consequently, involves enough movements for the shares to be accurate enough for the screen to apply. Check marks in the fifth column indicate that a DBEA-commodity pair can be dismissed based on the unreliability of the screen's underlying share information.

100. The two columns on the right report the results of the critical loss analysis. I report the ratio of the affected volume to the available volume for diversion. If this ratio is below one, any attempt to impose a SSNIP is likely to be unprofitable, which I indicate with a check mark in the final column. I find that every DBEA-commodity pair can be eliminated as a concern for at least one of these reasons, and many for both, demonstrating that none are likely to experience a between-corridor competitive effect from a combination of CP and KCS.

Source: Confidential Waybill Sample, 2015–2019
Note: See Appendix, Exhibit 20 and Exhibit 21 for details. The first three columns characterize the reliablility of screened shares and report the extent to which shippers likely have access to additional alternative railroad options for shipments of each commodity to each DBEA. The last two columns characterize the critical loss analysis and report the ratio of the total expanded tonnage affected by the combination CP and KCS over the maximum of the available tonnage. A ratio below one indicates that sufficient diversion on either the receivers' or shippers' end is likely to render a price increase unprofitable. The two check-mark columns are checked when a commodity-DBEA pair is considered to have unreliable shares or is able to defeat a hypothetical price increase by a combined CP/KCS.

101. To make more concrete the logic behind my assessments of these DBEA-commodity pairs, consider **steel or iron plate shipped to the Amarillo, TX-NM BEA**. I first address the reliability of the screening shares. As I explained above, shares are not a reliable description of shippers' choices unless they are based on enough movements in the given year and are not merely a fluke of year-to-year fluctuations. That is not what I observe in the pattern of movements for this BEA-commodity. KCS and CP each participated in more than 10 percent of these movements in the 2019 data ({{{ }}} and {{{ }}} percent, respectively) and combined, CP and KCS participated in {{{ }}} percent. However, when I look at movements in previous years, I see that shippers are demonstrating that they can rely on alternatives to CP and

KCS.[62] Indeed, in other years, shippers {{{ }}} used alternatives to CP and KCS. I observe movements of steel plate to Amarillo in the data for each year from 2015 through 2019, yet only in 2019 are CP and KCS used often enough by shippers to trigger the screen.[63] This pattern tells me that although I observe shippers currently (in 2019) using CP and KCS, they routinely used other options and could respond with these options to any attempted price increase by a combined CP/KCS on steel plate movements to Amarillo.

102. In addition, steel plate is rarely shipped to Amarillo, as there are only {{{ }}} observed movements in the 2019 Waybill Sample.[64] Thus, any railroad involved in even one of the {{{ }}} movements would have a share above the 10 percent threshold, which makes that portion of the screen unreliable. These {{{ }}} movements represent {{{ }}} carloads in 2019, well below the one-carload-per-day threshold that the Board has relied upon in previous competitive analyses.[65] This *de minimis* level of activity, by itself, would be enough reason to conclude that the shares that trigger the screen are not a reliable measure of the competitive significance of CP and KCS for the BEA-commodity pair.

103. Continuing with steel plate shipped to Amarillo as an exemplar, I next discuss how the volume ratio informs the critical loss analysis. This analysis explores whether a hypothetical price increase on steel plate shipped to Amarillo is likely to be defeated by shippers diverting their steel plate shipments to other railroads, and the volume ratio

62 *See* Appendix 7.2, Exhibit 20.
63 See my workpaper 11.
64 *See* Appendix 7.2, Exhibit 20.
65 *See* fn. 56.

reveals that the answer is yes. In this case, the shippers of plate to Amarillo have more options than receivers of plate in Amarillo. Either group has enough alternatives evident for their volume to suggest they could divert enough of their demand for rail service to defeat a price increase, but I proceed with the shipper side. The volume affected by the hypothetical price increase is two percent of the volume of steel plate demand available to shippers looking to divert their shipments from Amarillo – that is, there is ample potential for shippers to defeat the price increase.[66] Thus, from the critical loss analysis, I can also conclude that a combined CP/KCS would not likely find it profitable to increase prices on steel plate shipped to Amarillo.

104. After analyzing all 12 DBEA-commodity pairs that trigger the screen for further examination of source competition from Exhibit 11, I find that none is likely to experience a between-corridor competitive effect as the result of a CP and KCS combination. As detailed in Appendix 7.2, these DBEA-commodity pairs have a reliability basis or a critical-loss basis, or both, to conclude that there is unlikely to be any harm to source competition from a CP and KCS combination.

[66] To identify volume of steel plate demand available to shippers looking to divert their shipments from Amarillo, I look at all the origin BEAs that shipped steel plate to Amarillo in 2019, and only keep those for which steel plate could be shipped independently of CP and KCS to destinations other than Amarillo. That is, I check whether I observe in the 2019 Waybill Sample a movement of steel plate to a destination other than Amarillo independently of CP and KCS. Shippers at these origins could divert volume being shipped to Amarillo to these other destinations in order to defeat a hypothetical price increase. I then compare the total volume of steel plate shipping to Amarillo to the volume of steel plate being shipped to these other destinations. If this ratio is below the critical loss threshold, then there is enough available volume to likely defeat a hypothetical price increase. *See* Appendix 7.2, Exhibit 21.

5.2.2. Results for destination competition

105. In this section, I summarize the results of the 50/10 screen for destination competition and the subsequent analysis that confirms that none of the origins identified by the screen are concerning.

106. In **Exhibit 13,** I summarize the results of the initial screen for destination competition. Overall, based on movements in the 2019 Waybill Sample, 20 OBEA-commodity pairs trigger the screen for destination competition, including 9 that trigger the OBEA-participating screen and 11 that trigger the OBEA-terminating screen. No OBEA-commodity pairs trigger the OBEA-originating screen.

Source: Confidential Waybill Sample, 2019
Note: The exhibit reports the results from the initial stage of the of 50/10 screen for destination competition. The three panels describe the OBEA-commodity pairs triggered by each of the participating, terminating, and originating screens. An OBEA-commodity pair is triggered when both KCS and CP have tonnage shares greater than 10 percent and a combined share greater than 50 percent, and, for the participating screen, the combined share must also be at least 10 percent greater than the maximum of either the CP or KCS shares. The CP, KCS, and combined shares are reported for each pair in the "share of tonnage" columns. The exhibit also reports the total expanded tonnage.

107. For each of these OBEA-commodity pairs, I look at additional information to determine whether the results of the screen reflect the kind of competitive significance of CP and KCS in movements of the commodity out of the BEA area that would be needed to create a between-corridor competitive effect. In **Exhibit 14**, I summarize the results of this assessment for each of the OBEA-commodity pairs that screen for destination competition, reporting and organizing results as I did in the previous section for source competition.

108. I evaluate the reliability of the measured shares themselves, and whether the measured shares reflect sustainable market power or whether shippers have ready alternatives involving other railroads that they could turn to in the face of higher prices. Based on these two assessments, as detailed in Appendix 7.3, I can eliminate all but one OBEA-commodity pair. Those two assessments do not allow me to eliminate corn syrup shipped from Davenport-Moline-Rock Island, IA-IL (row 11) as a potential concern for between corridor competitive effects. I discuss corn syrup from Davenport in more detail below and explain why it is also unlikely to experience a reduction in between-corridor competition.

Source: Confidential Waybill Sample, 2015–2019
Note: See Appendix, Exhibit 22 and Exhibit 23 for details. The three columns under "Assessment of Reliability of Screened Shares" characterize the reliablility of screened shares and report the extent to which shippers likely have access to additional alternative railroad options for shipments of each commodity from each OBEA. The last two columns characterize the critical loss analysis and report the ratio of the total expanded tonnage affected by the CP and KCS combination over the maximum of the available tonnage. A ratio below one indicates that sufficient diversion on either the receivers' or shippers' end is likely to render a price increase unprofitable. The two check-mark columns are checked when a commodity-OBEA pair is considered to have unreliable shares or is able to defeat a hypothetical price increase by a combined CP/KCS.

109. To the extent that a combination of CP and KCS affects **corn syrup shipped from Davenport-Moline-Rock Island, IA-IL**, competition and shippers will benefit from potential new CP/KCS single line service. The 2019 data show CP or KCS handling the terminating leg of {{{ }}} percent of movements of corn syrup that originate out of the Davenport BEA. However, {{{ }}} of the shipments terminated by CP terminate in Kansas City, and {{{ }}} of these movements are Rule 11 shipments that

CP handed off to another railroad in Kansas City.[67] {{{ }}} of these Rule 11 interchanges in Kansas City are with KCS and destined for Mexico.[68] After a combination of CP and KCS, these CP movements could instead go on a CP/KCS single line through Kansas City.

110. Thus, after my analysis, I find that none of the 20 OBEA-commodity pairs that trigger the screen for further examination of destination competition summarized in Exhibit 13 is likely to experience a between-corridor competitive effect as a result of a combination of CP and KCS.[69] There is unlikely to be any harm to destination competition.

[67] See my workpaper 12.

[68] The CP and KCS 100% traffic tapes confirm that out of the {{ }} movements of corn syrup in which CP handled the shipment from Davenport to Kansas City, {{ }} were interchanged with KCS in Kansas City with an ultimate destination in Mexico. See my workpaper 12.

[69] In Appendix 7.3, I describe similar analysis of additional information for each of the remaining OBEA-commodity pairs in Exhibit 14. I find that each of the OBEA-commodity pairs described in the appendix have a reliability basis, critical-loss basis, or both on which to conclude that the combination of CP and KCS is unlikely to affect destination competition.

6. A CP AND KCS COMBINATION DOES NOT CREATE ANY ISSUE OF COORDINATED COMPETITIVE EFFECTS

111. In the previous sections, I considered the various forms of competitive effects theories that could involve unilateral action by a combined CP/KCS. In this section, I consider a competitive effect theory raised in the U.S. Department of Justice's comment – that a combination of CP and KCS might affect competition by facilitating a more coordinated outcome among the railroads that would otherwise be competing with one another.[70]

112. A number of factors are generally recognized as making coordination more difficult to achieve without industry participants outright engaging in illegal activities. Collectively, these factors go to the difficulty of industry participants reaching some agreement on industry outcomes with each other, monitoring each other's compliance with that agreement, and punishing non-compliance to incentivize continued coordination.[71]

113. In the case of a combination between CP and KCS, three additional factors make any effect on competition through coordinated effects unlikely regardless of how likely (or not) the railroad industry is to support coordinated outcomes of any sort based on the general factors of coordination.

---

[70] Comment of the United States Department of Justice, *Canadian Pacific Railway Limited, et al. – Control – Kansas City Southern, et al.*, Finance Docket No. 36500, Apr. 12, 2021.

[71] Horizontal Merger Guidelines, section 7.2.

114. First, a combined CP/KCS would still be the smallest Class I railroad. CP and KCS are currently the two smallest Class I railroads.[72] The smallest participants in an industry generally have incentives to grow and build their share at the expense of larger participants.[73] That dynamic can make an agreement between large and small participants particularly difficult to achieve as the two groups would likely disagree about whether to split the gains from coordination based on historic performance or future potential. Likewise, small and large industry participants are likely to have disagreements over what constitutes non-compliance and have different capabilities to punish and be punished for non-compliance.[74]

115. Second, as shown in the previous sections, a combination of CP and KCS does not eliminate any significant competitive overlap between them. In general, coordinated

---

[72] *Canadian Pacific Railway Limited, et al. – Control – Kansas City Southern, et al.*, Finance Docket No. 36500 (Decision No. 4 decided Apr. 23, 2021), at p. 2 ("[T]he combination of CP and KCS, the sixth largest and seventh largest Class I railroads, respectively, would still result in the smallest Class I railroad, based on U.S. operating revenues").

[73] The Horizontal Merger Guidelines explain that a small firm with an ability to expand quickly is less likely to conform to a coordinated agreement. *See* Horizontal Merger Guidelines, at p. 26 ("A firm is less likely to be deterred by whatever responses occur [(i.e., less likely to coordinate with rivals)] if the firm has little stake in the status quo. For example, a firm with a small market share that can quickly and dramatically expand, constrained neither by limits on production nor by customer reluctance to switch providers or to entrust business to a historically small provider, is unlikely to be deterred."). *See also* Bos, Iwan, and Joseph E. Harrington, Jr. "Endogenous cartel formation with heterogeneous firms," *The RAND Journal of Economics* 41, no. 1 (2010): 92-117 at p. 93. The authors consider small firms with production constraints and also find reason to conclude "we should not expect a cartel to include very small firms."

[74] The academic literature confirms that these types of asymmetries, which may be generalized as differences in various aspects of cost structure, increase the difficulty of coordination. *See* Ivaldi, Marc, Bruno Jullien, Patrick Rey, Paul Seabright, and Jean Tirole, "The Economics of Tacit Collusion: Implications for Merger Control," in *The Political Economy of Antitrust* (Emerald Group Publishing Limited 2007) ("Ivaldi 2007") at pp. 223-224 ("[In regards to cost asymmetry] First, firms may find it difficult to agree to a common pricing policy. Indeed, firms with a lower marginal cost will insist on lower prices than what high-cost firms would wish to sustain. More generally, the heterogeneity in cost structures may rule out any 'focal point' in pricing policies and so exacerbate coordination problems. . . Second, even if firms agree on a given collusive price, low-cost firms are more difficult to discipline.").

effects theories often reflect a simple intuition that coordination is easier among fewer parties – that two people can coordinate their actions more easily than three – and there is some economic foundation for considering reductions in the number of competitors as a possible impetus to coordination.[75] However, a combination of CP and KCS does not involve such a reduction as they are not horizontal competitors to each other. So, the combination does not change the likelihood of any agreement being reached or enforced.

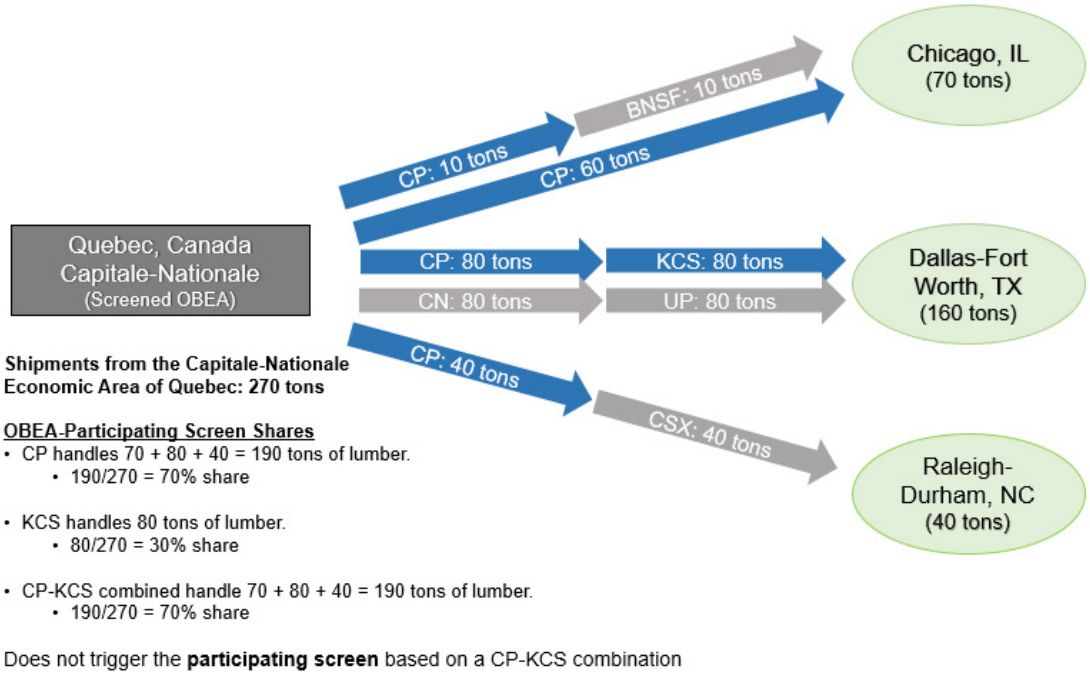
116. Third, the pro-competitive effect of a combination of CP and KCS would tend to disrupt any tendency toward agreement. The incentive to realize the potential of new single-line service, for example, would create an incentive for the combined CP/KCS to compete more aggressively. And, as discussed above, the enhanced quality of the combined CP/KCS single-line service would incentivize rivals to change their own service and pricing. Change and disruption of this sort generally make reaching an agreement more difficult (at least without engaging in outright illegal activity) as there is not an obvious focal point for outcomes from which an agreement could build.

117. Based on these factors, I conclude that a combination of CP and KCS is unlikely to affect competition through coordinated effects.

[75] For example, see Ivaldi 2007 at p. 220 ("Collusion is more difficult when there are more competitors. First, coordination is more difficult, the larger the number of parties involved. Second, and beyond the issue raised by the difficulty of reaching a consensus, deviations from it are more tempting in the presence of many competitors: Since firms must share the collusive profit, as the number of firms increases each firm gets a lower share of the pie. This implies that the short-run gain from deviation increases, while at the same time the long-run benefit of maintaining collusion is reduced. It is thus more difficult to prevent firms from deviating.").

7. APPENDIX

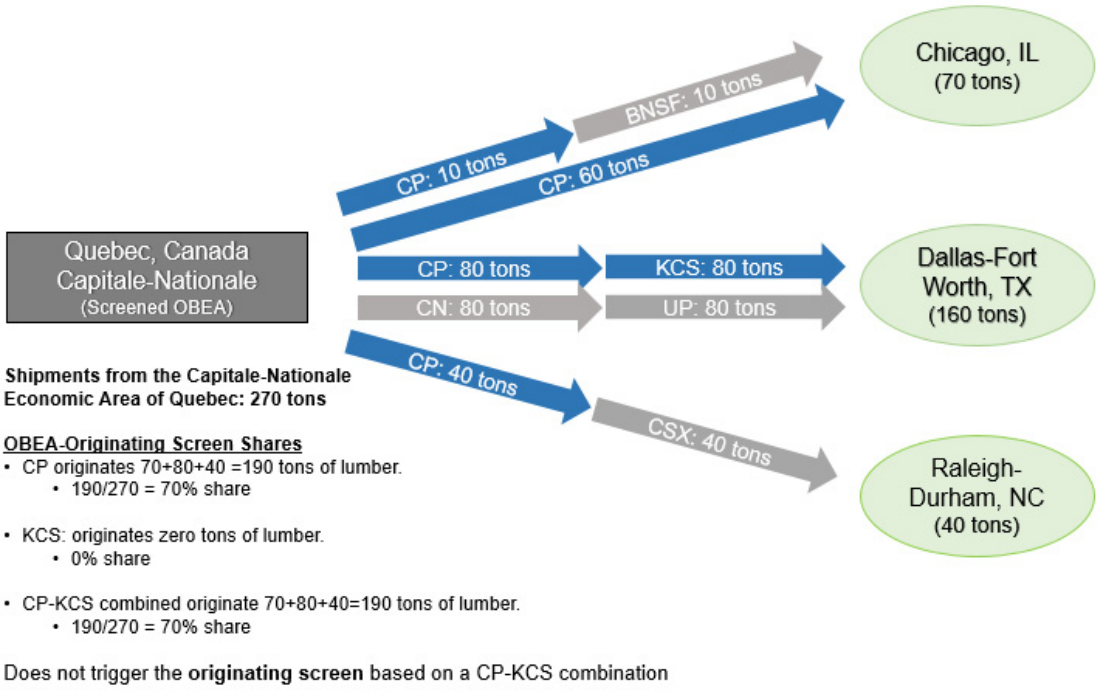
7.1. Appendix: Details of 50/10 screen implementation



7.1.1. Illustration of three definitions of share calculations

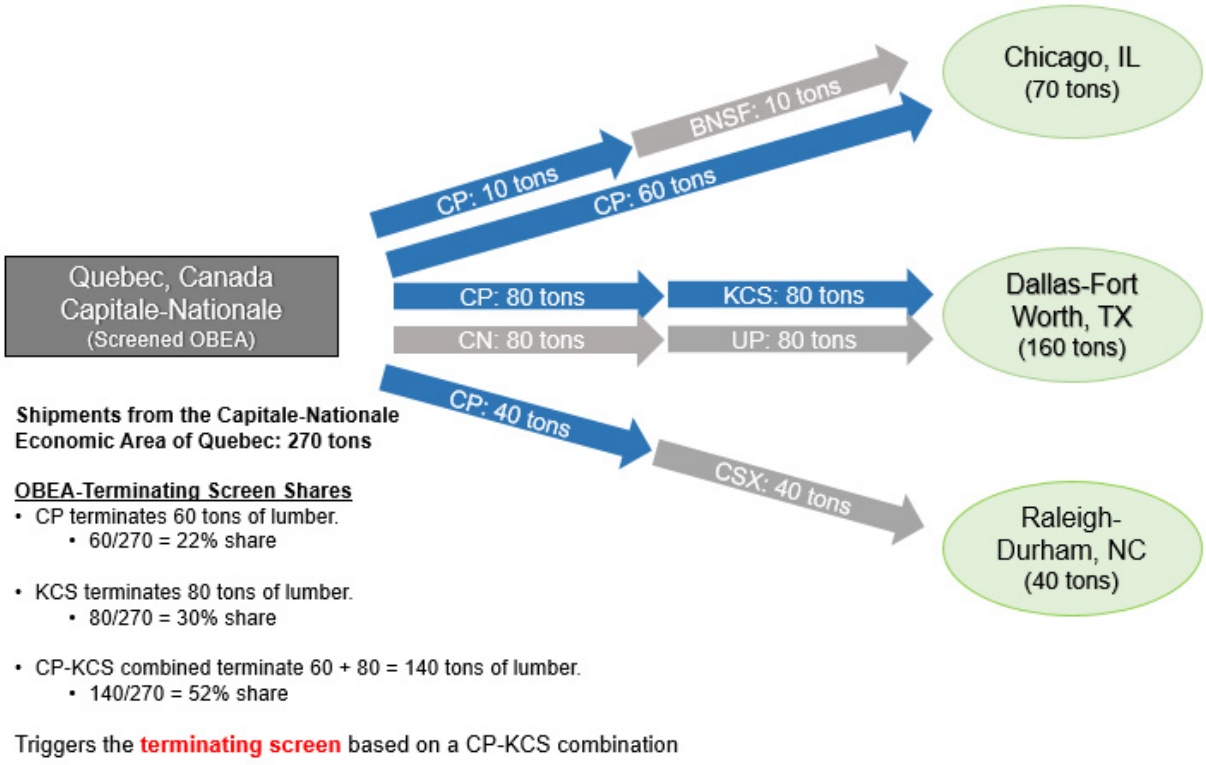
118. To make the three share calculations of the 50/10 screens more concrete, I will explain each screen as they apply to destination competition (that is, the potential that shippers benefit from alternative shipment routes from a given origin to alternative destinations). I use the same pairings of a commodity (defined by a non-hazardous 7-digit STCC code) and an originating BEA area (*OBEA*) in the Confidential Waybill Sample in each of the three screens. Each screen, however, uses a different method for calculating the CP and KCS movement shares for each pair.

119. The first version is the most general and calculates CP and KCS shares based on all movements of the commodity from the OBEA that CP and KCS *participate* in at all, whether as the originating, terminating, or intermediate railroad. I call this the "*OBEA-participating*" screen. I describe a stylized example of how to calculate the three OBEA-participating screen shares in **Exhibit 15** based on actual movements in the data, but the details in the diagram are all fabricated for the purpose of exposition. In the exhibit, the blue arrows describe tonnage of lumber shipped by either CP or KCS from the Capitale-Nationale, QB OBEA. To calculate the shares, I separately sum the tonnage handled by CP, by KCS, and by either CP or KCS, and then divide by the total tonnage originating from the OBEA.



120. The participating screen allows for some intentional double-counting. In this example, the route where 80 tons are interchanged between CP and KCS has the same 80 tons counted in the shares for each railroad, although counted only once in the combined share. The threshold accounts for this sort of double-counting. Specifically, the OBEA-participating screen is not triggered for this example because, while both CP and KCS each have shares greater than 10 percent and a combined share greater than 50 percent, the combined share is not at least 10 percent greater than the maximum of the separate shares for CP and KCS. This is consistent with the intuition that KCS's participation on the route to Dallas may be relevant to shippers, but as a partner on this route with CP, the shippers' options are not likely to be made worse by a combination of CP and KCS.

EXHIBIT 15
Stylized example of an OBEA-participating screen calculation to assess the extent of destination competition

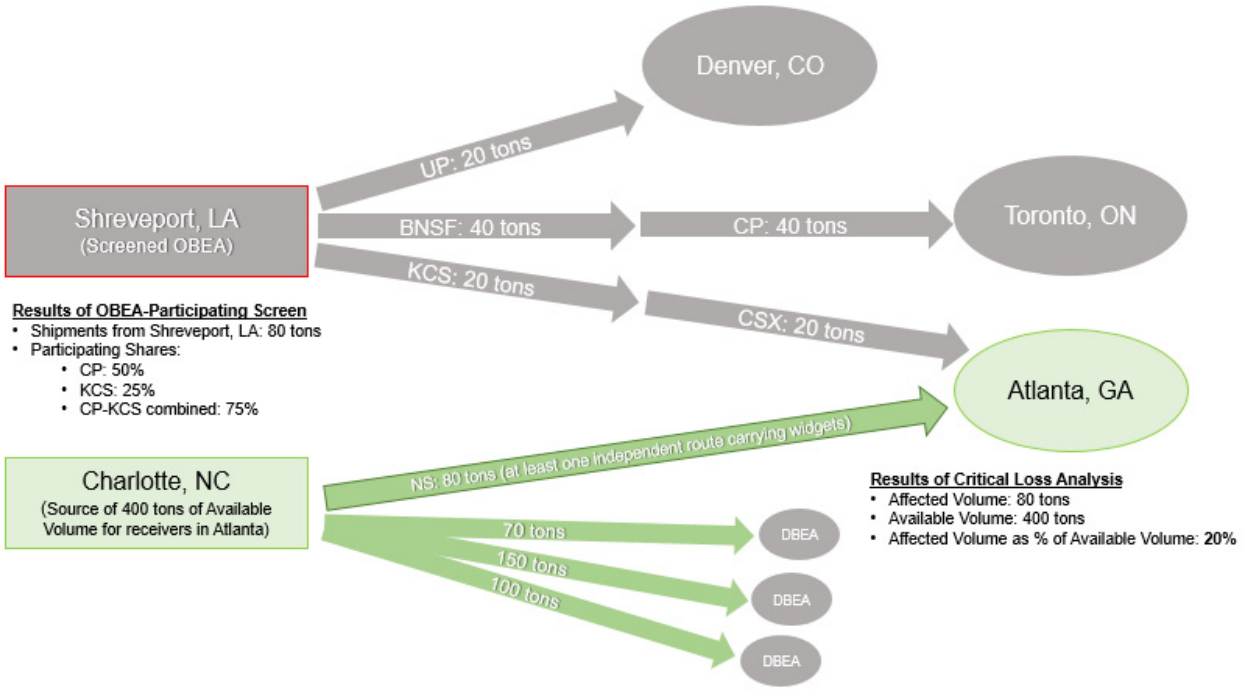


121. The second version of shares allows for the possibility that a shipper's ability to choose alternative destinations is most dependent on the railroads available to originate traffic in the OBEA. This version calculates shares based on the identity of the *originating* carrier for movements of the commodity from the OBEA. I call this the "*OBEA-originating*" screen. The OBEA-originating screen shares are calculated similar to the OBEA-participating screen, except that the parties must be the originating railroad for the tonnage to factor into the share calculations. The stylized example in **Exhibit 16** presents the same movements as the previous example, but counted according to the originating screen. As originations are only observed as competition between CP and CN in this example, the combination of CP and KCS does not reduce the choices of shippers. This screen would trigger, however, for a hypothetical combination of CP with CN reflecting the fact that such a combination would not only affect competition on the route to Dallas, it might affect shippers to Chicago and Raleigh as well.

EXHIBIT 16
Stylized example of an OBEA-originating screen calculation to assess the extent of destination competition

122. The third version allows for the possibility that a shipper's ability to choose alternative destinations is most influenced by the carriers operating at those destinations. It calculates shares for movements of the commodity from an OBEA based on the identity of the *terminating* railroad. I call this the "*OBEA-terminating*" screen. The OBEA-terminating screens are calculated similar to the other screens, except that the parties must be the terminating railroad for the tonnage to factor into the share calculations. The stylized example in **Exhibit 17** illustrates the same movements as the prior examples, but counted according to terminations. In the example, this screen does trigger for a CP and KCS combination suggesting further examination to cover the possibility that KCS at Dallas is a relevant option affecting competition for shippers of lumber out of Quebec as they negotiate with CP for termination at Chicago.

EXHIBIT 17
Stylized example of an OBEA-terminating screen calculation to assess the extent of destination competition



123. The analogous definitions and share calculations for source competition revolve around shipments of each commodity to a destination BEA area (the "*DBEA*"). They are "*DBEA-participating*" which uses shares based on all movements CP or KCS participate in, "*DBEA-terminating*" which gives CP and KCS shares based on their identities as the terminating carriers, and "*DBEA-originating*" which gives them shares based on their identities as the originating carrier.

7.1.2. Illustration of available capacity calculations for critical-loss analysis

124. To make the available capacity used in the critical-loss analysis more concrete, **Exhibit 18** illustrates a BEA-commodity pair that would trigger the *OBEA-*

participating screen. In this example, shipments of widgets are observed from Shreveport to Denver, Toronto, and Atlanta with CP participating in 50 percent of the shipped tons and KCS participating in 25 percent. The screen identifies widgets shipped from Shreveport as having the potential to be affected by a CP and KCS combination based on these shares and the critical loss test can then address whether the implied concentration is likely to matter. In this example, widgets are also shipped to Atlanta from Charlotte via NS without any involvement by CP or KCS. Shippers on the receiving end, faced with a hypothetical price increase on their shipments from Shreveport, would be able to divert some of their demand for widgets to Charlotte and, consequently, divert their demand for rail service to NS. There may be lots of widgets shipped out of sources like Charlotte that serve the same destinations as Shreveport over independent routes. As I explained in section 88, the volume of such shipments relative to the volume of shipments included in the screening shares is a useful approximation of whether enough diversion on the receiving end is likely that a price increase would be unprofitable.

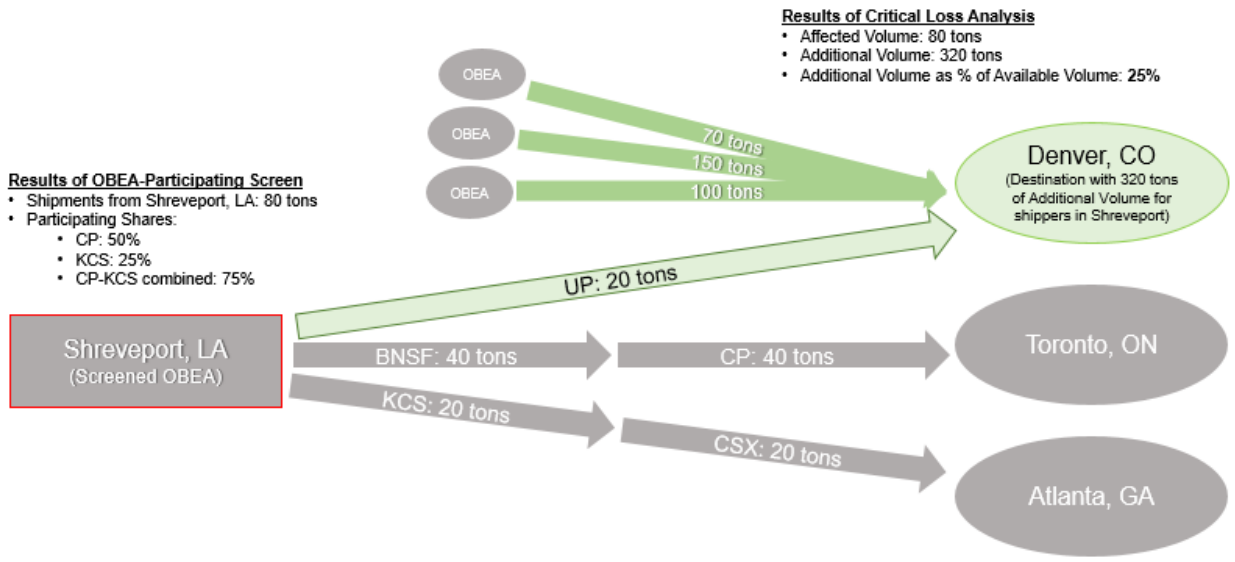


EXHIBIT 18
Illustration of volume available to shippers on the receiving end of movements for a BEA-commodity that would trigger the OBEA-participating screen

125. To illustrate the way that shippers on the origin end might also divert their sales to defeat a price increase, **Exhibit 19** presents the same scenario of widgets shipped from Shreveport but now considering the availability of Denver as an alternative outlet for the shippers looking to move their widgets out of Shreveport. In this version of the example, Denver is identified as an alternative outlet because UP's route for widgets to Denver is independent of CP and KCS. The potential to divert widgets to Denver as an outlet is demonstrated by the volume of widgets currently shipped to Denver from other sources. Faced with a hypothetical price increase by a combined CP/KCS on shipping their widgets to their current outlets, shippers in Shreveport would likely divert some of their product to Denver and their demand for rail services to UP. The demand for widgets in Denver is large based on the volume received in Denver and diversion is

likely to make the assumed price increase unprofitable based on the comparison of that volume to the volume included in the screening shares.

EXHIBIT 19
Illustration of volume available to shippers on the origin end of movements for a BEA-commodity that would trigger the OBEA-participating screen

7.2. Appendix: Detailed results for source competition

126. Below, I describe the additional information used to determine whether the results of the DBEA-participating screen reflect the kind of competitive significance of CP and KCS for the remaining commodities listed in Exhibit 11 and not already described in section 5.2.1. I find that the remaining BEA-commodity pairs do not meet the reliability threshold, that shippers are able to defeat a price increase, or both.

127. **Exhibit 20** describes the detailed results of the reliability threshold for the DBEA-commodity pairs screened for source competition presented in section 5.2. The additional columns document with green check marks the years in which shippers have

enough options available to them from other railroads. The exhibit also summarizes the total number of BEA-commodity pair movements and expanded carloads, and numbers colored in green indicate that the number of movements in the 2019 data do not meet the reliability threshold.

Source: Confidential Waybill Sample, 2015–2019
Note: The "Pattern of Shares" columns indicate years for which movements of the commodity shipping to the BEA area do not trigger the screen with a green check mark and years for which the screen is triggered with a red X. Dashes indicate years for which there are no observed movements of the commodity to the BEA. The last two columns summarize the number of BEA-commodity pair movements in the 2019 data, or the number of observations in the Waybill sample, and the total expanded carloads shipped via those movements. The green-colored movements and carloads indicate that the BEA-commodity pair does not meet the one-carload-per-day threshold, suggesting that the shares that triggered the screen are not reliable. The red-colored movements and carloads indicate that the pair meets the one-carload-per-day threshold. Total carloads are not adjusted for railcars carrying more then one intermodal unit. Doing so, adjusting carloads by the average units per flat car, would further reduce the number of carloads represented by these movements.

128. **Exhibit 21** describes the underlying tonnage values for the critical loss analysis presented in section 5.2.1 for the DBEA-commodity pairs screened for source competition. The receivers' available expanded tonnage describes what can be diverted from other origins that also serve the DBEA that is also independent of CP and KCS, representing the supply available elsewhere to receivers. The shippers' available

expanded tonnage describes what can be diverted to other destinations that is independent of CP and KCS, representing the available demand for the commodity elsewhere.

129. The outcome of the critical loss analysis is captured by the ratio of the total expanded tonnage affected by the combination of CP and KCS over the maximum of the receivers' or shippers' available tonnage. A ratio below one indicates that a combined CP/KCS would likely not find it profitable to increase prices.

EXHIBIT 21
Critical loss analysis for the second stage analysis of DBEA-commodity pairs screened for source competition

Source: Confidential Waybill Sample, 2015–2019
Note: The critical loss analysis assesses the extent to which a combined CP/KCS would find it unprofitable to increase the price on shippers of a BEA-commodity pair. The total expanded tonnage describes the volume of commodity shipped to the DBEA. The receivers' available expanded tonnage summarizes the volume of the commodity that can be shipped to the screened DBEA from origins that serve the screened DBEA through a route independent from CP or KCS, representing the available supply of that commodity from these particular origins. The shippers' available expanded tonnage summarizes the volume of commodity that is shipped to other destinations that the origins of the screened DBEA can reach through a route independent from CP or KCS, representing the available demand for the commodity in these particular origins. The maximum available tonnage is the larger of the receivers' and shippers' available expanded tonnage. The outcome of the critical loss analysis is captured by the ratio of the total expanded tonnage affected by the CP and KCS combination over the maximum of the available expanded tonnage. A ratio below one indicates that enough diversion on either the receivers' or shippers' end renders it likely that a price increase would be unprofitable.

130. **Furniture kits moved to Chicago-Gary-Kenosha, IL-IN-WI**. This commodity only rarely ships to this BEA area – there are only {{{ }}} observed movements in the 2019 Waybill Sample. Incidentally, all of these movements were intermodal, which suggests other railroads serving the Chicago area were likely competitive options for the movements.[76] These {{{ }}} movements represent {{{ }}} carloads in 2019, well below the one-carload-per-day threshold. The shares are thus not a reliable measure of the competitive significance of CP and KCS for this BEA-commodity pair. Moreover, there are only {{{ }}} movements of furniture kits to *any* destination in the Waybill Sample for 2015–2019.[77] This commodity has limited competitive relevance. This BEA-commodity pair is not likely to have competition affected by a combination of CP and KCS.

131. **Plastic dishes moved to Dallas-Fort Worth, TX-AR-OK**. This BEA-commodity pair triggered the screen in 2019 and 2018. In earlier years (2015–2017), the data does include movements of plastic dishes to Dallas-Fort Worth but {{{ }}}.[78] This lack of persistence to the CP and KCS shares is one reason to conclude that competitive effects are not likely – shippers have demonstrated they can and do switch to other railroads. In addition, only {{{ }}} movements, representing {{{ }}} carloads, are observed in 2019, which is below the reliability threshold.

132. The critical loss analysis for plastic dishes moved to Dallas-Fort Worth also suggests there is little competitive concern. The volume affected by a hypothetical

---

[76] See my workpaper 13.

[77] See my workpaper 14.

[78] {{{ }}}. See my workpaper 15.

price increases is only six percent of the volume of plastic dish demand available to shippers looking to divert their shipments from Dallas-Fort Worth if a combined CP/KCS attempted to increase the price in this area. This BEA-commodity pair is not likely to have competition affected by a combination of CP and KCS.

133. **Steel and iron plate moved to {{{ }}}.**

This commodity ships only rarely to {{{ }}}. Although the 2019 participating shares for CP and KCS were {{{ }}} percent and {{{ }}} percent, respectively, these shares are based on only {{{ }}} observed movements in the Waybill Sample.[79] With only {{{ }}} movements, the share for one of the railroads involved is going to be at least {{{ }}} percent.[80] These {{{ }}} movements, which expand for the Waybill Sampling frame to {{{ }}} carloads, are far below the reliability threshold used by the Board in past competitive analyses.[81] Shares for this BEA-commodity pair are not reliable measures of CP and KCS competitive significance.

134. In addition, the critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this BEA-commodity pair. The volume affected by a hypothetical price increase is only {{{ }}} percent of the volume of steel plate

---

79 {{{ }}} See my workpaper 16. See Exhibit 11.

80 Shares for CP, KCS, and combined CP-KCS were, respectively: in 2018, {{{ }}}; in 2017, {{{ }}}; in 2016, {{{ }}}; and in 2015, {{{ }}}. See my workpaper 17.

81 Vellturo V.S., 2007, at p. 88.

demand available to shippers looking to divert their shipments from San Francisco if a combined CP/KCS attempted to increase the price in this area.[82] This BEA-commodity is not likely to have competition affected by a combination of CP and KCS.

135. **Clay moved to Des Moines, IA-IL-MO.** Similar to steel plate that is shipped to the Amarillo, TX-NM BEA, clay shipped to the Des Moines, IA-IL-MO BEA area only triggers the screen in 2019. In all other years of data, enough other railroads carried the commodity such that the screen would not have been triggered, so the shares of CP and KCS lack persistence. The {{{ }}} movements in 2019, representing {{{ }}} expanded carloads, also fall below the reliability threshold. The shares underlying the screens for this pair, therefore, do not demonstrate a commodity likely to experience competition issues from a CP and KCS combination. Additionally, the critical loss analysis of this BEA-commodity pair demonstrates that a combined CP/KCS would not find it profitable to increase price on shippers of clay shipped to the Des Moines, IA-IL-MO BEA.

[82] I do not find any origins that in 2019 ship steel plate to {{{ }}} independent of CP and KCS. This is not surprising, since CP and KCS happened to participate in {{{ }}} movements in 2019, and does not mean that there would be no available volume of steel plate for shippers to divert *to* {{{ }}}. Steel plate may be shipped relatively infrequently by rail to {{{ }}}, but it is not a rare commodity more generally. Large volumes of steel plate are shipped by rail throughout the U.S. each year – in 2019, I observe 828 rail movements totaling 2,831,800 expanded tons of steel plate to U.S. destinations in the Waybill Sample. See my workpaper 18. Moreover, origins of steel plate movements can be connected to {{{ }}} via a railroad routing that is independent of CP and KCS. Indeed, in 2019 more than 800,000 tons of steel plate shipped from sources that ship other commodities to {{{ }}} independent of CP and KCS. Shippers in these locations would only need to divert a small fraction of this volume to {{{ }}} in order to defeat a hypothetical price increase. The volume affected by a hypothetical price increase for steel plate shipped to {{{ }}} is {{{ }}}, which is less than {{{ }}} percent of the more than 800,000 expanded tons of steel plate that ships from origins that could be connected to {{{ }}} independent of CP and KCS. See my workpaper 19.

136. **Lumber or timber moved to Jackson, MS-AL-LA.** Shares of lumber or timber shipped to the Jackson, MS-AL-LA BEA area fluctuate from year to year such that the 2019 shares, which trigger the screen, do not persist in looking at prior years. Movements of lumber or timber to Jackson appear in all prior years of the data, but with shares for CP and KCS that would not have triggered the screen. The {{{ }}} 2019 movements, representing {{{ }}} shipped carloads, are approaching but still below the reliability threshold. Finally, the critical-loss analysis of this BEA-commodity pair suggests that a combined CP/KCS would not find it profitable to increase price on shippers of lumber or timber to the Jackson, MS-AL-LA BEA.

137. **Lead bars moved to Spokane, WA-ID.** The screen of lead bars shipped to the Spokane, WA-ID BEA area is based on shares for CP and KCS out of {{{ }}} 2019 movements representing {{{ }}} carloads, falling well below the reliability threshold. This is a BEA-commodity pair that is not even observed in prior years other than 2018. However, the shares observed in 2018 for CP and KCS would not have triggered the screen. This pattern suggests the shares lack persistence to the extent the movement is observed in a given year's data. A critical loss analysis of lead bars shipped to the Spokane, WA-ID BEA area demonstrates that a combined CP/KCS would not find it profitable to increase price on shippers of this commodity to this BEA area.

138. Five commodity-DBEA pairs trigger the originating screen. For each of the five pairs, the CP and KCS shares underlying the screen lack persistence – shares of CP and KCS observed on movements in prior years would not have triggered the screen. These pairs are all observed frequently enough in the 2019 data to be close to or above the

reliability threshold. Consequently, the lack of persistence in these shares is particularly informative about shippers' ability to return to the other railroads they relied upon in these prior years if CP and KCS were to attempt to raise their prices.[83] Moreover, the critical loss analysis for each of these commodity-DBEA pairs reveals that a combined CP/KCS would not find it profitable to raise prices on any of them. These include the following commodity-DBEA pairs:

- **Polypropylene moved to Davenport-Moline-Rock Island, IA-IL;**
- **Woodpulp moved to Michoacán de Ocampo, Mexico;**
- **Wheat (not organically grown) moved to Nuevo León, Mexico;**
- **Pulpboard or fiberboard moved to Nuevo León, Mexico;** and
- **Steel plate moved to Rochester, MN-IA-WI.**

7.3. Appendix: Detailed results for destination competition

139. Below, I describe the additional information used to determine whether the results of the OBEA-participating screen reflect the kind of competitive significance of CP and KCS for the remaining commodities listed in Exhibit 14 and not already discussed in section 5.2.2. I find that the remaining BEA-commodity pairs do not meet the reliability threshold, that shippers are able to defeat a price increase, or both.

140. **Exhibit 22** describes the detailed results of the reliability threshold for the OBEA-commodity pairs screened for destination competition presented in section 5.2.2. The columns document with green check marks the years in which shippers have enough

[83] In one of the five pairs, steel plate shipped to Rochester, MN-IA-WI, the shares based on movements in one of the prior years, 2016, would trigger the screen, however, this appears to be simply another manifestation of year-to-year fluctuations in share rather than suggesting persistence of the shares.

options available to them from other railroads. The exhibit also summarizes the total number of BEA-commodity pair movements and expanded carloads, and numbers colored in green indicate that the number of movements in the 2019 data does not meet the reliability threshold.

Source: Confidential Waybill Sample, 2015–2019
Note: The "Pattern of Shares" columns indicate years for which movements of the commodity shipping from the BEA area do not trigger the screen with a green check mark and years for which the screen is triggered with a red X. Dashes indicate years for which there are no observed movements of the commodity from the BEA. The last two columns summarize the number of BEA-commodity pair movements in the 2019 data, or the number of observations in the Waybill sample, and the total expanded carloads shipped via those movements. The green-colored movements and carloads indicate that the BEA-commodity pair does not meet the one-carload-per-day threshold, suggesting that the shares that triggered the screen are not reliable. The red-colored movements and carloads indicate that the pair meets the one-carload-per-day threshold. Total carloads are not adjusted for railcars carrying more then one intermodal unit. Doing so, adjusting carloads by the average units per flat car, would further reduce the number of carloads represented by these movements.

141. **Exhibit 23** describes the underlying tonnage values for the critical loss analysis presented in section 5.2.2 for the OBEA-commodity pairs screened for destination

competition. The receivers' available tonnage describes what can be diverted from other origins that ship to destinations served by the OBEA that is also independent of CP and KCS, representing the supply available elsewhere to receivers. The shippers' available tonnage describes what can be diverted to other destinations reached by the OBEA and that is independent of CP and KCS, representing the available demand for the commodity elsewhere.

142. The outcome of the critical loss analysis is captured by the ratio of the total expanded tonnage affected by the combination of CP and KCS over the maximum of the receivers' or shippers' available tonnage. A ratio below one indicates that a combined CP/KCS would likely not find it profitable to increase prices.

EXHIBIT 23
Critical loss analysis for the second stage analysis of OBEA-commodity pairs screened for destination competition

Source: Confidential Waybill Sample, 2015–2019
Note: The critical loss analysis assesses the extent to which a combined CP/KCS would find it unprofitable to increase the price on shippers of a BEA-commodity pair. The total expanded tonnage describes the affected volume of commodity shipped from the OBEA. The receivers' available expanded tonnage summarizes the volume of the commodity that can be shipped to the BEAs served by the screened OBEA from any other BEA area that can ship the commodity to those BEAs through a route independent from CP and KCS, representing the supply of that commodity from other originations. The shippers' available expanded tonnage summarizes the volume of commodity that is shipped from any other BEA area to a destination that the screened OBEA can reach through a route independent from CP or KCS, representing the available demand for the commodity in that particular destination. The maximum available tonnage is the maximum between the receivers' and shippers' available tonnage. The outcome of the critical loss analysis is captured by the ratio of the total expanded tonnage affected by the CP and KCS combination over the maximum of the available tonnage. A ratio below one indicates that enough diversion on either the receivers' or shippers' end renders it likely that a price increase would be unprofitable.

143. **Kaolin (China Clay) moved from Atlanta, GA-AL-NC**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. The {{{ }}} movements in the 2019 data, representing only {{{ }}} carloads, fall well below the reliability threshold. Moreover, there are only {{{ }}} total movements anywhere in the 2019 data. All {{{ }}} movements were intermodal,

suggesting that other railroads serving the Atlanta area or possible destinations were likely competitive options for the movements.[84]

144. **Paper moved from Atlanta, GA-AL-NC**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. This is not a completely infrequent movement with {{{ }}} observations in the 2019 data, which all happen to be intermodal movements, so the year-to-year fluctuation in shares is particularly informative about shipper choices in prior years.[85] The critical loss analysis for this commodity-OBEA pair confirms that the combined CP/KCS would not find it profitable to raise prices for paper shipped from the Atlanta, GA-AL-NC BEA.

145. **Pellets for gas well fractures moved from Atlanta, GA-AL-NC**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. Additionally, the shares are based on {{{ }}} 2019 movements representing only {{{ }}} carloads and well below the reliability threshold. Finally, the critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for the OBEA-commodity pair.

146. **Lumber or timber moved from Capitale-Nationale, QB, Canada**. This OBEA-commodity pair triggers the screen in 2019 based on shares that lack persistence despite the observation of sufficient movements in 2019, suggesting the shares in prior years are particularly informative of shippers' ability to return to other railroads if a combined CP/KCS attempted to raise prices. Additionally, the ratio of affected to available volume for the critical loss analysis of this OBEA-commodity pair is less than

[84] See my workpaper 20.

[85] See my workpaper 21.

one percent, confirming that a combined CP/KCS would not find it profitable to raise prices.

147. **Lactose moved from {{{ }}}**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. Moreover, the shares are based on only {{{ }}} movements, representing {{{ }}} carloads, which is significantly less than the reliability threshold. Based on these factors, the screened commodity is not likely to experience competition issues from a combination of CP and KCS.

148. **Animal tallow or fat moved from Davenport-Moline-Rock Island, IA-IL**. This OBEA-commodity pair has no movements observed in the data from prior years and has only {{{ }}} 2019 movements, representing {{{ }}} carloads, suggesting that the shares that triggered the screen are not reliable. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this OBEA-commodity pair.

149. **Dried peas moved from Fargo-Moorhead, ND-MN**. This OBEA-commodity pair trigger the screen based on shares that lack persistence. Moreover, the shares are based on only {{{ }}} movements in the 2019 data, representing {{{ }}} carloads, which is significantly less than the reliability threshold. The critical loss analysis yields a volume ratio of almost exactly {{{ }}}. Based on these factors, the screened OBEA-commodity pair is not likely to experience competition issues from a combination of CP and KCS.

150. **Animal tallow moved from Hamilton-Niagara Peninsula, ON, Canada**. This OBEA-commodity pair has no movements observed in the data from prior years, and has only {{{ }}} 2019 movements, representing {{{ }}} carloads, suggesting that the shares that triggered the screen are not reliable. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this OBEA-commodity pair.

151. **Calendar roll paper moved from San Antonio, TX**. This OBEA-commodity pair triggers the screen based on shares that have only fleeting persistence. Prior to 2018, when movements of this pair are observed, the shares for CP and KCS would not have triggered the screen. Additionally, the shares are based on only {{{ }}} 2019 movements, representing {{{ }}} carloads, missing the reliability threshold. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this OBEA-commodity pair.

152. **Soybean oil moved from {{{ }}}**.
This OBEA-commodity pair has no movements observed in the data from prior years, and has only {{{ }}} 2019 movements, representing {{{ }}} carloads, suggesting that the shares that triggered the screen are not reliable. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for the BEA-commodity pair.

153. **Frac sand moved from Madison, WI-IL-IA.** There are three grades of frac sand (30/50 Mesh, 40/70 Mesh, and 100 Mesh) that appear in the data as separate commodities, each triggering further investigation of movements from Madison, WI-IL-IA. The critical loss analyses for all three of these grades demonstrate that shippers

would readily divert enough frac sand of the relevant grade to defeat any attempted price increase by a combined CP/KCS. Moreover, for the 100 Mesh sand, the shares lack persistence. Because of these factors, all three grades of frac sand from Madison, WI-IL-IA are unlikely to experience competition issues from a combination of CP and KCS.

154. **Animal tallow moved from Madison, WI-IL-IA**. This OBEA-commodity pair triggers the screen with shares based on only {{{ }}} movements, representing {{{ }}} carloads, which are well below the reliability threshold. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this OBEA-commodity pair.

155. **Linseed oil moved from Minneapolis-St. Paul, MN-WI-IA**. This OBEA-commodity pair triggers the screen based on shares that have only fleeting persistence. Prior to 2018, the shares for CP and KCS would not have triggered the screen. Moreover, the shares are based on only {{{ }}} 2019 movements, representing {{{ }}} carloads, which is less than the reliability threshold. Based on these factors, the screened commodity is not likely to experience competition issues from a combination of CP and KCS.[86]

[86] {{{ }}} originates volume of linseed oil from two BEAs in {{{ }}} that are located about 1.5 hours in driving distance apart. One BEA area appears to predominately serve demand in the west. However, if {{{ }}} were able to divert linseed oil volume from both of these {{{ }}} locations to the {{{ }}} BEA, in response to a hypothetical price increase on shipments there from the Minneapolis-St. Paul, MN-WI-IA BEA, the ratio measuring critical loss would be nearly equal to {{{ }}} instead of {{{ }}}. See my workpaper 22.

156. **Newsprint paper moved from Northwest, ON, Canada**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this BEA-commodity pair.

157. **Liquefied Propane Gas moved from Red Deer, AB, Canada**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. Prior to 2017, the shares for CP and KCS would not have triggered the screen. Moreover, the critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this BEA-commodity pair.

158. **Rapeseed oil moved from Saskatoon-Biggar, SK, Canada**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this BEA-commodity pair.

159. **Structural beams moved from Thompson-Okanagan, BC, Canada**. This OBEA-commodity pair triggers the screen based on shares that lack persistence. Moreover, the shares are based on only {{{ }}} 2019 movements, representing {{{ }}} carloads, suggesting that the shares that triggered the screen are not reliable. The critical loss analysis confirms that a combined CP/KCS would not find it profitable to raise prices for this BEA-commodity pair.

VERIFICATION

I, W. Robert Majure, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this statement.

Executed this 28th day of October, 2021.

W. Robert Majure

ACADEMIC BACKGROUND

1990 – 1994 **Massachusetts Institute of Technology** Cambridge, MA
Ph.D., Economics
Specialization: Industrial Organization, Microeconomics, Econometrics
Thesis: Disequilibrium Game Theory

1986 – 1990 **University of Virginia** Charlottesville, VA
B.A., Economics and Mathematics

PROFESSIONAL EXPERIENCE

2019 – Present **Cornerstone Research, Inc.** Washington, DC
Vice President
Provide financial and economic analysis for commercial litigation matters. Support experts in preparing for deposition and trial testimony.

2010 – 2018 **Antitrust Division – U.S. Department of Justice** Washington, DC
Director of Economics
Senior career executive supervising the Antitrust Division's Economic Analysis Group. Helped formulate economic evidence and testimony for cases in industries such as software (*U.S. v. H&R Block, Inc., et al.*), telecommunications (*U.S. and Plaintiff States v. AT&T Inc., et al.*), video (*U.S. v. AT&T Inc., DirecTV Group Holdings, LLC, and Time Warner Inc.*), publishing (*U.S. v. Apple, Inc., et al.*), airlines (*U.S., et al. v. US Airways Group, Inc. and AMR Corp.*), oilfield services (*U.S. v. Halliburton Co. and Baker Hughes Inc.*), and health insurance (*U.S. and Plaintiff States v. Aetna Inc., and Humana Inc.* and *U.S. and Plaintiff States v. Anthem, Inc. and Cigna Corp.*).

2003 – 2010 **Antitrust Division – U.S. Department of Justice** Washington, DC
Chief of Competition Policy Section
Managed a section of about 18 economists and other staff. Supervised economic analysis of antitrust investigations in various industries including computer software (*U.S. v Oracle Corp.*), real estate (*U.S. v Kentucky Real Estate Commission*), and telecommunications (*U.S. v Cingular Wireless et al*). Testified in *U.S. v SBC Communications Inc. and AT&T Corp.* and *U.S. v. Verizon Communications Inc. and MCI, Inc.* Consulted on appellate arguments of the United States in Circuit Court (including *FCC v Prometheus Radio Project*).

1997 – 2003 **Antitrust Division – U.S. Department of Justice** Washington, DC
Assistant Chief of Economic Regulatory Section

Assisted with the management of a section of about 18 economists and other staff. Supervised economic analysis of antitrust investigations in various industries including telecommunications (*U.S. v WorldCom and Sprint*), computer software (*U.S. v Mathworks and Wind River*), publishing, radio and television advertising (*U.S. v Univision and Hispanic Broadcasting Corp*), electricity, and airlines. Consulted on appellate arguments of the United States in Circuit Court and the U.S. Supreme Court (including *Iowa Utilities Board v FCC and U.S.*).

1994 – 1997 **Antitrust Division – U.S. Department of Justice** Washington, DC
Economist
Performed economic analysis in antitrust investigations. Applied developments in the fields of industrial organization, microeconomics, and econometrics to practical questions raised in antirust analysis. Examined mergers or practices in telecommunications (including *U.S. v Sprint and Joint Venture Co.*), computer software, and banking. Testified in the merger of Union Pacific Railroad and Southern Pacific Railroad (before the Surface Transportation Board).

TESTIMONY

Real Estate Exchange, Inc. v Zillow, Inc. et al. – Filed declaration in support of motion for preliminary injunction.

U.S. v SBC Communications Inc. and AT&T Corp. and *U.S. v. Verizon Communications Inc. and MCI, Inc.* – Filed declarations in Tunney Act proceeding to explain the economic analysis of the United States for the proposed mergers and of the proposed consent decrees.

ICC Finance Docket No. 32760 – Submitted testimony on behalf of the U.S. Dept. of Justice analyzing prospective merger of Union Pacific Railroad and Southern Pacific Railroad.

VERIFIED STATEMENT OF RICHARD W. BROWN AND NATHANIEL S. ZEBROWSKI

PART I INTRODUCTION AND OVERVIEW

1. We are Richard W. Brown and Nathaniel S. Zebrowski of FTI Consulting, Inc.

2. Richard W. Brown is an as-needed contractor in FTI Consulting's Network Industries Strategies ("NIS") practice and is responsible for conducting detailed railroad market studies for a variety of railroad clients. He previously served as a Director for FTI Consulting for over 10-years. He has performed numerous internal studies related to exploring potential rail merger opportunities including estimating likely traffic diversions. Prior to joining FTI in 1999, Mr. Brown spent 28-years with BNSF Railway ("BNSF") and its predecessor The Atchison, Topeka and Santa Fe Railway ("ATSF") where he most recently served in executive-level positions involving strategic merger analysis and planning, and prior to that headed ATSF's Bulk Commodity Marketing department. He holds a BA in Economics from Syracuse University and an MBA degree from Northwestern University Graduate School of Management.

3. Nathaniel S. Zebrowski is a Managing Director in FTI's NIS practice. He joined the practice in 2011 and has over 10-years of experience providing professional consulting services to freight transportation companies including developing numerous evidence submissions to the Surface Transportation Board, Federal courts, and arbitration boards. His work includes analyzing railroad traffic and revenue patterns, evaluating railroad operations and service, and studying the competitive dynamics of the freight transportation industry. He has special expertise in developing complex computer models assessing traffic flows over railroad networks and conducting detailed studies on costs, operations, and pricing of freight transportation services. He holds a Bachelor's Degree in

Economics from Northwestern University and a graduate certificate in Transportation Policy, Operations, and Logistics from George Mason University.

4. Details of our backgrounds and qualifications are set forth in Exhibits 1 and 2 to this Verified Statement.

5. As part of the assessment of the market impacts of Canadian Pacific Railway's ("CP") proposed acquisition of control of Kansas City Southern ("KCS"), we have been asked by CP to estimate the amount of railroad traffic that would shift from movement on other railroads to the combined CP/KCS system as a result of the new service offerings, more efficient single-line services, and other changes resulting from the Transaction. Such traffic shifts are commonly referred to as rail-to-rail diversions. In this statement we describe the analysis we performed to determine the volume and nature of the rail-to-rail diversions to the combined CP/KCS system reasonably expected to occur as a result of the proposed Transaction. We also estimate incremental revenue gains to the combined CP/KCS system associated with these rail-to-rail traffic diversions, and develop traffic characteristic information which is used in the Verified Statement of Michael Baranowski ("Baranowski V.S.") to develop incremental costs for this traffic.

6. Our analysis focuses on determining how a CP/KCS combination would create rail-to-rail diversion opportunities for existing traffic flows that moved over the North American railroad network in the base year of 2019.[1] Specifically, we examine whether the traffic moving

[1] The Board has made 2015-2019 CWS data available for this proceeding. We rely on 2019 data for measuring representative traffic patterns because it is the most recent period of full-year data available in both traffic tape data and CWS data sources, which are analyzed together in our work. We use 2015-19 combined CWS data for supplemental purposes, including identifying prevailing revenue levels and determining railroad interchange partners.

between individual origins and destinations in 2019 would have moved differently were CP and KCS functioning as a combined system.[2] In terms of annual traffic flows at 2019 levels, we estimate that approximately 80,000 carloads and 138,000 intermodal containers would likely divert each year from existing routes to CP/KCS as a result of the CP/KCS combination. Table 1 below summarizes this.

TABLE 1[3]
SUMMARY OF 2019 RAIL-TO-RAIL DIVERSIONS LIKELY TO OCCUR DUE TO CP/KCS COMBINATION

	Estimated Volume of Existing 2019 Rail Traffic Flows Diverted to CP/KCS
Automotive	33,218
Grain	15,768
Energy, chemicals and plastics	21,143
Forest Products	4,616
Metals, minerals and consumer products (including chemicals)	4,514
Carload Subtotal	79,259
Intermodal Containers	137,416
Total	216,675

7. These diversions are principally made possible by new single-line service options the end-to-end CP/KCS combination would generate for traffic moving between origins and destinations that could be served efficiently by a combined CP/KCS network, but where

---

Our analysis based on 2019 traffic data does not consider other potentially significant traffic opportunities that would arise from (a) post-merger changes in traffic patterns (except for grain); (b) investments by CP/KCS in growth opportunities unlocked by a combined CP/KCS network; or (c) diversions to CP/KCS intermodal offerings from the highways (so-called truck-to-rail diversions). All of these categories of potential traffic gains by the combined CP/KCS system are addressed in other portions of the Application, particularly the Verified Statement of Bengt Mutén and the Verified Statement of Jonathan Wahba and Michael Naatz (the "Wahba/Naatz V.S.").

[2] We considered the potential for some geographic shift for finished vehicles, intermodal, LPG and lumber. We analyzed grain from a broader origin and destination perspective, as detailed later in this statement.

[3] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

individually CP and KCS each serve one end of the movement but not the other. Many opportunities involve situations where there are no existing single-line options today, which require that shippers interact with multiple railroads on price and service terms, while also bearing additional costs, longer transit times and increased unpredictability associated with interchanging shipments between separately-run networks.

8. In the cases where other carriers already offer single-line service, the combination would bring to fruition the full competitive potential of CP's and KCS's assets by operating them in a manner that could offer services capable of providing enhanced competition against the incumbent single-line carriers. In these cases, whether given levels of traffic shift to the combined CP/KCS system or not, shippers obtain more and better transportation options and expanded competitive leverage.

9. The opportunities for diversions are fundamentally related to how the major North American railroad networks are presently configured and operated and how those characteristics would be affected by a CP/KCS combination. A major weakness for both the independent CP and KCS railroads is that their network franchises are not sufficiently diverse to create opportunities for efficient single-line routes to connect major markets. KCS has an extensive origination franchise in Mexico for autos and manufactured goods but does not have access to major consumption markets in the United States. KCS's network also serves an extensive population in Mexico with demand for food, fuel, and manufacturing inputs, but with limited access to production areas in the United States. CP's network complements KCS's by providing both access to origins for traffic that KCS can terminate as well as access to destinations for traffic that KCS can originate. As our analysis confirms, there is substantial opportunity for synergy in a CP/KCS combination.

10. Because the networks of the two Western Class Is are generally oriented east-to-west, there is an opening for a north-to-south oriented railroad spanning trans-continentally and operating through and within the Plains states and provinces and connecting to eastern population centers. The need for this increased connectivity is heightened by the recently signed USMCA trade agreement which increases opportunities for additional trade between the United States, Mexico, and Canada.

11. A combined CP/KCS system would significantly change the existing competitive dynamics by injecting a large number of new single-line routes into north-to-south oriented rail transportation corridors. CP/KCS would have the expanded geographic reach and integrated operating economies necessary to provide shippers with new single-line service options capable of competing more effectively with the routings of the larger Class I railroads. The distinct operating advantage CP/KCS would have is rooted in simple, repetitive train movements through the CP/KCS system's major north-to-south corridor running through the geographic middle of the United States. While the network has a simple linear configuration which is well-suited to reliable and efficient operations, the opportunities to attract traffic are great because, in extending through the middle of the United States, it spans from the Gulf of Mexico to the Upper Midwest, connects at either end to wide gathering networks stretching across both Canada and Mexico, and provides efficient access to Dallas, Houston, Shreveport, Jackson, Kansas City, St. Louis, Chicago, the Twin Cities, and a variety of other important industrial and agricultural centers along the way. While our analysis evaluates thousands of individual diversion opportunities at a lane-by-lane basis across all of CP's and KCS's commodity groups, there are five key areas where the CP/KCS combination would generate rail-to-rail diversions promoting enhanced competition and providing better service and value.

12. ***Midwest Grain to the Gulf Region and Mexico***. First, under the CP/KCS combination, grain shippers in the Midwest would gain access to a stronger railroad enabled to compete against the larger Class I carriers by offering new direct service access into Mexican markets as well as providing an additional direct service option to the Gulf region. This would be achieved by aligning CP's origin capabilities with KCS's access to the major consumption markets in Mexico and the Gulf region. Currently grain originations by rail in the Midwest are dominated by other Class I carriers even though CP has at least as strong a network reach into many of the core production areas located throughout the region. Despite this, CP's market share remains small because it is unable to effectively compete against the larger Class I carriers with greater destination access. KCS is an ideal partner for CP because it offers the destination access CP requires to grow its grain business, while benefiting from CP's origin access required to grow its grain business. CP and KCS already work together to transport grain in interline service by matching CP grain origins with KCS grain destinations but cannot compete effectively against the larger Class I carriers' single-line service accessing more destinations. The merger would put CP/KCS on a more equal footing with their competitors in the transportation of Midwestern grain, thus enabling CP/KCS to win new business by offering attractive service alternatives and boosting competition across thousands of miles of grain-producing land in the United States.

13. ***Automotive Parts and Other Containerized Mixed Goods between the United States and Mexico***. Second, the CP/KCS combination would streamline United States exports of automotive parts from the major originations in the Upper Midwest (served via Chicago and Detroit) into Mexico by creating a new single-line intermodal service option with direct access to the Mexican automotive plants, as well as balanced reverse flows of complementary automotive

parts and other merchandise flowing into the United States integrated into the same intermodal supply chain. Currently, interline movements with larger Class I carriers interchanging containerized automotive parts with KCSM at the Mexican border dominates these traffic flows. The CP/KCS combination creates the opportunity for Midwest automotive parts manufacturers to obtain access to a single-line service option offering reliable end-to-end automotive parts movements critical to effective supply chain management. Other containerized merchandise volumes, including appliances, manufactured goods, and prepared foods, would enhance these new intermodal services by providing additional economies of scale. The larger Class I carriers, which heavily dominate Mexican cross-border intermodal flows today, would remain as strong competitors and likely continue to handle a majority of this traffic, in part due to their route structure advantages and franchise strength. The new competition from CP/KCS single-line offerings would incentivize all participants to improve performance and offer attractive rates.

14. ***Finished Vehicles from Mexico to the United States.*** Third, the CP/KCS combination would pair KCS's access to Mexican automotive production facilities and core north-to-south oriented mainline with CP's distribution network to open a new competitive corridor for moving finished vehicles into the United States and Canada. The larger Class I carriers currently dominate the domestic automotive distribution network and generally KCS hands off automotive carloads at or near the Mexican/U.S. border. While many of these handoffs would continue because the larger Class I carriers will retain access to a broader array of distribution points and efficient routes to Upper Midwest markets, the combined CP/KCS would have the ability to design an attractive single-line service that would compete well to win a share of the existing market. This service would anchor a new automotive distribution network with the economies to also successfully compete for service to the Kansas City, Twin Cities, and

Canadian markets, as well as strengthening CP's existing business delivering autos manufactured at Canadian plants to the United States. This will benefit domestic automotive distributors by introducing a new cost-competitive direct service option, pressuring all market participants to improve performance and offer attractive rates.

15. ***New Domestic Intermodal Services.*** Fourth, the major corridor between Dallas and Chicago would benefit from the introduction of a third competitor with a single-line route capable of providing reliable services of the sort demanded by many intermodal shippers, as explained in the Wahba/Naatz V.S. *See* Wahba/Naatz V.S. at ¶ 52.

16. ***Bitumen/Crude from Alberta to the Gulf Region.*** Fifth, a CP/KCS combination would provide an efficient single-line service capable of moving bitumen from production fields in Northern Alberta to Gulf region refineries and terminals served by KCS while avoiding Chicago. A coordinated unit train loop service that avoids the need for interchange would offer the prospects for improved performance and economic terms that would be able to attract traffic from other routes. *See* Wahba/Naatz V.S. at ¶ 87. Our analysis identifies likely diversions of existing interline flows to CP/KCS single-line routes, but the availability of this option likely will also incentivize a more rapid shift away from the movement of hazardous crude oil traffic in flammable form towards the non-hazardous "DRUbit" form of bitumen ultimately demanded in the Gulf region.

* * *

17. In addition to these five significant categories of likely diversions, there are many other important diversion opportunities driven by similar synergies aligning CP's and KCS's networks and linking them together via Kansas City and an integrated CP/KCS north-to-south mainline. Foremost among these include boosting lumber flows from Canadian mills into the

rapidly expanding Texas market, expanding CP's LPG supply opportunities by opening destinations in Mexico, providing single-line service for intermodal traffic moving between Mexico and Canada, and creating new single-line competition for moving Gulf region plastics and chemicals into the Midwest, metals from Chicago plants to Texas and the Gulf region, corn-derived sweeteners and animal feeds from Midwest grain producing areas into Mexico, and wood pulp and paper products from Louisiana into the Midwest. Details on the individual diversion market opportunities and how we estimated the amount of rail-to-rail diversion traffic for each are described in the remainder of our statement.

18. The remainder of this statement describes how we estimated likely rail-to-rail diversions, evaluates the results of this analysis, and develops estimates of incremental revenues and traffic characteristics associated with the diverted traffic.

PART II
ESTIMATING LIKELY RAIL-TO-RAIL TRAFFIC DIVERSIONS

A. Data Sources and Modeling Approach

19. We describe in greater detail in Appendix A our development of a comprehensive dataset of traffic for use in our diversion analysis. We summarize here the salient features of that approach.

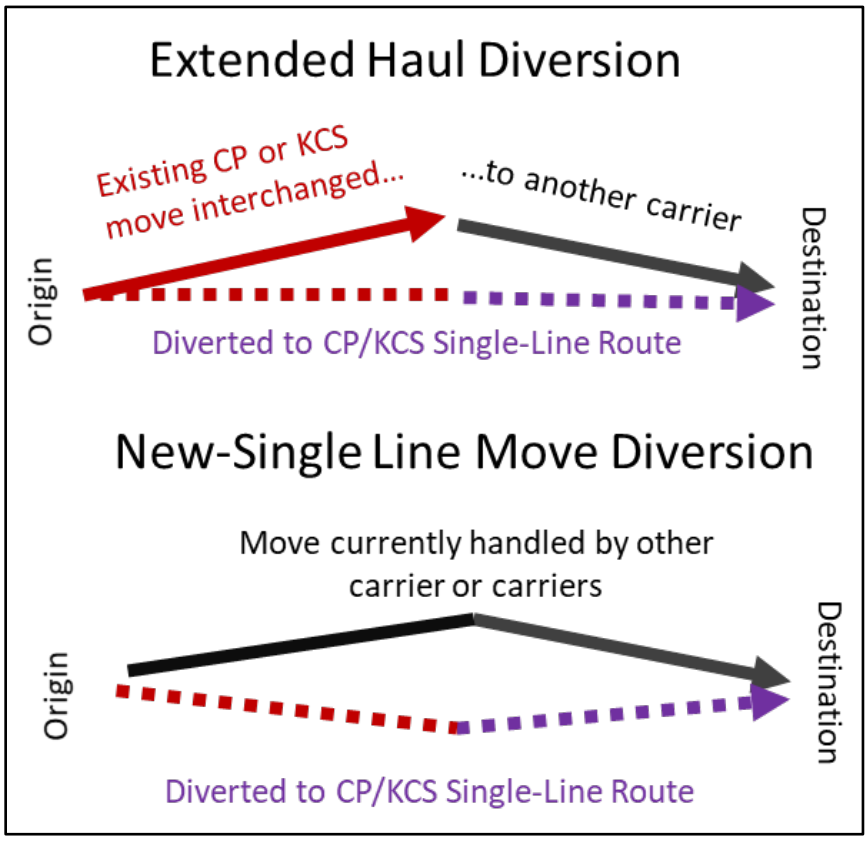
20. Our analysis started by compiling a comprehensive dataset of 2019 North American freight railroad traffic movements. For this we relied on complete 2019 traffic tape data provided by CP and KCS to identify all loaded revenue traffic movements handled by CP or KCS, and the Board's 2019 Confidential Carload Waybill Sample ("CWS") data to identify all other loaded revenue traffic movements handled by other carriers. To avoid a double count with traffic tape data, we removed all moves in the CWS handled by CP or KCS. The traffic tape data

includes all CP (including CPRL in Canada and Soo Line and affiliates in the United States) and KCS (including KCSR and KCSM) loaded revenue movements throughout North America and typically provides the full routing information for all movements whether rebilled or not.

21. Because rebill moves in the CWS only report partial route information, we projected where possible full routing information by linking together forwarded and received rebill moves flowing into and out of major Rule 11 gateways at the car type-specific, commodity-specific, shipment-size specific, and car ownership-specific levels. This approach yielded estimated full routing information for approximately 57% of all rebilled moves in the CWS less CP/KCS Traffic Tape moves. Table 2 below summarizes total loaded revenue movements included in our consolidated 2019 traffic data.

TABLE 2[4]
SUMMARY OF 2019 CONSOLIDATED NORTH AMERICAN RAIL TRAFFIC DATABASE USED TO IDENTIFY POTENTIAL CP/KCS DIVERSION OPPORTUNITIES

	2019 Carloads	2019 Intermodal Containers	Total
CWS Total	19,244,313	16,448,525	35,692,838
CWS Total Less CP/KCS Moves	16,899,723	15,540,425	32,440,148
Portion Through Moves	11,858,497	13,227,105	25,085,602
Portion Rebilled Moves With Projected Full Routing	2,470,981	1,748,640	4,219,621
Portion Rebilled Moves With Partial Routing	2,570,245	564,680	3,134,925
CP/KCS Loaded Revenue Moves in Traffic Tapes	2,738,379	1,473,002	4,211,381



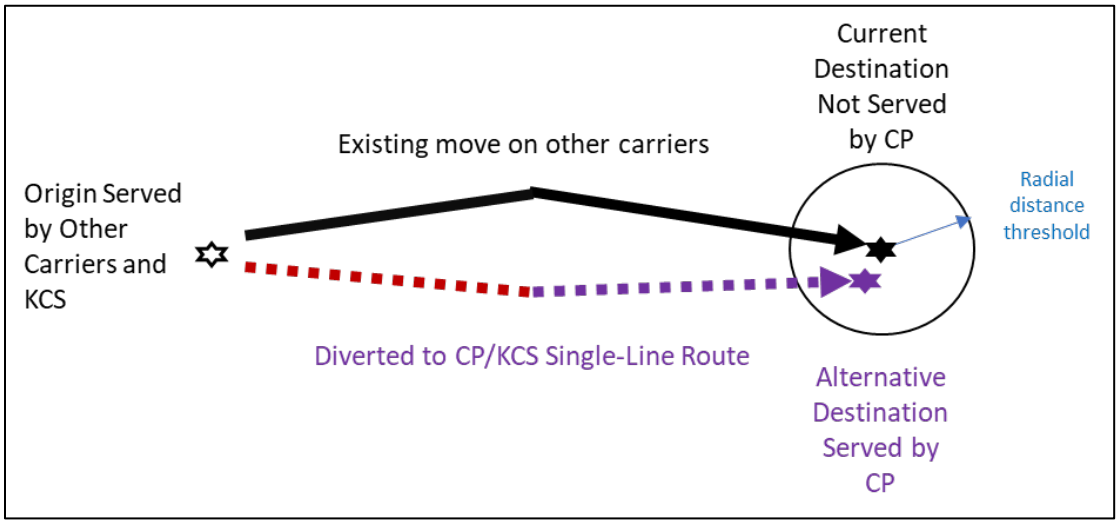
22. Next, we identified the movements in the consolidated traffic data that would potentially be divertible to a combined CP/KCS system. To do this, we developed a screening process to determine the universe of all 2019 railroad traffic movements that a combined CP/KCS system could potentially handle in single-line service. Generally speaking, this includes

[4] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

movements that could potentially be served by either CP or KCS at the origin, and the other carrier at the destination, but are not currently interlined between the two carriers.[5] Where CP or KCS already handled one end of the movement, but as a merged system could serve both ends instead of interlining the movement with another carrier, or where CP or KCS interlined the traffic but also used a bridge carrier in between, we identified potential rail-to-rail diversion opportunities where CP/KCS could convert some of KCS's and CP's interline shipments to single-line movements on the CP/KCS system ("extended hauls"). Where neither KCS nor CP handled either end of the movement, but could potentially serve both ends as a merged carrier, we identified potential new single-line movement opportunities ("new single-line move" shipments). Figure 1 below illustrates these different categories of diversions.

[5] The stations KCS or CP could potentially serve were identified using the AAR's 2019 Centralized Station Master ("CSM"). Stations not served by KCS or CP directly but served by shortline carriers interchanging traffic with KCS or CP were also considered.

FIGURE 1
ILLUSTRATION OF DIFFERENT TYPES OF DIVERSIONS TO COMBINED CP/KCS SYSTEM



23. We made adjustments to ensure inclusion of movements of certain commodities where the specific destination locations are known to be flexible.[6] For intermodal, lumber, and automotive movements, we treated all destinations as accessible to CP or KCS so long as they had terminated intermodal or automotive traffic at a station within 250 radial miles, or lumber traffic at a station within 50 radial miles.[7] This is appropriate because such traffic will be trucked to a final destination after it is unloaded at the distribution facility at the rail station,

[6] A similar concept applies to origins for cereal grain commodities including corn, wheat, and soybeans, which may be trucked to various elevators served by rail located throughout production areas. We treat these commodities separately as discussed later in this statement, and therefore do not apply radial adjustments at this stage.

[7] For these analyses, we used the 2019 consolidated traffic tape data to look for nearby stations with qualifying CP or KCS volumes.

which implies that the shipment is not dependent on the exact location of a given facility. Automotive shipments and containers are typically trucked from rail facilities (automotive ramps and intermodal terminals) to final destinations in a single shift for a driver which represents a range of about 250 miles one-way. Lumber distribution facilities are predominantly located at or around major cities, so 50 miles is a sufficient range to provide coverage. Figure 2 below provides an illustration of this process for destination shifts for lumber.

FIGURE 2
ILLUSTRATION OF DIVERSION INVOLVING DESTINATION STATION SHIFT WITHIN CERTAIN RADIAL MILEAGE THRESHOLD
(*E.G.*, LUMBER, FINISHED VEHICLES, INTERMODAL)

24. As Figure 2 depicts, if we observed a railroad movement terminating on another carrier (represented by the black star) at a station not accessed by CP or KCS but we identified a CP or KCS station terminating the same commodity within the given distance threshold (represented by the purple star within the black circle), we treated that move as potentially divertible in our screening process. This approach takes into account the fact that shippers likely are indifferent between receiving the commodity from either of these stations. We selected the nearest CP or KCS station to the one currently in use, but recognize there may be other CP or KCS stations within similar distances that might be alternatively selected.

25. Table 3 below summarizes total 2019 traffic movements initially identified in our screening process as potential diversion opportunities by commodity group.[8]

TABLE 3[9]
SUMMARY OF POTENTIALLY DIVERTIBLE MOVEMENTS IDENTIFIED IN SCREENING PROCESS

Commodity Group	2019 Movements Potentially Divertible to CP/KCS (Carloads / Units)		
	Interline to Single-Line Movements (Extended Haul Traffic)	New Single-Line Movements	Total
Automotive	74,345	62,877	137,222
Coal	222	1,240	1,462
Energy, chemicals and plastics	34,643	31,021	75,664
Fertilizer and sulphur	1,013	3,746	4,759
Forest Products	10,883	10,109	20,992
Grain	2,1781	24,110	45,891
Intermodal	223,928	571,133	795,061
Metals, minerals and consumer products	13,395	31,323	44,718
Potash	1,073	822	1,895
Total	381,283	746,380	1,127,663

B. Grouping Potential Diversion Opportunities for Further Analysis

26. We next grouped individual lanes identified in the screening model as potentially divertible into broader groupings of commodity-specific regional traffic flows. Since the initial results consisted of over 4,000 individual lanes, we sought to identify a smaller number of distinct groupings of traffic representing potential diversion opportunities to facilitate review in consultation with knowledgeable Applicant personnel. Overall we assigned approximately 69

[8] We defined commodity groups using the same line of business categories used by CP internally.

[9] Source: Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

percent of the total potentially-divertible carloads/units (representing approximately 746,000 carloads in 2,200 individual lanes) into over 70 specific traffic groups for further analysis. Some portion of the remaining traffic – *i.e.,* approximately 380,000 carloads/units in over 1,800 different lanes – likely would be attracted to the new service offerings of the CP/KCS system, but we regarded the commodity and geographic mix as too heterogeneous to permit reasonable and reliable determinations as to whether the traffic was in fact divertible or the likelihood that it would in fact divert to CP/KCS routes.

27. We then considered each of the groups individually and gathered feedback from Applicant personnel in order to determine which presented realistic current diversion opportunities.[10] Factors we considered included the level of access that CP and KCS had to customers, how a CP/KCS route compared to alternative routes in terms of length of haul and service levels, the other railroads' market position and franchise strength, the capability of CP/KCS facilities to support the service shippers demand, and whether the opportunity would require new investments that were unlikely to be a good fit with the near-term priorities of the combined CP/KCS network. We determined that 33 traffic groups containing approximately 580,000 carloads or intermodal containers represented opportunities we expect would experience some level of traffic diversions within the three years following consummation of the CP/KCS merger.[11] Table 4 below summarizes by commodity group the results of this process.

---

[10] Due to the confidentiality restrictions of CWS data, all information provided to Applicants for review was aggregated to include at least three stations and not permit identification of particular traffic flows for an individual railroad other than CP or KCS.

[11] There were several reasons for why certain groups of traffic were removed from the initial screening group as not reflecting likely diversion opportunities. First, the initial screens considered only whether CP and KCS provided service at one or the other end of a move and not whether the two carriers together could offer an efficient route between these end points, so some groups of moves were eliminated where CP/KCS routings would be unduly circuitous. For example, while KCS can originate

TABLE 4[12]
SUMMARY OF EVALUATING POTENTIALLY DIVERTIBLE MOVEMENTS TO IDENTIFY TRAFFIC GROUPS PRESENTING NEAR-TERM DIVERSION OPPORTUNITIES

	Total 2019 Potentially Divertible Movements	Portion Assigned to Traffic Groups For Further Review	Traffic Groups Presenting Near-Term Diversion Opportunities
Automotive	137,222	90,183	72,915
Coal	1,462	-	-
Energy, chemicals and plastics	83,303	48,595	37,534
Fertilizer and sulphur	4,759	2,434	6
Forest Products	20,992	10,631	6,277
Grain	45,891	19,374	9,219
Intermodal	795,061	566,859	434,973
Metals, minerals and cons. prod.	44,718	26,773	12,497
Potash	1,895	1,346	-
Total	1,127,663	766,194	573,421

28. For those traffic groups presenting potential diversion opportunities, we developed mileage estimates using PC Miler for the CP/KCS route and the shortest available route and removed any lanes where the CP/KCS route was more than 500 miles or 50% longer than the shortest available route. Table 5 below shows the effect of applying this filter.

traffic at Counce, TN (just east of Memphis) and CPRS can terminate traffic in Chicago, there is no realistic, non-circuitous CP/KCS route between these two locations. Second, AAR's Central Station Master ("CSM") data used to identify whether CP or KCS has access at origin or destination occasionally does not reflect all limitations on access or operating rights relevant to the potential for traffic diversion. For example, although the CSM lists CP as having access to NS's intermodal facility in Bethlehem, PA, this is an NS-owned facility that CP does not serve independently from NS. As another example, KCS does not currently have rights to move traffic over UP trackage between Houston and Beaumont unless that traffic has had a prior or subsequent haul on the Tex Mex Laredo-Robstown/Corpus Christi line or is moving to/from shipper facilities on KCS's "Wharton Line" between Rosenberg and Victoria, TX. As a result, our analysis excluded movements between Houston and CP territory from potential diversion. In addition, we removed certain traffic from consideration in our diversion analysis because it consisted of low volume flows of geographically dispersed traffic that we deemed de minimis for purpose of this study.

[12] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

TABLE 5[13]
SUMMARY OF EFFECT OF MILEAGE FILTER APPLIED TO TRAFFIC IN DIVERSION OPPORTUNITIES

	Traffic Groups Presenting Diversion Opportunities	Diversion-Eligible Movement With Mileage Filter Applied
Automotive	72,915	71,900
Energy, chemicals and plastics	37,534	36,654

PART III
ANALYSIS OF LIKELY RAIL-TO-RAIL TRAFFIC DIVERSIONS TO THE COMBINED CP/KCS SYSTEM

29. With the near-term diversion opportunities defined, we next developed the appropriate principles to apply to each individual traffic record (or groups of records) to reliably estimate the portion of the traffic that CP/KCS would be able to attract from the other railroads currently moving this traffic. As part of this assessment, we studied the factors influencing how traffic moving in particular origin-destination pairs is distributed among the array of competing rail options.[14] We observed, for example, that origin-destination pairs (lanes) served by two single-line carriers tended to have traffic distributed relatively evenly among the two, while on lanes for which only one carrier offers a single-line route, that carrier tends to move a majority of the traffic in single-line service. Notably, we observed that the traffic share distributions varied

[13] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[14] The details of this analysis are provided in Appendix B.

widely across lanes and there was weak correlation between the relative shares of traffic among the available routing options and the movement mileages for those options.

30. We also gave consideration to the likely differentiation of the CP/KCS service offering, recognizing that CP/KCS would in many lanes offer somewhat longer routes than the larger Class Is. Table 6 below summarizes average miles for movements currently handled by other carriers where we identify diversion opportunities.

TABLE 6[15]
OVERALL AVERAGE MILEAGE CHARACTERISTICS FOR TRAFFIC ELIGIBLE TO BE DIVERTED

Overall Average Miles For New Single-Line Diversion Opportunities	
Existing Movement on Other Carriers	1,853
Shortest Route Theoretically Possible	1,747
CP/KCS Route for Diversion Opportunity	2,070

31. Table 6 shows that existing movements of traffic eligible for diversion travel on average around 100 miles longer than the shortest route theoretically possible (including the effects of circuity), and that CP/KCS routes would be on average around 200 miles longer than the existing routes. Average end-to-end haul lengths for traffic eligible for diversion are typically between 1,500 and 2,000 miles, so these differences are relatively minor in percentage terms and from a cost perspective.[16] We also recognize that CP/KCS would also remain smaller than its larger Class I rivals, which have built strong franchises and are well-entrenched in many

---

[15] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[16] For perspective, the 2019 URCS cost for a western carrier's 2,000 mile movement in single-line service is 7% higher than for an equivalent 1,800 mile movement with one interchange. These mileage levels correspond generally to the overall average traffic composition included in our diversion results. All else equal, assuming another railroad currently priced this traffic at 200% R/VC, CP/KCS could offer a 5% rate discount to the shipper and still move the traffic at an R/VC level of 175%. (This calculation assumes a single car shipment of 100 net tons of lumber in a private flat car with circuity set to 1.0. $5,409 / $5,055 = 1.07. $5,055 x 200% x 95% / $5,409 = 178%.) *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summaries.xlsx," tab "Tables."

of the markets where CP/KCS will compete. Applicant personnel provided us with observations on market conditions and their commercial experience related to the diversion opportunities. We gave weight to all of these factors in determining what probabilities to assign to the diversion opportunities for purposes of stating them in terms of expected values.

32. The combination of these factors led us to err on the side of conservatism in estimating the likely lane shares that CP/KCS offerings would achieve. CP/KCS's incentives to offer improved reliability, more aggressive pricing, and other ways of differentiating themselves from the larger Class I carriers could lead to higher levels of diversions than we predict, whereas aggressive competitive responses by the incumbent carriers could lead to lower diversions than we predict. In light of the factors noted above, and the incentives that incumbent carriers will have to seek to retain the traffic in which they currently participate, we considered it appropriate to assume that CP/KCS would be required to offer rate reductions averaging five percent in order to attract traffic away from existing single-line service to CP/KCS single-line service.

33. Our estimates of potential rail-to-rail diversions of traffic that CP or KCS currently interchange with other railroads took account of Applicants' stated commitment to keep open all existing gateways on commercially reasonable terms. In no instance do we assume that CP/KCS would be in a position to – or have an incentive to – "force" a shift of traffic to CP/KCS single-line routes. Rather, our analysis considers the advantages of an additional single-line competitive option from the perspective of shippers, which would benefit from stronger competition and in many cases a shipping alternative they would prefer from a value point of view (in terms of service reliability, car supply, economic terms, and all of the other factors that are relevant to a shipper's transportation purchase decision). As we discuss below

(*see* Table 27), our analysis concludes that a majority of CP's and KCS's existing interline traffic would not be diverted away from the interline routes that shippers choose today.

34. We applied the starting point diversion percentages shown in Table 7 below to project the amount of traffic that will divert to CP/KCS, but as noted below our diversion estimates considered further individualized factors that led us to apply adjustments that affected these percentages.

TABLE 7
STARTING POINT DIVERSION RULES FOR TRAFFIC SUSCEPTIBLE TO DIVERSION

Existing Conditions	Post-Transaction Conditions	% of Traffic Shifted to CP/KCS
Traffic moves via single-line option via other carriers (e.g., BNSF Direct)	CP/KCS adds new single-line option	25%
Traffic moves via interline service via other carriers (e.g., CN-UP)	CP/KCS adds new single-line option eliminating interchange	50%
CP or KCS participates in traffic via interline service with other carriers (e.g., CP-UP)	CP/KCS could handle traffic in efficient single-line service eliminating interchange	50% (where origin/destination served by CP or KCS today is open to other carriers) 75% (where origin/destination served by CP or KCS today is sole-served)
Traffic moves in interline service via two interchanges, with CP and KCS at origin or destination and a third bridge carrier	CP/KCS could handle traffic in efficient single-line service eliminating two interchanges	75%

For purposes of applying these diversion percentages, we conservatively did not treat any stations in Mexico as sole-served by KCSM to account for potential FXE access. We also reduced by half the amount of divertible traffic in the CWS reported as rebill received or forwarded by UP at the Eagle Pass border crossing with FXE because we were unable to identify

which carloads originated or terminated at locations where KCSM would be able to serve effectively.

35. We next discuss how we applied these diversion percentages in analyzing the dynamics of the individual diversion opportunities on a commodity-by-commodity basis.

A. Grain

36. Grain diversion opportunities derive primarily from the fact that the merged entity will provide synergy for grain production in the Midwest and grain consumption and export in the Gulf region and Mexico. Grain commodities include both cereal grains such as corn, wheat, and soybeans which are sourced from changing geographies as market conditions and transportation rates fluctuate, as well as grain-derived commodities including corn syrup, corn starch, ethanol, and distillers dried grains (DDGs). Since the latter are typically produced at fixed origin plants located in grain-producing regions, they represent relatively more stable traffic flows. Accordingly, we use existing 2019 rail traffic flows as a basis to identify diversions for grain-derived commodities, but for cereal grain diversions we look beyond specific historical origin-to-destination flows and focus instead on underlying factors related to origin production and destination consumption driving the overall demand for transportation.

37. For cereal grains, CP has a strong origin capability but it has been underutilized due to lacking destination options. Table 8 below summarizes CP's broad access but small share for soybeans, wheat, and corn originating in the Midwest.

TABLE 8[17]
SUMMARY OF CP'S SHARE OF MIDWEST CORN, WHEAT, AND SOYBEANS SHIPPED BY RAIL

	2019 Carloads in CWS and Traffic Tapes	Percent of Total
Total Corn, Wheat, and Soybeans Originated by Rail in BEAs Served by CP	429,722	100%
CP Share of Originated Traffic	76,459	18%

38. This outcome is driven by CP's limited book of destination options. CP competes with BNSF, UP, and CN from Iowa and the upper Midwest. These carriers have more grain destination options than CP which makes their elevator locations more valuable to the shipper. In particular, via a UP or BNSF elevator, grain can access Pacific Northwest and eastern markets, can ship directly to the Gulf region, and can reach other important export markets. From the perspective of the farmer, this means that, depending on present market conditions, trucking to a more distant elevator with railroad service to destinations not accessible to another closer elevator could result in receiving a higher price. The CP/KCS combination addresses this weakness for CP by enabling it to offer its customers single-line access to the South Central and Gulf regions as well as large consumption points in Mexico.

39. In contrast, KCS has more destination demand than origin supply, terminating more than 23,000 more cereal grain carloads than it originates, as Table 9 summarizes.

TABLE 9[18]
COMPARISON OF KCS/KCSM ORIGINATED AND TERMINATED CORN, WHEAT, AND SOYBEAN CEREAL GRAIN

2019 KCS/KCSM Carloads of Cereal Grain in Traffic Tapes Excluding Intra-Mexico Movements	
Total Originated	59,972
Total Terminated	83,104
Difference	23,132

[17] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[18] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

40. CP has the capability to increase cereal grain shipments from the elevators it serves in Minnesota, Iowa, and the Dakotas by attracting grain volumes from other carriers' nearby elevators or truck shipments currently moving to the Mississippi for barge transportation. CP also expects that grain shippers will work with it to build out additional elevator capacity to supply additional destination demand stimulated by CP/KCS single-line service options to Mexico and the Gulf region, as the Wahba/Naatz V.S. explains. *See* Wahba/Naatz V.S. at ¶ 24.

41. KCS has a large grain-distribution network in Mexico and terminates over 80,000 carloads of grain from the United States. As discussed in the Wahba/Naatz V.S., CP/KCS expects that merger-related service improvements will allow it to increase its share of cereal grain exports from the United States to Mexico by five percent. *See* Wahba/Naatz V.S. at ¶ 22. To provide context for this increase, based on 2017 Freight Analysis Framework data published by the Bureau of Transportation Statistics, 2019 U.S. Department of Trade data, and 2019 CP/KCS combined traffic tapes, we estimate the 2019 modal shares for United States cereal grain exports to Mexico shown in Table 10 below.

TABLE 10[19]
ESTIMATED 2019 UNITED STATES TO MEXICO CEREAL GRAIN EXPORT TONNAGES BY MODE

Mode	Estimated Share
KCSM	{{{ }}}
Other Rail	
Barge	36%
Truck	6%
2019 Total Export Tonnage	**25,860,634**

42. A five percent gain would increase KCS's share from {{{ }}} percent of total cereal grain exports to Mexico to a CP/KCS post-combination share of {{{ }}} percent. This

[19] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

would represent 12,930 additional carloads of cereal grains moving via CP/KCS single-line routes. For purposes of developing operating outputs for us in the Operating Plan, we estimate that these carloads would be distributed proportionally across the CP-served grain-supply regions that would be newly accessible via single-line routes. Table 11 below reports these figures.

TABLE 11[20]
ALLOCATION OF UNITED STATES TO MEXICO EXPORT CEREAL GRAIN DIVERSIONS TO CORN, SOYBEANS, AND WHEAT

Commodity	Rail Carloads Originated by All Carriers in BEAs Served by CP	Percent of Total	Diversion Carloads
Corn	204,730	48%	6,160
Soybeans	122,417	28%	3,684
Wheat	102,575	24%	3,086
Total	429,722	100%	12,930

43. We then allocated these estimated diversions across individual origins and destinations identified by Applicants for corn, soybeans, and wheat to reflect the locations where Transaction-related synergies are expected.

44. The five percent increase in share anticipated by CP is realistic for several reasons. First, it is well supported by the core complementarity of CP's and KCS's grain networks and the synergies achieved by linking CP origins and KCS destinations via reliable single-line service. Second, even with this increased share, CP/KCS would still have less than a {{{ }}} share of the overall export tonnages despite being the only carrier offering single-line end-to-end service. Third, the estimated new Mexican export traffic would reflect a very small fraction of the grain for which CP/KCS could offer single-line access to Mexico. KCS currently exports about {{{ }}} cereal grain carloads originated by rail

[20] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

from origin areas for which it is able to provide single-line service to Mexican destinations, whereas even with the expected diversions CP/KCS would be exporting only about *one out of every 30* of the additional cereal grain carloads for which CP/KCS would be able to provide new single-line service to Mexican destinations.[21]

45. In addition to cereal grains, the CP/KCS combination would attract additional movements of other grain commodities as well.

46. ***Sweeteners and Dried Distillers Grains ("DDGs")*:** This traffic primarily consists of corn syrup and DDGs from corn-rich production areas in Illinois and Iowa accessible to CP that move to Mexico and to a lesser extent to the Gulf region, where they are used for food production (for corn syrup) and animal feed (for DDGs). Two lanes that are illustrative of this opportunity are movements of corn syrup from Rock Island, IL into Mexico, which currently moves via {{ }}, and DDGs from CP-served plants in Lawler, IA and Charles City, IA that CP currently forwards to {{ }} for movement to Mexican Gateways for movement beyond into Mexico on FXE and KCSM. In both of these examples, we would expect that a CP/KCS single-line route offering would attract some of this traffic.

47. ***Canadian Seed Oils and Legumes*:** This opportunity includes seed oils and legumes from CP-served origins in Manitoba and Saskatchewan that CP forwards to UP for movement to Eagle Pass and movement beyond via FXE to Mexican destinations primarily around Mexico City and Celaya. Since KCSM also reaches these destinations and has a

[21] Specifically, of the {{{ }}} carloads of cereal grains shipped by rail on any carrier in origin BEAs accessible to KCS, KCS shipped {{ }} carloads. {{ }} / {{{ }}}. CPRS would provide access to origin BEAs that generated an additional {{{ }}} carloads of cereal grains in 2019. 12,930 / {{{ }}}.

comparable route structure, we expect some of this traffic would be attracted to CP/KCS single-line movements that would offer improved economics and service to shippers.

48. Table 12 below summarizes additional individual diversion opportunities in existing 2019 traffic flows we have identified for grain commodities other than corn, wheat, and soybeans.

TABLE 12[22]
SUMMARY OF GRAIN CARLOADS EXCEPT CORN, WHEAT, AND SOYBEANS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Primary Commodities	Total Diverted Carloads	Overall Percent Diverted
IL/IA	Mexico / Gulf region	DDGs and Sweeteners	2,650	34%
Canada	Mexico	Legumes and Oil Seeds	188	48%

B. Intermodal

49. Viewed from the perspective of our rail-to-rail diversion analysis, the primary flows of existing intermodal traffic that likely would be attracted to new CP/KCS services are (a) between Mexico and Chicago and Detroit where CP/KCS would create new single-line service, as well as (b) between Chicago and Dallas, where CP/KCS would enter as the third competitor with a single-line route.

50. ***Intermodal Shipments Between Mexico and Chicago/Detroit***. More than {{{ }}} containers of freight annually flow northbound from Mexico into the United States/Canada each year by rail, and slightly less moves in the reverse southbound direction, which includes some empty specialized-crate containers moving in revenue backhaul service. Much of this traffic consists of containerized automotive parts, appliances, and other

[22] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

manufactured goods. KCSM handles about {{{ }}} of these total volumes. Table 13 below summarizes the major locations originating and terminating for KCSM's cross-border intermodal traffic.

TABLE 13[23]

51. KCSM's intermodal franchise in Mexico has strong network reach into core industrial areas generating traffic. FXE also has a competitive presence in intermodal but its network provides more advantageous services in the west of Mexico, although it is capable of providing competitive alternatives for most Mexican traffic by partnering with other Class I carriers in the United States.

52. Despite KCSM's strong position in Mexico, due to its limited intermodal distribution network in the United States, almost all of the more than 240,000 intermodal cross-border containers KCS handles in Mexico are originated or terminated north of the border by other railroads. KCS originates or terminates fewer than 5,500 of these containers in the United States. The majority of KCS's cross-border intermodal traffic is interchanged with BNSF or UP, and moves to/from the Midwest, especially Detroit and Chicago, where some traffic is then

[23] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

interchanged to eastern carriers. KCS's remaining cross-border intermodal traffic is mostly interchanged with NS or CSXT to reach the eastern United States. Table 14 below summarizes KCSM's cross-border intermodal traffic flows.

TABLE 14[24]

53. Linking KCSM's access to Mexican intermodal markets with CP's access to Detroit and Chicago intermodal markets (as well as Ontario and Quebec) would establish a core service opening a new competitive corridor offering the first single-line service option. A distinct advantage of the CP/KCS combination is that this new corridor connects through Kansas City, which would provide the operating economies to support an additional competitive

[24] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

intermodal service option linking Kansas City with markets to the north, as discussed in the Wahba/Naatz V.S. *See* Wahba/Naatz V.S. at ¶¶ 63-65.

54. ***Intermodal Shipments Between Dallas and Chicago.*** As the Wahba/Naatz V.S. also explains, CP/KCS will make possible a new single-line intermodal service between Dallas and Chicago, creating new head-to-head competition with existing services offered by BNSF and UP. CP/KCS's concentration on providing efficient and reliable north-to-south movements through its core mainline will create an attractive service alternative to the existing intermodal services between Chicago and Dallas that are a comparatively small part of a much larger group of east-to-west focused intermodal services. A reliable third-morning availability offering, tapping CP's efficiently located Bensenville intermodal facility on the northwest side of Chicago, offers the promise of attracting a meaningful share of the traffic moving in this lane despite the longer CP/KCS route, for reasons Wahba/Naatz explain. *See* Wahba/Naatz V.S. at ¶¶ 51-52.

55. Table 15 summarizes the individual diversion opportunities identified by our analysis.

TABLE 15[25]
SUMMARY OF INTERMODAL CONTAINERS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Diverted Containers	Overall Percent Diverted
Mexico	Chicago	33,496	47%
Mexico	Detroit	7,485	23%
Chicago	Mexico	30,215	43%
Detroit	Mexico	10,950	22%
Subtotal Mexico – Midwest Traffic Diversions		**82,146**	**37%**
Chicago	Dallas	{{{	
Dallas	Chicago		
Subtotal Chicago – Dallas Traffic Diversions			}}}
Mexico	Canada (excl. Toronto)	807	54%

Toronto	Dallas	144	54%
Subtotal Intermodal Other Traffic Diversions		**4,673**	**54%**
Total		**137,416**	**32%**

56. All of the above moves represent existing 2019 traffic flows where CP/KCS would be capable of providing end-to-end single-line service. These diversion opportunities are reasonable in light of the logistical advantages of single-line service especially important to intermodal, and CP/KCS's ability to attract sufficient intermodal volumes required to build a reliable and integrated service on the north-to-south core mainline overcoming its route length disadvantages in certain lanes. Each of these rail-to-rail diversion opportunities, and their associated volume levels, was reviewed and deemed reasonable by Applicants' commercial teams. The associated operating changes required to serve the diverted traffic were provided to the team developing the Operating Plan and integrated into the CP/KCS service design plan. The

[25] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

operating team determined that CP/KCS would be capable of effectively serving the diverted traffic subject to the below adjustments.

57. As a result of the service design analysis, certain capacity restraints were identified for intermodal shipments into and out of CP's Detroit intermodal terminal accessed via CSXT trackage rights that include daily haul-length limits, and as a result we adjusted downwards our Detroit intermodal diversions by 55 percent. *See* Operating Plan (Exhibit 13) at ¶ 36.

58. In addition to the diversions we estimate, we understand that other Applicant witnesses (Mutén and Wahba/Naatz) have identified additional intermodal traffic opportunities that the CP/KCS system could attract, including international intermodal traffic via the Port of Lazaro Cardenas on the Pacific Coast of Mexico, and additional domestic intermodal traffic that would be diverted from truck to rail. Those additional traffic estimates are fully consistent with our conclusions regarding likely rail-to-rail intermodal diversions and would provide beneficial economies of scale key to developing successful new intermodal services.

C. Automotive Traffic

59. Over {{{ }}} automotive carloads originating from automotive plant facilities in Mexico move north into the United States/Canada each year. KCSM has a strong position with respect to this traffic and in 2019 originated more than half of Mexican automotive traffic imported into the United States and Canada by rail, with the rest handled by FXE. Rail participation in the transportation of finished vehicles is heavily influenced by whether the railroad is able to serve an individual automotive production plant. Table 16 below summarizes automotive carloads KCSM originated from major plant locations in Mexico, the majority of which move into the United States and Canada.

60. Some of these plants are also accessible by FXE, and the same holds true in reverse in that there are volumes that are currently moved by FXE from automotive plants in Mexico that KCSM could potentially attract with better access to end markets in North America.[27] Figure 3 below plots these automotive origins. The relative size of the pie charts reflects KCSM automotive volumes in the indicated origin clusters (with the different colors reflecting the portion of the volumes represented by individual plants within that cluster).

[26] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[27] The majority of non-KCS automotive flows from Mexico into the United States are reported in the CWS as rebilled received by UP or BNSF at the U.S./Mexico border (generally at Eagle Pass), which prevents visibility into their ultimate origin in Mexico.

[28] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

}

61. While having significant access to automotive supply from Mexico, KCS terminates very little of this traffic in the United States, and none in Canada, due to a limited distribution network. As Table 17 below shows, this leads KCS to interchange with other carriers, often with KCSM handing the traffic off at or near the U.S./Mexican border.

TABLE 17[29]

KCS	}}}

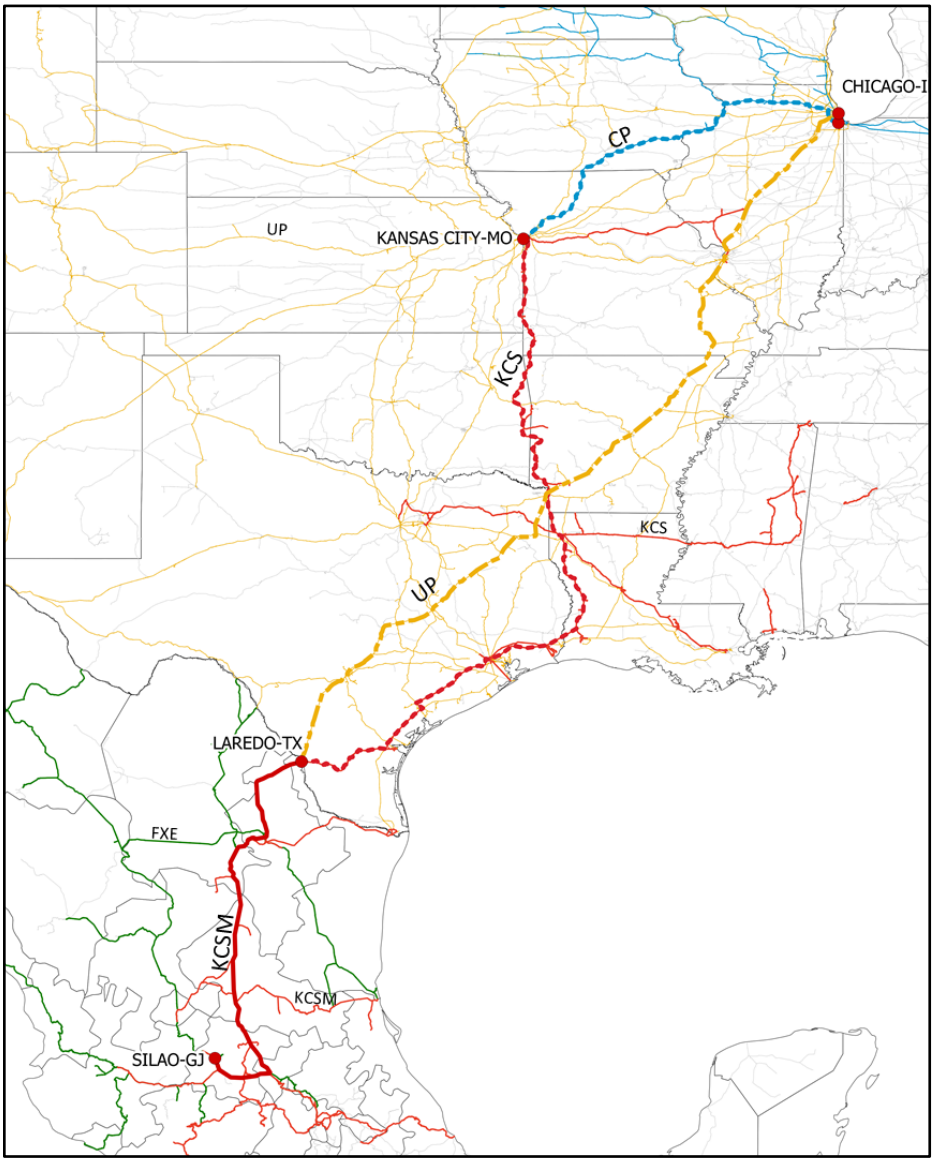
62. From CP's perspective, KCS's access to Mexican finished automotive traffic is a natural fit with the capabilities of its automotive distribution network built primarily to deliver autos from Canadian automotive manufacturing plants to major Canadian and U.S. markets. Despite its access to these distribution points, CP's participation in finished automotive flows from Mexico is small, comprising less than {{{ }}} of all imported Mexican finished automotive carloads into Canada and less than {{{ }}} into the United States. Pairing KCSM's supply of Mexican automotive imports with CP's automotive distribution network and connecting these markets with a new single-line route from Mexico to Chicago offers new service efficiencies and enhanced competition.

63. Table 18 below summarizes the individual regional diversion opportunities we identify.

[29] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

TABLE 18[30]
SUMMARY OF FINISHED VEHICLE AUTOMOTIVE CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Diverted Carloads	Percent of Eligible Traffic Diverted
Mexico	Chicago interchange (CSX or NS)	14,430	40%
Mexico	Canada	8,349	52%
Mexico	Chicago	5,197	50%
Mexico	Twin Cities	2,933	71%
Mexico	Kansas City	1,838	46%
Subtotal Mexican Imported Autos		**32,747**	**46%**
Ontario	Kansas City	337	57%
Gulf region	Canada	134	67%
Subtotal Other		**471**	**59%**
Total		**33,218**	**46%**



64. As Table 18 shows, we project over 33,000 automotive carloads diverting to the CP/KCS system each year primarily from Mexico once the full effects of the merger are phased in. This represents slightly under half of the total eligible traffic moving in lanes CP and KCS are capable of serving on either end but currently do not serve from origin to destination. More than half of the movements originated in Mexico that our analysis concludes would be diverted are already handled by KCSM and nearly all are currently delivered to UP or BNSF at or near the border. While CP/KCS would have routes that are on average 17 percent longer, CP/KCS would offer the only single-line service in the market, which would be highly attractive to shippers.

65. The map in Figure 4 below shows the existing KCSM-UP interline and alternative CP/KCS single-line routes for a representative finished vehicle movement from Silao,

[30] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

Guanajuato to the Chicago gateway. Under our analysis, half of these movements will divert from the current KCSM-UP interline-route to the CP/KCS single-line route.

FIGURE 4
MAP OF KCSM-UP INTERLINE ROUTE AND CP/KCS SINGLE-LINE DIVERSION ROUTE FOR MOVEMENT OF AUTOMOTIVE CARLOADS FROM SILAO TO CHICAGO

66. Although our initial logic identified Kansas City as already served by CP, and thus the combination with KCS would not provide new access associated with a merger-related diversion possibility, we overrode this classification to reflect the fact that CP does not currently

terminate finished vehicles in Kansas City because it does not have a facility to do so, whereas the CP/KCS combination would give CP access to the KCS automotive facility at International Freight Gateway.

67. Each of these diversion opportunities, and their associated volume levels, was reviewed by Applicants' commercial and operating teams and deemed reasonable.

68. In addition to the diversions we estimate, we understand that Wahba/Naatz have identified additional automotive traffic opportunities that the CP/KCS system could attract, including future services connecting Canadian and Upper Midwest assembly plants with Dallas and Eastern Texas where CP/KCS could build new distribution facilities. They also identified a similar diversion opportunity related to a plant just west of Queretaro that came online in 2020 and thus did not show up in the 2019 traffic data we use. *See* Wahba/Naatz V.S. at ¶ 74. Those additional traffic estimates are fully consistent with our conclusions regarding likely rail-to-rail intermodal diversions.

C. Energy and Chemicals

69. We address diversion opportunities for crude, liquified petroleum gas ("LPG") and chemicals in the following section.

1. Bitumen/Crude

70. In 2019, approximately {{{ }}} carloads of bitumen moved from production fields in northern Alberta into the United States, with most destined for the Gulf region. CP currently originates {{{ }}} of the Alberta crude moving by rail to all destinations, but it has a much smaller share of volumes destined for the Gulf region. CN moved approximately {{{ }}} more carloads to the Gulf region than CP in 2019.

71. CP's service is handicapped by its need to interchange this traffic with destination carriers. CN does not have this limitation, although its single-line route requires passing through

the Chicago area. The vast majority of CP's traffic destined for the Gulf region currently moves via interchange with BNSF at Noyes, MN (at the Canadian border) or with UP via the Chicago Gateway. Because the tank cars that haul this traffic are shipper-owned, operating efficiencies and related cycle times are highly influential on shippers' choice of transportation provider. *See* Wahba/Naatz V.S. at ¶ 87. Many of these moves would be expected to convert to CP/KCS single-line service, along with smaller volumes from origins accessible to CP that CN currently moves to the Gulf region.

72. The resulting diversions we identified are summarized in Table 19 below.

TABLE 19[31]
SUMMARY OF DRU CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Total Diverted Carloads	Overall Percent Diverted
Northern Alberta	Texas Gulf	16,341	69%

73. In addition to these estimated diversions, we understand that Wahba/Naatz explain that the CP/KCS Transaction – and the availability of improved single-line routes for shipments of Alberta bitumen to Gulf region refiners, likely would accelerate the transition of the crude oil in existing forms (which are highly flammable and treated as hazardous shipments) towards the movement of so-called "DRUbit," which is bitumen from which diluent has been removed. DRUbit is not flammable and not hazardous, and Wahba/Naatz anticipate that CP/KCS would attract additional volumes of crude moving in this form. *See* Wahba/Naatz V.S. at ¶ 88 et seq.. Those additional traffic estimates are fully consistent with our conclusions regarding likely rail-to-rail intermodal diversions.

[31] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

2. Liquefied Petroleum Gas

74. LPG moves by rail from production regions to areas where sufficient demand for consumption exists that is not already supplied from other more proximate sources. CP has origin access to large production areas in Alberta and Saskatchewan, while KCS has access to destination markets in Mexico (as discussed by Wahba/Naatz), and the KCS north-to-south mainline links the two together to provide the opportunity to attract additional rail traffic in these lanes. *See* Wahba/Naatz V.S. at ¶¶ 82-83.

75. Over {{{ }}} carloads of LPG were originated in Alberta in 2019, the majority of which moved into the United States, with more than {{{ }}} continuing into Mexico. Mexico does not have significant domestic production and relies on imports of LPG to satisfy its demand, much of which is moved by rail from the United States and Canada. In 2019, more than half of the approximately {{{ }}} carloads of North American LPG imported by rail into Mexico came from Alberta. Table 20 below summarizes CN and CP LPG flows to Mexico via interchange with other carriers and ultimate delivery to their destinations by KCSM or FXE.

TABLE 20[32]
SUMMARY OF LPG CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

	CN	CP
LPG Carloads Originated in Alberta	{{{ }}}	{{ }}
Portion Delivered to Mexico		
KCSM		
FXE[33]		

[32] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[33] FXE estimates assume traffic showing in 2019 CWS as rebilled at the U.S./Mexico border, less CP/KCS volumes from 100% traffic tapes, delivered to FXE.

76. Many of CP's originations are currently handed off to UP in Saint Paul, which then forwards the traffic to KCSM or FXE at the Mexican border. A single-line CP/KCS option likely would attract much of this LPG to CP/KCS routes serving final consumption points in Mexico, thereby avoiding two separate interchanges (CP to UP and UP to FXE or KCSM). To the extent KCSM could not reach FXE-served consumption points directly or find sufficient consumption demand at alternative destinations it serves, we understand from Applicants that KCSM could work with truck networks out of Monterrey and Saltillo to provide access to western Mexico destinations (*see* Wahba/Naatz V.S. at ¶ 82). Based on these considerations, we relaxed the typical constraint in our screening model and allowed inclusion of movements where KCSM could not directly serve the ultimate destination in Mexico, which identified modest amounts of additional rail-to-rail diversion traffic. Table 21 below summarizes our traffic diversion estimates.

TABLE 21[34]
SUMMARY OF LPG CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Total Diverted Carloads	Overall Percent Diverted
Alberta	Mexico	1,545	60%

3. Chemicals

77. We examined potential shifts of chemicals traffic to CP/KCS single-line routes arising from the linkage of KCS's access to chemical plants in the Gulf region with CP's access to Chicago, the Upper Midwest, and Canada. Among the particular flows that could be served by a combined CP/KCS system are movements of plastics and lubes from production areas served by KCS – including Princeton, Baton Rouge, Westlake, Reserve, Cotton Valley, and Woodlawn

[34] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

in Louisiana, Port Neches, and Beaumont in Texas, and Vicksburg in Mississippi. Table 22 below table summarizes the regional flows where we expect CP/KCS to attract additional traffic. Details on the specific diversion movements are included in our workpapers.

TABLE 22[35]
SUMMARY OF CHEMICAL CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Primary Commodities	Total Diverted Carloads	Overall Percent Diverted
Gulf region	Canada	Plastics	944	62%
Gulf region	Chicago	Plastics/Lubes	1,579	48%
Gulf region	Midwest	Plastics/Lubes	734	49%

D. Forest Products

78. We identified two categories of forest products traffic likely to be attracted to CP/KCS single-line routes.

79. ***Lumber from CP Origins to Dallas, TX***. CP's forest products business is based on its broad geographic access to Canadian lumber production areas in British Columbia, Alberta, Ontario, and Quebec. Each year over {{{ }}} carloads of lumber move into the United States from Canada. Despite having similar access at origin to lumber mill production sources as compared to CN, CP currently handles less than {{{ }}} percent of this cross-border traffic. What CP does handle is nearly all interchanged with other U.S. carriers due to CP's limited distribution network in the United States. [36]

80. The CP/KCS combination would expand CP's market access, most significantly by providing single-line service to the Dallas area, which is the second-largest termination area

[35] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

[36] BNSF also competes for lumber traffic in British Columbia via the BCOL, which CN owns and operates but BNSF and CP also have access rights to.

for lumber by rail in the United States, and the largest termination area for Canadian lumber. *See* Wahba/Naatz at ¶¶ 97 and 98. To complement CP's origin access to lumber supply, KCS has a lumber distribution facility in the Dallas area which currently terminates fewer than {{ }} lumber carloads annually. For context, UP and BNSF respectively terminate over {{{ }}} carloads of lumber annually at their facilities in the Dallas area.

81. In addition to CP/KCS's increased ability to attract Canadian lumber traffic that CP currently hands off to other U.S. carriers, CP/KCS's new single-line routes will also enable it to originate a larger share of lumber from Canadian mills served by both CP and CN (and where CN dominates). We estimate this additional traffic by identifying lumber mills CP can access in Alberta, British Columbia, Ontario, and Quebec, and assuming CP increases its share by five percentage points and moves that traffic to destinations in Dallas and other destinations to either displace existing supply or accommodate future growth. Table 23 below summarizes our quantification of this expectation.

TABLE 23[37]
SUMMARY OF FOREST PRODUCTS CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS ORIGINATING AT NEARBY CN-SERVED ORIGINS

Total 2019 Lumber Traffic Into United States From Canadian Origins CP Can Access Supplying Dallas	{{{
CP 2019 Share of Rail Volumes at These Origins	
Effect of Increasing CP's Share From {{{ }}}} to Supply Lumber to Dallas	
Total by 2021 After Accounting for 15% Growth from 2019 to 2021	}}}

82. ***Paperboard from KCS-Served Mills to CP-Served Production Facilities***. KCS serves numerous paperboard production facilities in Louisiana and other South Central states. Paperboard is used in the production of cardboard boxes, which have become ubiquitous in most

[37] *See* Brown/Zebrowski Workpaper "Lumber Analysis.xlsx," tab "Tables."

American's daily deliveries of goods to their homes via Amazon, UPS, USPS, FedEx, and other delivery services. These boxes are manufactured at facilities across the United States, with a significant concentration in the Upper Midwest – and in particular the Chicago area, where so much commerce originates. Due to KCS's strong origin network and the expanded destination reach CP will provide, CP/KCS will attract a material portion of the paperboard moving from the South Central states to packaging facilities surrounding Chicago.

83. Table 24 below summarizes the forest products traffic that our analysis indicates would be attracted to CP/KCS single-line routes.

TABLE 24[38]
SUMMARY OF FOREST PRODUCTS CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Primary Commodities	Nature of Diversion	Total Diverted Carloads	Overall Percent Diverted
Canada	Texas	Lumber	Existing Traffic Patterns	1,684	48%
Canada	Texas	Lumber	Increased Share of Originations	2,038	na
TX/LA/OK	Midwest	Paperboard	Existing Traffic Patterns	894	42%
Totals				4,616	46%

E. Metals, Minerals and Consumer Products ("MMA")

84. There are several specific regional flows presenting opportunities for CP/KCS to attract various commodities that CP classifies as part of its MMA line of business. Although not all involve large volumes of traffic, these opportunities reflect the breadth of the impact of the CP/KCS combination in enhancing competition in the North American rail network for

[38] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

numerous shippers of various sizes benefitting from improved transportation services. As illustrations, sugar production primarily in Louisiana would have new single-line access to Chicago and the Upper Midwest; iron and steel produced near Chicago could flow to the CP/KCS system through local shortline connections to consumption areas such as Texas and Mexico; and rail shipments of foundry sand from a large mine near Utley, WI to Mexican industrial plants requiring it for specialized production processes could bypass multiple interchanges with larger Class Is and move directly from CP's WSOR shortline connection into Mexico via CP/KCS single-line service. Table 25 below summarizes these individual opportunities. Additional details underlying these flows are provided in our workpapers.

TABLE 25[39]
SUMMARY OF MMA CARLOADS DIVERTED TO CP/KCS FROM EXISTING 2019 TRAFFIC FLOWS

Origin Area	Destination Area	Primary Commodities	Total Diverted Carloads	Overall Percent Diverted
LA	NY/VT/PA	Sugar	184	34%
LA	IN/IL	Sugar	448	25%
WI	Mexico	Sand	{{{ }}}	50%
IN/IL	TX/MS/LA	Iron and Steel	1,444	27%
Midwest	Mexico	Iron and Steel	833	51%

F. Summary of Diversion Results from 2019 Traffic Data

85. Table 26 below summarizes the total amount of diverted traffic we project for the different categories of rail-to-rail diversions our analysis identified.

[39] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

TABLE 26[40]
SUMMARY OF ELIGIBLE TRAFFIC IN DIVERSION OPPORTUNITIES AND PERCENTAGE DIVERTED BY CATEGORY

	Eligible Traffic for Diversion	Effective Overall Diversion Percentage	Diverted Traffic
CP/KCS Competitive Wins			
New CP/KCS Single-line Movement Diverted From Single-Line Movement on Other Carrier	250,159	25%	62,543
New CP/KCS Single-line Movement Diverted From Existing Interline Movement on Other Carriers	50,778	29%	14,925
CP/KCS Extended Hauls (Interline Moves Becoming Single-Line Moves)			
Existing CP or KCS Interline Movement Converted to CP/KCS Single-line Movement Open at Both End	239,060	43%	102,637
Existing CP or KCS Interline Movement Converted to CP/KCS Single-line Movement Sole-Served at One End	23,895	74%	17,620
Existing Interline Movement Between KCS and CP Using Bridge Carrier Converted to Single-Line Movement	5,274	76%	3,982
Subtotal Rail-to-Rail Diversions from Existing 2019 Traffic Movements	***569,166***	***35%***	***201,707***
Additional Diversions Resulting from Traffic Pattern Shifts			
Lumber and Grain	N/A	N/A	14,968
Total	569,166	N/A	216,675

86. Table 27 on the next page breaks down our expected "extended haul" diversion opportunities by the connecting carriers and major gateways where CP/KCS single-line offerings would win some portion of the traffic currently moving in interline service. As shown in that

[40] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

table, CP/KCS will affect only a minority – and in most cases a small minority – of the traffic that CP or KCS interchange with other Class I carriers at the gateways they serve.

TABLE 27[41]
EXTENDED HAUL DIVERSION OPPORTUNITIES BY AFFECTED CARRIER AND GATEWAY

Interchange Partner	2019 Total U.S. Interchange Traffic	Traffic Eligible for Diversion	Diverted Traffic	Diverted Traffic as Percentage of All Interchange	Diverted Traffic as Percentage of "Eligible" Traffic

41 *See* Brown/Zebrowski Workpaper "Interchange Analysis.xlsx," tab "Tables."

87. As we have discussed, the specific rail-to-rail diversions that we forecast will occur because the combined CP/KCS system is better able to enhance the value received by prospective customers, in the form of better service, improved cycle times, better economic terms, and all of the other attributes of transportation service that matter to these customers.

88. One quantification of those benefits is reflected in the actual diversions themselves – in terms of carloads and revenues. CP/KCS will realize those gains, of course, but the choices shippers make to shift their traffic to CP/KCS options will also reflect the enhanced value those shippers realize from the improved competitive options made available by the CP/KCS Transaction.

89. Though more difficult to quantify, the shipping public and the broader economy will benefit in many direct and tangible ways. For example:

- Shippers will realize rate reductions, both from CP/KCS's more aggressive competition enabled by its new single-line offerings and reduced cost profile as well as from shippers' incumbent-serving railroads striving harder to retain the traffic for which CP/KCS will compete more effectively. These competitive benefits, although difficult to quantify with any precision, likely will be quite significant over time given the aggregate volume of rail traffic for which CP/KCS will be a stronger competitor, even where it does not win the traffic.
- Shippers will realize improvements in service and service reliability as a result of CP/KCS removing an interchange and enabling operating improvements and investments that improve transit times and predictability. Those improvements will push other railroads to improve as well, magnifying the benefits beyond the diversions we project.
- CP/KCS single-line routes offer the potential to improve railcar utilization and cycle times, improving CP/KCS's cost profile when using railroad-owned equipment and simultaneously delivering direct benefits for shippers who own or lease their own equipment. Those shippers will be able to ship more goods using their existing fleets or be able to achieve fleet size reductions, in both cases generating direct economic benefits.
- Shippers will benefit in more subtle ways as well, such as through improved ease of doing business with a single, integrated end-to-end system rather than coordinating and managing two separate connecting

railroads for purposes of billing/invoicing, shipment monitoring, inventory control, and the like. These benefits likely will be greatest where CP/KCS is able to assist in simplifying multiple cross-border customs and currency logistics (spanning the entire USMCA continent), which no railroad can do today.

- In addition, over the longer run, a broader CP/KCS network almost certainly will support a broader array of investments in new transportation services than the two separate railroads would, given their narrower footprints and more limited market reach. Examples of these sorts of initiatives are discussed in Wahba/Naatz V.S. and include investments in international intermodal services to/from the Port of Lazaro Cardenas, investments supporting the conversion of crude-by-rail shipments into safer DRUbit form, and investments supporting new grain distribution capacity in the U.S. Corn Belt, among many others.

PART IV
ESTIMATING LIKELY INCREMENTAL REVENUES FROM DIVERTED TRAFFIC

90. Our estimate of revenues associated with rail-to-rail diversions began with an assessment of prevailing rate levels for the diverted shipments based on rates for rail movements of the same or similar commodities between the same regions. We also identified the diversions received by CP or KCS under existing interline movements that would convert to single-line service to determine the incremental revenues gained by CP/KCS. We then applied an aggregate five percent reduction in revenue to movements that new CP/KCS single-line services would win away from other carriers' existing single-line services, as noted at paragraph 32 above. The revenues we estimate represent price levels as of 2019.

A. Identifying Revenue Earned by Other Carriers for Portion of Move that Will Shift to CP/KCS

91. Our estimates of the incremental revenues CP/KCS would earn from diverted traffic vary depending on the category of the diversion and whether the current move is rebilled.[42]

92. For ***new single-line moves***, incremental revenues are those reported in the 2019 CWS for the existing movement. When these moves are rebilled at the Mexican border, we include estimated average Mexican revenue divisions from KCSM traffic tape data for similar commodities.[43] Where CP/KCS relies on a shortline partner to serve the origin or destination, we deduct the average estimated division paid to that shortline as determined from CWS data.

93. For ***existing CP or KCS interline traffic that is non-rebilled***, incremental revenues are determined by calculating the average revenues for the portion of the existing route that is not on CP or KCS as reported in the combined 2019 CP/KCS traffic tape data. [44]

94. Incremental revenues for ***interline rebilled moves*** currently handled by CP or KCS that would be converted to single-line CP/KCS movements are not readily available in the data and thus had to be estimated. For these moves, we estimated revenues based on rate levels observed for comparable movements in the 2015-2019 CWS.[45] Where possible, we measured rate levels for comparable end-to-end movements of the same or similar commodities moving

---

[42] All revenue estimates are stated in United States dollars ("USD"). Revenues from the CP Traffic Tape Data were reported in Canadian Dollars ("CAD"). A conversion rate of 1 USD = 1.33 CAD was used to convert revenues in the CP Traffic Tape Data into USD.

[43] Certain Mexican cross-border movements reported in the CWS as non-rebilled involving FXE appeared to not include revenue divisions for FXE, and we therefore included estimated average Mexican revenue divisions for these movements as well.

[44] Average revenues refers to the average revenue per car or intermodal unit.

[45] We adjusted revenues across all five-years of CWS data to 2019 levels using the STB's Railroad Revenue Deflator factors determined in EP 748. *See* https://www.stb.gov/reports-data/economic-data/railroad-revenue-deflator-factors/.

between the same regions in comparable service, accounting for shipment size and car supply among other things, and deducted CP's or KCS's current division to identify the incremental portion. If there were not adequate movements on an end-to-end basis, we instead looked for comparable rebilled movements on a similar basis corresponding to the segment of the move not currently handled by CP or KCS. Over 95% of estimated revenues were based on prevailing rate levels for comparable traffic movements of the same 2-STCC commodity (or more refined, e.g., 7-STCC) moving between the same state-to-state pairs (or more refined, e.g., station-to-station). Details of this process are provided in Appendix C.

B. Adjusting Revenues to Take Account of Rate Competition Aimed at Winning Traffic Away from Incumbent Routings

95. For movements already moving on other railroads in single-line service, as discussed above we conservatively assumed that CP/KCS would attract only 25 percent of the existing shipments to new CP/KCS single-line routes, and we also reduced the prevailing rate levels by five percent to reflect that CP/KCS would not be able to differentiate its offering solely on the basis of its new single-line option in order to win the traffic. These levels of assumed rate reductions are generally consistent with the observed effects of railroad competition at origin and destination discussed in the Christensen Report commissioned by the STB.[46]

96. Table 28 below summarizes the application of our revenue-assignment methodology. We provide results phased in over a three-year period using the phase in assumptions discussed in the Wahba/Naatz V.S. *See* Wahba/Naatz at ¶ 115. The fully phased-in diversion levels occur in Year 3.

---

[46] "Volume 2: Analysis of Competition, Capacity, and Service Quality, Revised Final Report." Lauritis R. Christensen Associates, Inc. November 2009. *See* Tables 13-3, 13-4, 14-3, and 14-4.

TABLE 28[47]
SUMMARY OF PHASED IN RAIL–TO-RAIL DIVERSION TRAFFIC AND INCREMENTAL REVENUES BY LINE OF BUSINESS

	Year 1	Year 2	Year 3
Diverted Carloads/Units			
Automotive	11,188	22,038	33,218
Energy, chemicals and plastics	16,343	19,207	21,143
Forest Products	2,100	3,961	4,616
Grain	4,984	10,365	15,768
Domestic IM	45,336	90,708	137,416
Metals, minerals and consumer products	0	2,257	4,514
Total	79,950	148,536	216,675
Incremental Revenues (2019 Levels)			
Automotive	$42.3M	$84.2M	$127.3M
Energy, chemicals and plastics	$63.0M	$80.0M	$89.8M
Grain	$25.4M	$52.5M	$79.8M
Domestic IM	$49.0M	$98.1M	$148.6M
International IM	$0.0M	$0.0M	$0.0M
Metals, minerals and consumer products	$0.0M	$12.1M	$24.3M
Total	$195.5M	$362.5M	$513.1M

C. Developing Shipment Information Required to Support the Operating Plan and Determine Incremental Costs Associated with Diverted Traffic

97. For all of the traffic that we estimated would be diverted to the CP/KCS system, we reported to other witnesses the movement characteristics required to (a) develop the Operating Plan and (b) estimate the costs associated with moving the new traffic (as presented in the Baranowski V.S.). The data we reported included average tons per car, car type, and shipment size information, all of which was readily available from the underlying 2019 movement records on which the diversions were based.

[47] *See* Brown/Zebrowski Workpaper "Rail to Rail Diversion Summary.xlsx," tab "Tables."

98. Certain of the movement characteristics that we reported had to be estimated, using the following approaches:

- Car ownership was defined by treating car initials ending in "X" as private, except for car initials associated with TTX, and other car initials as railroad-owned.
- We projected AAR Car Type for limited records where it was missing in the traffic tape data based on the prevalent car type among similar commodities.
- We developed total end-to-end miles on CP/KCS using PC Miler practical routes between the starting and ending locations on CP/KCS. For extended hauls, we also developed existing miles on CP or KCS to deduct from end-to-end miles so as to identify the incremental additional miles associated with the diversions. For traffic in the CWS rebilled at the Mexican border, we estimated average Mexican miles from KCSM traffic tape data for similar commodities.
- For diversion lanes affected by our radial flags, such as forest products traffic shifted to a nearby CP or KCS transload, we assumed the traffic would originate or terminate at the nearest point where CP or KCS had handled traffic to the existing flow.
- We identified the pre- and post-diversion switches by type on either end performed by CP and KCS, including identifying where the diverted traffic would be interchanged with a shortline carrier.
- For the through moves we projected by allocating rebilled moves, we assigned shipment tonnage by averaging the tons for the two segments of the move for paired shipments.

APPENDIX A
PREPARATION OF CONSOLIDATED CP AND KCS 2019 TRAFFIC TAPE DATA FOR USE IN MERGER APPLICATION

1. We were asked by counsel for Applicants to prepare a consolidated set of 2019 CP and KCS system-wide traffic data for use in preparing the Application. Traffic tape data, also referred to as waybill data or movement data, is maintained by freight railroads in the ordinary course of business and is a primary source for capturing information on rail freight movements at the individual shipment level. Traffic tape data records report route information, including origin and destination station and interchange locations; the railroads' participating in

the movement; car type; commodity; shipment size and weight; and a variety of other information for individual shipments moving across a given carrier's network.

2. Because many parts of the Application depend on analyzing the proposed CP and KCS network as a combined system, it was expedient to prepare a single master dataset of consolidated CP and KCS traffic for use in various analyses underlying the Application. The consolidated dataset has been provided to the following witnesses for their preparation of Application materials:

- Our Verified Statement;
- The Mutén V.S. addressing truck-to-rail diversions;
- The Verified Statement of W. Robert Majeure addressing competitive impacts;
- The Operating Plan sponsored by Ray Elphick and John Orr (without confidential revenue information); and
- The Baranowski V.S., addressing operating costs.

3. Below we describe the process used to develop the consolidated dataset. CP and KCS provided us with raw traffic tape data records maintained in the ordinary course of business for shipments with a waybill date in 2019. These tapes included all available data records for both loaded and empty movements and revenue and non-revenue movements for the entire CP system (both in Canada and the United States (*i.e.*, Soo Line and affiliates) and the entire KCS and KCSM system (KCSM in Mexico and KCSR and affiliates in the United States)). The tapes do not include trackage or haulage movements of other carriers' traffic on CP's or KCS's networks. CP and KCS provided us with standard fields of information for these records corresponding to those that are typically provided to the Board when preparing the Carload Waybill Sample. They also provided shipper and consignee information. A complete listing of these fields is included in Exhibit 3 attached hereto.

4. Table A1 below summarizes total raw records provided.

TABLE A1[48]
TRAFFIC TAPE RECORDS

2019 Total Traffic Tape Records Provided	
CP/Soo Line	4,307,445
KCSR/KCSM	3,057,747
Total	**7,365,192**

5. Based on our review of the data, we identified certain minor discrepancies in KCS data that required supplemental modifications. These modifications involved supplementing missing or inconsistent STCC information, appending car type information to certain intermodal flatcar records, and adding switching details KCS provided, all of which are contained in our workpapers along with the raw traffic tape data.

6. We removed multiple copies of movement records that were internally duplicated within the CP and KCS data. Duplicate records for the same movement were generally identified as multiple records with the same waybill number, waybill date, and car initial and number (or container initial and number for intermodal shipments). We also identified certain multi-car shipments with duplicate records covering the same movement where car initial and number differed. We eliminated duplicate versions and only kept a single record for each movement.

7. For CP, the following process was used to determine which duplicate record to keep:

- Eliminate any non-revenue duplicate records first;
- If duplicates remain pick the one with the most recent "RELEASE TMS";
- If duplicates remain, pick the one with CSTMS_CLRNC_CD = "Y"; and

[48] *See* Brown/Zebrowski Workpaper "Consolidated 2019 Traffic Data.xlsx," tab "Tables."

- If duplicates remain, pick the last one in the data.

This process removed 52,576 records from the 4,307,445 records provided by CP.

8. Nearly all duplicate records involved cases of cross-border movements on KCSR and KCSM, where both KCSR and KCSM raw data files reported the same movements. For these, we first determined which records were duplicates and then dropped the KCSM version of the record. This adjustment removed 306,141 of 3,057,747 records provided by KCS.

9. We added the system revenues (for both freight and fuel surcharges) from the dropped record to the record that was retained in cases where each record only reported the portion relating to either KCSR or KCSM. The following logic was applied to determine when to combine through revenues, which may include other carriers' revenue divisions depending on the rebilling status of the particular move, and when to use the through revenues from a single version of the record:

- First, if through freight revenues in the KCSR and KCSM duplicate records were the same, use that value – *i.e.,* do not add together – to determine total through freight revenues.
- Second, if KCSR plus KCSM system revenue divisions are less than the higher of the two through freight revenues in the duplicate KCSR and KCSM records, then use the higher of the two values to determine total through freight revenues.
- Otherwise, add together total through freight revenues in the duplicate KCSR and KCSM records to determine total through freight revenues.

10. Table A2 below summarizes the total records received and our processing to eliminate duplicates.

TABLE A2[49]
PROCESSED WAYBILL RECORDS

+ Add Raw CP 2019 Waybill Records	4,307,445

[49] *See* Brown/Zebrowski Workpaper "Consolidated 2019 Traffic Data.xlsx," tab "Tables."

+ Add Raw KCS 2019 Waybill Records	3,057,747
- Remove CP Internal Duplicates	52,576
- Remove KCS Internal Duplicates	306,141
- Remove CP-KCS Interline Record Duplicates (discussed below)	89,603
= Final 2019 CP/KCS Consolidated Traffic Tape Records	**6,916,872**

11. We compared the processed dataset against CP- and KCS- reported totals to ensure they were aligned. Table A3 below compares CP's system freight revenues and revenue units from the data to those reported publicly in CP's 2019 Annual Report.

TABLE A3[50]
CP TRAFFIC RECORDS

	2019 CP Traffic Tape Data	CP Reported Revenue Units in 2019 10-K
Intermodal	1,043,656	1,046,100
Carload	1,719,073	1,720,400
Total Revenue Units	2,762,729	2,766,500
Intermodal	$1,165.2M	$1,194.8M
Carload	$4,526.3M	$4,515.0M
Total Freight Revenues	$5,691.5M	$5,709.8M

12. This table shows that the data are well aligned. It should be noted that some difference is expected because reported information is based on accounting date – *i.e.*, when an individual movement was reported in the company's general ledger – as opposed to the waybill date, which is the date used for purposes of selecting data for inclusion in the Board's Carload Waybill Sample.

13. Table A4 below compares KCS/KCSM's system freight revenues and revenue units to those provided by KCS and shows that they are well aligned.

[50] *See* Brown/Zebrowski Workpaper "Consolidated 2019 Traffic Data.xlsx," tab "Tables."

TABLE A4[51]
KCS TRAFFIC RECORDS

	2019 KCS/KCSM Traffic Tape Data	KCS/KCSM Reported Revenue Units
Intermodal	675,145	676,691
Carload	1,125,003	1,130,593
Total Revenue Units	1,800,148	1,807,284
Intermodal	$397.0M	$370.2M
Carload	$2,557.2M	$2,355.7M
Total Freight Revenues	$2,954.2M	$2,725.9M
Less Payouts in Reported Data	$237.0M	Included
Total Adjusted Freight Revenues	$2,717.2M	$2,725.9M

14. Next we aligned the fields provided by CP and KCS and combined them into a single dataset. Certain issues on reporting convention and record interpretation are noted below:

- For CP records, through freight revenues include fuel surcharge revenues but system freight revenues do not include fuel surcharge revenues; For KCS records, through freight revenues and system freight revenue include fuel surcharge revenues.

- KCSR/KCSM's origin-to-destination routing fields (Origin FSAC thru Termination FSAC) report the end-to-end ultimate-origin-to-ultimate-destination-movement regardless of whether the move is rebilled, except for interline records that are not settled in the Interline Settlement System ("ISS") (*e.g.*, those including an ISS non-participant in the movement). For non-ISS rebill movements, end-to-end routing may not be reported consistently. For example, we have confirmed non-ISS records do not report the ultimate end point for movements originating or terminating at Laredo. We populated these ultimate endpoint fields for KCSR/KCSM records for consistency using the end-to-end routing information already provided. CP records' origin-to-destination routing reports only the Rule 11 rebill portion of the move, but CP separately provided fields reporting ultimate origin and ultimate destination railroad and location.

- The physical on/off fields reflect the on/off points of the railroad that reported the record, *e.g.,* a KCSM record reports where the shipment came on and off KCSM.

15. With the CP and KCS data stacked in a single dataset, we next identified joint CP-KCS interline movements which would be expected to be reported separately in both of the

[51] *See* Brown/Zebrowski Workpaper "Consolidated 2019 Traffic Data.xlsx," tab "Tables."

carriers' datasets. We did this both by reviewing the railroads reported in the relevant routing fields in the KCS data and by matching the CP and KCS records for rebilled moves together using car initial and car number and a seven-day date range to control for cases where the waybill number may have changed. We dropped the KCS version of the record and kept the CP version, except when a KCS record identified CP in the move but a corresponding record was not contained in the CP data.[52] KCS revenues from dropped KCS records were appended in a field added to the corresponding CP version of the record that was retained to ensure that all CP and KCS revenues were captured.

16. Table A5 below summarizes total consolidated 2019 CP and KCS revenue units and freight revenues (including fuel surcharges).

TABLE A5[53]
CONSOLIDATED CP AND KCS TRAFFIC RECORDS

	Carload	Intermodal	Total Units
Revenue Unit Movements	2,805,904	1,717,582	4,523,486
System Freight Revenues	$7,082.7M	$1,562.2M	$8,644.9M

17. Finally, at the request of Applicants, we prepared supplementary flat car movement records derived from KCSR and KCSM traffic tape data. The raw KCSR/KCSM traffic tape data typically contained records for container movements that identify only the individual flat car on which they are conveyed, but do not include separate records reflecting movements of the flat car itself. We estimated flat car movements by identifying unique combinations of origin-to-destination movements in given date ranges reported in the various

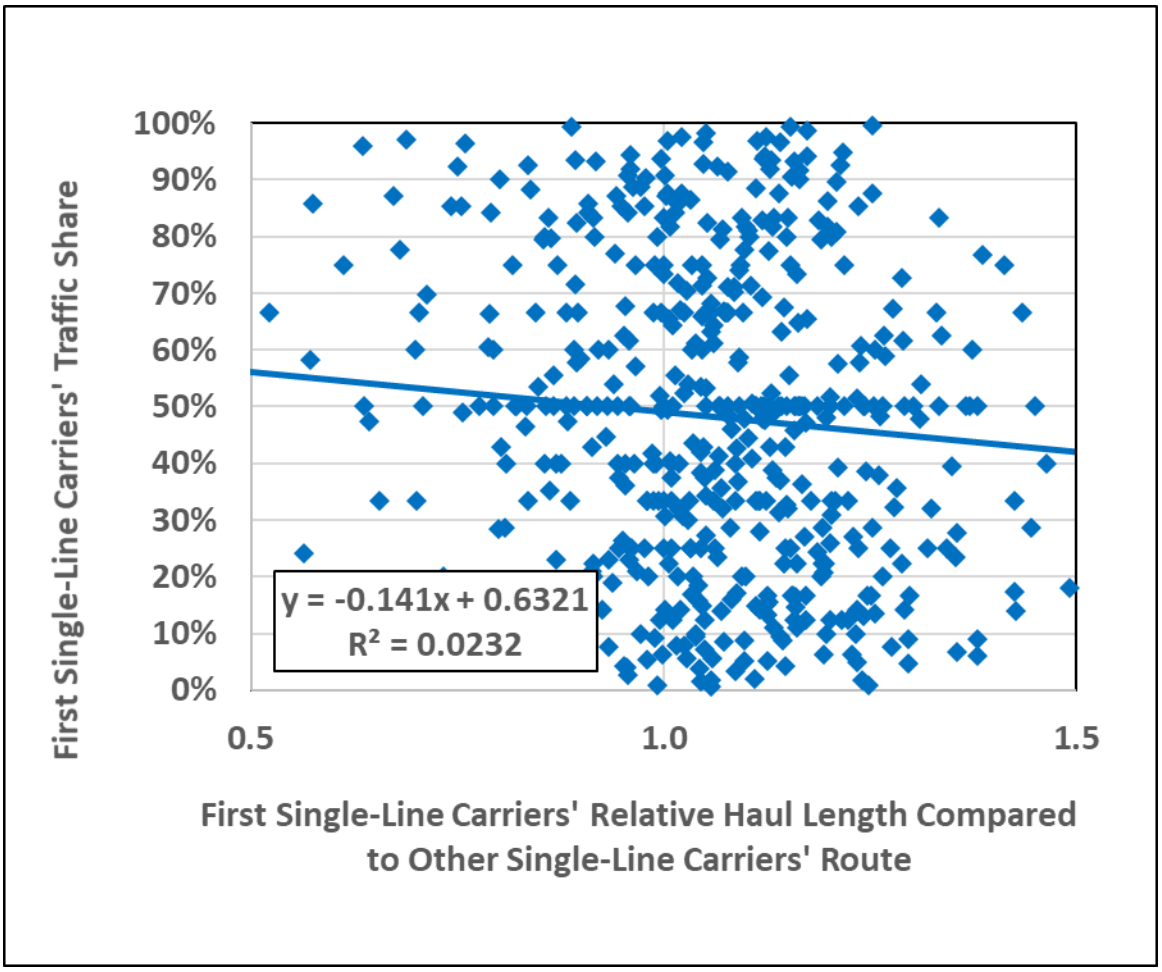
[52] Witness Robert Majure requested copies of the dropped KCS version of the records, which we provided.

[53] *See* Brown/Zebrowski Workpaper "Consolidated 2019 Traffic Data.xlsx," tab "Tables."

container movement records conveyed by the same flat car. Details of this process are included in our workpapers.

APPENDIX B
TRAFFIC DISTRIBUTION ANALYSIS

1. This Appendix describes certain of our analyses of traffic data supporting our range of percentage diversion estimates.



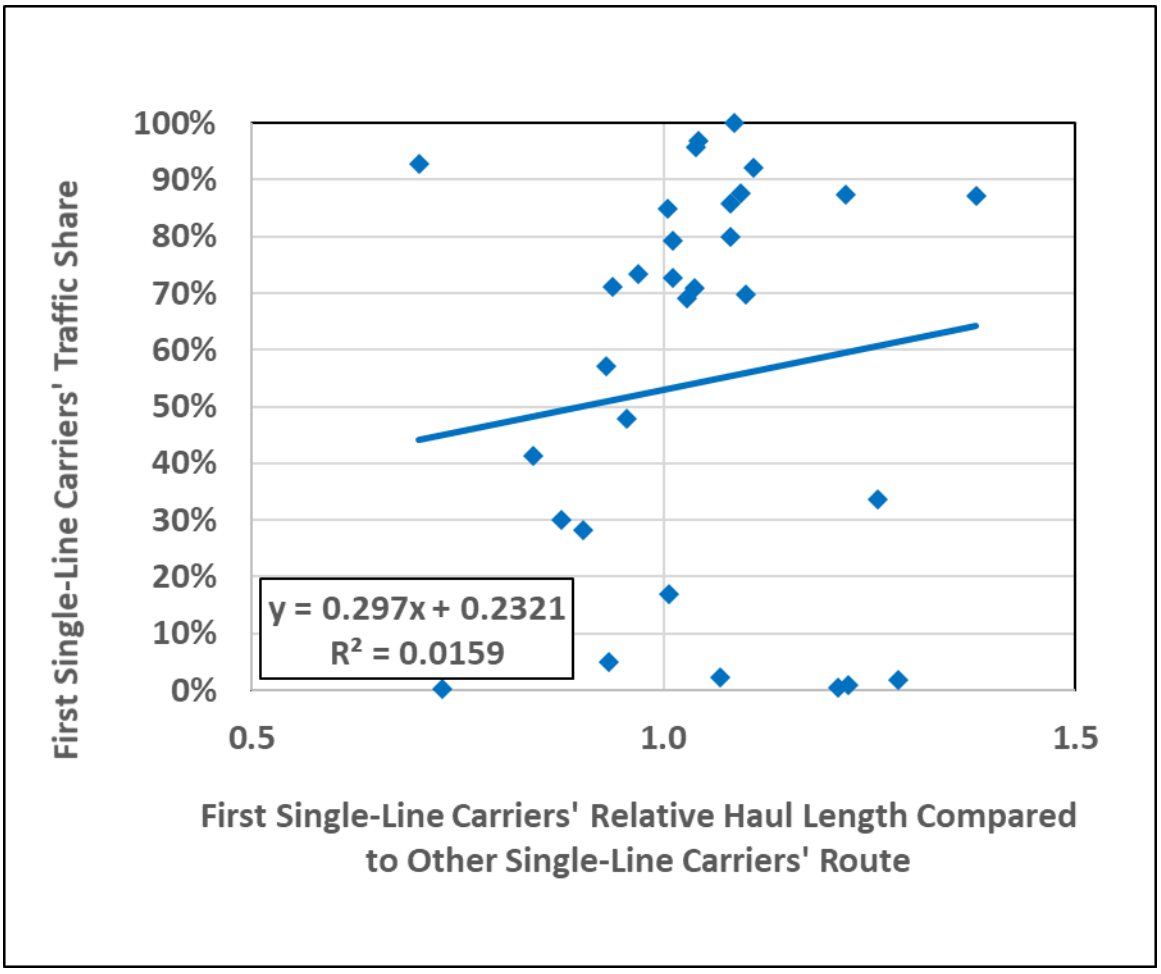
2. Our determination of appropriate diversion percentages began by surveying distributions of traffic among carriers for regional flows with characteristics similar to the traffic we have identified as eligible to divert. Specifically, we examined carload and intermodal traffic shares for county-to-county traffic flows in the 2015-2019 CWS for pairs historically served by either multiple Class I railroads with single-line routes or one Class I with a single-line route and at least one other interline alternative, whether or not involving the single-line carrier.

3. Our analysis focused on county-to-county pairs with rail distances over 1,000 miles corresponding to the longer distances of the traffic we identified as eligible for diversion. We isolated county-to-county pairs with either two single-line route alternatives, one single-line route and at least one dependent interline route alternative (*i.e.*, the interline route(s) involves the single-line carrier), or one single-line route and at least one independent interline route alternative (*i.e.*, the interline routes do not involve the single-line carrier).

4. We calculated relative traffic shares for the various route options based on total units over the period 2015-2019 and compared these shares to the relative lengths of haul for each route alternative. We then plotted the relevant traffic shares against relative length of haul and fitted these distributions with regression equations to identify the overall average distributions and examine the influence of routing options and length of haul on the distribution of traffic share.

5. Figure B1 below depicts 524 individual county-to-county carload traffic flows of at least 1,000 miles in length for which two Class I carriers offered single-line routes that were used between 2015 and 2019. The y-axis shows, for a given observation, the percentage share of traffic on one of the two single-line carriers' routes (the other carriers' share would be the difference of one minus this percentage amount). The x-axis shows how the route miles for the carrier whose option is depicted compared to the other single-line carrier's route miles. For example, for the observation in Figure B1 for which the carrier's share of traffic is 55 percent (per the y-axis) and the relative route mile figure is 1.2 (per the x-axis), this data point indicates that the first carrier handled 55 percent of the traffic even though its route was on average 20 percent longer for carload traffic traversing that county-to-county pair over the past five years.

FIGURE B1[54]
CARLOAD TRAFFIC SHARES (Y-AXIS) AND RELATIVE ROUTE MILES (X-AXIS) FOR MOVEMENTS BETWEEN COUNTY-TO-COUNTY PAIRS SERVED BY TWO SINGLE-LINE CARRIERS IN 2015-2019 CWS DATA



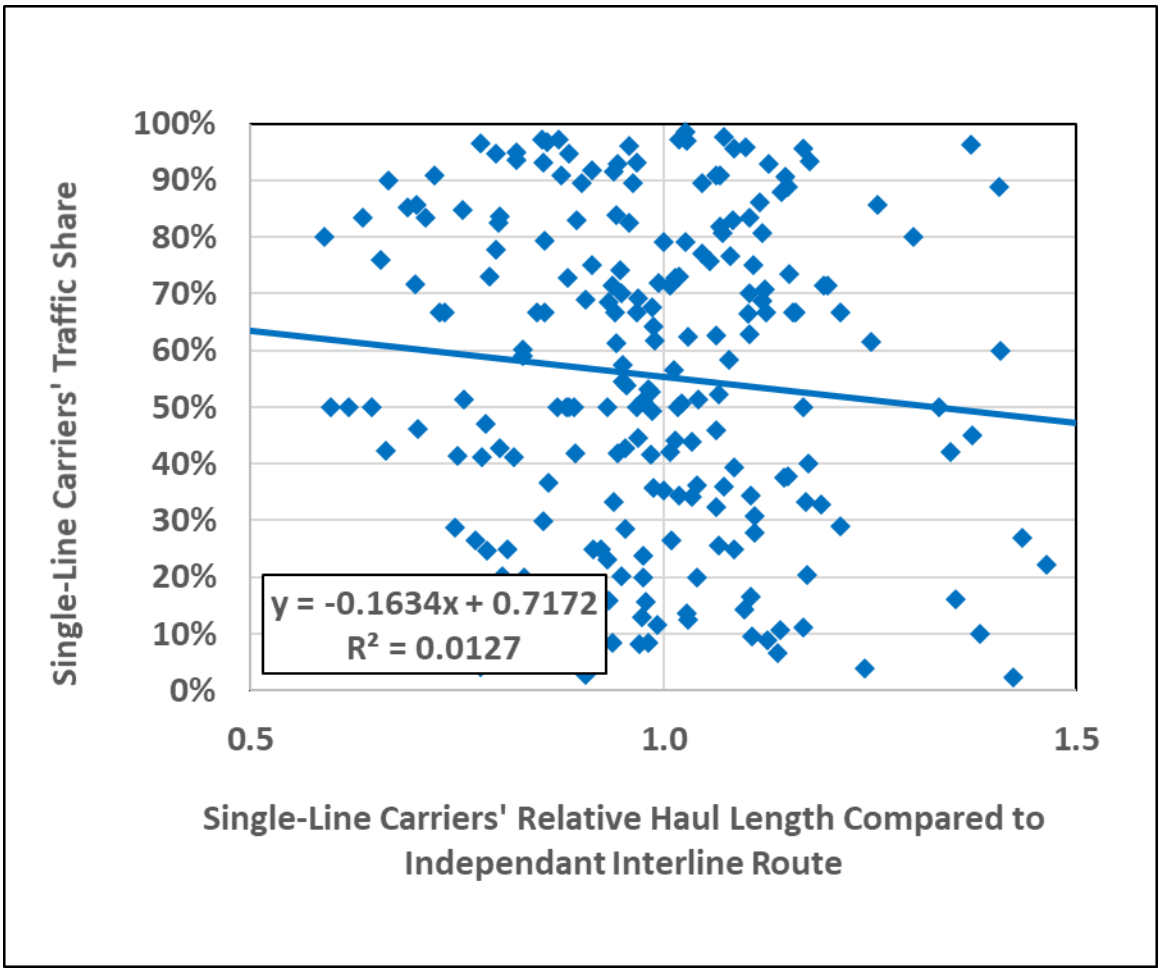
6. Figure B1 shows that overall there is a wide distribution of traffic shares that are minimally affected by relative route length. While the dispersed data illustrates a weak relationship between traffic share and relative route length, we may interpret the above chart to indicate that on average – *i.e.,* aggregated on an overall basis across all traffic analyzed – such

[54] *See* Brown/Zebrowski Workpaper "Traffic Distribution Analysis," tab "Figures."

traffic on average splits quite evenly between the two available single-line routes, with the carrier having the shorter route likely to take a slightly larger share of the traffic.

7. Figure B2 below plots the same data for intermodal traffic. Because only 33 county-to-county pairs qualify, the regression analysis has poor predictive power and there are high levels of variance.

FIGURE B2[55]
INTERMODAL TRAFFIC SHARES (Y-AXIS) AND RELATIVE ROUTE MILES (X-AXIS) FOR MOVEMENTS BETWEEN COUNTY-TO-COUNTY PAIRS SERVED BY TWO SINGLE-LINE CARRIERS IN 2015-2019 CWS DATA



55 *See* Brown/Zebrowski Workpaper "Traffic Distribution Analysis," tab "Figures."

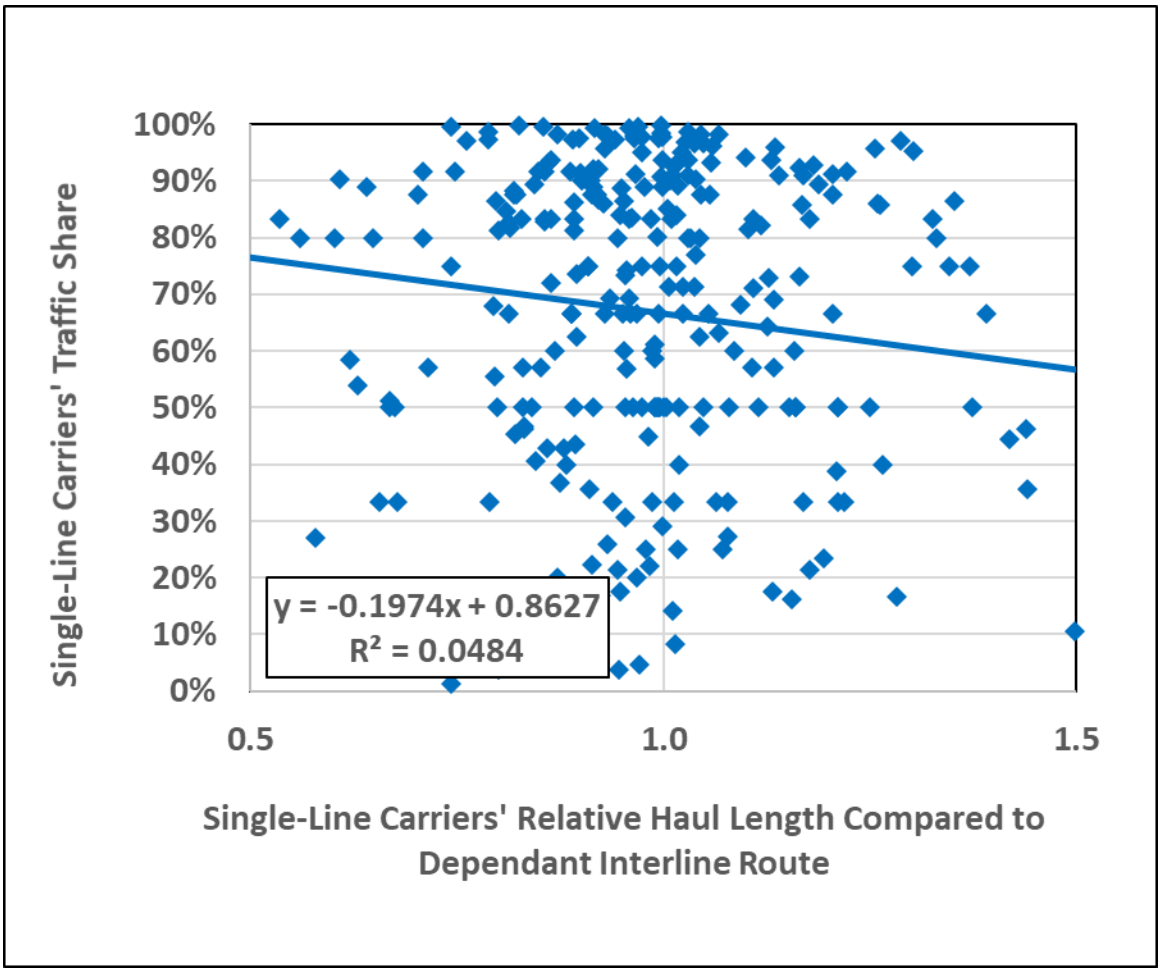
8. The analysis depicted in Figures B1 and B2 supports the conclusion that a 50 percent diversion percentage represents a reasonable starting point for determining how much traffic would divert from another single-line carrier to a new CP/KCS single-line option.

9. Next we performed a similar analysis examining traffic distributions and relative haul length where one carrier offers a single-line route and another carrier offers an independent interline route (*i.e.*, one that does not require the participation of the first carrier to complete the move). Figure B3 below is based on 221 individual county-to-county pairs involving movements over 1,000 miles. It shows traffic shares that vary greatly and have a weak negative relationship with relative haul length.

FIGURE B3[56]
CARLOAD TRAFFIC SHARES (Y-AXIS) AND RELATIVE ROUTE MILES (X-AXIS) FOR MOVEMENTS BETWEEN COUNTY-TO-COUNTY PAIRS SERVED BY ONE SINGLE-LINE CARRIER AND INDEPENDENT INTERLINE ROUTES IN 2015-2019 CWS DATA

10. As Figure B3 depicts, for county-to-county carload flows where a single-line and independent interline route are both used by shippers, the carrier with the single-line route on average is expected to attract roughly one-half to two-thirds of the traffic, with percentage shares at the higher end of this range correlated with that carrier having a relatively shorter route.

---



56 *See* Brown/Zebrowski Workpaper "Traffic Distribution Analysis," tab "Figures."

11. For intermodal traffic, the importance of single-line routes is even more pronounced. Very little intermodal traffic is attracted to interline offerings between counties where a rival railroad offers single-line service.

12. This analysis generally supports using as a starting point a diversion percentage of more than 50 percent for traffic where CP/KCS would offer the only single-line route and other carriers could offer interline route options not involving CP or KCS.

13. We also considered a situation where there is another interline option, but where that routing would involve CP or KCS participation in the origin-to-destination route. Figure B4 below depicts the relationship between relative traffic share of the single-line carrier and relative length of haul for the 289 individual county-to-county pairs involving carload traffic moving at least 1,000 miles.

FIGURE B4[57]
CARLOAD TRAFFIC SHARES (Y-AXIS) AND RELATIVE ROUTE MILES (X-AXIS) FOR MOVEMENTS BETWEEN COUNTY-TO-COUNTY PAIRS SERVED BY ONE SINGLE-LINE CARRIER AND "DEPENDENT" INTERLINE ROUTES IN 2015-2019 CWS DATA

14. Figure B4 indicates that where a given carrier participates in an interline route, and that same carrier offers its own single-line route, then on average more than two-thirds of the traffic would be expected to be move in single-line service, with that percentage increasing where the single-line carrier's length of haul is relatively shorter. However, it is also frequently the case that the single-line carrier participates in interline routes with other carriers to offer end-

[57] *See* Brown/Zebrowski Workpaper "Traffic Distribution Analysis," tab "Figures."

to-end service across a range of different relative route lengths. As with the previous survey, we note there is very limited qualifying intermodal traffic to evaluate.

15. These data provide statistical support for higher diversion percentages than we have applied. Our more conservative approach is driven in part by the market context in which the CP/KCS system will operate. CP/KCS will remain smaller than its entrenched Class I competitors, which have built strong franchises over the years for much of the traffic for which CP/KCS would be competing. Although our analysis does not indicate a strong influence of relative route length on traffic-share levels, we have considered that CP/KCS single-line routes for the diversion opportunities average 10 to 20 percent longer than those of the shortest rival route.

16. In light of these factors, it is reasonable to conclude that only 25 percent of eligible traffic would divert to CP/KCS single-line routes, while the incumbent single-line carrier(s) would retain 75 percent. Similarly, it is reasonable and conservative to conclude that only 50 percent of interline traffic would be attracted to CP/KCS single-line routes, with competing independent interline routes retaining 50 percent, even though overall distributions indicate that figure could be higher. Likewise, for interline traffic involving another carrier which CP or KCS would participate and where CP/KCS could offer its own single-line route, we assume 75 percent of eligible traffic will move in single-line service, a figure confirmed by the data above indicating that carriers offering their own single-line service routinely cooperate with other carriers to offer interline service on the same lanes.

17. It should be emphasized that the diversion percentages we apply are intended to estimate the expected value of diversions across eligible traffic groups as achieved during an

average period and should not be construed as specifying the exact movements predicted to divert at a future time.

APPENDIX C
PROCESS FOR ESTIMATING INCREMENTAL REVENUES FOR REBILLED TRAFFIC ATTRACTED TO CP/KCS SYSTEM

1. This Appendix describes our process for estimating the incremental revenues that CP/KCS would earn from the new traffic that would be attracted to its new single-line routes in the situation where the affected traffic is currently moving in rebilled interline service.

2. For traffic shifted to CP/KCS single-line service from rebilled interline shipments, we estimated revenue levels for the incremental portion of the shipment based on comparable shipments. We used the current movement's car ownership, AAR car type, and standard transportation commodity code ("STCC") to match with other traffic in the 2015-2019 CWS for which revenues were reported. In doing so, we examined various origin-to-destination geographic aggregations, including at the level of standard point location code ("SPLC"), business economic area ("BEA"), state, freight rate territory, and country level.

3. For each traffic grouping, we proceeded by systematically relaxing the degree of aggregation in a step-by-step process by which we identified the most comparable available traffic from which to calculate average revenues. For carload traffic, car ownership, STCC, and geographic aggregation were prioritized in this matching process because rate structures and revenues are most dependent on these variables. For intermodal movements, car ownership and geographic aggregation were prioritized, given that STCC is generally less significant in determining the rate structure and revenues for intermodal traffic.

4. As an illustrative example of this step-by-step matching process:

- If there is not a matching move at the car ownership-AAR car type-STCC-SPLC level, then a match is attempted at the car ownership-1st Digit AAR car type-STCC-SPLC level.

- If no match is found, then a match is attempted at the car ownership-STCC-SPLC level.
- If no match is found, attempts to match at the 4- and 2- digit STCC level are made.
- If no match is found, the process repeats sequentially at the next largest geographic aggregation level until a match is found.

5. We used this process to calculate average revenues estimates for both the entire movement (end-to-end) and the non-CP/KCS segment of the current movement.[58] We deducted CP and KCS's current divisions from the calculated end-to-end revenues to estimate incremental revenues to CP/KCS for extending the haul. We compared this to estimated revenues for the new segment where CP/KCS would extend the haul, which already represent the incremental revenue to CP/KCS. Both approaches are designed to estimate the same incremental revenues. In cases where we were able to develop reliable estimates under both approaches, we generally preferred to use the end-to-end revenues less actual CP and KCS divisions since this accounts for the amount CP and KCS already received for that particular move. To determine cases where one approach was more reliable than the other, we applied certain checks and comparisons between the two. If either the end-to-end or segment approach was matched at poor geographic level not more specific than the state-level, we used the other approach assuming it was matched at a geographic level more specific than the country-level (*e.g.*, station, BEA, or state). We also made comparisons between the developed data points to ensure they related in a consistent fashion. Specifically, if the estimated end-to-end revenue amount was below the actual CP and/or KCS divisions, or if the estimated end-to-end revenue amount was lower than the estimated segment revenue amount, we used the segment revenue estimate. For diverted moves

[58] Only non-rebill moves in the 2015-2019 CWS were used when estimating Average Revenue per Car for the entire movement, and only rebilled moves were used when estimating Average Revenue per Car for the non-CP/KCS segment.

derived from CWS movement records that do not report the Mexico portion of revenues (a situation that arose primarily for FXE moves rebilled at Eagle Pass), we derived estimates of the revenue levels for the Mexican portion of the move from comparable KCSM shipments in the traffic tape data.[59]

6. As a final step to ensure reasonableness, we calculated average revenues per-mile for each line of business from the revenues developed for each individual diverted shipment. We removed as outliers the bottom ten percent and top 90 percent revenue per-mile figures from the calculation of the average revenue levels that we ultimately applied to what was diverted.

7. As seen in Table C1 below, incremental revenues for 49 percent of the diverted traffic used complete data from either the 2019 CWS or the combined CP/KCS traffic tapes, ten percent use matched end-to-end revenue levels from the CWS less actual CP/KCS divisions, and 41 percent use matched segment revenue levels from the CWS.

[59] This process only covers diversions of existing 2019 traffic movements and does not include the cereal grain and lumber opportunities discussed above that are not related to specific existing movements. For these, cereal grain revenues were based on KCS's 2019 average revenues for unit train shipments in railroad-owned cars from the Kansas City area to Mexico, and lumber revenues were based on 2019 average revenues.

TABLE C1[60]

Percentage of Diversion Traffic Covered By Three Approaches For Estimating Revenues	
Actual Movement Revenues From CWS or Traffic Tapes	49%
Average End to End Revenues from CWS Less Actual CP/KCS Divisions	10%
Average Segment Revenues from CWS for New CP/KCS Segment	41%

BS in Economics from Syracuse University

Richard Brown is an as need Director in the Network Industries Strategies ("NIS") group of FTI's Economic Consulting practice. With 28 years of experience in the railroad industry, Mr. Brown specializes in providing financial, economic and analytical consulting services to North America's largest railroads. Mr. Brown has provided expert testimony in merger proceedings and rate reasonableness cases before the Interstate Commerce Commission and The Surface Transportation Board. Mr. Brown works primarily from his Texas office at 925 Ranch Road, Copper Canyon, TX 76226.

Mr. Brown joined FTI Consulting in 1999. Much of the NIS group's work focuses on the economic and financial analysis of network industries, in particular different aspects of transportation. While at FTI, he has been involved in the analysis of rates, costs, and service in the railroad industry. Mr. Brown has worked extensively to develop expert testimony before the Surface Transportation Board ("STB") examining the reasonableness of railroad rates, railroads' applications for mergers and acquisitions. He also supported railroad internal strategic planning needs with respect to mergers and acquisitions and the impact of potential regulatory changes.

Prior to joining FTI, Mr. Brown spent 28 years with The Burlington Northern & Santa Fe Railway (BNSF), and its predecessor The Atchison, Topeka and Santa Fe Railway (ATSF). While at BNSF, he focused on strategic issues including the negotiation and implementation of the agreements between UP and BNSF that were effected to facilitate the UP-SP merger. Additionally, he took a lead role in the analysis of the potential impact of regulatory changes on railroad marketing strategy.

Mr. Brown held numerous positions in Strategic Planning and Marketing at ATSF. He was involved in merger analysis and planning and played a key role in the attempted merger between ATSF and Southern Pacific. He headed ATSF's Bulk Commodity Marketing which included Chemicals and Coal. In this role, Mr. Brown re-engineered a field sales organization with

regional directors responsible for coaching and mentoring account

managers; started a subsidiary company to handle tank containers as a retail intermodal options; and expanded on that with a joint venture with Bulkmatic, a major dry bulk truck line, to initiate a retail intermodal option for bulk containers.

Mr. Brown holds a Bachelors Degree in Economics from Syracuse University and an MBA degree from Northwestern University Graduate School of Management.

Nathan Zebrowski is a Managing Director in the Network Industries Strategies group of the Economic Consulting segment, located in McLean, VA. He provides financial and economic consulting services to the transportation and energy industries.

Mr. Zebrowski's work combines economic and statistical training with deep industry expertise and project experience. His work includes freight transportation market analysis; competitive assessments and valuations for transportation assets, services, and systems; contract evaluation, negotiation support, regulatory risk assessment, and damages determinations; litigation and expert witness testimony; rate reasonableness inquiries including application of regulatory tests; M&A related analysis and support; and operational, capital investment, and cost studies.

In Mr. Zebrowski's work evaluating network enterprises, he is informed by an intimate knowledge of the fundamental economics related to long-lived network assets, the unique realities affecting network operations and the highly individualized nature of the regional and commodity markets in which transportation businesses participate. He has special expertise in developing complex computer models assessing traffic flows over railroad networks and conducting detailed studies on costs, operations, and pricing of freight transportation services.

VERIFIED STATEMENT OF BENGT MUTÉN

1. My name is Bengt Mutén, and I am a Consulting Principal with IHS Markit in its Economics and Country Risk practice. My office is located at One Financial Center, Suite 1900, Boston, Massachusetts 02111.

2. I have a Bachelor of Science in Management Science from the Massachusetts Institute of Technology and a Master's of Science in Civil Engineering from the University of California at Berkeley. Since leaving Berkeley in 1980, I have been involved in the analysis and forecasting of the freight transportation market. I started my career at DNS Associates, Inc., and continued it at Mutén and Associates, Inc. A significant part of my practice during this period involved merger analysis, including diversion analyses relating to the Norfolk Southern-Conrail and Santa Fe-Southern Pacific transactions, transactions involving a number of regional railroads, and analyses supporting railroads' internal strategic planning.

3. In 1997 I joined Reebie Associates, a leading firm in analyzing the freight transportation marketplace across modes. Reebie Associates was acquired by Global Insight in 2004, which itself was acquired by IHS in 2008. IHS then then merged with Markit to become IHS Markit in 2016. During this time I provided diversion testimony for the applicants supporting Kansas City Southern's ("KCS's") acquisition of the Texas Mexican Railway.

4. I am also currently the primary developer of Transearch®, a database of modal freight movements originally developed by Reebie Associates in 1980. This database is used in market planning across a range of industries, but primarily by states, Metropolitan Planning Organizations ("MPOs"), and Class I railroads.

5. In this proceeding I have been asked by Applicants to estimate the expected diversions of current truck traffic to intermodal services the combined Canadian Pacific ("CP")

and KCS system will offer. This statement describes the process I used to estimate those diversions, and the results of my analysis.

I. INTRODUCTION

6. I estimated the likely diversion of truck traffic to new, integrated intermodal rail services that will be offered by the combined CP/KCS system by examining the improvements the transaction would achieve relative to the other existing rail intermodal options currently available to shippers. I performed this analysis on a lane-by-lane basis for all lanes in which the transaction would yield an improved CP/KCS single-line intermodal offering. As discussed in more detail below, I defined lanes as combinations of origin and destination pairs. In the United States, the origin and destination areas are defined by Business Economic Areas, which are based on the U.S. Bureau of Economic Analysis 1997 definitions[1]; in Canada, they are defined by Canadian Metropolitan Areas ("CMA") and the remainders of each province; and in Mexico, they are defined by states. These areas are herein collectively referred to as "BEAs." The aggregate volume of susceptible traffic is the sum of truck traffic moving in dry van or refrigerated trailers or containers, plus the total volume of intermodal traffic moving between ramps in these origin-destination lanes. In my analysis, I relied upon the truck flows that are reflected in the IHS Markit Transearch® database for 2019, the intermodal flows from CP and KCS waybill data for 2019, and the 2019 STB Carload Waybill Sample.

II. ESTIMATING TOTAL TRUCK FLOWS BY LANE AND COMMODITY

A. The Transearch Database

7. IHS Markit develops its Transearch database annually. This database includes essentially all freight flows within, into, and out of the United States, in most cases with county-

[1] Railinc Business Services, 2019 Surface Transportation Board Carload Waybill Sample Reference Guide (2020) at 70-98.

to-county geographic detail, commodities at a 4- or 5-digit STCC level, and, for truck, one of seven equipment types.

8. Users of Transearch can be broadly grouped into two categories, private-sector transportation-related firms and public sector planning agencies. In the private sector, users include Class I and short-line railroads, trucking companies, other transportation service providers, and trucking industry suppliers. A common application of Transearch in this sector is market sizing. Freight carriers use the data to assess their market share, either within their mode of operation, or across competitive modes. Additionally, there are more targeted applications where carriers will look in-depth at market-to-market lanes to find backhaul opportunities or modally divertible freight. Further, some clients use the data to identify industries or commodities in specific geographic markets as the basis for a sales campaign.

9. In the public sector, the primary Transearch users are state departments of transportation and MPOs. Transearch is often used as a key input to their federally mandated Freight and Rail Plans, but they will also use the data for more specific and targeted investigations such as corridor studies and infrastructure impact assessment. Ports and economic development agencies also use Transearch – ports use Transearch to assess the competitive hinterland service area for their facilities versus other port locations and economic development agencies use Transearch to identify regional or local trading patterns that are not available from other sources, as well as new business or industry opportunities.

10. Transearch was first developed forty years ago and has been steadily enhanced based in large part on feedback from the client base of transportation service providers – the data can be characterized as long-term market tested and proven. The annual processing cycle, however, includes validation quality control measures such as comparisons with alternate

sources of information, including the Bureau of Transportation Statistic's Commodity Flow Survey ("CFS") and the Federal Highway Administration's Freight Analysis Framework ("FAF"). Additional validation is performed through comparison with the prior year version. Where significant changes are seen as compared to earlier data or to the CFS or FAF, the development stream for the records in question are carefully reviewed and traced back to the specific input factors that serve as the basis for the generation of the result. Where possible, alternate information sources such as carrier flow data and industry association reports are reviewed and compared to help substantiate or adjust the activity level.

B. Data on Aggregate Truck Flows

11. Producing each annual version of the Transearch database begins by establishing region-specific output volumes by industry or commodity. For the majority of commodities,[2] including most manufactured goods, this information is drawn from IHS Markit's Economics and Country Risk Business Markets Insights ("BMI") database, supplemented by trade association and industry reports and U.S. government-collected data.

- BMI contains a consistent set of historical statistical estimates and forecasts by industry sector at the county level of geographic detail; and
- The statistics include the number of business establishments, employees, and output (as sales) by industry at the 6-digit North American Industrial Classification System ("NAICS") code level.

12. Information from the US industry Input/Output ("I/O") tables reported by the Bureau of Economic Analysis data is another key input in the process of estimating production

---

[2] Commodities for which production volumes are not derived from BMI include:
- Agricultural products and livestock (sourced from the U.S. Department of Agriculture);
- Coal and petroleum products (sourced from the U.S. Energy Information Administration);
- Motor Vehicles (sourced from other IHS Markit Autos industry in-house databases);
- Selected chemicals (sourced from IHS Markit Chemicals industry group); and
- Minerals (sourced from the U.S. Geological Survey).

and consumption volumes. These I/O tables contain information on the amount of raw materials and other inputs that are needed to produce each industry's output. They also provide simultaneous information on the number and value of commodities that are demanded by each industry, as well as the amount of output generated by each industry.

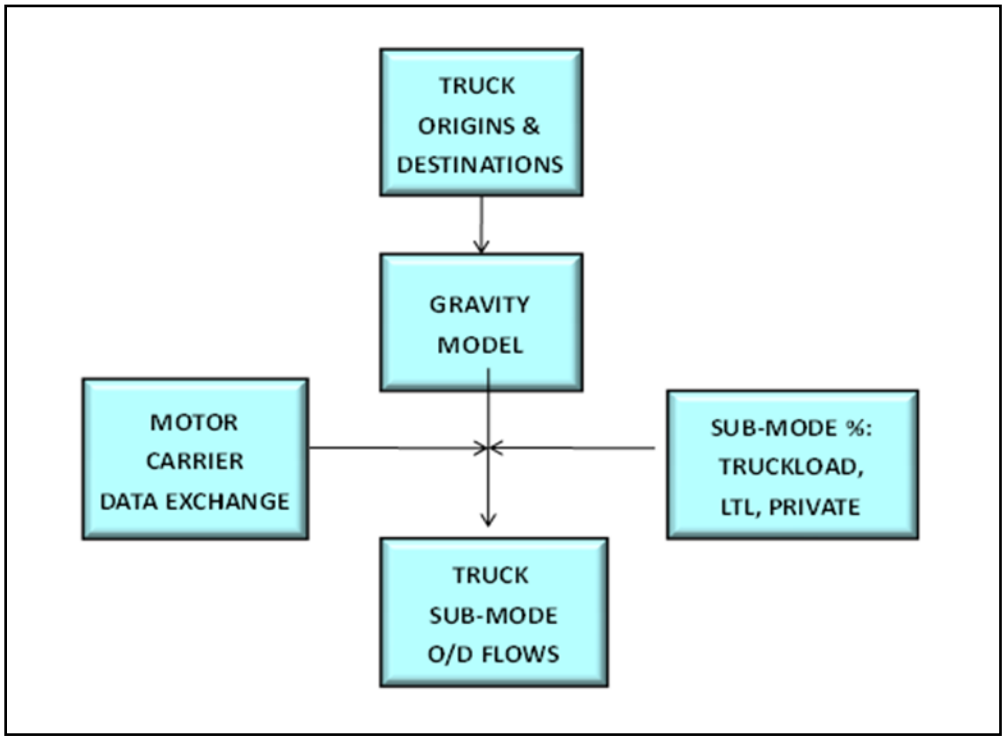
13. The BMI county-level sales information is used in conjunction with these I/O tables to estimate the value of production and consumption for each commodity at the county level. The NAICS commodities are converted to 4- or 5-digit Standard Transportation Commodity Codes ("STCCs"). For each STCC, there is a price per ton, which is used to translate each commodity from nominal dollars into tonnage.

14. Using port-level U.S. Census merchandise trade data, Transearch identifies the volume of commodities that are domestically produced and exported along with quantities of commodities that are imported and used for domestic production and consumption. As a result, final county-level production and consumption numbers in Transearch include imports and exports.

15. In addition, Transearch incorporates additional sources of demand from the public sector, households, and the financial sector. This demand is accounted for in Transearch by using factors that take into account state and local tax revenues, wages and salary disbursements (as a proxy for household disposable income), and investments.

16. At this point in the Transearch database production process, total production and consumption volumes, as well as paired origin/destination commodity flows for freight movements by air, rail, water, and pipeline, are defined at the county level. IHS Markit then subtracts the known modal pairings from total production and consumption by county – origin volumes are subtracted from production (sales) totals; destination volumes are subtracted from

consumption (purchases) totals.[3] The remaining production and consumption volumes are converted into O-D flows moving by truck.



1. United States Domestic and Sea Trade Truck Movements

17. For truck movements within the United States, the next step in the production of the Transearch database is to allocate the aggregate level O-D truck flows to discrete categories of truck traffic (*i.e.,* truckload, LTL and private trucking.) From publicly available sources such as the CFS and FAF, IHS Markit gathers information on the typical distances each commodity is hauled (*e.g.*, less than 100 miles, 100-200 miles, etc.). The distribution by distance for each commodity is used in a gravity modeling approach to determine origin/destination paired flows. A gravity model for transportation and distribution applications, such as Transearch, utilizes two key parameters to convert the linkage between origin and destination market volumes into market-to-market flows: the size of the market, in terms of its origin or destination volumes, and the distance between the markets. The larger and nearer markets will account for a larger proportional share of the traffic, the smaller and more distant markets will be allocated proportionally smaller volumes.

18. IHS Markit verifies the origin/destination pairings through a comparison with actual commodity flow data collected from major freight carriers in the IHS Markit proprietary Data Exchange program. This process is depicted in Figure 1 below.

[3] These modal volumes are well-defined and reported by government agency data sources.

FIGURE 1
PROCESSING TRUCK ORIGINS AND DESTINATION INTO FLOWS

19. The tonnage for each STCC category is allocated between the for-hire and private sectors of the industry based on relative volumes reported in the CFS. The for-hire segment is then split between truckload and less-than-truckload ("LTL") components based on the actual freight carrier industry data on the level of LTL shipments, as well as prior Transearch patterns.

20. Motor carriers that participate in the exchange of their actual flow pattern data submit a summary of their annual volumes that includes identification of origin and destination markets, plus tonnage or truckloads. Commodity indications are captured through equipment types where available, or imputed using the available production and consumption data. Traffic is reported by zip code which is converted to county as part of the database preparation process. All of this information is provided on an origin-to-destination basis.

21. There is some variation in the sample achieved each year through this program, but in recent years it has included about 70 million individual truck shipments, covering both the truckload and LTL segments of the industry.[4] Participating carriers are primarily large truckload and LTL operators with average lengths of haul over 500 miles. However, the sample also includes owner-operator business, portions of private carriage and dray activity, and significant amounts of regional (under 500-mile) traffic. The sampling rate is about six percent overall, five percent under 500 miles, and four percent under 100 miles.[5]

22. Because this program depends on cooperation and carriers' business interests, it does not create a stratified random sample; to address this, coverage is pursued and obtained for a broad cross section of the trucking market, including diverse industrial and geographic segments.

23. To supplement the information obtained through the Data Exchange, IHS draws on proprietary data sets that contain information on the specific locations of manufacturing and distribution facilities, along with profiles of their industrial output, employment and sales level. This information, in conjunction with information gathered through the Motor Carrier Data Exchange, guides the establishment of origination volumes at the county level, and is particularly useful in markets where the Data Exchange sample is small.

24. Just as business establishment information is used to supplement origination data, it is used similarly in conjunction with the Bureau of Economic Analysis Industrial I/O tables to enhance the destination or consumption volumes by county. Based on the production volumes

---

[4] As a point of comparison, the 2017 CFS sampled approximately six million shipments and the 2002 CFS sampled three million shipments; in both cases, these samples included to all the modes, not just to truck.

[5] As another point of comparison, the STB Waybill Sample runs 2.8 percent of shipments, but it is a stratified random sample and thus includes 22.5 percent of tonnage.

by industry derived from such data, the I/O relationships are analyzed to develop necessary input commodities and volumes that would be needed to satisfy production demands.

25. An initial screening and analysis of the Data Exchange information adjusts and eliminates any discrepancies in reporting formats or procedures by various participants. Summary results are also tabulated, and a variety of statistics are derived to ensure the reasonableness of the resulting data.

2. Mexico/United States Surface Freight Movements

26. The Transearch United States/Mexico cross-border data is constructed from transborder statistics produced by the U.S. Census Bureau, directly and through the U.S. Department of Transportation Bureau of Transportation Statistics. This source provides information on cross border shipments by truck, rail, and pipeline, in terms of declared value (in U.S. dollars) at customs inspection points on the border. Information on southbound shipments includes U.S. state of origin, crossing point, and Mexican state of destination and (separately) U.S. origin, commodity and Mexican destination. For northbound shipments, U.S. state of destination and the crossing point are shown, but origins are displayed simply as Mexico; however, physical volume (tons) is reported for these shipments, along with their value. Commodities are classified based on the international Harmonized Commodity Coding and Classification System, as set by the United States International Trade Commission and the World Customs Organization.

27. For southbound movements, the origin-crossing-destination and origin-commodity-destination datasets are combined with the crossing-level commodity data from U.S. Customs to estimate the complete flow. In a small number of cases, however, the source data contains crossings that do not correspond to physical border crossings – instead, they reflect the

point where the movement cleared customs. In those cases, Transearch retains the crossing from the source data for the sake of consistency.

28. For northbound movements, processing the data also involves allocating the northbound traffic to the Mexican state of origin. This process relies primarily on the latest Mexico Economic Census as conducted by the Instituto Nacional de Estadística y Geografía , which is made current using internal IHS Mexican intelligence and cross border Data Exchange information. The data is then converted using a translation table (i) relating the Harmonized Code to STCC commodity codes and (ii) converting from volume units (dollars) into tons. Additional checks are performed during the process of converting volume units from dollars to tons.

29. Where possible, this conversion relies on the unit counts of imports and exports. For commodities where unit weight varies widely, this conversion relies on a table of product values; however, adjustments are made in some instances where a dollar value is deemed more appropriate for import/export trade in a given commodity. Unit counts are added for truck and rail using averages from data exchange or commodity specific defaults.

30. U.S. and Mexican origins and destinations will incorporate flow information from the Data Exchange if such information exists. This includes cases where flows are transshipped before reaching ultimate endpoints to show the modal endpoint (to be consistent with other Transearch flows).

31. The database also includes U.S./Mexico water movements across the Gulf of Mexico and along the Pacific coast. Once again, the source for the U.S. port of entry/departure is the transborder data produced by the U.S. Census Bureau. In contrast to the overland moves, the source data provides weight in tons as well as the dollar value for seaborne vessel

movements. On the Mexican side of these movements, the source of the data is the Mexican Secretaría de Comunicaciones y Transportes ("SCT"), which publishes annual port level statistics for each Mexican port by commodity and country of origin and destination. This data is aggregated at the Mexican state level and the commodity classifications are converted to be compatible with the U.S. data. The state-level Mexican data is then matched with the port-level U.S. data using an iterative "best fit" process that assigns the flow based on criteria such as commodity, coast, and containerization. In the event that the U.S. Census and SCT data disagree, the process relies more upon the U.S. data.

32. Transearch for U.S./Mexico is further allocated down to the BEA or county-level based on domestic U.S. production and consumption levels within counties, by specific commodity types. The relative weighting of each county's inbound and outbound volumes, as a percent of a state's total volumes by specific commodity type, are used to create disaggregation factors, which are then applied to Mexican traffic flows. Primary source information from the Data Exchange, which includes material volumes of United States/Mexico truck traffic, is employed as am additional check against flow patterns at the state and the county level.

33. The allocation to the county level is undertaken chiefly for the purpose of developing flow routing assignments because this level of allocation has limited reliability as a localized picture of traffic between Mexico and the United States. In addition, as discussed earlier, in counties with multiple border crossings, the database does not distinguish volumes by the individual gateways. When applied to flow maps, the traffic movements through these multiple border crossings within the same county are routed based upon the shortest flow, not necessarily through the specific gateway facility.

3. Canada/United States Freight Movements

34. Similar to the U.S./Mexico data, the Transearch United States/Canada data draws primarily from customs data obtained from the U.S. Department of Transportation Bureau of Transportation Statistics ("BTS"). As with the BTS data for Mexico, data are separately provided as origin-crossing-destination totals by value and origin-commodity-destination totals by value. In this source, however, all origins and destinations are defined as U.S. states or Canadian provinces in both directions of trade. Commodities are coded in accordance with the Harmonized Commodity Description and Coding System HS and translated into equivalent four-digit STCC definitions.

35. Five separate modes are reported: truck, rail, water, air, and pipeline. In addition, where the mode of transport is unknown or not clearly specified on the customs documents, the shipment is included in an "other" grouping. It should be noted that the Canadian and Mexican cross-border data is the only part of Transearch that contains pipeline data, which are flows overwhelmingly dominated by shipments of crude petroleum and natural gas. For Canadian cross-border flows, these data are processed in a manner similar to how the Mexican data is processed, where origin-crossing-destination totals and origin-commodity-destination totals provided by BTS are combined with crossing level commodity totals from U.S. Customs to generate a complete flow from origin province to border crossing to destination state by commodity and vice versa.

36. For U.S. origins and destinations, domestic traffic volumes at the county level are used to allocate the international origins and destinations. (This step is unnecessary for rail traffic based on the STB Waybill, since granular geographic information is available in the sample.) This process uses the same U.S. domestic data and processing techniques that are used with the Mexican data, but because Canadian shipping activity is more dispersed, the resulting

patterns are more robust. Canadian origins and destinations are disaggregated to the metropolitan market level based on patterns of Canadian domestic truck traffic, reported by Statistics Canada. Reports identify commodities and CMAs; still, significant portions of traffic appear in non-CMA, "remainder of Province" territories, and these residual geographic classifications also are carried forward into the international data set.

C. Current Intermodal Rail Flows

37. For Intermodal Rail Flows I used the combined 2019 CP/KCS 100% waybill data provided by FTI (covering both U.S. and Canada for CP and U.S. and Mexico for KCS). I combined these records with the 2019 STB Carload Waybill Sample Confidential File ("CWS") after eliminating duplicate records and adjusting for rebill flows.

38. The combined CP/KCS file included 1,876,725 intermodal units as detailed in Table 1 below. Of these, 932,857 units originated and/or terminated in the United States or transited between Canada and Mexico and would be expected to be included in the CWS:

TABLE 1

Carriers	Units
CP and KCSM	1,137
KCS and KCSM	141,340
CP, no KCS or KCSM	1,187,632
KCS, no CP or KCSM	200,489
KCSM, no CP or KCS	339,671
Haulage on CP	6,446
Total	**1,876,725**

39. The CWS included 410,576 intermodal records (records with one or more intermodal units), with 417,772 units. The expanded counts (multiplying by the sampling rate) is

16,448,525 units. Of those expanded records, 16,417 records with 656,680 units included CP or KCS in the route and were discarded as duplicates.

40. Rebill (Rule 11) traffic is included and flagged as such in the CWS. However, carriers tend to report this traffic differently. BNSF, UP, CSX, and NS report all rebill traffic regardless whether they originated, terminated, or handled the traffic as a bridge carrier, but they only report their portion of the move. For example, a move rebilled at Chicago for an intermodal unit routed Los Angeles-UP-Chicago-NS-Philadelphia would (if sampled in the CWS) show up both as a Los Angeles-UP-Chicago move with a rebill code of 1 (forwarded) and as a Chicago-NS-Philadelphia move with a rebill code of 3 (received). However, most other carriers report only terminated rebill moves, but show the full route (but only their own revenue, since other carrier's revenue would not be known to them). Thus, a Charlotte-NS-Meridian-KCS-Laredo flow would (again, if sampled) show up both as a Charlotte-NS-Meridian move with rebill code 1 (because of NS's reporting practices) and as a Charlotte-NS-Meridian-KCS-Laredo flow with rebill code 3 (because of KCS's reporting practices). For the reverse movement, the only record would be Meridian-NS-Charlotte, with a rebill code 3 and no corresponding record for the KCS portion.

41. There are also some other discrepancies in how railroads report certain traffic. For instance, BNSF markets direct Los Angeles-Atlanta and back intermodal service, but the trains are handled by CSX east of Memphis. CSX appears to report this traffic as a Memphis-Atlanta rebill flow, whils BNSF includes the whole route Los Angeles-Atlanta as a single line flow in their submission to the CWS. In this case, the CSX records were discarded as they duplicated the CSX portion of the BNSF flow.

42. Since length of haul is a significant driver of divertibility, it was important to identify the ultimate origins and destinations for rebilled intermodal flows, not just the individual legs. To avoid double counting, I took the following steps:

Step 1: If the CWS records showed the full route, it was kept.

Step 2: For rebill records where only a single carrier was included:

(a) If there were records with identical waybill number, date, and junction in the CP/KCS sample, the duplicate records were dropped.

(b) Remaining forwarded rebill flows were allocated to destinations proportional to the rebill flows of the same equipment owner and junction and heading in the same directions. For example, UP rebill flows into Chicago were allocated among rebill flows out of Chicago, excluding those heading West.

(c) Forwarded rebill flows still remaining were allocated to destinations proportional to the rebill flows of the same equipment type (container or trailer) and junction and heading in the same directions.

43. There are significant volumes of traffic to/from Mexico that are rebilled at the border. For obvious reasons, the Mexico portion is not included in the CWS. For KCSM traffic, this did not present an issue because these movements were included in the KCS waybill data and dropped from the CWS as described in Step 2(a) above. For Ferromex traffic I used the rail data in Transearch to allocate this traffic to origin and destinations states in Mexico, using the commodity information on the waybill. The same process was used for flows rebilled at the

Canadian border: if they were in the CP sample, they were dropped and the remainder were allocated to CN points using Transearch data

44. The STB does not require that waybills terminating in Canada show the Canadian route. While other carriers still appear to report the Canadian portion of the route, CN seems to show a termination point at the border. Using the same process I used for rebills, I also used Transearch to estimate destination provinces and CMAs for this traffic.

III. ESTIMATING DIVERSIONS FROM IMPROVED CP/KCS INTERMODAL OFFERINGS

45. I was able to estimate the likely shift of truck traffic from highway movements to new CP/KCS intermodal offerings using the Transearch data on existing truck modal flows along with detailed information about where rail intermodal offerings have been successful to date. My analysis began by examining the factors that influence the share of total susceptible movements that are handled in rail intermodal service by lane. For each origin destination combination, I summed the total number of trucks using dry van or refrigerated trailers or containers, plus the total number of intermodal units. I then assigned separate truck and a rail mileage to each O-D pair. For truck mileage, I used county-to-county miles from the Oak Ridge National Laboratory national freight network data, and then took the weighted average for the O-D pair. For rail mileage, I used the weighted average miles for intermodal flows from the CWS. I discarded O-D flows under 500 miles as well as flows that did not include at least 1,000 units of intermodal traffic in 2019.

46. I then performed a regression analysis to identify the factors that influence the share of total movements in these lanes handled by rail intermodal, applying the methodology used repeatedly in prior rail merger proceedings by my former colleagues at Reebie Associates,

and accepted by the STB.[6] Their prior work found that the primary drivers of intermodal market share were the size of the market, the distance between the end points, and the availability of single-line service. My analysis of the available data in this proceeding confirmed the relevance of these factors. Specifically, my regression identified coefficients for each of the following variables: total traffic volume, the length of the highway distance, the difference between the highway distance and the rail distance, and the number of interchanges required. My regression analysis estimated the following predictive equation:

Intermodal Share = 0.00013954 * Truck Miles + 0.0000011495 * (Intermodal Tons + Truck Tons) + 0.31800 * (1 is single line, 0 is interline) + 0.0000028182 * (Truck Miles-Rail Miles).

Equation has an r square of .9255.

47. Using this equation, I was able to estimate the impact on rail intermodal lane share for the O-D lanes where the CP/KCS transaction would create new single-line intermodal offerings. My analysis considered only those flows where a combined CP/KCS would be able to offer single line system service, but neither CP nor KCS is currently able to offer single-line service. Thus, my analysis was limited to those flows with one end point in BEAs where there was a ramp on the CP system, and the other endpoint at a KCS or KCSM ramp (including privately operated ramps in Mexico). I included lanes between points on CP and Kansas City even though CP serves Kansas City today because CP does not have an intermodal ramp or provide intermodal service to the Kansas City BEA.

---

[6] *See, e.g.*, *CSX Corp. and CSX Transportation, Inc. & Norfolk Southern Corp. & Norfolk Southern Ry. – Control & Operating Leases/Agreements – Conrail Inc. & Consolidated Rail Corp.*, STB Finance Docket No. 33388, Verified Statement of Joseph G. B. Bryan (filed June 2, 1997).

48. My analysis also excluded from consideration any diversions in O-D pairs where existing single-line rail intermodal service had already attracted at least five percent of total susceptible movements, meaning where a new CP/KCS offering would not be creating the first single-line rail intermodal offering. This does not mean there would be no such diversions, but estimating their magnitude would require a more detailed assessment of the specific attributes of the CP/KCS service and the incremental value it would bring to potential intermodal shippers. However, for purposes of this analysis, we assumed that CP/KCS would have similar pricing and service levels as its competitors, and thus would not be presenting a genuinely new alternative for flows moving by truck now. In Appendix A these exclusions are noted with "Rule 1". My analysis did not exclude from consideration lanes in which existing single-line rail options have failed to attract at least five percent of the total susceptible volumes. Texas-Minneapolis lanes are one such example; though served today by BNSF and UP, there was only minimal intermodal traffic in 2019, and CP/KCS would offer a more direct route and dedicated intermodal service.

49. For each of the lanes included in my diversion analysis, I applied the above formula to the available traffic volumes, both for the current route (almost always with no single-line rail intermodal offering) and for the CP/KCS alternative (single-line but in a number of cases higher mileage). I then calculated diversion gains for CP/KCS from highways as the difference in the expected rail shares.

50. In a few cases my analysis produced expected lane shares for rail intermodal that were curiously high. To avoid overestimating potential diversions, and in line with the conservative nature of my analysis, I assigned a ceiling of 70.9 percent as the rail intermodal share of traffic in any lane. This ceiling was conservative in that it is based on the 80th

percentile of intermodal lane shares across all U.S. lanes with rail intermodal service. In Appendix A, these exclusions are referred to as excluded under "Rule 2."

51. Knowledgeable CP personnel confirmed that the estimates appeared reasonable from the perspective of the services CP anticipated offering post-transaction, providing comments that result in only three changes:

- Potential service between the Jeffersonville, OH ramp and U.S. points was not viewed as likely to divert additional truck traffic from the highways, and these flows were therefore removed from the diversion analysis.
- My results yielded a significant imbalance in volume between Minneapolis, MN, and Dallas, TX. Because of uncertainty as to whether CP would be able to handle the surplus southbound traffic in a cost-effective way, the forecasted southbound diversions were capped at the level of the forecasted northbound volumes.
- The total volume of current traffic plus truck-to-rail and rail-to-rail diversions to and from CP's Detroit Intermodal Terminal was judged to exceed the current capacity of the terminal. As with rail-to-rail diversions of intermodal traffic in lanes to/from Detroit (Verified Statement of Richard W. Brown and Nathaniel S. Zebrowski at 35), truck-to-rail diversions were reduced to 45 percent of the original estimate.

52. Overall, my analysis estimated annual diversion of 64,018 trailers or containers per year to intermodal service. The results by O-D pair are shown in Appendix A.

IV. REVENUE ESTIMATES

53. The truck-to-rail diversions that I forecast would result from the introduction of new single-line rail intermodal services by a combined CP/KCS system. The revenues that

CP/KCS would earn on this new intermodal traffic can reasonably be estimated by first determining the drivers of the market rate levels charged by railroads for existing domestic rail intermodal traffic, and then applying those determinants to the composition of the new traffic CP/KCS would handle. Using the movement-by-movement revenues available in the CWS and the CP and KCS traffic records for BEA-to-BEA lanes with minimum volume of 1,000 units per year, I performed a regression analysis to determine the observable characteristics that explain rate levels. As shown below, the formula revealed by these data is driven by the length of haul and by the density (units per year) of the BEA-to-BEA corridor:

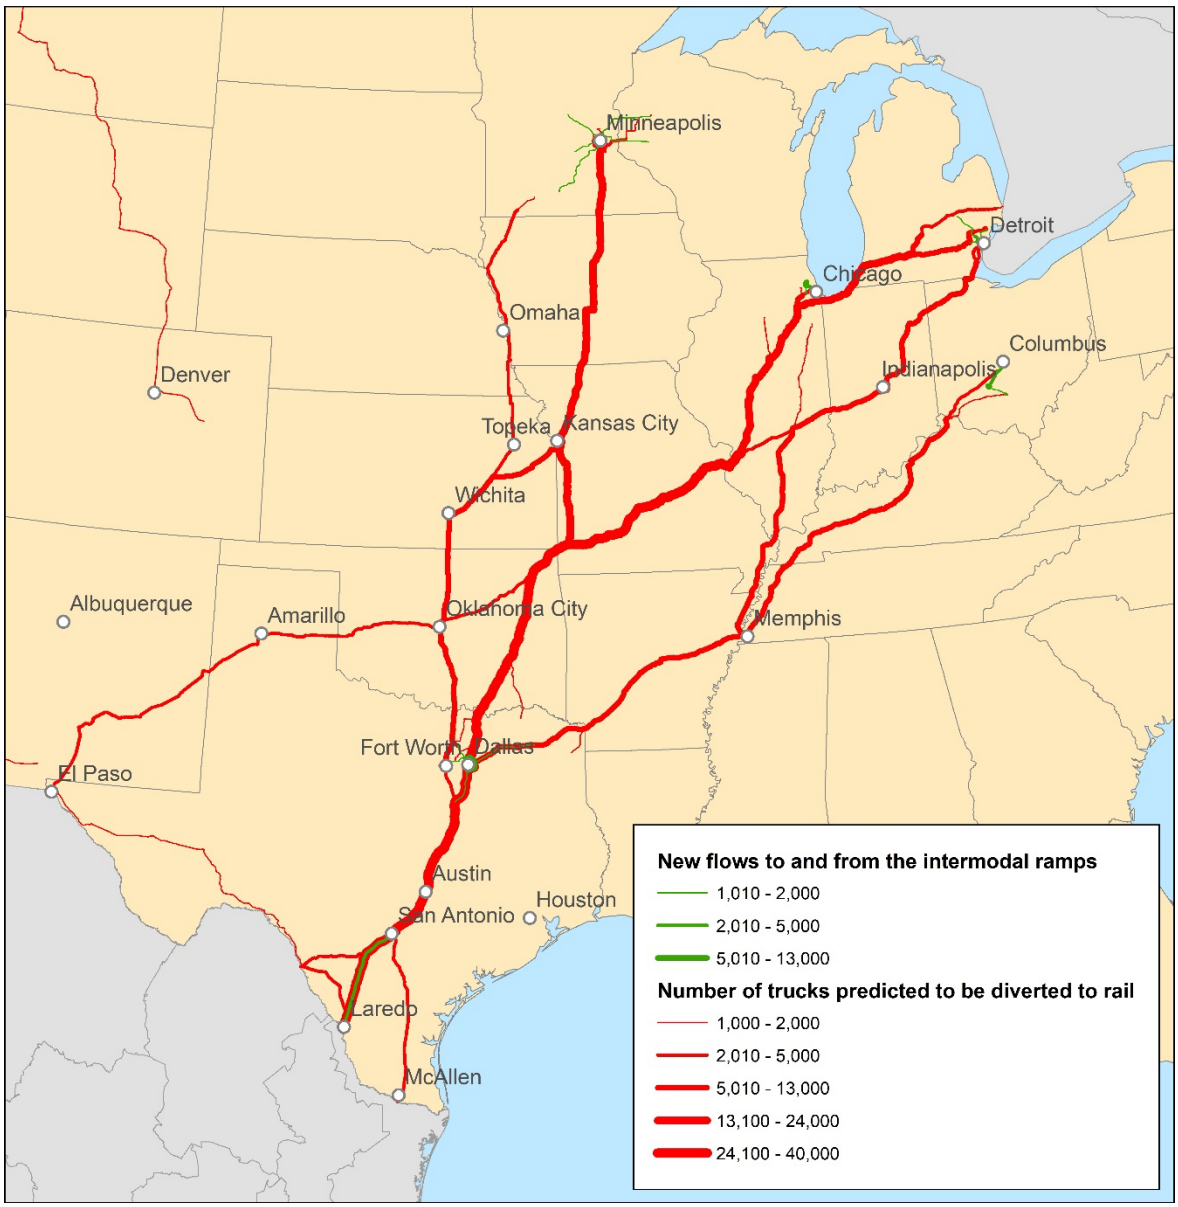
Revenue per Loaded Unit (US $) = .82903 * Rail Miles + 338,295/Density

Equation has an r square of .99992.

Revenue per Empty Unit (US $) = .38387 * Rail Miles + 164,256/Density

Equation has an r square of .99967.

54. Applying this formula to the movements we forecast to be diverted from highway to the CP/KCS system, I estimate that the total revenue gain to the combined system will be $98.2 million per year (based on 2019 dollars and traffic levels). Importantly, this formula should not be used to predict the specific market rates that would be charged for any given movement or in any specific lane. A variety of market factors – such as the predominant direction of travel and the commodity mix – could significantly impact individual movement or corridor revenues. Nonetheless, Appendix A reports the calculated revenue gain per corridor in order to illustrate the order-of-magnitude breakdown of my estimate of the overall total revenue gain.



55. I understand that the Joint Verified Statement of Jonathan Wahba and Michael J. Naatz identifies as a new marketing opportunity for the combined CP/KCS system's new intermodal services to attract perishable flows currently moving by truck from Mexico to Upper Midwest markets reachable via CP-served intermodal terminals. Most of the opportunity these witnesses see would not have been detected by my analysis, because only very small volumes of this traffic move directly from Mexico to Chicago by truck today. Instead, most of these volumes flow out of Mexico to intermediate destinatiions in border states (primarily California, Arizona, and Texas), and later move to the Midwest. My analysis did divert very small volumes of this traffic, however, which I provided to other witnesses to ensure that there was no inadvertant double count. The traffic in this category identified in my analysis amounted to 374 loaded units with estimated annual revenues of $643,011.

V. FORECASTED SHIFTS OF TRUCK TRAFFIC FROM U.S. HIGHWAYS TO RAIL

56. The diversion of trucks to intermodal is expected to reduce long-haul truck miles in the United States by 86.2 million annually, while requiring an additional 3.4 million miles of local dray to the ramps, for a net reduction of 82.8 million annual truck miles.[7] The reduction of long-haul truck miles in Canada is expected to be 1.8 million, and in Mexico 14.9 million, with a small increase in local dray miles in each country. The change in truck miles by state is shown in Appendix B, by major highway in Appendix C, and on the map set forth as Figure 2 below.

[7] We routed the traffic to be diverted using the Oak Ridge National Laboratories Intermodal Network. The routes are in most cases county centroid to county centroid, via actual border crossings where applicable and to/from ramps where there was a node in the network. For each O-D pair there is only one "best" route.

EXHIBIT 1 TO
VERIFIED STATEMENT OF BENGT MUTÉN

CURRICULUM VITAE OF BENGT MUTÉN

Bengt Mutén
IHS Markit Transportation Consulting

As consulting principal in the IHS Markit transportation consulting practice, Mr. Mutén currently focuses on the production and development of the Transearch multimode commodity flow database. His 40 years career spans railroad reorganizations and mergers; the divestiture of regional railroads; inter-company coordination; and freight planning for industry as well as national, state, and regional governments.

Education

- Master of Science in Civil Engineering (Transportation) from the University of California at Berkeley, 1980.
- Bachelor of Science in Management from the Massachusetts Institute of Technology, 1979.

Industry Experience

Areas of Expertise

- Market Analysis
- Rail Transportation
- Transportation Information & Research
- Freight Flow Forecasting
- Commodity Flow Data
- Port Commodity Forecast

Consulting Experience

Railroad Market Analysis. Mr. Mutén developed a framework for predicting market share changes from mergers, acquisitions, and divestitures that applied market expertise to railroad waybill data. He applied this model on behalf of applicants or contesting parties in most of the railroad mergers for the last three decades, as well as for regional railroad divestitures and acquisitions. Most recently he provided an analysis of traffic of Canadian Pacific line that was sold to Norfolk Southern and provided testimony as part of the buyer application to the Surface Transportation Board.

Port Market Analysis. Using IHS Markit's Transearch and PIERS databases as well as Census Data, Mr. Mutén has reported on actual and potential trade flows in port catchment areas, most recently for the Port of South Carolina and the Port of Portland.

Canada Freight Flow Model and Database. Mr. Mutén modeled truck freight flows using production, consumption and trade data, surveys, and flow data from other modes as part of this pioneering effort to build the first model and database of freight flows for Canada. The project examined the movement of Canada's domestic and international freight by five modes and nearly 30 commodity groups at the Provincial and sub-Provincial level of geographic detail. The final

deliverable included a 20-year outlook, including high and low scenarios. The database is used extensively to guide national planning initiatives.

Freight Analysis Framework. Participated in the development or forecasting of all four quinquennial releases for the Federal Highway Administration which delivers origin-destination freight flow forecasts by commodity and mode over a 30 year time frame. Provided general transportation modeling support.

Traffic Analysis Zones (TAZ). Mr. Mutén applied his expert knowledge of the linkages between economics and freight activity, to disaggregate the county-level freight activity in Transearch, to sub-county TAZ flows for a variety of clients, including over 3500 TAZ for each of Southwestern Pennsylvania Commission and the Arizona Department of Transportation. The TAZ data is incorporated into these agencies' travel demand and land-use models. The localization of Transearch by customization techniques is part of the approach, but it takes into account new data development and the understanding of supply chain dynamics.

Rail Bottom Line Report. Mr. Mutén was one of five authors of the AASHTO Freight Rail Bottom Line Report; providing government officials and others with an overview of the current and future impact of U.S. freight railroads.

IHS Markit Transearch Database Expansion. Mr. Mutén has expanded the scope of IHS's annual proprietary U.S. county-level freight movement database, Transearch, by modeling commodities previously excluded, identifying imports and exports and their off-shore origin or destination, and tying Transearch to Geographic Information Systems for analysis and display. Mr. Muten has combined primary shipment data obtained from some of the nation's largest rail and truck freight carriers with information from public, commercial, and proprietary sources to generate a base year estimate of freight flows at the county level.

2. KCS Headquarters Employees 13

V. EMPLOYEE PROTECTIVE CONDITIONS 13

VERIFIED STATEMENT OF MYRON W. BECKER

1. My name is Myron W. Becker. I am the Chief Labor Officer for Canadian Pacific Railway Company ("CP"). My business address is Building 1, 7550 Ogden Dale Road, Calgary, AB T2C 4X9. I have been employed by CP in my current position since August 2013.

2. My rail experience began in 1977, when I was hired by Canadian National Railway ("CN") as a brakeman/trainman in Humboldt, Saskatchewan, Canada. After being promoted to conductor and then locomotive engineer, I worked in Operations at various locations across Western Canada. In 1989, I was promoted to Labor Relations at CN and subsequently held various senior labor relations positions in the railroad industry on the Grand Trunk Western Railroad, Illinois Central Railroad, and CSX Transportation, and in the airline industry at NetJets.

3. I am responsible for, among other things, the negotiation and administrative oversight of collective bargaining agreements, policies, and employee protective arrangements that apply to employees of CP in Canada, and employees in the United States who are represented by labor organizations under the Railway Labor Act. There are eight separate bargaining units on CP in Canada and 28 bargaining units on CP in the United States. I am the senior officer of CP designated to handle disputes arising under any of the 39 collective bargaining agreements now in effect between CP and the various labor organizations in Canada and the United States.

4. One of my key responsibilities is partnering with CP's functional teams and collaborating with labor union leaders on various change initiatives to facilitate the achievement of CP's business goals and objectives while ensuring compliance with all applicable

agreements, policies, laws, and regulations. I am highly qualified to evaluate the impact, if any, of the proposed transaction between CP and KCS (the "Transaction") on CP and/or KCS employees.

5. I am submitting this statement to explain the steps CP anticipates taking to manage the small number of changes in the CP and KCSR unionized labor force that will result from implementation of CP's control of KCS.

I. OVERVIEW OF ANTICIPATED CHANGES IN CP'S AND KCS'S UNION-REPRESENTED WORKFORCE IN THE UNITED STATES

6. As set forth in the Labor Impact Exhibit and explained in the Operating Plan, combining CP and KCS will in general result in increased employment across the combined network, with most of the anticipated job growth in union represented positions. In this statement, I address the Transaction's impact on union represented employees.

7. The operational consolidations arising from the combination of these two railroads will entail some adjustments in work arrangements, including (1) in the region centered on Kansas City, the one point where CP and KCS's rail networks connect, and (2) as a result of the relocation of CP's U.S. headquarters from Minneapolis to Kansas City. The balance of my statement describes in more detail how CP envisions combining the U.S. union-represented labor forces of the two systems.

II. CP'S WORKFORCE IN THE UNITED STATES

8. CP employs approximately 2,295 employees in the United States who are represented by labor unions on the following CP-controlled railroads:

TABLE 1
CP REPRESENTED U.S. EMPLOYEES

Railway Property	States Operated In	Number of Union-Represented Employees
Dakota, Minnesota & Eastern Railroad Corporation ("DM&E")	Illinois, Iowa, Minnesota, Missouri and Wisconsin	590
Soo Line Railroad Company	Illinois, Indiana, Michigan, Minnesota, North Dakota, Ohio, South Dakota and Wisconsin	1,500
Delaware and Hudson Railway Company, Inc. ("D&H")	New York	159
Central Maine & Quebec Railway US Inc. ("CMQ")	Maine and Vermont	46

III. KCS'S WORKFORCE IN THE UNITED STATES

9. KCS controls three U.S. rail operating subsidiaries: The Kansas City Southern Railway Company ("KCSR"), The Texas Mexican Railway ("Tex Mex"), and Gateway Eastern Railway Company ("GWER "). All of the unionized workforce of these three carriers are KCSR employees. I will refer to them collectively herein as "KCSR employees" or the "KCSR workforce."

10. KCSR employs approximately 2,248 employees represented by labor organizations at locations in Alabama, Arkansas, Illinois, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas. These employees are based across KCS's U.S. system as shown in Table 2 below.

TABLE 2
KCSR REPRESENTED EMPLOYEES

Railway Property Where Employees Are Based	States Operated In	Number of Union-Represented Employees
KCSR	Alabama, Arkansas, Illinois, Kansas, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas	1,923
Tex Mex	Texas	325
GWER	Illinois	0

11. Many of KCSR's union-represented employees work under collective bargaining agreements with KCSR predecessors, as follows:

- 88 KCSR employees in the states of Illinois and Missouri work under agreements originally entered into with the former Gateway Western Railway Company;
- 75 KCSR employees in the states of Arkansas and Louisiana work under agreements originally entered into with the former Louisiana and Arkansas Railway; and
- 428 KCSR employees in the states of Alabama, Louisiana, Mississippi, Tennessee, and Texas work under agreements originally entered into with the MidSouth Rail Corporation.

IV. EFFECT OF THE PROPOSED TRANSACTION ON CP AND KCSR EMPLOYEES

12. The CP/KCS transaction will drive growth in employment across the entirety of the combined CP/KCS system. We anticipate adding over 1,000 union-represented operating positions across the CP/KCS North American system to accommodate the traffic growth we expect the Transaction will generate – with more than 750 of those new jobs in the United States.

13. CP expects that implementation of the Transaction will affect limited numbers of employees by replacing the existing CP/KCS interchange at Kansas City with new CP/KCS single-line services involving relocated crew change locations, deeper blocking, and a de-

emphasis on interchange switching activity at the Kansas City joint facility that CP and KCSR share today, and by combining the work of CP (DM&E) and KCSR employees who work on that territory. CP also intends to relocate its U.S. headquarters to Kansas City, which will affect its (Soo Line) union represented dispatchers and crew management employees as they are integrated with KCSR's comparable functions.

14. First, the Transaction will affect the work performed by certain operating employees of the rail-carrier affiliates of CP and KCS working on the lines of DM&E and KCSR radiating from Kansas City, a region I refer to as the "Consolidated Territory." As shown in Figure 1 below, the Consolidated Territory will encompass the train and engine, signal, car repair/maintenance, and engineering personnel who are responsible for the following lines radiating from Kansas City:

(1) DM&E's line between Kansas City and Ottumwa, IA, 195.9 miles north of Kansas City;

(2) Kansas City Terminal (KCSR and DM&E);

(3) Kansas City - Joint Agency Yard (currently co-operated by KCSR and DM&E);

(4) KCSR between Kansas City and Mexico, MO, 156.3 miles east of Kansas City;

(5) KCSR from Mexico, MO 156.8 miles to East St. Louis, IL, and from Mexico, MO 127.5 miles to Springfield, IL; and

(6) KCSR between Kansas City and Pittsburg, KS, 124.5 miles south of Kansas City.

FIGURE 1
CONSOLIDATED TERRITORY MAP

15. Second, the Transaction will also affect the personnel performing train dispatching, clerical work, and crew management on the U.S. portion of CP's system, who work at CP's U.S. headquarters in Minneapolis and are employed by Soo Line. Those functions will be relocated to Kansas City and integrated with comparable functions performed by KCSR employees at KCS's Kansas City headquarters.

16. The operations of CP's other two U.S. rail carriers (D&H and CMQ) and of KCS's Tex Mex subsidiary are not contiguous to the Consolidated Territory. As explained in the Operating Plan, there will not be any Transaction-related operational changes that adversely affect any of those employees.

17. I address below the implications of the Transaction for each category of represented employee whose job relates to the Consolidated Territory.

A. Effect of The Proposed Transaction on Employees of CP's U.S. Rail Carriers

1. DM&E Employees

18. A total of 74 DM&E union-represented employees work in the Consolidated Territory, represented by three different unions, at the locations and in the crafts shown in Table 3 below:

TABLE 3
POTENTIALLY AFFECTED DM&E
EMPLOYEES IN CONSOLIDATED TERRITORY

Location	**BLET** Locomotive Engineers, Conductors, & Trainmen	**BMWED** Engineering & Track Maintenance	**BRS** Signal Maintainer & Signal Technician	Grand Total
Kansas City	18	0	0	18
Joint Agency	16	0	0	16
Ottumwa	32	6	2	40
Total	**66**	**6**	**2**	**74**

19. CP anticipates that none of these employees will be adversely affected by the Transaction. As set forth in the Operating Plan and Labor Impact Exhibit, CP anticipates that the impact of the Transaction on DM&E's union-represented employees will be positive. Traffic on the CP/KCS system between Kansas City and Ottumwa will grow and will continue to be handled by DM&E train and engine service employees. Specifically, the Operating Plan projects increases in traffic volume over the three-year period following CP's assumption of control that will benefit DM&E employees both within and outside the Consolidated Territory. *See* Operating Plan (Exhibit 13), Labor Impact Exhibit; Traffic Density Charts (Exhibit 14).

Accordingly, CP does not anticipate that DM&E employees at Ottumwa, Kansas City, or any other location will be adversely affected by the Transaction.

2. Soo Line Employees

20. The Operating Plan projects increases in traffic volume over the three-year period following CP's assumption of control that will benefit employees across the portion of CP's U.S. network operated by Soo Line. *See* Operating Plan (Exhibit 13), Labor Impact Exhibit; Traffic Density Charts (Exhibit 14).

21. CP does plan to make changes that will affect employees at its U.S. operating headquarters currently located at Minneapolis, MN. CP plans to relocate work of three types from Minneapolis to KCS's headquarters in Kansas City following acquisition of control, combining work performed by union-represented employees of Soo Line with work of the same type currently performed by union-represented KCSR employees in Kansas City. CP anticipates the following changes affecting union-represented employees:

(1) Train Dispatching - 35 employees represented by the American Train Dispatchers Association ("ATDA");

(2) The Network Service Center - 15 crew dispatchers and 21 clerks in non-operational roles, all represented by the Transportation-Communications International Union ("TCU"); and

(3) One employee, an electronic equipment maintainer, represented by the International Brotherhood of Electrical Workers ("IBEW").

22. The specific location and crafts of these employees are shown in Table 4 below:

TABLE 4
POTENTIALLY AFFECTED SOO LINE
EMPLOYEES IN CONSOLIDATED TERRITORY

Location	ATDA Train Dispatchers	TCU Clerical Positions	TCU Crew Dispatchers	IBEW Electronic Equipment Maintainer
Minneapolis	35	21	15	1

23. Within 12 months following assumption of control, CP anticipates it will abolish the positions in these groups at Minneapolis and concurrently create an equal number of the same positions at Kansas City, subject to adjustment in the event that some employees at Minneapolis may prefer to accept other positions on Soo Line or choose to accept separation allowances under protective conditions or agreements.

24. CP intends to integrate the transferred work functions with the corresponding KCSR functions at Kansas City, and does not anticipate that there will be any aggregate loss of work as a result of the transfers. CP will continue to evaluate automation, economies of scale, and/or efficiency opportunities, including the elimination of redundant processes or procedures.

25. These transfers of work functions, with associated job abolishment and job creation, will be carried out in accordance with appropriate implementing agreements negotiated with the pertinent labor organizations, subject to the requirements of the Board's protective conditions. CP has committed to the affected labor organizations that it will use best efforts to find alternate positions on Soo Line in the Minneapolis-St. Paul area for employees who choose not to relocate with their current work to Kansas City.

B. Effect of the Proposed Transaction on KCSR Employees

26. I project the following changes affecting KCSR employees.

1. KCSR Employees in the Consolidated Territory

27. A total of 388 KCSR union-represented employees work in the Consolidated Territory, represented by several different unions, at the locations and in the crafts shown in Table 5 below:

TABLE 5
POTENTIALLY AFFECTED KCSR
EMPLOYEES IN CONSOLIDATED TERRITORY

Union/Craft[1]	East St. Louis, IL	Grandview, MO	Kansas City Joint Agency	Kansas City	Louisiana, MO	Mexico, MO	Pittsburg, KS	Slater, MO	Totals
ARASA Mechanical Foremen			2						2
ATDA Train Dispatchers				36					36
BLET Locomotive Engineers	8		22				42	1	73
BMWED Engineering & Track Maintenance	4		2	4	3	3	4	4	24
BRC Carmen	1		17				1		19
BRS Signalmen	1	1	1		1	1	3		8
IAM Machinists			24						24
IBEW Electrical Workers			10						10
SMART-TD Conductors	21		51				89	1	162
SMART-TD Yardmasters			7						7
TCU Clerks & Carmen				23					23
Totals	**35**	**1**	**136**	**63**	**4**	**4**	**139**	**6**	**388**

28. The impact of the transaction on KCSR's union-represented employees is expected to be positive. The Operating Plan provides that train operations and maintenance functions in the former-KCS portions of the Consolidated Territory will continue to be handled by KCSR employees between Kansas City and Pittsburg, KS to the south, and between Kansas

[1] ARASA = American Railway and Airway Supervisors Association; BLET = Brotherhood of Locomotive Engineers and Trainmen; BMWED = Brotherhood of Maintenance of Way Employees Division - International Brotherhood of Teamsters; BRC = Brotherhood of Railway Carmen; BRS = Brotherhood of Railway Signalmen; IAM = International Association of Machinists and Aerospace Workers; and SMART-TD = Sheet Metal, Air, Rail and Transportation International Union, Transportation Division.

City and Mexico, MO and between Mexico and East St. Louis, IL and Springfield, IL, to the east. CP does not anticipate making any other significant operational changes on the KCS property that would adversely affect KCSR's union-represented employees in the three-year period following CP's assumption of control. CP will continue to evaluate operations on the former-KCS portions of the combined system to determine whether efficiencies can be realized. However, in view of the anticipated traffic growth over the three-year period described in the Operating Plan, Applicants do not expect that KCSR employees in the Consolidated Territory will be adversely affected by the Transaction; instead, this anticipated growth should enhance future work opportunities both within and outside the Consolidated Territory. *See* Operating Plan (Exhibit 13), Labor Impact Exhibit; Traffic Density Charts (Exhibit 14). Accordingly, I do not anticipate that KCSR employees at Kansas City, Pittsburg, KS; Mexico, MO, East St. Louis, IL, or any other location will be adversely affected by the Transaction.

2. KCS Headquarters Employees

29. KCSR has employees at Kansas City performing train dispatching work (represented by the ATDA) and Network Service Center work (represented by the TCU). As noted above, CP intends to transfer to Kansas City work of the same types now performed by similarly represented Soo Line employees and consolidate the two rail systems' functions there. CP projects that there will be no loss of work for the affected KCSR employees as a result of the relocation of jobs from Minneapolis.

V. EMPLOYEE PROTECTIVE CONDITIONS

30. Applicants anticipate that, in accordance with the requirements of 49 U.S.C. § 11326(a), the Board will impose on this Transaction the employee protective conditions set forth in *New York Dock Ry. – Control – Brooklyn Eastern Dist. Terminal,* 360 I.C.C. 60*, aff'd, New York Dock Ry. v. United States,* 609 F.2d 83 (2d Cir. 1979). The *New York Dock*

conditions provide extensive monetary benefits for employees who are dismissed or displaced because of the transaction on which the conditions have been imposed. The conditions provide a measure of compensation for the costs of relocation. Moreover, the conditions require that the carriers give advance notice to employees and their representatives of operational changes that may result in the dismissal or displacement of employees, or the "rearrangement of forces," and provide an opportunity for the negotiation of implementing agreements in connection with such operational changes.

31. CP has not yet negotiated protective arrangements with any labor organizations specifically in connection with the proposed Transaction, and my understanding is that KCS has not done so either. CP has previously entered into various agreements and protective arrangements with labor organizations, including but not limited to what are commonly called the Cramdown Agreements of 2000 and 2001, that may bear on implementation of the proposed Transaction pursuant to the *New York Dock* conditions; CP has assured the relevant labor organizations of its intention to honor those agreements. CP will extend similar assurances that, following CP's acquisition of control, KCSR will honor any protective agreements it has entered into with labor unions, including but not limited to the Cramdown Agreements.

32. It is my hope that CP's U.S. operating carriers and KCSR will be able to reach *New York Dock* implementing agreements with the labor organizations representing affected employees in the coming months.

VERIFICATION

I, Myron W. Becker, declare under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Further, I certify that I am qualified and authorized to file this Verified Statement.

Executed on this 28th day of October, 2021.

EXHIBIT 13
OPERATING PLAN

1. INTRODUCTION

1.1. WITNESS QUALIFICATIONS

1. This Operating Plan is sponsored and verified by Raymond A. Elphick and John F. Orr.

2. My name is Raymond A. Elphick. I am the Assistant Vice President Service and Product Design for Canadian Pacific Railway Company ("CP"). My business address is Building 1, 7550 Ogden Dale Road, Calgary, AB, Canada, T2C 4X9. I have been employed by CP since April of 1992.

3. My rail experience began in 1989, when I was hired by Canadian National Railway ("CN") as a brakeman/trainman in Toronto, Ontario. In 1992, I was hired by CP in Engineering Services. I held several different planning roles in Engineering. I was promoted to Service Design in 2005, where I have now spent 16 years in various roles with increasing accountability.

4. I am responsible for, among other things, the service design, network capacity capital, and interline agreements at CP. One of my key responsibilities at CP is reviewing new business opportunities with CP's commercial team and designing transportation services that meet the needs of those customers consistent with CP's network and operating capabilities. In doing so, I am deeply engaged in the products CP offers and the strategic requirements to build a network with both the capacity to deliver those products efficiently and with the service and competitive capability our customers require. I am well qualified to evaluate the potential of a combined CP/KCS Service Design.

5. My name is John F. Orr. I am Kansas City Southern's Executive Vice President – Operations. Prior to joining KCS, I served for 34 years (until 2019) in operating leadership positions as Canadian National Railway, culminating in my service as CN's Senior Vice President and Chief Transportation Officer. I have also been an executive consultant for a variety of entities in railroad and other transportation fields.

6. I hold a bachelor of arts in environmental studies from University of Waterloo and have completed business coursework and professional development in leadership at Harvard University, University of Waterloo, University of Guelph, University of Western Ontario, and the Niagara Leadership Institute.

1.2. PURPOSE AND SCOPE

7. Exhibit 13 constitutes the Operating Plan for the railroad system that will result from the consolidation of CP and the Kansas City Southern ("KCS") including the Kansas City Southern de Mexico ("KCSM"). The combined system of railroad operations will be referred to in this exhibit as the "CP/KCS."

8. This Operating Plan explains how the separate operations of CP and KCS will be integrated into a single consolidated CP/KCS network (spanning the United States, Canada, and Mexico) characterized by fully unified operations within three years of Board approval of the Application and the resulting exercise of CP control of KCS.

9. Because the CP/KCS combination is a true end-to-end merger, the principal routes relied upon by CP and KCS independently today will play similar roles once the Transaction is completed. Therefore, this Operating Plan focuses on changes to operations based on (1) traffic diversions (both from other railroads and trucks) that are attributable to the advantages of extended single-line service; (2) operating efficiencies arising from a larger network that is able to implement the best practices of both railroads; (3) market development

opportunities that are made possible by the merger; and (4) streamlining of operations at numerous locations across the CP/KCS network, especially in Kansas City, MO; Nuevo Laredo, TA area yards and Vanegas, SL.[1]

10. The overall objective of this Operating Plan is to describe the Applicants' plan for integrating CP and KCS operating functions, personnel and planning in an effort to provide the best possible service to the shipping public at competitive prices. The Operating Plan describes how this integration will take place and the corresponding effects on customers, service, traffic density, terminal switching, labor forces, and equipment utilization. The Operating Plan therefore provides the following information:

- Changes in train service and yard activities that will optimize operations for a fully integrated CP/KCS network;
- Adjustments to the Operating Plan during the three-year period over which the transition will be fully implemented, including anticipated shifts and increases in traffic to take advantage of the efficiencies and service opportunities achieved through the combination;
- Identification of the investments necessary to accommodate increased train lengths and/or traffic volumes on certain segments while allowing simultaneous service improvements; and
- Analyses that demonstrate that existing (or anticipated) Amtrak and commuter passenger service will not be adversely affected by either the Operating Plan itself, or the additional freight traffic that the combined CP/KCS is expected to attract.

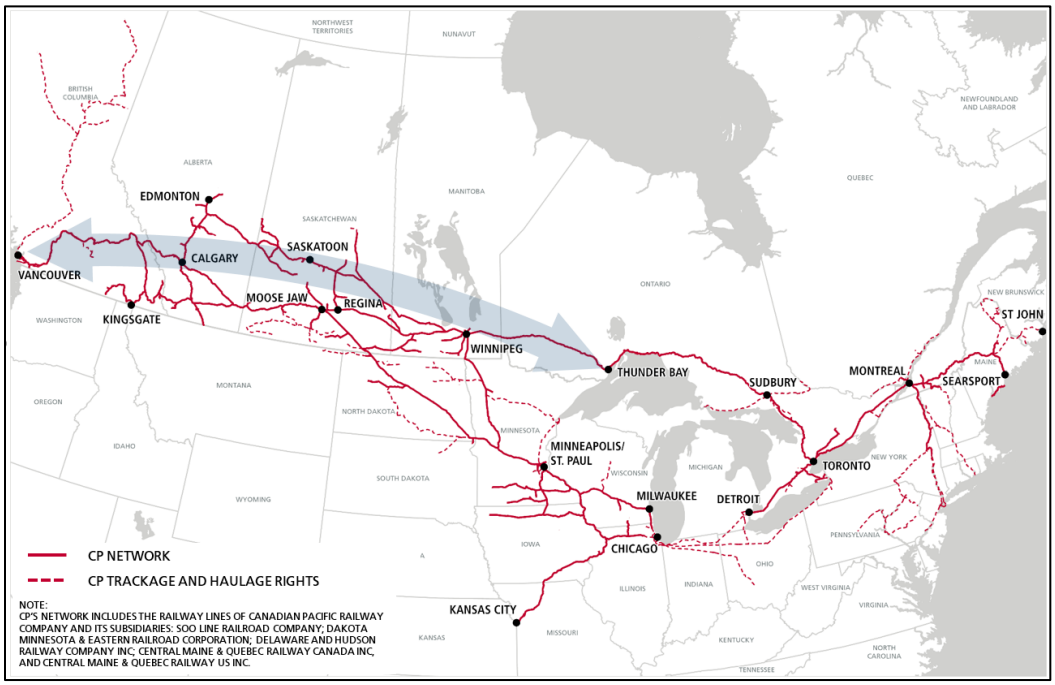
1.3. OVERVIEW

11. The Operating Plan is presented in two stages. The first summarizes the transition from the Base Plan, which reflects the pre-Transaction operations of CP and KCS as independent companies, to the Optimized Plan, which reflects the integration and optimization of the operations of CP and KCS as a single, integrated network, but without the additional traffic that

[1] Standard abbreviations are used for Mexican states: TA = Tamaulipas, SL = San Luis Potosí.

CPKC's new capabilities are likely to attract. The second stage summarizes the transition from the Optimized Plan to the Growth Plan, which reflects the anticipated traffic levels that the full integration of the CP/KCS network – which will be complete within three years of the Control Date – will handle.

12. As demonstrated in the sections that follow, the combined CP/KCS network will generate significant operating efficiencies and amply accommodate significant traffic growth through improved operating practices and substantial investment in capacity. CPKC will provide a much improved competitive alternative in North-South corridors relative to the CP-KCS interline options that exist today.



2. DESCRIPTION OF EXISTING NETWORKS

2.1. PRINCIPAL ROUTES – CP

13. CP's network in Canada extends from the Port of Vancouver on Canada's Pacific Coast to the Port of Montreal and eastern Quebec up into the Port of Saint John, NB via haulage, and to the U.S. industrial centers of Chicago, Detroit, Buffalo, NY; Albany, NY; Kansas City; and Minneapolis.

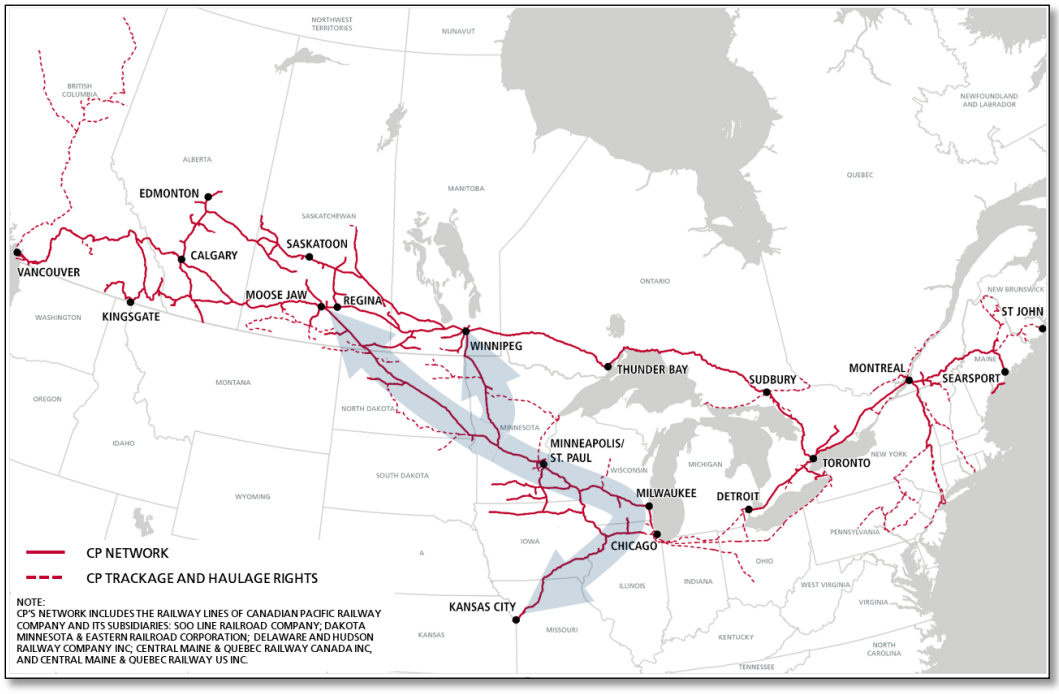
2.1.1. The Western Corridor: Vancouver to Thunder Bay

FIGURE 1
CP NETWORK OVERVIEW – WESTERN CORRIDOR

14. As shown in Figure 1 above, the Western Corridor links Vancouver with Thunder Bay, ON, Canada's primary Great Lakes bulk terminal. Thunder Bay is also the Western Canadian terminus of CP's Eastern Corridor. With service through Calgary, the Western Corridor is an important part of CP's routes between Vancouver and the U.S. Midwest, and between Vancouver and Eastern Canada.

Products

15. The Western Corridor is CP's primary route for bulk and resource products traffic from Western Canada to the Port of Vancouver for export. CP also handles significant volumes of intermodal containers and general merchandise traffic.



Western Corridor Feeder Lines

16. The Western Corridor includes the following feeder lines:

- The "Coal Route," which links southeastern British Columbia coal deposits to the Western Corridor and to coal terminals at the Port of Vancouver;
- The "Edmonton-Calgary Route," which provides rail access to Alberta's Industrial Heartland (north of Edmonton, Alberta) in addition to the petrochemical facilities in central Alberta;
- The "Pacific-CanAm Route," which crosses the Crowsnest Pass in Alberta and connects Calgary and Medicine Hat in Alberta with the U.S. Pacific Northwest via the Eastport, ID/Kingsgate, BC gateway; and
- The "North Main Line Route," provides rail service to customers between Portage la Prairie, MB, and Wetaskiwin, AB, including intermediate stations at Yorkton and Saskatoon in Saskatchewan. This line is an important collector of Canadian grain and fertilizer, serving the potash mines located east and west of Saskatoon and many high-throughput grain elevators and processing facilities. In addition, this line provides direct access to refining and upgrading facilities at Lloydminster, AB, and western Canada's largest pipeline terminal at Hardisty, AB.

2.1.2. The Central Corridor: Moose Jaw and Winnipeg to Chicago and Kansas City

FIGURE 2
CP NETWORK OVERVIEW – CENTRAL CORRIDOR

17. As shown in Figure 2 above, the Central Corridor connects with the Western Corridor at Moose Jaw and Winnipeg. By running south to Chicago and Kansas City, through the Twin Cities of Minneapolis and St. Paul, MN, and through Milwaukee, WI, CP provides a direct, single-carrier route between Western Canada and the U.S. Midwest, providing access to Great Lakes and Mississippi River ports. From La Crosse, WI, the Central Corridor continues south toward Kansas City via the Quad Cities (Davenport and Bettendorf in Iowa, and Rock Island, East Moline and Moline in Illinois), providing an efficient route for traffic destined to points beyond the Kansas City Gateway. CP's Kansas City line also provides a direct connection into Chicago and, by extension, to points east on CP's network such as Toronto, ON, the Port of Montreal, and the Port of Saint John, NB on the Atlantic Ocean.

Chicago

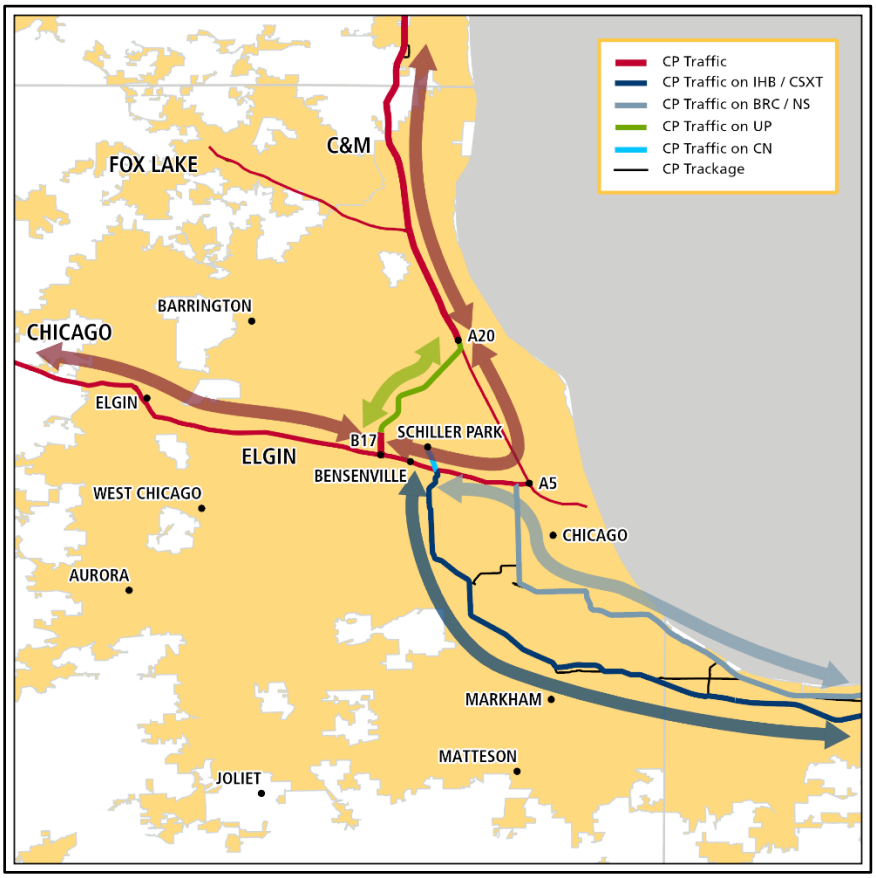
18. Chicago is the nation's busiest rail hub and one of the most active intermodal hubs worldwide. Each day, 1,300 freight and passenger trains travel through the greater Chicago area, including one quarter of all freight trains in the United States.

19. Bensenville Yard is CP's primary classification yard in the Chicago region and is located northwest of the city near O'Hare Airport. Schiller Park Yard, about 4.3 track miles to the northeast of Bensenville, is primarily an intermodal yard that works in tandem with CP's intermodal facility adjacent to Bensenville Yard. Schiller Park has recently been expanded to take on an additional role as an automotive compound.

20. Bensenville Yard is accessed from the north and west via two subdivisions. From the north, the C&M subdivision runs between Chicago and Milwaukee. On their approach to Chicago, trains operating over the C&M subdivision can be routed (a) over UP trackage directly into Bensenville via Tower A20, or (b) over CP/METRA tracks via Tower A5. From the west, CP's Elgin subdivision is the final leg of a link between Chicago and the Quad Cities region.

21. Both the C&M and Elgin subdivisions accommodate two daily commuter windows. Additionally, the C&M subdivision accommodates CP's freight operations as well as a total of eight Amtrak train pairs per day – the daily Empire Builder long-distance train and the Amtrak's Chicago-Milwaukee Hiawatha service. Amtrak has repeatedly awarded CP a grade of A for passenger on time performance, the top mark among Class I host railroads.

22. Between Bensenville Yard and points east of Chicago, CP freight trains operate via two alternative routes pursuant to operating agreements with CSX and NS. In both cases, CP's trains move efficiently through the Chicago terminal without requiring intermediate handling.



23. First, CP hands off one intermodal train daily to CSX, and receives one such train in return, which CSX moves between Chicago and a connection with CP's network in Eastern Canada at Buffalo, NY. These trains operate to/from CP's Schiller Park terminal and operate across Chicago via the Indiana Harbor Belt Railroad ("IHB"). Traffic destined for Detroit, or received from Detroit, is block-swapped between CP's haulage trains 142/143 and CSX's trains travelling between the Northwest Ohio Intermodal Container Transfer Facility (at North Baltimore, OH) and CP's Detroit Oak Yard.

24. Second, CP operates two pairs of manifest and automotive trains daily over trackage rights on NS between Chicago and Eastern Canada (via Detroit). From the east, these trains operate through Chicago into Bensenville via the Belt Railway of Chicago ("BRC") or to IHB's Gibson Yard.

25. Reciprocal manifest trains and empty automotive trains operate back to Eastern Canada over the same routing.

26. Figure 3 below depicts these through routes between Bensenville and points surrounding Chicago.

FIGURE 3
CP ACCESS ROUTES IN CHICAGO

27. As the point of convergence for six of the seven North American Class I railroads, Chicago is a primary interchange for CP. Between 75 and 80 percent of CP carloads passing through Chicago either originate or terminate on another railroad. With the majority of rail yards in the region lying to the south of downtown Chicago, much of CP's interchange volumes depart CP's network to connect with yards further south, sharing the same highly trafficked corridors as other Class I carriers. Two major intermediate switching terminal railroads, the BRC and the IHB, play key roles in CP's interchange traffic with other Class I railroads by providing the track infrastructure and classification services required to exchange carloads. From Bensenville, CP

operates two interchange trains daily in and out of the BRC's Clearing Yard via BRC's Kenton Line Subdivision. These trains include all of CP's traffic going to and from CN, BNSF, and CSX. Unit trains interchanged with NS and the UP are routed over the BRC to Rockwell Street Yard. CP delivers manifest and intermodal traffic directly into NS's Calumet Yard via BRC and into UP's Proviso Yard via IHB. Both railways reciprocate with direct service into Bensenville. Lastly, CP automotive and manifest carloads move in and out of IHB's Gibson and Blue Island Yards over IHB tracks.

Products

28. The traffic transported on the Central Corridor includes intermodal containers from the Port of Vancouver, fertilizers, chemicals, crude oil, frac sand, automotive, grain, and other agricultural products.

Central Corridor Feeder Lines:

29. The Central Corridor includes the following feeder lines:

- The Company has operating rights over BNSF tracks between Minneapolis and St. Paul, along with connectivity to the twin ports of Duluth, MN and Superior, WI.
- At Duluth/Superior, CP maintains its own yard facilities that provide an outlet for grain from the U.S. Midwest via the grain terminals at these ports. Duluth/Superior is a strategic entry point for large dimensional shipments that can be routed via CP's network to locations such as Alberta's Industrial Heartland to serve the needs of the energy industry.
- CP's route from Winona, MN, to Tracy, MN, provides a route for shipments of key agricultural and industrial commodities.
- CP's feeder line between Drake and New Town, ND, provides access to an important grain-growing region as well as Bakken oil production.
- CP also owns two significant feeder lines in North Dakota and Western Minnesota operated by the Dakota, Missouri, Valley & Western Railroad and the Northern Plains Railroad, respectively. Both short lines are active in providing service to agricultural and Bakken oil-related customers.

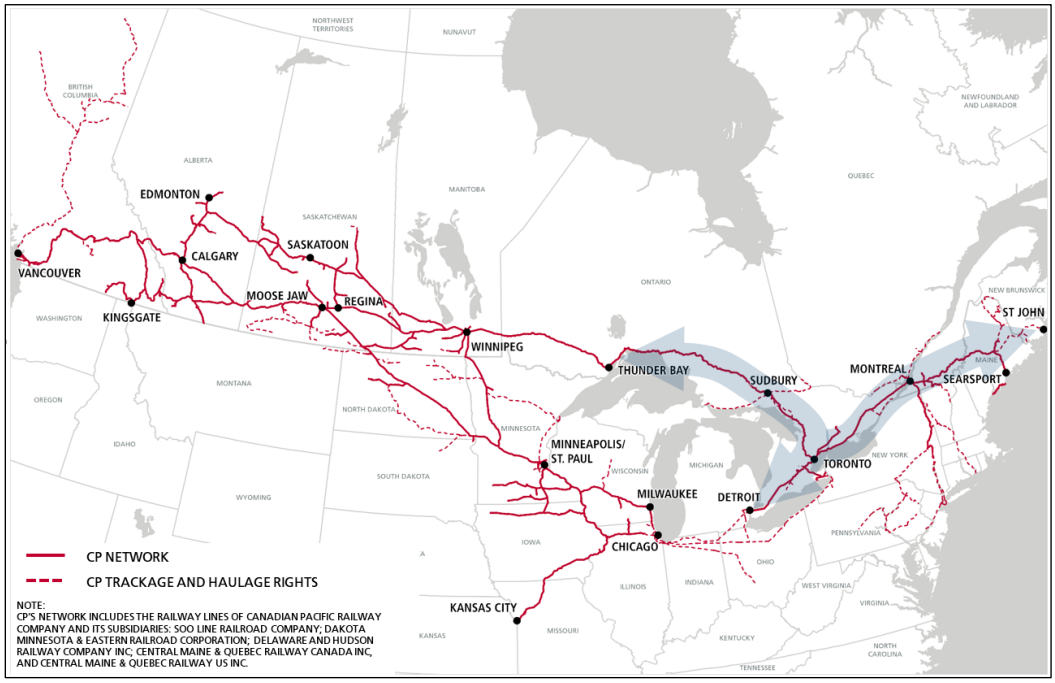
Central Corridor Connections

30. CP's Central Corridor provides the following connections to other railroads:

- The Central Corridor connects with major railways at Chicago. Among other connections outside of Chicago, CP has connections with BNSF at Minneapolis, Minot, ND, and Duluth/Superior, and with UP at St. Paul and Mankato, MN.
- CP connects with CN at Dubuque, IA, Milwaukee, and Chicago.
- At Kansas City, CP connects with KCS, BNSF, NS, and UP.
- CP's Central Corridor also connects with several short line railways that primarily serve grain in the U.S. Midwest, thereby extending CP's market reach in this region.

Central Corridor Yards and Repair Facilities

31. CP supports rail operations on the Central Corridor with rail yards in Chicago (Bensenville Yard); Milwaukee, WI; Glenwood, MN; St. Paul; Mason City and Nahant, IA. CP shares a yard with KCS in Kansas City – the so-called Joint Agency Yard.



32. In addition, CP has a major locomotive repair facility at St. Paul and car repair facilities at St. Paul and Chicago.

33. CP owns 49 percent of IHB, a switching railway serving Greater Chicago and northwest Indiana. CP is also part owner of BRC, which is the largest intermediate switching terminal railroad in the U.S.

34. CP has intermodal terminals in Minneapolis and Chicago, auto compounds in Cottage Grove, MN and Schiller Park, IL, and a dried distillers' grain transload facility in Chicago.

2.1.3. The Eastern Corridor: Thunder Bay to Quebec, Detroit and Albany

FIGURE 4
CP NETWORK OVERVIEW – EASTERN CORRIDOR

35. As shown in Figure 4 above, CP's Eastern Corridor extends from Thunder Bay through to the Port of Montreal, Searsport, ME, and the Port of Saint John (the latter via haulage agreement with the New Brunswick Southern Railway), and between Toronto and Chicago via Detroit or Buffalo. CP's Eastern Corridor provides shippers direct rail service from Toronto, Montreal, and Saint John to Calgary and Vancouver via CP's Western Corridor and to the United States via the Central Corridor. These routes are a key part of CP's transcontinental intermodal services.

36. CP's Eastern Corridor routes to and from the Port of Montreal provide a competitive, highly-efficient path for European cargo destined to the U.S. Midwest. CP trackage between Montreal and Detroit connects seamlessly – via the Detroit River Tunnel – with NS trackage between Detroit and Chicago (via Butler, IN), over which CP has trackage rights. Two CP train pairs operate over these NS trackage rights today, limited by agreement to a maximum

length of 12,000 feet. These trains are also subject to the height restrictions of the CP-owned Detroit River Tunnel, which precludes Automax cars and most double-stacked intermodal containers.

37. A haulage agreement with the CSX provides a route for CP double-stack intermodal service between Chicago and the CP's network in Eastern Canada. These trains are crewed by CSX and operate over 540 miles over CSX's high speed double-stack cleared Chicago Line connecting Bensenville Yard with Buffalo via Cleveland, OH. Together, the NS and CSX agreements provide direct reliable service between the Midwest and CP's Eastern network.

38. CP's 2019 acquisition of the Canadian portions of Central Maine & Quebec Railway and its 2020 acquisition of the U.S. portions of CMQ extended CP's network into Maine – including the Port of Searsport – and across Southern and Eastern Quebec to Saint John, NB.

Products

39. Major traffic categories transported in the Eastern Corridor include forest products, chemicals and plastics, crude, ethanol, metals, minerals and consumer products, intermodal, automotive products and general merchandise.

Eastern Corridor Feeder Lines

40. A major feeder line serves the steel industry at Hamilton, ON, and provides connections with both CSX and NS at Buffalo.

41. The Delaware and Hudson Railway Company, Inc. (D&H) feeder line extends from Montreal to Albany, NY, with haulage rights beyond to New York City and Philadelphia.

Eastern Corridor Connections

42. CP's Eastern Corridor routes connect with CN at a number of locations in Ontario – including Sudbury, Windsor, London, Hamilton, and Toronto – and at Montreal, Quebec. The

Eastern Corridor also connects with a number of short-line railways including routes from Montreal to Quebec City, QC, and Brownville Junction, ME, to Saint John, NB.

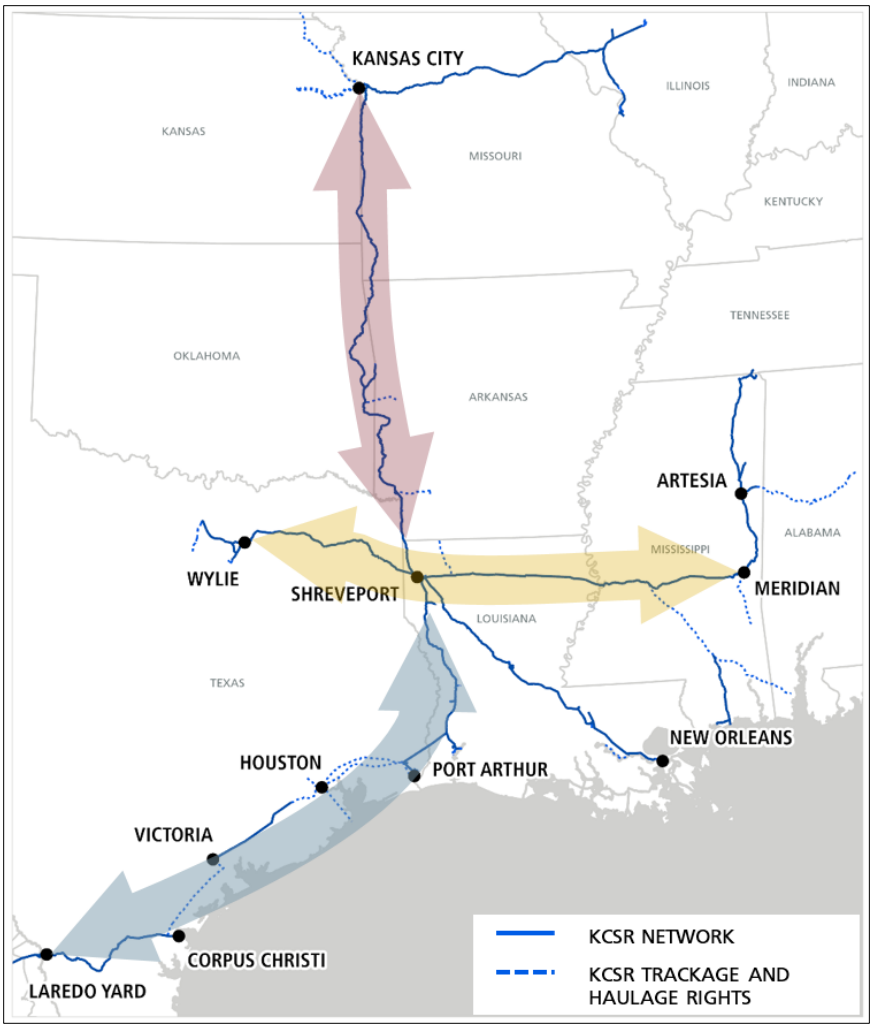
43. CP connects in New York with the two eastern Class I railways: NS and CSX at Buffalo, NS at Schenectady, and CSX at Albany. CP also connects with Pan Am Southern at Mechanicville, NY, and Northern Maine Junction, ME, for service to the Boston and New England areas, and with the Vermont Railway at Whitehall, NY, and Newport, VT.

44. Via haulage arrangements on CSX's route south of Albany, CP provides service to Fresh Pond, NY, connecting to the New York & Atlantic Railway with access to the Bronx and Queens. CP can also access Philadelphia via CSX haulage.

45. CP can access a number of short-lines in Pennsylvania via haulage on NS routes south of Schenectady, NY.

Eastern Corridor Yards and Repair Facilities

46. CP supports its rail operations in the Eastern Corridor with rail yards at Sudbury, London, Toronto, Montreal, Saratoga Springs, NY, and Brownville Junction, ME.



47. CP has locomotive repair facilities at Montreal and Toronto and car repair facilities at Thunder Bay, Toronto, and Montreal.

48. CP's largest intermodal facility is located in the northern Toronto suburb of Vaughan and serves the Greater Toronto and Southwestern Ontario areas. CP also operates intermodal terminals in Montreal and Detroit.

2.2. PRINCIPAL ROUTES – KCSR/KCSM

2.2.1. Current KCSR Routes

FIGURE 5
PRINCIPAL KCSR ROUTES

49. KCSR's U.S. operations (Figure 5) are centered on Shreveport, LA, with train operations radiating from there in a hub and spoke configuration. From the perspective of potential traffic moving to and from the CP system, the key route is KCSR's north-south funnel between major yards in Kansas City and Shreveport. Dominant flows are loads south and empties north, with bulk trains of grain and coal being prime examples of the predominantly southbound traffic flow. Manifest traffic makes up the next distinct category. KCSR has important connections with CP, UP, and BNSF at Kansas City, with smaller volumes of interchange there with NS.

50. Southbound manifest traffic predominately flows to and through Shreveport, which is a key junction location. From Shreveport, the KCSR network branches into four routes: west to Dallas, east to Meridian/Artesia, MS, southeast to New Orleans, and south to Port Arthur, Corpus Christi, the Laredo Gateway, and Mexico. The Dallas-Meridian route handles considerable volumes of East-West intermodal traffic. Much of that traffic bridges between UP at Shreveport and NS at Meridian, but KCSR also operates intermodal terminals at either end: Wylie terminal near Dallas on the west end and Jackson Terminal in Jackson, MS at the east end. Jackson Intermodal terminal is a KCSR-owned terminal that CN has access to. The eastern portion of this route – 320 miles from Shreveport to Meridian, MS – is jointly owned by KCS and NS as Meridian Speedway, LLC ("MSLLC").

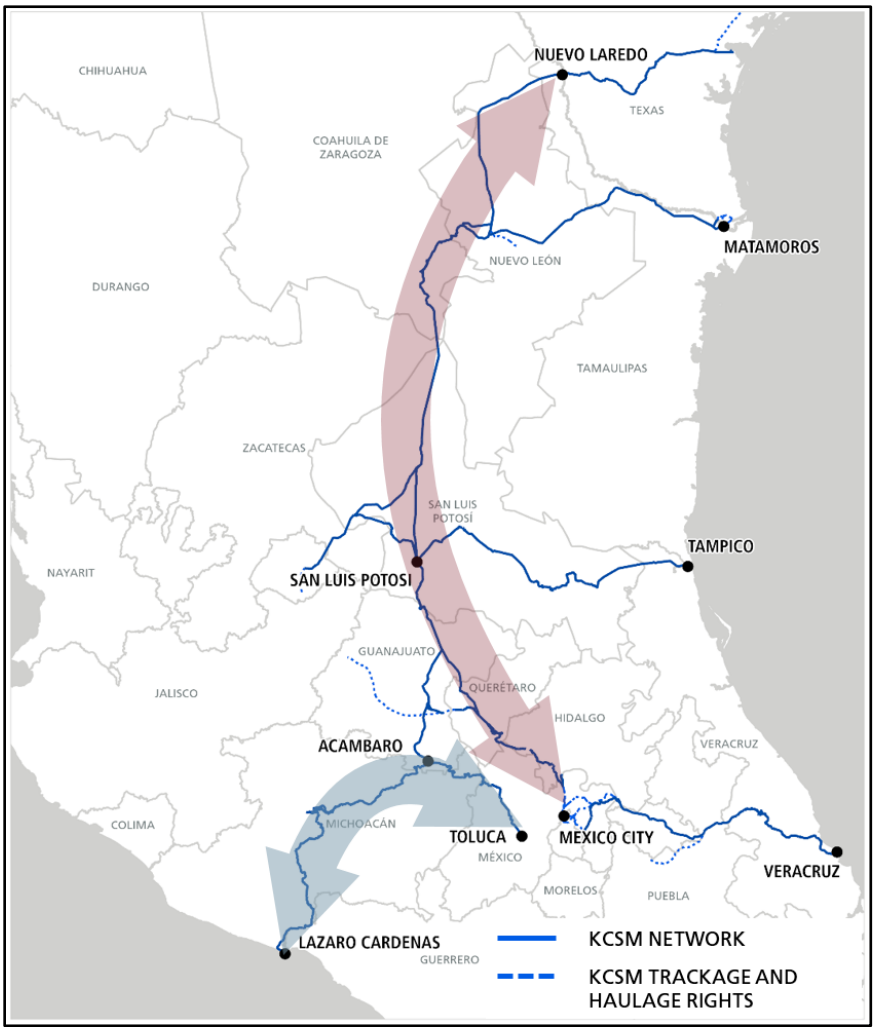
51. From Shreveport, KCSR operates two routes to the Gulf of Mexico – one that ends at New Orleans, and the other that serves Port Arthur, Beaumont and Corpus Christi, TX (and extends beyond into Mexico). These port terminals handle a diverse range of products including paper, energy, chemicals, food and consumer goods.

52. KCSR's route from Shreveport to Laredo (via Beaumont, Rosenberg, Victoria, and Robstown, TX) is the gateway to the Mexican border. Large portions of this route rely on trackage rights over UP lines that were granted to the Texas Mexican Railway in the UP/SP merger. Laredo is the busiest rail border crossing along the U.S.-Mexican border, handling a wide range of traffic.

KCSR Feeder Lines:

53. North and west of Kansas City, haulage routes from Topeka, KS, Council Bluffs, IA, Lincoln, and Omaha, NE, connect grain customers with markets served by KCSR/KCSM via the Kansas City gateway.

54. The KCSR route from Kansas City, MO, to East St. Louis, IL, serves agricultural, bio-fuels, and cement customers, among others. At Roodhouse, IL, a branch to Springfield, IL, connects with UP and the Illinois & Midland Railroad ("IMRR") at Springfield and serves additional agricultural facilities in Jacksonville, IL. At East St Louis, KCSR interchanges with BNSF, CN, CSXT, NS, and UP, as well as Alton & Southern Railway ("ALS"), Terminal Railroad Association of St Louis ("TRRA").



55. The KCSR route from Counce, TN, to Meridian, MS, serves an industry rich region of agricultural, forest products, steel, tire manufacturing, and metal recycling customers. Various short line connections extend KCSR's reach north of Corinth and east of Columbus, MS.

56. The KCSR route from Hattiesburg to Gulfport, MS, serves the Port of Gulfport and forest products customers. This line connects with KCSR (MSLLC) at Jackson via haulage over CN from Hattiesburg to Jackson.

57. KCSR has access to the Port of Mobile, AL, via haulage rights over CN between Jackson and Mobile.

2.2.2. Current KCSM Routes

FIGURE 6
PRINCIPAL KCSM ROUTES

58. Like KCSR, KCSM (Figure 6) is primarily oriented on a north-south axis. From Laredo in the north, the line extends 750 miles to Mexico City in the south. Lines extending east to Matamoros, Tampico, and Veracruz on the Gulf coast, and west to Lazaro Cardenas on the Pacific seaboard provide the KCSM's reach to tidewater. KCSM's line to Lazaro Cardenas has a junction at Acambaro that runs east towards Toluca.

59. KCSM's network serves more than a dozen automotive plants either directly or indirectly. Auto parts and finished vehicles to and from these facilities make up a diverse and

solid automotive base. GM, Ford, FCA, Toyota, Honda, Nissan, BMW, VW, Mazda, Audi, Mercedes, and Kia all have access to KCSM transportation services.

60. KCSM handles intermodal over the majority of its network, connecting intermodal facilities that are both KCSM-owned and private intermodal facilities, customers and ports across the network, which spans from Salinas Victoria in the north to Lazaro Cardenas, Puerta Mexico in Toluca and Pantaco in Mexico City.

KCSM Feeder Lines:

61. The KCSM route from Monterrey, NL, to Matamoros, TA, serves online customers including an auto compound at Pesqueria, NL, transloads, and receivers of agricultural products. KCSM interchanges with BNSF and UP just west of Matamoros via the West Rail International Bridge. KCSM has access to the Port of Brownsville, TX, via UP haulage to a connection with the Brownsville & Rio Grande International Railroad.

62. KCSM's route east from San Luis Potosi, SL, to Tampico, TA, serves online cement, fuel, scrap metal, and transload customers. KCSM has access to the Port of Altamira, TA, via trackage rights over FXE north of Tampico.

63. West of San Luis Potosi, KCSM serves online receivers of agricultural products. KCSM serves an automotive facility at Aguascalientes, AG, via trackage rights over FXE from Chicalote, AG.

64. The KCSM route east from Mexico City accesses intermodal, grain, and oil facilities at the Port of Veracruz, VC, from the north through a new connection at Santa Fe, VC.

3. DEVELOPMENT OF THE OPERATING PLAN

65. CP adapted its industry leading service design processes and capabilities to develop an Operating Plan for the consolidated CP/KCS network. The tools, data, and service design processes involved have been tested and proven over more than 20 years at CP and have

been integral to CP achieving its industry-leading operating and financial performance. Development of the Operating Plan involved the dedication of top tier service design personnel to the project on a full time basis. The design team dedicated to the project are industry leaders and experts in railway service design.

66. MultiRail was used as the primary tool to design efficient blocking and train service for an integrated CP/KCS system. MultiRail is a standard software application for railway operating plan development with a long history of intensive use at CP and other railroads.

67. The first step in using MultiRail is to "plot" all stations and rail lines by latitude/longitude and type.[2] These data were used by MultiRail's algorithms to analyze patterns of movement between facilities from origin to final destination. CP's information was already loaded into MultiRail. Information was added concerning the geographic location of stations on the KCS system based on KCSR's Timetable #15 (effective June 9, 2020) and KCSM's Timetable #3 (effective Oct 25, 2016). Because both CP and KCSR timetables are in Imperial measures, the KCSM timetable was converted from the metric system to Imperial measures to create uniformity across the entirety of the combined CP/KCS network.

68. The end result of this process is depicted in Figure 7, which is a graphical representation of the combined network generated by MultiRail.

[2] Stations (nodes) in MultiRail are categorized by their facilities and functionality (*e.g.,* customer facilities, sidings, junctions, local serving yards, regional yards, and system yards).

FIGURE 7
CP/KCS COMBINED NETWORK AS MODELED IN MULTIRAIL

69. Next, KCS rail traffic data was translated into a MultiRail-compatible format. To do so historical traffic data for KCS (including KCSR and KCSM) was sorted into the traffic categories required by MultiRail – including data elements such as waybill origin, waybill destination, traffic category, car type, load/empty indicator, Standard Transportation Commodity Code (STCC), shipper, consignee, on-railroad, off-railroad, and total cars in the sample period. After importing the KCS traffic file to MultiRail, a consolidated data set was created by combining the two individual records of car movements interlined between CP and KCS into a single combined record. For example, a waybill for a car moving from Altona, MB, to San Luis Potosi, SL, routed as CP-Kansas City-KCSR-Laredo-KCSM was combined into a single record.

70. In addition to the combined base map and traffic file, the design team loaded into MultiRail the current KCS blocking and train plan, including information on train origin, destination, routing, work on-line, and scheduled run times and station time.

71. The current CP train design was applied to the CP portions of each movement, and the KCS train design was applied to the KCS portions of each movement. Traffic movements were reviewed to determine how traffic is currently blocked in each yard, how many blocks are built, what traffic flows to each of the blocks, and which blocks are assigned to each train and in what sequence. The result was a detailed baseline understanding of how the operations of CP and KCS work today as two independent entities. This is what is referred to as the "Base Plan."

72. After developing a good understanding of how the operations work today, the next phase of the design process involved making modifications to reflect the effects of the proposed Transaction, in two steps. In Step 1 the design team developed a plan for an integrated CP/KCS operation carrying only the base traffic (the "Optimized Plan"), and in Step 2 the team developed a plan for an integrated CP/KCS operation carrying both the base traffic and also reflecting changes to that traffic base arising from the Transaction – *i.e.*, extended hauls, rail-to-rail diversions, truck-to-rail diversions, and merger-related market development opportunities (the "Growth Plan").[3]

73. The sections that follow go into more detail about the development of the Base Plan, the Optimized Plan, and the Growth Plan.

[3] The Growth Plan and related statistics reflect the anticipated traffic levels upon full integration of the CP/KCS network at Year 3 after the Control Date.

3.1. THE BASE PLAN

74. As described above, waybill records were collected from both CP and KCS and combined into a system traffic file with empty return flows modelled to reflect historical ratios. Errors or omissions in data translation were identified, investigated, and corrected.

75. In order to generate an accurate and complete view of the operations of each network, the design team used the blocking and train plans in effect in the first quarter of 2021 [4] This set of traffic and designs for the two separate railroad networks is referred to as the Base Plan.

3.2. THE OPTIMIZED PLAN

76. Combining the CP and KCS rail networks into a single network unlocks tremendous opportunities for efficiency gains. Starting upon authorization of common control, CPKC would begin to make changes to improve service and efficiency on the combined network through, among other steps, new train services operating across the current boundary of the separate networks. Optimization will take advantage of longer-distance train profiles handling longer-distance blocks, keeping traffic moving further along the network before needing to be re-worked in yards.

77. The exercise of developing the Optimized Plan was built upon aspects of Precision Scheduled Railroading ("PSR"). KCS's ongoing adoption of PSR principles helped to make KCS's base operational design more compatible with the PSR-based design that CP has

[4] Because the stand-alone operating plans for CP and KCSR/KCSM used in the MultiRail model of CP/KCS reflect operations as of Q1 2021, they embed efficiencies both railroads achieved from 2019 up until that point. This approach avoids attributing to the Transaction efficiency gains that have already taken place. We confirmed that this approach would not lead to any overstatement in efficiencies (*i.e.,* the Q1 2021 operations are not less efficient than operations as of 2019, and would be capable of handling the 2019 traffic). Because of changes in KCS's train plan from 2019 to 2020, particularly within Mexico, we made use of KCS traffic flow data for the peak month of October 2020 to provide a better match between the train plan design and the way the traffic actually flowed over the network.

honed over many years. In developing the Optimized Plan, CP drew on its unparalleled experience with PSR to design an operating plan for the combined CP/KCS network that could handle the base traffic in a manner that both improved service to customers and achieved optimum efficiency improvement.

78. Capitalizing on the long haul traffic flows presented by a pure end-to-end merger, the blocking and train design in the Base Plan was modified in line with CP's core service design principles and practices. Where possible, operations were configured across the now-integrated network to incorporate balanced scheduled train pairs, daily services, longer-distance train runs, longer-distance blocks, and train meets making use of longer sidings. The goal was to reduce intermediate handlings of traffic by blocking deeper into the combined network, keeping trains running further, which, in turn, keeps assets such as locomotives moving, and puts cars into yards only when absolutely necessary.

79. A base block of ten cars was used to plan terminal blocking in order to maximize the use of yard tracks, minimize train work events and extend the distance blocks travel prior to being re-processed. The number of blocks was set taking into consideration the capacity of each yard (*i.e.*, the number and length of classification tracks in the yard). The longest distance, most sizable blocks in turn anchor the train plan, with additional blocks layered on to build a complete network-wide train plan. The result is a faster, more cost effective service to handle the base traffic with the lowest number of intermediate handlings.

80. Table 1 below provides key metrics comparing the Optimized Plan with the Base Plan. Those metrics demonstrate and quantify the improved efficiency of network operations under the Optimized Plan. This is before considering ways in which the combined network will

be able to attract additional rail traffic from railroad and truck competitors, and from merger-related market development opportunities.

TABLE 1
CHANGES IN OPERATING STATISTICS RESULTING FROM OPTIMIZED PLAN

Description	Base Plan	Optimized Plan	Percentage Change
Gross Ton Miles	385.6B	385.6B	N/A
Running Car Miles	3.66B	3.66B	N/A
Intermediate Handlings	22.01M	21.61M	-1.8%
Train Hours	2.97M	2.834M	-4.4%
Train Miles (Freight)	49.93M	48.26M	-3.3%
Gross Ton Miles/Train Mile	7,724	7,991	3.5%
Locomotives/Train	2.72	2.71	-0.1%
Locomotive Unit Miles	50.07B	48.32B	-3.5%

3.3. THE GROWTH PLAN

81. After the Optimized Plan was finalized, CP incorporated the effects of extended hauls, diversions from other railways, truck-to-rail diversions, and anticipated merger related market development opportunities. With growth in traffic, additional operating costs and investments were identified to further expand capacity and/or improve service levels. This involved making changes to the train and blocking plans developed in the Optimized Plan. This output is referred to as the "Growth Plan".

82. It is not expected that the CPKC merger-related traffic growth will take exactly the shape (in terms of precise mix, volume and timing) represented in the traffic file on which the Growth Plan is based. The Growth Plan is a reasonable and reliable estimate of how CPKC's operations would be structured to handle forecasted traffic growth; it therefore provides a robust estimate of the operating and other savings realized from the CPKC transformation. CPKC will have the assets and capabilities it needs to be nimble and able to adjust as the Transaction is implemented in the real world.

83. The Growth Plan differs from the Base Plan and the Optimized Plan in two primary respects. First, the Growth Plan incorporates additional traffic that the combined network would carry following Board control approval and implementation of the Transaction by (a) extending the length of haul for traffic CP or KCS already is handling; (b) by attracting traffic away from other railroads (rail-to-rail diversions) and off the highways and onto CP/KCS intermodal service (truck-to-rail diversions); and (c) by incorporating new traffic growth opportunities afforded by the combination. The estimated additional sources of traffic were based on comprehensive analyses that are described in the Verified Statements of Michael R. Baranowski and Bengt Mutén, and the Joint Verified Statement of Jonathan Wahba and Michael J. Naatz.

84. This estimation process began with an evaluation of the Board's 2019 confidential waybill file to identify shipments that could be diverted to the combined CP/KCS system. Limited adjustments were made to account for known changes in traffic patterns that have occurred since 2019, as well as certain new opportunities that did not exist as of 2019. The result was a matrix of traffic movements that the combined network would handle over the course of the first three years post-Transaction, during which the transition would be fully implemented taking into account the phasing in of potential traffic diversion and growth opportunities as well as the need for additional capacity required to accommodate the new traffic.

85. Second, the Growth Plan also considers sources of organic growth in traffic volumes in order to confirm – and demonstrate to the Board – that the operation of the combined network will be fully resourced and capable of an efficient operation without congestion or service degradation. The traffic growth considered thus includes both anticipated volume growth

for traffic currently handled by CP or KCS as well as volume growth that will be attracted by the combined network.[5] Growth forecasts for KCSR/KCSM traffic are based on normal-course-of-business planning processes for all years. Growth forecasts for CP traffic are based on normal-course-of-business planning processes up to 2023. Beyond 2023 CP traffic growth is based on forecasted North American economic growth with commodity specific opportunities overlaid.

86. Table 2 below summarizes the effects of incorporating the Growth Plan:

TABLE 2
CHANGES IN OPERATING STATISTICS INCORPORATING THE GROWTH PLAN

Description	Base Plan	Optimized Plan	Optimized vs. Base Plan	Growth Plan	Growth vs. Optimized Plan
Gross Ton Miles	385.6B	385.6B	N/A	461.9B	19.8%
Running Car Miles	3.66B	3.66B	N/A	4.63B	21.3%
Intermediate Handlings	22.01M	21.61M	-1.8%	22.37M	3.5%
Train Hours	2.97M	2.834M	-4.4%	2.86M	1.1%
Train Miles (Freight)	49.93M	48.26M	-3.3%	53.63M	11.6%
Gross Ton Miles/Train Mile	7,724	7,991	3.5%	9,000	12.2%
Locomotives/Train	2.72	2.71	-0.1%	2.74	1.0%
Locomotive Unit Miles	50.07B	48.32B	-3.5%	52.45B	8.5%

87. Development of these three scenarios (Base Plan, Optimized and Growth Plans) enabled the design team to:

(a) demonstrate the base-year efficiencies created by combining CP and KCSR/KCSM into an integrated system that takes advantage of a fully-integrated and optimized plan – based on a 2019 base year;

(b) calculate the incremental efficiencies and net revenues resulting from extended hauls, rail-to-rail diversions, truck-to-rail diversions, and other traffic growth opportunities that flow from Transaction-related benefits (including additional opportunities that did not exist in the 2019 base year) over the first three years following Control; and

[5] Only the volume growth that will be attracted by the combined network was considered in quantifying the Transaction-related effects.

(c) demonstrate the present and future net benefits of a CP/KCS combination both on a pro forma basis relative to 2019 and going forward for Years 1-3 and beyond.

3.4. GENERAL CATEGORIES OF TRAFFIC ON THE COMBINED NETWORK

88. In developing the operating assumptions under each of the Plans described above, CP assigned each movement to one of four traffic categories; manifest, intermodal, automotive, or bulk.

3.4.1. Manifest

89. Manifest (or merchandise) traffic, includes all railcar shipments that are not in intermodal, automotive, or bulk (unit train) service. Although these movements are often referred to as single railcar movements, manifest traffic is frequently handled in blocks of 10, 20, 30 or more cars depending on the origin customer's capacity and the size of the order being fulfilled. Manifest shipments usually make one or more stops along their route to be switched from one block to another, or from one train service to another.

3.4.2. Intermodal

90. Intermodal refers to the transportation by rail of containerized shipments, either in domestic/marine container or in trailers that move between modes of transportation without unloading the lading. Intermodal terminals are often separated from standard railcar yards, and are designed for the secure and efficient handling of the containers and trailers from railcars to trucks (or vice versa). When volumes are sufficient, solid intermodal trains are built to expedite movement from an origin to a single destination location. Solid intermodal trains are typically designed to stop only for crew changes and fueling, although exceptions are made to set-out or pick-up intermodal cars.

3.4.3. Automotive

91. Automotive traffic generally falls into two categories of shipments: auto parts and finished vehicles. Auto parts are extremely time sensitive due to "just-in-time" transit commitments agreed to between the rail carrier and the customer (usually an automotive manufacturer or "OEM"). Auto parts with time sensitivities move in general manifest (or, if containerized, intermodal) trains but are managed to ensure tight connections between trains to protect service commitments.

92. Finished vehicles typically move in groups of multilevel railcars to accommodate the volume of traffic released from automotive assembly plants. When volumes warrant, solid trains of finished vehicles with limited stops en route, similar to solid intermodal trains, offer the quickest transit times and fewest railcar handlings from origin through to destination. Reduced handlings also minimize the chance of the vehicles inside the railcars being damaged, for example, by "jumping their chocks."

3.4.4. Bulk

93. Bulk train service refers to solid (or unit) trains handling commodities such as grain, coal, sulphur, or potash. In recent years, unit trains of ethanol, crude oil, and frac sand have been added to the unit train mix on CP and other North American railways. All of these commodities can also run in manifest service, with the difference being that bulk train origin and destination stations are able to load and/or unload solid trains, often in less than 24 hours. Locomotives typically remain with these unit trains to avoid the costs and delay of deadheading power to/from the terminal. Bulk service is designed to require no work en route other than crew changes and fueling, although longer-distance trains do receive intermediate safety inspections en route. In terms of train size, unit trains range from 100 cars for grain or sand trains on CP's

U.S. network up to 200 cars per train of potash. Locomotives are assigned on a maximum-tonnage-per-unit basis.

3.5. TRAFFIC FLOWS, BLOCKING PATTERNS, LINE SEGMENT, AND YARD ACTIVITY CHANGES

3.5.1. Traffic Flows

94. As noted earlier, three scenarios were developed in MultiRail to aid in analyzing pre- and post-Transaction traffic flows. The first, the Base Plan, represents CP's and KCS's separate traffic flows and operating plans. The second scenario, the Optimized Plan, established the revised car flows, blocking, and train plans in a combined system based on current levels of traffic. The third scenario, the Growth Plan, developed further car flow, blocking, and train plan revisions that would enable the combined network to efficiently handle the additional traffic anticipated from extended hauls, rail-to-rail diversions, truck-to-rail diversions, and multi-year growth anticipated over the period of transaction implementation, culminating in Year 3 post-transaction when the transaction would be fully implemented.

3.5.2. Blocking Patterns

95. To realize opportunities for improved service and efficiency on a combined CP/KCS system, train schedules and blocking patterns were revised and new services established using two processes. First, a longer-distance blocking plan for the combined system was designed with the aim of reducing intermediate handlings by blocking deeper into the combined network. Train runs were extended to match the deeper blocking, which reduces the number of handling events on cars and locomotives, generating efficiencies in the use of assets as well as improving service levels experienced by CP/KCS customers. For example, blocks built today by CP in Chicago or St. Paul for Kansas City were evaluated for potential extension to Shreveport

and other points on the KCS system. Similarly, blocks built today by KCS in Shreveport for Kansas City were evaluated for potential extension to Chicago, St. Paul, and other CP points.

96. The design process used was an iterative one. To illustrate, it begins at a logical location where opportunities exist to reduce switching activity consistent with supporting existing or improved service levels. Terminal blocking plans were reviewed from a minimum block size threshold of an average of ten or more cars per day to evaluate potential long-distance block candidates. The number and length of classification tracks in a given yard may constrain the total number of blocks that can be established. As a result, the longest-distance blocks form the foundation of the blocking plan, with intermediate blocks layered onto the longer-distance trains. The overall objective was to reduce the number of times an average car has to be switched between its ultimate origin and ultimate destination. Imposing this discipline across the breath of a combined network resulted in many changes in the blocking design and the amount of blocking performed at various yards across the network.

97. Second, the plan was refined for each train using a tool in MultiRail called the "Block By-Pass Opportunity" report, a feature that analyzes the existing design and suggests new blocks to make and yards to bypass. The suggested options were assessed for practicality in terms of block size, possible train connections, how the proposed block affects service levels, and the traffic composition of the new block. This process was repeated until no further incremental improvements were observed.

98. To improve customer service levels wherever practicable, the frequency of train service was increased to daily and balanced in both directions. The goal was to provide consistency to both service and operations, the latter in terms of a simpler daily plan that is repeatable – *e.g.*, the same block departs on the same train every day. Repetitive plans are

measured and continuously improved. Continuous improvement is the foundation of PSR and creates reliability across the network.

3.5.3. Line Segment Changes

99. CP calculated train counts and gross ton-miles for each line segment for (a) the Base Plan and (b) the Growth Plan (*i.e.*, Year 3). These statistics are reported in Appendix A.

3.5.4. Yard Activity Changes

100. The train and blocking changes designed into the Optimized Plan and the Growth Plan resulted in changes in yard activity. As an anticipated consequence of the revised, integrated network design, several yards would experience significant reductions in the volume of traffic that requires yard processing – most notably Kansas City, MO and several KCSM yards in Mexico. These changes yield lower costs, increase capacity, and improve reliability and service performance. Appendix B displays all yard volume changes under the Optimized and Growth Plans.

3.6. Realization of Traffic Gains and Consolidation of Benefits

101. The integration of the CP and KCS networks will be complete within the first three years of Board approval of control, leading to significant and recurring benefits. This is the period during which the combined railroads will swiftly establish improved new single-line service offerings and commercial initiatives, invest in improved signaling and capacity enhancements on the core North-South routes of the CP/KCS system, and attract additional new traffic from other railroads and the highways as a result of these initiatives. During this period, increases in traffic resulting from extended hauls, rail-to-rail diversions, truck-to-rail diversions and additional merger-related market opportunities are expected to result in significant economies of scope and scale that will support the realization of the associated operating

efficiencies. Some new traffic opportunities may take longer to develop as they involve seasonal demands (*e.g.*, propane volumes in winter vs. summer) or longer-term capital investments by CP/KCS or third parties (*e.g.*, a potential intermodal/automotive facility serving Southeast Texas, new grain elevators in Southeast Iowa).

3.7. APPROACH TO CONSOLIDATED OPERATIONS

3.7.1. KCS Current Train Operation

102. Appendix C contains schematics describing the KCSR/KCSM pre-Transaction train schedules in effect in the first quarter of 2021.

103. The current KCSR/KCSM train design can be broadly described as a hub and spoke design centered on Shreveport Yard and Sanchez Yard (just south of Laredo). Trains are designed to send traffic to these major hubs for further processing. Two such examples are KCSR manifest trains "M-KCSH," from Kansas City to Shreveport, and "M-ARSH," from Artesia, MS to Shreveport. The pattern is similar on KCSM, with manifest trains "M-MYSZ" and "M-MYSZ2," both from Monterrey to Sanchez, and "M-SZMY" and "M-SZMY2," both from Sanchez to Monterrey, illustrating twice daily services in Northern Mexico.

104. The blocks currently established within each train profile largely mirror this hub-and-spoke structure. For example, manifest traffic arriving (or originating) Kansas City is currently forwarded to Shreveport in a mixed block for classification there into new blocks: (a) east to Meridian, Jackson and Artesia, (b) southeast to New Orleans, and (c) south and southwest to Port Arthur and Mossville (Lake Charles, LA). At Shreveport, traffic for Mexico is processed and sent to Sanchez Yard for further handling. At Sanchez, traffic is processed into blocks for key stations along the line, such as larger terminals at Monterrey and San Luis Potosi, as well as smaller locations such as Saltillo and Escobedo.

105. Another feature of KCS's current operation is that many of KCS's scheduled trains run only on select days of the week rather than daily. Examples are manifest train "M-SHKC2," from Shreveport to Kansas City, which operates only on Monday, Wednesday, Friday, and Saturday (*i.e.*, "xMxWFS"); manifest train "M-SHDA," from Shreveport to Wylie, which operates SxTWTFS; and intermodal train "I-DAAT2," from Wylie to Meridian, which operates xxxWxFx. This scheduling approach is driven by specific line-of-business considerations. For example, a pure intermodal service may operate less than daily because average intermodal traffic volumes are too low to warrant daily service. However, this means that when traffic surges (as it inevitably does) the current KCS/KCSM train plan must use "as required" or extra train profiles to supplement scheduled services. Examples are intermodal train "I-DALR," form Wylie to Laredo, and manifest train "M-JAKC," from Jackson to Kansas City. KCSM takes a similar approach in Mexico. KCSM "as required" examples are automotive trains "A-ESNL," from Escobedo to Nuevo Laredo, "A-SLUP," from San Luis Potosi to Laredo, and "A-TLBN," from Toluca to Laredo. These as required trains are typically one way moves with no reciprocal return symbol, which often results in assets and crews that are stranded, which requires dead-heading of crews and limits utilization and resource optimization.

3.7.2. CP's Application of PSR

106. Appendix D contains schematics describing CP train schedules in effect in the first quarter of 2021.

107. Based on CP's long experience with PSR, it is understood that daily service for all lines of business in all directions creates a predictable daily schedule that encourages the railroad and its customers to collaborate to achieve predictable and reliable operations. This substantially reduces expenses such as car dwell and deadheading of locomotives and crews. This experience informed the approach to designing a consolidated plan for the CP/KCS system that took

advantage of its greater scope and density with both efficiency and service reliability as the primary objectives.

108. It is important to emphasize that the principles of PSR, which have been embraced by both CP and KCS independently, are built on the premise of constant re-evaluation and optimization. The operating plans described herein are based on the traffic and diversion studies of a fully-combined CP/KCS system as undertaken by Applicants using the best information available.

4. CP/KCS COMBINED NETWORK OVERVIEW

4.1. COMBINED NETWORK - PRINCIPAL ROUTES

109. CP and KCS intersect only in Kansas City, where they already share yard facilities, and the two railroads have no overlapping or parallel routes. As a result, there will be no change in the principal routes operated by either railroad. There will be no abandonments or discontinued operations anywhere on the combined system as a result of the Transaction. Instead, the combination of end-to-end networks will enable the more efficient operation of the two railroads' routes, lowering costs and improving the level of service provided to customers for North-South traffic moving on the combined CP/KCS system via Kansas City. Instead of KCS's and CP's separate lines ending at Kansas City, longer-distance trains along with more far-reaching blocks are possible, allowing service to be expedited through a reduction in car handlings and locomotive changes.

110. At the same time, CP/KCS will keep open, both operationally and commercially, all existing gateways. It is therefore anticipated that CP/KCS will support efficient interchanges – and continue to interchange large volumes of traffic with other Class I railroads – for example, at Laredo (with UP), Robstown (with BNSF), Jackson (with CN), Chicago (with CSX, NS, UP,

BNSF, and CN), and Minneapolis/St. Paul (with BNSF and UP). The Operating Plan does not contemplate any changes to the CPKC train services to/from these gateways.

4.2. COMBINED NETWORK - CONSOLIDATION OF MAIN LINE OPERATIONS

111. Appendix E contains schematics describing proposed CP and KCS train schedules post-transition. The CP/KCS Optimized and Growth Plans anticipate daily and balanced train services where volume permits, daily train services handling mixed intermodal/manifest traffic in cases where volumes are insufficient to support trains dedicated to one category of traffic.

4.3. COMBINED NETWORK - YARD PROCESSING AND BLOCK DESIGN CHANGES

112. The proposed changes in the operation of an integrated CP/KCS system will affect the role of yards. As traffic flows to new, longer distance blocks, the number of cars per day going into a yard will be altered. Some yards will get busier, while others will experience reductions in workload. Table 3 lists key yard locations and the difference in number of cars processed per day under the Base Plan and the Optimized Plan.

TABLE 3
ANTICIPATED YARD WORKLOAD (±10 CARS PER DAY) - BASE PLAN TO OPTIMIZED PLAN

Yard	Processed Cars Base Plan	Processed Cars Optimized Plan	Difference in Cars / Day
San Luis Potosi	533.86	567.32	33.46
Shreveport	869.29	892.39	23.11
Escobedo	278.04	297.29	19.25
Nahant (near Davenport, IA)	363.61	380.07	16.46
Laredo	1062.21	1078.64	16.43
Mexico City	186.00	196.36	10.36
San Juan Del Rio	51.29	40.93	-10.36
Jackson	391.82	378.21	-13.61
Salinas Victoria	199.61	185.68	-13.93
Monterrey	995.00	967.43	-27.57
Beaumont	189.54	157.86	-31.68
Saltillo	62.82	28.43	-34.39
IFG (near Kansas City)	97.96	54.93	-43.04
Queretaro	223.07	173.71	-49.36
Kansas City	581.54	506.46	-75.07
Vanegas	140.96	0.50	-140.46
Sanchez (near Nuevo Laredo)	1562.25	1179.21	-383.04
Nuevo Laredo	532.64	105.68	-426.96
Grand Total			**-1130.4**

113. The large decreases in cars per day processed at Nuevo Laredo and Sanchez Yard are the result of building longer-distance blocks for the combined CP/KCS network, which reduces the amount of handling at the border yards, thereby reducing transit times and other costs of handling this traffic. For example, in the combined network, blocks that bypass Nuevo Laredo and Sanchez are made possible because other yards – especially Shreveport – will be relieved of some workload by yards north of Kansas City that will in turn be building blocks that bypass those intermediate points. It is important to note that blocking plans are subject to constant adjustment and will necessarily evolve with changes in traffic volumes and composition on the CP/KCS network.

114. The decrease in cars per day at Kansas City is a reflection of no longer terminating CP and KCS train symbols at Kansas City, and the impact of longer distance blocks supporting a through train service. For example, under the Optimized Plan yards in St. Paul, MN and Nahant, IA (near Davenport) will create blocks to Shreveport and Sanchez from the north; and Shreveport will create blocks to Nahant and St Paul from the south. This will reduce or eliminate the need to processing CP/KCS traffic in Kansas City. In addition, having Shreveport create separate blocks for each railroad with which CP/KCS will interchange at Kansas City will further reduce the need to classify traffic at Kansas City.

115. In the Optimized Plan some yards like Shreveport and Monterrey produce more blocks. Table 4 below provides a list of the CP/KCS yards (sorted in alphabetical order) that will make more blocks under the Optimized Plan (vs Base Plan). Complete details of changes to blocks can be found in Appendix F.

TABLE 4
ADDITIONAL LONG DISTANCE BLOCKS BY YARD
BASE PLAN TO OPTIMIZED PLAN

Yard	Additional Blocks
Corpus Christi	1
East St Louis	1
Encantada (IMS)	1
IFG (near Kansas City) (IMS)	1
Jalapa	1
Laredo	3
Matamoros	1
Meridian	2
Mexico City	1
Monterrey	2
Nahant (near Davenport, IA)	2
Pedro C Morales (near Monterrey)	1
Puerta Mexico (IMS)	4
San Luis Potosi	3
Sanchez (near Nuevo Laredo)	2
Shreveport	4
St Paul	1
Toluca	1

116. The total number of blocks a given yard can build daily is a function of the number of classification tracks in the yard, the length of each track, and the number of times per day the traffic is pulled from the tracks and departed. Under certain circumstances where a track is pulled and departed more than once per day that same track can be used to build additional destination blocks. Existing and planned yard infrastructure was analyzed for each of KCS's yards in the United States and Mexico and took into account available yard capacities in developing Operating Plans. Analysis concluded that there is no need for additional yard capacity on the KCSR and KCSM network.

4.4. GROWTH PLAN – PRINCIPAL ROUTES

117. Appendix G contains schematics describing proposed CP and KCS train schedules post-Transaction.

118. Transforming the separate CP and KCS networks into a single, integrated network creates the opportunity to optimize service design around a combined traffic base and a larger, coordinated operating footprint. This, in turn, will improve customer service and promote efficiency for both customers and CP/KCS by speeding up traffic, smoothing day of week volume levels, increasing train productivity, and decreasing operational costs. Daily train services carrying long-distance blocks will allow traffic to remain moving on trains for longer distances, minimizing delays and costs associated with extra processing of traffic.

119. As an illustration, consider the effects on locomotive utilization. Because locomotives remain working on trains for longer durations without changing off, there is reduced intermediate dwell time compared to shorter lengths of haul. The same concepts apply to rolling stock. The resulting improvements in efficiency include reduced transit times, lower handling costs, reduced dwell, and less inventory that otherwise consumes available capacity in yards.

120. Some illustrations of how these principles will be applied to the CP/KCS network include:

- Under the Optimized Plan: the separate KCS Shreveport to Kansas City and CP Kansas City to St. Paul blocks and trains would be combined, with new blocking at Shreveport that will eliminate the reprocessing of traffic that currently takes place at Kansas City. The result is an average *reduction in transit time of 26 hours*. Comparable changes would be made for southbound flows in this corridor, with St. Paul building blocks for Shreveport and beyond.
- Under the Growth Plan: CP's current Toronto-to-Chicago service would be extended through to Lazaro Cardenas bypassing intermediate processing at Nahant, Kansas City, Shreveport, Laredo, Sanchez, Vanegas, and Escobedo.
- For full details of the design changes that CP anticipates, please refer to Appendices H and I.

121. With a consistent daily train plan, CP/KCS will be able to design and implement precision train meets. Integrated CP/KCS train services will run in routine time slots allowing

for increased train lengths by design. Not only will this improve productivity, it will allow for volume fluctuations without negatively affecting dwell time. Over a longer time horizon, this operational design will make capital planning for siding and yard capacity expansion simpler to model and build, further contributing to train service that is more predictable.

122. The principle of balance guides this design. Even when traffic levels are not available to run the daily design, balance still applies. For example, even if it is sometimes necessary to run train service less than daily, schedules can still be designed to ensure power and crew cycles are optimized, which in turn reduces crew held-away time and deadheading of crews to home terminals and ensures that locomotive power is shared efficiently between bi-directional train pairs.

123. An example of a proposed change unlocked by the CP/KCS combination that will improve efficiency relative to current KCS operations involves current manifest trains "M-SHLC" and "M-LCSH," which operate between Shreveport and Mossville, LA. Train "M-SHLC" is scheduled to depart Shreveport at 0800 hours four days per week (xMTxTxS), arriving Mossville at 1645 hours. Return train "M-LCSH" is scheduled to depart Mossville at 1330 hours only three days a week (xMxWxFx), arriving Shreveport at 2230 hours. By changing service days for "M-SHLC" to SxTxTxx, crew and locomotives will be available to supply the return train on alternate days (xMxWxFx), avoiding the dwell of locomotives at Mossville over Sunday and Tuesday and a corresponding deadhead of crews.

124. The ability to deploy longer, safer trains is a key component of running an efficient combined network supporting increased traffic flows. To assist in operating longer trains, CP's Train Area Marshalling tool (or "TrAM") – a proprietary train dynamics and territory analysis program developed in house – will allow CPKC to determine where to place

locomotives within each train. In contrast to traditional static rules published in a timetable format, TrAM takes into account grade and curvature in all of the territories a specific train will traverse and checks its predictions against a live consist at each work event location. TrAM checks train consists to ensure safe marshalling of cars within the train, including as cars are picked up or set out en route. This software will support the safe and efficient operation of longer trains on the combined CP/KCS network.

4.5. GROWTH PLAN - PROPOSED CP/KCS OPERATIONS

125. The Growth Plan incorporates the combined network operations needed to attract and support the additional traffic that will flow to the combined network as a result of the transaction. The traffic additions will be the result of improved transit times, more reliable service, and the commercial benefits associated with single-line service. The nature and sources of this traffic are described in detail in the testimony of Messrs. Baranowski, Mutén and Wahba/Naatz. Of the four categories of traffic (intermodal, automotive, manifest and bulk), growth in intermodal is the single most significant driver of the changes in train design to support the multi-year traffic forecast underpinning the Growth Plan.

126. The end-to-end nature of the CP/KCS network makes planning for this forecasted traffic growth relatively straightforward. Traffic will flow from origins on CP in Western Canada and the Upper Midwest via CP's line between St. Paul and Sabula Junction to Kansas City. Traffic will also flow from origins in Chicago, Detroit, and Eastern Canada via CP's line between Chicago and Sabula Junction to Kansas City. South of Kansas City that traffic will be delivered to destinations on KCS in Arkansas, Mississippi, Louisiana, and Texas, and throughout Mexico. Northbound traffic will flow in reverse.

4.5.1. Through-Train Service

127. The additional traffic density associated with the Growth Plan will support scheduled through-train services characterized by extended train run distances, increased train lengths, new block and train assignments, updated scheduled times, and both increased daily service and train pair balancing where volumes permit. Because traffic remains on the train for longer distances, dwell times and re-handling at intermediate yards are substantially reduced. These efficiencies result in more efficient utilization of locomotives and freight cars, which in turn adds to the capacity available to support further traffic increases.

128. Longer trains and consistent daily train services will also result in smoother and more predictable traffic flows. This, in turn, minimizes the chances of "bubbles" of traffic hitting yards on unscheduled trains. Consequently, customers will experience a more reliable service that will enable them to more accurately plan their transportation-dependent workflows. Examples of new train services that will accommodate the anticipated growth and deliver the through-train benefits include the new CPKC trains listed below:

- ***CPKC Trains 160 and 161***, operating daily between Minneapolis IMS and Toluca (2640 miles)
  - Intermodal and manifest traffic
- ***CPKC Trains 162 and 163***, operating daily between Bensenville IMS and Wylie, TX (1221 miles)
  - Intermodal and manifest traffic
- ***CPKC Trains 170 and 171***, operating daily between Toronto and Lazaro Cardenas (3190 miles)
  - Intermodal, automotive and manifest traffic
  - Detroit intermodal connects to/from CPKC Trains 142 and 143 at Bensenville
  - Replaces CP Trains 140 and 141 between Bensenville and Toronto

- ***CPKC Trains 174 and 175***, operating daily between Bensenville IMS and Interpuerto (2170 miles)
    - Intermodal and manifest traffic
- ***CPKC Trains 176 and 177***, operating daily between Bensenville IMS and Lazaro Cardenas (2650 miles)
    - Intermodal only connecting the Port of Lazaro Cardenas with Chicago and serving intermediate Mexican markets at Salinas Victoria and Encantada

129. The Growth Plan reflects operations that will support anticipated steady-state traffic flows over the long run. In some cases, additional long-distance blocking will be instituted when warranted by seasonal (or other) increases in traffic volumes. For example, it is anticipated that traffic flows will not always support daily long-distance manifest blocks between Western Canada to KCS destinations. However, during winter months, seasonal propane shipments and/or other fluctuations in traffic likely will warrant additional longer-distance blocks, allowing the combined entity to further reduce overall handlings.

4.5.2. Local Train Service

130. The Growth Plan as presently constituted is able to provide effective service to the combined network traffic using the same local service designs that CP and KCS operate today. As CPKC integrates the two networks, in-depth reviews of local service levels may reveal opportunities to adjust local assignments to provide further improvements in the service provided to customers. CP plans to approach this process – referred to as "white-boarding" – on a customer-specific basis to design services that consider end-to-end customer transit time along with the service timing and frequency that meets the customer's needs. The process will review such factors as spotting capacity, loading and unloading time, and private fleet sizing to address the customer's supply chain needs and improve its asset turns.

4.6. GROWTH PLAN - YARD AND TERMINAL ACTIVITY CHANGES

131. As a result of an Operating Plan that reduces reliance on intermediate yard handlings, the majority of yards on the combined network will see only minor increases in the volume of cars processed or number of blocks made even with the anticipate traffic increases. Most CP/KCS system yards will continue to operate at volume levels similar to those experienced today.

132. Table 5 below summarizes the anticipated effects on system yards under the Growth Plan – *i.e.*, at the end of Year 3.

TABLE 5
YARD AND TERMINAL ACTIVITY CHANGE > 25 CARS/DAY
OPTIMIZED PLAN TO GROWTH PLAN

Yard	Processed Cars Growth Year 3	Processed Cars Optimized Plan	Change in Cars Processed	% Change in Cars	Originating Blocks Growth Year 3	Originating Blocks Optimized Plan	Change in Originating Blocks

ESCOBEDO	263.15	297.29	-34.14	-11%	24	24	0
LAREDO	1043.75	1078.64	-34.90	-3%	5	5	0
MONTERREY	930.33	967.43	-37.10	-4%	27	29	-2
JACKSON	340.00	378.21	-38.22	-10%	23	23	0

133. Due to their size and strategic importance in the merged network, two of the largest yards on CP's system, St. Paul and Bensenville, will see meaningful changes in classification demand.

134. St. Paul Yard is CP's only remaining U.S. hump operation. This Milwaukee Road-era yard was extensively re-built in 1951 into a hump yard that currently builds 28 manifest road blocks, out of a total of 63 blocks. Although post-Transaction volumes at St Paul Yard will be virtually unchanged, a modest increase of 69 cars a day processed and the addition of one block to Shreveport, about 1,181 route miles away will be added to the yard. This increase in processing is well within the capacity of the yard's configuration and associated resource needs.

135. CP's Bensenville yard is located near Chicago's O'Hare airport. The original yard dates from 1916 but has changed dramatically in the ensuing 105 years – most notably its transformation into a 70-track classification yard in 1953. In the 1990s the yard was rebuilt into its current configuration, with an intermodal facility on the east side. Manifest traffic flows into Bensenville for processing from the north (via CP's Milwaukee route); from the south (over CP's route from Kansas City via Nahant); from the East (over NS trackage rights and CSX haulage), and from interchange with other carriers across Chicago terminal area. Post-Transaction, Bensenville will see an increase of 112 cars for processing daily. Bensenville will be tasked with building four new merchandise blocks: to Shreveport, Sanchez, Monterrey, and San Luis Potosi. The latter block would be the second longest distance manifest block on the combined network at 2,160 miles, behind only the current Calgary to Montreal block at 2,388 miles. Bensenville will also face additional demand from anticipated growth in automotive and intermodal traffic.

136. CP has already planned a transformation and expansion of Bensenville's capacity, unrelated to the Transaction, taking advantage of an increased footprint unlocked by a settlement with the Illinois Tollway that will allow the relocation of an embankment carrying a UP line across the center of the yard. While that project is underway, Bensenville will be supported by CP's nearby Schiller Park intermodal terminal and other CP facilities so as to avoid overloading Bensenville while it is undergoing expansion and reconfiguration to support future traffic levels.

137. On KCSR/KCSM, yards with reduced blocking and/or processing activity include Kansas City, Nuevo Laredo, Sanchez, and Vanegas.

- ***At Kansas City***, which is discussed in greater detail in Section 5.3.1 below, traffic moving beyond Kansas City will bypass processing at the Joint Agency yard that CP and KCS share. The existing track configuration allows for trains moving between CP and KCS to run straight through and complete crew changes on double-track segments north and south of the current connection between CP and KCS trackage.
- ***At Nuevo Laredo and Sanchez***, in close proximity to the U.S.-Mexico border, changes to the combined network blocking plan drive a reduction in activity because blocks will be built in the United States that bypass processing there, and vice versa.
- ***At Vanegas***, the Optimized Plan shifts all processing to other yards, given the lack of any need for additional work at this location to support local switching activity.

138. KCS yards with increased blocking and/or processing include the following;

- ***Shreveport*** will play a more prominent role in the post-Transaction train design. Ten new manifest blocks will be built, destined for Bensenville, Kansas City/BNSF interchange, St Paul, Nahant, East St Louis, Vicksburg, MS, Port Arthur, TX, Sanchez, Monterrey, and San Luis Potosi. The yard has sufficient capacity to accommodate this expanded role.
- ***San Luis Potosi*** yard will see an increase of 38 cars per day and the requirement to produce four new blocks under the Optimized Plan. As with Shreveport, the yard has sufficient capacity to accommodate this expanded role.

139. Other changes in yard processing will occur as volume migrates to the combined CP/KCS network. At St. Paul, Chicago and Jackson, among others, some portion of the traffic currently interchanged with other roads will migrate to single-line service. The Operating Plan has taken into account these traffic shifts and simultaneously assured that there is sufficient capacity to handle them and that existing service levels are maintained at the existing gateways that will see reductions in interchange volumes.

5. IMPACTS ON TRAFFIC DENSITIES

5.1. IMPACTS ON TRAIN VOLUMES, GROSS TON-MILES AND TRAFFIC DENSITY

140. Modeling shows that that the integrated CP/KCS network will allow for the same traffic to be handled by fewer, more-efficient, longer-distance train pairs. As volumes increase over time, new train services will be added to support growth. The Traffic Density Charts contained in Exhibit 14 show the projected changes in train volumes, gross ton-miles, train miles and traffic density on the network.

5.2. IMPACTS ON TRAFFIC MIX

141. The CP/KCS network will closely mirror the U.S. rail network as a whole form the standpoint of traffic mix.

5.2.1. Manifest

142. Manifest traffic will comprise approximately 46 percent of carloads handled by the combined CP/KCS as compared to 49 percent for all U.S. railroads combined.[6] Major commodities typically handled as manifest traffic include automotive, petroleum, chemicals, forest products, consumer products, metals, and minerals**.** Nationwide, key flows of manifest traffic are similar.

---

[6] Source: FTI Consulting referencing 2019 STB Waybill sample.

5.2.2. Intermodal

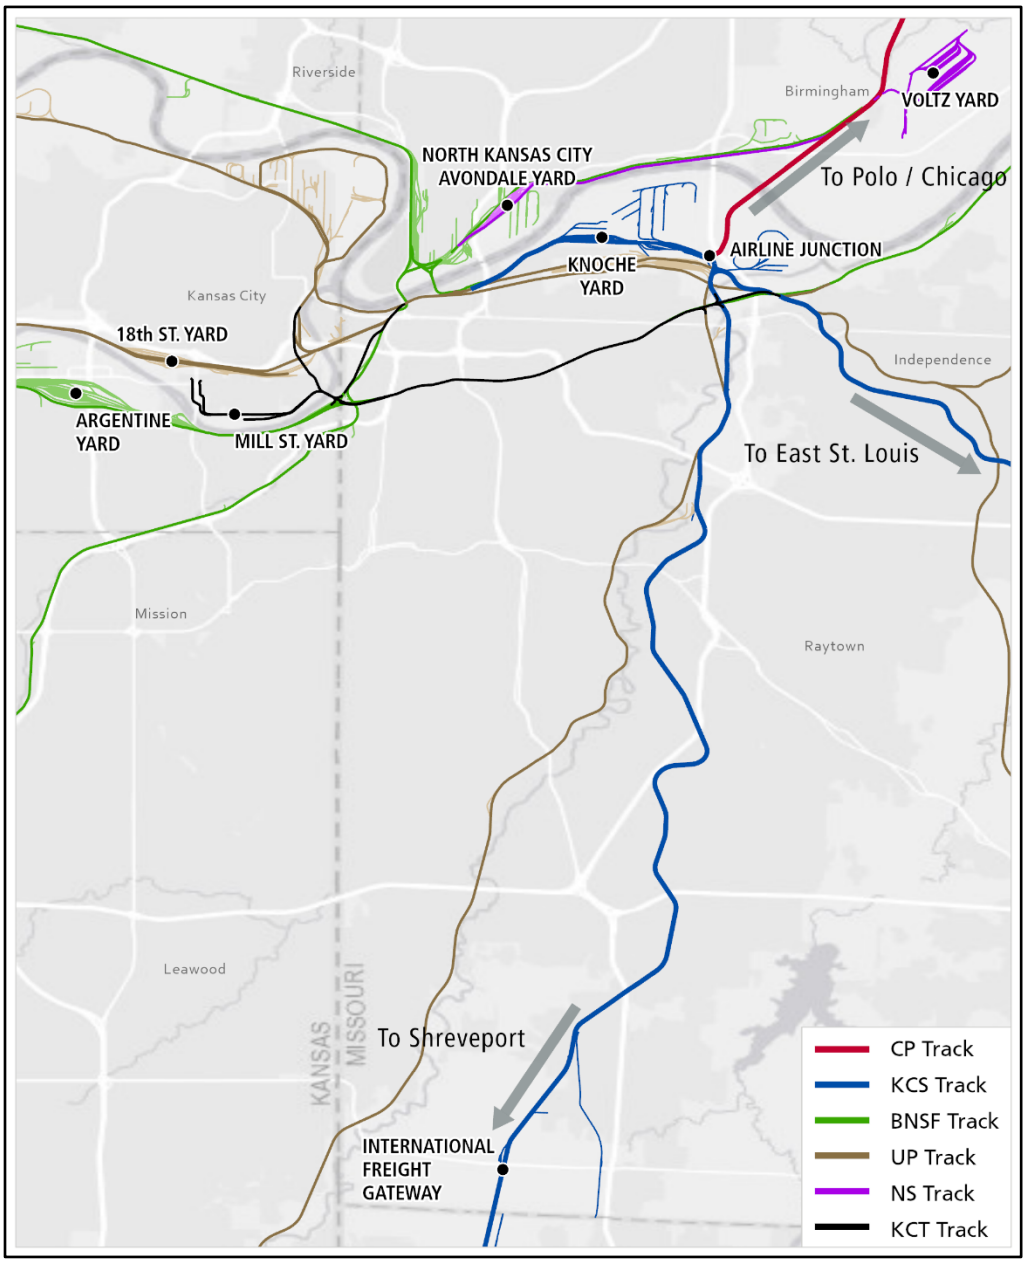
143. Intermodal traffic will comprise approximately 18 percent of carloads handled by the combined CP/KCS as compared to 15 percent for all U.S. railroads combined.[7] Major commodities typically handled in intermodal service includes import / export traffic, and domestic intermodal traffic with a wide variety of commodities handled within these two sub-segments.

5.2.3. Bulk

144. Bulk traffic comprises approximately 36 percent of carloads handled by the combined CP/KCS as compared to the same percentage for all U.S. railroads combined.[8] Key flows of bulk traffic include grain from Western Canada and the U.S. Midwest to the ports of Vancouver, Portland, and Thunder Bay as well as destinations in the Gulf States and Mexico; coal traffic from southeast British Columbia to the port of Vancouver; ethanol from the U.S. Midwest to points in the Northeast; crude oil from northern Alberta to the Gulf Coast, among others.

5.3. IMPACTS AT KEY NETWORK POINTS

5.3.1. Kansas City



145. CP and KCS connect at a single point – Kansas City. CP and KCS trackage connect at Airline Junction, but they interchange traffic at their adjacent jointly-owned yard (referred to as the Joint Agency or "Knoche Yard"). CP manifest trains from the north pull into Knoche Yard, and are broken up for interchange with the various carriers in Kansas City. KCSR manifest trains from the south do the same. These points are depicted in Figure 8 below.

---

7 *Id.*

8 *Id.*

FIGURE 8
KANSAS CITY TERMINAL AREA

146. Pursuant to their Joint Agency relationship, CP and KCS share responsibility for the operation of the yard and the conduct of operations, including interchanges with other railroads in Kansas City. CP and KCS each provide switch engines along with yard and local

crews. Lead jobs classify cars in the Joint Agency's Knoche Yard for local customer delivery and interchange with BNSF, NS, UP, and Kansas City Terminal Railway ("KCT"), as follows:

- BNSF: Each railroad is responsible for a reciprocal three month rotation transferring cars between the Joint Agency Yard and BNSF Argentine Yard.
- NS: Each railroad is responsible for a reciprocal four month rotation, transferring cars both directions between the Joint Agency Yard and NS's Avondale Yard.
- UP: Each railroad is responsible for a reciprocal four month rotation, transferring cars in both directions between the Joint Agency Yard and UP's 18th Street Yard.
- KCT performs the interchange in both directions between KCT's Mill Street Yard and the Joint Agency Yard.

147. CP operates bulk and manifest train service to and from Kansas City. Bulk trains are interchanged with BNSF and UP at or via Airline Junction. Under a recently-executed interchange agreement with KCS, CP may operate bulk trains through Airline Junction, changing crews with KCS at the International Freight Gateway (IFG), 23.4 miles to the south so as to avoid occupying single-track mainline or blocking the leads to Knoche Yard. In turn, KCS may operate bulk trains to CP through Airline Junction to Polo, MO, 42.1 miles to the north of Airline Junction.

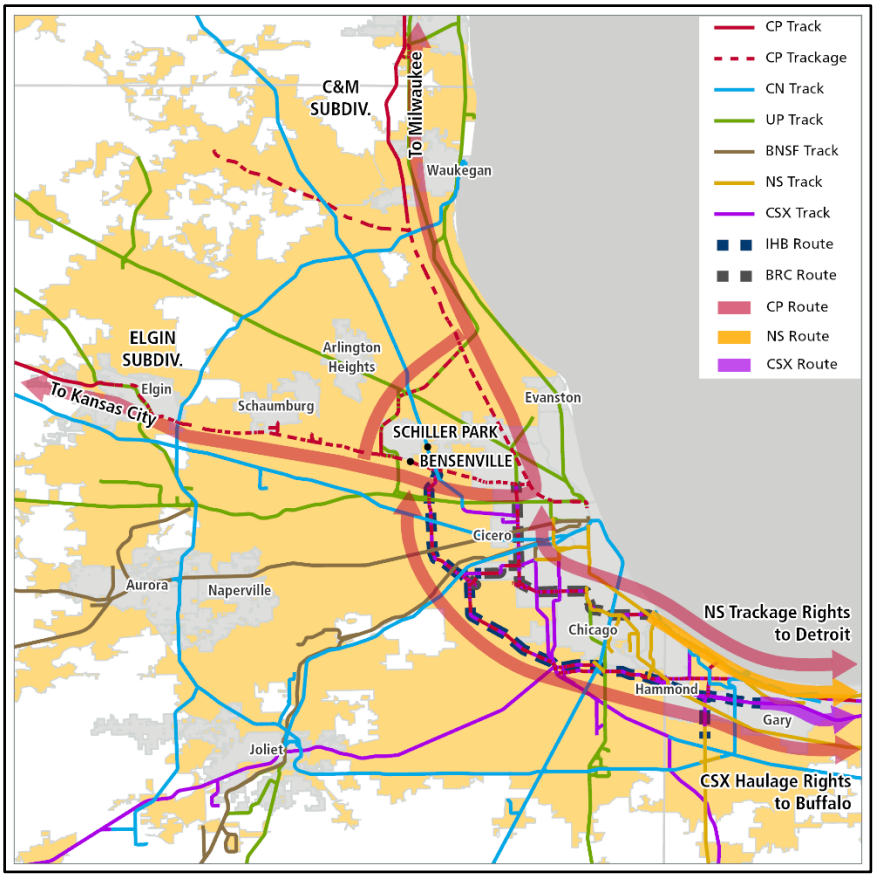
148. CP's only scheduled train service southbound to Kansas City is the daily Train 474, which originates at St Paul and picks up additional Kansas City manifest at Nahant and Muscatine. Train 474 enters the Joint Agency via the CP/UP inbound track and is yarded on the designated receiving tracks. Joint Agency switch crews classify inbound cars into the classification tracks in Knoche Yard, connecting to local customer jobs and transfers for connecting carriers. Cars can connect to KCS's trains "M-KCSH" and "M-KCSH2" for processing at Shreveport or depart east on train "M-KCVN" for locations between Kansas City and East St. Louis.

149. Northbound, Joint Agency switch crews classify outbound CP Train 475 with manifest traffic from KCS trains "M-SHKC" and "M-SHKC2" as well as traffic from other connecting carriers and locals. Train 475 departs the Joint Agency blocked for short haul traffic, Muscatine, Nahant, and St Paul.

5.3.2. Chicago

150. The Chicago area is a critical interchange for six Class I railways. According to the Chicago Metro Agency for Planning (CMAP), Chicago is among the most congested freight regions in the world, with freight tonnage estimated to increase by two thirds over the next 30 years. This concentration of activity can have a negative impact on the speed and performance of rail movements and also presents challenges for the community, including motorist delays at crossing and transit delays on shared passenger/freight infrastructure. Historically, Chicago's emergence as a hub between eastern and western railroads made it a natural handoff point for trans-continental movements. Today Chicago remains the predominant interchange location between Class I railways in North America, often emerging as the most cost-effective gateway option between railroads for shippers moving freight across the continental United States.

151. Railroads operating in Chicago rely on shared infrastructure and integrated operations to move carloads through the area and to access each other's networks. The highly integrated nature of rail operations means that disruptions in one location have the potential to affect all carriers. The risk of widespread service disruption is exacerbated by the region's propensity for cold-weather events, such as the blizzards of 1999 and 2011 that had network-wide consequences for rail freight movements. Since 2011 new operational procedures, coordination and yard monitoring have been developed with the aim of mitigating congestion events. Nevertheless Chicago remains vulnerable to disruptions that can create chokepoints for multiple carriers and impact freight movements across broad swaths of the rail network.



152. The most significant impact of the CP/KCS combination on Chicago will come from the new single-line routing options it creates that enable shippers *to bypass Chicago entirely*. KCS is the only Class I that does not reach Chicago. CP's North-South route connecting Western Canada and the Upper Midwest with Kansas City (and the connection to KCS) bypasses Chicago 140 miles to the west. The unique end-to-end combination of these two networks at Kansas City creates a single-carrier mainline route between Western Canada and the U.S. Midwest and the South Central States and Mexico without entering the Chicago region. Single-carrier efficiencies will unlock more value through this corridor, making it a competitive alternative to traditional routing through Chicago. For shippers this means new options to avoid congestion in Chicago and competitive access to other interchange gateways served by KCS. For Chicago, this helps divert rail traffic that does not need to be in the region. CP anticipates an incremental 6.6 trains per day over the Marquette Subdivision following the combination with KCS – volumes which will be routed around Chicago as opposed to through it. Some of the new traffic attracted by CP/KCS single-line services will supplant interline movements for which the interchange takes place at Chicago today, reducing burdens on the Chicago terminal.

153. At Chicago, the impact of the Transaction will be minimal. Because KCS does not serve Chicago, implementing the Transaction will not require any integration of operations there. Instead, the only effects will arise from changes in traffic volumes. The combined CP/KCS system will benefit Chicago-area shippers with new intermodal services connecting Chicago with Texas and Mexico. These trains will route directly in and out of CP's terminals (Bensenville and Schiller Park) on the northwest edge of Chicago using CP's underutilized Elgin Subdivision. An incremental 7.1 trains per day are projected on this route, handling primarily intermodal and automotive loads. From an infrastructure perspective the existing double track

on the Elgin Subdivision will allow for this growth without impact to the METRA passenger service windows. Further, as noted above CP's recent land agreement with the Illinois Toll Authority and UP, will open new options for expansion of switching and container handling capacity at Bensenville.

154. Some of this new traffic will continue east of Bensenville/Schiller Park via CP's operating rights on NS and haulage rights on CSX. But that traffic will not burden the Chicago terminal, as it will bypass Chicago interchanges by routing via the IHB and BRC through routes on existing train services, as shown in Figure 9 below.

FIGURE 9
CP'S CLASS 1 RAIL NETWORKS IN CHICAGO

155. CP's route between Chicago and Milwaukee will see *less traffic* as a result of the Transaction. A moderate increase in manifest traffic is expected on this line as a result of

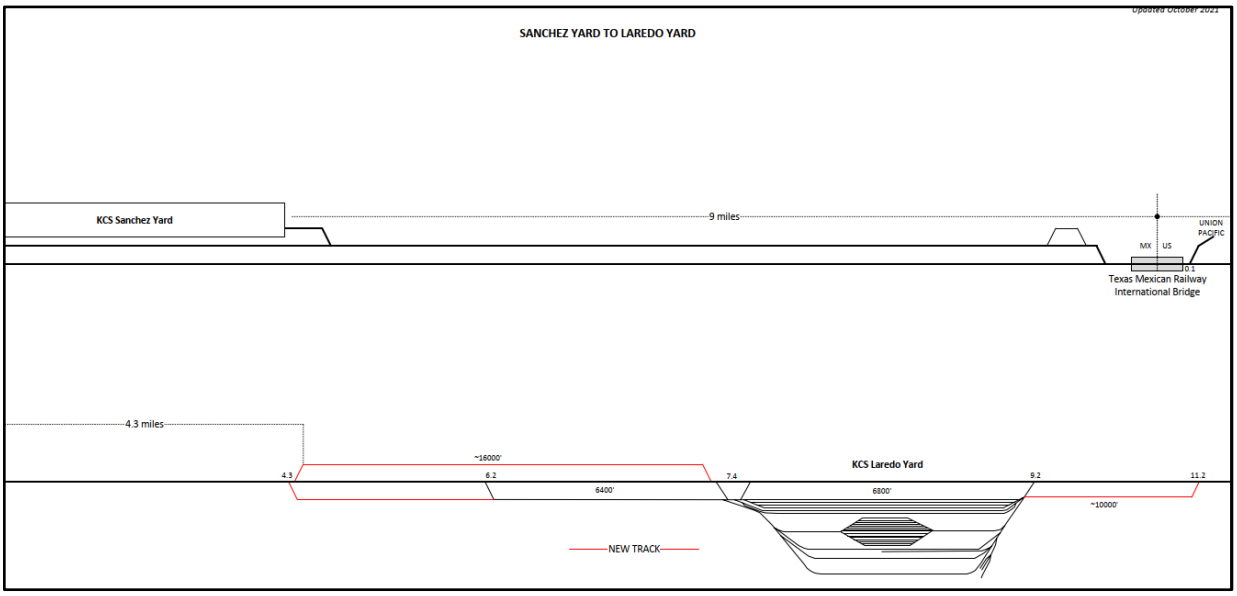
organic growth (the Transaction will actually reduce volume somewhat), but likely future growth in bulk commodities (especially grain and crude oil) that would have moved via this line to interchange in Chicago will now be routed in single-line service via the Marquette Subdivision, far to the west of Chicago.

156. CP/KCS will also have little impact on the volume of carload traffic processed at Chicago-area yards. As noted above, CP's own Bensenville yard will see modestly increased processing demands (approximately an 11 percent increase), but most of these cars will be classified for movement beyond Chicago to other parts of the CP/KCS system, not for interchange with other carriers. As a result, there will be no material impact on the transfer operations in the Chicago terminal or yard processing demands at other carriers' facilities across the terminal, and no adverse impact on terminal congestion.

157. Rail congestion in Chicago is a recognized challenge for the region and for North America's freight and passenger rail industries. The Chicago Region Environmental and Transportation Efficiency Program (CREATE) is investing $4.6B in an infrastructure project as part of an effort to alleviate this. The service plan for a combined CP/KCS balances new economic opportunities for shippers in the Chicago region with routing alternatives for those seeking to avoid it.

5.3.3. Laredo

158. The Laredo Gateway is the connection with the KCSM route in Mexico and both UP and KCSR north of the border. The Transaction will not affect Laredo, except to the extent CP/KCS single-line routes attract traffic that would otherwise have moved across the border by truck.



159. The potential additional traffic that would move between KCSM and KCSR at Laredo can readily be accommodated by existing and planned infrastructure north and south of

the border at Laredo/Nuevo Laredo. KCSM has in recent years significantly expanded its Sanchez Yard, approximately nine miles south of the border crossing. KCSR is in the process of expanding capacity north of the border at its Laredo Yard (approximately seven miles from the border crossing) and beyond to increase overall fluidity in the border zone and allow for increases in cross-border train volumes across the single-track International Bridge over which all of KCSM-UP and KCSM-KCSR traffic must pass.

160. In today's operation, four hour directional windows allow trains to fleet north or south across the border. The additional capacity KCSR is adding at Laredo will allow for KCSR to receive more trains from Mexico while simultaneously receiving westbound trains from Robstown/Corpus Christi for staging closer to the border crossing (reducing the need to hold southbound trains outside of Laredo or northbound trains in Mexico. This will increase the aggregate flow of traffic across the International Bridge for both KCS and UP, as trains will be closer to the border and better able to cross as slots in the prescribed window become available.

161. Figure 10 below is a schematic showing KCS's route from Sanchez Yard across the International Bridge to Laredo Yard, and depicting the planned infrastructure improvements at Laredo Yard. UP's route north of the border is shown diverging from the KCS route immediately north of the International Bridge. UP is already able to stage trains near the Bridge, a capability KCS is seeking to achieve with its infrastructure additions.

FIGURE 10
KCSR LAREDO CAPACITY IMPROVEMENTS UNDERWAY

162. The specific goals of KCS's work are twofold:

- Advance trains towards the border to improve the train velocity and utilization of the border for all railroads serving Laredo.
- Evolve the operational model at the border to allow both UP and KCS access to the bridge upon presentation of the train, rather than restricting operations to unidirectional operating windows that necessarily impose delays on many trains with the objective of preserving fluidity under current conditions.

163. With these capacity additions, the added volumes handled by the integrated CP/KCS system will not create challenges for operations at Laredo.

6. IMPACTS ON PASSENGER AND COMMUTER SERVICE

164. The CP/KCS Transaction will not result in any detrimental impact on Amtrak or commuter operations. To the contrary, it should foster expansion in passenger operations on the CP/KCS system

6.1. AMTRAK OPERATIONS

165. Amtrak trains operate on CP and KCS by commercial agreement under statutes granting operating priority over freight trains. CP has been Amtrak's top performing host

railroad for the last six years, according to their Host Railroad Report Card, and will continue to fulfill its commercial and statutory obligations during and after integration of the two railroad systems.

166. There are no adverse impacts on Amtrak operations as a result of a merged CP/KCS. While the segments on which Amtrak operates will see increases in freight train volumes, CP's infrastructure capacity over these routes together with its scheduling of freight trains to avoid conflicts with passenger train schedules will support the increased traffic without negatively affecting Amtrak service.

6.1.1. Amtrak Operations on CP Lines

167. ***Between Schenectady, NY and Rouses Point , NY***: Amtrak's Adirondack service operates a daily train in each direction between New York City and Montreal. These passenger trains operate over 178 miles on CP between Rouses Point, NY and Schenectady, NY.

168. Amtrak's Ethan Allen Express service uses a portion of the same CP line. It operates a daily train in each direction between New York City and Rutland, VT, of which 60 miles traverses on CP between Whitehall, NY and Schenectady, NY.

169. The Transaction is expected to bring one additional freight train per week to this relatively-low-density CP route, and that train will be scheduled not to conflict with Amtrak's operations.

170. ***Chicago-Milwaukee***: Amtrak's Hiawatha service provides frequent passenger service between Milwaukee and Chicago, with seven trains per day in each direction Monday to Saturday and six trains per day in each direction on Sunday. CP handles the Hiawatha trains on its C&M Subdivision for 53 miles of their route between Rondout, IL and Milwaukee. CP's portion of the route is a high-capacity, double-track mainline equipped with centralized traffic control ("CTC"). The modest increase in freight traffic will not affect Amtrak service given the

available capacity in this corridor and CPKC's plan to scheduling incremental freight traffic to avoid passenger trains.

171. CP remains committed to supporting Amtrak's plan to expand train frequencies on Amtrak's Hiawatha service as outlined in Amtrak's May 2021 Corridor Vision report. The proposed combination will not interfere with Amtrak's objective to deliver frequent, reliable, and sustainable intercity passenger service on this corridor.

172. ***Chicago-St. Paul, MN***: Amtrak's Empire Builder service operates one train per day in each direction between Chicago and Portland/Seattle. CP handles the Empire Builder trains between Rondout, IL and St. Paul, MN (384 miles of the 2,560-mile route). The corridor is controlled by CTC and includes 118 miles of double-track main line and 20 long passing sidings. The Transaction will increase freight traffic on this route: Between St Paul and River Junction, MN (near LaCrosse, WI), CP/KCS will handle 6.2 additional trains per day. The existing track capacity on this route is ample and, coupled with CP's disciplined operating approach and consistent record of providing reliable passenger service, will enable CP to schedule its incremental Transaction-related freight trains to operate without adversely affecting the existing Amtrak service.

173. As stated in Amtrak's Corridor Vision, the Wisconsin and Minnesota Departments of Transportation envision expanding Amtrak frequencies between Chicago and the Twin Cities. The proposed new service would be supported by government funded infrastructure investments to offset the track capacity consumed by passenger trains. The CP/KCS Operating Plan would not be an obstacle to this initiative.

6.1.2. Amtrak Operations on KCS Lines

174. KCS does not host Amtrak in the United States. However, Amtrak does operate over KCS-owned trackage to which other Amtrak Host railroads have access under joint facility

and/or trackage rights agreements, and Amtrak also operates over trackage of other carriers to which KCS has access.

175. ***Beaumont-Rosenberg, TX***: Amtrak's Sunset Limited thrice weekly roundtrip service between New Orleans and Los Angeles operates between Beaumont and Rosenberg (southwest of Houston) over trackage that CPKC will also use. Amtrak uses UP trackage between these points, and KCS also operates over this trackage under rights granted by the Board in the UP/SP merger. At Beaumont, UP has operating rights across the KCS-owned Neches River bridge, and Amtrak operates using those rights.

176. The Transaction is projected to increase KCS's train volumes between Beaumont and Rosenberg by 8.3 trains per day, which CPKC will schedule to avoid the time slot during which the Sunset Limited is scheduled to operate. This UP route is dispatched by UP under a directional-running scheme (in conjunction with another UP line between Beaumont and Houston that Amtrak does not use) that enhances overall freight capacity. CPKC will prioritize Amtrak over the Neches river bridge in coordination with UP, and we anticipate that over the UP trackage between Beaumont and Rosenberg UP dispatchers will continue to afford Amtrak trains appropriate priority over freight operations, thereby avoiding any adverse impact on Amtrak's operations.

177. ***Godfrey-Granite City, IL***: Amtrak's Lincoln and Texas Eagle Services operate 20.8 miles over a KCS-UP joint facility between Godfrey, IL and Granite City, IL (near East St. Louis), with dispatching controlled by UP. The Transaction is not expected to generate additional freight traffic on this segment, and as a result there will be no impact on Amtrak operations.

178. ***New Orleans***: KCS has trackage rights over a short eight-mile section of CN and NS trackage between Frellsen, LA and Southport Junction, LA, providing it with access to KCS's West Yard in New Orleans. This section is shared with Amtrak's Sunset Limited and City of New Orleans services. The Transaction is not expected to generate additional freight traffic on this segment, and as a result there will be no impact on Amtrak operations.

179. CP is supportive of a proposed intercity passenger rail service on KCS's line between New Orleans and Baton Rouge. The line is already equipped with Positive Train Control ("PTC"). With sufficient investment to fortify the infrastructure for higher speeds, and additional track capacity to support service reliability, there would be no obstacle to establishing new Amtrak service in this corridor.

6.2. COMMUTER OPERATIONS

180. The operation of commuter trains on CP-owned lines and CP freight trains on commuter-owned lines are governed by joint facility agreements. These agreements restrict the times of day during which passenger and freight trains may operate. The CP/KCS combined system will avoid adverse impacts on commuter service by scheduling additional freight traffic outside of the time slots reserved for commuter operations.

6.2.1. Commuter Operations on CP Lines

181. The Northeast Illinois Regional Commuter Railroad Corporation, commonly known as Metra, provides commuter service in the greater Chicago metropolitan area. This is the only location where commuter trains operate on CP in the United States.

182. ***Chicago-Fox Lake***: Metra's Milwaukee District North line provides commuter service between Chicago and Fox Lake, IL. The route covers 33 miles of Metra-owned right-of-

way between Chicago Union Station and Rondout and 17 miles of CP-owned track between Rondout and Fox Lake.

183. Metra operates 18 trains per weekday and nine trains per weekend day in each direction between Rondout and Fox Lake, and 64 trains per weekday and 20 trains per day on weekends between Rondout and Chicago Union Station. The Transaction is not expected to generate additional freight traffic on this segment, and as a result there will be no impact on Metra operations.

184. ***Chicago-Elgin, IL***: CP has trackage rights over 34.3 miles of Metra's Milwaukee District West Line between Tower A5 in Chicago (also known as Pacific Junction) and Almora, IL (near Elgin). This trackage is part of CP's Elgin Subdivision.

185. The Transaction is projected to increase freight traffic by 7.1 trains per day on the western 24.2 miles of this line, between Almora and CP's Bensenville Yard. However, there is ample capacity for these additional train frequencies. The Elgin Sub is double track, with triple track east of Bensenville Yard, and train slot capacity is not a concern given the low current freight train frequencies and the ample infrastructure. Metra service will not be adversely affected.

6.2.2. Commuter Operations on KCS Lines

186. KCS does not currently host commuter trains on its network in the United States. However, construction is underway by Dallas Area Rapid Transit (DART) to build its new "Silver Line," which will overlap with 15 miles of KCS trackage rights over DART-owned trackage west of Wylie to Renner, TX. The new commuter line is scheduled to be in service in 2023. KCS operations west of Wylie are not expected to see any increase in train activity, and as a result there will be no impact on DART's proposed operations.

7. THE LABOR FORCE REQUIREMENTS FOR THE COMBINED CP/KCS SYSTEM

187. The labor force required to support CPKC's integrated operation will grow along with the expanding traffic base of the combined railroad. The Labor Impact Exhibit accompanying the Application provides a detailed breakdown of the locations where we anticipate new union-represented operating positions to handle the additional train volumes of the CPKC system, as they materialize over the integration period. As the Exhibit shows, we anticipate that a total of 1,031 new operating positions would be created across CPKC's North American network, with more than 750 of those positions in the United States. The precise numbers and locations of these new positions will of course depend on the pace of new traffic growth and the evolution in CPKC's productivity over time.

188. The labor force changes, including the relocation of certain operating personnel (including Soo Line dispatchers) currently based at CP's U.S. headquarters in Minneapolis to the future CPKC U.S. headquarters in Kansas City, are discussed in detail in the Verified Statements of Myron W. Becker (in Volume 2 of the Application) and Chad Rolstad (in Volume 1 of the Application).

8. EQUIPMENT REQUIREMENTS AND UTILIZATION

8.1. LOCOMOTIVES

189. The locomotive power required to effectively handle the volume of traffic anticipated under a combined CP/KCS system will be made available through improved efficiencies in locomotive utilization that will emerge from the integration of the two railways under the Optimized Plan. The integration of the combined CP/KCS system will take advantage of single-line, longer-distance and more productive train designs on the combined network, thereby reducing locomotive requirements. Additionally, the CPKC blocking plan will eliminate some yard processing activities, resulting in fewer yard locomotive assignments and further

reducing the need for active locomotives. After factoring in the anticipated merger-related growth, and ongoing productivity improvements contemplated under the Growth Plan, no locomotive acquisitions would be required to handle the volumes projected by the end of Year 3.[9]

8.1.1. Locomotive Utilization Improvements

190. As shown in Table 6 below, CP and KCS currently own or lease a total of 1,615 road freight locomotives with a combined average age of 17 years, and 806 switching locomotives with a combined average age of 34 years.

TABLE 6[10]

KCS	Owned	Leased	Total	Age
Freight	809	0	809	19
Switching	199	0	199	47
Total	**1,008**	**0**	**1,008**	**24**

CP	Owned	Leased	Total	Age
Line haul	804	2	806	14
Road switcher	593	14	607	30
Total	**1397**	**16**	**1413**	**20**

Combined	Owned	Leased	Total	Age
Line haul	1,613	2	1,615	17
Road switcher	792	14	806	34
Total	**2,405**	**16**	**2,421**	**22**

191. The combination of the CP and KCS networks will enable improved locomotive utilization, thereby creating excess capacity from the legacy locomotive fleets. A significant

[9] It is expected additional locomotives would be brought into service to handle organic growth on the CP/KCS system. Given organic growth would occur without the Transaction, it has not been counted as an impact of the Transaction. The combined fleet has sufficient locomotives to accommodate both organic and Transaction related growth.

[10] Source: KCS Fleet Roster; September 2021, current CP inventory at October 1, 2021. A total of 68 freight locomotives currently loaned or leased to KCS will be returned by the end of 2021. Those loaned or leased locomotives are not included in the table statistics.

reduction in the size of the combined locomotive fleet will be made possible by the Operating Plan developed for the combined network, allowing for improved train productivity and thus increased locomotive productivity. By optimizing the horsepower-per-ton ratio – while implementing rigorous schedules with balanced, daily train flows that naturally supply power at each end of the run of a train – improvements will be generated in locomotive cycle times, dwell and productivity.

192. An important PSR principle is to right-size the active locomotive fleet to match the current demand. When applied to a broader CP/KCS system, this will drive consistently higher locomotive productivity and free up locomotives for utilization elsewhere as needed.

193. Although the overall KCS fleet is slightly older than the CP fleet, the two fleets are largely compatible in type and unit capacity, which will allow the combined entity to seamlessly integrate the two fleets. With excess locomotives in the combined fleet, CPKC will be able to optimize the active locomotive assignments to the newest, most fuel efficient members of the fleet. This will improve the reliability and fuel efficiency of active trains. By extension, this will create the opportunity to remanufacture older locomotives to meet future demand.

8.1.2. Locomotive Maintenance

194. CPKC will perform locomotive maintenance at the same locations as that work is performed today on the separate KCS and CP systems. As the overall maintenance workload grows along with growing traffic and train frequencies, facilities located on KCS will naturally take on increased workload as a by-product of extended hauls through to Mexico (CP facilities are not expected to see any reduction in workload). The existing KCS maintenance facility at Shreveport has ample capacity to handle the additional activity and the anticipated incremental volumes would drive an increase in staffing of maintenance personnel of approximately 6-10

percent. We do not anticipate any change to the existing locomotive repair and maintenance infrastructure.

195. Overall, the synergies unlocked by the Optimized Plan will permit the combined CP/KCS to save at least 135 owned locomotives, relative to 2019 base levels.[11] Given the growth anticipated as a result of the transaction, it is estimated that by the end of Year 3 of the Growth Plan, all of these locomotives will be added back into the operating fleet, along with 14 additional units required to handle total Transaction-related growth. The additional locomotives will be sourced from the existing un-utilized locomotives of both railways, with no need for additional acquisitions from OEMs or third parties.

196. The re-deployment of 135 locomotives over the first three years post-control will allow CPKC to pause its normal cadence of locomotive remanufacturing, removing 45 remanufactured locomotives from that program over Years 1 and 2. This will result in a net capital savings of $90 million

8.2. ROLLING STOCK BY TYPE

8.2.1. CP and KCS Rolling Stock

197. As shown in Table 7 below, CP and KCS currently maintain a fleet of approximately 63,000 railcars (including each company's TTX allocation).

[11] Because CP and KCS have increased their in-service fleets subsequent to the 2019 base year, the reduction in locomotives achieved by Transaction-related efficiencies measured against 2021 year-to-date would amount to 201 units.

TABLE 7
COMBINED CP/KCS RAILCAR FLEET

Car Type	CP	KCS	Combined
Box Car	2,964	6,150	9,114
Covered Hopper	15,522	5,594	21,116
Flat Car	3,181	2,282	5,463
Gondola	5,317	3,754	9,071
Intermodal	4,530	1,811	6,341
Multi-Level	3,826	3,951	7,777
Open Top Hopper	105	289	394
Tank Car	65	64	129
Total Revenue Fleet	**35,510**	**23,895**	**59,405**
On Company Service	2,589	977	3,566
Total Fleet	**38,099**	**24,872**	**62,971**

198. The combination of CP and KCS will drive improvements in overall network velocity generated by increases in train speed and reductions in railcar dwell, which in turn will allow the combined system to handle the same volume of freight traffic (and provide improved service levels) using 2,850 fewer railcars.

199. CPKC railcar fleet size requirements were estimated using the following methodology:

- First, the required fleet was calculated to meet demand using historical CP and KCS demand and cycle times for 2019.
- Second, 750 cars were removed from the required fleet through the implementation of the Optimized Plan, which generated improved cycle times relative to 2019 levels.
- Third, taking into account factors affecting variability such as improved fleet velocity, handlings, and distribution it was conservatively estimated that additional velocity savings could be achieved (an additional 0 to 1.5 cycle day reduction depending on fleet).

200. The result of these cycle improvements created an additional fleet reduction of 2,100 cars in addition to the 750 cars saved through the implementation of the Optimized Plan. These reductions will come from the older, less efficient cars, thereby upgrading the quality of cars that customers will receive.

201. The combination of these two railroads will improve the efficiency of freight car distribution and create new opportunities to triangulate railcar usage. This will allow reduced empty miles as fewer cars will be reverse-routed to origin. This reduction in empty transit will improve overall fleet velocity and ensure that railcars spend more time being productive. In the process, CPKC will have an improved ability to promptly provide shippers with the empty railcars they require for loading.

202. Traffic growth resulting from the CP/KCS combination will require the expansion of the railcar fleet. The required incremental investment in railcars was determined by mapping the forecasted fleet size against projected demand for each car type, taking into account network operating improvements. To support the significant increases in both automotive and intermodal traffic anticipated in the Growth Plan, the combined entity will acquire at least 265 multilevel autorack cars by Year 3 to support increased business originating in Mexico and 831 intermodal cars to support both domestic and international intermodal services by Year 3. In addition, the growth in manifest traffic originating in Mexico will require 194 boxcars by Year 3. Increased demand for bulk shipments of agricultural products will require the addition of 604 covered hoppers.

203. CP/KCS will need to routinely upgrade all fleets as cars age out. These ongoing replacements are considered normal operating practice, but they do gradually improve the quality of the fleet. The current fleet will see a significant turnover in boxcars over roughly the next five years, with older and smaller “Plate C” boxcars aging out and being replaced with more efficient and higher-capacity “Plate F” cars. The upgraded cars will provide greater fleet flexibility, improving CPKC’s ability to distribute the fleet anywhere across North America to haul multiple commodities rather than simply reverse-routing empty cars back to customers.

204. Every car removed from the CP/KCS fleet offers an opportunity to reduce lease costs, reduce daily car hire charges, or avoid replacement capital investments. An average railcar cost approximately $400 per month to lease and maintain, which translates to $4,800 per year per railcar. The cost to purchase a new railcar ranges from $80,000 to well over $120,000 depending on the specific type. To the extent cars in the current fleet become surplus as a result of improved fleet productivity, CPKC could realize one-time proceeds on the disposal of these older, less efficient cars, with used cars selling for $15,000 to $20,000.

205. By reducing its leased fleet by over 500 railcars, CPKC will avoid up to $2.6 million in annual lease and per diem expenses. The total proceeds from disposing of cars will range from $16.7 million to $31.7 million depending on the sales prices realized.

8.2.2. Plans for the Acquisition and Retirement of Rolling Stock

206. Based on the analysis of CP and KCS current ownership profiles, the following acquisitions and retirements are anticipated:

- Boxcars
  - One-year acquisition strategy
    - 194 cars Year 3
- Covered Hoppers
  - Multi-year acquisition strategy
    - 67 cars Year 2
    - 537 cars Year 3
- Mill Gondolas
  - Return 124 TTX cars (GONX) – 124 cars in Year 1
  - Return leased cars – 73 cars upon expiry in Year 3
  - Sell or cascade into maintenance of way service – 1,397 cars total, prioritizing the older cars first.
- Coil Gondolas
  - Return lease cars on lease – 372 cars expiring in Year 2
  - Negotiate early return of 97 additional leased cars.

- General purpose flats
  - Allow natural attrition to occur – 67 cars by Year 3
  - Return TTX cars – 315 cars by Year 3
- Centerbeams
  - Return all TTX low capacity centerbeam cars – 246 cars by Year 3
  - Sell 205 low-capacity KCS centerbeams
  - The remaining fleet will handle anticipated annual growth based on improved cycle times.
- Multilevel Autoracks
  - Multi-year acquisition strategy
    - 39 cars Year 2
    - 226 cars Year 3
- Intermodal Flatcars
  - Multi-year acquisition strategy
    - 98 cars Year 1
    - 460 cars Year 2
    - 273 cars Year 3

207. All of the planned acquisitions outlined above will be accommodated via rental and lease arrangements. The costs for these acquisitions are reflected in the costs to handle added traffic as outlined in the Baranowski V.S.

8.3. MAINTENANCE OF WAY PRACTICES AND EQUIPMENT

208. CP operates a transcontinental railway that spans many different kinds of challenging terrain. The network traverses the Rocky Mountains, crosses the central plains of Canada and the Northern United States, and connects to the Atlantic Ocean. This variety has given CP experience developing and implementing approaches to maintenance and capital replacement of assets which are safe, effective, and efficient in all of these different environments. To facilitate a proactive approach to maintenance, CP owns and deploys a fleet of sophisticated technology and testing vehicles to measure and analyze track conditions.

209. CP inspection and maintenance practices are directed by company officers and executed by unionized employees in three primary departments: Track Maintenance, Structures Maintenance, and Signals & Communications Maintenance. Inspection and maintenance standards meet or exceed all regulatory requirements and contribute to CP's industry-leading low rate of train accidents.

210. Maintenance staff are located strategically throughout the network at assigned bases with specifically assigned territories defining the assets for which they are accountable to inspect and maintain to CP's established standards. The number and distribution of both management and unionized staff is generally determined by the number of assets in their assigned territory and influenced by the operational requirements of the territory. Areas are assigned additional resources where a disruption to service would have more significant impacts (*e.g.*, because of the presence of a major yard, high mainline train count, or high customer density) or in which critical assets (such as lift bridges) are located.

211. CP utilizes data obtained through visual track and bridge inspections, geometry test vehicles, ultrasonic rail testing vehicles, signals and communications testing, and other specialized inspection technologies to drive both immediate maintenance actions as well as medium and long term capital infrastructure upgrades. Inspection and maintenance frequencies are increased in areas of higher train volumes. Employing these strategies has allowed CP to efficiently mitigate safety-related risks.

212. CP supplements its fleet of owned equipment used for inspection and testing with contract equipment and services. This allows CP to conduct inspections and testing at frequencies well in excess of regulatory requirements. CP also conducts geometry testing and

other specialized testing that is not required by regulation, but which drives significant safety and operating benefits.

213. CP's higher frequency of testing and inspections allows for data analysis and trending, such as the development of track quality indices, alerts for growth in defect levels and to trigger maintenance intervention. The frequency at which CP undertakes inspection and testing along with analysis of the data allows us to track the infrastructure impacts associated with changes in train count, tonnage, or train consist. The rate of change in track quality indices, defect rates, and the type of impacts noted support appropriate and timely responses in maintenance and capital replacement strategies.

214. Combining the CP and KCS networks will allow for CP to deploy these strategies across the combined network, while taking advantage of KCS's successful experience and practices geared to local conditions across KCS's territory. The Operating Plan contemplates increased train counts and tonnages on several corridors, requiring some changes to the maintenance and capital investment strategies on those segments. The inspection and maintenance practices outlined will allow for appropriate adjustment of immediate maintenance as well as capital infrastructure investments.

215. Some of the immediate changes will include:

- Increase in Signals & Communications maintenance staff on subdivisions on which CTC is installed in Year 1 through 3 of the Growth Plan.
- Accelerated capital replacement of timber bridge structures on the Marquette, Davenport, Ottumwa, Laredo,[12] and Kansas City Subdivisions

216. Additional changes are possible over the longer term on subdivisions that will see significant tonnage increases, including:

---

[12] CP's Laredo Subdivision in Missouri, named for Laredo, MO, not Laredo, TX.

- Changes in the tie replacement cycles for wood tie subdivisions, for example moving from a planned capital tie program that replaces ties on a seven-year cycle to a six-year cycle. Were such a shift to occur, it would be based on thorough data analysis of inspection and testing data.
- Changes in curve rail replacement cycles in high curvature and grade areas, for example curve rail currently lasting ten years may require rail change out in eight years under increased tonnage conditions.
- CP/KCS will perform additional or accelerated grade stabilization work over time in locations prone to slides to improve operating reliability

217. The expected volumes in KCS yards will change under the Growth Plan, resulting in increased maintenance effort and spend in yards with increased volumes and a decreased spend in yards with reduced volumes. Overall, in yards with a change of more than ten cars processed per day, positive or negative, the Growth Plan will see a net reduction of 460 cars processed per day. Therefore, the net maintenance effort and spend should not increase but may be redistributed based on the planned changes in car processing.

218. Focusing just on the KCS yards with a projected increase of more than ten cars processed per day, the daily car volumes processed in those yards will increase by approximately 659 cars per day, spanning 12 different yards. The top two changes will occur at intermodal facilities. The next two biggest changes are Shreveport (80 cars per day) and Queretaro (60 cars per day). The remainder of the yards have an increase of less than 40 cars per day. As a result, it is likely that Shreveport and Queretaro yards will see a greater proportion of the reallocation of the maintenance expense dollars.

219. In CP yards, St. Paul (with a 70-car per day increase) and Bensenville (with a 112-cars per day increase) are the two yards that will see a potential increase in maintenance. The increase at St. Paul represents only a four percent increase to the overall volume, which is immaterial from a maintenance perspective. At Bensenville, the reconfiguration project

discussed above should result in a facility requiring considerably less ongoing maintenance for years to come.

8.3.1. Track Evaluation Overview

220. CP owns and employs a fleet of sophisticated technology and testing vehicles to measure and analyze track conditions. The testing and data collected regarding the infrastructure condition is utilized to develop immediate maintenance actions as well as annual capital investment strategies.

221. A summary of CP owned Geometry testing assets is listed below.

- 1 manned Heavy Geometry Testing consist (equipped with gauge restraint measurement system);
- 3 Autonomous Heavy Geometry Measurement System vehicles (instrumented box cars operating in revenue service);
- 1 Heavy Geometry Inspection Vehicle truck (Hirail truck, also equipped with rail profile measurement);
- 1 Light Geometry Inspection Vehicle truck (with load axle and rail profile measurement); and
- 3 Light Geometry Inspection Vehicle trucks (geometry only).

222. KCS utilizes external service providers under contract to execute their geometry testing and does not own any geometry vehicles.

223. Combining the assets of CP and KCS will allow for expansion of this strategy and increased testing frequencies.

8.3.2. Maintenance-of-Way Equipment Overview

224. CP owns an extensive maintenance-of-way ("MOW") equipment fleet and MOW railcar fleet to facilitate execution of maintenance and capital upgrades to infrastructure. CP also utilizes ultrasonic test vehicles for rail flaw detection. CP's approach includes a mix of five

owned vehicles operated by CP staff with additional vehicles used on a contract basis. KCS similarly owns two ultrasonic testing vehicles and supplements with contracted services.

225. A summary of CP owned MOW equipment and railcars is listed below.

- On track work equipment (rail/tie/ballast/surfacing crews) – 1,516
- Ballast cars – 1,065
  - Automated hoppers – 550
  - Manual hoppers – 242
  - Side air dumps – 273
- Rail/continuous welded rail (CWR) equipment
  - CWR trains – 10 (3 interchangeable @ 1,600’ and 7 non-interchangeable at 1,440’)
  - Stick rail carriers (80’- 0”) – 124
  - CWR unloading units – 6
  - CWR pick up units – 4
- Gondola fleet (wood/metal in MOW service) – 680
- Turnout delivery (A-frame cars) – 22
- MOW trains (9 wells each) – 3
- Plows/spreaders - 62
  - Plows – 29
  - Spreaders – 33
- Boarding car fleet (all car types) – 75
- Work equipment machine flats – 192
- Ultrasonic test vehicles – 5

226. A summary of KCS owned MOW equipment and railcars is listed below:

- On track work equipment (rail/tie/ballast/surfacing crews) – 400
- Ballast cars – 228
  - hoppers – 200
  - Side air dumps – 28
- Rail/continuous welded rail (CWR) equipment
  - CWR trains – 4 (60 cars, run as 1 long train & 3 short trains)

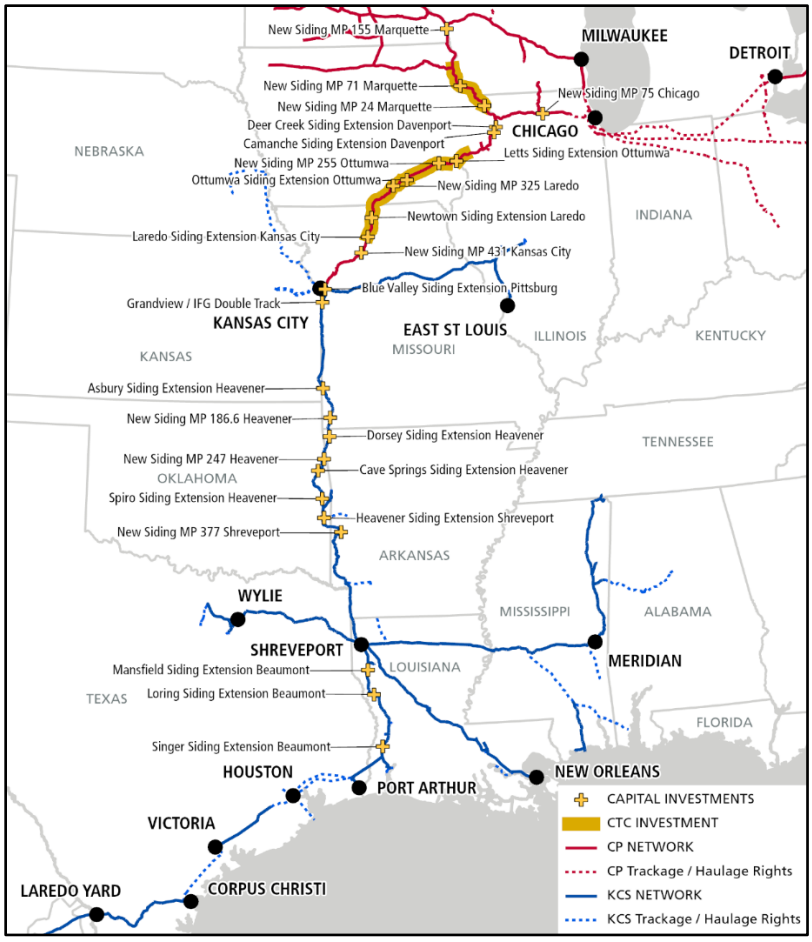
    - CWR unloading units/threader cars – 2
- Other MOW Rolling Stock – 1000 (flat cars, gondolas, work equipment flats, caboose cars)
- Ultrasonic test vehicles – 2

227. KCS possesses a fleet of MOW equipment and railcars consisting of approximately 590 pieces of on track work equipment, 87 ballast cars and 116 other MOW railcars. KCS does not own any CWR rail trains.

228. CP's current network is located in Canada and the Northern United States, and the associated winter weather on the network limits the use of much of this MOW equipment between November and April of each year. The generally warmer climate on the existing KCS network would allow for utilization of some CP owned equipment on the KCS during the winter months. Greater utilization of CP-owned equipment would be expected to generate savings in ballast delivery costs which again can be utilized to invest in operational and safety improvement opportunities.

8.4. NO DEFERRED MAINTENANCE OR DELAYED CAPITAL IMPROVEMENTS

229. The true end-to-end nature of the CP and KCS networks means there will be no redundant or downgraded lines, and no reduction in the intensity of MOW activity anywhere on the system. This means no anticipated deferred maintenance or delayed capital improvements as a result of the combination of the networks.



230. The combination of CP and KCS will result in opportunity to bring together the best operating and maintenance practices of both railways. CP's mature track block planning process in a PSR environment combined with owned MOW equipment assets will generate synergies by enabling work execution at lower unit cost with reduced impact on the operating plan.

9. MEETING THE CAPACITY NEEDS OF THE CP/KCS SYSTEM

9.1. LINE INFRASTRUCTURE AND CAPACITY

231. To improve service quality and accommodate the anticipated growth in traffic, CPKC will make extensive investments in line capacity and safety on its core North-South Corridor between Louisiana and the Upper Midwest via Kansas City. The CP/KCS combination, and the investment in capacity it will bring, creates a significant opportunity to inject new and invigorated competition into North-South transportation corridors connecting the United States, Mexico, and Canada. The new investments in this North-South Corridor are depicted in Figure 11 below and discussed further in the section that follows.

FIGURE 11
LOCATION OF PLANNED CAPITAL INVESTMENTS

Operating Plan (Exhibit 13), page 81

232. The CP/KCS combination offers a unique catalyst for investments that will expand the capacity and capabilities of the CP/KCS North-South corridor between Beaumont/Port Arthur and St. Paul/Chicago. The separate CP and KCS lines that converge on Kansas City from the north and south are adequate to handle existing volumes, but they are generally underutilized relative to other heavy-haul freight mainlines in the United States. The Transaction will enable the traffic growth necessary to support investment that will unlock the full potential of these lines.

233. CP's existing infrastructure north of Kansas City is sufficient to handle current volumes between Kansas City and St. Paul and between Kansas City and Chicago. Track conditions on this single-track route are good, and CP has invested in longer siding lengths and new sidings (as it has across the rest of its network). Train control systems north of Kansas City are primarily Track Warrant Control ("TWC") (*i.e.*, with no lineside signals), with some Centralized Traffic Control ("CTC"). CTC currently exists on CP's entire Kansas City Subdivision, to a point just north of Laredo, MO. The Ottumwa Subdivision is a mixture of CTC and TWC. CTC also exists from Island to Deer Creek on the Davenport Subdivision; West Savanna to Lake on the Chicago Subdivision; and Sabula Junction to Lake on the Marquette Subdivision. CTC allows for higher track speeds, with power turnouts reducing meet/pass delays that ultimately reduce transit times through the corridor.

234. Like CP's line north of Kansas City, KCSR's line between Kansas City and Beaumont has sufficient capacity to handle the current volumes and current train lengths. Optimizing train lengths to 10,000 feet will require extending nine sidings to a minimum of 10,000 feet to allow for greater meet capability. Investment will also be made at the IFG to double track through the terminal to support additional train work events. The 14.6 additional

trains per day being added to this route by Year 3 will also require the addition of three new sidings to close some of the longer gaps between current sidings. The proposed siding extensions and new siding locations also reduce the potential for blocked public grade crossings when trains are stopped for a meet.

235. The anticipated increase in trains per day is a combination of bulk trains and mixed intermodal, automotive and manifest trains. Bulk trains are generally shorter in length, ranging between 6,200 feet and 7,600 feet, depending on the commodity. Intermodal, automotive and manifest trains are longer, with a target length of 10,000 feet in these lanes.

236. The Transaction-related increases in train starts contemplated in the Growth Plan are expected to begin with a few new trains in the first year, a modest increase in Year 2 and a higher increase for Year 3. The modelled timing and type of new train starts in the North-South Corridor are as follows:

- **Year 1** – 4.8 additional trains per day
  - 2.0 intermodal/automotive/manifest trains between Bensenville and Mexico (one in each direction).
  - 2.8 bulk trains operating between St Paul and Beaumont. This includes both loaded and empty moves.
- **Year 2** – 2.8 additional trains per day, for a cumulative increase of 7.6 trains per day.
  - 2.0 new intermodal/automotive/manifest train starts between Bensenville and Wylie (one in each direction).
  - 0.8 new bulk trains between St Paul and Beaumont. This includes both loaded and empty moves.
- **Year 3** – 7.0 additional trains per day, for a cumulative increase of 14.6 trains per day.
  - 4.0 new intermodal/automotive/manifest train starts between Chicago to Mexico lane (two in each direction).
  - 2.0 new intermodal/automotive/manifest train starts between St. Paul and Mexico (one in each direction).

- 1.0 new bulk trains between St Paul and Beaumont. This includes both loaded and empty moves.

237. CP models subdivision capacity based on the time it takes for two trains in opposite directions to traverse the longest segment between sidings. From this number the maximum number of trains capable of operating on the subdivision is determined. Fluid capacity is then assessed against the maximum capacity. Capital strategies to support longer trains and fluid capacity include siding extensions, installation of additional sidings where required, or the installation of CTC and remote activated power switches. Certain locations may simply require basic maintenance capital to improve track speeds and thereby increase capacity. Finally, these capital investments also contribute to improved fuel efficiency and reduced time spent occupying crossings as trains are able to meet without stopping to line switches. These environmental benefits are addressed in the Verified Statement of Glen Wilson.

238. Detailed capacity modeling was performed to identify the additional infrastructure needs required to support anticipated traffic growth while maintaining the improved levels of service that will attract and retain traffic. Infrastructure was identified to ensure that the trains on these lines would operate fluidly. CP's capacity modelling of fluid capacity allows for sufficient flexibility to manage engineering work blocks, unplanned outages, and other impacts that can create surges in traffic and congestion on the subdivision.

239. To support the additional train volumes a combined CP/KCS network would invest $276 million in the first three years on new infrastructure to support new north-south rail capacity in this corridor.

- On CP lines north of Kansas City: $157.6 million
- On KCS lines between Beaumont and Kansas City: $118.8 million

240. Details are provided in Table 8 below. A complete listing of the projects can be found in Appendix R.

TABLE 8[13]
PLANNED INFRASTRUCTURE INVESTMENTS

Subdivision	Location	Type	Segment	Estimated Total ($ USD)
Chicago	MP 75	New Siding	Randall Rd - Kittredge	8.47M
Marquette	96 Miles	CTC	Sabula Jct. to Marquette	15.06M
Marquette	MP155 (Brownsville)	New siding	River Jct - Kains	13.31M
Marquette	MP71	New siding	Eckards - Edmore	15.40M
Marquette	MP24	New siding	Dubuque - Green Island	12.42M
Davenport	Deer Creek	Siding Extension	Green Island - Camanche	12.66M
Davenport	Camanche	Siding Extension	Camanche - Nahant	1.95M
Ottumwa	62 Miles	CTC	CTC Subdivision	13.39M
Ottumwa	Letts	Siding Extension	Letts - Nahant	1.31M
Ottumwa	MP 255	New siding	Letts - Ottumwa	9.49M
Laredo	102 Miles	CTC	CTC Subdivision	24.18M
Laredo	Ottumwa	Siding Extension	Ottumwa	2.11M
Laredo	Moravia	New siding	Ottumwa - Newtown	9.84M
Laredo	Newtown	Siding Extension	Laredo - Ottumwa	3.06M
Kansas City	Laredo	Siding Extension	Polo - Newtown	3.70M
Kansas City	MP 431	New siding	Laredo - Polo	11.21M
CP Total				157.56M
Pittsburg	Blue Valley (MP 8.1)	Siding Extension	Blue Valley	30.13M
Pittsburg	Grandview/IFG (MP 28.5)	Double track	Blue Valley – Grandview	12.81M
Heavener	Asbury (MP 140.4)	Siding Extension	Asbury	6.14M
Heavener	MP 186.6	New siding	McElhany - Noel	12.08M
Heavener	Dorsey (MP 214.2)	Siding Extension	Dorsey - Gentry	2.77M
Heavener	MP 247	New Siding	Watts - Stilwell	11.28M
Heavener	Cave Springs	Siding Extension	Stilwell-Cave Springs	4.14M
Heavener	Spiro (MP 311.7)	Siding Extension	Spiro - Shady Point	4.44M
Shreveport	Heavener	Siding Extension	Heavener - Page	10.36M
Shreveport	MP377	New siding	Rich Mountain - Potter	11.28M
Beaumont	Mansfield (591.3)	Siding Extension	Frierson - Mansfield	4.97M
Beaumont	Loring (MP 625.9)	Siding Extension	Converse - Loring	3.82M
Beaumont	Singer (MP 705.1)	Siding Extension	Neame - Singer	4.63M
KCSR Total				**118.82M**
Grand Total				**276.39M**

[13] Costs in this review are best estimates and all projects include a 30 percent contingency value.

241. The plan to add this capacity is designed to stay a step ahead of anticipated traffic growth, beginning with concept and design work, permitting, and environmental assessment, and then proceeding with grading, track, and signals.

242. A more detailed summary of the phasing of these capital projects is set forth below.

- La Crosse to Davenport
  - Year 1
    - New CTC Installation: 46 miles
    - Environmental permitting and engineering design for one new siding and one siding extension
    - Grading: two new sidings
    - Track construction and in service one siding extension
  - Year 2
    - New CTC Installation: 26 miles
    - Environmental permitting and engineering design for one new siding
    - Grading track, track construction and in service three new sidings and one siding extension
  - Year 3
    - Grading/Track construction and in service one new siding
- Davenport to Kansas City
  - Year 1
    - New CTC Installation: 30 miles
    - Track construction and in service three new sidings and three siding extensions
  - Year 2
    - New CTC Installation: 63 miles
    - Environmental permitting and engineering design for one siding extension
  - Year 3
    - New CTC Installation: 72 miles
    - Grading/Track construction and in service one siding extension
- Kansas City to Shreveport
  - Year 1

        - Environmental permitting and engineering design for two new sidings, and one siding extension.
        - Environmental permitting and engineering design/Grading one siding extension
        - Environmental permitting and engineering design/Grading/Track construction and in service one siding extension

    - Year 2
        - Environmental permitting and engineering design for one new siding
        - Environmental permitting and engineering design/Grading/Track construction and in service, three siding extensions, portion of Double track
        - Grading/Track and in service two new sidings and one siding extension and a portion of one siding extension
    - Year 3
        - Grading, track construction, and in service one double track project, one new siding and one siding extension.

- Shreveport to Beaumont
    - Year 1
        - Environmental permitting, engineering design/Grading/Track construction and in service two siding extensions
    - Year 2
        - Environmental permitting and engineering design/Grading/Track construction and in service one siding extension
    - Year 3
        - Nil

A complete listing of the projects can be found in Appendix R.

243. Table 9 below breaks down the planned investment per year based on the location of the planned investment.

TABLE 9
CAPACITY INVESTMENT PER YEAR
(USD MILLIONS)

	Year 1	Year 2	Year 3	Total
CP	$77.3	$47.3	$33.0	$157.6
KCS	$26.2	$63.6	$28.9	$118.8
Total	**$103.5**	**$110.9**	**$61.9**	**$276.4**

244. During the first three years following Board approval of control, these investments will be among the highest priorities on the combined CPKC system. Minor reprioritization of discretionary capital projects will occur to support the funding and rapid execution of this work. Approximately $50 million in capital will be reallocated annually from the two railroads' combined infrastructure investment budgets over this integration period – approximately 2.6 percent of the combined CPKC capital envelope – with the balance reflecting a savings in capital in other areas from the integration of the systems as well as a net increase in the railroads' level of capital investments.

9.2. YARD AND TERMINAL CAPACITY

245. The anticipated increase in traffic on the combined CP/KCS system can be accommodated by system yards and intermodal terminals.

9.2.1. Manifest Yard Activity

246. Neither the Optimized Plan nor the Growth Plan will result in any increases in manifest yard activity greater than 20 percent. A complete listing of the yards and changes in activity can be found in Appendix B. Only two yards will experience an increase in car handlings of more than 100 cars per day, and neither will have any difficulty accommodating that increased volume. Bensenville will see an increase of 112.11 cars per day, or only about ten percent of its current volume, and the planned reconstruction work discussed below will add

substantial capacity there. Queretaro Yard will operate at only 33 percent of its available capacity despite adding 110 processed cars per day to the current workload.

9.2.2. Intermodal Terminals

247. With the addition of substantial volumes of new intermodal traffic, several of the CP/KCS system intermodal terminals on the CP/KCS system will see meaningful increases in railcar and container processing activity (lifts, etc.). The available capacity at these facilities was evaluated and determined to be sufficient to accommodate the growth. The intermodal terminals seeing the largest increases in handling are shown in Table 10 below, with Bensenville and Schiller Park appropriately considered together as a single, integrated facility since they are only 4.3 miles apart.

TABLE 10
INTERMODAL TERMINALS HAVE ADEQUATE CAPACITY FOR INCREASED HANDLINGS

Road	Terminal	2019 Daily Volumes	Total Growth Plan Daily Volumes	Increase in Daily Volumes
CP	Chicago, IL*	687	1,273	586
KCS	Dallas, TX (Wylie)	564	856	292
KCS	IFG (Kansas City)	82	183	101
CP	Detroit, MI	128	220	92
CP	Minneapolis, MN	373	459	86
KCSM	Salinas Victoria, NL	449	529	80
KCSM	Puerta Mexico, EM	180	241	61
KCSM	Interpuerto, SL	411	458	47

*** -** Bensenville/Schiller Park IMS combined volumes.

248. There are no capacity concerns at these facilities. As discussed above, Bensenville Terminal will undergo a reconfiguration within an expanded footprint as a result of a settlement with the Illinois Tollway Authority and UP. The project plan for the reconfiguration of Bensenville includes the following:

- Construction of a high-volume intermodal facility capable of handling 10,000 foot trains.
- New leads supporting classification independent of arriving and departing trains.
- Construction of a new auto facility replacing an existing smaller compound.

249. The availability of the nearby Schiller Park facility, which can be operated in tandem with Bensenville, will support surges in volume during periods when Bensenville is undergoing reconfiguration work, as it has in the past.

250. Likewise, Wylie will have sufficient capacity to handle the growth. Traffic destined for points in Texas from Mexico, currently directed to Dallas, could be diverted to the lightly-utilized Kendleton Intermodal Facility should there be a need.

251. The remainder of the facilities, including Kansas City's IFG facility, all have ample capacity to accommodate the growth.

10. CONCLUSION

252. The combination of CP and KCS will enhance shipping options for existing and new customers by creating a more competitive network thanks to the single carrier efficiencies made possible by the combination of the two networks. The Operating Plan as detailed above underpins in detail how the synergies will be created, maintained and implemented in order to maintain high levels of customer service and ensure capacity for future growth. The plan was developed using industry best practices and considered all aspects of the merged operations. With this template for implementation and under the stewardship of the CP/KCS operating team, customers can look forward to the following:

- Service levels will improve with reduced intermediate handlings in many locations.
- New services and lanes will be developed to provide more options for the seamless flow of goods throughout North America.

- Competition will be increased with more options for shippers in accessing markets.
- The Environment will benefit from gains in efficiency and fuel economy, as discussed in more detail in the Verified Statement of Glen Wilson.
- Economic growth will be supported for the long term as the USMCA trade agreement plays an increasingly major role in the North American economy.
- Sharing of best practices in safety management systems will further improve industry leading performance.

ATTENTION: Surface Transportation Board

My name is Ana López Mestre Martínez and my business address is Ave. Paseo de la Reforma No. 295-3, Col. Cuauhtémoc, Alcaldía Cuauhtémoc, Ciudad de México 06500. I am the Executive Vicepresident and General Director of American Chamber of Commerce o Mexico, A.C.

In my role, I am responsible for the optimal operation and administration of the Chamber; supervision of its activities and personnel; as well as conclusion of contracts, promote the admission of partners and issue membership credentials of partners, approval of publications, among others.

American Chamber of Commerce of Mexico, A.C. is an independent, non-partisan and non-profit organization, dedicated to promote trade and business opportunities between Mexico and the United States. We generate more than 2.5 million direct formal jobs and 6 million indirect jobs, representing 21% of the national GDP, contributing significantly to the social and economic development of Mexico.

KCS has been a member of American Chamber of Commerce since 2005, promoting the values we stand for: free trade, Rule of Law and social responsibility. As part of our business community, KCS has been supportive of the best corporate practices and business competitiveness.

American Chamber of Commerce of Mexico, A.C supports safe, efficient and improved service options and transportation competition in the markets we serve, to the benefit of rail customers and other stakeholders

We support Northamerica's integration and promote access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement, including transportation and railroad options.

VERIFICATION

I Ana López Mestre Martínez, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.
Executed on March 30th 2021.

Bossier Chamber of Commerce

Surface Transportation Board
395 E St, SW
Washington, DC 20423

On behalf of the board of directors of the Bossier Chamber of Commerce located at 710 Benton Road please accept this letter of support for the approval of CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in our Northwest Louisiana region to reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option

This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.

For these reasons, the Bossier Chamber of Commerce is voicing strong support for the combination of CP and KCS, because it will enhance competition, retain, and expand job opportunities, provide expanded options, and drive efficiencies for customers of all sizes. The Bossier Chamber of Commerce urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Lisa Johnson
President/CEO

Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

On behalf of the Charles City Area Chamber of Commerce I have been authorized to write to you to endorse the Canadian Pacific ("CP") and Kansas City Southern ("KCS") railroad proposal.

CP runs through Charles City, Iowa, where our farmers and business have utilized its services for many years in order to get products to their intended destination. After reviewing the facts surrounding the CP-KCS merger, our Board of Directors thoroughly believe that it is the best situation for our town.

It is our understanding that a CP-KCS merger would create the first U.S.-Mexico-Canada railroad network. Since Canada and Mexico are Iowa's biggest trade partners, it would be ill-advised for us to not support this opportunity for our farmers and businesses. This merger will allow our products to quickly get across the continent due to CP and KCS's combined-complementary networks.

Additionally, this merger should provide for greater competition with other railroads in Iowa, which will lead to accountability between the rail lines to encourage excellent service, shipping options, and fair pricing.

We encourage the Surface Transportation Board to support a CP-KCS merger over any other acquisition avenues.

Mark Wicks, Community Development Director

CITY OF BELTON
506 Main Street
Belton, MO 64012

(816) 331-4331
Fax (816) 322-4620

My name is Carolyn Yatsook and my organization's address is 506 Main St., Belton, MO. I am the Economic Development Director of the City of Belton, Missouri. In my role, I am responsible for business retention and attraction, workforce development and marketing.

The City of Belton is a City in Cass County, Missouri, that is adjacent to the current Kansas City Southern rail line. There is City owned property, which we are marketing for a light industrial user. Kansas City Southern has been supportive of the potential to serve this site, dependent upon the end users needs. We appreciate the working relationship that we have with Kansas City Southern.

The City of Belton supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in Belton, Cass County, and Missouri reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option

This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.

RE: STB Finance Docket No. 36500 - CP-KCS Proposed Combination

Dear Surface Transportation Board:

My name is Scott Maddasion and I am Mayor for the City of Clinton. The City of Clinton is filing this letter in support of the proposed combination between Canadian Pacific and Kansas City Southern and asks that the Surface Transportation Board take quick action to approve it.

CP is an important member of our community and economy. They have been a responsive and responsible operator. They provide businesses in our area and region with an important artery for their transportation needs – in some cases taking trucks off the highways, which we strongly support.

The transaction would provide significant benefits that we are eager to see realized as soon as possible.

The City of Clinton sees the proposed transaction as a win-win. By giving CP greater market reach, the combined network will provide better transportation options for our businesses and support economic and job growth. The City of Clinton see no downsides.

From the City of Clinton's perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our community reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, the City of Clinton has no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of communities and customers.

The City of Clinton sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The City of Clinton has a large industrial community, with Archer Daniels Midland, Custom-Pak and Sethness Products being significant users of the existing CP lines.

Sincerely,

Scott Maddasion
Mayor

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Stephen Weipert and I am Mayor for the City of Marquette, Iowa. The City of Marquette is filing this letter in support of the proposed combination between Canadian Pacific and Kansas City Southern and asks that the Surface Transportation Board take quick action to approve it.

Marquette was founded as a railroad terminus for the neighboring town of McGregor in 1874 with many residents that have family members that work (or worked) for the railroad. We have a large Depot Museum dedicated to railroad history. CP recently built 2 new operational buildings in our community. CP is an important member of our community and economy. They have been a responsive and responsible operator. They provide businesses in our area and region with an important artery for their transportation needs – in some cases taking trucks off the highways, which we strongly support. The continued partnership will benefit the City of Marquette.

Marquette sees the proposed transaction as a win-win. By giving CP greater market reach, the combined network will provide better transportation options for our businesses and support economic and job growth. Marquette see no downsides.

From Marquette's perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our community reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, Marquette has no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of communities and customers.

Marquette sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Respectfully,

Stephen Weipert

Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I write to you today as the Economic Development Administrator of the City of Minot to express our support for Canadian Pacific (CP) and Kansas City Southern's (KCS) proposed merger.

This merger will provide an important North-South rail link and is an opportunity for economic development in Minot because it will create the first railroad to extend across the entire North American continent, delivering goods between Canada and Mexico quickly. This is also an opportunity to boost competition between railroads, and better serve shippers.

Other proposals, leave shippers in more vulnerable positions. Since Canadian National (CN) and KCS compete aggressively for traffic, so if they merge, shippers may find themselves in a situation where they have fewer options when it comes to pricing and service quality.

As a member of the state's economic development community, I know this will be a good opportunity for other cities and towns in North Dakota. I urge the Surface Transportation Board (STB) to support Canadian Pacific's bid. Many businesses and shippers in North Dakota and across the Midwest will benefit from this deal.

Respectfully submitted,

Jonathan Rosenthal, AICP
Economic Development Administrator

RE: **STB Finance Docket No. 36500 CP-KCS Proposed Combination**

ATTENTION: Surface Transportation Board

My name is Diana Broderson and I am Mayor of the City of Muscatine, Iowa. The purpose of my letter is to share my support of the proposed combination/merger between Canadian Pacific and Kansas City Southern and request that the Surface Transportation Board take quick action to approve it.

Canadian Pacific is an important member of our community and economy. They have been a responsive and responsible operator providing a valuable service to businesses in our area and region. The Railroad provides an important artery for the transportation needs of our local businesses and I appreciate their contribution.

This proposed transaction appears to provide a win-win. By giving Canadian Pacific greater market reach, the combined network with Kansas City Southern will provide better transportation options for our businesses and support economic and job growth. The significant benefits realized by area businesses through this transaction will have a positive effect on the community as a whole.

From my perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined Canadian Pacific/Kansas City network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our community reach our existing markets and new markets more efficiently.

The two railroads' strong focus on safety and their track record of operational excellence leaves no doubt that Canadian Pacific Kansas City together will be able to integrate their operations seamlessly to the benefit of communities and customers. Thank you for your time and please contact me if you have any questions.

Sincerely,

Diana L. Broderson
Mayor
City of Muscatine, Iowa

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Dear Ms. Brown:

As an elected official for the City of Oconomowoc, Wisconsin, I believe our area has the unique opportunity to be part of a first for North America, the first railroad line connecting the U.S., Mexico and Canada. This economic boost would be made possible if your agency approved the merger of the Canadian Pacific (CP) and Kansas City Southern (KCS) railroads and would give Southeastern Wisconsin unique access to export markets to our north and south.

With existing local CP access points in Watertown (approximately 10 miles to our west) and Milwaukee (approximately 30 miles to our east), this merger would bring with it additional market access for area businesses into the southern U.S. and Mexico. Obvious industries like agriculture and manufacturing could see huge benefits to this extended single-line access to more markets, but this energy-efficient transportation option could also create new sectors in our area that we can't even dream up. In addition, because CP and KCS's existing service areas don't overlap, there would be no loss of service from the merger. In short, the merger would be all upside for our area.

The CP and KCS merger would be an economic win for our region and I hope the Surface Transportation Board will see that and approve this important deal.

Respectfully submitted,

Lou Kowieski
Alderman, 2nd District
City of Oconomowoc

OTTUMWA

CITY OF BRIDGES...RIVER OF OPPORTUNITY

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Tom Lazio and I am Mayor for the City of Ottumwa, IA. Ottumwa is filing this letter in support of the proposed combination between Canadian Pacific and Kansas City Southern and asks that the Surface Transportation Board take quick action to approve it.

CP is an important member of our community and economy. They have been a responsive and responsible operator. They provide businesses in our area and region with an important artery for their transportation needs – in some cases taking trucks off the highways, which we strongly support.

The transaction would provide significant benefits that we are eager to see realized as soon as possible.

Ottumwa sees the proposed transaction as a win-win. By giving CP greater market reach, the combined network will provide better transportation options for our businesses and support economic and job growth. Ottumwa see no downsides.

From Ottumwa's perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our community reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, Ottumwa has no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of communities and customers.

Ottumwa sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Ottumwa has a large community of manufacturing businesses- such as John Deere, JBS, C & C Manufacturing, Winger Co.--that may benefit from this consolidation.

ATTN: Surface Transportation Board
RE: Objection to KCS Waiver in Finance Docket No. 36514

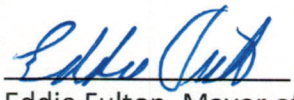
The City of Quitman submits this letter to express its concerns related to potential application of the KCS waiver in connection with Canadian National's ("CN") bid to acquire Kansas City Southern ("KCS").

CN's submissions in this docket and in the pending CP/KCS docket are confusing in that CN seems clear that it does not want the KCS waiver to apply. But out of an abundance of caution, we are submitting this letter to state our objection to the KCS waiver applying to a CN/KCS transaction. We would not be surprised if CN's embrace of the waiver was designed to lull stakeholders into believing that there was no need for file objections.

There are several reasons why a waiver should not apply to any aspect of CN's proposed takeover of KCS (including the use of a voting trust), a transaction that have vastly different impacts from the CP/KCS transaction for which the STB has already held the KCS waiver would apply.

- CN is a much larger railroad in the U.S. than CP, and unlike a combined CPKC, CN/KCS would not be the smallest U.S. railroad.

- Unlike the CP/KCS combination, which is truly end-to-end in nature, a potential CN/KCS combination is heavily overlapping across much of KCS's U.S. system. There are likely profoundly serious competitive harms, and CN proposes to fix just a handful of 2-to-1 points. These impacts on competition are exactly the kinds of issues to which the 2001 merger rules were intended to apply.



Visit Our Website: www.ci.quitman.ms.us
POST OFFICE BOX 16 • 101 E. CHURCH STREET • QUITMAN, MISSISSIPPI 39355-0016
PHONE: 601.776.3728 • FAX: 601.776.4016
EMAIL: info@ci.quitman.ms.us
"A Great Place To Live and Visit"

- The potential "downstream" impacts of a CN transaction are significant: unlike CP/KCS, which leaves the six largest railroads in basically the same relative positions, CN/KCS would destabilize the balance of the six-carrier network, creating pressure for CP and others to combine. That is exactly the kind of issue the 2001 rules were designed to address.

- CN's much higher cash bid for KCS implies an incredibly significant acquisition premium that we are concerned would create incentives for CN to raise rates even in those instances where it is not harming competition. This is the kind of issue that the 2001 merger rules provide the Board with greater flexibility to address.

- **CN's proposal to acquire KCS would kill the CP/KCS deal, which we see as a perfect fit that injects new competition into the rail industry. In addition, it would destroy any opportunity for municipalities along the eastern side of Mississippi to be able to competitively move products to the Deep-Water Ports at Pascagoula and Mobile. Any rail addition on this side of the state would not be started or completed. As soon as CN acquires KCS's shares, the CP/KCS deal is dead. Thus, a waiver allowing use of a voting trust without formal Board public interest review (which CN has already applied for) would be inappropriate.**

Respectfully submitted,

Eddie Fulton, Mayor of Quitman, MS

Re: Support of the CP/KCS Purchase

My name is Ray Watson and my organization's address is 401 North Trenton Street, Ruston, LA 71273. I am the Economic Development Administrator for the City of Ruston. In my role, I am responsible for recruiting, retaining and growing tier one businesses.

The City of Ruston partners with KCS rail to ensure that businesses have the rail service needed to perform at their maximum capacity. We also work with KCS to identify and correct any safety issues for the city of the rail line. We are currently working with them to identify available tracts of land for future development that either existing spurs can be expanded or new spurs can be built to service future clients.

The City of Ruston supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in North Louisiana reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option

This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.

For these reasons, the City of Ruston is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The City of Ruston urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Ray Watson, declare certify under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTN: Surface Transportation Board

As Mayor of Saint John, I am writing to support Canadian Pacific Railway's bid to acquire Kansas City Southern Railway. Most notably my support stems from CP Rail's significant infrastructure investments facilitating a return to Port Saint John and our region. Port Saint John's access to both class one railways is critical to our region's growth potential. Furthermore, the diversification of the East coast supply chain is good for all of North America.

CP Rail's acquisition of KCS is seen as far away as Saint John, New Brunswick as a critical piece of a diversified North American supply chain. This diversification is important to every port from Mexico and US Gulf Ports to Vancouver and Saint John as well as every major distribution centre in Canada and the United States. The monopolization of the supply chain that we had experienced on the East Coast of Canada, prior to CP Rail returning to Port Saint John, made us less competitive. The same competitive disadvantage will happen to US Gulf Coast Ports unless the CP Rail bid is successful.

The monopolization of the supply chain leads to disruptions and economic uncertainty and should not be considered as a viable option for North American rail.

CP Rail has made a commitment to my community, one that I value and fully endorse. We want to see both class one railways maximize their success starting in Port Saint John and branching out across the North American logistics network. CP Rail's acquisition of KCS has my full support as the only option for our economy's success.

Don Darling

CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

The City of Saint Paul is filing this letter in support of the proposed combination between Canadian Pacific and Kansas City Southern and asks that the Surface Transportation Board approve it.

CP is an important member of our community and economy. They provide businesses in our area and region with an important artery for their transportation needs – in some cases taking trucks off the highways, which we strongly support as it reduces air pollution including greenhouse gas emissions, aiding our climate action goals.

The Hoffman Yard in Saint Paul is a significant "hump-yard" operation in CP's network and the City sees many positive benefits for our community in more freight moving by rail. We see the proposed transaction as a win-win. By giving CP greater market reach, the combined network will provide better transportation options for our businesses and support economic and job growth.

From Saint Paul's perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our community reach our existing markets and new markets more efficiently.

The City of Saint Paul sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation. The agricultural, construction, energy, and many other businesses in the Twin Cities Metropolitan

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

As a former North Dakota state legislator and employee of a large steel company which uses North Dakota railroads to receive materials in the southeast/central part of the State, I realize how important access to rail services for shipping and receiving is to the livelihood of our State

As you are no doubt aware, Kansas City Southern (KCS) recently dissolved its merger agreement with Canadian Pacific (CP). KCS now plans to enter into a new agreement with Canadian Northern (CN). This is concerning to residents of North Dakota particularly in light of the fact CN intends to acquire KCS via a voting trust. If CN is allowed to use a voting trust to complete its acquisition, the American rail industry will be harmed.

The most important cause for alarm is the adverse impact of the CN acquisition on existing competition between KCS and CN. The Board's 2001 merger rules place a premium on enhanced competition. KCS and CN run broadly parallel lines across much of KCS territory in the south-central region of the United States. It is nearly impossible to imagine a merger between these two lines leading to lower prices and better services because all future revenues will go to the same sets of pockets. Thus, there will be zero incentive to improve service for customers.

Allowing CN to use a voting trust to acquire KCS will eliminate any possible chance for CP to merge with KCS. The union of CP and KCS two lines would actually increase investment and open up important competition against CN, BNSF, and Union Pacific. If CN is given the opportunity to close KCS into trust, an unfortunate precedent will be established and the stage set for similar mergers in the future.

Finally, a voting trust presents serious financial concerns. CN plans to issue $19 billion of new debt to finance its purchase of KCS and intends to pay a 45 percent price premium. If the Board approves the voting trust but ultimately denies the CN application, CN will be hard pressed to recoup its astronomical purchase price and will almost certainly pass its burden onto consumers.

Letter to STB commenting on CN Trust Proposal

It is my opinion that it is not in the public interest to allow CN to use a voting trust in conjunction with its attempt to acquire KCS. As such, we recommend the STB to reject CN efforts to use a voting trust.

Respectfully submitted,

Cc: All Parties of Record

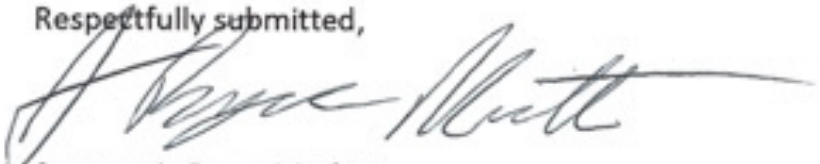
Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:



In March of this year, Canadian Pacific Railway (CP) and Kansas City Southern Railway (KCS) announced plans to merge. The proposed union was lauded by more than 400 shippers and other stakeholders due to its expected impact on service, safety, and efficiency to shippers and surrounding communities. The CP-KCS line would be the first U.S-Mexico-Canada rail network, and would drive competition and job growth across North America.

A single-line rail network from Mexico to Canada would greatly benefit the Oklahoma economy. In 2018, Oklahoma businesses exported $2.4 billion in goods to Canada and Mexico including machinery, chemicals, transportation, fabricated metal products, and electrical equipment. Recent trade wars have disrupted the supply chains manufacturers and the ag industry depend on, thus making efficient rail transportation more important than ever.

Despite the competitive benefits associated with a CP-KCS merger, the deal was dissolved in mid-May. Canadian National Railway (CN) made a bid at a 45 percent price premium, and KCS shareholders accepted. This is cause for great concern. CN plans to issue over $19 billion in new debt to finance this venture, and wants the Surface Transportation Board to approve the use of a voting trust to fast-track the merger. If approved, it will eliminate any opportunity for KCS to be acquired by CP and the important competitive benefits of the CP-KCS merger will be lost.

A CN-KCS merger cannot provide the same benefits to shippers and communities as a CP-KCS union. A CN acquisition will limit competition and lead to diminished service and efficiencies. As such, I ask the members of the STB to decline the CN request for a voting trust.

Respectfully submitted,

Senator A. Bryce Marlatt
Former State Senator and Asst. Pro Temp

GREATER SHREVEPORT CHAMBER

Surface Transportation Board
395 E St, SW
Washington, DC 20423

March 29, 2021

Member of the Board:

I am writing on behalf of the Members and Board of Directors of the Greater Shreveport Chamber of Commerce, located at 400 Edwards Street, Shreveport, LA 71101. Since 1910, the Greater Shreveport Chamber has served the Shreveport-Bossier area as a catalyst for business development and nexus for community engagement.

Over the years, the Greater Shreveport Chamber has engaged with Kansas City Southern (KCS) and recognizes the critical role that KCS plays in the Shreveport-Bossier economy. As such, the Greater Shreveport Chamber is pleased to provide this letter in support of the approval of the Canadian Pacific/Kansas City Southern combination. We believe the merger will provide significant benefits to our community and to the region, and we are eager to see them realized as soon as possible.

We believe that the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in Northwest Louisiana and beyond reach new markets more efficiently. And, with the two railroads' strong focus on safety and their respective track records of operational excellence, we are confident that CPKC will be able to integrate their operations efficiently and expand the benefits available to rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities, stimulating significant investment and jobs.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option, and we believe this merger creates such an option.

Further, this merger will offer a unique opportunity to fuel economic growth across North America while reducing freight congestion, thereby reducing the environmental impact of fossil fuels and strengthening competition in the freight transport marketplace.

For these reasons, The Greater Shreveport Chamber is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The Greater Shreveport Chamber urges the STB to approve CP's acquisition of KCS

as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Best regards,

Timothy J. Magner Ed.D.
President

May 26, 2021

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Dear Ms. Brown:

Both Covid-19 and the trade policy challenges of the past several years exposed fractures in the U.S. food supply chain. Iowa producers have felt the ripple effects of these events. Transportation is a critical input that impacts the supply chain for the state's commodities.

The complexity of the multiple channels required to get grain to market has not only increased the cost for producers and has driven a need for efficient flow of grain shipments from the Upper Midwest to port destinations in Canada, the Gulf Region, and Mexico. What's more, the adoption of USMCA has markedly increased the need for efficiencies in grain transportation to these two important markets.

That is what makes the recent Canadian Pacific (CP) and Kansas City Southern (KCS) merger announcement so compelling. The combination of these two railroads would create the first U.S.-Mexico-Canada rail network. This deal would drive significant efficiencies, bypassing the previous logistical challenges associated with multiple connecting railroads and creating a new single line that will enable producers to get their grain market faster.

In 2018, Iowa businesses exported $6.6 billion in goods to Canada and Mexico alone. The new CP-KCS combination would service nearly 350 grain elevators across United States and Canada, providing them with direct access to more than 20 terminals at major ports.

The proposed plans also call for expanded capacity to move even more grain by leveraging a new high-efficiency railcar model that carries 15 percent more grain over older railcar designs.

Perhaps the most important aspect of this merger for Iowa agriculture is that it enhances competition against other rail and trucking options for getting grain to market. Producers will

have more options for getting their commodities where and when they need them – driving competition and economic productivity across the Heartland.

The benefits of this merger extend beyond Iowa farms. The combination of these two railroads should bring increased economic activity to our rural communities. And with greater access to the markets in Canada and Mexico, the more than 25,400 Iowa manufacturing jobs that depend on exports to Canada and Mexico should have increased security with potential opportunities for growth.

Like many Iowans, I'm skeptical of many mergers, but in this case, CP and KCS operate complementary networks that will deliver Iowa producers expanded reach without overlap. Shippers will have more options for getting their grain to market, increasing competition among Class 1 railroads. It's also worth noting that after the combination would take effect, it would remain the smallest of six Class 1 railroads by revenue.

Thank you for your consideration in this important matter.

Sincerely,

Brian Best
Iowa State Representative
House District 12

County Board Supervisor District 15

Amy Maurer

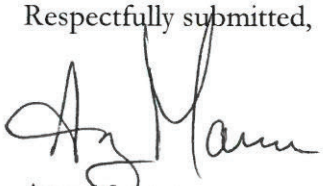
Washington, DC 20423
Re: Finance Docket No. 36514 – Canadian National Ry. – Control – Kansas City Southern

Dear Ms. Brown:



I am writing to express my perspective on the acquisition of Kansas City Southern (KCS). As a Kenosha County Supervisor, I believe it is our area's best interest if KCS is purchased by Canadian Pacific (CP).

A combined CP-KCS railroad network would create the first United States-Canada-Mexico line to increase efficiency and quicken how products are delivered. Because KCS and CP operate complementary networks, the lines will become more fluid, capacity will be higher, and congestion will reduce.

Additionally, a CP and KCS combination will enhance competition and create new shipping options. This merger will create an environment where existing railroad giants will have to compete with the new CP-KCS line, encouraging fair pricing and excellent service. Competition will be higher, and even after CP and KCS merge, they will still be the smallest Class 1 railroad by revenue.

As a county supervisor, I look to support deals that are best for the public interest. CP's proposal is superior and will create a healthy business environment while also better serving us in Kenosha County. I urge the Surface Transportation Board (STB) to support Canadian Pacific's proposal above all else.

Respectfully submitted,

Amy Maurer
Kenosha County Supervisor District 15

THOMAS A. PRESSLY
Louisiana State Representative
District 6

Chairman Martin J. Oberman
Surface Transportation Board
395 E Street, SW
Washington, DC 20423

Dear Chairman Oberman,

Please accept this letter of support of the merger of Canadian Pacific and Kansas City Southern to create the first rail network connecting the United States, Mexico and Canada. As a Louisiana State Representative representing portions of Shreveport and Bossier City, I welcome this merger as an opportunity to expand services to our region of the state and grow jobs and opportunities in Northwest Louisiana.

This merger is a tremendous opportunity to create additional operations, training, mechanical, and other jobs in the Shreveport-Bossier area, including at the Deramus Yard, largest of KCS's U.S. railyards. Additionally, the CPKC network would provide additional direct shipping opportunities from our region which could create indirect jobs in our area in the shipping, logistics, and transportation field. From my perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development not only in Northwest Louisiana, but throughout North America.

The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help businesses in our region and state reach new markets more efficiently. Additionally, the new CPKC single-line routes will expand access to growing markets across the United States, Mexico and Canada that are part of the USMCA trade agreement. Having our community, which has been an integral part of the KCS line since the inception of the railway, at the center of the North-South, East-West corridor in the United States provides significant opportunities for growth in our region through the USMCA trade agreement.

Further, with the two railroads strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. I believe strongly that this consolidation will create new economic development opportunities, creating significant investment and job creation.

For these reasons, I am proud to voice my strong support for the combination of CP and KCS, as it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Therefore, I urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Thomas A. Pressly

MAINE
STATE
CHAMBER
of
COMMERCE

The voice of Maine business

June 21, 2021

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E. Street S.W.
Washington, DC 20423

Dear Ms. Brown:

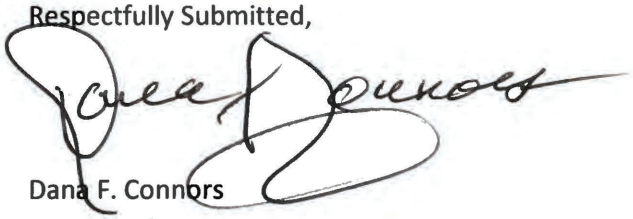
My name is Dana Connors, my business address is 128 State Street, Suite 101, Augusta, Maine04330. I am President/CEO of the Maine State Chamber of Commerce, where we represent a network of over 5,000 businesses across the state of Maine.

Canadian Pacific Railway Company is a member of the Maine State Chamber of Commerce.

The Maine State Chamber of Commerce supports approval of the CP/KCS combination. Thetransaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets companies in Maine rely on. The combined CPKC network - with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets would help companies that do business into and out of the State of Maine, reach our existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their record of operationalexcellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. The Maine State Chamber of Commerce sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. We are particularly enthusiastic about therole new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.



The entirely complementary nature of CP's and KCS' networks - connecting only at Kansas City and not overlapping anywhere - means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

128 State Street, Suite 101 ◆ Augusta, Maine 04330-5630 ◆ tel (207) 623-4568 ◆ fax (207) 622-7723 ◆ website: www.mainechamber.org ◆ e-mail: info@mainechamber.org

We have been impressed by the level of attention by CP and KCS, to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, the Maine State Chamber of Commerce is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options anddrive efficiencies for customers of all sizes.

Respectfully Submitted,

Dana F. Connors
President/CEO
Maine State Chamber of Commerce

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Dear Ms. Brown:

I write in support of the proposed merger between Canadian Pacific (CP) and Kansas City Southern (KCS) railroads. This merger holds promise for Wisconsin and rest of the country and deserves support.

Wisconsin's leading industry is manufacturing. We make things here in Wisconsin - machinery, computers and electronics, transportation equipment, and lots of food and agricultural products. Our largest export markets for these goods are Canada and Mexico.

In fact, Wisconsin exported a $7 billion in goods to Canada in 2018, which is about a third of the state's overall exports. The CP-KCS merger could increase that number. By creating the first United States-Mexico-Canada rail network, a merged CP-KCS will drive single-lined efficiencies North and South, fostering economic growth across North America, which is a win for Wisconsin workers.

In 2016, over 8,000 companies exported goods from Wisconsin with nearly 90 percent of those companies being small- and medium-sized businesses that employ fewer than 500 people. These are good paying jobs that fuel the economic engine of Main Streets across the state. Wisconsin's economy is reliant on a robust export system and the CP-KCS merger will offer additional options and services for shippers, as greater efficiency and access to rail make it easier to move materials across North America.

As the economy begins recovering from the COVID-19 pandemic, it's more important than ever that Wisconsin participates in the economic growth and that our neighbors in Canada and Mexico can rely on Wisconsin exports.

It is unfortunate that in the year 2021 there is still not a seamless transcontinental rail system between the three countries. The merger between CP and KCS would create a rail network that does just that. CP and KCS have done their due diligence to ensure the combination of the two companies will benefit all parties involved: businesses, shippers, and hardworking Americans.

As the Surface Transportation Board reviews this proposed transaction, I urge you to recognize the benefits of this merger for Wisconsin's and the nation's economy.

Sincerely,

Steve Baas
Senior Vice President of Government Affairs and Public Policy
Metropolitan Milwaukee Association of Commerce

Re: Finance Docket No. 36514 – Canadian National Ry. – Control – Kansas City Southern

Dear Ms. Brown:

I write to you today on behalf of the Muscatine Chamber of Commerce. Our intention with this letter is to express our support for Canadian Pacific ("CP") in its bid for the Kansas City Southern ("KCS") railroad.

Though Canadian National ("CN"), through an unsolicited bid, offered a higher monetary amount, it remains clear that CP's offer is better for businesses in Iowa, and in particular, Muscatine.

Iowa's two largest trade partners are Canada and Mexico. We would like our farmers and manufacturers to be able to benefit fully from trade deals such as the United States-Mexico-Canada Agreement (USMCA). A CP-KCS network will create the first U.S.-Mexico-Canada railroad network capable of doing this by delivering products across the continent much faster and with more efficiency.

A CP-KCS merger will also create competition between other railroads, allowing each network to hold the other accountable for superb service and fair pricing. Even after CP and KCS merge, they will remain the smallest Class 1 railroad by revenue. Shippers, farmers, and manufacturers in Iowa deserve to have options that allow them to prosper.

We ask the Surface Transportation Board (STB) to consider these facts as they weigh whether or not to approve a CN-KCS voting trust. CP has offered a better deal for Iowa, the Midwest, and the overall public interest. We kindly urge the board to concur.

Erik Reader, President & CEO

Cc: All Parties of Record

From the Desk of
State Representative Mike Brandenberg
Legislative District 28
Edgeley, ND

As a state legislator, I care about what happens in our state. I was encouraged when I saw an announcement by Canadian Pacific (CP) and Kansas City Southern (KCS) to combine routes. I'm optimistic, after reviewing the plan by CP and KCS to merge, that this would have a tremendously positive impact on our state. Currently, in North Dakota, shippers and farmers have limited rail options and often have to use multiple railroads to get products to their destination. The proposed combination will create the first, single-line rail route spanning from Canada, through the U.S., and down into the southern parts of Mexico.

A new single line rail offering will ensure North Dakota farmers, manufacturers, and refineries are able to get their products to market quickly, without the hastle of switching routes which can lead to delays. Our state relies heavily on trade, especially with our neighbors to the north and south. A merger between CP and KCS will make it so shippers can rely on one line to get products to Canada, Mexico, or down to the Gulf Coast to be shipped all over the world. Producers in North Dakota have a pent up desire to increase trade spurred by the new USMCA agreement; we expect to see new exports flourish this year.

Understandably, the announcement by CP and KCS made headlines as the first major rail merger since the 20th century, and has quickly earned support from hundreds of stakeholders. This attention, however, has also received the focus from a competitor, Canadian National (CN), which made its own, unsolicited offer to purchase KCS. This new offer would be disasterous for North Dakota.

First, the CN and KCS merger would be anti-competitive, leading to fewer options for shippers along the impacted route. In multiple locations, CN and KCS actually have overlapping routes and currently compete for business. Once merged, CN would no longer have to compete with KCS, and current routes may be decommissioned, which would eliminate existing options.

Second, the CN route doesn't reach North Dakota. There will be a huge missed opportunity for our communities if this deal goes through. Shippers in North Dakota will not be a part of the CN-KCS merger and will not see the benefits a single line rail could bring.

Examining the details of the two major railroad proposals, there is a clear winner. The CP-KCS merger is good for North Dakota and good for the U.S. as a whole. Both proposals are now before the Surface Transportation Board (STB). I hope the STB will carefully review the facts and consider what is truly in the best interest of the public. I urge the STB to reject the CN-KCS proposal, and KCS to reconsider its original plan with CP.

Regards,

Mike Brandenberg

Congress of the United States
Washington, DC 20515

June 25, 2021

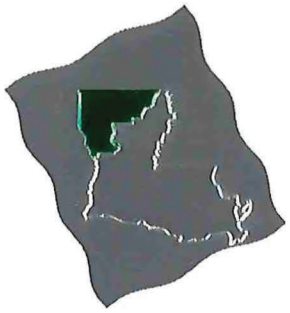
Martin J. Oberman
Chairman
Surface Transportation Board
395 E Street, SW
Washington, DC 20423

Dear Chairman Oberman:

We write to express our support for the proposed merger agreement between Kansas City Southern (KCS) and Canadian Pacific Railway (CP). We believe such an arrangement would serve the public interest by opening new markets for commodities produced in States served by CP, including North Dakota. Thank you for your attention to this important matter.

Canadian Pacific Railway is one of two Class I freight rail providers in North Dakota, both of which provide integral market access for much of North Dakota's commodity driven economy. As a state rich with natural resources, including agricultural products, crude oil, and others, producers in our state rely on freight transportation to move their products to market. Currently, shippers in North Dakota have direct access to ports in the Pacific Northwest, and thus much of Asia, through rail transportation provided by both Canadian Pacific and Burlington Northern Santa Fe (BNSF). A KCS/CP merger would create the first Class I railroad with track in Canada, Mexico, and the United States, opening access to new markets for our State's producers in Mexico, while also providing a more direct route to markets in the Southern United States. This in turn would increase competition and help our agricultural producers continue to provide the highest quality, lowest cost food supply in the world, while also contributing to our nation's energy independence.

Further, a KCS/CP merger would preserve the competitiveness of the rail industry among the limited number of Class I carriers operating in the U.S. In fact, the proposed merger would remain the smallest of the Class I railroads, promoting competition among railways in the region and ensure railways provide efficient service and competitive rates.



Again, thank you for your attention to this important matter. Please do not hesitate to contact our offices should you require more information or wish to discuss this matter further.

Sincerely,

John Hoeven
U.S. Senator

Kevin Cramer
U.S. Senator

Kelly Armstrong

NORTH LOUISIANA ECONOMIC PARTNERSHIP

March 29, 2021

Surface Transportation Board
395 E St, SW
Washington, DC 20423

RE: CP/KCS Merger

To Whom It May Concern:

The North Louisiana Economic Partnership (NLEP) is submitting this letter of support for the approval of the Canadian Pacific (CP)/Kansas City Southern (KCS) railway merger. The NLEP is a regional economic development organization covering a fourteen-parish (county) territory in North Louisiana, and our mission is to advance the regional economy by supporting job growth and capital investment in this region. From our experience working with existing and prospective companies, we consider the rail infrastructure of KCS a significant asset for meeting our mission.

Access to rail has increasingly become a major factor for the projects we manage. Agriculture, energy, and manufacturing are leading industries in the State of Louisiana as a whole, therefore having a variety of reliable transportation options is critical for our economic health. KCS entered into a joint venture to create the Meridian Speedway, which is the fastest rail route between Dallas and the northeast. This high-speed rail route originates in Shreveport, LA. Not only does KCS offer rail access, but its routes also provide our region a competitive advantage.

The NLEP has worked with KCS throughout our existence, but over the last five years that relationship has grown much stronger and more collaborative. Frequently the KCS Industrial Development Manager and other KCS representatives are critical members of our project teams when working with new or existing businesses considering a new location or expansion. KCS's partnership has been instrumental in helping our region both retain and grow jobs as well as ensure our companies remain competitive in the global market.

The NLEP was excited to learn of the potential CP/KCS merger, as we believe the transaction would provide significant benefits that we are eager to see realized as soon as possible, such as:

- **Improved service options.** This larger rail network would invigorate transportation competition and improve economic development potential for North Louisiana. The combined CP/KCS network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in North Louisiana reach new markets more efficiently. And, with the two railroads' strong focus on safety and their

track record of operational excellence, we have no doubt that CP/KCS will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

- **Expanded Market Access.** We are particularly enthusiastic about the role new CP/KCS single-line routes will play in expanding access for North Louisiana companies to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option for the agreement to achieve its intended economic development outcomes. We believe strongly that this consolidation will create new economic development opportunities for companies in our region that will result in significant new investment and job creation.
- **Reducing roadway congestion.** This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.
- **Strengthen quality jobs in North Louisiana.** KCS currently employs over 700 residents of North Louisiana and we believe this merger would not only retain those jobs but could lead to an increase in quality jobs here over time if the above results are realized.

For these reasons, the North Louisiana Economic Partnership is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded service and market options and drive efficiencies for customers of all sizes. The NLEP urges the Surface Transportation Board to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized as soon as possible for the benefit of all stakeholders.

Thank you in advance for your favorable consideration of this acquisition and merger.

Sincerely,

Justyn Dixon
President

VERIFICATION

I Justyn Dixon, certify, under penalty of perjury, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I write to you on behalf of the Portage Area Chamber of Commerce to share our support for Canadian Pacific's ("CP's") bid to purchase Kansas City Southern (KCS).

Portage businesses rely on CP as both a business partner and to ship goods. For example, our member Crawford Oil and Propane Company, another supporter of the CP-KCS merger, is a longtime fuel supplier for CP. Because CP-KCS will increase the capacity and distance that goods can be shipped, it will positively impact Crawford Oil as the demand for its product increases. In addition, shippers in the area will be able to send their goods with heightened efficiency.

In addition to the positive impact that it will have on our businesses; a combined CP-KCS network will:

- Strengthen competition among railroads, which will create a positive environment for shippers and businesses by promoting excellent service and pricing.
- Create the first United States-Mexico-Canada railway, allowing our community to take full advantage of the USMCA trade deal.
- Heighten efficiency, service improvements, and work to achieve meaningful environmental benefits.

In light of the positive benefits listed throughout this letter, the Portage Area Chamber of Commerce urges the STB board to support CP's proposal to acquire KCS.

Respectfully submitted,

Marianne Hanson

Marianne Hanson
President & CEO Portage Area Chamber of Commerce

_____

Cc: All Parties of Record

Mission: To provide leadership for building a healthy economy and a high quality of life in the Portage Area.

April 30, 2021

Mr. Martin J. Oberman, Chairman
US Surface Transportation Board
395 E Street SW
Washington, DC 20423

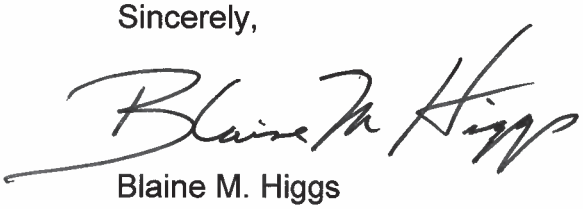
Dear Mr. Oberman:

Our two countries enjoy a unique and long-standing history, and the largest trade relationship in the world. Our economies are closely intertwined, and shared prosperity requires our continued partnership and collaboration. Therefore, important regulatory decisions in one country can have a ripple effect in the other.

It is for that reason that I write to express my enthusiastic support for the merger agreement between Canadian Pacific Railway Limited (CP) and Kansas City Southern (KCS).

The proposed combined network would create the first rail network connecting the United States, Mexico and Canada. Moreover, it will provide increased competition and support North America's economic growth.

CP Rail's return to service in our province of New Brunswick is proving to be an economic game-changer and is providing much-needed competition to the other Class 1 railroad operating in our region, Canadian National Railway (CN).



The Port of Saint John is a deep-water port, capable of handling a variety of cargo types, and together with CP, shippers can access domestic, North American and international markets. This return to service by CP also offers a connection to the Port of Searsport, Maine, which will drive economic growth along the US eastern seaboard.

Office of the Premier / Cabinet du premier ministre
P.O. Box/C. P. 6000 Fredericton New Brunswick/Nouveau-Brunswick E3B 5H1 Canada
Tel./Tél. : (506) 453-2144 Fax/Téléc. : (506) 453-7407
Email/Courriel : premier@gnb.ca/premier.ministre@gnb.ca

I urge the U.S. Surface Transportation Board to reject CN's request for a voting trust structure and reject any waiver from a full public interest review for CN's voting trust proposal. On the other hand, since CP's proposed acquisition of KCS raises none of the same competition concerns and would in fact enhance competition and further level the playing field for rail shippers in North America, the Board should approve its proposed voting trust.

Thank you in advance for your consideration.

Sincerely,

Blaine M. Higgs
Premier

June 28, 2021

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington D.C., 20423

Dear Mrs. Brown,

The Southeast Texas Economic Development Foundation is filing this letter to express our support for Canadian Pacific's (CP) acquisition of Kansas City Southern (KCS).

Our priority is to work with local businesses and the community to foster economic growth that is central to the success of our community as a whole. When we learned about the proposed merger between CP and KCS, we were excited for the benefits such a merger could have on not only our business community in Texas but across the country.

The CP-KCS merger would create the first rail network connecting the U.S., Mexico, and Canada offering seamless service for U.S. businesses. The new combined network will stimulate growth by increasing market reach and competition. A CP-KCS combination offers:

- Efficient flow of grain shipments from origins in Canada and the Upper Midwest to destinations in the U.S. South, Gulf ports and deep into Mexico.
- New head-to-head, single-line competition for intermodal shipments between the Mexican border and the Upper Midwest.
- Improved services and access to Vancouver and Minneapolis-St. Paul via CP's routes into Western Canada.
- New single-line hauls linking key automotive manufacturing and distribution centers in Mexico and the Upper Midwest and Canada.

The CP-KCS merger will only be beneficial; we do not anticipate any negative impacts to competition, safety, or any other public interest. For these reasons, we support the proposed merger of CP and KCS and hope the STB will also support such an important combination.

Sincerely,

James E. Rich
Executive Director

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

As you are considering the proposed acquisition bids of Kansans City Southern by Canadian National and Canadian Pacific, I hope you will look favorably upon CP's offering and reject CN's proposal to use a voting trust. The CP proposal is better for shippers and consumers.

The Board has explained it plans to adopt a more cautious approach to CN's proposed voting trust and decide whether this trust is in the public's best interest – the clear answer is the use of a trust in this proceeding will do little in favor of public interest.

This is the first time the Board will be applying the 2001 merger rules. I want to note a quick check-off to allow a voting trust does not serve the public interest and creates a precedent that encourages railroad mergers and severs the Board's freedom to apply the 2001 rules in the way initially intended.

I hear often from shippers the need to inject more options and greater competition into the marketplace. That's why the most troubling factor associated with the proposed CN's voting trust is the effect it will have on existing competition between KCS and CN. It becomes rather apparent competition between the two railroads is already aggressive – if they were to merge, the points, corridors, and regions that are served by both lines would suffer. As two separate entities, alternative solutions for shippers are available, and the two can discipline each other when they are not competing for business. I do not want to see competition between the two done away with.

The Board has specifically noted cause for concern relating to CN's proposal to issue $19 billion of new debt to finance its purchase of KCS. I share this concern with the Board, primarily

because this massive debt burden will create immediate incentives for CN to raise revenue – which means higher prices for its current customers.

As I mentioned, there is a better alternative in terms of public interest. A CP-KCS merger promises to create new, better single-line routes from the Midwest and Canada all the way to the Gulf of Mexico. Competition between rail lines would increase and offer a robust market that better serves the public. A CP-KCS merger would still be the smallest Class 1 railroad by revenue, a stark difference from what would be the third largest Class 1 railroad if CN acquired KCS.

I urge the STB to reject Canadian National's motion to approve its proposed voting trust. Denying the trust will allow CN to make its case that its proposal offers public benefits – something we have yet to see.

Respectfully submitted,

David Steffen
State Representative

Tyler J. Foti

County Board Office

By Electronic Filing

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I write to you today to express my support for Canadian Pacific (CP) in its effort to acquire Kansas City Southern (KCS).

As a Waukesha County supervisor representing an area serviced by CP, it is apparent that a combined CP-KCS railroad network is the better option for our area businesses. Though this is a merger of two Class 1 railroads, I do not see a threat to competition should this merger be completed. On the contrary, I believe it will enhance competition and keep each railroad accountable to their customers on both pricing and service. In fact, even after KCS and CP merge, the joint railroad will still be the smallest Class 1 railroad in North America by revenue.

Unfortunately, this CP-KCS deal has been derailed by an unsolicited offer by Canadian National (CN). CN-KCS is a combination that I believe will hurt competition. If CN is allowed to merge with KCS, it will create the third-largest Class 1 railroad in North America. This is a deal that I cannot support for the sake of Waukesha County's shippers and consumers.

I urge the board to consider the broad impact that allowing a CN-KCS merger will have on Wisconsin and competition as a whole and instead support a CP-KCS merger, which will promote healthy competition for our area businesses.
Respectfully submitted,

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Dear Ms. Brown:

I am reaching out to share my support of Canadian Pacific Railway's (CP) application to acquire Kansas City Southern (KCS) and create the first U.S-Canada-Mexico rail line in North America.

As a state representative of an area already served by CP, it's clear to me that this acquisition would bring with it increased trade opportunities for businesses, including in agriculture and manufacturing, in my district. In addition, due to the small size of CP and KCS relative to other Class 1 railroads, it's my belief that the merger of these two railroads does not threaten market competitiveness in the railroad shipping market, but, will instead, lead to greater competition as a joint CP/KCS railroad would better be able to compete with other, larger, Class 1 railroads. In fact, it is my understanding that even after a CP/KCS merger, the joint railroad would still be the smallest Class 1 railroad in North America.

While I know after CP and KCS agreed to an acquisition deal, Canadian National (CN) approached, and later entered into agreement with KCS to join their two railways, I have heard concerns that a CN/KCS deal would bring with it less competition and more market power as a CN/KCS deal would make CN the 3rd largest railroad in North America. This is a concern as CN already holds great market share here in Wisconsin and I fear our state's shippers and consumers would be at a detriment should CN by able to control more of the national market and face less pressure to fairly serve businesses in our state.

I ask that you please consider this letter and the impact of both of these applications on my constituents and all citizens of the State of Wisconsin. Our state's economy relies on a robust, competitive and responsive rail system and I believe the CP/KCS application best achieves that goal.

Sincerely,

Barbara Dittrich

WYLIE ECONOMIC DEVELOPMENT

My name is Jason Greiner and my organization's address is 250 South Hwy 78, Wylie, TX. 75098. I am the Executive Director of the Wylie Economic Development Corporation. As the Director of the EDC, I facilitate new investment and job creation in our community as well as support our community's economic development strategies.

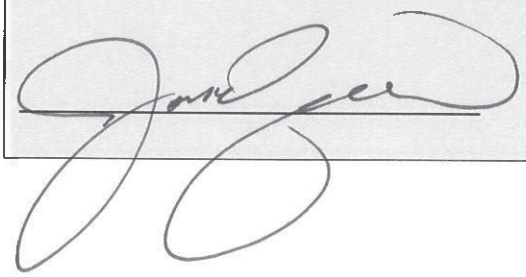
The City of Wylie has enjoyed a long relationship with the railroad. Wylie's story began back in the 1880s and our growth (and success) is directly tied to the railroad. The first Gulf, Colorado, and Santa Fe Railway train rolled into Wylie on October 13, 1886, and our community has grown with the railroad ever since. In fact, Wylie was incorporated in November 1887 along the railroad right-of-way. A lot has changed over the 100+ years, but the future looks even brighter. The recently announced 220-acre Wylie Logistics Park is immediately adjacent to KCS' David L. Starling Wylie Intermodal Terminal and offers 2.4 million square feet of potential building capacity.

The Wylie EDC supports the approval of the CP/KCS combination. We believe that the transaction would provide significant benefits that we are eager to see realized as soon as possible. From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and facilitate economic development efforts in communities like ours. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic, and Pacific coasts as well as to key overseas markets – would help the businesses in Wylie, the DFW Region and all of North Central Texas reach new markets more efficiently. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. We believe there is a need for a true USMCA railroad option. This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight and transportation marketplace.

For these reasons, the Wylie EDC is voicing strong support for the combination of CP and KCS because we believe it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. The Wylie EDC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these two systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,



Jason Greiner

Re: Montreal Port Authority supports to the CP/KCS combination

To whom it may concern,

I, Martin Imbleau, President and Chief Executive Officer of the Montreal Port Authority, would like to express our views on the above-mentioned transaction. As an autonomous Federal agency responsible for the Port of Montreal, we have an exceptional collaborative relationship with CP, which benefits from direct access to the various port operators found on our docks. CP is a long-standing partner of the Port of Montreal and a trusted partner in the development of logistics activities. The Montreal Port Authority, an organization located at 2100 Pierre-Dupuy Avenue in Montreal, Canada, wishes to express its great satisfaction with CP.

Therefore, the Montreal Port Authority supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Even, if the Montreal Port Authority has not often spoken about railroad consolidation, we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The Port of Montreal is the second largest port in Canada and a diversified transshipment centre that handles all types of goods: containerized and non-containerized cargo, liquid bulk and dry bulk. As the only container port in Quebec and the largest post on the Eastern coast of Canada, we are a destination port served by the largest shipping lines in the world. We are also an intermodal hub with a service offering that is unique in North America, featuring its own rail network directly dockside connected to the CP network.

As we prepare for the largest expansion in our history with an expansion plan that will increase our handling capacity by 1.15 million TEUs (twenty-foot equivalent units), we believe that an extensive railroad network will allow us to create business opportunities, and, consequently, to better serve the markets we serve, particularly through the Midwest.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Montreal Port Authority is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Montreal Port Authority urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Martin Imbleau declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Re: Letter of Support – Canadian Pacific ("CP") acquisition of Kansas City Southern ("KCS")

My name is Adam Tindall-Schlicht, Director of Port Milwaukee. I am responsible for the full operations, financial, business development and personnel management of Port Milwaukee. Port Milwaukee welcomes the news of CP's acquisition of Kansas City Southern (together "CPKC") and the promise of expanded CP operations in the Upper Midwest.

From the Port's perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help Port Milwaukee reach existing markets and new markets more efficiently. Given the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Port Milwaukee is serviced daily by CP today, and the Port's 20+ commercial tenants and customers from around the globe trust CP in Milwaukee for its reliability, safety and customer service. There is much that the Port and CPKC can realize through the merger:

- CP's intermodal container service at Port Milwaukee was discontinued about a decade ago by the rail line. The merger may foster new intermodal and other business development opportunities in Milwaukee, particularly given our adjacency to Chicago. The reinstatement will improve the efficiency of container handling and trade in the heartland of North America through Port Milwaukee.

- Port Milwaukee has been targeting outreach to Mexico-based customers as a business development initiative for future growth. The southern connectivity from Milwaukee to Mexico via CPKC will immediately become a new opportunity for Port Milwaukee to explore.

- The Port and Milwaukee Harbor is realizing unprecedented growth and multimodal development. The DeLong Company, the Michels Corporation, and Komatsu Mining are each constructing multimillion dollar manufacturing sites currently at the Port with connectivity to CP. These sites will have increased business development reach as a result of the CPKS announcement.

- The Port is particularly enthusiastic about the role that new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option of which Port Milwaukee will help prosper.

- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among the Port's transportation options, but as separate companies they have not been able to offer a seamless, single-line service we have come to expect from our transportation providers for continued growth. This transaction will improve the Port's surface transportation options.

PORT OF BROWNSVILLE
the port that *works*

April 15, 2021

ATTENTION: Surface Transportation Board

My name is Eduardo A. Campirano and my business address is 1000 Foust Road, Brownsville, Texas 78521. I am the Port Director and CEO of the Port of Brownsville.

The Port of Brownsville supports approval of the CP/KCS combination. The transaction would provide significant benefits.

The transaction would provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing and new markets more efficiently. The two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. Examples include:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation option.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

While KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options. However, as separate companies, they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

The nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have noted the attention placed by of CP and KCS on safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For aforementioned reasons, the Port of Brownsville is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The Port of Brownsville urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BRANDY D. CHRISTIAN
CHIEF EXECUTIVE OFFICER

M. D. (MIKE) STOLZMAN
GENERAL MANAGER

NEW ORLEANS PUBLIC BELT RAILROAD

April 1, 2021

Surface Transportation Board
395 E Street SW
Washington, DC 20423

Dear Sir or Madame:

My name is Brandy Christian, and I am the President and CEO of The Board of Commissioners of the Port of New Orleans (Port NOLA) and the CEO of the New Orleans Public Belt Railroad Commission for the Port of New Orleans (NOPB). The corporate address of both organizations that I oversee is 1350 Port of New Orleans Place, New Orleans, Louisiana 70130. In my role, I am responsible for executive management of Port NOLA and the NOPB.

The Port of New Orleans is a diverse deep-water port strategically located on the Mississippi River near the Gulf of Mexico -- with access to 30-plus major inland hubs such as Dallas, Memphis, Chicago and Canada via 14,500 miles of waterways, six Class I railroads and interstate roadways. Port NOLA works jointly with the KCS on international intermodal business moving in and out of the Port of New Orleans and the KCS rail terminal in Wylie, Texas, serving the Dallas-Fort Worth market. Additionally, the KCS provides rail service to Port NOLA's industrial real estate tenants via the New Orleans Public Belt Railroad.

The NOPB is a Class III switching railroad with a mission of serving the Port of New Orleans, local customers, and the New Orleans Rail Gateway. The NOPB connects six Class I railroads to each other and to properties in and near the Port NOLA complex. The NOPB interchanges with KCS on a daily basis.

Both Port NOLA and NOPB have benefitted from a strong relationship with KCS and have worked even more closely on growing volume moving by rail through the New Orleans corridor since the re-start of intermodal service between New Orleans and Wylie in 2018.

Both Port NOLA and NOPB support approval of the CP/KCS combination. The transaction would provide significant benefits and enhanced rail network connectivity that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in our State reach new markets more efficiently.

(504) 896-7410 Office
(504) 896-7419 Fax

And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option

This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.

For these reasons, Port NOLA and NOPB are voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Port NOLA and NOPB urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Brandy D Christian

Brandy D. Christian
Chief Executive Officer

PORT OF PORT ARTHUR

March 29, 2021

Surface Transportation Board
395 E Street SW
Washington, D.C. 20423

Re: Support for Canadian Pacific Railway and Kansas City Southern Railway Company Transaction

Surface Transportation Board:

My name is Larry Kelley and my organization's address is 221 Houston Ave, Port Arthur, TX 77641. I serve as the Port Director/CEO of Port of Port Arthur Navigation District of Jefferson County. I am responsible for the direct management of the organization, finance, operations and real estate of a modern rail served public maritime facility.

The Port of Port Arthur has a longstanding, mutually beneficial relationship with the KCS. The community of Port Arthur, TX was the original terminus of the railroad. The city, port and KCS' history are closely linked. Historically and today the port attracts business to the railroad and the KCS brings business to the port in an interdependent relationship. Over the years in partnership with the KCS the port has acquired modest lands from the railroad. Each time the port has developed those lands into sustainable port and rail cargo volumes.

The Port of Port Arthur supports timely approval of the CP/KCS combination. The transaction would potentially provide significant benefits to the port in terms of enhanced connectivity and new market development, while leveraging the port's own capital expansion activity.

To the port, the transaction provides the opportunity for improved service options, stimulate competition and economic development. The combined CPKC network should provide new single-line hauls and access to premier ports, such as the Port of Port Arthur, as well as other ports in the U.S. Gulf, Atlantic and Pacific coasts. Improved access to key overseas markets and new markets will aide many businesses in the South East Texas-Port Arthur region. Optimistically and without exception, import and export customers have given us positive feedback about the combination. With a unified culture of safety and focus on operational excellence, the CPKC integration should benefit rail customers and other stakeholders. We strongly believe this consolidation will create new economic development opportunities, significant investment, and job creation.

Port of Port Arthur
221 Houston Avenue
P.O. Box 1428
Port Arthur, Texas, 77641
409.983.2011
portpa.com

We are particularly enthusiastic about the combined CPKC single-line routes. For us and many rail users this will expand access to growing or underserved markets across the United States, Mexico and Canada. We believe it is important that there be an actual USMCA railroad option.

This merger offers a unique opportunity to stimulate economic growth across North America while sustainably reducing freight congestion and strengthening freight market competition.

As described, the Port of Port Arthur is supporting the combination of CP and KCS, to enhance competition, provide expanded options and drive efficiencies for a wider variety of customers. The Port of Port Arthur urges the STB to approve CP's timely acquisition of KCS. Timely integration of these systems generating end-to-end benefits is in the public interest and U.S. commerce. If you have any questions or desire further comment, please feel free to reach out to me.

Sincerely,

Larry Kelley
Port Director/CEO
Port of Port Arthur

VERIFICATION

I Larry Kelley, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

A Quien Corresponda.
Presente

ING. ROMEL EDUARDO LEDEZMA ABAROA en mi carácter de Director General de **Administración Portuaria Integral de Veracruz S.A. de C.V.**, concesionaria del Puerto de Veracruz, con domicilio Av. Marina Mercante 210, 7° piso Col. Centro C.P. 91700 Veracruz, Ver., correo electrónico: direccion@puertodeveracruz.com.mx, ante ustedes con el debido respeto expongo lo siguiente :

Sobre el particular, me permito hacer su conocimiento que la empresa Kansas City Southern (KCS), es un socio estratégico para el desarrollo del Puerto de Veracruz. Prestando el servicio ferroviario de movimiento de carga al centro y norte de México, de manera eficiente y segura, siendo un actor importante en el desarrollo de Veracruz.

Es por ello, que esta Entidad considera positivo la unión de KCS, con la empresa Canadian Pacific Railway (CP), lo cual es una excelente noticia, ya que esperamos se incrementará el potencial competitivo de este puerto proporcionando beneficios importantes a las tres naciones, Estados Unidos de América, Canadá y México.

Desde nuestra perspectiva, la combinación CPKC promete proporcionar servicios de transporte de mercancías más amplios que seguramente incrementarán la conectividad ferroviaria, lo cual facilitará el tránsito de carga y apoyará a disminuir los tiempos de traslado a los principales puertos y centros de distribución en las costas del Golfo, el Atlántico y el Pacífico de los EE.UU., Así como a los mercados claves, ayudando a los dueños de la carga a llegar tanto a los mercados existentes como a los nuevos de manera más eficiente.

Como Administración Portuaria no tenemos dudas de que CPKC podrá integrar sus operaciones sin problemas en beneficio de los clientes ferroviarios y otras partes interesadas. Es por ello, que existe interés con dicha transacción porque permitirá que la combinación CPKC, proporcione opciones de servicio ferroviario nuevas, más eficientes y confiables. Esto fortalecerá la competencia contra los otros transportistas ferroviarios y otros medios de transporte, que dan servicio a nuestros mercados. Por ejemplo:

- Estamos particularmente entusiasmados con el papel que desempeñarán las nuevas rutas de una sola línea de CPKS, en la expansión del acceso a los mercados en crecimiento en los Estados Unidos, México y Canadá bajo el acuerdo comercial T-MEC. Es importante que haya una verdadera opción de ferrocarril del T-MEC.
- Las nuevas ofertas de servicios de CPKS mejorarán los tiempos de tránsito y la confiabilidad, lo que reducirá los costos de nuestros equipos y mejorará nuestra eficiencia.
- Se fortalecerá la logística en la importación y exportación de materia prima y producto terminado.
- Se eliminará costos que se ocasionaban a los clientes los cruces de ferrocarril que existían al entregar KCS a CP y viceversa.

Por estas razones, La Administración Portuaria Integral de Veracruz S.A. de C.V., expresa un sólido apoyo a la combinación de CP y KCS, ya que mejorará la competitividad, brindará opciones ampliadas e impulsará la eficiencia para clientes de todos los tamaños. Administracion Portuaria Integral de Veracruz S.A. de C.V., insta al STB a aprobar la adquisición de KCS por parte de CP lo antes posible para que estos sistemas puedan integrarse y los beneficios de extremo a extremo de este acuerdo se puedan realizar en beneficio de todas las partes interesadas.

Sin otro particular, aprovecho la ocasión para enviarle un cordial saludo.

ING. ROMEL EDUARDO LEDEZMA ABAROA

Director General de Administración Portuaria Integral de Veracruz, S.A. de C.V.

[Translation of Preceding Letter from Administración Portuaria Integral de Veracruz S.A. de C.V., signed by Romel Eduardo Ledezma Abaroa]

Communications Veracruz

Secretariat of Communications and Transportation

Directorate General

Office API VER-D.G. 135/2021

H. Veracruz, Veracruz, March 31, 2021

To whom it may concern,

Engineer Romel Eduardo Ledezma Abaroa, Director General of the Port Authority of Veracruz, Corp., concessionaire of the Port of Veracruz, located at Avenue Marina Mercante 210, 7th floor Col. Centro C.P. 91700 Veracruz, Ver. Email address: direccion@puertodeveracruz.com.mx, hereby set out with due respect:

In particular, I would like to share that the company, Kansas City Southern (KCS), is a strategic participant in the development of the Port of Veracruz. It provides railway cargo transportation to central and northern Mexico efficiently and securely and is an important player in the development of Veracruz.

Thus, this Entity welcomes the union of KCS with the company Canadian Pacific Railway (CP) as excellent news as we hope it will increase the competition potential of this port, providing important benefits to three nations, the United States of America, Canada and Mexico.

In our perspective, the merging of CP and KCS will provide broader services for the transportation of goods that will surely increase railway connectivity which in turn will facilitate the transportation of cargo and help decrease transportation time to the main U.S. ports and distribution centers on the coasts of the Gulf, the Atlantic, and the Pacific. The same goes for key foreign markets, helping cargo owners transport to existing markets, as well as new markets in the most efficient way.

As a Port Authority, we have no doubts that CPKC can integrate their operations without issue for the benefit of the railway clients and other interested parties. Thus there is much interest in this particular transaction because it will allow the merging of CPKC to present new options for railway services that are more efficient and reliable. This will strengthen the competition against other railway transporters and other modes of transportation that serve our markets. For example:

- There is particular enthusiasm for the role of the new routes created by the combined single CPKC line in the expanded access to growing markets in the United States, Mexico and Canada under the trade/business agreement T-MEC. It is important that there is a real T-MEC railway option.
- The new opportunities under CPKC services will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

- It will strengthen the logistics of importing materials and exporting finished products.
- It will eliminate costs clients paid when KCS railroads crossed CP's, and vice versa.

For these reasons, the Port Authority of Veracruz, Corp., expresses strong support for the merging of CP and KCS, for it will improve competition, offer broader opportunities, and promote efficiency for clients of all sizes. The Port Authority of Veracruz, Corp., urges the Surface Transportation Board (STB) to approve the acquisition of KCS by CP as early as possible so that these systems can be integrated and all benefits of this agreement can be provided to all interested parties.

Sincerely,

Engineer Romel Eduardo Ledezma Abaroa

Director General of the Port Authority of Veracruz, Corp.

2021 "Año de la Independencia"

Ciudad y Puerto de Lázaro Cárdenas,
Michoacán a 30 de marzo de 2021.

A QUIEN CORRESPONDA.
Presente.

ING. JORGE LUIS CRUZ BALLADO, en mi carácter de Director General de **Administración Portuaria Integral de Lázaro Cárdenas, S.A. de C.V.,** concesionaria del Puerto de Lázaro Cárdenas, Michoacán, con domicilio en Boulevard de las Islas número 1, colonia Isla del Cayacal, ciudad Lázaro Cárdenas, Michoacán, correo electrónico: dirgral@puertolazarocardenas.com.mx, ante Ustedes con el debido respeto comparezco y expongo:

Sobre el particular, me permito hacer su conocimiento que la empresa Kansas City Southern (KCS), durante los últimos 15 años ha venido prestando el servicio ferroviario de movimiento carga de y hacía el Puerto de Lázaro Cárdenas, con excelentes resultados, constituyéndose en actor principal del desarrollo de este puerto del Pacifico mexicano.

Es por ello, que esta APILAC apoya la aprobación de la combinación de KCS, por parte de la empresa Canadian Pacific Railway (CP), lo cual se considera como una excelente noticia, ya que incrementará el potencial competitivo de este puerto proporcionando beneficios importantes a las tres naciones, Estados Unidos de América, Canadá y México.

Desde nuestra visión, la combinación CP/KCS proporcionará servicios de transporte de mercancías más amplios que seguramente incrementarán la conectividad ferroviaria, lo cual facilitará el tránsito de carga pesada y apoyará a disminuir los tiempos de traslado a los principales puertos en las costas del Golfo, el Atlántico y el Pacífico de los EE.UU., Así como a los mercados extranjeros clave, ayudando a los dueños de la carga a llegar tanto a los mercados existentes como a los nuevos mercados de manera más eficiente.

2021 "Año de la Independencia"

Como Administrador Portuario no tengo ninguna duda de que CPKC podrá integrar sus operaciones sin problemas en beneficio de los clientes ferroviarios y otras partes interesadas. Es por ello, que existe mucho interés con dicha transacción porque permitirá que la combinación CPKC, proporcione opciones nuevas de servicio ferroviario, más eficientes y confiables, lo que fortalecerá la competencia de otros transportistas ferroviarios y otros medios de transportes, que dan servicio a nuestros mercados. Por ejemplo:

- Existe particular entusiasmo con el papel que desempeñarán las nuevas rutas de una sola línea de CPKC, en la expansión del acceso a los mercados en crecimiento en los Estados Unidos, México y Canadá bajo el acuerdo comercial T-MEC. Es indispensable que exista una verdadera opción de ferrocarril del T-MEC.
- Las nuevas ofertas de servicios de CPKC mejorarán los tiempos de tránsito y la confiabilidad, lo que reducirá los costos de nuestros equipos y mejorará nuestra eficiencia.
- Se fortalecerá la logística en la importación de materiales y la exportación de productos terminados.
- Se eliminarán costos que se ocasionaban a los clientes en los cruces de ferrocarril que existían al entregar KCS a CP y viceversa.
- Se prevé que plantas procesadoras de Canadá, se instalen en Lázaro Cárdenas y otras partes de México, recibiendo la materia prima vía marítima en el puerto y su distribución sea a través del ferrocarril CPKC.

Por estas razones, la Administración Portuaria Integral de Lázaro Cárdenas, S.A. de C.V., expresa su sólido apoyo a la combinación de CP y KCS, ya que mejorará la competencia, brindará opciones más amplias e impulsará la eficiencia para clientes de todos los tamaños.

Por lo anterior, esta Entidad exhorta al Surface Transportación Board a aprobar la adquisición de KCS por parte de CP a la brevedad posible, para que estos sistemas puedan integrarse y los beneficios de extremo a extremo de este acuerdo se puedan realizar en beneficio de todas las partes interesadas.

Sin otro particular, aprovecho la ocasión para enviarle un cordial saludo.

ING. JORGE LUIS CRUZ BALLADO
Director General de Administración Portuaria
Integral de Lázaro Cárdenas, S.A. de C.V.

México 2021 Año de la Independencia

[Translation of Preceding Letter from Administración Portuaria Integral de Lázaro Cárdenas, signed by Jorge Luis Cruz Ballado]

Communications Lázaro Cárdenas

Secretariat of Communications and Transportation

2021 "Year of Independence"

City and Port of Lázaro Cárdenas, Michoacán

March 30, 2021

To whom it may concern,

Engineer Jorge Luis Cruz Ballado, Director General of the Port Authority of Lázaro Cárdenas, Corp., concessionaire of Port Lázaro Cárdenas, Michoacán, located at the Boulevard de las Islas number 1, island colony of Cayacal, city of Lázaro Cárdenas, Michoacán, email address: dirgral@puertolazarocardenas.com.mx, hereby set out with due respect:

In particular, I would like to share that the company, Kansas City Southern (KCS), has been providing for the past 15 years railway cargo service to and from Port Lázaro Cárdenas, with success, becoming a key player in the development of this port of the Mexican Pacific.

Thus, APILAC supports the approval of the merging of KCS and the company, Canadian Pacific Railway (CP), which is to be considered great news as it will increase the competition potential of this port, providing important benefits to three nations, the United States of America, Canada and Mexico.

In our view, the merging of CP and KCS will provide broader services for the transportation of goods that will surely increase railway connectivity which in turn will facilitate the transportation of heavy cargo and help decrease transportation time to the main U.S. ports on the coasts of the Gulf, the Atlantic, and the Pacific. The same goes for key foreign markets, helping cargo owners transport to existing markets, as well as new markets in the most efficient way.

As Port Director, I have no doubts that CPKC can integrate their operations without issue for the benefit of the railway clients and other interested parties. Thus there is much interest in this particular transaction because it will allow the merging of CPKC to present new options for railway services that are more efficient and reliable, which will strengthen the competition of other railway transporters and other modes of transportation that serve our markets. For example:

- There is particular enthusiasm for the role of the new routes created by the combined single CPKC line in the expanded access to growing markets in the United States, Mexico and Canada under the trade/business agreement T-MEC. It is essential that a real T-MEC railway option exists.
- The new opportunities under CPKC services will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

- It will strengthen the logistics of importing materials and exporting finished products.
- It will eliminate costs clients paid when KCS railroads crossed CP's, and vice versa.
- It is expected that Canadian processing plants will open in Lázaro Cárdenas and other parts of Mexico, receiving raw material through maritime port and distributing through CPKC railways.

For these reasons, the Port Authority of Lázaro Cárdenas, Corp., expresses its utmost support for the merging of CP and KCS, for it will improve competition, offer broader opportunities, and promote efficiency for clients of all sizes.

Therefore, this entity urges the Surface Transportation Board to approve the acquisition of KCS by CP as early as possible so that these systems can be integrated and all benefits of this agreement can be provided to all interested parties.

Sincerely,

Engineer Jorge Luis Cruz Ballado

Director General of the Port Authority of Lázaro Cárdenas, Corp.

ATTENTION: SURFACE TRANSPORTATION BOARD

My name is Jim Quinn, and my business address is 111 Water Street, Saint John, New Brunswick, Canada. I am President and CEO of The Saint John Port Authority. In my role, I am responsible for all management and operations of Port Saint John.

Port Saint John is experiencing tremendous growth due to our partnership with CP Rail and their network. Importers and exporters are looking for increased optionality particularly as labor stoppages and congestion continue to affect the transportation sector. The CP-KCS transaction would offer the first complete North American network connecting ports across the continent. Port Saint John is excited about the potential to have connectivity from eastern Canada through Kansas City and beyond.

Port Saint John supports approval of the CP-KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CP-KCS network – with new single-line hauls and access to premier ports on the U.S. Gulf, and the Atlantic and Pacific coasts as well as to key North American cities and overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CP-KCS will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. CP has already proven their track record of seamless connectivity with their acquisition of CMQR that leads to Port Saint John by investing heavily in rail safety and expediting investment to accommodate demand. We see this transaction as uniquely beneficial to the North American transportation network as it will provide the first contiguous Canada-United States Mexico rail network connection.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options. The seamless connection from Port Saint John, through the mid-western United States down to Mexico offers a tremendous opportunity for the entire transportation network.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. CP Rail has made significant upgrades to the former CMQR line in Maine offering a safer, faster more effective line for rail traffic. Their track record for investment is clear and proven to both Port operators and steamship lines.

Tel./tél. 506.636.4869 Fax/téléc. 506.636.4443
PortSaintJohn @portsaintjohn sjport.com

For these reasons, Port Saint John is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Port Saint John urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Jim Quinn, declare under penalty of perjury under the laws of the United States ,that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 26, 2021.

Support for Canadian Pacific Railway/Kansas City Southern Lines Combination

Boundary Trail Railway Company ("BTRC") is a private short line railway company operating a network connecting with the Canadian Pacific Railway (CPR) south of Winnipeg, Manitoba, Canada. Our customers ship grain, fertilizers, special crops, plastics, and steel in and out of our growing region in southern Manitoba. Our customers include U.S. shippers such as Simplot out of Boise, ID.

We have a deep and close relationship with our American neighbours in North Dakota, and by extension with the Northern Plains Railroad who operate a few miles south of the border. We have an integrated rail services partnership and together with CPR we offer complete transportation solutions for our Canadian and U.S. customers.

We see nothing but exciting potential and further market access benefits for our shippers from a CP/Kansas City Southern combination. We can see fertilizer coming from new origins, potential new destinations for Manitoba-originated commodities, and new transload opportunity for industrial products as a result of a single-line railroad that extends from the "heartland of Canada" where we are located, throughout the U.S., and into Mexico. As a small short line player in a large industry, we are keen on opportunities that diversify and grow our business, and provide significant benefit to our customers. BTR accordingly enthusiastically

supports the STB approval of CP's proposed KCS combination in a quick and efficient manner.

We have the privilege of BTR of operating on CP lines in Manitoba and elsewhere as a result of trackage rights agreements. We know of CP's intense focus on safety and operating practices, and their commitment to the community in respect to the same issues. This will serve the merged entities and its U.S. operations very well and as a result, a safe industry remains a highly productive industry that shippers can rely upon.

Yours very truly,

BOUNDARY TRAIL RAILWAY INC.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Steve Bromley and my business address is 421 7th Avenue SW, 30th Floor Office 3068, Calgary, AB T2P 4K9. I am Chief Commercial Officer of Cando Rail Services Ltd. In my role, I am responsible for commercial, business development, infrastructure, and operations/service delivery.

Cando Rail Services is a customer of CP's at the Cando Multi-Purpose Terminal in British Columbia where CP provides daily transfer and switching services.

Cando Rail Services supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Cando sees this transaction as uniquely beneficial.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City and expand the markets we serve.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been impressed by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions.

For these reasons, Cando Rail Services is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Cando Rail Services urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Jordan Buck and I am Director Marketing for Central Midland Railway. My business address is 1400 North Warson Road, St. Louis, Missouri 63132. As Director Marketing, I am responsible for sales and marketing, developing new rail business and industrial development.

The Central Midland Railway supports approval of the CP/KCS combination. The transaction would provide significant benefits to our customers and to the economic development of the St. Louis region.

The KCS has been an excellent partner in our efforts to maintain and grow rail business with customers on the Central Midland. Our customers have enjoyed the benefits of Central Midland's ability to interchange with six of the seven major Class 1 carriers, with CP heretofore being the only exception. Having single line access to suppliers and markets on the CP will provide a tremendous economic boost to our customers by reducing their transportation costs and presenting more options for sourcing inputs and selling their products. Among the customers who will benefit from direct access to the CP are Central Midland's seven customers that receive inbound forest products who will enjoy direct access to CP's huge paper and lumber sourcing basket. Our three vegetable oil customers will appreciate the access to CP's large base of oilseed crushers in the Upper Midwest and our eleven petro-chemical customers will gain single-line access to CP's large group of producers in that industry.

The advantage that comes with access by the CP to St. Louis will not only benefit Central Midand's current customers, but will prove to be tremendously helpful for industrial development efforts throughout the region. It solidifies St. Louis' position as one of the premier inland logistics centers in the United States. No other region has direct access to more Class 1 carriers, is more centrally located on the inland waterway system and has better connections to the interstate highway system. This unparalleled access to producers and markets throughout all of North America via multiple modes as well as single rail-line access to every major port in North America makes the region extremely attractive as a site location for multi-national manufacturers and distributors. The efficiencies generated from this exceptional transportation access will drive job growth in the heart of the country and strengthen our nation's economy.
