This proposed merger will produce benefits in economic efficiency, not only to the Central Midland Railway, but to the St. Louis region and the nation. Creating efficiencies in transportation will produce benefits in transportation safety , environmental protection, and in job creation. For these reasons, the Central Midland Railway is wholly supportive of the CP-KCS merger and urges the STB to approve the petition as quickly as possible.

Sincerely,

Jordan Buck
Director, Marketing
Central Midland Railway

ATTENTION: Surface Transportation Board

My name is Phil Smailes and my business address is 2511 Pratt Blvd., Elk Grove Village IL 60007.

I am Director of Marketing for Progressive Rail Incorporated. In my role I am responsible for Sales and Marketing for PGR operated rail lines -Chicago Jct. Railway in Elk Grove Village, IL and the Chicago St. Paul & Pacific Railway in Bensenville, IL

I am supportive of the Canadian Pacific and Kansas City Southern merger. The combination of these two historic railroads would provide numerous and significant benefits for the customers we serve on both rail lines. It offers optionality, extended market reach and efficiencies that cannot be captured today.

Optionality

This will offer our customers more origin and destination options into markets that up this point could not be effectively reached and will provide our customers greater routing alternatives for their raw material sourcing and product sales.

Market Reach

Our customers have an extended reach to cities and industries that they cannot touch today from the Chicago area. It will allow for the conversion of markets from truck to rail that could not be supported on a multiple rail lines basis.

Efficiencies

A single line move connecting the northern and southern points that a combined CP/KCS would offer would greatly improve transit times and route predictability which are both keys in making the truck to rail conversion. Those efficiencies are not only realized in costs saving to our customers but in the reduction of carbon emissions that such a conversion would have.
In summary, the merger of these two railroads will offer our customers a better service product to utilize rail to its greatest extent possible. I urge the STB's approval of the merger of these two railroads .

Sincerely,

Philip Smailes
Director, Marketing
Chicago, St. Paul & Pacific Railroad

TELEPHONE 701-223-9282
FAX NUMBER 701-223-4147

3501 E ROSSER AVE
BISMARCK, ND 58501

ATTENTION: Surface Transportation Board

My name is Mark Trottier and my business address is 3501 East Rosser Ave, Bismarck, North Dakota. I am Manager of business development of Dakota, Missouri Valley and Western Railroad. In my role, I am responsible for developing business for our company and our customers.

DMVW is a shortline railroad that interchanges with the Canadian Pacific. I work with customers on our railroad to help ensure that their products move in a timely fashion and also work with teams from CP to make this happen. The teams I work with at Canadian Pacific have been great to work with in resolving any issues or problems the customer might have. Myself and our customers have seen a significant communication increase and a willingness to help with any problems.

Dakota, Missouri Valley and Western Railroad supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

I personally feel that the combination of these 2 class 1 railroads will greatly enhance our customer's competitiveness because it will open them to a whole new set of markets, thus making them more profitable in the communities in which they operate. I personally feel that this will bring a badly needed boost to the agricultural economy in North Dakota. The grain shippers on our line have never been able move grain to the south because they were always at a disadvantage with elevators that were located on another class 1, but this merger will level the playing field for them and the "trickle down" at the local level will be huge.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by giving shippers more destinations and allowing their operations to access these markets in different times of the year.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Dakota, Missouri Valley and Western Railroad is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Dakota, Missouri Valley and Western Railroad strongly urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTN: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Davenport Industrial Railroad (DIR), a Class III railroad connecting with Canadian Pacific Railway System (CP) in Davenport, IA hereby files this letter to express its concerns about the bid by Canadian National Railway (CN) to acquire the Kansas City Southern Railway (KCS) and express its support for the CP-KCS combination.

DIR supports swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. A combined CP-KCS would increase operating efficiencies for our customers and provide new marketing opportunities to the Eastern Iowa Industrial Center which our rail line serves.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP-KCS deal. Specifically, if CN were to acquire KCS, the merged firm would not provide a single-line haul, competitive option into the markets south of Kansas City which adversely affects our customers in the fertilizer, chemical, and plastics manufacturing industries.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP-KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN-KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CP-KCS network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist; that will help us serve our customers better. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City and not provide the benefits of a single line haul from the Gulf Coast or Texas areas to Davenport.

Respectfully,

Steve Berish
General Manager/Co-Owner

TO: **Surface Transportation Board**

SUBJECT: **Supplier Support Letter**

Supplier Support Letter Bullets

Edmonton Railway Contracting Ltd. is a supplier of all manpower, equipment and materials used in constructing or maintaining railroad tracks to the rail industry. CP is one of our customers.

I Rajinder Dhillon serve as the General Manager at Edmonton Railroad Contracting Ltd. where my duties include overseeing day-to-day operations, ensure employees work productively, professionally and safely, as well as developing and implementing growth strategies for the company. Edmonton Railway Contracting Ltd. supports approval of the proposed combination of CP and KCS.

From our perspective as a supplier, the transaction is beneficial because it will strongly support growth and investment in the North American rail network.

Edmonton Railway Contracting Ltd. is a track maintenance, new track construction, rail equipment supplier. The value in the merger that we see is the increase in the infrastructure with CP, and the amount of goods that it can move south within its own capacity.

The new transportation services that CPKC will bring to their customers will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC, and will shift freight from trucks on the highways to the rail system. All these things will help support economic and employment growth in the United States and across the Continent under the USMCA trade agreement.

In turn, that growth will support investments in new rail capacity that benefit shippers, the public, and suppliers like us alike.

We see the transaction as only beneficial; we do not anticipate any negative impacts to the environment, to competition, to safety, or to any other public interest. For these reasons, we hope to see the transaction close and the benefits come to light as soon as possible.

Raj Dhillon

Washington, D.C. 20423

Dear Surface Transportation Board:

My name is Tony De Thomasis, President and CEO of Essex Morterm Holdings, owners and operators of the Essex Terminal Railway Company (ETR). Our business address is 1601 Lincoln Ave., Windsor, ON, CANADA. In my role, I am responsible for the operations of the ETR short line which connects with CP at Windsor, Ontario. ETR works closely with CP to ship rail traffic to/from customers in the greater Windsor area. ETR's customers ship and receive propane, agricultural products, aluminum, steel, plastics, fuel and lumber.

ETR supports the combination Canadian Pacific Railway and Kansas City Southern Railroad. The transaction will provide significant benefits that we are eager to see realized. The transaction promises to provide improved service options and invigorate transportation competition in the markets our customers serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help our customers reach markets more efficiently. Given the two railroads' strong focus on safety and their track record of operational excellence, we have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

The transaction will allow CPKC to provide new, more efficient and reliable rail service options which will strengthen competition against other, larger rail carriers and trucks. We are particularly enthusiastic about the role CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. CPKC's new service offerings will improve transit times and reliability which will reduce our customers' equipment costs.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer our customers the benefits of seamless, single-line service. The entirely complementary nature of CP's and KCS' networks will only make CPKC a better alternative. By connecting only at Kansas City, not overlapping anywhere and continuing to interchange with all of their other existing interline partners, the transaction will not have any adverse effects on competition.

ETR is voicing strong support for the combination of CP and KCS because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. We urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized by all stakeholders.

Yours truly,

Forty Mile Rail Inc.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Paul Laqua and my business address is 601 1st Avenue Foremost Alberta. I am President of Forty Mile Rail Inc. In my role, I am responsible for making sure the rail operates in a safe and productive manor.

Forty Mile Rail Inc. is [a shareholder owned Industrial Rail line that ships a number of agriculture products in conjunction with CP Rail. Forty Mile Rail Inc has also worked with wind towers in the past. Most recently we have stored non hazardous cars on our line as well as cars with residue last contained. All of the above work has been carried out with a very strong working partnership with CP Rail.

Forty Mile Rail Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

> For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Forty Mile Rail Inc. is currently working on a fertilizer agreement with ADM out of Iowa. This would include the movement of unit trains from Iowa to Forty Mile Rail Inc. on the CP/KCS line.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of fertilizer from January to 2022.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

- CPKC will open new doors for Forty Mile Rail Inc. to maintain and provide a broader customer base on a consistent and reliable bases.

[

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers

For these reasons, Forty Mile Rail Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Forty Mile Rail Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Fremantle Trailer Repairs Ltd.

Michael W. Peters
Chief Commercial Officer, North America

March 30, 2021

Attn: Surface Transportation Board, FD-36500

My name is Michael Peters, and my business address is 13901 Sutton Park Drive, Jacksonville, Florida, 32224. I am the Chief Commercial Officer of Genesee & Wyoming Inc. (GWI) in North America. In my role I am responsible for all commercial activities for the 110+ short line railroads that GWI owns and operates in North America.

GWI interchanges thousands of railcars each month with both KCS and CP through 6 railroads that interchange with Canadian Pacific and 10 railroads that interchange with KCS. We have worked hard with both KCS and CP over the years to develop creative innovative solutions to provide competitive rail freight options for shippers.

GWI supports approval of the CP/KCS combination in an expedited fashion to allow for the benefits of the transaction to be realized by all involved.

As the operator of short line last mile operations, we know it is vitally important that the long-haul portion of any rail transportation move occur efficiently and effectively for the benefit of our customers. We expect the proposed transaction could improve service and competition in several ways:

- A combined CP/KCS will provide an additional competitive route for agricultural products coming out of South Dakota on our Rapid City, Pierre and Eastern (RCPE) railroad destined for U.S. Gulf Coast Ports and further export around the world.
- A combined CP/KCS has the potential to create a more seamless supply chain for finished autos and auto parts to move to and from the US Midwest, Mexico, and Canada.
- A combined CP/KCS will decrease transit times and improve railcar utilization for shippers and railroads alike.
- A combined CP/KCS should reduce cross border trucking and improve safety on our road infrastructure.

From our perspective, the proposed transaction should provide improved service options and invigorate transportation competition in the markets we serve.

GWI urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Best regards,

Michael W. Peters

March 31, 2021

ATTENTION: Surface Transportation Board

My name is Perry Pellerin. I am the CEO of Great Sandhills Railway Ltd (GSR). We operate a shortline that interchanges with CP Rail at Swift Current, Saskatchewan. The relationship between CP and GSR has been and will continue to be critical for our success. There is no question to our full support of the purchase of the KCS by CP Rail. Both CP and KCS operate a safe, efficient railway and the idea of operating as one will only enhance those activities. The idea of a seamless route for our customers to Midwest USA and Mexico opens several opportunities not currently available to them under the current Rule 11 operation.

GSR is anchored by a gas plant that already ships several thousand cars per year to the Midwest USA and Mexico. The holdback from expanding this busines is rates. These rates are often a function of a combination of several Rule 11 rates. This combination of rates is often prohibitive from completing the additional business. The prospect of a seamless single line route will result in improved efficiency and rate structure more shipper friendly.

We have interchanged with CP Rail for over 10 years. Their attention to safety and communication have made them a great partner. I suspect these same attributes will be extended to KCS. KCS has also built its own reputation as a company that does what it says it is going to do. Together this will make the new CP/KCS carrier a significant competitor with the other Class One carriers.

In our opinion, CP Rail would be the best suitor for the KCS. Any other Class One carrier that acquired KCS might disrupt any competitive balance that currently exists. This would be especially true in the north/south corridors.

Having a seamless single line service for our customers means the acquisition will have a positive impact in all respects. Giving our shippers more options is good for them and obviously good for GSR. We are encouraged by our partner's expansion plans, as it in part will extend our reach for additional business. Combine that with the increased operating efficiencies it will make the CP/KCS a significant carrier option that we would be proud to be part of. All these factors would demand that GSR show its support for the acquisition.

Sincerely,

Perry Pellerin
CEO
Great Sandhills Railway Ltd

ATTENTION: Surface Transportation Board

My name is Andrew Glastetter, General Manager of the Great Western group of companies including the Great Western Railway of Saskatchewan (GWRS), The Fife Lake Railway Company, and Great Western Commodities. My business address is 254 Centre Street Box 669 Shaunavon, Sk Canada. In my role I have the overall responsibility of all three organizations and report to the board of directors of our parent company, "101052644 Saskatchewan Ltd". Great Western Railway is Saskatchewan's largest shortline railroad operating on a network of 440 miles in Southwest Saskatchewan. Great Western Commodities is a newly formed company that operates to buy, sell and coordinate grain shipments from the south Saskatchewan area. Since the inception of Great Western Commodities two and a half years ago, grain shipments have increased across the Great Western Railway network by over 90%. Great Western Commodities is also in the process of planning the build of a unit train capable inland grain terminal on our line which is just one part of an industrial growth strategy involving potentially $60,000,000.00 of infrastructure additions over the next few years.

Great Western Railway was formed in the year 2000 when this previous CP branch line was purchased from CP Rail. Today we still interchange directly with CP Rail at Assiniboia, Sk. Our focus over the past several years has been to grow our business and improve on efficiencies that support a fluid supply chain. With the constant improvements in process management across the class one railroads, the need to progress short line operations with the same passion for efficiency gains is critical to keep the supply chain moving effectively. This process focus with reciprocal effort from CP Rail has been a successful strategy for us resulting in improved flow of traffic at interchange.

Great Western Railway, Fife Lake Railway, and Great Western Commodities support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

In the past, I have been known to be skeptical of large railroad mergers, especially where I felt that shippers may be left with less competitive options. I do not see that as an issue in this case. I see this transaction as a means to reduce barriers in what is often a challenging supply chain. Service and access will improve which will drive a more seamless and efficient flow of traffic. I also expect there will be some shipping cost relief for many shippers. In our case we have experience with pricing shipments from our area through the ports on the U.S. Gulf. The rates were prohibitive due to the number of class one carriers involved in the move. This transaction will provide access from Canada direct to the U,S, Gulf ports with one carrier which will ease the shipping cost, and make traffic management and tracking that much more simple, also without the often delayed handover at class one interchange. This improved access to direct operations in the southern U.S., and to the Gulf ports opens up vast new opportunities for shippers from our area. We have bid on new business in the past for several hundred thousand tons of grain per year with overseas grain shippers that wished to ship through their affiliated terminals at Gulf ports, but the rates and logistics did not work. This access will likely re-open

those and other similar opportunities and may help balance the often congested port access in Canada currently.

Our railway operation also serves the aggregate and energy industry. Over the years we have safely moved several thousand railcar loads of crude by rail across our line. While crude by rail is not moving on our line currently, we expect this transaction may resume these shipments due to the improved access to the U.S. ports, and due to the pipeline capacity issues we face here in Canada. One large oil producer in our region has long expressed interest in improved direct access to U.S ports and refineries.

Part of our industrial expansion plans here also include the formation of new industrial distribution centers for various industries including wind farm distribution yards. With more access and opportunities to efficiently and safely move these large scale industrial projects by rail, we can better serve the alternate energy supply industry and move more traffic from the road networks to rail where is can be handled more safely and with a reduced impact to road infrastructure and the environment. As an example, all the components for a wind farm of over 60 towers that is in the middle of construction less than half a mile from our rail line was shipped here by truck over 1100 miles from a U.S. port. With many such projects planned for the region, the improved access and shipping costs that will be realized with this transaction will make the rail move more competitive for both overseas suppliers, and may also result in more projects being supplied by domestic suppliers from the southern U.S.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of agriculture and energy products to and from southern Saskatchewan and the U.S. south and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. The Great Western Railway has invested millions of dollars in a fleet of nearly 250 grain hopper cars which we use in conjunction with CP owned railcars, and various private fleets. Many of our own railcars ship grain to Mexico, and experience delays along the trip that is the result of several railroads handling the carload. The single-line haul from our interchange to Mexico and return will result in better cycle times providing better asset utilization and more grain shipped per railcar.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Great Western Railway, Fife Lake Railway, and Great Western Commodities are voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. I urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Andrew Glastetter, declare under penalty of perjury under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is William Furman, and my business address is One Centerpointe Drive, Ste. 200, Lake Oswego, Oregon, 97035. I am the Chairman and CEO of The Greenbrier Companies, Inc. (Greenbrier). Greenbrier is a leading international supplier of equipment and services to global freight transportation markets. Greenbrier designs, builds and markets freight railcars and marine barges in North America. We also have manufacturing operations in South America and Europe. Through our wheels, repair & parts business unit we supply freight railcar wheel services, parts, repair, refurbishment and retrofitting services to North American railroads and railcar owners and users. Greenbrier also offers railcar management, regulatory compliance services and leasing services to railroads and related transportation industries in North America.

Greenbrier supports approval of the CP/KCS combination. The transaction will allow a combined CPKC to provide new, more efficient and reliable rail service options and will generate immediate benefits to the freight rail sector. Greenbrier's relationship with CP and KCS extends across all of our business units. We are confident the combination will strengthen our role as a supplier to North American rail equipment markets.

CPKC will become the first Class I network, with service entirely under its own system, to create a north-south connection between the three USMCA countries. This supports Greenbrier's manufacturing operations in the U.S. and Mexico by enhancing efficiencies in our North American supply chain network and ensuring reliable delivery of our finished products. At the front end of our production cycle, KCS transports raw material south, including hundreds of thousands of tons of U.S. steel to our assembly facilities in Mexico. KCS then transports the finished new railcars north to our customers across North America. Over the last twelve months, we have shipped almost one thousand loads of raw material south and returned thousands more finished railcars north, all on KCS. In a typical year (non-COVID), Greenbrier's shipments north and south are three to four times higher. For example, from June 2019-July 2020, we shipped nearly 400,000 tons of steel to our Mexican operations. The railroad's service has always been reliable, competitive and consistent.

Greenbrier provides KCS with car hire accounting systems and services, including processing payments owed by KCS and receipts owed to KCS. This includes processing car hire claims, discounts, contract rate management and monthly funds settlement. Greenbrier is the industry leader in the railcar management space, and we are gratified that KCS has entrusted us with this service since January 2019.

The CPKC merger would create new opportunities for Greenbrier's wheels, repair & parts (GRS) business unit. Over the last 12 months, CP and KCS have accounted for a meaningful amount of our overall revenue from Class I Railroads for these aftermarket needs.

This transaction also offers a first of its kind, North American freight network that will fuel economic growth, reduce carbon emissions and provide a competitively priced service for the transportation marketplace. The merger will deliver significant benefits to the larger North American freight transportation market, including supply chain enhancements, environmental sustainability and North American trade competitiveness. The integrated rail network created by a merged CPKC will bring enhanced market competition to freight transportation. This will have a beneficial effect on service design and lower logistics costs to shippers in the U.S., Canada and Mexico.

- The merger supports our customers' export product growth plans: As a rail equipment supplier, this will enable us to supply many shippers with railcars to gain access to export markets for such commodities as energy products, grain and many other rail-transported goods.
- The combined networks will reduce redundant miles, improve transit times, remove interchange points and cut carbon emissions. These actions align with our core values of employee safety and green manufacturing.
- As an equipment supplier, this merger is beneficial as it will support growth and investment in the North American rail freight network. It would remove many heavy trucks off the roads and highways, while reducing congestion and pollution. These benefits will help support economic and employment growth in the United States and across the continent under the USMCA trade agreement. It is important to North American competitiveness in a global market space that there be a true USMCA railroad option.

I also emphasize that the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. Finally, given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest of the seven Class I railroads serving North America, Greenbrier is confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Greenbrier is voicing its strong support for the combination of CP and KCS. We believe it will enhance competition, provide expanded options and drive efficiencies for all stakeholders. Greenbrier urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized.

William A. Furman

ATTENTION: Surface Transportation Board

My name is Jordan Buck and I am Director Marketing for Iowa Southern Railway. My business address is 1303 South 21st Street, Centerville, Iowa 52533.

As Director Marketing, I am responsible for sales and marketing, developing new rail business and industrial development.
The Iowa Southern Railway supports approval of the CP/KCS combination. The transaction would provide significant benefits to our customers and to the economic development of Southern Iowa.

Since we assumed operation of the former Appanoose County Community Railroad in 2016, the Canadian Pacific has been a tremendous partner in reviving the railroad by taking advantage of every available opportunity to move products more efficiently into and out of Southern Iowa by rail. As an example, a myriad of agricultural products, such as lentils, peas, barley and beet pulp, were once moving very inefficiently by truck from the northern plains states to multiple processing and storage locations throughout the country only to be trucked again from those locations to multiple distant customers. These commodities are now moving by rail in 100+ ton covered hoppers from the northern plains into Centerville, Iowa via CP where they are processed or stored and shipped to end customers throughout the country by rail or, locally, by truck. In addition, CP has opened up markets for locally generated products such as scrap steel and has converted the local propane and lumber markets to rail. All of these changes have benefited the bottom line of the businesses of Southern Iowa.

With the combination of the CP and the KCS, even more benefits will come to Iowa Southern's customers and the local and regional economy. The economic development of the region will be aided by direct single-line access to KCS's large base of lumber mills as single line pricing and service will positively impact the price and availability of lumber for construction. Among other benefactors will be agricultural producers in Southern Iowa who will have single line access to new markets with the many poultry feeders on the KCS, export ports on the US Gulf, and the huge market for ag products in Mexico. Local manufacturers will also see improvements in their ability to source imported raw materials moving out of Mexico or through Gulf ports and will improve their ability to export their products.

The merger of CP and KCS will be a job-creator and will bring increased economic prosperity to a region of the heartland where the Iowa Southern Railway is working diligently to reverse the economic deterioration that has been created largely by being bypassed by the national transportation system. This region still has the tools to achieve greater prosperity and access to the KCS will prove to be a tremendous boost toward that goal. For these reasons, the Iowa Southern Railway is wholly supportive of the CP-KCS merger and urges the STB to approve the petition as quickly as possible.

Sincerely,

Jordan O Buck

Iowa Southern Railway

ATTENTION: Surface Transportation Board

My name is Dave Fellon and my business address is 12045 West State Street, Mason City, IA. I am Owner & President of the Iowa Traction Railway. In my role, I am responsible for Sales and Marketing and building new organic carload business.

The Iowa Traction Railway supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

It is with high enthusiasm that I prepare this letter for review by the Surface Transportation Board in advance of a pending merger between the Canadian Pacific Railway and Kansas City Southern Railway.

During my career in railroading over the past 25 years, I have never seen a proposed merger that even begins to compare to the CPKC. This is truly the one merger that makes so much sense for all of the right reasons. In that train of thought, let's consider all of the economic, social, and environmental gains that will be ushered in with a combined Canadian Pacific Railway/Kansas City Southern Railway network here in Northern Iowa.

On Progressive Rail's Iowa Traction Railway, based in Mason City, Iowa, we have prime rail served industrial sites, large workforces, and a Midwest work ethic that gets things done. What we don't have is total connectivity to Mexico as the Canadian Pacific Railway only reaches Kansas City, Missouri. A streamlined network of three lines that touch the Atlantic Ocean, the Pacific Ocean, and the Gulf of Mexico will finally connect all of North America by one railroad that brings with it the DNA of the CP and KCS, both of which are known for their excellent service and collaborative business development styles.

However, this is far from a merger being granted for efficiency sake. It is also a merger that's about attracting more business off the highways and onto the railways, with more high-paying jobs following in the wake.

Railroads have a long tradition of being excellent industrial development machines. The ability to attract industry to North America involves competing for jobs on a worldwide scale. The more efficiency, the more cost effectiveness, and the more optionality that a railroad can offer assures this development as the deciding factor always comes down to logistics. The CPKS railroad will open up endless doors for big time capital to flow into a network that offers any site selection team with the perfect connectivity to Canada, the United States of America, and Mexico.

Industrial development equals generational careers. Careers equal strong families. Strong families equal great schools, solid towns and cities, and reinvestment by stakeholders into a better way of life for years to come. It all starts with the CPKC Railroad connecting all of the right dots which will allow the rest to follow.

Finally, the world is burning up and getting warmer by the year. Allowing the Canadian Pacific Railway/Kansas City Southern Railway to merge will allow supply chains to

become hyper-efficient. Circuitous routes are no longer needed. Extra drayage and other accessorial work can be eliminated. All combined, this would make a meaningful reduction in carbon. We will all be judged by our children who entrust us to be good stewards of the planet. What we as an industry can do with the CPKC merger is increase carbon reduction by removing less efficient trucks from the highways while deploying the safest mode of land based transportation. We can help deliver a safer, cleaner world for everyone. As a society, we need to get this right and time is of the essence.

In closure, I am respectfully asking that the Surface Transportation Board support the CP/KCS merger. This is exactly what the economy, our society, and the environment all need.

Thank you,

Dave Fellon
Majority Owner

LAKE LINE RAILROAD INC. c/o 1700 – 242 Hargrave Street, Winnipeg, Manitoba Canada R3C0V1

March 29, 2021

Surface Transportation Board
395 E Street SW
Washington, DC 20423

Dear Sir or Madam:

My name is Art Stacey. I am the President of Lake Line Railroad Inc. ("LLRR"). In my role, I am ultimately responsible for all aspects of LLRR's relationship with Canadian Pacific Railway ("CPR") with whom we interchange traffic at two locations.

LLRR is a short line railroad comprising two rail lines formerly operated by CPR. We have been in operation for 9 years. We interchange traffic with CPR two to three times per week. LLRR supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. For LLRR the benefits include the ability to offer to shippers the opportunity to have access to the gulf coast and to points in the southern US and Mexico. I expect that the combination will also assist us in attracting new shippers to our rail line.

From our perspective the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our shippers reach existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their record of consistent operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

LLRR presently ships grain, alcohol, and aggregate on our two lines. I believe that the enhanced access with the CPKS combination will give to ports and southern destinations will make us a more attractive option to local shippers, particularly in the grain industry.

While CP has provided us with good service its market reach is limited today as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that could expand the markets we serve effectively. We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen

competition against the other, larger rail carriers and trucks that serve our markets. From our perspective the greatest benefit of the CPKS combination will be the enhanced opportunity to serve shippers of grain from our catchment area. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of cereal and specialty grains from central Manitoba to buyers in the southern US and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we need from our rail - transportation partners. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For the reasons set out above LLRR is strongly supportive of the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. LLRR urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Yours truly,

LAKE LINE RAILROAD INC.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Jason Bierwerth and my business address is PO Box 705 Crookston, MN 56716. I am Manager of Operations of Minnesota Northern Railroad. In my role, I am responsible for overseeing the daily operations, finances and other matters.

Minnesota Northern Railroad is a shortline railroad that interchanges with BNSF at Thief River Falls, MN shipping grain, fertilizer, rock, and scrap steel commodities. We have a great working relationship for 20 years.

Minnesota Northern Railroad supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Minnesota Northern Railroad has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City to enable our customers to reach a new market. Many of our customers have chosen to ship via BNSF instead of CPRS due to the limited reach on the CPRS.**
>
> **And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our customers.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Minnesota Northern Railroad is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Minnesota Northern Railroad urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Jason Biewerth

April 30, 2021

Surface Transportation Board

- Nethercott Excavating Ltd. is a supplier of Rail Maintenance and Construction services to the rail industry. CP is one of our customers.
- I Gary Nethercott serve as the President and Owner at Nethercott Excavating Ltd, where my duties include Estimating, Pricing, Organizing the work, Billing, Overall daily running of the business. Nethercott Excavating Ltd. supports approval of the proposed combination of CP and KCS.
- From our perspective as a supplier, the transaction is beneficial because it will strongly support growth and investment in the North American rail network.
- We are very much involved with the maintenance of the rail network and improving the safety of the system. We respect and support CP attention to safety and continued investments in upgrading facilities and increasing the capacity to serve customers.
- The new transportation services that CPKC will bring to their customers will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC, and will shift freight from trucks on the highways to the rail system. All of these things will help support economic and employment growth in the United States and across the Continent under the USMCA trade agreement.
- In turn, that growth will support investments in new rail capacity that benefit shippers, the public, and suppliers like us alike.
- We see the transaction as only beneficial; we do not anticipate any negative impacts to the environment, to competition, to safety, or to any other public interest. For these reasons, we hope to see the transaction close and the benefits come to light as soon as possible.

Signed:

Gary Nethercott (President)

BRANDY D. CHRISTIAN
CHIEF EXECUTIVE OFFICER

M. D. (MIKE) STOLZMAN
GENERAL MANAGER

NEW ORLEANS PUBLIC BELT RAILROAD

April 1, 2021

Surface Transportation Board
395 E Street SW
Washington, DC 20423

Dear Sir or Madame:

My name is Brandy Christian, and I am the President and CEO of The Board of Commissioners of the Port of New Orleans (Port NOLA) and the CEO of the New Orleans Public Belt Railroad Commission for the Port of New Orleans (NOPB). The corporate address of both organizations that I oversee is 1350 Port of New Orleans Place, New Orleans, Louisiana 70130. In my role, I am responsible for executive management of Port NOLA and the NOPB.

The Port of New Orleans is a diverse deep-water port strategically located on the Mississippi River near the Gulf of Mexico -- with access to 30-plus major inland hubs such as Dallas, Memphis, Chicago and Canada via 14,500 miles of waterways, six Class I railroads and interstate roadways. Port NOLA works jointly with the KCS on international intermodal business moving in and out of the Port of New Orleans and the KCS rail terminal in Wylie, Texas, serving the Dallas-Fort Worth market. Additionally, the KCS provides rail service to Port NOLA's industrial real estate tenants via the New Orleans Public Belt Railroad.

The NOPB is a Class III switching railroad with a mission of serving the Port of New Orleans, local customers, and the New Orleans Rail Gateway. The NOPB connects six Class I railroads to each other and to properties in and near the Port NOLA complex. The NOPB interchanges with KCS on a daily basis.

Both Port NOLA and NOPB have benefitted from a strong relationship with KCS and have worked even more closely on growing volume moving by rail through the New Orleans corridor since the re-start of intermodal service between New Orleans and Wylie in 2018.

Both Port NOLA and NOPB support approval of the CP/KCS combination. The transaction would provide significant benefits and enhanced rail network connectivity that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in our State reach new markets more efficiently.

RE: Support for Canadian Pacific Railway/Kansas City Southern Lines Combination

Northern Plains Railroad Inc. ("NPR") is an independent regional railroad network serving shippers in North Dakota and Minnesota. For a quarter of a century, NPR has been working within a freight transportation alliance with Canadian Pacific Railway ("CP") that initially ensured the preservation of rail service over a light density branch line network critical to the North Dakota and Minnesota agricultural community. As a result of the successful combination of safe operations, joint railroad and shipper capital investments, and an intense focus on meeting our customer's needs with customized local "first and last mile" service, NPR is proud to have created a successful business model that we believe is representative of the benefits that short line and regional railroads can provide shippers throughout the North American railroad industry. Along our 350 route miles, NPR today safely moves more than 20,000 carloads annually, originating shipments from modern unit train loading facilities, as well as traditional "single car" customers. We also provide a suite of value-added rail services to these shippers, providing a complete transportation package. Every shipper and carload are critical and important to NPR. It is in this spirit that NPR strongly supports Surface Transportation Board ("STB") approval of the CP/Kansas City Southern Lines ("KCS") combination.

NPR, our shippers, and the communities we serve in the upper Midwest have benefited economically from the existing origin and destination options that the CP-SOO Line combination has created for over three decades. An expansion of CP's existing network to include the KCS and its Mexican lines will create significant additional market access for NPR shippers today and into the future as the demand continues for competitive and service-sensitive rail freight transportation options. We believe that the CP-KCS combination will serve only to improve

growth possibilities in our industry, creating jobs, economic growth, and continuing to support rural development in North Dakota and Minnesota.

Looking to the future of the rail industry, NPR would point out that shippers looking to access the North Dakota and eastern Minnesota market will now have the benefit of single line access to CP, and by extension to its short line operators like NPR who provide the local service through transload and other creative logistic options.

In summary, NPR would again suggest that this combination is very worth of STB approval in a quick and timely manner. NPR is very much looking forward to the opportunities for future growth that it will provide in our region.

Yours very truly,

NORTHERN PLAINS RAILROAD INC.

Jesse J. Chalich

ATTENTION: Surface Transportation Board

My name is Dave Fellon and my business address is 21778 Highview Avenue, Lakeville, MN 55044. I am Owner & President of Progressive Rail Incorporated. In my role, I am responsible for Sales and Marketing and building new organic carload business.

Progressive Rail Incorporated supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

Massive economic growth is knocking in a big way with the combined Canadian Pacific Railway/Kansas City Southern Railway system. For over twenty years, Progressive Rail's hard fought for customers have trusted the CP to handle their urgent freight. During this time, the world has dramatically changed and markets are flowing like a rushing river to the fastest, most efficient, and most cost effective supply chains. It has been great to work with the Canadian Pacific Railway throughout their entire network, but unfortunately it ends in Kansas City, Missouri. With the approval of the CPKC partnership, Progressive Rail's valued customers will be able to successfully compete in a hyper-competitive global marketplace.

Speaking of global, we all breathe the same air. Today it is becoming ever more polluted as railroads on a percentage basis haul very little merchandise. The 36-38% market share being touted is dramatically weighted to unit train and bulk commodities. This is telling as to what a more streamlined CPKC Railway will be able to accomplish in the merchandise arena by way of making those crucial truck to rail conversions. When that flywheel finally starts turning in the right direction, the entire world wins with a whole lot less carbon emissions from trucks.

Additionally, rail is the safest mode of land based transportation. As the American Trucking Association continues to push for heavier and multiple trailer rigs, the new CPKC Railway allows for a far safer way to transport goods.

To realize America's next step in global economic prosperity, a quantifiably healthier environment, and a far safer traveling experiences, TEAM PGR is wholly supportive and genuinely excited about all of the benefits that the merger of the Canadian Pacific Railway and Kansas City Southern Railway network will consistently deliver.

Progressive Rail Incorporated urges the STB to approve CP's acquisition of KCS as swiftly as possible.

Sincerely,

Dave Fellon
President
Progressive Rail Incorporated

READING & NORTHERN RAILROAD

1 Railroad Blvd., P.O. Box 218, Port Clinton, PA 19549

Phone: 610.562.2100 www.rbmnrr.com

MARCH 30, 2021

SUPPORT LETTER

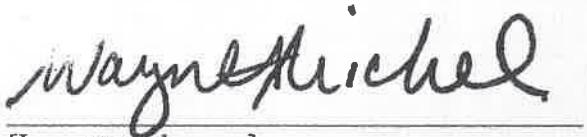
ATTENTION: Surface Transportation Board

My name is Wayne Michel and I am President of the Reading Blue Mountain & Northern Railroad (RBMN).

RBMN, with its corporate headquarters in Port Clinton, is a privately held railroad company serving over 70 customers in nine eastern Pennsylvania counties (Berks, Bradford, Carbon, Columbia, Lackawanna, Luzerne, Northumberland, Schuylkill and Wyoming). It has expanded its operations over the last 30+ years and now handles over 34,000 carloads of freight and 140,000 excursion train riders over 400 miles of track. RBMN operates both freight services and steam and diesel-powered excursion passenger services, owns almost 1,400 freight cars, and employs nearly 300 dedicated employees. RBMN has repeatedly been honored as one of the premier railroads in the nation including being named Regional Railroad of the Year in 2020 by Railway Age Magazine.

Although our primary interline relationship is with the Norfolk Southern Railroad, we have a commercial connection with Canadian Pacific due to the haulage agreement that resulted from CP's sale of much of the D&H to NS. NS delivers CP traffic to RBMN at NS' Taylor Yard under this haulage arrangement.

Over the years, we have worked well with CP to offer many of our customers competitive single line rates and routes from CP origins. The expansion of CP origins and destinations to KCS points will offer our many customers additional competitive options. Accordingly, RBMN supports STB approval of the CP/KCS merger and would hope the transaction is approved as soon as possible.



On a personal note, I have a good deal of experience with railroad mergers. I began my railroad career as a staff attorney at the STB predecessor agency, the Interstate Commerce Commission. In that capacity I helped draft or review most of the major ICC consolidation decisions between passage of the Staggers Act and 1985. In fact, I was asked to testify before the agency in the early 1980's after drafting the then Railroad Merger Policy statement. In my opinion, the CP/KCS consolidation is an excellent example of the type of end-to-end merger that should be supported as in the public interest.

In conclusion, RBMN is excited about the transaction because it will provide our customers with additional options for suppliers and additional markets for deliveries of materials. Accordingly, we urge the STB to approve CP's acquisition of KCS in a timely fashion so that the benefits of the deal can be realized for RBMN's customers and communities.

VERIFICATION

I, Wayne A. Michel, declare [or certify, verify, or state] under penalty of perjury [''under the laws of the United States,'' if executed outside of the United States] that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on 03/30/21(date).

[Signature]

[Insert typed name]

SRY Rail Link
Southern Railway of British Columbia Limited
2102 River Drive
New Westminster, BC
V3M 6S3

ATTENTION: Surface Transportation Board

My name is Gerald Linden and my business address is 2102 River Drive, New Westminster, BC. I am President of Southern Railway of British Columbia Limited (SRY). In my role, I'm responsible for all aspects of the company.

SRY is a major transporter of freight in British Columbia. We provide businesses and customers located in the BC Lower Mainland and Fraser Valley with seamless rail connections to markets throughout North America. SRY owns over 125 miles of track and interchanges railcars with four North American Class 1 railroads: CP, BNSF, CN, and UP.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our customers reach existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are supportive of the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against truck carriers that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our customers.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs by improving cycle times on our leased centrebeams and boxcars.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve transportation options for our customers.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, SRY is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. SRY urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Gerald Linden, I certify that I am qualified and authorized to submit this letter executed on March 29, 2021.

Gerald Linden

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

Standard Rail Corporation (formerly MGH Railcar) hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS") and to provide support for Canadian Pacific's ("CP") proposed combination with KCS.

Standard Rail Corporation offers a wide range of services, such as; mobile railcar cleaning, railcar dismantling, derailment service, transloading services, rail car remarking and mobile railcar repair. We work closely with CP partnered shortlines to transport and store cars off CP's mainline.

Standard Rail Corporation has not previously addressed either of the two proposals involving the acquisition of KCS.

Standard Rail Corporation is reliant on CN for transportation services in certain markets and therefore does not wish to voice a position taking CP's side over CN's.

Standard Rail Corporation nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.
- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS in light of these criteria.

Respectfully submitted,

Jaime DeKelver, CCLP
Vice President

STEWART SOUTHERN RAILWAY
BOX 12, Fillmore, SK, S0G 1N0 - PH: (306) 722-0000 FAX: (306) 722-1200

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Glenn Pohl and my business address is Box 12, Filmore, SK Canada S0G 1N0. I am the General Manager of The Stewart Southern Railway. In my role, I am responsible for overseeing the day to day operations, safety, promotion of the rail line and all around activities within our line.

Stewart Southern Railway is a shortline based out of Regina and runs 85 miles to the southeast on the old Tyvan Subdivision ending at Stoughton Saskatchewan. We have a direct relationship with CP Rail as we run into the Regina CP yard and we are situated just off the mainline. We ship everything from propane and butane, pulse crops, wheat, potash, gravel and storage cars. The SSR ships all over Canada all through the USA and down to Mexico.

The Stewart Southern Railway supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Stewart Southern Railway has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

This merger will allow our customers to have access to more markets creating a more competitive edge for moving commodities to markets with better pricing on shipping. With the CP KCS combination, it will open up our markets on our energy products and pulse crop customers.

We ship grain from our SSR served facilities in southern Saskatchewan to our customers with elevators/terminals in the South Central and Gulf region.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Energy products, and pulse crops from the SSR in Southern Saskatchewan to The Gulf.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. By offering a one desk waybill with less interchange fees we feel the savings and efficiency will promote more activity and markets to the south.
- Our customers receiving more options for the gulf will help find new direction and markets from Canada to Mexico.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Stewart Southern Railway is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Stewart Southern Railway urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Glenn Pohl

Stewart Southern Railway

T&W

TWIN CITIES & WESTERN RAILROAD COMPANY

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Mark Wegner and our business address is 2925 12th Street East, Glencoe, Minnesota, 55336. I am President & CEO of Twin Cities & Western Railroad Company, Minnesota Prairie Line, Inc. and Sisseton Milbank Railroad Company. In my role, among other responsibilities, I am responsible for providing optimal freight rail opportunities for the rail shippers and communities we serve.

Twin Cities & Western Railroad Company (TC&W) was formed July 26, 1991 as a line sale from Soo Line Railroad (subsequently integrated into Canadian Pacific). As such, TC&W has had a nearly 30-year history of partnering with Canadian Pacific in pursuing joint markets for the shippers in the south central Minnesota and northeastern South Dakota communities our short line railroads serve.

Twin Cities & Western Railroad Company supports approval of the CP/KCS combination. The transaction would appear to provide significant benefits for our customers and we are excited to explore market options for our customers with the combined CPKC!

From our perspective, the transaction promises to provide improved service options and hopefully open up the KCS chicken feeding facilities to receiving Minnesota and South Dakota corn from our customers.

CP has traditionally worked with TC&W as the grain markets constantly change, and in partnership with CP, both of our organizations have been nimble, quick and responsive to sharp changes in the grain marketplace, which has been a hallmark of our joint success. This combination should yield even more options to respond to the often unforeseen changes in the grain marketplace. We fully expect the combined entity will continue the tradition of nimble, quick and responsiveness TC&W has seen, with a wider array of options as a result of the KCS addition.

For these reasons, Twin Cities & Western Railroad Company is voicing support for the combination of CP and KCS, because it will provide expanded options for the customers we serve.

Sincerely,

Mark Wegner

VERMONT RAIL SYSTEM
One Railway Lane, Burlington, VT 05401
Tel. 802-658-2550 Fax. 802-658-2553

March 29, 2021

Ms. Cynthia T. Brown
Chief, Section of Administration
Office of Proceedings
Surface Transportation Board
395 E Street, S.W.
Washington, DC 20423

Re: Docket No. FD 36500 – Canadian Pacific Railway Limited, et al.

Dear Ms. Brown:

Vermont Rail System (VRS), headquartered in Burlington, VT, consists of six short line railroads, two of which interchange with CP. The Clarendon and Pittsford Railroad interchanges with CP in Whitehall, NY, and the Washington County Railroad interchanges with CP in Newport, VT. These interchanges with CP serve as gateways to points north and west of New England. VRS supports the proposed CP/KCS combination as offering additional competitive routing options for VRS and its customers.

From our perspective, the proposed transaction promises to provide improved service options and transportation competition in the markets we serve. VRS handles inbound grain traffic from the Midwest, as well as traffic that terminates in Mexico. The current VRS traffic destined for Mexico is interchanged from CP to KCS in Kansas City, and a combined CPKC network – with new single-line hauls and access to ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – could improve efficiency in this existing lane of business and open opportunities for business growth.

In addition, we are particularly enthusiastic about the role that new CPKC single-line routes could play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. While VRS understands that KCS and CP have had a cooperative relationship in the past, as separate companies they have not been able to offer the kind of seamless, single-line service we seek from our transportation providers so the transaction proposed should be an improvement for our customers. Given the straightforward network connectivity between CP and KCS, we believe that they should be able to implement their transaction without service disruptions.

For these reasons, VRS supports the combination of CP and KCS as promising enhanced competition and expanded transportation options for VRS customers.

Regards,

Selden Houghton
President

March 29, 2021

The Honorable Martin J. Oberman
Chairman
Surface Transportation Board
395 E Street SW
Washington, DC 20423

Dear Chairman Oberman:

Re: FD 36500, *CP-Control-KCS*

Watco operates 41 Class III short line railroads and one Class II regional railroad across the United States. Ten of those railroads connect with either CP or KCS. One, the Kaw River Railroad (KAW), connects with both CP and KCS at Kansas City, along with all of the other railroads serving that important terminal.

We enthusiastically support the proposed combination of CP and KCS and urge the Surface Transportation Board to approve it as expeditiously as possible. The transaction promises to provide new, more competitive services to the customers served by Watco's railroads and expand their market reach throughout North America. CP and KCS are both good partners to the railroads with which they connect, providing reliable and efficient service and supporting the needs of our customers. CP's commitment to operational excellence and execution gives us great confidence that the combination of these railroads, which connect only at the single point of Kansas City, will be implemented without disruption to the reliable service our customers are provided today.

The Watco railroads that connect with KCS and CP serve a wide array of customers and commodities. Listed below are the eight railroads with connections with KCS and not CP:

1. Alabama Southern Railroad (ABS) connects at Artesia, MS
2. Arkansas Southern Railroad (ARS) connects at Heavener, OK and Ashdown, AR
3. Baton Rouge Southern Railroad (BRS) connects at Brooklawn, LA
4. Louisiana Southern Railroad (LAS) connects at Gibsland, Pineville and Sibley in Louisiana
5. Mississippi Southern Railroad (MSR) connects at Newton, MS
6. South Kansas & Oklahoma Railroad (SKOL) connects at Pittsburg, KS
7. Timber Rock Railroad (TIBR) connects at DeRidder, LA
8. Vicksburg Southern Railroad (VSOR) connects at Vicksburg, MS

These railroads originate and terminate a wide variety of commodities that move via KCS to a wide array of destinations. The new CPKC network will have dramatically expanded reach offering new

single-line routes to important markets in the Upper Midwest and throughout Canada. For example, on the Alabama Southern Railroad (ARS), steel plate will have greater access to northern markets and Canadian crude oil will have greater outlets to coastal American refineries. The combination will be good for Watco's online customers, and therefore good for Watco. Additionally, we operate KCS-owned Dallas Zacha Terminal through a long-term lease.

One of our railroads connect with CP and not KCS. The Wisconsin & Southern Railroad (WSOR) serves northeastern Illinois and southern Wisconsin and connects with CP at Chicago and at Janesville and Milwaukee, Wisconsin. (Watco also provides switching services at one location served by CP in Canada.) WSOR serves agricultural and industrial customers throughout southern Wisconsin and northern Illinois. WSOR already has direct connections with other Class 1 railroads at Chicago, and knows first-hand the advantages for our customers of the single-line routes those railroads offer to and from points in the South Central United States. The proposed CPKC creates a new competitive option that will serve our customers well, especially for grain and other commodities moving to South Central States, and for the first time on a single-line basis, deep into Mexico.

One of our railroads, the KAW connects with both KCS and CP in Kansas City, along with all of the other Class 1's serving that important terminal. We know first-hand that the connection between CP and KCS is an efficient one with a direct connection through the shared Knoche yard. Their network configuration will help make implementation of new combined services very easy, without disruption to the busy and important Kansas City terminal.

We also know first-hand there is no negative competitive implications with CP and KCS both reaching Kansas City; CP heads north, KCS heads south and they are not competitive alternatives for KAW-served customers. Instead, a combined CPKC system with expanded service offerings across their integrated network will provide better options for our customers whichever markets they are trying to reach.

The Watco Team and its undersigned railroads look forward to CP and KCS being allowed to deliver the benefits their combination promises, and we encourage the Board to approve the transaction without unnecessary delay and burden.

Sincerely,
Alabama Southern Railroad (ABS)
Alabama Warrior Railway (ABWR)
Ann Arbor Railroad (AA)
Arkansas Southern Railroad (ARS)
Austin Western Railroad (AWRR)
Autauga Northern Railroad (AUT)

Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

1725091 Alberta Ltd. is an investment company with operating companies in the supply of concrete and aggregate products in Western Canada. We have actively sought markets in the United states and Mexico for our products and many of our equipment supplies and materials come in by rail.

If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result. We are pro-business but we are also pro-competition and if CN were allowed to proceed with this transaction it would have a devastating impact on the competitiveness of the rail industry and would precipitate further requirements for the rail consolidation increasing this issue further. This would result in higher input prices for us and higher export prices for the world if customers can even access the network which could be closed for all but the biggest customers.

I am writing to express 1725091 Alberta Ltd.'s perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would

be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed

to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its

existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Gord Wallace,
1725091 Alberta Ltd.

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

5 Suns Transloading hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would also provide great access to fertilizers/DDGs for farmers in a cost-effective manner.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, we would be harmed by the reduction in competition that would result from a CN acquisition of KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Shawn Murray
Owner/President

A&K Railroad Materials, Inc.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Kellen Desmond, President of A&K Railroad Materials and my business address is 1505 S Redwood Rd, Salt Lake City, UT 84104.

A&K is a leading supplier of new and used railroad track materials and depends on North America's railroad carriers and infrastructure as our primary mode of delivering product. We regularly utilize CP and KCS as we have locations directly served by these railroads. These locations include sites in Kansas, Illinois, and Saskatchewan.

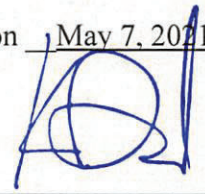
A&K supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example, CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of railroad track materials from our US Midwestern locations to Canada and Mexico.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two



smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, A&K is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. A&K urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Kellen Desmond, verify that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on May 7, 2021

Providing What Matters

A.STUCKI COMPANY

May 14, 2021
Surface Transportation Board
395 E. St. SW
Washington, DC 20423

- A. Stucki is a supplier of freight car and rail related parts to the rail industry. CP is one of our customers.
- I Dave Oestermeyer SERVE AS THE Chief Commercial Officer at A. Stucki, where my duties include commercial growth. A. Stucki supports approval of the proposed combination of CP and KCS.
- From our perspective as a supplier, the transaction is beneficial because it will strongly support growth and investment in the North American rail network.
- As a freight car component supplier to CP, we see the benefit in this merger of CP and KCS to bring even more attention to safety and growth in the rail industry.
- The new transportation services that CPKC will bring to their customers will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC, and will shift freight from trucks on the highways to the rail system. All of these things will help support economic and employment growth in the United States and across the Continent under the USMCA trade agreement.
- In turn, that growth will support investments in new rail capacity that benefit shippers, the public, and suppliers like us alike.
- We see the transaction as only beneficial; we do not anticipate any negative impacts to the environment, to competition, to safety, or to any other public interest. For these reasons, we hope to see the transaction close, and the benefits come to light as soon as possible.

Signed,

DA Oestermeyer

MAERSK

ATTENTION: Surface Transportation Board
RE: Finance Docket No. 36500, CP/KCS Combination

My name is Jonathan Sinton and my business address is 9300 Arrowpoint Blvd., Charlotte, NC 28273, USA. I am the Regional Head of Procurement, North America with A.P. Moller – Maersk ("Maersk"). In my role, I am responsible for procurement decisions for the North America market, including rail services.

Maersk is the leading global container logistics company in the world. We rely heavily on efficient rail transportation services from ports to inland destinations and are intimately familiar with the rail options available from ports across North America. We contract with all the Class I North American railroads for rail transportation services.

We have in-depth familiarity with the capabilities of the separate Canadian Pacific and Kansas City Southern networks. Both of these railroads are good transportation partners of ours, and they provide efficient and effective transportation services. But separately they are not able to provide nearly the reach as they would if they were combined.

Maersk supports actions, initiatives, investments and business combinations that increase supply chain efficiency, fluidity and velocity at competitive prices. The transaction will have particularly compelling benefits from traffic moving inland from the KCS-served port of Lazaro Cardenas, where APM Terminals operates a terminal. We have been quite impressed by the work KCS has done to develop efficient intermodal services connecting Lazaro Cardenas with central Mexico and points on KCS's system in the United States. KCS's current reach, however, is limited, as it does not extend beyond Kansas City. The combination with CP promises to open up new options for efficient intermodal rail transportation all the way into America's Heartland. We don't expect these options to supplant the current options from ports on the U.S. West Coast, but as recent supply chain challenges have shown, the entire U.S. economy – and indeed the World economy –benefits when there are better transportation options available to overcome logistical challenges.

From our perspective, the ability for a combined CPKC network to offer new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. A more efficient rail network results allows for strengthened competition against the other, larger rail carriers and trucks that serve our markets.

Maersk relies upon CP's service to deliver containerized freight destined to or originating from overseas markets in a safe, efficient and cost-effective manner. CP has provided us with excellent service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

Classification: Confidential

DocuSign Envelope ID: DE69FE47-640F-4C03-B005-EDA5D0A67352

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that we do not anticipate adverse impacts on our ability to cost-effectively procure rail service from the relevant market. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we have reason to believe KCS and CP's assertions that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Maersk can support the combination of CP and KCS, because it will provide expanded options and drive efficiencies for customers of all sizes without sacrificing competition.

VERIFICATION

I Jonathan Sinton, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Surface Transportation Board
395 E St SW
Washington, DC 20423

Dear Board Members,

I am writing to express my support for the proposed merger between Canadian Pacific Railway and Kansas City Southern Railway, as it has been proposed to the US Surface Transportation Board.

My company, ABDW Logistics, LLC exists as an active CPRS shipper with locations in Wisconsin and Iowa. CPRS has provided adequate, frequent service over time, a positive aspect which I am confident will continue subsequent to the merger. CPRS has shown great attention in recent years to operational improvement and consistency as well as focus on customer experience. Again, I expect that these same attributes will continue in a positive fashion post-merger.

My business provides transloading services, more distinctly defined as facilitating movement of freight from truck to rail or vice-versa, allowing the rail to expand its market reach beyond that of what its rails will reach directly. Commodities include road construction products such as sand, cement, fly ash and aggregate/stone, agricultural products such as dry and liquid fertilizer.

The benefits that I perceive from this merger come from the increased market reach of the combined network. This transaction allows for a wide-variety of origin-destination pairs to be served under a single carrier, where these options only currently exist under interline. I view this as a positive for my business in two ways. First, the increased market reach potentially allows

for an advantage in serving markets that are not reached by a single carrier, as aspect that I expect the combined company to market and pursue vigorously. Second, this market reach allows the combined company to increase its length of haul providing more profitable business and thus incentive for the combined carrier a better opportunity to exceed cost of capital earnings and thus provide continued incentive to invest in its network.

I encourage the Surface Transportation Board to consider these positive attributes during its approval process for this transaction.

Regards,

Drew Wilson

Owner

ABDW Logistics, LLC

Malvern, Pennsylvania 19355

Phone: 610.662.9060
Fax: 484.913.1345

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500
CP-KCS Potential Combination
To Whom It May Concern:

I am writing on behalf of AC LOGISTICS, INC, _ in regards to the recently proposed unsolicited offer by Canadian National (CN) to acquire the Kansas City Southern (KCS) railroad. As a shipper of goods that consumers and businesses in North America rely on, we require a marketplace for rail transportation that is both service and commercially competitive. We believe that the CN's proposal for the KCS will create a high degree of market dominance that will negatively impact service for shippers across Canada, the USA and North America. In contrast, Canadian Pacific's proposal will help enhance competition by levelling the advantages that CN holds in the market today in Canada and the USA.

Today, CN's network holds unique single-line access to markets in Canada like Prince Rupert, British Columbia; Halifax, Nova Scotia; New Orleans, Louisiana; Mobile, Alabama; and Jackson, Mississippi. This single-line access is used advantageously when customers seek alternative transportation solutions with CN's competitors. By creating a CN network that adds the coverage of KCS' network, their competitive behavior will become even more punitive. They will be able to leverage their access to intermodal markets in the Southern USA and Mexico to force shippers to pay more to move goods on their network in Canada and the US Midwest that is subject to competition. Furthermore, with their control over key markets and transportation lanes, CN will have no incentive to improve service. Ultimately it will be consumers that will suffer as a result of CN's market dominance. This simply cannot happen.

In comparison, CP's proposal to acquire the KCS will create a more balanced and competitive marketplace that will compete with the CN in markets like the US Gulf and afford shippers more single-line options for goods moving between the USA and Canada. CN will continue to hold monopoly positions in Prince Rupert and Halifax, but will have to compete in more markets and hold an overall less dominant position. CP's proposal, if successful, should enhance the competitive landscape and be to the benefit of the rail transportation market in North America.

Because of these reasons, I believe that at a CN-KCS merger should be resoundingly rejected while a CP-KCS merger be authorized to create a safer, more efficient, and more competitive North American rail network. It will be in the best interest of all North American shippers to support the CP-KCS proposal and reject the unsolicited CN-KCS proposal.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Yogesh Raipuria, and my business address is #512, 13737 96th Avenue, Surrey, BC, V3V 0C6, CANADA. I am Director of Adroit Overseas Enterprises Ltd. In my role, I am responsible for overseeing Business Development, Operations and Documentation, Accounting and Finance & Audits and Internal controls of the entire organization.

Adroit Overseas Enterprises Ltd is using the services of Canadian Pacific Railway Company to move product such as Lentils, Peas, Wheat and Flaxseeds from its processing plants and elevators within Canada or outside Canada such as USA and Mexico. Canada Pacific Railway Corporation has played a pivotal role in the growth of our company.

Adroit Overseas Enterprises Ltd supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Adroit Overseas Enterprises Ltd has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship grain from CP-served facilities in Canada, Minnesota and North Dakota to our customers with elevators/terminals in the South Central and Gulf region & Mexico.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to in order to expand our reach to other locations. This transaction will open up new doors to ship products such as Corn, Soybean Meal, and Distilled Dried Grains to these locations.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior and cost efficient.

ADROIT OVERSEAS ENTERPRISES LTD.
#512, 13737- 96th Ave, Surrey, BC, V3V 0C6, Canada
Tel: +1 604 930 4855 Fax: +1 604 909 4855
Email: Info@adroitoverseas.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments to Mexico from Minnesota, North Dakota, and Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency due to a unified logistics platform from origin to destinations.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

Also, in our opinion, at the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere, means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Adroit Overseas Enterprises Ltd is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Adroit Overseas Enterprises Ltd urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Yogesh Raipuria

Adroit Overseas Enterprises Ltd

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

AEG Fuels LLC hereby files this letter to express its concerns to the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition.

In addition, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, we will be harmed by the reduction in competition that would result from a CN acquisition of KCS. This would adversely effect our movements of aviation fuels between the US and Canada since there would be only one rail option to seamlessly connect the two countries.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

AEROPRES CORPORATION

Casey E. Rhymes
Director of Operations/Business Development
Phone: (318) 213-1213
Email: crhymes@aeropres.com

March 29, 2021

Aeropres Corporation operates five liquefied petroleum gas and specialty chemical blending and terminaling facilities in the United States. Our primary markets are aerosol propellants, blowing agents, refrigeration, and various other specialty chemical manufacturers. One of our major challenges lies in trying to obtain raw materials from the various producers across the United States and delivering products to our customer base in the United States, Canada, and Mexico. Many times, we are unable to participate in certain markets due to challenges in moving our core products via rail at a rate that is competitive.

Aeropres Corporation supports approval of the CP/KCS combination. We see promise of new opportunities and better service options that will support our current state business and provide a catalyst for growth.

Sincerely,

Casey Rhymes

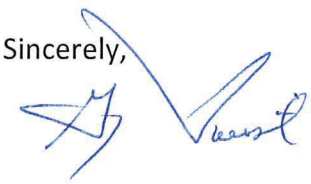
AGP
Ag Processing Inc

Attention: Surface Transportation Board

My name is Greg Twist and I am responsible for the Transportation Department of Ag Processing Inc, a cooperative, (AGP) headquartered at 12700 West Dodge Road, Omaha, NE 68154.

AGP is a customer of the Canadian Pacific (CP) and we have access to them at our Mason City, Emmetsburg, and Sheldon, Iowa soy crushing facilities. We are also exclusively served by the CP at our Algona, Iowa biodiesel facility.



We ship our products on the CP throughout the U.S. and Canada, however, we are quite limited to Mexico. The prospect for our soy CP crushing facilities to move on a single line haul into Mexico with this merger should enhance our market access. Currently we have to move on 2-3 railroads to reach the same markets.

The CP has been a reliable supplier for both local service and long-haul freight. I cannot comment on Kansas City Southern (KCS) service in that we are not directly served by them at any of our locations.

Ordinarily, we are not in favor of less competition but this merger/acquisition is unique because it doesn't eliminate duplicate access to markets but truly enhances access. The single line move should enhance our ability to be competitive to Mexico, decrease transit time and allow us more arbitrage opportunities in a volatile operating environment.

AGP strongly supports the merger/acquisition of the CP and the KCS and we urge the STB to approve this acquisition for all reasons stated above.

Sincerely,

Greg Twist
Sr. Vice President - Transportation

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Ag Transfer LLC and its parent company Stone Arch Commodities LLC are exporters of containerized agricultural commodities.

I am writing to express Stone Arch's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have

to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these

circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment,

downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Revis L. Stephenson III
President, Ag Transfer LLC

AgMotion Pet Food Ingredients
730 2nd Ave. South, Suite 700
Minneapolis, MN 55403

ATTENTION: Surface Transportation Board

My name is Michael Peterson and my business address is 730 2nd Ave S Minneapolis, MN. I am Director of trading for our DDG and Pet Food Ingredient teams. In my role, I am responsible for rail trading, contract negotiations, and training.

AgMotion engage with the CP and KCS to move our feed and grain throughout Canada, the US, and exporting into Mexico.

AgMotion support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. AgMotion has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

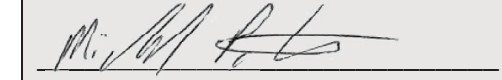
- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of different feeds and pet food ingredients from Canada, ND, and Minnesota to our customers in MO, AR, LA, TX and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by avoiding the time and coordination it takes for 2 different rail lines to switch cars back and forth.

- CPKC will be a good combination of Railroads as the CP has the origins and the KCS has relevant destinations. Now we can have through rates to new destinations.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, AgMotion is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. AgMotion urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Michael Peterson, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on3/29/21.

Michael Peterson

605 Highway 169 North, Suite 1050, Plymouth, MN 55441

ATTENTION: Surface Transportation Board

My name is Chris Wetzell, and my business address is 605 N Hwy 169, Suite 1050, Plymouth, MN 55441. I am General Manager of the Northern Division within Agrex Inc. In my role, I am responsible for trading and logistics for midwestern and Canadian grain areas, particularly areas that are in Canadian Pacific's territory.

Agrex Inc. is a grain trading company that originates US and Canadian grain, oilseed, and feedstuff and distributes these products both domestically and around the world, including Mexico. More specific to this discussion, Agrex originates canola, spring wheat, soybeans and corn from numerous CP served upper Midwest locations to areas of greater demand, including but not limited to Southeast, Gulf, and Mexico. The products are transported by covered hopper rail cars.

Agrex Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

- We ship grain from our CP-served facilities in North Dakota, Minnesota, Iowa, AB, SK, and MB to our customers with elevators/terminals in the South Central and Gulf region.
- CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).
- And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction, because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past. While CP-KCS joint routes are among our transportation options, as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

The entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Agrex Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Agrex Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Respectively,

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Navin Kumar Askaran and my business address is 210-254 Edmonton Street, Winnipeg, MB R3C 3Y4. I am the Acting CEO of Agrocorp Processing Limited (APL). In my role, I am responsible for the overall management of the company's agricultural commodities' processing and trading operations across 5 Plants in Alberta and Saskatchewan provinces, Canada.

APL has had a long relationship with CP for over a decade, with CP handling goods from our Plants in Cut Knife, Innisfail and through third party suppliers. Destinations serviced are Vancouver in Canada, Pine Bluff and Gaston in the USA.

APL supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. APL has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

APL mainly ships lentils, peas and pea protein from CP-served facilities in Cut Knife and Innisfail to our customers through elevators/terminals in Vancouver and USA. Destination markets include South America, China, Indian sub-continent and other Asian countries.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively for example, Mexico).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lentils, peas, protein from Canada to USA and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This new service will ensure quality of goods and efficient delivery to our customers.
- In the long-term there may be higher cost-benefits through increased trading that can be planned with the availability of single-line rail service into the USA and Mexico.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, APL is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. APL urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Proposed Merger of Canadian Pacific Railway and Kansas City Southern Lines

Dear Board Members:

Alberta Midland Railway Terminal Ltd. (AMRT) is a private rail logistics facility located within Alberta's Industrial Heartland, the largest petrochemical processing region in Canada. As a key north American industrial area that features investments from both established American and Canadian companies, over 280,000 railcars of energy and petrochemical shipments leave this region annually, together with over 45,000 inbound carloads of steel and manufactured goods as well.

AMRT serves many of these customers including U.S. based energy shippers, refiners, and Canadian chemical manufacturers. Accordingly, AMRT would like to concur with CP's assertions that users of the combined rail network will benefit from:

- New single line haul offerings delivering dramatically expanded market reach to the U.S. South.
- Enhanced service offerings, lower transit times, and direct access to premier ports on the U.S. Gulf Coast and Atlantic coast.
- Expanded and alternative network routes that avoid Chicago.

We truly believe that this combination represents great synergy and opportunity for AMRT and by extension companies and shippers who use rail to access our region. Alberta's Industrial Heartland is a great example of a region where the USMCA has a positive impact by providing trade access for American companies, made

possible by the competitive rail service that CP provides. This combination of CP and KCS will only serve to enhance this.

Please add our support for the CP and KCS merger in your deliberations.

Yours very truly,

Kelly D. Sledz
Chief Executive Officer
Alberta Midland Railway Terminal Ltd.

VERIFICATION

Re: Proposed Merger of Canadian Pacific Railway and Kansas City Southern Lines

Dear Board Members:

On behalf of Alberta's Industrial Heartland Association (AIHA), I am writing to provide support for the proposed merger of Canadian Pacific Railway (CP) and Kansas City Southern Lines (KCS).

Alberta's Industrial Heartland (AIH) is a 582 square kilometre heavy industrial energy cluster located in the northeast region of Alberta, Canada. AIH is the largest hydrocarbon processing region in Canada, home to over 40 companies providing significant economic and employment benefits to Alberta. AIHA is responsible for promoting and attracting future sustainable investments into the region.

Growth of AIH will require shippers to have access to cost effective and efficient rail services to connect with global customers. AIHA believes that under the proposed merger, current and future shippers in AIH will benefit from:

- New single line haul offerings delivering dramatically expanded market reach to the U.S. South.
- Enhanced service offerings, lower transit times, and direct access to premier ports on the U.S. Gulf Coast and Atlantic coast.
- Expanded and alternative network routes that avoid Chicago.

AIHA believes that the proposed merger will help support the critical infrastructure required for Alberta's exports and promote investment and development in the region.

Sincerely,

Mark Plamondon
Executive Director
Alberta Industrial Heartland Association

Suite 300, 9940 – 99 Avenue, Fort Saskatchewan, AB T8L 4G8

Office: 780.998.7453 Email: Inquiries@IndustrialHeartland.com www.IndustrialHeartland.com

ALERIO

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Tai Tran and my business address is 421-7 Avenue SW, 30th floor, Calgary, AB. I work at Alerio Marketing Inc. as Vice President, Marketing and Strategy. In my role, I am responsible for sourcing Propane to supply the Mexican market.

Alerio Marketing is currently shipping propane cars on the CP/KCS/KCSM rail network to link Edmonton propane supply with Mexican demand. I am a very satisfied CP customer and extremely happy with the relationship with CP.

Alerio Marketing supports the combination of the CP/KCS combination as I would expect better service through streamlining of processes. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

With the vast network and reach of the combined CPKC, this combination will strengthen Alerio Marketing current markets and will allow Alerio Marketing to access future new markets while maintaining strong focus on safety and operational excellence.

Alerio Marketing is a shipper of propane from CP-served facilities in Edmonton to our markets in northeast and north central Mexico . Currently, the cars would interchange at Kansas City and Laredo before reaching the final destination. At each interchange, shipper such as Alerio need to switch from one railway system to another system to track the same railcar. This lacks the integrated flow and seamless transfer from origin to final destination. I would expect the combination will facilitate tighter integration, better communication, improve the flow of railcars, and better service. I understand that the integration of CP and KCS is a very important issue to both companies. I am optimistic that both railways will do their best to manage the integration of the two railways, mitigate any issues and once completed, to reap the benefits of a combined railway connecting Canada/US/Mexico.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane from Edmonton to Mexico.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- I look forward to when an integrated system from CPKC to track the movement of goods through one portal end to end.

For these reasons, Alerio Marketing is supportive of the combination of CP and KCS, because it will enhance service, drive efficiencies and enhance competition. Alerio Marketing urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I,_Tai Tran_, declare that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

To Whom It May Concern:

RE: Shipper Support Letter

As the Director of Procurement for Algoma Steel Inc. ("Algoma"), I am responsible for procurement and logistics for Algoma, which scope covers bulk raw materials, equipment and other components for maintenance, repair and operations; as well warehousing and logistics contracting with railways, barges and trucking firms.

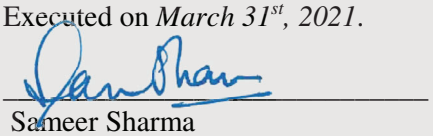
Algoma is a fully-integrated steel producer located on the Great Lakes in Sault Ste. Marie, Ontario, Canada. Our operations consist of producing value-added finished steel products from iron ore and other raw materials. Algoma is a leading flat-rolled steel producer in North America, one of the Canada's largest steel producers by volume and only plate manufacturer, with total iron capacity of up to 3.6 million tons per year, and total potential liquid steel capacity is 3.2 million tons per year. Algoma ships its steel products to diverse geographical bases covering Canada, USA and Mexico, and has a strategic supplier relationship with Canadian Pacific Railway.

Algoma supports the potential merger between Canadian Pacific Railway ("CP") and Kansas City Southern ("KCS"). The CP/KCS transaction would provide significant benefits that we are eager to see realized as soon as possible.

In our view, the transaction provides opportunities to reduce freight congestion, helping the environment, and strengthening competition in the freight transport marketplace. The combination promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CP/KCS network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. As we have limited sales in Texas and Mexico, we see this as an opportunity to grow our business with a single consolidated railway which will offer us competitive and reliable services.

We ship over 12,000 rail-car loads annually, which CP shares a significant portion of our overall business and has worked with us effectively over the years. We transship to CP at Sudbury, Ontario via a short line railroad owned by Gennesse & Wyoming Inc. which is connected to our Sault Ste. Marie operations.

Although CP has provided us with good service, its market reach is limited today, as their lines only go as far south as Kansas City. By combining the railroads to create the rail network seamlessly connecting the U.S., Mexico and Canada, the CP/KCS merger offers all the benefits of a multi-national, end-to-end merger.



CP/KCS's new service offerings will improve transit times and reliability which will in turn reduce our equipment costs and improve our efficiency. As a single carrier, we expect CP/KCS to provide us with quicker turnaround times by reducing the times at switching / interchange stations and provide us competitive rates.

Algoma encourages the approval of the CP/KCS transaction such that these systems can be integrated and the end-to-end benefits can be realized for the benefit of all stakeholders.

VERIFICATION

I, Sameer Sharma I hereby attest that the above statements are true and accurate to the best of my knowledge. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

My name is Shane L. Betz and my business address is: 115 31st Avenue North, Minneapolis, MN 55411. I am President & CEO of Alliance Recycling Group ("ARG"). In my role, I am responsible for managing overall business operations.

ARG is an active shipper of processed scrap metal throughout the US and Canada and occasionally Mexico, we are CP served and ship approximately 50% of our material to other CP served steel mills, the remainder typically goes on the BN to the southern region.

ARG supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. ARG has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

115 31st Avenue N Minneapolis, MN 55411 phone 612-588-2721 fax 612-588-2724

ALLIANCE

RECYCLING GROUP

We ship scrap metal from our CP-served facilities in Minnesota to our customers with steel mills in the South Central, Gulf region and occasionally Mexico, which could become a much better market for us if this merger were approved.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of scrap metal from MN to the southern region and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Currently if we are shipping to the southern or gulf regions we ship on the BN, in the rare instances that we ship to Mexico now, we go on the BN or UP to Eagle Pass.

KCS and CP have had a cooperative relationship in the past, and CP KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

115 31st Avenue N Minneapolis, MN 55411 phone 612-588-2721 fax 612-588-2724

ALLIANCE
RECYCLING GROUP

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, ARG is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. ARG urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Amardeep Singh Deol and my business address is 7290 Major Mackenzie Dr., Kleinburg ON, L0J 1C0. I am the President of Amar Transport. In my role, I am responsible for all departments of the company.

Amar Transport has been working with CP for 20+ years for the transportation of import and export ocean containers for our customers. Over this period of working with CP, Amar Transport is pleased with the level of service provided.

Amar Transport supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Amar Transport has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We have shipments from Dallas TX and Laredo TX with destinations to Toronto ON and Montreal QC.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of pet food and confectionary goods (beginning from July 2021 – June 2022) from throughout Texas to Toronto and Montreal.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This achieved since when using rail to ship our customers' goods, the major concern in the transportation industry of the driver (CDL) shortage is no longer an issue (increasing reliability) and expenses are reduced since our trucks, fuel and parts are used far less.

  KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

  At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

  We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

  For these reasons, Amar Transport is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Amar Transport urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

As a shipper and a small business we at American Bean LLC attempt to find the most affordable way for shipping our products. We find that transporting and delivering by rail is the least expensive method as well as the most efficient way. A CPRS/KSC merger would provide a supply chain that would benefit us as well as our customers.

About 70% of our product is conveyed to Mexico via rail. In the past 5 years we have seen a gradual decline in shipments to Mexico and Texas. One of the principle reasons behind this is our transportation rates do not compare with our competitors. Our main competitors are on the BNSF rail line and as of now we can't rival. At times we have needed to absorb the expense contrast so we can move our product which leads to a loss in revenue for our company. We have attempted to find alternative methods for transportation, however as you are probably aware, rail is more fuel efficient than trucking which in turn leads to non-competitive rates when compared to rail.

Our product that moves south into Texas and Mexico by rail is as of now transporting on 2 separate railroads. Canadian Pacific services our facility here in Oslo, MN. From here Canadian pacific will interchange to either Union Pacific or to Kansas City Southern rail road. Generally speaking we are already utilizing both Canadian Pacific and Kansas City Southern Rail railways, but without the advantages of better rates.

The network will fit nicely with one another and help fill out North America with rail service. We are of the assumption that a CP/KCS solidification will bring us better rates, faster services, and assist us with developing our clients, producers and buyers.

I am writing to express American Bean LLC's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both

concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Laurie Schumer
Plant Manager – Oslo,MN

AMERICAN
IRON & METAL

STB Finance Docket No. 36500

CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Mark Hudson and my business address is 9100 Boul Henri-Bourassa E, Montreal-Est QC H1E 2S4, Canada. I am Vice President, Logistics of American Iron and Metal Inc.. In my role, I am responsible for all aspects of international and domestic trade execution as relate to logistics.

American Iron & Metal (AIM) is a family-owned, Canada-based company founded in 1936 in Montreal, Quebec, with 3000 employees and 90 locations around the globe. Recognized as one of North America's most sophisticated metal recyclers, specializing in the recovery and recycling of scrap metal by-products, AIM has evolved into a successful and multifaceted company with a global footprint.

Rail transportation is an integral part of AIM's supply chain. With rail-served scrap yards throughout Eastern Canada and the US and a private fleet of over 1,600 rail cars. Rail transportation enables us to deliver our scrap metal to steel manufacturers in Canada and the U.S. as well as to move product efficiently between our own facilities and yards.

Currently, we have two scrap yards and processing facilities directly served by CP – in Hamilton, ON and Bangor, ME from which we ship to various destinations in the US; CP also accesses our yard at the Port of Saint John, NB via NBSR haulage. Our relationship with CP has evolved over the last several years and we continue to explore opportunities to grow our footprint with CP by opening new locations on their network. The consistent and reliable service of CP allow us to meet the requirements of our customers and extend our reach into new and expanding markets. We directly benefit from the value of CP's service, which can be demonstrated by competitive rates, network reach, fast transit times and industry leading safety practices.

9100 boul. Henri-Bourassa Est, Montréal (Québec) H1E 2S4 **T** 514 494-2000 **F** 514 494-3008 **aim-global.com**

We ship outbound scrap metal from our CP-served facilities in Hamilton, ON and Bangor, ME to various U.S. steel producers such as Steel Dynamics Inc. in Columbia City and Butler, IN; SSAB in Montpelier, IA and others, as well as from Bangor, ME to the Port of Saint John, NB for export. We also ship outbound fluff from Hamilton, ON and Saint John, NB to our facility in Montreal, PQ. Finally, we also ship scrap for partnership yards with Inland Steel out of CP-served facilities in Floral, SK and Lloydminster, SK going also to the listed above destinations in IN and to Selkirk, MB. Currently we only ship scrap from Kentucky to Mississippi (SDI Columbus) and currently other business has not been forthcoming. We hope with this merger we will be in a more competitive position to ship from Canadian points of origin (CP served) further south and south west of the United States. We also have a joint venture in California and have just begun to ship from there into Mexico, our relationship with CP would hopefully improve our ability to increase this flow.

AIM supports approval of the CP/KCS combination. The transaction would hopefully provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. AIM has not often spoken favorably about railroad consolidation, but we see this transaction as potential beneficial to our particular trade going forward.

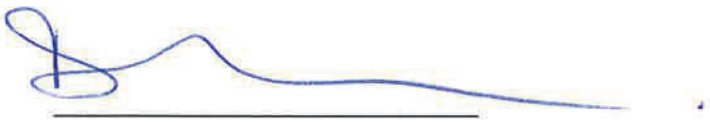
CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

9100 boul. Henri-Bourassa Est, Montréal (Québec) H1E 2S4 **T** 514 494-2000 **F** 514 494-3008 **aim-global.com**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of scrap metal from Hamilton, ON to Columbus, MO and by providing access to additional export locations/ports in the Gulf.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will hopefully improve transit times and reliability, which will reduce our equipment costs and improve our efficiency if we ship South of Kansas City.
- AIM boasts a proven track record in environmental waste management that is second to none. We promote environmental sustainability at every aspect of our business and are excited that in addition to providing new competition against other railroads, the new single-line routes made possible by the transaction are expected to shift trucks off crowded U.S. highways, yielding reduced highway traffic and lower carbon emissions.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

9100 boul. Henri-Bourassa Est, Montréal (Québec) H1E 2S4 **T** 514 494-2000 **F** 514 494-3008 **aim-global.com**

For these reasons, AIM is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. AIM urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Executed on 29thMar 29, 2021.

Mark Hudson

9100 boul. Henri-Bourassa Est, Montréal (Québec) H1E 2S4 **T** 514 494-2000 **F** 514 494-3008 **aim-global.com**

903 Mayo Shell Road
PO Box 584
Galena Park, TX 77547

ATTENTION: Surface Transportation Board

My name is Jesse Stephenson, and my business address is 903 Mayo Shell Road, Galena Park, TX. I am Vice President of Operations at American Plant Food. In my role, my responsibilities include all logistics and transportation.

American Plant Food is a Crop Nutrient Producer and Supplier and moves approximately 1.2 million tons of crop nutrients to customer locations each year via barge, rail and truck. The CPRS and KCS are our valued partners in meeting the needs of our customers. In addition, we are developing a new production facility location on the KCS at Winnsboro, TX which we hope to be served by the new combined CPRS-KCS combination.

We support the STB approval of the CP-KCS combination. We believe the transaction would provide significant benefits including, as part of the STB approval of the merger, to allow the new CP-KCS have access to haul our traffic from our Houston area facilities northbound and to that end, we are eager to see the STB merger approval realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls to the upper Midwest and Canada will provide opportunities to reach customers with single line rail access and improved transit times. We have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. American Plant Food has not previously supported major railroad consolidation, however we hope and believe this consolidation will increase competition and open up opportunities for us to expand our use of rail.

In our view, we support the transaction because it will allow a combined CPKC to provide new, more efficient, competitive, and reliable rail service options. The merger will significantly strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- One of the benefits from this STB approved consolidation would be for the new consolidation to be permitted to haul some of the more than half a million tons of crop nutrient commodities from one of our locations on the PTRA in Houston northbound on

AMERICAN PLANT FOOD
GROWTH STARTS HERE

the newly formed CPKC. Presently, KCS is restricted to only to southbound under a previously outdated merger agreement restriction by the Union Pacific and BNSF. This is an outdated restriction on the KCS, which limits competition from the Houston area, and we believe it should be removed as part of the STB merger approval. The KCS should be granted access to haul northbound from Houston which will increase rail competition.

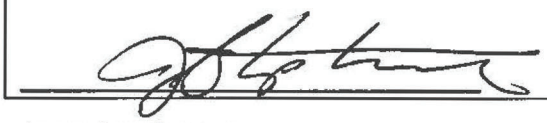
In addition, we would hope the newly formed CPKC will review our new plant location (operated under the name of Sigma) and approve and provide rail access to our new production facility at Winnsboro, TX. Direct rail access would allow us to reach rail served customers, grow our business, and expand the manufacturing capability of our 100K ton plus production facility at the Winnsboro plant.

- CPKC's service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency through single line service.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

In our opinion, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. The CP-KCS combination will provide a competitive alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Given the straightforward network connectivity between CP and KCS at Kansas City, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.



AMERICAN PLANT FOOD
GROWTH STARTS HERE

For these reasons, American Plant Food is supporting the combination of CP and KCS, because it will enhance competition and provide expanded options for our crop nutrient products. We urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these two rail carriers can be integrated and the end-to-end benefits of this deal can be realized for the benefit of us and all stakeholders.

APM TERMINALS

ATTENTION: Surface Transportation Board
RE: Finance Docket No. 36500, CP/KCS Combination

My name is Jose Rueda Salinas and my business address is Terminal de Contenedores II, Interior Recinto Portuario S/N., Lázaro Cárdenas, Michoacán C.P. 60950. I am the Managing Director of APM Terminals Lazaro Cardenas ("APMT Lazaro"). In my role, I am responsible for the operations and overall growth and business performance of APMT Lazaro, including our relationship with importers and other stakeholders.

APMT Lazaro is a key gateway terminal on the West Coast of Mexico serving many destinations within Mexico, but also has connectivity through KCS to US markets. APMT Lazaro is owned by AP Moller – Maersk, the world's leading and largest container logistics company. We rely heavily on efficient rail transportation services from ports to inland destinations and are intimately familiar with the rail options available from ports across North America.

As a result, the transaction will have particularly compelling benefits from traffic moving inland from the KCS-served port of Lazaro Cardenas. We have been quite impressed by the work KCS has done to develop efficient intermodal services connecting Lazaro Cardenas with central Mexico and points on KCS's system in the United States. KCS's current reach, however, is limited, as it does not extend beyond Kansas City. The combination with CP promises to open up new options for efficient intermodal rail transportation all the way into America's Heartland. We don't expect these options to supplant the current options from ports on the U.S. West Coast, but as recent supply chain challenges have shown, the entire U.S. economy – and indeed the World economy –benefits when there are better transportation options available to overcome logistical challenges like the recent congestion at other West Coast ports.

The new options that a combined CP/KCS operation will be able to provide will expand our competitive options and open up new markets for APMT Lazaro.

APMT Lazaro supports actions, initiatives, investments and business combinations that increase supply chain efficiency, fluidity and velocity at competitive prices. Based on our review to date, we believe that a CP/KCS combination would likely result in these positive attributes and therefore APMT Lazaro supports the CP/KCS combination.

The Honorable Martin J. Oberman
Chairman, United States Surface Transportation Board
395 E Street, SW
Washington, DC 20423-0001

Dear Chairman Oberman and Surface Transportation Board Members,

My name is Lance Norman and I am the Executive Vice President of APPS Transport Group. APPS is a major national transportation company in Canada. We have both road and rail operations - both intra Canada and cross border. The CPR is a major supplier of intermodal services to our company.

We understand that Kansas City Southern and Canadian Pacific are requesting authority to enter into a transaction that would put them under common control. We support this application as the combined network will create a rail network that offers significant opportunities for service improvements and efficiencies.

A CPKC combination is also interesting to us because of the potential for a cost-effective alternative to truck to and from many more points in the United States, Canada and Mexico. I can foresee no reduction in competition by reason of the acquisition and in fact only increased competition for trucks and other rail carriers.

We believe that the proposed combination may provide significant benefits to us and therefore our company supports the application.

We urge the Surface Transportation Board to judge the proposal on its merits and we look forward to a positive outcome.

Please feel free to contact me if you require more information.

Sincerely,

Lance Norman
Executive Vice President
APPS Transport Group

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Stephane Landry and my business address is 1053 Blvd Ducharme, La Tuque, QC, CA ,G9X 3C3. I am Director Transport & Distribution of Arbec Lumber Inc. In my role, I am responsible for the Logistic Team for the finished Products.

Arbec Lumber Inc is shipping an average of 200 railcars a year throught CP/KCS to our customer in Taxes. The good services that we had with both railways gave us the opportunity to develop new customers and keep the one that already have.

Arbec Lumber Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Arbec Lumber Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- Access to more equipments.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Arbec Lumber Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Arbec Lumber Inc, urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Executed on March 31st 2021.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Randy Zulinick and my business address is 400-970 McMaster Way, Kamloops, BC Canada V2C 6K2. I am the Vice President of Operations of Arrow Transportation Systems Inc. and Arrow Logistics (Arrow). In my role, I am responsible for the overall management and strategic direction of our business units in Canada and the United States.

Our company has been working together with CP for over 40 years, providing materials handling, logistics, and freight solutions to a wide variety of shippers and receivers across Canada and the United States. Today we are one of the largest shippers of forest products in North America and we handle a wide range of products such as building materials, steel, aggregates, equipment, liquids, and bulk agricultural products.

Arrow supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. Arrow views the CP/KCS combination as nothing but positive for our customers and our business such as improved transit time to market, better asset utilization, reduction of greenhouse gas emissions, and ultimately results in a more efficient rail network.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, we are confident that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

The opportunity to move freight seamlessly into the Gulf Coast, Dallas, and Mexico on a single line haul would be incredibly beneficial to our company and our customers. CP is a very well-run railroad that has provided excellent service, but it is a detriment to not have destinations beyond Kansas City.

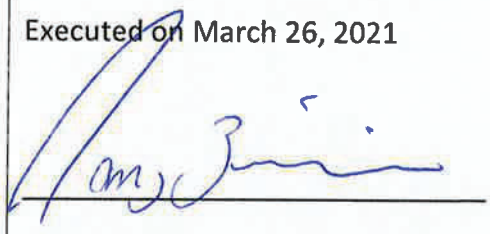
Arrow truly views the CPKC transaction to be very beneficial and we do not see any downside to this consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our inbound and outbound rail shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options for our customer base.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Arrow is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Arrow urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

The Arthur Companies

To: Surface Transportation Board member

My name is Kevin Karel and I am the General Manager of The Arthur Companies. The Arthur Companies is a diversified agriculture business headquartered in Arthur, North Dakota, with locations in Anamoose, Ayr, Carrington, Harvey, Page, and Pillsbury. The company, founded in 1906, is privately-owned with businesses in grain operations, agronomy services, and retail sales of seed, fertilizer, and chemical. Arthur Companies also operates a wholesale fertilizer, birdseed, and propriety trading business. The company is partnered in a premium ingredient business, Anchor Ingredients, with locations in Hillsboro, Buffalo, Beach, ND, and Culbertson, MT. There is a proud tradition of customer service excellence in all that we do, and we are focused on putting business decisions close to our customers enabling leadership at all levels of our organization. We currently utilize rail, truck, air and intermodal modes of transportation to facilitate markets for our farmers crops and their input selections. We currently do business on multiple railroads in the United States, Canada and Mexico.

The Arthur Companies supports approval of the CP/KCS combination, with a high expectation that North Dakota farmers get additional markets and better service.

- CP/KCS is a unique Class 1 merger. Which has marketplace effects.
  - For The Arthur Companies, it creates a brand new and single-line option for shipments from North Dakota to the Southern US, including the Gulf, and to Mexico, in competition with UP and BNSF.
  - More generally, not only are the two railroads much smaller than the larger Class 1 railroads (the Big Four), but the transaction is also the only one possible that has no competitive overlap, no likelihood of service disruption, and that creates no strategic imperative for other railroads to combine in answer to the transaction.
  - For that reason, the KCS waiver from the new Major Rules adopted in 2001 makes perfect sense – this is exactly why the KCS waiver was granted.
- The best way to discourage further Class 1 consolidation is for the STB to retain the KCS waiver and apply the Old Rules to the CP/KCS proposal.
  - The New Rules have done their job so far and discouraged any further consolidation involving the Big Four.
  - Changing the New Rules, by removing the waiver and applying them to CP/KCS, could well make further consolidation more likely rather than less.
- This transaction likely will be approved either way for the reasons noted above – it strengthens competition and there is no competitive overlap, no service risk, and no downstream "end game" risk.

    - If the STB applies the Old Rules, the new requirements of the New Rules remain untested and their uncertain implications will continue to deter further consolidation.
    - If the STB applies the New Rules, when it approves the CP/KCS transaction it may in the process create hope that other transactions – despite their differences from CP/KCS – might be able to navigate those rules too.
- The combination could create a more efficient connection between critical grain production areas in the US and processors and mills in the Southern US, US Gulf export locations and Mexican markets. This improves liquidity for grain trades, options for grain sourcing, and provides more competition compared to existing options.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. In a rapidly dynamic marketplace, more shipment options and windows will greatly help the farmer prosper. The CPKC will need to service this customer better than existing. CPKC will need to commit to service levels and price competitiveness in this market. As a customer we need competitive markets with other Class I direct rail markets. I believe this merger would create the opportunity to achieve those goals. My expectations for a combined CPKCS would be:

- Ability to serve existing markets, with a lower shipping cost once combined.
- Better and more consistent equipment
- Accurate arrivals and departures
- Seamless customer service

I support this merger for the North Dakota farmer. I also would testify in front of the STB as to why this merger is needed.

Thank You,

Kevin Karel

VERIFICATION

I Kevin Karel, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ASL Distribution Services Ltd.

March 26, 2021

ATTENTION: Surface Transportation Board

My name is Cole Dolny. I am the President & CEO of ASL Distribution Services Limited. ("ASL"). I am responsible for leading the development of the vision and strategy for the company in consultation with our board of directors and executive team, growing the value of the company, and managing the relationship with our major customers and carrier partners. ASL is a logistics business that manages various modes of transportation as well as warehousing and final mile deliveries. We use rail for many of our customers.

ASL supports approval of the CP/KCS combination. I believe the merger would provide significant benefits to the North American supply chain. For our perspective, the transaction promises to provide improved service options and increase transportation competition in the markets they and we serve.

CP has provided us with good service, however its market reach is limited today and we support this being expanded. Furthermore we believe that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve these markets.

For these reasons, ASL strongly supports the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. ASL urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Yours truly,

Cole Dolny
President & CEO

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Abby Mann and my business address is 12745 116th Avenue, Surrey, BC V3V 7H9. I am Vice President – Plywood and Transportation for AP Group of Companies (Aspen Planers Ltd.). In my role, I am responsible for the entire group's transportation needs.

Aspen Planers Ltd. is very reliant on the CP to move its Lumber and Plywood products throughout North America. We have been pleased with our relationship and level of commitment and service that CP provides us.

Aspen Planers Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. I have heard others that have not spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

In my mind it is always better to have a single- line rail operator to deal with. The cargo flows much smoother from origin to final destination, in most cases saving weeks if not longer on the transit time. Not only does our customer get the product quicker but the whole system gets the empties back into circulation that much faster. These two points are integral and vital in this day and age to our business and its needs.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.

Aspen Planers Ltd.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will allow for quicker turnaround of empty Box Cars and C/B railcars once they reach destination. This is vitally important for a shipper like us.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Aspen Planers Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. GRUPO TRANSPORTES MONTERREY

General Escobedo, Nuevo León México
May 7, 2021

ATTENTION: Surface Transportation Board

My name is FERNANDO BERNAL, and my business address is Carretera a Colombia 2090 General Escobedo Nuevo Leon. I am Director Commercial Corporative of GRUPO TRANSPORTES MONTERREY. In my role, I am responsible for Commercial and Marketing for all the group.

One of our companies AUTO LINEAS AMERICA has a specialty to move Railroad containers from Toluca, San Luis Potosi, Salinas Victoria Intermodal ramps, we have been doing for more than 20 years, growing, and using all chassis in each intermodal ramp without any problem.

AUTO LINEAS AMERICA supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. AUTOLINEAS AMERCIA has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

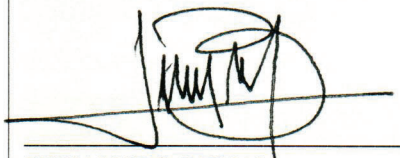
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Expanding business opportunities
- Better transit times and more security

GRUPO TRANSPORTES MONTERREY

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, AUTO LINEAS AMERICA S.A. DE C.V. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. AUTO LINEAS AMERICA S.A. DE C.V. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I FERNANDO BERNAL, declare under penalty of perjury "under the laws of the United States," if executed outside of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Re: Finance Docket No. 36514 – Canadian National Ry. – Control – Kansas City Southern

Dear Ms. Brown:

I am representing Automoves Ltd., a regular intermodal shipper utilizing CP Rail network for the purpose of transporting automotive parts across Canada. We are working towards expanding our shipping capabilities further south, including shipments between Canada and Mexico. This lane would help accommodate the need for growing cooperation between the suppliers of both countries in the automotive sector. The deal between CP Rail and KCS has direct impact in our ability to facilitate this growth.

I am writing to express Automoves perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest. We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have

Automoves Ltd.
1401 The Queensway, Units 5-6 Etobicoke, ON M8Z 1T2

www.automoves.ca

to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to

apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the adverse impact that would have on existing competition between KCS and CN.

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.
CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another

if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason not to let CN use a voting trust, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved. The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Andrejs Ludzeneks / Automoves Ltd.

Re: CP Rail's proposed acquisition of Kansas City Southern Railways (KCS)

My name is Vishnu Sharma and I am Global Head of Sourcing and Logistics for Pulp Business of Aditya Birla Group, which operates 5 Pulp mills globally, 3 of them being in Canada.

Our relationship with CP is relative to one of our Pulp Mill in Canada – AV Terrace Bay Inc (AVTB), where we produce NBSK pulp. AVTB, being on CP rail network, is dependent on a reliable CP network to move our Pulp, both in Canada and US, directly or through interchanges with other rail companies. Annually we move close to 3000 rail cars as part of outbound logistics from the mill. We appreciate the relationship we have built with CP as our railway partner

The proposed acquisition of KCS by CP Rail is a welcome news as far as AVTB is concerned. A direct connectivity to Southern US and Mexico, as currently being served by KCS, will help us over a period of time to widen our market base. A direct connectivity is always a better option as it not only speeds up the cargo movement but also avoids dealing with multiple rail companies under Rule 11 besides avoiding billing errors etc. We also appreciate that CP and KCS are extremely safety focused which is important to us and our customers.

I do hope that the proposed acquisition of KCS by CP rail, will receive necessary approval from your office at the earliest.

Regards

(Vishnu Sharma)

ATTN: Surface Transportation Board

RE: STB Finance Docket No. 36500, CP-KCS Proposed Combination

My name is Daniel Goldberg, and my business address is 1099 Pratt Blvd, Elk Grove Village, Illinois. Axis Warehouse ("Axis") is a receiver of rail cars on the CP via PG, typically rail cars containing food and auto parts. Service has not been great from the South the past few years.

Axis supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve in the Midwest. The combined CPKC network- with the new single-line hauls and access to premier ports on the U.S Gulf, Atlantic and Pacific coasts as well as to key overseas markets- would help us reach our existing markets and new markets more efficiently. Also, with the two railroads strong focus on safety and their track record of operational excellence, I have no doubt that CPKC should be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Axis sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

VERIFICATION

I, Daniel Goldberg, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

My name is Steve Ramescu, and my business address is 4900 Armand Frappier, St Hubert Qc. Canada. I am President of Axsun Inc

Axsun is an IMC specializing in Intermodal Transportation services in North America. As an Intermodal service provider, we ship various types of goods using all railroads on the continent. We have worked with CP for decades as well as using the KCS through TFM (KCSM)for rail services to and from Mexico for many years.

Axsun supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and will invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

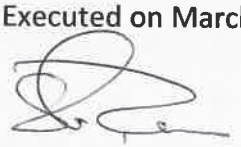
CP has historically provided us excellent service; however, its market reach has been limited relying on interlining traffic. Allowing CP to have a single line service uniting Canada, U.S and Mexico will provide a benefit to the shipping community by streamlining rail service and allow CP/KCS to provide a more economical, seamless, and environmentally friendly option when compared to today's traditional methods. This also has enormous benefit in alleviating congestion points of physical road cross-towns or connections, taking more shipments off the highways.

Another major benefit to a CP / KCS merger, is to streamline operational and customs procedures by issuing only one seamless waybill. Having this seamless operation eliminates the element of error and costly delays, which ultimately benefits the shipping community.

Having CP and KCS combined will provide additional competition to the current market and provide shippers with an excellent choice when choosing their shipping methods. A combined CP and KCS will expand existing markets while allowing greater and new markets to be developed. With today's driver shortages, environmental issues, and the push to get more traffic of the roads, we only see benefits to this transaction being secured.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Axsun is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Axsun urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is JULIO ALFONSO MORFIN and my business address is 600 W. Chicago Ave. STE 860 | Chicago, IL 60654 | USA. I am Sugar Sourcing Logistics Manager of Barry Callebaut. In my role, I am responsible for the overall sugar logistics to our clients and plants in Mexico and the USA.

Barry Callebaut has been working for periods of time with CP and KCS from routes in the US and exports from Mexico; we had shipped totes in 1 MT of raw sugar through the lines of KCS in Mexico and CP in Chicago to Vermont with a very good relationship over the time. Barry Callebaut supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Barry Callebaut has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments to and from USA / MEX.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by having the leverage of negotiation.
- Better service and follow up.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. ATTENTION: Surface Transportation Board

My name is Lisa Anderson and my business address is 2905 West Service Rd, Eagan MN I am Intermodal Manager of Bay and Bay Transportation. In my role, I am responsible for managing the intermodal operations group

Bay and Bay supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Bay and Bay] has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Bay and Bay is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Bay and Bay urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Lisa Anderson, declare certify under penalty of perjury under the laws of the United States if executed outside of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Beamish Construction is an Ontario based road paving company. Many of our raw materials, including aggregates, fuel, equipment, and liquid asphalt are shipped in by rail. We have also looked at export markets into the United States. If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer to the point that it would cause significant price increases and supply chain disruptions for our business.

I am writing to express Beamish Construction Inc's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers

of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for

transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Michael Andrighetti,

To whom it may concern:

I, Richard Bell serve as the Vice President at Bell & MacKenzie (a business of Allredi Blast and Abrasives Canada) where my duties include both overseeing the sale of certain materials (locomotive traction sand) and the purchase of rail transportation for various industrial minerals throughout Canada and the U.S. to our location in Hamilton, ON, Canada. Bell & MacKenzie unequivocally supports approval of the proposed combination of CP and KCS.

We see this transaction as beneficial from both a customer and supplier because it will support sustainable growth and investment in their combined North American rail network. CP's attention to safety, and their continual investments in infrastructure and people will increase and improve their capacity and service level to their customers and to their suppliers.

The new services that the CPKC will bring will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC and will help shift freight from trucks to rail. All of these things will help support economic and employment growth in the United States and across North America under the USMCA trade agreement. That growth will support new investments in new rail capacity and infrastructure that will benefit shippers, suppliers and the public.

ATTENTION: Surface Transportation Board

From: Brad Baylis – CFO

Benga Mining Limited
140 – 10th Avenue S.E.
Calgary, Alberta
Canada

My name is Brad Baylis, Chief Financial Officer of Benga Mining Limited **(Benga).** In my role, I am responsible for the company's financial functions including key commercial relationships such as rail transportation.

Benga is a prospective customer of CP for the transportation of Metallurgical Coal to the West Coast of Canada. We have worked effectively with CP over the last number of years to establish our rail transportation services agreement.

Benga supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. In addition, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders**.**

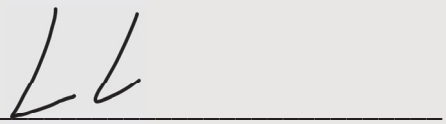
Benga is not generally favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We will be shipping metallurgical coal from our Alberta mine for export out of western Canada. Looking to the future, having multiple port optionality, including through the US gulf may be beneficial to our competitiveness into international markets. This combining of networks will benefit our business immensely into the future by providing competitive, single linehaul solution into the gulf.

CP provides good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that could expand the markets we could serve effectively.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been impressed by the attention to CP safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Benga is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Benga urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Brad Baylis, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on April 29, 2021.

Brad Baylis

BENTONITE
Performance Minerals LLC
3000 N. Sam Houston Pkwy. E.
Houston, TX 77032
Tel: (281) 871 7900
Fax: (281) 871 7940
Website: www.bentonite.com

ATTENTION: Surface Transportation Board

Bentonite Performance Minerals (BPM)ships BPM product from our bentonite plants on the Canadian Pacific Railway (CP) from Chicago into Canada and from Tracy, MN to Chicago to connect with other class 1 railroads to large customers. Kansas City Southern Railroad (KCS) is one of the class 1 railroads out of our barite plant. The CP railroad has been a valuable supplier of rail services and BPM looks forward to growing that relationship with them.

BPM supports approval of the CP/KCS combination. The transaction would provide significant benefits to BPM that we are eager to see realized as soon as possible.

From BPM's perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, BPM has no doubt that CPKC will be able to integrate its operations to the benefit of rail customers and other stakeholders.

> **CP has provided BPM with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**
>
> **BPM recognizes from experience that single-line rail service options offer superior service.**

The transaction should allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bentonite and barite from Wyoming to Texas/ Mexico and from Louisiana into Canada.

- We are BPM anticipates that the new CPKC single-line routes will expand access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. With increased business rail car inventory has decreased dramatically and improved transit times will help better satisfy our customers needs.

The complementary nature of CP's and KCS' networks, will not have any adverse effects on competition. It will make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, BPM is confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For the foregoing reasons, BPM is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. BPM recommends that the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Respectfully,

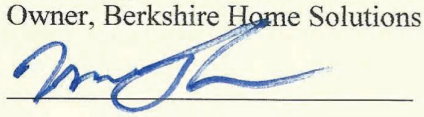
Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:



My name is Matt Joseph, and I am the owner of Berkshire Home Solutions in Plymouth, Minnesota. We are an industry leader in general contracting.

I write to you my perspective on the Canadian Pacific ("CP") Kansas City Southern ("KCS") proposed merger.

As a general contractor, I rely on various trade routes to source materials. My business depends on safe, reliable, and efficient modes of transportation that get goods from market to my building sites. A CP-KCS merger would increase access to new markets by connecting the U.S., Mexico, and Canada through a single-line route. This would help increase competition and possibly drive down transportation costs – savings that could be passed onto consumers and homeowners.

I urge the Surface Transportation Board to support a CP-KCS merger over any other potential acquisitions.

Matt Joseph
Owner, Berkshire Home Solutions

RE: CN (Canadian National) proposed Merger with KCS Railroad
STB (Surface Transportation Board)
395 E Street SW
Washington, DC 20423

To whom it may concern,

Berry Pallets purchases several rail cars of lumber from mills across North America. Currently we purchase about 150 cars a year and are expected to purchase 300+ a year starting soon with some new machinery we have purchased. We at Berry Pallets oppose this merger with CN and KCS. We do however support a merger with CP and KCS. CN is very difficult to do business with mostly resulting in delayed shipments. Several of our cars we use originate from CN serviced lumber mills, so we are familiar with how they operate. There are no good trans loads for CN. CP however have several great trans load locations but is cost prohibitive to transfer between CP and CN. We currently do a CN to a UP interchange at a small charge but UP is slow as processing the cars. All of this leads to us having to pay higher costs to get our lumber to our door and our customers having to pay more for their products. This could lead to us not being as competitive in the market place and could restrict our growth as a company.

If you have any questions or concerns on what is stated above, please call me at 507-835-5056.

Thank you,

Richard Berry

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I am writing to express Berthold Farmers Elevator's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

There are a few reasons we feel this way, but the biggest reason is that if placed in a voting trust, that would eliminate the ability of the CP to acquire the KCS. In our opinion, a merger of the CN and KCS provides little value, no increase in efficiency and has a negative impact on competition. If the CN and KCS do merge with the help of the trust, the precedent set could allow of more consolidation in an already consolidated industry.

We ask that the STB reject CN's motion to approve its proposed voting trust. The CN should have to prove the merger would benefit the shippers and customers, without the use of the voting trust.

Respectfully submitted,

Dan Mostad

BESTWAY

March 26, 2021

ATTENTION: Surface Transportation Board

My name is Frank Figliomeni with a business address of 9701 Highway 50, Woodbridge, Ontario, Canada. I am the Executive Vice President of Bestway Cartage Limited, a division of Consolidated Fastfrate Inc. ("Fastfrate"). In my role, I am responsible for implementing the strategic plan that guides the direction of the business, overseeing the complete operations of our cross-border trucking division, and managing the relationship with our major customers and carrier partners.

As part of a group of companies that is one of Canada's largest privately held intermodal LTL carriers offering industry-best LTL and TL intermodal transit times, Bestway Cartage Limited provides easy-to-use, time-definite LTL shipping services between Quebec, Ontario and the states east of the Mississippi.

Bestway supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Fastfrate has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Bestway ships consumer packaged goods, electronic products, and other raw materials for customers located in central Canada to the United States. As a group of companies, we moved over 28,000 marine containers through the CP network of railway in 2020.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to, or that could expand the markets we serve effectively.

BESTWAY

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

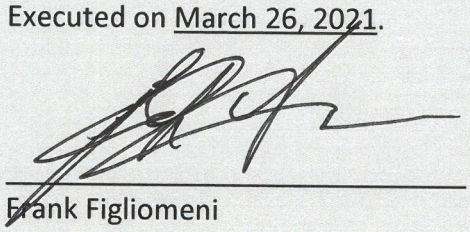
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our cross-border shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.



For these reasons, Bestway is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Bestway urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BESTWAY

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Casey Carmody and my business address is 1080 Eldridge Parkway, Suite 1150, Houston, TX 77077. I am VP of Business Development of BioUrja Terminals & Land, LLC. In my role, I am responsible for business development and commercial operations at our facility in New Town, North Dakota.

BioUrja is a large volume terminal served by CP that loads unit trains of crude oil and unloads unit trains of frac sand. Trains from our facility have traditionally shipped to the East Coast and Gulf Coast. We have enjoyed a close relationship with CP over the years. BiouUrja supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. For our perspective, the transaction promises to provide improved service offerings. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our new markets more efficiently.

We see this transaction as beneficial, and at this time we do not perceive any commercial downsides or decreased competition for our operations. Rail service is vital to our terminal's survival, and more efficient access to additional markets will likely make our facility more competitive. For example, CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane from New Town, ND to Mexico.

For these reasons, BioUrja is providing its support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for BioUrja. BioUrja urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized.

Birchwood FORD ON REGENT

Ford
Go Further

To whom it may concern,

Birchwood Ford would like to let you know that we have been a customer of Cp Rail for a few years and would like to let you know that they are a very reputable company to deal with both with the vehicle sales and the vehicle services side of our business.

I am the Commercial Fleet manager at Birchwood Ford and have been here for 35 years and dealing with Cp Rail for approx. 7 years.

From our perspective as a supplier I believe the transaction will be beneficial because it will support growth and investment to the rail system in North America.

We are a customer that relies heavily on rail transport and I do believe with this merger that will help us with shipping times for both our parts and vehicle wait times in turn getting our products to our customers quicker.

In my dealings with Cp Rail I have had the opportunity to visit some of their facilities and am quite impressed with the focus on keeping up to date with their buildings and safety protocols.

In closing we cannot see how this merger would not be beneficial to all involved with rail transportation. There would be no negative impacts that I can see to the environment to safety to the competition or any public interest and therefore we hope to see this transaction close so that we can start seeing the benefits as soon as possible.

Thank You

Brian Penner

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Brad Chase, I'm the SVP of Bison Transport. In my role, I am responsible for all Intermodal, Warehousing and Logistics Operations across North America.

Bison Transport is a significant user of CP for Intermodal move domestic Canada and Cross Border into the US. We have grown our Intermodal business substantially with CP as a result of their best in class service and collaborative approach to business efficiency and growth.

Bison Transport fully supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Bison Transport has a primary business of over the road truck load transportation serving customers in Canada, The United States and Mexico. Our Intermodal business is a complement to our over the road business. We believe strongly that the needs of our customers to have alternatives to optimize their freight needs could be well served in this transaction. While trucking companies typically oppose rail freight evolving we do support this merger to expand market reach for our customers.

We have contracts today with both the CP and KCS railroads. This combination will make the cross border shipping much more efficient and effective to serve customers. The capability to ship straight through from Canada to points in the US and to Mexico will truly help our customers with their overall needs, specifically those we cannot effectively serve with road operations.
This will also strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of cross border rail loads from approximately 200 per month to ideally over 1000.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by creating a much higher utilization of our assets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without any major service disruptions.

For these reasons, Bison Transport is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Bison Transport urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Brad Chase, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Brad Chase, Senior Vice President of Logistics and Multi-Modal

Boise Cascade

ATTENTION: Surface Transportation Board

My name is Scott Martini and my business address is 8714 215th Street West Lakeville MN. I am Sr Lumber Buyer of Boise Cascade. In my role, I am responsible for buying Lumber and Panel products for our Distribution Center in Lakeville MN.

Boise Cascade is a receiver of railcars on the CPRS via PGR typically Lumber /Plywood/ Composite Decking/Rebar/Engineered Wood products into Lakeville. Service has been not great coming from the south the past few years.

Boise Cascade supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve in the Midwest. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC should be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Boise Cascade has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation

Boise Cascade Timber & wood Division has Plywood Mills and Engineered Wood plants in LA that ship into the Midwest and more specifically into Lakeville MN. Boise also buys rebar and other steel products from Mexico.

Boise Cascade Distribution has locations in Kansas City, St. Louis that should benefit from CPKC merger for Lumber Products coming from Canadian shipments on the CPRS into those locations.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

Boise Cascade

CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of all Forest Products.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, typically our shipments have gone thru the Chicago which takes several extra day in transit and forced us to truck several load to meet our customer's demands for product.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. For these reasons, Boise Cascade is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Boise Cascade urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BOND CONSTRUCTION
COMPANY, LLC

11930 Perkins Rd. Ste B
Baton Rouge, LA 70810

Distinguished Members of The Surface Transportation Board:

As partner in a small construction company, I am concerned by the proposed merger of KCS railroad and Canadian National Railroad. The rise in the price of building materials of all types over the past year has been breathtaking. A rise in transportation costs across materials has only exacerbated the spike in end user prices. Rail serves an important role in the transportation network for a number of building materials, including lumber. This proposed merger will reduce competition in the market and eventually raise costs for all builders, businesses, and potential homeowners by further driving up freight costs.

Currently, in Louisiana, these two rail lines compete for business over parallel portions of their networks. They provide key connections for import markets as well as domestic transportation. This competition will be even more important now that trade with Canada and Mexico is expected to increase. This will be especially true if tariffs on Canadian lumber are reduced, and that lumber becomes a potential source of relief for sky-high prices. The overall size of the combined company paired with the significant overlap in route offerings will reduce competition.

The rise in costs across construction materials has already driven up the price of new homes dramatically in the last eighteen months. This has reduced, and will continue to reduce, housing affordability across Louisiana. This is not the time to further exacerbate the problem with reduced competition in transportation.

I strongly urge you to reject the CN – KCS merger. The original proposed merger between Canadian Pacific railroad and KCS is better for businesses and consumers alike, and you should strongly consider approving that merger. Unlike the CN – KCS merger, a combination of KCS with CP would enhance competition in Louisiana. These two railroads have mostly complementary routes and would remain relatively small enough in all markets that they would have to continue to vigorously compete.

Sincerely,

Richard Bond, Owner
Bond Construction Co., LLC

BORAL RESOURCES

Build something great™

Date: March 30th, 2021
ATTENTION: Surface Transportation Board

My name is Terese Hunwick and my business address is 10701 S. River Front Parkway, Suite 300, South Jordan, UT 84095. I am the VP Supply Chain of Boral Resources and responsible for rail services.

Boral Industries Inc. is a customer of CP's. We market fly ash from a coal power plant located in Coal Creek Jct, ND which is rail served by the Dakota Missouri Valley and Western Railroad (DMVW). This shortline operates on behalf of CP, providing a CP linehaul shipment for Boral into fly ash destination markets in the Midwest.

Boral Industries Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to or that could expand the markets we serve effectively. We know from experience that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of fly ash from Coal Creek Jct ND to Texas.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico

- and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Fly ash moves in private cars which are owned or leased by Boral Industries Inc. Faster transit times would reduce the number of cars we need in our fleet, reducing our asset costs.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Boral Industries Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Boral Industries Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BORDER AG & ENERGY COOP
106 MAIN ST
BOTTINEAU, ND 58318
701-228-2294

ATTENTION: Surface Transportation Board

My name is Wayne Johnson, and my business address is 106 Main St Bottineau, ND 58318. I am General Manager of Border Ag & Energy Coop. In my role, I am responsible for managing all grain shipments from our two shuttle facilities, one on the BNSF and the other on the CP at our location in Russell, ND.

Border Ag & Energy Coop has done business with the CP for many years, depending on rail shipments oil and cereal grains originating in north central ND. Wheat and sunflowers from our Russell facility goes to the PNW, Mexico as well as for domestic use. The CP has struggled at times being competitive with the BNSF due to lack of destination markets. This has resulted in grains flowing to the BNSF.

Border Ag and Energy Coop supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stake holders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

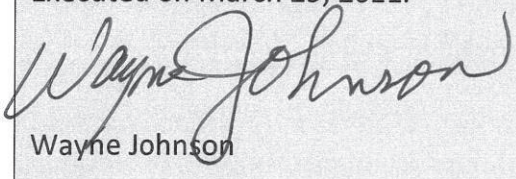
- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipping of 2459 cars from Jan 1, 2020 to Dec 31, 2020.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- Will allow CP cars to ship to Mexico to capture markets.

In the past the CP has limited the number of cars shipped to Mexico due to the slow return, this merger will increase the velocity for the railroad.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Border Ag & Energy Coop is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Border Ag and Energy Coop urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BORDER CHEMICAL COMPANY LIMITED

SINCE 1959

March 30, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

Attention: Surface Transportation Board

Border Chemical Company Limited (BCCL) is a shipper of sulphuric acid railcars into Canadian and American destinations. We also receive railcars of raw materials shipped by rail from both countries. We have a long-standing history of working with CP Railway and support the CP/KCS combination.

The merger of these two firms will improve logistical options for Border Chemical and assist in the cost-efficient movement of our raw materials from Louisiana and our finished goods into various USA destinations.

As the general manager of BCCL, I have challenged our team for the past 35 years, to identify improved service options, and find better rail competition within the markets we service. There will be a noticeable improvement to our service levels out of Louisiana by the creation of better competition. As a side benefit during rail labour disputes, we will have access by both major Canadian rail service providers into the southern USA.

For these reasons, BCCL is very supportive for the combination of CP and KCS, because it will enhance competition and improve our access to raw materials in a timely fashion. There will be additional benefit as the demand for our ultra-low mercury grade sulphuric acid is more sought after by USA based customers looking to be more environmentally focused.

BCCL urges STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and create logistical benefits for companies doing business on both sides of the border.

Regards,
Border Chemical Company Limited

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Border City Concrete is a concrete producer located on the Alberta/Saskatchewan border and serves the local markets in both provinces. We have produced materials for both CN and CP, including railway ballast and concrete. As well, many of our products support industry that import directly around the continent and world by rail while our raw materials and equipment come in by rail.

We are very concerned with the proposed merger between CN and Kansas City Southern because we feel that our already precarious access to a broad and competitive rail network is under threat. There are existing signs that CN has used its market position in a predatory way and while partially kept in check by a recently strengthened CP if CN is allowed to increase its competitive position we have strong concerns that recent gains could be undone. On the other, hand CP has already had a beneficial impact on the marketplace and giving them a combined platform with KCS would provide another true competitor in the North American rail marketplace reducing prices and increasing service for all.

I am writing to express Border City Concrete's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place

"heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same

points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for

KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Brian Morrison,
President,
Border City Concrete

BOSS LUBRICANTS

Serving Canada
Made In Canada

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Brad Flegel and our business address is # 104, 6303 - 30th Street SE, Calgary, Alberta, Canada. I am the Vice President of Operations at Boss Lubricants. In my role, I am responsible for various operational aspects of our business including the procurement of lubricant supply that is shipped in railcars from various suppliers who are mostly located in the United States & Canada.

Boss Lubricants is a family-owned business which is currently entering its 28th year of operation. Over this period, we have chosen CP Rail as our primary rail service provider to ensure our railcars are quickly and efficiently delivered to our Calgary head office location. We have enjoyed working with CP Rail as they have helped us grow and flourish as a company.

Boss Lubricants supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Boss Lubricants has not often spoke favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Boss Lubricants relies on the supply of lubricants in order to serve and facilitate our customers across Canada. Our company sources these lubricant supplies all over North America in locations such as Minnesota, Ohio, Louisiana, & Texas.

CP Rail has always done their best to provide good service, but its market reach is limited today as their lines only go as far south as Kansas City. If CP Rail could interline with other railroads to reach further markets and locations beyond Kansas City and reduce shipping delays this would only prove beneficial to Boss Lubricants going forward.

Personally, I know from experience and having many conversations with our suppliers who have single-line rail options at their locations, that single-line rail service options are the way to go forward to ensure and provide the best service possible. Boss Lubricants are very excited about the transaction because we feel it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

112, 6303 - 30 Street S.E. / Calgary, Alberta, Canada / T2C 1R4
tel: (403) 279-2223 / fax: (403) 279-2272 / toll free: 1-800-844-9457
www.bosslubricants.com

Boss Lubricants are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Boss Lubricants currently have railcars that are shipped out of Galena Park Texas and Shreveport Louisiana. Having new single routes will allow for these railcars a faster and quicker delivery of supply to our location in Calgary Canada, which in turn will allow us to provide better service and reliability to our customers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have always been aware that CP and KCS have held high standards of safety and operational effectiveness in their respective organizations. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Boss Lubricants is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Boss Lubricants urges the STB to approve CP's acquisition of KCS as quick as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Brad Flegel, VP of Operations

Boss Lubricants

BridgePoint Shipper Support Letter to Canadian Pacific

ATTENTION: Surface Transportation Board

My name is Anurag Arun and my business addresses: Toronto Office: Unit # 2, Building G, 20 Barnes Ct, Concord, L4K 4L4
GTA West Office: 6550 Danville Road, Mississauga, L5T 2S6. I am President of BridgePoint Logistics Inc. In my role, I am responsible for overseeing the operation and smooth functioning of the business.
BridgePoint used CP for movement of general cargo and we are satisfied with the service experience, thus far.

BridgePoint supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.
We see this association as uniquely beneficial on our Canadian and US Corridors.

We are excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer competitive transport options for our shipments of goods.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times & reliability - will improve our deliverables to our Customers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, BridgePoint is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. BridgePoint urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BROOKSTONE
BROOKSTONE SPECIALTY SERVICES, INC.

tel: 515 669 7586
225 Bell Avenue
PO Box 2394 Ames, IA 50010

ATTENTION: Surface Transportation Board

My name is Tom Barragy and my business address is 1305 19th St. SW, Mason City, IA 50401. I am President of Brookstone Specialty Services, Inc. In my role, I am responsible for the daily operations of our Transloading operations served by the CP.

Brookstone Specialty Services, Inc relationship with the CP benefits greatly by service via our transload site in Mason City with loads of lumber and other products into our facility.

Brookstone Specialty Services, Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads 'strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We transload lumber, building materials, and recycled materials from our CP-served facilities in Iowa to our customers with elevators/terminals in the South Central and Gulf region.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber from Southern Service Clients.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. We will be able to add additional transload services and intermodal service with increase service area
- Expands our customer base, gives us opprutunity to expand to multiple service locations

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Brookstone Specialty Services, Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. "Integrity in our business, quality in our products, versatility for our customers."

April 30, 2021

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

Buchanan Lumber Mobile hereby files this letter to express its views about the bids tendered by various railways to acquire Kansas City Southern ("KCS")

Buchanan Lumber Mobile Manufacturer of high quality Domestic Hardwoods, Imports and Cypress Lumber. We have access to ship throughout North America via rail at our facilities through our connection with the TASD (Terminal Railway Alabama State Dock). This gives us access to eight different rail options although we would lose one of them if the CN were to be successful in acquiring the KCS, whereas we would remain with eight options if the CP were to be successful. In fact, the CP option would offer up a new competitive option going north that we have not had access to in the past!

Buchanan Lumber Mobile has not previously addressed either of the two proposals involving the acquisition of KCS; nonetheless we have strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

As a small, private, independent business trying to operate with the current transportation and freight challenges that are part of the post-Covid19 economy, we are in favor of any proposal that would generate more available options for the rail-transportation of product.

Respectfully submitted,

Dick Buchanan, President
Buchanan Lumber Mobile, Inc

BULKMATIC de MEXICO

SAN PEDRO GARZA GARCÍA, N.L. APRIL 6TH, 2021

My name is Francisco Javier Melo Valdés and my business address is Humberto Junco Voigt 2307 Torre 1 Mezzanine, Col. Valle Oriente SPGG, N.L. C.P. 66269. I am Commercial VicePresident of Bulkmatic de Mexico. In my role, I am responsible for all commercial activities within Bulkmatic's business units.

Bulkmatic de Mexico has been a KCS business partner for over 20 years and operates 9 out of its 16 transloading terminals under KCSM rail service in Mexico. In gross numbers, considering the carloads KCSM hauls in the agriculture, energy and chemicals/petroleum business lines, Bulkmatic de Mexico transloads more than 12% of KCSM's carloads (account 4% for all KCS's carloads). We are indeed a significant partner to KCS along the routes from Nuevo Laredo to Mexico City and a significant logistics service provider to the industries and our customers.

From our perspective, the combined CPKC service will provide options to our customers and invigorate transportation competition in the markets. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our customers reach existing markets and new markets more efficiently. Bulkmatic de Mexico is transloading commodities that rely on the first and second CP's lines of business after Intermodal . Bulkmatic de Mexico will expect to grow when such carloads shift to the single-line haul CPKC into Mexico.

Trusting this letter will find you well, please contact me for any additional information at my e-mail fmelo@bulkmatic.com.mx

Best Regards.

Francisco J. Melo

BULKMATIC
Quality Driven

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Alfie Bingham and my business address is 2001 N. Cline Ave, Griffith, IN 46319. I am CEO of Bulkmatic Transport. In my role, I am responsible for our U.S.-based business, as well as our subsidiary in Mexico.

Bulkmatic de Mexico, our subsidiary, operates multiple rail-to-truck transload terminals on KCSM lines in Mexico. We've been working closely with KCSM and its parent company, Kansas City Southern, for many years to provide shippers in the U.S. efficient rail access to markets in Mexico. By offering rail efficiencies and first-rate service, we have together made new markets in Mexico accessible to U.S. exports. We have been very successful in facilitating increased trade between the U.S. and Mexico and converting a substantial amount of cross-border truck traffic to rail, which has many economic and environmental benefits.

Bulkmatic supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. In the USA and Canada, the combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In Mexico, KCS provides efficient service thru the most relevant manufacturing footprint. The two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders

From our perspective, the more shippers who have single-line access to Mexican markets, the further we can extend the economic advantages of rail service to shippers and receivers on both sides of the border. By offering shippers in Chicago, the Northeast and Canada a streamlined route into Mexico, we believe we'll continue to see trade increase as buyers and sellers discover they have viable access to new markets. Bulkmatic supports any merger that extends the efficiency and service we've worked with KCS/KCSM to offer industrial shippers and receivers over the last 20 years.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks in the North America market

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada

under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

We believe this transaction could be positive for as a transportation option. We can see the benefit in the future to be able to have a seamless option into the Canada market, and more competitive option to access market around the Chicago area.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Bulkmatic Transport is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Bulkmatic Transport urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Alfie Bingham, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on 3/30/2021.

Albert Y. (Alfie) Bingham III

CZARNIKOW

CIUDAD DE MEXICO, March 26th, 2021.

ATTENTION: Surface Transportation Board

My name is Fernando Mosso and my business address is Descartes 54-101, Col Nueva Anzures, 11590 CDMX, Mexico. I am Regional Operations Manager of C Czarnikow Sugar Mexico, SA de CV. In my role, I am responsible for Logistics Operations.

C Czarnikow Sugar Mexico, SA de CV is a Sugar trading company; for export and Import of Sugar in Mexico, USA, and Canada, for several years we have been using rails as transportation method for many of our contracts.

Our relationship with KCS and CP has been satisfactory thru several years for shipping sugar from Mexico to several US destinations and from Canada to Mexico.

C Czarnikow Sugar Mexico, SA de CV supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CP-KC –KCSM network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. C Czarnikow Sugar Mexico, SA de CV has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship sugar our CP-served facilities in Taber, AB to our customers in several places in Mexico.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Sugar from Canada to Mexico and Mexico to US, including US to US origin destinations.

ATTENTION: Surface Transportation Board

My name is Derrick Broome, and my business address is 130 East Chestnut Street, Suite 402 Columbus, Ohio 43215. I am Vice President - Intermodal of C.A.T. Global Logistics. In my role, I am responsible for Intermodal Pricing, Operations and Sales.

C.A.T. Global Logistics is currently a customer of both the CP and the KCS shipping primarily paper goods out of Canada and manufactured goods out of Mexico throughout the U.S. on behalf of our clients.

C.A.T Global supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. C.A.T. Global has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

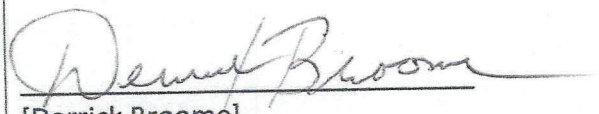
> CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).
>
> And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our cross-border shipments in North America.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. There will no longer be the necessity to cross dock, crosstown our own units or handle multiple rail bills.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, C.A.T. Global Logistics is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. C.A.T. Global Logistics urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

6110 49TH STREET SOUTH
MUSCATINE IOWA, 52761

My name is Tom Schnedler and my business address is 6110 49th St, Muscatine, IA. I am the Director of Operations of CAM II Warehouse, Inc. In my role, I am responsible for all aspects of daily operation of CAM II Warehouse and its affiliated properties.

CAM II Warehouse is has been served by the CP and previous railroad since 1976. Railroad service has been a vital portion of our business and hopefully will continue to be.

CAM II Warehouse supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CAM II and its affiliates have three warehouses in Muscatine that receive various goods on a regular basis. With this merger we hope to open up even more rail business that are currently brought in by a very strained commercial trucking market.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City. Often times when short lines and the costs that go along with them makes it not feasible to ship rail.

And we know from experience we have not been able to compete against single line served warehouses.

TWS

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Canada Drayage Inc.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Kevin Hankinson and my business address is 11440 – 54 Street SE, Calgary AB. I am Vice President, Western Canada of Canada Drayage Inc. In my role, I am responsible for Canada Drayage business activities in Western Canada and the leadership of our Western Canadian personnel.

Canada Drayage is part of the Fastfrate Group of Companies. The Fastfrate Group of Companies and CP Rail have enjoyed an uninterrupted business relationship dating back to the mid 1960's. Today CDI is a drayage service partner for CP Rail across Canada daily providing in excess of 200 trucks per day from Vancouver Island through to Quebec for CP Rail. CP Rail is The Fastfrate Groups intermodal partner in Canada moving in thousands and thousands of container loads annually. Our organizations work closely to enhance, improve, and streamline our collective services and market requirements to bring greater value in our services to our respective client base and our organizations.

Canada Drayage Inc supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Canada Drayage has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The Fastfrate Group of Companies, sees impactful opportunities to work further with CP Rail and extending to the Fastfrate client base and expanded Canada, US, Mexico intermodal network to support our customer base with a streamline fluid supply chain solution for our Canadian clients. The expanded reach CP Rail will achieve with the combined CP Rail and KCS network will open new doors and value to our business and our clients.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

CIFFA Canadian International Freight Forwarders Association

March 26, 2021

Surface Transportation Board
395 E Street SW
Washington, DC
20423

Attention: Office of Proceedings

Re: Finance Docket No. 36500, Canadian Pacific Railway Limited, – Control – Kansas City Southern

My name is Bruce Rodgers and my business address is 170 Attwell Drive, Suite 480, Toronto Ontario CA M9W 5Z5. I am the Executive Director of the Canadian International Freight Forwarders Association (CIFFA). Our Association represents the interests of the freight forwarding industry in Canada.

We are writing this letter in support of the CP/KCS combination. The transaction would provide significant benefits that our members are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the North American marketplace. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would assist in reach existing and new markets more efficiently. Also with the two railroads' strong focus on safety and their track record of operational excellence, we are confident that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP has provided overall good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City, which could expand markets that our members serve effectively. We do know from experience that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve the markets.

We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from transportation providers. This transaction will improve transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CIFFA is voicing strong support for the combination of CP and KCS. It will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. We urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Bruce Rodgers, declare under penalty of perjury "under the laws of the United States," that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter on behalf of our Association.

Executed on March 26, 2021.

CANADIAN TIRE

April 9, 2021

To Whom It May Concern:

I am writing on behalf of Canadian Tire Corporation (CTC) to express our support of Canadian Pacific Railway's (CP) acquisition of Kansas City Southern (KCS), particularly given the new Canada-US-Mexico Trade Agreement (CUSMA).

CP plays a critical role in CTC's supply chain by transporting goods to distribution centres and retail locations across Canada. The expanded network that this acquisition provides will benefit CTC by creating improved rail access to our vendors in the United States and improved transportation access to sourcing opportunities throughout North America that are, currently, served by truck. This acquisition will create a safe, efficient and fast service that will help us reduce carbon intensity and improve the North American supply chain's environmental footprint.

This acquisition will join two rail systems with no operational overlap. CTC requests the STB approve CP's acquisition of KCS so that these systems can be integrated, and the end-to-end benefits of this deal can be realized quickly.

Regards,

Gary Fast

Canpotex

Inspiring Growth

March 30, 2021

ATTENTION: Surface Transportation Board

My name is Vee Kachroo, and my business address is Suite 400, 111 – 2nd Avenue South, Saskatoon, SK, S7K 1K6, Canada. I am the Senior VP - Operations for Canpotex Ltd. In my role, I am responsible for the Supply Chain movement of Potash, from Saskatchewan to customers around the world.

Canpotex Ltd. ships over 13M mt of potash around the world, thru our terminals in Vancouver, BC, Portland, Or, St. John, NB and Thunder Bay, On. We use CP rail to move our product from Saskatchewan to our terminals. CP Rail handles over 75% of our rail business. We are satisfied with the service CP provides and over the past 5 years have continued to see a very customer centric supplier, focused on innovation to assist us in getting our product to our customers more reliably.

Canpotex Ltd. supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network with new single-line hauls and access to premier ports on the U.S. Gulf and Pacific coasts would help us reach our existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Canpotex Ltd. has not often spoken favorably about railroad consolidation. We see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

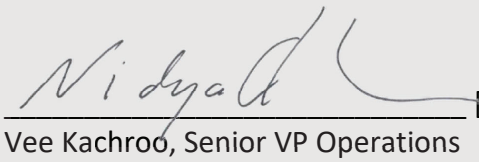
CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience of both our own, and that of our competitors who have single-line rail options at their origins, that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of potash from mines in Saskatchewan to international customers in Brazil, Mexico, and other countries in Central and South America. The proposed CPKC network would allow us to have additional port optionality in the Gulf and potential competitive rail direct options into the Mexican market.
- Having a large private fleet of over 5500+ rail cars, CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been impressed by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Canpotex Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Canpotex Ltd. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

2284 Wyecroft Road Oakville, ON L6L 6M1

ATTENTION: Surface Transportation Board

Caravan Logistics Inc. is an asset based transportation company with headquarters at 2284 Wyecroft Road, Oakville, ON, L6L 6M1. I, Zoriana Workun, am the Director of Operations for Caravan Logistics Inc. and am responsible for the entire operation of the company including intermodal and over the road solutions using either our assets or agents.

Caravan's relationship with CP began in 2010 when we started moving intermodal service via Expressway.

While the relationship with CP has been beneficial there are limitations. Their intermodal service stops at Chicago and often freight is destined for Kansas City. This means that for beyond points CP needs to engage another carrier which results in inefficiencies with rubber tire or steel wheel interchanges that slow down the movement of freight. The merger between CP/KCS will remove this inefficiency as a single through carrier. From our perspective, the proposed CP/KCS merger promises to provide improved service options and will invigorate transportation competition in the markets we serve. With the single line haul access Caravan Logistics could be in a position to convert truck from these routes into intermodal. This will enable Caravan to migrate our assets trucks to other lanes while supporting our environmental objections in the greater community that we serve today.

I am very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. There are options to explore routes into Mexico a service offering that Caravan Logistics has shied away from previously because there wasn't a compelling service solution.

While there has been significant media attention of a potential anti-competitive nature of the merger or the concern that approval of this merger will lead to future rail mergers we at Caravan Logistics do not believe that to be the case. With respect to the anti-competitive nature there is no overlap between CP and KCS. Unlike other merger proposals the CP and KCS only meet in Kansas City. That by very definition means there is no limit on competition. Additionally, there is no limitation of service offerings. Shippers still have access to other service offerings. For example from Western Canada to Mexico a Shipper could use CN, UP or the BNSF. As previously stated due to the limited reach of CP these options are still available. The other proposed merger would have CP removed from the equation so the shipper solution drops from 4 carriers to 3 which by definition is anti-competitive. Furthermore, the concern about future mergers is also unfounded because the CP/KCS merger would still be the smallest of the Class one rail.

For these reasons, Caravan Logistics is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Caravan Logistics urges the STB to approve CP's acquisition of KCS as

DocuSign Envelope ID: C7C70397-1645-4EF0-8335-F2FE01388451

swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders and reject calls to revoke it, and to proceed to review and approve the CP-KCS proposed combination as expeditiously as possible. We look forward to seeing CPKC as a stronger competitor in the industry.

VERIFICATION

I _Zoriana Workun_, verify under penalty of perjury under the laws of the United States,'' if executed outside of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

CARAVAN SUPPLY CHAIN

caravansupplychain.com

302151

ENTERED
Office of Proceedings
April 26, 2021
Part of
Public Record

April 23, 2021

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

Caravan Supply Chain Inc. hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS") and Canadian Pacific's ("CP") proposed combination with KCS.

> Caravan Supply Chain Inc. has not previously addressed either of the two proposals involving the acquisition of KCS.
> Caravan Supply Chain Inc. is reliant on CN for transportation services in certain markets and therefore does not wish to voice a position taking CP's side over CN's.

Caravan Supply Chain Inc., nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.
- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS in light of these criteria.

Respectfully submitted,

Barry O'Neill, Vice President, Owner,
Caravan Supply Chain Inc.

CARGO M
LOGISTIC AND TRANSPORTATION
METROPOLITAN CLUSTER OF MONTRÉAL

Cynthia T. Brown
Chief, Section of Administration
Office of Proceedings
Surface Transportation Board
395 E. Street, S.W.
Washington, DC 20423-0001

Re: Acquisition of Kansas City Southern by Canadian Pacific Railway

Dear Ms. Brown,

I am writing to you as the Executive Director of Cargo Montreal. We are the logistics and transportation metropolitan cluster of Montreal. Our mission is to bring together all Greater Montreal area freight transport and logistics stakeholders whose activities promote Montreal as an industry hub around common goals to increase cohesion, competitiveness, growth, and reach to market. Cargo Montreal's members produce and ship a large variety of commodities to national and international markets.

Cargo Montreal firmly supports the acquisition of Kansas City Southern (KCS) by a Canadian Class 1 railroad company, such as Canadian Pacific Railway (CP), because of the several benefits such a transaction would generate all along the supply chain.

This would result in opening and accessing more markets for shippers in North America in respect to the USMCA spirit and goals, where the integration of the supply chain is key. Moreover, we strongly believe that the new combined company would produce a more economical rail option for our members and unlock large potentials of the networks across America.

We are confident that a deal between CP and KCS would be beneficial to low-carbon objectives of both the United States of America and Canada, since Canada's Class 1 railroads companies are already showing leadership in fighting against climate change and also because transportation by rail is the most energy-efficient method of moving freight over land.

Therefore, Cargo Montreal strongly believes that an acquisition of KCS by Canadian Pacific, a Canadian Class 1 railroad company, would offer a faster, safer, cleaner and a better competitive market access option than the status quo.

As a regulator, the Surface Transportation Board must ensure competition options will remain for shippers with limited downstream consolidation impacts of any potential transaction between two large companies. Cargo Montreal believes shippers will continue to have access to a competitive landscape with, in fact, an improved access to new markets. We are also hopeful that such a transaction could result in cheaper options for our members.

In terms of potential downstream consolidation impacts, past transactions tell us that Canadian Class 1 railroad companies have a great track record of acquisitions; we do not see why it would be any different this time. We trust this transaction would integrate KCS as a partner in an effective and seamlessly way.

At a glance, here are some other reasons why Cargo Montreal is optimistic for a potential transaction:

- A combined company's single-owner, single-operator service, would result in faster transit times, more economical rail option and shorter distances on many key routes;

- Enhanced service and competition linked to this transaction should provide cheaper and more competitive options to our members;

- Customers of both companies would benefit from faster, safer, more direct, and more efficient service. It would most likely reduce our members' equipment costs and increase fleet capacity in terms of total shipments.

For all reasons stated above, Cargo Montreal is expressing support for the acquisition of Kansas City Southern (KCS) by Canadian Pacific Railway (CP), a deal that would greatly improve the North American Transportation Network.

Sincerely,

Mathieu Charbonneau
Executive Director

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Cecchetto and Sons Limited is a key service provider to the nickel mining industry of northern Ontario. In addition, our company constructs key infrastructure such as water and wastewater treatment plants and other industrial projects throughout Ontario.

Much of our raw materials, supplies, and equipment are transported by rail. If CN is successful in its acquisition of Kansas City Southern, we are concerned that the resulting monopoly would restrict competitive pricing of transportation, and limit our access to essential equipment and materials that are more cost effectively transported by rail.

I am writing to express Cecchetto and Sons Limited's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed

transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for

shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not

investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan

that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Vaughn Blacklock
Cecchetto and Sons Limited

Cc: All Parties of Record

ATTENTION: Surface Transportation Board

My name is Douglas Punzel and my business address is 8505 183rd Suite H, Tinley Park, IL 60477. I am President of Celtic International, a Transplace Company. In my role, I am responsible for the Intermodal business operated throughout North America.

Celtic International is a customer of both CP and KCS moving Intermodal shipments using rail owned equipment.

Celtic International supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Celtic International has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We use Intermodal services with the CP, to and from Canada, generally focused on the rail owned box fleet. We use KCS on Southeast/Southwest lanes and in/out of Mexico using rail owned equipment.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

© 2020 Transplace

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of 53 Intermodal containers from Mexico to/from US and Canadian points. Growing our Mexico business is a key growth initiative.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Reducing hand offs in this business is critical.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

© 2020 Transplace

For these reasons, Celtic International is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Celtic International urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Douglas C Punzel state under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

My name is Chris Stevens and my business address is 850, 335-8th Avenue SW, Calgary Alberta Canada. I am Vice President of Marketing for Centennial Gas Liquids ULC. In my role, I am responsible for developing and implementing Centennial's marketing strategy to purchase, transport, and sell natural gas liquids in North America.

Centennial is responsible for negotiating the Canadian rail contracts for both Centennial Energy and NGL Wholesale Supply, sister companies for NGL Energy Partners.

Centennial Energy, supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Centennial ships LPG across Canada, to our rail terminals based into the United States, and to our Mexican Customers. We have over 3,000 railcars under long term lease, as rail shipments are the primary focus of our wholesale marketing business.

CP is an important business partner, and we see the merger with the KC, and the resulting efficiencies as critical to provide competitive access to some of our markets in the US and Mexico.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane from Western Canada to Laredo, Mexico and points beyond.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our rail car costs and improve our efficiency as we realize more shipments per year on each railcar.

CENTENNIAL ENERGY, LLC.

In our estimation, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Centennial Energy is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Centennial Energy LLC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: **Support Letter for Merger of CP/KCS**

Attention: **Surface Transportation Board**

Dear Sir/Ma'am:

My name is Bryan Fitzsimmons and I am President/CEO Centerville Iron & Metal with rail operations in the U.S. State of Iowa. We ship scrap to steel mills located in the Midwest area of the U.S.

Canadian Pacific has supported our business with gondola car assignments and shipping throughout the years. There are several individuals inside of Canadian Pacific who routinely have gone above and beyond our expectations in delivering service.

Centerville Iron & Metal is a small shipper and business that completely supports the proposed merger between Canadian Pacific and Kansas City Southern rail companies. We see many benefits however a few of the more prominent ones in our mind is as follows:

- A larger network, with reduced switching fees allowing expansion and growth of business to markets around North America which we don't currently have access to. These markets might include Mexico and customers or mills in that country.
- A larger gondola railcar pool, improving availability and lead time of gondola rail car assignment for shipping.
- A single-line point of service, limiting the possibility for lost time with cars sitting while waiting to be picked up by other shippers (i.e. switching lines). Being a single-line shipper, CP/KCS will provide a seamless interface with which to work to get cars to markets beyond where we currently ship to as well.
- Network efficiency, seeing little to no overlap between the networks means all of the benefits listed should result in a service improvement that is greater than 'the sum of the parts'.

I would like to add that as a small business, it is important for us to have access to these benefits which are not solely helpful to large companies or organizations. Small businesses depend and rely upon access to rail service and the markets they can open up for a company are critical to their growth. This merger does exactly that.

For these reasons Centerville Iron & Metal strongly supports the combination of Canadian Pacific and Kansas City Southern. If you have any questions please don't hesitate to contact me at the email below. I would be happy to expand upon the benefits for us of the merger between CP & KCS further.

CENTRAL FARM SERVICE

April 19, 2021

ATTENTION: Surface Transportation Board

My name is Dennis Inman, and my business address is 233 W. Ciro St. Truman, MN. I am the Vice President - Grain of Central Farm Service. We are a full-service farmer owned cooperative offering grain handling services, agronomy products, refined fuels, and livestock feed. In my role as the Vice President of the Grain Department I am responsible for leading all the grain purchasing, storage and handling of grain at our 18 grain elevators in Southern Minnesota and Northern Iowa.

Central Farm Service is currently operating four grain elevators and several agronomy facilities with access to the CP railroad. Our grain locations primarily ship corn and soybeans to a variety of destinations including the PNW and NOLA export elevators, various processing plants across the northern tier of U.S. states and Canadian provinces. We have enjoyed a strong relationship with the CP railroad throughout our company's history.

Central Farm Service supports approval of the CP and KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CP-KCS network – with new single-line hauls and access to ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Central Farm Service has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with limited downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its line only go as far south as Kansas City. We have other shuttle train loading facilities on competing railroads that give us better access to end-users of grain in California, Arizona and into Mexico. Those single-line destinations have generally meant much more competitive pricing which we are able to pass onto our farmer members in the form of higher prices for their grain.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of corn and soybeans from Southern Minnesota to the NOLA export elevators and Mexico demand points.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction should have limited adverse effects on competition.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Central Farm Service is voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Central Farm Service urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

CENTREPORT™ CANADA

Canada's Centre for Global Trade
WINNIPEG, MANITOBA

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Diane Gray and I am the President and CEO of CentrePort Canada Inc., located at 100-259 Portage Avenue, Winnipeg, Manitoba, Canada, R3B 2A9.

CentrePort Canada Inc. is responsible for facilitating the overall development of the 20,000 acre inland port in Winnipeg, Manitoba. CP's main east-line across Canada runs through the inland port. A significant Rail Park is in the pre-construction phase, located immediately south of the CP rail line. It is anticipated that the companies locating in the Rail Park will be served by CP and will benefit significantly from the CP-KCS combination.

CentrePort Canada Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. CP has provided shippers in the Winnipeg market with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help CentrePort companies' reach existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the

Suite 100 - 259 Portage Avenue, Winnipeg MB Canada R3B 2A9
Tel: (204) 784-1300 Fax: (204) 784-1308
www.centreportcanada.ca

kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CentrePort Canada Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CentrePort Canada Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SHIPPER SUPPORT LETTER

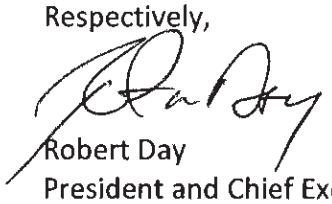
March 29, 2021

ATTENTION: Surface Transportation Board ("STB")

I am President & CEO of Ceres Global Ag Corp., with principal offices at 701 Xenia Avenue South, Suite 400, Golden Valley, MN 55416 ("Ceres" or the "Company"). In my role, I am responsible for setting Ceres' corporate vision and running the Company. I submit this letter to the STB in support of Canadian Pacific Railway Limited's ("CP") request for STB approval of its planned merger with the Kansas City Southern railroad ("KCS").

Through its network of commodity logistics centers, Ceres and its subsidiaries merchandize high-quality North American agricultural commodities and value-added products and provide reliable supply chain logistics services to agricultural, energy and industrial customers worldwide. Ceres utilizes multiple transportation modes on several railroads, including the CP, to ship cereal grains and oilseeds (e.g., wheat, durum, soybeans) to and from Ceres-owned assets, third-party facilities, and directly to its customers in the U.S. A typical example of Ceres' shipments via the CP is the movement of grain products from the prairies of Western Canada and the Northern U.S. plains to Ceres' Minnesota terminal assets in Duluth and Minneapolis, and later by rail to grain and oilseed processing customers in the U.S., Mexico or by vessel to international customers. The CP plays a critical role in Ceres' ability to manage an efficient supply chain and provide reliable service to its customers.

Ceres supports the planned combination of the CP and the KCS as it would increase railroad competition by providing shippers additional routes to move products to destinations that the CP cannot serve today. Today, Ceres is unable to access KCS-only destinations directly from many of the facilities (Ceres-owned and 3rd party) from which it originates. The combined CP/KCS network will allow Ceres and others to efficiently access KCS lines and provide added options to access ports in the U.S. Gulf, Atlantic and Pacific coasts and directly into Mexico.



Ceres originates grain and oilseeds from farmers in Western Canada (Saskatchewan, Manitoba & Alberta) and the Northern U.S. (North Dakota, Montana & Minnesota) through Company-owned and 3rd party assets served by CP. While CP has historically provided Ceres with good service, its geographic reach is limited to the northern corridor of the U.S., thereby forcing Ceres to transfer its shipments on the CP to another railroad or mode of transportation (e.g., barge) when appealing opportunities arise to move products south into the U.S., U.S. ports and Mexico. Compared to a single-line haul carrier, which the CP/KCS would become should the combination be approved, the status quo for such shipments is both inefficient and costly. In addition, a single line haul provides the carrier with control of logistics from origin to destination, which would enable the carrier to provide shippers with more consistent monitoring, timing of arrival and pricing.

Ceres is particularly enthusiastic about the role the new CP/KCS single-line routes will play in expanding access to U.S. ports and Mexico. Today, farmers in the upper Midwest lack efficient access to the U.S. Gulf and Mexico, which forces them to lower the price of their products in order to compete globally. In recent years this has proven costly as cheaper logistics from other countries have made it difficult for U.S. farmers and their products to be price-competitive into the world market. A CP/KCS railroad, with its north to south connections, would open new markets for U.S. and Canadian farmers.

Lastly, with CP's strong focus on safety and its track record of operational excellence, we would expect a smooth integration. Given the straightforward network connectivity between the CP and KCS, and the fact that the CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their combination without service disruptions that have accompanied some past rail mergers.

To summarize, Ceres supports the proposed combination of the CP and KCS, because it will enhance railroad competition to the benefit of shippers, provide both farmers and shippers with expanded options for their products, and drive efficiencies for customers of all sizes. Ceres encourages the STB to approve the planned merger as swiftly as possible so that these benefits can be realized as quickly as possible for all stakeholders.

Respectively,

Robert Day
President and Chief Executive Officer

CF Industries Shipper Support Letter of CP & KCS Merger

ATTENTION: Surface Transportation Board

My name is Bert Frost and my business address is 4 Parkway North, Suite 400, Deerfield, IL 60015. I am Senior Vice President, Sales, Market Development and Supply Chain for CF Industries. In my role, I am responsible for overseeing the procurement of natural gas, the pricing and marketing strategy of our finished products, and the supply chain network to deliver those products.

CF Industries is a global nitrogen fertilizer manufacturer with nine production facilities and 23 distribution terminals in the United States, Canada, and the United Kingdom. We deliver fertilizer and industrial products to our customers: agricultural retailers/wholesalers and industrial manufacturing businesses. Products we ship include anhydrous ammonia, urea, urea liquor, urea ammonium nitrate, aqua ammonia, diesel exhaust fluid and nitric acid. We have been doing business with both the CP and the KCS for many years now and are currently enjoying high levels of satisfaction from both partners.

CF Industries supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. With the strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. CF has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

One of our production facilities and seven of our storage terminals are located on the CP railroad while another three terminals utilize the CP in the rail route. Efficient and cost-effective transportation to these facilities by rail is an integral part of CF's business as it brings our products closer to the end user in preparation for agricultural application season. The

production facility located on the CP is in Medicine Hat, Alberta, which ships to our terminals in Manitoba, Saskatchewan, and the Midwest region of the United States. While CF has no assets located on the KCS rail line, the last year has brought more business between the two parties and an increase in shipment opportunities into Mexico on the KCSM. The Mexican business is expected to grow with the merger as the established relationship with CP is expected to generate more options for CF products.
CP has provided us with good service, but its market reach is limited today as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that could expand the markets we serve effectively. We know from experience (both our own and our competitors) that single-line rail service options are usually more competitively priced and have faster transit times than a route utilizing two railroads.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability which will reduce our equipment costs and improve our efficiency.

The entirely complementary nature of the CP and KCS networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist since CPKC will continue to interchange with other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CF Industries is voicing strong support for the combination of CP and KCS because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CF urges the STB to approve CP's acquisition of KCS as swiftly as possible so these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I BERT FROST, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Kim Ludtke and my business address is 525 8 Ave SW, Calgary, AB T2P 1G1. I am Vice President, Operations & Supply Chain of CFR Chemicals. In my role, I am responsible for all purchasing and operations.

CFR Chemicals is a chemical distributor and transloading facility based in central Alberta. Although CFR Is serviced by CN, we can ship via CP because we are within an interzone switch. Currently, when possible we ship using CP out of the southern US. In these circumstances CP has provided excellent service.

CFR Chemicals supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Currently the majority of our products that originate from the US gulf coast arrive in central Alberta via CN due to CP lane restrictions. By only have one rail option that services this corridor, CFR has potential risk associated with service, labor disruptions, and a pricing monopoly. By allowing this merger, CFR would have an alternative option for security of supply and competitive pricing.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of various chemicals from the US Gulf Coast to Central Alberta.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will improve our ability to service our customers in a reliable, competitive way.
- By having alternate supply lines into our facility, we could potentially broaden our transloading business, and create more access for our customers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CFR Chemicals is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. CFR Chemicals urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Kim Ludtke

Charles City Rail Terminal, LLC
300 Lawler Street
Charles City, IA50616
Yesterday is history, tomorrow a mystery, but today is a gift … that's why they call it the present

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Joe Natale and my business address is 300 Lawler Street, Charles City, IA 50616. I am the General Manager of Charles City Rail Terminal, LLC ("CCRT"). In my role, I am responsible for the development and operations of the company.

CCRT is developing a rail transloading facility to load and offload railcars and will provide transloading services for companies shipping on the CP.

CCRT supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CCRT's transloading facility will service processing and production facilities in Iowa and surrounding states needing to transport multiple commodities (ethanol, corn, soybean, fertilizers, animal feedstock, etc.) to other regions of the country on the CP/KCS, including the Gulf region. CCRT will also serve Iowa and surrounding states with a reliable source of propane by providing destination delivered supply or railcar throughput arrangements as well as provide an origination point for suppliers seeking to optimize its supply logistics utilizing the CP/KCS.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CCRT is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CCRT urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION:
Surface Transportation Board
395 E Street SW
Washington, DC
USA
20423

March 30, 2021
To Whom It May Concern;

My name is Mark de Hueck and my business address is 155 Gordon Baker Road Suite 300, Toronto Ontario, Canada M2H 3N5. I am the Director of Supply Chain, Transportation and Customer Service for Chemtrade Logistics Inc. (Chemtrade), a Chemical Manufacturer with annual revenue of approximately $2B from 65 manufacturing sites. In my role, I am responsible for the movement of all our products in North America.

Chemtrade currently ships hundreds of thousands of bulk loads to customers across North America (primarily the United States and Canada) including businesses and municipalities. We ship a number of commodity chemicals that are used in water treatment, food, pulp and paper, oil and gas, refining, mining, and a myriad of other manufacturing industries. We work with all of the North American Class 1 Railways in a meaningful way and understand the railway space intimately. We have enjoyed a mutually beneficial relationship with both CP and KCS for many years. The service we receive from both of these

organizations is commensurate with other railways and in some instances better. We are currently working closely with CP (and all of our other carrier partners) to identify future improvement opportunities given the current challenges in the marketplace.

Chemtrade supports approval of a CP/KCS combination. The transaction could provide benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction potentially provides opportunity to improve rail service options and invigorate transportation competition in the markets we serve, which is currently somewhat lacking. The combined CPKC network, with new single-line hauls and access to ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets, should in theory, help us reach our existing and new markets more seamlessly and cost effectively. There is potential that with the two railroads' strong focus on safety and operational excellence, the new CPKC should be able to integrate their operations quickly to the benefit of rail customers and other stakeholders. Chemtrade has not often spoken favorably about railroad consolidation, but we see this transaction as potentially uniquely beneficial, with limited downside if the railway executes as promised.

Chemtrade needs safe, reliable, ratable and cost effective rail service in order to get its products to market across North America. With the STB's guidance and assurances from the CPKC, this merger has potential to benefit Shippers and their customers in these markets as well as opening up additional new opportunities under the United States, Mexico and Canada (USMCA) trade agreement. We can foresee that it would be valuable to have access to a seamless USMCA railroad option.

We are cautiously optimistic about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers that serve our markets. We hope that a strengthened and new organization will be able to improve upon its current level of service as well as the rate scheme due to synergies.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options and we hope, reduce costs.

At the same time, the complementary nature of CP's and KCS' networks means that the transaction should not have any material adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC should continue to interchange with all of their other existing interline partners. We are hopeful that the implementation of this transaction can occur without the service disruptions that have accompanied some past rail mergers.

For these reasons, Chemtrade is voicing support for the combination of CP and KCS, because it should enhance competition, drive efficiencies and improve service for customers. Chemtrade requests the STB to approve CP's acquisition of KCS once it has done its due diligence as swiftly as possible.

We would be pleased to discuss any of these matters with you at your convenience.

Yours truly,

Mark de Hueck

Creating connections to empower agriculture

April 13, 2021

Cynthia T. Brown
Chief, Section of Administration
Office of Proceedings
Surface Transportation Board
395 E St, SW
Washington, DC 20423

Re: STB application of merger rules for handling the proposed merger of the Canadian Pacific and Kansas City Southern railroads
Finance Docket No. 36500

Dear Ms. Brown:

As a farmer-owned cooperative, CHS Inc. ("CHS") supports approval of the Canadian Pacific Railway acquisition of Kansas City Southern. CHS anticipates that the merger would expand U.S. farmers' market access, especially in Northern states, where current rail service is limited and does not provide connections to broad geographies or destination markets.

If approved, the proposed Canadian Pacific Kansas City Southern network would enable single-line hauls and timely access to ports on the U.S. center Gulf, Atlantic and Pacific coasts, as well as key overseas markets. Single-line hauls mean fewer railroad interchanges, which often add incremental operational costs. Any reductions in operational costs make for more competitive market access.

While many variables are under your consideration, on the surface, it appears U.S. farmers might anticipate the following benefits:

- Expanded market access and new competitive transportation options for shipments of corn, soybeans and dark northern spring wheat from North Dakota and Minnesota to the southern U.S. and Mexico

- Expanded, single-line routes to support market growth across the United States, Mexico, and Canada, under the USMCA trade agreement

- Improved transit times and global export market reliability, reducing by 1-3 days the time it takes for a 100-car train filled with grain to travel from North Dakota to Mexico, the largest market for U.S. corn and corn byproducts

Change and innovation in agriculture have always been driven by technology and an equal measure of common-sense solutions that drive business and improve farmer efficiency and profitability, for their benefit and the benefit of the rural communities in which they live. This proposed merger appears to be one of those scenarios.

Respectfully,

John Griffith
CHS Executive Vice President, Global Grain & Processing and CHS Hedging

TOGETHER WE HAVE THE POWER TO WIN

Princeton South Corporate Center
500 Charles Ewing Boulevard
Ewing Twp., NJ 08628

April 15, 2021

ATTENTION: Surface Transportation Board

Church & Dwight Co., Inc., a $4.15 billion Consumer Packaged Goods (CPG) company, is headquartered in Ewing, New Jersey and has locations globally, including in Green River, Wyoming.

Our operations depend on safe and efficient rail freight transportation service to connect with our suppliers and provide our products to customers. Rail freight shipping is an economical advantage to our company that helps us remain competitive and service our markets.

Church & Dwight has been a rail shipper of CP's for many years. We shipped over 2000 carloads of clay from Wyoming to various destinations in the US using CP as a bridge carrier in 2020, in addition to smaller volumes of animal feed.

We support approval of the CP/KCS combination, which promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

For example, CPKC's new single-line haul offerings will:

- Offer new competitive transportation options for our shipments of materials from Wyoming to locations in southern US and elsewhere.
- Improve transit times and reliability, which may reduce our transportation costs and improve our efficiency.
- Provide an opportunity for Church & Dwight to have additional carload or IM options south of Kansas City, which has the potential to reduce the amount of trucks for OTR shipments and still serve a broader network of customers as our business continues to grow.

For these reasons, Church & Dwight Co., Inc. supports the combination of CP and KCS.

Sincerely

TOGETHER WE HAVE THE POWER TO WIN

Princeton South Corporate Center
500 Charles Ewing Boulevard
Ewing Twp., NJ 08628

04/01/2021

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street, SW
Washington, DC 20423

My name is Allen Ofstehage and my business address is 900 Apollo Road, Eagan, MN. I am Senior Vice President of Citi-Cargo & Storage Co., Inc. In my role, I am responsible for corporate management.

Citi-Cargo & Storage is a full service logistics company, providing public warehousing with final mile delivery and regional trucking services.

Citi-Cargo & Storage supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Citi-Cargo & Storage generally does not support consolidation. However, we see this transaction as uniquely beneficial, with none of the downsides you might see with other consolidations.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our bulk shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Citi-cargo & Storage is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Citi-cargo & Storage urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

April 29, 2021

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Clayton County Recycling Inc. hereby files this letter to express its concerns to the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would open up new markets for our scrap facilities and allow us to expand our current recycling business.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Owner / President

CC All Parties of Record

Surface Transportation Board

To Whom It May Concern;

As Vice-President of CMA CGM (America) LLC, I write this letter on behalf of our company to lend support for the proposed merger of the Canadian Pacific ("CP") and Kansas City Southern ("KCS") railways. As one of the largest ocean carriers in North America and indeed the World, CMA CGM is a significant user of both of these railroads, shipping more than 12,750 shipping containers annually on their networks.

CMA CGM supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. As an ocean carrier, living with competition is a daily reality and we know that we need to serve our customers in the best, most cost effective manner. We believe the combination of CP and KCS will add healthy competition to the Class 1 railroads, which will be applauded by all rail customers including CMA CGM and our competitors.

There is little to no overlap between the services of CP and KCS and the complementary nature of CP's and KCS's networks – connecting only at Kansas City, means that the transaction will not have any adverse effects on competition. Trust me, you would be receiving a much different letter if we were concerned about limiting competition, even if in only one market. Instead, the lack of overlap will make these carriers a better alternative relative to the other options that already exist and we understand that CPKC will continue to interchange with all of their other existing interline partners to provide the services we need.

Finally, the merger of CP and KCS has the potential to provide new solutions for our beneficial cargo owning customers by creating entry and IPI points not previously available. We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

For these reasons, CMA CGM (America) is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CMA CGM urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely yours,

Bob Basila
Vice-President

Coca-Cola Canada Bottling Limited

Attn: Surface Transportation Board – Docket No. 36500

RE: CP-KCS Potential Merger

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Coca-Cola Canada by creating more efficient supply chains across the North American continent, but also open up new opportunities and new markets for businesses.

Coca-Cola and CP work together today to move intermodal and carload traffic across Canada and the USA. CP plays a critical role in the Coca-Cola supply chain, transporting beverage products and enabling Coca-Cola to keep store shelves stocked for the Canadian consumer. The relationship is strategic and both companies collaborate to create better and more environmentally sustainable supply chains.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating potential new opportunities for Coca-Cola to route cargo and source consumer goods from the USA and Mexico. The CP/KCS combination will enable Coca-Cola to convert truck traffic to rail, thereby providing a benefit to the environment and society by taking trucks off the critical public infrastructure of the USA.

We firmly believe that CP and KCS will provide Coca-Cola with safe, efficient and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. Coca-Cola urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely,

David Keenan

Director Transportation

Coca Cola Canada Bottling Ltd

FOREST PRODUCTS

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Rocky M. Boucher and my business address is 324 Bluff Road, Newport, VT 05855, United States. I am the Director of Sales, Veneer Operations for Columbia Forest Products. In my role, I am responsible for sales for Columbia Forest Products' four hardwood veneer mills.

Columbia Forest Products is North America's leading manufacturer of hardwood plywood and hardwood veneer products, which are used to create high-quality cabinetry, fine furniture, architectural millwork and commercial fixtures. Columbia's products are sold through a network of wholesale distributors, mass merchandisers and original equipment manufacturers. Employee-owned and headquartered in Greensboro, NC, Columbia has approximately 2,000 employee-owners and operates plants throughout the United States and Canada.

Rail transportation enables us to deliver our products to customers in the United States. We use CP to ship our products from both our CP-served production plant in Newport, VT and Presque Isle, ME (via the Main Northern Railway which has a haulage agreement with CP) to various destinations in the state of Oregon.

Our relationship with CP has evolved since the CP's acquisition of the CMQ in 2020 and we continue to explore opportunities to grow our rail business with them. The consistent and reliable service of CP allow us to meet the requirements of our customers and extend our reach into new and expanding markets. We directly benefit from the value of CP's service, which is demonstrated by competitive rates, network reach, transit times and industry leading safety practices. Our shippers work extensively with their CP counter-parts on transport solutions for our customers and to find freight solutions to keep our costs competitive with our US and Canadian based competitors. These have been long-standing relationships that continue to grow more productive and beneficial over time.

Columbia Forest Products supports approval of the CP/KCS combination as it relates to the service and cost savings opportunities it would represent as they have been described. The transaction as communicated would provide significant benefits that we are eager to see realized as soon as possible.

FOREST PRODUCTS

For our perspective, the transaction promises to provide improved service options for several markets that we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

We are very interested in the transaction because it will reportedly allow a combined CPKC to provide new, more efficient and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings could expand market reach and offer new competitive transportation options for our shipments of hardwood veneer to Laredo, TX and the Mexican market which is an important market for Columbia Forest Products.
- CPKC's new service offerings may improve transit times and reliability, which has the potential to reduce our equipment costs and improve our efficiency.
- Columbia Forest Products supports environmental sustainability and encourages the addition to provide new competition against other railroads.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. Ideally this transaction will address that.

For these reasons, Columbia Forest Products is supportive of the combination of CP and KCS.

STB Finance Docket No. 36500
CP-KCS Proposed Combination
March 29th, 2021

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit Conagra Brands by creating more efficient supply chains across the North American continent. Head Quartered in Chicago, Conagra Brands and CP work together today to move our iconic brands across Canada. CP plays a critical role in the Conagra supply chain, enabling Conagra to keep store shelves stocked and Canadians fed. The relationship is strategic and both companies collaborate to create better and more environmentally sustainable supply chains.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating new opportunities for Conagra to source materials across the USA and Mexico. The combined CPKC network would help us move our products more efficiently with a smaller environmental footprint. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Swift approval of CP's acquisition of KCS would allow these systems to be integrated and the end-to-end benefits of this deal could be realized for the benefit of all shippers across the USA, Mexico and Canada.

FASTFRATE

March 26, 2021

ATTENTION: Surface Transportation Board

My name is Manny Calandrino with a business address of 9701 Highway 50, Woodbridge, Ontario, Canada. I am the President & CEO of Consolidated Fastfrate Inc. ("Fastfrate"). In my role, I am responsible for developing the vision and strategy for the company in consultation with our board of directors, growing the value of the company, providing the final decision for high-level business changes, and managing the relationship with our major customers and carrier partners.

Fastfrate is one of Canada's largest privately held intermodal LTL carriers offering industry-best LTL and TL intermodal transit times. We have had a long-standing partnership with CP that dates back over 20 years, and we have terminals located in proximity to CP's facilities in all major cities in Canada.

Fastfrate supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Fastfrate has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Fastfrate ships consumer packaged goods, electronic products, and other raw materials for customers located in central Canada and the United States to western Canada and overseas. In 2020, Fastfrate moved over 28,000 marine containers through the CP network of railway.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach

destinations beyond Kansas City that we ship to, or that could expand the markets we serve effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our cross-border shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Fastfrate is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Fastfrate urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Manny Calandrino, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

STB Docket FD36500

Surface Transportation Board
395 E Street SW
Washington DC 29423

My name is Ronald C. MacDonald Sr. V. P. Marketing, Cornerstone Systems Memphis, TN 38125. As Sr. V.P. Marketing I am involved in both rail car and intermodal shipments.

Presently, we handle railcar and intermodal shipments with the KCS (intermodal we do not handle direct but in KCS/NS service). We do not have a way to handle intermodal with KCS/CP as KCS does not provide rail owned 53 ft. containers. Also, with CP we handle intermodal CP/UP and CP/NS shipments but not CP/KCS as CP does not have rail owned containers that can interchange with KCS. The main possible benefit of the merger would be the CP extending the EMP rail owned 53 ft. container fleet to include KCS thus allowing a single linehaul.

Cornerstone Systems is voicing support to the CP and KCS merger. We hope CP can find a way to expand the EMP fleet to the KCS served ramp thus having EMP service between Canada and Mexico as well as on KCS.

I, Ronald C. MacDonald verify that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

COSCO SHIPPING 中远海运集运（北美）有限公司
COSCO SHIPPING Lines (North America) Inc.

March 29, 2021

RE: *COSCO SHIPPING Lines (North America) Inc. Letter of Support*

To Whom It May Concern at the Surface Transportation Board

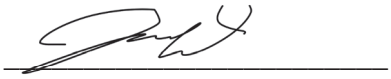
My name is HE Qin and my business address is 100 Lighting Way, Secaucus, NJ 07094. I am General Manager of COSCO SHIPPING Lines (North America) Inc. ("CSLNA"). In my role, I am responsible for overseeing vendor negotiations and vendor relations with our partners, including Canadian Pacific Railway ("CP").

COSCO SHIPPING Lines (North America) Inc. has been a partner of CP for several years and we have enjoyed a successful partnership in assisting our domestic and international customers for several years.

We would therefore like to offer our support to approve the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

As an international ocean carrier COSCO SHIPPING Lines requires reliable service with multiple networks to offer our customers. A CPKC combination would allow us to provide this for our accounts to the benefit of all stakeholders.



We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example, we are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of

seamless, single-line service we have come to expect from our transportation providers. This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, COSCO SHIPPING Lines (North America) Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CSLNA urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

HE Qin

COVIA

ATTENTION: Surface Transportation Board

My name is Campbell Jones and I am the Chief Operating Officer of Covia Holdings LLC ("Covia"), with a business address of 3 Summit Park Drive, Independence, OH 44131. In my role as COO, I am responsible for Mining, Manufacturing, and Logistics operations.

Covia has a long history of working with both the CP and KCS. We have three mining facilities that originate on the CP and use the KCS as a connecting carrier for shipments into Mexico.

Covia supports approval of the CP/KCS combination. We expect this transaction could provide benefits to Covia that we are eager to see realized as soon as possible.

From our perspective, the transaction is likely to provide Covia with increased service options. We expect that a combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic, and Pacific coasts as well as to key overseas markets – would help us better reach our existing markets and new markets. CP market reach is limited today, as its lines only go as far south as Kansas City. This transaction would potentially allow a combined CPKC to provide expanded service options. We are particularly enthusiastic about the role new CPKC single-line routes could play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. We would value there being a more complete USMCA railroad option as we currently ship from Canada to Mexico on a mixed carrier intermodal network. As separate companies, CP and KCS have not been able to offer the kind of seamless, single-line service we anticipate they will be able to offer following the CP/KCS combination.

For these reasons, Covia is voicing support for the combination of CP and KCS. Covia urges the STB to approve CP's acquisition of KCS as swiftly as possible.

VERIFICATION

I Campbell Jones, in my capacity as Chief Operating Officer of Covia Holdings LLC and not in a personal capacity, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Crow Wing Recycling hereby files this letter to express its concerns about the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

As expressed in our previous letters to the Board dated March 24, 2021, Crow Wing Recycling supports swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and Gulf port options for imports, year round barge terminal access, improved service options, and invigorated transportation competition.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers like Crow Wing Recycling of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, the merged firm would not provide Crow Wing Recycling competitive options into our existing customer markets, or the US Gulf Coast and Mexico. If the CP/KCS deal is not approved because CN prevails—or for any other reason—we will simply not be competitive in shipping to these markets as we will be required to continue interlining with other railroads or only serve these markets seasonally to reach these destinations, which increases costs and reduces efficiency. A CP-KCS combination would place us on a more even playing field and greatly expand access to growing markets across the United States, Mexico, Canada, and globally. The bid by CN jeopardizes this access and the increased competition it would generate.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Grant VanWyngeeren, Vice President

RE: Canadian Pacific – Kansas City Southern Pending Merger

Dear Chairman Oberman:

My name is Chris Mnichowski and my business address is 6636 Berger Avenue, Kansas City, KS 66111. I am President of CTI Freight Systems Inc. (CTIFS) In my role as executive I am responsible for the strategic planning and company vision reporting to the CEO and Board of Directors. Additionally, this position requires overview of personnel who handle day to day operations and sales.

CTI Freight Systems Inc is an asset based 3PL providing shipping opportunities to industry via rail and/or truck or combinations thereof. CTIFS has relations with all Class 1 railroads and transports commodities on the KCS into Canada, on the CSX & NS to the east coast and the NS/UP to the west coast. We also ship on the CN shipping cross border to our U.S. customers.

CTI Freight Systems, Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. CTIFS has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CTIFS provides rail transportation service in its private rail shipping foundry coke from Birmingham to California, Virginia & Wisconsin. We ship protein from the Midwest for export and having access to Mexico and the Canadian West Coast with the CP will give us the additional service lanes and capacity to meet current and future demand.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of pig iron from Corpus Christi, TX to Quebec.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- CPKC's offerings will allow CTIFS to provide alternatives to the congestion and delays that occur at Los Angeles/Long Beach CA ports.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CTI Freight Systems Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CTI Freight Systems Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Chris Mnichowski, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination) **ATTENTION:** Surface Transportation Board

My name is Trevor McPherson, and my business address is 920 Fleming AVE Penhold AB. I am Procurement and Logistics Manager of Custom Bulk Services INC. In my role, I am responsible for and over see that all transportation and logistics run smoothly as well as cost effectiveness.

CP is our partner and we rely on them for transportation to haul vital shipments to support our Agricultural and other customer's operations. Custom Bulk Services INC. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Custom Bulk Services INC. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**
>
> **And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.
For these reasons, Custom Bulk Services INC. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Custom Bulk Services INC. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Custom Bulk Services INC. also hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS") and to reiterate its support for Canadian Pacific's ("CP") proposed combination with KCS.

Custom Bulk Services INC. is aware of CN's competing bid to acquire KCS. Based on our experience, we believe that the CP/KCS combination promises to deliver tremendous benefits, including new and better competitive transport options.

Custom Bulk Services INC. nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.
- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS in light of these criteria.

Respectfully submitted,

Trevor McPherson, Logistics Manager

CC: All Parties of Record

ATTENTION: Surface Transportation Board

My name is Martin Kiehm and my business address is 8415 220th Street West, Lakeville, MN 55044. I am President of Custom Stud, Inc. In my role as owner of the company, Custom Stud Inc is continually exploring better, more cost-effective means for both inbound and outbound shipping.

Custom Stud, Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Custom Stud, Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

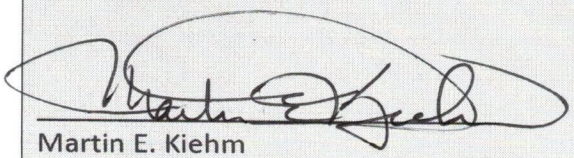
CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior at providing better and faster service.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example, the time in transit is an issue that we, as well as our tenant, find it difficult to justify & drive our costs up.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Custom Stud, Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Custom Stud, Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

CW Metals
9696 Fallon Avenue
Tel 763-295-6992
www.cwmetals.com

ATTENTION: Surface Transportation Board

My name is Neil Byce and my business address is 9696 Fallon Ave, Monticello, MN 55362. I am President of CW Metals. In my role, I am responsible for overseeing all aspects of the business.

CW Metals is a scrap metal recycler and processor who currently has relationships with the CP at two of our scrap yards. Those yards are Lakes Iron and Metals in Detroit Lakes, MN and Crow Wing Recycling in Ironton, MN.

CW Metals supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. CW Metals has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship metal commodities from our CP-served facilities in Detroit Lakes, Minnesota and Ironton, MN to consumer mills south of our location.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of metal from our facilities to various consumer mills south of our locations.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This change will provide growth opportunities for shipping to additional consumers and potentially reduce transit time.
- We anticipate that expanding shipping opportunities and reducing transit time will aid in the stabilization of metal markets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, CW Metals is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CW Metals urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Letter to STB commenting on CN Trust Proposal

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Cypress Concrete Ltd.

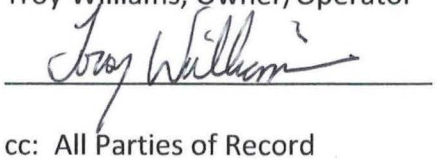
I am writing to express Cypress Concrete Ltd.'s perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to the proposed voting trust process under the 2001 Major Merger Rules and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use."

As a company that has been successfully transporting large portions of product (cement powder) through North American rail networks, we are writing to express our view that the use of a trust for a CN KCS merger under the 2001 Major Merger Rules would not be in the public interest.

We welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest"

and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest and would not cause substantial financial harm to one or both railroads is cause to conduct a full and thorough review of the transaction instead of allowing a trust. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules.



In addition, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high-capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening new competition against CN, BNSF and Union Pacific.

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust.

Respectfully submitted,

Troy Williams, Owner/Operator

Dakota Gold Transfer-Plaza, LLC.
6286 41st St. NW Plaza, ND 58771

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Cody Moe and my business address is 6286 41st ST NW, Plaza ND 58771. I am CEO/President of Dakota Gold Transfer-Plaza. In my role, I am responsible for overseeing the operation of the transload site and future growth of overall business.

Dakota Gold Transfer-Plaza is a fee for service transload business in the midstream energy business. We move NGLs & LPGs out of the Bakken. We move diesel and gasoline into the Bakken from CP origins.

Dakota Gold Transfer-Plaza supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Dakota Gold Transfer-Plaza has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship NGLs and LPGs from our CP-served facilities in North Dakota to our customers with terminals in the gulf region as well as far south into Mexico.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to. With this merger to take place we will be able to provide a better service and rate more consistently to our customers.

From past experience we can attest that a single line haul is far more superior than an interline haul. Allowing us to serve customers more cost efficient options.

Dakota Gold Transfer-Plaza, LLC.
CODY@DAKOTAGOLDTRANSFER.COM KIM@DAKOTAGOLDTRANSFER.COM
OFFICE: 701-497-3663 CELL: 701-509-6958

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of NGLs and LPGs from North Dakota into the gulf region and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Dakota Gold Transfer-Plaza is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Dakota Gold Transfer-Plaza urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is ARTURO RODRIGUEZ GUJARDO and my business address is AVE. LAZARO CARDENAS 2333 SAN PEDRO GARZA GARCIA, NUEVO LEON. I am Senior Manager of Transportation and Foreign Trade of DEACERO SAPI DE CV. In my role, I am responsible for the operation and negotiation of transport and foreign trade of the company worldwide.

DEACERO SAPI DE CV is a steel manufacturer in Mexico, with mills, wire facilities, scrap yards and distribution centers in all Mexico and in the United States. We have a strong relation with KCSM, KCS and CP moving scrap from USA to Mexico and finish product as rebar, beams and Wire Rod between México and export shipments to USA and Canada.

DEACERO SAPI DE CV supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

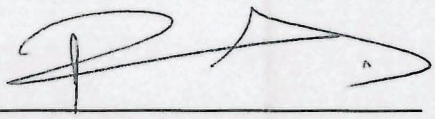
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. In the USA and Canada, the combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In Mexico, KCS provides efficient service thru the most relevant manufacturing footprint. The two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks in the North America market

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

We believe this transaction could be positive for as a transportation option. We can see the benefit in the future to be able to have a seamless option into the Canada market, and more competitive option to access market around the Chicago area.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, DEACERO SAPI DE CV is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. DEACERO SAPI DE CV urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: CP KC Supplier Support

To whom it may concern,

DeMan Construction Corp. is a supplier of construction services to the rail industry. CP is one of our most valued customers.

I, Peter DeMan, serve as the Principal-in-Charge at DeMan Construction Corp., where my duties include Project Manager, Estimator, and Master Electrician. DeMan supports approval of the proposed combination of CP and KCS.

From our perspective as a supplier, the transaction is beneficial because it will strongly support growth and investment in the North American rail network.

We have been providing construction project management and all other construction related services (repairs, renovations to facilities, general maintenance, watermain upgrades, etc.) to CP for many years at numerous locations across Canada. We value our long-standing relationship with CP and support their attention to safety, continual investments in upgrading facilities and capacity to serve customers.

The new transportation services that CPKC will bring to their customers will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC, and will shift freight from trucks on the highways to the rail system. All of these things will help support economic and employment growth in the United States and across the Continent under the USMCA trade agreement.

In turn, that growth will support investments in new rail capacity that benefit shippers, the public, and suppliers like us alike.

We see the transaction as only beneficial; we do not anticipate any negative impacts to the environment, to competition, to safety, or to any other public interest. For these reasons, we hope to see the transaction close and the benefits come to light as soon as possible.

Regards,

Peter De Man, Owner
DeMan Construction Corp.

DESARROLLOS AMBOISE, S. A. DE C. V.

My name is Manuel Cruz. I am the Logistics Manager of Desarrollos Amboise S.A. de C.V. In my role, I am responsible for Purchasing and Logistics for our group.

Desarrollos Amboise S.A. de C.V. is a Propane Wholesale Company out of Monterrey, Mexico. We buy and import propane from the US and Canada and ship it by rail into Mexico. We have had a very good relationship with CP and KCS ever since we first starting importing propane back in 2016. This has been a new operation for us and both companies have been great allies and suppliers.

The CP/KCS combination could be of great benefit by increasing the trade between Canada, USA and Mexico and supporting the free trade agreement. This could also benefit both customers and employees by having 1 single company connecting Canada to Mexico. This could also open new investment opportunities in all 3 countries by increasing traffic and increasing the need for new terminals and infrastructure.

Manuel Cruz

Logistics Manager for Desarrollos Amboise S.A. de C.V.

DFK Enterprise, Inc.

Derek Kruk
President

Naperville, Illinois 60540
dkruk@dfkenterprise.com
April 12, 2021

ATTENTION: Surface Transportation Board

My name is Derek Kruk, and my business address is 944 Rockbridge Road, Naperville, Illinois. I am President of DFK Enterprise. In my role, I am responsible for all company rail operations.

DFK Enterprise is a bulk oil trading and transportation company with ongoing rail operations in North America. DFK Enterprise has used CP periodically over the last ten years to ship petroleum products from Western Canada into the US Midwest. The combined CP/KCS railroad offers a compelling competitive alternative to Canadian National oil movements from Canada into the United States.

DFK Enterprise supports approval of the CPKC combination. The transaction would provide benefits that we would hope to realize soon.

From our perspective, the transaction should provide extension of transportation options from Canada into the United States. The transaction should improve competition with current Canadian and American rail options. The combined CPKC network would help DFK Enterprise develop new markets, particularly into the US Gulf Coast.

We look forward to the transaction because it will allow a combined CPKC to provide DFK Enterprise more extensive single line rail service options. This will strengthen competition against the other, large rail carriers that serve our markets. For example, CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of oil from East Edmonton, Alberta to Houston, Texas.

For these reasons, DFK Enterprise supports the combination of CP and KCS, because it should provide expanded options and provide for improved rail efficiencies. DFK Enterprise urges the STB to approve CP's acquisition of KCS as quickly as practical so that these systems can be integrated, and the benefits of this deal can accrue to all stakeholders.

To Whom It May Concern:

RE: Canadian Pacific Railway (CP) and Kansas City Southern (KCS) Potential Merger

---

We are writing to provide support for the proposed combination of Canadian Pacific Railway Limited (CP) and Kansas City Southern (KCS).

Dollarama and CP are currently working together to move intermodal traffic across Canada. CP is a strategic business partner of Dollarama and plays a critical role in the Dollarama supply chain, transporting retail and food products for the benefit of Canadian consumers.

Based on the information available to us, we believe the combination of CP and KCS railroads is bound to create more efficient supply chains across the North American continent and open up new opportunities and new markets for businesses. We are confident that a combined CP and KCS entity will create an even stronger business partner for Dollarama, from both a financial and an operational standpoint, and will continue to provide Dollarama with safe, efficient and fast service that will allow us to move goods across Canada, and to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint.

From an ESG perspective more specifically, this merger offers large benefits as transportation-related greenhouse gas emissions are directly related to fuel consumption. The combined CP-KC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help a significant number of customers reach existing and new markets more efficiently, moving more freight by rail instead of truck and, as a result, lowering greenhouse gas emissions associated with transportation. For illustration purposes, a single unit train keeps more than 300 trucks off public roads and is four times more fuel-efficient than trucking. Also, railroads have made significant operational and technological improvements to improve fuel efficiency, which holds great promise in allowing customers like Dollarama and others lower their carbon footprint and, more generally, in addressing climate change challenges.

Dollarama see favorably the approval by the STB of CP's acquisition of KCS so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico, and Canada.

Sincerely,

Neil Rossy
President and CEO
Dollarama

Camrose, Alberta T4V 1T6

March 29, 2021

Mr. Martin J. Oberman, Chairman
United States Surface Transportation Board
Washington, D.C.

SUPPORT FOR THE COMBINATION OF CANADIAN PACIFIC RAILWAY & KANSAS CITY SOUTHERN LINES.

Dear Chairman Oberman and Surface Transportation Board Members:

Dominion Railway Services Ltd. is a transportation logistics company providing third party services for a host of rail shippers, industrial, and short line railways in both the United States and Canada.

We wish to express our support for the combination of Canadian Pacific Railway and Kansas City Southern Lines. We believe that this north-south railroad will provide shippers for example in the midwestern U.S. with improved single-line access to both Mexican and Canadian markets, and in doing so create economic development opportunities for U.S. companies, along with counterparts in Canada and Mexico.

From our own experience, we know that Canadian Pacific has for many years worked to leverage its Kansas City gateway to the benefit of north American shippers, and that intuitively the introduction of a single line haul specifically will result in improved service options, reduced rail car cycle times, and an increased flow of traffic. Accordingly, logic also suggests that there should be railroad industry jobs created in the Midwest on the combined CP/KC network as additional crews and maintenance personnel are required as volumes grow.

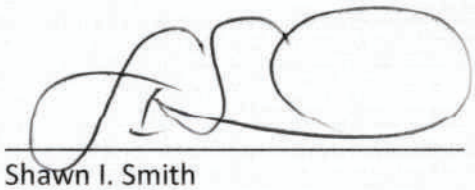
We appreciate the role that the Surface Transportation Board has in assessing the competitive impacts of rail transactions. In the case of CP/KC, it appears that traffic handled by existing interline partners will continue to be interchanged as it has in

the past, and that the merger of these carriers will not have an adverse impact on competition. As a result, a timely approval of the transaction would certainly advance some of the shipper and further industry stakeholder benefits that the transaction seems to represent.

As a result, we are pleased to respectfully submit this letter of support accordingly,

Yours very truly,

DOMINION RAILWAY SERVICES LTD.



S.I. Smith
President

VERIFICATION

March 31, 2021

The Honorable Martin J. Oberman
Chairman
Surface Transportation Board
395 E Street, SW
Washington, DC 20423

REGARDS: Proposed merger of the CP and KCS

I am writing on behalf of Domtar in preliminary support of the proposed purchase of the Kansas City Southern Railroad by the Canadian Pacific Railroad. We see potential in the transaction to provide benefits along certain routes.

Domtar is a leading provider of a wide variety of fiber-based products, including communication, specialty and packaging papers, market pulp and airlaid nonwovens. With approximately 6,600 employees serving more than 50 countries around the world, Domtar is driven by a commitment to turn sustainable wood fiber into useful products that people rely on every day. Domtar's annual sales are approximately $3.7 billion, and its common stock is traded on the New York and Toronto Stock Exchanges. Domtar's principal executive office is in Fort Mill, South Carolina.

My business address is 234 Kingsley Park Drive, Fort Mill, South Carolina 29715 and my telephone number is 803/802-8041. I serve as Domtar's vice president for government relations.

Domtar is served by the Kansas City Southern at our Ashdown, Arkansas facility and by the Canadian Pacific at our Kamloops, British Columbia, Dryden, Ontario and Espanola, Ontario sites. We are proud of the business relationships we have forged with the two railroads.

Domtar will be reviewing the specific details of this transaction in the coming months. We are optimistic we can reach a suitable accord before the Surface Transportation Board makes its final decision.

The CPKC has the potential to unlock several new routes for some of our Canadian products to start flowing into United States customers.

Domtar is heavily dependent on connections to North American ports, especially on the east and west coasts. The Canadian Pacific is a good business partner that provides our Canadian pulp, particularly Dryden and Kamloops to port access in Vancouver. Considering the markets we serve from Ashdown we favor using ports along the east and west coasts of the United States. We hope that the CPKC will see enhanced traffic destined for ports along the east and west coasts of the United States and that Domtar will benefit from improved connections to ports such as Charleston, Savannah and Los Angeles/Long Beach.

At each of the four facilities mentioned above, Domtar is impressed with the safety commitment shown by both railroads. We have every reason to believe this commitment will remain.

With best regards, I remain

Sincerely,

Thomas S. Howard
Vice-President Government Relations

Ms. Cynthia T. Brown
Chief of the Section Administration, Office of Proceedings
Surface Transportation Board
395 E. Street, S. W.
Washington, D. C. 20423

Re: Finance Docket No. 36500, CP/KCS Combination

Dear Ms. Brown:

My name is Matthew Wells Leech and my business address is 5605 Carnegie Blvd Suite 200, Charlotte, NC 28209. I am the Chief Executive Officer of DP World - Americas. In my role, I am responsible for DP World's network of marine and logistics terminals across North America.

DP World has been a transportation partner of CP Rail since 2006. CP Rail provides highly reliable rail connectivity for containers and other cargoes being imported and exported through three of our Canadian marine terminals. Of particular relevance are our terminals in Vancouver British Columbia (Centennial Terminal and Fraser Surrey) and our facility in Saint John (New Brunswick). DP World and CP Rail have enjoyed a very close working relationship, which has been strengthened with CP Rail's recent acquisition of the Central Maine & Quebec railway, which has allowed CP Rail to extend their service offering to Saint John.

DP World supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

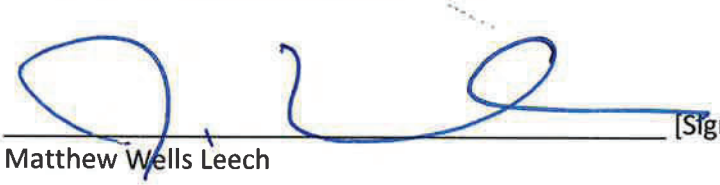
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Specifically, we see opportunities with this transaction for CP Rail to expand their connectivity from our Canadian marine terminals into the central United States market. This will significantly increase the level of competition amongst Canadian railroads to destinations such as St. Louis, and will also open up new (previously inaccessible) route options for movement of cargoes from Canadian ports into markets along KC's main line between Kansas City and Shreveport.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach from Canadian ports into markets south of Kansas City, that were previously inaccessible from Vancouver or Saint John.
- CPKC's new service offerings should create a second option for accessing key hinterland markets such as St. Louis from Canadian ports, thereby providing more competition for importers and exporters in those regions.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, DP World is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. DP World urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Matthew Wells Leech, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

My name is Sean Winstanley, and I am the Joint owner of a property rental and development company in Nova Scotia, Canada. As such, I rely heavily on my suppliers of lumber, plastics (window manufacturing), roofing shingles, and other construction and renovation materials to move at the best possible cost through the North American rail markets to our location. In fact, transportation costs and competitiveness are often points of conversation with suppliers as we look for new ways to get product to our rather remote area at a reasonable cost. We have historically been somewhat captive to CN rail options naturally; however, since the CP's acquisition of the rail line running into New Brunswick last year, we've been able to explore other options via their new access to the Port of Saint John NB. It is wonderful to have competitive options, which is why I am voicing my sincerest concerns with CN's attempt to buy the KCS. While I have not previously written, I fully support the CP's efforts to purchase the KCS as I see it as a very similar outcome as we've seen with their acquisition of the Central Maine and Quebec Railway i.e. creating new and exciting options for shippers to compete, particularly from the US Gulf Coast to Chicago and up into Canada. The CN's proposal will kill those competitive option for me, my suppliers, and all other shippers who yearn for more competition, not further amalgamation of railways that simply creates them 'redundancy' as CN have openly admitted.

Therefore, my view is that the use of a trust in this proceeding would not be in the public interest and I am strongly opposed to the use of a voting trust. I fear the impacts on the transportation costs to my business in the future. As I understand it, the STB is supposed to protect competition and I am urging you to do this for the best and brightest future for small to medium sized businesses like myself, up to and including the largest of businesses who would ultimately benefit by the choice the CP purchase would offer them versus the anti-competitive nature of CN's deal.

If you approve the trust, either the CN and KCS will not be able to actually come together after the full STB review so they will need to sell the company at a large loss, or if they do get approval, further consolidation will undoubtedly occur, only leading to a further reduction in options and competitiveness for shippers. The former will leave CN and its shareholders with an insurmountable debt (that they will have to pass on to their most captive of shippers no doubt). Who would be buying them for the money CN is paying after knowing that no other railway, other than CP, could likely complete the deal? The answer must be private equity who would never be willing to pay what CN is as they cannot take

advantage of the synergies CN or CP tout as the reason for paying such a premium. It is clear that CN is simply trying to terminate any chance of a CP competitive threat here, which should not be allowed.

Please make your decision in the interest of those who stand to lose or gain the most, not in favor of the company who simply pays the most. It is important to my business and thousands of other businesses who will be left to face the consequences. Please reject the CN's request for a voting trust and let them prove how they will overcome the anti-competitive nature of their acquisition. Our futures are in your hands and we trust you to do the right thing.

Respectfully submitted,

Sean Winstanley, Co- Owner

ATTENTION:
Surface Transportation Board
395 E Street SW
Washington, DC 20423

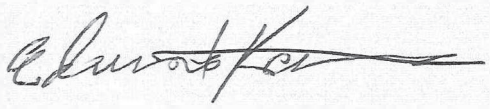
My name is Edward Kaletzke; I am Vice President of E.J.R. Reload Inc. , 250 Sutherland Avenue, Winnipeg Manitoba R2W 5M2.

E.J.R. Reload Inc. (EJR) operates as the Canadian Pacific Railway (CP) Transfer Facility in Winnipeg, Manitoba. We receive / offload / deliver bulk railcar shipments of automobiles, steel, lumber, and aggregate commodities on behalf of CP Rail's customer base here in Winnipeg and Manitoba. Previously we had been a lumber railcar reload facility for CP. We have had a close working relationship with CP for the past 40 years. EJR values the long- standing business relationship with CP. EJR has dealt with many CP associates throughout the 40 years, some notable strengths of the company that has enhanced our business include: safety record, operation excellence, high level of customer satisfaction and expansion and diversification.

A significant portion of the shipments received at our facility originates from the southern United States. In addition, most recently, Manitoba businesses have shown an interest in shipping steel goods by railcar from Mexico into Manitoba. The new Canada-United States-Mexico Agreement (CUSMA) reinforces the commitment to an enhanced trading relationship between the three countries. Current railcar shipments originating beyond Kansas City need to be interlined with other railroads and often cause delays in transit time. The approval of the Canadian Pacific Railway (CP) / Kansas City Southern (KCS) combination would allow for more timely, direct line rail shipments and possibly open up new market points; thus benefiting businesses in Manitoba.

To date, we have experienced limited opportunities or missed out on opportunities due to CP's current limited market reach. EJR supports approval of the CP/KCS combination. The transaction would support a more efficient, competitive rail transportation network with significant expanded market reach that would be reflective of the new CUSMA agreement and have economic benefits for all three countries.

Rail based traffic has been proven to be the safest, most cost effective and most environmentally sensitive way to ship / move goods. CP has proven their commitment to



service and safety. We expect those ideals to be further enhanced by the proposed new single line hauls across the combined network.

For these reasons, EJR is voicing strong support for the combination of CP and KCS. The combination will enhance competition, provide expanded options and drive efficiencies for businesses of all sizes. EJR urges the Surface Transportation Board to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: SURFACE TRANSPORTATION BOARD

SUBJECT: SUPPORT LETTER CP/KCS MERGER

To whom it may concern,

EACOM Timber Corporation is a major Eastern Canadian wood products company. Operations include the manufacturing, marketing, and distribution of lumber and wood-based value-added products, and the management of forest resources. EACOM owns seven sawmills, a remanufacturing facility, and an engineered I-joist plant with over 1,200 employees. The Company is committed to investing in strong assets, including healthy forests, advanced technology, and talented people.

As EACOM's logistics Director, I am responsible for the transportation of finished products from our production sites to our valuable customers.

Canadian Pacific (CP) is an important transportation service partner for EACOM Timber Corp. (EACOM) helping us getting our products to the market.

With the information available to date on the transaction EACOM supports the approval of the CP/KCS merger. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

About 50% of EACOM finished product is transported by rail, CP plays a significant role in our supply chain allowing us to place our products in the market in an efficient and competitive way. We are encouraged by the perspective of a transaction that would allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

1100 Rene Levesque Blvd. West
Suite 2110
Montreal QC H3B 4N4

T: 514 848-6815
F: 514 848-6885
EACOM.ca

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, EACOM is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Based in Sault Ste. Marie, Ontario, Ellwood Robinson is a road paver and asphalt tack coat service provider. Much of our equipment and asphalt cement comes in by rail. Our markets would be positively impacted by an increase in inbound and outbound products by rail. If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing and supply shocks that would be difficult to overcome.

I am writing to express Ellwood Robinson Inc's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed

transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for

shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not

investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan

that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

John Thomas,
Ellwood Robinson Inc.

Date: March 30th, 2021
ATTENTION: Surface Transportation Board

My name is James McPherson. I am the Logistics manager of ENX Inc. I am responsible for planning the strategy, procurement and execution of rail services.

ENX Inc. is a cement and fly ash supplier distributing our products across North America. Our facility is CN served, but we are able to use CP through Canadian Transportation Agency zone switching.

ENX Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, this union promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to U.S. Gulf, South West, and Mexico – would help us reach new and exciting markets more efficiently.

These two railroads have a very strong focus on safety and a proven track record of operational excellence. I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of all rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. Some examples of how this merger will directly benefit our organization are:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of fly ash from Edmonton AB to Texas.
- New CPKC single-line routes will expand access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. ENX is a private car shipper and faster transit times will allow us to own and lease fewer cars, reducing our fleet costs.

The complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on other railroads. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, ENX Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. ENX Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Loveraj Rai, and my business address is 6601 Goreway dr. Unit B Mississauga ON L4V 1V6 Canada. I am the Chief Operating Officer of ETG Commodities Inc. In my role, I am responsible for executing the company's business plan and managing daily operations.

ETG Commodities Inc has a long-term relationship with CP; we have shipped pulses, peas and beans from Saskatoon and Regina to Vancouver, Montreal, and Toronto. We extended our business and CP was a major factor in ensuring a smooth entry into the South American market to destinations like Laredo and Eagle Pass TX for furtherance into Mexico. CP's is an integral part of our supply chain.

ETG Commodities Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. ETG Commodities Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship grain from our CP-served facilities in Swift Current SK, Success SK, Lajord SK and Cutknife SK to our customers with elevators/terminals in the South Central and Gulf region. As the majority of our grains are exported, ETG Commodities Inc. could greatly benefit from access to a combined 22 intermodal facilities across North America.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (like Mexico for example).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

6601 Goreway Drive, Unit B, Mississauga, ON, L4V 1V6, Canada

ETG

ETG Commodities Inc.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of pulses from Canada to Central and South America.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- There will be a seamless traceability of cargo.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, ETG Commodities is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. ETG Commodities Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Loveraj Rai,

ETG Commodities Inc.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Ethier Sand and Gravel is a Canada based producer and supplier of aggregate material for residential, commercial, and industrial markets. We also are a leading supplier of winter salt/sand mix for our market, and many of these raw materials have been shipped in by rail. We also receive many of our equipment supplies from the United States by rail. If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer to the point that we would have difficulty operating our business with the price increases that CN would need to put through to recover their investment and they would be able to do it because there would be no alternatives along their route network.

I am writing to express Ethier Sand & Gravel's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be

reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or

less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Dan Ethier,
Ethier Sand & Gravel

Re: Canadian Pacific and Kansas City Southern Transaction

To Whom It May Concern:

My name is Donal Lambert and my business address is 3227 East 31st St., Tulsa, OK 74105. I am Head of North America for EuroChem North America Corp. ("EuroChem"). EuroChem is an importer and distributor of fertilizer and feed throughout all of North America. Currently, we ship Canadian Pacific ("CP") direct rail from a terminal in Clinton, IA to North Dakota and a large footprint of Canadian fertilizer retailers. The exceptional service provided by the CP commercial and operations team has allowed us to grow this business tremendously. Unfortunately, there are a couple of constraints with the current system, including the terminal at Clinton; specifically:

1. The Clinton terminal is impacted by river close each year, which limits our time to supply the terminal with product to ship outbound via CP rail. We do plan carefully to "freeze-in" supply each year, but this is often cost prohibitive due to storage charges on barges.

2. There are capacity constraints with terminal operations in Clinton as well. The terminal is only capable of storing, holding and loading a certain amount of railcars each day.

With these constraints, we have reached our capacity on rail shipments to various CP destinations, but there is additional demand to the market we serve. If there was a viable alternative for us to supply and ship from then we could meet the additional demand.

A CP/Kansas City Southern ("KCS") combination eliminates both of the issues mentioned above. The combination would give us single-line rail service options. It has been our experience that single-line rail options are a far better value than the two-line hauls currently required to ship CP direct from terminals below the area on the Mississippi River that cannot be serviced by barge once the river closes. With the additional origin points from which to ship CP rail, operational capacity frees up allowing us to meet the demand for fertilizer shipments in the markets we serve.

EuroChem supports approval of the CP/KCS combination. We believe the transaction would provide significant benefits that we are eager to see realized as soon as possible. More specifically, from our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts would help us reach our existing markets and potentially new markets more efficiently.

EuroChem North America Corp.
3227 E. 31st St.
Tulsa, Oklahoma 74105
+1 (918) 496-5115
www.eurochemgroup.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. In our opinion, this will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, we believe that given the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction is unlikely adverse effects on competition. Instead, we anticipate it will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, EuroChem is voicing strong support for the combination of CP and KCS, because it will enhance competition and provide expanded options and drive efficiencies for us. EuroChem urges the U.S. Surface Transportation Board to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Donal Lambert

Head of North America

eUSU Logistics

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is James Gibson and my business address is 3501 Algonquin Rd, Suite 830, Rolling Meadows IL 60008. I am a Vice President at Eusu Logistics. In my role, I am responsible for negotiations with all transportation providers and shippers.

Canadian Pacific has been a valued transportation provider to Eusu Logistics for many years. We rely on this relationship to transfer goods and products between the United States and Canada.

Eusu Logistics supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Eusu Logistics has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.]

We believe the combination of CP and KCS will provide a service valuable to our customer base including Samsung, LG, and Visio. The ability to provide additional competition is needed in this market.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of electronics from Mexico to US and Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada

under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. Past mergers of Union Pacific and Southern Pacific, Conrail and Norfolk Southern and CSX Rail.

For these reasons, Eusu Logistics is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Eusu Logistics urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I James Gibson, declare under penalty of perjury ["under the laws of the United States," if executed outside of the United States] that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 26, 2021.

EVERGREEN SHIPPING AGENCY (AMERICA) CORP.

March 29, 2021

ATTENTION: Surface Transportation Board

Evergreen Shipping Agency (America) serves as North American general agent for Evergreen Line. Evergreen is a global ocean carrier that serves all continents with container ships. Evergreen supports approval of the CP/KCS combination. The transaction would provide benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

For these reasons, Evergreen Shipping Agency (America) Corporation is voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Evergreen Shipping Agency (America) Corporation urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely yours,

Peter Wan

Ms. Cynthia T. Brown
Chief of the Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street, S.W.
Washington, D.C. 20423

Re: Docket No. FD 365000 Canadian Pacific Railway Limited; Canadian Pacific Railway Company; Soo Line Railroad Company· Central Main& Quebec Railway US Inc.; Dakota Minnesota & Eastern Railroad Corporation; and Delaware & Hudson Railway Company Inc.-Control-Kansas City Southern, The Kansas City Southern Railway Company, Gateway Eastern Railway Company and the Texas Mexican Railway Company

Dear Ms. Brown,

On behalf of EVRAZ North America, headquartered at 71 S. Wacker Drive, Suite 1700, Chicago, Ill. 60606, I am writing in support of the application filed by Canadian Pacific Railway to acquire control of Kansas City Southern.

As a rail shipper in both Canada and the United States, and a leading supplier to the largest freight railroads in North America, including both Canadian Pacific and Kansas City Southern, EVRAZ North America believes this transaction will provide significant benefits to our business and the North American economy.

EVRAZ North America is a leading producer of steel and engineered steel products for rail, energy and industrial end markets. We operate steelmaking, steel product production and scrap metal recycling facilities in Colorado, Oregon and North Dakota in the United States, and in Manitoba, Saskatchewan and Alberta in Western Canada. We employ approximately 3,000 workers, including about 1,500 in the United States. About 60 percent of our U.S. workforce is unionized.

EVARZ North America ships more than 2.5 million tons of finished and semi-finished steel products and general scrap by rail to and from our facilities each year. Our customers are located in all parts of Canada, the United States and Mexico. EVARZ North America is also the number one supplier of rail to freight railways across North America.

Canadian Pacific is a primary rail service provider for origin and destination of our products (pipe, steel slab, steel coil) and raw materials (scrap) in Regina, Saskatchewan, and Camrose, Red Deer and Calgary, Alberta, though our products and raw materials move on all the class I railroads, including Kansas City Southern.

From our perspective, the combined CPKC network stands to provide improved single-line and long-haul service options into the markets our steel business serves. Unlike other class one mergers that ultimately eliminated service options, this transaction we believe will enhance rail service and efficiency. The complementary nature of the CP and KCS networks –

EVRAZ

not overlapping anywhere – means the transaction should not have adverse effects on competition. We are particularly interested in the prospect of CPKC single-line routes into Mexico from Canada and more portions of the central and southern United States.

This extended network can strengthen competition against trucks and other, large rail carriers that deliver to our markets to the benefit of shippers such as EVRAZ North America. CP-KCS joint routes are among our transportation options today and we are familiar with the delays and disruptions that can come with interchange moves involving multiple carriers. This transaction should improve transit times, equipment availability, and service reliability, as well as our overall transportation options.

We applaud these two railroads' strong focus on safety and are especially pleased to hear Canadian Pacific's commitments to invest more capital in what today are underutilized rail corridors. Greater investments in rail infrastructure, including with the premium rail EVRAZ North America supplies and made by our United Steelworkers in Pueblo, Colorado, will further increase rail safety and efficiency. Those improvements can benefit our business, our workers and our customers, as well as the overall freight network in the United States and our shared economy.

In summary, EVRAZ North America supports this proposed transaction for its potential to enhance railway competition, to provide expanded single-line haul options and to improve efficiencies for rail customers. We encourage the STB to approve CP's acquisition of KCS in a timely manner to allow the integration to proceed, clearing the path for major rail infrastructure investments and for the benefits of this deal to be realized for all stakeholders.

Sincerely,

Skip Herald
President and CEO
EVRAZ North America

Express System Intermodal, Inc.

ATTENTION: Surface Transportation Board

My name is Mark D'Ascenzo and my business address is 801 Warrenville Road, Suite 300, Lisle, IL 60532, USA. I am Managing Director of Express System Intermodal, Inc. (ESI). In my role, I am responsible for implementing the company's strategic objectives.

ESI currently sources intermodal services from CP in U.S. to West Canada lanes as well as KCS in the U.S.

ESI supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. ESI has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

ESI needs an expanded network of service—it needs to be safe, reliable, and competitively priced in the transportation marketplace. ESI primary service mode is intermodal and this merger will not only increase the length of single-line rail linehaul but it will open new markets.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience--both our own, and that of our competitors who have single-line rail options at their origins--that single-line rail service options are far superior.

801 Warrenville Road, Suite 300 • Lisle, IL 60532
Tel.: (630) 645-9860 • Fax: (630) 241-9156 • Web: www.esi-intermodal.com

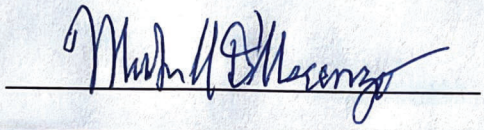
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our intermodal shipments;
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option;
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers such as UP-SP-DRGW-MP-WP which make an oligopoly of rail service in the Western U.S.



For these reasons, ESI is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. ESI urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is John Noyes and my business address is 816 Bainbridge St, La Crosse, WI 54603, United States. I am the Owner and President of FJ Robers Co Inc. For the last 35 years I have offered transloading services for multiple industries around the globe moving everything from bulk, break bulk and special project cargos.

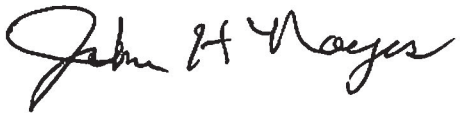
FJ Robers Co Inc. is a trans loader with rail, barge, and interstate highway access. We move a variety of commodities between the three modes of transportation. Our facility is CP served.

FJ Robers Co Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of many different inbound and outbound cargos.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by offering the ability to move cargo seamlessly from Canada all the way to Mexico and points in between.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, FJ Robers Co Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. FJ Robers Co Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Ryan Wimble and my business address is 993 Maquam Shore Road, Saint Albans Bay, VT. I am the Logistics Manager of FW Cobs Company. In my role, I am responsible for the oversight and management of all our shipping and receiving needs for our entire book of business.

FW Cobs is a partner with CP, shipping the majority of our grain shipments from our Loreburn, SK facility which resides on CP property. We deal in primarily organic feed grade grains and use CP to ship hundreds of rail cars on an annual basis both to Eastern and Western United States. We receive weekly service from CP and crews work well with our elevator staff as well as myself at FW Cobs headquarters.

FW Cobs Company supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. FW Cobs Company has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

FW Cobs Company ships organic feed grade grains into the US and is always looking for new markets to access in order to grow and expand our business. While CP has provided us with good service, its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that FW Cobs could utilize to expand our market offering. And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior in providing efficiencies.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of organic grain from Loreburn SK to the US.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This is especially important for FW Cobs as a portion of our fleet are private hopper cars and improved transit time equates to faster turning of our assets.
- The potential for advancing business opportunities in the organic grain industry should they exist in the southern United States on new CPKC lines

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. We assume this will work similar to how the most recent acquisition of the Central Maine Quebec railway where rail rates, routing and further information would be provided well in advance of our shipping desires. This is a much larger scale but FW COBS assumes caution and clear communication on any pertinent business related updates will be taken care of by assigned representatives at CPRS.

For these reasons, FW Cobs Company is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. FW Cobs Company urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Ryan Wimble
FW Cobs Company

FARMERS CO-OPERATIVE OF HANSKA

ATTENTION: Surface Transportation Board

My name is Jerry Svoboda and my business address is 103 East 1st Street, Hanska, MN. I am General Manager of Farmers Co-operative of Hanska. In my role, I am responsible for serving the needs of the farmer/members by offering competitive grain markets as well as inputs such as fertilizer, fuel, propane gas and feed products.

Farmers Co-operative of Hanska is a shipper of grain utilizing the network of the Canadian Pacific Railway. The corn and soybeans we ship are mostly destined for export to the Pacific Northwest. We view the proposed merger as an opportunity ship corn from south central Minnesota to southern markets including Mexico which could benefit our farmer members significantly.

Farmers Co-operative of Hanska supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Farmers Co-operative of Hanska has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

103 EAST FIRST STREET PO BOX 6 HANSKA, MN 56041
PHONE: 507-439-6244 FAX:507-439-6542
An Equal Opportunity Employer

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. In our experience, using multiple rail services cause delays in train movement compared to rail cars dropped off at interchanges. This causes issues for us in staffing when cars to not arrive when expected or are held up by the transfer from one rail line to the other

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

Kevin Peach - General Manager

ATTENTION: Surface Transportation Board

My name is Kevin Peach and our business address is 2472 30th St NE, Gilby, ND 58235. I am General Manager of The Farmers Elevator Company of Honeyford, ND. I manage company-wide operations for an agricultural cooperative that spans three counties in northeastern North Dakota.

The Farmers Elevator Company of Honeyford is a bulk grain shipper and fertilizer retailer on CP's network. Our company regularly ships grain to various CP destinations, both domestic and export markets. The CP has satisfactorily served our company for over 15 years, providing us efficient service, competitive rates, and for the most part, access to competitive markets.

The Farmers Elevator Company of Honeyford very strongly supports approval of the CP/KCS acquisition/merger. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction provides great potential for improved service options and would stimulate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. We are confident that the CPKC would be able to integrate their operations seamlessly to the benefit of rail customers such as ourselves and other stakeholders. Furthermore, both railroads' strong focus on safety and precision railroading is commendable and something to get behind. The Farmers Elevator Company of Honeyford sees this transaction as beneficial, with no fear of this deteriorating competition in our local markets.

Currently, the Farmers Elevator Company regularly ships bulk grain (corn, soybeans, and wheat) from our main terminal, in Gilby, North Dakota to export markets in the Pacific Northwest and Duluth-Superior, flour mills, ethanol plants, and oilseed crush facilities in the domestic US (many destinations Chicago-Beyond), feed markets in western Canada, and St Louis barge terminals. Other markets exist, but the aforementioned markets currently present most of the opportunity.

We prefer to load rail via our CP-served facility to utilize the cost savings of bulk shipped rail versus smaller truckloads. We actively compete with other local BNSF served competitors to originate grain, oftentimes placed at a disadvantage due to lack of market access to alternative destinations that our competitors have access to on a single line haul.

In our opinion, CP terminals in the upper plains such as ourselves have suffered relative to other local BNSF terminals in regard to market competitiveness. The lack of competitiveness

honeykp@polarcomm.com www.honeyford.com

has seen decreased grain shipment volumes and margins to the detriment of our shareholders and patrons.

Three specific markets that we struggle to gain access to, due to CP lines only currently extending as far south as Kansas City include, but are not limited to Texas, the Gulf of Mexico, and Mexico. Our BNSF-served competitors have single-line access to these markets. We are not competitive into these markets, as we currently must interline with other railroads to reach such destinations beyond Kansas City.

We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction as it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen our competition against local BNSF terminals to gain equal market access.

We feel there are other broader benefits to this merger as well.

- A new CPKC single line route could help fortify North American trade in a time of tenuous trade relations with China. This merger would provide an even stronger infrastructure for the USMCA trade agreement. Agricultural export markets are the lifeblood our local economy, and this provides an additional market to fall back onto.
- Environmentally and logistically, a single line route linking the United States, Mexico, and Canada would provide increased fuel efficiency and less truck traffic congestion.
- CPKC's new service offerings will improve transit times and reliability, which we feel such synergies will reduce our transportation costs and improve our efficiency.

In our experience, KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of competitive, seamless, single-line service that are required to gain long-term market access. This transaction will greatly improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We are impressed by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and

KCS are the two smallest U.S. Class I railroads, and both utilize precision railroad operation styles, we are confident that they will be able to implement their transaction without any service disruptions.

For these reasons, The Farmers Elevator Company of Honeyford, ND is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. The Farmers Elevator Company of Honeyford, ND urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Kevin Peach, declare, under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

FARMWARD
COOPERATIVE
Advancing farming for generations

ATTENTION: Surface Transportation Board

My name is Kurt Soupir and my business address is 711 Front Street, P.O Box 278 Morgan, Mn 56266. I am the Grain Merchandiser of Farmward Cooperative. In my role, I am responsible for finding and selling to markets that maximize revenue for my company.

Farmward Cooperative has a grain terminal that is located on a CP owned rail line. With this rail line, we have the ability to ship grain for domestic and export use. The CP has been doing an excellent job keeping our shuttles moving in a timely fashion.

Farmward Cooperative supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

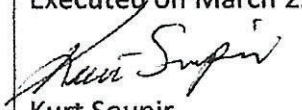
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our grain shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Farmward Cooperative is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Farmward Cooperative urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

FASTFRATE

March 26, 2021

ATTENTION: Surface Transportation Board

My name is Frank Figliomeni with a business address of 9701 Highway 50, Woodbridge, Ontario, Canada. I am the Executive Vice President of Fastfrate Integrated Logistics, a division of Consolidated Fastfrate Inc. ("Fastfrate"). In my role, I am responsible for implementing the strategic plan that guides the direction of the business, overseeing the complete operations of our asset-based logistics division, and managing the relationship with our major customers and carrier partners.

As part of a group of companies that is one of Canada's largest privately held intermodal LTL carriers offering industry-best LTL and TL intermodal transit times, Fastfrate Integrated Logistics delivers solutions with end-to-end control and visibility to our customers throughout North America.

Fastfrate supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Fastfrate has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Fastfrate ships consumer packaged goods, electronic products, and other raw materials for customers located in central Canada and the United States to western Canada and overseas. In 2020, Fastfrate moved over 28,000 marine containers through the CP network of railway.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach

destinations beyond Kansas City that we ship to, or that could expand the markets we serve effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

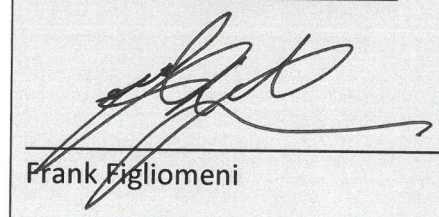
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our cross-border shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.



FASTFRATE

For these reasons, Fastfrate is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Fastfrate urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

Federal White Cement Ltd. (FWC) hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS").

FWC is a major manufacturer of white portland cement. We own and operate a plant in Zorra ON and distribute our cement throughout North America. Utilizing our private covered hopper fleet, we ship cement via rail throughout the US and utilize rail for inbound clay materials.

FWC has not previously addressed either of the two proposals involving the acquisition of KCS.

FWC is reliant on both CP and CN for transportation services in certain markets.

FWC nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.
- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS while contemplating these criteria.

Respectfully submitted,

Art DeVecchis
VP Sales, Marketing & Logistics
Federal White Cement Ltd.

FERROUS PROCESSING & TRADING Co. CPKC SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Viktor Velichkov and my business address is 3400 E Lafayette Ave Detroit, MI 48207. I am Rail Logistics Manager of Ferrous Processing & Trading Co. In my role, I am responsible for everything that has to do with the railroads including, track/railcar leases, OT57s, Umler, railcar purchases/sales, railcar repair, and any new business development involving rail.

Ferrous Processing & Trading Co. is a customer of both CP and KCS. We currently do not ship on CP but have service available at Zalev Brothers in Windsor, ON. We currently ship scrap metal via KCSM/KCS from Jumandi in Chicalote, AG Mexico to Steel Dynamics in Columbus, MS. We are very happy with our service, our rates, and our relationship with KCS.

Ferrous Processing & Trading Co. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls would help us reach our existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Ferrous Processing & Trading Co. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial.

We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior in terms of both speed and cost.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, rail carriers and trucks that serve our markets. For example,

- **CPKCs new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of scrap metal from Chicalote, AG in Mexico to metals markets in the Midwest where previously business was cost prohibitive due to high freight rates and transit times.**
- **We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada**

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Fessenden Co-op Association is a local farmer owned grain and agronomy co-op located in central North Dakota. We handle many kinds of grains but primarily spring wheat, soybeans, corn, pinto beans, and black beans. We are served by CP Rail at 2 of our locations, Carrington and Fessenden. Combing CP & KSC would be much more beneficial to the members who own this co-op as we ship several thousand bags (cwt.) of edible beans into Mexico and southern points in the USA served by the KCS line. It would also provide us with more competitive markets into Mexico for corn, wheat, and soybeans. The CN-KSC combination does nothing for us.

I am writing to express Fessenden Co-op Association's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example,

they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having

multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

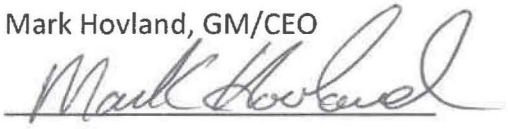
Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment,



downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Mark Hovland, GM/CEO

ATTENTION: Surface Transportation Board

My name is Andy Wallgren and my business address is 1 Ceasar Road, Sudbury, Ontario, Canada, P3E 5P3. I am the Sales Manager of Fisher Wavy Inc.

Fisher Wavy Inc. is a manufacturer of a wide range of concrete and aggregate products for industrial, commercial, and residential clients in Sudbury ON, Sault Ste. Marie ON, and surrounding areas. Our facility is CP served and we receive cement and slag shipments.

Fisher Wavy Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to U.S. Gulf, South West, and Mexico – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Fisher Wavy Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Fisher Wavy Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Dan Leavens and my business address is 7151 44th Street SE Calgary, Alberta Canada. I am Managing Partner of FMi Logistics Inc. In my role, I am responsible for negotiations with our transportation vendors and implementing pricing for our clients with respect to ground and rail transportation solutions.

FMi Logistics Inc. has used CP rail as a core rail vendor for several years to handle our clients supply chain domestically here in Canada and are elated that CP rail has expanded their service offerings further in the USA and directly into Mexico.

FMi Logistics Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. FMi Logistics Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

Unit 111, 7151 – 44th Street SE

FX: 403-723-6664

e: admin@fmicanada.com
web: www.fmicanada.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of our current and potential new clients
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, FMi Logistics Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. FMi Logistics Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible, so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Best Regards,

Dan Leavens

FOOD, HEALTH & CONSUMER PRODUCTS OF CANADA

PRODUITS ALIMENTAIRES, DE SANTÉ ET DE CONSOMMATION DU CANADA

FHCP PASC

LETTER OF SUPPORT FROM FOOD, HEALTH & CONSUMER PRODUCTS OF CANADA (FHCP) RE: CANADIAN PACIFIC AND KANSAS CITY SOUTHERN: THE FIRST U.S.-MEXICO-CANADA RAIL NETWORK

ATTENTION: Surface Transportation Board

My name is Michael Graydon. I am CEO of Food, Health and Consumer Products of Canada (FHCP). The food, health, and consumer products sector employs more than 350,000 Canadians across businesses of all sizes that manufacture and distribute the safe, high-quality products that are at the heart of healthy homes, healthy communities, and a healthy Canada. In my role, I am responsible for setting the strategic direction and management of the organization. My business address is 2700 Matheson Blvd. E., East Tower, Suite 602 E, Mississauga, ON L4W 4V9.

A modern, reliable and cost-efficient supply chain is a critical component of our industry. With more than 350,000 workers, the Food, Health and Consumer Products industry contributes more than $40 billion to Canada's GDP annually. Despite this success, our industry continually faces capacity constraints resulting from not having the right products in the right places for consumers. FHCP supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

Our industry requires more capacity to ensure our products are reaching the thousands of retail locations across our country to meet the growing needs of Canadians. Time-starved Canadians expect to find their products on grocery and drug store shelves when needed. They are also extremely sensitive to price fluctuations. Increasing our industry's distribution capacity through an expanded network will support our obligation to provide Canadian consumers with competitive and stable pricing while also ensuring we drive sales and export to other markets. The Canadian government has set an ambitious target to grow Canada's agri-food exports to at least $75 billion annually by 2025. CPKC represents an important step in advancing that agenda.

For these reasons, Food, Health and Consumer Products of Canada is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. FHCP urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Michael Graydon, declare under penalty of perjury, under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 30, 2021.

PO Box 68
Forest River, ND 58233
(T) 701-248-3261
(F) 701-248-3766

ATTENTION: Surface Transportation Board

My name is Brian Schanilec, and my business address is 600 Carpenter Ave E, Forest River ND 58233. I am the President and Owner of Forest River Bean Co., Inc. In my role, I am responsible for overseeing all aspects of business, management, and marketing.

Forest River Bean specializes in Dry Edible Beans that we ship all over the world. We are currently on a Canadian Pacific line (sidetrack) and have been very pleased with the service that we maintain. We ship beans in Boxcars and Hopper cars in many different types of pack to many different ports around the United States. We have been shipping most of our Boxcars to Mexico to help with their supply demands.

Forest River Bean is in full support of approval of the CP/KCS combination. The operation would give significant benefits that we are ready to achieve as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Forest River Bean has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of edible beans from North Dakota to Southern United States, ports, and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Single line service is the most efficient means within the railroad industry.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

For these reasons, Forest River Bean is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Forest River Bean urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I am Phillip Jallo, general manager of the Fordville Coop Marketing Assn. We are a bulk shipper of grain commodities by rail on the Canadian Pacific Railway.

I am writing to express the Fordville Coop Marketing Assn's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public

interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity

across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle

benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup

them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Phillip Jallo 5-24-2021

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is HAPPY GILL and my business address is 23371 FISHERMAN ROAD, MAPLE RIDGE, BC V2W 1B9. I am CO-VICE-PRESIDENT of FRASER PLASTICS LTD.

Fraser Plastics has been using CP for many years and this route will be very important for us starting next month.

FRASER PLASTICS LTD. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. FRASER PLASTICS LTD. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship plastic pellets from our CP-served facilities in BC to our customers with elevators/terminals throughout North America.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

CPKC NETWORK will help FRASER PLASTICS LTD. to expand the customer base without worrying about the logistics.

FRASER PLASTICS

23371 Fisherman Rd

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, FRASER PLASTICS LTD. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. FRASER PLASTICS LTD. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Jeff Thaler. I am the CEO of Full Circle Ag located in Britton, SD. Full Circle is a cooperative located based out of Britton, SD and has nine locations that supports our members owners with grain, agronomy, energy, and feed operations.

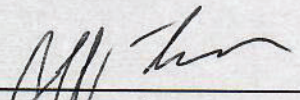
Full Circle Ag currently works with the CP railroad out of our grain terminal in Forman, ND. We utilize their rail services to ship corn and soybeans to a variety of locations including Kalama, Washington; St Louis, Missouri; and Chicago, Illinois. The Kalama Export Co. based in Washington is currently one of our few options to access overseas markets. Full Circle Ag supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets would help us reach our existing markets and new markets more efficiently. Full Circle Ag feels that this merger will support our members at a higher level to allow for access to more markets and allow the CP to compete at a higher level with the BNSF to serve its customers.

Limited rail access to additional markets has limited the success of our grain division. This increased access to markets will allow our business to not be disadvantaged in grain margins due to other rail lines having access to these additional markets. Single rail line access allows a least cost model which will position us to be more competitive to access grain bushels from our member owners and provide a local market that increases competitive bids for our local producers.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets

across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

For these reasons, Full Circle Ag is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Full Circle Ag urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

FULLERTON ND 58441

ATTENTION: Surface Transportation Board

My name is Andrew J Hager, Jr. and my business address is 202 Minneapolis Ave, Fullerton ND. I am the General Manager of the Fullerton Farmers Elevator. In my role, I am responsible for overall management of the company including the grain merchandising.

Fullerton Farmers Elevator uses the CP rail to ship our grain commodities to outside markets.

Fullerton Farmers Elevator supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Fullerton Farmers Elevator has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another Class I consolidation.

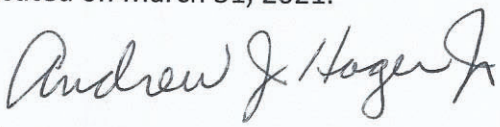
CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City. A merger would provide a more effective way for market expansion.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bulk grain from Fullerton, ND to St. Louis, center gulf, Texas gulf and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, the Fullerton Farmers Elevator is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The Fullerton Farmers Elevator urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Andrew J Hager, Jr, state under penalty of perjury, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Alex Boisseau, and my business address is 333 Boulevard Decarie, Suite 250. I am Branch Director of Fuze Logistics Services. In my role, I am responsible for Directing of the relative department's Intermodal operations, Ontario highway operations and sales, and office infrastructure.

Fuze Logistics Services is a committed and service-oriented transportation firm with views of Canadian Pacific Railway as a Canadian based railway business partner which our teams utilize to sustain intermodal transportation efficiency, via a single source to ensure customer satisfaction. Our service has flourished and continues reflect strong growth indicators, directly impacted via partnerships created with organizations such as Canadian Pacific Railway.

Fuze Logistics Services supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Fuze Logistics Services has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The Fuze Logistics services team manages a wide variety of freight via multi-modal solutions which we rely on and operate daily within current CP rail thresholds. Our current processes do include a multi-billing platform that does convolute internal processes and the recent acquisition proposal has our team extremely excited to participate and utilize the proposed partnership/merger services immediately. It allows our network to provide additional capacity within sustained markets of the newly found streamlined network. Our continued and ongoing inbound business initiative strongly coincides with the current proposals and has the potential to utilize the routings in detail inbound from markets such as Saltillo, MX. Silao, MX. And San Luis Potosi, MX destined to several Canadian destinations which can now be serviced via one streamlined platform.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of all kinds from Mexico to US and Canadian destinations.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Via improved transits and overall conformity – our team will be able to provide our structured service with less reach and more diligence utilizing one platform, subsequently reducing costs and overall efficiency.
- The addition of a Canadian platform will allow a streamlined position for both KCS and CPR within a saturated market while maintaining balance between as a collective, allowing for additional capacity and additional (may be noted a special requirements) service needs.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two

smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Fuze Logistics Services is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Fuze Logistics Services urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

G. Thompson Livestock Co. Inc. hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would also provide great access to fertilizers, Dry Distillers Grain and Feed corn for farmers and cattle feeders in a cost-effective manner.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS,

NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Glen Thompson

G3 CANADA LIMITED SUPPORT LETTER

ATTENTION: Surface Transportation Board

G3 Canada Limited has a long-standing working partnership with CP rail in Canada shipping grain from our country grain elevators to our port terminals.

G3 Canada Limited supports approval of the CP/KCS combination. We feel the transaction would provide significant benefits and opportunities for the movement of grain both north and south via the new CP/KCS rail system.

The combined CPKC network would provide access to ports on the U.S. Gulf, Atlantic and Pacific coasts that would help us reach our existing markets and new markets more efficiently.

Although most of G3 Canada's grain is shipped east and west within Canada we do have customers in the USA and Mexico that could be better served by the new combined entity. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. Today CP must interline with other railroads to reach destinations beyond Kansas City which is in many cases inefficient.

We are very excited about the transaction because it will allow a combined CPKC to provide more efficient and reliable rail service options. This will strengthen competition and opportunities for grain movement into these markets. We are very supportive of the role new a CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement.

For these reasons G3 Canada Limited is supportive of the combination of CP and KCS. It will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. G3 Canada Limited urges the STB to approve CP's acquisition of KCS so that these systems can be integrated, and the end-to-end benefits can be realized for all.

Respectively

Don MacDonald

GAC Chemical Corporation

ATTENTION: Surface Transportation Board

My name is David Colter and my business address is 34 Kidder Point Road, Searsport, Maine. I am President/CEO of GAC Chemical Corporation. In my role, I am responsible for overseeing our chemical manufacturing and distribution operations.

GAC Chemical receives close to 1000 railcars per year connected to our business. The railcars headed to our facility originate from Western Canada; Mexico; and the Southern United States. Our relationship with CP is close to one year old due to their 2020 acquisition of the short line railroad serving our facility (CMQR). We view the CP/KCS combination as a key growth driver and opportunity for the Northeastern United States.

GAC Chemical supports the approval of the CP/KCS combination. The transaction would provide significant benefits to our company and region. The combined rail map clearly demonstrates the creation of a rail network supporting commerce between Canada, Mexico and the U.S. We are eager to see the combination realized as soon as possible.

From GAC's perspective, the transaction provides an opportunity for improved service options and transportation competition in the markets supplying key raw materials to our region. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help with our reach to existing and new markets more efficiently.

From a safety and operational perspective, given the two railroads' strong focus on safety and their track record of operational excellence, I am confident that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. GAC does not often speak favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

With GAC located in Maine, rail shipments to our facility can be a logistics challenge given our need to ship from Western Canada, Mexico and the Southern US. We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

34 Kidder Point Road • Searsport, Maine 04974 • (207) 548-2525 • Fax: (207) 548-2891 • www.gacchemical.com

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

I understand that KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, GAC Chemical Corporation is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. GAC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

GAF We protect what matters most

March 31, 2021

Surface Transportation Board
395 E Street SW
Washington, DC 20423

Dear STB Board Members,

My name is Michael Donoghue, Manager, National Rail Services, at GAF. Our corporate office is located at 1 Campus Drive Parsippany, NJ 07054. I am responsible for all rail matters including pricing, operations, and rail fleet management for both the US and Canada.

GAF is the largest roofing manufacturer in North America. We have major plant production locations in many key areas of the US. Rail is an intricate part of our supply chain network for both raw materials and finished goods. GAF ships on all Class 1 railroads and many Class 2 and Class 3 short lines. Our Minneapolis plant is served by CP and our Tuscaloosa AL plant by KCS. The success of our service commitments to our customers relies on a robust fluid rail network.

In the past, we have viewed most rail mergers with a bit of skepticism and have concluded that bringing two large railroads together creates an uncompetitive marketplace and questionable rail synergies. However, from our perspective, the transaction of CP-KCS promises to provide improved service options and invigorate transportation competition in the markets we serve. We see no redundancy in track operations and view this as an end-to-end transaction linking the two railroads together at one interchange. The combined CP-KCS network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts, as well as, to key overseas markets – would help us reach our existing as well as provide more flexibility in reaching new markets. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CP-KCS will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We wholly support this transaction and hope the board accepts this merger in a timely manner.

Sincerely,

Mike Donoghue

Michael Donoghue
Manager, National Rail Services

Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

On behalf of Gasaway Farms, I am writing to encourage the members of the STB to reject Canadian National's (CN) attempt to use a voting trust to take over Kansas City Southern (KCS). It is our belief that a merger between CN and KCS violates the Board's 2001 Major Merger rules as well as Decision No. 3 which states that the rules place "heavier burdens on merger applicants to show that a major rail consolidation is consistent with the public interest".

A CN acquisition of KCS via voting trust will limit competition, and this violates public interest. American farmers are already experiencing increased prices on essential goods and consistently declining incomes. CN and KCS have a number of overlapping lines in key markets, and a merger would leave shippers with fewer options for service. CN and KCS serve large numbers of shippers in western Iowa and eastern Nebraska, at Jackson, Mississippi, East St. Louis, Illinois, Springfield, Illinois, and both reach the port if Mobile, Alabama. By combining these two lines, shippers will suffer from a lack of price and service competition in all of these locations.

In addition to our concerns over diminished competition, Gasaway Farms also worries about future merger prospects.Years of low commodity prices have already pushed many of us in the agriculture sector to the brink of financial distress and we believe limiting competition will have a significant financial impact on our local economies. Allowing CN to use a voting trust to acquire KCS will make it impossible for Canadian Pacific (CP) to merge with KCS. This represents a significant loss. A CP-KCS union would provide single-line service between Mexico, the United States, and Canada. Additionally, a CP-KCS line would contribute to competition between the major lines and shippers would benefit from lower rates and better services as a result.

A CN voting trust does not benefit anyone other than KCS shareholders. If the CN proposal can pass muster on its own merits, there should be no reason to push for a voting trust. Therefore, Gasaway Farms encourages the STB to deny the CN bid for a voting trust.

Respectfully submitted,

Chase Gasaway, Owner and Operator Gasaway Farms
Arkansas Advisory Board Member, Farmers and Families First

GAVILON

April 9, 2021

Dear Surface Transportation Board:

My name is Ross Edwards and my business address is 1331 Capitol Avenue, Omaha, NE 68102. I am Vice President, Transportation of Gavilon. In my role, I am responsible for rail transportation and logistics of Gavilon.

Gavilon is commodity management firm that ships and receives grain, fertilizer, and feed ingredients in Canada, the US, and Mexico on every class 1 in the US including the CP and KCS.

Gavilon supports approval of the CP/KCS combination. We believe the transaction would provide benefits for our company and the agriculture industry. We believe the transaction would provide improved transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

Gavilon ships grain, fertilizer, and feed ingredients on the CP. We operate CP-served facilities in ND and MN. We support the transaction as we believe it will allow a combined CPKC to provide new, more efficient and more reliable rail service options to Gavilon. This should strengthen competition against the other, larger rail carriers and alternative shipping methods that serve our markets. For example, CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of distiller's grain from MN to Mexico.
CP-KCS joint routes are among our current transportation options, but as separate companies they have not been able to offer seamless, single-line service. This transaction should improve our transportation options.

For these reasons, Gavilon supports the combination of CP and KCS. Should you have any questions, feel free to contact me at ross.edwards@gavilon.com.

Sincerely,

Ross Edwards

ATTENTION: Surface Transportation Board

My name is Dan Calder and my business address is 4120 84 Ave NW, Edmonton AB. I am the Logistics Manager of General Recycling Industries Ltd. In my role, I work closely with CP Rail billing cars and coordinating service.

General Recycling has its own rail fleet (GRIX prefix) and CP Rail is the rail line that services our yard. Three times a week we receive rail service from CP; our loaded cars are pulled and empty gondolas pushed into our yard. Thru CP Rail, our inventory has shipped throughout Canada and the United States. This relationship has been in place since our facility first opened at this location over two decades ago.

General Recycling Industries supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, General Recycling Industries is voicing strong support for the combination of CP and KCS and urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36500 – Reply to Objections to KCS Waiver

My name is Jaclyn Eilen and my business address is 21790 Hamburg Ave, Lakeville MN 55044. I am the office manager for General Transport Inc. In my role, I am responsible for the daily business operations for the company.

General Transport Inc has previously submitted to the Board a letter supporting approval of the proposed CP-KCS combination, and I have attached a copy of that letter for the Board's convenience. As expressed in our previous letter, General Transport Inc supports swift approval of the CP-KCS combination because of the significant benefits we expect to realize from this transaction.

General Transport Inc is aware that several parties have filed objections to the application of the pre-2001 merger rules to the CP-KCS transaction under the "waiver" issued in 2001 for transactions involving KCS. General Transport Inc wishes to reply to those objections by urging the Board not to revoke the KCS waiver. The pre-2001 rules provide the Board and all interested parties all the tools that are needed to fully evaluate the proposed transaction.

We are fully cognizant of the Board's mandate to ensure that Class I mergers are in the public interest, and do not risk significant disruptions in the railway system. From our perspective, the unique nature of the CP-KCS transaction alleviates the concerns that motivated the new rules adopted in 2001. Reviewing the CP-KCS combination under the tried and true pre-2001 merger standards will prevent undue delay, while still allowing for a thorough public interest assessment by the Board.

As we have mentioned in our April 16th 2021 letter, the end-to-end CP-KCS transaction will improve service options, with new single-line hauls and broader access to markets across North America. Our experience shows us that single-line rail service options are far superior to public and private fleets. The unique synergies of a CP-KCS combination promise significant public benefits to General Transport Inc and similarly situated shippers, which we are eager to see realized as soon as possible, without the delays and additional burdens that would result from applying the 2001 rules for the first time ever to this transaction.

Nothing about the CP-KCS transaction raises the kinds of concerns that would flow from a merger of the much larger Class I railroads. The issues should be simple – the transaction improves competitive options and service – and any concerns any party has should be easy to address under the pre-2000 rules. The 2001 rules were

designed for much more complex transactions raised much more serious issues, and they should not be tested out in this case.

General Transport Inc and our shipping partners are looking forward to a stronger CPKC network that will increase our access to diversified market opportunities. As such, we urge the Board to apply the KCS waiver provision it thoughtfully included in its 2001 Major Merger Rules. An elongated period of review will delay and potentially reduce the positive synergies this merger promises. The KCS waiver will allow the Board to conduct a thorough but efficient and fair review and allow for the benefits of the new CPKC network to come to fruition more quickly.

General Transport Inc is additionally concerned that applying the 2001 Major Merger Rules to the CP-KCS merger, a transaction the rules were not designed for, would lead to precedent with unintended consequences and might also create an easier path for some other Class I merger proposals that would be problematic in ways CP-KCS is not. The CP-KCS merger is unlike other Class I merger combinations, in that it is a straightforward transaction between the two smallest U.S. Class I railroads, and it promises substantially more benefits than risks to the public interest. We also know that this transaction, among all possible Class I mergers, is unique in not posing any serious concerns about lost competition, service disruption, or other harms. Interpreting and applying the 2001 rules to this transaction could encourage other Class I railroads to see an easier path for their own Class I merger proposals without the same unique benefits of the CP-KCS transaction.

For these reasons, General Transport Inc urges the Board to maintain the KCS waiver and reject calls to revoke it, and to proceed to review and approve the CP-KCS proposed combination as expeditiously as possible. We look forward to seeing CPKC as a stronger competitor in the industry.

Yours sincerely,

Jaclyn Eilen

RE: Finance Docket No. 36500, CP/KCS Combination

My name is Doron Grosman and my business address is Suite 610 – 375 Water Street, Vancouver, BC V6B 5C6 Canada. I am the President and CEO of GCT Global Container Terminals Inc. In my role, I am responsible for all facets of the business at our marine terminals in Canada and the United States which includes railway connectivity at our facilities.

GCT fosters a long standing, strong partnership with CP which has been built on a foundation of ensuring fluidity in the supply chain for containerized freight moving via rail. We partner with CP at our flagship terminal, Deltaport which is largest marine terminal in Canada in addition to Vanterm in the Metro Vancouver area.

GCT supports approval of the CP/KCS combination. The transaction would facilitate significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options in the markets which are served via our marine terminals. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – may help us expand to new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence based on our experience, I am confident that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We see this transaction as uniquely beneficial, where this consolidation of Class I railways would facilitate increased service options for our customers.

CP's partnership has been vital in promoting import and export growth in the United States Mid-West and Canadian markets via our marine terminals in Metro Vancouver. CP has provided excellent service to our mutual customers, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City.
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition in our markets also served by other, larger rail carriers and trucks. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for containerized freight shipments.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will reduce transit times and reliability, which will improve efficiency throughout the supply chain. This will unlock new opportunities for GCT and promote growth for services which call at our marine terminals through the expanded North America network.

We have been impressed by the attention of CP to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident in their commitment to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, GCT is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. GCT urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, DORON GROSMAN, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

My name is Barry Chypyha and my business address is 800 Alness, Toronto, ON, M3J 2H5. I am Director of Operations & Logistics at Global Furniture Group. I am responsible for leading & managing my organizations supply chain.

Canadian Pacific Railway is my primary intermodal carrier in Domestic Canada and we are looking to expand our relationship to service our North American customers.

Global Furniture Group supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

global furniture group

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Global Furniture Group believe that this is a very unique consolidation transaction that will doesn't have a downside.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Global Furniture Group is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Global Furniture Group urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Bob Thomas. I work for Grand Prix Inc. at 121 Ferry Street, Van Buren, ME 04785. My role is transportation logistics, with an emphasis on business development.

Grand Prix has a growing relationship with CP as a result of CP's recent acquisition of the CMQ Railway. We have multiple business units working with CP on inbound paper and fertilizer and outbound scrap paper.

We support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network, with new single-line hauls, would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Speaking from a recent experience on a transition where CP acquired the CMQ Railway, CP has provided us with good service, since its acquisition and we are excited about the opportunities of growth with the CPKC and its expanded reach.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber into Texas destinations.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons Grand Prix Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes Grand Prix urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Yours sincerely,

Robert D. Thomas

Re: Canadian Pacific: Kansas City Southern, Kansas City Southern Railway Company, Gateway Eastern Railway Company and Texas Mexican Railway Company

Dear Mrs. Brown:

Graneleros de Coyotillos, SAPI de CV is a company dedicated to the commercialization and storage of grains and seeds, transported through equipment from Canadian Pacific and Kansas City Southern; with origins from various regions of Canada and the USA with whom we have maintained an excellent business relationship over 8 years.

Graneleros de Coyotillos, SAPI de CV supports the combination of Canadian Pacific and Kansas City Southern because it will create a faster, safer, cleaner and more direct service for North-South trade. The combination will help realize the potential of the USMCA.

We believe that a combination of Canadian Pacific and Kansas City Southern would help us win in our markets. Canadian Pacific's strong track record of success in providing superior service, intermodal capabilities, and safety, gives us confidence that a combination of Canadian Pacific and Kansas City Southern would be in the best position to meet our needs. In addition, Canadian Pacific's successful combination history over the past 25 years also provides the assurance that Canadian Pacific will be able to seamlessly and effectively integrate and partner with Kansas City Southern.

We believe that our need for bulk hoppers, tank trucks and rail platforms will be satisfied with this merger to streamline our operations with origins in Canada and the USA, basically using the services of Canadian Pacific / Kansas City Southern.

The combined company would create an end-to-end, single-operator, single-owner enhanced service network, resulting in a faster, safer, and cheaper rail option for us. We hope that this transaction can provide seamless transportation and service that would not otherwise be available.

Canadian Pacific has significant experience in providing seamless intermodal service throughout its network and across borders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Jackie Bodner and my business address is 503, 10109-106 Street, Edmonton, Alberta, Canada. I am the Business Development lead of Great Northern Grain Terminals Ltd. and I am responsible for identifying and developing new business opportunities for our organization.

Great Northern Grain Terminals Ltd. owns and operates an inland grain terminal and we have been in business for more than 30 years. Our success has been directly impacted by the relationship and service level established with CP over the years.

Great Northern Grain Terminals Ltd. supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Great Northern Grain Terminals Ltd. moves most of its grain via rail. To date, movement has been somewhat limited to domestic and/or West Coast export shipments as the lack of single-line haul locations have restricted alternative market access. As with any industry, any time a shipment needs to be transferred or "touched" by way of supply chain movement, fees, rates, and turnaround begin to increase and, in most instances, these factors have eroded certain market opportunity.

Given the recent announcements, we are very much looking forward to the synergies CP and KCS will be able to offer. In particular, seamless movement of product combined with access to new and exciting markets along the agricultural value chain. Not only do these benefits yield additional opportunities for our grain handling facility but, it also opens up alternative markets to our upstream producers and creates numerous options for our downstream processors.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bulk agricultural products.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, improve our efficiency by increasing the throughput capabilities of our facility.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Great Northern Grain Terminals Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Great Northern Grain Terminals Ltd. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Jackie Bodner, Business Development

GREENFIELD
GLOBAL

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Chris Deline, and my business address is Chatham, ON. I am the Logistics and Trade Compliance Manager, B&DS division of Greenfield Global Inc. In my role, I am responsible for rail transportation.

Greenfield Global is an ethanol producer and ships its tank cars on the CP network and throughout Canada and east to west coast in the US. Greenfield has been a shipper with the CP since 1998.

Greenfield Global supports approval of the CP/KCS combination. The transaction may provide significant benefits that we will explore as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we may explore. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – may help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Greenfield Global has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation. Greenfield Global continues to look for opportunities where shipping by rail can replace shipping by truck due to the environmental benefits of this mode of transportation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we may ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

275 Bloomfield Road, Chatham, Ontario, N7M 0N6, Canada | P. 519.436.1130 | F. 519.436.1595
www.greenfield.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of ethyl alcohol from Ontario to the Midwest and southern US and into Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which would reduce equipment costs and improve efficiency. Further to this, shortened transit times will allow shippers to move the same volume of goods with fewer rail cars in service.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Greenfield Global is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Greenfield Global urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

GREENLIGHT TRAFFIC AND DISTRIBUTION INC

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500, CP-KCS Proposed Combination

My name is Augustin Martin and my business address is 220-6705 Tomken Road, Mississauga, Ontario. I am a Director of Greenlight Traffic and Distribution Inc. In my role, I am responsible for all rail moves within Canada and the United States of America for our customers within North America.

Greenlight Traffic and Distribution Inc. is a Third-Party Logistics company with customers all across North America (Canada/United States) and we move various products (Grain, Plastic, Metal and Metal, Sugar, Animal feed and Rubber) for our customers across the CP Network. We have been blessed that we are able to utilize the services of CP for our customers. The reason is the level of service is the best in the industry and having efficient service is what makes us as successful as we are and able to provide a wide spectrum of solutions to our customers.

Greenlight Traffic and Distribution Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly for the benefit of rail customers and other stakeholders.

Greenlight Traffic and Distribution Inc. uses the CP rail network in various combinations to serve our customers, which works well for our customers, but an increase in market reach would benefit us. For example, we currently ship plastic film from Montreal, QC to Baton Rouge, LA over the road. It would be a great advantage for us to have a single, reliable carrier providing end-to-end service. This would eliminate a lot of disruption during produce season and provide steady service and confidence to our existing customers

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. For example, when it is a single carrier, the interline reduces and it is hassle free.
- Utilizing the service of a single rail line will open a whole new prospective and bring business opportunities that we can now offer our current and new customers.

For example: An existing customer of Greenlight Traffic and Distribution Inc. requested a shipment be moved from Halifax, NS to Mexico City, MX. It was a huge challenge to move this freight. After many hurdles, we were able to accomplish the task. It would be a huge advantage to have a carrier like CPKCS that is integrated and who could have accomplished this as a single move.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Andrea Adam, and my business address is 282 Huron St, Clinton, ON. I am Operations Manager of Greenway Animal Nutrition. In my role, I am responsible for all the day to day activities.

Greenway ships feed and food grade commodities through North America. We have valued our relationship with CP as they are great to deal with and their rate make us competitive in an ever-changing market. We have always been able to count on CP's level of service which has been very beneficial to set our customers at ease knowing their product will be where they need it, when they need it.

Greenway supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. ATTENTION: Surface Transportation Board

My name is Brad Sanders and my business address is 811 Main St, Suite 2800, Houston, TX 77002. I am Executive Vice President, Chief Commercial Officer of Guanajuato Energy Terminal ("GET"). In my role, I am responsible for developing the commercial strategies and the proper execution of them for GET.

GET has enjoyed a good relationship with Kansas City Southern Railway ("KCS"), providing our customers services that involve rail solutions for various commodities in the United States and Mexico, including refined products and propane. These services require close operational collaboration and/or negotiations with rail carriers. GET believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service that will enable us to better serve our customers and communities.

GET supports approval of the CP/KCS combination. The transaction will provide benefits that we are eager to see realized.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

KCS has provided us with good service, but its market reach is limited today, as KCS's lines only go as far north as Kansas City. KCS must interline with other railroads to reach destinations beyond Kansas City to which we ship or into which we may expand.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce equipment costs and improve efficiencies for our customers.

KCS and CP have had a cooperative relationship based on our past dealings with them, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – makes it less likely that the transaction will have any significant adverse effects on competition. It should make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, GET is voicing its support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. GET urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Best Regards,

Brad Sanders
Executive Vice President, Chief Commercial Officer

HARBOUR METALS RECYCLING LTD.

1100 Montreal St. Thunder Bay, ON P7E 6T8
T: (807)577-0873 F: (807)577-0874 E: info@harbourmetals.com
www.harbourmetals.com

ATTENTION: Surface Transportation Board

My name is James White, and my business address is 1100 Montreal St. Thunder Bay, ON Canada P7E 6T8. I am the Trader for Harbour Metals Recycling Ltd. In my role, I am responsible for all off the logistics, purchasing and sale of our raw materials and processing equipment.

Harbour Metals Recycling Ltd. is a shipper with CP Rail. We ship scrap metal materials across North America for consumption in domestic and international based steel mills and foundries. Cp has enhanced our growth significantly by improving our service frequency and turnaround time on our private cars. They offer us competitive pricing allowing us to expand our market capabilities.

Harbour Metals Recycling Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Harbour Metals Recycling Ltd. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Harbour Metals Recycling Ltd. ships the majority of our products via private gondola cars by rail with CP Rail. We currently ship processed scrap metals including steel, stainless steel aluminum and copper bearing products from our CP served facility in Thunder Bay, Ontario Canada to customers in Ontario, Manitoba, Saskatchewan, Ohio, Michigan, Indiana, Illinois, Minnesota, Wisconsin and Iowa.

We also purchase equipment from across North America to improve our processing and logistic capabilities.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of scrap materials from Thunder Bay, On to further points in the southern United States and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency buy allowing us to move more volume of raw materials annually and improve the efficiency of obtaining processing and logistics equipment we require.
- Reducing the need to interline will increase the efficiency and reduce the need for inter-switching times and the fees associated with those switches.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Harbour Metals Recycling Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Harbour Metals Recycling Ltd. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I James White, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

To Whom it may Concern:

Re: Letter of Support for the Proposed Canadian Pacific Railway ("CP") and Kansas City Southern Railway ("KCS") Merger

Our names are Doug Atkins Gibson Energy, 1700, 440 – 2 Avenue SW, Calgary, AB T2P 5E9, and Jim Albertson, USD Group LLC, Suite 1960, 440 – 2nd Ave. S.W., Calgary, AB / T2P5E9. We are directors of the Hardisty Energy Terminal Limited Partnership ("**Hardisty Energy Terminal**") and Vice Presidents of the ultimate partners of Hardisty Energy Terminal, Gibson Energy ULC and USD Group, respectively (**collectively, the "Partners"**). The Hardisty Energy Terminal is a partnership formed in Alberta, Canada that is nearing the completion of building a Diluent Recover Unit (**"DRU"**) in Hardisty, Alberta, Canada, that it will operate. The Partners currently work together to ship Dilbit (heavy Canadian crude oil) out of Hardisty, Alberta, utilizing CP. KCS offers opportunities to reach new customers through its rail network.

As you likely know, diluent is required to be added to bitumen to make it less viscous for delivery by pipeline (blended product is referred to as Dilbit). Diluent is removed by refineries and offers little to no value when bitumen is delivered by rail car. By removing much of the diluent just prior to loading into a rail car creates a new product, DRUbit™, that is not only more valuable and economic/efficient to ship, it also offers safety and environmental benefits as it ships as non-flammable and non-hazardous by rail in the United states and Canada. CP and KCS have agreed to work together to deliver DRUbit™ to the U.S. Gulf Coast for a customer.

On behalf of Hardisty Energy Terminal, we provide this letter of support for the proposed CP/KCS merger because we believe the combined entities will provide benefits to the rail industry and current and potential future DRUbit™ customers. Among other benefits, we believe this merger provides the potential for maintaining or improving:

- service options to customers across North America through integrated networks;
- transportation competition in the markets we serve;
- Hardisty Energy Terminals ability to reach existing and new markets though single-line hauls;
- access to premier ports on the U.S. Gulf, Atlantic, and Pacific coasts as well as to key overseas markets; and
- an already strong focus on safety and operational excellence.

We are confident that CP and KCS will be able to integrate their operations quickly and efficiently to the benefit of Hardisty Energy Terminal, its rail customers and other stakeholders in our industry, as well as other industries that will benefit from growing access to markets across the United States, Mexico and Canada under the USMCA trade agreement.

Thank you for your consideration of this merger.

Yours truly,
Hardisty Energy Terminal Limited Partnership

HCL LOGISTICS SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Mike Pullam and my business address is 2021 Oxford St. E., London, ON. I am the Director Business Development of HCL Logistics. In my role, I am responsible for the strategic growth of our business while developing strong relationships with he Class 1 rail lines such as Canadian Pacific (CP).

HCL has worked extremely close with CP since starting our transload operation with CP acting as both a service provider and an essential resource to allow us to grow our business. As a transload facility CP ships in a diverse cross-section of commodities which include but are not limited to metals, lumber, gypsum, pulp & paper, retail products etc. The consistency and efficiency of delivery has proven to exceed both HCL and its customer expectations allowing our operating to move in the most efficient manner possible.

HCL Logistics supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. HCL has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

As the needs in the marketplace grow so does HCL's commitment to the region's requirements. More than ever before, regional customers are strategically looking for ways to reduce cost and the supply chain is certainly a place they are looking first. Understanding various products are shipped to Canada from the southern states and Mexico, having a connection to these areas is critical. There is no doubt that CP's service is best in class but there is obvious limitations to their connectivity to aforementioned areas.

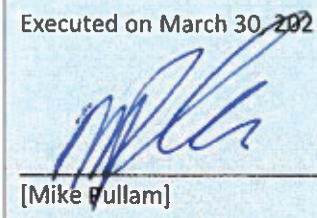
As other Class 1's move seamlessly through the network based on the fact they are a single line option form origin to destination, CP can be seen as having line haul options that are inferior in terms of their ability to reach destination south of Kansas City.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of retail and automotive goods from Mexico directly through to HCL.
- We are particularly enthusiastic about the role new single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Getting product to market is essential and knowing the seamless transition of rail cars from the KCS to CP will be a seamless one, this will dramatically reduce transit time allow product to get into the hands of those who need it most.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, HCL Logistics is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. HCL urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SUPPORT LETTER

ATTENTION: Surface Transportation Board
RE: Finance Docket No. 36500, CP/KCS Combination

My name is Jungyub Lee and my business address is 222 West Las Colinas Blvd., Suite 700 Irving, TX 75039 . I am the President & CEO at HMM (America), Inc.

HMM (America), Inc. entrusts our rail business to CP's network which presently offers direct connections for our shipments moving to/from the Canadian port of Vancouver to inland markets in Canada and the United States Mid-West.

HMM (America), Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders HMM (America), Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

HMM (America), Inc. relies upon CP's service to deliver containerized freight destined to or originating from overseas markets in a safe, efficient and cost effective manner. CP has provided us with excellent service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our containerized freight shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will unlock new opportunities for HMM

(America), Inc and promote growth for our services through the expanded North America network.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, HMM (America), Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. HMM (America), Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Dan Holman and my business address is 503 Grand Avenue, Luseland, Saskatchewan. I am General Manager of Holman Farming Group. In my role, I am responsible for general operations of our integrated grain farm and rail shipping/receiving operation.

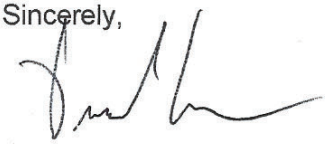
Holman Farming Group (subsidiary of Holman Farming Company Inc.) is a single point receiver/shipper who receives bulk railcars of fertilizer and ships bulk railcars of grains, oilseeds, and pulse crops. We have a relatively new relationship with CPR and have been very happy with the level of service we have received so far from the company. Currently, we receive and unload rail cars of fertilizer that originate in the USA and in the future we plan on shipping railcars of grains, oilseeds, or pulses that will go to either a Canadian or US destination depending on the commodity and time of year.

Holman Farming Group supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Holman Farming Group sees this transaction as uniquely beneficial, with none of the downsides that might result from further Class I consolidation.

From a Canadian grain farmer and small shipper's point of view this merger opens up new transportation corridors for our business and will support a change in shipping/receiving patterns. Currently most grain exports from Canada flow east or west out of the country. With this integration it will be easier to create a better Southern flow of grain exports. Railing grain to a increased amount of destinations will give us shippers increased flexibility in finding markets for our products. We are looking forward to being able to reach new customers in North America with an integrated freight charge and no inter-switching fees.

From a fertilizer receiving company's point of view we also support this merger. Canada is a net importer of Urea, UAN, and Phosphorus fertilizers. These fertilizers are mostly imported into North America from the port of New Orleans (NOLA). It is our belief that having an integrated option to bring railcars of fertilizer into Canada that arrive in North America from NOLA will allow better arbitrage of world prices to the Canadian market. This will increase the total flow of tonnes through the rail network – as lower fertilizer costs typically result in higher usage on farms.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers

For these reasons, Holman Farming Group is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Holman Farming Group urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Dan Holman

Holman Farming Group

Attn: Surface Transportation Board – Docket No. 36500

RE: CP-KCS Potential Merger

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Hopewell Logistics by creating more efficient supply chains across the North American continent, but also open up new opportunities and new markets for businesses.

Hopewell Logistics and CP work together today to move intermodal traffic across Canada. CP plays a critical role in the Hopewell supply chain, transporting products and enabling Hopewell to keep store shelves stocked for the Canadian consumer. The relationship is strategic and both companies collaborate to create better and more environmentally sustainable supply chains.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating potential new opportunities for Hopewell to route cargo and source consumer goods from the USA and Mexico. The CP/KCS combination will enable Hopewell to convert truck traffic to rail, thereby providing a benefit to the environment and society by taking trucks off the critical public infrastructure of the USA.

We firmly believe that CP and KCS will provide Hopewell with safe, efficient and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. Hopewell urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely,

Kevin Roy

Hopewell Logistics

HORIZON GRAINS LTD.
Suite 200, 1001 - 1 Street SE Calgary, Alberta T2G 5G3

April 26. 2021

ATTENTION: Surface Transportation Board

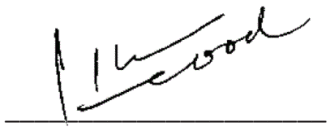
RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Horizon Grains Ltd. hereby files this letter to express its concerns to the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

As expressed in our initial letter to the Board dated April 20. 2021, we support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would also provide great access to fertilizers for farmers in a cost-effective manner.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS,

The merged firm would not provide a single-line haul, competitive option into the markets south of Kansas City (which competing fertilizer producers shipping from different regions use to service these markets today.



We will be harmed by the reduction in competition that would result from a CN acquisition of KCS.

NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Iftikhar Wainse
Director, Business Development
April 26. 2021
CC: All Parties Of Record

HOWARD
ENERGY PARTNERS

16211 La Cantera Parkway
Suite 202
San Antonio, TX 78256

To whom it may concern:

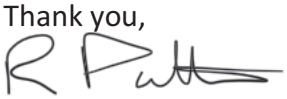
On behalf of Howard Energy Partners (HEP), I am writing to express our support for the approval of the CP/KCS combination, as the transaction wouldprovide significant benefits that we are eager to see realized.

HEP is a midstream company with a focus on providing logistics solutions for the import and export of energy products through our pipeline and terminal systems. We have common customers with KCS, and currently work with KCS on the exportation of refined products from U.S. Gulf Coast-based terminals to Mexico.

Consolidation of CP / KCS would expand opportunities for HEP and our terminal customers to improve rail logistics solution for the flow of crude oil, LPGs, and refined products with Canada, through an efficient, single-line rail haul to the U.S. Gulf Coast.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are supportive of the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competitionagainst the other, larger rail carriers and trucks that serve our markets.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers.This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relativeto the

other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, HEP is voicing strong support for the combination of CP andKCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. HEP urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of thisdeal can be realized for the benefit of all stakeholders.

Thank you,

Roy Patton
Executive Vice President and Chief Commercial Officer

HUDSON'S BAY | SUPPLY CHAIN & LOGISTICS

Date: 3/30/2021
Subject: CP-KCS Proposed Combination

STB Finance Docket No. 36500

To Whom It May Concern:

On behalf of Hudson's Bay, we are writing to provide written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). We believe this combination of railroads will open up new opportunities and new markets for North American shippers large and small. We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve these markets today. For example,

- Improved transit times, and direct access to ports on the U.S. Gulf, Atlantic, and Pacific coast – this improves efficiency and asset utilization and de risk supply chains, shippers will have the ability to develop multi gateway strategies
- Both CP & KCS have an unrivaled commitment to safety & operational efficiency, and with a cooperative relationship in the past, we are confident that the implementation will be strategic & collaborative and will be without the service disruptions and result in environmentally sustainable supply chain solutions
- This transaction will be creating opportunity for shippers large & small that simply does not exist today. This transaction will be taking trucks off the road, enabling new supply chains and creating competitive, efficient markets for shippers in North America.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating new opportunities for them to source materials more competitively.

For these reasons, I am voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for shippers of all sizes. I urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Regards,

Alex Boyd

Alex Boyd
DVP, Logistics

HYUNDAI GLOVIS

1005- 90 Burnhampthorpe Rd. W.
Mississauga ON L5B 3C3

ATTENTION: Surface Transportation Board

I would like to introduce myself, Mr. Harrison Kim, CEO of Glovis Canada Inc., Canadian head quarter located at 90 Burnhamthorpe Rd W, Suite 1005, Mississauga, ON, L5B 3C3. In my honored role of CEO for Glovis Canada Inc., part of my responsibilities are the timely and efficient flow of finished vehicles, finished vehicle parts along with steel derived products from port and plants throughout Canada, with origins points including Mexico and the USA.

Glovis Canada Inc. is current shipping, via Canadian Pacific Railway Limited, finished vehicles from American, Mexican and Canadian VPC/Ports to distribution centers located in 7 of the 10 Canadian provinces. Canadian Pacific Railway Limited being a vital part of Glovis Canada Inc.'s supply chain, I only see positive ramification to our distribution network with regards to railroad consolidation between Canadian Pacific Railway Limited and KCS coming to fruition. Canadian Pacific Railway Limited has, and continues to provide stellar rail shipping service to Glovis Canada Inc. With the proceedings of new railroad consolidation between Canadian Pacific Railway Limited and KCS, I only expect and foresee the service quality and timeliness reaching levels unseen in the rail industry thus far.

Glovis Canada Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Glovis Canada Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Glovis Canada Inc. ships finished vehicles, through Canadian Pacific Railway Limited and its rail affiliates, from multiple origins in USA, Mexico and Canada towards 7 Canadian provinces. Rail transit time along with rail car availability for rail load is a crucial part in Glovis Canada Inc.'s ability to continuously succeed in meeting its customer's requirements related to monthly whole sale targets, thus ensuring increased market share for its customer in the sector of new auto sales. CP has provided us with reliable service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship from. We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

HYUNDAI GLOVIS

1005-90 Burnhampthorpe Rd. W.
Mississauga ON L5B 3C3

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency, by reducing interchange points and single inline services.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Glovis Canada Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Glovis Canada Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

HYUNDAI GLOVIS

1005- 90 Burnhampthorpe Rd. W.
Mississauga ON L5B 3C3

VERIFICATION

I Harrison Kim, declare verify, under penalty of perjury "under the laws of the United States," that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on 3/30/24 [*date*].

March 29, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Doug Little and my business address is 458 Locust St, Burlington, ON , L5S 1V1. I am Vice President of IMCO International. In my role, I am responsible for Global Operations and Business Development.

IMCO International ships finished steel pipe products with Canadian Pacific Railway.

IMCO International supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. IMCO International has not often commented about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downside that might result from another round of Class 1 consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach southern ports beyond Kansas City.

IMCO ships steel OCTG pipe from CP-served facilities in St. Catherine, Quebec, to IMCO customer yards in Alberta.

We see possibilities with shipping from Ports in Texas to Alberta with a more competitive option with the CPKC proposed routing.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of OCTG pipe.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Ultimately we feel a single line haul will improve our speed to market.

The entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, IMCO International is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. IMCO International urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Doug Little
IMCO International

Independent Dispatch, Inc.

INTERMODAL MARKETING SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Erica Hill, our business address is 214 NE Middlefield Rd, Portland, OR 97211. I am Director of Intermodal Services for Independent Dispatch, Inc. In my role, I am responsible for the intermodal department that handles railroad stacktrain container shipments.
Independent Dispatch, Inc. is an Intermodal Marketing Company that uses both the CPRR & KCS/KCSM railroads. Both are an integral part of our transportation solutions. We currently use CP for cross-border US to/from Canada and we use the KCS for both intra-US and cross-border shipments to/from Mexico on a regular basis.

Independent Dispatch, Inc. supports approval of the CP/KCS combination. The transaction could provide significant benefits for in-bond shipments between Canada and Mexico, in particular. We anticipate the merger will create a greater supply of containers in Mexico for us to use for shipments Silao, GJ to Dublin, VA for Ethan Allen Furniture. We also hope the CP will decide to make the KCSM TMXU container fleet into the EMP container fleet, which would create a more reloadable option.

Independent Dispatch Inc. feels a single-line rail service would provide a more seamless means of rail transport for our customers. As the CP and KCS networks do not currently overlap at all, we do not foresee any adverse effects on competition. Both CP & KCS rails have excellent safety records and good operational effectiveness (with CP being the most reliable of the two). IDI does not have the reservations we often have with other proposed Class I consolidations.

For these reasons, Independent Dispatch, Inc. supports the combination of CP and KCS. It will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. IDI urges the STB to approve CP's acquisition of KCS for the benefit of intermodal transportation companies and the shippers we serve.

VERIFICATION

I _____Erica Hill_____, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on ___April 5, 2021_____.

INDEPENDENT
ENERGY CORP.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Brad Tuomainen and my business address is 250 6th Ave SW, Calgary, Alberta, Canada T2P 3H7. I am Senior Vice President Refined Products for Independent Energy Corp. In my role, I am responsible for the purchase of all refinery feedstocks as well as the sale of all refined products produced at the soon to be constructed refinery in Kerrobert, Saskatchewan, Canada. The refinery will be coming on in three phases; Phase 1- 16 kbd crude capacity with an expected start up of August 1, 2021. Phase 2 – 32 kbd crude capacity with the expected completion of the expansion to be Q2 2022. Phase 3 will take crude capacity to 64 kbd with expected completion to be Q1 or Q2 2023.

The Independent Energy Corp. is situated on the CP short line between Wilkie and Kerrobert, Saskatchewan. CP is working with IEC to determine service levels to move Ultra Low Sulphur Diesel and Low Sulphur Vacuum Gas Oil from the refinery to markets in North America. IEC is working on markets for those two products into the Gulf Coast and New Mexico. The merger will change the dynamic of shipping products to those markets substantially as it will create a one railroad movement to those markets. The markets are traditional Diesel and Fuel Oil markets.

IEC fully supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. This merger will provide significant benefits with respect to making IEC products more price competitive through presumed reduced rail rates and will see cost savings with respect to its railcar fleet as railcar turn times should also see a reduction.

IEC will be shipping both ULSD and VGO to the Gulf Coast. There will be some ULSD moved via truck into the western Canadian market, as well as Butane and Condensate/Naphtha. This will change significantly when we go to Phases 2 and 3. When those phases are ready to go the expectation is for the local market for Butane and potentially Condensate to be saturated and rail access to the Gulf Coast/Mexico and the West Coast to be the most economic going forward.

www.independentenergy.ca - Suite 620, 250 – 6th Avenue SW, Calgary, AB T2P 3H9 - info@independentenergy.ca

It has been my experience that CP always provided with good service going back to my days at Gibson Energy/Moose Jaw Refinery. The level of service, in particular the routing of railcars was always a challenge given the circuitous routing with multiple rail lines required to get product to the Gulf Coast. This also made the Mexican market difficult to access based on the reliance to move railcars on multiple rail lines. Single line rail movements to the Gulf Coast will open up IEC products to the largest market in the US as well as accessing the large market in Mexico and waterborne markets.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of ULSD/VGO/Butane from western Canada to the US Gulf Coast and accessing waterborne markets as well as Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by reducing railcar transit times at presumable lower rail rates.
- This transaction is crucial to the success of the IEC Kerrobert facility and would provide further synergies to the Gulf Coast market as IEC looks to build two to three similar facilities in western Canada over the next 3 – 5 years.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Independent Energy Corp is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. IEC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Surface Transportation Board
395 E Street SW
Washington DC 20423

Re: Merger of CP & KCS

ATTENTION: Surface Transportation Board (STB)

My name is Craig Dohm, and I am Vice President, Logistics of Interfor Corporation (Interfor). In my role, I am responsible for managing all transportation and supply requirements for Interfor's seventeen sawmill operations in the United States and Canada. Interfor and its U.S. subsidiary, Interfor U.S. Inc., ship lumber using rail, flatbed truck, intermodal and export ocean containers to reach our customers in over 30 countries worldwide.

Interfor ships lumber with CP from two origins in British Columbia, Canada to numerous locations in Canada and United States, including traffic interchanged to other Class 1 railroads for delivery to our customers. Interfor's longstanding business with CP and service provided by the railroad have benefitted Interfor's market access and ability to satisfy our customers' lumber requirements.

Interfor supports approval of the CP/KCS combination. Interfor believes that the transaction would provide significant benefits to us, as described below, and we are eager to see the combination realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network—with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets—would help us reach our existing markets and new markets more efficiently. Interfor's market access to destinations served by KCS, including Mexico, has been limited in the past due primarily to uncompetitive freight cost and inefficient interchange between rail carriers.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

Interfor Corporation | Suite 1600-4720 Kingsway Metrotower II Burnaby, BC, Canada V5H 4N2 | tel: (604) 422-3400 fax: (604) 422-3452 | Interfor.com

- We believe that CPKC's new single-line haul offerings will offer us new competitive transportation options for shipments of lumber from British Columbia to destinations in the United States and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets for our products across the United States and Mexico.
- We also believe that CPKC's new service offerings will improve transit times and reliability, which have impacted Interfor's ability to ship our products to some destinations in the United States and Mexico.

At the same time, because CP's and KCS' networks connect only at Kansas City, we do not foresee that the proposed combination will adversely affect competition in the transportation markets served by the two carriers. Instead, based on our understanding of the transaction, we believe that the combined rail network will enhance competition in the markets served because CPKC will offer better alternatives to those that currently exist.

In the course of our relationship with CP, we have been struck by the railroad's attention to safety and operational effectiveness. We believe that the combined company will carry forward this focus on safety and effectiveness and we have confidence in the assurances we have received that the two companies will be able to implement their transaction without any material service disruptions.

In summary, Interfor Corporation supports the combination of CP and KCS, because we believe it will enhance competition and provide us with expanded, more efficient transportation options. For these reasons, Interfor Corporation urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Yours truly,

Interfor Corporation

Craig Dohm
Vice President, Logistics

INTERNACIONAL
REGIOMONTANA
DE ACERO, S.A. DE C.V.

My name is Alethia Avendaño and my business address is Internacional Regiomontana de Acero SA de CV. I am Admnistrator of Internacional Regiomontana de Acero SA de CV. In my role, I am responsible for investments and payments to suppliers for our rail business and our PIRSA industrial park.

Internacional Regiomontana de Acero SA de CV has been working with KCSM since 2012 when we opened our rail business thanks to KCSM as they approach us and incentive us to enter in this rail business as we already had some around 600 meter of spurs in Apodaca area, now we have 5 kilometers spurs in this area. Our principal clients are gas LPG companies and scrap companies. We receive around 300 cars of gas LPG from Canada and USA per month and we ship around 90 gondolas of scrap to USA, among other products and services.

Internacional Regiomontana de Acero SA de CV supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Internacional Regiomontana de Acero SA de CV has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We use the rail that comes from Canada, the Calgary area to be specific, for the gas LPG clients and we think that with this transaction the connectivity between CP and KCSM will be more efficient, clear, and beneficial for our business in travel time and pricing.

INTEROCEANIC

(914) 762-7800
ioccorp.com

Reference: STB Finance Docket No. 36500, CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is James Spataro and my business address is 7 Renaissance Square, 7th Floor. I am Director of Operations for Interoceanic Corporation. In my role, I am responsible for the corporate Supply Chain Logistics.

Interoceanic Corporation and its subsidiary PCI Nitrogen Corp. are marketers and producers of a variety of fertilizers. PCI produces Ammonia Sulfate (AMS), Ammonia Thiosulfate (ATS), Sulfuric Acid, and a net buyer of Ammonia and Molten Sulfur. We currently ship products throughout the United States and would like to be able to buy and sell products in Canada and Mexico and with the merger of the CP and KCS Lines we can increase our sales market as well as expand our raw material purchasing ability over time.

Interoceanic Corporation supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Interoceanic Corporation has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship numerous types of dry and liquid fertilizers to our customers throughout North America. In addition, we arrange for the shipment of raw materials needed to produce our fertilizers from our supplier across America to our plant in Pasadena, TX.

We have approached CP in the past to provide us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

7 Renaissance Square 7th Floor
White Plains, NY 10601

INTEROCEANIC

(914) 762-7800
ioccorp.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and potentially offer new competitive transportation options for our shipments of Ammonium Sulfate & Ammonium ThioSulfate fertilizers, and Sulfuric Acid, from the U.S. to Canada and Central and Southeastern Mexico, as well as Molten Sulfur from Canada to the U.S.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. For shipments of fertilizer from our TX plant up to CPKC-served points in Canada, we anticipate a 3 to 5 days transit-time savings using a CPKC single-line routing, and, for shipments of sulfur south from Canada to TX, 2-3 days of reduced transit time, thereby increasing the amount of turns for our private railcar fleet.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. In particular, the formation of CPKC will be of limited utility to Interoceanic Corporation unless CPKC gains the right to directly serve the Canadian market on outbound shipments of finished product from our PCI Nitrogen plant in Pasadena, TX (via the PTRA), in much the same way that KCS currently has the right to serve our plant in relation to outbound cross-border fertilizer traffic to Mexico. Similarly, CPKC should also gain the right to directly handle inbound movements of sulfur from Canada to our plant via the PTRA. This transaction will greatly improve our transportation options, provided that CPKC is granted these rights as a merger condition.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all current interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. Because of the end-to-end nature of the

7 Renaissance Square 7th Floor
White Plains, NY 10601

INTEROCEANIC

(914) 762-7800
ioccorp.com

combination, we do not anticipate the kinds of service meltdown, congestion, and car supply difficulties that accompanied the UP/SP and, to a lesser extent, the BNSF/ATSF mergers of the 1990s.

For these reasons, Interoceanic Corporation / PCI Nitrogen Corporation is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Interoceanic Corporation / PCI Nitrogen Corporation urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be expeditiously integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, James Spataro, declare under penalty of perjury, under the laws of the United States, if executed outside of the United States, that the foregoing is true and correct to the best of my knowledge. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 31, 2021.

James Spataro

Interstate Asphalt Corp.
3301 S. California Ave.
Chicago, IL 60608
(954) 769-9500

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Brian Inniger and I am President of Interstate Asphalt. In my role, I am responsible for the operations of our company, including securing products, sales, personnel and logistics. Interstate Asphalt has five storage terminals located in Illinois and Michigan and provides asphalt for the heavy/highway construction industry in the Midwest.

As a wholesaler of asphalt, Interstate Asphalt ships significant quantities of product from western Canada, as well as Western and Gulf Coast regions of the United States. CP is a key logistics component for this supply from western Canada and Minnesota. Freight is a significant cost for consideration of such supply to remain a low cost supplier to keep our customers competitive in this highly competitive, hard bid industry.

Interstate Asphalt supports approval of the CP/KCS combination. The transaction would provide more competition within the rail industry and provides great competition/lower cost to product from the Gulf Coast region.

For our perspective, the transaction promises to provide improved service options and competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf coast would help us reach our existing markets and potentially open new markets for us. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Normally, consolidation of the industry eliminates competition, but this combination expands the markets and increases competition.

Interstate currently ships asphalt from suppliers in western Canada and Minnesota with CP, which has provided good service. However, CP's market reach is limited with lines only as far south as Kansas City. For our Gulf Coast shipments, we could have used the combination of CP and KCS, but from our experience single line rail options are the most efficient and cost-effective and are far superior.

We view the transaction very favorably because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of asphalt from the Gulf Coast to our Midwest terminals in Illinois and Michigan.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers by eliminating switch fees and improve timeliness of delivery. This transaction will improve our transportation options.

For these reasons, Interstate Asphalt is voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Interstate Asphalt urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Brian Inniger, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 29, 2021.

Brian A. Inniger, President
Interstate Asphalt

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Adam Breakell and my business address is 4100 Berkshire Lane N, Suite 200 Plymouth, Mn 55446. I am the VP of Sales and Procurement of Interstate Energy Partners. In my role, I am responsible for the supply procurement, sales, contract management and logistics management of all rail and truck volumes, both through our own terminal and for all sales in other regions.

Interstate Energy Partners (IEP) has been a frequent shipper with the CP both in our propane and sand sales with a strong working relationship with our representative, Mr. Pete Deering over a number of years.

IEP supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. IEP has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Today, IEP is a shipper of primarily propane and other NGL's via rail and truck from origin points throughout the upper Midwest in the USA and northern Alberta, Canada and we are actively pursuing new opportunities that would simultaneously increase our rail traffic from CP origins in Canada and expand us into delivering to KCS destinations in south TX as well as delivering directly into Mexico.

> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency through utilizing a single carrier system.
- The use of a single carrier from Canada all the way to Mexico would provide a huge logistical advantage for our customers both in the way of tracking shipments but also in pricing hauls in these lanes and directly from one market to another.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, IEP is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. IEP urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Adam M. Breakell

Interstate Energy Partners

IRON HORSE

TRANSLOADING

April 30, 2021

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Iron Horse Transloading hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would also provide great access to fertilizers/DDGs for farmers in a cost-effective manner.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, we would be harmed by the reduction in competition that would result from a CN acquisition of KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Shawn Murray
Owner/President

April 6, 2021

To: Surface Transportation Board

Irving Oil is an international refining and marketing company located in Saint John, New Brunswick, Canada. Our North American operations include Canada's largest refinery, along with more than 900 fueling locations and a network of distribution terminals spanning Eastern Canada and New England. We are pleased to offer our support in favour of the Canadian Pacific acquisition of Kansas City Southern.

Our company has a cooperative business relationship with Canadian Pacific, as Canadian Pacific is a Class 1 railway providing rail transportation services to customers in the Saint John region, including Irving Oil.

A combined Canadian Pacific-Kansas City Southern Railway would provide customers with an option for a single-line service over a broader geographic scope. This expanded reach will allow for more transportation options for customers, thereby increasing competitive options and market possibilities.

The Canadian Pacific acquisition of Kansas City Southern will provide Irving Oil with additional service options and the opportunity to reach new markets.

For these reasons, Irving Oil supports the approval of the Canadian Pacific Kansas City Southern combination and we encourage the Surface Transportation Board to approve this acquisition so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Kevin Scott

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

J Carpenter Environmental, LLC. hereby files this letter to express its concerns to the bid by CN to acquire KCS.

We support the swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. We sell products and equipment that are used by manufacturers and contractors for waste treatment, pollution control, liners, hydraulic barriers, waste solidification, drilling and Frac Sand Production. Our line of business involves project-based work and we are often quoting to different destinations throughout North America. The greater single-line haul that a CP-KCS combination would provide would result in competitive options as we plan our transportation needs.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, competitive overlaps would reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am providing written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only J.D. Irving Limited by creating more economical & effective supply chains across the North American. This transaction will open up new opportunities and new markets for businesses by leveraging this much needed supply chain resource. Currently J.D. Irving Limited and CP partnered together to move Intermodal traffic across Canada and the United States. The J.D. Irving Limited & CP partnership is strategic and both companies collaborate to create better and more environmentally sustainable supply chains to service the demand of the North American marketplace.

J.D. Irving Limited is thrilled about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

1) We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
2) CPKC's new service offerings will improve transit times and reliability, which will reduce our inventory costs and improve our efficiency. By having a single source solution that avoid interchanges.
3) This transaction will aid in reducing carbon emission by creating a competitive alternative to Over-the-Road that is considerably more sustainable for the environment.

J.D. Irving Limited urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico, and Canada.

Sincerely,

Jean-Guy Bourque

Surface Transportation Board
395 E Street SW
Washington, DC 20423

ATTENTION: Surface Transportation Board

J. D. Irving Limited (Sawmills Group) has been dealing with Canadian Pacific for several years. We have weekly shipments of lumber and building material that travel over their tracks to several destinations.

We support approval of the CP/KCS combination. The transaction would provide significant benefits that would give us access to more markets.

J.D. Irving Limited has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

With our fleet of center beams, CP can offer competitive rates and service to our customer base. This will give us more options to market and permit us to leverage our volume with more carriers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We share the same focus to quality and safety that both CP and KCS envision.

For these reasons, J. D. Irving Limited is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. We urges the STB to approve CP's acquisition of KCS so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Respectfully yours,

André Beaulieu

Director of Sales and Transportation, J. D. Irving Sawmills

JAMES VALLEY GRAIN LLC.

P.O. Box 210 • 600A S. 7th St.
Oakes, ND 58474
Phone: 701-742-5200
Fax: 701-742-3365

ATTENTION: Surface Transportation Board

My name is Eric Larson and my business address is 600A South 7th Street Oakes, ND. I am General Manager of James Valley Grain. In my role, I am responsible for buying and selling of commodities and rail logistics along with customer service.

James Valley Grain ships Wheat/Corn/Soybeans by rail on the CP Rail Road most of the wheat goes to the eastern mill markets by 25 or 30 car lots. Corn and Soybeans are shipped via CP in their shuttle train program. Service, Communication and Equipment can always be better. They are improving in all those areas.

James Valley Grain supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. James Valley Grain is normally not in favor, about railroad consolidation, but we see this transaction as uniquely beneficial.

James Valley Grain ships grain from our CP served facilities in North Dakota to the PNW export market with some going to the Gulf or on occasion to the eastern processors all on the CP RR.

CP has provided us with good service, but in our opinion we have limited markets, this new adventure is quite exciting with the possibilities of new markets for all commodities and will expand our markets to all 440 JVG customers.

Change and Challenges are good for the betterment of all parties involved, yes there will some growing pains but I am confident in time they will be worked out. For the betterment of all parties involved.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

JAMES VALLEY GRAIN LLC.
P.O. Box 210 • 600A S. 7th St.
Oakes, ND 58474
Phone: 701-742-5200
Fax: 701-742-3365

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of all commodities from today into the future.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

Anytime we can get a single line haul with no hand offs to other competing railroads it's a good thing they stream line the fluidity of the haul.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, James Valley Grain is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. James Valley Grain urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

RE: Shipper Support Letter

ATTENTION: Surface Transportation Board

My name is Gerardo M. Jaime and my Headquarter business address is 1876 Custer Roberts Hollow Ln. Custer Kentucky 40115. I am General Manager of JEI, Inc. In my role, I am responsible for finding and operating Rail to truck and truck to rail facilities to ship and receive commodities for our customers via rail throughout the United States.

JEI, Inc. Ships bales of scrap paper into Mexico via KCS. I am very satisfied and happy with the level of service we receive. I am especially happy with the amount of attention and assistance I have received over the years from KCS's management and personnel. Any time we have a question or concern the KCS is always prompt to answer and help with anything we may need. I have worked with many rail roads and I can say I am most happy with KCS all and all.

JEI, Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. JEI, Inc. Has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of class I consolidation.

> **We ship bales of scrap paper from our KCS served facility in Ft. Smith Arkansas to our customer in Mexico. We also receive lumber from Canada to our facility in Indiana. We also Ship scrap paper bales from Chicago to Mexico.**
>
> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**
>
> **And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Scrap Paper from Fort Smith Arkansas to Mexico.. Our Chicago loads to Mexico stopped a few years back because of all the interchanges needed to arrive to Mexico, hopefully now with this merger we can start the loads again.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. We will have more equipment during busy seasons.
- Currently our customers ship some via truck into Mexico, now with this merger the rates should be a little better where our customer will choose rail over trucking.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, JEI, Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. May 11, 2021

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

JGL Commodities Ltd. hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS") and to provide our support for Canadian Pacific's ("CP") proposed combination with KCS.

JGL Commodities Ltd. has been operating in agricultural trade for over a decade. Our parent company, JGL Group, has been active in Canada for over 40 years. JGL Commodities Ltd. provides supply chain management solutions for processors including wheat millers, protein producers, and pet food manufacturers.

We work closely with CP rail, shipping grain products out of our Woodrow SK facility to the West Coast for export. As well as, shipping grain products from the US to Canada and intra-US corridors.

JGL Commodities Ltd. has not previously addressed either of the two proposals involving the acquisition of KCS.

JGL Commodities Ltd. is reliant on CN for transportation services in certain markets and therefore does not wish to voice a position taking CP's side over CN's.

JGL Commodities Ltd. nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.

The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.

COMMODITIES

P.O. Box 40 • Moose Jaw, Saskatchewan • Canada • S6H 4N7
Tel: 306.624.2378 Fax: 306.624-2375

- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS in light of these criteria.

Respectfully submitted,

Glen Loyns
General Manager
JGL Commodities

Jim Donnan Companies
1010 Southview Circle

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Steve Roth and my business address is 1010 Southview Circle, Center Tx, 75935. I am Executive Vice-President of Jim Donnan Companies. In my role, I am responsible for then design and construction of rail terminals though out the Texas Gulf Region. I have overseen the construction of many rail terminals, most recently USA Rail Terminals in Baton Rouge and USA Rail Terminals Port Arthur. Our company recently sold these two facilities to the Alpenglow Rail Group.

In the past I have developed projects on the CP most notably to the East of Minot, ND in order to bring in Frac Sand. With that said my main focus now is working with the KCS to develop 230 acres of KCS served land in Corpus Christi. We are also working on a large refined fuel export terminal and a Canadian crude receiving terminal with a large Midstream company in Corpus Christi located within the Port of Corpus Christi.

Jim Donnan Companies fully supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Jim Donnan Companies has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.]

We believe that the CP/KCS consolidation will benefit our company in Corpus Christi. We currently own the most prime industrial 230 acres on the KCS with an existing KCS lead in place. We believe that this site will be incredible valuable for the shipment of Canadian Crude by Unit Train to the local refineries. We are currently working with the same large Midstream company to engineer and design pipeline connectivity to their over 2mm Bbls of storage.

CP has provided us with good service in the past, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior from a freight pricing standpoint and a logistics standpoint.
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Canadian Crude to Corpus Christi and cheaper refined products from Corpus Christi to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency with the potential for Unit Train service from the Northern States to the Texas Gulf Region.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Jim Donnan Companies is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Jim Donnan Companies urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Richard Pinner and I am President of K+S North America Corporation, the North American subsidiary of the K+S Group which is a DAX listed company, the world's largest producer of salt and owner of Morton Salt as well as the world's third largest supplier of potash for agriculture. In my role, I am responsible for the sales and marketing activities of the company in North America as well as strategy and business development.

K+S recently developed a new potash mine in Saskatchewan, the first greenfield development for nearly 40 years, and has exclusively contracted Canadian Pacific Rail for the movement of fertilizers from this mine.

K+S North America supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options, invigorate transportation competition, and also provide great access to cost effective fertilizers for farmers in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In addition, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. K+S North America has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship potash from our CP-served mine in Bethune, Saskatchewan for bulk export through Vancouver, BC and throughout the North American domestic market. As we continue to grow our presence in the US domestic market and look for potential export opportunities, this combining of networks will benefit our business immensely in the future.

CP provides us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to, or that could expand the markets we serve effectively. Every switch and additional railroad used to deliver fertilizers to American farmers adds cost, increases time, and

reduces efficiency, adding complexities to delivering essential nutrients in a timely and low-cost manner to US agriculture.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of potash into the heart of US crop producing regions.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve not only our efficiency but more importantly allow American farmers to access cost-effective products for essential food production.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies, they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been impressed by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, K+S North America is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. K+S North America urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Kallio Capital is a Canadian investment company with operating companies with businesses in the construction and agriculture space. We have actively sought markets in the United states and Mexico for our products and many of our equipment supplies and materials come in by rail.

If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result. We are pro-business but we are also pro-competition and if CN were allowed to proceed with this transaction it would have a devastating impact on the competitiveness of the rail industry and would precipitate further requirements for the rail consolidation increasing this issue further. This would result in higher input prices for us and higher export prices for the world if customers can even access the network which could be closed for all but the biggest customers.

I am writing to express Kallio Capital's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I

am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers

or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Kristen Wallace,
Kallio Capital

Kristen Wallace

Cc: All Parties of Record

KC SMARTPORT
SUPPLY-CHAIN CENTERED

March 29, 2021

Attention: Surface Transportation Board

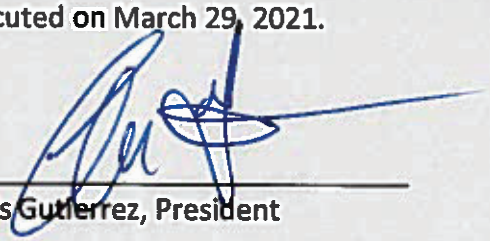
My name is Chris Gutierrez and my organization's address is 30 W Pershing Road, Kansas City, Missouri 64108. I am President of Kansas City SmartPort, Inc. In my role, I am responsible for the regional economic development efforts of a bi-state, 18 county, 50 community region in Kansas City and primarily focused on freight based economic development.

My organization has been a strong partner with the KCS Railroad for over 20 years and has worked closely with their efforts to develop an integrated North American network. The KCS team is a member of my organization and has served as chair of our board. The relationship has been mutually beneficial and developed into a strong partnership.

Kansas City SmartPort supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition and economic development. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help the businesses in our greater Kansas City region reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We believe strongly that this consolidation will create new economic development opportunities creating significant investment and job creation.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option



This merger offers a unique opportunity to fuel economic growth across North America while reducing freight congestion, helping the environment, and strengthening competition in the freight transport marketplace.

For these reasons, KC SmartPort is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. KC SmartPort urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Chris Gutierrez, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 29, 2021.

Letter to STB commenting on CN Trust Proposal
JUNE 21ST 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

I am writing to express Katoen Natie USA (KTN) perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

Katoen Natie USA (KTN) owns and operates a plastics storage, custom packaging and distribution facility for producers of petrochemical products in Baton Rouge, LA. Our facility is served by both the Kansas City Southern and Canadian National Railway. Access to both rail carriers creates competition, focused on premium service and market based prices. With the CN-KCS acquisition, KTN's facility will lose a competitive option and the benefits of that access at Baton Rouge. The merger, in our opinion, is anti-competitive regardless of the proposed mitigation.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Frank Vingerhoets

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Lionel Dubrofsky and my business address is 3075 Trans Canada Highway, Pointe Claire, Quebec. I am the President of Kaycan Ltd.. In my role, I am responsible for the overall operations of the company.

Kaycan is a manufacturer of exterior building products used on homes. We ship with CP across North America and have enjoyed a business relationship with them for over 4 decades

Kaycan supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Kaycan has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We use CP bulk, rail cars and intermodal facilities throughout Norht America to service our customers.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by getting it to our customers in a more timely manner

KAYCAN

KAYCAN LTD.

www.kaycan.com

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Kaycan is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Kaycan urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

PO Box 68
Kensal ND 58455
701-435-2451 fax 701-435-2214

March 30, 2021

ATTENTION: Surface Transportation Board

My name is Chris Mashek, and my business address is 611 Parker Street, Kensal, ND. I am the General Manager of Kensal Farmers Elevator Company. In my role, I am responsible for the buying and selling of grain and agricultural inputs.

Kensal Farmers Elevator Company, is a two station (grain elevator), farmer owned, company. We are located on the North Dakota CP Mainline, going through the middle part of North Dakota. We primarily ship Spring Wheat, Corn, and Soybeans, on the CP railroad. We are a shuttle loading facility, which means we load 110 car unit trains, to various export and domestic markets. We ship primarily to West Coast ports as well as St Louis, and eastern domestic markets. The Eastern domestic markets are critical for us. We, as a CP shipper, believe this CP/KCS combination would allow us to compete much more effectively, with our primary rail competitor BNSF, benefiting our local farmer owners. There are times, currently, we are not competitive in the Corn and Soybean origination, locally, because of the strength of the BNSF, in the western and southern routes. Opening up new competitive shipping opportunities, is critical for us, to survive and compete long term.

We have grown alongside the CP, over the years, starting off as a single car rail (boxcar) loader, in the early 1900's. Our successes and failures are in large part driven by the CP's competitiveness over the years. Many more successes than failures, but some of both. Some of the failures were out of our collective control, (weather), etc., but the CP has been responsive, trying to listen to customer thoughts and concerns, taking the approach as a business partner, to help you succeed. This merger would help CP/KCS compete in regions (South and Western Midwest), we as a shipper, currently have very limited or essentially no access, currently.

Kensal Farmers Elevator Company supports approval of the CP/KCS combination. It is critical to the future of our small business, that the CP be able to offer competitive rates to shippers, shipping in all directions, of North America. We believe, the transaction would provide uniquely significant benefits, and increased rail competitiveness. We believe the combined CP/KCS entity would offer us as a shipper, all the benefits of increased markets and market share, with very little downside, attached to previous rail combinations. It would offer us the ability to grow, alongside our most reliable grain trading partners, Canada and Mexico. We don't feel there is any overlap in service, and routes, that has accompanied other proposed rail combinations. From a rail market share standpoint, the combined entity, would still be the smallest Class I railroad.

Kensal Farmers Elevator Co.
PO Box 68
Kensal ND 58455
701-435-2451 fax 701-435-2214

March 30, 2021

We have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Single Line operations are much more efficient, from a shipper's perspective. It will improve our shipping options, a great deal, ultimately making us much more competitive, as a farmer owned small business.

In closing, Kensal Farmers Elevator Company would encourage swift approval, of the CP/KCS combination.

Thank you for your consideration,

VERIFICATION

I, Chris Mashek, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

BEST MANAGED COMPANIES
Recognizing private company success

MATT CONARD
KENT CORPORATION DIRECTOR OF LOGISTICS
2905 N HWY 61
MUSCATINE, IA 52761

APRIL 1, 2021

To Whom It May Concern:

My name is Matt Conard and I have responsibility for all Transportation and Warehousing activities at Kent Corporation. Kent Corporation is shipper utilizing both CP and KCS services in order to transfer goods to and from our facilities from our suppliers and to our customers.

Kent Corporation supports approval of the CP/KCS combination which should provide benefits early on.

From our perspective, the transaction should provide improved service. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – should help us reach our existing markets and new markets more efficiently. Combining the two railroads' strong focus on safety and operational excellence, CPKC should be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Kent Corporation views this transaction as uniquely beneficial, with few of the downsides of previous concern regarding Class I consolidation.

- We are a CP-served facility at our Muscatine, Iowa plant and rely on them for all of our inbound and outbound rail shipments.
- CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We are positive about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

KENT CORPORATION

BEST MANAGED COMPANIES
Recognizing private company success

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings should improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by eliminating Rule 11 billing, reduced switching time between multiple carriers, and better asset utilization.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We appreciate greatly the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we expect that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers and PSR implementations.

For these reasons, Kent Corporation is offering support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes.

Kent Corporation encourages the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Matt Conard

West Salem, WI 54669

JUNE 24, 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

My name is Kevin Hoyer, I am a La Crosse County supervisor, owner/operator of a farm in West Salem, WI and a manager of an Ag Retailer in Melrose, WI. As a local leader, farmer and Ag Retailer I have a vested interest in any potential impacts to the agriculture industry, as well as to our community and the overall economy.

There are currently two separate railroad mergers before the STB. I am writing to provide my viewpoint on Canadian National's (CN) proposed voting trust concerning its merger with Kansas City Southern (KCS), and to offer my support for Canadian Pacific's (CP) combination with KCS.

A CP-KCS merger will offer a seamless network and new single-line offerings to improve the flow of grain shipments from origins on CP in Canada and the U.S. to destinations served by KCS in the U.S. Gulf ports and into Mexico. The combined network will increase options for shippers in the U.S. by connecting agriculture products with new ports and new markets.

Conversely, a CN-KCS merger would decrease competition, reducing the number of independent routing options from four to three between the Midwest and the Gulf Coast. Additionally, CN and KCS compete assertively for traffic and shippers. Combining the two networks would decrease competition and leave shippers in a vulnerable position to price hikes and low-quality service.

I urge the STB to reject CN's voting trust and encourage KCS to reengage CP on its initial offer.

Respectfully submitted,

Kevin J Hoyer

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Mark Schmitke and my business address is 2411 Wentz Ave, Saskatoon, SK S7K 3V6. I am the Director – Pricing & Traffic of Kindersley Transport Ltd.. In my role, I am responsible for pricing, traffic and managing carrier relationships, including our relationships with our rail carriers.

Kindersley Transport Ltd is currently engaging CP Rail as part of our rail linehaul moving LTL shipments from Eastern Canada to our terminals in Western Canada. Kindersley Transport has realized incremental growth in this part of our business and CP Rail is a major partner in these moves.

Kindersley Transport Ltd supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Kindersley Transport Ltd has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Kindersley Transport Ltd is interested in increasing our movements of rail LTL, primarily targeting US shippers trying to reach the Canadian market. There are few rail options available to these shippers unless they are moving entire containers. Kindersley Transport Ltd believes that a northbound rail LTL offering will allow smaller shippers to be more competitive in the Canadian marketplace and reduce their transportation costs as compared to road shipments. In addition, with strained capacity right now on the road, a rail LTL offering will help alleviate these issues.

CP has provided us with good service, but their market reach is limited today. Kindersley Transport Ltd only uses single-line rail options and increasing CP Rails reach would benefit us greatly.

siemens
Transportation Group Inc.

P: 306.934.1911 | F: 306.975.9309
2411 Wentz Avenue S7K 3V6 P.O Box 7290 | S7K 4J2 | Saskatoon, SK Canada | www.siemenstransport.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of general LTL from Southern US points to Western Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Reducing Kindersley Transport Ltd's reliance on road transportation will remove service bottlenecks we are experiencing due to lack of capacity.
- CPKC's new service offering will allow Kindersley Transport Ltd to develop a new service offering that will have benefits for customers and the LTL transportation industry as a whole. This will reduce customer's costs while allowing us to reduce the current strain on resources we are experiencing in road transport.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

Kindersley Transport Ltd is aware that several parties have filed objections to the application of the pre-2001 merger rules to the CP-KCS transaction under the "waiver" issued in 2001 for transactions involving KCS. Kindersley Transport Ltd wishes to reply to those objections by urging the Board not to revoke the KCS waiver. The pre-2001 rules provide the Board and all interested parties all the tools that are needed to fully evaluate the proposed transaction.

Kindersley Transport Ltd and our shipping partners are looking forward to a stronger CPKC network that will increase our access to diversified market opportunities. As such, we urge the Board to apply the KCS waiver provision it thoughtfully included in its 2001 Major Merger Rules. An elongated period of review will delay and potentially reduce the positive synergies this

merger promises. The KCS waiver will allow the Board to conduct a thorough but efficient and fair review and allow for the benefits of the new CPKC network to come to fruition more quickly.

Kindersley Transport Ltd is additionally concerned that applying the 2001 Major Merger Rules to the CP-KCS merger, a transaction the rules were not designed for, would lead to precedent with unintended consequences and might also create an easier path for some other Class I merger proposals that would be problematic in ways CP-KCS is not. The CP-KCS merger is unlike other Class I merger combinations, in that it is a straightforward transaction between the two smallest U.S. Class I railroads, and it promises substantially more benefits than risks to the public interest. We also know that this transaction, among all possible Class I mergers, is unique in not posing any serious concerns about lost competition, service disruption, or other harms. Interpreting and applying the 2001 rules to this transaction could encourage other Class I railroads to see an easier path for their own Class I merger proposals without the same unique benefits of the CP-KCS transaction.

For these reasons, Kindersley Transport Ltd is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Kindersley Transport Ltd urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders and reject calls to revoke it, and to proceed to review and approve the CP-KCS proposed combination as expeditiously as possible. We look forward to seeing CPKC as a stronger competitor in the industry.

VERIFICATION

I Mark Schmitke, declare under penalty of perjury under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

MARCH 29, 2021

ATTENTION: Surface Transportation Board

My name is Joel Schimke and my business address is 4520 12th St NE, Fessenden, ND 58438. I am the managing partner of Kirkeide's Northland Bean and Seed. In my role, I am responsible for originating, processing, and sales of dry edible beans.

Kirkeide's Northland Bean and Seed has a unique relationship with CP, as 95% of our shipments are in Boxcars and Hopper cars loaded out of Emrick ND. Our plant is located 4 miles from Emrick; we transport the beans by truck, then warehoused and loaded on CP Railroad. Our access to markets in Texas and Mexico is critical to our overall business model along with our sustainability as a small, locally owned, and community orientated small business.

Kirkeide's Northland Bean and Seed supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. Such as direct access to markets currently being serviced by our competitors that are on the BNSF railroad. Along with competitive rates that CP/KCS could provide with single-line hauls that we need to compete against.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Kirkeide's Northland Bean and Seed sees this as a unique opportunity in our markets and highly recommend approval of this combination of two Class 1 Railroads.

We ship processed dry edible beans from our CP served Emrick ND loading facility to our customers in Corpus Christi and Houston, Texas. We also ship carloads into various Mexico locations. Although CP has provided good service to us on these destinations, our rate using multiple railroads to reach destination has become a huge obstacle in our ability to be competitive with BNSF loaders.

Kirkeide's Northland Bean & Seed Co., Inc.

4520 12th St. NE
Fessenden, ND 58438
Phone: 701-547-3466 • Fax: 701-547-3539

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of processed edible beans from North Dakota to Mexico is a opportunity that is very exciting for our small business.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- We provide edible plant protein to some of the poorest areas of Mexico, Central America, and the Caribbean. Our access to ports in Texas and Mexican destinations at competitive rates is vital for farmers in North Dakota and the consumer in these countries.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

Kirkeide's Northland Bean & Seed Co., Inc.

4520 12th St. NE
Fessenden, ND 58438
Phone: 701-547-3466 • Fax: 701-547-3539

For these reasons, Kirkeide's Northland Bean and Seed is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Kirkeide's Northland Bean and Seed strongly urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Joel Schimke

KIROS
ENERGY MARKETING

ATTENTION: Surface Transportation Board

My name is Lori Unger and my business address is Suite 3150, 225-7th Ave SW, Calgary, AB. My job title is Vice President at Kiros Energy Marketing. Kiros Energy Marketing sells propane, butane, condensate and crude by rail, truck, ship and/or pipeline across North America and Mexico. My role is defined as propane supply and marketing with a territory across Canada, West of the Mississippi and into Mexico. The scheduling, logistics and railroad negotiations fall under my control as well. We have worked extensively with CP for many years and continue to grow year over year.

Kiros Energy Marketing supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

> **Kiros Energy Marketing was on the forefront of rail shipments of propane from Western Canada to Mexico following that country's deregulation. We have successfully shipped over a thousand railcars on the current CP/KCS/KCSM lines since 2015.**
>
> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**

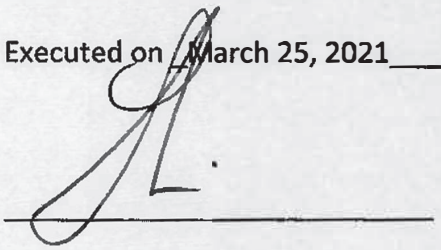
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane from Western Canada to Laredo, Monterry and San Luis Potosi.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Kiros Energy Marketing is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Kiros Energy Marketing urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

KP | BUILDING PRODUCTS

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Lionel Dubrofsky and my business address is 2700 Highpoint Drive, Milton, ON. I am the President of KP Building Products Ltd... In my role, I am responsible for the overall operations of the company.

KP Building Products Ltd is a manufacturer of vinyl siding and accessories used on homes. We ship with CP across North America and have enjoyed a business relationship with them for over 3 decades

KP Building Products Ltd supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. KP Building Products Ltd has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We use CP bulk, rail cars and intermodal facilities throughout North America to service our customers.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against

KP | BUILDING PRODUCTS

the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by getting it to our customers in a more timely manner

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, KP Building Products Ltd is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. To: Surface Transportation Board – Docket No. 36500

RE: CP-KCS Potential Merger

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Kraft Heinz by creating more efficient supply chains across the North American continent, but also open up new opportunities and new markets for businesses. Kraft Heinz and CP are working together to move intermodal traffic across Canada. CP plans to play a critical role in the Kraft Heinz supply chain, transporting food products and enabling Kraft Heinz to keep store shelves stocked for the Canadian consumer.

As one of North America's safest railroads, we firmly believe that CP and KCS will provide and unlock Kraft Heinz with safe, efficient, and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. The relationship is strategic for both companies to collaborate and create more environmentally sustainable supply chains that meet both ESG goals.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating new opportunities for Kraft Heinz to route cargo and source consumer goods from the USA and Mexico.

Kraft Heinz urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Thank you,

Eric Kaufold

ATTENTION: Surface Transportation Board

My name is Benoit Couturier and I am the General Manager and Head of the Center of Excellence for transportation and logistics services at Kruger. In my role, I am responsible for the delivery of our containerboards and publication paper products to our customers worldwide.

Kruger has been in a business relationship with the Canadian Pacific for decades. The rail services that they provide us is crucial to the success of our company, as it allows our product to be delivered to our customers in a timely manner, in a cost effective way and in a safe environment. The intent of this letter if to state our supports to the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. The CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

In 2020, we ship over 200,000 MT of paper products via rail across the Canadian and United States border. We see growing business opportunities in Mexico and in the state of Texas that would benefit from this merger.

Historically, CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Kruger is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes.

Yours truly,

Benoit Couturier

HANSEN'S 40
Vehicle Relocation 1980-2020
40 YEARS OF TRANSPORTATION EXCELLENCE

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is John DiBernardo, and my business address is 300-305 Milner Ave, Scarborough ON, M1B 3V4 Canada. I am CFO and COO of L. Hansen's Forwarding Ltd. In my role, I am responsible for Finance and Operations of the business.

L. Hansen's Forwarding Ltd. has been in business with CP for over 40 years in shipping secondary-market finished vehicles via rail across Canada from coast to coast. The relationship has been strong throughout this period and CP has provided us with good service.

L. Hansen's Forwarding Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. CP's current reach is limited today and the combination with KCS would help us to move North-South via rail versus truck which is less expensive and more environmentally friendly. Single-line rail service would give us an opportunity to ship at competitive rates.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. L. Hansen's Forwarding Ltd. has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

ATTENTION: Surface Transportation Board

My name is Steve Castegan and my business address is 820 Lucien-Beaudin, Saint-Jean-sur-Richelieu, Quebec, Canada. I am the Executive Vice-President and General Manager of La Milanaise Inc. In this role, I am responsible for all aspects of managing the company's business; I am also currently acting as the CEO.

La Mianaise Inc. is a Canadian based Organic flour company with fast growing presence throughout the North American market. We ship organic grains with CP from the Canadian Prairies to our flour mills in the Province of Quebec. Over the past few years, we considerably grew our rail business with CP and went from a few carloads per year to nearly 300 carloads and containers combined and continuing to grow. The proposed merger between CP and KCS will further support Milanaise in our efforts to grow our market share in the US and Mexcio, creating additional opportunities for inbound cereals from the US and outbound finished products all the way down to Texas as well as Mexico, markets we don't reach today. CP has always been considered a partner to Milanaise and has supported us in finding solutions that meet our transportation needs across Canada. We value CP's partnership and continue to grow our business with them by seeking to establish CP-served grain transloads.

La Milanaise Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. La Milanaise has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation..

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we are developing such as Texas where we could

become more competitive with a potential of 150 carloads per year. This would also give us a direct access to more organic farmers that we couldn't buy from in the Midwest.

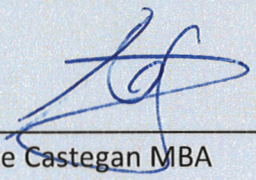
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings for intermodal will expand market reach and offer new competitive transportation options for our shipments between Chicago and Dallas.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

La Milanaise is particularly interested in establishing our presence in Texas and Mexico as we see great opportunities for growth in that geographical area, which is currently outside of our reach. A single-line route from Canada to Mexico will enable us to penetrate these markets as well.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, La Milanaise is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. La Milanaise urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Chuck Boa and my business address is 300 – 115 Quarry Park Road, SE, Calgary, Alberta, Canada. I am the Logistics Manager of Lafarge Canada and in my role, I am responsible for the supply planning / management of the company's cementitious materials as well as the logistics of those materials to customers.

Lafarge is a customer both a shipper and a consignee of Canadian Pacific's, with multiple cement plants, terminals and transloads across the network. Lafarge predominantly ships cement and cementitious materials by rail with CP across Canada and the northern US, with total volume well in excess of 10,000 carloads annually. Over and above that, Lafarge ships substantially more than that across a number of other rail lines in North America. Over my 9 years of being directly involved with CP, I've seen a very collaborative approach and a definitive improvement in service over the years.

Lafarge supports the approval of the CP/KCS combination and sees that the transaction would provide potential benefits that we are eager to see realized.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. I anticipate that there would be potentially better accessibility to import both supplementary cementitious materials as well as major components for our cement plants, due to the new single line access to additional ports in North America.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and

Lakeside Foods has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.]

We ship canned goods from our plants in WI and MN to various customer DCs or Lakeside controlled DC throughout the USA. Like main destinations of Harrisburg PA, Atlanta GA, Dallas TX.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of canned goods from WI/MN to SE and SW
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

LAKESIDE FOODS, INC., 808 Hamilton St., P.O. Box 1327, Manitowoc, WI 54221-1327
Phone 920-684-3356 / Fax 920-686-4033 / lakeside@lakesidefoods.com

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency and hopefully cost reduction thru less inter exchange costs.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Lakeside Foods is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Lakeside Foods urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Josh Grunnet and my business address is 1401 Landmark Dr Cottage Grove WI 53527. I am Senior Merchandiser and Director of Landmark Logistics of Landmark Countryside Cooperative. In my role, I am responsible for merchandising and logistics of grain.

Landmark Countryside Cooperative is a unit train grain shipper and receiver of feed ingredients in Fall River WI on the Canadian Pacific.

Landmark Countryside Cooperative supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Landmark Countryside Cooperative has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Since the construction of our site in 2014 the Canadian Pacific has made some improvements of service, yet we still have not been successful using Rule 11 to access markets due to transparency of rates and willingness of the destination to participate outside of direct line hauls or well established through rate tariff. With this merger it would decrease barriers to access destination markets for our grain producers.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of grain from Wisconsin to the South.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

In March of this year, Canadian Pacific (CP) and Kansas City Southern (KCS) announced a merger agreement. The potential union of the two lines was embraced by more than 400 shippers and other interested parties due to the competitive advantages it would bring in various parts of the nation. Because CP and KCN lines do not overlap, the combined line would seamlessly link Canada, the United States, and Mexico and provide an important counterpoint to existing UP, BNSF, and CN single-line routes.

Last month, Canadian National (CN) made an unsolicited bid for KCS and the CP-KCS merger agreement was ultimately dissolved. CN plans to finance the staggering 45 percent price premium with $19 billion in new debt. Furthermore, CN is hoping to fast-track its acquisition with the use of a voting trust. This is both dangerous and unnecessary, and Langley Oil Company encourages the STB to reject the CN voting trust.

International developments have highlighted the need to responsibily develop infrastructure to supply the country with important resources and generate sustainable economic growth at home. Allowing CN to take over KCS with a voting trust will limit competition in key railroad markets and ultimately offer shippers fewer choices and diminished service. Moreover, a CN voting trust will close the door on a CP-KCS merger, and with it, all opportunity to enhance competition in key markets.

The Board has gone on record in the past to state that CN and KCS “compete aggressively for traffic” and its own Decision No. 3 makes it clear that all potential mergers must align with the public interest. At the end of the day, a CN-KCS merger does not support the public interest and this is why there is such a push to close this deal via a voting trust. The STB has the authority to block the voting trust and Langley Oil Company hopes the members of the Board agree this is the safest course of action.

Respectfully submitted,

Jerry Langley, Owner and Operator, Langley Oil Company LLC
Arkansas Oil and Gas Commissioner

LC | Logistics GPS

Global Port Services

ATTENTION: Surface Transportation Board

My name is Alejandro Ortiz Aviña and my business address is Av Ocampo Poniente 250 Colonia Centro Monterrey NL, Mexico. I am Sales Manager for LC Logistics GPS (A Grupo Villacero Company). In my role, I am responsible for the sales and marketing of our general and container cargo in two of our bonded facilities located in the Port of Lazaro Cardenas.

LC Logistics GPS is very interested on this merger opportunity for all the importers and exporters that ship through the Port of Lazaro Cardenas (steel coils, urea, consumer goods, containers / intermodal, grains and other commodities that need to be shipped by rail. Our relationship with KCSM over the years has been very good and we firmly believe that the merger of both railways will bring seamless routes that will strengthen our logistics force.

LC Logistics GPS supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

LC Logistics GPS has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.]

LC logistics GPS has many customers interested on shipping by rail (carload, automotive and intermodal) to take advantage of the safety required in the transportation of sensitive raw materials and consumer goods. The use of KCS / CP will bring a lot of value to several projects that involve for example, the ports of Vancouver and Lazaro Cardenas as a bridge into Mexico for grain and consumer goods in maritime containers.

In example, we can inspect, segregate, expedite and ship the commodities mentioned above in both maritime containers and carload rail cars from our KCSM facilities at the port of Lazaro Cardenas bound to central and northern Mexico territories.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options for our steel operations based at Monterrey, Mexico (Villacero). This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of steel from Canadian origins to our Monterrey (Apodaca) steel service center.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. This could apply for our export future projects.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency with a surplus of empty available box cars, coil cars and gondolas as well as double stack intermodal cars.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers (UP / SP for example).

For these reasons, LC Logistics GPS is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. LC Logistics GPS urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36500 – Reply to Objections to KCS Waiver

My name is Jay Dillard and my business address is 2800 Industrial Park, Centerville, IA. I am Administrative Coordinator for Lee Container. In my role, I am responsible for inbound and outbound rail cars to our Iowa facility .

Lee Container supports swift approval of the CP-KCS combination because of the significant benefits we expect to realize from this transaction.

Lee Container is aware that several parties have filed objections to the application of the pre-2001 merger rules to the CP-KCS transaction under the "waiver" issued in 2001 for transactions involving KCS. Lee Container wishes to reply to those objections by urging the Board not to revoke the KCS waiver. The pre-2001 rules provide the Board and all interested parties all the tools that are needed to fully evaluate the proposed transaction.

We are fully cognizant of the Board's mandate to ensure that Class I mergers are in the public interest, and do not risk significant disruptions in the railway system. From our perspective, the unique nature of the CP-KCS transaction alleviates the concerns that motivated the new rules adopted in 2001. Reviewing the CP-KCS combination under the tried and true pre-2001 merger standards will prevent undue delay, while still allowing for a thorough public interest assessment by the Board.

Our experience shows us that single-line rail service options are far superior to public and private fleets. The unique synergies of a CP-KCS combination promise significant public benefits to Lee Container and similarly situated shippers, which we are eager to see realized as soon as possible, without the delays and additional burdens that would result from applying the 2001 rules for the first time ever to this transaction.

Nothing about the CP-KCS transaction raises the kinds of concerns that would flow from a merger of the much larger Class I railroads. The issues should be simple – the transaction improves competitive options

2800 INDUSTRIAL PARK RD.
Centerville, Iowa 52544
Phone:641-856-6123●Fax:641-856-4070

www.leecontainer.com

and service – and any concerns any party has should be easy to address under the pre-2000 rules. The 2001 rules were designed for much more complex transactions raised much more serious issues, and they should not be tested out in this case.

Lee Container and our shipping partners are looking forward to a stronger CPKC network that will increase our access to diversified market opportunities. As such, we urge the Board to apply the KCS waiver provision it thoughtfully included in its 2001 Major Merger Rules. An elongated period of review will delay and potentially reduce the positive synergies this merger promises. The KCS waiver will allow the Board to conduct a thorough but efficient and fair review and allow for the benefits of the new CPKC network to come to fruition more quickly.

Lee Container is additionally concerned that applying the 2001 Major Merger Rules to the CP-KCS merger, a transaction the rules were not designed for, would lead to precedent with unintended consequences and might also create an easier path for some other Class I merger proposals that would be problematic in ways CP-KCS is not. The CP-KCS merger is unlike other Class I merger combinations, in that it is a straightforward transaction between the two smallest U.S. Class I railroads, and it promises substantially more benefits than risks to the public interest. We also know that this transaction, among all possible Class I mergers, is unique in not posing any serious concerns about lost competition, service disruption, or other harms. Interpreting and applying the 2001 rules to this transaction could encourage other Class I railroads to see an easier path for their own Class I merger proposals without the same unique benefits of the CP-KCS transaction.

For these reasons, Lee Container urges the Board to maintain the KCS waiver and reject calls to revoke it, and to proceed to review and approve the CP-KCS proposed combination as expeditiously as possible. We look forward to seeing CPKC as a stronger competitor in the industry.

Yours sincerely,

Jay Dillard

Administrative Coordinator

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500

My name is Marc Newcomer and my business address is 3251 Bath Pike, Nazareth, PA 18064. I am the Manager of Supply Chain and Transportation of Lehigh Hanson. In my role, I am responsible for strategy, planning, and procurement of rail services.

Lehigh Hanson is a shipper on CP. We have a cement plant located in Glens Falls NY on the CP; we ship cement to New Haven CT from this facility. CP also has reciprocal switch access to our Mason City IA plant on the UP. CP has helped us move traffic from Mason City to Chicago for furtherance on other railroads to destinations in the Midwest.

Lehigh Hanson supports approval of the CP/KCS combination. The transaction could provide benefits that we are eager to see realized.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers that serve our markets. For example, CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. As private equipment shippers, transit time is very important to us as it determines how many cars we must keep in our fleet in order to serve the market's cement demand. Faster transit time means we will need a fewer number of cars and our fleet costs will be lower.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their

other existing interline partners, and could enhance our access to these markets due to our existing access to CP's network.

We have noted the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Lehigh Hanson is voicing support for the combination of CP and KCS, because it could enhance competition, provide expanded options and drive efficiencies for customers of all sizes.

Loblaw
Companies
Limited

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Canadian Pacific Railways:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS) because I understand this combination of railroads will benefit Loblaw by creating a more efficient supply chains across the North American continent and open up new opportunities and new markets for business. Loblaw and CP work together today to move intermodal traffic across Canada and between the United States. CP plays a critical role in the Loblaws supply chain, transporting dry and perishable product and enabling Loblaws to keep store shelves stocked and Canadians fed. The relationship is strategic and both companies collaborate to create better and more environmentally sustainable supply chains.

From our perspective, a transaction that potentially provides improved service options, competition for shippers across North America, and new opportunities for Loblaws to route cargo over US Gulf ports and source consumer goods and produce from the USA and Mexico, is positive.

Loblaw therefore would support a transaction that achieves these results.

Sincerely,

Brian Springer

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Chris Locher and my business address is 456 Humber Place, New Westminster BC Canada. I am Managing Director of Locher Evers International. In my role, I am responsible for Ocean freight export, port drayage, distribution, and Intermodal transportation from BC to Central Canada and USA destinations.

Locher Evers International is primarily an Intermodal shipper/client of CP. Our main business with CP is shipping Intermodal 53's from BC to Toronto/Montreal with the odd shipment for USA. We are very satisfied with our relationship with CP having changed over approximately 3 years ago from CN (approx 30 years with CN).

Locher Evers International supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Locher Evers International (LEI) has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will offer new competitive transportation options for when we have shipments for certain USA destinations, and possibly Mexico, that we are asked to ship to.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

TRANSSHIPMENT

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is BÉLAND AUDET and my business address is 4545, Villeneuve Street, Lac-Mégantic (Qc) G6B 2C2 CANADA. I am LOGIBEL's General Manager. In my role, I am responsible for all the operations of storage and transshipment.

At this moment, LOGIBEL has no relationship with CP and/or KCS, but we are looking forward to get a relationship after the CP/KCS combination. LOGIBEL supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

LOGIBEL has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The CP/KCS combination will allow LOGIBEL to develop business links with new customers. We will be able to develop the Mexican market. Many of our customers import raw materials related to steel and petroleum products, such as plastics. Also, this merger would allow us to expand our lumber shipping services to Mexico.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber from Canada to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

BEAUCE
250, rue Damase-Breton
Saint-Lambert-de-Lauzon (Qc)
G0S 2W0

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, LOGIBEL is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. LOGIBEL urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is John De Rose and my business address is 1 Maritime-Ontario Boulevard, Brampton, Ontario, L6S 6G4. I am Vice President of The Logistics Alliance. In my role, I am responsible for transportation functions across all modes for Logistics Alliance which includes financial and service accountability.

Logistics Alliance works with CP today to move domestic Canadian traffic. CP plays a critical role in the Logistics Alliance supply chain, transporting dry and perishable product. The relationship is strategic in nature as we challenge each other to work more efficiently with an eye on reducing costs and delivering a more environmentally sustainable solution for the movement of goods

The Logistics Alliance supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. The Logistics Alliance has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial.

Logistics Alliance ships dry and perishable product from the Southern U.S. and Mexico that move via truck today. The CP/KCS combination would provide opportunity to convert truck traffic to intermodal, the single line option will provide competitive transit times and improved access to markets that could not be serviced by the rail prior.

CP has provided us with excellent service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to access origin points in the Southern United States and Mexico. The CP/KCS combination will extend market reach and provide more options for Logistics Alliance in these key corridors.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

LOGISTICS ALLIANCE
forward thinking™

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of food and retail product from Mexico and the Southern United States to Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will improve our efficiency and drive volume through modal conversation opportunities.

We also recognize the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, The Logistics Alliance is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The Logistics Alliance urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Rumana Sobhan and my business address is 307 Grey Silo Road, Waterloo, ON, Canada. I am President of Logistics Helper Inc. In my role, I am responsible for shipping intermodal freight.

Logistics Helper Inc. is a shipper with Canadian Pacific and satisfied with the excellent service.

Logistics Helper Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

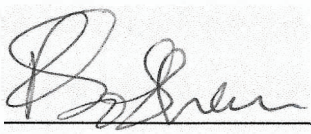
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Logistics Helper Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship ingredients for pharmaceutical companies. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to Cedar Rapids, IA.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Logistics Helper Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Logistics Helper Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Logistique Canamex Inc. hereby files this letter to express its concerns to the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

As expressed in our initial letter to the Board dated April 29th, 2021 we support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. The combination of CP and KCS would provide our customers more asset and it would help us serve them better. It will make our strong relationship with CP even stronger.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Sylvain Jarry

ATTENTION: Surface Transportation Board

My name is Emery Robidoux and my business address is 19 Mills Drive, Goodwood, Nova Scotia, B3T 1P3. I am the rail manager of M&J Total Transport & Rigging Inc. (TTR). In my role, I am responsible for developing and managing rail logistics solutions for over-sized dimensional cargo.

TTR has developed a relationship with CP for the transportation of dimensional cargo, and has been satisfied with CP's service and customer support.

TTR supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

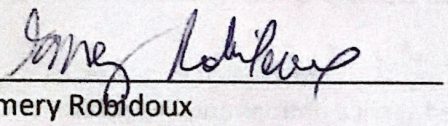
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

TTR depends on rail transportation to handle many large pieces of dimensional project cargo, such as transformers, generators and wind turbine components. Rail offers a feasible alternative to over the road, and in some cases, rail is the only option.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.



For these reasons, TTR is voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. TTR urges the

STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

March 29, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

On behalf Mactrans Logistics Inc, we are writing to provide written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). We believe this combination of railroads will open up new opportunities and new markets for North American shippers large and small. We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve these markets today. For example,

- Improved transit times, and direct access to ports on the U.S. Gulf, Atlantic, and Pacific coast – this improves efficiency and asset utilization and de risk supply chains, shippers will have the ability to develop multi gate way strategies

- Both CP & KCS have an unrivaled commitment to safety & operational efficiency, and with a cooperative relationship in the past, we are confident that the implementation will be strategic & collaborate will be without the service disruptions and result in environmentally sustainable supply chain solutions

- This transaction will be creating opportunity for shippers large & small that simply does not exist today. This transaction will be taking trucks off the road, enabling new supply chains and creating competitive, efficient markets for shippers in North America.

From our perspective, the transaction promises to provide improved service options and competition for shippers across North America while creating new opportunities for them to source materials more competitively.

For these reasons, Mactrans Logistics Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for shippers of all sizes. Mactrans Logistics Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Regards,

Rico Covello
Director of Operations, Mactrans Logistics Inc.

MADDOX LOGISTICS LIMITED AND TJC'S TRANSPORTATION SOLUTIONS LTD. SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Todd Murray and my business address is 5 Lynx Close in St. Albert, Alberta, Canada, T8N 5T2. I am the Director and owner for both Maddox Logistics Limited (Maddox) and TJC's Transportation Solutions Ltd (TJC's). In these companies I am responsible for overseeing all aspects of moving freight within North America.

Maddox has been doing business with CP since 2004 and TJC's has been doing business with CP since 2009. Both companies use crossborder, via rail, with a multitude of different products between Canada and the USA for our Canadian and American customers. The products that have shipped with CP are: bulk Western Red Cedar, chemicals, and freight of all kinds (FAK). Over the years working with CP, I have been able to maintain strong relationships based on the service CP has provided.

Maddox and TJC's support the approval of the CP/KCS combination. The transaction would provide significant benefits that I am eager to see realized as soon as possible.

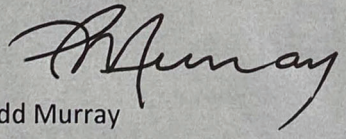
The transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly for the benefit of rail customers and other stakeholders. Maddox and TJC's are in favour of this specific railroad consolidation. This transaction is uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

When acknowledging both my companies' needs, I see the benefit of being able to reach new customers and further support existing customers' needs by providing service that can cover, for the first time, destinations in and out of Canada that were unreachable, unless interlining with another railroad. I know that single-line rail service options are superior.

I am excited about the transaction, as it will allow, a combined CPKC to provide new, efficient and reliable rail service options. This merger will strengthen competition against the larger rail carriers and trucking companies that serve our markets by:

- expanding market reach and offer new competitive transportation options for our shipments of western red cedar from Calgary into new US markets,

- expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement (it is important that there be a true USMCA railroad option),
- improving transit times and reliability, due to new service offerings, will reduce equipment costs and improve efficiency by not having to interline with other railroads, and
- creating more efficient tracking and tracing of customer freight by dealing with only one railway.



KCS and CP have had a cooperative relationship in the past. CP-KCS joint routes are among our transportation options. However, as separate companies, they have not been able to offer the seamless, single-line service the new CPKC will. This transaction will improve our transportation options.

At the same time, the complementary nature of CP's and KCS' networks (connecting only at Kansas City and not overlapping anywhere) means that the transaction will not have any adverse effects on competition. It will allow these carriers a beneficial alternative, relative to the other options that already exist, as CPKC will continue to interchange with all of their other existing interline partners.

I acknowledge the attention that CP and KCS give to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest Canadian and U.S. Class I railroads, I am confident that they will be able to implement their transaction without service disruptions that have accompanied some past rail mergers.

For these reasons, Maddox and TJC's are voicing strong support for the CP and KCS merger. This merger will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Maddox and TJC's, urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems are integrated. The end-to-end benefits of this deal will be realized for the benefit of all stakeholders.

Executed on 31 March 2021.

Tel: 207-947-4525 Fax: 207-848-2015

March 30, 2021

To the Attention of the Surface Transportation Board.

Dear STB:

Our Company, Maine Propane Distributors, has had a relationship with CP for about one year. We receive Propane from CP into Northern Maine Junction, Hermon, Maine. This "Class One" Railroad moves freight like the wind, extremely fast. We have enjoyed good service from CP and would recommend them to the Surface Transportation Board as a solid choice to run the KSC with great efficiencies. We, in Maine may or many not benefit from this acquisition, however we support the merger. The KSC is a connector to the CP and the longer runs, which CP prefers is usually better for the customer receiving the freight quickly and with productiveness. The KSC/CP would run most likely better then the KSC by itself.

Sincerely yours,

Rob E. Cort
President
Maine Propane Distributors

Maine Woods Company LLC

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Chris Castano. I work for Maine Woods Company, LLC at 92 Fish Lake Road Portage Lake, ME 04768 . My role is transportation logistics.

Maine Woods Company, LLC has a growing relationship with CP as a result of CP's recent acquisition of the CMQ Railway. We currently move forest products from our location in Portage Maine to points in the US and Canada.

We support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network, with new single-line hauls, would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Speaking from a recent experience on a transition where CP acquired the CMQ Railway, CP has provided us with good service, since its acquisition and we are excited about the opportunities of growth with the CPKC and its expanded reach.

For these reasons Maine Woods Company LLC is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Maine Woods urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Daniel Desmeules and my business address is 2900 Francis Hughes, Laval, QC. I am the Logistics Manager of Mapei Inc. In my role, I am responsible for all Canadian Transportation Activities and Inventory Management for the 6 Mapei sites in Canada.

Mapei Inc. is working with CP Rail for moving all their Intermodal shipments across Canada and coming/going to USA too. Adding KCS will help Mapei moving more business via Intermodal and hopefully secure some lanes of replenishment of raw materials.

Mapei Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Mapei has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Mapei is shipping weekly from the Texas and Oklahoma area and adding the KCS service with CP will help us securing at a better cost our shipments of finish goods and raw material for our Canadian's production sites.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.] We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of building materials
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency, by moving our material via intermodal instead of over the road. That will be an important cost improvement for Mapei

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Mapei Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Mapei Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Maple Ridge is a supplier of aggregate and sand products in Thessalon, Ontario. We currently distribute materials that are produced locally as well as products that are shipped in by lake freighter, but our division has sought rail transportation options for inbound and outbound products as well. If CP were successful in acquiring Kansas City Southern, the enhanced market access may make this option more economical and might allow for product shipments inbound and outbound that are currently not possible and would not be possible if CN were successful, given that it already has access to these markets.

I am writing to express Maple Ridge Aggregates' perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to

use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Rick MacDonald

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Tatiana Dowd and my business address is 5960 W. Parker Road, Suite 278 #235, Plano, TX 75093. I am Railroad Logistics Coordinator of Matrix Chemical. In my role, I am responsible for overseeing Chemical's rail logistic across North America, Mexico and Canada, coordinating smooth logistic solutions for Matrix's customers.

Matrix Chemical, LLC is long standing customer of both CP & KCS railroad. We ship primarily MEK, IPA & Acetone to variety of our customers in Mexico, USA and Canada. Improvement in better shipment visibility, delivery estimates and all together improvement (up to CP standards) would be greatly appreciated.

Matrix Chemical, LLC supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Matrix Chemical, LLC has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation. In contrast, the CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, not only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

We ship Chemical from Indiana and Texas to our customers Ontario and Wisconsin.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach our production locations beyond Kansas City that we ship from.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

P: 214.774.2238 F: 214.291.5700 151 CALLE DE SAN FRANCISCO, STE 200 PMB 5559 | SAN JUAN, PR 00901-1607 WWW.MATRIXCHEMICAL.COM

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Acetone from Texas to Alberta, Ontario and Wisconsin.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment turn around time and improve our efficiency to market.
- Single railroad shipment from Mexico to USA or to Canada. Competitive purchase pricing and faster delivery.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

MATRIX CHEMICAL

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Matrix Chemical, LLC is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Matrix Chemical, LLC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Tatiana Dowd

Matrix Chemical, LLC.

P: 214.774.2238 F: 214.291.5700 151 CALLE DE SAN FRANCISCO, STE 200 PMB 5559 | SAN JUAN, PR 00901-1607 WWW.MATRIXCHEMICAL.COM

We See More In Your Fields

MaxYield COOPERATIVE

My name is Ben Buie and I am the Grain Team Leader of MaxYield Cooperative, headquartered in West Bend, Iowa. In my role, I am responsible for merchandising and shipping 50-60 million bushels of grain annually.

MaxYield Cooperative supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. It would provide equal opportunity for single line shipments to an underserved market.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

MaxYield Cooperative has three facilities that sit on the CP railroad in northern Iowa. Currently, we rarely ship grain on the CP because the market wants the grain to flow south and that option is not available to us as a single line option on the CP today. The CP must interline with other railroads to reach destinations to the south beyond Kansas City. Interline shipments have not been competitive in price and service to single line options.

MaxYield regularly ships corn and soybeans to the gulf for export and to Mexico today from our facilities that sit on the UP railroad. We feel that the CP/KCS merger would give us an additional single line option to those southern destinations. The additional competition would benefit MaxYield Cooperative and our farmer-owners by reducing freight costs and providing additional outlets that are closer to our farmer's bins and fields.

In addition to increasing competition to the gulf and Mexico destinations, the CP/KCS merger would give our farmers access to feed mills in Mississippi.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of grain to the gulf and Mexico.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, MaxYield Cooperative is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. MaxYield Cooperative urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Ben Buie, state under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Mike Trosen, and my business address is Lamberton Minnesota. I am General Manager of Meadowland Farmers Coop. In my role, I am responsible for the overall Management of our diversified Cooperative.

Meadowland Farmers Coop has a shuttle loader at Lamberton and Walnut Grove Minnesota. We load both corn and beans by shuttle at both locations. Although service has been good from the CP, due to freight spreads the majority of our grain is loaded on BNSF shuttles for West Coast markets.

Meadowland Farmers Coop supports approval of the CP/KCS combination. The transaction will provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Meadowland Farmers Coop normally views railroad consolidations with skepticism, but this particular merger, with little or no market overlap has a GREAT opportunity to open our Company up to new Quality markets that as a Farmer owned Coop will bring value to our Member/Owners.

> **As I have stated earlier, CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to and again, as I stated earlier market spreads make us a one destination shipper. This merger will open southern markets that aren't competitively priced for us today.**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada

CARES

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Justin Berthiaume and my business address is 7 Rue Saint-Jacques, Montréal, QC H2Y 1K9. I am the National Sales Director of Medlog Canada. In my role, I am responsible for all Sales and Operations for the North American logistics arm of MSC Canada.

Medlog Canada utilizes CP for Domestic Intermodal both for Intra-Canada as well as cross-border. We also ship our own 40 foot containers on CP Rail. Our cooperation with CP has been growing steadily and our satisfaction with the level of service we've received is the main reason we both see a bright future for this business relationship.

Medlog Canada supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Medlog Canada has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

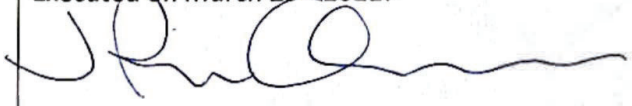
Medlog Canada will need all the help it can get to have better access to the US and Mexican markets considering the lack of equipment available to us in Canada. The Intermodal Market will grow in the next couple years considering the lack of drivers available for long-hauls and having this new partnership to bring our customers products in and out of Canada will be a great advantage to us.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

MEDLOG Canada
7 rue Saint-Jacques
H2Y 1K9, Montreal
Quebec, Canada

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Better transit and visibility means better utilization of our equipment.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Medlog Canada is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Medlog Canada urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Washington, DC 20423

Re: Finance Docket No. 36500 – Reply to Objections to KCS Waiver

My name is Tim Holan and my business address is 20 Greenway Plaza Suite 650, Houston Texas 77046. I am the Head of Operations for Mercuria Energy America, LLC. In my role, I am responsible for the transportation decisions (truck, rail, pipeline, barge, and vessel) required to deliver a wide range of commodities to counterparties throughout North America and the World.

Mercuria supports swift approval of the CP-KCS combination because of the significant benefits we expect will be realized from this transaction.

Mercuria is aware that several parties have filed objections to the application of the pre-2001 merger rules to the CP-KCS transaction under the "waiver" issued in 2001 for transactions involving KCS. Mercuria wishes to reply to those objections by urging the Board not to revoke the KCS waiver. The pre-2001 rules provide the Board and all interested parties all the tools that are needed to fully evaluate the proposed transaction.

We are fully cognizant of the Board's mandate to ensure that Class I mergers are in the public interest, and do not risk significant disruptions in the railway system. From our perspective, the unique nature of the CP-KCS transaction alleviates the concerns that motivated the new rules adopted in 2001. Reviewing the CP-KCS combination under the tried and true pre-2001 merger standards will prevent undue delay, while still allowing for a thorough public interest assessment by the Board.

As Head of Operations for Mercuria and someone with 30+ years of experience working with the railroads I feel that the end-to-end CP-KCS transaction will improve service options, with new single-line hauls and broader access to markets across North America. Our experience shows us that single-line rail service options are far superior to public and private fleets. The unique synergies of a CP-KCS combination should provide benefits to Mercuria, similarly situated shippers, and the public. We are eager to see these realized as soon as possible, without the delays and additional burdens that would result from applying the 2001 rules for the first time ever to this transaction.

Nothing about the CP-KCS transaction raises the kinds of concerns that would flow from a merger of the much larger Class I railroads. The issues should be simple – the transaction improves competitive options and service – and any concerns any party has should be easy to address under the pre-2000 rules. The 2001 rules were designed for much more complex transactions that raised more serious issues, and they should not be tested out in this case.

Mercuria and our shipping partners are looking forward to a stronger CPKC network that will increase access to diversified market opportunities. As such, we urge the Board to apply the KCS waiver provision it thoughtfully included in its 2001 Major Merger Rules. An elongated period of review will delay and potentially reduce the positive synergies this merger promises. The KCS waiver will allow the Board to conduct a thorough but efficient and fair review and allow for the benefits of the new CPKC network to come to fruition more quickly.

Mercuria is additionally concerned that applying the 2001 Major Merger Rules to the CP-KCS merger, a transaction the rules were not designed for, would lead to precedent with unintended consequences and might also create an easier path for some other Class I merger proposals that would be problematic in ways CP-KCS is not. The CP-KCS merger is unlike other Class I merger combinations, in that it is a straightforward transaction between the two smallest U.S. Class I railroads, and it promises substantially more benefits than risks to the public interest. We also know that this transaction, among all possible Class I mergers, is unique in not posing any serious concerns about lost competition, service disruption, or other harms. Interpreting and applying the 2001 rules to this transaction could encourage other Class I railroads to see an easier path for their own Class I merger proposals without the same unique benefits of the CP-KCS transaction.

For these reasons, Mercuria urges the Board to maintain the KCS waiver and reject calls to revoke it, and to proceed to review and approve the CP-KCS proposed combination as expeditiously as possible. We look forward to seeing CPKC as a stronger competitor in the industry.

Yours sincerely,

Tim Holan

MERCURY RESOURCES SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Margo Brock, and my business address is 169 Commack Road, Commack New York. I am President/Principle of Mercury Resources LLC.

Mercury Resources is a supply chain management company that ships various types of freight by rail / barge / truck, across North America. We work with all class 1 railroads. We find our interaction with both CP and KCS to be great, two railroads focused on building and executing business opportunities, which helps us keep trade moving for our commodity trading clients.

Mercury Resources supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Mercury Resources does not favor class 1 consolidation generally. The top 5 class 1 railroads are already so big by themselves. However, the combination of these two smallest class 1 railroads complements each other, and the market, in a unique opportunity.

There is already a tremendous amount of freight in the US, that cannot benefit from the rail system, and must remain on trucks. We see the next level of freight where is should be a rail move, but when required to move interline with more than one class 1 railroad, the pricing is too high, and it converts to truck. The most beneficial utilization of the railroads is when you can run a class 1 direct freight lane, but each you introduce another class 1 into the freight structure of the lane, the price jumps significantly. This combination of CP and KCS will eliminate many of those rail opportunities converting to truck – due to the expansive reach created. Do we really need more trucks on our roads? More pollution, more traffic, more wear and tear on our US infrastructure that is reportedly in need of much upgrading and repair!

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

MERCURY RESOURCES

Mercury Resources LLC
169 Commack Road,Suite H#285

Office: 1-631-296-20 30 I Fax: 1-631-410 -1926
www.mercuryresources.com

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers

For these reasons, Mercury Resources is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Mercury Resources urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

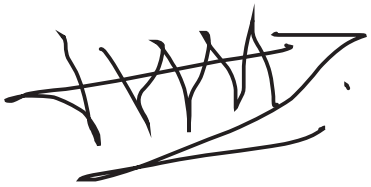
JOSÉ ZOZAYA
Presidente Ejecutivo

Mexico City, April 12, 2021.

To whom it may concern,



My name is Jose Zozaya, and my business address is Ensenada 90, 06100 Mexico City. I am Executive President of the Mexican Association for the Automotive Industry (AMIA). In my role, I am responsible for the representation of member companies established in Mexico to manufacture, trade and sale automobiles and light commercial vehicles, usually known as Original Equipment Manufacturers (OEM).

AMIA's relation with KCS Mexico is indirect when its member companies ask for support from the federal government to solve rail way issues because of protesting groups blocking train operations.

AMIA supports approval of the CP/KCS combination. The transaction would provide significant benefits to member companies that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets our member companies serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. AMIA has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Sincerely

Dr. José Zozaya
Executive President

STB Finance Docket No. 36500
CP-KCS Proposed Combination

April 28, 2021

ATTENTION: Surface Transportation Board

My name is Jeffrey Stromberg, and my business address is 501 Avenue M South, Saskatoon, SK. I am a shareholder of Micro Oil Inc. In my role, I am responsible for Finance and Procurement.

Micro Oil Inc. has used CP for its rail service needs for the past 20 years. We import oil by rail car from various locations over the US and Canada, and these shipments are delivered to our spur in Floral, SK.

Micro Oil Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Micro Oil Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach other destinations beyond Kansas City that we can ship from & that could expand the markets we deal with effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of oil from states in the southern USA.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Rail cars cost money to lease, and, the more efficient the route, the more trips per year the rail car can make at the same lease cost.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Micro Oil Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Micro Oil Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Jeffrey Stromberg, CPA, CA

My name is Brad Deets and my business address is 3800, 205 – 5th Ave SW; Calgary, AB, T2P 2V7. I am VP – Supply and Marketing of Midstream Energy Partners. In my role, I am responsible for the North American commercial activity within the LPG sector.

Midstream Energy Partners transports in excess 2,000 rail cars of propane and butane per year, largely on the Western side of North America. While we are not the largest shipper of product within CP's network, CP has always been fair and reasonable in helping us move cars efficiently and economically and in turn helping Midstream Energy Partners grow our business.

Midstream Energy Partners supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Midstream Energy Partners has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

In the past CP has always provided Midstream Energy Partners with good service. As I look forward, with an expanded market reach beyond Kansas City, I envision CP to find market and transportation efficiencies that will all product to move more fluidly throughout North America.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of 2,000 rail cars per year and growing.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. In our business, rail freight and car costs represent the largest cost by a significant amount. Any ability to reduce those costs and allow us to reinvest in our business will create growth for both Midstream Energy Partners and the economy as a whole.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Midstream Energy Partners is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Midstream Energy Partners urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

MIDWEST BULK TRANSLOAD
1 Genstar Drive, Joliet, IL 60435
800-590-6064 Fax 815-600-8077
www.mbtransload.com E-mail: mail@mbtransload.com

ATTENTION: Surface Transportation Board

My name is Ted Kennedy and my business address is 2100 Clearwater Drive, Oak Brook, IL 60523. I am CEO of Midwest Bulk Transload. In my role, I am responsible for the safe and profitable operation of our transload facility.

Midwest Bulk Transload is a Grain and Feed transload operation that transfers product from bulk railcars to bulk 40 foot export containers.

Midwest Bulk Transload supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Midwest Bulk Transload foresees many benefits of this merger as it gives existing customers and suppliers on the CP or KCS a direct, more efficient connection to move product.

Midwest Bulk Transload has the ability to receive bulk grains from various CP points and load containers for export. With this merger, this will open up a very large grain and feed market in Mexico for new customers that can receive bulk containers. Today, we are limited to shipping to just 2 ports, Vancouver and Montreal. With Mexico being a large buyer of Feed and Grain from the US, this will allow Midwest Bulk Transload to serve more buyers for US grain and feed. Having a larger market to serve, this ultimately makes the processing plants more profitable as well as increase commodity prices at the farm. The efficiency of connecting the KCS and the CP lines will provide feed mills, farmers and processors will provide for more profitable operations.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Distillers Dried Grains and Soybeans from Bensenville, IL to various Intermodal yard locations in Mexico. We are particularly enthusiastic about the role new CPKC single-line routes will play in

expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by ship containers of feed to Mexico whereby this service has never been offered in the past.
- With this merger, the shippers and receivers of Distillers Dried Grains, Soybean Meal, and Soybeans, will have a more efficient means of transportation and both shippers and receivers will benefit from these rail efficiencies through increased profit margins.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Midwest Bulk Transload is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Midwest Bulk Transload urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Dear Ms. Brown:

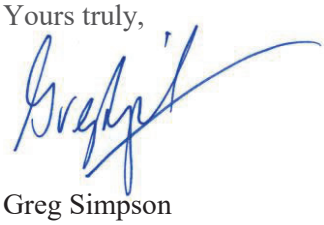
Re: CP/KCS combination (STB Finance Docket No. 36500)

On behalf of Millar Western Forest Products Ltd., I am writing in support of the CP/KCS combination (STB Finance Docket No. 36500).

Millar Western Forest Products Ltd.is an Alberta-based forest products company that has been in business for more than a century. We apply that experience in the responsible and sustainable development of renewable resources, while holding to our core values of safety, integrity, honesty, trust and respect.

Our company is headquartered in Edmonton and produces wood pulp, lumber and specialty wood products at manufacturing facilities in Whitecourt, Fox Creek and Acheson, Alberta. We employ more than 700 people full-time, and hundreds more on a contract basis, in forest management and mill operations.

Millar Western markets its output globally and uses numerous modes of transport to move our products to our customer base. These include highway carriers, intermodal, railways, break bulk vessels, container vessels, warehouses, reloads and terminals/ports.



We currently move product via both Canadian Pacific and the Kansas City Southern. CP is used on shipments within Canada and from Canada to the U.S. KCS participates on movements of our goods to numerous U.S. markets and to many of our Mexican customers.

Millar Western strongly endorses the CP/KCS combination. We believe the combination of CP and KCS will strengthen the overall rail network and enhance North American trade opportunities, benefiting the people of the United States, Canada and Mexico.

…/2

We welcome your questions and thank you for your consideration.

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Miller Precast Ltd. hereby files this letter to express its concerns to the bid by CN to acquire KCS. Miller Precast Ltd. is a one-stop-shop for all precast concrete needs. We supply Thunder Bay and the greater Northwestern Ontario and receive bulk cement via rail. We are CP served, but open to CN via CTA switch.

We support the swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, competitive overlaps would reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City. We are also concerned with downstream effects and the risk that the CN-KCS combination would stimulate further industry consolidation, such as by destabilizing the six large carrier balance in North America.

Respectfully submitted,

Tracy Miller
Owner & President

MINNESOTA GRAIN & FEED ASSOCIATION

June 22, 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

The Minnesota Grain and Feed Association (MGFA) is a 114-year-old organization representing the interests of the grain elevator and feed mill industry in Minnesota. With approximately 70 cooperative grain elevators operating close to 200 branch locations statewide and another 165 privately owned facilities, we have a vested interest in not just opposing the Canadian National's bid to acquire the Kansas City Southern but also their proposal for a voting trust.

Today I am writing to express MGFA's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." It is MGFA's view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so – and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

1407 1ST STREET NE • NEW PRAGUE, MN 56071 • PHONE 952-758-3999 • FAX 952-758-3997
E-mail: info@mgfa.org • Website: www.mgfa.org

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

It is MGFA's perspective that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory in the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs, St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would, of course, do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up in the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high-capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were

CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

A CP/KCS union would also specifically benefit Minnesota grain shippers on the CP line. A combination of these two railroads should expand our access to markets across the United States, Mexico, Canada and internationally, not to mention it would increase competition among other rail carriers that serve our markets in Minnesota.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Laura Lemke

Subject: **STB Finance Docket No. 36500**
CP-KCS Proposed Combination

Dear Surface Transportation Board Members,

I am writing you today to express our support regarding Canadian Pacific Railway (CP) proposal for a CP-Kansas City Southern (KCS) combination.

Montreal Gateway Terminals Partnership (MGT) is the leading container terminal operator at the Port of Montreal, the international port closest to America's industrial heartland. Strategically positioned 1,600 kilometers inland on the St. Lawrence River, MGT is the shortest route connecting the US Northeast and Midwest market of 100 million consumers to Northern Europe and the Mediterranean. MGT has a diversified customer base and has been handling container volume for global shipping companies since 1971.

MGT believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service to us and enable us to better serve our own customers and communities, while improving safety and enhancing competition.

CP's proposal is timely and introduces a number of positive, future-focused ideas to improve North America's transportation network. We believe the proposal is in the public interest as it would improve overall service while meaningfully enhancing competition amongst the Class 1s and with other transportation modes. Specifically, we believe the following points in CP's proposal are key:

- with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets, would help us reach our existing markets and new markets more efficiently
- increasing capacity for all shippers without creating the need for more infrastructure
- creating efficient, reliable single-line service thereby reducing shipper equipment costs and inventory carry requirements

MORE THAN JUST FEED

STB Finance Docket No. 36500
CP-KCS Proposed Combination

April 29, 2021

ATTENTION: Surface Transportation Board

My name is Andrew Barwegen and my business address is 126 E Canal Garden, Strathmore, Alberta T1P 1Y4. I am Vice President of Procurement at More Than Just Feed Inc. In my role, I am responsible for the company's procurement and logistics strategic planning.

More Than Just Feed operates a private Transload facility serviced by CP at Monarch, AB. We handle grain and grain products, transloading directly from rail to truck. We are currently working closely with CP on expansion/growth opportunities at our facility, which includes importing and handling new commodities (such as fertilizer).

More Than Just Feed supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. More Than Just Feed has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach markets beyond Kansas City that we could utilize to expand our transload business.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our potential shipments of fertilizers and other grain or commodity products from import facilities to Monarch, AB.

MORE THAN JUST FEED

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will improve our efficiency. Improved reliability gives us better ability to plan inbound shipments for offloading.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, More Than Just Feed is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. More Than Just Feed urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Andrew Barwegen
VP of Procurement
More Than Just Feed Inc.

Canadian Pacific's acquisition of Kansas City Southern

March 29, 2021

Attention: Surface Transportation Board

To whom it may concern:

The Mosaic Company (NYSE: MOS) is compelled by a critical social mission — to help the world grow the food it needs. Fertilizer accounts for half of all crop yields, so as the world's leading integrated producer of concentrated phosphate and potash, we believe enabling farmers around the globe to optimize the food they grow on every acre of farmland will be integral to feeding a growing population.

One of the channels Mosaic uses to move our crop nutrition products from our mines into the North American market is through Canadian Pacific (CP). CP provides an important service to Mosaic, and we are satisfied with the quality of their service. We do expect to see improved access to part of the farm belt by this acquisition.

We do not expect negative impacts to competition upon CP's acquisition of Kansas City Southern, and we do not oppose this acquisition.

Regards,

Karen A. Swager
Senior Vice President, Supply Chain

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Jason Venditti and my business address is 56 Romina Drive. I am President and Managing Partner of National Cold Chain Inc. (aka NCC)

NCC is a 3PL who offers both road and intermodal service to our clients, we are heavily immersed in perishable supply chains of Canadian CPG companies and are one of the fastest growing buyers of refrigerated intermodal cube/services from both Canadian class 1 rail lines.

NCC supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. NCC has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

NCC works with Canadian and USA CPG food shippers and a variety of FAK shippers to move their products from the USA and Mexico to Canadian consumers. CP provides us with good domestic rail service but is limited in its supports of our customer's larger North American networks requirements. We rely on the Canadian class 1 railways to serve our clients and today CP is not able to compete with CN on service or price on freight originating in the USA and MX. A second option would be valuable to my business and create competition. We need a second single line cross border operator.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Economical options exit MX to Canada are limited today. We have clients shipping on the water at extensive > 30 day transits in the absence of a viable MX to CAD service. Today there is far too much carbon being burned just to get freight

out of MX and onto a line that can bring it into Canada, this would also make a significant contribution to lowering carbon emissions, today Canadian carrier give away their capacity just so they can get to Laredo so they can load Mexican freight destined for Canada. The CPKC would open up a vital supply chain link for many Canadian shippers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, NCC is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. NCC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

To Whom It May Concern

Re: STB Finance Docket No. 36500 / CP-KCS Proposed Combination

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Nestle by creating more efficient supply chains throughout North America, but also open up new opportunities and new markets for businesses. Currently Nestle and CP partner together to move Intermodal traffic across Canada and between the United States and Canada. CP is a strong supply chain partner, transporting both raw material as well as perishable finished goods. The Nestle & CP partnership is strategic and both companies collaborate to create better and more environmentally sustainable supply chains.

Nestle is supportive of the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen the North American supply chain. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our intermodal shipments between Canada, the US and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is beneficial to have a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our inventory costs and improve our efficiency. By having a single source solution that avoid interchanges. This will further enable reliable service to our customers.

Furthermore, as North America's two safest railroads, we firmly believe that CP and KCS will provide Nestle with safe, efficient and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. Nestle urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely

Leslie Nicholson

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Nestle by creating more efficient supply chains throughout North America, but also open up new opportunities and new markets for businesses.

Nestle is supportive of the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen the North American supply chain. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our intermodal shipments between Canada, the US and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is beneficial to have a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our inventory costs and improve our efficiency. By having a single source solution that avoid interchanges. This will further enable reliable service to our customers.

Furthermore, as North America's two safest railroads, we firmly believe that CP and KCS will provide Nestle with safe, efficient and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. Nestle urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely,

Jim Wells

Chief Supply Chain Officer

Nestle USA

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is **Alberto Rivera** and my business address is **Anillo Vial II Poniente #10800 Col. Santa Maria, Querétaro. QRO. CP 76137**. I am **founder & CEO** of **Networks Group**. In my role, I am responsible for **developing, leading and coordinating the functions of strategic planning, critical decision making and general supervision of the activities carried out by the company.**

Networks Group is **a company that has had a relationship with KCS for 20 years through our customers and directly with a high satisfaction in the loading & unloading services of railcars with foreign trade goods from and to abroad.**

Networks Group supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. In the USA and Canada, the combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In Mexico, KCS provides efficient service thru the most relevant manufacturing footprint. The two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. This will strengthen competition against the other, larger rail carriers and trucks in the North America market.

For these reasons, **Networks Group** is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. **Networks Group** urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Alberto Rivera, declare under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 30th, 2021.

NEW COOPERATIVE INC.
2626 1st Ave. South | P.O. Box 818 | Fort Dodge, IA 50501

My name is Dan Dix and my business address is 2626 1st Ave. South, Fort Dodge, IA 50501. I am the General Manager of NEW Cooperative, Inc. In my role, I am responsible for the leadership of a grain and supply company with over 5500 farmer owners.

NEW Cooperative, Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help our farmers reach new markets. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Corn and Soybeans from north central Iowa to Southern US Feeder Markets, Gulf for export, and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, NEW Cooperative, Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. NEW Cooperative and its 5500 member owners urge the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Dan Dix, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 30, 2021.

ATTENTION: Surface Transportation Board
RE: STB Finance Docket No. 36500 CP-KCS Proposed Combination

My name is Mark McKendry and my business address is 909 Lake Carolyn Pkwy, Irving, TX. I am Vice President of NFI, and leader of the Intermodal business unit. In my role, I am responsible for all functions relating to NFI's North American Intermodal product.

NFI is a strategic partner of CP in Canada, and a roughly $3 billion dollar 3rd party logistics provider with significant operations in the regions served by both the Kansas City Southern, and the Canadian Pacific Railway. Our domestic Intermodal product leverages all North American class 1's, meaning we have a relationship and understanding of their operating principles, customer service and train service.

NFI supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Like many IMC's, NFI has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Intermodal from SLP to the mid-west and Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. The option of bypassing Chicago as a rubber tire interchange, and moving to a steel wheel interchange which reduces bottle necks and expenses is particularly appealing.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these

carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, NFI is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. NICHOLANDDIAMONDCONSULTINGLTD.

SHIPPER SUPPORT LETTER- NICHOL AND DIAMOND CONSULTING LIMITED

ATTENTION: Surface Transportation Board

My name is Michelle Toma and my business address is PO Box 47009 Creekside NW Calgary, AB T3P 0B9 and I am the Vice President of Nichol and Diamond Consulting Ltd.

Nichol and Diamond Consulting Ltd is a long standing partner of CP Rail and we have worked diligently over the years to grow with CP by focusing on providing high speed quality service to our customer base. We support the approval of the CP/KCS combination. The transaction would provide significant benefits and opportunities for growth we are eager to see realized.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls, would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We see this transaction as uniquely beneficial.

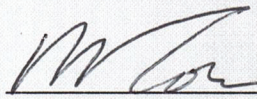
We ship intermodal containers with CP intermodal service primarily serving a retail customer base.

CP's market reach is limited today in the US and we have not been using CP in cross border as it must interline with other railroads to reach US destinations that we could potentially ship to or that could expand the markets we serve effectively.

And we know from experience both our own, and that of our competitors who have single-line rail options at their origins that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. We feel that CPKC's new service offerings will improve transit times and reliability.



The complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Nichol and Diamond Consulting Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Rob Birch and my business address is 22 Dairy Lane Huntsville Ontario P1H 1T4. I am the owner of North Atlantic International Logistics Inc. In my role, I am responsible for all Intermodal service providers including rates and lanes.

North Atlantic has been providing intermodal service to our customers for many years and CP Rail is a very important vendor. I believe that my growth in intermodal service is directly linked to CP Rail's growth with regard to new lanes and services.

North Atlantic International Logistics Inc supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. North Atlantic has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

North Atlantic provides its various customers with door to door service across North America: offering LTL, 20', 40', and 53' intermodal service. With important freight moving between north and south or east to west, this combination of rail networks will make cross border shipping much more efficient and effective to serve customers: from Canada to points in the US and to Mexico.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, North Atlantic International Logistics Inc is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. North Atlantic International Logistics Inc urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

March 30, 2021

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500-CP-KCS Proposed Combination

North Dakota Grain Dealers Association ("NDGDA") hereby files this letter in support of approval of the CP/KCS combination. The transaction should provide benefits in the form of expanded markets to those North Dakota grain shippers serviced by CP.

NDGDA is an association of 120 companies that operate over 250 grain elevators in North Dakota. These grain elevators are the first point of sale for nearly all grain produced in the state. These businesses receive clean, condition, blend and ship grain on to domestic and worldwide markets. Grain production remains the mainstay of North Dakota's economy and rail service is essential to move grain from points of production to points of consumption. More than 80 percent of North Dakota's grain shipments occur by railroad.

From our perspective, the transaction promises to provide improved service options and open new markets to North Dakota shippers. The combined CPKC network – with new single-line hauls and access to ports on the U.S. Gulf, Atlantic and Pacific coasts – should help us reach our existing markets and new markets more efficiently.

North Dakota is served by two rail carriers and this action will strengthen competition between those carriers and trucks that serve our markets. KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer a seamless, single-line service so this transaction should improve our transportation options.

This merger makes sense because there are no overlaps in each carriers' perspective network. We assume that this transaction would be a complement to each of the carrier's existing service and support it for that reason. We would not be in favor of any transaction that would cause a deterioration in service to CP's shippers in North Dakota.

The North Dakota Grain Dealers Association is voicing support for the combination of CP and KCS, because it should enhance competition and provide expanded options for North Dakota grain shippers. To that end, we encourage the STB to approve CP's acquisition of KCS.

Respectfully submitted,

Stu Letcher
Executive Vice President
North Dakota Grain Dealers Association

VERIFICATION

I Stu Letcher, declare under penalty of perjury US Law that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

NORTH PRAIRIE AG SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Josh Schaefer, and my business address is 103 Dakota Street Nekoma, ND 58355. I am General Manager of North Prairie Ag in Nekoma, ND. In my role, I am responsible for overseeing all business operations and developing new and innovative procedures to expand growth and capture additional market share in NE North Dakota and North West Minnesota.

North Prairie Ag is a shuttle loading/unloading facility on the CP located in NE ND. We are one if not the largest shippers on the CP in all the United States. We primarily ship wheat going east over the Chicago market and soybeans to the PNW. We also unload crop nutrition products at our facility. We unload railcars of Urea, Ammonium Sulfate, and Phosphate primarily from Canada and the Minneapolis Markets as those are currently the only markets, we have access due to limited rail access to the south where a large portion of our is imported from NOLA.

North Prairie Ag supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. North Prairie Ag has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with adequate service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship and receive from. I know from personal experience and that of our competitors single-line rail options at their origins are far more cost effective, efficient, and safe. We currently have very few single line hauls and therefore puts us at a large disadvantage not being able to reach all the markets our competitors can in a single line haul.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of spring wheat into St Louis.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will be done with straight line hauls and reduced cost of having to rely on connecting carriers for us to get our products to and from the most ideal market destinations.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, North Prairie Ag is voicing strong support for the combination of CP and KCS, because it will enhance competition, reduce freight costs, provide expanded options, and drive efficiencies for customers of all sizes. North Prairie Ag urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Karen Philipation. I am the Transportation Manager for North West Terminal Ltd (NWT) located at Unity Saskatchewan. In my role, I am responsible for NWT rail logistics. The business relationship between CP and NWT has been and will continue to be critical for our success. There is no question to our support of the purchase of the KCS by CP Rail. Both CP/KCS operate a safe efficient railway and the idea of operating under one umbrella will only enhance those activities. The idea of a seamless route from our facility to Mexico and return opens the door for opportunities not currently available to us under the current Rule 11 operation.

North West Terminal not only handles several grain commodities, but also has an ethanol plant that requires a steady input of feed grain or now corn originating in the Kansas City area. Also, onsite we load crude oil and propane both of which should benefit from this integrated network. Although NWT is dual served by both CN and CP Rail this pending acquisition will provide necessary competition for CN to the Gulf Coast. The key to our success is to have as many destination and port options as possible for rail competition. This acquisition does just that. The result will be competitive rates and service that will be good for shippers on both sides of the border.

Over the last few years CP Rail have been actively seeking business and following that up with service as promised. This increased intensity has caused NWT to search out new markets and possibilities. The addition of KCS just expands that potential market existentially.

In our opinion, CP Rail would have to be the best suitor for the KCS. Any other Class One carrier that acquired KCS might disrupt any competitive balance that currently exists. This would be especially true in the north/south corridors. Based on a seamless single line service the acquisition makes sense. Combine that with the gained operating efficiencies, it will make the CP/KCS a significant carrier option compared to the other Class One operators.

All these factors would demand that NWT shows its support for the acquisition and is extremely excited about the potential possibilities it will provide.

Karen Philipation

Northcoast Reload Inc.

920 Derwent Way Delta, BC V3M 5R2

April 30, 2021

ATTENTION: Surface Transportation Board

My name is Sandeep Parhar and my business address is 920 Derwent Way in Delta, BC. I am President of NJ Transload Inc and also Northcoast Reload Inc. In my roles, I am responsible for Handling, Storage and Freight Coordination for building products to and from our 215,000 square foot warehouse facility.

NJ Transload has relied on CP Rail to arrange freight movement of building products all over North America. CP's dedicated rail lines have helped lower transportation costs without drastically increasing lead time for delivery. Over the last 5 years we have been able to grow our business from initially shipping intermodal containers only to Ontario to now shipping to multiple locations in North America including new lanes for us in 2020 into Minnesota, Indiana and Illinois.

NJ Transload and Nothcoast Reload both support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

As a central hub for Lumber, Plywood and OSB mills located in Northern BC and Alberta, our facility would have the ability to offer our customers in the building supply markets with more options to get high quality lumber and panel products to key markets throughout North America. With an ability to service more markets we are excited of the possibilities for the growth of our business by increasing product turns and providing our customers with the ability to service markets they have been unable to effectively enter prior.

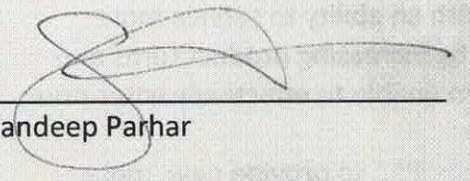
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Douglas Fir Lumber and Plywood from BC to the Central and Southern parts of the US.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, NJ Transload is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. NJ Transload urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Northern Brick is a supplier of landscape, masonry and related supplies in North Bay, Ontario. Our division supplies residential, commercial, and industrial customers in our territory. Many of the products that we carry are, or could be, transported by rail if the proper network existed economically. We are concerned that if CN is successful in acquiring Kansas City Southern, many of our products will see cost increases that we won't be able to effectively pass on to our customers.

I am writing to express Northern Brick's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to

use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Kim Birmingham
Northern Brick

NORTHERN COUNTRY COOP

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Jason Schwenneker and my business address is 203 E. Spring St, Stacyville, IA 50476. I am CEO/GM of Northern Country Cooperative. In my role, I am responsible for NCC success and future viability as a cooperative.

Northern Country Cooperative is currently shipping 25 car grain trains on the CP rail way. With this we have been investigating an expansion of a facility for several years on the CP but the economics and market access have not been conducive, but with the unification we are hopeful this provides us with the opportunities to pursue adding to our footprint with a shuttle loader.

NCC supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. NCC and I have not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Today we have access to CP, CN, and the UP rail lines from our network of facilities. We are a full service cooperative that is transporting ag products in and out. There are tremendous benefits of having rail today and not being reliant on truck for everything, however, using our current markets and lanes often times truck is a more economical choice for transportation. Becoming less reliant on truck and utilizing destinations with the CP-KCS and other rail lines is an ideal situation. Also, we would like to move more products on rail to cut down on our carbon footprint. Currently we do not have access to the KCS but with the two companies coming together it would allow us to gain access to many more markets for our agricultural products. To support our future growth, we need additional market access.

We ship grain from our CP-served facilities in Iowa and Minnesota to our customers with elevators/terminals in the South Central and Gulf region. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we could ship to or have access to like the Gulf of Mexico and Mexico specifically.

We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of agricultural products from Minnesota and Iowa to the Gulf and Mexico.
- We are particularly excited about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will be done by using more rail to move goods vs truck. Labor in the future is going to be challenging enough and by moving more product by rail vs truck also reduces our carbon footprint.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Northern Country Cooperative is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. NCC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Jason Schwenneker state under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Northern Ski Company Limited

1 Ceasar Rd.,
Sudbury, ON P3E 5P3

MAY 21, 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Northern Ski Company is a Canadian based investment company which holds an interest in various Canadian corporations, including CP Rail.

A great number of Canadian (and in fact, American) companies would stand to benefit by CP's acquisition of Kansas City Southern. The increase in rail access that would be created by the proposed merger would expand markets on both sides of the border, and allow, safe, efficient, and environmentally responsible transportation of goods.

I am writing to express Northern Ski's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed

transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not

investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

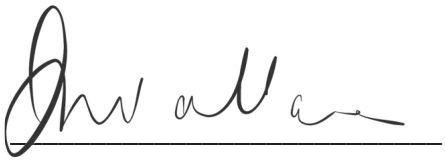
Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan



that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Jamie Wallace,
Northern Ski Company Limited

Cc: All Parties of Record

Northland Products Company
1000 Rainbow Drive
Waterloo, IA 50701

April 7, 2021

To whom it may concern,

Northland Products Company is a global producer and supplier of automotive, industrial and railroad lubricating oils and associated lubricants, with production facilities based in Waterloo, IA and Temple, TX. The products produced by Northland are utilized by automotive and agricultural OEM's, Class One railroads (including the Canadian Pacific Railroad, CSX Rail and Canadian National Railroad) and other regional manufacturing and industrial customers throughout the US, Canada and Mexico.

As the senior executive officer at Northland Products Company, I am actively engaged in the challenges and benefits associated with the supply chain efficiencies and continuity that rail transportation provides. Lubricant producers like Northland are highly dependent on an efficient and reliable cross-border railroad network. Due to the daily volume of inbound and outbound material shipped by Northland, rail transportation is the only viable method of moving both raw materials and finished goods to our global customer base. The synergies created by the CP – KCS merger will not only enhance current supply chain transportation efficiency but will encourage much-needed growth and railroad infrastructure investment. These ongoing investments in capacity, safety, system integration and efficiency enhancements are imperative to sustain the broad-based growth and competitiveness of North American manufacturers and producers.

As the USMCA and former NAFTA trade agreements have demonstrated, manufacturers and end-use customers across the US, Canada and Mexico benefit greatly from the efficient integration of the raw material, manufacturing and product transportation networks which join our countries. As cross-border freight processing and interstate truck traffic continues to pose significant challenges for producers and customers alike, the first obvious solution is to further utilize and enhance the existing rail infrastructure within the borders of the USMCA. The CP-KCS merger is a critical step to optimizing this infrastructure and deploying the capital and investment resources of the North American railroad industry.

On behalf of Northland Products Company and other midwestern-based manufacturers and producers, please accept this letter as an enthusiastic and unqualified affirmation of the economic, environmental and overall public safety benefits associated with the CP-KCS merger.

Thank you for your consideration of Northland's input on this matter and I look forward to the prompt and unqualified approval of this merger.

Respectfully yours,

Eric P. Petersen
Northland Products Company
President, COO

SUPPORT LETTER

ATTENTION: Surface Transportation Board
RE: Finance Docket No. 36500, CP/KCS Combination

My name is Ronnie Armstrong, and my business address is 377 E, Butterfield Road Suite 500 Lombard, Il 60148. I am the Vice President, Inland Operations at Ocean Network Express, (North America) Inc. In my role, I am responsible for procurement decisions for the North America market, including rail services.

Ocean Network Express (ONE) entrusts a portion of our rail business to KCS's network which presently offers direct connections for our shipments moving in the gulf region of the United States.

ONE supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other ONE has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

ONE relies upon KCS's service for the transit of containerized freight in a safe, efficient, and cost-effective manner. KCS has provided us with excellent service, but its market reach is limited today by the reach of its network.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our containerized freight shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will unlock new opportunities for ONE and promote growth for our services through the expanded North America network.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. As a result, this transaction will improve ONE's transportation options.

North America RHQs
8730 Stony Point Parkway
Suite 400
Richmond, Virginia 23235
www.one-line.com

For these reasons, Ocean Network Express, (North America) Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. ONE. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these two rail networks can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I __Ronnie Armstrong__, state the above under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on _March 30, 2021_.

oec GROUP
Global Logistics Performers

SHIPPER SUPPORT LETTER- OEC GROUP

ATTENTION: Surface Transportation Board

My name is Marc Bibeau and my business address is 725 Montee-De- Liesse, Saint Laurent, Quebec H4T1P5 . I am the CEO and President of OEC Group.

OEC Group is a long standing partner of CP Rail and we have worked diligently over the years to grow with CP by focusing on providing quality service to our customer base.

OEC Group supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship intermodal containers with CP intermodal service primarily serving a retail customer base. We currently are extremely active in Vancouver to Toronto, Montreal and Chicago lanes.

CP has provided us with good service, but its market reach is limited today in the US and we have not been using CP in cross border as it must interline with other railroads to reach US destinations that we could potentially ship to or that could expand the markets we serve effectively.

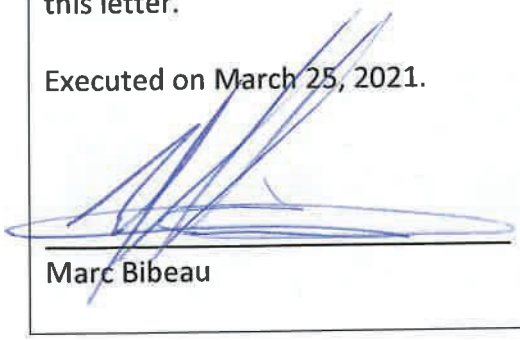
And we know from experience both our own, and that of our competitors who have single-line rail options at their origins that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, OEC Group is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. OEC Group urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Marc Bibeau certify under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

Good Day, my name is Russell E. Bragg, and my business address is 4601 North 6th Street, Fort Smith, Arkansas. I am the Senior Vice President of Supply Chain for OK Foods, a Division of Bachoco. My role in the last 33 years at OK Foods is in the movement of rail grain and soybean meal from the US Midwestern markets.

OK Foods has two feed mills located on the KCS system sourcing grains from the Missouri, Kansas, and Nebraska markets. The KCS has been a loyal and supportive partner during my entire tenure here. They have helped us grow our business by providing dependable service at fair rates. One of the areas that has come up short is origination of grain, meal and DDG's above the Kansas City interchange. This heartland of grain is currently not available to us via other US carriers, and we would hope that this merger will help us with access to the Iowa, Minnesota and the Dakota markets during certain times of the year.

OK Foods supports approval of the CP/KCS merger. This transaction would potentially provide OK Foods access to new markets, and potentially lower landed cost of ingredients.

Our parent company in Celaya, Mexico, would also benefit from this transaction for the same reasons as they purchase grain of the same KCS system we use. The addition of other unit train shippers will benefit us and all the stakeholders on the KCS system.

Verification:

I, Russell Edward Bragg, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Surface Transportation Board Members

RE: CP Bid for KCS

To The Members of the Surface Transportation Board,

The Oklahoma economy has steadily improved since the COVID-19-induced downturn last year. An important area of growth and recovery is international trade. The United States, Mexico, Canada (USMCA) agreement was recently updated to improve trade among these nations. In the wake of these negotiations, attention has turned to attempts to establish a single-line rail route connecting USMCA countries, spanning the distance from Mexico to Canada.

Earlier this year, Canadian Pacific Railway (CP) and Kansas City Southern (KCS) reached an agreement to merge the two railroads. If approved by the Surface Transportation Board (STB), the combined rail line will provide a 20-thousand-mile single-line route across the largest trade bloc in the world.

Hundreds of shippers across the United States have spoken up in favor of the CP-KCS combination. Unlike rail mergers brokered by the notorious tycoons of America's past, the union of CP and KCS will add competition and rail capacity. It will drive current and future economic growth in North America by initiating the more efficient use of existing infrastructure and offering more options for shippers. The merger will also speed up rail freight transport by easing congestion in the most congested rail hubs in the country.

The CP-KCS merger is good for America and good for Oklahoma. The combined rail network will connect key manufacturing centers with key distribution centers, undoubtedly benefitting Oklahoma export industries. For this reason and those outlined above, I encourage the members of the STB approve the merger between CP and KCS.

OLEUM ENERGY SOLUTIONS
821 Aubrey Avenue, Ste. B1
Ardmore, PA 19003

May 4, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

Oleum Energy Solutions, LLC (hereinafter "Oleum") was founded at the beginning of 2014 to provide supply chain management services primarily to the Oil and Gas Industry. Our team – which boasts a combined 30+ years of "railroading" experience – has been working with Canadian Pacific Railway company (hereinafter "CP") since then. We have worked hand-in-hand with CP to collectively deliver high-value service to mutual clients, with the majority of business moving from the United States into Canada. CP has provided us with good service, but its market reach is limited today with its lines only reaching as far south as Kansas City. As such, the CP must interline with other railroads to reach destinations beyond Kansas City to which we ship.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. Separately, they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist since CPKC will continue to interchange with all of their other existing interline partners. The fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers, and we urge the STB to approve CP's acquisition of KCS so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

OOCL

We take it personally

ATTENTION: Surface Transportation Board

March 30, 2021

RE: Finance Docket No. 36500, CP/KCS Combination

My name is Eric Witsaman and our offices are in Salt Lake City, Ut. I am the Vice President of Operations, North America with OOCL. In my role, I am responsible for procurement decisions for the North America market, including rail services.

OOCL entrusts a portion of rail business to CP's network which presently offers direct connections for our shipments moving to/from the Canadian ports of Vancouver and inland markets in Canada and the United States Mid-West.

OOCL supports approval of the CP/KCS combination. The transaction would provide significant benefits that we believe would be in the best interest of our organization.

From our perspective, the transaction promises to provide improved service options and enhance transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. These two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

OOCL relies upon CP's service to deliver containerized freight destined to or originating from overseas markets in a safe, efficient and cost-effective manner. CP has provided us with excellent service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

We are very excited about the transaction because it will allow a combined CPKC to provide new, efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

OOCL

We take it personally

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our containerized freight shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will unlock new opportunities for OOCL.

KCS and CP have had a cooperative relationship in the past, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, OOCL is supporting for the combination of CP and KCS, because it will enhance competition, provide expanded network and drive efficiencies for customers of all sizes. OOCL asking STB to explore with all stakeholders and review this proposal which may help bring more options, competition to the industry and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Patrick Mitchell and my business address is 609-1199 West Pender Street, Vancouver BC Canada. I am the Director of Supply Chain for Ostara Nutrient Recovery Technologies Inc and Ostara USA LLC. In my role, I am responsible for all facets of the Supply Chain – including transportation.

Ostara manufactures and distributes fertilizer globally. Specifically, within the USA and Canada, we manufacture our product in the USA and utilize the CP to deliver the product to our end customers who are located in the Canadian Prairies (Albert, Saskatchewan, and Manitoba). CP has been a strong partner for Ostara's shipping needs and has been a supportive and a valued partner.

Ostara supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Ostara has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Ostara has seen exponential growth over the past 5 years and our business has in turn, replied more heavily on bulk rail car shipments. This allows our material to travel long distances and as cost effective as possible. Without rail, our business would not be able to supply the Canadian Prairies with our unique and very specialize fertilizer. This product has proven results of increasing yields and delivering a better ROI to famers vs traditional fertilizers.

Our only manufacturing facility that utilizes rail cars is location in Florida. Our product travels with the CSX up to Chicago IL where it interchanges with the CP for final mile delivery to our customers in Canada.

Ostara recently purchased another manufacturing facility located in St Louis MO. This new facility will provide scale and a more centrally positioned origin for our business. This facility is currently not accessible directly by the CP. However, with this agreement, the CPKC network will allow us access and will allow the CP to continue as a valued partner in Ostara's growth.

Ostara Nutrient Recovery Technologies Inc.

TEL +1 604.408.6697 | URL www.ostara.com

To date, CP's support and service has been exceptional with our current transportation lane. I can only expect that this will grow stronger with the addition of the KC lines.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of fertilizer from St Louis MO into Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Ostara is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Ostara urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Joe Tompalski and my business address is in Acheson, AB. I am President of Overland Container Transportation Services (2013) Ltd. In my role, I am responsible for all activities associated with the running and management of OCTS.

OCTS is closely aligned with and dependent upon CP as a service provider. Our Company manages the first and last miles for containerized freight. OCTS routinely attends to CP facilities in Alberta where we collect loaded imports for delivery, and deliver loaded containers for export.

OCTS supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. OCTS sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

OCTS acts on behalf of the beneficial owners of freight of all kinds and ships or receives this freight from CP's facilities in Calgary & Edmonton. These customers are sometimes located in the South Central and Gulf region.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce equipment costs and improve our efficiency. Faster turnaround times facilitated by this merger will enable faster, more efficient movement of freight across North America, benefitting the end users as well as service providers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, OCTS is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. OCTS urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Palmer Construction is an aggregate supplier in Sault Ste. Marie, Ontario. We have sought the potential of shipping our products to other markets, both in Canada and the US, by rail. If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result.

I am writing to express Palmer Construction Group's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed

transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for

shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not

investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan

that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Terry Rainone,
Palmer Construction Group

Park Farm Grains Ltd.

March 30, 2021

ATTENTION: Surface Transportation Board

My name is Bill McLeod. My business address is 1962 Greenfield Road, Ayr, Ontario, N0B 1E0, Canada. I am Owner and President of Park Farm Grains Ltd.

Park Farm Grains Ltd. is a transloader in Ayr ON, served by the Canadian Pacific (CPRS). We transload inbound bulk dried distillers' grains into containers for intermodal export and are planning to expand our commodity offering to include Portland cement.

Park Farm Grains Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two

1962 Greenfield Road, Ayr ON N0B 1E0

Paterson GlobalFoods

March 29, 2021

ATTENTION: Surface Transportation Board

To Whom it May Concern:

Re: Merger of Canadian Pacific Railway Limited ("CP") and Kansas City Southern ("KCS")

My name is Andrew Paterson and I am the President and Chief Executive Officer of Paterson GlobalFoods Inc. ("Paterson"). In my role, I am responsible for all aspects of Paterson's operations, including significant rail shipment volumes throughout North America.

Paterson is a fully diversified grain company with origination locations in both Canada and the United States. Paterson ships grain, oilseeds, pulses, fertilizer as well as processed grain ingredients to destinations in Canada, the United States and Mexico. CP has become a key component of our supply chain and we are quite satisfied with the level of service and accountability that they have offered over our 113-year relationship.

I am writing to express Paterson's support for the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as Mexico – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

While CP provides Paterson with strong service domestically, CP's reach into the United States and Mexico is limited today. We know from experience that single line rail service options on CP would improve this reach and the economics thereof.

PATERSON GLOBALFOODS INC. | 22nd Floor, 333 Main Street, Winnipeg, Manitoba, R3C 4E2

Earning Your Trust Since 1908

CANADA'S BEST MANAGED COMPANIES Platinum member

For example, Paterson imports significant volumes of fertilizer from the United States into Canada by rail. Currently, the most economical option for Paterson is to ship manifest traffic from origins in Minnesota to Paterson's warehouse in Winnipeg; which creates significant inefficiencies when unloading. The CPKC combination will give Paterson direct linehaul access to unit train fertilizer imports from the St. Louis area, significantly improving both the economics and efficiency of this aspect of our business.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of soybeans from Manitoba to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

The entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Paterson is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Paterson urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Respectively,

PATERSON GLOBALFOODS INC.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Kyle Pattison and my business address is 701 1st Street, Clayton Iowa, 52049. I am of Owner of Pattison Sand Company. In my role, I am responsible for the operation and oversite of the company.

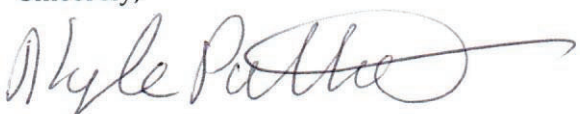
Pattison Sand Company (PSC) is Iowa's only Frac Sand Producer and is an Iowa based family business that roots date back to 1950s & Ag Business. PSC started producing sand in 2008. The quality and value of our product has resulted in a steady growth in our sales. We are located in Northeast Iowa and are exclusively served by Canadian Pacific. We primarily furnish sand to the oil and gas industry in, North Dakota, Texas and Oklahoma via multiple railroads. Over the years CP has provided us with good service, but its market reach is limited, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to. These complications of multiple railroads in the route limits our ability to expand the markets we serve and puts us at a competitive disadvantage to our competitors who have single-line rail options at their origins.

Moreover, we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]

Pattison Sand supports approval of the CP/KCS combination. The completed transaction will have the ability to provide a more seamless route to our customers while providing us with a broader market for our products and services such as rail car storage and other products that may link to Mississippi River and a larger storage facility.

From our understanding, the transaction promises to provide PSC with improved service options and transportation choices in the markets we serve. The combined CPKC network – with new single-line hauls and access would help us reach our existing markets and new markets more efficiently. In addition, with the two railroads' strong focus on safety and operational excellence, CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders

We are excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies, they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Pattison Sand Company is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Pattison Sand Company urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Kyle Pattison

PERFORMANCE
OFFICE PAPERS
21565 Hamburg Avenue
Lakeville, MN 55044
(952) 469-1400
FAX (952) 469-5890

ATTENTION: Surface Transportation Board

My name is Brad DeFauw and my business address is Performance Office Papers, 21565 Hamburg Avenue, Lakeville, MN 55044. I am the Vice-President of Shipping Logistics for Performance Office Papers. In my role I am responsible for the overall function of inbound (roll paper) and outbound (finished product) transportation needs of our company.

Performance Office Papers supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Performance Office Papers has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Performance Office Papers currently receives railcars of roll paper from CP-served facilities throughout the United States and occasionally from overseas. In the past, we have also shipped finished product to various distribution centers throughout the United States.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Performance Office Papers is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Performance Office Papers urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

My name is Christine Hoffman and my business address is 141 Hamilton Road, New Hamburg, Ontario, Canada, N3A 2H1. I am the Director of Operations of Pestell Pet Products Inc. In my role, I am responsible for the long-term operational strategy and day-to-day execution. This includes our rail strategy, planning, and procurement.

Pestell Pet Products Inc. has been a rail shipper of CP's for many years. We ship bulk clay by rail to our plant based in New Hamburg, Ontario. The traffic originates in Wyoming on the Rapid City, Pierre and Eastern Railroad (RCPE) and interchanges to CP in Tracy MN. In 2020, we shipped over 500 carloads on CP.

Pestell Pet Products Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network would help us reach new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example, CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs as a private fleet owner, and improve our efficiency.

The complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Curtis Chandler and I am President of PFL Petroleum Services Limited. My business address is 1865 Veterans Park Drive, Suite 303, Naples, FL 34109. As the President and founder of PFL, I am responsible for the oversight and supervision of all aspects of our business's railcar transactions, including railcar storage, railcar movement, and sourcing customers with counterparties to meet their specific needs.

PFL Petroleum Services Limited is a full service rail company covering the North American rail market. We provide storage and transloading solutions, railcar procurement and structured finance, third party logistics, and mobile cleaning and repair. PFL serves a broad base of clientele across many different industries such as energy, coal, grain, minerals, and food or animal products. We also have direct relationships with many car owners, such as banks and leasing companies.

PFL strongly supports the approval of the CP/KCS combination. This transaction would provide significant benefits that we are eager to see realized as soon as possible. As a Canadian American, I am greatly encouraged by this merger and the value it will unlock for Canadian import/export markets. From our perspective, the transaction promises to provide improved service options and enhanced transportation competition in the markets we serve. The combined CPKC network will help us and our clients reach existing markets and serve new markets more efficiently. We are particularly enthusiastic about the role the new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement.

Both rail lines have provided us with exceptional service, but their market reach is limited today. CP or KCS must interline with other railroads to reach most all of the destinations we ship to and this merger will create a valuable alternative to existing rail networks. We have learned from our experience and our customer's experience that a seamless, single-line rail service is far superior in terms of safety, economics, and efficiency. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

This merger has the potential to add significant value to PFL and our clients. We have numerous clients who operate between Canada, the US Gulf Coast, and Mexico who will directly benefit from this merger. In addition, as a railcar storage provider across the US and Canada, many of our facilities are served by KCS or CP. The combined CPKC network will create a plethora of storage and transloading efficiencies for our clients.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options. At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. This is truly an end to end merger with no existing parallel routes between the railroad. This transaction will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service

disruptions that have accompanied some past rail mergers. PFL Petroleum Services Limited has not often spoke favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

For these reasons, PFL Petroleum Services Limited is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. PFL Petroleum Services Limited urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Curtis R. Chandler, President

PFL Petroleum Services Limited

PHOENIX PARK

Phoenix Park Energy Marketing LLC
Remington Square Office Bld. B
10613 West Sam Houston Parkway North
Suite 100 Houston, Texas 77064
www.phoenixpark.co

Date: March 25, 2021

ATTENTION: Surface Transportation Board

My name is Donnie Schubert and my business address is 10613 West Sam Houston Parkway, North Houston, Texas 77064. I am President of Phoenix Park Energy Marketing LLC (PPEM). In my role, I am responsible for the day to day operation within North America; as well as expanding the current footprint.

Phoenix Park is a marketing company that currently moves approximately 7,200 car loads of LPG's within North America at which 90% of our traffic moves on the CP. As of mid-2022 our projected LPG traffic will increase well over 15,000 carloads & over 30,000 car loads of Distillates annually.

Phoenix Park supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Phoenix Park has not often spoken favorably about railroad consolidations; however, we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidations.

Phoenix Park ships LPG's from several CP-served facilities throughout Canada to our customers with terminals all throughout Mexico and Gulf region.

CP has provided us with tremendous service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of 7,200 railcars per year, which is intended to double in 2022.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Phoenix Park is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Phoenix Park urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Pioneer Construction ("Pioneer") has operations across Ontario. Pioneer has extensive aggregate properties throughout this area and has long sought to bring crushed hard stone to markets in other parts of Canada and the US where such materials are scarce. In addition, Pioneer has constructed railway sidings throughout Ontario. Many of our supplies of equipment and asphalt cement also come from the rail network from the United States. If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result.

I am writing to express Pioneer Construction Inc's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers

or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Malcolm Croskery,
Chief Operating Officer
Pioneer Construction Inc.

Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Pipeline Foods is an organic grain company that owns 2 assets in Canada and has 3rd party agreements with others, all of which happen to be on a CP Rail lines. Pipeline Foods buys organic grain from Canadian farmers and sells that grain across the globe and definitely via rail to the U.S. Given Pipeline is situated on CP Rail lines, allowing the CN to purchase the KCS would effectively eliminate any access to customers throughout and beyond the KCS rail line.

I am writing to express Pipeline Foods perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+

Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S.

PIPELINE FOODS

Winnipeg MB R3Y 1G4 | 204.594.8755
pipelinefoods.com

This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, in its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for

PIPELINE FOODS
1-104 Scurfield Blvd, Unit 1
Winnipeg MB R3Y 1G4 | 204.594.8755
pipelinefoods.com

several years, so it will have incentives to do it through higher prices for CN's current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board ultimately denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only Pique Supply by creating more efficient supply chains across the North American continent, but also open up new opportunities and new markets for businesses. Currently Pique Supply and CP work together on pre-paid Intermodal/International & Carload traffic inbound Canadian and Cross-border shipments. CP is critically important for transporting raw martial & finished product enabling Pique Supply to deliver to North American customer base.

Pique Supply is thrilled about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our inventory costs and improve our efficiency. By having a single source solution that avoid interchanges.
- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our intermodal shipments from or to Canada to or from The Southern United States & Mexico

Pique Supply urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely,

Stephanie Kennedy

Public Record

ATTENTION: Surface Transportation Board Docket # FD36500

My name is Stephen Banahan, and my business address is 482 Milo Rd. Dover-Foxcroft, ME. I am the Industrial Sales Manager of Pleasant River Lumber Co. Inc. In my role, I am responsible for managing all rail traffic for our 5 Sawmills.

Pleasant River Lumber ships from two locations on the CP. We ship approximately 325 cars per year and hope to increase that to 500 cars in the future.

Pleasant River Lumber supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Pleasant River Lumber has not spoken in favor of railroad consolidation, but we believe this merger will be beneficial to our business. Our company needs to ship approximately one third of our annual production by rail. It enables us to ship to a much wider geographic customer base than we are shipping via Flat Bed Trucks. It makes us more competitive in distant markets, and it reduces our reliance on trucking.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber from Maine to various destinations in the Midwest and South.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico,

and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Pleasant River Lumber is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Pleasant River urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Stephen Banahan, declare under penalty of perjury under US Law that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Port Arthur Terminal

March 30, 2021

ATTENTION: Surface Transportation Board

My name is Brad Sanders and my business address is 811 Main St, Suite 2800, Houston, TX 77002. I am Executive Vice President, Chief Commercial Officer of Port Arthur Terminal LLC ("PAT"). In my role, I am responsible for developing the commercial strategies and the proper execution of them for PAT.

PAT has enjoyed good relationships with Canadian Pacific Railway ("CP") and Kansas City Southern Railway ("KCS"), providing our customers services that involve rail solutions for DRUbit™ and Dilbit in the United States and Canada. These services require close operational collaboration and/or negotiations with both rail carriers. PAT believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service that will enable us to better serve our customers and communities.

PAT supports approval of the CP/KCS combination. The transaction will provide benefits that we are eager to see realized.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP and KCS have both been very responsive to our needs, but their respective market reaches are limited today, as CP's lines only go as far south as Kansas City and KCS's only as far north as Kansas City. CP and KCS must interline with other railroads to reach destinations beyond Kansas City to which we ship or into which we may expand.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce equipment costs and improve efficiencies for our customers.

811 Main Street • Suite 2800 • Houston, Texas 77002 • Phone 281/291-0510 • Fax 281/291-0321

KCS and CP have shown us a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – makes it less likely that the transaction will have any significant adverse effects on competition. It should make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, PAT is voicing its support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. PAT urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is William Berkey and my business address is 300 Lindenwood Dr. Malvern, PA. I am a Logistics Manager of Potters Industries. In my role, I am responsible for transportation and the procurement of our main raw material.

Potters Industries ships cullet all over North America to all of its facilities. The CP plays an important part as it services at least one of our facilities.

Potters Industries supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Potters currently receives cullet via the CP at our Muscatine, IA facility. Even though the CP provides good service, I believe this merger will make their service even better. With facilities in Mexico, we are excited about opportunities to ship cullet from the US to our Mexico plants.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of cullet from the US to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse

effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Potters Industries is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Potters Industries urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

PREMAY
Pipeline Hauling LP

Cynthia T. Brown
Chief, Section of Administration
Office of Proceedings
Surface Transportation Board
395 E. Street, S. W.
Washington, DC 20423-0001

Dear Ms. Brown

Premay Pipeline Hauling LP is a CP customer in Canada where we have worked on numerous pipeline projects over the past decade. Our working relationship covers many facets of the railroad system (cargo loading, rail freight, and cargo offloading). These different aspects of work have provided the opportunity for Premay & CP to work collaboratively within many departments across the CP organization.

Premay Pipeline Hauling LP supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

We believe that the combination of CP and KCS would help us to win in our markets. CP's strong track record of success with superior service and safety give us confidence that a combined CP-KCS would be best positioned to serve our needs.

Premay Pipeline Hauling LP is a trucking company that works with CP on projects that require long-haul distances, as well as, CP siding to accommodate the loading and offloading of cargo (pipe). The CP coordination of these pipeline projects contribute to the success of Premay and the projects as a whole.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Premay Pipeline Hauling LP is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Premay Pipeline Hauling LP urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Dave Morrison

VP, Sales & Marketing

Premay Pipeline Hauling LP

Priam Logistics Inc.

Connecting the world

To Whom It May Concern:

The purpose of this letter is to provide written support from Priam Logistics Inc. for the acquisition of Kansas City Southern (KCS) by Canadian Pacific Railway (CP). As a company that sources goods and materials from across North America we see this combination of railroads as a benefit to our supply chain, and the North American transportation network. CP plays a critical role in our supply chain, transporting goods across Canada and the United States. Priam believes this expanded network will benefit our company by creating more efficient supply chains, by opening up new opportunities and new markets for businesses, and by allowing the creation of new supply chain strategies that could not exist with today's North American rail network.

The combination of the CP and KCS networks will create improved service options and competition while unlocking new sourcing opportunities in the US and Mexico. Furthermore, the ability to convert truck moves to a single line rail alternative will allow a more environmentally friendly transportation alternatives that are safe, fast and efficient and which do not exist today

It is our belief that a combined CP and KCS will help create a more efficient, safer and better North American rail network to the benefit of all. We urge the STB to approve CP's acquisition of KCS in a timely manner and allow shippers across North America to begin to benefit from this enhanced rail network.

Sincerely,

Troy Wasmuth
President
Priam Logistics Inc.

Suite 300 – 330 St. Mary Ave. R3C 1M5 Phone: 204-819-7284 Toll Free: 1-888-200-7183

ATTENTION: Surface Transportation Board

My name is Joel Fenger and my business address is 109 1st Street Hoffman, MN. I am the Grain Division Manager of Pro Ag Farmers Coop. In my role, I am responsible for the overall performance of the grain division for Pro-Ag farmers Coop.

Pro Ag is a shipper on the Canadian Pacific. Pro Ag ships corn, soybeans out of our Hoffman terminal. We also load some singles out of our Parkers Prairie location. Pro Ag generally ships over 2600 cars a year out of Hoffman.

Pro Ag supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Pro Ag has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Last year we had low quality grain that we couldn't get out to our western PNW market. We relied on taking our low quality to the eastern ethanol market. Having this transaction with the CPKC we would have been able to find homes for our grain down south in the golf market. It would benefit Pro Ag with the summer soybean market. Most years the soybean PNW program is done by March, which usually turns into a gulf market. With this merger we would be able to get beans down to the gulf on a reasonable timely rate.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Pro Ag is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Pro Ag urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

pullman innovations

2701 E. 100th Street Phone: 773.978.5130
Chicago, IL 60617 Fax: 773.978.7125

ATTENTION: Surface Transportation Board

My name is Joseph Thomas and my business address is 2701 E 100th St. Chicago, IL 60617. I am GM of Rail Logistics of Pullman Innovations. In my role, I am responsible for coordinating inbound and outbound Rail traffic.

Pullman Innovations provides highly nutritional, vegetable oil products formulated to meet your feed ingredient needs. We ship and receive from Canada, Mexico and the United States. The CP has been in my opinion has had the fairest rates across the board regarding other Class 1 railroads. Their customer service has also been number 1. We currently use them for all of our Canadian shipments and are excited about the possibility of adding southern US and Mexico area as an option. Pullman Innovations supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Pullman Innovations has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.] Currently and historically our transportation needs have been delayed due to the connecting short lines and or other options. Pullman Innovations currently receives a majority of our raw soapstock product from Trois Rivieres, PQ, which is serviced by the CP direct to our facility in Chicago. I have had a great experience in the past with the lane. We feel that adding the option of a continues lane south of Chicago will not only decrease our overall costs, but also bring down our dwell time on car travel. In our opinion the CP has provided us with great service and adding the ability to open more market for them will in turn help us. We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Veg Oil and soapstock.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico

ATTENTION: Surface Transportation Board

My name is Ray Hassan and my business address is PO Box 56, Lajord Saskatchewan, S0G 2V0. I am the Logistics Manager of Purely Canada Foods. In my role, I am responsible for all exports via rail in Canada, the US and into Mexico.

Purely Canada Foods is currently shipping all across Canada to both ports as well as around 15 to 20 cars per month into Mexico on CP and KCS lines. We have a long standing relationship with CP which only stands to grow well into the future given the excellent service provided by CP and in turn KCS when it comes to our US and Mexico shipments.

Purely Canada Foods supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Purely Canada Foods has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Currently we ship approximately 200 carloads a year of grain from our Lajord SK facility (which is serviced by a CP shortline partner the Stewart Southern Railway, who interchanges with CP at Richardson, SK) to Mexico. I believe this CP/KCS combination will benefit us by single-line efficiencies on our current business into Mexico, as well as to further expand on this market. While CP has provided us with exceptional service, we have also been somewhat hesitant to explore some markets within the US due to its market reach being limited today, as its lines only go as far south as Kansas City.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of grain from Saskatchewan to Mexico and the US.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This is especially important with our private car fleet. It is imperative and very beneficial to our business when transit times are reduced to allow us to turn equipment around move efficiently.
- CPKC will also allow us to target specific customers in Mexico that required specific lane shipment that previously may not have been as competitive for Purely Canada Foods versus some of our competitors.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Purely Canada Foods is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Purely Canada Foods urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Ray Hassan , declare under penalty of perjury under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Purolator

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am writing to provide my written support for the proposed acquisition of Kansas City Southern (KCS) by Canadian Pacific Railway (CP). Purolator Inc. is Canada's leading courier provider, and through Purolator's International business, we extend our reach within the North American market place. As VP Transportation, who is responsible for middle mile logistics, I believe this combination of railroads will benefit the North American supply Chain. CP plays a critical role in the Purolator Inc. supply chain, transporting goods across the Purolator network safely and ensuring that Purolator meets our service commitments to our customer base.

As North America's safest railroad, I firmly believe that CP and KCS will continue to provide Purolator Inc. with safe, fast and efficient service improving the North American supply chain's environmental footprint. Purolator Inc. supports CP's acquisition of KCS.

Sincerely,

Joe Lombardo

R. G. PHILLIPS GROUP OF COMPANIES INC.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Greag Phillips and my business address is 7 Clair Rd. W, PO Box 27016, Guelph, ON, N1L 0A6. I am owner and operator of RG Phillips Group of companies Inc.

RG Phillips has leased and located our Transload operations at Ingersoll, ON. We service inbound steel among other commodities for transload and delivery in the local area.

R.G. Phillips supports supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. RG Phillips sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We receive steel rail shipments into our Transload facility in Ingersoll, ON for purpose of transloading and delivery to our Customers in the local area. These inbound shipments originate from all over North America.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach origins beyond Kansas City that we received shipments from (or that could expand the markets we serve effectively).

In addition, I know from experience that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies, they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, RG Phillips is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. RG Phillips urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Greag Phillips

R. G. Phillips Group of Companies

Ragasa

ATTENTION: Surface Transportation Board

My name is Francisco Belden and my business address is Av. Dr. Jose Eleuterio Gonzalez 2815, Col. Mitras Norte, Monterrey, Nuevo Leon, Mexico, 64320. I am the Commodities Procurement and Sales Director of Ragasa Industrias. In my role, I am responsible for the international and national procurement of our primary oilseed, soybeans, the design of the commercial strategies implemented in our bulk oil division, risk management and logistics management.

Ragasa Industrias is a family-owned company with more than 100 years of experience in the oilseeds industry. Founded in 1917 by Raúl García as a crushing company, today Ragasa has the largest crushing soy facility in North America and is one of the primary importers of U.S. soybeans in Mexico, accounting for more than 95% of the soybeans we crush. Given the location of our plant in the Northern part of Mexico, the railway has become the best medium through which we transport our soybeans from our suppliers. Obtaining the most time efficient method of transportation is of the utmost important for us as our company and our customers are an important link in the country's agro-industrial chain. Ragasa not only transforms the products of the field for livestock consumption, but it also transforms them into products for the end-consumer through Nutrioli, the number one cooking oil brand in the Mexican market.

Ragasa Industrias supports approval of the CP/KCS consolidation. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and stimulate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In addition to this, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Ragasa sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The CPKC network would grant us the following benefits:

- Greater access to grain elevators found in Canada and other parts of the United States that we have not been able to reach with the current railroad system
- Diversification of our current product portfolio, as our current focus is on soybeans but would like to expand our sourcing options into the canola market
- Establishing a one, combined railroad network would expedite and facilitate every point our supply chain, allowing each and every single party involved in the operation to serve each other better

Thus, we are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, as well as with larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of soybeans and canola from the United States and Canada to Mexico.

Ragasa.

- Under the USMCA trade agreement, CPKC single-line routes would play a key role in expanding access to growing markets across the United States, Mexico and Canada, becoming a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Current transit times have not been an optimum level and a combined network would greatly reduce transit times and allow us to achieve faster and higher crushing levels given the highly increasing demand in our domestic market.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Ragasa is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Ragasa pleas the STB to approve CP's acquisition of KCS as swiftly as possible so that their systems can be integrated, and the end-to-end benefits of this deal be realized for the benefit of all stakeholders.

VERIFICATION

I, Francisco Belden, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

RAHR MALTING CO.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Robert Sutton and my business address is 800 1st Ave West, Shakopee, MN . I am VP Sales & Logistics of Rahr Malting Company. In my role, I am responsible for Sales and Logistics for our malt manufacturing plans in Canada and the USA.

Rahr Malting Company is a bulk rail shipper using CP Rail from our facilities in Canada and the USA to customers across Canada and the USA with great satisfaction in CP's service.

Rahr Malting Company supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Rahr Malting Company has rarely spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Rahr Malting Company ships bulk railcars from our Shakopee, MN facility via CP Rail to Chicago for interchange with other railways to service our customers in the eastern United States. We also ship from our Alix, AB Canada facility to the Montana and Idaho borders for interchange with another railway for delivery to our customers in the Western United States.

While we do not have any customers being serviced by the KCS Railway today, we are excited about the prospect of being able to use the CPKC for new single-line haul offerings into growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able

to offer the kind of seamless, single-line service we have with our other transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Rahr Malting Company is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Rahr Malting Company urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

FREIGHTCAR.COM
RAILROAD TECHNOLOGY CORPORATION
335 RIVER DRIVE
JUPITER, FL 33469
415 515-2110

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Robert Ness and my business address is 335 River Drive, Jupiter, Florida. I am the President & CEO of Railroad Technology Corporation. In my role, as CEO I manage a fleet of heavy capacity and specialty type railcars. Our fleet primarily serves electric utilities and logistics providers for rail transport of large power transformers and related power generation equipment critical to operation of the North American Eclectic Grid.

Railroad Technology Corporation railcars transport power transformers from manufacturers in Mexico including GE PROLEC and SIEMENS ELECTRIC. These shipments originating in Mexico may be bound for destinations throughout North America – 48 contiguous states, Alaska and Canada. Our relationship with CP and KCS is quite satisfactory, and their service is uniformly satisfactory.

Railroad Technology Corporation stands in support and for approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the proposed CP/KCS transaction will provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Railroad Technology Corporation has not been in favor of Class I railroad consolidation in the past, however the KCS / CP combination promises to be beneficial. We do not see any potential downside in the KCS / CP consolidation as it would directly benefit our business by reducing the number of times our railcars have to interchange between carriers.

As described above, we ship power transformers from Mexico throughout the contiguous 48 states, plus Alaska and Canada. We have a small fleet of very high value railcars which are used to transport very high value power generation equipment, critical to the operation of the North American Electric Grid. The combination of CP / KCS would clearly benefit our business model with potential cost savings due to reduced railcar interchange. Based upon our experience, single line rail service as proposed in the KCS / CP merger will be superior to the status quo.

We are very excited about this proposed transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of large power transformers originating at plants in Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by reducing transit times and often lengthy delays which are due to interchange of cars between carriers.
- Reduced car handling as a result of the proposed merger will directly save us additional and unnecessary maintenance expense.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

The attention of CP and KCS to safety and operational effectiveness is impressive. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers such as the Chicago North Western and Southern Pacific mergers into Union Pacific.

For these reasons, Railroad Technology Corporation voices strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Railroad Technology Corporation urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

I, Robert M. Ness, hereby certify that I am the President & CEO of Railroad Technology Corporation, a Florida corporation, and that the foregoing is true and correct and that I am qualified and authorized by Railroad Technology Corporation to submit this letter.

Red Leaf Pulp

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Joe Hinz and my business address is 205 – 2100 Airport Drive, Saskatoon, SK. I am the Director of Project Development for Red Leaf Pulp (RLP). In my role, I am responsible for determining the locations of RLP capital projects and development of reliable supply chains.

Red Leaf Pulp is developing the first non-wood pulp mill in Canada, producing a unique unbleached product demanded by the US$250 Billion paper and packaging market. The combination of CP/KCS will allow Red Leaf Pulp to maximize shipping efficiencies and customer service to pulp agents and buyers in central United States and overseas markets.

Red Leaf Pulp supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Red Leaf Pulp has not often spoken favorably about railroad consolidation due to reduced competition, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We will ship market pulp from our CP-served facilities in Saskatchewan and other potential locations in western Canada and mid western United States to our customers in the Central, South Central and export markets.

CP's market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that could expand the markets we serve effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

505 - 2755 Tutt Street, Kelowna, BC - V1Y 0G1
redleafpulp.com

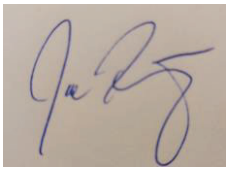
Red Leaf Pulp

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of market pulp from Western Canada to South Central United States and export markets.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. There are usually delays in shipping and customer service levels when shipments rely on regional service providers. This combination will streamline the above which will result in improved efficiency and greater customer satisfaction levels.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. Senior management at Red Leaf Pulp have managed pulp and grain operations in western Canada in previous careers that were serviced by a larger Class I competitor organization and have experienced contractions in business volumes and lower levels of customer service due to sub-standard performance and lack of competition.

For these reasons, Red Leaf Pulp is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers

Red Leaf Pulp

of all sizes. Red Leaf Pulp urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Joe Hinz

RED MAPLE CAPITAL

OFFICE 5016 48th St., Lloydminster, AB T9V 0H8

MAY 21, 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Red Maple Capital is an investment company with operating companies in many businesses across western Canada in the agriculture, oil and gas, and construction space. Many of our raw materials and equipment come in by rail and many of our products are exported to the United States.

If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result. We are pro-business but we are also pro-competition and if CN were allowed to proceed with this transaction it would have a devastating impact on the competitiveness of the rail industry and would precipitate further requirements for the rail consolidation increasing this issue further. This would result in higher input prices for us and higher export prices for the world, if customers can even access the network which could be closed for all but the biggest customers.

I am writing to express Red Maple Capital's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would

be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed

to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its

existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Jeff Wallace,
Red Maple Capital

Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Redhead Equipment is an equipment dealer which provides agricultural and construction equipment as well as heavy trucks, together with parts and service support, to the entire province of Saskatchewan through its eight branches in the province. The products that are produced with our equipment are shipped around the world. Redhead has long received the equipment from OEM manufacturers, primarily located in the US, to its various branches in Saskatchewan by rail and most of the outgoing export of agriculture products is by rail.

If CP were to acquire Kansas City Southern this would allow us to have real competition along the rail network with CN which would provide us with better access to markets, betting pricing, and service but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a monopoly over its competition that prices would increase and service would suffer. They would not be accountable to their customers because the customers would have nowhere else to turn. As a result, we would have serious cost shocks because of increased pricing, supply shocks that would be difficult to overcome and markets that would be more difficult to reach as a result. We are pro-business but we are also pro-competition and if CN were allowed to proceed with this transaction it would have a devastating impact on the competitiveness of the rail industry and would precipitate further requirements for the rail consolidation increasing this issue further. This would result in higher input prices for us and higher agriculture export prices for the world.

I am writing to express Redhead Equipment's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S.

This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

Date: April 28, 2021

ATTENTION: Surface Transportation Board

My name is Doug Punke, and I am the CEO of Renewable Products Marketing Group (RPMG). On behalf of RPMG, I am reaching out concerning the pending proposal by Canadian Pacific (CP) to acquire the Kansas City Southern (KCS).

RPMG ships ethanol from origins in Iowa, Minnesota, and North Dakota to export locations in the US gulf, and Distillers Dried Grains to markets in Mexico. We strongly support approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Mexico as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction should not have any adverse effects on competition. It should make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We are aware of the position that DOJ took in the CP docket (FD 36500) regarding the application of the KCS waiver from the 2001 merger rules, and more pointedly with respect to the voting trust that CP proposed for its transaction.

RPMG is quite familiar with the rail transportation marketplace and how a potential CP acquisition of KCS would affect competition. From our vantage, there is no doubt that ***a CP transaction would increase rail shippers' competitive options, not reduce them***. We are not concerned about KCS being placed in voting trust pending the STB's review of that proposed transaction. We are eager for that review to proceed as expeditiously as possible.

We support CP's acquisition of the KCS and urge the STB to approve same.

Sincerely,

Douglas E Punke

Doug Punke

CEO - RPMG

RICHARDSON

March 31, 2021

ATTENTION: Surface Transportation Board

I am Vice-President, Transportation for Richardson International Limited ("Richardson"), Canada's leading agribusiness. Richardson was established in 1857, making it one of Canada's oldest companies. It continues to be privately-owned by the Richardson family, with its headquarters situated in Winnipeg, Manitoba.

Richardson is a vertically-integrated agribusiness, involved in the purchasing, handling, processing and export of North American grains and oilseeds. It owns and operates a network of grain terminals and crop input locations situated throughout Western Canada, along with port terminals in Vancouver and Prince Rupert (British Columbia), Thunder Bay and Hamilton (Ontario) and Sorel (Quebec).

Richardson canola processing plants are located in Yorkton (Saskatchewan) and Lethbridge (Alberta), with packaging operations in Lethbridge, Oakville (Ontario) and Memphis (Tennessee). In 2013, Richardson expanded its processing business to include oat milling and currently operates mills in Portage la Prairie (Manitoba), Martensville (Saskatchewan), Barrhead (Alberta), South Sioux City (Nebraska) and Bedford (United Kingdom).

Transportation logistics play a critical role in Richardson's operations and involve a number of transportation means including truck, rail and marine (barge, lakers and ocean freight). Approximately 50% of Richardson's facilities are served by CP. As a result, Richardson relies heavily on CP's service in order to achieve its business objectives. Quite simply put, if CP fails to provide adequate rail service, then Richardson's business will certainly fail.

When considering the proposed CP/KCS combination, Richardson sees the potential of resulting improved rail service. In particular, CP's ability to directly ship railcars from Richardson facilities in Canada to a wider number of destinations in the United States, including destinations significantly closer to Richardson's Memphis plant, offers obvious opportunities. Similarly, the ability for CP to move unit trains directly to Richardson customers situated in Mexico provides shipping opportunities that are currently limited. The growing opportunities for cross-border North American trade under the USMCA are more likely to be achieved with an efficient cross-border rail carrier such as the one that would result from the CP/KCS combination. Furthermore, we fail to see any prejudice that would result from the proposed combination.

For these reasons, Richardson supports the combination of CP and KCS and requests the Surface Transportation Board to grant its approval. We would be pleased to provide any further information that you may require for that purpose.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Jesse Regier and my business address is 6707 39th Street, Leduc, AB I am Director of Operations at Rocanda Enterprises and Rocanda USA. In my role, I am responsible for logistics, inbound and outbound shipping, product forecasting, sourcing, and supply chain.

Rocanda relies heavily on CP as means of transporting key materials from the USA into Canada. As our company expands, we hope to add USA-USA routes, Canada to USA routes, and Mexico to USA/Canada routes. CP is a valuable partner to Rocanda in our growth as a Canadian and USA manufacturer and distributor.

Rocanda fully supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). Rocanda has manufacturing facilities in Texas, Wyoming, and Alberta, and has suppliers based across Canada, USA, and Mexico. We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior. The greater access that we have to single-line rail options, the more likely it is that we can expand operations and work more seamlessly with our suppliers.

In addition, we have had very negative experiences with rail lines where lots of switches occur between different rail companies. Lines that went from UP to BNSF to CP have been notorious for us in causing delays, and even lost cars. We have never experienced any of these issues on single-line routes, and intend to stick with single-lane routes whenever possible. A combined CPKC will assist in this goal.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of calcium chloride from Mexico into USA and Canada, and mineral oil from various USA states into Canada.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Rocanda is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Rocanda urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Jesse Regier

Rocanda Enterprises and Rocanda USA

ATTENTION: Surface Transportation Board March 29, 2021

My name is William Wallace and my business address is Bristol Circle In Oakville Ontario . I am Senior Vice President of Routes Transportation Group. In my role, I am responsible for supplying transportation and warehousing for our clients in Canada, USA and Mexico.

Routes Transport Group has been a long time client of CP rail using their services within Canada on full Containers. In addition, we use CVP rail for the majority of inbound ocean container business.

Routes Transport Group supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Routes Transport Group. In the past we have not been in support of such a merger however with the leadership of CP Rail we see this being a very large step forward in the Global market that we serve.

It is expected that we will be taking advantage of the merger within our automotive and general commodities business units that serve Mexico and The USA markets from and to Canada.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City.

2823 Bristol Circle/Suite 3 P 905/829/3878 F 905/829/1742
Oakville/ON/L6H 6X5 T 800/392/8416 routestransport.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, Transportation modes that serve our markets.

- under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will be accomplished by a " One Stop " approach to Transportation.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Routes Transportation Group is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Our Company urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

May 17, 2021

Surface Transportation Board
395 E Street SW Washington, DC 20423

To whom it may concern:

Runde Metal Recycling LLC is a supplier of scrap metal for recycling purposes. CP is one of the rail lines we use to transport our scrap metal.

I, Matthew Runde, Vice President/Operations Manager at Runde Metal Recycling, LLC, supports approval of the proposed combination of CP and KCS.

From our perspective as a supplier, the transaction is beneficial because it will strongly support growth and investment in the North American rail network.

Runde Metal Recycling, LLC works closely with the CP rail for shipments as well as processing scrap metal on site to be delivered directly to steel mills and foundries for recycling purposes. We are constantly looking for new opportunities to ship our scrap metal and this merger will open up many new markets for us.

The new transportation services that CPKC will bring to their customers will stimulate growth in rail transportation, will provide new competitive options that support growth at CPKC, and will shift freight from trucks on the highways to the rail system as well as barge traffic. All of these things will help support economic and employment growth in the United States and across the Continent under the USMCA trade agreement.

In turn, that growth will support investments in new rail capacity that benefit shippers, the public, and suppliers like us alike.

We see the transaction as only beneficial; we do not anticipate any negative impacts to the environment, to competition, to safety, or to any other public interest. For these reasons, we hope to see the transaction close and the benefits come to light as soon as possible.

Sincerely,

Matthew Runde
Vice President/Operations Manager
Runde Metal Recycling LLC

STB Finance Docket No. 36500
CP-KCS Proposed Combination

26, Chemin de la Pêche, Pont-Rouge (Québec) G3H 1C3 • téléphone : (418) 873-4509 • télécopieur : (418) 873-2561

ATTENTION: Surface Transportation Board

My name is Alexandre Boillat and my business address is 26 Chemin de la Pêche, Pont-Rouge, Québec, G3H1C3, Canada. I am sales supervisor of Sable Marco Inc. In my role, I am responsible for sales team supervision, marketing operations and some specific customers orders.

Sable Marco Inc. is working with CP to ship some of his products to British Columbia since a few years. We are very satisfied with the relationship and service.

Sable Marco Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sable Marco Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

> **From our factory in Pont-Rouge, Québec, Canada, we ship polymeric sand for paver joints, ice salt, de-icer, anti-skid stone to British Columbia. Some of the containers are unloaded at destination and then goes to Portland Orgeon by truck.**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sable Marco Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. SACRAMENTO ENERGY RESOURCES

1231 Old Annetta Rd Aledo, Texas 76008 817-441-6568 Fax: 817-441-5880

ATTENTION: Surface Transportation Board

My name is Mitchel Johnson and our business address is 1231 Old Annetta Rd, Aledo, TX 76008. I am VP of Operations of Sacramento Energy Resources, LLC. In my role, I am responsible for the overall operations of Sacramento Energy Resources.

Sacramento Energy Resources is a wholesale propane that buys and sells propane in Canada, Mexico and the US.

Sacramento Energy Resources supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sacramento Energy Resources sees this transaction as beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship propane from our CP-served facilities in the Alberta, Canada area, all the way to Monterrey, Mexico and points in between

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

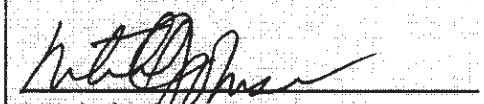
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of propane.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by having better rates across one carrier instead of having to switch carriers multiple times.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sacramento Energy Resources is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Sacramento Energy Resources urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Washington, DC 20423

RE:
STB Finance Docket No. 36500
CP-KCS Proposed Combination

Dear Ms. Brown:

Sand Technologies mines industrial sands in Wisconsin. In addition, our company handles rail logistics to ship Feldspar, Mica, and high-purity Quartz out of South Dakota, destinating throughout the United States.

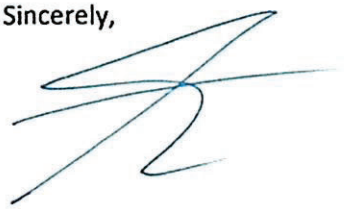
Sand Technologies supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sand Technologies has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation. The CP Rail has been great to work with, both on a single-line haul and switching to many short lines.

Sand Technologies has new opportunities in these mineral markets with immediate transportation needs for the CP. The CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively). We know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

The newly combined CPKC would provide reliable, more efficient rail service options. In turn, strengthening competition against larger rail carriers and truck services throughout our markets. Expanding access to the growing markets under the USMCA trade agreement across the United States, Mexico, and Canada would become possible with the single-line routes the new CPKC merger would provide. Thus, improving transit times and reliability, which are key in reducing equipment costs and increasing efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of



seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sand Technologies is voicing strong support for the combination of CP and KCS. It will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Sand Technologies urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Tim Barth
President
Sand Technologies, Inc.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

April 29, 2021

ATTENTION: Surface Transportation Board

My name is Brent Avery, and my business address is #1 Railway Avenue, Chaplin, Saskatchewan S0H 0V0. I am General Manager of Saskatchewan Mining and Minerals Inc. In my role, I am responsible to oversee the complete operation at the Chaplin, Saskatchewan facility.

SMMI manufacturers Anhydrous Sodium Sulphate and ships directly onto the CP who provide good service, on time delivery and competitive pricing. CP delivers either direct to our customers or interchanges with the other Class 1 railways for further movement.

SMMI supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. SMMI has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship Sodium Sulphate from our CP-served facility in Chaplin, Saskatchewan to our customers with plants across Canada and all areas of the United States with potential increased business in the South Central and Gulf regions. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that could expand the markets we serve effectively. We know from experience both our own, and that of our competitors who have single-line rail options at their origins that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Sodium Sulphate from Chaplin, Saskatchewan to St. Louis, MO., Oklahoma, Louisiana, and Mexico customers.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Alleviating the interchange in Kansas City will increase our railcar turn times and avoid the possibility of railcars sitting idle in the yard.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, SMMI is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. SMMI urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Brent Avery
General Manager
Saskatchewan Mining and Minerals Inc.

SETHNESS ROQUETTE
EXCELLENCE IN CARAMELS

My name is Lloyd R. Glanz and my business address is 1347 Beaver Channel Parkway, Clinton, IA. I am VP/Plant Manager of Sethness Roquette. In my role, I am responsible for general operations of this Caramel Color manufacturing facility.

Sethness Roquette is a routine beneficiary of the services of the CP Railroad for delivery of our liquid caramel color products to various large food and beverage industries across North America.

Sethness Roquette supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

> **Sethness Roquette is currently exploring the possibility of expanding into Mexico South America with some of their product requirements and views this venture as something that can contribute to our success in this region.**
>
> **CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).**
>
> **And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.**

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Caramel Color from the Midwest.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. ATTENTION: Surface Transportation Board

My name is Ron Law and my business address is 3456, Bridgeway Street, Vancouver B.C. V5K1B6 . I am the President of Sharp Base Shipping And Transport (Canada) Ltd. In my role, I am responsible for business in between Canada and US traffic and the ground railroad services..

Sharp Base Shipping And Transport (Canada) Ltd. Had been worked with Canadian Pacific Railway for many years and we usually shipped with CP for the fresh vegetables, fruits, frozen seafoods to / from US and Canada and CP provided a fast and accurate services and support for the reefer containers and dry 53' containers in our traffic

Sharp Base Shipping And Transport (Canada) Ltd supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible and this will help us to develop the business in US and Canada

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sharp Base Shipping And Transport (Canada) Ltd. has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We usually shipped hardwood Maple logs from Halifax, NS to Chicago and Gulf area by ground trucks and if CP and KCS merged , we can truck the products to Montreal and using CP intermodal services and the transportation costs of those routes will certainly less, efficient and more safer by using trucks

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of hardwood maple logs from Montreal, QC to Chicago and Gulf area
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency rather than we were using the flat deckers running a single trip but paid the round trips costs,
- Our customers in US will be more satisfied to use an efficient,less costs, more safer way of transportation especially in Winter time

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sharp Base Shipping And Transport (Canada) Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Sharp Base urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Surface Transportation Board
Washington, D.C.

Dear Sir/Madam, Re: CP Rail/KCS Merger

The Shipping Federation of Canada, established in 1903, is a national trade association representing the owners, operators and agents of ocean-going vessels trading between North American and overseas ports. We are writing on behalf of our members whose international cargo ships call at United States ports on the west, east and/or Gulf coasts. Those member companies include container, breakbulk and bulk carriers, many providing door to door service to their clients, utilizing truck and rail service for the inland portion of the cargo transport.

Our members fully support the recently announced Canadian Pacific Rail, Kansas City Southern Lines merger, for several reasons, but specifically, this merger will allow international ocean shipping companies access to new markets, through those U.S. gateway ports with an inland transportation alternative, leading to enhanced competition, both in terms of price and service for their customers trading to and from international markets.

Since this merger, if approved, will provide those beneficial cargo owners with more choice and improved service, we strongly support the merger of these two rail service providers and are available to answer any questions the Surface Transportation Board may have.

Sincerely,

M.H. Broad

Michael H. Broad

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Silver Peak Capital is an investment company with operating companies in the transportation, construction, agriculture and heavy equipment industries, throughout Canada. We are actively examining transactions that would allow us to invest in the United States and into Mexico. One of our potential transactions is with a product that is shipped by rail through the United States and into Mexico. If CP were to acquire Kansas City Southern this would allow us to have true competition along the rail network we are looking at with CN but if CN completes this acquisition this would not be the case. We are concerned that if CN were given a true monopoly over it's competition that prices would increase and service would suffer to the point that we would not be able to pursue our investment.

I am writing to express Silver Peak Capital's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place

"heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same

points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

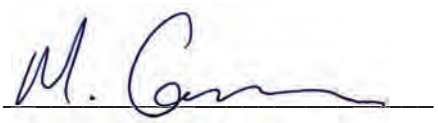
Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for



KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Martin Gran,
Chief Financial Officer,
Silver Peak Capital

SHIPPER SUPPORT LETTER- SIMARD TRANSPORT

ATTENTION: Surface Transportation Board

My name is Donald Abraham and my business address is 1212, 32nd Avenue
Lachine, QC H8T 3K7 and I am the Executive Vice President for Simard Transportation.

Simard Transport is a long standing partner of CP Rail and we have worked diligently over the years to grow with CP by focusing on providing quality service to our customer base.

Simard Transport supports approval of the CP/KCS combination. The transaction would provide significant benefits and opportunities for growth we are eager to see realized.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls, would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. We see this transaction as uniquely beneficial.

We ship intermodal containers with CP intermodal service primarily serving a retail customer base. We currently are extremely active in Toronto & Lachine to Western Canada lanes as well as Vancouver to East.

CP's market reach is limited today in the US and we have not been using CP in cross border as it must interline with other railroads to reach US destinations that we could potentially ship to or that could expand the markets we serve effectively.

And we know from experience both our own, and that of our competitors who have single-line rail options at their origins that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

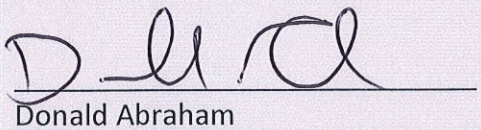
SIMARD
Plus loin Even Further

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability.
- KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Simard Transport is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Simard Transport urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Donald Abraham certify under penalty of perjury under the laws of the United States that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

TRANSLOAD LTD.

Simba Transload Ltd.
311 Burnt Ridge Road, Unit 106
Red Deer County, AB T4S 2L4
P: 403-347-1868 F: 403-770-8121

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Marvin Trimble, and my business address is 311 Burnt Ridge Road, Unit 106, Red Deer County, AB T4S 2L4. I am President of Simba Transload Ltd. In my role, I am responsible for managing and negotiating logistics contracts with our customers (Commodity Marketing Companies, Fuel Distributors, Refineries, Producers, and Logistics companies.) and all modes of transportation of their goods. (Rail, Truck, Barge, Ship, Container etc.)

Simba Transload Ltd. has been shipping commodities by rail for over 25 years and we have shipped via CP and KCS to several destination in Louisiana, Texas, New Brunswick, New York, Alabama, and Mexico.

Simba Transload Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits to our company and many of the companies we serve due to the removal of interchange cost and logistics delays that we endure now. The sooner this could be executed the better it would be for our bottom line and we think there will be some environmental savings as well.

From our perspective, the transaction promises to provide improved service options and motivate transportation competition in the markets we serve. The combined CP/KCS network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, we have no doubt that CP/KCS will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Compared to other proposed and executed Class 1 railway consolidations our company has seen over the years, this combination seems to have very little overlap and would seem to benefit all three countries that this combination covers!

Here are a few examples of current and past business that Simba Transload Ltd. has used CP/KCS routes and how we see this combination would make these routes more cost effective and efficient:

> **We ship HFO from our CP-served facilities in Unity, SK to terminals in Texas, New York and Louisiana many of these shipments have seen delays and interchange issues. We also ship propane from our CP-served terminal in southern Alberta near Lethbridge to Mexico and we see this combination benefitting us and our customers as well.**

MT

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to, and we would now have the opportunity to ship to even more destination which would become more competitive with this combination! Also we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CP/KCS to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CP/KCS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Propane from Alberta to Mexico.
- We are particularly enthusiastic about the role new CP/KCS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by reducing the number of railcars we need to lease to service long hauls. Currently we have to add 20-25% extra railcars to cover inconsistent round-trip delivery and return times. For example, our "typical" round trip manifest shipment to Texas is 34-47 days. With this variance we have to lease enough railcars to cover the worst-case scenario but if the number was consistently 34 to even 40 days, we could reduce the number of railcars we lease!

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CP/KCS will continue to interchange with all of their other existing interline partners.

We have always been impressed by CP and KCS safety records as a company with the highest standards in the industry we appreciate this focus of both companies. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the

MD

two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Simba Transload Ltd. strongly supports the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Simba Transload Ltd. strongly urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

MAIL ADDRESS: Box 1136 Moose Jaw, Saskatchewan Canada S6H 4P8

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Greg Simpson, and my business address is 1170 North Service Road, Moose Jaw, SK. I am the President and CEO of Simpson Seeds Inc.

Simpson Seeds is a processor and exporter of Saskatchewan grown pulse crops with three facilities located in central Saskatchewan responsible for exporting approximately 150,000MT of pulses annually. Two of these facilities rely solely on CP for hopper car and boxcar access to both of Canada's major export ports (Vancouver and Montreal) and complete market access into Mexico. CP has been a great and reliable partner for the last 30 years, and we rely on their service to ensure that our Canadian pulse crops remain competitive in international markets.

Simpson Seeds fully supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

The transaction promises to provide improved service options and invigorate transportation competition in the markets. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic, and Pacific coasts and key overseas markets – would help us reach our existing markets new markets more efficiently. With the two railroads' intense focus on safety and their track record of operational excellence, I do not doubt that CPKC will integrate its operations seamlessly to the benefit of rail customers and other stakeholders. While Simpson Seeds does not typically support railroad consolidation as it can take away from the industry's competitive nature, we see this transaction as being uniquely positive to the entire North American agricultural market. We would have none of the downsides typically seen from a Class I consolidation.

Currently, the Mexican Market imports approximately 40-60,000 MT of lentils annually over the rail. As it stands, while CP does provide us with good service, their market reach has been limited as any service farther south than Kansas City must connect with other railroads. With this merger, we expect CP's rates to be more competitive into Mexico due to the elimination of interchange fees.

For Simpson Seeds to access CNs' lower rates, we have to load product in trucks, ship it into North Dakota or Montana, and trans-load it onto the BNSF, resulting in more low prices paid to our farmers. Additionally, the environmental impact of running trucks three trucks on 14 hours round trip to load a single hopper car is not sustainable.

P: 306.693.2132 TF: 1.877.252.9431 F: 306.693.4489
HEAD OFFICE: 1170 North Service Road Moose Jaw, Saskatchewan
MAIL ADDRESS: Box 1136 Moose Jaw, Saskatchewan Canada S6H 4P8

CP's ability to directly access theMexican market would have an immediate positive impact on both our facilities and the farmers we represent. Our exports to Mexico has dropped from 12,000 MT per year to 5,000 MT per year because of the current rates. Based on today's price for lentils, the drop in exports represents millions in lost revenue by us and the farmers we represent.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. CP's acquisition of KC will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lentils from Saskatchewan, right into the heart of Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. There must be a valid USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Due to the logistics of interline rates, it can cause significant delays and opportunities for costly errors that a single-line service would all but eliminate.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options. Still, as separate companies, they have not offered the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

Simultaneously, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other existing options since CPKC will continue to interchange with all their other existing interline partners.

We believe CP and KCS are committed to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without service disruption.

For these reasons, Simpson Seeds is voicing strong support for the combination of CP and KCS because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Simpson Seeds urges the STB to approve CP's acquisition of KCS as swiftly as possible.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Richard Hansen, and my business address is 25608 114 Avenue, Acheson, AB T7X 6E2. I am President and Co-Founder of Sky Eye Measurement. In my role, I am responsible for executing Sky Eye's strategy and ensuring that Sky Eye is a growing, profitable and sustainable business that is a safe, positive and rewarding workplace for our team.

Sky Eye Measurement is an energy transfer solutions company. We design, build and manufacture transloading equipment for the safe transfer of hydrocarbons. A large portion of our equipment is designed to facilitate the transfer of hydrocarbons from rail to truck or truck to rail across North America.

Sky Eye Measurement supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sky Eye Measurement views this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Our equipment plays a pivotal role in energy transport by rail across North America. This merger will enable us to service a larger market. CP has provided with good service, but we know their market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. For Sky Eye Measurement to continue to grow It is important that there be a true USMCA railroad option.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve the transportation options for Sky Eye Measurement and our clients.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse

effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sky Eye Measurement is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Sky Eye Measurement urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is John Young and my business address is 1000 Floral Vale Boulevard, Suite 225, Yardley, PA 19067. I am the Chief Operating Officer of Smart Sand Inc. In my role, I am responsible for all operations and logistics related to the movement of sand and equipment for Smart Sand.

Smart Sand is a fully integrated frac sand supply and services company, offering complete mine to wellsite proppant supply and logistics solutions to our customers. We produce low-cost, high quality Northern White frac sand, which is a premium proppant used to enhance hydrocarbon recovery rates in the hydraulic fracturing of oil and natural gas wells. We also offer proppant logistics solutions to our customers through our in-basin transloading terminal and our SmartSystems™ wellsite proppant storage capabilities. We market our products and services primarily to oil and natural gas exploration and production companies and oilfield service companies. The nature of our business demands a strong supply chain which is only as strong as its weakest link. As the bulk of our sand is transported by rail, Canadian Pacific Railway ("CP"), as our primary originating carrier, provides critical and timely service to us, without which we would not be able to function efficiently. Kansas City Southern ("KC"), as one of our terminating carriers, provides critical access for our products to both the Eagle Ford and (through shortline partners) the Permian shale basin. Both CP and KC have historically provided excellent service to us for their respective portions of our supply chain.

Smart Sand originates sand directly on the CP from our large mining site located in Oakdale, WI. CP provides single line haul service to our expansive transload facility in New Town, ND serving the Bakken shale formation. We also ship (and have shipped in the past) to multiple other destinations throughout the country, including East to the Marcellus/Utica basin, South to the Mid-Continent (Oklahoma), Eagle Ford and Permian basins, West to the Denver Julesburg and Powder River Basins and North to various Canadian shale basins. Although CP has provided us with good service, we have been negatively impacted by CP's limited service reach today. The majority of our current business with CP requires interline exchange to reach destinations and this has impacted our ability to get our sand into certain markets efficiently and at a competitive price.

Smart Sand supports approval of the CP/KC combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the CP/KC combination promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls into the areas we currently serve, including the Eagle Ford and Permian basin – would help us reach our existing markets and potentially new markets, such as the Haynesville (Texas/Louisiana) shale basin, more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of sand from Oakdale, WI to Texas, Oklahoma and Louisiana destinations (Haynesville, Eagle Ford, Mid-Continent and Permian basins).
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by reducing time spent at interchange and improving the chances of accurate estimated time of arrival and departure. KC and CP have had a cooperative relationship in the past, and CP-KC joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KC's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KC to safety and operational effectiveness. Given the straightforward network connectivity between CP and KC, and the fact that CP and KC are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Smart Sand is voicing strong support for the combination of CP and KC, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Smart Sand urges the STB to approve CP's acquisition of KC as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I John Young, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

ATTENTION: Surface Transportation Board

My name is Troy Baraby and my business address is 382 So. Junction Rd Plattsburgh, NY 12901. I am the owner of South Junction Enterprises LLC. In my role, I am responsible for unloading bulk commodities at our transloading facility at South Junction Enterprises LLC in Plattsburgh, NY.

South Junction Enterprises LLC is a transloading facility that utilizes CP's track to unload agricultural products like grain, industrial products like sand and cement, and minerals for feed ingredients. Bulk rail car commodities get shipped to us by origins such as Saskatchewan, North Dakota, New Jersey and Ontario. CP has been an excellent partner working with our transloading facility, their support has helped us both in achieving success.

South Junction Enterprises LLC supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markers we serve. The combined CPKC network- with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets- would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. South Junction Enterprises LLC has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class 1 consolidation.

South Junction Enterprises LLC requires a track network that can extend its services to all areas. In order to be a transloading yard that unloads multiple bulk commodities, we need a service area with a wider range to where these products are being produced and manufactured. Agricultural products that we bring in at our transloading facility feed local dairy in a regional area of 5-6 counties in NY and travel as far as into VT. Sand and Cement are brought in to manufacture thin set for our communities largest employer. This company employs over 600 people in Plattsburgh NY.

Our customers that we transload commodities for will benefit from lower transportation costs by the products being shipped on a single extended Class 1 rail line as opposed to traveling through various Class 1 railroads and short lines, which delays delivery times of commodities and adds increased handling costs.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of agricultural products, feed ingredients, and industrial products.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This will allow for quicker transportation schedules, lowered handling costs, which will the increase efficiency and overall production.

From South Junction Enterprises perspective and extended Class 1 railroad network could make shipping bulk commodities from new customers or businesses that we are not currently working with more appealing to utilize.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as a separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere- means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class 1 railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, South Junction Enterprises LLC is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. South Junction Enterprises LLC urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Robert Chapman, and our business address is Box 719, Gull lake, Saskatchewan, Canada. I am the Sr. Manager Business Development for South West Terminal (SWT). In my role, I am responsible for SWT business development, trading and rail logistics within our group.

The business relationship between CP and SWT has been an essential part of the growth of SWT's business over the last 25 yrs. SWT has expanded the rail siding at Antelope, Saskatchewan to where we now have three 8500' tracks to accommodate CP's larger trains. This investment allows for the increased efficiency for both inbound and outbound rail shipments.

SWT supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

SWT is a grain and crop inputs company. As a large single point shipper on CP's main line, it is important for us to have access to all of North America's ports. SWT ships durum wheat to many North American Mills and we look forward to the opportunities that the acquisition will offer into Mexico. As well, we import granular fertilizer from various locations within the United States. As CP takes on a more integrated approach with acquisitions such as the KCS, we would expect our transit times and service to improve.

Even though SWT is located on a CP only served line, CP continues to be a very strategic business partner. The expectation is that the acquisition of KCS will only strengthen our relationship and will improve the already best in class service that CP provides SWT.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

tel: 306.672.4112
fax: 306.672.4166
toll free: 888.672.4112
Box 719, Gull Lake, SK S0N 1A0

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of durum wheat from Saskatchewan to the USA and Mexico. As well, increase options for the importation of granular fertilizer.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, SWT is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. SWT urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Respectively,

Robert Chapman

Southland pulse Inc.
A Grower's Gateway to the Globe

PO Box 879 Hwy 39 NW Estevan SK, S4A 2A7
Phone: 306-634-8008 Fax:306-634-8007
Email: shawn.southland@sasktel.net

ATTENTION: Surface Transportation Board

My name is Shawn Madsen and my business address is Box 879, Highway 39 NW, Estevan, SK S4A 2A7. I am the Operations Manager of Southland Pulse. In my role, I am responsible for the day to day operations including buying and selling, incoming and outgoing product and managing staff.

Southland Pulse was started in 2001 with CP being a vital part of our supply chain. Over 80% of our business is on the rail, with our annual tonnage ranging from 70,000 to 80,000 per year. Almost all of that goes to Vancouver, as going south (US/Mexico) has never been an easy option. Over the years, we have found CP to improve on their service and communication, and are happy it is the rail company we deal with.

Southland Pulse supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. Shipping through the US has been a challenge in the past and this will help ease those restrictions.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Southland Pulse has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

As I mentioned earlier, a very high percentage of our business heads on the rail west to Vancouver. That being said Mexico has always been on the radar. In fact, we used to ship there more frequently, but over the years it seemed to become increasingly difficult to route and it is expensive.

We continue to get inquires to ship to Mexico, but those same hurdles have deterred the business. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of pulses to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. The confusion of switches and routes not only cost us time, but also more money.
- The ease of getting a rate to an existing destination, or a new one will not only help us improve the business we are doing, but open new doors.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Southland Pulse is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Southland Pulse urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SPAAR

12222 44 St SE
Calgary, AB T2Z 4A2

MAY 21, 2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

SPAAR is an industry leading envelope construction provider in the Alberta Marketplace. We work with several suppliers whom rely on both CN and CP for the movement of numerous supplies from various US rail networks, including but not limited to wallboard (drywall).

I am writing to express SPAAR's perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation

of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control

transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment

SPAAR
12222 44 St SE
Calgary, AB T2Z 4A2

of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

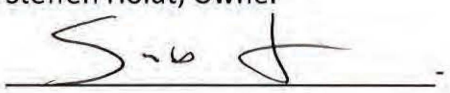
We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It will not be able to do that with any of the merger "synergies" it plans for several years, so incentives will be to do it through higher prices for CNs current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal



SPAAR

12222 44 St SE
Calgary, AB T2Z 4A2

offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Steffen Holdt, Owner

RE: STB Finance Docket No. 36500

CP-KCS Potential Combination

Sprague Operating Resources LLC hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. We are served at our Searsport, Maine marine terminal by the CP, and this merger would expand our rail capabilities and allow us to serve new markets for us.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

Our Energy Makes the Difference®

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Sincerely,

Mike Zampano

SSAB

March 30, 2021

Via E-Filing
Ms. Cynthia T. Brown
Chief of the Services of Administration, Office of Proceedings
Surface Transportation Board
395 E Street SW
Washington, DC 20423

RE: Docket No. FD 36500

Dear Ms. Brown:

I am writing to the Surface Transportation Board to express SSAB Americas' (SSAB) support for the Canadian Pacific Railway Limited (CP) purchase of Kansas City Southern (KSC) and the subsequent merger of their rail operations. We are encouraged by the opportunity for the new entity to provide end-to-end rail services from Canada to Mexico, throughout the U.S. Midwest, and across Canada. The proposed synergies and reduction of administrative burden due to the elimination of interchanges has great potential to shorten rail transit times, reduce cost, and improve efficient outbound movement of SSAB's finished product as well as inbound delivery of our raw materials.

Currently, CP is SSAB's sole rail services provider to our Montpelier Iowa facility. The acquisition of the KCS network will increase CP's reach and strengthen their strategic fit as a transportation supplier to our Montpelier operations as well as SSAB facilities in St. Paul MN, Toronto ON, Houston TX, and Mobile AL. We feel the combined network will allow for reduction of congestion and improved delivery for our customers and suppliers who are geographically distributed across North America. Increased ability to ship on a single rail system with focus on efficient operations supports SSAB's sustainability mission, and aligns with our commitment to production and shipment with the lowest possible environmental impact.

Thank you for your consideration of these comments. I am prepared to answer any further questions you may have relative to this issue.

Best Regards,

Sean Keenan

Votorantim Cimentos

St Marys Cement

April 30, 2021

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

My name is Jim Reznik and I am the Director of Logistics for North America at St Marys Cement a Votorantim Cimentos company.

St Marys Cement is a major producer of cement in the US and Canada, with a network of cement plants and terminals. We ship 2000+ carloads of cement annually.

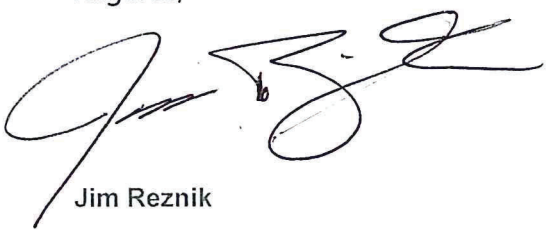
St Marys Cement supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



St. Marys Cement U.S. LLC | 9333 Dearborn Street, Detroit, MI 48209 | Tel 313 842 4600, Fax 313 849 4555

votorantimcimentos.com | stmaryscement.com

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, St Marys Cement is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. St Marys Cement urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated. The end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Regards,

Jim Reznik

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Marc Desrosiers and my business address is 248 Industrial Blvd, Chateauguay, Qc. I am President of STCH inc. In my role, I am responsible for business development.

STCH inc is using CP services for a lot of trans-Canadian shipments for several years. They bring us a very good alternative for our customers.

STCH inc supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

STCH Strongly believe that adding rail service alternative between Canadian to/from Midwest and Southern States of USA will be great. For several goods, transportation prices are really a huge factor for Canadian and American businesses to stay competitive worldwide. At STCH, we have customers in mulch, woods shavings, fertilizer, shingle, plastic industry to name a few where pricing is primordial.

We are also really interested to add rail option on movements across USA, Mexico and Canada. With the USMCA trade agreement, we will also require solid transportation option in the Automotive industries. Therefor, I look forward seeing that CP/KCS transaction realized.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. I believe this transaction will improve our transportation options.

For these reasons, STCH is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all

sizes. STCH recommend the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrate and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Executed on March 31st,2021.

Marc Desrosiers, President STCH

ATTENTION: Surface Transportation Board

My name is Jeff Brandt and my business address is 7401 Hamlin Street, Schererville, IN 46375. I am Vice President, Transportation and Logistics for Stella-Jones Corporation. In my role, I am responsible for the management and execution of all transportation functions across our network.

Stella-Jones is a leading producer and marketer of pressure-treated wood products. The Company supplies North America's electrical utilities and telecommunication companies with utility poles, and the continent's railroad operators with railway ties and timbers. Stella-Jones also manufactures and distributes residential lumber and accessories to retailers for outdoor applications, as well as industrial products for construction and marine applications.

Stella-Jones Corporation supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible. Stella-Jones currently ships railway ties, transmission poles, lumber, and industrial products with CP from various plants and distribution yards in Canada and the US.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example, Stella-Jones will be able to ship direct either north into Canada from our most southern U.S. locations into Canada or South from Canadian locations into the southern U.S.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Stella-Jones is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Stella-Jones urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STERILITE CORPORATION
30 Scales Lane
Townsend, MA 01469

March 29, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Steven Stone and my business address is 30 Scales Lane, Townsend, MA. I am Executive Vice President of Sterilite Corporation. In my role, I am responsible for manufacturing, purchasing and the overall operations of our company.

Sterilite Corporation operates a large manufacturing and distribution facility in Davenport, IA. This facility opened in 2018 and consumes about 700 rail cars of plastic resin per year. The rail cars are brought into Davenport and are delivered to our interchange track by the Canadian Pacific Railroad ("CP").

Sterilite Corporation supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

Most of the plastic resin that we purchase originates in the U.S. gulf region. From our perspective, the CP/KCS transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us to transport our raw materials more efficiently.

We are supportive of the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Sterilite Corporation is voicing strong support for the combination of CP and KCS. The merger will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Sterilite Corporation urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this merger can be realized for the benefit of all stakeholders.

Sincerely,

Steven Stone
Sterilite Corporation

AG TRANSFER

STONE ARCH COMMODITIES

GRAIN BELT TRUCKING

LETTER IN SUPPORT OF CP & KCS COMBINATION

March 29, 2021

ATTENTION: Surface Transportation Board

My name is Revis Stephenson and my business address is 702 North 1st Street, Suite 100. I am President of Stone Arch Commodities and its subsidiaries Ag Transfer and Grain Belt Trucking. In my role, I am responsible for oversight of all company operations.

Our company is an exporter of agricultural feed ingredients in shipping containers. We are one of the country's largest exporters as measured in shipping container TEU's. CP has been a great partner in helping us expand our business through our co-located facility in Minneapolis. In 2020, we exported over 150,000 tons of U.S grown agriculture products solely on CP rail. We place great value on our relationship with CP and we would not have been able to have the success we have had without their partnership.

Ag Transfer supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Ag Transfer sees this railroad consolidation as expansion of services and access to new destinations instead of a reduction in competition.

Currently we ship containerized grains by rail to the West Coast via CP from our Minneapolis facility and via UP and BNSF from our Chicago facility. With expanded CP/KCS services we may have additional opportunities to reach Mexico or may have a more competitive gateway through Kansas City. We believe that our competitive position will be improved by expanded single-line rail service options with a consolidated CP/KCS.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options. We believe this will increase our competitiveness and potentially open up new business to Mexico from our Midwest locations.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

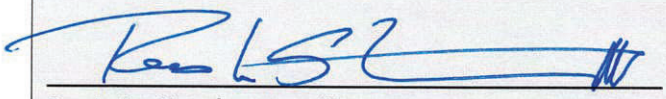
KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Stone Arch Commodities & Ag Transfer are voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Stone Arch Commodities urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Best Regards,



702 North 1st Street, Suite 100 Minneapolis, MN 55401

VERIFICATION

I Revis L. Stephenson III, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Executed on March 29,2021.

Revis L. Stephenson III

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Marc Cayouette and my business address is 19250 Clark Graham, Baie D'Urfé. I am General Manager of StyroChem Canada. In my role, I am responsible for overseeing all departments including that of Logistics and transportation.

StyroChem is a producer of Expandable Polystyrene. The product is classed as HAZMAT UN2211 class 9 product. Our transporter must be HAZMAT certified and be able to provide clean transport vessels. StyroChem has been in partnership with CP for well over a decade, moving product to the West provinces. We are very pleased with the service and price we have with CP.

StyroChem supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. StyroChem has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

StyroChem ships it's products throughout the world. Air, Ocean, rail and trucks are used for the transportation. Much of the product (just over 1/3 of our capacity) is currently shipped via rail. Most is heading West or South West. Our largest customer resides in Mexico. We are actually looking at more customers in the Mexico region. At the moment most rail is carried by CN. CP is used to reach Canadian destination in the West. We get excellent service from CP and would definitely consider them for some of our Mexico deliveries if offered.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. We look for low transport cost to a location and then find customers in that region.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, StyroChem is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. StyroChem urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Marc Cayouette

Terminal Interior de Carga
AL SERVICIO DE

San Luis Potosí, S.L.P. México, March 26th, 2021.

Surface Transportation Board.

To whom it may concern:

My name is Francisco Xavier Zermeño Urquiza and my business address is Eje 120 No 595, Zona Industrial 78395, San Luis Potosí, S.L.P. México. I am the Principal for Suministros Industriales Potosinos, S.A. de C.V. (**SIPSA Terminals**). In my role, I am responsible for managing, operating and expanding our group´s transportation services and logistics business in North America.

SIPSA Terminals owns and operates Multimodal Rail Terminals in México, all of them rail served by the Kansas City Southern de México **(KCSM)** network. In the more than 24 years we have had a relationship with them, we have grown our customers use of the railroad as their preferred mode of transportation mean, due to its reliability, cost efficiencies and environmental friendliness. Our services include transloading bulk materials, commodities, autoparts, as well as agricultural, chemical, and energy products among others for their transportation from and to the USMCA market (you can see our complete services offering at www.terminalsip.com). In our dealings with **KCSM**, we have found a solid, serious, and trustworthy partner to convert "over the road" traffics to rail traffics with all the aforementioned described efficiencies.

SIPSA Terminals supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. **SIPSA Terminals** has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Terminal Interior de Carga
AL SERVICIO DE

In **SIPSA Terminals**, we offer the railroad mode of transportation advantage to customers that are either not rail served or prefer to assign the loading, unloading, packaging, bagging, transload, warehousing and cross dock of their products (be raw material or finished goods) to specialists like ourselves, combining transport modes (rail, last/first mile delivery and pick up), and sometimes ocean to present the best, most efficient logistic and cost solution to their supply chain needs. Our focus is to use the extended railroads networks throughout North America to achieve this goal, partnering with **KCSM** and their connecting class 1 and short line railroads.

However, **KCSM** and its northern franchise, **Kansas City Southern Railroad** service offering is sometimes affected due to the lack of an integrated lane all the way up to the American Northern Midwest due to the operational and cost affectations of switching with competing railroads, situation that sometimes represents a competitive disadvantage for customers shipping and receiving material in both ends.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of autoparts from Central México to the North American auto makers.
- We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKS's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by not having to waist time and money incurred while interchanging railcars with competing railroads.
- CPKC´s will be instrumental in integrating strong, efficient and reliable supply chains for the USMCA trade block that will allow to better compete with other commercial regions such as Asia and Europe.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, **SIPSA Terminals** is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. **SIPSA Terminals** urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Francisco Xavier Zermeño Urquiza, declare under penalty of perjury under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Sun Transportation Systems

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Navtej Grewal and my business address is 13930 Humber Station Rd, Bolton ON L7E0Y4. I am Director of Logistics at Sun Transportation Systems. In my role, I am responsible for third-party relationships and our intermodal service.

Sun Transportation Systems ships intermodal containers (private and rail-owned) with CP, across Canada and cross-border between Canada and the United States. We choose to ship with CP because of the extent of their network and the reliability of their service.

Sun Transportation Systems supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

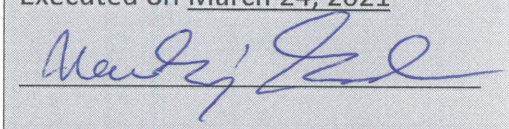
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Sun Transportation Systems has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with minimal downsides that might result from another Class I consolidation.

Sun Transportation Systems ships freight of all kind (FAK) via intermodal containers between Toronto, Montreal, Calgary, Vancouver, Chicago, Los Angeles and Mexico. We currently interchange between CP, BNSF and KCS for freight to travel between Canada and Mexico. A single rail service would remove our cost of interchanging over the road between 3 different railroads. Service would be improved because containers would not need to be moved from railcar to chassis and back to railcar. A single rail service would provide much more superior rail service.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our intermodal shipments of FAK between Canada and Mexico

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. At present time, we interchange over the road between the CP Schiller Park terminal and KCS Kansas City Terminal to ship freight into Mexico. This will save us on the interchange and provide better transit time.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction smoothly.

For these reasons, Sun Transportation Systems is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Sun Transportation Systems urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Shipper Support Letter – CP, KCS Combination

ATTENTION: Surface Transportation Board

My name is Michael Corbett and my business address is 715 South 4th Street in Pender, NE. I am Vice President of Supply Chain at Sunrise Foods International, Inc (Sunrise Foods). In my role, I am responsible for overseeing all our company's logistics and infrastructure.

Our mission at Sunrise Foods is to provide exceptional ingredients to our customers in the organic food and feed grain markets. It is critical for us to maintain a sustainable and efficient supply chain which assists in the effort to make organic foods accessible to all. Canadian Pacific Railway is a critical supply chain partner for Sunrise Foods in both the United States and Canada. CP continues to meet and exceed our expectations on service and reliability.

Sunrise Foods International supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition. The combined CPKC network – with new single-line hauls and access to/from premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets and origination points – would help us reach our existing markets and new markets more efficiently. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We ship organic grain from CP-served facilities in IA, MB and MN to various organic feed mills and food processors throughout the US and overseas. We are also utilizing GULF ports to import organic food/feed ingredients. Having another class 1 railroad as an option to move product North/South will be advantageous to our current business and provide future opportunities.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to/from (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of organic grain moving between Canada/Upper Midwest and MO, AR, KS region.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Sunrise Foods is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Sunrise Foods urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

Letter to STB commenting on CN Trust Proposal

MAY 21,2021

BY ELECTRONIC FILING

The Honorable Cynthia T. Brown

Chief, Section of Administration, Office of Proceedings

Surface Transportation Board

395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

My name is Aftab Ghouri of Superior Pulses and my business address is 01 Railway Ave, Verwood, Saskatchewan.

I am writing to express Superior Pulses perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants.

to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would

inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there should not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.

But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high-capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so CN will be incented to do it through higher prices for their current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome these burdens.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal

offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500 (CP-KCS Potential Combination)

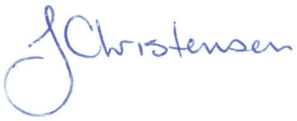
Supreme Structural Transport Ltd. hereby files this letter to express its views about the bid by Canadian National ("CN") to acquire Kansas City Southern ("KCS") and provide its support for Canadian Pacific's ("CP") proposed combination with KCS.

As a specialized Engineered Heavy-Lift company, Supreme Structural Transport Ltd. provides rigging and transport of Superloads which are outside of the capabilities of typical carriers. For our electrical transformer clients, we provide Jack-and-Slide procedures for transloading units from rail cars or for pad placement. We work closely with CP on rates, clearances, utilization of rail yards and rail corridors in the BC area to transport transformers.

Supreme Structural Transport Ltd has not previously addressed either of the two proposals involving the acquisition of KCS.

Supreme Structural Transport Ltd is reliant on CN for transportation services in certain markets and therefore does not wish to voice a position taking CP's side over CN's.

Supreme Structural Transport Ltd nonetheless has strong views about the kind of railroad combination that the STB should allow – and indeed expedite – versus the kind of combination that it should not permit to proceed.



The kind of transaction that is in the interests of shippers and the public would:

- ***Not have competitive overlaps*** that reduce the number of independent rail options, even if the railroads might think they can propose "remedies" to overcome the lost competition.
- ***Improve competitive options***, including by adding new single-line routes where other, larger railroads currently dominate.
- ***Not pose a risk of stimulating further industry consolidation***, such as by destabilizing the six large carrier balance in North America

A transaction meeting these criteria is in the public interest and should receive swift Board approval. Quick approval of procompetitive transactions is critical to helping shippers and other stakeholders reap the benefits sooner rather than later, and we have no objection to the use of a voting trust mechanism to facilitate such a transaction. For transactions that do not meet the three criteria set out above, we would strongly object to the Board allowing the transaction to proceed even as far as a voting trust, which itself could diminish competition and lead to downstream concerns.

We trust the Board to assess the two proposals for KCS in light of these criteria.

Respectfully submitted,

Jessica Christensen
Vice President

Taconic Maintenance
PO Box 591
Hyde Park, NY 12538
(845)444-9000

ATTENTION: Surface Transportation Board

My name is John Parker and my business address is P.O. Box 591 Hyde Park, NY 12538. I am President of Taconic Maintenance. In my role, I am responsible for Opening the Midwest by establishing new dealers across a seven state area.

Taconic Maintenance ships our components of our product from Texas, Louisiana and, Utah by rail tankers.

Taconic Maintenance supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Taconic Maintenance uses the rail on a regular basis throughout the winter to transport all our raw materials, with this merger it will make our processes more efficient and streamlined.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.]

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Southwest to the North
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

Taconic Maintenance
PO Box 591
Hyde Park, NY 12538
(845)444-9000

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Taconic Maintenance is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Taconic Maintenance urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Giorgina Butler, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Target Transportation Ltd moves product extensively within the United States and Mexico. Competitive pricing, capacity, and consistent service are key to our success.

I am writing to express Target Transportation Ltd.'s perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use of a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of

KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS; s shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south-central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high-capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Bord noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will incentives to do it through higher prices for CNs current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or jack up rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Murray Crane

RE: CP-KCS Proposed Merger

I am writing you today, to express our support regarding Canadian Pacific Railway Limited's (CP) proposal for a CP- KCS merger.

Taslar specializes in exporting raw agricultural commodities out of Canada to many countries in Asia, Africa, Europe and south America. With the anticipated merger, we expect to improve transit time and costs for export to USA and beyond. We believe that this particular merger will increase efficiency since both companies don't overlap but expand on each other's network. Frankly; rail freight is the most economical and environmentally friendly way of moving goods. One CP freight train moves as much as 800 trucks combined. Not to mentioned that railroads are a lot more safer than trucks. Your decision today will help form an important player in strengthening the rail transportation system in North America.

TASLAR believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service to us and enable us and other to better serve new customers in US, Canada and beyond. We urge you to judge the proposal on its merits and we look forward to a positive outcome.

Please contact us at the address above for more information if you so desire more clarification.
Sincerely,

HASAN TASLAR

ATTENTION: Surface Transportation Board

My name is Ronald Tepper with a business address of 55 Commerce Valley Drive West, Suite 220, Thornhill, Ontario, Canada. I am the owner and President & CEO of Tepper Holdings Inc. ("THI"). In my role, I am responsible for developing the vision and strategy for the company in consultation with our advisory board, growing the value of the company, providing the final decision for high-level business changes, and managing the relationship with our major finance and business partners.

THI, through its ownership of the Fastfrate Group of Companies has had a long-standing partnership with CP that now spans decades. The Companies under this group include Consolidated Fastfrate, Fastfrate Integrated Logistics, Canada Drayage, Bestway Cartage and ASL Distribution Services. THI also owns freight terminals for The Fastfrate Group's use that are adjacent to or near CP's intermodal yards throughout Canada.

THI supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. THI has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

55 COMMERCE VALLEY DRIVE WEST, SUITE 220, THORNHILL, ONTARIO L3T 7V9 TEL: (905) 889-0663

The Fastfrate Group ships consumer packaged goods, electronic products, and other raw materials for customers located in central Canada and the United States to western Canada and overseas. In 2020, The Fastfrate Group moved over 28,000 marine containers through the CP network of railway.

CP has provided our Companies with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to, or that could expand the markets we serve effectively.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our cross-border shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, THI is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Fastfrate urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I _Ron Tepper, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Adrián Estrada Montemayor and my business address is Ave. Universidad 992, Col. Cuauhtémoc, San Nicolás de los Garza, N.L., C.P. 66450. I am General Counsel and Institutional Affairs Director of Ternium México, S.A. de C.V. ("Ternium").

I am writing this letter on behalf of Ternium in support of the CP/KCS combination, trusting the transaction would enhance the railway service across the North American region to the benefit of rail customers and other stakeholders.

As one of the largest railway service users in Mexico, Ternium has a long-standing strategic commercial relationship with Kansas City Southern México, S.A. de C.V. ("KCSM"); by using railway infrastructure, Ternium ships: (i) slabs from Port of Brownsville and Lázaro Cárdenas to our industrial facilities, scrap and direct reduced iron (DRI) to our facilities in Nuevo León and Puebla; and (ii) all kinds of steel products from our industrial facilities primarily in Mexico to serve our customers in the region. With KCSM´s railway service, a large part of our relevant manufacturing footprint is covered.

We trust this transaction will allow a combined CPKC to provide new, more efficient and reliable rail service options, and we are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

Given the foregoing, Ternium is voicing strong support for the combination of CP and KCS, because we trust that the transaction will enhance competition, provide expanded options and drive economic benefits and efficiencies for customers and stakeholders.

VERIFICATION

ATTENTION: Surface Transportation Board

My name is Shawn Olson and my business address is Suite 1600 140 10th Avenue SE, Calgary, Aberta, Canada. I am the Director of Metals Recycling and Rail Response of Tervita Corporation. In my role, I am responsible for the business unit operations including the logistics and transport of scrap metal via rail to steel mills.

Tervita Corporation is both a supplier and customer to Canadian Pacific Railway. We utilize Canadian Pacific Railway to deliver a significant portion of our annual 100,000 tonnes of scrap metal to markets throughout Canada and the US. Tervita Corporation also provides rail response services to Canadian Pacific Railway for mechanical engineering and track work throughout Western Canada.

Tervita Corporation supports approval of the CP/KCS combination. The transaction would provide benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve while expanding our opportunities to grow into markets that are not currently economical. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Transportation of scrap metal via rail is a critical process for Tervita corporation, our Metal Recycling Business Unit's profitability is dependant on reliable and economic logistics from our multiple facilities in Western Canada to steel mills from Seattle to Chicago to Montreal. The opportunity to expand our existing customer base south from Kansas City to the gulf coast and into Mexico is exciting.

As a shipper, Tervita Corporation maintains a private rail car fleet of over 100 cars to service our 100,000 tonnes of shipping requirements annually. Our growth and expansion plans are dependent on the ability to move materials to regional markets in a cost efficient manner as supply and demand in the commodity markets shift. Increased market reach from Western Canada with a single line rail service will support our growth goals.

Further, as a supplier to Canadian Pacific Railway the execution of their growth and strategic plans allows Tervita Corporation to grow and expand with them. We look forward to continuing to support Canadian Pacific Railway operationally as they expand their offering.

Tervita Corporation

Calgary Head Office
1600, 140 10th Ave SE
Calgary, AB Canada
T: (403) 233-7565

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of 100,000 tonnes of material from Western Canada.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Tervita Corporation is voicing support for the combination of CP and KCS, because it will provide expanded options and drive efficiencies for our organization to grow and expand into further markets that are not economically feasible in the current state of the transportation network.

Thank you,

Shawn Olson,
Director, Metals Recycling and Rail Services
Tervita Corporation

ATTENTION: Surface Transportation Board

My name is Josh Ruple and my business address is 811 Main St, Suite 2800, Houston, TX 77002. I am a President of TDWP Partners LLC ("TDWP"). In my role, I am responsible for all business affairs of TDWP. One of its businesses is operating a refined products terminal at Shell Deer Park.

TDWP has long enjoyed good relationships with many railroads, including Kansas City Southern Railway ("KCS"), providing our customers services that often involve rail solutions in the United States and Mexico for various commodities, including refined products. These services require close operational collaboration and/or negotiations with rail carriers. TDWP believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service that will enable us to better serve our customers and communities.

TDWP supports approval of the CP/KCS combination. The transaction will provide benefits that we are eager to see realized.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

KCS has provided us with good service, but its respective market reach is limited today, as its lines only go as far north as Kansas City. KCS must interline with other railroads to reach destinations beyond Kansas City to which we ship or into which we may expand.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce equipment costs and improve efficiencies for our customers.

The entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – makes it less likely that the transaction will have any significant adverse effects on competition. It should make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TDWP is voicing its support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. TDWP urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am writing to provide my written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). TFI International Inc. is the largest publicly traded transportation company in Canada after the railroads. With over 80 operating companies TFI International Inc. is a true North American transportation company. As Executive Vice President my portfolio includes Canadian and US Energy Sector Services as well as our LTL divisions. I believe this combination of railroads will benefit not only TFI International Inc. by creating more efficient supply chains across the North American continent, but also opening up new opportunities and new markets for businesses. TFI International Inc. and CP work together today to move intermodal traffic across Canada and between the United States. CP plays a critical role in the TFI International Inc. supply chain, transporting product across the TFI network safely and ensuring that TFI meets our service commitments to our customer base.

From my perspective, the linkage between Canada through to Mexico via one carrier should enable TFI International Inc. to redeploy OTR assets to other corridors enabling TFI International Inc. to open new markets and reach new customers. Moreover, there may be additional opportunities to modify the supply chains within our TF Energy Solutions portfolio.

As North America's safest railroads, I firmly believe that CP and KCS will provide TFI International Inc. with safe, efficient and fast service that will allow us to achieve the goal of reducing carbon intensity and improving the North American supply chain's environmental footprint. TFI international Inc. supports and urges the STB to approve CP's acquisition of KCS as swiftly as possible in order for TFI International can modify our supply chain accordingly.

Sincerely,

Bob McGonigal

Executive Vice President

TFI International Inc.

CP / KCS Letter of Support

ATTENTION: Surface Transportation Board

My name is Bill Krueger and my business address is 10975 Benson Dr, Overland Park, KS. I am President of The Andersons Trade Group. In my role, I am responsible for all functions of Anderson Trade and Processing.

The Andersons currently ships grain and energy products on the KCS and CPRS. With origination in Canada & US and destination markets in Canada, US and Mexico.

The Andersons supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

The Andersons currently utilizing the KCS and CP, touching them both in many different areas:

We own and operate an elevator on the KCS in Delhi, LA that is capable of shipping 110 car unit trains.

Shipping propane out of Canada into the US and Mexico

Shipping grain products out of US and Canada locations to US and Mexico destination

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bulk grain product and energy products from the US and Canada to the US, Canada and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. This merger has the ability to transition a 3 line movement we are currently making from Canada to Mexico to a single line carrier.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless,

single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, The Andersons is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. The Andersons urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Mark Thomson and my business address is 11715 Tannery Road, Surrey, BC, Canada. I am the President and Partner of The Mountain View Group. In my role, I am responsible for leading all our Canadian and US facilities.

The Mountain View Group is an Industrial Transloading Company primarily shipping forest products, steel, mining supplies, shingles, as well as large project cargo. We are both a receiver of inbound cargo from CP (via our Canadian Operation) and as an outbound loader of cargo with CP to Eastern Canada and the US. Our newest transload facility in TX can receive cargo via the KCS. While we are in no means a large user of CP or the KCS, our experience with CP with regards to rates and services has been excellent. We are very excited about the potential of expanding our business with the new CPKC entity in Canada, the US, and Mexico.

The Mountain View Group supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

I have worked in the Transportation Sector for nearly 30 years in various senior roles. I spent over 20 years with the largest forestry company in Canada – West Fraser – and oversaw all logistics for the company worldwide with a $700 million dollar budget. I have been very vocal against most of the rail mergers that have been previously proposed as I was extremely concerned about the erosion of competition and options for shippers. This acquisition is one of the first rail proposals where I see a much more beneficial and strategic option for North American shippers. It will create a new, non-overlapping, continental rail option for shippers as well as create increased competition in the marketplace. In addition, the combination of two of the smaller Class I railways will create a more robust and competitive company with the assets and longevity to compete with the larger Class I operators.

As a company leader and owner of a private company, I am constantly looking at growth opportunities. My single facility in Canada operates on a short line with access to CN, CP, BN/UP. Despite having multiple options, we are limited by agreements in place such as the Interstate 5 agreement between BN and UP, as well as geographical and logistical limitations to access certain markets. Our biggest markets are the US West Coast, Southern US, and Mid-West US. Texas is a huge market for us and continues to

grow year after year. Having the ability to ship on a single line from Canada to Texas is extremely valuable to us in having both timely shipment cycles and competitive freight costs.

We are opening our 3rd Texas facility in May of this year. This facility will be able to receive cars via the KCS, BN, and UP. One of the fastest growing areas in the forestry sector is Southern Yellow Pine out of the US South East. This area has the largest available fiber basket in North America and is growing daily as Canadian lumber production has been decreasing. Southern Yellow Pine sales have been migrating more and more Westward and Northward over the years. Over 80% of this market is currently serviced by over the road trucks. Once these shipments exceed a 200-mile radius, rail is by far the most competitive mode of transportation. This lumber market segment is grossly underserviced and ripe for a strong rail service provider. The CP-KCS combination will directly serve many of these SE mills reducing truck congestion on the road as well as greatly reduce carbon emissions.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber from Canada to the US as well Southern US origins to Midwest and Southern locations.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Most of our lumber shipments from Canada to the US and Mexico require two or more interchanges. A single carrier route will eliminate dwell times at junctions as well as expedite shipments and create fewer demurrage issues
- Car cycle times will improve with a single carrier which creates more fluid car days and hence improves overall car supply for shippers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

As I previously stated, I have historically been very vocal with both Canadian and US Regulatory bodies regarding rail mergers and/or acquisitions. While some previous M&A rail proposals may have provided some service benefits and streamlining, most shippers, like myself, feared the reduction of options and competition far outweighed any potential benefits. Having been through many hearings on rail acquisitions, I feel very comfortable in stating that this combination of railways will actually create more competition and add new service options for shippers. It should meet and exceed the Public Interest criteria.

For these reasons, The Mountain View Group is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. The Mountain View Group urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Mark Thomson

President and Partner

The Mountain View Group

THOMSON REUTERS SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Peter Schuweiler and my business address is 610 Opperman Drive, Eagan Minnesota 55123. I am a Senior Buyer of Thomson Reuters. In my role, I am responsible for the procurement and inventory management of bulk quantiles of graphic printing papers.

Thomson Reuters has used CP rail to ship roll stock graphic paper from numerous locations throughout the country.

Thomson Reuters supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Thomson Reuters has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of bulk graphics paper shipments from our paper mills to our location in Eagan, MN.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. With new options for shipment lanes

for our paper it will ensure that the marketplace has the most competitive cost structure.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Thomson Reuters is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. Thomson Reuters urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Peter Schuweiler, declare under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter. Executed on 3/30/21 .

ATTENTION: Surface Transportation Board

My name is George Strandberg and my business address is 375 Island Drive, Thunder Bay, Ontario, Canada P7C 5J7. I am the General Manager of Thunder Bay Terminals Ltd. In my role, I am responsible for the daily operation of the Terminal.

Thunder Bay Terminals (TBTL) is a bulk handling facility that transload bulk cargo from railcar to vessel. It is located at the Canadian western end of the Great Lakes/St Lawrence Seaway system. Primary cargos handled are coal and potash but can also handle any dry flowable product. Once loaded to vessel the products are shipped to docks throughout the Great Lakes/St Lawrence Seaway as well as for offshore international destinations. Thunder Bay Terminals has had a 40-year working relationship with CP that has been beneficial to both parties.

Thunder Bay Terminals supports approval of the CP/KCS combination. The transaction has the potential to provide benefits that we are eager to explore.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition. With the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that presently service the transportation market.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Patric Nagel and my business address is based at 603 15 Avenue, Nisku, Alberta, Canada T9E 7M6. I am the President and CEO of Tiger Calcium Services Inc. In my role, I am responsible for the overall performance and execution of Tiger's operations inclusive of oversight of our complex logistics operations of which rail transportation is a critical component.

Tiger Calcium is a manufacturer of calcium chloride, utilizating CP Rail and its US interline partners to transport product throughout western and central Canada and into the northwest and central U.S. and to import products from southern US and Mexico back to Canada. We have utilized CP Rail via a dedicated siding at our manufacturing site for several decades and rely on their service to economically expand the geographic scope of our accessible markets.

Tiger Calcium Servces Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Tiger Calcium does not often speak favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation

We have a significant leased fleet of railcars used to ship liquid calcium chloride from our manufacturing plant's siding in the Mitsue Industrial Park (Slave Lake), Alberta to a great many customers and/or company-owned remote storage sites through western Canada. Where CP service is limited, we are forced to utilize ground transportation which is both less efficient and more costly. Our accessible market is expanded by hundreds of kilometers in any direction where rail service is available. With extended single-line rail service, we will have the opportunity to further extend our reach through expanded use of rail transportation.
We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options.

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of calcium chloride from Alberta to more southern U.S. destinations.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. Our business currently transacts with vendors based in Louisiana, Texas and Mexico and added rail alternatives will make us more competitive in all our markets.
- CPKC's new service offerings, due to having one through rate for the shipment and reduced switching times between rail companies, will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not, from our perspective, have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we believe that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Tiger Calcium Services Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Tiger Calcium urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I Patric Nagel, declare under penalty of perjury under the laws of the United States, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Patric Nagel

TIMIRON LLC

20 Stanwix Street
Suite 630
Pittsburgh, PA 15222

March 25th, 2021

ATTENTION: Surface Transportation Board

My name is Timothy Chutz.

My business, TIMIRON LLC, is headquartered at:
20 Stanwix Street
Suite 630
Pittsburgh, PA 15222

I am an owner in and President/Managing Director of TIMIRON LLC. We are more commonly referred to by our trade name, TIMIRON.

In my role I am responsible for all areas of finance, sales & marketing, customer relationships and corporate governance.

TIMIRON has been a long time shipper on both the CPR and KCS systems. My former company, Arrow Material Services, was engaged in construction and operations of rail transloading terminal facilities throughout the USA.

Through our network of terminals across the United States and Canada, we have shipped and trans-loaded literally tens of thousands of carload quantities of liquid, dry bulk and other types of commodities such as:
Frac sand
Crude oil
Condensate
Chemicals and plastics
Iron and steel products
Ferro alloys
Ores
Minerals
Pig iron
Petroleum coke
Foundry coke
Scrap metals
Wood and forest products
Machinery and consumer products

Our relationship with both railroads, independent of one another, has always been excellent, working together to identify areas lacking adequate service either by last mile truck deliveries or lack of water resources and filling that need with construction of trans-loading facilities to fill the gap.

TIMIRON fully supports approval of the CP/KCS combination. This transaction would provide significant benefits that we are eager to immediately actualize.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we currently serve. The combined CPKCS network with new single line hauls and access to premium ports on the USA Gulf, Atlantic and Pacific coasts as well as to key overseas markets would help us reach our existing markets and new markets more efficiently.

And with the strong commitment to safety, human capital and environmental concerns coupled with their individual records of excellent operational performance, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

TIMIRON has not often spoken favorably on railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downside that might result from another round of Class 1 consolidation.

Specifically, our needs to ship crude oil products between the USA, Canada and Mexico will only increase as the North American marketplace consolidates in the face of global competition. We have an immediate need to ship UTICA/Marcellus condensate (diluent) from terminal facilities in Ohio, Pennsylvania and West Virginia to the Canadian tar sands production facilities of Alberta, Canada. This product would be useful as “blend stock” to make possible the return shipments of Canadian heavy bitumen crude oil to markets in the USA and Mexico. Rail transportation is essential to accomplish a long term and efficient North American crude oil products strategy.

Although a volatile commodity driven market, frac sand moves in huge volumes when the markets for drilling and hydro-fracing are economical. It would be our intention to utilize the CPKC network of rail linked terminals from sand mines to wellheads across the North American landscape.

CP and KCS have both provided us excellent service over years past, however, their respective individual market reach is limited today. Both railroads end up having to interline with other railroads in order to reach certain important markets driving up cost and requiring more time in transition from one railroad to another. Single line hauls are always faster, more efficient and far more economical.

We know from repeated and personal experiences that this transaction will facilitate these operational and economical efficiencies immediately.

We are extremely excited about this transaction because it will allow a combined CPKC to provide new and more efficient, reliable and economical rail service options. This will strengthen competition against the other larger rail carriers and motor carriers that serve our markets.

By way of example,
* CPKC's new single line haul offerings will expand market reach and offer new competitive transportation options for our shipment of diluent from Cadiz Ohio to all crude oil production points in Alberta, Canada.

* We are particularly excited about the role new CPKC single line routes will play in expanding access to growing markets across the USA, Canada and Mexico under the USMCA trade agreement. It is extremely critical that there be a true USMCA railroad service option.

* CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Less time in transit via single line hauls, less time in terminal switch yards and better coordination of train departure and arrival schedules will result in far better equipment utilization and lower car leasing or ownership requirements.

KCS and CP have had a very cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies, they have not been able to offer the kind of seamless, single line haul efficiencies we need from providers of transportation services. The completion of this transaction will immediately and greatly improve our transportation and terminal options.

At the same time, the entirely complimentary nature of the CP and KCS networks connecting only at Kansas City without overlapping anywhere else means that this transaction will have no adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest US Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have plagued some of the past rail mergers.

For these reasons stated above, TIMIRON LLC voices strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customer of all sizes.

TIMIRON LLC urges strongly urges the STB to approve the CP acquisition if the KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this transaction can be realized for the benefit of all customers and stakeholders.

VERIFICATION

I, Timothy Chutz, declare under penalty of perjury, that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Jaime M. Vélez de León and my business address is Salvador Madariaga #5277 Col. Jardines Universidad CP45110, Zapopan, Jalisco. I am CEO of TL Pacifico Group, in my role is to develop new business and supervise TLP operations.

TL Pacífico moves maritime containers worldwide with infrastructure and agents in the main ports of the world. As well we move LCL and Project cargo offering customs brokerage in origin and destination. we also coordinate air cargo movements.

Mainly our principal ports are Lázaro Cárdenas, Manzanillo, Altamira, and Veracruz with destination to Guadalajara, CDMX, Monterrey and Puebla the merchandise coming from the base ports of China, the type of merchandise that we load are mainly auto parts, granite, flooring, marble, due to the principal destinations and commodity of our clients, we use train delivery.

Throughout the time we work with the main carriers as CMA, ONE, HPL, EMC, etc that provide us the rail service, so far we are satisfied with the service given so far.

TL Pacífico supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

Mainly the merge of CP/KCS will bring possibilities on better and more rail equipment, wish will make rail logistics easier with better prices. We work with many customers where CP/KCS has a direct line; MTY, QRO, CDMX, SLP, this speaking nationally.

Down below, please find my participation as opener of new routing as logistics coordinator and founder of the house bróker agency;

http://t21.com.mx/maritimo/2016/06/14/puerto-mexicano-ahorra-18-dias-transito-nueva-ruta-houston-vietnam

http://t21.com.mx/maritimo/2014/07/02/abren-ruta-exportacion-eu-chile-via-lazaro-cardenas-maersk

Salvador Madariaga 5277 Col. Jardines Universidad
C.P. 45110 Zapopan, Jalisco

in the other hand, our sister company, cargo transport system (cts), with representation in USA and CANADA, so far the china levels for the us, are incredibly higher such as 17,000USD 40' Container, so, we have a big opportunity to create an in bond service from lazaro cardenas to the main us stations to reduce cost and look for solutions and reduce cost. this is a big opportunity for TLPACIFICO to gain a solution and be part of the new era of supply chain.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are extremely excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of 1211 from China to Guadalajara, Puebla, CDMX, Monterrey.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

  Stimulates greater rail competition, reducing costs and encouraging customers to increase volume, increasing imports/exports, and helping to level countries' trade balances.

It will be the only integrated rail system connecting major ports on the U.S. Gulf, Atlantic and Pacific coasts to key foreign markets.

- The merger provides consumers with greater security, the option to increase the weight moved and a key factor, direct service, reducing waiting times.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TL Pacífico is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. TL Pacífico urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Our names are Brad Eckford and Pino Pucci, business address 3000 28 Street Vernon British Columbia. We are the Manager Transportation and Logistics and VP Sales, Marketing and Logistics of Tolko Marketing and Sales. In our roles, we are responsible for the Sales and Transportation of Forest Products throughout North America and Offshore markets.

Tolko Marketing and Sales is a current customer of both CP Rail and KCS. We ship Forest Products originating in Canada and the US and both Railways provide access to key markets for our products.

Tolko Marketing and Sales supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Tolko Marketing and Sales ships 25,000 rail cars of products each year and CP Rail provides important transportation needs for our Forest Products Panel and Lumber shipments. The planned CPKC would provide Tolko with direct origin / destination access to Key markets that they cannot currently offer. The direct access would provide greater transparency to shippers and improved transit times due to less Interswitching.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

The entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons, Tolko Marketing and Sales is voicing support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Tolko Marketing and Sales urges the STB to approve CP's acquisition of KCS so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: Finance Docket No. 36500, Canadian Pacific Railway Limited, - Control – Kansas City Southern

My name is William Wang, and our business address is 2727 Workman Mill Road, City of Industry, CA 90601. I am the Director of Business Process of Topocean Consolidation Service, Inc. In my role, I am responsible for vendor's compliance, market intel, etc., and provide suggestions to the whole group for business development and safety.

Topocean has been using CP service out of Canada to USA, especially to Chicago. We have enjoyed working with CP in the past years.

Topocean supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Topocean has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship all kinds of goods via Canadian gateway to the U.S. market, and CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to Dallas, even Mexico.

And we know from experience that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Home Goods from Asia via Canada to Midwest, Texas, etc.
- We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKS's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Since booking is going to be made from beginning point to the end, a lot of unnecessary coordination can be avoided to improve the efficiency, and eventually it saves the cost as well.
- It can also provide another alternative when PSW is congested.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Topocean is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Topocean urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Torch River Rail Inc.
PO Box 368
Choiceland, SK S0J 0M0
torchriverrail@gmail.com

Torch River Rail Inc. hereby files this letter to express its concerns to the bid by CN to acquire KCS and re-iterate its support for the CP-KCS combination.

As expressed in our initial letter to the Board dated April 30 2021, we support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition. Oats being the major commodity moved by our company, and with Mexico just beginning to be a major market for our oats, It is imperative that we are able to be as competitive as possible. To be competitive the rail freight is a major factor. A CP KCS merger would create a straight through connection with no interchanges creating the most direct and cost effective way to serve this important market.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, The merged firm would not provide the same straight through cost effective freight for fertilizer brought into our area from the Gulf of Mexico.

We would be harmed by the reduction in competition that would result from a CN acquisition of KCS.

NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.
It would also be naive to not think that in places where CN and KCS lines parallel, that in the future there would be closure of some of these lines, eliminating infrastructure reducing the ability to service local industries.
We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted

Ron Shymanski

Surface Transportation Board
395 E Street, SW
Washington, DC
20423

Dear Surface Transportation Board,

The Toronto Region Board of Trade and our 13,500 members are excited by the announcement of Canadian Pacific Railway's proposed acquisition of Kansas City Southern Railway, and the potential this presents for the North American economy.

Canadian Pacific has a unique history as a foundational transportation company in North America, linking our two countries. The historic success of the Canadian Pacific Railway has long demonstrated the essential nature of goods movement, not only to North America's economic prosperity, but also to community building. Today, North America's freight railways continue to be an important success story, making great strides in enhancing the access of businesses to market and the reliability of our supply chains. They also play an important environmental role, reducing greenhouse gas emissions and road congestion.

Canadian Pacific's proposed acquisition of Kansas City Southern Railway will further link the three CUSMA partner economies. North American businesses will benefit from access to seamless rail networks that connect the Atlantic, Pacific, and Gulf coasts, and now Mexico. This connectivity, without need for cumbersome interchange between railways, is a significant competitive advantage and will serve to further strengthen the efficiency and resilience of supply chains.

The Board applauds Canadian Pacific for this strategic investment, which will benefit the Toronto region and North American businesses.

Sincerely,

Jan De Silva
President & CEO

Toronto Transportation Club

April 9, 2021

Attn: Surface Transportation Board (SBT) – Docket No. 36500

To Whom It May Concern:

RE: Canadian Pacific Railway (CP) and Kansas City Southern (KCS) Potential Merger

---

We are writing to provide support for the proposed combination of Canadian Pacific Railway Limited (CP) and Kansas City Southern (KCS).

The Toronto Transportation Club was founded in 1913 and is one of the oldest transportation clubs in Canada boasting over 1200 members. We are a non-profit organization with a wide cross-section of industry members, contributors and volunteers. The roster includes both individuals and corporations representing suppliers and purchasers from every major industry sector.

Based on the information available to us, we believe the combination of CP and KCS railroads will create more efficient supply chains across the North American continent and open up new opportunities and new markets for businesses. We are confident that a combined CP and KCS entity will create more competition and strengthen them as business partners to Transportation Companies and Retailers across North America.

Looking at it from an ESG perspective, this merger offers large benefits as transportation-related greenhouse gas emissions are directly related to locomotive fuel consumption. The combined CP-KC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help a significant number of customers reach existing and new markets more efficiently and more environmentally.

The Toronto Transportation Club see favorably the approval by the STB of CP's acquisition of KCS so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico, and Canada.

Sincerely,

John Foss
President
The Toronto Transportation Club

TORQ
Energy Logistics Ltd.

ATTENTION: Surface Transportation Board

My name is Steve Smith, and our business address is Suite 1810, 250 - 6th Avenue SW, Calgary, AB T2P 3H7. I am the Chief Operating Officer of Torq Energy Logistics Ltd. ("Torq"). In my role, I am responsible for all operational aspects of our rail terminals and trucking services.

Torq has been a long-time transloading service provider to CP in the movement of various energy commodities outbound/inbound on CP and KCS. The energy commodities that we handle move to/from various areas of North America and having an aligned partner to provide the safest and cost effective service is paramount to our customers.

Torq supports the approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts, as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Torq has not often spoken favourably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Torq serves as a transload service provider to CP in Western Canada to originate various Canadian energy commodities primarily south to US destinations, as well as receiving commodities at our rail terminals for movement to end destinations in Canada. Torq provides an integrated supply chain with first and last mile trucking of certain of these energy products and sees the benefit of cost-effective solutions resulting from this merger.

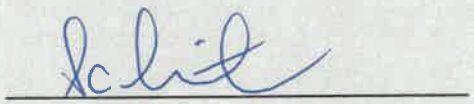
> Torq ships or receives crude oil, NGL's, frac sand, chemicals and/or refined products from our CP-served facilities in Lloydminster, Instow, Bromhead and Unity, Saskatchewan and Tilley, Alberta to destinations/origins on the East Coast, Midwest, West Coast and Gulf Coast regions.
>
> CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their rail terminals) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example:

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of crude oil, NGL's, frac sand, chemicals and refined products from 2022 and beyond.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce supply chain costs and improve our efficiency. By providing our customers with single-line haul service from origin to destination at competitive rates, we are able to commit capital to infrastructure at our rail terminals that increases the volume of business that can benefit CPKC and end customers.
- The most cost-effective supply chain will benefit customers and end users. Creating competition to other single-line options for our customers will benefit trade and commerce while at the same time allowing for the most efficient means of transport for the commodities that we handle.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers. This merger truly provides a marriage between two parties without conflict given the minimal overlap of their networks.

For these reasons, Torq is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Torq urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Dave Taylor and my business address is 16711 Voie de Service N, Kirkland, QC H9H 3L1. I am CEO of Traffic Tech Inc. and affiliates In my role, I am responsible for overseeing the affairs of the company, making major corporate decisions, managing overall operations and act as point of liaison between the owner of the company and the board of directors.

CP and KCS are both direct and indirect suppliers of Traffic Tech and assist in transporting the various goods of its clients throughout Canada and the United States. Traffic Tech has a long-standing relationship with CP/KCS and supports the merger of CP and KCS to better service its customers.

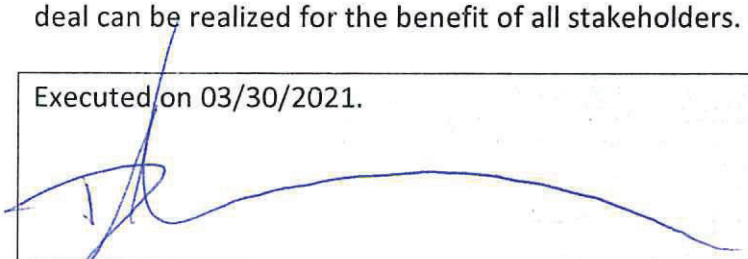
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. In the last 12 months Traffic Tech has moved over 800 shipments with CP and would provide its clients with additional intermodal opportunities with the merger of CP and KCS. Recently an employee mentioned past challenges on converting on Mexico bids but the benefits of the merger will better Traffic Tech's chances in the future.

Furthermore, this merger will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.



KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Traffic Tech Inc is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Traffic Tech Inc urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Dave Taylor
CEO
Traffic Tech Inc

My name is Steve Taylor and my business address is 400 Longwood Rd South in Hamilton, Ontario Canada. I am Vice President of Transcare Logistics Corporation, I am responsible for streamlining operations covering all of our locations across Ontario and Quebec and to ensure customers are getting an uninterrupted service on every product we receive as well as ship on behalf of our customers.

Transcare is a 3rd party transloading company that receives multiple commodities from all over North America. These products include granulated plastic in bulk cars, drywall, canola oil and multiple steel products just to name a few. We rely on punctual, reliable rail service to provide our customers 1st and final mile services. We have grown our customer base over time and the biggest lane we serve is a CP / KCS lane between different points in Texas and our Hamilton Ontario facility. We have relied directly with CP for our rail service but with this merger we will be able to provide increased customer service with greater visibility and a synergy in services between CP and KCS .

Transcare Logistics Corporation supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

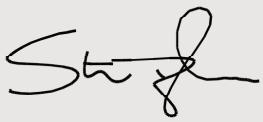
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Transcare has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our customers products from 2021 and beyond.
- We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKS's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by streamlining the process with more visibility and precision railroading.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Transcare Logistics Corporation is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Daniel Price and my business address is 40W815 S. Bridle Creek Drive, Saint Charles, IL 60175; PO Box 198, LaFox, IL 60147. I am President of the Transload Distribution Association of North America (TDANA) and I am responsible for leading the organization Board of Directors and its membership.

TDANA represents the interests of the transloading industry to business and political leaders; advances the technologies, offerings, and standards of practitioners; and increases the visibility of our membership to all shipper industries. As the only association representing transload companies across North America, our organization facilitates partnerships between trans-loaders and shippers and as such, our membership reach includes hundreds of transload organizations and shippers who conduct business on and transport freight via Canadian Pacific and Kansas City Southern lines.

TDANA supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. TDANA has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Our transload and shipper members across North America have experienced the challenges of scheduling loads across multiple lines. While both companies have provided excellent service to our transload and shipper members, their limitations (CP in the South and KCS in the North) require them to interline with other railroads to reach shippers' preferred destinations. Single-line rail service is preferred to expedite service with one point of contact for accuracy and accountability.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our members' shipments.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our members' equipment costs and improve our efficiency.

KCS and CP have been strong supporters of the TDANA from its inception. The TDANA has been able to help educate and grow the transloading industry because of the vital relationships with the KCS and CP

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TDANA is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. TDANA urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

Transload Logistics Corp. hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, we will be harmed by the reduction in competition that would result from a CN acquisition of KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

RE: SHIPPER SUPPORT LETTER

My name is Dallas Sherwood and my business address is 74075 Hwy 845 Lethbridge AB. I am the CEO of Transmark Ltd. In my role, I am responsible for overall operations and customer relations in our North American market.

Transmark is a storage and transload facility working directly with CP in assisting rail customers with the ability to achieve their logistics and storage requirements. From car storage to wind energy, transloading oil and repairing rail cars, we offer a variety of services. We have worked with CP and their staff and crews for many years and have been very happy with the service and respect we get as a customer.

Transmark Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Transmark has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Transmark relies on CP for our excellent service to the customers we serve. Our customers ship bulk oil to the Gulf coast, bring windmill components from the Texas ports, grain products from the Northern States and rail cars coming from all over the South Central and Gulf region for storage and repairs. CP has provided us with great service, but it's market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

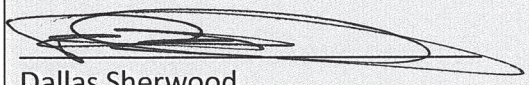
And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of crude oil from Alberta to the refiners in the Gulf region.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. Turnaround times for cars cycling through loading schedules, the ability to pre plan operations will greatly effect customer relations and in turn productivity.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Transmark is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Transmark urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

TRANSMODAL

My name is EDUARDO HERRERO GONZALEZ and my business address is CONSTITUCION #581, COL. CENTRO, VERACRUZ, VER. MEXICO, C.P. 91700. I am CEO of TRANSMODAL S.C. In my role, I am responsible for SUPPERVISION OF UPPER MANAGEMENT.

In TRANSMODAL S.C. our relationship with Kansas is the rail fleet service, mainly on the routes from Veracruz to Mexico, and Lázaro Cardenas, using the intermodal sector.

TRANSMODAL S.C. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. TRANSMODAL S.C. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

On the shipping services on routes. CP has provided us with good service, but its Customer Service is limited today, as its response times are slow. CP must improve their attention times, in order for us to give better service to our customers.

And we know from experience that companies with high response times in Customer Service, have more agreeable relationships with their customers.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Mexico from 2021 to 2022.
- We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada that

under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKS's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.

- All-in rate, as we are not at the expense of monetary variations in fuel.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This Transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TRANSMODAL S.C. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Bruno Auger, president of Bma Transport and my business address is 218 Robinson street, Saint-Eustache, Québec, Canada. I am President of Transport Bma. In my role, I am responsible for the entire company logistic in Canada and USA.

Transport BMA is a car carrier transport company and we move over 100 000 units by years actually. We use Cp for help us to move this big Volume in Canada right now and we have interest to move a lot of this unit directly in USA. We are really satisfied the partnership that we have with the CP team.

Transport Bma supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Transport Bma has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

TRANSPORT BMA

LA FORCE D'UNE ÉQUIPE ! THE STRENGHT OF A TEAM!

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. With the others access or rail, we will have a opportunity to grow up the company

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Transport BMA is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Transport BMA urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Executed on 28 April 2021.

Attention: Surface transportation board

To whom it may concern,

My name is Jacques Boileau and I am the president of Transport Procal which office address is 13240 rue Turcot in Mirabel, PQ J7J 1C7. We, as a transport logistic specialist, offers to our customers a trouble-free service for their needs in buying commodities from different areas in Canada and North Western US States.

We have been offering Intermodal services to our customers for the past 20 years mainly using as a partner CP rail for their efficiency in transit time, their availability of equipment and the sales and marketing support.

We look after the coordination of every loads that we are given by our customers from the day the product is ready to ship until it's delivered to their facility. On a yearly basis we do on average 100 loads per week with retail box fruits and vegetable for wholesalers and food chains as well as fruit loads for transformers. The partnership that we have establish with CP Rail have allowed us to be the main user of refrigerated containers from Western Canada going East.

We feel that the transaction announced from CP Rail to merge with Kansas City operation will allow us to perhaps offer our customers an Intermodal service from Southern States going into the Toronto and Montreal Canada's market knowing that most of our customers orders commodities from these areas.

As an officer of Transport Procal I support and anticipate a benefit for our operation going forward.

Jacques Boileau

ATTENTION: Surface Transportation Board

My name is Craig Bailey, and my business address is 201 Robin Crescent, Saskatoon, SK., S7L 6M8 I am CEO & Shareholder of Transport Services and Logistics Canada Ltd., In my role, I am responsible for company direction, business growth, and mentorship.

Transport Services and Logistics Canada Ltd., has been a long term partner of CP Rail. We utilize CP's Intermodal Service for 100% of our rail logistic needs. The customers we serve have a broad range of products, from food, automotive parts, and wood. Our relationship with CP has allowed for growth over the years and we continue to value their partnership.

Transport Services and Logistics Canada Ltd., supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Transport Services and Logistics Canada Ltd., has never spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We see this consolidation between CP and KCS as an opportunity to grow our cross border rail offering, in addition, we can provide our clients with a seamless connection to grow their product reach. Transport Services and Logistics Canada Ltd., also provides global logistics for numerous clients, we see this consolidation as another opportunity to grow our clients export reach having direct access to various ports seamlessly.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments / clients
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

TRAXXSIDE SHIPPER SUPPORT LETTER

April 30, 2021

ATTENTION: Surface Transportation Board

My name is David Warne, and my business address is 231 Speedvale Ave W, Guelph, ON N1H 1C5. I am General Manager of Traxxside Transloading. In my role, I am responsible for the operations, logistics and commercial success of our company, including the relationships with the railways.

Traxxside is 3rd Party Logistics Company offering multi modal transloading service between rail, intermodal and trucks. Traxxside's customers rely on us to efficiently ship and receive over 2500 carloads annually of bulk grain, food, and industrial products through our facility to support their production facilities and customers. We have an excellent relationship with Canadian Pacific who connect to our facility via a short-line and directly with their door to door domestic intermodal service.

Traxxside supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Traxxside has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

The combined company's single line service would improve our customer's ability to source products of brown and brewers rice moving from KCS markets in Arkansas, Louisiana & Mississippi directly to Guelph, Ontario.

CP's experience providing seamless intermodal service throughout their network and across borders will also benefit our customers and operations.

We are excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets.

We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico, and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

TrendWood Limited
2431 - 121 AVENUE N.E.,
EDMONTON, ALBERTA T6S 1B2

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Greg Sylvester and my business address is 2431 121 ave NE, Edmonton, AB . I am owner/manager of Trendwood Limited. In my role, I am responsible for shipping railcars of forest products into the United States.

Trendwood Limited is a reload facility that has been served by CP Rail since it opened in 1983. Trendwood has shipped tens of thousands of railcars into the United States since and continues to do so with the strong partnership of CP Rail.

Trendwood supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

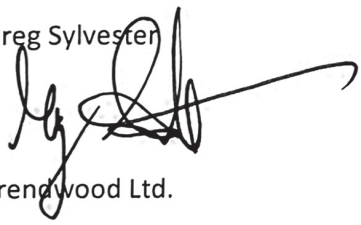
For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Trendwood has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

With this transaction approved, we could see potential new lanes of shipping that we previously could not access. Through rates into the lower states would now be a possibility and would make shipping into certain markets easier and more competitive.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of lumber from Edmonton to destinations in the lower United States.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. It would also reduce the dwell time of cars that we experience with certain Class I railroads that serve the areas that we ship into.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.



At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Trendwood Limited is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Trendwood Limited urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Greg Sylvester

Trendwood Ltd.

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is HORACIO CESAR FLORES LOPEZ and my business address is AV. LOS ANGELES #303, COL. GARZA CANTU, SAN NICOLAS DE LOS GARZA, NUEVO LEON, MEXICO, C.P. 66480. I am PRESIDENT of TSIM INTERNACIONAL, S.A. DE C.V. In my role, I am responsible for presiding over the entire workforce of my company, and manage budgets and make sure resources are allocated properly.

TSIM INTERNACIONAL, S.A DE C.V owns a Transloading Rail Terminal which is served by the KCSM. The company specializes in providing logistical services to KCSM´s customers, such as: Transloading, Warehousing and Transporting General Cargo. This relationship has been working since 1995.

TSIM INTERNACIONAL, S.A DE C.V supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. In the USA and Canada, the combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. In Mexico, KCS provides efficient service thru the most relevant manufacturing footprint. The two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders

TSIM INTERNACIONAL, S.A DE C.V. has been working with KCSM as a Transloading Rail Terminal, by loading/unloading, warehousing and transporting a vast array of products such as: Steel, Wood, Paper, etc. Currently the company operates approximately 500 railcars per month.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other larger rail carriers and trucks in the North American market.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

We believe this transaction could be positive for as a transportation option. We can see the benefit in the future to be able to have a seamless option into the Canada market, and more competitive option to access market around the Chicago area.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TSIM INTERNACIONAL, S.A DE C.V. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. TSIM INTERNACIONAL, S.A DE C.V. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Mohrsville, PA 19541

TUSCARORA GRAIN CO., LLC SHIPPER SUPPORT LETTER

ATTENTION: Surface Transportation Board

My name is Chris Johnson, and I am the Co-Founder of Tuscarora Grain Co., LLC (TGC) in Mohrsville PA. I am responsible for overall operations of our grain and rail operations.

TGC ships North American grown Organic and Non-GMO grain to the east coast on the Canada Pacific Railway. TGC has been working with the CP for the last 5 years. I have personally had a business relationship with the CP for 15 years.

TGC supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. TGC sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

TGC ships grain a few US and Canada CP-served facilities (Iowa, Minnesota, WI, SK, AB) to our rail facility in east-central PA. CP has provided us with good service, but its market reach into the breadbasket of the US is sparsely limited as its lines only go as far south as Kansas City. We are excited about the opportunities to be able to originate US organically grown grain from NE & KS and shipping east.

TGC knows from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior. TGC is serviced by more than one Class I. TGC chooses to do most of their rail business with the CP due to the great customer service and willingness to work with a small family-owned company such as ours.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient, and reliable rail service options. This will vastly strengthen CP to better compete against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of organic grain.
- We are enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- President of Mexico recently announced the banning use of certain popular herbicides as well as the use of GMO's. This will greatly assist our business in purchasing from a large supplier such as Mexica of organic and Non-GMO grain being grown in a climate conducive to long growth season. Quality of grain should be very good.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all their other existing interline partners.

I have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, TGC is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. TGC strongly urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

VERIFICATION

I, Chris Johnson, declare verify under penalty of perjury 'under the laws of the United States, that the foregoing is true and correct. Furthermore, I certify that I am qualified and authorized to submit this letter.

TWIN RIVERS
PAPER COMPANY

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

Twin Rivers Paper Company LLC is a leading major producer of label, packaging, publishing, and technical papers and lumber with its management office in Portsmouth, NH, which relies on CP as an important supply chain provider.

Twin Rivers supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Twin Rivers sees this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Speaking from a recent experience on a transition where CP acquired the CMQ Railway, CP has provided us with good service, since its acquisition and we are excited about the opportunities of growth with the CPKC and its expanded reach.

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of paper.

82 Bridge Avenue
Madawaska, ME 04756
Tel 207-728-3321
Fax 207-728-8701
twinriverspaper.com

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

For these reasons Twin Rivers is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Twin Rivers urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Steve Collard

ATTENTION: Surface Transportation Board

My name is Casey Ehrman and my business address is 400 SW 6th Ave, Portland, OR 97204. I am a Partner at TYR Food Products Inc. In my role, I am responsible for managing our feed products group which buys and sells grains for animal feed.

TYR Food Products Inc ships various different grains on the CP rail line to customers in the US, Canada, and Mexico. We utilize the CP rail for shipping our grain in covered hoppers out of Minnesota and Canada.

TYR Food Products Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. TYR Food Products Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship grain from our CP-served facilities in Minnesota, and North Dakota to our customers with elevators in the South Central and Gulf region.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against theother, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of grain from Minnesota to Texas.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroadoption.
- CPKC's new service offerings will improve transit times and reliability, which will reduceour equipment costs and improve our efficiency.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kindof seamless, single-line service we have come to expect from our transportation providers. Thistransaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relativeto the other options that already exist, since CPKC will continue to interchange with all of theirother existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP andKCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some pastrail mergers.

For these reasons, TYR Food Products is voicing strong support for the combination of CP andKCS, because it will enhance competition, provide expanded options and drive efficiencies forcustomers of all sizes. TYR Food Products urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of thisdeal can be realized for the benefit of all stakeholders.

VERIFICATION

I Casey Ehrman, state under penalty of perjury that the foregoing is true and correct. Further, I certify that I am qualified and authorized to submit this letter.

Drummondville, March 25th, 2021

STB Finance Docket No. 36500
CP-KCS Proposed Combination

Letter presented to:
Surface Transportation Board

Object: **Support letter - Project CP-KCS**

My name is Patrick Turcotte, I am the president of TYT Group Inc. with the head quarters located at 675 Lemire Boulevard West, Drummondville, Quebec, J2B 8A9. I am President of one of the largest multimodal, logistics companies in Quebec.

TYT Group is operating a network of railed warehouse transload in Quebec which one is located in CP facility in Cote-Saint-Luc. The transload terminal offers logistics solutions to customers in key urban centres along the east coast. This project enhances our footprint in the Montreal area by building capacity and expanding our ability to provide customers with value beyond rail, through trucking and transload. We can say that over the years we have develop a great business relationship between CP and TYT.

Group TYT supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Group TYT has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Group TYT is looking to be a one-stop access to offer the best transportation and logistic solutions to our customers. We are stretching the limits to become a leader in transportation, warehousing, and distribution services. We do that in collaboration with a few partners and one of the majors is Canadian Pacific.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

UET Shipper Support Letter

ATTENTION: Surface Transportation Board

My name is Tom Smith and my business address is 225 Union Blvd, Suite 2000. Lakewood, CO 80228. I am President of United Energy Trading, LLC ("**UET**").

UET is a privately held trading and logistics company. UET focuses on trading, logistics, and transportation of hydrocarbons and other commodities. UET also develops supply chain solutions and assets for the movement of hydrocarbons and other commodities. UET has been and continues to be a major player in the movement of hydrocarbons by rail including crude oil and LPGs out of Canada and refined products to Mexico.

UET supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. UET has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

UET is currently working with the CP on movements of crude oil and LPG across a network of terminals in North America. UET is working to ship products out of AB and SK to various points in the US Gulf and East Coast.

UET is currently shipping refined products with the KCS to various point in Mexico. In addition, UET is working with the KCS on the potential movement of LPGs into Mexico.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (or that could expand the markets we serve effectively).

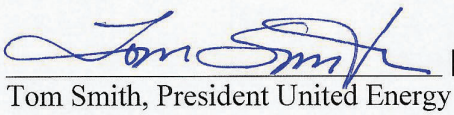
And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Crude Oil from Alberta, Canada to the US Gulf Coast and Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency by allowing us to utilize a single railroad from Canada, ND, and other points directly into Mexico.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, UET is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. UET urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

The Honorable Cynthia T. Brown
Chief, Section of Administration, Office of Proceedings
Surface Transportation Board
395 E Street S.W.
Washington, DC 20423

Re: Finance Docket No. 36514 – *Canadian National Ry. – Control – Kansas City Southern*

Dear Ms. Brown:

Up On Me Imports Inc has concerns that CN monopoly if they are allowed to buy Kansas City South in Canada

I am writing to express Up On Me Imports Inc perspective on Canadian National's ("CN's") proposal to use a voting trust in connection with its proposed acquisition of Kansas City Southern. In Decision No. 3, the Board explained that it will adopt a "more cautious approach" to CN's proposed voting trust and will consider whether allowing the use of a voting trust would be consistent with the public interest in light of the "potential benefits and costs of such use." I am writing to express our view that the use of a trust in this proceeding would not be in the public interest.

We have not formed a definitive view regarding the public interest consequences of CN's proposed acquisition of control of KCS, but we welcome the fact that the Board has confirmed its intention to consider whether that transaction is in the public interest under the Board's 2001 Major Merger rules. As the Board acknowledged in Decision No. 3, those rules place "heavier burden[s] on merger applicants to show that a major rail consolidation is consistent with the public interest" and give the Board much greater discretion to disapprove proposed transactions or impose extensive conditions aimed at ensuring that they serve the public interest.

We think the fact that the Board cannot (and should not) pre-judge whether CN's proposed control transaction would ultimately be found consistent with the public interest after 18+ months of review under the new merger rules is exactly why the Board should not allow CN to use a voting trust to complete its acquisition first and have it reviewed later. CN would be spending tens of billions of dollars to buy KCS, and there is no way to be confident that it could ever recoup that investment were it required – more than a year and a half from now – to divest KCS. The unpredictable consequences of having to do so, and of leaving ownership of KCS shares in the hands of CN all that time – would inevitably encumber the Board's evaluation of the first-ever major merger to be reviewed under the 2001 rules. The Board should not have to

worry about the consequences of KCS coming out of trust as it decides whether to allow CN to take control of KCS, or how extensive the conditions need to be for it to do so.

In addition, this is the first time the Board will be applying the 2001 merger rules, both on the merits and in considering whether to allow a voting trust. It would not be consistent with the public interest to rubber stamp use of a voting trust here when doing so could create a precedent that both encourages additional rail mergers and also limits the Board's freedom to apply the 2001 merger rules the way they were intended – meaning that disapproval or extensive conditions are much more likely.

We think that the costs of allowing a voting trust far outweigh the benefits. We see no real benefits, other than allowing KCS's shareholders to collect billions of dollars without having to bear the burdens and risks of CN and KCS trying to persuade the Board that their deal is in the public interest. That does not seem to be a public benefit at all. Without prejudging how that assessment will turn out, if CN is right that its proposal is great for competition and all stakeholders, there ought not be such a great risk for KCS's shareholders either, and no need for a voting trust.

The costs of allowing a voting trust here, however, are quite significant. In addition to the concern about establishing a precedent for other mergers and constraining the Board's first-ever application of the new merger rules, we see a number of realistic concerns that arise immediately if CN were allowed to use a trust.

First, from our perspective, the most significant cost associated with allowing CN to use a voting trust to complete its acquisition of KCS is the ***adverse impact that would have on existing competition between KCS and CN.***

We are familiar with the rail service offerings of CN and KCS, which are broadly parallel across much of KCS's service territory on the south central United States. Our experience in rail transportation markets confirms that competition between two railroads serving the same points, corridors and regions manifests itself not just where they serve the same specific shipper facilities. Competing railroads like CN and KCS also provide alternative solutions for shipments of the same commodities in the same geographic areas, thereby disciplining one another even where they are not head-to-head alternatives for the same shipper. For example, they serve alternative transloads, alternative grain terminals, alternative receivers or shippers of the same commodity across the regions they both serve, like much of Mississippi, much of Louisiana, Omaha/Council Bluffs; St. Louis, Springfield, and southwestern Illinois.

CN's proposed control of KCS would of course do away with all of this competition completely. It may be possible to remedy some of it with targeted access for other rail carriers, but without an independent KCS it would be impossible to remedy all of the harm. Under these circumstances, we would imagine that the Board would not approve CN's proposed control transaction under the new merger rules, which emphasize "enhanced" rather than reduced competition.
But some of the harm would come immediately if CN were allowed to acquire KCS's stock and hold it in a voting trust. As we understand how voting trusts work, CN would receive all of the benefits of owning KCS – including dividends from KCS's profits – even though KCS's management continued to direct the day-to-day functions of that railroad. As a market participant, we cannot imagine that competition between CN and KCS would remain robust if CN knew it would earn profits when KCS was able to win business despite charging higher rates

or offering worse service. Why would either of them sharpen their pencils against one another if the profits ended up the same place: with CN? Ultimately, we agree with the U.S. Department of Justice's observation that "threats to competition would be present immediately after the CN voting trust is consummated."

Second, allowing CN to use a voting trust to complete its acquisition of KCS would eliminate the opportunity for ***KCS to be acquired by Canadian Pacific and the strong competitive benefits such a transaction would yield.***

A CP/KCS transaction promises to create new, better single-line routes from America's Heartland and Canada to the Gulf of Mexico. CN (via its 1998 acquisition of Illinois Central) already reaches the Gulf of Mexico. CN has a high capacity mainline route straight from Chicago to New Orleans. CP, by contrast, has an underutilized route line that only goes as far as Kansas City. CP's only friendly connection at Kansas City is with KCS. Were CP and KCS allowed to combine, CP would have incentives to invest in this route via Kansas City, opening up new competition against CN, BNSF and Union Pacific.

Allowing CN to acquire all of KCS's stock as part of a voting trust transaction would kill this opportunity for enhanced competition. Not only that, it will leave CP and its U.S. network a shadow of a CN/KCS network. CN in the U.S. would be three times the size of CP in the U.S. This kind of competitive imbalance is bad for America's rail network, and we worry in particular about its implications for potential further consolidation.

Making matters worse, CN would get stronger by absorbing KCS's system, much of which is broadly parallel to CN's existing U.S. network. This implies rationalization of assets, not investment in new competitive routes. And it implies a loss of competitive options – both concrete multi-railroad access to individual shippers and more subtle benefits of having multiple railroads near one another to serve as "geographically competitive" options for transload shipments, grain moving to alternate elevators/terminals, build-ins and build-outs, and other means.

We are aware that the Board would consider a proposed CN/KCS under the new merger rules, and therefore could condition it to try to protect competition or disallow the transaction entirely. But that is a reason ***not to let CN use a voting trust***, so that there is no pre-judgment of the outcome of that first-ever new rules assessment, and no foreclosure of a potential CP/KCS transaction and all the competitive benefits it promises.

Third, In its Decision No. 3, the Board pointed to the fact that one aspect of the public interest it needed to consider was the potential ***financial impact of a transaction on the "total fixed charges" and the "financial integrity" of the rail carriers involved.*** The Board specifically noted cause for concern relating to CN's proposal to issue over $19 billion of new debt to finance its purchase of KCS, and the 45% price premium it was proposing to pay.

We share the concerns the Board noted, and believe these factors are compelling reasons why CN should not be able to use a voting trust to complete its purchase – spending all of this money and issuing all of this debt – unless and until the Board has completed its full assessment whether a CN/KCS transaction that would burden the railroad and its customers in this would be in the public interest.

We understand that CN has said it plans to try to demonstrate how its strong balance sheet and financial forecasts will allow it to earn a return on its investment in KCS, and to avoid financial hardship if it has to divest KCS. No matter what showing CN is able to make in this regard, in

our view it cannot support a finding that it would be in the public interest to allow CN to buy KCS first and defend its acquisition later.

No matter how strong CN's balance sheet might be, the huge price premium it is paying and massive debt burden will create immediate incentives for CN to extract more revenues from its existing customers. It won't be able to do that with any of the merger "synergies" it plans for several years, so it will incentives to do it through higher prices for CNs current customers or less investment on CN's network. These incentives arise whether or not CN ends up having to divest KCS.

In addition, if CN is allowed to use a voting trust and the Board denies CN's application to control KCS, CN would have to divest KCS sometime in 2023. It is hard to imagine CN would be able to get a price for KCS anywhere close to what it agreed to pay. Its high premium seems designed to deny KCS to CP, and no other railroads would be willing (or able) to pay such a high price for KCS. In that scenario, CN would be saddled with massive amounts of debt and no merger synergies with which to recoup them. Even if CN could put forward an optimistic business plan that showed it could bear these burdens without financial disaster, what if the economic picture in 2023 were not so rosy? CN might have to sacrifice investment, downgrade service levels, or increase rates even more in order to overcome the burdens it took on.

* * *

Accordingly, we urge the STB to reject CN's motion to approve its proposed voting trust. The fact is that the Board does not need to play Russian Roulette with the U.S. rail network. It can deny CN's proposed voting trust and let CN proceed to convince the Board that its proposal offers compelling public benefits that cannot be achieved any other way, and that the super-premium CN is paying to KCS's shareholders is not contrary to the public interest. Only then should CN be allowed to spend so many billions to acquire KCS.

Respectfully submitted,

Cc: All Parties of Record

RE: STB Finance Docket No. 36500, CP-KCS Proposed Combination

My name is Luke Vander Aarde and my business address is 730 2nd Avenue South, Suite 700, Minneapolis, MN 55402. I am a Senior Grain Merchandiser of US Commodities, LLC. In my role, I am responsible for buying and selling grain and managing the logistics and transportation of grain.

US Commodities is satisfied with its current business with the CP and looks forward to growing with the KCS after the merger.

US Commodities supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

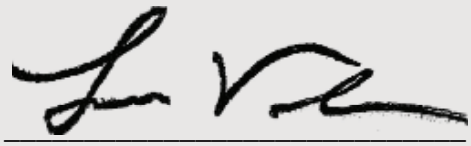
From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of corn.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency.
- CPKC will be a good combination of railroads as the CP has the origins and the KCS has relevant destinations. Now we can have through rates to new destinations.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.



We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, US Commodities is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. US Commodities urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

ATTENTION: Surface Transportation Board

My name is Brad Sanders and my business address is 811 Main St, Suite 2800, Houston, TX 77002. I am Executive Vice President, Chief Commercial Officer of USD Group LLC ("USDG"). In my role, I am responsible for developing the commercial strategies and the proper execution of them for USDG and its affiliated businesses.

USDG has long enjoyed good relationships with many railroads, including Canadian Pacific Railway ("CP") and Kansas City Southern Railway ("KCS"), providing our customers services that often involve rail solutions for various commodities across North America. These services require close operational collaboration and/or negotiations with rail carriers. USDG believes a CP-KCS combination will create a transcontinental railroad with the scale and reach to deliver improved levels of service that will enable us to better serve our customers and communities.

USDG supports approval of the CP/KCS combination. The transaction will provide benefits that we are eager to see realized.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – will help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

CP and KCS have both provided us with good service, but their respective market reaches are limited today, as CP's lines only go as far south as Kansas City and KCS's only as far north as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City to which we ship or into which we may expand.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This should strengthen competition against the other, larger rail carriers and trucks that serve our markets.

- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKC's new service offerings will improve transit times and reliability, which will reduce equipment costs and improve efficiencies for our customers.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless,

single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS's networks – connecting only at Kansas City and not overlapping anywhere – makes it less likely that the transaction will have any significant adverse effects on competition. It should make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, USDG is voicing its support for the combination of CP and KCS, because it will enhance competition, provide expanded options, and drive efficiencies for customers of all sizes. USDG urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SARTIGAN
The Strip Specialist

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Louise Fluet And my business address is 888 Route de Shenley Est, St-Honoré-de-Shenley, QC G0M 1V0, Canada. I am Controller of Usine Sartigan Inc. In my role, I am responsible for to negotiate the price of insurance, transport, manage the administrative department, finance investment projects, obtain subsidies.

Usine Sartigan Inc. specializes in the manufacturing of various wood components, primarily for the construction industry. CP is our preferred partner and rail service provider. We ship our finished products with CP (via the QGRY) from Quebec, QC to various destinations in the U.S. Mid West and the South East. Our customers are large home center retailers such as Lowe's company and Home Dépôt who are very transit time sensitive and demand high levels of service.

The consistent and reliable service of CP allow us to meet the requirements of our customers and extend our reach into the U.S. market. We directly benefit from the value of CP's service, which is demonstrated by competitive rates, breadth of the network, fast transit times and industry leading safety practices.

Usine Sartigan Inc. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Usine Sartigan Inc. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

We ship Lumber and wood products from Quebec City, QC to our customers in the U.S. Mid West and the South East. CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. While our business might not be directly impacted by the merger due to the location of our current customers, we believe the proposed transaction will provide increased competition, market access and greater choices for shippers.

And we know from experience both our own, and that of our competitors who have single-line rail options at their origins that single-line rail service options are far superior.

888, route 269, Saint-Honoré (Québec) G0M 1V0 • **Tél. : (418) 485.6797 / Fax : (418) 485.6745**
sarti@globetrotter.qc.ca / www.sartigan.com

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options to destinations that are currently beyond our reach.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- As Usine Sartigan Inc. promotes environmental sustainability, we are excited that in addition to providing new competition against other railroads, the new single-line routes made possible by the transaction are expected to shift trucks off crowded U.S. highways, yielding reduced highway traffic and lower carbon emissions.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Usine Sartigan Inc. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Usine Sartigan Inc. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

SURFACE TRANSPORTATION BOARD
SHIPPER SUPPORT LETTER

To whom it may concern:

My name is Francisco Javier Vera Lima, and my business address is Calle Manuel Gomez Morin 3870, Interior 603, Piso 4, Colonia Centro Sur, Queretaro, Qro. I am the President & CEO of the Board of V Modal Mexicana, Sociedad Civil.

V Modal Mexicana, is a company created in 2010 to provide excellent Logistics Coordination services, combining rail, road and maritime transportation, through the Intermodal service and the General Cargo in railroad, making efficient the cost of transportation in the supply chain of the companies and our customers, with a "Friendly with the Environment" proposal, reducing the carbon footprint, road congestion on highways and main cities, as well as the insecurity on road routes in the Door to Door services that we provide.

V Modal Mexicana has been working for long time with KCS to increase movements between Mexico City and Salinas Victoria thru the Intra-Mexico Service, connecting the industrial zone of the State of Nuevo Leon and the border area of Laredo, TX with Mexico City and the industrial cities of surrounding states.

V Modal Mexicana and KCS, have been working together to connect the ports of Lazaro Cardenas, Veracruz, and Tampico/Altamira with the industrial zones of Mexico City, Bajio, San Luis Potosi, Guadalajara, Monterrey and surrounding states.

The commercial relationship that we have with the KCS and the CP has allowed V Modal to work in the analysis of a boxcar movement from Monterrey to Ontario, including a Cross-Dock operation at Henry Warehousing facility in Weston, ON, which could be developed in the short term.

V Modal Mexicana has been requested to support the approval of the CP/KCS combination and for our perspective, the transaction promises to provide improved

VMODAL MEXICANA S.C.

vmodal@vmodal.mx
tel. +52 (442) 209 9600

service options and invigorate transportation competition in the markets we serve. The combined CPKC network –with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets– would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, we have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders.

Even though V Modal Mexicana has not often spoken about railroad consolidation, we believe that this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation. We are sure that this transaction would provide significant benefits that we are eager to see realized as soon as possible.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. We know from experience, that single-line rail service options are far superior and we believe that this unique rail service will strength competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKS's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments.
- We are particularly enthusiastic about the role new CPKS single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.
- CPKS's new service offerings will improve transit times and reliability, which will reduce, for sure, our transportation costs, improve our efficiency and the safety conditions of cargo.
- CPKC's green logistics with low pollutant emissions in benefit of the environment.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

VMODAL
LOGISTICA MULTIMODAL

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers, like the one that affected Transportacion Ferroviaria Mexicana (TFM) in the beginning of its operations during the Concession of the Northeast Railroad of Ferrocarriles Nacionales de Mexico (FNM).

For these reasons, V Modal Mexicana is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. V Modal Mexicana urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated, and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Re: STB Docket #FD-36500

Dear Ms. Brown:

Valero Marketing and Supply Company ("**VMSC**") is a marketing company that markets refining and ethanol products across the United States from the facilities of its many affiliated companies. These facilities are rail-served and VMSC uses the services of Canadian Pacific Railway Company ("**CP**") and Kansas City Southern Railway Company ("**KCS**") to deliver the facility products.

VMSC is aware that CP and KCS have announced a plan to combine their operations.

At this time, VMSC has no objection to, and supports the approval of, CP's proposed acquisition of KCS.

Sincerely,

Todd J. Link
Vice President, Transportation
Valero Marketing and Supply Company

VAN-KAM Freightways Ltd.
10155 Grace Road
Surrey, BC V3V-3V7

STB Finance Docket No. 36500
CP-KCS Proposed Combination

To Whom It May Concern:

I am providing written support for the combination of Canadian Pacific Railway (CP) and Kansas City Southern (KCS). I believe this combination of railroads will benefit not only VanKam Freightways Ltd by creating more effective supply chains across the North American. This transaction will open up new opportunities and new markets for businesses by leveraging this much needed supply chain resource. Currently VanKam Freightways Ltd and CP partner together to move Intermodal traffic into Western Canada and the Southwest United States. CP is a line haul carrier that is transporting various commodities and VanKam Freightways Ltd handles the first or final mile drayage component. VanKam Freightways Ltd & CP partnership is strategic and both companies collaborate to create better and more environmentally sustainable supply chains to service the demand of the North American marketplace.

VanKam Freightways Ltd is thrilled about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. We are particularly enthusiastic about the role new CPKC single-line routes

will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option. This transaction will aid in reducing carbon emission by creating a competitive alternative to Over-the-Road that is considerably more sustainable for the environment.

VanKam Freightways Ltd urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all shippers across the USA, Mexico and Canada.

Sincerely,

Derek Power

National Account Director

ATTENTION: Surface Transportation Board

RE: STB Finance Docket No. 36500
CP-KCS Potential Combination

VantEdge Logistics Inc. hereby files this letter to express its concerns to the bid by CN to acquire KCS and state its support for the CP-KCS combination.

We support swift approval of the CP-KCS combination because of the significant benefits the combination would bring, including expanded markets and port options, improved service options, and invigorated transportation competition.

By contrast, a CN acquisition of KCS would lead to a reduction in competition and deprive shippers of the many tangible benefits offered by the CP/KCS deal. Specifically, if CN were to acquire KCS, NOT only will we be deprived of the benefits of the CP/KCS deal, but we will also suffer a reduction of competition in key areas by virtue of CN acquiring KCS.

From our perspective, the only combination involving KCS that is in the public interest is the one that CP has proposed. Unlike the CP/KCS combination, the acquisition of KCS by CN would result in harm to competition because the two railroads today serve many locations and shippers in common. Indeed, they operate parallel lines between Baton Rouge and New Orleans and Eastern Mississippi; they both serve grain and other shippers in large swaths of the Midwest and Southern United States; and they both reach the port of Mobile, Alabama. Even more fundamentally, between the Upper Midwest and Gulf Coast, a CN/KCS combination would reduce the number of independent routing options from four to three.

We expect a combined CPKC network to offer seamless, single-line service that will improve our transportation options and provide a better alternative to the options that already exist. A CN-KCS combination would limit competitive carrier options to markets and ports south of Kansas City.

Respectfully submitted,

Glenn Moore

Glenn Moore

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

My name is Carl Veikle and my business address is PO BOX 548 Cut Knife, SK S0M 0N0. I am the Owner of Veikle Grain Ltd. In my role, I am responsible for the entire operation.

Veikle Grain Ltd. has been working with CP for 30 years transporting mostly pulses and wheat to Vancouver and Montreal. In the last six years we have been receiving liquid and dry fertilizer from throughout the states (New Jersey, New Orleans).

Veikle Grain Ltd. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

For our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Veikle Grain Ltd. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

Veikle Grain Ltd. has been transporting pulses to CP certified facilities in Vancouver and Montreal for thirty years and we have been receiving liquid and dry fertilizer for the last six years from the United States. With the proposed merger of the CP and the KCS this will give Veikle Grain access to new markets, especially when it comes to the importing and receiving of fertilizers from the US into Canada. This single-line rail service option from Canada into the US and vice versa is far superior than CP interlining with other railroads beyond Kanas City.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of Fertilizer from New Orleans to our location in Cut Knife, SK.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency from direct movement.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.

At the same time, the entirely complementary nature of CP's and KCS' networks – connecting only at Kansas City and not overlapping anywhere – means that the transaction will not have any adverse effects on competition. It will only make these carriers a better alternative relative to the other options that already exist, since CPKC will continue to interchange with all of their other existing interline partners.

We have been struck by the attention of CP and KCS to safety and operational effectiveness. Given the straightforward network connectivity between CP and KCS, and the fact that CP and KCS are the two smallest U.S. Class I railroads, we are confident that they will be able to implement their transaction without the service disruptions that have accompanied some past rail mergers.

For these reasons, Veikle Grain Ltd. is voicing strong support for the combination of CP and KCS, because it will enhance competition, provide expanded options and drive efficiencies for customers of all sizes. Veikle Grain Ltd. urges the STB to approve CP's acquisition of KCS as swiftly as possible so that these systems can be integrated and the end-to-end benefits of this deal can be realized for the benefit of all stakeholders.

Sincerely,

Carl Veikle

STB Finance Docket No. 36500
CP-KCS Proposed Combination

ATTENTION: Surface Transportation Board

April 19, 2021

My name is Tina Mobayen and my business address is 601 – 850 West Hastings St. Vancouver, BC V6C 1E1. I am the Export Manager of Victoria Pulse Trading Corp. In my role, I am responsible for trading and the daily operation flow of our facility in Francis, SK.

Victoria Pulse Trading Corp. is a family owned Canadian company established in 2002. We are a pulse export shipper whose facility is located at Francis, SK. Our origin is on the Stewart Southern Shortline (SSR), which is a CP served shortline. We work very closed with CP as our shipments interchange from the SSR to CP at Richardson SK. We also utilize other CP origin locations such as Estevan SK to ship our products for export (via Vancouver or Montreal) or into Mexico (via CP and the KCS).

Victoria Pulse Trading Corp. supports approval of the CP/KCS combination. The transaction would provide significant benefits that we are eager to see realized as soon as possible.

From our perspective, the transaction promises to provide improved service options and invigorate transportation competition in the markets we serve. The combined CPKC network – with new single-line hauls and access to premier ports on the U.S. Gulf, Atlantic and Pacific coasts as well as to key overseas markets – would help us reach our existing markets and new markets more efficiently. And, with the two railroads' strong focus on safety and their track record of operational excellence, I have no doubt that CPKC will be able to integrate their operations seamlessly to the benefit of rail customers and other stakeholders. Victoria Pulse Trading Corp. has not often spoken favorably about railroad consolidation, but we see this transaction as uniquely beneficial, with none of the downsides that might result from another round of Class I consolidation.

CP has provided us with good service, but its market reach is limited today, as its lines only go as far south as Kansas City. CP must interline with other railroads to reach destinations beyond Kansas City that we ship to (for example, our specialty crop shipments to Mexico). And we know from experience (both our own, and that of our competitors who have single-line rail options at their origins) that single-line rail service options are far superior.

We are very excited about the transaction because it will allow a combined CPKC to provide new, more efficient and reliable rail service options. This will strengthen competition against the other, larger rail carriers and trucks that serve our markets. For example,

- CPKC's new single-line haul offerings will expand market reach and offer new competitive transportation options for our shipments of specialty crops from Richardson SK to Mexico.
- We are particularly enthusiastic about the role new CPKC single-line routes will play in expanding access to growing markets across the United States, Mexico and Canada under the USMCA trade agreement. It is important that there be a true USMCA railroad option.

VICTORIA PULSE
Trading Corporation

Vancouver, BC V6C 1E1
T: + 1 604 733 1094
F: + 1 604 733 1097
info@victoriapulse.ca
www.victoriapulse.ca

- CPKC's new service offerings will improve transit times and reliability, which will reduce our equipment costs and improve our efficiency. As there is significant track mileage between Saskatchewan and Mexico, improved transit time means assets cycle more quickly, allowing us to re-load empties and increase shipments.
- Since Victoria Pulse Trading Corp. is located on a shortline, our freight costs include the shortline and any subsequent Class 1 carriers in the line haul. A single-line rail service option with CP from our shortline interchange could potentially give us more competitive freight options.

KCS and CP have had a cooperative relationship in the past, and CP-KCS joint routes are among our transportation options, but as separate companies they have not been able to offer the kind of seamless, single-line service we have come to expect from our transportation providers. This transaction will improve our transportation options.
