The Surface Transportation Board's Office of Environmental Analysis has reviewed the proposed new rail alignment, as well as its potential impacts, and after speaking with Mike LaPietra today, we concur with the determination that a supplemental Environmental Assessment is not necessary for the Eastern Iowa Industrial Rail Project.

As soon as it becomes available, please send documentation of FHWA's determination or agreement that the original finding will not be affected by the proposed alignment change. The documentation may be emailed to christa.dean@stb.dot.gov or it can be mailed to:

Subject: Eastern Iowa Industrial Rail Project RPD-FE06(001)--49-82

Christa,

As you probably recall, the City of Davenport changed the alignment of the railway after the EA and FONSI were signed. This new alignment was slightly outside of the original study area and we advised the city they would need to prepare a supplemental EA, hold a public hearing and amend the FONSI. The City has evaluated the area outside of the initial study area and provided the attached table that shows resource impacts that have changed with the new alignment. I have also attached a project map, SHPO letter and a picture of an abandoned warehouse for your reference.

In summary, the new alignment would require approximately 6.24 additional acres of ROW, would affect 4 additional parcels but no additional property owners, farmland impacts would be reduced by

approximately 2.8 acres and one abandoned warehouse building would need to be acquired. The IADOT believes these additional impacts are not at the level that would require the preparation of an EIS and we recommend that a supplemental EA/FONSI not be completed. Instead we recommend that the information contained in this email be used as a project re-evaluation. **Do you concur with this approach?** If you concur, the IADOT would recommend that the original clearance date of 07/08/2008 be retained. Please let me know if you have any questions need any additional information.

Thank you,

Randy Hyler
