US Transportation Safety Board
RE: Docket No. 35087
Section on Environmental Analysis
395 E. Street SW
Washington, DC 20423

To Whom It May Concern:

This letter is regarding Docket ~~NO. 35087~~ ^{HDR} 35087, Section on Environmental Analysis. I am extremely concerned about the proposal to utilize the railroad tracks passing through the southern boundary of the Prestwick subdivision of Frankfort, Illinois, for the passage of 28 trains every 24 hours.

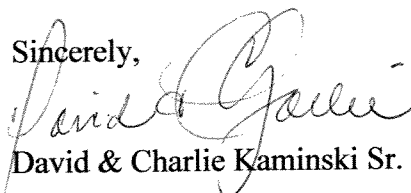

I have lived in Prestwick for 10 years. I own commercial property in downtown Frankfort. The EJ&E railroad is approximately 150 yards from my house. The result of CNR using this railroad in any capacity would be catastrophic. Why would the USTB allow such a change in transportation? CNR is now using tracks through downtown Chicago, a metropolitan/industrial area which is geared for this type of transportation. Frankfort and the other villages are suburbs which have grown into fine communities through the hard work and dollars of its citizens. These villages are not equipped to handle such a huge impact of railway transportation!

Aside from the environmental impact to the neighborhood, such increased usage would wreak havoc on the traffic patterns in Frankfort and neighboring communities. Unlike Chicago, many roads in this area end in cul de sacs or other dead-end configurations. Also, few viaducts exist in this area to allow for passage under the tracks. This would impact emergency response vehicles (i.e. ambulance, fire and police calls), school buses (we have schools along the railroad route), and significantly disrupt the flow of traffic and entry into neighborhoods.

More than the existing 6 trains per day passing through the EJ&E railroad is unacceptable. The NOX and particulate load, the increase noise from train whistles and engine noise, and the smell from the diesel would increase by significant magnitude. The overall impact would greatly effect the environment and quality of life in this area.

It is our strong urgent request that the plan for this railroad to be turned down or altered, so that the tracks are moved to a less populated area to the south. If this cannot be accomplished, I would encourage those in charge to address these serious concerns by imposing the maximum train traffic rules, whistle blowing standards, and maximum penalties to the railroad when traffic flow is impeded beyond measurable tolerances. These requests are in addition to any recommendations that result from the planned environmental impact study.

Sincerely,

David & Charlie Kaminski Sr.Cc: Jerry DuCay, Village Administrator, Frankfort
President Hunter E. Harrison, CNR
