Notice of Intent to Participate

Re: Docket Number – EP 775 – Growth in the Freight Rail Industry

Pursuant to the STB's July 9, 2024 notice in the above-referenced proceeding, Martín Perassolo (US29/899.901 Patent priority's holder) would like to participate by sharing some written comments regarding the Board's interests in the health and growth of the industry and the need for rail customers to move their goods.

As the owner of the patented model of a new domestic intermodal container half the length of the current 53 footer, I want to collaborate with the goal of this meeting sharing its features as an alternative tool to gain different related objectives.

With the aforementioned modularized way of shipment railroads could offer a new range of services to shippers, and several new business opportunities would be created.

I appreciate the opportunity to inform about the existence of the patented model because in view of the situation that this hearing has generated, the product shows that it is a good tool to develop a new freight ecosystem and collaborate by creating prosperity and jobs for states and municipalities, since it allows domestic intermodal to be taken to a smaller scale, but serving markets that cannot use it today.

I would be grateful about being mentioned in this meeting, and I am available for details.

Some core ideas are showed in the following link: <https://goo.su/UzFTUC>

Respectfully submitted,

/s/ Martín Perassolo
