Docket No. 35087

In reference to the Sale of CN to The E.T. & E. line.

We of this Community have a tough time as it is without anymore traffic.

As it is these Engineers blast their horns when coming thru at all hours of day & night. after 11 PM till at least 6 AM. I think they should just keep a little. there's very few traffic during those hours anyway.

We have gates flashing lights and I don't think they ^{should} whistle as loud and as long as they do. People with heart problems and young children are startled when a sudden blast or whistling thru of these trains.

I think the Engineers get their jollies off doing this with out respect to the people or community. If a lot of people ~~knew~~ ^{knew} were these engineers line, they would park in their driveways and blast their horns and say now how do you like it, when they are trying to sleep.

Working people need sleep and it's very different when this goes on during the middle of the night all night long. I lived here thirty five years and it's never been as it ^{is} now. They use to have head lights that would flash back & forth at night and a few beeps. God if CN get in who knows what will happen then.
