Transcript:

I am a senior citizen and I am most concerned about what will happen to our town if this project goes through. First of all, I'm very, very concerned about our crossroads and at one particular line it's very close to a school, what that would do to children who are either crossing the gates to get there, I know there's traffic guards out there but it impedes and slows down our busses and it just is going to turn this community upside down. I don't understand why, at this point in time, that a foreign railroad train company should come in and buy an American train and just support goods from foreign countries. Our country is in enough problems, has enough problems without adding additional problems with a railroad that wants to come through, through our Chicago and suburban, in our community and tie up our main throughfares that would deter people who need health assistance, either fire department, local police department. We had a man the other night, as if that train would come through, he wouldn't be there to speak, he was having a heart attack and the regular route to his house and would have to cross that line and you're talking about additional 28 or 30 trains a day and I hear trains come through, I'm a block away from a train line and they come through at 2, 3, 4 o'clock in the morning honking their horn, like how many people would be out at that time in the day that they need to sound their horns that loud when there's nobody there, because I got out and looked and there's nobody there and it's just these trains coming through. I can't understand why people are going to support this document and I'm totally, totally against it. And it's 67007, I believe was the number that, and the finance docket of 35087. Do not allow this to happen. Thank you. Bye
